ORDER OF PROCEEDURE

Mr. THOMAS. Mr. President, what we would like to do is allocate 15 minutes to the Republicans, 15 minutes to the Democrats, 15 minutes for the senior citizens, for the country, for the people of this country, for the economy at large, for American families. If he can get reelected, that would be a good thing. My point is that the President is not proposing something he thinks is going to be bad for the economy, because that would be the worst possible thing for him to do in terms of his reelection possibilities.

So it is important to recognize that he really believes what he is proposing will work, and so do I. So do the majority of us. We would not be proposing this if it was not obvious to us that the best way to get the economy moving again, the best way for economic growth and job creation, is to reduce taxes in those areas of the economy which would provide the best economic growth with that tax relief.

We know, for example, that one of the best ways to get reinvestment is for people to have more of their money to invest, obviously. The best way for them to have more money is not to pay so much to Uncle Sam in taxes. That is what tax relief is all about.

Two years ago the President asked the tax relief President Bush suggested, but we phased it in over time. What the President is now proposing is less accelerated, those tax reduction, those marginal rate income tax reduction, so they take effect immediately. If, as the President said, a good idea to do it in 2 years, it is an even better idea to do it now when we need that money in our pockets to invest so our businesses can create jobs and help with economic growth.

The first point of the President's plan is to take those tax breaks on the income tax marginal rates for each of the brackets we were reducing, and reduce them this year rather than waiting 2 years from now. It makes great economic sense. It will help families, it will help small businesses, and it will enable those businesses to take that money that is being saved and invest it in new jobs and in new businesses.

The second feature of the President's plan is to eliminate double taxation of dividends. As a matter of fact, the United States is second only to Japan in having the worst possible tax policy on corporate dividends. Only one country in the world taxes dividends more than the United States: Japan. Every other country in the world that has developed economies has a much lower tax rate on dividends. So we have put ourselves at a competitive disadvantage with all of these other countries in the world. The reason we have such a disadvantage is because we do not just have one tax on corporate dividends; we repeat the tax. We tax the corporation the first time around when the income is earned, and as soon as they pay the dividends out to the shareholders, we tax it again. So it is a double taxation. No wonder our rate is so high. It is 70 percent.

As I said, only one country in the world, Japan, which is having huge problems in the current time, has a worse tax rate on dividends than we do. So the President logically says, let's get rid of that double taxation. The way he chose to do it was to repeal the tax on the dividends that are earned by American citizens, investors. The corporation still pays the tax, but it is not taxed the second time around.

There are many advantages to doing that way: First, it really helps the senior citizens in this country to get that dividend income. Secondly, it really helps to spur economic growth because not only will the dividends then be used for reinvestment in American business, but it also helps the stock market generally by infusing capital back into the stock market. The economists we have talked to all make the point that it is not just the corporations that choose to issue dividends that will benefit from this, and their taxpayers, but it is all of the stocks because of the general increase in the value of equities. I think we have seen that in the way the market has responded to the President's proposal.

A third side benefit of this elimination of the double tax of dividends is the impact it will have on corporate governance. We all know the problem that was revealed over the course of the last couple of years about certain corporations, not corporations that were paying dividends but corporations that were putting money into the hands of their executives, in some cases in a very bad way. Fortunately, the President cracked down hard on them, as did the Congress, with the Sarbanes-Oxley legislation. The idea is to create transparency, to let the stockholders know what is going on in corporations, and to give them an incentive not to create more debt but to finance their expansion through equity; that is to say, through offering stock to the public, which the public then buys, the money then enabling the corporation to invest in expansion of the business, hiring more people, for example, rather than going to the bank to borrow the money to do that.

Today, our Tax Code gives the incentive to go borrow because corporations can deduct the interest on the money they borrow. That is the way corporations treat that when they pay the income tax. We need to give them at least an equal incentive and perhaps a greater incentive to finance their corporate expansion through borrowing but, rather, through the issuance of stock, which then Americans can acquire.

What is one way to do that? By ensuring that if they pay dividends on that stock, the purchasers of the stock are not going to have to pay a tax on the dividends they receive. It is a way of providing an incentive for the corporations to finance their expansion through borrowing.

For all of these reasons, the economists we have talked to are pretty clear that eliminating the double taxation on dividends would provide a real spur to investment in business, would enable the businesses to expand, would create something like 500,000 jobs this year, 1.4 million jobs next year. That is real job creation.
There are those on the other side who say that is impossible. There are not going to be that many jobs created. The economy is not going to get better with the President's proposal.

I go back to my first point. The President's proposal is not going to make the economy personal reason mind, as well as the good of the country, when he talks about a program that will really improve the economy. He wants to be reelected. He would not be doing this if he thought it would be bad for the economy.

There is a misperception by some that this recession we are in right now is a recession that should be dealt with not by allowing businesses to have more money to reinvest to create jobs; that is to say, it is not a capital deficit problem but, rather, it is a matter of consumer spending. If only we would give more money to people, they would spend it and that would make everything better, create more demand for products, they would buy more, and so on. That just does not happen to be true.

Here are the statistics. Consumer spending has been going up. It went up 3.1 percent in the year 2002, 2.5 percent the year before that; disposable personal income has increased, up 4.3 percent last year.

The problem is not disposable personal income; it is not consumer spending that has been going on. We know from personal experience, people have been able to defray the mortgage payments, they have been able to buy cars at zero percent interest. There are a lot of factors we are personally aware of that confirm it is not a matter of consumer spending but, rather, a capital asset problem. Businesses cannot get the money to expand.

What happened? We all know what happened in the stock market in the last several years. According to some people, $10 trillion in value in stocks has disappeared, evaporated. The stocks were way up here, and now they are down here. What is the difference? It is $10 trillion in value, in assets, in money that corporations do not have anymore. They do not have that value, and therefore they cannot go to the bank and borrow. They cannot sell their stock for a good price; people are not buying. And the question is how do you get more capital assets into the business sector, which is where we need the jobs. Whether it be small business or big business, it is the same; it is a capital asset deficit, not a consumer spending problem.

