Among other increases, this bill increases funding for the National Institutes of Health (NIH) by \$2 billion, including a \$384 million increase for the National Cancer Institute. This will continue us on the path of doubling the funding of NIH over five years. The President requested only a 2.1 percent increase over FY 1999, which does not keep pace with medical research inflation, projected to be 3.5 percent next year.

The National Institutes of Health—often called the “crown jewel” of the federal government—offers hope to millions of Americans who suffer from diseases like diabetes, arthritis, Alzheimers, Tourette's Syndrome, Parkinson's and on and on. Sadly, NIH can now only fund 31 percent of applications. Under the Presidents's FY 2000 proposal, it could have fallen to 28 percent, a 10 percent drop. This is the wrong direction, especially at a time when research is opening many new scientific doors.

Federal support for curing diseases and finding new treatments is not a partisan issue. Federal spending on health research is only 1 percent of the federal budget. Sixty eight percent of Americans support doubling medical research over five years; 61 percent of Americans support spending part of the surplus on medical research. Fifty five percent of Californians said they would pay more in taxes for more medical research, in a Research America poll.

NIH is especially important to my state where some of the nation's leading research is conducted. The University of California received \$1.7 billion in NIH funds in 1998. The federal gov-

ernment supports over 55 percent of UC's research.

I am pleased that the bill includes \$ 3.28 billion for the National Cancer Institute. This is an increase of \$384 million or 13 percent over last year. With this, NCI will be able to fund at least 10 percent more grants. If we had gone along with the President proposed 2 percent increase for cancer research, NCI would have been able to fund 10 percent fewer grants. That is the wrong direction, at a time when cancer incidence and deaths are about to explode.

Today, one in every four deaths is due to cancer. Cancer costs over \$100 billion a year. Because of the aging of the population, the incidence of cancer will explode by 2010, with a 29 percent increase in incidence and a 25 percent increase in deaths, at a cost of over \$200 billion per year. The cancer burden will hit America the hardest in the next 10 to 25 years as the country's demographics change. (These are the findings of the September 1999 Cancer March Research Task Force.) Cancer deaths can be reduced from 25 to 40 percent over the next 20 year period, saving 150,000 to 225,000 lives each year if we do the right thing.

I want to thank the chairman of the subcommittee for including in the committee report language indicating that we need to increase cancer research funding consistent with the recommendations of the Research Task Force of the Cancer March. The Cancer March called for increasing the National Cancer Institute budget by 20 percent each year for four years, to get to \$10 billion by 2005. This bill with its 12 to 13% increase in funds is a step on the way.

The National Cancer Dialogue, a national group representing leaders of the entire cancer community and over 120 cancer organizations, recommended that NCI be funded at \$5 billion in FY 2000 and CDC cancer activities at \$516 million.

What can be accomplished with \$5 billion for research?

More drugs: NCI could bring 40 new cancer drugs from the laboratory to clinical trials. In NIH's entire history, only 70 drugs have been approved for treating cancer.

Cancer Genetics: Continuing to identify genes involved in cancer. Improving our understanding of the interaction between genes and environmental exposures.

Imaging: Finding new ways to detect cancers earlier when they are small, not invasive and more easily treated.

Clinical Trials: Increase participation from 2 percent currently. Medicare beneficiaries account for more than 50 percent of all cancer diagnoses and 60 percent of all cancer death.

Prevention: 70 percent of all cancers are preventable says the American Cancer Society. By expanding the CDC's efforts to provide cancer screen-

ing, cancer registries and other measures to help people prevent cancer screening, cancer registries and other measures to help people prevent cancer. For example, tobacco-related deaths are the single most preventable cause of death and disability and account for 30 percent of all US cancer death.

I am also pleased to see an increase of \$200 million over last year and \$100 million over the President's request for Ryan White AIDS, as well as a 12 percent increase for AIDS research at NIH.

California has the second highest incidence of HIV/AIDS in the US. While the AIDS death rate has declined it is still too high. Over 40,000 new infections develop each year. In California, 100,000 people are living with HIV/AIDS. Half of all HIV-infected people do not receive regular medical care according to the Rand study, December 1998.

We face serious challenges. We must find a cure. We must find new treatments. HIV lingers in cells so long that the “virus cannot be eradicated at all with current treatments * * * it remains tucked away longer than though,” according to the New England Journal of Medicine, May 1999.

This funding bill also includes important funding for education at all levels. There is hardly a more important function of government than providing a solid education for our youngsters.

The bill raises education by \$2 billion over last year. This is important in light of the decline in the federal share of total education funding from 14 percent in 1980 to six percent in 1998, according to the Office of Management and Budget.

No doubt we need to do more. Our nation's schools face unprecedented challenges. My state is fraught with problems: California has 6 million students, more students than 36 states have in total population and one of the highest projected enrollments in the country, California will need 210,000 new teachers by 2008. We have about 30,000 teachers on emergency credentials. We have the most diverse student body in the county. In some schools, over 50 languages are spoken. While this diversity is one of my state's great strengths, in the classroom, it places huge responsibilities on teachers.

Buildings: We need to build 6 new classrooms per day, \$809 million per year. Some elementary schools have over 5,000 students. Our schools are too big.

In higher education, California is preparing for “Tidal Wave II,” the demographic bulge created by children of the baby boomers which will inundate our colleges and universities between 2000 and 2010.

And so our needs are huge. Our challenges are great.

I am disappointed that the Senate did not adopt the Murray amendment

that would have ensured that \$1.4 billion be used to hire teachers and reduce class size. By adding \$200 million and raising the allocation from \$1.2 billion to \$1.4 billion and specifying that it be used to hire teachers and reduce class sizes, California could have hired 1,100 new teachers, on top of the 3,322 that will provide funding for last year. I hope the conference will see the importance of this.

One area of this bill that I have given my attention to is ESEA Title I, the program that provides over \$8 billion for educating poor children. Unfortunately, despite my efforts in the Appropriations Committee, I was unable to delete what is known as the "hold harmless" provisions. Also, the committee would not accept my amendment to clarify and insure that any new or additional funds, over last year, go to states that are hurt by the hold harmless provision.

The Title I hold harmless provisions (there are two in the bill, for basic grants and for concentration grants) hold states and districts "harmless." They say in essence that no state or district will receive less than it did the previous year despite changes in the number of poor children. In the bill, these apply to the Title I basic grants and the concentration grants. These provisions freeze funding in place despite the number of poor children, despite their eligibility.

I tried to delete these provisions in the committee, but because, frankly, there are more low-growth states than high-growth states like mine, in the Senate, did not have the votes to completely eliminate them.

Here is why the hold harmless provisions are wrong: One, they violate the purpose of the program since 1965, to target funds on poor children, two, they contravene the census update requirement. The authorizing law requires the Department to update child poverty data every year so that each state will receive funds according to the number of poor children. The hold harmless renders that requirement virtually meaningless.

Secretary Riley wrote, April 29, 1999: "I do share your concern that the 100 percent hold-harmless provision undermines the apparent statutory intent that allocations for Title I and other programs be based on the most recent census data."

Three, a poor child is a poor child. Congress recognized that poor children need extra help, wherever that child may be. A poor child in California is as worthy as a poor child in Mississippi and should not be deprived of funding.

A July 1999 study found that students in poor school districts (West Fresno, Mendota, Farmersville) ranked at or near the bottom of California's achievement tests. "Most of the lowest-scoring school districts * * * are in rural areas with high unemployment

and poverty and have many children from migrant farm worker families who speak little English and have little education." (Fresno Bee, 7/25/99)

Four, hold harmless provisions disproportionately hurt states with high growth rates in poor children, states like California, Arizona, New Mexico, Texas, Hawaii, South Carolina, Maryland, Nevada, Virginia, Georgia, Florida, New York, North Carolina, Oklahoma.

Here are some examples of losses of Title I Funds under FY 1999 hold harmless: California \$36 million; Florida \$32 million; New Mexico \$4.5 million; New York \$48 million; North Carolina \$8 million; Texas \$32 million.

Last year, under the bill's Title I hold harmless, California lost \$32 million. California has 14 percent of all Title I children and gets 11 percent of Title I funds. (US Dept of Education). California has a 22 percent poverty rate for children; The US rate is 18.7 percent. (9 states exceed California's). California's number of poor students grew 53 percent from 1990 to 1995; nationally, it grew 22 percent. In total federal dollars, California pays 12.5 percent of federal taxes but gets back only 11.2 percent.

California receives \$656 in Title I funds per poor child. The national average is \$745. Some states receive as much as \$1,289, according to the US Department of Education. California has almost 40 percent of the nation's immigrants. The poverty rate for immigrants grew by 123 percent from 1979 to 1997. (Center for Immigration Studies, 9/2/99). Income inequality is growing in California faster than the rest of the country (Public Policy Institute of California, 2/9/99)

Five, the hold harmless freeze in the status quo, even for those not eligible. The hold harmless provision gives funds to states and districts that may not even be eligible for funds, merely because they got funds in the past. What good are eligibility rules if we ignore them, override them willy-nilly. We either have eligibility rules or we don't.

If Congress believes the formula is not properly structured or targeted, Congress should change it in the authorizing statute. Congress will have that opportunity next year when ESEA is reauthorized.

I am grateful that the committee agreed, at my request, to modify the bill so that the Title I hold harmless will not apply in FY 2000 to the eight federal programs have funding formulas based in whole or in part on the Title I formula. Those programs are: Safe and Drug-free Schools; Even Start Family Literacy; Comprehensive School Reform; Eisenhower Professional Development (Teacher training); Technology Literacy; Class Size Reduction; Goals 2000, Title III; and McKinney Homeless Education.

This amendment was needed because, in FY 1998 and 1999, the Department of Education applied the 100 percent hold harmless to 8 other education programs, thus compounding the harm of the Title I hold harmless provision and the cuts that result from it.

I believe in the current bill, Congress is giving the Department clear guidance that the Title I hold harmless provision should not be applied to other programs.

Because last year the Department applied the hold harmless to other programs, my state lost funds under the following programs: Teacher Training \$40,000; School Reform \$700,000; Technology Literacy \$5.4 million; Goals 2000 \$3 million; EvenStart/Literacy \$1 million.

I thank the committee for remedying this inequity.

I am disappointed that the Committee did not provide funding for the President's English Language and Civics Education Initiative, under the Adult Education program. This is an effort to help states and local communities provide instruction to adults who want to learn English as a Second Language (ESL) programs, as well as instruction in civics and life skills. If adequately funded, this initiative would help ensure that those who seek to become American citizens learn not only the words of the citizenship oath, but also the broader language of our civic life. Simply put, this initiative would help our nation's newcomers become full participants in American life.

In 1990, there were about 25.5 million U.S. adults age 18 and older who spoke a language other than English at home. Many of these non-English speakers were new immigrants. Some immigrants have lived here for many years. Still, other non-English speakers were born in the United States but grew up without mastering the English language. Many of these adults reported that they have difficulty speaking English, but were highly motivated to learn the language, especially to obtain jobs and gain access to educational opportunities.

As the number of non-English speaking residents has increased, so has the demand for placement in English-as-a-Second-Language (ESL) classes. In the last five years, enrollment for ESL classes has jumped from 1.2 million in 1994 to nearly 2 million in 1998. In the state of California, more than 1.2 million adult students enrolled in these classes in 1998, accounting for 38.2 percent of the adult education students in the state.

The increased demand for ESL classes have resulted in long waiting lists for ESL classes in many parts of the country. For example, Los Angeles has a waiting list of 50,000 people for ESL classes. Chicago's ESL programs are filled to capacity as soon as they open

their doors. And, New York State has resorted to a lottery system to select individuals who wish to learn English.

I have visited several immigrant communities throughout California and have been impressed by the high work force participation rates, the strong sense of family, and a tireless commitment to their community. However, during these visits and in letters from my constituents, I have been often told about the lack of opportunities to participate in adult English education courses. This is particularly troublesome, given the large number of people in my state seeking to become American citizens, and to otherwise more fully participate in our civic life.

More support for programs like English Language and Civics Education Initiative would help states and communities throughout California and the rest of the nation that are struggling to keep up with this demand. Providing \$70 million requested by the Administration would not merely be an expenditure, but an investment in our nation's future.

While this bill cannot address all the health and education needs of our nation or even those that are a federal responsibility, allocations are good—\$2 billion more for education and \$3 billion more for health (for the discretionary programs). It does not do all I wish it would do. For example, it does not adequately fund afterschool programs, health professions training, or educational technology as much as I would like, but it does address many important needs and I will vote for it.

I urge my colleagues to give it their strong support.

Mr. SPECTER. Mr. President, we are under very heavy time constraints because some of our Members are about to depart. On two personal notes, I had said earlier that I had recused myself from consideration of the funding for the National Constitution Center because my wife is the director of development there. I want to repeat that and include, again, a copy of a letter to Senator COCHRAN who took over on that issue as the next senior ranking Republican.

I ask unanimous consent to print the letter in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, DC, September 17, 1999.

Hon. THAD COCHRAN,
U.S. Senate, Washington DC.

DEAR THAD: As a precautionary matter, I think it is advisable for me to recuse myself on the issue of the appropriation for the National Constitution Center since my wife, Joan Specter, is director of fundraising.

I would very much appreciate it if you would substitute for me on that issue since you are the senior Republican on the Subcommittee for Labor, Health and Human Services and Education.

Sincerely,

ARLEN SPECTER.

Mr. SPECTER. I have one other item on a personal note. Senator INOUE for some time has urged the naming of a building for me, which I had resisted. After my wife heard about it and the grandchildren, I have succumbed to the majority vote on the naming of the building the National Library of Medicine.

In conclusion, I hope we will have a very strong vote in favor of this bill. This bill stretches about as far as it can and is about as low cost as it can be with the chance of getting the President's signature. This is only one step along the way toward conference, and we need a very strong vote in favor of this bill if we are to take care of the important funding, especially for not only worker safety but health and education.

I yield to my colleague.

Mr. REID. Will the Senator yield to this Senator?

Mr. HARKIN. Are we in our 10 minutes of time on which we had a unanimous consent agreement?

Mr. SPECTER. That time might have already been used. Why don't we proceed with Senator HARKIN's closing statement until Senators, who have planes to catch, arrive.

Mr. HARKIN. I yield such time as he may want to the majority whip.

Mr. REID. Mr. President, I state for the record that the issue of class size reduction is of vital importance to everyone on this side of the aisle, as the case has been made very clear. There are going to be enough votes to pass this bill by virtue of the Democrats voting in favor of it, but we want to at this time alert the conferees that if they fail to adequately address this matter, it will be extremely difficult to support this Labor-HHS conference report.

Further, the two managers of this bill have worked very hard. They have shown compassion, courage, and expertise in getting the bill to this point, and I congratulate and commend both of them for their diligent work.

The PRESIDING OFFICER. The Senator from Iowa.

Mr. HARKIN. Mr. President, I thank Senator REID for all of his support and his help and great work in moving this bill along. We appreciate it very much.

We have had a good debate, a long debate, a good exchange of amendments on this bill. We have had amendments that have been approved and rejected on both sides of the aisle.

I thank and commend my chairman, Senator SPECTER, for his leadership, his skill, and his persistence, his dogged persistence in managing this bill and getting it through. Senator SPECTER had tried time and time again during the long, hot, dog days of summer and coming into this fall, never giving up, always pushing us to get this bill up and get it through. Again, I commend him and thank him for his lead-

ership and also thank Senator SPECTER and his staff for always working closely with us. I can honestly say that at no time were we ever surprised about anything. We have had a very good working relationship. We may not have always agreed on everything—that is the nature of things around here—but we always had a good, open, fair, and thoughtful relationship. I appreciate that very much on the part of my chairman.

This is always the toughest appropriations bill to get through. It was tough when I was chairman and Senator SPECTER was ranking member. Things have not changed a bit. This year was a greater challenge than ever. But I say to my colleagues on this side of the aisle, we have produced a very good bill—not just a good bill, a very good bill. It is not perfect. Maybe there are some things I would like to have seen different. Perhaps we can improve it a little bit in conference. But it is a very good bill.

Let me just give a few of the highlights of what we were able to accomplish in this bill:

First of all, an overall increase of \$4 billion over last year; a \$2.2 billion increase for education programs. That is \$500 million more than the President asked for. So if anyone says we did not take care of education, they do not know what they are talking about, and I say that in all candor; \$500 million more than what the President asked for.

A \$2 billion increase for the National Institutes of Health—\$2 billion last year, \$2 billion this year, keeping our promised goal of doubling NIH funding in 5 years.

We have had a very important increase for community health centers, a \$100 million increase for community health centers. Community health centers in rural areas and in some of our poorer areas of this country are the health care system for a lot of poor people in our country, and they are doing a great job. This bill has a \$100 million increase for community health centers.

We maintain the funding for all the job training and worker protection provisions in the Department of Labor. We have over a \$600 million increase for Head Start. Maybe I would like to see a little bit more, but it is good progress. We are moving in the right direction towards getting all 4-year-olds covered in Head Start programs.

The Dodd amendment almost doubles the child care development block grant to \$2 billion for child care. That is very important.

We double the funding for afterschool programs. Again, I know how strongly Senator SPECTER feels about this. He authored a bill, the youth antiviolen- bill, of which I am a cosponsor, taking care of these kids after school. We doubled from \$200 million to \$400 million the afterschool programs.

We raised the maximum Pell grant from \$3,150 to \$3,325, the highest it has ever been.

Let me cut to the quick. I know many of my colleagues on this side of the aisle have signed a letter expressing their concern over the lack of authorization of reducing class size. We have the money in there for it, but we do not have the authorization.

As I have said repeatedly, reducing class size is critical. I am personally disappointed that Senator MURRAY's amendment was not adopted. But I want to be very clear, though, that there is absolutely no inconsistency with signing that letter and voting for passage of this bill.

We vote to send bills with problematic issues to conference all the time around here. Maybe there is one little thing we do not agree with, but overall we agree with the major thrust of the bill, and we send it to conference.

Do not let the perfect be the enemy of the good. This is a good bill. We should send it to conference. If you are concerned about class size, the best and quickest way to have those concerns resolved is to vote the bill out and send it to conference. We will have a chance there to make improvements. If you still have problems after that, you can vote against the conference report.

But this bill is too important to the health, the well-being, and the education of the American people to kill it on the Senate floor. Everyone who votes for this bill can be proud of their vote, proud of the investments that we have made in the human infrastructure of this country.

Lastly, people have said there are a lot of gimmicks in this bill. There are no gimmicks in this bill. We advance funds because of the unique way that education is funded in this country. We do not pay it out until the next year anyway. So there are no gimmicks in this bill. This is straightforward. This is a sound bill. I strongly urge my colleagues to vote for this bill.

Again, I thank Senator SPECTER, his staff: Bettilou Taylor, Jim Sourwine, Mary Dietrich, Kevin Johnson, Mark Laisch, Jack Chow, and Aura Dunn for all of their hard work. I also thank my minority staff: Ellen Murray and Jane Daye; also my personal staff: Bev Schroeder on education; Chani Wiggins on labor; Sabrina Corlette on health; Katie Corrigan on disabilities; Rosemary Gutierrez on child labor; and, of course, my outstanding leader, legislative director, Peter Reinecke, for all of his hard work.

So again I urge my colleagues on this side of the aisle to give this bill their "yes" vote and send it to conference resoundingly because it is a good bill, and it is good for America.

I ask unanimous consent that several letters in support of passage of this bill be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NATIONAL ASSOCIATION OF CHILD CARE RESOURCE AND REFERRAL AGENCIES,

Washington, DC, October 7, 1999.

Hon. TOM HARKIN,
U.S. Senate,
Washington, DC.

DEAR SENATOR HARKIN: On behalf of the Board of Directors and the more than 700 members of the National Association of Child Care Resource and Referral Agencies (NACCRRRA), this letter urges the U.S. Senate to pass the FY2000 budget bill. NACCRRRA appreciates the inclusion of a set-aside for child care resource and referral and school-age child care in the Child Care and Development Block Grant (CCDBG), even though we sought an increase in the CCDBG to provide more and improved services to children and families throughout the country.

NACCRRRA especially thanks the Senate for including language for the Child Care Aware service in the budget bill. Child Care Aware is the only national hot-line for parents, families and community persons interested and involved in child care and early education to get connected to the CCR&R in their community. We continue to request inclusion of a funding amount for CCA: \$500,000.

Thank you once again.

Sincerely,

YASMINA VINCI,
Executive Director.

EDNA RANCK,
Director of Public Policy and Research.

STUDENT AID ALLIANCE,
Washington, DC, October 7, 1999.

Hon. TOM HARKIN,
Ranking Member, Labor, Health and Human Services Subcommittee, Washington, DC.

DEAR SENATOR HARKIN: We write on behalf of the Student Aid Alliance—a coalition of 60 organizations representing colleges and universities, students, and parents—to thank you for your leadership in crafting a Labor-HHS-Education appropriations bill for FY 2000 that recognizes the need for increased investment in student aid programs.

Despite the constraints of a woefully inadequate 302(b) allocation and stringent budget caps, your bill will help maintain access to postsecondary education for low-income students. It clearly recognizes the need for sustained federal investment in proven student aid programs. We appreciate the central role you have played in bringing about increases for student aid programs in FY 2000.

At the outset of this year's appropriations process, the Student Aid Alliance set important goals for student aid funding. As you will recall, we have advocated for a \$400 increase in the maximum Pell Grant, substantial increases in campus-based aid (SEOG, Perkins Loans, and Work-Study), LEAP, TRIO, and graduate education programs. Your bill takes a step in the right direction toward achieving our funding goals.

During the final weeks of the Congressional session, we will continue to seek additional opportunities to help achieve the funding recommendations of the Student Aid Alliance. We hope that by working together we can build upon your good work to make even more funding available for your subcommittee's priorities.

Again, thank you for your work on behalf of all college students. We look forward to working with you as the appropriations process continues.

Sincerely,

STANLEY O. IKENBERRY,

Co-Chair.
DAVID L. WARREN,
Co-Chair.

NATIONAL COALITION FOR
 CANCER RESEARCH,
 Washington, DC, October 7, 1999.

Hon. TOM HARKIN,
 U.S. Senate,
 Washington, DC.

DEAR SENATOR HARKIN: On behalf of the National Coalition for Cancer Research, a coalition of 25 national organizations of cancer researchers, patients, and research advocates dedicated to eradicating cancer through a vigorous publicly and privately-supported research effort; I want to thank you and your colleagues on the Labor-HHS Appropriations Committee for your strong support of the National Institutes of Health (NIH) with regard to the FY 2000 appropriations.

It is very important that the Senate make a strong statement regarding the continued commitment to double the budget of the NIH in order to sustain the momentum of this historic initiative. It is vitally important that the Senate pass this legislation in order to provide the necessary leverage to maintain the Senate's position in conference negotiations and to move this important legislation to the next process. Thank you for your strong support and consideration of this important issue.

Sincerely,

CAROLYN R. ALDIGE,
 President.

NATIONAL ALLIANCE FOR EYE
 AND VISION RESEARCH,
 Washington, DC, October 7, 1999.

Hon. TOM HARKIN,
 U.S. Senate,
 Washington, DC.

DEAR SENATOR HARKIN: Thank you for your continued strong commitment to biomedical research demonstrated by the \$2 billion increase provided for the NIH in the Fiscal Year 2000 spending bill moving through the Senate.

On behalf of the National Alliance for Eye and Vision Research (NAEVR), I urge you and your colleagues to hold firm to your commitment through the conclusion of the budget process in order to stay on track towards doubling the NIH budget by 2003. Your efforts have given renewed hope to millions of Americans afflicted with disease and disabling conditions that improved treatments and cures may be close at hand.

It is critical that the Senate pass the Labor-HHS-Education spending bill in order that the nation's commitment to biomedical research is not weakened in the negotiations to determine the final funding outcome for NIH.

Once again, thank you for your strong support and for your consideration of this important issue.

Sincerely,

STEPHEN J. RYAN, MD,
 President.

Mr. LOTT addressed the Chair.

The PRESIDING OFFICER. The majority leader.

Mr. LOTT. I will be brief because I know we need to go to final passage.

I must say that, amazingly, in a moment we are going to be voting on final passage of the Labor-HHS appropriations bill. I think this is the first time in 3 years that we have done that. I know we did not have one last year. I cannot recall for sure about 1997. I know we did in 1996. Regardless, this is the 13th and last of the appropriations bills. We are going to get to final passage. I hope it will pass.

I have to extend my congratulations to the chairman of the subcommittee, the Senator from Pennsylvania, and the Senator from Iowa. A lot of people thought we could not get it done, but here we are. I want to say a special thanks to PAUL COVERDELL, who acted as one of my assistants on this matter, working with the whip on our side, and HARRY REID, who did a great job. In fact, I had asked Senator COVERDELL if he would do this every week, and he has respectfully declined.

Having said that, following this bill—the last appropriations bill—there will be no further votes this evening, and no votes will occur on Friday of this week. In addition, the Senate will not be in session on Monday, in light of the Columbus Day holiday.

On Friday, the Senate will begin consideration of the Comprehensive Test Ban Treaty at 9:30 a.m. Obviously, this is a very important treaty, a very important matter, so I urge my colleagues to participate in the debate tomorrow. I think we have somewhere between 10 and 20 speakers who are going to speak on this tomorrow. I hope the Senators will watch it from their offices or review the debate that occurs on Friday.

This evening, the Senate will shortly begin the Agriculture appropriations conference report. Additional debate on that issue will occur this evening. Several votes will occur on Tuesday, October 12, beginning at 5:30. There could be one vote or more. I think it is very possible there could be a couple votes at that time on Tuesday dealing with the Agriculture appropriations conference report and possibly with the Comprehensive Test Ban Treaty.

So I thank all my colleagues for their cooperation. We have had a very successful week. We passed the FAA reauthorization, confirmed two judicial nominations, passed the foreign operations conference report. Now we are hopefully fixed to pass the Labor-HHS appropriations bill, and we will file cloture tonight, since it seems it is necessary, on the Agriculture appropriations conference report.

The bottom line: No further votes tonight; the next vote, 5:30 on Tuesday.

I yield the floor.

Mr. SPECTER addressed the Chair.

The PRESIDING OFFICER. The Senator from Pennsylvania.

Mr. SPECTER. I have a good bit to say, but since colleagues want to get to the airport, I shall say it after the final vote takes place.

I yield the floor.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. COVERDELL. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass? The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. REID. I announce that the Senator from New York (Mr. SCHUMER) is necessarily absent.

I also announce that the Senator from Connecticut (Mr. DODD) is absent because of family illness.

The PRESIDING OFFICER (Mr. SESSIONS). Are there any other Senators in the Chamber desiring to vote?

The result was announced—yeas 73, nays 25, as follows:

[Rollcall Vote No. 321 Leg.]

YEAS—73

Abraham	Gorton	Mikulski
Akaka	Grassley	Moynihan
Baucus	Gregg	Murkowski
Bennett	Harkin	Murray
Biden	Hatch	Reed
Bingaman	Hollings	Reid
Bond	Hutchinson	Robb
Boxer	Hutchison	Roberts
Breaux	Inouye	Rockefeller
Bryan	Jeffords	Roth
Burns	Johnson	Santorum
Byrd	Kennedy	Sarbanes
Campbell	Kerrey	Shelby
Chafee	Kerry	Smith (OR)
Cleland	Kohl	Snowe
Cochran	Landrieu	Specter
Collins	Lautenberg	Stevens
Coverdell	Leahy	Thompson
Daschle	Levin	Thurmond
DeWine	Lieberman	Torricelli
Domenici	Lincoln	Warner
Dorgan	Lott	Wellstone
Durbin	Lugar	Wyden
Feinstein	Mack	
Frist	McConnell	

NAYS—25

Allard	Enzi	Kyl
Ashcroft	Feingold	McCain
Bayh	Fitzgerald	Nickles
Brownback	Graham	Sessions
Bunning	Gramm	Smith (NH)
Conrad	Grams	Thomas
Craig	Hagel	Voinovich
Crapo	Helms	
Edwards	Inhofe	

NOT VOTING—2

Dodd Schumer

The bill (S. 1650), as amended, was passed.

The text of the bill will be printed in a future edition of the RECORD.

Mr. SPECTER. Mr. President, I move to reconsider the vote.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. SPECTER. Mr. President, I thank my colleagues on both sides of the aisle.

I ask unanimous consent when the Senate completes all action on S. 1650, it not be engrossed and be held at the desk.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPECTER. Mr. President, I thank my colleagues on both sides of the aisle for the very strong vote in support of this bill. I thank my distinguished colleague, Senator HARKIN, ranking member, for his cooperation, for his leadership, and for his extraordinary diligence. We have had an extraordinary process in moving through this bill.

It is very difficult to structure funding for the Department of Education, the Department of Health and Human Services, and the Department of Labor which can get concurrence on both sides of this aisle. The bill came in at \$91.7 billion. There have been some additions. It is hard to have enough spending for some, and it is hard not to have too much spending for others. I think in its total we have a reasonably good bill to go to conference.

The metaphor that I think is most apt is running through the raindrops in a hurricane. We are only partway through. We are now headed, hopefully, for conference. I urge our colleagues in the House of Representatives to complete action on the counterpart bill so we may go to conference.

We have already started discussions with the executive branch. I had a brief conversation with the President about the bill. He said his priorities were not recognized to the extent he wanted. I remind Senators that the Constitution gives extensive authority to the Congress on the appropriations process. We have to have the President's signature, but we have the constitutional primacy upon establishing the appropriations process at least to work our priorities. I am hopeful we can come to an accommodation with the President.

We have had extraordinarily diligent work done by the staff: Bettilou Taylor, to whom I refer as "Senator Taylor," has done an extraordinary job in shepherding this bill through and taking thousands of letters of requests from Senators; Jim Sourwine has been at her side and at my side; I acknowledge the tremendous help of Dr. Jack Chow, as well as Mary Dietrich, Kevin Johnson, Mark Laisch, and Aura Dunn. On the minority staff, Ellen Murray has been tremendous, as has Jane Daye.

There is a lot more that could be said, but there is a great deal of additional business for the Senate to transact. I thank my colleagues for passing this bill.

AGRICULTURE, RURAL DEVELOPMENT, FOOD AND DRUG ADMINISTRATION, AND RELATED AGENCIES APPROPRIATIONS ACT, 2000—CONFERENCE REPORT

Mr. LOTT. Mr. President, I ask consent that the Senate proceed to the conference report to accompany the Agriculture appropriations bill, the conference report be considered as read, and immediately following the reporting by the clerk and granting of this consent, Senator JEFFORDS be recognized.

Mr. JEFFORDS. I object.

Mr. LOTT. In light of the objection, I now move to proceed to the conference report of the committee of conference on the bill (H.R. 1906) an act making appropriations for Agriculture, Rural Development, Food and Drug Administration, and Related Agencies for the fiscal year ending September 30, 2000, and for other purposes.

The PRESIDING OFFICER. The report will be stated.

The clerk read as follows:

The committee on conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 1906), have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

(The conference report is printed in the House proceedings of the RECORD on September 30, 1999.)

Mr. LOTT. Mr. President, I ask consent following my remarks, Senator JEFFORDS be recognized.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LOTT. I say to the membership, if an agreement cannot be reached for a total time limitation that is reasonable, I will file a motion for cloture on the Agriculture conference report, and that a cloture vote will occur on Tuesday of next week at 5:30 unless a consent can be worked out to conduct the vote at an earlier time or unless something can be worked out to just have the vote on final passage.

I ask the Senator from Vermont if he is in a position to agree to a time limitation for debate at this time on the pending Agriculture conference report?

Mr. JEFFORDS. I believe I can't make that agreement at this time.

Mr. LOTT. I thank my colleague for his frankness. I understand his feeling about it. I know there are Senators on both sides of the aisle who have some reservations about going forward with this bill. I know they can understand the need to move this very important bill on through the conference process and to the President for his signature.

CLOTURE MOTION

I send now a cloture motion to the desk.

The PRESIDING OFFICER. The cloture motion having been presented

under rule XXII, the Chair directs the clerk to read the motion.

The legislative clerk read as follows:

CLOTURE MOTION

We the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, do hereby move to bring to a close debate on the conference report to accompany H.R. 1906, the Agriculture appropriations bill.

Trent Lott, Thad Cochran, Tim Hutchinson, Conrad Burns, Christopher S. Bond, Ben Nighthorse Campbell, Robert F. Bennett, Craig Thomas, Pat Roberts, Paul Coverdell, Larry E. Craig, Michael B. Enzi, Mike Crapo, Frank H. Murkowski, Don Nickles, and Pete Domenici.

Mr. LOTT. I ask consent that the mandatory quorum under rule XXII be waived.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LOTT. I ask consent that the cloture vote occur at 5:30 p.m. on Tuesday.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LOTT. I yield the floor.

The PRESIDING OFFICER. The Senator from Vermont is now recognized.

Mr. JEFFORDS. Mr. President, it is with great disappointment and reluctance that I stand before the Senate to express my reasoning for opposing the fiscal year 2000 Agriculture appropriations bill. This bill provides funding for agricultural programs, research, and services for American agriculture. In addition, it provides billions of dollars of aid for farmers and ranchers throughout America who have endured natural and market disasters.

However, and most unfortunately, it neglects our Nation's dairy farmers. I understand the importance of funding these programs and the need to provide for farmers. However, dairy farmers throughout the country, drought-stricken farmers in the Northeast, have been ignored in this bill. Congress is willing to provide billions of dollars in assistance to needy farmers across the country. Dairy farmers in States are not asking for Federal dollars but for a fair price structure for how their products are priced.

Vermonters are generally men and women of few words. Given that the State's heritage is so intertwined with agriculture and the farmer's work ethic, whether fighting the rocky soil or the harsh elements, Vermonters have developed a thick skin. If Vermonters want advice, they will ask it. Until then, it is best to keep one's mouth shut.

Indeed, a Vermonter will rarely meet a problem with a lot of discussion but, rather, with a wry grin and perhaps a shrug. If there is a blizzard and the temperature is below zero, the Vermonter will most likely put on his boots and grab a shovel. Talking isn't going to make the snow melt, but hard work will clear a path so the mailman can get to the door.

A Vermonter will always speak his or her mind with the fewest words possible. President Calvin Coolidge was a native Vermonter to the core. A woman told Calvin Coolidge, that taciturn 30th President who hailed from Vermont, she bet she could get him to say more than two words. Coolidge thought a moment and then replied, "You lose."

