

North Texas in Denton, where he played quarterback for the football team and earned his degree in 1973. From there, he attended Dallas Seminary.

Tom has been pastoring at Denton Bible Church for 23 years. With over 4,000 members, Denton Bible Church is the largest church in Denton. Beside the four services he leads each Sunday, Tom disciples over 30 young men and teaches two men's bible studies.

In addition, Tom has served as a national speaker for the Fellowship of Christian Athletes, Campus Crusade for Christ, and Navigators. He is the author of two books and three video series. His taped messages have been heard throughout the world. Tom and his wife Teresa have two sons, Benjamin and John Clark.

Once again, Mr. Speaker, it is my privilege to welcome Tom Nelson to the Congress of the United States. I would like to thank him for his leadership in the community of Denton and express my appreciation for his leading the House today in prayer.

SUPPORT FLETCHER-PETERSON BALANCED PATIENTS' BILL OF RIGHTS

(Mr. GIBBONS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GIBBONS. Mr. Speaker, today I rise to express my strong support for a meaningful and responsible Patients' Bill of Rights recently introduced by my colleagues and friends, the gentleman from Kentucky (Mr. FLETCHER) and the gentleman from Minnesota (Mr. PETERSON).

We have been debating this issue for years, and it is time to give Americans what they need and what they deserve. This bill ensures that Americans will have access to medical care, including pediatric services, OB-GYN, specialists and emergency care. It further provides accountability by assuring those who make medical decisions which result in an injury are held responsible for their actions.

And this bill assures Americans can count on affordable health care. After all, what good is a Patients' Bill of Rights if millions of more Americans are unable to afford health care?

I call upon everyone in this Chamber to support the Fletcher-Peterson bill. It is a balanced Patients' Bill of Rights, which ensures that medical decisions are made by doctors and patients, and not by HMO gatekeepers or lawyers.

APPROVE FEDERAL FUNDING OF STEM CELL RESEARCH

(Ms. ESHOO asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. ESHOO. Mr. Speaker, I was recently visited in my office here in

Washington by two of my young constituents, Mary Lucas, 9 years old, and Kelsey Kagle, 15. They both have juvenile diabetes.

Mary Lucas, the 9-year-old, said something to me that has remained with me and I think always will. She told me that if we found a vaccine or a cure for diabetes, and if there was not enough for everyone, she would give up her share to someone who needed it more than her. Her unselfish words, I think, are instructive to us.

How will we cure juvenile diabetes? One promising method is by investing in stem cell research, which has the potential to cure diseases that afflict tens of millions of Americans today, diseases like cancer, Alzheimer's and Parkinson's.

According to a recent article in the New York Times, a study by the NIH sites the dazzling array of treatments that may result from research on both embryonic and adult stem cells. The report makes clear that embryonic stem cells are clearly superior to adult stem cells for stem cell research.

Most Americans understand that stem cell research is not about destroying lives, but prolonging and bringing quality to and curing American lives today. So let us get this out of political science and keep it in the hands of the real scientists that understand this, and let us take a giant step, Mr. President, and allow Federal funding for stem cell research.

WALK FAR FOR NATIONAL ALLIANCE FOR AUTISM RESEARCH

(Ms. ROS-LEHTINEN asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. ROS-LEHTINEN. Mr. Speaker, these posters portray two beautiful, happy children, Bonnie and Willis Flick. What these pictures do not portray is that Bonnie and Willis cannot effectively communicate with their parents or their playmates because they live with autism.

In recent years autism has risen dramatically across our Nation, and although it typically affects 1 in every 500 children, in my hometown of Miami-Dade County, the rate of autism in young children has jumped to about 1 in every 250.

On Saturday, November 3, I will participate in Walk Far for NAAR, the National Alliance for Autism Research. This will raise funds for research projects and fellowships to fight this devastating disorder.

I ask my colleagues to join me in congratulating the chair of this year's walkathon, Patricia Cambo, and the co-chairs, Rene Vega and Dr. Michael Alessandri, as well as last year's co-chairs, Michelle Cruz and Marie Ilene Whitehurst.

