NOT VOTING—12

Ayotte	DeMint	Risch
Blunt	Hutchison	Roberts
Burr	McCain	Rubio
Coats	McCaskill	Warner

The nomination was confirmed.

The PRESIDING OFFICER. Under the previous order, the motion to reconsider is considered made and laid upon the table.

The President will be immediately notified of the Senate's action.

LEGISLATIVE SESSION

The PRESIDING OFFICER. Under the previous order, the Senate will resume legislative session.

MORNING BUSINESS

Mr. REID. Mr. President, I ask unanimous consent that the Senate proceed to a period of morning business, with Senators permitted to speak for up to 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATIONAL SCHOOL LUNCH AND BREAKFAST PROGRAM

Mr. MORAN. Mr. President, 2 weeks ago, I spoke on the Senate floor about some of my concerns with the pending legislation that we have been talking about now—a number of appropriations bills—including the committee report on agriculture. The last time we visited about this, I talked about the GIPSA rules. I wish to focus on one more area of concern in this appropriations bill; that is, that the Department of Agriculture has proposed a rule to revise the nutrition requirements for the National School Lunch and Breakfast Program.

In its current form, the rule contains some impractical nutrition standards and goals. I don't think there is any question that all of us in the Senate, and certainly every parent I know, would want—we all want our children to have nutritious food and we want them to have nutritious food at home and at school. That is not the point. It is not the question. What I question is whether the Department of Agriculture's rule is realistic for schools, and for those who provide food to the schools, whether they are able to comply with this new rule.

For example, as written, the rule would exclude many nutritious vegetables in school meal programs. Appropriately,

the Senate adopted an amendment offered by Senator COLLINS of Maine, which I supported, that allows school nutritionists to continue to make their own recommendations based upon the most recent dietary guidelines for Americans, rather than having to follow the mandates issued in this latest USDA rule. In my view, that is exactly where these decisions should be made: in schools around our country by nutritionists—not mandated by our government in Washington, DC.

Furthermore, we must keep in mind the impact this rule will have on school budgets and food suppliers. Unfunded mandates such as this one will make it even harder for schools to provide healthy lunches for students.

The Department of Agriculture estimates that the cost of compliance over a 5-year period will reach \$6.8 billion. The Federal reimbursement already does not cover the full cost of preparing a meal in many schools across our country. This new USDA rule will further drive up the costs of providing lunches and school districts will have to make up the difference. This doesn't seem like a reasonable approach when many school districts are already struggling to make ends meet.

Let me give an example of what is in this rule. Once finalized, schools would be required to reduce sodium content in breakfasts by up to 27 percent and school lunches by up to 54 percent. There are a couple problems with this requirement. There is no suitable replacement for sodium that can maintain the same functions of flavor and texture. Also, reducing sodium is not just a function of limiting raw salt content. Many ingredients have sodium in them that occurs naturally.

School food suppliers have been working for years to reduce the amount of sodium in their food products. However, they need additional time to come up with a solution that balances nutritional value with taste so kids will eat the school lunch.

This rule would also change how nutritional content is measured—rather than measure nutrition based on density, the Department of Agriculture rule proposes to measure nutritional content based on volume. For example, tomato paste is nutritionally dense, but the Department of Agriculture says it must meet the same volume as a fresh tomato. That doesn't make much sense. Why would we take a metric to be the arbitrary volume requirement instead of just measuring the nutritional value?

The bottom line is, kids can still get the right nutrients from food products if they are measured by nutritional content.

A more sensible approach to making sure children have healthy options for breakfast and lunch would be to work together with scientists, nutritionists, and industry representatives toward a set of intermediate goals. Food costs, service operations, and student partici-

pation rates could then be more closely evaluated before moving on to the next goal. This would give school districts and food suppliers the chance to make changes in a more reasonable timeframe.

Our colleagues in the House included a provision in their version of this legislation that directed the Department of Agriculture to issue a new proposed rule that would not add unnecessary and costly regulations to the school lunch and breakfast programs. Unfortunately, this language was not included in the Senate version of the bill. In conference, I will continue to work with my colleagues to make sure the Department of Agriculture is not making it harder for schools to provide healthy lunches but instead is working alongside local schools and their officials to develop better nutritional goals.

TRIBUTE TO MR. EMMETTE THOMPSON AND MISSION OF HOPE

Mr. MCCONNELL. Mr. President, I rise today to pay tribute to one of the finest charitable organizations serving the people of Kentucky, Mission of Hope, and its executive director, Mr. Emmette Thompson. Mission of Hope, located in Knoxville, TN, has been providing the impoverished children and families in the rural Appalachian communities of southeastern Kentucky and elsewhere with food, clothing, and other necessities for over 15 years.

Mission of Hope was founded in 1966 in response to a television broadcast entitled "Hunger for Hope," in which anchor Bill Williams informed viewers of the destitution and poverty that affected families in the mountains and hills of southeastern Kentucky. The "Hunger for Hope" broadcast inspired founder Julie Holland to enlist the help of her church, Central Baptist of Bearden, to aid in handing out children's coats that had been donated by a local department store.

Since that first donation, Mission of Hope has grown to serve more than 17,000 people throughout more than 80 schools and organizations in Kentucky, Tennessee, Virginia and West Virginia. Over 85 percent of the population in this region suffers from hunger and joblessness due to a depleted coal mining economy.

Mission of Hope's objective is to provide, every year, the hunger-stricken families of Appalachia with hope and the chance at a better life through evangelical Christian charitable ministries. By partnering with school family-resource centers and small community ministries, Mission of Hope is able to provide assistance to those children and families most severely impoverished, and donates new clothes, food, toys, and school supplies through organized programs and events.

In addition, Mission of Hope assists in the repairing of homes, and provides a \$2,500 scholarship to 11 qualified students from schools in the region. They