Vermonters know I must speak my mind about the importance of protecting the farm families in our State. They expect me to be generous with my thoughts and expressions on just how critical the Northeast Dairy Compact is to Vermont. I will not let them down. The clock is ticking on the dairy compact and Federal order reform. Every moment is valuable.

As Governor Aiken, a true Vermonter, said:

People ask what's the best time of the year for pruning apple trees. I say, when the saw is sharp.

In other words, procrastination has no place in a Vermonter's mindset. Assuming every Vermonter owns a sharp saw, the best time to get to work pruning an apple tree is right about now.

America's dairy farmers need our help. Now is the time to help them. Congress has the tools and the means, so let us not procrastinate on protecting the future of one of our most important resources. The farmers in New England have a program that works. It is called the Northeast Dairy Compact. Because the dairy pilot program has worked so well, no fewer than 25 States have approved compacts and are now asking Congress for approval.

Unlike other commodities such as wheat, cotton, or soybeans, milk cannot be stored to leverage a better price from the market. Milk must be bottled and shipped to the grocery store as soon as it is taken from the cow. Because of the unique situation milk is in compared to other commodities and ensuring there is a fresh local supply of milk in every region of the country, Congress established a pricing structure to protect farmers and consumers. There have been several modifications of the 1937 Agricultural Marketing Adjustment Act over the years to comply with changes at the marketplace, but the structure of the Federal milk marketing orders is as solid and important both to farmers and consumers today as in 1937.

The Federal milk marketing orders have assisted dairy farmers in surviving the economy and weathering prices. The Federal milk marketing orders over the last 60 years have been, and continue to be, supplying the Nation with sufficient supplies of a wholesome product and at very reasonable prices. You ought to compare the prices over time with other things such as soft drinks and things such as that and you will realize what a deal you have. To those who say they do not un-

derstand them, who make fun of their seeming complexity, I can only reply: They work. Because they work, dairy is not looking for a bailout in the form of disaster relief; no.

But dairy farmers do need relief of a different kind. There is no need for the expenditure of money. The compact we need to have does not cost the Government money; it saves the Government money. It also brings about a calm structure to the pricing aspects. It protects the producers, protects also the manufacturers, and has worked out especially well for consumers, giving them an average price for their milk which is lower than the average in the country. Where commodity farmers are asking their Government for relief from natural and market disasters, dairy farmers are asking for relief from the promised Government disaster in the form of a fair pricing structure from the Secretary of Agriculture.

This chart, which I will have here in a moment, will demonstrate so those who can see it will understand better what I am talking about. What we are here about today is that, basically, we have a very reasonable request for the continuation of a compact which has worked for many years now, and is so good that, first of all, it has 25 States that have passed laws to have another compact. But, most importantly, it also, unfortunately I should say at the same time, is keeping farmers in business. For some reason or other, those up in the Midwest, who have this compulsion to believe they can provide the milk for the whole Nation if they just had the chance, they don't like it. Why? It is keeping the farmers in business and they want them out of business so they can take away their markets.

Second, you have people who do not like it—although those in the area who are using it like it very much—but others outside the area are very concerned about it; that is, those who buy the milk are concerned because they no longer have a monopoly or they are at the mercy of the market. Because when dairy sits there, it spoils, so you have to get it right away. If nobody takes it, it is not worth much. So the processors do not like this because they do not set the price. They do not have a monopoly.

How does it work? We put together a system for the dairy farmer up in northeastern Vermont. They worked out this arrangement. That is why Massachusetts, which has very few farms, and Rhode Island, agreed to join together, because they found out it would work out for their processors, it would work out for the consumers, and it would work out for the farmers. But dairy farmers do need relief of a different kind.

There is no need for an expenditure of money where commodity farmers are asking for relief from natural and

market forces. They are asking for relief in the form of a fair pricing structure from the Secretary of Agriculture. This chart says it all. I hope my colleagues remember, I had this chart before this body some time ago. It helps us get the necessary votes to show a majority understood. From this chart, which is the revenue loss resulting from the Federal USDA order proposed—that is 1-B—you can see why we are having such conflict and why we are having a difficult time getting the dairy bill through.

On this chart, those States in red are the ones that will lose under 1-B. The States in green are the ones that will gain. Guess where those are that will gain. They are in the upper Midwest. Everybody else in the country, with a few exceptions, loses. So what does the Secretary do? He sets up this scam way of approving the order by saying it is 1-B or disaster. How would you vote? Would you vote for 1-B or would you vote for disaster? Guess what. 1-B won, but was that the preference of the farmers? No. We have gone to court on that and the court agreed and said that was a farce. So there is a restraining order to stop the imposition of 1-B. But remember that chart because it shows why and what this is all about.

Unless relief is granted by correcting the Secretary's final rule and extending the Northeast Dairy Compact, dairy farmers in every single State will sustain substantial losses, not because of Mother Nature or poor market conditions but because of the Clinton administration and the few in Congress who have prevented this Nation's dairy farmers from receiving a fair deal.

Unfortunately, Secretary Glickman's informal rulemaking process developed pricing formulas that are fatally flawed and contrary to the will of Congress. The Nation's dairy farmers are counting on this Congress to prevent the dairy industry from being placed at risk, and to instead secure a sound future.

Secretary Glickman's final pricing order, known as option 1-B, which I just talked about, was scheduled to be implemented on October 1 of this year. However, the U.S. district court has prevented the flawed pricing system from being implemented by issuing a 30-day temporary restraining order on the Secretary's final rule. That will expire at the end of this month. Hopefully, it will be extended.

The court found the Secretary's final order and decision violates Congress' mandate under the Agriculture Marketing Agreement Act of 1937, and the plaintiffs who represent the dairy farmers would suffer immediate and irreparable injury from implementation of the Secretary's final decision.

The court finds the plaintiffs have a likelihood of success in their claim that the Secretary's final order and decision violates the AMAA by failing

adequately to consider economic factors regarding the marketing of milk in the regional orders across the country.

Again, this chart shows why the court said we had better take another look at this. If this is what is going to happen with this order by the Secretary of Agriculture, that does not seem to be consistent with talking about the regions, making sure the regions are handled fairly.

The temporary restraining order issued by the U.S. district court has given Congress valuable additional time to correct Secretary Glickman's rule. We must act now. With the help of the court, Congress can now bring fairness to America's dairy farmers and consumers. Instead of costing dairy farmers millions of dollars in lost income, Congress should take immediate action by extending the dairy compact and choosing option 1-A for the Secretary.

The Agriculture appropriations bill, which includes billions of dollars in disaster aid, seems to be a logical place to include provisions that would help one of this country's most important agricultural resources without any cost to the Federal Government. Again, I repeat that over and over again—without any cost to the Federal Government. Giving farmers and consumers a reliable pricing structure and giving the States the right to work together, at no cost to the Federal Government—again, at no cost to the Federal Government—to maintain a fresh supply of local milk is a novel idea.

If you learn about agricultural problems in this country, you will realize much of the aid in this bill does not go for disasters of the kind of weather or whatever. It is low prices. So what is going to happen? The Federal Government is going to put up billions of dollars because the farmers did not get the price that they thought was fair. That is fine, but why in the world could you, then, deny the area of New England an order which helps them to keep their farmers in business and doesn't cost any money to the Federal Government?

That sounds like a convoluted way of running a system, but we may be getting used to it.

It is an idea towards which Congress should be working. Instead, a few Members in both the House and Senate continue to block the progress and the interest of both consumers and dairy farmers.

The October 1, 1999, deadline for the implementation of the Secretary's rule has come and gone, but with the help of a U.S. Federal district court, Congress still has time to act. We must seize this opportunity to correct the Secretary of Agriculture's flawed pricing rules and at the same time maintain the ability of the States to help protect their farmers without addi-

tional costs to the Federal Government.

Federal dairy policy is difficult to explain at best. I have been here 24, 25 years. When I was in the House, I was fortunate enough, or unfortunate as you might say, to be the ranking member on a subcommittee dealing with dairy. I point back to that time because that was the Watergate years. The reason I got that job was because there were not many Republicans left, and all of us received ranking jobs of some sort.

At that time, we had problems, and we have had problems every year I have been here. We finally have come across a program that works that will prevent the travesties we have witnessed over the years. I have seen it for 24, 25 years now, and I finally see there are programs that will work, programs that will keep us out of disasters, programs that will make us proud of agriculture and protect the consumers' costs and protect all the others who work with it. Why do we want to do away with it?

Federal dairy policy is difficult to explain at best. As a Member who has served many years, and during my years in the House, I worked very closely with dairy programs that impacted dairy farmers and consumers. The Federal Milk Marketing Program may be difficult to explain, but its intent is simple. The Federal milk marketing orders, which are administered by USDA, were instituted in the 1930s to promote orderly regional marketing conditions by, among other things, establishing a regional system of uniform classified pricing throughout the country's milk markets. Milk marketing policy is defined by the fact that milk is a unique commodity. It is not something such as grain which is put in a storage bin or put in a freeze locker or canned. When you want it, you want it fresh and you want to be able to drink it.

Fluid milk is perishable and must be worked quickly through the marketing chain and reach consumers within days of its production. That is why if a farmer goes to the person from whom he normally purchases milk and he says we don't want it, they are at their mercy: "Well, we'll take it up \$2, \$3 less a hundredweight if you really want to get rid of it."

Unlike other commodities, this means that dairy farmers are in a poor bargaining position with respect to the price they can obtain from milk handlers. In addition, persistent price instability, particularly when prices are depressed, serves to drive producers from the market and damage the market's ability to provide a dependable supply of quality milk to consumers.

We get this up and down. If there is too much, farmers go out of business; if there is too little, then farmers either come back or they put more cows out.

The interesting thing is, if you look at the charts—consumers should be very interested in this—you will see a ratchet effect. Every time the price to the farmer goes down, the retail price stays up there because the processors keep it up there. The farmers lose and the consumers lose. That price should go down if the demand goes down, but that does not happen. That is another reason why this compact has worked so well because it takes that ratchet situation out of the system.

Based on the Agriculture Marketing Agreement Act of 1937, the major objectives of the Federal milk marketing orders are as follows: to promote orderly marketing conditions for dairy farmers; to equalize the market power of dairy farmers and processors within a market and thereby obtain reasonable competition; to assure consumers of adequate and dependable supplies of pure and wholesome fluid milk products from the least costly sources; and to complement the efforts of cooperative associations of dairy farmers, processors, and consumers; and to provide maximum freedom of trade with proper protection of established dairy farmers against loss of the market.

For dairy farmers increasing production to adjust to market conditions is not a matter of sowing more seeds. Price stability is a key to dairy farmers' success. That makes sense to me and should make sense to anyone who values having a local supply of fresh milk available at their local market at reasonable prices.

Yet while the market order system is basically sound, it still needs improvement. It is for this reason that the Congress in the 1996 farm bill directed the Secretary of Agriculture to revise the pricing system.

This Congress has made its intention abundantly clear with regard to what is needed for the new dairy pricing rules. Sixty-one Senators and more than 240 House Members signed letters to Secretary Glickman last year supporting what is known as option 1-A for the pricing of fluid milk.

On August 4 of this year, you will recall the Senate could not end a filibuster from the Members of the upper Midwest but did get 53 votes, showing a majority of the Senate supports option 1-A and keeping the Northeast Dairy Compact operating. Most recently, the House passed their version of option 1-A by a vote of 285-140.

The House and Senate have given a majority vote on this issue. Thus, I was very hopeful that its inclusion would have been secured in the Agriculture appropriations bill.

This unified statement of congressional intent reflected the fact that the majority of the country and the dairy industry support option 1-A. It has a broad support of Governors, State departments of agriculture, the American Farm Bureau, and dairy cooperatives

and coalitions from throughout the country. Even the Land-O-Lakes Cooperative in the upper Midwest supports option 1-A and the compacts.

You can imagine the surprise and disappointment of so many of my colleagues and dairy farmers around the country when Secretary Glickman instead chose option 1-B for the pricing structure for fluid milk. Simply stated, if this option is allowed to be implemented, it will put the future of this country's dairy industry at severe risk.

The pricing provisions of the Secretary's final rule will result in lower producer prices by as much as a \$1/2 million a day and will unnecessarily force farmers out of business. Adequate local supplies of fresh milk in our region will then be threatened and consumers will pay higher prices for fresh milk which is transported great distances from other areas of our country.

I see my good friend from New Jersey is here. I am ready to go on at length. I expect he wants to express himself.

Mr. President, I yield the floor at this time.

Mr. TORRICELLI. Mr. President, I thank the Senator from Vermont for yielding. I thank him in behalf of the dairy farmers in New Jersey and agricultural interests in our State and region for his extraordinary leadership in what is a defining moment for those of us in the Senate as to whether or not we will stand with agriculture in the Northeast or the dairy farmers and the farmers who remain in our region of the country are simply to dwindle and die as did so many who came before them.

I could not feel more strongly about this issue at this moment in the Senate. As the Senator from Vermont, year after year I have come to this well—or in my service in the House of Representatives—as an American feeling the need and the pain of others who suffered from hurricanes in Florida, earthquakes in California, tornadoes in the Midwest, floods in the upper Northwest to get assistance to people in need.

Through the years, I voted for agricultural appropriation after agricultural appropriation because I understood the hard work of American farmers in our heartland and the difficulties they face in flood or in diseases to crops, whatever the problem might be.

You can imagine my surprise to find, when the State of New Jersey, New England, and the Mideastern States have suffered the worst drought in generations, that our farmers are not receiving the same consideration.

From June through August, in a normal year, the State of New Jersey would receive 8 inches of rain. This year, New Jersey received 2 inches of rain. Our reservoirs were severely drained. The crops of many fruit and vegetable growers were devastated with losses of 30 to 100 percent.

Yesterday, Senator SANTORUM noted that this legislation deals with the falling prices of crops in the Midwest and offers relief. He appropriately said: We wish we had falling prices at which to sell our crops.

The crops of New Jersey farmers are destroyed. Yet this legislation, which offers \$8.7 billion in relief, goes largely for low crop prices in the South and to a lesser degree in the Midwest. Only 10 percent is for natural disaster assistance for the entire Nation.

Not only is it not adequate, it is an insult to the hard-working farmers in New Jersey and New England who have been devastated by the drought. In my State, 400,000 acres of farmland, on 7,000 farms, have sustained what is estimated to be up to \$100 million worth of damage.

Secretary Glickman has estimated there could be \$2 billion worth of damage in the entire Northeast. The Governors of our States, including Governor Whitman in my own State, have estimated it could be \$2.5 billion. That was before Hurricane Floyd brought its own damage to North Carolina and New Jersey and other agricultural interests. This legislation offers but 10 percent—less than half, probably less than a third—of what the need really is at the moment.

It will surprise some around our country to understand why a Senator from New Jersey would take this stand attempting to block the entire agricultural appropriations for the whole Nation because of farmers in New Jersey.

New Jersey has not been identified as the Garden State by chance. Agriculture in New Jersey is a \$56 billion industry. It is the third largest industry in the entire State. It matters. The nursery industry alone is a \$250 million annual business. The sale of vegetables, such as tomatoes, peppers, and cucumbers, is a \$166 million industry. And the sale of fruits, such as cranberries, peaches, and blueberries, is a \$110 million business. Our field crops, such as corn, winter wheat, and soybeans, generate \$66 million in sales while our dairy industry is a \$41 million business.

This is not some ancillary problem in the State of New Jersey. It is the economic life of whole counties, entire communities, and thousands of people. At \$8,300 for an average acre of land in New Jersey, our farmland is the most valuable in the Nation, growing 100 different kinds of fruits and vegetables for local and national consumption.

I take a stand against this legislation because I have no choice. I join with the Senator from Vermont because of the devastation of our agriculture industry but also because I share the Senator's deep concern for the future of dairy. The dairy industry was once one of the largest and most important in the State of New Jersey. There are now no more than 180 dairy farms left, with hard-working people in Salem,

Warren, Sussex, and Hunterdon Counties.

I know if the Senator from Vermont does not get consideration for his dairy farmers, his dairy industry will become tomorrow what the dairy industry has come to be today—prices that do not sustain a quality of life and do not allow people to keep the land. Those dairy farms will be destroyed.

In the last decade alone, 42 percent of the dairy farms in New Jersey have been destroyed—beautiful lands that sustained families and communities and are now parking lots and shopping centers or simply vacant, idle land. The fact is, a dairy farmer today in New Jersey cannot get a price to sustain the costs of his business. Without the compact that the Senator from Vermont is advocating, they never will. New Jersey dairy farms have experienced a 37-percent drop in the price of their product. It is not sustainable.

So I thank the Senator from Vermont for yielding the time. I pledge to return to this floor with him to fight for disaster assistance for New Jersey farmers who have lost their crops and need help—not a loan, because they cannot sustain a loan; they cannot pay interest on a loan. These are small family farms that simply need a Federal grant, a fraction of the kind of expenditures that will go to the South and the Midwest—a fraction—so they can plant their crops again in the spring and have a new crop next year to feed their families and feed our communities. For this dairy compact, we need to make sure these few remaining dairy farmers are not lost and the 20 percent of the fresh milk that goes to New Jersey families can continue to come from our own farms.

For those people who live in the urban areas of New Jersey and in suburban communities, who think they are far away from these dairy and agricultural needs, this remaining agricultural land in New Jersey must not be destroyed, because with every dairy farmer who goes out of business, every family farmer who has to sell their land, that open space is lost to suburban sprawl, and it affects the quality of life of every family in our State.

So I thank the Senator from Vermont for yielding the time. I pledge to return again and again with him to try to fight this legislation and, if by chance we should fail, to urge the President to veto it. I thank the Senator for yielding the time.

I yield the floor.

Mr. JEFFORDS addressed the Chair. The PRESIDING OFFICER. The Senator from Vermont.

Mr. JEFFORDS. I commend the Senator from New Jersey for his very realistic look at this bill. I would like to emphasize that there is so much more than the ordinary disaster in here. It has nothing to do with hurricanes and the drought. And the billions of dollars

for the Northeast, which had the drought and problems and all, have nothing to do with farmers. Not only that, the program they have—which costs no money and which has given security to the farmers and helped the consumers—will not go forward. They rejected our attempts to put it in there.

The Senator from Oregon, I believe, desires to speak on another matter. I would like to finish up with a few more remarks, and then I would be happy to yield. We may have one other Member coming over to speak on dairy. But I know he also supports this effort, and I appreciate that very much.

Let me remind my colleagues that unlike years ago, the Federal pricing program has essentially no Federal cost and no Federal subsidy. So here we are arguing for something to protect our farmers, to protect consumers, to protect the processors with a reasonable price, and we cannot get it approved, when billions of dollars are being spent in the disaster bill for non-disasters—except a lower price. That is a disaster, but it is not the kind of disaster we look to for protection by the Federal Government.

The overall loss to dairy farmers caused by the overall final rule is even more startling. We are back on 1-B, the one the Secretary of Agriculture jammed down the farmers' throats. Fortunately, the courts have put a stop to that.

The Secretary's final rule will drop the price paid for cheese by as much as 40 cents per hundredweight of milk. That is the way we look at how we reward the farmers for each hundredweight of milk. Dairy economists estimate that U.S. dairy farm annual income will fall in total by at least \$400 million or more under the Secretary's final decision.

Who benefits from that? Do the consumers? No. There is no evidence whatsoever that they will benefit. Who will benefit? The processors, the ones that buy the milk. Their profits will go up. The farmers' profits will go down. And the consumer prices will go up. What we are trying to set up is a system where that does not occur. The Northeast is projected to lose \$80 million to \$120 million per year under 1-B. The Southeast loses \$40 to \$60 million. The upper Midwest will lose upwards of \$70 million, even though, as the chart in red shows, they lose a lot less. In fact, they gain. On the other hand, most areas of the country will be better off under option 1-A, including the upper Midwest. Marginally increasing producer income in most regions of the country, option 1-A is based on solid economic analysis, benefiting both farmers and consumers. It takes into account transportation costs for moving fluid milk, regional supply and demand needs, the cost of producing and marketing milk, and the need to at-

tract milk to regions that occasionally face production deficits.

In early August, dairy farmers were given the opportunity to vote for option 1-B or reject the Federal Milk Marketing Order Program. That is right. There were two choices given to dairy farmers: Either approve option 1-B or have no Federal order program. Which is it? It is not a surprise that the farmers overwhelmingly chose the lesser of two evils.

There was no sense to this. There was no reason to allow it to occur. Correcting the Secretary's final rule, as part of the Agriculture appropriations bill, would have prevented dairy farmers across the Nation from losing millions of dollars in income.

Let me also explain briefly, before I turn to my friend from Oregon, the votes were in the conference committee to put in what we are trying to do. They were there. However, what happened? Just as we were about to have that vote, people from processors and others came in, and the leaders who were behind this move were able to convince those Members not to vote for what we want here, which is basically real help to farmers and consumers.

With that, Mr. President, I yield the floor, at least until my good friend from Oregon has finished.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. WYDEN. Mr. President, I want to take a few minutes tonight—Senator GRAHAM of Florida will be joining me, and Senator GORDON SMITH of my home State, my friend and colleague, will be joining me as well tonight—the three of us want to take a few minutes to talk about the important amendment we were able to have added to the HHS appropriations bill during the course of the last week.

In the beginning, we especially express our appreciation to Senator SPECTER and Senator HARKIN. They worked with the three of us and our staffs over the last week on this particular issue.

What our agricultural labor amendment does is require the Department of Labor to report to the Congress on how the Department plans to promote a legal, domestic workforce—specifically, to improve compensation, working conditions, and other benefits for agricultural workers in the United States.

Today's agricultural labor program is a disaster for both farm workers and for farmers. We have a system that is completely broken. Estimates are that well over half of the farm workers in this country are illegal. As a result of their status, they can have no power at all. They can't even vote. They are subjected to the worst possible conditions imaginable, horrendous housing, and, in many instances, thrown into the back of pickup trucks and moved by

people called coyotes, who, for a profit, bring them from other countries. The conditions to which our agricultural workers are subjected in so many instances are nothing short of immoral.

At the same time, the growers, who have a dependable supply of workers to pick their crops, are also in a completely untenable situation, the growers who want to do the right thing. Senator SMITH and I represent a great many of those growers and farmers in our home State of Oregon, who don't know where to turn to find legal workers.

The General Accounting Office did a report a couple of years ago on the farm worker situation in our country. They said there really are enough farm workers, but they came to that conclusion only by counting the illegal farm workers in our country. Well over half of the farm workers in the United States are illegal. It is a situation that essentially turns those farmers, when they want to do the right thing, into people who have to make a choice as to whether or not they want to be felons and not comply with the law or simply another individual in the bankruptcy line in our country.

To give you an idea how absolutely unacceptable this situation is, just this week I had berry farmers from my home State in Oregon telling me they had recently had meetings with the Department of Justice and the Immigration and Naturalization Service. They were told, in effect, how to work the system, but they weren't given any hope that what they were doing was within the law. In effect, the administration was telling the berry farmers in my State, with a wink and a nod, they should tolerate this system that is based on workers who can have no power and farmers who lack a system that is dependable and reliable so they can find legal workers.

In the last session of Congress, Senator GRAHAM, Senator SMITH, and I put together a bipartisan proposal to change this wholly unacceptable situation and produce a new system for dealing with agricultural labor that would be in the interest of both the farm worker and the farmer. Under our proposal, workers who were legal would get a significant increase in their benefits. Just how significant was documented in a report done for us by the Library of Congress, October 21, 1998. At page 2 of that report, it states specifically that the Library of Congress found that under our proposal—it received 67 votes in the Senate—the legal farm worker would get significantly higher wages, under what the Senate voted for. In addition, there would be benefits for housing, transportation, a variety of benefits that are so critical to the farm workers.

But after 67 Members of the Senate voted for our proposal, the administration said: It is unacceptable. We are

going to veto it. It is not good enough. We have other ideas.

At that time, Senator SMITH, Senator GRAHAM, and I entered into a series of discussions with the Clinton administration asking them for their plan on how to produce this system that would address the legitimate concerns of both the farm workers and the growers. We have been at that for more than a year.

I see our good friend Senator GRAHAM coming to the floor, and I will yield to him in just a moment.

Senator GRAHAM, Senator SMITH, and I have been at the task of trying to get from the administration their plan to deal with agricultural labor for more than a year. We told them, if they don't like our proposal—67 votes in the Senate; the Library of Congress said it will produce higher benefits, wages, improved transportation, and improved housing for so many legal workers—since it wasn't good enough for the Clinton administration, we would like to see their proposal. We decided we would, in the spirit of comity and a desire to get an agreement with the executive branch, wait for their proposal.

We are still waiting to this day. The administration remains on the sideline to this day, unwilling to come forward with any specific ideas that would be in the interests of both the workers and the growers. Just this week, they told the berry farmers in my home State—and we do a lot of things in Oregon well; frankly, what we do best is grow things; our farmers are very important to our State—the administration basically told them, just wink and nod at the rules that are out there today.

In December of 1998, Alexis Herman, Secretary of Labor, sat in a meeting in Senator GRAHAM's office with Senator GRAHAM, Senator SMITH, and myself. Alexis Herman told us, three Members of the Senate, that the administration would give us a specific proposal for dealing with this agricultural labor situation by the end of February 1999.

No such proposal has ever been delivered. In a moment, I am going to yield to my friend from Florida because he has essentially laid out a timeline that demonstrates how many times we have tried to get the administration off the sidelines and to join us in a bipartisan effort to produce a system that would work for the farm worker and for the grower.

By its inaction, the administration is perpetuating a system that is a disaster for both the farm worker and the farmer. It is a system that is totally broken—a system that has condemned the vast majority of farm workers to some of the most terrible and immoral conditions imaginable. It is a system that has made it impossible for the farmers who want to do the right thing to know where to turn.

In the last Congress, Senator GRAHAM, Senator SMITH, and myself brought a legislative proposal that

would change that, which the Library of Congress said would produce a significant amount of additional benefits for the legal farm worker. The Clinton administration said that wasn't good enough, and we have waited and waited for their ideas.

Well, tonight, as a result of the action taken in the Labor-HHS bill, we are calling, as a matter of law, on the Clinton administration to give us their plan as to how to produce a legal domestic workforce, which would have improved compensation, improved working conditions, and improved benefits that those farm workers are entitled to as a matter of simple justice.

So I am hopeful that we will get the administration off the sidelines soon. I am hopeful that they will do what they promised to do well over a year ago.

If the Senator from Vermont is willing, I would like to break my remarks off at this point and allow the Senator from Florida to speak for a few minutes. We want to be courteous to our colleague from Vermont because he is dealing with an issue of great importance to him. We will be brief.

I ask unanimous consent that a memorandum be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL RESEARCH SERVICE,
LIBRARY OF CONGRESS,
Washington, DC, October 21, 1998.
[Memorandum]

To: The Honorable Ron Wyden; Attention: David Blan.
From: American Law Division.
Subject: Agricultural Labor Proposal.

In your letter of October 15, 1998, you asked for a memorandum comparing the basic federal protections available to farm workers with the protections that would have been extended to farm workers under the proposed conference agreement to the Commerce State Justice bill/H2A provision. The letter stated that you are "especially interested in whether the agricultural labor proposal before the Appropriations Conference Committee would have offered farm workers, and particularly the more than 99.5% of U.S. farm workers who work on non-H-2A farms new or expanded benefits compared to current law."

The proposal would have required the Secretary of Labor to establish state and regional registries containing a database of eligible United States workers seeking temporary or seasonal agricultural jobs, in order to inform those workers of available agricultural jobs and to grant them the right of first refusal for available jobs. Basically, farmers would have to apply to the registry for U.S. workers, and hire all referred U.S. workers, before they could seek non-immigrant alien temporary agricultural workers under the immigration program known as "H-2A." Agricultural employers could not import any workers unless the registry failed to refer a sufficient number of registered workers to fill all of the employer's job opportunities. Therefore, the employer could only acquire as many imported workers as would be needed in addition to those U.S. workers referred.

The proposal would have had an impact on domestic farm workers in addition to its effect on alien workers. The general legislative scheme was to condition the right of an agricultural employer to request and hire temporary alien workers on the employer's requirement, first, to seek domestic workers from the registries maintained by the Labor Department, and, then, to extend the protections granted to H-2A aliens under the proposal to all workers in the same occupation on the same farm. Under the proposal, agricultural employers seeking domestic and foreign workers through the registries were required to assure that they would not refuse to employ qualified individuals, and would not terminate them unless there were "lawful job-related reasons, including lack of work." Employers were also required to comply with the following specific assurances.

WAGES

Under current law, agricultural employers, unless they are exempt as small farmers, must pay the applicable minimum wage and overtime rates under the federal Fair Labor Standards Act (FLSA) or 1938, as amended. 29 U.S.C. §§201-19. Under that law, farm workers must receive the greater of the applicable federal or state minimum wage.

Under the conference agreement, the employer must pay the greater of the prevailing wage in the occupation or the adverse effect wage rate to the workers. The employer using the registry must provide assurances that the wages and benefits promised to the workers hired from the registry would be provided "to all workers employed in job opportunities for which the employer has applied [from the registry] and to all other workers in the same occupation at the place of employment."

MIGRANT WORKER PROTECTION

Under current law, agricultural employers who hire migrant and seasonal workers must comply with the provisions of the Migrant and Seasonal Agricultural Worker Protection Act (MSWPA). 29 U.S.C. §§1801-72. The MSWPA, however, does not cover any temporary nonimmigrant alien authorized to work in agriculture employment under the H-2A program. See 29 U.S.C. §1802(8)(B)(ii).

Under the proposal agricultural employers were required to comply with all applicable federal, state, and local labor laws, including laws affecting migrant and seasonal agricultural workers, for all United States workers as well as all alien workers on the farm.

HOUSING

Under current law, employers have no responsibility to provide housing or housing assistance to their workers. Under the Migrant and Seasonal Agricultural Worker Protection Act (MASWPA), any person who owns or controls housing must comply with substantive federal and state safety and health standards applicable to that housing. 29 U.S.C. §1823.

Under the conference proposal, employers are required to provide housing at no cost to all workers in jobs for which the employer has applied to the registry, and to all other workers in the same occupation as the place of employment, if the workers' permanent place of employment is beyond normal commuting distance. The employer may provide a housing allowance as an alternative.

WORKERS COMPENSATION

Under current law, workers compensation coverage is exclusively a subject of state law, which may not cover all agricultural employees, especially those considered casual or temporary.

Under the proposal, the employer was required to provide insurance coverage providing benefits equivalent to those under state law, at no expense to the worker, for any job that was not covered by the state workers compensation law.

HEAD START

Under current law, migrant employees find barriers to participation in Head Start programs.

Under the proposal, the Migrant and Seasonal Head Start Program would have been established, removing barriers to participation by the children of migrant farmworkers.

TRANSPORTATION

Under current law, employers are not obliged to provide transportation to workers. If transportation is furnished, the employer and any farm labor contractor must comply with the motor vehicle safety requirements of the MSWPA, 29 U.S.C. §1841.

Under the conference proposal, a worker who completed 50 percent of the period of employment would be reimbursed for transportation expenses to the job, and a worker who completed the period of employment would be reimbursed for the cost of transportation back to the worker's permanent place of residence.

ENFORCEMENT OF LABOR LAWS

Under current law, labor laws are enforced primarily by the U.S. Department of Labor and by the responsible state labor enforcement agencies.

Under the proposal, the Secretary of Labor was required to establish an expedited complaint process, including a written determination of whether a violation has been committed within 10 days of the receipt of a complaint.

Workers on farms where the employer did not seek workers through the Labor Department registry would not have been affected by the proposal. Agricultural employers who hire migrant and seasonal workers must comply with the provisions of the Migrant and Seasonal Agricultural Worker protection Act (MSWPA), 29 U.S.C. §§1801-72.

In conclusion, the proposed agricultural registry program would have required farmers to extend the protections of the federal migrant and seasonal worker law to all workers in the same occupation on the site. The proposed agricultural employment bill could well have expanded employment protections for U.S. workers beyond current law. If an agricultural employer applied to a registry and found enough U.S. workers for some or all of the available job opportunities, then those U.S. workers would have been entitled to the enhanced wage, housing, transportation, and other benefits and protections made applicable to all employees in the same work on the same site.

Mr. WYDEN. I am going to yield the floor at this time.

Mr. JEFFORDS. Mr. President, the Senator from Maine has a brief statement to make on the bill that we are talking about. I know the Senator from Florida has a brief statement, and I have no objection to the Senator from Florida leading. I also thank my friend from Oregon for his remarks about a very serious topic.

I yield to the Senator from Florida.

The PRESIDING OFFICER. The Senator from Florida is recognized.

Mr. GRAHAM. Mr. President, I thank my colleagues from Vermont and Maine for their always courteous gen-

erosity, and my colleague from Oregon, with whom I have been working so closely for approximately 2 years-plus now on this important issue.

There is one thing I believe we can agree on, and that is that the status quo of agricultural farm workers in America is unacceptable. It is unacceptable to have somewhere between 35 and 50 percent of all of our migratory farm work done by people who are here illegally. It is unfair to the individuals involved because it puts them in the shadows of our society.

If I may, I will state a personal experience. Immediately after Hurricane Andrew, which hit south Florida in August of 1992, there was great concern about communicable diseases such as cholera; therefore the Public Health Service wanted to inoculate the whole population against the potential of these diseases. There is a substantial migrant farm worker population that lives in the southern part of our State, and many of those people refused to come forward to be inoculated, nor would they allow their children to be protected against communicable diseases because they live in such a dark shadow because of their undocumented status. They were fearful that if they came forward, even with firm promises and commitments by the Public Health Service that they would not be reported for any other purpose, they were still not willing to take the risk. So they put themselves, their families, and the entire community at risk. That is one anecdote of the degree to which, by our acceptance of the status quo, we have placed hundreds of thousands of people into a status of servitude and in the dark closet of our society.

We also have placed honest farmers in an extremely difficult situation. They are frequently presented with documents that appear to be credible. They hire people to do necessary work during the brief period that is available to harvest the crops, and then they find out later that these people had fraudulent documents, were undocumented, and that they might be subject to various sanctions.

We also know that because of the current system, we have farm workers—both those who are legal citizens or residents of the United States, as well as those who are undocumented—living in horrendous circumstances of housing, being transported in vehicles that don't meet basic safety standards, being placed in a position where their salaries are held each week in order to pay off previous debts, and they live in conditions that are reminiscent not of the 21st century but of the 17th or 18th century. These people are doing extremely difficult work, work that is vital to our Nation and vital to our Nation's economy. They deserve better from us, the policymakers of America, than we have done for them in the past.

