the United States and its early entry into force would significantly reduce the chances of new states developing advanced nuclear weapons and would strengthen the global nuclear non-proliferation regime for the twenty-first century. Just as the United States led the international community nearly three years ago by being the first to sign the CTBT, which has now been signed by 132 nations, the Senate now has a similar opportunity and responsibility to demonstrate U.S. leadership by ratifying it.

The Treaty enhances U.S. national security and is important among the American people. Recent bipartisan polling data indicates that support for the Treaty within the United States is strong, consistent, and across the board. It is currently viewed favorably by 82% of the public, nearly the highest level of support in four decades of polling. Only six percentage points separate Democratic and Republican voters, and there is no discernible gender gap on this issue. This confirms the traditional bipartisan nature of support for the CTBT, which dates back four decades to President’s Eisenhower’s initiation of test ban negotiations and was reaffirmed by passage in 1992 of the Exon-Hatfield-Mitchell legislation on a testing moratorium.

It is clear to me that ratifying this Treaty would be in the national interest. And it is equally clear that Senators have a responsibility to the nation and their constituents to put partisan politics aside and allow the Senate to consider this Treaty.

Mr. THOMAS. Mr. President, I ask unanimous consent that I be allowed to speak for 10 minutes in morning business.

Mr. THOMAS. Without objection, it is so ordered.

Mr. THOMAS. I thank the Chair.

TAX RELIEF

Mr. THOMAS. Mr. President, I want to visit this topic that is coming before the Senate very soon, probably tomorrow, and that is tax relief and the reconciliation bill we will be considering.

To me that is one of the most important things before us, not only as the Senate but before us as American people. We ought to spend our time focusing on that issue.

I have been a little amazed at the comments that have been made this morning. I only heard part of them, but they said this tax relief will certainly damage the economy. I have never heard of anything like that in my entire life. More money in the hands of Americans will probably strengthen the economy. We heard about Alan Greenspan. The fact is, his complete comments were that he would much rather see tax relief than expending those dollars in larger government, which basically is the alternative.

We ought to review again for ourselves and for listeners where we are with respect to the surplus, where we are with respect to the public debt, and with the President’s proposal versus tax relief.

We all know we worked a very long time to have a balanced budget. For the first time in 25 years, we have a balanced budget and are want to be sure the majority of the surplus is Social Security money. This is the first time we have done this in a very long time. It is largely the result, of course, of a strong economy and some efforts on the part of this Congress to have a balanced budget amendment, to have some spending caps to hold down spending.

What can we expect? According to the Congressional Budget Office which released their midsession review on July 21, the estimates are that the total budget surplus will measure $1.1 trillion to the year 2004, and to the year 2009 nearly $3 trillion in surplus will be coming in. The non-Social Security surplus will measure almost $300 billion to the year 2004 and nearly $1 trillion to the year 2009. This is the non-Social Security surplus that comes in to our budget.

The congressional budget resolution which talks about will leave the publicly held debt level at $1.6 trillion. The President’s, on the other hand, will leave it at $1.8 trillion. With some tax relief, the reduction in publicly held debt under the tax relief program, the reconciliation program we will be talking about the next several days, will reduce the debt more than the President’s plan which plans to spend the money.

These are the facts. It is interesting; the budget chairman was on the floor yesterday indicating that out of the total amount of money that will be in the surplus, less than 25 percent will be used for tax relief and it will still be $1 trillion.

These are the facts, and it seems to me we ought to give them some consideration.

Another fact that I believe is important in this time of prosperity, in this time of having a balanced budget and having a surplus, is the American people are paying the highest percentage of gross national product in taxes ever, higher than they did in World War II. Certainly, there is a case to be made for some sort of tax relief. If there are surplus dollars, these dollars ought to go back to the people who paid them. They ought to go back to the American people to spend as they choose.

