

which to revise and extend their remarks on the matter before the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Virginia?

There was no objection.

NATIONAL METASTATIC BREAST CANCER AWARENESS DAY

Mr. PALLONE. Mr. Speaker, I move to suspend the rules and agree to the resolution (H. Res. 787) expressing support for designation of October 13, 2009, as National Metastatic Breast Cancer Awareness Day.

The Clerk read the title of the resolution.

The text of the resolution is as follows:

H. RES. 787

Whereas metastatic breast cancer refers to Stage IV breast cancer when cancer cells travel from the breast, either through the bloodstream or the lymphatic system, to other parts of the body, including the bones, liver, lungs, or brain, and continue to grow in their new location;

Whereas an estimated 192,370 women and 1,910 men in the United States will be diagnosed with invasive breast cancer, and 62,280 women will be diagnosed with in situ breast cancer;

Whereas nearly 30 percent of women diagnosed with early stage breast cancer will develop Stage IV advanced or metastatic breast cancer;

Whereas in developing countries, the majority of women with breast cancer are diagnosed with advanced stage or metastatic disease;

Whereas the statistic that 155,000 women and men are presently living with metastatic breast cancer in the United States underscores the immediate need for increased public awareness;

Whereas there currently is no cure for metastatic breast cancer, and metastatic breast cancer frequently involves trying one treatment after another with the goal of extending the best quality of life as possible;

Whereas scientists and researchers are conducting important research projects to achieve breakthroughs in metastatic breast cancer research;

Whereas metastatic breast cancer is rarely discussed during Breast Cancer Awareness Month, however those living with the disease should never feel isolated or ignored;

Whereas metastatic Breast Cancer Awareness Day emphasizes the urgent need for new, targeted breast cancer treatments that will provide a high quality of life and long life expectancy for patients by making Stage IV cancer a chronic, but not fatal disease;

Whereas the House of Representatives is an institution that can raise awareness in the general public and the medical community of breast cancer; and

Whereas October 13, 2009, would be an appropriate date to designate as National Metastatic Breast Cancer Awareness Day: Now, therefore, be it

Resolved, That the House of Representatives—

(1) supports the designation of National Metastatic Breast Cancer Awareness Day;

(2) encourages all people in the United States to become more informed and aware of metastatic breast cancer; and

(3) respectfully requests the Clerk of the House to transmit a copy of this resolution to the Metastatic Breast Cancer Network.

The SPEAKER pro tempore. Pursuant to the rule, the gentleman from

New Jersey (Mr. PALLONE) and the gentlewoman from North Carolina (Mrs. MYRICK) each will control 20 minutes.

The Chair recognizes the gentleman from New Jersey.

GENERAL LEAVE

Mr. PALLONE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous material in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. PALLONE. Mr. Speaker, I yield myself such time as I may consume.

I rise today in strong support of House Resolution 787. This resolution expresses support for designating October 13, 2009, as National Metastatic Breast Cancer Awareness Day.

Metastatic breast cancer refers to stage IV breast cancer, the most advanced stage of this form of cancer. At this point, cancer cells have spread beyond the breast and underarm lymph nodes to other areas of the body. Sadly, there is no cure for breast cancer once it has reached this stage.

Breast cancer is the second most commonly diagnosed cancer in women. The National Institutes of Health estimates that nearly 195,000 new cases will be diagnosed in 2009, the majority of which occur among women. Nearly 30 percent of women diagnosed with early stage breast cancer will develop metastatic breast cancer; and despite this startling statistic, advanced breast cancer is rarely discussed during National Breast Cancer Awareness Month.

This resolution supports designation of National Metastatic Breast Cancer Awareness Day. It encourages all people in the U.S. to become more informed and aware of metastatic breast cancer and requests that the Clerk of the House transmit a copy of this resolution to the Metastatic Breast Cancer Network.

