

that Department was established in 1849. However, it took another quarter of a century, a ruling from the U.S. Supreme Court, and the protection of Federal troops to settle the bogus land claims and chase off overeager entrepreneurs seeking to make profit from the springs. Notably, the 1916 Organic Act which established the National Park Service mentioned only the Hot Springs Reservation by name, even though by that time several other national parks and monuments had been designated by Congress. The Organic Act placed all these units under the supervision, management, and control of the new agency.

On March 4, 1921, Congress elevated Hot Springs to a national park status, apparently with the personal interest of the first director of the National Park Service, Stephen Mather.

Bathhouse Row, the Hot Springs street lined with opulent bathhouses and hotels, was added to the National Register of Historic Places on November 13, 1974. The most elegant of these bathhouses, the Fordyce, has since been adapted to use as a visitor center and museum.

The park currently totals 5,550 acres and attracts over 1 million visitors a year. The park plans a 175th anniversary celebration on Friday, April 20; and this resolution will be a fitting commemoration of the role Hot Springs played in National Park history.

Madam Speaker, I want to commend and congratulate my colleague, Representative ROSS, for his commitment and leadership on this matter. We strongly support the passage of House Resolution 138 and urge its adoption by the House.

Madam Speaker, I reserve the balance of my time.

Mr. BISHOP of Utah. Madam Speaker, I yield myself such time as I may consume.

House Resolution 138 was adequately explained by the majority, and we support this resolution and we urge its adoption.

Madam Speaker, I reserve the balance of my time.

Mr. GRIJALVA. Madam Speaker, at this time I would like to yield as much time as he may consume to my colleague from Arkansas (Mr. ROSS).

Mr. ROSS. Thank you, Chairman GRIJALVA.

Madam Speaker, I rise today in support of House Resolution 138, a resolution honoring and recognizing the importance of Hot Springs National Park on its 175th anniversary. I am pleased that the entire Arkansas congressional delegation is supporting and cosponsoring this bipartisan bill.

April 20, 2007, will mark the 175th anniversary of Hot Springs National Park in Hot Springs, Arkansas. This resolution will write into history the important role that Hot Springs National Park has played in the formation of the Department of the Interior and the National Park System.

The very idea of setting aside special places in the United States for the future enjoyment of its citizens originated in Hot Springs, Arkansas, when on April 20, 1832, President Andrew Jackson and the United States Congress established Hot Springs Reservation to protect the 47 hot springs in Garland County, Arkansas. That year, Hot Springs Reservation became the first protected area in the Nation and was the only Federal area mentioned by name in the act that established the National Park System.

The Hot Springs Reservation was then officially renamed Hot Springs National Park on March 4, 1921, becoming America's 18th national park, joining many other national landmarks.

For more than 200 years, Hot Springs National Park has remained an area of exceptional beauty and magnificence. People have used the hot spring water and therapeutic baths to treat a variety of ailments, and the reservation eventually developed into a well-known resort nicknamed "the American Spa." Well, today Hot Springs National Park protects eight historic bathhouses, and the Bathhouse Row area in Hot Springs National Park is a national historic landmark district that contains the largest collection of bathhouses of its kind in North America. It provides visitors from around the country and the world with leisure activities such as hiking, picnicking, and scenic drives and remains a national treasure to be enjoyed by generations of Americans.

□ 1415

Hot Springs National Park has played a crucial role in the formation of the United States National Park System. I am proud to sponsor a resolution commemorating its 175th anniversary, and I urge my colleagues to vote in favor of House Resolution 138 today.

Mr. BISHOP of Utah. Madam Speaker, I yield back the balance of my time.

Mr. GRIJALVA. Madam Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Arizona (Mr. GRIJALVA) that the House suspend the rules and agree to the resolution, H. Res. 138.

The question was taken.

The SPEAKER pro tempore. In the opinion of the Chair, two-thirds being in the affirmative, the ayes have it.

Mr. GRIJALVA. Madam Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 8 of rule XX and the Chair's prior announcement, further proceedings on this question will be postponed.

MORE WATER AND MORE ENERGY ACT OF 2007

Mr. GRIJALVA. Madam Speaker, I move to suspend the rules and pass the

bill (H.R. 902) to facilitate the use for irrigation and other purposes of water produced in connection with development of energy resources.

The Clerk read the title of the bill.

The text of the bill is as follows:

H.R. 902

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE, FINDINGS, AND PURPOSE.