There will be great debates about this, and there have been great debates about this. There are threats by the White House to veto any substantial tax reductions. Sometimes one begins to wonder, as we address these issues, whether or not it should be what we think is right or whether we have to adjust it to avoid a veto. That is a choice we have to make. All right, if we believe in something, we ought to do what we think is right. If the President chooses to veto it, let him veto it. Otherwise, we commit
Mr. THOMAS. I ask unanimous consent that the Senate continue in a period of morning business, for 90 minutes, equally divided in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER. The Senator from Illinois.

EXTENSION OF MORNING BUSINESS

Mr. DURBIN. Mr. President, this morning we devoted most of the morning business to a discussion of an item which will come before us soon, and that is the whole question of how our economy is to look for the next few years. There are two very different visions of that future which will be articulated by people who get up—one on the Republican side and another on the Democratic side.

The Senator from Wyoming was kind enough to speak and to tell us earlier about his concerns over taxes. Certainly, this has been debated by many on both sides of the aisle. He made a point which I think is worth noting and explaining. Yes, it is true that Federal tax receipts are higher than they have ever been from individuals and families, but it is also true the tax rates on individuals and families in every income category, are at some of the lowest levels they have been in modern memory.

The reason why taxes and tax receipts are higher reflects the fact that the economy is strong, people are working, they are earning money in their workplace, as well as in their investments, and they are paying some tax on it.

If you look at the dynamic growth in taxation on American families, you will find it is not from Washington but, rather, from State capitals and local sources, local units of government. That, to me, is an important point to make as we get into a question of whether we should cut Federal taxes.

I, for one, believe we can cut Federal taxes and do it particularly for the lower and middle-income families and really enhance our economy—if they are targeted; if they are contained. Because people who get up and go to work every day, and sweat out the payroll tax, which is usually higher than their Federal income tax liability, are the folks who need a helping hand.

Sadly, the Republican proposal before us, which will be about a $1 trillion tax cut over the next 10 years, does not focus on the lower and middle-income families. It reverts to the familiar Republican tax rates and does it particularly for the wealthiest American families and "chump change," if you will, for working families.

That in and of itself is an injustice. The Republican Senator who spoke before me made the statement that he could not see why giving more money back to people to spend could possibly hurt the economy. In fact, it is a source of concern.

You notice that about once a month, or every other month, we wait expectantly for news from the Federal Reserve Board as to whether they are going to raise interest rates. It is an important issue and topic for many Americans. If you have a mortgage with an adjustable rate on it, the decision by Chairman Greenspan of the Federal Reserve to raise interest rates will hit you right in the pocketbook. Your mortgage rate will go up. The payment on your home will go up.

Most people think this is a decision to be made looking at the overall economy. I suggest most American families look at interest rate decisions based on their own family. What will it do to my mortgage rate? What will it do, if I am a small business owner, of the capital for me to continue doing business? These are real-life decisions.

If the Republicans have their way this week and pass a tax break, primarily for wealthy people, injecting money into the economy, it will increase economic activity. It is expected, then, that some people will buy more. It may mean Donald Trump will buy another yacht or Bill Gates will buy something else.

That money spent in the economy creates the kind of economic movement which the Federal Reserve watches carefully. If that movement seems to be going too quickly, they step in and slow it down. How do they slow it down? They raise interest rates.

So the Republican plan, the tax break for wealthy people, the $1 trillion approach, is one which runs the risk of heating up an economy, which is already running at a very high rate of speed, to the point where the Federal Reserve has to step in. And once stepping in and raising interest rates, the losers turn out to be the same working families who really do deserve a break.

It has been suggested that if we, instead, take our surplus and pay down the national debt, it not only is a good thing intuitively that we would be retiring this debt, but it has very positive consequences for this economy.

Consider for a moment that in the entire history of the United States, President George Washington was the only President, Jimmy Carter, that we had accumulated $1 trillion in debt. That means every Congress, every President, each year, who overspent, spent more Federal money than they brought in in taxes, accumulated a debt which over the course of 200 years of history, came to $1 trillion, a huge sum of money, no doubt.

But after the Carter administration, as we went into the Reagan years, the
