Mr. Speaker, I rise today to introduce the “Microbicides Development Act of 2001”. I am pleased to be joined by many of my good friends and colleagues who have signed on as original cosponsors to this legislation. My thanks go to them. Mr. Speaker, this week the United Nations convened a special session of the U.N. General Assembly to address how to combat the spreading HIV/AIDS epidemic. We have entered yet another decade in the battle against HIV/AIDS. June 5, 1981 marked the first reported case of AIDS by the Centers for Disease Control. Since that time, over 400,000 people have died in the United States. Globally 21.8 million people have died of AIDS.

Tragically, women now represent the fastest growing group of new HIV infections in the United States and women of color are disproportionately at risk. In the developing world women now account for more than half of HIV infections and there is growing evidence that the position of women in developing societies will be a critical factor in shaping the course of the AIDS pandemic.

So what can women do? Women need and deserve access to a prevention method that is within their personal control. Women are the only group of people at risk who are expected to protect themselves without any tools to do so. We must strengthen women’s immediate ability to protect themselves—including providing new woman-controlled technologies. One such technology does exist called microbicides.

The Microbicides Development Act of 2001 which I am introducing, will encourage federal investment for this critical research, with the establishment of programs at the National Institutes of Health (NIH) and the Centers for Disease Control and Prevention. Through the work of the NIH, non-profit research institutions, and the private sector, a number of microbicide products are poised for successful development. But this support is no longer enough for actually getting microbicides through the development “pipeline” and into the hands of the millions who could benefit from them. Microbicides can only be brought to market if the federal government helps support critical safety and efficacy testing.

Health advocates around the world are convinced that microbicides could have a significant impact on HIV/AIDS and sexually transmitted diseases (STDs). Researchers have identified almost 60 microbicides, topical creams and gels that could be used to prevent the spread of HIV and other STDs such as chlamydia and herpes, but interest in the private sector in microbicides research has been lacking.

According to the Alliance for Microbicide Development, 38 biotech companies, 28 not-for-profit groups and seven public agencies are investigating microbicides. Phase III clinical trials have begun on four of the most promising compounds. The studies will evaluate the compounds’ efficacy and acceptability and will include consumer education as part of the compounds’ development. However, it will be at least two years before any compound trials are completed.

Currently, the bulk of funds for microbicide research comes from NIH—nearly $25 million per year—and the Global Microbicide Project, which was established with a $35 million grant from the Bill and Melinda Gates Foundation. However, more money is needed to bring the microbicides to market. Health advocates have asked NIH to increase the current budget for research to $75 million per year.

Mr. Speaker, today, the United States has the highest incidence of STDs in the industrialized world—annually it is estimated that 15.4 million Americans acquired a new STD. STDs cause serious, costly, even deadly conditions for women and their children, including infertility, pregnancy complications, cervical cancer, infant mortality, and higher risk of contracting HIV.

This legislation has the potential to save billions in health care costs. Direct cost to the U.S. economy of STDs and HIV infection, is approximately $8.4 billion. When the indirect costs, such as lost productivity, are included that figure rises to an estimated $20 billion.

With sufficient investment, a microbicide could be available around the world within five years. I urge my colleagues to lend their support to this vital legislation.

CELEBRATING THE OPENING OF THE SMITHSONIAN FOLK LIFE FESTIVAL

HON. CHARLES B. RANGEL
OF NEW YORK

In the House of Representatives
Thursday, June 28, 2001

Mr. Speaker. Mr. Speaker, I rise before you today to celebrate the opening of the Smithsonian Folk Life Festival. I commend the Smithsonian Institution for its decision to feature New York City and its rich heritage and diversity. I am delighted that Harlem, with its own legendary Apollo Theatre, will be showcased by hosting its famous “Amateur Night at the Apollo” on the Mall Saturday, July 7. For the very first time Americans outside of New York will be allowed to a part of Amateur Night at the Apollo. They will be able to experience the excitement of Amateur Night at the Apollo in the same way that past winners, such as, Billie Holiday, Ella Fitzgerald, Sarah Vaughan, James Brown, and Stevie Wonder did many years ago.

When New Yorkers took the A-train uptown, the first stop was the Apollo. When the downtown musicians wanted to learn how to play jazz they went to the Apollo. When the kids from Brooklyn wanted to learn how to bobapop and “lindy hop” they went to the Apollo.

The Apollo stage is where the Godfather of Soul—James Brown, got his soul; where Michael Jackson showed off the moonwalk; and today it provides a showcase for leading hip-hop artists.

The Apollo Theatre was built in 1913, however it was not until 1932 when Sydney Cohen purchased it that it became known as a Black Vaudeville house. This change was reflective of the influx of African-Americans into the area between 135th and 145th streets and the changes in Harlem entertainment. Over the next few decades the Apollo became the place to perform if you were a serious musician. You were not accepted as a serious musician in Harlem until you performed and excelled at the Apollo.

For more than eighty years the Apollo Theatre has been the first home of African-American music, the cultural mecca of Harlem, and the monument to the genius of Black Americans in the entertainment industry. The Theatre achieved the high point of its popularity in the 1950’s when the growing number