I will emulate my good friend from North Dakota, the master of charts. He has a chart for everything. I will produce a big chart, but I will now show the small version that will make the point. The upper line is the line increasing, and that is consumer spending. The lower line shows the first year up to the current time consumer spending has continued to increase. It went up 31 percent last year. We do not have a demand problem, a consumer spending problem in this country; we have a capital asset problem. Here is what has happened with capital assets. Here is the big stock boom. With everyone investing in the stock markets, the corporations had a lot of money they loaned to buy the stocks. We all know what happened. A lot of that value was taken out as the market plunged. That is what this line shows. It hit the bottom and is just barely beginning to move up. This is what we have to make up. This is the area we need to improve. It is the area of providing more capital to our businesses so they can expand and create more jobs. Again, how do you do that? They basically have two ways. They can try to borrow the money—not good policy, but besides that, they do not have the leverage to do that these days because the Federal institutions are looking at them and asking: How exactly are you going to repay us? How will you do something good with this money? They are not convinced yet that the value is there that they want to lend the money at a reasonable rate. Or they can go to the public and say: Here is some more stock; would you please buy it.

In the past, the public said: We are not sure we want to invest anymore in the stock market because you are not doing that well. So along comes the President's plan. He says: We will accelerate depreciation for small business, thereby allowing them to defer taxation of dividends, and we will accelerate the marginal income tax relief we passed 2 years ago.

Just like that, we created an opportunity for people to take the money they have saved, put it into the stock market, put it into businesses, or put it into small businesses that are not publicly traded and create those jobs. That is the genius of the President's program. It is nothing new. The President has created, before the tax relief that has been provided to investors who turn around and reinvest in the businesses that create the jobs.

The problem is this recession is not like the old recessions, and that is why I understand those who are stuck in the last century in looking at this as a consumer or demand recession. This is the first 21st century recession, the first high-tech recession, and it is the first non-capitalist recession. It is not a consumer recession. That is why it does not do any good, as the Democrat leader's plan essentially does, to just drop money out of an airplane and say: Here is money, consumers; go ahead and spend it on something. That is not going to help. What we need is for those businesses to acquire capital so they can expand, create jobs, and therefore the economy can grow and we can all benefit. To those who want to demagog the issue, and I would never accuse colleagues on the other side of the aisle of this, but I have seen folks on TV say that is giving money to the rich, to the elite. First of all, over half of the American people today are investors. Senior citizens, in particular, are very large investors, and a significant amount of the tax relief the President is providing goes to senior citizens. As a matter of fact, under the President's jobs and economic growth plan, 13 million elderly taxpayers would receive an annual tax cut of $1,394 this year. One of every two senior citizens receives dividends and as a group seniors receive half of all the taxable dividends paid to shareholders. So elimination of the double taxation of dividends provides average relief of $991 for the more than 9 million seniors who include dividend income on their tax return in the year 2003. That is a real benefit to the seniors in our society. It is a real benefit to the American taxpayer at large.

I will have more to say on this subject later. I appreciate my colleague from Wyoming allowing me to open this debate, and I look forward to hearing from my colleagues on the subject.

The Finance Committee of the Senate did not publicly trade and create those jobs. That is the genius of the President's program. It is nothing new. The President has created, before the tax relief that has been provided to investors who turn around and reinvest in the businesses that create the jobs.

The Finance Committee of the Senate did not publicly trade and create those jobs. That is the genius of the President's program. It is nothing new. The President has created, before the tax relief that has been provided to investors who turn around and reinvest in the businesses that create the jobs.

The Finance Committee of the Sen-
circumstances have not allowed him to carry out this role on this bill as much as he would like. It appears some in the committee have made nonnegotiable demands for what they say "must" be in this bill. Rather than pass a bill that would include all terms with which we can agree, or at least most of us, I am somewhat insist that the bill must, for example, include tax cuts for dividends. That is an insistence that some members of the committee are making and do not want to negotiate. Some suggest this will increase the rate of acceleration of the tax rates for the 1 percent of American elite with income greater than $311,000. That is something they insist on or there is no bill; that is, rather than pass a bill with overwhelming support and seek a bipartisan vote.

The Senate often works because of willingness to compromise. Senators give up what they consider perfect in order to get in the end what will be good. I know Chairman Grassley works to get things done in that way, and so does this Senator. Without compromise, we will get less done. Without compromise, the result will command less popular support. It will be more tenure be, and without compromise the Senate will be a much more partisan place, a place that is not much fun in which to work.

But this is only Monday. It is early in the debate and there is still time, even at this late date. I believe it is not too late for us in the Senate to work in the Senate's best traditions; that is, work together.

Let me take a few moments now to discuss why we are here today. I will also discuss the President's proposal and the congressional reactions to it.

Why are we here today? In the first instance, we are here because the budget resolution directs us. The budget resolution expressing the will of the Congress tells us that this month we shall consider a reconciliation bill, so we are carrying out our duty under the budget process. We are also here because the times demand it. The times demand action.

On a Montana ranch, when the grass has burned dry and there is just dust in the air, the rancher has to take steps to feed and protect his herd. And when drought hits and times are tough, no Montana rancher would fail to dig down to the very water table, not fail to find a way to make things work to get his place back on solid ground.

On a larger scale, we are here today because the American economy demands it. There is a drought in the American economy—just as there has been in many parts of America, a very severe drought facing agriculture.

The week before last, the Government reported that the unemployment rate surged to 6 percent. Since January 2001, just 2 years ago, the private sector has lost more than $311,000. That is something they insist on or there is no bill; that is, rather than pass a bill with overwhelming support and seek a bipartisan vote.

The economy has lost more than half a million jobs in the last 3 months alone. We now have the fewest number of jobs in 41 months. Since January 2 years ago, the economy has grown by anemic average of 1.5 percent, far below the post-World War II average.

Business owners tell me they are not investing, despite what the Senator from Arizona just said on the floor, because of so much uncertainty and too much overcapacity. Consumer confidence has dropped. Simply put, there is a lot of uncertainty out there.

The reason the investment curve has declined is very simply because the bubble burst. That bill that was run up in the 1990s, whether in the high-tech sector or the telecommunications sector—generally that bubble burst. The price-to-earnings ratio was way too high. Everyone knew it but said maybe they would get on the gravy train, knowing it would not last forever, but trying to stay on as long as it would last. As it turned out, so did the bubble; and I am afraid the bubble burst—no more gravy train. The economy didn't collapse, but we fell into recession.

As a consequence, there is amazing business overcapacity. Businesses are telling me they have not had a chance to get their place back on solid ground. There is a lot of uncertainty in the economy. There is a lot of uncertainty because there are fewer jobs and the income that was high is so high and there is also an increased need for unemployment benefits.

We have to increase investor confidence. They tell me, as I am sure they are telling you, over and over again, they are unwilling to invest now. They don't want to take that step to invest. They are afraid. They are a little nervous. Why? Because there is no pricing power. Business owners tell me they are not investing partly because they are afraid. They are a little nervous. Why? Because there is no pricing power.