Earlier this month, my subcommittee held a hearing on four pieces of legislation that focus on prevention, early diagnosis, and treatment of breast cancer. During this hearing, we heard from four of my colleagues who have sponsored legislation to address this important health issue. Those are Congressman NADLER, Congresswoman DELAURO, who is also the sponsor of this resolution today, Congresswoman WASSERMAN SCHULTZ, and Congresswoman CASTOR. We also heard testimony from a number of advocacy groups and the National Cancer Institute.

Mr. Speaker, this hearing and the resolution before us today underscore the importance of early detection of breast cancer and ensuring that, once diagnosed, women receive the best quality treatment available. As House Resolution 787 highlights, it's especially important that women with metastatic breast cancer feel supported rather than feeling isolated or ignored.

As National Breast Cancer Awareness Month draws to a close, I would like to take this opportunity to comment on the important issues raised with respect to the experience of breast cancer patients in today's medical environment. These patients and many others lack access to preventive services that are recommended by experts. Many patients lack coverage of the medical care that they need. That's precisely why we are hard at work trying to pass health reform legislation that will improve access to quality and affordable health care for every American.

If enacted, America's Affordable Health Choices Act of 2009, currently H.R. 3200, will make dramatic improvements in our efforts to battle breast cancer. Specifically, it will provide affordable access to insurance. H.R. 3200 would prohibit insurers from excluding patients or charging higher premiums because of preexisting conditions. It would offer protection against high out-of-pocket costs by limiting deductibles and copayments and precluding insurance companies from establishing limits on annual or lifetime benefits. H.R. 3200 would also prohibit insurers from rescinding or dropping insurance policies on the basis of health status.

This bill would also provide coverage of preventive services in Medicare, Medicaid, and within the newly established Health Insurance Exchange, free of cost sharing. This means that services like mammograms would be available free of copays. Early detection and treatment can help reduce the number of patients who ever get to stage IV while we continue our efforts to find a cure for those who do.

I am pleased to join my colleagues today in raising awareness about breast cancer, and particularly stage IV breast cancer.

Of course I want to thank, in particular, the gentlewoman from Connecticut, Congresswoman DELAURO, and my colleague from New Jersey, Congressman LOBIONDO, for their leadership.

Let me just say about Congresswoman DELAURO, she has been basically a champion on every aspect of breast cancer since I've been here. I think, really, without her efforts, we would not have gone as far as we have in terms of providing meaningful research and treatment. So it's certainly no surprise that she is the prime sponsor of this resolution today.

I reserve the balance of my time.

Mrs. MYRICK. Mr. Speaker, I am very proud to be here today to support Representative DELAURO's Metastatic Breast Cancer Awareness Day resolution.

As has already been mentioned many times this month, October is National Breast Cancer Awareness Month, and we see it all over by the pink ribbons everywhere, media campaigns. Throughout the last 30 days, there has been good exposure. The month is nearly over, but the need for breast cancer

awareness and education continues all year long.

October 13 has been recognized as National Metastatic Breast Cancer Awareness Day, and I would like to thank the Metastatic Breast Cancer Network for their continued community outreach.

Awareness and education has assisted in the annual decline in deaths from breast cancer. The Centers for Disease Control has stressed the importance of women receiving regular mammograms, which can help doctors diagnose breast cancer in its early stages, which was my fortunate experience. It is because of these successful programs and National Breast Cancer Awareness Month that encourage early diagnosis before the cancer cells travel from the breast to other parts of the body, including the most well-known and, unfortunately, the places they go the most often, the bones, the liver, the lungs, and the brain. And that describes metastatic breast cancer.

□ 1100

It's commonly known as stage IV breast cancer because it is diagnosed when the cancer has spread to one or more of these distant sites in the body. For all intents and purposes, it is the scariest form of the disease and one that is very difficult to fight. People face reality when they're first diagnosed and are told that they're at stage IV. For others, it's a diagnosis they face later on as they go through their treatment, which is happening to one of my friends currently.