One thing we also know, in addition to the fact that the status quo is unacceptable, is the status quo will continue until we decide that this issue is important enough to engage in a serious debate in which we can analyze what the problems are with the status quo, and what the range of solutions to those problems are, and which of those solutions appear to be most appropriate. And it is regarding that which the Senator from Oregon has mentioned that we have had a series of efforts to try to elicit from the administration their plan.

Now, why have we focused so much on the administration? Well, first, they happen to have a unique perspective on the problem, since they are responsible to the Department of Labor, and, secondarily, the Department of Agriculture, for the implementation of the status quo. Therefore, they should be in a specially advantaged position to analyze and recommend alteration to the status quo.

We also know in this form of government we have that while the legislature's responsibility is to enact law, the President, because of his role and because of his constitutional veto authority, plays a key position in terms of legislation and the law.

So beginning in June of 1997, we have been meeting with representatives of the administration, heads of departments, as well as representatives of the White House. Senator WYDEN and myself, sometimes accompanied by others, have met face-to-face, occasionally by conference telephone call, and occasionally by correspondence with the administration on 12 separate occasions between June of 1997 and May of 1999.

Each one of those had a common theme: What is your proposal? What is your diagnosis of the problem? What is your prescription against this problem? As of today, in early October of 1999, we have yet to receive a credible response to that question.

Thus, the amendment that was accepted to the bill we have just adopted directs the administration to submit to the Congress such a plan. It is my hope that the administration will do so with a sense of expedition. I hope within a period of 60 or 90 days we receive its recommendations so that, if not at their first session of the 106th Congress, then at the earliest point in the second session of the 106th Congress, we would be in a position to have the administration's views as to how this very vexatious problem could be resolved.

I might say that the fact we have made this request, and have made it now for the better part of 30 months, is not an indication that we are going to desist until we have heard the administration's plan. While we would like to have their guidance and suggestions, we consider it to be our ultimate responsibility, as we did in 1998 when we

presented to the Senate and the Senate adopted by a margin of well over 2 to 1, the proposal that we submitted. We will continue to take effective action to keep this issue on America's agenda because we cannot tolerate a continuation of the status quo which places hundreds of thousands of human beings into a position of servitude and which places hundreds of thousands of legitimate farmers in a position in which they must operate at the fringe of the law when what they want to do is to be law-abiding citizens.

Before this 106th Congress concludes, I hope we will have had the wisdom to reject the status quo and to have adopted humane, effective public policy which will erase the stain of the status quo of American farm workers, which will have lifted this cloud of illegality from American farmers, which will assure standards of treatment that we as fellow human beings would consider to be dignified and respectful for other human beings, and that we can move forward with a new era in America agriculture.

I appreciate the work of my colleague from Oregon. I also commend our other colleague from Oregon, Senator GORDON SMITH. It is an outstanding example of the people of Oregon who have sent to us these two Members of the Senate, who happen to be from different parties but understand their ultimate commitment is to America and to what is best for this great Nation. They are giving us, in this case, as in other areas, an example of what bipartisanship means and what bipartisanship can accomplish. For that, as well as for their friendship, I extend my gratitude.

The PRESIDING OFFICER. The Senator from Maine.

Mr. JEFFORDS. Mr. President, I know my good friend from Maine is desirous to speak, and I certainly appreciate that.

The PRESIDING OFFICER. The Senator from Maine is recognized.

Ms. SNOWE. I thank the Senator.

Mr. President, I rise today in opposition to the Agriculture conference report. I rise in strong opposition to the conference report.

First, I wish to commend my colleague from Vermont, Senator JEFFORDS, for his leadership, for his perseverance, for his hard work and determination on behalf of all the small dairy farmers, not only in his State of Vermont but in the State of Maine and throughout New England. I thank him. I commend him for the extraordinary effort he has displayed and exhibited throughout this process.

It is only regrettable that those members of the conference committee in resolving the differences between the House and the Senate on the Agriculture conference report did not recognize the position that has been held by all of us who represent the New Eng-

land States for the Northeast Dairy Compact. That is why I rise in strong opposition to the Agriculture appropriations conference report because it does not extend a reauthorization of the Northeast Dairy Compact.

This issue is a States rights issue more than anything else. Quite simply, it addresses the needs of the States in the Northeast, and most specifically those in New England, that have organized in a way that we can allow fair prices for locally produced supplies of fresh milk.

All the legislatures have approved the compact in New England, and in the Northeast, and all that is required is the sanction of Congress to reauthorize this compact. The compact has protected New England farmers against the loss of their small family dairy farms and consumers against the decrease in the fresh supply of local milk. The compact has proven to be an effective approach to address farm insecurity. The compact has stabilized the dairy industry in this entire region and has protected farmers and consumers against volatile price swings.

As I say, we are talking about small dairy farmers. In my State of Maine, the farmer has an average of 50 cows on their farm. They are trying to preserve a way of life, a way of life that has been there for families for generations. We are trying to protect them through this dairy compact.

All we are asking from this Congress is a reauthorization so we can extend this way of life to small dairy farmers—not agribusiness, not big business, not co-ops, just small dairy farmers who want to produce milk so they can sell it to the consumers in my State of Maine, to Senator JEFFORDS' State of Vermont, and within the New England region.

Over 97 percent of the fluid milk market in New England is self-contained. Fluid milk markets are local due to the demand for freshness and high transportation cost. So any complaints raised from other parts of the country about unfair competition is quite disingenuous.

All we are asking for is a continuation of the Northeast Dairy Compact, the existence of which does not threaten or financially harm any other dairy farmer in the country—not any other dairy farmer in the country. It is to help our dairy farmers within New England, to help the consumers, to help a way of life. The Northeast Dairy Compact currently encompasses the New England States and only applies to fluid milk sold on grocery store shelves in the Northeast.

Only the consumers and the processors in the New England region pay to support the minimum price to protect a fair return to the areas' family dairy farmers and to protect a way of life important to the people of Northeast.

All six of the New England States have supported this through the acts of the legislature, and through all of their Governors, because each Governor has signed a resolution supporting the Northeast Dairy Compact.

Let me repeat. Every Governor and every State legislature in New England have supported the dairy compact. Republicans, Democrats, and Independents support the dairy compact through acts of the legislatures because they recognize how important this compact is to the small dairy farmers in the Northeast.

Under the compact, New England retail milk prices have been among the lowest and the most stable in the country. The opposition—again, we have heard it day in and day out—has manufactured arguments against the compact, saying that increased milk prices.

Let's look at dairy prices over the past few months around the country for a gallon of fresh milk. The price in Augusta, ME, ranged from \$2.89 to \$2.99 per gallon from February to April of 1999; in Boston, MA, the market price stayed perfectly stable at \$2.89 from February to April of 1999; the price in Seattle ranged from \$3.39 to \$3.56 over the same time period. Washington State is not in the compact. Yet their milk was approximately 50 cents higher per gallon than in the State of Maine. The range in Los Angeles was from \$3.19 to \$3.29; in San Diego, the range was from \$3.10 to \$3.62. California is not in the compact. Las Vegas prices were \$2.99 all the way up to \$3.62 in that time period; not much price stability there. And then Nevada is not in the compact. In Philadelphia the range was \$2.78 to \$3.01 per gallon, not as wide a shift as Nevada but a much wider price shift than the Northeast Compact States.

That is why Pennsylvania dairy farmers want to join us. That is why Pennsylvania supports joining the compact.

Denver, CO, on the other hand, is not in the compact. A gallon of milk in Denver has cost consumers anywhere from \$3.45 to \$3.59 over the past few months, over one half a dollar more than in New England.

The Northeast Dairy Compact has not resulted in higher milk prices in New England in spite of what the opposition has said, but milk prices are among the lowest in the country and are among the most stable.

Opponents also say consumers are getting a raw deal having to spend more on milk. Obviously, based on what I have said thus far in terms of prices around the country, this claim is inaccurate, as prices are among the lowest in the Northeast Compact area and reflect greater price stability.

Also, where is the consumer outrage from the compact States for spending a few extra pennies for fresh fluid milk so as to ensure a safety net for dairy

farmers so they can continue in an important way of life. Where is that consumer outrage? It isn't in New England. I have not heard of consumer complaints in my State over the last 3 years as a result of this dairy compact, even in instances where milk prices might have gone up a few pennies because consumers support our dairy farmers. They realize that this pilot program is very important to a way of life, to the kind of milk they want in their region, and they are willing to support it. They recognize this dairy compact has been a huge success.

The Compact Commission sent out over \$4 million in checks to Northeast dairy farmers this past month. That averages to over \$1,000 for each dairy farmer—enough to help keep small family farmers in business and continue a historical way of life that is so important.

The Northeast Interstate Dairy Compact has provided the very safety net that we have hoped for when the compact passed as part of the Freedom to Farm Act, the omnibus farm bill of 1996. The dairy compact has helped farmers maintain the stable price for fluid milk during times of volatile swings in farm milk prices.

In the spring and summer months of 1997 and 1998, for instance, when milk prices throughout most of the country dropped at least 20 cents a gallon while consumers' prices remained constant, the payments to the Northeast Interstate Compact dairy farmers remained above the Federal milk marketing prices for class 1 fluid milk because of the dairy compact and I might add, at no expense to the Federal Government. The costs to operate the dairy compact are borne entirely by the farmers and the processes of a compact region.

Also, consider what has happened to the number of dairy farmers staying in business since the formation of the dairy compact. Another goal of the compact is to preserve a way of life of the small dairy farmer. It is now known throughout New England there has been a decline in dairy farmers going out of business. This is a clear demonstration that with the dairy compact, the dairy producers were provided a safety net, which is what we had hoped for. The results have been just that.

In addition, the compact requires the Compact Commission to take such action as necessary to ensure that a minimum price set by the commission for the region does not create an incentive for producers to generate additional supplies of milk. There has been no rush to increase milk production in the Northeast, as has been stated. Oh, we heard time and time again by the opposition that it would increase milk production.

We inserted in the compact legislation back in 1996 compensation producers that have been implemented by

the New England Dairy Commission specifically to protect against increased production of fresh milk. That legislation in the 1996 farm bill required the commission to reimburse the USDA for any portion of the Government's cost of purchasing surplus dairy products that could be attributed to an increase in milk production in the Northeast in excess of the projected national average. This provision was included in the farm bill in response to critics' concern that the compact price would lead to overproduction of milk in the Northeast and thus cause Government purchases of surplus milk under the dairy support program to rise.

Between March and September of 1998, the commission placed \$2 million in escrow in anticipation of a potential liability to USDA for surplus purchases. The commission ended up paying \$1.76 million to the USDA toward the end of the fiscal year and returned unused escrow funds of \$400,000 to the Northeast producers who did not increase milk production during fiscal year 1998.

I welcome anybody in this Chamber to cite any other commodity farm program that actually paid back the Federal Government money, that didn't cost the Government any money. I daresay there is no other instance of any other commodity farm program that actually reimbursed the Federal Government, that didn't cost the Government one dime—other than the New England Dairy Compact.

How can other regions of the country feel threatened by a Northeast Dairy Compact for fluid milk produced and sold mainly at home in our region of the country? This compact did what it said it would do: Preserve its way of life, create price stability; it didn't cost the Government money; it didn't increase production, and if it did in any small way, we reimbursed the Government so it wouldn't cost any money.

Despite what has been stated by the opposition, again there has been no additional cost to the Federal nutrition programs, no adverse price impact in the WIC Program—the Women's, Infants and Children Program—or the Federal school lunch and breakfast program. In fact, the advocates of the programs support the compact and serve on its commission.

It should be noted that in the farm bill conference in 1996, the Secretary of Agriculture was required to review the dairy compact legislation before implementation to determine if there was compelling public interest for the compact within the compact region. In August 9, 1996, and only after a public comment period, Secretary Glickman authorized the implementation of the dairy compact, finding that it was, indeed, in the compelling public interest to do so.

In addition, another mechanism for guaranteeing that this was in their in-

terest, that it wasn't going to cost money to the Federal Government, the Agricultural Appropriations Act of 1998 directed the Office of Management and Budget to study the economic effects of the compact and especially its effect in the Federal food and nutrition programs. Key findings of the OMB study released in February 1998 showed that, for the first 6 months of the compact, the New England retail milk prices were 5 cents per gallon lower than retail milk prices nationally.

Also, a GAO study stated that the compact economically benefited the dairy producers, increasing their income from milk sales by about 6 percent, with no adverse effects to dairy farmers outside the compact region.

These were independent studies. We had OMB, GAO, we had every safety mechanism and precaution in this legislation, and it has demonstrated time and time again it is in the best interests of our small dairy farmers, not costing the Government money—in fact, to the contrary.

The consumers in the Northeast Compact area are showing their willingness to support this compact, to pay a little more for milk if the additional money is going directly to the dairy farmer. Because we are not talking about big corporate farms, we are talking about the small dairy farmer whose family has been in business 100 years, 150 years—generational. That is what they want to do—to maintain their families, to maintain a way of life, and to sell their milk to their local consumers.

Environmental organizations have supported dairy compacting as the compact helps to preserve dwindling agricultural land and open spaces that help combat urban sprawl.

I will ask unanimous consent to have printed in the RECORD a joint resolution from the Legislature of the State of Maine that was passed last spring. I have it here on this board. It shows strong support, on a bipartisan basis, in the Maine State Legislature, and how enormously important this compact is to the near 500 dairy farmers in Maine who produce annually over more than \$100 million in the State of Maine, and how it is in the best interests of Maine's consumers and businesses that this compact be reauthorized. It is that important.

So we have Republicans and Democrats in the State legislatures, we have an independent Governor who supports it, we have everybody across the political spectrum who supports this dairy compact because they understand the value of it.

I also will ask unanimous consent to have printed in the RECORD a July 15, 1999, letter from Maine's Commissioner of Agriculture, who wrote:

I am writing to urge your continued support of Maine's dairy farmers. As you know there is legislation pending before Congress

relating to the reauthorization of the Northeast Dairy Compact Commission, and reorganization of the Federal Milk Marketing Orders. These issues are of the utmost importance to Maine dairy farmers and the dairy industry and the infrastructure in this State as a whole.

We need only look at the recent volatility of milk prices to see the Northeast Dairy Compact has been a great success.

He goes on to say:

I cannot stress enough the importance of this issue to the Maine dairy industry.

I also will ask unanimous consent to have printed in the RECORD a September 29, 1999, letter from the Council of State Governments, Eastern Regional Conference, signed by Senators and Representatives and heads of the departments of agriculture of Maine, Connecticut, Delaware, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

These State elected officials from States all over the Northeast wrote:

The Northeast Interstate Dairy Compact, in setting minimum regional prices for milk, has been an essential stabilizing force with respect to the price that the northeast dairy farmers receive for the milk they produce. Because of its regional focus, it has been extremely successful in promoting adequate local milk production to meet the needs of consumers for fresh milk at an affordable price.

I am also submitting for the RECORD the Council of State Governments' resolution of August 11, 1999, in support of the reauthorization of the compact.

Last, I will ask consent to have printed in the RECORD a September 30 editorial from the Bangor Daily News in my State of Maine, which states:

The compact helps keep local farmers in business, not only through price support but also by keeping enough other farmers at work. That means a dairy infrastructure of grain dealers, truck drivers, and farm machinery salespeople will remain. And that means jobs where they are needed most, in the smallest towns whose residents cannot simply turn to alternative industries. This is not mere nostalgia for the bucolic past, but an immediate dollars and cents issue.

The editorial goes on to say:

Certainly there would be less support for the compact as it stood alone as the sole agricultural support states enjoyed. But the sheer number and variety of Federal programs for crops or for not growing crops, for research and marketing, for electricity, grazing water, etc., makes singling out this relatively small program seem more than a little short-sighted.

That raises an important point. We do not get any support. We do not get the kinds of subsidies that other parts of the country, other commodity programs, have received. Our dairy farmers work hard. They work hard for the sole interest of producing a small amount, so they can sell to their local consumers, to their neighbors, to their community, to their State. That is all they ever want.

This editorial goes on to say:

None of the Midwestern representatives so angry about the compact have suggested, for

instance, that Congress end the millions of dollars spent on local farm research or cut the power lines at the Hoover dam.

Yet the dairy compact is in no sense different than these programs—or it is different only in the sense it helps farmers in this region rather than the usual pattern of helping farmers in the Midwest. Unless Congress has some hidden reason to single out punishment for New England dairy farmers, it should support the compact as a sensible part of our Nation's agricultural policies.

That is an important final point. As one who served 16 years in the House of Representatives, and now in my fifth year in the Senate, I have seen a huge disparity in our farm programs between the policies and programs providing support for the big, the very big, farmers, and the lack of support for the small family farmer, who is so indicative and characteristic of my State and I know the State of Vermont that my colleague, Senator JEFFORDS, represents. It is the small family farmer who just wants to survive, wants to go about doing his business each and every day. Yet we are not going to allow them to do that and to continue a way of life.

The pattern I have seen in these agricultural programs that are supported here in this conference report, time and time again over my 20 years, has been to the exclusion of the small family farmer and to the benefit of the big agribusiness in America. I say that is a travesty of justice. I say it is unfair. I say it is not right.

That is why this dairy compact is so important. Indeed, it is shortsighted on the part of the conferees who did not support the reauthorization in this conference report. It is shortsighted of those who are unwilling to give it their support once again, raising the most bogus of arguments, which we have dispelled. We have refuted all of their arguments, not just based on our hearsay alone, but we have had OMB studies, we have had GAO studies—by everybody's reckoning. We even have legislatures in all the New England States and in the Northeast that support this dairy compact, and the Governors. Can they be all wrong? Could they be misrepresenting their constituency? I say not.

I hope we can defeat this conference report. It simply is not right. It is simply not fair. I ask you to support the small farmers and the way of life they want to embrace, that they cherish, and that they want to sustain. We owe them that much.

Again, I thank my colleague from Vermont, Senator JEFFORDS, for doing yeoman's work on behalf of these small dairy farmers in his State and my State, throughout New England and the other States that want to join because they have seen the success of this compact over the last 3 years. It was a very effective and successful pilot program, and it deserves to be continued.

Mr. President, I now ask consent that the material I referred to be printed in the RECORD, and I yield the floor.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATE OF MAINE JOINT RESOLUTION

Whereas, Maine has nearly 500 dairy farms producing milk valued annually at over \$100,000,000; and

Whereas, maintaining a sufficient supply of Maine-produced milk and milk products is in the best interest of Maine consumers and businesses; and

Whereas, Maine is a member of the Northeast Interstate Dairy Compact; and

Whereas, the Northeast Interstate Dairy Compact will terminate at the end of October 1999 unless action is taken by the Congress to reauthorize it; and

Whereas, the Northeast Interstate Dairy Compact's mission is to ensure the continued viability of dairy farming in the Northeast and to ensure consumers of an adequate, local supply of pure and wholesome milk; and

Whereas, the Northeast Interstate Dairy Compact has established a minimum price to be paid to dairy farmers for their milk, which has helped to stabilize their incomes; and

Whereas, in certain months the compact's minimum price has resulted in dairy farmers receiving nearly 10% more for their milk than the farmers would have otherwise received; and

Whereas, actions taken by the compact have directly benefited Maine dairy farmers and consumers; now, therefore, be it

Resolved: That We, your Memorialists, respectfully urge and request that the United States Congress reauthorize the Northeast Interstate Dairy Compact; and be it further

Resolved: That suitable copies of the Memorial, duly authenticated by the Secretary of State, be transmitted to the Honorable William J. Clinton, President of the United States, the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, each member of the United States Congress who sits as chair on the United States House of Representatives Committee on Agriculture or the United States Senate Committee on Agriculture, Nutrition and Forestry, the United States Secretary of Agriculture and each Member of the Maine Congressional Delegation.

STATE OF MAINE, MAINE DEPARTMENT OF AGRICULTURE, FOOD & RURAL RESOURCES

Augusta, ME, July 15, 1999.

Sen. OLYMPIA J. SNOWE,
Washington, DC.

DEAR SENATOR SNOWE: I am writing to urge your continued support of Maine dairy farmers. As you know, there is legislation pending before Congress relating to reauthorization of the Northeast Dairy Compact Commission and reorganization of the Federal Milk Marketing Orders. These issues are the utmost importance to Maine dairy farmers and the dairy industry and infrastructure in this state as a whole.

We need only look at the recent volatility in milk prices to see that the Northeast Dairy Compact has been a great success. The Compact was designed to provide dairy farmers with a safety net against huge drops in prices. While much of the rest of the country saw recent reductions in prices by up to one third, the blow to dairy farmers of the northeast, while substantial, was cushioned by the

floor price established through the Compact. The Compact worked! For many Maine dairy farmers, the Compact has been the difference between existence and extinction.

There is no question that the Federal Milk Marketing Orders needed reform. Consolidation of orders and updating of standards and definitions was long overdue. However, adoption of the pricing changes to the different classes of milk as proposed by USDA will have enormous impacts for Maine dairy farmers. Even by the most conservative estimates produced by USDA, farm income in the northeast will decrease \$84 million dollars per year under the new proposed pricing system. Most estimates indicate the loss to farmers will be in excess of \$100 million dollars.

Pending legislation would reauthorize the Northeast Compact (along with authorization of a Southern Compact), require USDA to adopt the so called 1-A option of pricing class I milk and require USDA to hold rule-making hearing on pricing of class III milk. I urge your continued support and hope you will encourage uncommitted colleagues to support the Jeffords/Leahy amendment legislation. I can not stress enough the importance of this issue to the Maine dairy industry.

Please contact me with any concerns or questions you have regarding these important matters.

Sincerely,

ROBERT W. SPEAR,
Commissioner.

COUNCIL OF GOVERNMENTS,
September 29, 1999.

Re: Northeast Interstate Dairy Compact.

The Northeast Interstate Dairy Compact, in setting minimum regional prices for milk, has been an essential stabilizing force with respect to the price that northeast dairy farmers receive for the milk they produce. Because of its regional focus, it has been extremely successful in promoting adequate local milk production to meet the needs of consumers for fresh milk at an affordable price.

As you know, the Dairy Compact is due to expire on October 1, 1999. Twenty five states, including all of those in the Northeast, have adopted the Dairy Compact. If it is not reauthorized, the resulting volatility in milk prices will cause regional dairy farmers to suffer devastating financial consequences. Therefore, we urge you to promote the extension of the Northeast Dairy Compact, as well as ratification of the Southern Dairy Compact, by Congress in an effort to secure the financial future of our region's dairy farmers.

In summary, we believe prompt action is necessary on both of these matters that are so critical to maintaining the viability of the region's agriculture industry and, thereby, our overall economy and quality of life. The financial losses endured by our farmers are substantial and immediate. We respectfully request that you and your Congressional colleagues from the Northeast support the measures we are proposing and promote regional solidarity to assist the struggling northeast farmers.

Please feel encouraged to contact any of the signatories below or our staff in the Council of State Governments' Eastern office with responses to this letter and any recommendations for immediate follow-up action.

Sincerely,

Representative Jessie G. Stratton, Co-Chairwoman, Joint Environment Committee, CT.

John F. Tarburton, Secretary, Department of Agriculture, DE.

Representative V. George Carey, Chairman, Environment & Natural Resources Committee, DE.

Senator John M. Nutting, Co-Chairman, Joint Agriculture, Conservation & Forestry Committee, ME.

Jonathan Healy, Secretary, Department of Agriculture, MA.

Stephen Taylor, Commissioner, Department of Agriculture, Markets & Food, NH.

Assemblyman William Magee, Chairman, Assembly Agriculture Committee, NY.

Representative Italo Cappabianco, Minority Chairman, Agriculture & Rural Affairs Committee, PA.

Ken Ayars, Chief, Division of Agriculture & Marketing, Department of Environmental Management, RI.

Representative Douglas W. Petersen, Co-Chairman, Joint Natural Resources & Agriculture Committee, MA.

Assemblywoman Connie Myers, Vice-Chair, Agriculture & Natural Resources Committee, NJ.

Representative Thomas E. Armstrong, Member, House Agriculture & Rural Affairs Committee, PA.

Senator William Slocum, Minority Chairman, Senate Agriculture & Rural Affairs Committee, PA.

Leon C. Graves, Commissioner, Department of Agriculture, VT.

COUNCIL OF STATE GOVERNMENTS,
EASTERN REGIONAL CONFERENCE,
Burlington, VT, August 11, 1999.

REAUTHORIZATION OF THE NORTHEAST INTERSTATE DAIRY COMPACT AND THE RATIFICATION OF A SOUTHERN COMPACT

Whereas, the Northeast Interstate Dairy Compact has maintained a successful track record of stabilizing the price dairy farmers receive for the milk they produce and has created a beneficial partnership between consumers and dairy farmers; and

Whereas, it is in the best interest of the general public to perpetuate our existing dairy industry and insure the continuance of local production to adequately meet the demand of all consumers for fresh milk at an affordable price; and

Whereas, dairy compacts have received the support of diverse coalitions, representing state and local governments, consumers, environmentalists, land conservation interests, financial institutions, equipment and feed dealers, veterinarians, the tourism industry, and agricultural organizations; and

Whereas, compacts are complimentary to the Federal Milk Marketing Order System, which provides the basis for orderly milk marketing through a uniform federal minimum pricing structure; and compacts take into account regional differences in the cost of producing fluid milk, and therefore permit a more localized determination of milk prices, allowing the compact to work in concert with the Federal Order System; and

Whereas, there has recently been a drop in the Basic Formula Price of \$6 cwt, emphasizing the volatility that exists within the dairy industry; and

Whereas, the Constitution of the United States expressly authorizes the states to enter into interstate compacts with the approval of Congress and twenty-five states have passed legislation seeking authority to enter into an interstate dairy compact; and

Now, therefore be it *Resolved*, That, we request that the 106th Congress of the United States take immediate action to reauthorize

the Northeast Interstate Dairy Compact and ratify a Southern Compact.

[From the Bangor Daily News, Sept. 30, 1999]

MILK AND MONEY

As a strict measure of its faithfulness to letting the market choose winners and losers, the Northeast Interstate Dairy Compact fails entirely. As policy for promoting economic diversity, food safety and open space, however, it is an important program for the region.

The compact helps dairy farmers by guaranteeing a minimum price for milk. Though it has cost consumers approximately 15 cents per gallon since 1996, it returns to them at least that much value through other means. As members of Congress debate the future of the compact—which was set to end tomorrow but has been postponed by a judge's ruling Tuesday—they should keep in mind that their decision affects far more than a few small farmers.

The compact helps keep local farms in business not only through the price support but also by keeping enough other farmers at work. That means a dairy infrastructure of grain dealers, truck drivers and farm machinery salespeople will remain. And that means jobs where they are needed most, in the smallest towns whose residents cannot simply turn to alternative industries. This is not mere nostalgia for the bucolic past, but an immediate dollars and cents issue.

Having a healthy dairy industry is far more useful and considerably less expensive to Maine taxpayers than sitting by and watching these farms go under, then setting loose its retraining programs and hoping for the best. On a national level, the compact prevents an overdependence on a few large Midwestern sources for this important and highly perishable food. And it gives New England states more local say on controversial issues such as bovine growth hormone.

Certainly, there would be less support for the compact if it stood alone as the sole agricultural support states enjoyed. But the sheer number and variety of federal programs for crops or for not growing crops, for research and marketing, for electricity, grazing and water, etc., makes singling out this relatively small program seem more than a little short-sighted. None of the Midwestern representatives so angry about the compact have suggested, for instance, that Congress end the millions of dollars spent on local farm research or cut the power lines at the Hoover Dam.

Yet the dairy compact is in no sense different than these programs—or it is different only in the sense that it helps farmers in this region rather than the usual pattern of helping farmers in the Midwest. Unless Congress has some hidden reason to single out for punishment New England dairy farmers, it should support the compact as a sensible part of the nation's agricultural policies.

The PRESIDING OFFICER. The Senator from Vermont.

Mr. JEFFORDS. Mr. President, I will be finishing quickly. I would like to point out—exactly where the Senator from Maine left off—why we are here. It may be a little confusing why we are involved in a conference report, but it was pointed out in the farm bill of 1996, we got agreement that we should run a pilot program in New England of a very exciting idea, of a compact where the States would get together and handle the problems of their dairy farmers by having an organized marketing system.

We would show this kind of a system where people from the States would sit down on a commission and make sure the price of milk was held at a level which would guarantee a supply of fresh fluid milk, which is a basic part of agricultural law, and that the demonstration program would be reviewed when the milk orders were to be implemented.

What happened? Did the program work? That was the problem, it did. That is why we are here tonight because the program did work.

As the Senator from Maine pointed out, the opponents of this, in the Midwest in particular, were so confident it was going to fail, they went out and got the OMB, who they figured would be most friendly to them being of the administration, many Democrats—whatever, that is beside the point—but so certain were they that it would be a failure, they got OMB to do a study.

Lo and behold, what happened? The study came back, and the GAO later came back and said it worked great, it is a wonderful program. That is why 25 States now have said that ought to be a program in which they can get involved. Half the States in the country have already said it is a success. OMB said it is a success.

What is the problem now? Why? Because of the desire of those in the Midwest to take over and supply these areas with milk themselves and not the local dairy farmers, which helps make sure we have that fresh quality milk available, they decided they will put them out of business.

They cannot put them out of business because it is working. The processors, who have been used to setting the price themselves—in many cases there are one or two; there are not many processors, so when there is a good supply of milk, they can go to zero. That has stopped. It is working well.

The Department of Agriculture was not going to do the pilot program. We had to get it extended.

That is where we are. We wanted to extend it, and when we had one, at least we thought we had one in the conference committee that we would have approved because the majority in the House and Senate agreed it was a good program and ought to be extended, what happened? Forces came in and put pressure on Members and we ended up without a majority in the committee. Therefore, we got thrown out into the cold.

We are here to make sure this bill, which belonged on that conference report, that everyone seemed to agree to, goes forward. That is why we are now trying to hold up this bill to get action. We are not going to try to hold up the bill for the disaster payments. We will get into a further discussion of this whole bill and the stuff in it.

The one part that worked so well that does not cost any money and pre-

vents disasters, we cannot get it put into law. That is why we are here. We are going to continue. We are going to fight as long as we possibly can to make sure the dairy farmers in our States, the family farms, the small, beautiful hillsides that have their nice wonderful cows will be there for people to look at, and we will have a fresh supply of milk from our local farms.

Hopefully, since it was such a successful program, the 25 States that have already passed laws through their legislatures to participate in the compact will have the wonderful opportunities that have been so successful in New England.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from New Hampshire.

MORNING BUSINESS

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that the Senate now proceed to a period for morning business, with Senators permitted to speak for up to 10 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONFERENCE REPORT ON FOREIGN OPERATIONS APPROPRIATIONS

Mr. McCAIN. Mr. President, I support passage of the Conference Report on H.R.2606, the Foreign Operations Appropriations bill for Fiscal Year 2000.

Foreign aid programs, which constitute a mere one percent of federal spending, are an important and underappreciated component of United States foreign and national security policy. Passage of the annual appropriations bill for foreign operations is, consequently, an imperative. It is for this reason that I voted for its passage, and anticipate its being signed into law by the President.

Despite my support for passage of the Conference Report, this legislation is not without its flaws. While it includes essential economic and military assistance for Israel and Egypt, it contains none of the funding associated with implementation of the Wye River accords involving Israel, Jordan, and the Palestinian Authority. It is anticipated that such funding will be included in a supplemental appropriations bill at some point in the not-too-distant future, but I question the fiscal and political wisdom of budgeting in this manner. Smoke and mirrors rarely provide for sound budgeting practices or a coherent foreign policy.

I am also concerned about the continued inclusion in this legislation of unrequested earmarks and adds. While the Conference Report represents a vast improvement over the bill passed by the Senate in June, it still rep-

resents the legislature's continued refusal to desist from earmarking in spending bills. Such earmarks in the bill include \$500,000 for what by any other name remains the Mitch McConnell Conservation Fund, \$15 million for American universities in Lebanon, and a requirement to establish a \$200 million maritime fund using United States commercial maritime expertise. The bill essentially mandates the establishment of an International Law Enforcement Academy in Roswell, New Mexico, thereby demonstrating yet again that fiscal prudence and operational necessity remain alien concepts to members of this body.

There are more examples, but I think I have made my point. As I have stated in the past, there is undoubtedly considerable merit to some of the programs for which funding is earmarked at the request of members of Congress. My concern is for the integrity of the process by which the federal budget is put together. Merit-based competitive processes ensure that the interests of the American taxpayer are protected, and that the most cost-effective approach is employed. Absent such procedures, I will continue to have no choice but to highlight the practice of adding and earmarking funds for programs and activities not requested by the respective federal agencies.

Finally, I must register my strong opposition to language in the bill prohibiting any direct assistance to Cambodia and requiring U.S. opposition to loans from international lending institutions for that impoverished country. Cambodia's election was not perfect; in fact, the months leading up to the vote were characterized by numerous efforts on the part of the Cambodian People's Party to intimidate its political opposition. Cambodia, however, is experiencing its first period of relative peace and stability in many years, and it is regrettable that some in the Senate remain committed to isolating the government in Phnom Penh during a time when we should be working within that country to strengthen democratic institutions while facilitating economic growth. Section 573 of the Conference Report, consequently, represents a significant impediment to our ability to help Cambodia move forward from an enormously painful past.

Despite these flaws, Mr. President, I reiterate my support for passage of the bill and request the accompanying list, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FOREIGN OPERATIONS, EXPORT FINANCING, AND RELATED PROGRAMS FOR THE FISCAL YEAR ENDING SEPTEMBER 30, 2000, AND FOR OTHER PURPOSES—DIRECTIVE LANGUAGE AND EARMARKS

BILL LANGUAGE PROVISIONS

Not less than \$500,000 should be made available for support of the United States Telecommunications Training Institute;

\$19.6 million shall be available for the International Fund for Ireland;

\$10 million shall be available for the Russian Leadership Program;

\$1 million shall be available for the Robert F. Kennedy Memorial Center for Human Rights;

Sense of Congress that the Overseas Private Investment Corporation shall create a maritime fund with total capitalization of up to \$200 million. The fund shall leverage U.S. commercial maritime expertise;

REPORT LANGUAGE PROVISIONS

The Agency for International Development is "encouraged" to provide assistance for the Morehouse School of Medicine to establish an International Center for Health and Development;

\$250,000 shall be made available to the International Law Institute;

AID is directed to restore biodiversity funding, which benefits the agricultural and pharmaceutical industries;

\$700,000 is earmarked for Historically Black Colleges and Universities for implementation of a distance learning program;

AID is directed to "uphold its commitment" to American Schools and Hospitals Abroad by providing at least \$15 million for fiscal year 2000, with the money allocated to institutions operating in Lebanon;

The bill directs that \$500,000 shall be provided for research, training and related activities in the Galapagos Islands. Usually referred to as the Mitch McConnell Conservation Fund, the money will likely be allocated for the Charles Darwin Research Station and the Charles Darwin Foundation;

\$861,000 is earmarked for the Seeds of Peace program;

\$5 million is earmarked for the Irish Peace Process Cultural and Training Program.