Business owners tell me they are not investing partly because they are afraid. They are a little nervous. Why? They cannot get people out to buy more of their products. The economy is stalled. There is no great demand.

Consumer confidence has fallen off, too, actually. But the main reason for businesses not investing is people not buying their products. They are waiting for citizens to buy more of their products. The President proposes a budget, but under the Constitution Congress legislates. We do not merely rubberstamp the President's budget. We have a job to do. After all, we are supposedly elected to exercise our own independent judgment as Senators.

Many of the President's proposals command broad support. I support a good number of them. They may not be the most efficient stimulative proposals possible, but they should increase consumer confidence. I understand why some people face the payrolls and the cost structures that business people face. That is what really counts.

Business people are telling me they are not investing partly because they are afraid. They are a little nervous. Why? They cannot get people out to buy more of their products. The economy is stalled. There is no great demand.

We should also address a third goal; that is, we should spread the benefit of the tax reduction among all taxpayers. We are all Americans. We all should benefit, not just the special elite.

We should also look at our long-term fiscal situation; that is, our debt. We should not add needless debts, additional burdens on our children and our grandchildren. We must avoid action today which may have the effect of raising interest rates, particularly mortgage interest rates, not far down the road.

I remind my colleagues that this is only May 2003. Things can change. Things can happen very quickly. Where are we going to be a year from now? Where are we going to be 2 years from now? What actions are we taking today that will have an effect on long-term interest rates? We are lucky that inflation is low, but I can remember when it was not. Interest rates were very high and that day, unfortunately, will happen again. We don't know when, but we should not take action today which may have the effect of raising interest rates, particularly mortgage interest rates, not far down the road.
their costs by increasing the child credit to $1,000 right now. I also support speeding up relief for the marriage penalty.

Let’s eliminate that marriage penalty. I also support expanding the 10 percent Medicare Part D savings to include the alternative minimum tax. I am pleased the committee-reported bill includes something on each of these items.

But Congress has a role to temper and improve the President’s proposals. From my perspective, several areas are key.

First, the amount of the tax cut package is critical. The absence of fiscal responsibility over the long term affects interest rates now and in the future. We have a duty to be responsible. We must not worsen interest rates and dampen economic growth by passing an irresponsibly large package.

In January, 2 years ago, the Congressional Budget Office projected surpluses of $5.6 trillion for the next decade. That important figure to remember. Surpluses were projected 2 years ago of $5.6 trillion for the decade. Today, CBO projects the President’s budget will result in deficits—not surpluses but deficits—of $2.1 trillion for the same period. That is a swing of almost $8 trillion in just 2 years, and recent projections make those projections look overly optimistic.

I might note other bills we are going to have to pay, whether it is Medicare, prescription drug benefits, more AMT—which we all know we will have to pay for relief for the alternative minimum tax—Iraq. Things are not going well in Iraq. That is going to cost money. Who knows what other events are going to occur? Iraq. That is going to cost money. Things are not going well in Iraq. Who knows what other events are going to occur to add to whatever we are facing around this country and how much that is translating into Medicare costs and Medicaid costs, and with the baby boomers starting to retire in just a few years from now.

I believe we would be irresponsible by adding significantly to our deficit.

Our national balance of payments
debt is declining against the euro? Could it be that the investors around the world are beginning to question America’s long-term economic policies? I think that is a small part of it. I can’t describe all of it. I don’t know. But I raise those concerns. Clearly, our fiscal circumstances are much less favorable than when we considered the 2001 tax bill. We are in a different situation today, much different from that of that time.

Today, we must keep the size of the tax bill within narrower limits. Today, we must be more concerned about contributing to higher interest rates. In that regard, I am pleased that the committee-reported bill keeps within the $350 billion limit over the coming decade that was agreed to during consideration of the budget resolution.

Second, the President’s proposal on dividends is troubling for many of us. It must either be eliminated or even more dramatically scaled down. Yes, the tax treatment of dividends might be a worthy subject—as part of a budget-neutral corporate tax reform debate. But the President’s dividend proposal—at roughly $400 billion—is simply too large. It is too complicated, and affects too few taxpayers to be appropriately included in this stimulus package. It borders on irresponsibility.

Only 3 out of 10 tax filers report dividend income on their tax returns. They would not benefit from the dividend proposal. In other words, seven of 10 Montanans would see no tax benefit at all from a dividend tax cut as a consequence. The provisions in this bill should benefit taxpayers more broadly across the income spectrum. That way, they can most effectively get money to taxpayers who would spend it and spur the economy.

The committee changed the President’s dividend proposal. Unfortunately, the committee-reported bill also contains an ill-conceived dividend proposal. The bill would exclude from income all dividend income up to $500. It then includes a 10-percent exclusion for dividend income above $500 from 2004 to 2007. And the exclusion in-creases to 20 percent for 2008 through 2012. On one hand, the dividend exclusion provides simplification. A capped exclusion of $500 would make it no longer necessary for half of taxpayers with dividend income to report their dividends on their tax returns.

But this benefit is overshadowed by the worst part of the proposal—the 10 percent exclusion for dividend income above $500. This provides a very large tax cut to the elite.

Take the example of a taxpayer who has $1 million in dividend income. Under the committee-reported bill, that fortunate taxpayer gets to exclude a little more than $100,000 of dividend income—$100,450, to be exact. Applying tax rates to this excluded income, this taxpayer would get a tax cut of about $35,000 a year from the dividend tax cut alone.

A third problem with the President’s proposal is the acceleration of the rate cuts for that 1 percent of American elite with income greater than $311,000. This proposal alone costs some $35 billion.

In better times, I would support a package that included benefits for those making over $311,000. But these are not better times. In better times, I would support a package that included benefits for those who make over $311,000. But with the budget in the shape it is in, now is not the time to accelerate this rate reduction. This provision is just too costly and too narrow to effectively spur demand and rebuild the economy.

Fourth, more needs to be done to infuse funds to cash-strapped States and localities. The economic downturn has cut State and local revenues dramatically. But State constitutions—as opposed to the U.S. Constitution—require States to balance their budgets.

So State and local governments are forced to make widespread, often painful spending cuts in education, in health, and in other vital programs. They are still struggling to balance their budgets this fiscal year. And almost all of them are struggling to balance their budgets for the fiscal year that begins in July. These State spending cuts, layoffs, and increased taxes could offset the gains from tax breaks in this bill.

