

driving innovation, driving job creation, leading to entirely new multi-million-dollar industries, and transforming how we live and work for the better.

Computer science education prepares students for the jobs of the future by engaging and preparing them for careers in high-paying occupations. But our education system is not currently producing enough graduates in computing sciences and IT fields to meet the growing needs of the industry. In fact, the current pipeline of computing graduates will only fill 52 percent of the projected jobs. The other 48 percent will either have to be filled elsewhere in the world or go unfilled.

If the U.S. is to continue to discover and develop the innovations that have created new industries and transformed others, we need to ensure a healthy computer science workforce that's skilled and large enough to meet our growing needs. Women and many minority groups are currently underrepresented among computing and IT professionals as well as students, depriving the Nation of a potential skilled workforce and of the innovation that results from diverse teams.

If we don't address the issues causing too few students to take computer science education classes in kindergarten through 12th grade, as well as college, our pipeline and our Nation's future will be compromised. That's why I've introduced the Computer Science Education Act, which will help ensure that American students not only use technology, but also learn the computing skills to invent technology needed to grow and drive our economy. I look forward to working with my colleagues to include this piece of legislation in the Elementary and Secondary Education Act reauthorization.

Computer Science Education Week was established in 2009 by the Computing in the Core Coalition to honor Grace Murray Hopper, a pioneer in computer science who engineered a new programming language and developed standards for computer systems to lay the foundation for many advances in computer science from the late 1940s through the 1970s. The U.S. House of Representatives has recognized Computer Science Education Week in the second week of December over the past 2 years.

Computer Science Education Week is a collaborative activity of Computing in the Core, a nonpartisan advocacy coalition. Its core partners are: the Association for Computing Machinery, Microsoft, Google, Computer Science Teachers Association, the National Center for Women and Information Technology—which is based in my district in Colorado—IEEE Computer Society, the Computing Research Association, the College Board, and many, many others.

I encourage my colleagues to join me in acknowledging the importance of computer science for our future by recognizing Computer Science Education Week this week.

SQUARING SOCIAL SECURITY AND THE PAYROLL TAX CUT

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. McCLINTOCK) for 5 minutes.

Mr. McCLINTOCK. Madam Speaker, topping the list of unfinished business this year is the impending collision of two closely related crises: the expiration of the payroll tax and the acceleration of Social Security's bankruptcy.

Last year, Congress voted for a payroll tax cut that averages roughly \$1,000 for every working family in America. As warned, it failed to stimulate economic growth and it accelerated the collapse of the Social Security system; but, as promised, it threw every working family a vital lifeline in very tough economic times.

We need to meet three conflicting objectives: We need to continue the payroll tax cut; we need to stimulate real economic growth; and we need to avoid doing further damage to the Social Security system.

First, we need to understand that not all tax cuts stimulate lasting economic growth. Cutting marginal tax rates does so because it changes the incentives that individuals respond to; cutting inframarginal tax rates, such as the payroll tax, does not. But that payroll tax cut did make a huge difference in the ability of working families to make ends meet in a time of declining family incomes and steadily rising prices. To restore that payroll tax rate today, given the economic pressures on working families, is simply unthinkable.

□ 1020

Yet at the same time, the payroll tax is what supports the Social Security system. Last year, that system entered a state of permanent deficit, and this condition will worsen until the Social Security system bankrupts in 2036. At that moment, every retiree will suffer a sudden and permanent drop in benefits of roughly 25 percent.

Further reducing the revenues into that system will hasten this day of reckoning. Just as bad, in the intervening time the expanding Social Security deficit will heap growing burdens on the Nation's already staggering public debt. Now, some have proposed paying for the inframarginal payroll tax cut that doesn't help the economy with a marginal tax hike that actually harms the economy. Surely we can do better than that. Actually, Congressman LANDRY of Louisiana has done better, and I commend his proposal to the attention of the House. It avoids damaging the Social Security fund while at the same time offering families continued relief from crushing payroll taxes.

His measure, H.R. 3551, the Social Security Preservation Through Individual Choice Enhancement (or SSPICE) Act, constitutes the most realistic and innovative approach to these twin and related crises that has

yet been placed before Congress by linking the cost of Social Security to the benefits that it provides. H.R. 3551 would give every American the choice of paying a lower payroll tax each year in exchange for working a month longer. That's all it would take to pay for itself—a month's delay in retirement for a year's worth of tax relief.