(a) SHORT TITLE.—This Act may be cited as the "More Water and More Energy Act of 2007".

(b) FINDINGS.—The Congress finds the following:

(1) Development of energy resources, including oil, natural gas, coalbed methane, and geothermal resources, frequently results in bringing to the surface water extracted from underground sources.

(2) Some of this produced water is used for irrigation or other purposes, but most of it is returned to the subsurface.

(3) Reducing the amount of produced water returned to the subsurface, and increasing the amount that is made available for irrigation and other uses—

(A) would augment water supplies;

(B) could reduce the costs to energy developers for disposing of such water; and

(C) in some instances could increase the efficiency of energy development activities.

(4) It is in the national interest to remove or reduce obstacles to use of produced water for irrigation or other purposes in ways that will not adversely affect water quality or the environment.

(c) PURPOSE.—The purpose of this Act is to facilitate the use of produced water for irrigation and other purposes without adversely affecting water quality or the environment, and to demonstrate ways to accomplish that result.

SEC. 2. DEFINITIONS.

In this Act:

(1) PRODUCED WATER.—The term "produced water" means water from an underground source, that is brought to the surface as part of the process of exploration for or development of oil, natural gas, coalbed methane, or any other substance to be used as an energy source.

(2) SECRETARY.—The term "the Secretary" means the Secretary of the Interior.

(3) UPPER BASIN STATES.—The term "Upper Basin States" means the States of Colorado, New Mexico, Utah, and Wyoming.

(4) LOWER BASIN STATES.—The term "Lower Basin States" means the States of Arizona, California, and Nevada.

SEC. 3. IDENTIFICATION OF PROBLEMS AND SOLUTIONS.

(a) STUDY.—The Secretary, acting through the Commissioner of Reclamation and the Director of the United States Geological Survey, shall conduct a study to identify—

(1) the technical, economic, environmental, legal, and other obstacles to increasing the extent to which produced water can be used for irrigation and other purposes without adversely affecting water quality or the environment; and

(2) the legislative, administrative, and other actions that could reduce or eliminate such obstacles.

(b) REPORT.—Not later than one year after the date of the enactment of this Act, the Secretary shall report to the Committee on Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate regarding the results of the study required by this section.

SEC. 4. IMPLEMENTATION.

(a) GRANTS.—Within existing authorities and subject to the availability of funds appropriated for the purpose, the Secretary shall provide financial assistance for the development of facilities to demonstrate the feasibility, effectiveness, and safety of processes to increase the extent to which produced water may be recovered and made suitable for use for irrigation, municipal or industrial uses, or other purposes without adversely affecting water quality or the environment.

(b) LIMITATIONS.—Assistance under this section—

(1) shall be provided for—

(A) at least one project in one of the Upper Basin States other than New Mexico;

(B) at least one project in either New Mexico or one of the Lower Basin States other than California;

(C) at least one project in California; and

(D) at least one project in Texas;

(2) shall not exceed \$1,000,000 for any project;

(3) shall be used to pay not more than 50 percent of the total cost of a project;

(4) shall not be used for operation or maintenance of any facility; and

(5) may be in addition to assistance provided by the United States pursuant to other provisions of law.

SEC. 5. CONSULTATION, ADVICE, AND COMMENTS.

In implementing this Act, including preparation of the report required by section 3 and the establishment of criteria to be used in connection with award of financial assistance pursuant to section 4, the Secretary shall—

(1) consult with the Secretary of Energy, the Administrator of the Environmental Protection Agency, and appropriate Governors and local officials;

(2) review any relevant information developed in connection with research carried out by others, including research carried out pursuant to section 999 of Public Law 109-58, and to the extent the Secretary considers advisable include such information in the report required by section 3;

(3) seek the advice of individuals with relevant professional or academic expertise and of companies or individuals with industrial experience, particularly experience related to production of oil, natural gas, or other energy resources, including geothermal resources; and

(4) solicit comments and suggestions from the public.

SEC. 6. RELATION TO OTHER LAWS.

Nothing in this Act shall be construed as superseding, modifying, abrogating, or limiting—

(1) the effect of any State law or any interstate authority or compact with regard to any use of water or the regulation of water quantity or quality; or

(2) the applicability or effect of any Federal law or regulation.

SEC. 7. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated—

(1) \$1,000,000 to implement section 3; and

(2) \$5,000,000 to implement section 4.