And the economic gains to tax breaks for the elite are overstated or theoretical.

Last year, the State of Montana cut benefits for severely mentally ill youth, just in order to make ends meet. The State also made across-the-board cuts in Medicaid provider payments and increased cost sharing—both of which now threaten access to care for low-income Montanans.

If those cuts were not drastic enough, this year, the State legislature just cut more than a quarter of a million dollars from Meals on Wheels for seniors. That will mean about 67,000 meals lost over the next 2 years. And budget constraints have also forced my State to cut 700 working families on a waiting list for child care.

Translating Montana’s small population to a national level, those cuts are the equivalent of more than 2 million lost meals nationwide. It’s the equivalent of a 22,000-family waiting list for child care.

We can pass all the Federal tax cuts we want. But what good will they do if we force States and localities to raise taxes, cut jobs, and reduce benefits?

We can avoid these economically-damaging State and local actions by assisting these governments with their budgets through temporarily raising the Federal Medicaid match and through other, more broad-based methods.

I am pleased that the committee-reported bill includes something in State aid. Unfortunately, the committee-reported bill includes only a little more than 5 percent of its total—for this purpose. I would have preferred a package that included $40 billion in State aid; the need is that great.
Fifth, making tax cuts refundable will help spur economic growth. Very simply, it works. They will quickly get funds to people who are likely to spend them rapidly, spur demand, and rebuild the economy. The President’s proposal accelerated the $1,000 child credit. I supported the increase in the child credit when it was passed in 2001, and I support the acceleration.

But the President’s proposal did not accelerate the refundability of the credit. Fortunately, during consideration of the bill, the Finance Committee adopted Senator Lincoln’s amendment to accelerate the refundability of the child credit. This Lincoln amendment will allow many low-income families to take full advantage of the increase in the credit.

Under current law, the credit is partially refundable. Families can take the credit if they pay payroll taxes, but do not have income tax liability. The amount that low-income families can get refunded is set to increase in 2005. Thanks to the Lincoln amendment, this improvement will be accelerated to 2004. This matches the increase in the credit. More hard-working low-income families will be able to get up to $1,000 per child in this credit in 2003, thanks to the Lincoln amendment.

Sixth, we should increase the bonus depreciation deduction for the year that a business purchases new equipment. In 2001, we saw a sharp drop in direct investment by businesses. The next year, we changed the law to give a larger bonus deduction. The trend in direct investment leveled, and even increased slightly. We need to provide more in the depreciation deduction for 2003 to encourage even more business investment.

And seventh, we need to extend unemployment benefits and help those who have exhausted their benefits. The government has reported that nearly 2 million people have been without work for 27 weeks or longer. The average time people have been unemployed is almost 20 weeks—the longest since 1984.

The weak economy has hit everyone. Unfortunately, some more than others. As we rebuild the economy, we should not leave these unemployed workers and their families behind.

Any bill to help rebuild the economy must help those most affected by the bad economy. As well, putting funds in these hands will provide an effective stimulus. The recipients of unemployment benefits and their families are likely to spend every dollar they get quickly. This spurs demand which, in turn, helps rebuild the economy.

We can agree that all actions we can take here would be equally stimulative. Not all tax cuts are created equal. Not all spending is equally stimulative, either.

A lot along with the provision takes effect. A provision that takes effect in 2006 will likely provide less stimulus than one that gets money into the system this year or next.

Much also depends on who receives the benefit. A provision that gets money into the hands of working and lower-income families—people who spend more of what they have, and spend it quickly—will be more stimulative than a provision that transfers money to elites who would save more of it.

Comparing various options for stimulus, a study by Economy.com concluded that extension of the Temporary Emergency Unemployment Compensation Act would provide the most effective stimulus of the options they studied. They concluded that every dollar in these unemployment benefits generated an estimated $1.73 in demand in the year ahead.

In contrast, they estimated that cutting dividend rates and accelerating 2006 rate cuts would generate less than a dollar’s worth of demand in the year ahead for each dollar spent. In terms of stimulus, some policy options are better than none, but unemployment insurance would be among the best.

Finally, the Finance Committee improved the President’s proposal by adopting a series of small but important provisions that will make people’s lives better.

For example, the committee adopted an amendment that Senators Hatch and Lincoln and I offered to significantly simplify tax return filing for millions of people. This provision reconciles the five varying child definitions into a single definition for a “qualifying child.” It is time for us to stop talking about simplification. It is time for us to do something about simplification. This amendment will at least make it so that we have just one definition of who is a child for purposes of claiming a tax benefit.

Another useful improvement that the committee made to the President’s proposal was in repealing the special occupational tax relating to alcoholic beverages. This provision will give much-needed relief and fairness to hundreds of thousands of small businesses.

Because this tax is levied on a per-location basis, a sole proprietorship must pay the same amount as one of the Nation’s largest retailers. Locally owned chains pay as much as, if not more than, the Nation’s largest single-site brewery. That is not fair, and this change is needed.

I make all of these points with the recognition that our differences are not as large as what we have in common. We agree broadly that we need to help create jobs and get the economy moving. We in the Senate should take the steps needed to address these goals.

The economic times that face us call on us to govern. We should avoid political point scoring. We must pass legislation to improve the lives of the people we represent.

Each of us was sent here by the people of our States. They sent us here not to make speeches, not to win debates; they sent us here to make life better.

In these difficult times, they sent us here to help create jobs, to rebuild the economy. We have a duty to respond to the times, not the politics. We have a duty to do the people’s work.

I thank the Chair.

Mr. THOMAS. Mr. President, I am glad we have begun this debate to do something that is necessary to help solve a problem we have in this country. Clearly, there will be differences in our views as to how we do this, and I guess that is no surprise. I think most all of us agree something has to be done to help our economy. We do not agree on what is the best way to do that, of course. There are pretty general differences in how it ought to be resolved.

My friends on the other side of the aisle are more interested in sending out money on a short-term basis, sending checks to a million people for 1 year; whereas we on this side are trying to find ways to create jobs, ways to change the economy so there is a future of prosperity rather than some kind of a Band-Aid that will surely wear out at the end of a year. So it is in this course, and I understand that. But I do believe there is a clear difference between having a plan that will do something over time or simply doing something that will have an impact next week but will not continue.

If, for example, if you are going to do something for businesses, they have to have some confidence that what they are doing is going to last for a while. People do not change the way they manage their business because there is going to be a 1-year kind of a change. I think that is so true. So you have to do something that is a little more permanent than that.

