

enough and people start looking for other kinds of heat.

Let's have the chart here on my bill. The NEED Act is the bill we hope we can amend into the energy bill. It would open up the Outer Continental Shelf for gas only. And we do some things here that we think are important. States will get 37.5 percent. That will be up to 150 billion. That is with the known reserves. And we have never done modern seismographic out there, so most people who produce oil figure there is three times as much out there than we think because the old seismographic of 40 years ago wasn't very good and today we have much more sensitive seismic that will tell us exactly what's out there.

We are going to give 100 billion to the government for the Treasury; \$32 billion will go into a fund for renewable energy that will help us promote the renewables of the future; \$32 billion will go into carbon capture and sequestration research, because there are those who determined that we must capture carbon. I am not sold totally on that; I am still somewhat skeptic, but let's provide the money so we can capture the carbon and we can produce energy without putting carbon in the atmosphere if that is what they believe to be correct.

We put \$20 billion to clean up the path of the Chesapeake Bay, the exact amount of money they say they need to clean up the Chesapeake Bay; \$20 billion to restore the Great Lakes, exactly what they said they needed to restore the Great Lakes; \$12 billion for the Everglade restoration; \$12 billion for the Colorado River basin restoration; \$12 billion for the San Francisco Bay restoration; and \$10 billion for LIHEAP and weatherization, which we have to fund because energy prices today are forcing people out of their homes.

I come from rural America. We have big old farmhouses, and people hate to leave their original farmhouses. Some of them, their parents and their grandparents were raised there. They like it there, they are comfortable there, it is a nice location. But they are hard to heat. They are big old plank houses, they are not built like houses today, and it takes a lot of energy to heat them. And people, with today's oil prices and natural gas prices, are forced out of their homes. That shouldn't be in America.

With the energy prices that are facing us this year, this winter, by the time Americans drive their vehicles with possibly \$3.50, \$4 gasoline, and very high gas and fuel oil to heat their homes, they will be choosing between being warm, having adequate food, and other staples of life. I know last winter, which was a very mild winter in my area in Pennsylvania, up until January and then it was very, very cold from January 15 on for about 3 months; but overall, it was considered a mild winter because the first half was very mild. I know people that kept their

homes at 58 degrees. Seniors in America shouldn't have to live in a 58-degree house. That is not how it ought to be. They ought to be able to afford to heat their homes.

And the tragedy is if we were allowed to produce, if this Congress would stop locking up the Outer Continental Shelf, if they would open up the reserves in the Midwest which some of them are taking off in the energy bill, we could have adequate natural gas in this country; the price could be affordable; Americans could be warm; and, the very best jobs in America like petrochemical and polymers and plastic and fertilizer and glass and steel plants and bricks could be made in America, and middle-class working Americans could continue to have the jobs that have historically allowed them to live a quality of life and raise their families.

Natural gas and energy prices overall are going to change the American economy. We are right on the verge of how much this economy can absorb. I was talking to someone who has worked on this all their life. They said they are astounded that \$70 oil has not stalled our economy. They are just holding their breath because they know it can't get much higher without stalling our economy and putting our economy into a recession and possibly a world recession. These kind of energy prices.

America has to get busy. China is building coal plants weekly, nuclear plants monthly, building the largest hydro dams in the world and cutting deals all over the world for gas and oil and coal. They are out there because they know, like so many other countries know, energy is scarce today, it is high priced, and they have to be about securing their future.

This Congress has been negligent year after year in dealing with energy, and here we are now facing an energy bill that is actually going to move us backwards. The Pelosi energy plan has no energy in it. In fact, it takes energy out of the supply stream we have today and will force dependence up on foreign unstable parts of the world, with false hopes that we can conserve.

And I am for conservation. I am for all of the better light bulbs and more efficient appliances and all the things and more efficient cars. All of those things. But they move the pendulum very slowly. New CAFE standards take 10 to 15 years for the new fleet to fully be here. All of these other appliance changes, it is only when a person buys a new appliance does it impact. And I know people who have refrigerators that are 15 and 20 years old, and until they replace that they are using an older, wasteful refrigerator.

Folks, we need to have energy as the number one issue facing this Congress, energy availability and affordability. We became the strongest Nation in the world because we were the first to discover oil, harness oil, and give us an energy source that started the Indus-

trial Revolution. The whole transportation revolution came from this country because we produced energy. We are choosing today to not produce energy, and we will fritter away, we will become a second rate nation in a very few years if we continue the wrong energy policy. And if we pass the energy bill that we are going to be facing on Friday, I believe we will increase dependence quickly, we will actually cause Americans to be forced to move out of their homes in the near future, not be able to live in the homestead because they can't afford to heat it.

We will continue to force millions of jobs overseas as we have in the past. Chemical plants have been built overseas in the last few years; they will continue to be rebuilt overseas. They can't move quickly, or they would have already been gone. It is a \$2 billion, \$3 billion, and \$4 billion investment to build a small chemical plant, and \$10 billion and \$20 billion to build a large one. Folks, they are in the process of doing that.

We now make 50 percent of our fertilizer offshore. In fact, the ethanol issue is an interesting one, because we are taking food stock, corn. And to grow the corn, we have to have lots of fertilizer. It takes a lot of fertilizer to grow corn. And 50 percent of the fertilizer that we are using to grow corn is coming from foreign imports. Does that make any sense? I don't think so. Because clean green natural gas can solve all those problems.

I look at natural gas as the clean fuel that bridges us to the future. No NO_x, no SO_x, a third of the CO₂ if you are worried about CO₂. And why the environmental groups are against clean green natural gas, I will never know, because some of the renewables are not nearly as clean as clean, green natural gas.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. HAYES (at the request of Mr. BOEHNER) for July 31 until 1 p.m. on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Ms. WOOLSEY) to revise and extend their remarks and include extraneous material:)