For the first time, individuals can make this choice to pay a lower payroll tax based on their own circumstances without further undermining the fiscal integrity of the Social Security system or the financial security of those relying on that system. For the first time, costs and benefits would be linked in a manner that all consumers can understand and judge for themselves based on their own circumstances.

In a difficult year like this, I think most families would rather save the extra tax and work the extra month. In better times ahead, they may choose to pay the extra tax to maintain their retirement schedule. But it will be their choice based on their needs, their plans, and their best judgment, and not the government's. And by linking costs with benefits, it will protect the long-term actuarial soundness of the Social Security system, a fact that the Social Security system's chief actuary has confirmed.

I'm excited to cosponsor Mr. LANDRY's bill and strongly and enthusiastically recommend it to the membership of the House and to the leadership. Mr. LANDRY has done an enormous service to every retiree who depends upon the Social Security system, as well as to every working family struggling in America, by preserving the fiscal integrity of the system while at the same time giving every American a choice that links the tax they pay to the benefits they receive. And it's an option they can exercise every year without fear that a future congressional act or failure to act might sock them with a tax increase they can't afford or hasten the collapse of a retirement system that many depend upon for their economic survival.

CUBS GREAT RON SANTO ELECTED TO HALL OF FAME

The SPEAKER pro tempore. The Chair recognizes the gentleman from Illinois (Mr. QUIGLEY) for 5 minutes.

Mr. QUIGLEY. Madam Speaker, in case you were wondering, that noise you heard from above yesterday morning was an old third baseman clicking his heels. Finally, on Monday morning, Ron Santo was inducted into the National Baseball Hall of Fame.

Now, most people knew Ronnie as the nine-time All-Star and the five-time Golden Glove winner, one of the top hitters of his era, and the third baseman on the Top 10 list in every statistical category. And many people knew Ronnie as the lovable voice of the Chicago Cubs, with whom we cheered every home run, moaned every dropped fly ball, and laughed at life's most

human moments in the booth, including a burning hairpiece.

But for many years on the field, people didn't know that while racking up 342 home runs and hitting more than 1,300 RBIs, Ronnie was struggling with diabetes. That's because Ronnie accomplished all of this from the roster, not the disabled list, despite his physical struggles.

Ronnie wanted to be a great player, not a great player "under the circumstances." He fought hard on the field for his team, and courageously in private for his health. He raised \$60 million and a lot of hope for juvenile diabetes research and inspired many to persevere against the odds.

Ronnie died too soon, exactly 1 year ago this week. I wish he had lived to see this, but I know that he and Harry are sharing an Old Style together and toasting to their favorite team. Here's to number 10, Ron Santo. Go Cubs.

ARMY PRIVATE FIRST CLASS
CODY R. NORRIS

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. OLSON) for 5 minutes.

Mr. OLSON. Madam Speaker, I rise today to pay tribute to Army Private First Class Cody R. Norris, who was killed on November 9 during combat operations in Kandahar Province, Afghanistan.

Cody was a proud Bulldog, a 2010 graduate of La Porte High School in La Porte, Texas. He was in Junior ROTC, a member of the Color Guard and the Rifle Team. He was also a member of the Military Museum.

Cody deployed to Afghanistan while he was assigned to Alpha Company, 2nd Battalion, 34th Armor Regiment, 1st Infantry Division—the Army's oldest division, the "Big Red One"—in Fort Riley, Kansas.

He was a typical American teenager. He enjoyed working on his 1952 M37 Army truck that he drove to and from school. He was a Texan who enjoyed paintball, deer hunting, playing video games, and yes, hibachi food.

Cody's lifelong dream was to join the Army. His time in Junior ROTC in high school motivated him to enlist in the Army to serve his country.

He always put others before himself and did so with a smile on his face and a kind word for those around him. He had a gift for winning people over with his caring personality and always managed to cheer up those around him.

Cody's mother said that he lived life on his terms and always did what he believed was right, regardless of trends or what other people thought. He was well liked by his platoon mates and gained the admiration of others by constantly carrying more than his fair share. According to his brother Michael, now a cadet at West Point, in Cody's last battle, when his platoon was attacked, he was carrying extra ammunition. When he was killed, that extra ammunition ultimately helped save his fellow soldiers, his friends.

I never had the honor to know Cody Norris personally, but I stand here today humbled by the fact that he and the hundreds of thousands of American troops serving in our Armed Forces are willing to sacrifice so much so that we may sleep peacefully under the blanket of freedom that they provide.