I think we have to have a commitment to see it to that which we do, and we have a commitment to see it to that which we do to the future. We need something that is dependable for the future. We need something that is stimulative to both the consumer sector and the business sector.

One of the differences, of course, is that our view is we need investments to create jobs, not to have a little more spending for a short period of time that will not be enough to stimulate the idea of reinvesting, but to stimulate the economy thus creating a good future for all the families in this country.

Without a doubt, Mr. President, on the economic front, the differences are not as large as we have in common. There are pretty general differences in what a person does in their economic planning. We need to have something that is necessary to help solve a problem we have in this country.

One of these differences, of course, is that our view is we need investments to create jobs, not to have a little more spending for a short period of time that will not be enough.
The Senator from Montana talked about that. We have a consumer base and a business base, and we need to have both of them.

This bill will have an impact. As a matter of fact, in the first 18 months, $144 million will flow into this economy. That is a short period of time. That is a lot of dough in a short while. So that is an example of the kinds of things that are in the bill. I think we need to really make sure that we talk about the different items in the bill when we talk about the bill.

Of course, all of us must recognize we are in an unusual situation. People go back to the late 1990s and compare that period of time to present day. In the late 1990s, we had not had a turnaround in the economy. In the late 1990s and the early 2000s, we had not had September 11, or we had not had homeland defense, we had not had Iraq, we had not had an economy that was going down for several years. Today we have a different kind of situation.

So it is sort of interesting to me. I suppose I have said as hard as anyone to be a budget balancer in this place, but I recognize you cannot talk about the same things under different circumstances. You can talk about balanced budgets all you want—and it is something I surely agree with—but when you are in a pit in terms of the economy, you have to do something so the economy will grow and replace that deficit. That is the whole purpose of what we are talking about.

We face, of course, an economic slowdown that began before the year 2000. The events of September 11 changed our world, stopped any recovery. The uncertainty of where we have been over the last several years has slowed down investment. There is no question about that. Now we are a little closer to the end of that, hopefully. The war and ongoing terrorism have created a challenge.

We have to create an environment that spurs both short- and long-term growth. The idea that we ought to do something for just a year to help the economy has been tried. It did not work. If you are a businessperson, if you are planning for your family, if you are doing anything long term, you have to know what you are doing is not going to expire in the next 9 months. So I think that is an important idea for us to talk about.

Of course, tax reductions will very quickly put money in people’s pockets—and a very broad part of the economy, as a matter of fact. That will help create the confidence necessary to do some of what this economy needs. I disagree with those who maintain that the answer to strengthening our economy is to go on another Federal Government spending binge. I believe we are already spending too much. I am interested in reducing taxes and changing some of the ways we do business.

But we are talking now about a bill that moves us in the right direction, one that has innovation and inspiration for investment, wanting to do something that gives incentives to do that.

I was just in Wyoming over this past weekend talking to the Governor about what we are seeing in the west. He talked about the economic security for our State and our country and our families over time, we need to really kind of know where we are going so we can measure what we do against what we did in the interim to see if we are going to get there. The governor said something interesting to me about figuring out what to do, getting on with it.

Getting on with it doesn’t work unless you know where you want to go. That needs to be part of the case here. Today we are considering a tax relief bill that will point the economy in the right direction. It is a good package. It puts money in the pockets of hard-working Americans, spurs investment, builds confidence in the economy, creates employment opportunities throughout America. Employment opportunities are the key.

Some of the provisions include accelerating the reduction in individual tax rates for everyone. To this idea that we should cut the wealthy, of course, someone who pays a great deal in taxes gets more dollars out of it, but as a percentage, it is to help everyone. It increases small business expensing limits. One of the things we can do is cause these small businesses to invest. It creates increased relief for individuals on the minimum tax. We have these tax deductions all along the line. And then we say, yes, but you can’t use them because we have a minimum tax. I agree with the Senator, we need to do some tax changes just in the structure. Increase the child tax credit. We talk about dividends.

There are other things that are there: provide marriage penalty relief of course and dividends. The dividends are not so much entirely just what people get out in dividends, but what it does to the corporate sector in how they function, how they operate, how they will be expanding, how they will create employment. These go beyond simply the distribution at the moment.

I am particularly pleased with the provisions that benefit small businesses; namely, of course, the acceleration of the individual tax rates. It increases small business expensing limits. Four out of five businesses have fewer than 20 employees. Generally we are talking about small business. Small firms are responsible for 55 percent of the new innovations and jobs. Small firms are responsible for 55 percent of new innovations and jobs. Small firms are responsible for 55 percent of the new innovations and jobs. Small firms are responsible for 55 percent of the new innovations and jobs.

In the late 1990s, we had not had homeland defense, we had not had Iraq, we had not had a turndown for several years. Today we have a different kind of situation.

I agree with the Senator, we need to do something so that in most States over the last few years spending has gone up tremendously, taxing has gone down. So there are going to have to be some changes there. In our bill we put $20 billion, most of it to be designed for Medicaid. I hope, again, that we don’t, in this effort to do something to help, increase the long-term arrangements for who is going to pay for these various programs. I happen to be one who thinks government closer to the people is the best way to go and that we ought to take a long look at that.

One of the things I think is important that we ought to talk about is the taxpayers in the highest income brackets are often entrepreneurs and small business owners, not just high-paid executives. I believe we ought to talk about these small businesses. Small business owners typically report their profits in their individual income tax returns. So that individual income tax is effectively the small business tax. When we talk about people getting some reduction, often those are small businesses that will put that money back in terms of investments.

Small businesses frequently pay the highest marginal rate. Taxpayers in the highest rate currently face a marginal rate of 38.6 percent. Although they file less than 1 percent of all tax returns, these taxpayers account for 16 percent of reported income, more than 31 percent of individual income tax payments.

Small business owners receive almost 80 percent of the tax relief from the top marginal tax rates of 35 percent. What we are seeking to do is to generate those jobs in the small businesses. Particularly, I suppose, in States such as Montana and Wyoming where almost all of our businesses are small, that is a crucial part of the economy. More than 98 percent of all companies have fewer than 100 employees. This is where we ought to be really focusing.

We talk about the dividend exclusion, of course, the economic impact of it. Double taxation of corporate earnings can eat up 60 percent of the profits, and the Federal tax is 35 percent at the corporate level, and another 38.6 percent of the remaining 65 percent at the individual level. There is something wrong if—ifyou invest in a company and that money, before you can get it back, is taxed at that rate. That doesn’t, of course, include any State or local taxes. So the tax burden on dividends could be higher than 60 percent.