The SPEAKER pro tempore. Pursuant to the rule, the gentleman from Arizona (Mr. GRIJALVA) and the gentleman from New Mexico (Mr. PEARCE) each will control 20 minutes.

The Chair recognizes the gentleman from Arizona.

GENERAL LEAVE

Mr. GRIJALVA. Madam Speaker, I ask unanimous consent that all Members may have 5 legislative days to re-

vised and extend their remarks and include extraneous material on the bill under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

Mr. GRIJALVA. Madam Speaker, I yield myself such time as I may consume.

Madam Speaker, I would like to commend our colleague, Representative MARK UDALL, for his hard work on this issue.

As many of us know, clean water is one of the most precious commodities in the West. The bill before us, H.R. 902, has a promise of providing more clean water to western communities.

In oil and gas fields with thousands of producing wells, millions of gallons of so-called produced water will be brought to the surface along with oil or gas. To those who operate oil and gas wells, produced water is a waste product. In some cases, the produced water can be injected into the wells to force more oil to the surface. If the water quality is good enough, a well operator might be allowed to discharge the water down the nearest stream, but there may also be opportunities to treat the water and make it useful for irrigation or even domestic purposes. H.R. 902 authorizes a study of the opportunities and the obstacles to beneficial and environmentally safe use of this produced water.

I again commend Mr. UDALL for his hard work on this legislation. In the 109th Congress, the Subcommittee on Water and Power held a hearing on similar legislation. This legislation was subsequently passed by the House. I urge my colleagues to join me in supporting this legislation.

Madam Speaker, I reserve the balance of my time.

Mr. PEARCE. Madam Speaker, I yield myself such time as I may consume.

I am here to support H.R. 902 introduced by the gentleman from Colorado (Mr. UDALL). I have cosponsored legislation authorizing the Department of the Interior to study the potential use of extracted water from oil and gas production for irrigation and other purposes.

It will not surprise anyone in this Chamber that water is the most important resource in the West. Water is the lifeblood of the American West and the foundation of its economy. Yet it is also the scarcest resource in some of the fastest-growing areas of the country. But we can go beyond that and declare that water is the most strategic asset in the entire world. It may surprise some in this Chamber that the potential source of good-quality water lies just beneath the surface and is being wasted every day.

During the process of oil and gas development, approximately 924 billion gallons of water is extracted throughout the year, with most of that water being pumped back underground. Some

significant share of that water is already being used for irrigation and livestock watering, but converting just 1 percent more of that total to additional beneficial use would yield over 75 billion gallons of more usable water for irrigation, ranching, fish and wildlife enhancement, stream augmentation or drinking water. The produced water that contains the lowest concentration of total dissolved solids, or TDS, less than 10,000 parts per million, is found in the western United States where water is a critical resource.

Often the largest hurdle to beneficial use of water produced from oil and gas production is finding the technology to accomplish water treatment in a cost-effective manner. Water treatment must compete with the lower-cost option of deep well injection. And while deep well injection is the most environmentally sound method of disposal, it forgoes the opportunity to use millions of gallons as a resource.

Beneficial use of this water in these arid environments will be a win-win situation for the energy industry, water consumers, and oil and gas consumers. This legislation will facilitate the potential use of this abundant water for irrigation uses and other beneficial purposes. It could potentially help us find new water from what is now a virtually untapped water resource.

I thank the gentleman from Colorado for introducing this legislation, and urge my colleagues to support the bill.

Madam Speaker, I reserve the balance of my time.

Mr. GRIJALVA. Madam Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. EDWARDS).

Mr. EDWARDS. Madam Speaker, let me begin by first thanking the gentleman from Arizona (Mr. GRIJALVA) for his excellent explanation of what is in this bill. I will not repeat all of the details of this bill, but the bottom line of this legislation is that America needs energy, America needs clean energy, and America needs clean water.

My district in central and north Texas basically is in the heart of one of the largest natural gas fields in American history, the Barnett Shale, and we are blessed to be in that situation where we are producing natural gas for not only Texas citizens, but families and businesses throughout the country.

Natural gas is one of the cleanest forms of energy for this country to run our factories and to heat our homes. Because it is priced on a regional basis rather than on a world basis, every extra thousand cubic feet of natural gas we can produce is going to make America more competitive in the world market by bringing those prices down.

This legislation is going to help us continue utilizing great natural resources such as the Barnett Shale by establishing pilot projects whereby we can learn how to more efficiently recycle the massive amounts of water that are used to, in effect, crack the shale,

divide the shale where this Barnett Shale field exists.