\$19 million is earmarked for the International Fund for Ireland;

\$10 million is earmarked for the Russian Leadership Program;

\$3 million is earmarked for Carelift International to support social transition initiatives in Central Europe and the new independent states;

The Department of State is directed to take measures ensuring the establishment of the International Law Enforcement Academy of the Western Hemisphere at the deBremmond Training Center in Roswell, New Mexico;

\$35.8 million is earmarked for the Global Environment Facility.

Total: \$321 million.

RESEARCH AND EXPERIMENTATION TAX CREDIT

Mrs. FEINSTEIN, Mr. President, I rise to note that since June 30 of this year, the Research and Experimentation Tax Credit has, once again, been allowed to lapse. As this body considers whether to enact a so-called "extenders" package, I want to urge my colleagues to include and pass a permanent extension of the Research and Experimentation tax credit.

The research and experimentation tax credit provides business an incentive to fund development of the technologies of tomorrow by providing a tax credit for investments in research.

The research and experimentation tax credit is an important element in the creation of strong economic growth

and rising productivity. Industry leaders have credited it with spawning private enterprise investments. It is especially important to the high-tech and emerging growth industries that are driving the California economy. And, because it creates jobs and spurs economic activity, the research and experimentation tax credit helps to increase the tax base, paying back the benefit of the credit.

Yet, despite its many benefits, for 18 years the research and experimentation tax credit remains, inexplicably, a temporary tax provision requiring regular renewal.

In fact, since 1981, when it was first enacted, the Research and Experimentation Tax Credit has been extended nine times. In four instances the research credit had expired before being renewed retroactively and, in one instance, it was renewed for a mere six months.

This is not a process which is conducive to encouraging business investment in the innovative industries—high technology, electronics, computers, software, and biotechnology, among others—which will provide future strength and growth for the U.S. economy.

Earlier in this decade California was faced with its severest economic downturn since the Great Depression. Today, the California economy is healthy and vibrant, and it is so in no small part because of the critical role played by innovative research and development efforts in nurturing new "high tech" industries.

Today the 150 largest Silicon Valley companies are valued at well-over \$500 billion, \$500 billion which did not exist two decades ago. Much of this growth is a result of ability of companies to undertake long-range and sustained research in cutting-edge technologies. Scores of California companies—and companies across the country—owe much of their success and growth to the incentive provided by the research and experimentation tax credit.

Research and experimentation is the lifeblood of high technology development, and if we want to continue to replicate the successful growth that has characterized the U.S. economy during this past decade it is crucial that we create a permanent research and experimentation tax credit.

For example, Pericom Semiconductor, located in San Jose, has expanded from a start-up company in 1990 to a company with over \$50 million in revenue and 175 employees by the end of last year and is ranked by Deloitte Touche as one of the fastest growing companies in Silicon Valley. According to a letter I received from Pericom, utilization of the research and experimentation tax credit has been key to their success, enabling them to add engineers, conduct research, and expand their technology base.

Indeed, according to a 1998 study conducted by the national accounting firm Coopers & Lybrand, a permanent credit will increase GDP by nearly \$58 billion (in 1998 dollars) over the next decade. The productivity gains from a permanent extension will allow workers throughout the Nation to earn higher wages, and the additional tax revenue created by these new jobs will help pay back the benefit of the credit.

Whether it is advances in health care, information technology, or environmental design, research and development are critical ingredients for fueling the process of economic growth.

Moreover, aggressive research and experimentation is essential for U.S. industries fighting to be competitive in the world marketplace. For example, American biotechnology is the world leader in developing effective treatments and biotech is considered one of the critical technologies for the 21st century. With other countries heavily subsidizing research and development, it is critical that U.S. companies also receive incentive to invest the necessary resources to stay on top of breakthrough developments.

I recently received a letter from the CEO of Genentech, for example, in which he wrote:

The R&D tax credit is especially important to Genentech and our patients. Our newest therapy, Herceptin, which is used to treat metastatic breast cancer, is a prime example. The early clinical trials for Herceptin showed that it was a somewhat effective treatment for metastatic breast cancer, but the results were not particularly robust. It was a classic case of a research project being "on the bubble" in terms of deciding whether to go forward into the most expensive phase of human clinical trials. However, because the value of the tax credit to Genentech directly means that we are able to move one additional drug candidate each year into clinical trials, we were able to move forward with the Phase III Herceptin clinical trial in late 1994. I dare say that without the R&D credit, Herceptin might well not have become a reality. Today, thousands of patients are receiving this important treatment.

I ask unanimous consent that the full text of the September 30, 1999 letter from Genentech Chairman Arthur Levinson be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GENENTECH, INC.,

San Francisco, CA, September 30, 1999.

HON. DIANNE FEINSTEIN,

HON. BARBARA BOXER,

U.S. Senate, Hart Senate Office Building,

Washington, DC.

DEAR SENATOR FEINSTEIN AND SENATOR BOXER: On behalf of Genentech, I would like to thank you both for your long-standing leadership and support for the Research and Experimentation Tax Credit, more commonly known as the R&D tax credit. Once again, however, we find ourselves in the perilous position of the Congressional session quickly coming to an end without providing an extension of the credit, which expired on June 30, 1999. As you are well aware, the credit is critical to California's economy, as

the high technology and biotechnology sectors count on the value of the credit to continue the economic expansion our sectors have enjoyed for the past few years.

The R&D tax credit is especially important to Genentech and our patients. Our newest therapy, Herceptin, which is used to treat metastatic breast cancer, is a prime example. The early clinical trials for Herceptin showed that it was a somewhat effective treatment for metastatic breast cancer, but the results were not particularly robust. It was a classic case of a research project being "on the bubble" in terms of deciding whether to go forward into the most expensive phase of human clinical trials. However, because the value of the tax credit to Genentech directly means that we are able to move one additional drug candidate each year into clinical trials, we were able to move forward with the Phase III Herceptin clinical trial in late 1994. I dare say that without the R&D credit, Herceptin might well not have become a reality. Today, thousands of patients are receiving this important therapy.

Clearly, Genentech is among the most research intensive companies in the world. In 1996, we invested \$471 million, or 49% of our revenue, on research and development and have consistently devoted more than 30% of revenues to R&D in the subsequent years. But research is our lifeblood. It gives life to the ideas we test to treat serious, unmet medical needs. Our strong portfolio of products is a direct reflection of the ideas our scientists have brought from the lab to the patient. And, as evidenced by our exciting pipeline, I firmly believe the best of our science is yet to come.

Direct federal support for overall research has, for the most part, been declining for over a decade. While a long-term commitment to increasing funds available to the federal government for basic research is important, maximizing private industry innovation through a permanent R&D tax credit is perhaps the most cost-effective means of ensuring that high levels of private-sector investment will continue to be made.

Your leadership and commitment to the R&D tax credit, has resulted in great economic benefit for both our country and for California. I encourage you to, once again, redouble your efforts to extend the credit now so that greater economic benefits and new therapies can benefit all Americans.

I have attached a couple of op-ed pieces regarding the credit which I and others wrote, and which ran in the San Jose Mercury over the last two years. I look forward to continuing to work with you and your staffs in support of the R&D tax credit.

Sincerely,

ARTHUR D. LENINSON, Ph.D.,
Chairman and Chief Executive Officer.

Mrs. FEINSTEIN. Most biotech research and development efforts are long term projects spanning five to ten years, sometimes more. The uncertainty created by the temporary and sporadic extensions is incompatible with the basic needs of biotech innovation—providing companies with a stable time frame to plan, launch, and conduct research activities. In the case of a promising but financially intensive research project, such unpredictability can make the difference as to whether the project is completed or abandoned.

Anyone who has watched the growth of America's high tech sector in the

past two decades—much of it in California—has seen first hand how research and development investment leads to new jobs, new businesses, and even entire new industries. And anyone who has benefitted from breakthrough products—from new treatments for genetic disorders to cleansing contaminated groundwater—has felt the effect of this tax credit.

Over the past two decades the research and experimentation tax credit has proven its worth in creating new technologies and jobs and in growing tax revenues for this country. It should not be imperilled by remaining a temporary credit, subject to termination because of the uncertainty of a given political moment. I urge my colleagues to work to make sure that any Senate tax bill contains a permanent extension for the Research and Experimentation Tax Credit.

INCREASING THE FEDERAL RESPONSE TO THE AIDS EPIDEMIC

Mr. KERRY. Mr. President, we are now entering the third decade of the AIDS epidemic and while we have made some progress in fighting this devastating disease, our federal response is still lacking.

More than 400,000 people have died of complications associated with acquired immunodeficiency syndrome since 1981. Last year, more than 54,000 new cases of AIDS were reported in this country. This trend is staggering and belies the misperception that somehow the AIDS epidemic in this country or abroad has abated. While it is true that therapeutic and treatment breakthroughs have led to longer and more productive fulfilling lives for those living with HIV, and that the death rate from AIDS has fallen in recent years, the fact remains that this epidemic has no cure and the rate of new infections has not slowed.

But these are days of great hope, Mr. President, in the fight against AIDS. During the years of inaction by the Reagan and Bush Administrations during the 1980s, we entered the second decade of the epidemic on a much different note: treatments were few, toxic and largely ineffective; training of physicians in the care of patients with HIV was incomplete, uneven and erratic; discrimination and abuse of people living with AIDS in housing, employment and medical care was rampant and abhorrent. It was difficult to have much hope as we entered the 1990s.

But this decade has seen great promise. We have made significant strides. No longer an immediate death sentence, AIDS has lost some—but certainly not all—of its social stigma. In that dark dawn of the epidemic, Mr. President, who would have believed that we would see a decade in which two Miss Americas would be AIDS activists, touring the country and speak-

ing out on AIDS prevention and care? In the early 1980s, who would have believed that we would have an Office of AIDS Research at the National Institutes of Health, that funding for the Ryan White program would increase by 260 percent, or that funding for AIDS research would increase by 67 percent?

And yet, Mr. President, the rumbling of the epidemic has not been stilled. In the early 1980s, who would have believed that some African countries would have 25 or 35 percent infection rates, or that an entire generation of gay men in the United States would be lost? Who would have believed that infection rates would continue at staggering paces at the same time leading voices would declare the epidemic over? Have we truly become victims of our own success?

I certainly hope not, for as Tony Kushner wrote at the end of his monumental play, *Angels in America*, "great work remains to be done."

Until we have an AIDS-free day in America, I will not become complacent. As ranking member of the Housing subcommittee, I know that great work remains to be done in finding shelter for people living with AIDS. I was pleased that my colleague from Missouri, Senator BOND, and my friend from Maryland, Senator MIKULSKI, were able to answer my request positively to increase funding by \$7 million for the Housing Opportunities for People With AIDS program in the VA-HUD and Independent Agencies appropriations bill for fiscal year 2000. This money is crucial as people living with AIDS have a fundamental need for adequate and safe housing. I will continue to work with all of my colleagues to keep the HOPWA program sufficiently funded.

Great work remains to be done on HIV prevention. We are lacking in our commitment to adequately fund the Centers for Disease Control in their anti-HIV efforts. Until a cure is found, we must ensure that the federal government issues information widely which is accurate, blunt and unequivocal. Prevention efforts work, Mr. President. I have seen the work of the AIDS Action Committee in Boston and I can tell you that their innovative programs are working to slow the spread of AIDS. Unlike the increase in funding which the National Institutes of Health has received, the CDC's prevention efforts have remained at roughly the same level in the past few years. It was my hope that the appropriators would have recognized the unmet needs related to HIV prevention in this country and it is my fear that the failure to keep pace with that need portends a disaster.

For example, in this legislation as in other legislation this year, we again were subjected to the perennial ill-informed debate on the issue of needle exchange. I am dismayed that the

Labor-HHS-Education appropriations bill will include language which deprives the Secretary of Health and Human Services from using her discretion based on science and empirical academic study to determine if needle exchange programs reduce the transmission of HIV without encouraging illicit drug abuse. This is bad public policy, when Senators act like scientists, and it is bad health policy. It is my hope that the conferees on this bill will restore the Secretary's discretion.

Great work remains to be done in combating AIDS abroad. We are a failure in our policy toward Africa. Our international efforts need to be bolstered to assist developing countries crippled by the effects of HIV disease. My distinguished colleague and friend from Vermont, Senator LEAHY, has been stalwart in raising the funding levels to fight AIDS abroad in the Foreign Operations appropriations bill and the Congress needs to follow his guidance by continuing to increase these levels. In addition, tomorrow I will introduce the Lifesaving Vaccine Technology Act of 1999 to spur research of vaccines to combat diseases which kill more than one million people every year, and I will have much more to say on this topic at that time.

Great work remains to be done for hemophiliacs. There is perhaps no greater neglect by the federal government in responding to the AIDS epidemic than the ignoring of our hemophiliac population. On November 11, 1998 the Ricky Ray Hemophilia Relief Act was signed into law. The bill, authored by the Senator from Ohio, Senator DEWINE, received overwhelming bipartisan support, and I was proud to be an original co-sponsor of the bill. When it passed, hemophiliacs felt their thirteen year battle to be compensated for the lapse in regulation of our nation's blood supply was over.

In the early 1980s, it became apparent that HIV was being improperly screened, and HIV-tainted blood product was being distributed to patients across the country. At the time, there were 10,000 Americans suffering with hemophilia, an illness which requires regular infusions of blood clotting agents.

According to the Institute of Medicine's report on HIV and the Blood Supply, "meetings of the FDA's Blood Product Advisory Committee in January, February, July and December 1983 offered major opportunities to discuss, consider, and reconsider . . . and review new evidence and to reconsider earlier decisions, [yet] blood safety policies changed very little during 1983." In effect, the report found the FDA was at fault for not responding to clear evidence of transmission dangers. As a result, more than sixty percent of all Americans with hemophilia were infected with HIV through blood products contaminated by the AIDS virus.

Currently, more than 5,000 have died and more are dying each day. In my office, I have been visited by courageous hemophiliacs and when they leave, I never know if I will ever see them again. This population has been decimated, Mr. President, and the personal tragedy is unspeakable.

We must fully fund the Ricky Ray Relief Act. The Senate version of the Labor-HHS-Education bill appropriates \$50 million out of the \$750 million needed to fund the Ricky Ray Trust Fund, and that is certainly better than the inadequate level of the other body, but it is a far cry from the level needed by the hemophiliac community. Members of this community never anticipated the one-time compensation from the trust fund, intended to assist with staggering medical bills and improve the quality of their lives, would turn out to be a pay-out to their estates.

You need only to speak to some of my constituents, like Therese MacNeill. She will tell you, as a mom, the hardship she has experienced in coping with the tragedy of losing one son to AIDS and caring for another who is HIV-positive. Terri MacNeill will let you know in no uncertain terms why we must fully fund Ricky Ray to help families who for years were storing HIV-infected blood product in their family refrigerators next to the lettuce and milk, and now are struggling under mountains of medical bills.

Other countries have recognized the plight of hemophiliacs who were infected by poorly screened blood. Australia, Canada, Denmark, France, Italy, and Switzerland are just some of the countries which have established compensation programs. Sixty Senators signed on as co-sponsors of the legislation authorizing the establishment of the Ricky Ray Trust Fund. Now is the time to realize our commitment to the hemophiliac population on par with other countries as well as our own actions in authorizing the bill. I hope that when the appropriations conference committee meets on this bill, the funding levels for the Ricky Ray act are raised substantially.

Mr. President, let me conclude by saying that I am heartened by the response of my friends, the distinguished Senator from Pennsylvania, Senator SPECTER, and the able Senator from Iowa, Senator HARKIN, in crafting this legislation. They have risen to an incredible challenge in the funding of programs designed for AIDS care, research and treatment, and I remain committed to work with them during this year and next to finish some of the great work that remains to be done, especially in regard to HIV prevention programs and the Ricky Ray Trust Fund.

THE VERY BAD DEBT BOXSCORE

Mr. HELMS. Mr. President, at the close of business yesterday, Wednes-

day, October 6, 1999, the Federal debt stood at \$5,654,882,997,504.81 (Five trillion, six hundred fifty-four billion, eight hundred eighty-two million, nine hundred ninety-seven thousand, five hundred four dollars and eighty-one cents).

One year ago, October 6, 1998, the Federal debt stood at \$5,536,217,000,000 (Five trillion, five hundred thirty-six billion, two hundred seventeen million).

Five years ago, October 6, 1994, the Federal debt stood at \$4,690,449,000,000 (Four trillion, six hundred ninety billion, four hundred forty-nine million).

Ten years ago, October 6, 1989, the Federal debt stood at \$2,877,626,000,000 (Two trillion, eight hundred seventy-seven billion, six hundred twenty-six million) which reflects a doubling of the debt—an increase of almost \$3 trillion—\$2,777,256,997,504.81 (Two trillion, seven hundred seventy-seven billion, two hundred fifty-six million, nine hundred ninety-seven thousand, five hundred four dollars and eighty-one cents) during the past 10 years.

MOTIVES OF VOTE

Mr. SMITH of New Hampshire. Mr. President, a couple of days ago on the Senate floor, one of my colleagues, Senator LEAHY from Vermont, made some remarks regarding the possible motives of some of us who made a vote on a particular nominee, Ronnie White of Missouri to the Federal court. I want to read from the Senate manual what we all know as rule XVIII. I want to indicate before reading that I do not believe Senator LEAHY violated that rule. That is not the purpose of bringing this up.

The rule says:

No Senator in debate shall, directly or indirectly, by any form of words impute to another Senator or to other Senators—

Plural—

any conduct or motive unworthy or unbecoming of a Senator.

That rule is very clear, and it is not very often throughout the history of the Senate that rule has been violated.

I want to quote what Senator LEAHY said on October 5 on the Senate floor after the vote on Ronnie White. He said:

Mr. President, I have to say this with my colleagues present. When the full history of Senate treatment of the nomination of Justice Ronnie White is understood, when the switches and politics that drove the Republican side of the aisle are known, the people of Missouri and the people of the United States will have to judge whether the Senate was unfair to this fine man and whether their votes served the interests of justice and the Federal courts.

Then the Senator from Vermont concluded by saying:

I am hoping—and every Senator will have to ask himself or herself this question—the United States has not reverted to a time in

its history when there was a color test on nominations.

The reason why I say rule XVIII was not violated in that case, I believe, although the Senator from Vermont may have walked up to the line—he did not cross it—is because he said “I am hopping.” I, therefore, will not make any contest at this point on that.

It concerned me deeply that those comments were made. I want to say for the record, and it is interesting because I spoke to at least a dozen colleagues who voted the same way I did, in opposition to this nominee—not that it matters—who did not even know what race Mr. White was. I didn't know. I had no idea, and I had numerous conversations about this nominee over the course of several weeks and months, as his nomination was pending. I never knew what his race was nor would I care because I wouldn't want to look, frankly. What difference does it make? It doesn't make any difference to me.

This went further than the Senate floor, which is quite disturbing. In the Washington Post today is in an article, “Deepening Rift Over Judge Vote, Minorities Confirmed At a Lower Rate.” That was the Washington Post story. Very prominently pictured in the article is a picture of Ronnie White, and in addition, Senators ASHCROFT and BOND. There is an implication there that I don't like.

In the article, we have Governor Mel Carnahan, who happens to be the opponent of Senator ASHCROFT in the election in Missouri for the Senate, who said:

“Judge White is a highly qualified lawyer and judge and the [death penalty] figures were manipulated by Senator Ashcroft to undermine him,” Carnahan said.

Then it got a little worse from the Chief Executive of the United States of America. I want to point out, if President Bill Clinton were Senator Bill Clinton, and he said what I am about to read, in my view, he would have violated rule XVIII. That is why I bring it up. Here is what the President said about all of us who voted against Mr. White's nomination:

Yesterday's defeat of Ronnie White's nomination for the federal district court judgeship in Missouri was a disgraceful act of partisan politics. The Republican-controlled Senate is adding credence to the perception that they treat minority and women judicial nominees unfairly and unequally.

That basically is a direct attack on all of us and our motives, basically accusing us of being—the implication is that we are racists, that we do not treat minorities fairly, and that we discriminate against women as well.

That came from the President of the United States.

I will also quote from an article in the Washington Times today in relation to J.C. Watts, the most prominent African American Republican in the Congress of the United States, who was

also deeply offended, as he should have been, by these remarks. It is interesting what Chairman Watts of the House Republican Conference said. This is J.C. Watts talking:

“It is fascinating to me that racism often is defined, not by your skin color, but by your ideology,” said Mr. Watts, the lone black Republican in the House, in a luncheon with editors and reporters at The Washington Times.

He said further:

Unless you're a Democrat. It's OK to do it to black Republicans, black conservatives. But don't do it to a black Democrat.

Then it is racial.

It really is troublesome to me that we create these barriers between us.

President Clinton said:

[By voting down] the first African American judge to serve on the Missouri State Supreme Court, the Republican-controlled Senate is adding credence to the perceptions that they treat minority and women judicial nominees unfairly and unequally.

But anyway, it is troubling to me that these kinds of things happen. I voted against the nominee because of his views on some issues. I spoke to this on the Senate floor on the same day. I am quoting myself now:

In the case of Justice White, who now serves on the Supreme Court in Missouri, he has demonstrated that he is an activist, and has a political slant to his opinions in favor of criminal defendants and against prosecutors. It is my belief that judges should interpret the law, and not impose their own political viewpoints.

That is why I voted against Ronnie White.

Prominent law enforcement people in Missouri were also opposed to him, and said so, as Senator ASHCROFT made very clear.

It is troubling to me that this issue raises its ugly head when somebody happens to be African American. I thought really we would get beyond this. It would have been nice if the President of the United States had said: Ninety-two percent of the minority nominations that have come through this Senate have been confirmed, most of them unanimously without even a recorded vote. It would have been nice if the President said that was pretty good on the part of this Senate, instead of singling out one who had not been confirmed for, I believe, good reason.

One of the things you find out in the Senate, if you stay here long enough, is that you probably have said something somewhere along the line you would like to take back. I am going to say up front regarding my colleague from Vermont, I do not impugn his motives, but it is interesting that Senator LEAHY did not vote to confirm Clarence Thomas. He voted against Clarence Thomas, a very prominent member of the Supreme Court who happens to be African American—a man I was proud to support. I did not hear the President mention any of us who voted for Clar-

ence Thomas, an African American. The reason is very simple: Clarence Thomas is a conservative. That is the reason.

I would never impugn my colleague's motives for voting against Clarence Thomas. I assume he voted against Clarence Thomas because he was a conservative, he did not like his politics, did not like his views on abortion and other issues. I believe that.

I say, without any hesitation, if my colleague were here on the floor now, I would look at him and say: Absolutely, I believe you, that that is your motive, and no other motive.

There was also another vote in 1989 in committee, for a gentleman by the name of William Lucas. Lucas was President Bush's pick for Assistant Attorney General for Civil Rights. He happens to be African American. Lucas's nomination never got to the Senate floor. The vote in Judiciary was 7-7. The Senator from Vermont voted no. Again, I would never use the issue of race to say that was the reason for his vote. I would not even imply it.

So I think it is important that we move beyond this, stop this divisiveness, and give people the benefit of the doubt, and particularly Senator HATCH who so many times has brought nominees whom you and I—I would say to the Senator in the Chair, I myself have often disagreed with Senator HATCH on some of the nominations he has brought, but he has brought them forth I think probably more fairly than he should have in terms of the nominations he brings forth.

So to throw that blanket over 54 individuals who voted the way they did, or even to imply it, is unfortunate.

So I say, to set the record straight, I am going to vote against a person who I think is an activist, who does not represent the views that I believe should be on the court, no matter what the color, and, most frankly, without knowing the color if I can help it because I do not think it matters. It is unfortunate in this case that we came to that.

Mr. President, I want to touch on one other issue before we close up the Senate.

THE PANAMA CANAL

Mr. SMITH of New Hampshire. A few days ago, on October 4, I indicated that there were 88 days until the Panama Canal would be turned over to the Chinese—to the Panamanians and ultimately into the hands of the Chinese Communists. That was October 4.

Today is the 7th, so we have 87, 86, 85—we are down to 85 days before the canal is closed, will be turned over to the Chinese. I have a chart here on which I will put some stickers to cross those days off. The days go fast. I point out that we are going to see this canal in the hands of a nation that does not

have positive feelings toward the United States—to put it as nicely as I can. So this is the flag of Communist China. So now 3 more days have gone by.

I recently addressed this issue of Panama and the impending turnover on October 4, a few days ago. Again, 3 more days have passed. The countdown continues. On December 31, this canal leaves the control of the United States and will come into the hands of the Chinese Communists.

In his book, "The Path Between the Seas," David McCullough's history of the canal reminds us of its historic importance:

The creation of the Panama Canal was far more than a vast, unprecedented feat of engineering. It was a profoundly important historic event and a sweeping human drama not unlike that of war. . . .

Great reputations were made and destroyed. For numbers of men and women, it was the venture of a lifetime. . . . Because of it, one nation, France, was rocked to its foundations. Another, Colombia, lost its most prized possession, the Isthmus of Panama. . . . The Republic of Panama was born. The United States was embarked on a role of global involvement.

So while the United States has no assurances it may remain in Panama after December 31, despite overwhelming public opinion in Panama in support of a continued U.S. presence—we are going to be leaving—the Chinese firm of Hutchison Whampoa will be there in the ports of Cristobal and Balboa on both sides of the canal, having won, through what was widely regarded as a corrupt bidding practice, the right to lease the ports for 25 years and beyond. Both sides of the canal will now be in the control of the Chinese.

After the United States withdraws from Panama, December 31, there is no doubt that a security vacuum will be created. Who is going to fill it? We have less than 3 months, 85 days, a very short window of time to try to work out a solution that is mutually acceptable to us and to the Panamanians.

Let us look at the status of the transition. What bothers me is that this administration is doing nothing to try to renegotiate those leases or to somehow talk with the Panamanians to try to get us to remain there. To date, we have transferred to the Government of Panama 57,000 acres—remember, we spent \$32 billion building that canal—57,000 acres and 3,000 buildings controlled by our military, including schools, hospitals, houses, airports, seaports, roads, and bridges. It represents about 62 percent of the total property.

As of July 1 of this year, U.S. troop strength was down from 10,000 in February 1994 to a little over 1,200, so we are just about finished. All U.S. presence on the Atlantic side was terminated on 30 June with the transfer of Fort Sherman and Pina Range. The remaining 36,000 acres and 1,900 facilities

will be transferred to the Government of Panama as follows: On the 28th of July, the Empire Range for the Army and the Balboa West Range for the Air Force will go. On the 13th of August, the U.S. Army mortuary—these are what has already happened—on the 17th of August, the Curundu Middle School; on the 1st of November, Fort Kobbe, Howard Air Force base, Farfan housing and radio site will go; Curundu Laundry; Fort Clayton, West and East Corozal; Building 1501, Balboa, and Ancon Hill communications site; and on December 31, the grand enchilada, the big prize, the Panama Canal itself, gone, without a whimper.

It troubles me this issue has not even entered the Presidential debate in this country. There is no one at the State Department or in the Defense Department or in the White House talking to the Panamanians about reopening the bidding process or renegotiating leases to try to get in there ahead of the Chinese company. As if to rub it in, to rub salt in the wound even more, the actual turnover is going to take place on December 10. Perhaps they advanced the date so it wouldn't interfere with our Christmas or New Year's Eve parties or maybe they were afraid of Y2K. Maybe they were afraid we would get stuck there.

The bottom line is, on December 10 we will turn it over, which is about 21 days earlier than we should. So I want to elaborate, again, on the significance of the canal to seapower, to our Navy, and to the importance of preserving both the spirit and the letter of the neutrality treaty.

I will now discuss the background of a controversial law in Panama known as Law 5.

President Teddy Roosevelt was a reader and admirer of Alfred Thayer Mahan, a gentleman regarded by many as the father of the modern American Navy. Mahan's book, "The Influence of Sea Power," had a profound impact on Theodore Roosevelt. Mahan traced the rise and decline of past maritime powers and concluded that supremacy at sea translated into national greatness and commercial success. We are essentially an island or, more specifically, a peninsula nation. The Navy is very important to us.

Roosevelt, whose first published work was "The Naval War of 1812," had read Mahan's book and understood its importance. It prompted him to be a strong advocate of constructing the canal, to be sure the United States would have easy access through the isthmus of Panama and into the Pacific from the Atlantic and vice versa.

In World War II, damage to the canal could have and would have delayed the buildup of our war efforts in the Pacific big time. I can't imagine what it would be like to not have been able to use the canal. It would have delayed the flow of supplies to Great Britain, the Soviet

Union, the dispatch of essential war materials from South America to the United States, and on and on.

I am concerned that some officials in Panama might be somewhat naive about the canal's security and about world history. In June, the then Panamanian Foreign Minister disagreed sharply with General Wilhelm, head of SOUTHCOM, who had testified before the Senate Foreign Relations Committee that Panamanian security forces were undermanned and ill equipped to deal with growing threats from Colombian guerrilla incursions and drug traffickers. Panama's Foreign Minister at that time, Jorge Ritter, said the general's statements were inadmissible and argued that "never have the U.S. military forces been here to guard our borders, and they have even less to do with the security of Panama, nor do they have anything to do with the security of the canal."

Even more surprisingly, the Foreign Minister alleged that the growth of drugs in Panama did not begin with withdrawal of U.S. troops but, instead, grew while there were military bases in Panama.

Perhaps this gentleman, with all due respect, has forgotten what happened in 1989. During questioning before the Senate Foreign Relations Committee, Adm. Thomas Moorer, former Chairman of the Joint Chiefs of Staff, was asked if the 1977 treaty had been more helpful or more harmful to U.S. interests. Moorer's immediate response was that 26 soldiers had died in Operation Just Cause in 1989. Among the reasons for the military intervention—to thwart drug trafficking, to preserve democracy in Panama, and to defend the canal—26 Americans gave their lives. To have Mr. Ritter make those kinds of statements is outrageous.

Part of the Senate Foreign Relations Committee hearing testimony includes some interesting commentary on the background of Mr. Ritter. He was the president of the Panama Canal Authority. He was also the chief Panamanian negotiator who reportedly torpedoed the base talks in Panama. He was tied by the Panamanian press and outside press to the highest levels of drug cartels and served as Panama's ambassador to Colombia during the time that Manuel Noriega was doing business with the drug cartels in Colombia. He was Noriega's point man, bottom line.

It was also reported to the press that Ritter had issued a Panamanian ID card for Jorge Escobar, which was found on him when he died in Colombia in a shoot-out with law enforcement. I am not surprised that Mr. Ritter downplayed the importance of the canal and U.S. military base rights. It doesn't surprise me at all.

Hopefully, with the recent inauguration of President Moscoso, that attitude, as expressed by the former Foreign Minister, has changed. I hope it

has. I am told that the new Panamanian President was planning to visit but, for whatever reason, I am not sure, canceled her trip. I had hoped to have the opportunity to meet with her. Hopefully, we will be able to do that at some point in the future.

I have been informed that, unlike her predecessor, President Moscoso would like to do business with the United States and would like to be above board with the negotiations. I wish her much success. I hope she realizes how important her actions are. It would be nice if some in the State Department and the administration would talk with her and encourage her in the next few weeks and months.

I also hope that it is not too late for her to weigh in on the decision about the leases at Cristobal and Balboa. I realize that would take a lot of political courage for her, but I hope she will give a thorough review of the bidding process, its known irregularities, and its compliance with both the spirit and the letter of the canal and neutrality treaty.

In conclusion, this Law 5 reportedly does the following: It gives responsibility for hiring new pilots for the canal who control the ships passing through the canal. It gives Hutchison Whampoa, the Chinese company, the right to possess Rodman Naval Station when it reverts to Panama this year. It gives the authority to control the order of ships utilizing the entrance to the canal and to deny ships access to the ports and entrances of the canal, if they are deemed to be interfering with Hutchinson's business operations. Contrast this with the explicit grant of expeditious passage in the 1977 treaty, which the Panama Canal treaty gave to the U.S. Navy.

Now we are seeing the Chinese Communists—and there are thousands of Chinese now in Panama. People say: Well, it is private business. There is no private business in China. It is all controlled by the government, whatever they do. So this is government business in China. It is Chinese Communist government in Panama by the Chinese. Law 5 gives the right to transfer unilaterally its rights to a third party to any company or any country they select. This ought to be troublesome, and yet it is not even on the radar screen in the political debates around our country today.

Certain public roads could become private in a hurry, which could impact canal access.

This Hutchison Whampoa deal includes U.S. Naval Station Rodman, as mentioned previously; U.S. Air Station Albrook; Diablo; Balboa, a Pacific U.S.-built port; Cristobal, an Atlantic U.S.-built port; the island of Telfers, strategically located adjacent to Galeto Island, a critical communication center.

Telfers Island is said to be the future home of a Chinese work in progress, an

export zone, called the "Great Wall of China" project.

I cannot understand how we can ignore this presence into the Western Hemisphere. Monroe would turn over in his grave. The Monroe Doctrine said that foreign European nations, and other nations around the world, should stay out of the Western Hemisphere. Yet, here they are.

Law 5 is subservient to the 1977 treaty. But if we fail to notice the discrepancies and fail to act upon those discrepancies, or to point out there are potential compliance problems, then we lose the opportunity to respond.

As I said before, I don't have the easel here now, but it's 84 more days. We will come back next week, and I will come back with the chart and it will be 79 days, or whatever it happens to be. But as each day ticks off, another day goes by—another day we haven't talked to President Moscoso and we haven't tried to reopen the negotiations, and we are another day closer to turning the Panama Canal not over to the Panamanians, but to the Chinese Communists—and not a whimper from anybody in the State Department, or the President, the Defense Department, Presidential campaigns, or anywhere. So the days are getting short. I think that I have an obligation to tell the American people, on a day-to-day basis—remind them—about what is going on.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on October 7, 1999, he had presented to the President of the United States, the following enrolled bill:

S. 559. An act to designate the Federal building located at 300 East 8th Street in Austin, Texas, as the "J.J. 'Jake' Pickle Federal Building."