For these women, time is truly of the essence, and the support of family, friends and of the medical professionals is crucial. Sadly, metastatic breast cancer is deadly in most cases, but the good news is that research continues to make great strides in survival rates and in the quality of life for these patients. So I am very proud to support this resolution to designate October 13 as Metastatic Breast Cancer Awareness Day.

I thank my good friend, Representative DELAURO, who is also a cancer survivor, I might add—long term—for sponsoring this bill.

With that, I reserve the balance of my time.

Mr. PALLONE. Mr. Speaker, I yield 4 minutes to the sponsor of the legislation, the gentlewoman from Connecticut (Ms. DELAURO). I can't say enough about her. Her championing on the issues of breast cancer research, treatment, et cetera, are really always out there.

Ms. DELAURO. I thank the gentleman for the time, and I also want to say to him thank you for your very, very kind words. It has been my honor to work in partnership with Congressman PALLONE. He is enormously committed to health care and to health care reform but with particular interest to women's health issues. He has been a strong partner in his championing of these efforts on the committee which he chairs.

I also want to say a "thank you" to my colleague Congressman LOBIONDO for cosponsoring this resolution with me today and a particular "thank you" to my colleague and good friend, Congresswoman MYRICK, for all of her efforts and stamina. We are a band of sisters in this effort. Thank you so very, very much.

Mr. Speaker, following the lead of eight States across the Nation—Colorado, Georgia, Illinois, Maine, Maryland, Michigan, Washington, and my home State of Connecticut—this resolution expresses support for designating October 13, 2009, as National Metastatic Breast Cancer Awareness Day.

Right now in America, it has been said that 15,000 men and women around the country are living with metastatic, or stage IV, breast cancer. It means that the cancer cells have traveled from the breast to other areas in the body, such as to the liver, lungs, bones or brain, and the cells are now growing there. There is no cure for breast cancer once it has metastasized, and most of today's current medical treatments are focused only on extending the best quality of life for the patient.

Breast cancer is the second leading type of cancer among women. In this year alone, 192,000 women—over that number—and 1,900 men in the United States will be diagnosed with the disease, and over 62,000 women will die from it. Thirty percent of women diagnosed with earlier stages of the illness will eventually suffer from metastatic breast cancer. The later it is diagnosed, the more likely it is that the cancer has or will metastasize.

Missed opportunities of early detection is a major reason why women in developing countries, as well as right here in the United States with our own most vulnerable citizens, are more likely diagnosed with late-stage breast cancer. Without adequate access to preventative medical care, the health of the poor here and around the world is already at extreme risk.

For all of these reasons and more, we believe that Congress should support this resolution and should get behind National Metastatic Breast Cancer Awareness Day on October 13. Not only will such a day help to emphasize the urgent need for new and targeted breast cancer treatments for stage IV cancer patients, but it will raise awareness, and it will save lives.

I know firsthand. I'm a cancer survivor—ovarian cancer. I was fortunate enough to have been diagnosed at stage 1. If it had not been caught early by my doctor or if the cancer had metastasized, there is a good chance I would not be standing here today. We need to promote awareness of metastatic cancers in any way that we can so that women and men will know how to get timely mammograms and cancer screenings that might just save their lives.

Even as doctors and scientists search for a cure for metastatic breast cancer,

it is up to us to help make the treatment affordable for women in need and to pass comprehensive health insurance reform now, not later. Too many women with breast cancer today are forced to make decisions based on their finances and not on what is best for their health. All too often, as they bravely battle their illnesses, they must also fight high out-of-pocket costs and denied claims. If they become too sick to work, they must face the terrifying prospect of losing their coverage altogether.

While today we express our support for a National Metastatic Breast Cancer Awareness Day, I hope very soon in the future we will reaffirm our commitment to breast cancer patients by passing meaningful health insurance reform.

The SPEAKER pro tempore. The time of the gentlewoman has expired.

Mr. PALLONE. I yield the gentlewoman 1 additional minute.

Ms. DELAURO. Today's resolution has the support of several key organizations, including Living Beyond Breast Cancer, breastcancer.org, The Wellness Community, Breast Cancer Network of Strength—formerly Y-ME—and the Young Survivor Coalition.