It is estimated that one well alone can require 3½ to 5 million gallons of water to basically break up that shale so we can bring the natural gas to the surface and utilize it in our homes and businesses. Right now much of that water is either being injected back down into the earth or literally carted away at great expense to be disposed of at other sites.

What a great benefit to the natural gas industry and families and businesses and communities all across America if we can recycle that water in an environmentally friendly way for the benefit of our farmers and ranchers, for the benefit of local communities that could use that water.

Seldom do we see in this House and on this floor a bill that businesses, the oil and gas industry, and environmentalists can be behind. I commend the gentleman and his coauthor, the gentleman from Colorado (Mr. UDALL), for having developed this legislation. It is nice to see bipartisanship on the floor of the House.

This is good for America. It does what its title says, More Water, More Energy. That is what this bill is all about. That is why I enthusiastically support it.

I want to thank the gentleman from Colorado for agreeing to my request to add Texas to the possible list of pilot sites for this project. Again, the home of the Barnett Shale in Texas is, I think, the largest producing gas field today. I think it is appropriate that Texas be included in this list of potential pilot projects. This is good legislation not just for Texans, it is good for America.

I thank the gentleman and all of those involved who put this legislation together.

Mr. PEARCE. Madam Speaker, many times people have asked exactly how does this work on the ground. For instance, in my home county of Lea County, New Mexico, we have the Ogallala Aquifer. We are right at the very edge of it. And in the 50 years we have been pumping out of the aquifer, we have used about 50 percent of the water that is available to us. There is no surface water available, only that aquifer water is available. We have used 50 percent of it, and it would take 1,900 years to recharge what has been used, and so we understand that we are on the downward slide for having water available to us.

In Lea County, New Mexico, we produce over 150,000 barrels of water yearly, and that water is reinjected. If that water were available to be cleaned up, that water would be available for development, industry and jobs. It is a very important thing.

The county right next is Eddy County. Water is produced there that is fresher than water in the Pecos River, and yet law and regulation requires the disposal of that water back down into salt zones. Everyone in the West under-

stands that at some point we are going to go back and repump that water to the surface, this time for use as water. Right now it is free at the surface. It is a by-product of the oil and gas exploration, and yet we are required to put that water back down into wells, into the salt zones, where it is going to be very much harder to clean up the next time we use it.

So this bill represents a great opportunity for us to take a step forward to benefit the industry in the West, to benefit the residents of the West, and to help lower the cost of production of oil and gas. It seems to be a win-win situation every way that we look at it.

I compliment the gentleman from Texas and the gentleman from Colorado for introducing this legislation.

Mr. UDALL of Colorado, Madam Speaker, I rise in support of my bill, H.R. 902, the "More Water and More Energy Act, and to express my thanks to Chairman RAHALL and Ranking Member DON YOUNG of the Natural Resources Committee for making it possible for the House to consider it today.

The bill's purpose is to facilitate the use of water produced in connection with development of energy resources for irrigation and other uses in ways that will not adversely affect water quality or the environment.

It is similar to a bill I introduced in the 109th Congress that passed the House last year but on which the Senate did not complete legislative action. It is cosponsored by Representative PEARCE of New Mexico, who is the ranking Republican member on the Natural Resources Committee's Subcommittee on Energy and Mineral Resources and also by Representative EDWARDS of Texas. I greatly appreciate their support.

I think the bill may help change an energy-industry problem into an opportunity, not just for oil and gas producers but for everyone else who would benefit from increased supplies of useable water.

Especially in the arid west, that covers everyone—not least our hard-pressed ranchers and farmers.

The focus of the bill is the underground water extracted in connection with development of energy sources like oil, natural gas or coalbed methane. It would do two things:

First, it would direct the Bureau of Reclamation and the USGS to identify the obstacles to greater use of produced water and the how those obstacles could be reduced or eliminated without adversely affecting water quality or the environment.

Second, it would provide for Federal help in building 3 pilot plants to demonstrate ways to treat produced water to make it suitable for irrigation or other uses, again without adversely affecting water quality or the environment.

At least one of these pilot plants would be in Colorado, Utah, or Wyoming. At least one would be in New Mexico, Arizona or Nevada. And there would be at least one each in California and Texas. This is to assure that, together, the plants would demonstrate techniques applicable to a variety of geologic and other conditions.

Under the bill, the federal government could pay up to half the cost of building each plant, but no more than \$1 million for any one plant. No federal funds could be used for operating the plants.

