

to war, is failing in helping men and women in uniform when they get out of war.

EXCHANGE OF SPECIAL ORDER TIME

Mr. WELDON of Florida. Mr. Speaker, I ask unanimous consent to take the Special Order time of the gentleman from Oklahoma (Mr. COLE).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

STEM CELL RESEARCH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. WELDON) is recognized for 5 minutes.

Mr. WELDON of Florida. Mr. Speaker, I come from the Sunshine State of Florida, and I rise tonight to shed a little sunshine, speak out some truth regarding the facts on stem cell research and specifically President Bush's position on stem cell research. And I would like to highlight some of the inaccuracies, misstatements and lack of candor that is coming from presidential candidate JOHN KERRY.

Senator KERRY's statements are notable for their sweeping inaccuracy. And as a physician who has formerly and still does take care of patients suffering from diseases like Alzheimer's and diabetes mellitus, I am very concerned that these statements are creating a false hope on the part of many people who suffer from these conditions. And, further, I am very disturbed by the fact that it appears as though the Senator is trying to exploit their suffering for his own personal political gain.

Senator KERRY has repeatedly stated that he intends to lift the Bush ban on stem cell research. What he does not tell us is that there is no Bush ban on stem cell research. Indeed, just this past year, under the Bush administration, some \$300 million has been spent on adult stem cell research, and on embryonic stem cell research, there has been about \$35 million spent. The facts are simple, and they are basically this: This body, the Congress of the United States, passed a ban on Federal dollars being used for research that involves the destruction of a human embryo.

□ 2045

Interestingly, Senator KERRY has voted for that, it is in the Labor, Health and Human Services bill, and he has voted for it I understand repeatedly; and that is where the ban is. It is actually in a bill this body passed and that Presidential candidate JOHN KERRY actually voted for. He is now criticizing President Bush for something that he actually voted for.

So what is the truth? What is really going on? Well, this body voted for no funding on any research that involves the destruction of a human embryo.

When you do embryonic stem cell research in humans, you have to destroy a human embryo in order to do that research. You have to take stem cells out of that embryo and, in the process of doing that, you destroy it. This is not illegal in the United States. It is perfectly legal to do it. The debate is exclusively over Federal funding of it.

Now, what President Clinton did is he played a very clever game around the intent of the law. He allowed these embryos to be destroyed in outside labs, and then the embryonic stem cells were shipped over to the NIH and he allowed Federal funding to be used for that.

I, along with others, felt that President Clinton was violating the law when he was doing that. And we asked him to stop, and he did not. Ultimately, George Bush came into office, and this was one of the first significant biomedical issues that the Bush administration had to wrestle with, and the decision was made that they would stop doing that. They would essentially stop being complicit in violation of the law and they would comply with the law.

So what is exactly the controversy here, you might say? Stem cell research, embryo stem cell research, what exactly is going on is very, very simple. We have been using adult stem cells, and adult stem cells are stem cells from our own bodies, in treating people with diseases for years and years and years and years.

I have in this chart next to me on my left an example of a person who had bad rheumatoid arthritis, and this is something we call a rheumatoid nodule. They were treated with adult stem cells, and you can see in this photo that nodule clears up, the rheumatoid arthritis goes away.

This is another chart of the same person. It may be a little bit hard to see, but this is before the treatment, the joints were very inflamed and red. You can see a nodule here on the thumb. Then after an adult stem cell treatment, it all clears up.

There are some people who feel that these embryonic stem cells will be better at this kind of treatment, but it has never been done. Nobody has ever taken an embryonic stem cell and treated a human being for anything.

What I believe Senator KERRY wants is he wants Federal dollars to be used for embryonic stem cell research in humans, even though it has never even been successfully done in animals. I think this is the wrong thing to do, and I think Mr. KERRY needs to retract some of these misstatements that he has been making.

GREAT VICTORY FOR FARM LABOR ORGANIZING COMMITTEE IN REACHING LABOR AGREEMENT

The SPEAKER pro tempore (Mr. MURPHY). Under a previous order of the House, the gentlewoman from Ohio

(Ms. KAPTUR) is recognized for 5 minutes.

Ms. KAPTUR. Mr. Speaker, I am proud to speak this evening on behalf of the people of our congressional district in Ohio. All Members like to rise when something really significant has happened, and I come from a part of America, northern Ohio, that has always fought for the betterment of the working conditions of people, across our region, across our State, across our country, and indeed across the world.

This past week, and I will place the article in the RECORD, something truly historic has occurred, something that deserves mention in the CONGRESSIONAL RECORD of our Nation, and that is the great victory by the Farm Labor Organizing Committee of Northwest Ohio and its magnificent leader, Baldemar Velasquez, in achieving the first labor agreement on behalf of thousands and thousands of migrant workers across this continent, for the first time giving them the ability to earn a decent wage, to have decent working conditions, and to contract for their labor, to begin to get rid of the corruption that surrounds individuals who move around this continent, exploiting people and forcing them to pay bounty if they want to go back to their nation, forcing them to pay a bounty if they want a job, and then ignore them, ignore their welfare when they are working with no rights at all.

Every year, 9 million people come to the United States of America, most of them illegally, to work in our fields, picking blueberries, cutting cabbage, working in meat plants, working in food processing facilities with absolutely everybody sort of closing their eyes to their welfare, everybody making money off their backs, and yet those workers having no standing.

This past week, through this incredible agreement, the Farm Labor Organizing Committee has finally given the most exploited people on this continent the first platform to stand on. I could not be prouder to represent any group of people than this group.

I can remember as a young college graduate coming back to my community in Ohio and wearing a button that said FLOC, the Farm Labor Organizing Committee, and it had the words "viva la causa," long live the cause. Indeed the cause has finally been victorious across this great continent.

This contract that the workers have gotten will cover over 8,000 workers, dozens of growers, and hopefully begin to ameliorate the terrible conditions forced on workers on this continent because of NAFTA, all that came before it and the worsening conditions that came after, as millions of Mexican farmers were thrown off their land and became a mobile group of people across this continent with no place to live, no decent wages, coming into our market, trafficked by among the most despicable people that have ever lived.

I am just so proud of the Farm Labor Organizing Committee. This is the first