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-5528. A communication from the Deputy General Counsel, Federal Bureau of Investigation, Department of Justice, transmitting, pursuant to law, the report of a rule entitled "Federal Bureau of Investigation, Criminal Justice Information Services Division Systems and Procedures" (RIN1105-AA63), received October 4, 1999; to the Committee on the Judiciary.

EC-5529. A communication from the General Counsel, Federal Emergency Management Agency, transmitting, pursuant to law, the report of a rule entitled "National Flood Insurance Program; Procedures and Fees for Processing Map Changes; 64 FR 51461; 09/23/99", received September 30, 1999; to the Committee on Banking, Housing, and Urban Affairs.

EC-5530. A communication from the Chairman, Federal Deposit Insurance Corporation,

transmitting, pursuant to law, the annual report for calendar year 1998; to the Committee on Banking, Housing, and Urban Affairs.

EC-5531. A communication from the Assistant General Counsel for Regulatory Law, Department of Energy, transmitting, pursuant to law, the report of a rule entitled "Safety of Nuclear Explosive Operations" (AL 452.2A), received October 4, 1999; to the Committee on Energy and Natural Resources.

EC-5532. A communication from the Principal Deputy Assistant Secretary for Congressional Affairs transmitting a draft of proposed legislation entitled "Veterans Programs Improvement Act of 1999"; to the Committee on Veteran's Affairs.

EC-5533. A communication from the Director, Office of Regulations Management, Department of Veterans Affairs, transmitting, pursuant to law, the report of a rule entitled "Enrollment-Provision of Hospital and Outpatient Care to Veterans" (RIN2900-AJ18), received October 4, 1999; to the Committee on Veteran's Affairs.

EC-5534. A communication from the Director, National Science Foundation, transmitting, pursuant to law, the 1998 biennial report of the Committee on Equal Opportunities in Science and Engineering; to the Committee on Health, Education, Labor, and Pensions.

EC-5535. A communication from the Commissioner of Social Security transmitting a draft of proposed legislation entitled "Civil Monetary Penalty Extension Act of 1999"; to the Committee on Finance.

EC-5536. A communication from the Chief, Regulations Unit, Internal Revenue Service, Department of the Treasury, transmitting, pursuant to law, the report of a rule entitled "Weighted Average Interest Rate Update" (Notice 99-49), received September 27, 1999; to the Committee on Finance.

EC-5537. A communication from the Chief, Regulations Unit, Internal Revenue Service, Department of the Treasury, transmitting, pursuant to law, the report of a rule entitled "Appeals Customer Service Program" (Announcement 99-98, 1999-412 I.R.B.—, dated October 18, 1999), received October 4, 1999; to the Committee on Finance.

EC-5538. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Ethalfuralin; Reestablishment of Tolerance for Emergency Exemptions" (FRL #6383-2), received October 4, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5539. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Tebuconazole; Extension of Tolerance for Emergency Exemptions" (FRL #6386-4), received October 4, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5540. A communication from the Director, Office of Procurement and Property Management, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Agriculture Acquisition Regulation: Part 415 Reorganization; Contracting by Negotiation" (RIN0599-AA07), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5541. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting,

pursuant to law, the report of a rule entitled "Avocados Grown in South Florida and Imported Avocados; Revision of the Maturity Requirements for Fresh Avocados" (Docket No. FV99-915-2 FR), received October 4, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5542. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Fresh Bartlett Pears Grown in Oregon and Washington; Increased Assessment Rate" (Docket No. FV99-931-1 FR), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5543. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Vidalia Onions Grown in Georgia; Decreased Assessment Rate" (Docket No. FV98-955-1 FIR), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5544. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Oranges, Grapefruit, Tangerines, and Tangelos Grown in Florida; Modification of Procedures for Limiting the Volume of Small Red Seedless Grapefruit" (Docket No. FV99-905-4 IFR), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5545. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Voluntary Egg, Poultry and Rabbit Grading Regulations" (Docket No. PY-99-904), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5546. A communication from the Administrator, Agricultural Marketing Service, Marketing and Regulatory Programs, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Interim Final Rule-Revision of Regulation for Mandatory Inspection (Flue-Cured Tobacco)" (Docket No. TB-99-07), received September 30, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5547. A communication from the Manager, Federal Crop Insurance Corporation, Department of Agriculture, transmitting, pursuant to law, the report of a rule entitled "Final Rule: General Administrative Regulations; Interpretations of Statutory and Regulatory Provisions" (RIN0563-AB74), received October 4, 1999; to the Committee on Agriculture, Nutrition, and Forestry.

EC-5548. A communication from the Acting Inspector General, Department of Defense, transmitting, pursuant to law, a report relative to the DoD annual financial audit of the uses of the Superfund; to the Committee on Environment and Public Works.

EC-5549. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Approval and Promulgation of Implementation Plans; Indiana" (FRL #6452-6), received September 30, 1999; to the Committee on Environment and Public Works.

EC-5550. A communication from the Director, Office of Regulatory Management and

Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Approval and Promulgation of Implementation Plans; California State Implementation Plan Revision, Santa Barbara County Air Pollution Control District and South Coast Air Quality Management District" (FRL #6448-5), received October 4, 1999; to the Committee on Environment and Public Works.

EC-5551. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Final Authorization of State Hazardous Waste Management Program Revision" (FRL #6448-5), received October 4, 1999; to the Committee on Environment and Public Works.

EC-5552. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "Technical Support Document for the Evaluation of Aerobic Biological Treatment Units with Multiple Mixing Zones", received October 4, 1999; to the Committee on Environment and Public Works.

EC-5553. A communication from the Director, Office of Regulatory Management and Information, Office of Policy, Planning and Evaluation, Environmental Protection Agency, transmitting, pursuant to law, the report of a rule entitled "USEPA Region 2 Draft Interim Policy on Identifying EJ Areas; June 1999; Parts I, II and III", received October 4, 1999; to the Committee on Environment and Public Works.

EC-5554. A communication from the Director, Office of Congressional Affairs, Nuclear Regulatory Commission, transmitting, pursuant to law, the report of a rule entitled "Changes, Tests, and Experiments" (RIN3150-AF94), received October 4, 1999; to the Committee on Environment and Public Works.

EC-5555. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Amendment to Class E Airspace; Moundsville, WV; Docket No. 99-AEA-11 (9-29/10-4)" (RIN2120-AA66) (1999-0319), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5556. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Revision of Class E Airspace; Raton, NM; Direct Final Rule; Confirmation of Effective Date; Docket No. 99-ASW-11 (9-29/9-30)" (RIN2120-AA66) (1999-0317), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5557. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Revision of Class E Airspace; Perry, OK; Direct Final Rule; Confirmation of Effective Date; Docket No. 99-ASW-15 (9-29/10-4)" (RIN2120-AA66) (1999-0321), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5558. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Depart-

ment of Transportation, transmitting, pursuant to law, the report of a rule entitled "Class D Airspace; Bullhead City, AZ; Direct Final Rule; Confirmation of Effective Date; Docket No. 99-AWP-3 (9-20/10-4)" (RIN2120-AA66) (1999-0320), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5559. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Burkhardt Grob Luft-Und Raumfahrt GmbH and CO KG Models G103 TWIN II and G103A TWIN II ACRO Sailplanes; Request for Comments; Docket No. 99-CE-68 (9-29/10-4)" (RIN2120-AA64) (1999-0379), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5560. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; MD Helicopters Inc. Model 369D, 369E, 369FF, 500N, and 600N Helicopters; Docket No. 98-SW-80 (9-30/10-4)" (RIN2120-AA64) (1999-0378), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5561. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Airbus Model A330-301, and Model A340-211, -212, -311, and -312 Series Airplanes; Docket No. 99-NM-119 (10-1/10-4)" (RIN2120-AA64) (1999-0377), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5562. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Short Brothers SD3-30, SD3-60, SD3-SHERPA, and SD3-60 SHERPA Series Airplanes; Docket No. 99-NM-29 (1-1/10-4)" (RIN2120-AA64) (1999-0375), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5563. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Empresa Brasileira de Aeronautica S.A. Model EMB-145 Series Airplanes; Request for Comments; Docket No. 99-NM-198 (10-1/10-4)" (RIN2120-AA64) (1999-0376), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5564. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Fokker Model F.28 Mark 0070 and Mark 0100 Series Airplanes; Docket No. 99-NM-346 (-28/10-4)" (RIN2120-AA64) (1999-0373), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5565. A communication from the Program Analyst, Office of the Chief Counsel, Federal Aviation Administration, Department of Transportation, transmitting, pursuant to law, the report of a rule entitled "Airworthiness Directives; Allied Signal Inc. TFE731 Series Turbofan Engines; Docket No.

99-ANE-51 (9-29/10-4)" (RIN2120-AA64) (1999-0374), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5566. A communication from the Chief Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service, Department of Commerce, transmitting, pursuant to law, the report of a rule entitled "Inseason Adjustment for the D Fishing Season Directed Pollock Fishery in Statistical Area 630 of the Gulf of Alaska", received September 30, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5567. A communication from the Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service, Department of Commerce, transmitting, pursuant to law, the report of a rule entitled "Fisheries of the Exclusive Economic Zone Off Alaska; Atka Mackerel in the Central Aleutian District and Bering Sea Subarea of the Bering Sea and Aleutian Islands", received September 30, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5568. A communication from the Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service, Department of Commerce, transmitting, pursuant to law, the report of a rule entitled "Fisheries of the Exclusive Economic Zone Off Alaska; Pollock by Vessels Catching Pollock for Processing by the Mothership in the Bering Sea Subarea", received September 30, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5569. A communication from the Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service, Department of Commerce, transmitting, pursuant to law, the report of a rule entitled "Prohibition of Directed Fishing for Pollock in Statistical Area 610 of the Gulf of Alaska", received September 30, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5570. A communication from the Deputy Assistant Administrator for Fisheries, Office of Sustainable Fisheries, National Marine Fisheries Service, Department of Commerce, transmitting, pursuant to law, the report of a rule entitled "Fisheries off West Coast States and in the Western Pacific; Pacific Coast Groundfish Fishery; Amendment 11" (RIN0648-AL52), received October 4, 1999; to the Committee on Commerce, Science, and Transportation.

EC-5571. A communication from the Associate Chief, Policy and Program Planning Division, Common Carrier Bureau, Federal Communications Commission, transmitting, pursuant to law, the report of a rule entitled "Telecommunications Carriers' Use of Customer Proprietary Network Information and Other Customer Information, Order on Reconsideration and Petitions for Forbearance" (CC Docket No. 96-114) (FCC 99-223), received September 30, 1999; to the Committee on Commerce, Science, and Transportation.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. HATCH, from the Committee on the Judiciary, without amendment:

S. Res. 179. A resolution designating October 15, 1999, as "National Mammography Day."

EXECUTIVE REPORTS OF A COMMITTEE

The following executive reports of a committee were submitted:

By Mr. HATCH, for the Committee on the Judiciary:

Ellen Segal Huvelle, of the District of Columbia, to be United States District Judge for the District of Columbia.

Anna J. Brown, of Oregon, to be United States District Judge for the District of Oregon.

Charles A. Pannell, Jr., of Georgia, to be United States District Judge for the Northern District of Georgia.

Florence-Marie Cooper, of California, to be United States District Judge for the Central District of California.

Ronald M. Gould, of Washington, to be United States Circuit Judge for the Ninth Circuit.

Richard K. Eaton, of the District of Columbia, to be a Judge of the United States Court of International Trade.

(The above nominations were reported with the recommendation that they be confirmed.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. CRAIG (for himself and Mr. CRAPO):

S. 1705. A bill to direct the Secretary of the Interior to enter into land exchanges to acquire from the private owner and to convey to the State of Idaho approximately 1,240 acres of land near the City of Rocks National Reserve, Idaho, and for other purposes; to the Committee on Energy and Natural Resources.

By Mrs. HUTCHISON (for herself and Mr. GRAMM):

S. 1706. A bill to amend the Federal Water Pollution Control Act to exclude from stormwater regulation certain areas and activities, and to improve the regulation and limit the liability of local governments concerning co-permitting and the implementation of control measures; to the Committee on Environment and Public Works.

By Mr. THOMPSON (for himself and Mr. FRIST):

S. 1707. A bill to amend the Inspector General Act of 1978 (5 U.S.C. App.) to provide that certain designated Federal entities shall be establishments under such Act, and for other purposes; to the Committee on Governmental Affairs.

By Mr. MOYNIHAN (for himself, Mr. JEFFORDS, Mr. LEAHY, Mr. KERREY, Mr. ROBB, Mr. ROCKEFELLER, Mr. SARBANES, Mr. GRAMS, and Mr. LIEBERMAN):

S. 1708. A bill to amend the Employee Retirement Income Security Act of 1974 and the Internal Revenue Code of 1986 to require plans which adopt amendments that significantly reduce future benefit accruals to provide participants with adequate notice of the changes made by such amendments; to the Committee on Finance.

By Mr. KYL (for himself, Mr. McCAIN, Mrs. HUTCHISON, Mr. DOMENICI, Mr. BINGAMAN, and Mrs. FEINSTEIN):

S. 1709. A bill to provide Federal reimbursement for indirect costs relating to the incarceration of illegal aliens and for emergency health services furnished to undocumented aliens; to the Committee on the Judiciary.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Ms. SNOWE (for herself, Mr. HELMS, Mr. SARBANES, Mr. BIDEN, and Mr. BYRD):

S. Res. 198. Expressing sympathy for those killed and injured in the recent earthquakes in Turkey and Greece and commending Turkey and Greece for their recent efforts in opening a national dialogue and taking steps to further bilateral relations; considered and agreed to.

By Mr. REED (for himself, Ms. COLLINS, Mr. TORRICELLI, Mr. REID, Mr. LEVIN, Mr. WELLSTONE, Mr. LIEBERMAN, Mr. KERRY, Mr. KENNEDY, Mr. SARBANES, Mr. DORGAN, Mr. SCHUMER, Mr. AKAKA, Mr. INOUE, Mr. CHAFEE, Mrs. BOXER, Ms. MIKULSKI, Mr. DODD, Mr. WYDEN, Mr. CONRAD, Mr. GRAHAM, Mr. DURBIN, Mr. DEWINE, Ms. LANDRIEU, Mr. JOHNSON, Mr. JEFFORDS, Mr. SMITH of Oregon, Mr. ROBB, and Mr. FRIST):

S. Res. 199. A resolution designating the week of October 24, 1999, through October 30, 1999, and the week of October 22, 2000, through October 28, 2000, as "National Childhood Lead Poisoning Prevention Week"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CRAIG (for himself and Mr. CRAPO):

S. 1705. A bill to direct the Secretary of the Interior to enter into land exchanges to acquire from the private owner and to convey to the State of Idaho approximately 1,240 acres of land near the City of Rocks National Reserve, Idaho, and for other purposes; to the Committee on Energy and Natural Resources.

CASTLE ROCK RANCH/HAGERMAN FOSSIL BEDS LAND EXCHANGE

• Mr. CRAIG. Mr. President, I rise today to introduce a bill to authorize the Castle Rocks Ranch/Hagerman Fossil Beds Land Exchange in my home state of Idaho.

Mr. President, in Idaho we have one of the foremost rock climbing destination sites in the world. It is called the City of Rocks National Reserve and is located in South Central Idaho. Most of the Reserve is owned by the National Park Service with parts of it being owned by the State of Idaho, the Forest Service, the Bureau of Land Management, and private landowners. The State of Idaho runs the Reserve with a cooperative agreement with the National Park Service.

The Reserve has unique geologic features—essentially, large rock formations jut out of the ground. I can't give it justice with my description—it is really something that must be seen, so I invite everyone to come to Idaho and visit the City of Rocks. Besides the rock formations, many of which are used extensively and known internationally for rock climbing, the site

has unique historic significance. The California Trail, one of the major trails for Westward expansion during the 19th Century, passes through the Reserve. One of the Reserve's major attractions, Twin Sisters, was a landmark for this trail and is currently being protected for historic significance. Additionally, wagon trains often stopped in the area to maintain their wagons. During these stops, pioneers wrote their names on the rocks with wagon grease. Many of these names are still visible on the rocks today and serve as a record of our ancestors who passed through the area.

Near the Reserve exists the Castle Rock Ranch, an approximately 1,240 acre ranch containing similar rock formations, which are ideal for rock climbing. Additionally, the Ranch contains irrigated pasture land. The Ranch was recently purchased by The Conservation Fund and other conservation groups in order to put it into the public domain for recreation. It is currently being operated as a working ranch. However, the State of Idaho would like to acquire this Ranch to make it into a state park. They would open up the rock formations for rock climbing, provide for camping and hiking, and, where irrigated pasture land exists, trade that irrigated land for dry land inholdings within the Reserve. This would help local ranchers acquire irrigated land, which is more valuable than gold in Southern Idaho, and allow the state to consolidate inholdings within the Reserve.

A couple of counties to the West and across the mighty Snake River exists the Hagerman Fossil Beds National Monument. This National Monument contains the Hagerman Fossil Beds, which is important because it contains the world's most important fossil deposits from a time period known as the late Pliocene epoch, 3.5 million years ago. They represent the last glimpse of time before the Ice Age. Additionally, the beds contain the largest concentration of Hagerman Horse fossils in North America. While the State of Idaho owns the actual fossil beds, the National Park Service runs and maintains the facility.

The State of Idaho wants to divest its interest in the fossil beds and acquire the Castle Rock Ranch. Additionally, the National Park Service wants to acquire the Fossil Beds. This would make it easier for everyone to work to protect the resources we have and open up opportunities for recreation. Consequently, I am introducing this legislation.

In brief, the legislation would authorize the National Park Service to acquire the Castle Rock Ranch, exchange the Ranch with the State of Idaho for the Hagerman Fossil Beds, and mandate that the State exchange land within the Ranch for inholdings within the City of Rocks. In the end,

the National Park Service would run and own the Hagerman Fossil Beds, the State of Idaho would own and run a state park in part of the Castle Rock Ranch, and voluntary inholders in the City of Rocks would be able to trade their inholdings for irrigated land on the Castle Rock Ranch.

The only concern I have is the existence of an easement on the Hagerman Fossil Beds for the local irrigation company. This is the only way for farmers in the local area to get water to their farms—a necessity in that region. Section 4(e) of this legislation was included to ensure that this easement will continue to exist. It is vital to the existence of family farms in the area, and, for the record, it is not my intent to harm—and I will do all in my power to prevent this legislation from harming—this easement or the irrigation in the local area.

Mr. President, this is a unique proposal that makes fiscal sense for taxpayers and has garnered the support of the National Park Service, the State of Idaho, The Conservation Fund, The Access Fund (a national climbing group), other conservation groups, local legislators, and many local residents. I hope that my colleagues will recognize the importance of this legislation and work for its enactment.●

By Mr. MOYNIHAN (for himself, Mr. JEFFORDS, Mr. LEAHY, Mr. KERREY, Mr. ROBB, Mr. ROCKEFELLER, Mr. SARBANES, Mr. GRAMS, and Mr. LIEBERMAN):

S. 1708. A bill to amend the Employee Retirement Income Security Act of 1974 and the Internal Revenue Code of 1986 to require plans which adopt amendments that significantly reduce future benefit accruals to provide participants with adequate notice of the changes made by such amendments; to the Committee on Finance.

THE PENSION REDUCTION DISCLOSURE ACT OF
1999

Mr. MOYNIHAN. Mr. President, I rise today, joined by Senators JEFFORDS, LEAHY, GRAMS, KERREY, ROBB, ROCKEFELLER, and SARBANES, to introduce legislation to provide greater disclosure of the impact of pension plan conversions.

This is the second bill I have sponsored this session aimed at achieving transparency of the effects of traditional pension plan conversions to "cash balance" plans, which have become extremely controversial in recent months. At least 300 large U.S. companies have converted to cash balance plans in the last few years.

Cash balance plans combine certain features of "defined benefit" and "defined contribution" plans. Like defined contribution plans, cash balance plans provide each employee with an individual account representing a lump-sum benefit. Like traditional defined benefit plans, cash balance plan con-

tributions are made primarily by the employer and are insured by the Pension Benefit Guaranty Corporation.

The calculation of benefits under cash balance plans, however, differs from other defined benefit plans. Whereas a traditional defined benefit plan grows slowly in the early years and more rapidly as one approaches retirement, cash balance plans de-accelerate this later-year growth and increase the early-year growth. Consequently, younger employees tend to do better under cash balance plans than under traditional plans, while older employees typically do worse. In some cases, an older worker's starting account balance may remain static for years—typically referred to as the "wear away" period.

The controversy over cash balance plans arises in part because present disclosure requirements are inadequate. Under present law, when an employer amends a defined benefit pension plan in a manner which significantly reduces the rate of future benefit accrual, the employer must provide participants with an advance written notice of the amendment. The law does not, however, require employers to disclose the effect the amendment will have on participants. In fact, it does not even require employers to disclose that benefits will be reduced. All that present law requires is that employers provide participants with a summary or copy of the plan amendment. Consequently, current law can be satisfied with a summary buried in an obscure document. In some cases, workers have complained that their employers purposefully obscured benefit reductions. As a result, employee anger over cash balance plans has grown, resulting in several class action lawsuits being filed in just the last three years.

The Pension Reduction Disclosure Act will strengthen existing law by requiring disclosure of information which will enable employees to determine the effects of benefit reductions. Specifically, before the plan is changed, each adversely-affected employee must receive illustrative examples showing the effects of the change on various employee groups. Moreover, each employee must have the opportunity to receive the benefit formulas for the old and new versions of the plan so that he or she can make specific comparisons of both plans. Then, 90 days after the plan is changed, each adversely-affected employee must have, upon request, the opportunity to receive an individual benefit comparison prepared by the employer. This information will provide employees with the knowledge they need regarding pension benefit reductions, while imposing minimal burden on employers.

The Pension Reduction Disclosure Act, is a modified version of legislation I introduced in March entitled The

Pension Right to Know Act (S. 659). The new measure attempts to address concerns raised by employers concerning S. 659. For example, the new measure requires disclosure only for adversely-affected employees, not all employees, in order to meet employer concerns that S. 659 was too broad in its reach. Moreover, the new bill addresses employer concerns that it would be difficult to provide individual benefit comparisons before the amendment effective date due to a lack of individual data. Under the bill introduced today, individual benefit comparisons would be required no earlier than 90 days after the effective date, and then only upon request. (To enable employees to compare the old and new plans before the effective date, this bill provides illustrative examples and, upon request, the benefit formulas for the old and new plans.) Another change is that the new bill allows the Secretary of Treasury to develop alternative and simplified compliance methods where appropriate, as in cases where there is no fundamental change in the manner in which benefits are determined. Moreover, the Secretary may reduce the advance notice period from 45 days to 15 days in cases in which the 45-day requirement would be unduly burdensome because the amendment is contingent on a merger, acquisition, disposition or other similar transaction.

I believe that such disclosure not only is in the best interest of employees, but also of the employer. Several class action lawsuits have been filed in the last three years challenging conversions to cash balance plans. These suits will likely cost millions of dollars in attorneys' fees, but with proper disclosure they might not have occurred.

I want to acknowledge the work of the Clinton Administration in helping to craft this measure. The bill largely follows the outline of a proposal suggested by the Administration in July which was developed in collaboration with my staff. The Departments of Treasury and Labor have provided great insight and creativity in developing this bill, and I thank them for their assistance. Two of our distinguished House colleagues, Congressman ROBERT MATSUI of California and Congressman JERRY WELLER of Illinois, are introducing this legislation in the other chamber, so hopefully it will become law this year.

In closing, let me repeat what I have said in the past. I take no position on the underlying merit of cash balance plans. Ours is a voluntary pension system, and companies must do what is right for them and their employees. But I feel strongly that companies must fully and comprehensibly inform their employees regarding whatever pension benefits the company offers. Companies have no right to misrepresent or obfuscate the projected benefit

employees will receive under a cash balance plan or any other pension arrangement, notwithstanding the fact that some pension consultants have advocated cash balance plans for that very purpose.

As I said upon introduction of my earlier legislation on this topic, it is time to let the sun shine on pension plan conversions. I urge the Senate to support this important measure.

I ask unanimous consent that a copy and summary of the bill be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1708

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Pension Reduction Disclosure Act of 1999".

SEC. 2. NOTICE REQUIRED FOR CERTAIN PLAN AMENDMENTS REDUCING FUTURE BENEFIT ACCRUALS.

(a) GENERAL NOTICE REQUIREMENTS.—Section 204(h) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1054(h)) is amended to read as follows:

"(h) NOTICE REQUIREMENTS FOR PENSION PLAN AMENDMENTS REDUCING ACCRUALS.—

"(1) IN GENERAL.—If an applicable pension plan is amended so as to provide for a significant reduction in the rate of future benefit accrual of 1 or more applicable individuals, the plan administrator shall—

"(A) not later than the 45th day before the effective date of the amendment, provide the written notice described in paragraph (2) to each applicable individual (and to each employee organization representing applicable individuals), and

"(B) in the case of a large applicable pension plan—

"(i) include in the notice under paragraph (2) the additional information described in paragraph (3),

"(ii) make available the information described in paragraph (4) in accordance with such paragraph, and

"(iii) provide individual benefit statements in accordance with section 105(e).

"(2) BASIC WRITTEN NOTICE.—The notice under paragraph (1) shall include a summary of the important terms of the amendment, including—

"(A) the effective date of the amendment,

"(B) a statement that the amendment is expected to significantly reduce the rate of future benefit accrual,

"(C) a description of the classes of applicable individuals to whom the amendment applies, and

"(D) a description of how the amendment significantly reduces the rate of future benefit accrual.

"(3) ADDITIONAL INFORMATION TO BE PROVIDED BY LARGE APPLICABLE PENSION PLANS.—

"(A) IN GENERAL.—The information described in this paragraph is—

"(i) a description of the plan's benefit formulas (including formulas for determining early retirement benefits) both before and after the amendment and an explanation of the effect of the different formulas on applicable individuals,

"(ii) an explanation of the circumstances (if any) under which (for appropriate categories of applicable individuals) the amendment is reasonably expected to result in a

temporary period after the effective date of the amendment during which there are no or minimal accruals,

"(iii) illustrative examples of normal or early retirement benefits meeting the requirements of subparagraph (B), and

"(iv) notice of each applicable individual's right to request, and of the procedures for requesting, the information required to be provided under paragraph (4) and under section 105(e).

"(B) ILLUSTRATIVE EXAMPLES.—Illustrative examples meet the requirements of this subparagraph if such examples illustrate the adverse effects of the plan amendment. Such examples shall be prepared by the plan administrator in accordance with regulations prescribed by the Secretary of the Treasury, and such regulations shall require that the examples—

"(i) reflect fairly the different categories of applicable individuals who are similarly affected by the plan amendment after consideration of all relevant factors,

"(ii) show a comparison of benefits for each such category of applicable individuals under the plan (as in effect before and after the effective date) at appropriate future dates, and

"(iii) illustrate any temporary period described in subparagraph (A)(ii).

Such comparison shall be based on benefits in the form of a life annuity and on actuarial assumptions each of which is reasonable (and is so certified by an enrolled actuary) when applied to all participants in the plan.

"(4) SUPPORTING INFORMATION RELATING TO CALCULATION OF BENEFITS.—

"(A) IN GENERAL.—Each individual who receives or who is entitled to receive the information described in paragraph (3) may (after so receiving or becoming so entitled) request the plan administrator to provide the information described in subparagraph (B).

"(B) INFORMATION.—The plan administrator shall, within 15 days after the date on which a request under subparagraph (A) is made, provide to the individual information (including benefit formulas and actuarial factors) which is sufficient—

"(i) to confirm the benefit comparisons in the illustrative examples described in paragraph (3)(B), and

"(ii) to enable the individual to use the individual's own personal information to make calculations of the individual's own benefits which are similar to the calculations made in such examples.

Nothing in this subsection shall be construed to require the plan administrator to provide to an individual such individual's personal information for purposes of clause (ii).

"(C) TIME LIMITATION ON REQUESTS.—This paragraph shall apply only to requests made during the 12-month period that begins on the later of the effective date of the amendment to which it relates or the date the notice described in paragraph (2) is provided.

"(5) SANCTIONS.—

"(A) IN GENERAL.—In the case of any egregious failure to meet any requirement of this subsection with respect to any plan amendment, the provisions of the applicable pension plan shall be applied as if such plan amendment entitled all applicable individuals to the greater of—

"(i) the benefits to which they would have been entitled without regard to such amendment, or

"(ii) the benefits under the plan with regard to such amendment.

"(B) EGREGIOUS FAILURE.—For purposes of subparagraph (A), there is an egregious failure to meet the requirements of this subsection if such failure is—

“(i) an intentional failure (including any failure to promptly provide the required notice or information after the plan administrator discovers an unintentional failure to meet the requirements of this subsection),

“(ii) a failure to provide most of the individuals with most of the information they are entitled to receive under this subsection, or

“(iii) a failure which is determined to be egregious under regulations prescribed by the Secretary of the Treasury.

“(B) EXCISE TAX.—For excise tax on failure to meet requirements, see section 4980F of the Internal Revenue Code of 1986.

“(6) SPECIAL RULES.—

“(A) PLAIN LANGUAGE.—The notice required under paragraph (1) shall be written in a manner calculated to be understood by the average plan participant who is an applicable individual.

“(B) NOTICE TO DESIGNEES.—The notice and information required to be provided under this subsection may be provided to a person designated, in writing, by the person to which it would otherwise be provided.

“(7) ALTERNATIVE METHODS OF COMPLIANCE WITH ENHANCED DISCLOSURE REQUIREMENTS IN CERTAIN CASES.—The Secretary of the Treasury shall prescribe such regulations as may be necessary to carry out this subsection. The Secretary of the Treasury may—

“(A) prescribe alternative or simplified methods of complying with paragraphs (3) and (4) in situations where—

“(i) there is no fundamental change in the manner in which the accrued benefit of an applicable individual is determined under the plan, and

“(ii) such other methods are adequate to reasonably inform plan participants who are applicable individuals of the impact of the reductions,

“(B) reduce the advance notice period in paragraph (1)(A) from 45 days to 15 days before the effective date of the amendment for cases in which compliance with the 45-day advance notice requirement would be unduly burdensome because the amendment is contingent on a merger, acquisition, disposition, or other similar transaction involving plan participants who are applicable individuals or because 45 days advance notice is otherwise impracticable,

“(C) permit the comparison of benefits under paragraph (3)(B)(i) to be based on a form of payment other than a life annuity, or

“(D) specify actuarial assumptions that are deemed to be reasonable for purposes of the benefit comparisons under paragraph (3)(B)(i).

“(8) APPLICABLE INDIVIDUAL.—For purposes of this subsection, the term ‘applicable individual’ means, with respect to any plan amendment—

“(A) each participant in the plan, and

“(B) each beneficiary who is an alternate payee (within the meaning of section 206(d)(3)(K)) under a qualified domestic relations order (within the meaning of section 206(d)(3)(B)(i)),

whose future benefit accruals under the plan may reasonably be expected to be reduced by such plan amendment.

“(9) TERMS RELATING TO PLANS.—For purposes of this subsection—

“(A) APPLICABLE PENSION PLAN.—The term ‘applicable pension plan’ means—

“(i) a defined benefit plan, or

“(ii) an individual account plan which is subject to the funding standards of section 302.

“(B) LARGE APPLICABLE PENSION PLAN.—The term ‘large applicable pension plan’ means an applicable pension plan which had 100 or more active participants as of the last day of the plan year preceding the plan year in which the plan amendment becomes effective.”

(b) INDIVIDUAL STATEMENTS.—Section 105 of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1025) is amended by adding at the end the following new subsection:

“(e)(1) The plan administrator of a large applicable pension plan shall furnish an individual statement described in paragraph (2) to each individual—

“(A) who receives, or is entitled to receive, under section 204(h) the information described in paragraph (3) thereof from such administrator, and

“(B) who requests in writing such a statement from such administrator.

“(2) The statement described in this paragraph is a statement which provides information which is substantially the same as the information in the illustrative examples described in section 204(h)(3)(B) but which is based on data specific to the requesting individual and, if the individual so requests, information as of 1 other future date not included in such examples.

“(3) Paragraph (1) shall apply only to requests made during the 12-month period that begins on the later of the effective date of the amendment to which it relates or the date the notice described in section 204(h)(2) is provided. In no case shall an individual be entitled under this subsection to receive more than one such statement with respect to an amendment.

“(4) Notwithstanding section 502(c)(1), the statement required by paragraph (1) shall be treated as timely furnished if furnished on or before—

“(A) the date which is 90 days after the effective date of the plan amendment to which it relates, or

“(B) such later date as may be permitted by the Secretary of Labor.

“(5) Any term used in this subsection which is used in section 204(h) shall have the meaning given such term by such section.

“(6) A statement under this subsection shall not be taken into account for purposes of subsection (b).”

SEC. 3. EXCISE TAX ON FAILURE TO PROVIDE NOTICE BY DEFINED BENEFIT PLANS SIGNIFICANTLY REDUCING FUTURE BENEFIT ACCRUALS.

(a) IN GENERAL.—Chapter 43 of the Internal Revenue Code of 1986 (relating to qualified pension, etc., plans) is amended by adding at the end the following new section:

“SEC. 4980F. FAILURE OF DEFINED BENEFIT PLANS REDUCING BENEFIT ACCRUALS TO SATISFY NOTICE REQUIREMENTS.

“(a) IMPOSITION OF TAX.—There is hereby imposed a tax on the failure of a plan administrator of an applicable pension plan to meet the requirements of subsection (e) with respect to any applicable individual.

“(b) AMOUNT OF TAX.—

“(1) IN GENERAL.—The amount of the tax imposed by subsection (a) on any failure with respect to any applicable individual shall be \$100 for each day in the noncompliance period with respect to such failure.

“(2) NONCOMPLIANCE PERIOD.—For purposes of this section, the term ‘noncompliance period’ means, with respect to any failure, the period beginning on the date the failure first occurs and ending on the date the failure is corrected.

“(c) LIMITATIONS ON AMOUNT OF TAX.—

“(1) OVERALL LIMITATION FOR UNINTENTIONAL FAILURES.—

“(A) IN GENERAL.—In the case of failures that are due to reasonable cause and not to willful neglect, the tax imposed by subsection (a) for failures during the taxable year of the employer (or, in the case of a multiemployer plan, the taxable year of the trust forming part of the plan) shall not exceed \$500,000 (\$1,000,000 in the case of a large applicable pension plan).