The bill's goal is reflected in its title—the "More Water and More Energy Act of 2006."

The extent of its potential benefits was shown by the testimony of Mr. David Templet at a hearing on the similar bill of mine the House considered last year.

Mr. Templet testified in support of that bill on behalf of the Domestic Petroleum Council and several other groups, including the Colorado Oil & Gas Association. He noted that produced water is the most abundant byproduct associated with the production of oil and gas, with about 18 billion barrels being generated by onshore wells in 1995.

And he pointed out that if only an additional 1 percent of that total could be put to beneficial use, the result would be to make over 75 billion gallons annually available for use for irrigation or other agriculture, municipal purposes, or to benefit fish and wildlife.

Now, remember that in the west we usually measure water by the acre-foot—the amount that would cover an acre to the depth of one foot—and an acre-foot is about 32,856 gallons, so an additional 75 billion gallons is more than 230,000 acre feet—more water, indeed.

And at the same time making produced water available for surface uses, instead of just reinjecting it into the subsurface, can help increase the production of oil and gas.

At last year's hearing, this was illustrated by the testimony of Dr. David Stewart, a registered professional engineer from Colorado. He cited the example of an oil field in California from which an estimated additional 150 million barrels of oil could be recovered if water were removed from the subsurface reservoir. And he pointed out that where oil recovery is thermally enhanced, a reduced amount of underground water means less steam—and so less cost—is needed to recover the oil.

The potential for having both more water and more energy is also illustrated by the example of a project near Wellington, Colorado, that treats produced water as a new water resource. I had the opportunity to visit it just last week, and found it very interesting.

An oil company is embarking on the project to increase oil production while a separate company will purchase the produced water to supplement existing supplies, eventually allowing the town of Wellington and other water users in the area to have increased water for drinking and other purposes.

In view of its potential for leading to both "more water" and "more energy" I was pleased but not surprised that last year the Administration, through the Interior Department, testified that it "agrees that the goals of the bill are commendable and the needs that could be addressed are real" and that the roles the bill would assign to the Bureau of Reclamation and the USGS are consistent with the missions and expertise of those agencies.

In view of all this, Madam Speaker, I submit that this bill—and its promise of helping provide our country with both more water and more energy—deserves the support of the House, and I urge its approval.

Mr. PEARCE. Madam Speaker, I yield back the balance of my time.

Mr. GRIJALVA. Madam Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by

the gentleman from Arizona (Mr. GRIJALVA) that the House suspend the rules and pass the bill, H.R. 902.

The question was taken; and (two-thirds being in the affirmative) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

**TAUNTON, MASSACHUSETTS,
SPECIAL RESOURCES STUDY ACT**

Mr. GRIJALVA. Madam Speaker, I move to suspend the rules and pass the bill (H.R. 1021) to direct the Secretary of the Interior to conduct a special resources study regarding the suitability and feasibility of designating certain historic buildings and areas in Taunton, Massachusetts, as a unit of the National Park System, and for other purposes.

The Clerk read the title of the bill.

The text of the bill is as follows:

H.R. 1021

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Taunton, Massachusetts Special Resources Study Act".

SEC. 2. FINDINGS.

Congress finds the following:

(1) The city of Taunton, Massachusetts, is home to 9 distinct historic districts, with more than 600 properties on the National Register of Historic Places. Included among these districts are the Church Green Historic District, the Courthouse Historic District, the Taunton Green Historic District, and the Reed and Barton Historic District.

(2) All of these districts include buildings and building facades of great historical, cultural, and architectural value.

(3) Taunton Green is the site where the Sons of Liberty first raised the Liberty and Union Flag in 1774, an event that helped to spark a popular movement, culminating in the American Revolution, and Taunton citizens have been among the first to volunteer for America's subsequent wars.

(4) Robert Treat Paine, a citizen of Taunton, and the first Attorney General of Massachusetts, was a signer of the Declaration of Independence.

(5) Taunton was a leading community in the Industrial Revolution, and its industrial area has been the site of many innovations in such industries as silver manufacture, paper manufacture, and ship building.

(6) The landscaping of the Courthouse Green was designed by Frederick Law Olmsted, who also left landscaping ideas and plans for other areas in the city which have great value and interest as historical archives and objects of future study.

(7) Main Street, which connects many of the historic districts, is home to the Taunton City Hall and the Leonard Block building, 2 outstanding examples of early 19th Century American architecture, as well as many other historically and architecturally significant structures.

