death and disability, thereby ensuring a long, productive, healthy life for all people. For those reasons, I felt that the CDC’s mission was far more suited to the regulation of tobacco. Unfortunately, that amendment was not approved by HELP Committee members and, as a result, the Senate is not considering a bill that would designate the FDA as the regulator of tobacco products.

In conclusion, I am probably one of the FDA’s strongest supporters in Congress, but I am concerned about the size of the FDA and its potential for overreach. I introduced legislation that created the White Oak campus; the unified FDA campus which I envisioned would bring prestige back to the agency. This campus is on track to be completed in 2012. I wanted FDA to be able to attract the brightest minds so we could get the best researchers in the country working together in order to ensure the safety of our drugs, medical devices and food supply. Dr. Margaret Hamburg, the newly confirmed FDA Commissioner, has impressed me with her strong vision for the future of the FDA. It is my hope that by adding the regulation of tobacco to the FDA’s portfolio, that vision does not go off course.

I want to make one thing perfectly clear—I support the intent of this bill which is to stop our young people from picking up that first cigarette and to protect public health by regulating tobacco. That being said, it is my hope that some of the concerns that I have raised will be carefully considered and addressed before this legislation is signed into law.

Mr. REID. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KAUFMAN. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Delaware.

PRAISE OF DR. DOUGLAS LOWY AND DR. JOHN SCHILLER

Mr. KAUFMAN. Madam President, I would like to continue what I began last month by honoring the contribution of our Federal employees.

On May 4, I came to the floor to discuss the importance of recognizing the hard work and dedicated service of our Federal employees. This is especially important because of our recovery efforts during these challenging economic times. The programs we enact, it is easy to say, will be carried out by a Federal workforce that requires people’s confidence. I know from personal experience how industrious and trustworthy civil servants are. The public needs to know this.

As I said then, we also need to encourage more of our graduates to enter careers in public service. America is blessed with so many enthusiastic and entrepreneurial citizens. We need them to lend their talents. We need their ideas, their creative minds. This is why I have made it a priority to honor excellent public servants and call attention to what Federal employees can and do accomplish.

In my previous remarks, I promised to highlight some of our excellent public servants from this desk every so often. In keeping with my promise, I rise to speak about two Federal employees whose achievements are particularly relevant to our work in this session: the current state of our health care system.

As many know, cervical cancer is the second most common cause of cancer deaths in women worldwide. It takes the lives of almost a quarter million women each year. Here in America, nearly 11,000 women are diagnosed annually.

What distinguishes cervical cancer from most other cancers is its cause. While many cancers are linked to a genetic predisposition for abnormal cell growth, nearly all cases of cervical cancer result from viral infections. The majority of these infections come from exposure to the human papillomavirus or HPV. HPV is the most common sexually transmitted disease affecting Americans.

When Dr. Douglas Lowy and Dr. John Schiller began studying HPV, little did they know that their 20-year partnership as researchers would lead to the development of a vaccine.

Working at the National Institutes of Health’s National Cancer Institute Center for Cancer Research, the two discovered that previous attempts at creating a vaccine had failed because a genetic mutation existed in the virus, making it difficult for the body to produce antibodies against it.

Once Drs. Lowy and Schiller made this finding, they worked to create a vaccine modified to prevent HPV without the mutation. This development is instrumental in the creation a few years ago of a vaccine that will prevent the vast majority of cervical cancer cases from developing.

Because over 80 percent of those who develop cervical cancer cases live in developing nations, Drs. Lowy and Schiller have been working with the World Health Organization to make the HPV vaccine available to women around the world.

In recognition of their achievement, the two men jointly were awarded the 2007 Service to America Federal Employee of the Year Medal.

Today, women and girls age 9 through 26 have the ability to be vaccinated against developing cervical cancer.

Once again, I call on my fellow Senators to join me in honoring Dr. Lowy and Dr. Schiller and all Federal employees who have distinguished themselves in their service of our Nation.

HEALTH CARE REFORM

Mr. KAUFMAN. Madam President, I would like to speak on reforming our health care system. Simply put, health care reform has been delayed for far too long, and it cannot wait any longer. Most Americans are satisfied with the health care they receive today.

But I want to be clear that I am concerned about the cost of health care. We must get health care costs under control while preserving choice.

If we do nothing and allow the status quo to persist, it has been estimated that the share of gross domestic product devoted to health care will rise from 18 percent in 2009 to 28 percent in 2030.

If health care premiums continue to rise at 4 percent per year, which is actually less than the average growth rate, then by 2025, premiums for family coverage will reach $25,200 a year—over $2,000 a month. This trajectory is simply unsustainable.

We have attempted to reform our health care system several times in the past to no avail. But this year is different and has to be different. This time the call for reform is coming from people and organizations that previously opposed reform. This time business, along with unions that represent their workers, are asking for reform.

Businesses in America have to compete against companies from other countries. Many of them do not pay anything for health care for their workers or retirees. Others pay far less than what many of our larger corporations pay. This puts many of our businesses at a disadvantage in the global marketplace.

As many know, people in my home State of Delaware and Americans across the Nation are struggling to keep up with the crushing and seemingly constant increase in the cost of health care.

Over the last decade, Americans have watched as their health insurance premiums and deductibles have risen at much faster rates than their wages, threatening their financial stability. It also puts them at risk for losing their insurance as employers struggle to provide adequate health care coverage.

Americans rightfully value their relationships with their doctor and the care they receive. We must—and I say must—preserve these relationships. In addition, as costs rise and insurance benefits erode, Americans are also asking to protect what works and fixes what is broken.

Our current health care system—the status quo—is rampant with bureaucracy, inefficiency, and waste. It is time for reform. It is time to reform health care for Americans so everyone has access to quality, affordable care, regardless of preexisting medical conditions. It is time to reform health care so we