“(B) TAXABLE YEARS IN THE CASE OF CERTAIN CONTROLLED GROUPS.—For purposes of this paragraph, if all persons who are treated as a single employer for purposes of this section do not have the same taxable year, the taxable years taken into account shall be determined under principles similar to the principles of section 1561.

“(2) WAIVER BY SECRETARY.—In the case of a failure which is due to reasonable cause and not to willful neglect, the Secretary may waive part or all of the tax imposed by subsection (a) to the extent that the payment of such tax would be excessive relative to the failure involved.

“(d) LIABILITY FOR TAX.—The following shall be liable for the tax imposed by subsection (a):

“(1) In the case of a plan other than a multiemployer plan, the employer.

“(2) In the case of a multiemployer plan, the plan.

“(e) NOTICE REQUIREMENTS FOR PENSION PLAN AMENDMENTS REDUCING ACCRUALS.—

“(1) IN GENERAL.—If an applicable pension plan is amended so as to provide for a significant reduction in the rate of future benefit accrual of 1 or more applicable individuals, the plan administrator shall—

“(A) not later than the 45th day before the effective date of the amendment, provide the written notice described in paragraph (2) to each applicable individual (and to each employee organization (as defined in section 3(4) of the Employee Retirement Income Security Act of 1974) representing applicable individuals), and

“(B) in the case of a large applicable pension plan—

“(i) include in the notice under paragraph (2) the additional information described in paragraph (3), and

“(ii) make available the information described in paragraph (4) in accordance with such paragraph.

“(2) BASIC WRITTEN NOTICE.—The notice under paragraph (1) shall include a summary of the important terms of the amendment, including—

“(A) the effective date of the amendment,

“(B) a statement that the amendment is expected to significantly reduce the rate of future benefit accrual,

“(C) a description of the classes of applicable individuals to whom the amendment applies, and

“(D) a description of how the amendment significantly reduces the rate of future benefit accrual.

“(3) ADDITIONAL INFORMATION TO BE PROVIDED BY LARGE APPLICABLE PENSION PLANS.—

“(A) IN GENERAL.—The information described in this paragraph is—

“(i) a description of the plan’s benefit formulas (including formulas for determining early retirement benefits) both before and after the amendment and an explanation of the effect of the different formulas on applicable individuals,

“(ii) an explanation of the circumstances (if any) under which (for appropriate categories of applicable individuals) the amendment is reasonably expected to result in a temporary period after the effective date of the amendment during which there are no or minimal accruals,

“(iii) illustrative examples of normal or early retirement benefits meeting the requirements of subparagraph (B), and

“(iv) notice of each applicable individual’s right to request, and of the procedures for requesting, the information required to be provided under paragraph (4) and under section 105(e) of Employee Retirement Income Security Act of 1974.

“(B) ILLUSTRATIVE EXAMPLES.—Illustrative examples meet the requirements of this subparagraph if such examples illustrate the adverse effects of the plan amendment. Such examples shall be prepared by the plan administrator in accordance with regulations prescribed by the Secretary, and such regulations shall require that the examples—

“(i) reflect fairly the different categories of applicable individuals who are similarly affected by the plan amendment after consideration of all relevant factors,

“(ii) show a comparison of benefits for each such category of applicable individuals under the plan (as in effect before and after the effective date) at appropriate future dates, and

“(iii) illustrate any temporary period described in subparagraph (A)(ii).

Such comparison shall be based on benefits in the form of a life annuity and on actuarial assumptions each of which is reasonable (and is so certified by an enrolled actuary) when applied to all participants in the plan.

“(4) SUPPORTING INFORMATION RELATING TO CALCULATION OF BENEFITS.—

“(A) IN GENERAL.—Each individual who receives or who is entitled to receive the information described in paragraph (3) may (after so receiving or becoming so entitled) request the plan administrator to provide the information described in subparagraph (B).

“(B) INFORMATION.—The plan administrator shall, within 15 days after the date on which a request under subparagraph (A) is made, provide to the individual information (including benefit formulas and actuarial factors) which is sufficient—

“(i) to confirm the benefit comparisons in the illustrative examples described in paragraph (3)(B), and

“(ii) to enable the individual to use the individual’s own personal information to make calculations of the individual’s own benefits which are similar to the calculations made in such examples.

Nothing in this subsection shall be construed to require the plan administrator to provide to an individual such individual’s personal information for purposes of clause (ii).

“(C) TIME LIMITATION ON REQUESTS.—This paragraph shall apply only to requests made during the 12-month period that begins on the later of the effective date of the amendment to which it relates or the date the notice described in paragraph (2) is provided.

“(5) SPECIAL RULES.—

“(A) PLAIN LANGUAGE.—The notice required under paragraph (1) shall be written in a manner calculated to be understood by the average plan participant who is an applicable individual.

“(B) NOTICE TO DESIGNEE.—The notice or information required to be provided under this subsection may be provided to a person designated, in writing, by the person to which it would otherwise be provided.

“(6) ALTERNATIVE METHODS OF COMPLIANCE WITH ENHANCED DISCLOSURE REQUIREMENTS IN CERTAIN CASES.—The Secretary shall prescribe such regulations as may be necessary to carry out this subsection. The Secretary may—

“(A) prescribe alternative or simplified methods of complying with paragraphs (3) and (4) in situations where—

“(i) there is no fundamental change in the manner in which the accrued benefit of an applicable individual is determined under the plan, and

“(ii) such other methods are adequate to reasonably inform plan participants who are applicable individuals of the impact of the reductions,

“(B) reduce the advance notice period in paragraph (1)(A) from 45 days to 15 days before the effective date of the amendment for cases in which compliance with the 45-day advance notice requirement would be unduly burdensome because the amendment is contingent on a merger, acquisition, disposition, or other similar transaction involving plan participants who are applicable individuals or because 45 days advance notice is otherwise impracticable,

“(C) permit the comparison of benefits under paragraph (3)(B)(i) to be based on a form of payment other than a life annuity, or

“(D) specify actuarial assumptions that are deemed to be reasonable for purposes of the benefit comparisons under paragraph (3)(B)(i).

“(7) APPLICABLE INDIVIDUAL.—For purposes of this subsection, the term ‘applicable individual’ means, with respect to any plan amendment—

“(A) each participant in the plan, and

“(B) each beneficiary who is an alternate payee (within the meaning of section 414(p)(8)) under a qualified domestic relations order (within the meaning of section 414(p)(1)),

whose future benefit accruals under the plan may reasonably be expected to be reduced by such plan amendment.

“(8) TERMS RELATING TO PLANS.—For purposes of this subsection—

“(A) APPLICABLE PENSION PLAN.—The term ‘applicable pension plan’ means—

“(i) a defined benefit plan, or

“(ii) an individual account plan which is subject to the funding standards of section 412.

Such term shall not include any governmental plan (within the meaning of section 414(d)) or any church plan (within the meaning of section 414(e)) with respect to which the election provided by section 410(d) has not been made.

“(B) LARGE APPLICABLE PENSION PLAN.—The term ‘large applicable pension plan’ means an applicable pension plan which had 100 or more active participants as of the last day of the plan year preceding the plan year in which the plan amendment becomes effective.”

(b) CONFORMING AMENDMENT.—The table of sections for chapter 43 of such Code is amended by adding at the end the following new item:

“Sec. 4980F. Failure of defined benefit plans reducing benefit accruals to satisfy notice requirements.”

SEC. 4. EFFECTIVE DATES.

(a) IN GENERAL.—The amendments made by this Act shall apply to plan amendments taking effect after the date of the enactment of this Act.

(b) SPECIAL RULES.—

(1) IN GENERAL.—The amendments made by this Act shall not apply to any plan amendment for which there was written notice before July 12, 1999, which was reasonably expected to notify substantially all of the plan participants or their representatives.

(2) TRANSITION.—Until such time as the Secretary of the Treasury issues regulations under sections 4980F(e)(3) and (4) of the In-

ternal Revenue Code of 1986 and section 204(h)(3) and (4) of the Employee Retirement Income Security Act of 1974 (as added by the amendments made by this section), a plan shall be treated as meeting the requirements of such sections if it makes a good faith effort to comply with such requirements.

(3) NOTICE AND INFORMATION NOT REQUIRED TO BE FURNISHED BEFORE 120TH DAY AFTER ENACTMENT.—The period for providing any notice or information required by the amendments made by this section shall not end before the date which is 120 days after the date of the enactment of this Act.

THE PENSION REDUCTION DISCLOSURE ACT OF 1999

Present Law.—Under present law, when an employer amends a defined benefit pension plan in a manner which significantly reduces the rate of future benefit accrual, the employer must provide participants with an advance written notice of the amendment. The law does not, however, require employers to disclose the effect the amendment will have on participants.

SUMMARY OF PROVISIONS OF THE PENSION REDUCTION DISCLOSURE ACT

Notice Requirements for Pension Plan Amendments Reducing Future Benefit Accruals.—At least 45 days before the effective date of a pension plan amendment that reduces the rate of future benefit accruals, employees adversely affected by the amendment must receive notice of a reduction, as described below.

Basic Notice.—Pension plans with fewer than 100 participants must provide a basic written notice including: the effective date of the amendment; a statement that the amendment is expected to significantly reduce the rate of future benefit accrual; a description of the classes of applicable individuals to whom the amendment applies; and a description of how the amendment significantly reduces the rate of future benefit accrual.

Enhanced Notice.—Pension plans with 100 or more participants must provide the following information in addition to the basic written notice.

A description of the plan’s benefit formulas before and after the amendments, and an explanation of the effects of the different formulas on participants;

An explanation of the circumstances under which any “wearaway” or other temporary suspension of benefit accruals may occur;

Illustrative examples showing the adverse effects of the plan amendment by comparing expected benefit accruals for various categories of participants (e.g., participants of similar age and years of service) under the old and new versions of the plan.

Alternative methods of compliance with enhanced notice in certain cases. The Secretary of the Treasury may prescribe alternative or simplified methods of compliance with the enhanced notice requirements in situations where there is no fundamental change in the manner in which benefits are determined (e.g., where the benefit formula is reduced from 1.25 percent of compensation to 1.0 percent of compensation). The Secretary may also reduce the advance notice period from 45 days to 15 days for cases in which compliance with the 45-day requirement would be unduly burdensome because the amendment is contingent on a merger, acquisition, disposition, or other similar transaction or because 45 days advance notice is otherwise impracticable.

In the case of plans with 100 or more participants, the plan must provide adversely-

affected participants, within 15 days of request, the specific benefit formulas and actuarial factors used in the preparation of the illustrative examples. The information must be sufficient to confirm the benefit comparisons provided in the illustrative examples and to enable participants to make calculations of their own benefits under the old and new versions of the plan that are similar to the calculations made in the examples.

Individual Benefit Statements.—In the case of plans with 100 or more participants, an adversely-affected participant may request and receive an individual benefit statement providing information which is substantially the same as the information in the illustrative examples described above, but which is based on data specific to the requesting individual. If the individual so requests, the individual statement must reflect one other future date not included in the examples. As with current law regarding accrued benefit calculations, individual statements must be provided within 30 days of request. The earliest required date for providing individual statements shall be 90 days after the amendment effective date.

SANCTIONS FOR NONCOMPLIANCE

Egregious Failure to Supply Notice.—Employers failing to provide most of the required notice information to most affected participants, or intentionally failing to provide notice information to any affected participant, shall provide the greater of the benefits available under the old and new versions of the plan and shall also be subject to an excise tax of \$100 per day for every day of the noncompliance period.

Nonegregious Failure to Supply Notice.—Employers failing to provide the required notice information, but not in the egregious manner described above, shall be subject to an excise tax of \$100 per day for every day of the noncompliance period.

Maximum Excise Tax Where Failure Due to Reasonable Cause.—In a case where the failure was due to reasonable cause and not willful neglect, the excise tax is limited to \$1 million for plans with 100 or more participants and \$500,000 for plans with fewer than 100 participants.

• Mr. JEFFORDS. Mr. President, I am pleased to join Senators MOYNIHAN, LEAHY, ROBB, KERREY, ROCKEFELLER and GRAMS of Minnesota in the introduction of the Pension Reduction Disclosure Act. This bill greatly expands current law and will provide improved disclosure of the impact of the conversion of a traditional defined benefit pension plan to a cash balance or other hybrid pension plan. We believe that current law protections are insufficient to protect the interests of plan participants. The Pension Reduction Disclosure Act is an important first step in improving worker pension protections. I am also pleased that the President supports this bill.

Appropriate disclosure for cash balance pension plans is a serious public policy issue affecting the retirement benefits of millions of Americans. At a minimum, employees should have meaningful notice when their employer plans to reduce pension benefits in the switch from a traditional to a cash balance plan.

This bill does that.

First, employers have not always been candid with employees about

what the changes in pension plans will mean for the employee's retirement. Our bill will require that they spell it out in black and white, and do so in language that anyone who is not an actuary or tax attorney can understand.

Second, plan sponsors will have to provide this information in a timely manner, so that employees can engage their employer and seek changes if they choose to do so. As we have seen at IBM and elsewhere, companies can misjudge the impact of these changes on their workforce.

Third, plan sponsors will be required to provide their employees with specifics about the effect that the change will have on their retirement benefits so that individuals can understand the financial impact that the conversion will have on their pension. Once we pass this bill, my guess is that employers will think long and hard about what changes they want to make to their pension plans.

Long-serving, loyal employees should not wake up to find their pension benefits slashed without even the chance to confront their employer. We can't expect people to save for retirement if the sand is forever shifting under their feet.

This bill addresses but one part of the conversion issue. But I think it deserves widespread bipartisan support. I believe that there are more issues at stake for workers, such as my own concerns regarding the pension benefit "wear away". However, the Pension Reduction Disclosure Act is a good first step we ought to take to address the legitimate concerns that have been raised about these plans.

We don't have a lot of time, but I hope we can send this bill to the President for his signature before we adjourn this fall. •

Mr. LEAHY. Mr. President, I am pleased to join Senator MOYNIHAN and Senator JEFFORDS as a cosponsor of the Pension Reduction Disclosure Act of 1999. I believe this bill is a good first step to providing American workers with the information they deserve to know about changes to their pensions. President Clinton has endorsed our legislation and is ready to sign it into law.

As the controversy surrounding IBM's decision to convert its traditional pension plan to a cash balance plan taught many Vermonters, Congress needs to revise our laws to require greater disclosure of pension changes. When IBM first announced its pension switch, many Vermont IBMers told me that they did not have enough information to judge the new plan's impact on their pensions. They discovered that current Federal law does not even require an employer to explain to its employees how any future pension benefits will be reduced. This is not right.

Unfortunately, Vermont IBMers are not alone. At least 325 companies, with

more than \$330 billion in pension-defined benefit assets, have adopted cash-balance plans in recent years. This phenomenon is the biggest development in the pension world in years. But, as we all know now thanks to the tireless efforts of IBMers in Vermont and elsewhere, there is a dark side to this corporate trend: the fact that many experienced workers face deep cuts in their promised pensions when their company switches to a cash-balance plan.

The Pension Reduction Disclosure Act would require all employers, regardless of the size of their pension plan, to notify their employees of pension plan changes that would reduce the future benefit accrual rate at least 45 days in advance of the change. In addition, this legislation would require employers to explain any differences in future accrual rates between the old and new plan in a clear and meaningful fashion, by providing employees with detailed examples showing the difference between the old and new plans.

This bill complements the Pension Right to Know Act, which Senator MOYNIHAN and I introduced earlier in the year. Our earlier bill would require employers to provide employees with individualized comparisons of future benefits under the old and new plans 15 days prior to the conversion for pension plans covering 1000 or more employees. Our legislation today also complements the Older Workers Pension Protection Act, S. 1600, which Senator HARKIN, Senator JEFFORDS and I introduced last month to prevent the wear away of an employee's promised pension benefits after a cash balance plan conversion.

Now is the time for Congress to act to ensure that all employers fully disclose the negative effects of their pension plan changes. Employees have a right to know how their futures will be affected by a company's decision to change its pension plan.

By Mr. KYL (for himself, Mr. MCCAIN, Mrs. HUTCHISON, Mr. DOMENICI, Mr. BINGAMAN, and Mrs. FEINSTEIN):

S. 1709. A bill to provide Federal reimbursement for indirect costs relating to the incarceration of illegal aliens and for emergency health services furnished to undocumented aliens; to the Committee on the Judiciary.

THE STATE CRIMINAL ALIEN ASSISTANCE PROGRAM II AND LOCAL MEDICAL EMERGENCY REIMBURSEMENT ACT

Mr. KYL. Mr. President, I rise today to introduce the State Criminal Alien Assistance Program II and Local Medical Emergency Reimbursement Act. Senators MCCAIN, HUTCHISON, DOMENICI, BINGAMAN, and FEINSTEIN join me.

Border counties and other jurisdictions throughout the Southwest are incurring overwhelming costs to process and incarcerate illegal immigrants who commit crimes. Hospitals are also

bearing steep costs to treat illegal immigrants for medical emergencies.

Regarding the first issue, it should be pointed out that, when states and localities do not have the resources to deal with criminal illegal immigrants, disasters can happen. Just last week, it was discovered that illegal immigrants who, in some cases, had committed serious crimes in Maricopa County, Arizona—including first degree murder in one of the cases—were permitted to post bond to the county, were then released to the Immigration and Naturalization Service, and were then allowed to return to their home country. Needless to say, those cases did not go to trial. Because the alleged criminal aliens never returned for their court date, justice was not served.

I continue to work toward better cooperation between the INS and local criminal justice systems, to make sure that illegal immigrants who are charged with crimes prosecuted under state law—and murder is prosecuted under state law—are held in Arizona. That means before, during, and after trial. It means, if the person is convicted, serving out his time in Arizona.

I will continue to work toward full funding for the federal program Congress created in 1995 to reimburse states and localities for the costs of incarcerating criminal illegal immigrants, the State Criminal Alien Assistance Program (SCAAP). Incarceration of criminal illegal immigrants costs state and local governments over \$1 billion a year. Last year's Commerce-Justice-State Appropriations bill provided \$585 million for the program, and reimbursed states approximately 39 cents on the dollar for such costs. I will work to increase federal funding for SCAAP, and will work to ensure that the FY 2000 C-J-S funding bill maintains, at the very least, the FY 1999 funding level of \$585 million.

It is my hope that the bill I am introducing today will further enhance the ability of states and localities to prevent the release of criminal illegal immigrants by giving them the resources they need, not only to incarcerate but to process and sentence such individuals. My bill creates SCAAP II and provides an additional authorization of \$200 million per year between 2001 and 2004 to states and localities for such expenditures. When illegal immigrants commit crimes and are then caught, they drain the budgets of a locality's sheriff, justice court, county attorney, clerk of the court, superior and juvenile court, and juvenile detention departments, as well as using up a county's indigent defense budget. And, even though illegal immigration is a federal responsibility, states and local jurisdictions all along the southwestern border have incurred 100 percent of specifically processing-related costs to date. This bill will change that.

Unfortunately, we do not yet know the full financial burden the states and

localities are bearing. I am hopeful that the FY 2000 Commerce-Justice-State Appropriations bill conference report will include funding for a study that will lay out realistic estimates of these costs.

What is known is that such expenditures comprise approximately 39 percent of the aforementioned budgets of just one Arizona county, Santa Cruz, with a population of just 36,000 residents. As a recent report conducted by the University of Arizona detailed, "such illegal entry pressures place inequitable demands on the resources and taxpayers of Santa Cruz County."

Other counties throughout the Southwest are in the same boat. Maricopa County, Arizona, for example, incurs costs of \$9 million to incarcerate illegal criminal immigrants. It is unclear what its costs are to process and sentence such aliens. Cochise County incurs costs of approximately \$406,000 per year to incarcerate criminal illegal immigrants and, therefore, must also incur significant costs to process and sentence these individuals. Providing resources to states and localities with such burdens will help prevent the release of criminals onto our nation's streets, and is clearly the financial responsibility of the federal government.

The second issue addressed by this bill is the burden borne by hospitals in southwestern states. The federal government is obligated to fully reimburse states, localities, and hospitals for the emergency medical treatment of illegal immigrants.

According to a preliminary Congressional Budget Office estimate provided two years ago, the total annual cost to treat illegal immigrants for medical emergencies is roughly \$2.8 billion a year. It is roughly estimated that the federal government reimburses states for approximately half of those costs. That means states must pay the remaining \$1.4 billion. The state of Arizona estimates that it incurs unreimbursed costs of \$20 million annually to treat undocumented immigrants on an emergency basis.

This legislation will provide states, localities, and hospitals an additional \$200 million per year to help absorb the costs of adherence to federal law, under which all individuals, regardless of immigration status or ability to pay, must be provided with medical treatment in a medical emergency. I have heard from individual doctors in Arizona, and hospitals as well, conveying their frustration in the face of these daunting costs.

Mr. President, I hope we can address these very pressing issues in the coming months, and that Members will consider joining my cosponsors and me in support of this bill.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1709

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "State Criminal Alien Assistance Program II and Local Medical Emergency Reimbursement Act".

TITLE I—STATE CRIMINAL ALIEN ASSISTANCE PROGRAM II

SEC. 101. SHORT TITLE.

This Act may be cited as the "State Criminal Alien Assistance Program II Act of 1999".

SEC. 102. FINDINGS AND PURPOSES.

(a) FINDINGS.—Congress makes the following findings:

(1) Federal policies and strategies aimed at curbing illegal immigration and criminal alien activity implemented along our Nation's southwest border influence the number of crossings, especially their location.

(2) States and local governments were reimbursed approximately 60 percent of the costs of the incarceration of criminal aliens in fiscal year 1996 when only 90 jurisdictions applied for such reimbursement. In subsequent years, the number of local jurisdictions receiving reimbursement has increased. For fiscal year 1999, 280 local jurisdictions applied, and reimbursement amounted to only 40 percent of the costs incurred by those jurisdictions.

(3) Certain counties, often with a small taxpayer base, located on or near the border across from sometimes highly populated areas of Mexico, suffer a substantially disproportionate share of the impact of criminal illegal aliens on its law enforcement and criminal justice systems.

(4) A University of Arizona study released in January 1998 reported that at least 2 of the 4 counties located on Arizona's border of Mexico, Santa Cruz, and Cochise Counties, are burdened with this problem—

(A) for example, in 1998, Santa Cruz County had 12.7 percent of Arizona's border population but 50 percent of alien crossings and 32.5 percent of illegal alien apprehensions;

(B) for fiscal year 1998, it is estimated that, of its total criminal justice budget of 5,000,000 (\$5,033,000), Santa Cruz County spent \$1,900,000 (39 percent) to process criminal illegal aliens, of which over half was not reimbursed by Federal monies; and

(C) Santa Cruz County has not obtained relief from this burden, despite repeated appeals to Federal and State officials.

(5) In the State of Texas, the border counties of Cameron, Dimmit, El Paso, Hidalgo, Kinney, Val Verde, and Webb bore the unreimbursed costs of apprehension, prosecution, indigent defense, and other related services for criminal aliens who served more than 142,000 days in county jails.

(6) Throughout Texas nonborder counties bore similar unreimbursed costs for apprehension, prosecution, indigent defense, and other related services for criminal aliens who served more than 1,000,000 days in county jails.

(7) The State of Texas has incurred substantial additional unreimbursed costs for State law enforcement efforts made necessary by the presence of criminal illegal aliens.

(8) The Federal Government should reimburse States and units of local government for the related costs incurred by the State for the imprisonment of any illegal alien.

(b) PURPOSE.—The purpose of this title is—

(1) to assist States and local communities by providing financial assistance for expenditures for illegal juvenile aliens, and for related costs to States and units of local government that suffer a substantially disproportionate share of the impact of criminal illegal aliens on their law enforcement and criminal justice systems; and

(2) to ensure equitable treatment for those States and local governments that are affected by Federal policies and strategies aimed at curbing illegal immigration and criminal alien activity implemented on the southwest border.

SEC. 103. REIMBURSEMENT OF STATES FOR INDIRECT COSTS RELATING TO THE INCARCERATION OF ILLEGAL ALIENS.

Section 501 of the Immigration Reform and Control Act of 1986 (8 U.S.C. 1365) is amended—

(1) in subsection (a), by striking “for” and all that follows through “State” and inserting “for—

“(1) the costs incurred by the State for the imprisonment of any illegal alien or Cuban national who is convicted of a felony by such State; and

“(2) the indirect costs related to the imprisonment described in paragraph (1).”;

(2) by striking subsection (c) and inserting the following:

“(c) INDIRECT COSTS DEFINED.—In subsection (a), the term ‘indirect costs’ includes—

“(1) court costs, county attorney costs, and criminal proceedings expenditures that do not involve going to trial;

“(2) indigent defense; and

“(3) unsupervised probation costs.”; and

(3) by amending subsection (d) to read as follows:

“(d) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated \$200,000,000 to carry out subsection (a)(2) for each of the fiscal years 2001 through 2004.”.

SEC. 104. REIMBURSEMENT OF STATES FOR COSTS OF INCARCERATING JUVENILE ALIENS.

(a) IN GENERAL.—Section 501 of the Immigration Reform and Control Act of 1986 (8 U.S.C. 1365), as amended by section 103 of this Act, is further amended—

(1) in subsection (a)(1), by inserting “or illegal juvenile alien who has been adjudicated delinquent or committed to a juvenile correctional facility by such State or locality” before the semicolon;

(2) in subsection (b), by inserting “(including any juvenile alien who has been adjudicated delinquent or has been committed to a correctional facility)” before “who is in the United States unlawfully”; and

(3) by adding at the end the following:

“(f) JUVENILE ALIEN DEFINED.—In this section, the term ‘juvenile alien’ means an alien (as defined in section 101(a)(3) of the Immigration and Nationality Act) who has been adjudicated delinquent or committed to a correctional facility by a State or locality as a juvenile offender.”.

(b) ANNUAL REPORT.—Section 332 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (8 U.S.C. 1366) is amended—

(1) by striking “and” at the end of paragraph (3);

(2) by striking the period at the end of paragraph (4) and inserting “; and”; and

(3) by adding at the end the following:

“(5) the number of illegal juvenile aliens (as defined in section 501(f) of the Immigration Reform and Control Act) that are committed to State or local juvenile correc-

tional facilities, including the type of offense committed by each juvenile.”.

(c) CONFORMING AMENDMENT.—Section 241(i)(3)(B) of the Immigration and Nationality Act (8 U.S.C. 1231(i)(3)(B)) is amended—

(1) by striking “or” at the end of clause (ii);

(2) by striking the period at the end of clause (iii) and inserting “; or”; and

(3) by adding at the end the following:

“(iv) is a juvenile alien with respect to whom section 501 of the Immigration Reform and Control Act of 1986 applies.”.

SEC. 105. REIMBURSEMENT OF STATES BORDERING MEXICO OR CANADA.

Section 501 of the Immigration Reform and Control Act of 1986 (8 U.S.C. 1365), as amended by sections 103 and 104 of this Act, is further amended by adding at the end the following new subsection:

“(g) MANNER OF ALLOTMENT OF REIMBURSEMENTS.—Reimbursements under this section shall be allotted in a manner that takes into account special consideration for any State that—

“(1) shares a border with Mexico or Canada; or

“(2) includes within the State an area in which a large number of undocumented aliens reside relative to the general population of the area.”.

TITLE II—REIMBURSEMENT OF STATES AND LOCALITIES FOR EMERGENCY HEALTH SERVICES TO UNDOCUMENTED ALIENS.

SEC. 201. AUTHORIZATION OF ADDITIONAL FEDERAL REIMBURSEMENT OF EMERGENCY HEALTH SERVICES FURNISHED TO UNDOCUMENTED ALIENS.

(a) TOTAL AMOUNT AVAILABLE FOR ALLOTMENT.—To the extent of available appropriations under subsection (e), there are available for allotments under this section for each of fiscal years 2002 through 2005, \$200,000,000 for payments to certain States under this section.

(b) STATE ALLOTMENT AMOUNT.—

(1) IN GENERAL.—The Secretary shall compute an allotment for each fiscal year beginning with fiscal year 2001 and ending with fiscal year 2004 for each of the 17 States with the highest number of undocumented aliens. The amount of such allotment for each such State for a fiscal year shall bear the same ratio to the total amount available for allotments under subsection (a) for the fiscal year as the ratio of the number of undocumented aliens in the State in the fiscal year bears to the total of such numbers for all such States for such fiscal year. The amount of allotment to a State provided under this paragraph for a fiscal year that is not paid out under subsection (c) shall be available for payment during the subsequent fiscal year.

(2) DETERMINATION.—For purposes of paragraph (1), the number of undocumented aliens in a State under this section shall be determined based on estimates of the resident illegal alien population residing in each State prepared by the Statistics Division of the Immigration and Naturalization Service as of October 1992 (or as of such later date if such date is at least 1 year before the beginning of the fiscal year involved).

(c) USE OF FUNDS.—

(1) IN GENERAL.—From the allotments made under subsection (b) for a fiscal year, the Secretary shall pay to each State amounts described in a State plan, submitted to the Secretary, under which the amounts so allotted will be paid to local governments, hospitals, and related providers of emergency health services to undocumented aliens in a manner that—

(A) takes into account—

(i) each eligible local government’s, hospital’s or related provider’s payments under the State plan approved under title XIX of the Social Security Act for emergency medical services described in section 1903(v)(2)(A) of such Act (42 U.S.C. 1396b(v)(2)(A)) for such fiscal year; or

(ii) an appropriate alternative proxy for measuring the volume of emergency health services provided to undocumented aliens by eligible local governments, hospitals, and related providers for such fiscal year; and

(B) provides special consideration for local governments, hospitals, and related providers located in—

(i) a county that shares a border with Mexico or Canada; or

(ii) an area in which a large number of undocumented aliens reside relative to the general population of the area.

(2) SPECIAL RULES.—For purposes of this subsection:

(A) A provider shall be considered to be “related” to a hospital to the extent that the provider furnishes emergency health services to an individual for whom the hospital also furnishes emergency health services.

(B) Amounts paid under this subsection shall not duplicate payments made under title XIX of the Social Security Act for the provision of emergency medical services described in section 1903(v)(2)(A) of such Act (42 U.S.C. 1396b(v)(2)(A)).

(d) DEFINITIONS.—In this section:

(1) HOSPITAL.—The term “hospital” has the meaning given such term in section 1861(e) of the Social Security Act (42 U.S.C. 1395x(e)).

(2) PROVIDER.—The term “provider” includes a physician, another health care professional, and an entity that furnishes emergency ambulance services.

(3) SECRETARY.—The term “Secretary” means the Secretary of Health and Human Services.

(4) STATE.—The term “State” means the 50 States and the District of Columbia.

(e) AUTHORIZATION OF APPROPRIATIONS.—There is authorized to be appropriated to carry out this section \$200,000,000 for each of fiscal years 2001 through 2005.

Mr. MCCAIN. Mr. President, I rise today in support of legislation Senator KYL and I are introducing with a number of our border-state colleagues to provide appropriate Federal reimbursement to states and localities whose budgets are disproportionately affected by the costs associated with illegal immigration. The premise of our bill, and of current law governing this type of Federal reimbursement to the states, is that controlling illegal immigration is principally the responsibility of the Federal government, not the states.

Our legislation would expand the amount and scope of Federal funding to the states for incarceration and medical costs that arise from the detention or treatment of illegal immigrants. Such funding currently flows to all 50 states, the District of Columbia, and two U.S. territories. Although our bill gives special consideration to border States and States with unusually high concentrations of illegal aliens in residence, it would benefit communities across the Nation. It deserves the Senate’s prompt consideration and approval.

Many of my colleagues are probably not aware that the Federal government, under the existing State Criminal Alien Assistance Program (SCAAP), reimbursed states and counties burdened by illegal immigration for less than 40 percent of eligible alien incarceration costs in Fiscal Year 1998. Border counties estimate that more than 25 percent of their criminal justice budgets are spent processing criminal aliens. In my State of Arizona, Santa Cruz County last year spent 39 percent of its total criminal justice budget to process criminal illegal aliens, of which over half was not reimbursed by the Federal government. In its last budget cycle, New Mexico's tiny Luna County spent \$375,000 on immigrant detention costs but received only \$32,000 from the Federal government to offset jail expenses. Overall, SCAAP reimbursed states and counties along the border for only 33.7 percent of the cost of incarcerating illegal aliens in FY 1997 and 39.9 percent in FY 1998.

The State of California spent nearly \$600 million last year to keep criminal aliens behind bars, but was reimbursed for only \$183 million of those expenses. In Texas, prosecution of drug and immigration crime, principally in the form of illegal entry into the United States, accounted for an astonishing 70 percent of criminal filings during fiscal 1998. That figure represents a one-year increase of 58 percent in the number of immigration cases brought before the courts, an increase that was not matched by Federal reimbursement for associated legal expenses and incarceration costs to the state and its counties.

Earlier this year, the House voted to fund SCAAP at \$585 million for FY 2000. This level is insufficient, but would at least roughly maintain existing levels of Federal support to states and localities for alien incarceration costs. Astonishingly, the Senate, in its version of the fiscal year 2000 Commerce, Justice, State, and the Judiciary Appropriations bill, proposed to slash SCAAP funding by 83 percent, to only \$100 million, for reasons that escape me. In the words of the U.S./Mexico Border Counties Coalition, "Given this program's history of not meeting its obligations to state and local governments even at higher levels of funding, this latest action will in essence leave state and local taxpayers to foot the Federal government's bill for the incarceration of criminal undocumented immigrants."

A June 21, 1999, letter from the Governors of Arizona, California, New York, New Jersey, and Illinois to members of the United States Senate makes the same point: "Control of the nation's borders is under the exclusive jurisdiction of the Federal government, yet State and local governments bear the brunt of the costs when the Federal

government fails to meet its responsibility to prevent illegal immigration. By cutting funding for SCAAP by 83 percent, the Senate is abandoning its responsibility and forcing the states to pay for a Federally mandated service." It is my hope that Congress will restore SCAAP funding to at least \$500 million, as the President requested for fiscal 2000 to help meet the needs of local communities across the country.

The legislation Senator KYL and I are introducing today would actually expand the State Criminal Alien Assistance Program by authorizing funding for state and local needs that currently go unmet. Although states receive Federal reimbursement for part of the cost of incarcerating illegal adult aliens, the Federal government does not reimburse States or units of local government for expenditures for illegal juvenile aliens. Nor does it reimburse states and localities for costs associated with processing criminal illegal aliens, including court costs, county attorney costs, costs for criminal proceedings that do not involve going to trial, indigent defense costs, and unsupervised probation costs. Our legislation would authorize the Federal government to reimburse such costs to States and localities that suffer a substantially disproportionate share of the impact of criminal illegal aliens on their law enforcement and criminal justice systems. It would also authorize additional Federal reimbursement for emergency health services furnished by States and localities to undocumented aliens.