This bill is a downpayment on ending double taxation. It is less than the President asked for. It is really less than the House has in theirs. But it is something that has a real impact on the future of jobs in this country.

We have a real challenge before us. I know we will be involved in many different snags and all that are going to come about in the discussion. There will be a great deal of interest in sending money back to the States. There is quite a bit of evidence that in most States over the last few years spending has gone up tremendously, taxing has gone down. So there are going to have to be some changes there. In our bill we put $20 billion, most of it to be designed for Medicaid.

I hope, again, that we don’t, in this effort to do something to help, increase the long-term arrangements for who is going to pay for these various programs. I happen to be one who thinks government closer to the people is the best way to go and that we ought to take a long look at that. One of the things I think is important that we ought to talk about is the taxpayers in the highest income brackets are often entrepreneurs and small business owners, not just high-paid executives.
give the States more and more opportunity to do their own thing by reducing our taxes. And if they need more taxes, that is where it ought to be, so that it can conform to the needs of a particular State.

We expect to be involved. As I understand the rule, there is a 20-hour limit on the debate on this reconciliation bill. That is good. We will need to address ourselves to a good many amendments. We talked about a good many of them in our committee before we got to the point of order. So we will have to consider that. We should do that. All I ask is that we keep in mind we really ought to have a goal. That is to strengthen the economy in a way that extends over time; that we create opportunities rather than payouts; that we have an opportunity to have a stronger economy for a period of time. And that is really what it is all about.

I yield the floor.

The PRESIDING OFFICER. The acting President Officer is pleased to recognize the distinguished chart king from North Dakota.

Mr. CONRAD. I thank the Chair. I don’t want to disappoint.

I want to respond to some of the arguments my colleague from Arizona made in his remarks because he referenced a number of matters which are mistaken. First, the Senator from Arizona said the current weakness in the economy is not a result of weak consumer demand. He then referred to numbers last year where for a couple of quarters consumer demand was good.

Weak consumer demand is right at the heart of the weakness of this economy. Consumer demand in the first quarter of last year went up at 1.4 percent. That is tepid. That is weak. That is right at the heart of the weakness of the economy. In the last quarter of last year, consumer demand went up 1.7 percent. That is right at the heart of why our economy is weak. People have lost confidence, and they have lost jobs, and they are not buying. That is why companies aren’t investing.

Have we missed what has occurred? Our colleague said it is a capital problem, a lack of capital. That would suggest we have a lack of capacity in our manufacturing. That is not what we are seeing. The capacity of America is operating at 74.8 percent. That means 25 percent of the manufacturing capacity is idle. Is it idle? Is it because of a lack of investment? Absolutely not. It is idle because there is a lack of demand. People are not buying. If we want to give a lift to the economy, we ought to strengthen consumer demand, so they will buy from our businesses, so our businesses will have a reason to invest.

We know we have overcapacity in telecommunications, in computer chips, and in area after area. The reason we have a tremendous bubble in markets is because overcapacity developed.

That takes us to the plan before us. I believe the plan the President has put before us is ineffective with respect to dealing with the weakness in our economy. I believe it is fiscally irresponsible, and I believe it should be defeated. I believe the President’s plan will actually weaken the economy further because it is going to explode the deficits and debt we see in this economy.

Finally, the proposal is unfair because it is heavily weighted to the wealthiest among us. One of the assertions that my colleague from Arizona was that our corporate taxes are very high in this country. They are not. On this chart is a comparison of taxes made by the Organization for Economic Cooperation and Development, which is the international scorekeeper. This looks to the most recent year for which they have full figures. For corporate income taxes as a percentage of gross domestic product, the average is right here, about 3¼ percent. The United States is way down here on the chart. I see a comparison that we have the second highest taxes on corporations next to Japan is just not so. It is just not so.

The reason they come to the conclusion that is because of the nominal tax rates—the tax rates that are in the law books—and forget to look at what actually happens when you start paying taxes: the deductions, the writeoffs, the ability to reduce your tax burden even further. So, for example, we all know what the tax rates are in the law. But that isn’t what the corporations pay. In fact, corporations pay substantially less than that because of deductions, exclusions, and writeoffs. So the reality is that we are at a relatively low cost tax jurisdiction when you compare us with other countries in the world.

When we look at the question of stimulating the economy, I think this comparison is important. On this chart is Senator Daschle’s plan. Here is the first-year cost and the 10-year cost, compared to what is before us in the Senate—called the Senate Finance Committee plan—and this is the House plan. You can see that in terms of giving lift to the economy now, Senator Daschle’s plan is far better, far stronger than the other competing plans. He has $125 billion of stimulus to the economy this year. The bill before us has $44 billion. The bill from the House has $40 billion in the first year. So they have very little lift to the economy in their plans. Let’s think about it logically. We have a $10.5 trillion economy, and they are proposing giving a $45 billion, or $48 billion in lift—very small.

One of the key determinations made in his remarks because he won’t disappoint.

The PRESIDING OFFICER. The acting President Officer is pleased to recognize the distinguished chart king from North Dakota.

Mr. CONRAD. I thank the Chair. I don’t want to disappoint.

I want to respond to some of the arguments my colleague from Arizona made in his remarks because he referenced a number of matters which are mistaken. First, the Senator from Arizona said the current weakness in the economy is not a result of weak consumer demand. He then referred to numbers last year where for a couple of quarters consumer demand was good.

Weak consumer demand is right at the heart of the weakness of this economy. Consumer demand in the first quarter of last year went up at 1.4 percent. That is tepid. That is weak. That is right at the heart of the weakness of the economy. In the last quarter of last year, consumer demand went up 1.7 percent. That is right at the heart of why our economy is weak. People have lost confidence, and they have lost jobs, and they are not buying. That is why companies aren’t investing.

Have we missed what has occurred? Our colleague said it is a capital problem, a lack of capital. That would suggest we have a lack of capacity in our manufacturing. That is not what we are seeing. The capacity of America is operating at 74.8 percent. That means 25 percent of the manufacturing capacity is idle. Is it idle? Is it because of a lack of investment? Absolutely not. It is idle because there is a lack of demand. People are not buying. If we want to give a lift to the economy, we ought to strengthen consumer demand, so they will buy from our businesses, so our businesses will have a reason to invest.

We know we have overcapacity in telecommunications, in computer chips, and in area after area. The reason we have a tremendous bubble in markets is because overcapacity developed.