Due to the success of Walk Far, the National Alliance for Autism Research more than doubled its level of funding for this year, and we hold promise that

a cure for autism is just around the bend for Bonnie and Willis Flick and many other children with autism.

SUPPORT USE OF FEDERAL FUNDS FOR STEM CELL RE- SEARCH

(Ms. DEGETTE asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. DEGETTE. Mr. Speaker, why should we use Federal money for embryonic stem cell research? While it is a difficult medical-ethical decision to make sure we put controls in place, embryonic stem cell research promises new breakthroughs in science that will help literally tens of millions of Americans.

There are three reasons why we need to make sure this research is federally funded and federally supervised.

First, medical breakthroughs of underestimated value are available through funding of this research. A large body of successful work with mouse embryonic stem cells shows these cells are superior to adult stem cells in the development of what may be cures for diabetes, Parkinson's disease, Alzheimer's and other chronic diseases.

Second, Federal funding provide necessary oversight of stem cell research. This is the new frontier, and we need to make sure we keep control of it.

Finally, America has the greatest health, medical and science community in the world. Federal funding will help U.S. scientists keep pace with international researchers. We need to find the cure for diabetes, we need to find the cure for Parkinson's, for Alzheimer's and so many other diseases. Let us keep this research going.

FUND ADULT STEM CELL RESEARCH GENEROUSLY

(Mr. PITTS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PITTS. Mr. Speaker, we must have stem cell research. Alzheimer's, Parkinson's and diabetes, these are all very serious diseases that have no cures. But our research must be ethical. Adult stem cell research holds the most promise for finding cures.

We should fund adult stem cell research, and fund it generously, but not embryonic stem cell research. Creating human embryos for research, experimentation, harvesting and destruction is not ethical. Killing one human life, even though very tiny, on the off chance of maybe one day saving another, is not ethical, moral, and, I should add, even legal to do with taxpayer money.

Since 1996, our laws ban government funding of research that involves killing human embryos. We should keep that ban. Now we have a study that shows that embryonic stem cells may

be too unstable to be of much use anyway, unless they are produced in huge numbers. But there is no such evidence that adult stem cells are unstable.

Adult stem cell research holds great promise. Adult stem cell research promises to help us find cures to diseases that have plagued mankind for centuries. Let us fund adult stem cell research, and fund it generously.

CHINA DOES NOT DESERVE TO HOST 2008 OLYMPIC GAMES

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRAFICANT. Mr. Speaker, China has executed 1,781 citizens in the last 90 days. That is more executions than the entire world performed over the last 3 years. China is now even executing citizens for pimping and prostitution. It is getting so bad that Chinese citizens, Chinese lovers, in fact, are afraid to kiss in public. Meanwhile, China says it is necessary to ensure "social stability."

Now, if that is not enough to power surge your electric chair, China is in line to host the 2008 Olympic games.

Beam me up. The Olympic games are designed to be a celebration of life, not death. China does not deserve to host these games.

I yield back the human rights abuses, the death and dying at the hand of Communist Chinese dictators.

□ 1015

GOVERNMENT SPENDING CAUSES DEFICIT SPENDING

(Mr. BRADY of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRADY of Texas. Mr. Speaker, Washington is out of touch with the real world again. Tax relief does not cause deficit spending, as we hear; spending causes deficit spending.

Washington spends every dime we send up here. That is the reason why this Congress stopped deficit spending in America. That is why this Congress stopped 40 years of dipping into the Social Security and Medicare Trust Funds, and that is why this Congress has started to pay down a good amount of the national public debt. Mr. Speaker, make no mistake. The very reason we sent money back home to the people is because we will spend every dime of it.