Reimbursement to States and localities for criminal alien incarceration is woefully underfunded according to the existing limited criteria for SCAAP, which do not take into account the full detention and processing costs for illegal aliens. Nor does the existing SCAAP provide necessary support to local communities for the cost of emergency care for illegal immigrants, a growing problem in the Southwest, and one exacerbated by the increasingly desperate measures taken by undocumented aliens to cross our border with Mexico. Our legislation thus authorizes the expansion of SCAAP to cover costs wrongly borne by local communities under current law—costs which are a Federal responsibility and should not be shirked by those in Washington who do not live with the problem of illegal immigration in their midst.

As my colleagues know, illegal immigrants who successfully transit our Southwest border rapidly disperse throughout the United States. That SCAAP funds flow to all 50 states reflects the pressures such aliens place on public services around the country. I hope the Senate will act expeditiously on this important legislation to alleviate those pressures by compensating state and local units for the costs they incur as unwitting hosts to

undocumented aliens, even as we continue to fund border enforcement measures to reduce the flow of illegal immigrants into this country.

Mr. BINGAMAN. Mr. President, I rise to join with my colleagues from Arizona, California, and Texas in introducing the "State Criminal Alien Assistance Program II and Local Medical Emergency Reimbursement Act of 1999."

The purpose of the bill is to expand to scope of the current SCAAP law to allow counties and states to be reimbursed not only for the costs of incarcerating illegal aliens, but also for the costs of prosecuting them, defending them and detaining them. Currently, SCAAP only pays for the costs of incarcerating illegal aliens convicted of a felony in the United States. This means that counties and states do not get reimbursed for the indirect and direct costs leading to such a conviction. Because many illegal aliens arrested for drug smuggling or alien smuggling by federal agents are prosecuted by the county prosecutors, this has put an enormous strain on the county's prosecution budgets and has burdened the already struggling indigent defense programs. With the expansion of SCAAP, the counties will finally get some relief.

Another positive change to the SCAAP law is the addition of juvenile incarceration as a reimbursable expense. Many drug traffickers are using teenagers to transport drugs across the border, knowing that we do not currently have a good system for dealing with criminal illegal juvenile aliens. Because these teens' parents are not living in the United States, the county jails are required to detain the teens pending adjudication. The other option is to let the teens go. Neither option is good from a law enforcement perspective, but the cost of detaining a juvenile places an enormous burden on the counties' juvenile detention facilities. I am pleased that this bill considered the counties' concerns and included the costs of detaining juveniles as a reimbursable expense.

In 1994 I supported the original SCAAP bill. Between 1996 and 1999, the federal government has reimbursed the State of New Mexico \$4.5 million for costs incurred in incarcerating criminal illegal aliens under this program. New Mexico counties have been reimbursed more than \$1.4 million for similar costs. However, this \$6 million reimbursement represents but a small fraction of the actual costs expended by New Mexico jails and prisons. This bill seeks to increase the amount available for reimbursement by raising the amount authorized to \$200 million between 2002 and 2005.

The second part of this bill addresses another problem facing the border states. Because many towns near the US-Mexico border are a mere stones

throw away from much larger Mexican towns and cities, many Mexican nationals often cross the border illegally in search of emergency medical services due to the lack of adequate facilities in Mexico. This bill will reimburse the health care providers required to provide emergency medical services to illegal aliens.

The border counties in New Mexico have repeatedly expressed their concern about the lack of federal assistance for emergency medical services provided to undocumented immigrants. Yet, under current law, New Mexico border communities are not eligible to be reimbursed for providing such emergency medical services. This has placed a significant financial burden on the public and private hospitals who are just trying to do what they think is right—provide emergency treatment to those in need. This lack of federal assistance has been very detrimental to New Mexico because the number of undocumented immigrants seeking medical attention in New Mexico is very high compared with the population of the New Mexico border community.

Between January 1, 1999 and August 31, 1999, Mimbres Memorial Hospital in Deming, New Mexico reported that 22 percent of its patients that were unable to pay for their medical care were residents of Mexico. These individuals accounted for \$379,311 in charges that had to be absorbed by this hospital. In a town of roughly 10,000 people, this is a sizeable amount for a local hospital to write-off as uncollectible.

With the passage of this bill, New Mexico will be eligible to participate in this federal reimbursement program. Because the authorized amount for this program will be increased to \$200 million between 2002 and 2005, this change will not affect the reimbursements to other states. This increase in funding is sorely needed to adequately address the financial burdens that illegal immigration imposes on the border communities.

I commend my fellow members of the Senate Southwest Border Caucus for working together on a bill that will make these necessary changes to the SCAAP program and address the financial hardship that illegal immigration imposes on our border communities.

I thank Senator KYL for introducing this bill and I encourage the Senate to take up this bill and pass this worthwhile legislation.

• Mrs. FEINSTEIN. Mr. President I am pleased to join my colleague Senator KYL in introducing the “State Criminal Alien Assistance Program II and Local Medical Emergency Reimbursement Act.”

The control of illegal immigration is a Federal responsibility. However, more and more, this burden is shifting to the states. The “State Criminal Alien Assistance Program II and Local Medical Emergency Reimbursement

Act” (SCAAP II), properly shifts the fiscal burden of illegal immigration into the hands of the Federal Government. This bill builds upon the existing Federal obligations under the “State Criminal Alien Assistance Program” (SCAAP I) by providing \$200 million for each of the fiscal years 2002 through 2005 to help border communities defray the indirect costs of illegal immigration, and an additional \$200 million to help state and local governments cope with the cost of providing emergency medical care to illegal immigrants.

The issue of illegal immigration, is one of national consequence that requires a Federal response. Unfortunately, Federal reimbursements have consistently failed to cover the actual costs borne by States and local communities confronting the effects of illegal immigration. For those communities that continue to shoulder this burden, the control of illegal immigration has become an unfunded mandate.

Mr. President, while I consider illegal immigration an issue that pervades communities across the nation, I would like to share with my colleagues how this issue has affected my home State of California. As you might imagine, the border counties in California are among the hardest hit in terms of dollars spent on incarceration, court costs, and emergency medical care for those who have entered the U.S. illegally.

San Diego County, for example, spent an estimated \$10.1 million in 1998 to cover the costs of illegal alien incarceration and spends an estimated \$50 million annually to provide emergency medical care for illegal immigrants. Imperial County estimates that it spent more than \$4 million last year in detention costs and another \$1.36 million in emergency medical expenses.

I am greatly concerned about the disproportionate burden these costs impose on the criminal justice system, hospitals and residents of San Diego and Imperial Counties, especially given the counties’ limited tax base and fiscal resources. Given what I have witnessed in my own state, it is not hard for me to understand the frustration and concern of communities in a growing number of other states. Similar burdens have fallen on border communities in states like Arizona, New Mexico, and Texas. Each year, the costs borne by states to respond to illegal immigration continue to soar, while Federal involvement remains minimal at best.

Unfortunately, we can only expect these costs for border states to swell over the next few years as border enforcement initiatives force illegal migration to shift further eastward from San Diego County to neighboring southern States and counties as well as to the more porous northern state borders. In launching Operation Gatekeeper, for example, the INS has

achieved considerable success in deterring illegal border crossings along the San Diego border.

At the same time, Gatekeeper has had the effect of shifting a large volume of migrant crossings to the more rugged East San Diego County mountain area and the desert region of Imperial County where there have been numerous instances of illegal immigrants in need of emergency care. One county hospital in El Centro, for example, reports that the Border Patrol has dropped off countless numbers of undocumented aliens found in the desert suffering from hypothermia or dehydration, or from broken limbs and fractured skulls as result of failed attempts at scaling the fence along the San Diego border.

The more “fortunate” border crossers are being detained at state and county jails. Although states receive Federal reimbursement for some of the direct costs of incarcerating adult illegal immigrants, the Federal Government does not reimburse states and localities for the indirect costs relating to the incarceration or the control of illegal aliens, including: court costs, county attorney costs, indigent defense, criminal juvenile detention, and unsupervised probation costs. Nor does it compensate state and local hospitals for the emergency medical care provided to illegal immigrants who are not in Federal custody.

Mr. President, I join my colleagues in introducing the SCAAP II bill in hopes that it will alleviate some of the fiscal strains illegal immigration has imposed on border states and communities. I look forward to working with my colleagues to move it through the Senate.●

ADDITIONAL COSPONSORS

S. 59

At the request of Mr. THOMPSON, the name of the Senator from New Hampshire (Mr. GREGG) was added as a cosponsor of S. 59, a bill to provide Government-wide accounting of regulatory costs and benefits, and for other purposes.

S. 80

At the request of Ms. SNOWE, the name of the Senator from Georgia (Mr. COVERDELL) was added as a cosponsor of S. 80, a bill to establish the position of Assistant United States Trade Representative for Small Business, and for other purposes.

S. 472

At the request of Mr. GRASSLEY, the name of the Senator from North Carolina (Mr. EDWARDS) was added as a cosponsor of S. 472, a bill to amend title XVIII of the Social Security Act to provide certain medicare beneficiaries with an exemption to the financial limitations imposed on physical, speech-language pathology, and occupational

therapy services under part B of the medicare program, and for other purposes.

S. 484

At the request of Mr. CAMPBELL, the name of the Senator from Alaska (Mr. MURKOWSKI) was added as a cosponsor of S. 484, a bill to provide for the granting of refugee status in the United States to nationals of certain foreign countries in which American Vietnam War POW/MIAs or American Korean War POW/MIAs may be present, if those nationals assist in the return to the United States of those POW/MIAs alive.

S. 659

At the request of Mr. MOYNIHAN, the name of the Senator from Maryland (Mr. SARBANES) was added as a cosponsor of S. 659, a bill to amend the Internal Revenue Code of 1986 to require pension plans to provide adequate notice to individuals whose future benefit accruals are being significantly reduced, and for other purposes.

S. 792

At the request of Mr. MOYNIHAN, the name of the Senator from Michigan (Mr. LEVIN) was added as a cosponsor of S. 792, a bill to amend title IV of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 to provide States with the option to allow legal immigrant pregnant women, children, and blind or disabled medically needy individuals to be eligible for medical assistance under the medicaid program, and for other purposes.

S. 914

At the request of Mr. SMITH, the name of the Senator from Washington (Mr. GORTON) was added as a cosponsor of S. 914, a bill to amend the Federal Water Pollution Control Act to require that discharges from combined storm and sanitary sewers conform to the Combined Sewer Overflow Control Policy of the Environmental Protection Agency, and for other purposes.

S. 1017

At the request of Mr. MACK, the name of the Senator from Mississippi (Mr. COCHRAN) was added as a cosponsor of S. 1017, A bill to amend the Internal Revenue Code of 1986 to increase the State ceiling on the low-income housing credit.

S. 1029

At the request of Mr. COCHRAN, the name of the Senator from Maryland (Ms. MIKULSKI) was added as a cosponsor of S. 1029, a bill to amend title III of the Elementary and Secondary Education Act of 1965 to provide for digital education partnerships.

S. 1044

At the request of Mr. KENNEDY, the names of the Senator from Nevada (Mr. REID) and the Senator from Illinois (Mr. DURBIN) were added as cosponsors of S. 1044, a bill to require coverage for colorectal cancer screenings.

S. 1053

At the request of Mr. BOND, the name of the Senator from Alaska (Mr. MURKOWSKI) was added as a cosponsor of S. 1053, a bill to amend the Clean Air Act to incorporate certain provisions of the transportation conformity regulations, as in effect on March 1, 1999.

S. 1091

At the request of Mr. DEWINE, the name of the Senator from Kentucky (Mr. MCCONNELL) was added as a cosponsor of S. 1091, a bill to amend the Public Health Service Act to provide for the establishment of a pediatric research initiative.

S. 1144

At the request of Mr. VOINOVICH, the name of the Senator from Delaware (Mr. BIDEN) was added as a cosponsor of S. 1144, a bill to provide increased flexibility in use of highway funding, and for other purposes.

S. 1187

At the request of Mr. DORGAN, the names of the Senator from Louisiana (Ms. LANDRIEU), the Senator from Louisiana (Mr. BREAUX), the Senator from South Dakota (Mr. DASCHLE), and the Senator from New Mexico (Mr. BINGAMAN) were added as cosponsors of S. 1187, a bill to require the Secretary of the Treasury to mint coins in commemoration of the bicentennial of the Lewis and Clark Expedition, and for other purposes.

S. 1263

At the request of Mr. JEFFORDS, the name of the Senator from Wyoming (Mr. THOMAS) was added as a cosponsor of S. 1263, a bill to amend the Balanced Budget Act of 1997 to limit the reductions in medicare payments under the prospective payment system for hospital outpatient department services.

S. 1277

At the request of Mr. GRASSLEY, the names of the Senator from New Jersey (Mr. LAUTENBERG) and the Senator from North Carolina (Mr. EDWARDS) were added as cosponsors of S. 1277, a bill to amend title XIX of the Social Security Act to establish a new prospective payment system for Federally-qualified health centers and rural health clinics.

S. 1384

At the request of Mr. ABRAHAM, the name of the Senator from Illinois (Mr. DURBIN) was added as a cosponsor of S. 1384, a bill to amend the Public Health Service Act to provide for a national folic acid education program to prevent birth defects, and for other purposes.

S. 1419

At the request of Mr. MCCAIN, the names of the Senator from Vermont (Mr. JEFFORDS) and the Senator from Nebraska (Mr. HAGEL) were added as cosponsors of S. 1419, a bill to amend title 36, United States Code, to designate May as "National Military Appreciation Month."

S. 1485

At the request of Mr. NICKLES, the names of the Senator from Maryland (Mr. SARBANES) and the Senator from Illinois (Mr. DURBIN) were added as cosponsors of S. 1485, a bill to amend the Immigration and Nationality Act to confer United States citizenship automatically and retroactively on certain foreign-born children adopted by citizens of the United States.

S. 1500

At the request of Mr. HATCH, the names of the Senator from North Carolina (Mr. EDWARDS), the Senator from Virginia (Mr. WARNER), and the Senator from Arkansas (Mr. HUTCHINSON) were added as cosponsors of S. 1500, a bill to amend title XVIII of the Social Security Act to provide for an additional payment for services provided to certain high-cost individuals under the prospective payment system for skilled nursing facility services, and for other purposes.

S. 1536

At the request of Mr. DEWINE, the name of the Senator from Idaho (Mr. CRAIG) was added as a cosponsor of S. 1536, a bill to amend the Older Americans Act of 1965 to extend authorizations of appropriations for programs under the Act, to modernize programs and services for older individuals, and for other purposes.

S. 1547

At the request of Mr. BURNS, the name of the Senator from Minnesota (Mr. GRAMS) was added as a cosponsor of S. 1547, a bill to amend the Communications Act of 1934 to require the Federal Communications Commission to preserve low-power television stations that provide community broadcasting, and for other purposes.

S. 1555

At the request of Mr. KENNEDY, the name of the Senator from Nevada (Mr. REID) was added as a cosponsor of S. 1555, a bill to provide sufficient funds for the research necessary to enable an effective public health approach to the problems of youth suicide and violence, and to develop ways to intervene early and effectively with children and adolescents who suffer depression or other mental illness, so as to avoid the tragedy of suicide, violence, and longterm illness and disability.

S. 1618

At the request of Mr. GRAHAM, the names of the Senator from Virginia (Mr. ROBB) and the Senator from New York (Mr. MOYNIHAN) were added as cosponsors of S. 1618, a bill to promote primary and secondary health promotion and disease prevention services and activities among the elderly, to amend title XVIII of the Social Security Act to add preventive benefits, and for other purposes.

S. 1633

At the request of Mr. MCCAIN, the names of the Senator from Alaska (Mr.

MURKOWSKI) and the Senator from California (Mrs. FEINSTEIN) were added as cosponsors of S. 1633, a bill to recognize National Medal of Honor sites in California, Indiana, and South Carolina.

S. 1633

At the request of Mr. GRAMS, his name was added as a cosponsor of S. 1638, a bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to extend the retroactive eligibility dates for financial assistance for higher education for spouses and dependent children of Federal, State, and local law enforcement officers who are killed in the line of duty.

S. 1678

At the request of Mr. DASCHLE, the names of the Senator from South Carolina (Mr. HOLLINGS) and the Senator from North Carolina (Mr. EDWARDS) were added as cosponsors of S. 1678, a bill to amend title XVIII of the Social Security Act to modify the provisions of the Balanced Budget Act of 1997.

S. 1701

At the request of Mr. SESSIONS, the name of the Senator from Florida (Mr. MACK) was added as a cosponsor of S. 1701, a bill to reform civil asset forfeiture, and for other purposes.

SENATE RESOLUTION 118

At the request of Mr. REID, the names of the Senator from Wyoming (Mr. ENZI) and the Senator from Montana (Mr. BURNS) were added as cosponsors of Senate Resolution 118, a resolution designating December 12, 1999, as "National Children's Memorial Day."

SENATE RESOLUTION 190

At the request of Mr. CAMPBELL, the names of the Senator from Nevada (Mr. REID) and the Senator from Oklahoma (Mr. INHOFE) were added as cosponsors of Senate Resolution 190, a resolution designating the week of October 10, 1999, through October 16, 1999, as National Cystic Fibrosis Awareness Week.

AMENDMENT NO. 1825

At the request of Mr. SESSIONS his name was added as a cosponsor of amendment No. 1825 proposed to S. 1650, an original bill making appropriations for the Departments of Labor, Health and Human Services, and Education, and related agencies for the fiscal year ending September 30, 2000, and for other purposes.

AMENDMENT NO. 1842

At the request of Mr. DOMENICI his name was added as a cosponsor of amendment No. 1842 proposed to S. 1650, an original bill making appropriations for the Departments of Labor, Health and Human Services, and Education, and related agencies for the fiscal year ending September 30, 2000, and for other purposes.

AMENDMENT NO. 1845

At the request of Mr. HARKIN the names of the Senator from Massachusetts (Mr. KENNEDY), the Senator from Nevada (Mr. REID), the Senator from

Washington (Mrs. MURRAY), and the Senator from South Dakota (Mr. JOHNSON) were added as cosponsors of amendment No. 1845 proposed to S. 1650, an original bill making appropriations for the Departments of Labor, Health and Human Services, and Education, and related agencies for the fiscal year ending September 30, 2000, and for other purposes.

AMENDMENT NO. 1861

At the request of Ms. LANDRIEU her name was added as a cosponsor of amendment No. 1861 proposed to S. 1650, an original bill making appropriations for the Departments of Labor, Health and Human Services, and Education, and related agencies for the fiscal year ending September 30, 2000, and for other purposes.

SENATE RESOLUTION 198—EXPRESSING SYMPATHY FOR THOSE KILLED AND INJURED IN THE RECENT EARTHQUAKES IN TURKEY AND GREECE AND COMMENDING TURKEY AND GREECE FOR THEIR RECENT EFFORTS IN OPENING A NATIONAL DIALOGUE AND TAKING STEPS TO FURTHER BILATERAL RELATIONS

Ms. SNOWE (for herself, Mr. HELMS, Mr. SARBANES, Mr. BIDEN, and Mr. BYRD) submitted the following resolution; which was considered and agreed to:

S. RES. 198

Whereas in the wake of the tragic earthquakes which struck Turkey on August 17, 1999, leaving up to 16,000 dead, 24,000 injured, and 100,000 homeless, and Greece on September 7, 1999, killing 143, injuring 1,600, and leaving 16,000 homeless, an improvement of relations between Turkey and Greece has occurred;

Whereas within hours of the earthquake hitting Turkey, Greece sent rescue teams, doctors, firemen, and emergency supplies to Turkey;

Whereas immediately after the earthquake struck Greece, Turkey, already dealing with its own devastation, sent rescue personnel to Greece;

Whereas in July, senior foreign ministry officials of Greece and Turkey held talks, the first talks at this level since 1994, to discuss bilateral cooperation in the fields of tourism, the environment, trade, and the economy as well as cooperation in combating organized crime, illegal immigration, drug-trafficking, and terrorism;

Whereas in September 1999, a second round of talks between senior foreign ministry officials of Greece and Turkey were held as a follow-up to the July meeting, and a third round has been planned for October 1999;

Whereas this spirit of cooperation has led to a warming of relations and confidence building measures, including—

(1) a naval vessel of Greece calling at a port of Turkey for the first time in more than a century;

(2) Greek and Turkish news commentators agreeing to publish their columns in each other's newspapers;

(3) Greece indicating that it is prepared to accept the candidacy of Turkey for membership in the European Union as long as Tur-

key meets all criteria for membership in the Union; and

(4) Turkey and Greece praising the other for earthquake assistance; and

Whereas the desire to further cultivate relations between Turkey and Greece has created an atmosphere of hope: Now, therefore, be it

Resolved, That the Senate—

(1) expresses sympathy for those killed and injured in the recent earthquakes in Greece and Turkey;

(2) commends, encourages, and supports recent efforts by Greece and Turkey to improve bilateral relations between those countries; and

(3) reiterates the importance of promoting positive bilateral relations between Greece and Turkey, which are of paramount interest to the United States.

SENATE RESOLUTION 199—DESIGNATING THE WEEK OF OCTOBER 24, 1999, THROUGH OCTOBER 30, 1999, AND THE WEEK OF OCTOBER 22, 2000, THROUGH OCTOBER 28, 2000, AS "NATIONAL CHILDHOOD LEAD POISONING PREVENTION WEEK"

Mr. REED (for himself, Ms. COLLINS, Mr. TORRICELLI, Mr. REID, Mr. LEVIN, Mr. WELLSTONE, Mr. LIEBERMAN, Mr. KERRY, Mr. KENNEDY, Mr. SARBANES, Mr. DORGAN, Mr. SCHUMER, Mr. AKAKA, Mr. INOUE, Mr. CHAFEE, Mrs. BOXER, Ms. MIKULSKI, Mr. DODD, Mr. WYDEN, Mr. CONRAD, Mr. GRAHAM, Mr. DURBIN, Mr. DEWINE, Ms. LANDRIEU, Mr. JOHNSON, Mr. JEFFORDS, Mr. SMITH of Oregon, Mr. ROBB, and Mr. FRIST) submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 199

Whereas lead poisoning is a leading environmental health hazard to children in the United States;

Whereas according to the United States Center for Disease Control and Prevention, 890,000 preschool children in the United States have harmful levels of lead in their blood;

Whereas lead poisoning may cause serious, long-term harm to children, including reduced intelligence and attention span, behavior problems, learning disabilities, and impaired growth;

Whereas children from low-income families are 8 times more likely to be poisoned by lead than those from high income families;

Whereas children may become poisoned by lead in water, soil, or consumable products;

Whereas most children are poisoned in their homes through exposure to lead particles when lead-based paint deteriorates or is disturbed during home renovation and repainting; and

Whereas lead poisoning crosses all barriers of race, income, and geography: Now, therefore, be it

Resolved, That the Senate—

(1) designates the week of October 24, 1999, through October 30, 1999, and the week of October 22, 2000, through October 28, 2000, as "National Childhood Lead Poisoning Prevention Week"; and

(2) requests that the President issue a proclamation calling upon the people of the United States to observe such day with appropriate programs and activities.

Mr. REED. Mr. President, I rise today to submit a resolution which would designate October 24-30, as "National Childhood Lead Poisoning Prevention Week." Despite steady progress over the past two decades to regulate inappropriate uses of lead, the tragedy of childhood lead poisoning remains very real for nearly one million preschoolers in the U.S.

Most children are poisoned in their own homes by deteriorating lead-based paint and lead-contaminated dust. While lead poisoning crosses all barriers of race, income, and geography, most of the burden of this disease falls disproportionately on low-income families or families of color who generally live in older, poorer quality housing. In the United States, children from low-income families are eight times more likely to be poisoned than those from high income families. African American children are five times more likely to be poisoned than white children. Nationwide, almost 22 percent of African American children living in older housing are lead poisoned, a staggering statistic, particularly given the overall decline in blood lead levels in the last decade.

Unfortunately, many communities have not experienced a major decline in blood lead levels. In fact, in some communities, more than half of the preschool children are lead poisoned. Baltimore, Providence, Philadelphia, Milwaukee, St. Louis, and Chicago all have lead poisoning rates that are three to nine times the national average.

Even low levels of exposure to lead impair a child's ability to learn and thrive, causing reductions in IQ and attention span, reading and other learning disabilities, hyperactivity, aggressive behavior, hearing loss, and coordination problems. These effects are persistent and interfere with their success in school and later in life. Research shows that children with elevated blood lead levels are seven times more likely to drop out of high school and six times more likely to have reading disabilities. State health officials believe that the need for certain education services is 40 percent higher among children with significant lead exposure.

Mr. President, lead poisoning is entirely preventable, making its prevalence among children all the more frustrating. In addition, lead poisoning has many dimensions, and therefore we have to tackle it from all directions. Specifically, our efforts should include screening and treating poisoned children, identifying and removing the source of their exposure, educating parents, landlords and entire communities about the dangers of lead, and ensuring that resources to address the problem are available and accessible to all who need them.

I have been working on a number of initiatives in the Senate to address

this problem including urging Senate leaders to provide for more funding for lead abatement. Last year, I sponsored an amendment that resulted in an increase of \$20 million in funding to eliminate lead hazards in the homes of young children. This year, the Senate has supported a similar figure.

Also, I have become deeply concerned, along with my colleague Senator TORRICELLI, about recent reports that children at risk for lead poisoning are not adequately screened or treated for the disease, even if they are enrolled in Medicaid. Although children enrolled in Medicaid are three times more likely than other children to have high amounts of lead in their blood, the General Accounting Office (GAO) recently reported that less than 20 percent of these young children have been screened for lead poisoning. Even more disconcerting is that half of the states do not have screening policies that are consistent with federal requirements. For this reason, we have introduced the Children's Lead SAFE Act (S. 1120) to ensure that all children at risk of lead poisoning receive their required screenings and appropriate follow-up care by holding states accountable.

Mr. President, I have been working on making important, yet common-sense, policy changes to ensure that children are screened and treated for lead poisoning and to provide critical funding for leadsafe housing. Beyond these efforts, I believe we need to take further steps to raise public awareness about the dangers of lead poisoning. Last month, Senator COLLINS and I hosted a Public Health Subcommittee hearing in Rhode Island to highlight the importance of the issue and to hear about the successful approaches undertaken by organizations in my home state to address the problem. We plan to hold a similar hearing in Maine next month. Because lead poisoning is a national problem, we believe it deserves national attention.

That is why Senator COLLINS and I, along with 26 original co-sponsors are introducing this bipartisan resolution that would commemorate the week of October 24-30, 1999 as "National Childhood Lead Poisoning Prevention Week." Designation of a national week for lead poisoning prevention would raise public awareness about the issue and highlight the need to protect children from lead poisoning to ensure their healthy development.

The Senate resolution would serve to further our efforts to recognize lead poisoning as a national problem and declare lead poisoning prevention as a national priority. The proposed resolution would also acknowledge the suffering of the many children with lead poisoning and their parents whose active involvement individually and through grassroots organizations has been instrumental in efforts to reduce

lead poisoning. The resolution is supported by the Alliance to End Childhood Lead Poisoning, the Children's Defense Fund, the Environmental Defense Fund, and more than one hundred state and local organizations. Mr. President, I ask unanimous consent that letters of support from the Children's Defense Fund and the Alliance to End Childhood Lead Poisoning, along with the list of the 100 supporting organizations be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CHILDREN'S DEFENSE FUND,
Washington, DC, September 27, 1999.

Hon. JACK REED,
Hart Senate Office Building, Washington, DC.

DEAR SENATOR REED: I am writing in strong support of resolution to commemorate the week of October 24-30, 1999 as "National Childhood Lead Poisoning Prevention Week."

Lead poisoning in children can cause learning disabilities, behavioral problems, and at extremely high levels of poisoning, seizures, coma, and death. According to the Centers for Disease Control (CDC), about 890,000 children in the United States have elevated blood lead levels, including one in five African-American children living in housing built before 1946. Infants and toddlers are most susceptible because they spend so much of their time with their hands in their mouths—hands that may have been on the floor, on the windowsill, on the wall, along the stairway, places where lead paint particles exist.

Over 80% of the homes and apartments built before 1978 in the United States have lead-based paint in them. Paint doesn't have to be peeling to cause a health problem; particles can circulate in dust and air circulation systems. Although elevated blood lead levels in children have declined in the last few decades, lead poisoning is preventable; any level of lead poisoning in children is too high.

Your resolution will heighten awareness of this tragic and preventable health problem. I commend your attention to the issue and look forward to working with you to ensure that all children have the chance to grow up healthy and reach their fullest potential.

Sincerely yours,

MARIAN WRIGHT EDELMAN.

ALLIANCE TO END
CHILDHOOD LEAD POISONING,
Washington, DC, October 7, 1999.

Hon. JACK REED,
Hart Senate Office Building, Washington, DC.

DEAR SENATOR REED: I am writing in support of your resolution to designate the last week of October "National Childhood Lead Poisoning Prevention Week." This measure is supported by over 100 local health departments, housing agencies, community-based organizations and lead poisoning prevention programs from across the country (see attached list).

Despite steady progress over the past two decades to regulate inappropriate uses of lead, the tragedy of childhood lead poisoning remains very real for nearly one million preschoolers in the United States. Children are most often poisoned in their own homes by lead-contaminated dust from lead-based paint that is deteriorating or disturbed by repainting or renovation projects.

While lead poisoning crosses all barriers of race, income, and geography, the burden of this disease falls disproportionately on low-income families or families of color, who generally live in older, poorer quality housing. In some communities, more than half of preschool children are lead-poisoned. Even low levels of exposure to lead can impair young children's ability to learn and thrive, causing reduced IQ and attention span, learning difficulties and behavior problems. These effects are persistent and interfere with success in school and later life.

Formal designation of a national week for lead poisoning prevention will instrumentally advance national, state, and local efforts to educate communities about the threat of lead to children. Thank you again for supporting designation of the last week of October "National Childhood Lead Poisoning Prevention Week."

Sincerely,

DON RYAN,
Executive Director.

● Ms. COLLINS. Mr. President, I am very pleased today to join my colleague, Senator JACK REED, in submitting a resolution designating October 24th–30th as National Childhood Lead Poisoning Prevention Week. This designation will help increase awareness of the significant dangers and prevalence of child lead poisoning across our nation.

Recently, Senator REED and I held a hearing in Rhode Island to address the impact exposure to lead paint can have on children's health and development, and to explore ways to improve our efforts to prevent and eventually eliminate lead poisoning in children.

Great strides have been made in the last 20 years to reduce the threat lead poses to human health. Most notably, lead has been banned from many products including residential paint, food cans and gasoline. These commendable steps have significantly reduced the incidence of lead poisoning. But the threat remains, and continues to imperil the health and welfare of our nation's children.

In fact, lead poisoning is the most significant and prevalent environmental health threat to children in the U.S. today. Even low levels of lead exposure can have serious developmental consequences including reductions in IQ and attention span, reading and learning disabilities, hyperactivity and behavioral problems. The Centers for Disease Control and Prevention currently estimates that 890,000 children aged 1–5 have blood levels of lead that are high enough to affect their ability to learn.

Today, the major lead poisoning threat to children is found in interior paint that has deteriorated. Unfortunately, it is all too common for older homes to contain lead-based paint. In fact, more than half the entire housing

stock—and three quarters of the stock built prior to 1978—contain some lead-based paint. Paint manufactured prior to the residential lead paint ban often remains safely contained and unexposed for decades, but over time, often through the remodeling process or through normal wear and tear, the paint can become exposed, contaminating the home with dangerous lead dust.

Because of the prevalence of older homes in the Northeast, lead poisoning exposure is a significant problem in our region. In Maine, 42 percent of our homes were built prior to 1950. Although screening rates nationally and in my state are considered to be too low, the sampling that has been done in my state shows that in some areas of the state 7–15 percent of children tested have high blood lead levels. In some areas of our country, the percentage is even higher.

Next month, I will hold a hearing in Maine to address the lead-based paint threat in our homes, and what parents can do to protect their children from the risks associated with lead exposure.

Once childhood development is impaired by exposure to lead, the effect is largely irreversible. However, if the presence of lead is detected prior to exposure, then remedial steps can be taken, such as lead containment or abatement, to prevent children from ever being harmed by lead's presence in the home.

We are not helpless to stop this insidious threat. By raising awareness of the prevalence of lead paint in homes, and the steps that can be taken to prevent poisoning, we can stop the life-impairing effects of childhood lead poisoning. I urge my colleagues to support me in raising awareness about childhood lead poisoning by co-sponsoring Childhood Lead Paint Poisoning Prevention Week.●

AMENDMENTS SUBMITTED

DEPARTMENTS OF LABOR, HEALTH AND HUMAN SERVICES, AND EDUCATION, AND RELATED AGENCIES APPROPRIATIONS ACT 2000

BOND (AND OTHERS) AMENDMENT NO. 2270

Mr. BOND (for himself, Mr. NICKLES and Mr. HUTCHINSON) proposed an amendment to amendment No. 1825 proposed by Mr. BOND to the bill (S. 1650) making appropriations for the Departments of Labor, Health and Human Services, and Education, and related agencies for the fiscal year ending September 30, 2000, and for other purposes; as follows:

On page 1 of the amendment, strike all after the first word and insert the following:

(a) FINDINGS.—Congress makes the following findings:

(1) The Department of Labor, through the Occupational Safety and Health Administration (referred to in this section as “OSHA”) plans to propose regulations during 1999 to regulate ergonomics in the workplace. A draft of OSHA’s ergonomics regulation became available on February 19, 1999.

(2) A July 1997 report by the National Institute for Occupational Safety and Health that reviewed epidemiological studies that have been conducted of “work related musculoskeletal disorders of the neck, upper extremity, and low back” showed that there is insufficient evidence to assess the level of risk to workers from repetitive motions. Such evidence would be necessary for OSHA and the administration to write an efficient and effective regulation.

(3) An August 1998 workshop on “work related musculoskeletal injuries” held by the National Academy of Sciences reviewed existing research on musculoskeletal disorders. The workshop showed that there is insufficient evidence to assess the level of risk to workers from repetitive motions.

(4) In October 1998, Congress and the President agreed that the National Academy of Sciences should conduct a comprehensive study of the medical and scientific evidence regarding musculoskeletal disorders. The study is intended to evaluate the basic questions about diagnosis and causes of such disorders.