By drawing attention to this disease, we can help medical researchers find ways to provide a higher quality of life and a longer life expectancy for patients. We can help make stage IV cancer a chronic but not a fatal disease, and we can encourage the women and men we love to stay aware of metastatic breast cancer and to protect themselves through regular checkups and screenings.

I strongly urge my colleagues to support this resolution.

Mrs. MYRICK. Mr. Speaker, at this time, I am very pleased to yield so much time as he may consume to the other sponsor of the legislation, the gentleman from New Jersey (Mr. LOBIONDO).

Mr. LOBIONDO. Thank you, Congresswoman MYRICK, and thank you to Congressman PALLONE and to Congresswoman DELAURO for their advocacy on this very important issue.

Mr. Speaker, I rise in very strong support of the resolution designating October 13 as National Metastatic Breast Cancer Awareness Day.

We have heard a lot of statistics. They are staggering, and they are staggering because, much of the time, some of this can be prevented. The resolution recognizes the need to raise the level of awareness and to increase research on treatments that will provide a higher quality of life and longer life expectancies for patients living with and fighting metastatic breast cancer.

I participated in an American Cancer Society cancer awareness event about 2 weeks ago on a Sunday in my district in southern New Jersey. On a Sunday morning, in a driving Nor'easter rainstorm with very high winds and with rain coming down in buckets, we had

hundreds of people who showed up because they believed that their involvement would make a difference. They were helping to raise the level of awareness. They were helping to get the message out that we can challenge this terrible disease and that we can make progress.

Metastatic breast cancer refers to stage IV breast cancer, which is when cancer cells travel and then do terrible things in other locations of the body. We know that, in this year, there will be in excess of 190,000 women, almost 2,000 men and, very, very tragically, in excess of 62,000 women who will lose their lives.

So I am a very proud cosponsor of this resolution. I encourage all of my colleagues to join in support of this. All of America should understand that, united and together, we can make a difference. We can make a difference against this dreaded disease.

Mr. PALLONE. Mr. Speaker, I yield 3 minutes to the gentlewoman from California (Ms. HARMAN).

(Ms. HARMAN asked and was given permission to revise and extend her remarks.)

Ms. HARMAN. Thank you, Mr. PALLONE, for yielding time to me to speak on this bill and on the bill that was just considered.

Mr. Speaker, I am proud to be a member of the Health Subcommittee of the Energy and Commerce Committee. I regret the fact that it has taken us so many months to get to a place where we are almost ready to consider comprehensive health care reform. I strongly support it, especially with a robust public option. Yet this is a good day because, today we will pass a more limited bill that identified a huge problem, metastatic breast cancer.

I have been fortunate not to have cancer, but there are many cancer survivors in this body, some of whom have survived breast cancer. I am the sister of Dr. David Lakes, who is an oncologist in Northern California and who was voted Healer of the Year in Marin County for the work he has done with those who suffer from metastatic breast cancer. I am very proud of him.

I am very proud of the sponsors of this legislation, who understand how critical it is not just to focus on the fact of this disease, but, as Ms. DELAURO said a few minutes ago, on how to make it a chronic disease and not a killer. So I strongly support this legislation.

As the author of Legislation to extend the PSIC Grant Program, the Public Safety Interoperable Communications Grant Program, which was debated just moments ago, I urge us to continue the program which provides \$1 billion in grants to State and local governments for interoperable communications systems, which, obviously, will be needed in the event of the next terrorist attack or natural disaster.

Eight years after 9/11, we have not fixed one of the two major problems on that day. One problem was that we

failed to connect the dots. The other was that we could not communicate in realtime among our first responders to the catastrophe both in New York and in Washington. Nationally, we still lack an interoperable communications network. That will require more work by Congress and the FCC to build out the now vacant 700 megahertz analog spectrum so that, nationally, all of our first preventers, or responders, can communicate.

