

Later today, thousands of people will gather in California to do just that, celebrate his life and pay tribute to him.

PROTECTING PRIVATE HEALTH INSURANCE

(Mr. SAM JOHNSON of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SAM JOHNSON of Texas. Many Americans don't have access to affordable health care, and we can and need to do better for all Americans. I support a system that gives Americans more affordable health care choices so they can pick the coverage that best fits their needs. The core part of the Democrat proposal is a new government-run program that will not only put bureaucrats between you and your doctor but would force more than 100 million people, Americans, out of the health coverage they currently receive through their jobs.

We need a plan that really does let Americans who like their health care coverage keep it, a plan that doesn't add new taxes or new mandates or drive up costs or drive people out of health care. We must give all Americans the freedom to choose their health plan, not force them into a government-run, one-size-fits-all plan. Private plans are great. Let's protect them.

INTRODUCTION OF THE SAFETY IN DEFENSE CONTRACTING ACT OF 2009

(Ms. SHEA-PORTER asked and was given permission to address the House for 1 minute.)

Ms. SHEA-PORTER. Madam Speaker, today I am introducing the Safety in Defense Contracting Act of 2009. When our servicemembers or civilian personnel put their lives at risk while deployed overseas, they should not have to worry about the safety of their living and working quarters. Unfortunately, due to shoddy contractor work, they do. American personnel have been injured or killed by electric shocks. That same deficient work has resulted in hundreds of fires, one which destroyed the largest dining hall in Iraq. Gross negligence by contractors is unacceptable.

That is why I am introducing the Safety in Defense Contracting Act to protect our military and civilian personnel by debarring grossly negligent or reckless defense contractors found guilty of causing death or injury to our personnel. Such contractors do not deserve further government contracts worth millions of dollars for performing the same work.

To make matters worse, defense contractors who are guilty of dangerously deficient work have been receiving award and incentive fees. My bill denies them these fees. They should no longer be rewarded for poor perform-

ance at the expense of the taxpayers. It will take time to rebuild our contractor oversight capabilities, but I ask my colleagues to join me in this bill.

CLEAN ENERGY—NUCLEAR POWER

(Mr. POE of Texas asked and was given permission to address the House for 1 minute.)

Mr. POE of Texas. Madam Speaker, many countries, including China and European nations, are continuing to move to clean energy, such as nuclear power. The United States, the nuclear power pioneer, lags far behind in the development of new generating plants. The United States could and should move to the licensing and development of more nuclear power plants.

Nuclear power is an efficient and a cheaper way of providing clean energy to America's manufacturing sector. We should streamline the long cumbersome process of power plant applications that use safe reactor designs, designs that have already been approved by the Nuclear Regulatory Commission.

Progress, safety and costs have advanced to a state that America can safely store spent nuclear fuel rods and also recycle fuel. One of America's most impressive plants is the North Anna Nuclear Station here in nearby Virginia. Nuclear power is responsible for 20 percent of our energy, but in France 80 percent of their energy comes from nuclear energy. Nuclear power will keep jobs in America and help free us from the shackles of foreign control of our energy.

And that's just the way it is.

OUR CLEAN AND SUSTAINABLE ENERGY FUTURE

(Ms. TSONGAS asked and was given permission to address the House for 1 minute.)

Ms. TSONGAS. Madam Speaker, global warming is no longer an academic question for scientists to ponder. It's a very real crisis that requires our leadership. This is not a political issue. This is a critical generational responsibility that will take a commitment from Congress and from every person in our society. We have a real opportunity this year to prove our commitment by voting for H.R. 2454, the American Energy and Security Act.

The renewable technologies to reduce greenhouse gas emissions exist. The societal will and desire to go clean have been demonstrated, and the political climate to finally create sound public policy is now present. The cost of inaction on this critical challenge is unacceptable and the price too high. A recent study concluded that unchecked effects of climate change could result in a cost of \$271 billion per year by 2025. Failure to act is intolerable when considering the economic and job creation opportunities a clean energy economy presents. The American Energy and Security Act provides a path that leads

us to a clean, sustainable energy future.

THE REPUBLICAN ANSWER TO THE ENERGY CHALLENGES WE FACE

(Mr. PENCE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PENCE. The American economy is hurting. Gasoline prices are on the rise. Utility rates threaten to go higher, imposing even greater hardship on working families. The American people are looking for answers in these times to the challenges we face in energy. The Democrat answer you have just heard is a national energy tax that will lead to higher energy prices and massive job losses for the American people.

The President said it best a year ago when he said, if the cap-and-trade plan were to pass, utility rates—his words now—would, quote, necessarily skyrocket.

Some estimates suggest job losses between 1.8 and 7 million. Well, Republicans have a better plan, the American Energy Act. It's an all-of-the-above plan that offers energy independence, more jobs and a cleaner environment without imposing a national energy tax. Our energy solution focuses on more domestic exploration for oil and natural gas, a renewed commitment to build 100 nuclear power plants in the next 20 years, investments in renewables, alternative energy technologies and creating incentives for conservation. You can read all about it on the editorial page of the Wall Street Journal today.

The American people want energy independence and a cleaner environment without a national energy tax. The American Energy Act offered by House Republicans is the answer the American people are looking for.

EXPRESSING OUTRAGE FOR THE MURDER OF OFFICER STEPHEN T. JOHNS

(Ms. JACKSON-LEE of Texas asked and was given permission to address the House for 1 minute.)

Ms. JACKSON-LEE of Texas. Madam Speaker, as an advisory board member of the Holocaust Museum of Houston, I rise with a deep sense of sympathy and outrage for the terrible tragic incident that happened, as The Washington Post reported, at a monument of sorrow and also a standing edifice for peace.

I offer my deepest sympathy to the family of Security Officer Stephen T. Johns. As a believer and an advocate of our Constitution and our First Amendment rights, I stand here in outrage to express my opposition to the idea that protected speech equals protected violence. This was a dastardly act, and we don't know how many other targets this hateful-minded person might have been engaged in.

We must continue to stand against hate. We must continue to promote the