That takes us to the plan before us. I believe the plan the President has put before us is ineffective with respect to dealing with the weakness in our economy. I believe it is fiscally irresponsible, and I believe it should be defeated. I believe the President’s plan will actually weaken the economy further because it is going to explode the deficits and debt we see in this economy.

Finally, the proposal is unfair because it is heavily weighted to the wealthiest among us. One of the assertions that my colleague from Arizona was that our corporate taxes are very high in this country. They are not. On this chart is a comparison of taxes made by the Organization for Economic Cooperation and Development, which is the international scorekeeper. This looks to the most recent year for which they have full figures. For corporate income taxes as a percentage of gross domestic product, the average is right here, about 3¼ percent. The United States is way down here on the chart. I see a comparison that we have the second highest taxes on corporations next to Japan is just not so. It is just not so.

The reason they come to the conclusion that is because of the nominal tax rates—the tax rates that are in the law books—and forget to look at what actually happens when you start paying taxes: the deductions, the writeoffs, the ability to reduce your tax burden even further. So, for example, we all know what the tax rates are in the law. But that isn’t what the corporations pay. In fact, corporations pay substantially less than that because of deductions, exclusions, and writeoffs. So the reality is that we are at a relatively low cost tax jurisdiction when you compare us with other countries in the world.

When we look at the question of stimulating the economy, I think this comparison is important. On this chart is Senator Daschle’s plan. Here is the first-year cost and the 10-year cost, compared to what is before us in the Senate—called the Senate Finance Committee plan—and this is the House plan. You can see that in terms of giving lift to the economy now, Senator Daschle’s plan is far better, far stronger than the other competing plans. He has $125 billion of stimulus to the economy this year. The bill before us has $44 billion. The bill from the House has $40 billion in the first year. So they have very little lift to the economy in their plans. Let’s think about it logically. We have a $10.5 trillion economy, and they are proposing giving a $45 billion, or $48 billion in lift—in a $10 trillion economy. Most economists say you have to at least have 1 percent of gross domestic product to have any significant effect. They are far short of that—less than one-half of 1 percent. They are not going to give any meaningful lift to the economy. Senator Daschle’s plan is about 1¼ percent of the gross domestic product. But, in addition to that, his cost over 10 years is much less. Their cost over 10 years is much more.

Why is that important? Because we know we are already in record deficit and we know that if we follow the President’s plan, the deficits are going to be $400 billion in a totally unsustainable situation.

Now, some have gone out and analyzed the effect on jobs of these various plans. Here is what they have found. Comparing the Democratic plan to the President’s plan, they found that our plan gives about twice as much lift to the economy in the first year as does the President’s plan. In the second year, it is about twice as much lift to the economy. But we do not have the negative long-term effect that the President’s plan has.

Some people may look at this and say, What negative effect could the President’s plan have long term? Well, economists have studied his plan—including 10 Nobel laureates in economics—and they have said the President’s plan is not an economic plan, not a job growth plan; it will hurt long-term economic growth; it will diminish job creation in the country because it is all financed with borrowed money. The deadweight of those deficits and debt is going to hurt our long-term economic condition.

You know, it is interesting, the people hired by the White House to make these determinations came to that same conclusion. This is a group called Macroeconomic Advisers, hired by the White House to do macroeconomic analyses—our own budget office—and here is what they told us: The President’s policy will give a short-term boost before 2004, and then it is worse than doing nothing.

After 2004, look at what happens to economic growth under the President’s plan, according to Macroeconomic Advisers. This gives a short-term lift before the 2004 election, and then look at what happens to economic growth. It plunges, and you are better off for the long term having done nothing.

How can that be? Here is what Macroeconomic Advisers said:—I didn’t hire them, the White House did; the Congressional Budget Office hired them. Here is what they said, talking about the President’s plan:

Initially the plan would stimulate aggregate demand by raising disposable income, boosting equity values, and reducing the cost of capital.

These are arguments our friends on the other side of the aisle have made.

However, the tax cut also reduces national saving directly while creating little new, permanent incentive for either private saving or labor supply. Therefore, unless it is paid for with a reduction in Federal outlays, the plan will raise equilibrium real interest rates, crowd out private sector investment, and eventually undermine potential gross domestic product.

It is not a plan that is an economic growth plan. It is a plan that will undermine long-term economic growth. It is not just economy.com and 10 Nobel laureates in economics, and it
is not just Macroeconomic Advisers. Here is a group of 250 of the leading CEOs in America’s Committee on Economic Development. They say the current budget projections seriously underestimate the problem of the growing deficit. While they say economic growth has caused much of the immediate deterioration in the deficit, the deficits in later years reflect our tax and spending choices. Deficits do matter. The aging of our population compounds the problem. I think they got it exactly right, and the President has it exactly wrong.

This is the chart that tells us what is happening to our budget deficits. This chart shows us the deficits are skyrocketing. In fact, they will be between $500 billion and $600 billion this year. We have never had a budget deficit of more than $250 billion in our country’s history, and we are heading for a deficit, on an operating basis, of over $550 billion. That is on an operating basis.

To be fair, on an operating basis, I think the previous record deficit was $350 billion or $360 billion. So this is by far the biggest deficit, on an operating basis, we have ever had. It doesn’t end any time in the next 10 years. As I mentioned, we are running operating deficits, each and every year, of over $300 billion.

Let’s review the background of how we got here. You will recall that 2 years ago, if you told by the administration we could expect almost $6 trillion in surpluses—$5.6 trillion in surpluses, we were told, over the next 10 years. Now we see, according to the CBO, if we adopt the President’s tax policy and his spending policy, instead of surpluses, we will have $2 trillion in deficits. That is fiscally irresponsible.

I am not talking about the short term. The Senator from Wyoming said you sometimes have to run a deficit to give the economy a boost. I agree with that. But we are talking about never getting out of deficit, according to the President’s plan.

Take his own budget documents—and I will show them in a moment—according to the President’s analysis of his own plan, you never escape from deficits, and they absolutely explode as the cost of the tax cuts increase at the very time the cost of the Government increases with the retirement of the baby boom generation.

What did all that money go where? Where did it go? Nearly an $8 trillion turn in 2 years—a turn for the worse. Where did it all go? The biggest chunk went to the tax cuts, those already passed and those proposed. That is 36 percent of the disappearance of the surplus.

The second biggest reason is additional spending in response to the attack on this country and the war. That is 28 percent of the disappearance of the surplus—more spending for defense—increased spending for homeland security. Oh, no, this is not a matter of the Democrats were spending money. We all supported increasing defense spending and increasing homeland security.

