

So I wish to share with you tonight some of those families' stories and what this closure, what the stealing of American jobs means and also comes with a warning, a warning that I've been repeating for the last 6 months. As Niagara goes, so goes this Nation. And as Kimberly goes, so goes our country.

This is a photo I'm showing you of the Wendel family. This is Don Wendel who worked for 30 years in the Kimberly mill. His wife is Ann on the far left of the picture; his daughter, Kathleen; and the son is Anthony. And he said, "Our daughter is a junior in high school and the thought of paying for college with this uncertain future is daunting. We also need to move to a larger home or add on to ours, and this now needs to be postponed indefinitely. We may have to sell our car we bought in March."

To sum it up, "It is shocking and disheartening that the owners, instead of researching options to make this mill profitable, made such a quick decision to shut it down. It is causing such great devastation to so many families, and the entire Kimberly community."

He's not alone. There are hundreds of others, like Jerry Jansen who worked there for 41 years. His wife is Donna; children, Craig, Scott and Matt; and many grandchildren. What does he say about this impact of the closing of the mill? "Just over 2 years left until I can collect Social Security. I don't know what I'm going to do until then. Nobody is going to hire someone my age."

To sum it up, "I feel like my life has been sucked out of me."

For generations, his family has worked at that mill, not just his family but his in-laws as well.

Another family, Tom Kilsdonk has been there for 24 years. His wife, Jodi; his children, Karley, Camie, and Hannah. And he said, "I have a major changes coming in a short period of time. Financial, emotional, social. My wife now works two jobs with no health care. It will not be enough."

To sum it up he said, "I feel like someone blindfolded me, dropped me off in the middle of the forest and left me there. I am angry, frustrated and nervous."

Well, to Tom Kilsdonk, to the Jansen family, to the Wendel family, there's somebody listening, and I have the honor of representing you and coming here to Congress to share with my colleagues your story. Your story must be told not just across Wisconsin, the Midwest, but across the country. Your story is not alone.

These unfair and unbalanced trade deals and the failure of this administration to administer justice, to apply the law equally, and to allow the illegal dumping of Chinese paper and South Korean paper into our domestic marketplace has damaged not only your lives but your entire city and entire region. This is a matter of national security. It's called job security. It's something that we have to fight for each and every day here in Congress.

And, yes, it's true, there are three components to the cost of doing business in the paper industry: energy, raw materials, and labor. We have to work hard here in Congress together and join hands across the aisle to solve these complex problems of energy and the economy.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. BURTON) is recognized for 5 minutes.

(Mr. BURTON of Indiana addressed the House. His remarks will appear hereafter in the Extensions of Remarks.)

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oregon (Mr. DEFAZIO) is recognized for 5 minutes.

(Mr. DEFAZIO addressed the House. His remarks will appear hereafter in the Extensions of Remarks.)

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. SOUDER) is recognized for 5 minutes.

(Mr. SOUDER addressed the House. His remarks will appear hereafter in the Extensions of Remarks.)

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. SHERMAN) is recognized for 5 minutes.

(Mr. SHERMAN addressed the House. His remarks will appear hereafter in the Extensions of Remarks.)

AMERICAN ENERGY ACT

The SPEAKER pro tempore. Under the Speaker's announced policy of January 18, 2007, the gentleman from Ohio (Mr. LATTA) is recognized for 60 minutes as the designee of the minority leader.

Mr. LATTA. Mr. Speaker, I appreciate the time.

As we gather here this evening, we have heard a lot of speeches and discussion about one of the number one questions we have in this country, and that's our energy policy. We all went home and a lot of us didn't want to go home on August 1, and we stayed down here to get an energy policy in this country, but as we did go home, we faced a lot of questions from our constituents.

I, for one, represent the National Manufacturing Association, one of the largest manufacturing districts, with manufacturing jobs in the Congress, and the number one agriculture district in Ohio. We have got a lot of needs in our district concerning energy. And that energy isn't just talking about oil to put in our cars, but it also depends on what we have in our factories.

□ 2000

This evening, we have a number of Members who I would like to bring to

the podium to talk a little bit about what's happening, not only in their States but across this country. The first Member I'd like to introduce this evening is our distinguished Member from Texas, our ranking member on Energy and Commerce, Mr. BARTON.

Good evening, and thanks very much. Mr. BARTON of Texas. Well, thank you, Congressman LATTA, and thank you for hosting this Special Order.

It's nice to be on the floor with the cameras on and with the microphones on. I was one of, I think, 135 Republican Members of the House who participated in what I called our American townhall meetings here on the floor during the August work period where we spoke to the tourists who were coming through the Capitol. We talked about the need for a comprehensive energy policy. We did it without the benefit of microphones and with the cameras off, just speaking extemporaneously to educate the American public and to keep a vigil for the American public for a real energy policy.

I notice that our distinguished Speaker today held a press conference at which she announced yet another attempt to politically confuse the American people by putting a so-called "energy package" on the floor perhaps on Thursday, perhaps on Friday, perhaps some day next week. One of her aides, in response to a question from the press corps after that press conference, said—and I'm not going to say this is an exact quote—that they would never allow the Republican energy package to come onto the floor because it was too radical. Well, that must be a different definition of "radical" than is in Webster's Dictionary, because what the Republican energy package is is the radical notion that Americans, themselves, can develop American resources so that we have American-made energy/American-produced energy to keep America's families and America's factories humming and being productive. I don't think that's radical.

I want to talk a little bit about a part of that energy policy, the Republican energy policy, which would be to allow drilling in ANWR, up in Alaska. I've been having my staff do a little bit of research, and I thought it might be beneficial to give the benefits of some of that research here to the Members on the floor and to others in the country.

In 1910, almost 100 years ago—I think it was while Teddy Roosevelt was President—the Congress passed a law for the development of American resources. That law stated that the Presidents and Congresses could set aside certain portions of Federal lands for different purposes if they felt that there might be some economic development potential in these Federal lands. It was called the Pickett Act. So, in 1924, they decided to create what we now call the Alaska Naval Petroleum Reserve. Now, there is a reason they picked this part of Alaska, which is to the west of Prudhoe Bay, fronting on