Look what we spend. Let us talk about the outhouse, the \$1 million, two-seater outhouse that our National Parks and Wildlife built a year ago. Let us talk about the salmon. We spend \$5 billion a year helping salmon swim upstream to their spawning grounds. We could put each fish in a first-class ticket seat and fly them to the top of the river each year and still save money. We have enough dollars for the

priorities of America. What we do not have is enough for the priorities of silliness. Tax relief does not cause deficit spending, spending causes deficit spending.

STEM CELL RESEARCH IS PRO-LIFE

(Ms. HARMAN asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. HARMAN. Mr. Speaker, I rise today to urge strong support in Congress and the administration for a vital field of medical research. Federal funding for embryonic stem cell research should not be caught up in the abortion debate. As many antichoice proponents have courageously noted, stem cell research is pro-life. It will save lives, not take them.

Let me review what we know about stem cell research.

First, research using embryonic stem cells is helping us understand and treat not just Parkinson's disease, spinal cord injuries, and Alzheimer's, but possibly heart disease, arthritis and cancer.

Second, stem cell research is going on today and should be subject to Federal guidelines. Research of the type described in the lead story in today's Washington Post is not permitted under NIH's ethical standards.

Third, adult stem cells are not able to develop into as many kinds of tissue as embryonic cells.

Fourth, the embryos used in stem cell research would otherwise be destroyed by fertility clinics.

Mr. Speaker, if the embryos used in this research are simply discarded, we discard with them the hope of patients across the country and the promise of a new generation of medical cures.

HYDROPOWER FOR CLEAN AND SAFE ENERGY

(Mr. STEARNS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STEARNS. Mr. Speaker, we in the House will be marking up an energy policy this week, and part of this policy will include hydropower. Hydropower provides a clean and safe source of energy. Hydropower is the fourth largest source of total generation, making it an important part of America's energy supply mix. In addition to providing sustainable power at a low cost, hydropower production has significant environmental benefits. Hydropower production has no emissions. Every kilowatt of power that is produced from hydropower reduces the need to burn oil and coal to produce the same amount of energy.

I am pleased that the Republican energy package will include elements to assure that we maximize the potential of our existing hydropower facilities. While we work to implement policies

and strategies to conserve energy, we must also work to increase energy supply to keep pace with growing demand. Mr. Speaker, I believe that maximizing the benefits of our hydropower resources is an important part of meeting that challenge.

CHOOSING TO BE RELEVANT TO SCIENCE

(Mr. WU asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WU. Mr. Speaker, stem cell research offers the prospect for cures for diseases such as diabetes, Alzheimer's, and Parkinson's disease. It is a development of such great historic significance that I want to hear back to another era when science was under threat from a theocracy.

About 400 years ago, Galileo Galilei was forced to recant the evidence of his eyes that the moons and the planets revolved around each other rather than all of them revolving around the Earth, as the church then insisted that we all believe. But even as the theocracy forced Galileo to recant his views, he was heard to mutter, "But the planets do move."

Mr. Speaker, just as the planets move, stem cell research will go forward. The only question is whether it goes forward in this country or in foreign countries; with government support or without government support; subject to NIH guidelines or subject to no ethical guidelines whatsoever.

Our choice here is not about stem cell research or not. Just as no theocracy can prevent the planets from moving, no theocracy can prevent stem cell research from going on. The only choice is whether we choose to be relevant to science.

AMERICA IS A NATION OF THE PEOPLE, BY THE PEOPLE, AND FOR THE PEOPLE

(Mr. SAM JOHNSON of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SAM JOHNSON of Texas. Mr. Speaker, do my colleagues know what? Our taxes were lowered on July 1. That means we will take home more of our own money. We can thank President Bush for that.

When I was home in Texas over July 4, I met Kris and Melissa Kelly who are constituents of mine, and I asked them, what are you going to do with that tax refund? They said they are going to put a down payment on a brand-new minivan for their family. Is that not what America is all about?

Instead of allowing the Federal Government to keep our hard-earned money, creating new and expensive government programs, we gave the people their own money back so they can buy the things they need.

So I salute President Bush for all he has done for the hard-working people of