(8) The city and people of Taunton have preserved many artifacts, gravesites, and important documents dating back to 1638 when Taunton was founded.

(9) Taunton was and continues to be an important destination for immigrants from Europe and other parts of the world who have helped to give Southeastern Massachusetts its unique ethnic character.

SEC. 3. STUDY.

The Secretary, in consultation with the appropriate State historic preservation officers, State historical societies, the city of Taunton, and other appropriate organizations, shall conduct a special resources study regarding the suitability and feasibility of designating certain historic buildings and areas in Taunton, Massachusetts, as a unit of the National Park System. The study shall be conducted and completed in accordance with section 8(c) of Public Law 91-383 (16 U.S.C. 1a-5(c)) and shall include analysis, documentation, and determinations regarding whether the historic areas in Taunton—

(1) can be managed, curated, interpreted, restored, preserved, and presented as an organic whole under management by the National Park Service or under an alternative management structure;

(2) have an assemblage of natural, historic, and cultural resources that together represent distinctive aspects of American heritage worthy of recognition, conservation, interpretation, and continuing use;

(3) reflect traditions, customs, beliefs, and historical events that are valuable parts of the national story;

(4) provide outstanding opportunities to conserve natural, historic, cultural, architectural, or scenic features;

(5) provide outstanding recreational and educational opportunities; and

(6) can be managed by the National Park Service in partnership with residents, business interests, nonprofit organizations, and State and local governments to develop a unit of the National Park System consistent with State and local economic activity.

SEC. 4. REPORT.

Not later than 3 fiscal years after the date on which funds are first made available for this Act, the Secretary shall submit to the Committee on Natural Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate a report on the findings, conclusions, and recommendations of the study required under section 3.

SEC. 5. PRIVATE PROPERTY.

The recommendations in the report submitted pursuant to section 4 shall include discussion and consideration of the concerns expressed by private landowners with respect to designating certain structures referred to in this Act as a unit of the National Park System.

The SPEAKER pro tempore. Pursuant to the rule, the gentleman from Arizona (Mr. GRIJALVA) and the gentleman from Utah (Mr. BISHOP) each will control 20 minutes.

The Chair recognizes the gentleman from Arizona.

GENERAL LEAVE

Mr. GRIJALVA. Madam Speaker, I ask unanimous consent that all Members may have 5 legislative days to revise and extend their remarks and include extraneous material on the bill under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

Mr. GRIJALVA. Madam Speaker, I yield myself such time as I may consume.

Madam Speaker, H.R. 1021 directs the Secretary of the Interior to conduct a special resources study to determine if certain historic buildings and areas in Taunton, Massachusetts, are suitable

and feasible for designation as a unit of the National Park System. The bill was introduced by the gentleman from Massachusetts, Mr. BARNEY FRANK.

Taunton is a city rich in cultural and historic resources. The city is home to nine historic districts, with more than 600 properties on the National Registry of Historic Places. A comprehensive study of these resources will help to determine if inclusion within the National Park System is appropriate. This study will be completed in consultation with the State historic preservation officer, State Historical Society, and the city of Taunton and other appropriate organizations.

Madam Speaker, I want to congratulate Representative FRANK for his efforts on behalf of this legislation and this community. I would note that identical legislation was approved by the House in the last Congress, and we urge our colleagues to support the measure today.

Madam Speaker, I reserve the balance of my time.

□ 1430

Mr. BISHOP of Utah. Madam Speaker, I yield myself such time as I may consume.

H.R. 1021 has been adequately explained by the majority, and we have no objection to this legislation. We also have no other speakers.

Madam Speaker, I yield back the balance of my time.

Mr. GRIJALVA. Madam Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Arizona (Mr. GRIJALVA) that the House suspend the rules and pass the bill, H.R. 1021.

The question was taken; and (two-thirds being in the affirmative) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

**NATURAL RESOURCE PROTECTION
COOPERATIVE AGREEMENT ACT**

Mr. GRIJALVA. Madam Speaker, I move to suspend the rules and pass the bill (H.R. 658) to authorize the Secretary of the Interior to enter into cooperative agreements to protect natural resources of units of the National Park System through collaborative efforts on land inside and outside of units of the National Park System, and for other purposes.

The Clerk read the title of the bill.

The text of the bill is as follows:

H.R. 658

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Natural Resource Protection Cooperative Agreement Act".
