

through rangelands across the west vegetation communities change from shrub dominated, to annual cheatgrass dominated landscapes. Not only do the vegetation communities change, but the fire cycle increase, habitat for wildlife is decreased, and forage for both domestic livestock and wildlife is greatly reduced throughout the grazing year.

Reducing fuels before the fire season using prescriptive grazing, brush thinning, green strips, and spring grazing on already cheatgrass dominated areas will help reduce the catastrophic fires that have moved through Nevada over the past few summers. The Nevada Cattlemen's Association would like to Thank You for realizing working on landscapes before the fires start is the best method not only for the landscape but for Ranchers across the state. Fire not only hurts the rancher during the fire, but for the years after when the federal land is closed off. Your recognition of the role that fire plays in these lives of rural Nevadans is greatly appreciated. We hope that you continue to support pre-fire management by ranchers and the federal land agencies. Your support on a national level shows your constituents that you care, and sets a national precedence that fire management should happen just as much before the fire bums as after. We Thank You for your support of pre-suppression fuels reduction on both public and private ground. Your recent legislation shows strong support for ranchers and the landscape they utilize.

The Nevada Cattlemen's Association works to protect ranchers and the landscapes they help to manage. Please help that tradition, value, and future continue.

Best Regards,

BOYD M. SPRATLING,
President.