As a former naval aviator, I know all too well the sacrifices families make to support their loved ones who serve in harm's way. Cody Norris and his family, and the thousands of other families who have lost loved ones in the defense of our country, have paid the ultimate price for our freedom. For them, in many ways, the war never ends.

America can never repay the debt we owe to Cody Norris and his family, but we can honor his family and his eternal contributions to our liberty. Madam Speaker, Cody Norris is a true American hero, and a grateful Nation says thank you.

□ 1030

EXTEND THE PAYROLL TAX CUT,
UNEMPLOYMENT INSURANCE
AND DOMESTIC RENEWABLE EN-
ERGY TAX INCENTIVES

The SPEAKER pro tempore. The Chair recognizes the gentleman from Virginia (Mr. CONNOLLY) for 5 minutes.

Mr. CONNOLLY of Virginia. Madam Speaker, all of us join with our colleague in honoring that fallen hero.

Madam Speaker, Congress must act now to extend the payroll tax cut, unemployment insurance, and domestic renewable energy tax incentives. The effects of the Great Recession continue to linger in this economy, which is why a more robust recovery has not yet taken root.

Our efforts in the last Congress, through the Recovery Act and the Job Creation Act at the end of last year, provided what momentum we actually have. The official unemployment rate has now fallen to 8.6 percent as a result of 120,000 new jobs created just last month. That's the lowest level in more than 2 years and marks 21 consecutive months of private sector job growth. But these gains will be at risk if Congress fails to extend the payroll tax cuts, domestic clean energy incentives, and unemployment benefits before the end of this year.

The payroll tax cut provides the average American worker \$1,000 to spend or invest every year, having a positive impact throughout the economy. Economic analysts at Barclays estimate that the payroll tax cut alone will add another 1 percent to gross domestic product growth, \$250 billion in economic activity throughout the United States. Conversely, if we fail to extend that payroll tax cut, 160 million Americans will be facing a tax increase in January.

Similarly, 1.3 million Americans who are trying to get back into the workforce will see their unemployment benefits cut unless we renew them. Ac-

ording to the Congressional Budget Office and Senator JOHN MCCAIN's economic adviser, Mark Zandi, unemployment insurance is one of the most effective forms of economic stimulus, generating \$1.64 for every \$1 we invest in unemployment insurance. Failure to extend unemployment benefits will reduce the gross domestic product by nearly 1 percent and, by reducing economic activity, could put as many as 1 million Americans out of work at a time when we're trying to expand the economy.

With respect to domestic clean energy production, renewing these incentives will sustain one of the few private sector success stories we've witnessed during the Great Recession. Since 2007, the number of jobs in the American wind industry has grown 70 percent. So today there are as many wind energy jobs as there are in the coal industry. The number of solar industry jobs doubled since 2007 to more than 100,000 Americans. This surge in domestic clean energy employment is a direct result of the 1603 Treasury Grant Program to support clean energy activity.

Madam Speaker, as we continue to debate these expiring tax and benefit provisions, I'd caution my colleagues against holding them hostage to advance some extreme ideological agenda. Last week, the Senate minority leader brought legislation to the floor which would have slashed Federal employee wages and benefits while arbitrarily downsizing the Federal workforce.

As the Bureau of Labor Statistics noted, public sector employment continues to shrink by tens of thousands of jobs. A job is a job, whether it's in the public sector or the private sector. One is not better than the other.

If Republicans had not been successful in cutting 535,000 public sector jobs in this country, unemployment would actually be 0.35 percent lower. It would be down to 8.25 percent today, not 8.6. Cutting Federal employee pay and slashing the workforce would actually undermine the economic benefits of the payroll tax extension and the economic benefits we've all worked so hard to create.

Similarly, we should reject attempts to tie these economic recovery actions with partisan proposals to gut the Clean Air Act. Republicans in the House already have tried to pass 172 viciously anti-environmental bills, riders, and amendment in this body this year alone. Now, some in the Republican Caucus have suggested pairing the Clean Air Act repeals with an extension of the payroll tax cut, a Faustian bargain at best, Madam Speaker.

Repealing these Clean Air Act standards for industrial boilers, for example, would cost the U.S. economy \$21 billion to \$52 billion per year in higher health care costs, real costs to the economy.

Not surprisingly, some even have proposed expediting approval of the Keystone XL pipeline in exchange for the payroll tax extension. Again, we already have pipelines from Canadian tar