In the meantime, it is significant that our communities will be able to access additional Federal funds because of the action recommended moments ago to pass S. 1694 which is identical to H.R. 3633—an action that means the bill will become law.

The SPEAKER pro tempore. The time of the gentlewoman has expired.

Mr. PALLONE. I yield to the gentleman 1 additional minute.

Ms. HARMAN. Let me finally say that the PSIC extension legislation is supported by the major city police chiefs, the National Governors Association, the National Emergency Management Association, the Association of Public-Safety Communications Officials, the Telecommunications Industry Association, mayors in Los Angeles, New York and Houston, the Los Angeles County Sheriff—Lee Baca—and many others because they know that having interoperable communications in our cities and regions is critical.

Just as metastatic breast cancer is an emergency that we must deal with, so is the lack of a truly national interoperable communications capability. We took a big step this morning. I hope we will take a bigger step later this year.

I thank Chairman PALLONE for the work that he does on the Health Subcommittee. I am proud to be a member.

Mrs. MYRICK. Mr. Speaker, I reserve the balance of my time.

Mr. PALLONE. Mr. Speaker, I yield 2 minutes to the gentlewoman from Nevada (Ms. BERKLEY).

Ms. BERKLEY. I thank the gentleman for yielding.

Mr. Speaker, I had not planned to speak on this resolution when I came to the floor, but after listening to Ms. DELAURO's eloquent discussion of it, I felt duty-bound to weigh in as well in very strong support.

There isn't a woman in my family who has not died from breast cancer—both of my grandparents, all of my aunts, of which I had several, and my mother. My sister, thank goodness, is a survivor, and has just celebrated the birth of her first grandchild herself; but it is in our family, and I cannot tell you how important this resolution is to increase the awareness of this deadly disease.

By the time my mother passed away, her breast cancer had metastasized throughout her body, and as she lay there with her family around her, she couldn't help but ask why she was still there. It broke our hearts to see this woman who had raised us so well and

who was so strong in our family literally fall apart before our very eyes.

So I hope that this resolution will increase the awareness of this dreaded disease that hits almost every household in the United States and that causes such pain and suffering. Let us be aware of it, and let us use this opportunity to educate our fellow citizens so that they can receive the treatment they need in a timely manner so they do not suffer as my entire family has.

I want to thank the gentlewoman from Connecticut, and want to urge all of my colleagues to give this resolution a resounding thumbs up.

□ 1115

Mrs. MYRICK. Mr. Speaker, I yield back the balance of my time.

Mr. PALLONE. Mr. Speaker, I would just urge everyone to support this resolution. I particularly want to thank the survivors, Mrs. MYRICK, Ms. DELAURO, and Ms. WASSERMAN SCHULTZ.

They just spend so much time devoted to this issue, whether it's research, treatment, to try to find a cure or to just raise awareness. I never cease to be amazed by their efforts. I want to thank them and I urge everyone to pass the resolution.

Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New Jersey (Mr. PALLONE) that the House suspend the rules and agree to the resolution, H. Res. 787.

The question was taken; and (two-thirds being in the affirmative) the rules were suspended and the resolution was agreed to.

A motion to reconsider was laid on the table.

SUPPORTING A NATIONAL DAY OF REMEMBRANCE FOR NUCLEAR WEAPONS PROGRAM WORKERS

Mr. LYNCH. Mr. Speaker, I move to suspend the rules and agree to the resolution (H. Res. 790) supporting the goals and ideals of a national day of remembrance on October 30, 2009, for American nuclear weapons program workers and uranium miners, millers, and haulers, as amended.

The Clerk read the title of the resolution.

The text of the resolution is as follows:

H. RES. 790

Whereas hundreds of thousands of men and women have served this Nation in building its nuclear defense since World War II;

Whereas these dedicated American workers paid a high price for their service and have developed disabling or fatal illnesses as a result of exposure to beryllium, ionizing radiation, toxic substances, and other hazards that are unique to the production and testing of nuclear weapons;

Whereas these workers were put at individual risk without their knowledge and consent in order to develop a nuclear weapons program;