The third biggest reason for the disappearance of the surplus, 27 percent of the reason is lower revenues, not as a result of tax cuts, but revenues lower than anticipated because the models predicting how much revenue we would get have simply been wrong. This is lower revenue, not as a result of tax cuts. Lower revenue is the third biggest part of the reason for the disappearance of the surplus. Those two together are 63 percent.

Only 9 percent of the disappearance of the surplus over the next 10 years is because of the economic downturn. Now we have budget deficits. The surpluses are all gone, and we are talking about massive deficits. What our friends on the other side of the aisle recommend is more tax cuts, massive tax cuts; not just tax cuts this year, but tax cuts next year, and 10 years from now. One third of the tax cuts we get now have simply been wrong. This is on the tax cuts that have effect 5 years from now that we got here. You will recall that 2 years ago we got the biggest chunk of tax cuts when he is forecasting massive deficits. He is giving tax cuts right on the eve of the retirement of the baby boom generation when the cost of the Federal Government is going to explode.

Two years ago, the President told us: Adopt my plan and we will pay off virtually all the debt. That turned out to be wrong, too. This year, we have had $6.7 trillion of gross Federal debt. Now the President is forecasting massive deficits. He is giving tax cuts right on the eve of the retirement of the baby boom generation when the cost of the Federal Government is going to explode.

I think the juxtaposition of all this is really odd. Maybe that is the best word to put to it. The President is asking for a massive tax cut when we already have record budget deficits, and at the very time our Republican colleagues are asking for the biggest increase in our debt in the history of the country. They are asking for a $984 billion increase in the debt. The largest increase we have ever had was in the President’s last budget when the debt was increased at one fell swoop by $915 billion.

The President today said to the American people: This money is not going to put to it. The President is asking for a massive tax cut when we already have record budget deficits, and at the very time our Republican colleagues are asking for the biggest increase in our debt in the history of the country. They are asking for a $984 billion increase in the debt. The largest increase we have ever had was in the President’s last budget when the debt was increased at one fell swoop by $915 billion.
When the President says, when we are already running record deficits, cut the revenue some more and increase spending—remember, the President’s budget plan was not cut taxes and cut spending. The President’s budget plan was to increase the debt and to cut taxes, even when we have record deficits. The result is a massive explosion of debt, and it is the people’s debt, make no mistake about that. In the future, when they come around to start to retire this debt, it is all of us who are going to be in the book. Maybe it is not going to be us. Maybe it is going to be our kids. Maybe that is the idea. Let us give ourselves big tax cuts. I would be a big beneficiary of those tax cuts.

I would get thousands of dollars of tax relief under this plan. I do not think it is right to give me a big tax cut now and shuffle it off to my kids and everybody else’s kids. That is what is happening. That is, again, not my estimate of what is happening. This is taken from the President’s own budget document. This is his long-term outlook of what happens if we adopt his plan. This is on page 43 of his analytical perspectives, and it shows the deficits now which are running these record deficits. They look small on this chart because that is in comparison to what is to come. This is in percentage of GDP terms. This is not in dollar terms. So this is an apples-to-apples comparison.

Looking to happen when we adopt the President’s spending and tax cut plan. The deficits explode, according to his own analysis of his own plan. It is not surprising why that is the case. This is the chart that tells it all. The blue bars are the Medicare trust fund. The green bars are the Social Security trust fund. The red bars are the tax cuts. What it shows is right now the trust funds are running big surpluses in anticipation of the retirement of the baby boom generation. But instead of using money to pay down debt or prepay the liability, we are taking it and using it to pay for tax cuts.

What happens when those trust funds go cash negative when the baby boomers retire? Under the President’s plan, at the very time the trust funds go cash negative, the cost of the tax cuts explode. Does this make sense? Is this really an economic growth plan? We are not talking about tax cuts now to give a lift to the economy when it is weak. We are talking about tax cuts that explode 10 and 15 years from now at the very time the expenses of the Federal Government explode because of the retirement of the baby boom generation.

Some are saying, well, deficits really do not matter. We do not need to worry about deficits anymore. The Chairman of the Federal Reserve Board thinks deficits matter. This is what he said to the Senate Banking Committee:

There is no question that as deficits go up, contrary to what some have said, it does affect long-term interest rates. It does have a negative impact on the economy, unless attended. He is exactly right. Deficits do matter. They always have. When Chairman Greenspan looks at this tax cut, here is what he says: Without spending reductions, they could be damaging to the economy.

With a large deficit, Mr. Greenspan said, you will be significantly undercutting the benefits that would be achieved from the tax cuts.

Not only is this plan bad on the other side.

The PRESIDING OFFICER. Mr. REID. I ask unanimous consent for additional time.

Mr. CONRAD. I ask unanimous consent for additional time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. REID. One additional minute on the other side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CONRAD. Mr. President, I conclude by saying not only is this plan ineffective in terms of giving lift to the economy and irresponsible in terms of the exploding deficits and debt, but it is also unfair. It is unfair because it overwhelmingly gives the greatest benefit to the wealthiest among us. The effect of this plan on people earning over $1 million in 2003 is this: They will get a $64,000 tax cut on average. That is for those earning incomes of over $1 million. Those who are in the middle of the wage distribution in our country will get a tax cut of $233.

We heard earlier that this thing has tremendous benefits to the elderly. Well, it certainly does. It has tremendous benefits to those who are wealthy who are elderly. Elderly earning more than $500,000 a year would get a $24,000 tax break.

The PRESIDING OFFICER. The additional minute requested by the Senator has expired.

Mr. CONRAD. I ask unanimous consent for an additional 30 seconds.

Mr. REID. The same on the other side.

Mr. President, I object.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CONRAD. I conclude by saying that if one is elderly and earns less than $50,000 a year, they will get a $90 tax reduction. If they are elderly and earn more than $500,000, they get a $24,000 tax reduction. That is not my idea of fair. That is not my idea of being effective for economic growth, and it is ultimately self-defeating because the plan is all financed by borrowed money.

The PRESIDING OFFICER. The additional 30 seconds requested by the distinguished Senator has expired.

Mr. REID. The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. REID. When and if we complete the morning business—which I understand there is 1 minute and a half remaining—is that right?

The PRESIDING OFFICER. That is correct.

Mr. REID. What would be the order before the Senate at that time?

The PRESIDING OFFICER. There is 11 minutes remaining. I am in error.

Mr. REID. What would be the order following the majority using its 11 minutes?

The PRESIDING OFFICER. The Senate has an order to proceed to S. 2.