(5) To complete that study, Public Law 105-277 appropriated \$890,000 for the National Academy of Sciences to complete a peer-reviewed scientific study of the available evidence examining a cause and effect relationship between repetitive tasks in the workplace and musculoskeletal disorders or repetitive stress injuries.

(6) The National Academy of Sciences currently estimates that this study will be completed late in 2000 or early in 2001.

(7) Given the uncertainty and dispute about these basic questions, and Congress’ intention that they be addressed in a comprehensive study by the National Academy of Sciences, it is premature for OSHA to propose a regulation on ergonomics as being necessary or appropriate to improve workers’ health and safety until such study is completed.

(b) PROHIBITION.—None of the funds made available in this Act may be used by the Secretary of Labor or the Occupational Safety and Health Administration to promulgate or issue, or to continue the rulemaking process of promulgating or issuing, any standard, regulation, or guideline regarding ergonomics prior to September 30, 2000.

WELLSTONE AMENDMENT NO. 2271

Mr. WELLSTONE proposed an amendment to amendment No. 1880 proposed by Mr. WELLSTONE to the bill, S. 2271, supra; as follows:

Beginning on page 1 of the amendment, strike “\$70,000,000” and all that follows and insert the following: “\$358,816,000 shall be made available to carry out the mental health services block grant under subpart I of part B of title XIX of the Public Health Service Act (\$48,816,000 of which shall become available on October 1, 2000 and remain available through September 30, 2001), and”.

BINGAMAN (AND OTHERS) AMENDMENT NO. 2272

Mr. BINGAMAN (for himself, Mr. DOMENICI, and Mr. FEINGOLD) proposed

an amendment to the bill, S. 1650, supra; as follows:

At the end of title II, add the following:

SEC. 216. STUDY AND REPORT ON THE GEOGRAPHIC ADJUSTMENT FACTORS UNDER THE MEDICARE PROGRAM.

(a) STUDY.—The Secretary of Health and Human Services shall conduct a study on—

(1) the reasons why, and the appropriateness of the fact that, the geographic adjustment factor (determined under paragraph (2) of section 1848(e) (42 U.S.C. 1395w-4(e)) used in determining the amount of payment for physicians’ services under the medicare program is less for physicians’ services provided in New Mexico than for physicians’ services provided in Arizona, Colorado, and Texas; and

(2) the effect that the level of the geographic cost-of-practice adjustment factor (determined under paragraph (3) of such section) has on the recruitment and retention of physicians in small rural states, including New Mexico, Iowa, Louisiana, and Arkansas.

(b) REPORT.—Not later than 3 months after the date of enactment of this Act, the Secretary of Health and Human Services shall submit a report to Congress on the study conducted under subsection (a), together with any recommendations for legislation that the Secretary determines to be appropriate as a result of such study.

BINGAMAN AMENDMENT NO. 2273

Mr. HARKIN (for Mr. BINGAMAN) proposed an amendment to the bill, S. 1650 supra; as follows:

At the appropriate place in the bill add the following:

SEC. . CONFOUNDING BIOLOGICAL AND PHYSIOLOGICAL INFLUENCES ON POLYGRAPHY.

(a) FINDINGS.—The Senate finds that—

(1) The use of polygraph tests as a screening tool for federal employees and contractor personnel is increasing.

(2) A 1983 study by the Office of Technology Assessment found little scientific evidence to support the validity of polygraph tests in such screening applications.

(3) The 1983 study further found that little or no scientific study had been undertaken on the effects of prescription and non-prescription drugs on the validity of polygraph tests, as well as differential responses to polygraph tests according to biological and physiological factors that may vary according to age, gender, or ethnic backgrounds, or other factors relating to natural variability in human populations.

(4) A scientific evaluation of these important influences on the potential validity of polygraph tests should be studied by a neutral agency with biomedical and physiological expertise in order to evaluate the further expansion of the use of polygraph tests on federal employees and contractor personnel.

(b) SENSE OF THE SENATE.—It is the Sense of the Senate that the Director of the National Institutes of Health should enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation into the scientific validity of polygraphy as a screening tool for federal and federal contractor personnel, with particular reference to the validity of polygraph tests being proposed for use in proposed rules published at 64 Fed. Reg. 45062 (August 18, 1999).

BINGAMAN (AND FEINGOLD)
AMENDMENT NO. 2274

Mr. HARKIN (for Mr. BINGAMAN (for himself and Mr. FEINGOLD)) proposed an amendment to the bill, S. 1650, supra; as follows:

At the end of title II, add the following:

DENTAL SEALANT DEMONSTRATION PROGRAM
SEC. . . From amounts appropriated under this title for the Health Resources and Services Administration, sufficient funds are available to the Maternal Child Health Bureau for the establishment of a multi-State preventive dentistry demonstration program to improve the oral health of low-income children and increase the access of children to dental sealants through community- and school-based activities.

BOND (AND OTHERS) AMENDMENT
NO. 2275

Mr. SPECTER (for Mr. BOND (for himself, Mr. HARKIN, Mr. ASHCROFT, Mr. GRASSLEY, Mr. CHAFEE, Mr. BIDEN, Mr. WELLSTONE, and Mr. SMITH of Oregon)) proposed an amendment to the bill, S. 1650, supra; as follows:

At the end of title II, add the following:

WITHHOLDING OF SUBSTANCE ABUSE FUNDS
SEC. . . (A) IN GENERAL.—None of the funds appropriated by this Act may be used to withhold substance abuse funding from a State pursuant to section 1926 of the Public Health Service Act (42 U.S.C. 300x-26) if such State certifies to the Secretary of Health and Human Services that the State will commit additional State funds, in accordance with subsection (b), to ensure compliance with State laws prohibiting the sale of tobacco products to individuals under 18 years of age.

(b) AMOUNT OF STATE FUNDS.—The amount of funds to be committed by a State under subsection (a) shall be equal to one percent of such State's substance abuse block grant allocation for each percentage point by which the State misses the retailer compliance rate goal established by the Secretary of Health and Human Services under section 1926 of such Act, except that the Secretary may agree to a smaller commitment of additional funds by the State.

(c) SUPPLEMENT NOT SUPPLANT.—Amounts expended by a State pursuant to a certification under subsection (a) shall be used to supplement and not supplant State funds used for tobacco prevention programs and for compliance activities described in such subsection in the fiscal year preceding the fiscal year to which this section applies.

(d) The Secretary shall exercise discretion in enforcing the timing of the State expenditure required by the certification described in subsection (a) as late as July 31, 2000.

BOXER AMENDMENT NO. 2276

Mr. HARKIN (for Mrs. BOXER) proposed an amendment to the bill, S. 1650, supra; as follows:

At the appropriate place add the following:
SEC. . . (a) FINDINGS.—Congress makes the following findings:

(1) In 1999, prostate cancer is expected to kill more than 37,000 men in the United States and be diagnosed in over 180,000 new cases.

(2) Prostate cancer is the most diagnosed nonskin cancer in the United States.

(3) African Americans have the highest incidence of prostate cancer in the world.

(4) Considering the devastating impact of the disease among men and their families, prostate cancer research remains underfunded.

(5) More resources devoted to clinical and translational research at the National Institutes of Health will be highly determinative of whether rapid advances can be attained in treatment and ultimately a cure for prostate cancer.

(6) The Congressionally Directed Department of Defense Prostate Cancer Research Program is making important strides in innovative prostate cancer research, and this Program presented to Congress in April of 1998 a full investment strategy for prostate cancer research at the Department of Defense.

(7) The Senate expressed itself unanimously in 1998 that the Federal commitment to biomedical research should be doubled over the next 5 years.

(b) SENSE OF THE SENATE.—It is the sense of the Senate that—

(1) finding treatment breakthroughs and a cure for prostate cancer should be made a national health priority;

(2) significant increases in prostate cancer research funding, commensurate with the impact of the disease, should be made available at the National Institutes of Health and to the Department of Defense Prostate Cancer Research Program; and

(3) these agencies should prioritize prostate cancer research that is directed toward innovative clinical and translational research projects in order that treatment breakthroughs can be more rapidly offered to patients.

DEWINE AMENDMENT NO. 2277

Mr. SPECTER (for Mr. DEWINE) proposed an amendment to the bill, S. 1650 supra; as follows:

On page 59, line 25, strike "\$1,404,631,000" and insert "\$1,406,631,000" in lieu thereof.

On page 60, before the period on line 10, insert the following: "Provided further, That \$2,000,000 shall be for carrying out Part C of title VIII of the Higher Education Amendments of 1998."

On page 62, line 23, decrease the figure by \$2,000,000.

HUTCHISON (AND BINGAMAN)
AMENDMENT NO. 2278

Mr. SPECTER (for Mrs. HUTCHISON (for herself and Mr. BINGAMAN)) proposed an amendment to the bill, S. 1650, supra; as follows:

At the appropriate place, insert the following:

SEC. . . The United States-Mexico Border Health Commission Act (22 U.S.C. 290n *et seq.*) is amended—

(1) by striking section 2 and inserting the following:

"SEC. 2. APPOINTMENT OF MEMBERS OF BORDER HEALTH COMMISSION.

"Not later than 30 days after the date of enactment of this section, the President shall appoint the United States members of the United States-Mexico Border-Health Commission, and shall attempt to conclude an agreement with Mexico providing for the establishment of such Commission."; and

(2) in section 3—

(A) in paragraph (1), by striking the semicolon and inserting "and";

(B) in paragraph (2)(B), by striking "and" and inserting a period; and

(C) by striking paragraph (3).

SPECTER AMENDMENTS NOS. 2279–
2280

Mr. SPECTER proposed two amendments to the bill, S. 1650, supra; as follows:

AMENDMENT NO. 2279

On page 50, line 17, strike "\$459,500,000" and insert in lieu thereof "\$494,000,000".

AMENDMENT NO. 2280

On page 66, line 24, strike all after the colon up to the period on line 18 of page 67.

COCHRAN AMENDMENT NO. 2281

Mr. SPECTER (for Mr. COCHRAN) proposed an amendment to the bill, S. 1650 supra; as follows:

On page 42, before the period on line 8 insert the following: "Provided further, That sufficient funds shall be available from the Office on Women's Health to support biological, chemical and botanical studies to assist in the development of the clinical evaluation of phytomedicines in women's health".

WYDEN (AND OTHERS)
AMENDMENT NO. 2282

Mr. SPECTER (for Mr. WYDEN (for himself, Mr. GRAHAM, and Mr. SMITH of Oregon)) proposed an amendment to the bill, S. 1650, supra; as follows:

On page 19, line 6, insert before the period the following: "Provided further, That funds made available under this heading shall be used to report to Congress, pursuant to section 9 of the Act entitled 'An Act to create a Department of Labor' approved March 4, 1913 (29 U.S.C. 560), with options that will promote a legal domestic work force in the agricultural sector, and provide for improved compensation, longer and more consistent work periods, improved benefits, improved living conditions and better housing quality, and transportation assistance between agricultural jobs for agricultural workers, and address other issues related to agricultural labor that the Secretary of Labor determines to be necessary".

MURRAY (AND OTHERS)
AMENDMENT NO. 2283

Mr. SPECTER (for Mrs. MURRAY (for herself, Ms. MIKULSKI, Mr. ROBB, Mrs. LINCOLN, and Mr. REID)) proposed an amendment to the bill, S. 1650, supra; as follows:

Beginning on page 1 of the amendment, strike all after the first word and insert the following:

SENSE OF THE SENATE ON WOMEN'S ACCESS TO OBSTETRIC AND GYNECOLOGICAL SERVICES.

(a) FINDINGS.—Congress makes the following findings:

(1) In the 1st session of the 106th Congress, 23 bills have been introduced to allow women direct access to their ob-gyn provider for obstetric and gynecologic services covered by their health plans.

(2) Direct access to ob-gyn care is a protection that has been established by Executive Order for enrollees in medicare, medicaid, and Federal Employee Health Benefit Programs.

(3) American women overwhelmingly support passage of federal legislation requiring

health plans to allow women to see their ob-gyn providers without first having to obtain a referral. A 1998 survey by the Kaiser Family Foundation and Harvard University found that 82 percent of Americans support passage of a direct access law.

(4) While 39 States have acted to promote residents' access to ob-gyn providers, patients in other State- or in Federally-governed health plans are not protected from access restrictions or limitations.

(5) In May of 1999 the Commonwealth Fund issued a survey on women's health, determining that 1 of 4 women (23 percent) need to first receive permission from their primary care physician before they can go and see their ob-gyn provider for covered obstetric or gynecologic care.

(6) Sixty percent of all office visits to ob-gyn providers are for preventive care.

(b) SENSE OF THE SENATE.—It is the sense of the Senate that Congress should enact legislation that requires health plans to provide women with direct access to a participating health provider who specializes in obstetrics and gynecological services, and that such direct access should be provided for all obstetric and gynecologic care covered by their health plans, without first having to obtain a referral from a primary care provider or the health plan.

REED AMENDMENT NO. 2284

Mr. SPECTER (for Mr. REED) proposed an amendment to the bill, S. 1650, supra; as follows:

At the appropriate place, insert the following:

SEC. . The applicable time limitations with respect to the giving of notice of injury and the filing of a claim for compensation for disability or death by an individual under the Federal Employees' Compensation Act, as amended, for injuries sustained as a result of the person's exposure to a nitrogen or sulfur mustard agent in the performance of official duties as an employee at the Department of the Army's Edgewood Arsenal before March 20, 1944, shall not begin to run until the date of enactment of this Act.

STEVENS AMENDMENT NO. 2285

Mr. SPECTER (for Mr. STEVENS) proposed an amendment to the bill, S. 1650, supra; as follows:

At the appropriate place in Title V—GENERAL PROVISIONS of the bill insert the following new section—

SEC. 5 . Section 169(d)(2)(B) of P.L. 105-220, the Workforce Investment Act of 1998, is amended by striking "or Alaska Native villages or Native groups (as such terms are defined in section 3 of the Alaska Native Claims Settlement Act (43 U.S.C. 1602)).", and inserting in lieu thereof, "or Alaska Natives."

DURBIN (AND OTHERS) AMENDMENT NO. 2286

Mr. SPECTER (for Mr. DURBIN (for himself, Mr. DEWINE, Mr. ABRAHAM, and Mr. SPECTER)) proposed an amendment to the bill, S. 1650, supra; as follows:

At the end of title II, add the following:

CHILDHOOD ASTHMA

SEC. . In addition to amounts otherwise appropriated under this title for the Centers for Disease Control and Prevention, 8.7 in ad-

dition to the \$*** already provided for asthma prevention programs which shall become available on October 1, 2000 and shall remain available through September 30, 2001, and be utilized to provide grants to local communities for screening, treatment and education relating to childhood asthma.

INOUE AMENDMENTS NOS. 2287— 2288

Mr. SPECTER (for Mr. INOUE) proposed an amendment to the bill, S. 1650, supra; as follows:

AMENDMENT NO. 2287

At the appropriate place, insert the following:

SEC. (a) The Centers for Disease Control and Prevention shall hereafter be known and designated as the "Thomas R. Harkin Centers for Disease Control and Prevention".

(b) Effective upon the date of enactment of this Act, any reference in a law, document, record, or other paper of the United States to the "Centers for Disease Control and Prevention" shall be deemed to be a reference to the "Thomas R. Harkin Centers for Disease Control and Prevention".

(c) Nothing in this section shall be construed as prohibiting the Director of the Thomas R. Harkin Centers for Disease Control and Prevention from utilizing for official purposes the term "CDC" as an acronym for such Centers.

Mr. HARKIN (for Mr. INOUE) proposed an amendment to the bill, S. 1650, supra; as follows:

AMENDMENT NO. 2288

At the appropriate place, insert the following:

SEC. . DESIGNATION OF ARLEN SPECTER DEPARTMENT OF HEALTH AND HUMAN SERVICES.

(a) IN GENERAL.—The National Library of Medicine building (building 38) at 8600 Rockville Pike, in Bethesda, Maryland, shall be known and designated as the "Arlen Specter National Library of Medicine".

(b) REFERENCES.—Any reference in a law, map, regulation, document, paper, or other record of the United States to the building referred to in subsection (a) shall be deemed to be a reference to the Arlen Specter National Library of Medicine.

HARKIN AMENDMENT NO. 2289

Mr. HARKIN proposed an amendment to the bill, S. 1650, supra; as follows:

On page 39, line 8, strike "\$6,682,635,000" and insert "\$6,684,635,000".

On page 40, line 20, strike "\$928,055,000" and insert "\$942,355,000".

On page 41, line 14, reduce the figure by \$10,300,000.

On page 62, line 23, strike "\$378,184,000" and insert "\$372,184,000".

NOTICES OF HEARINGS

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. MURKOWSKI. Mr. President, I would like to announce that a Full Committee hearing has been scheduled before the Committee on Energy and Natural Resources. The hearing will take place Thursday, October 14, 1999, at 9:30 a.m., in room SD-366 of the Dirksen Senate Office Building in Washington, D.C.

The purpose of this hearing is to receive testimony on S. 1683, a bill to make technical changes to the Alaska National Interest Lands Conservation Act, and for other purposes; S. 1686, to provide for the conveyances of land interests to Chugach Alaska Corporation to fulfill the intent, purpose, and promise of the Alaska Native Claims Settlement Act, and for other purposes; S. 1702, a bill to amend the Alaska Native Claims Settlement Act to allow shareholder common stock to be transferred to adopted Alaska Native Children and their descendants, and for other purposes; H.R. 2841, to amend the Revised Organic Act of the Virgin Islands to provide for greater fiscal autonomy consistent with other United States jurisdictions, and for other purposes; and H.R. 2368, the Bikini Resettlement and Relocation Act of 1999. There will be testimony from the Administration, and other interested parties.

Those who wish to testify or to submit written testimony should write to the Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C. 20510. Presentation of oral testimony is by Committee invitation only. For further information, please contact Jo Meuse or Brian Malnak at (202) 224-6730.

PERMANENT SUBCOMMITTEE ON INVESTIGATIONS

Ms. COLLINS. Mr. President, I would like to announce for the information of the Senate and the public that the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs, will hold a hearing entitled "Conquering Diabetes: Are We Taking Full Advantage of the Scientific Opportunities For Research?" This Subcommittee hearing will examine the devastating impact that diabetes and its resulting complications have had on Americans of all ages in both human and economic terms. Additionally, we will review the recent recommendations of the Congressionally-established Diabetes Research Working Group and will look at the current Federal commitment to diabetes research to determine if sufficient funding has been provided to take advantage of the unprecedented opportunities to ultimately conquer this disease and its complications.

The hearing will take place on Thursday, October 14, 1999, at 9:30 a.m., in Room 628 of the Dirksen Senate Office Building. For further information, please contact Lee Blalack of the Subcommittee staff at 224-3721.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Committee on Agriculture, Nutrition, and Forestry, be allowed to meet during the session of the Senate on Thursday,

October 7, 1999. The purpose of this meeting will be to discuss the regulation of products of biotechnology and new challenges faced by farmers and food businesses.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ARMED SERVICES

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Committee on Armed Services be authorized to meet at 9:30 a.m. on Thursday, October 7, 1999, in open and closed sessions, to receive testimony on the ability of the Stockpile Stewardship Program to adequately verify the safety and reliability of the U.S. nuclear deterrent under a comprehensive test ban treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

Mr. COVERDELL. Mr. President, I ask unanimous consent that the full Committee on Environment and Public Works be granted permission to conduct a hearing Thursday, October 7, 10:00 a.m., Hearing Room (SD-406), on water infrastructure legislation, including the following three bills: S. 968, Alternative Water Sources Act of 1999; S. 914, Combined Sewer Overflow Control and Partnership Act of 1999; and the Clean Water Infrastructure Financing Act of 1999, a bill to be introduced by Senator VOINOVICH.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Thursday, October 7, 1999 at 10:30 a.m. and 2:00 p.m. to hold two hearings.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. COVERDELL. Mr. President, the Committee on the Judiciary requests unanimous consent to conduct a hearing on Thursday, October 7, 1999 beginning at 10:00 a.m. in Dirksen Room 226.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. COVERDELL. Mr. President, the Committee on the Judiciary requests unanimous consent to conduct a markup on Thursday, October 7, 1999 beginning at 10:00 a.m. in Dirksen Room 226.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. COVERDELL. Mr. President, the Committee on the Judiciary requests unanimous consent to conduct a hearing on Thursday, October 7, 1999 beginning at 2:00 p.m. in Dirksen Room 226.

The PRESIDING OFFICER. Without objection, it is so ordered.

SPECIAL COMMITTEE ON THE YEAR 2000 TECHNOLOGY PROBLEM

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Special Committee on the Year 2000 Technology Problem be permitted to meet on October 7, 1999 at 9:30 a.m. for the purpose of conducting a hearing.

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Select Committee on Intelligence be authorized to meet during the session of the Senate on Thursday, October 7, 1999 at 2:00 p.m. to hold a closed hearing on intelligence matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON ENERGY RESEARCH, DEVELOPMENT, PRODUCTION AND REGULATION

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Subcommittee on Energy Research, Development, Production and Regulation of the Committee on Energy and Natural Resources be granted permission to meet during the session of the Senate on Thursday, October 7, for purposes of conducting a subcommittee hearing, which is scheduled to begin at 2:30 p.m. The purpose of this hearing is to receive testimony on S. 1183, a bill to direct the Secretary of Energy to convey to the city of Bartlesville, Oklahoma, the former site of the NIPER facility of the Department of Energy; and S. 397, a bill to authorize the Secretary of Energy to establish a multiagency program in support of the Materials Corridor Partnership Initiative to promote energy efficient, environmentally sound economic development along the border with Mexico through the research, development, and use of new materials.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INTERNATIONAL SECURITY, PROLIFERATION AND FEDERAL SERVICES

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Governmental Affairs Committee Subcommittee on International Security, Proliferation and Federal Services be permitted to meet on Thursday, October 7, 1999, at 2:00 p.m. for a hearing on Guidelines for the Relocation, Closing, Consolidation or Construction of Post Offices.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INTERNATIONAL TRADE

Mr. COVERDELL. Mr. President, I ask unanimous consent that the Committee on Finance, Subcommittee on International Trade be permitted to meet on Thursday, October 7, 1999 at 10:00 a.m. to hear testimony on the United States Agricultural Negotiating Objectives for the Seattle WTO Ministerial Conference.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

1999 REUNION OF MEMBERS OF FOX DIVISION, USS "ROCHESTER"

● Mr. ABRAHAM. Mr. President, I rise today to recognize the fighting men of the Fox Division, United States Navy, USS *Rochester* (CA-124), who bravely served our country in the Korean Conflict from June, 1950 to March, 1953. Aboard the USS *Rochester*—the flagship of the Commander Seventh Fleet—the men of the Fox Division participated in nearly every major naval engagement along the Korean Peninsula. The Fox Division's three teams: the Main Plot, the Sky Plot, and the Mark 56 directors, shared the critical responsibility of operating, repairing, and maintaining the complex equipment which ensured the accuracy of the *Rochester's* weapons systems. They accomplished these tasks with outstanding success.

The Fox Division recently celebrated their 1999 reunion in Frankenmuth, Michigan. Some of these reunited shipmates had not seen each other in over 45 years. Included among their ranks were:

Jerry Barca; John Brothers; Robert Cadden; Russell Daniels; Farrell Ferguson; Sheri Holman, representing her late husband Bob Holman; Bill Hontz; Marv Hufford; Larry Kobie; Tony Kontowicz; Leo Lane; Charles Newsham; Bobby Page; Carl Ray; Ronald Richards; Pete Russell; Roland Schneider; Donald Spencer; and Joe West.

Today I join my colleagues in thanking the men of the Fox Division for defending the cause of democracy, and for preserving our country's national security. I am proud to say that these veterans are an inspiration to all of us. By dedicating a portion of their lives to the service of their country, they have helped guarantee the freedom we Americans hold so dear. Our nation is grateful to each and every member of the Fox Division, USS *Rochester*, for their outstanding dedication and commitment to the United States of America. ●

VIOLENCE IN MICHIGAN

● Mr. LEVIN. Mr. President, this week, students at Erickson Elementary School and Willow Run High School are mourning the deaths of their peers. On Sunday afternoon, gun fire cut short the lives of two young boys in Ypsilanti Township. Sixteen year old Ernest Earl Lemons was shot in plain daylight, after a fight broke out between young people. Nine year old Cullen Ethington, who was a half a block away, was also killed by a stray bullet from that fight.

Both young people are now being remembered by their classmates and teachers. The tree where Lemons fell, after he was shot, is now decorated

with teddy bears. Students at Erickson are planning to plant a tree or flowers in honor of the short life of fourth grader Cullen Ethington, who will be memorialized by his classmates as a peer mediator who helped students resolve their disputes without violence.

School children are too often the victims of senseless gun violence. Gun violence results in injury and death, destroys families, and causes lasting psychological and emotional harm. In Michigan, each school is now forced to handle the trauma of children losing other children to gunfire. As many other school districts now know, violence and the fear of violence is not only tragic for individuals and families involved, it also interferes tremendously with the educational process. Students at Erickson, for example, are now spending time at school with trauma teams learning how to cope with death while their peers at other schools are learning about the pilgrims and practicing for the school play.

Congress must act now to end the proliferation of gun violence. Like young Cullen, we must not only make a pledge to live our lives without violence, but must also send a message to others that violence is never the answer.

My thoughts and prayers go out to the both the Ethington and the Lemons families.●

WILDERNESS DESIGNATIONS

● Mr. CRAIG. Mr. President, given the recent creation of the Wilderness and Public Lands Caucus and the ongoing debate on public land management, I think that all views on this complicated and emotional issue are vital to the discussion. Therefore, I ask that a brief statement from the Wilderness Act Reform Coalition, a group from my home State of Idaho be printed in the RECORD for all Senators to read and consider.

The article follows:

THE WILDERNESS ACT REFORM COALITION WHY WE ARE ORGANIZING

September 3, 1999 marks the 35th anniversary of the passage of the Wilderness Act. During those 35 years, it has never been substantively amended. Yet, the history of the application of the Wilderness Act to the public's lands and resources provides overwhelming evidence that it must be significantly reformed if the public interest is to be served.

September 3, 1999 also marks the launch of the Wilderness Act Reform Coalition (WARC), the first serious effort to reform this antiquated and poorly-conceived law. Much has changed since the Wilderness Act became law in 1964. Dozens of other laws have been passed since then to protect and responsibly-manage all of the public's lands and resources. Underpinning all of these laws—and guaranteeing their enforcement—is a public sensitivity and commitment to wise resource management which was not present two generations ago when the Wilderness Act was enacted.

Over this same time period our knowledge and understanding of how to accomplish this kind of wise and responsible resource management has increased exponentially. The demand side of the public's interest in their lands and resources has also increased exponentially. Recreation demand, for example, has increased far beyond what anyone could have anticipated 35 years ago and it has done so in directions which could not have been foreseen in 1964. Demand for water, energy and minerals, timber and other resources continues to go up as well.

All of this means that as the 21st Century dawns we find ourselves facing more complex natural resources realities and challenges than ever before in our history. Meeting these challenges while at the same time serving the broad public interest will require careful and thoughtful balancing of all resource values with other social goals. It will also require integrating them all into a comprehensive management approach which will provide the greatest good for the greatest number of Americans over the longest period of time.

These lands and resources, after all, belong to all of the American people. They deserve to enjoy the maximum benefits from them. Yet, the Wilderness Act, with its outdated, inflexible, and anti-management requirements, presently locks away over 100 million acres of the public's lands and resources from this kind of intelligent and integrated resource management. The inevitable result is the numerous negative impacts and damage to other resource values which are becoming increasingly apparent on the public's lands. The Wilderness Act remains frozen in another era. Due to the exponential changes which have occurred since it was passed, that era lies much further in the past than a mere 35 year linear time line would suggest.

OUR GOALS AND OBJECTIVES

The Wilderness Act Reform Coalition is being organized by members of citizen's groups and local government officials who have experienced firsthand the limitations and problems the Wilderness Act has caused. It has a simple mission: to reform the Wilderness Act. In carrying out that mission, the Coalition has identified two primary goals towards which it will initially work.

The first goal is to make those changes in the wilderness law which are essential to mitigate the most serious resource and related problems it is causing. These problems range from prohibiting the application of sound resource management practices where needed to hampering important scientific research and jeopardizing our national defense.

The second goal of the coalition is to use the failings of the Wilderness Act to help educate the public, the media and policy makers on the fundamentals of natural resource management. Most of the "conventional wisdom" about natural resource management to which most of them presently subscribe is simply wrong. It is essential that the public be better educated on the facts, the realities, the challenges and the options before there can be any responsible or useful policy debate on the most fundamental problems with the Wilderness Act or, for that matter, any of the other federal management laws and policies which also need to be reformed. That is why the Coalition has chosen a comparatively limited reform agenda for this opening round in what we recognize ultimately must be a broader and more comprehensive national policy debate.

OUR REFORM AGENDA

The Coalition currently advocates the following reforms of the Wilderness Act:

1. Developing a mechanism to permit active resource management in wilderness areas to achieve a wide range of public benefits and to respond to local needs. The inability or unwillingness of managers to intervene actively within wilderness areas to deal with local resource management problems or goals has resulted in economic harm to local communities and damage to other important natural resource and related values and objectives. The Coalition supports the creation of committees composed of locally-based federal and state resource managers, local governments, local economic interests and local citizens which will initiate a process to override the basic non-management directive of the Wilderness Act on a case-by-case basis.

2. Establishing a mechanism for appeal and override of local managers for scientific research. Wilderness advocates often tout the importance of wilderness designation to science. The reality, however, is that agency regulations make it difficult or impossible to conduct many scientific experiments in wilderness, particularly with modern and cost-effective scientific tools. Important scientific experiments have been opposed simply because they would take place within wilderness areas. A simple, quick and cheap appeal process must be created for scientists turned down by wilderness land managers.

3. Making it clear that such things as use of mechanized equipment and aircraft landings can occur in wilderness areas for search and rescue or law enforcement purposes. There have been incidents where these have been prevented by federal wilderness managers.

4. Requiring that federal managers use the most cost-effective management tools and technologies. These managers have largely imposed upon themselves a requirement that they use the "least tool" or the "minimum tool" to accomplish tasks such as noxious weed control, wildfire control or stabilization of historic sites. In practice, this means that hand tools are often used instead of power tools, horses are employed instead of helicopters and similar practices which waste tax dollars.

5. Clarifying that the prohibition on the use of mechanized transportation in wilderness areas refers only to intentional infractions. This would be, in effect, the "Bobby Unser Amendment" designed to prevent in the future the current situation in which he is being prosecuted by the federal government for possibly driving a snowmobile into a wilderness area in Colorado while lost in a life-threatening blizzard.

6. Pulling the boundaries of wilderness areas and wilderness study areas (WSA's) back from roads and prohibiting "cherrystemming." In many cases, the boundaries of wilderness areas and WSA's come right to the very edge of a road. Lawsuits have been filed or threatened against counties for going literally only a few feet into a WSA when doing necessary road maintenance work. It is clearly impossible to have a wilderness recreational experience in close proximity of a road. When formal wilderness areas are designated, the current practice is to pull the boundaries back a short distance from roads, depending on how the roads are categorized. That distance should be standardized and extended, probably to at least a quarter of a mile. The practice of "cherrystemming," or drawing wilderness boundaries right along both sides of a road to its end, sometimes for many miles, is a clear violation of the intent of the Wilderness Act that wilderness areas must first and foremost be roadless. It must be eliminated.

7. Permitting certain human-powered but non-motorized mechanized transport devices in wilderness areas. This would include mountain bikes and wheeled "game carriers" and similar devices. The explosion of mountain biking was not envisioned by the Congress when the Wilderness Act was passed. Opening up those wilderness areas which are suitable to mountain biking would provide a high quality recreation experience to more of the Americans who own these areas. Use of these human-powered conveyances would also reduce pressure on these areas in a number of ways, such as by dispersing recreation use over a wider area. At the same time opening these areas can also reduce the current or potential conflicts between various recreation uses on land outside of designated wilderness. The impact on the land from these types of mechanized recreation uses would be minimal to non-existent. Their presence in wilderness areas would not cause problems on aesthetic grounds for any but the most extreme wilderness purists and they represent only a tiny fraction of the Americans who own these lands.

8. Requiring that the resource potential in all WSA's and any other land proposed for wilderness be updated at least every ten years. For example, mineral surveys and estimates of oil and gas potential completed on many of the WSA's on BLM-managed land which have been recommended for wilderness designation are now 10 to 15 years old and in some cases even older. These reviews were often not very thorough even by the standards and technology available then, much less what is available now. Before any additional land is locked up in wilderness, Congress and the American people should at least have the best and most up-to-date information on which to weigh the resource trade offs and make decisions.

9. Stating clearly that wilderness designation or the presence of WSA's cannot interfere with military preparedness. In a number of instances, conflicts related to military overflights of designated or potential wilderness areas, or to the positioning of essential military equipment on the ground in these areas, poses a threat or a potential threat to our defense preparedness. The Coalition will push for clarification that when considering the impacts of any mission certified by the military as essential to the national defense, wilderness areas or WSA's will be treated exactly the same as any other land administered by that agency.

10. Clarifying that wilderness designation or WSA designation will not in and of itself result in any management or regulatory changes outside the wilderness or WSA boundaries. This change is essential to prohibit federal agencies or the courts from taking actions to impose any type of "buffer zones" around these areas, including such things as special management of "viewsheds" or asserting wilderness-based water rights.●

RECOGNIZING THE AMERICAN ASSOCIATION ON MENTAL RETARDATION ILLINOIS CHAPTER'S 1999 DIRECT SERVICE PROFESSIONAL AWARD WINNERS

● Mr. DURBIN. Mr. President, I take this opportunity to honor those who have enriched the lives of men and women with disabilities. Each year the Illinois chapter of the American Association on Mental Retardation recognizes the work of Illinoisans who have

dedicated and committed their lives to helping people with disabilities.

These award winners live in Illinois and play an important role in the lives of Illinoisans with disabilities. A 1999 Direct Service Award winner is someone who devotes more than 50 percent of their time working hands-on with their client. These award winners work directly with their clients with commitment, sensitivity, professionalism, and patience. These qualities set them apart and increase their value to their patients.

It is important we recognize these individuals who go beyond the call of duty to improve the lives of others. We should note that these individuals do not only enrich the lives of those for whom they care, but enrich our lives as well. They represent the true spirit of community service.

It is my honor and privilege to recognize the achievements of the following distinguished Illinois direct service professionals: Linda Barnes, Karen Catt, Candace Fulgham, Ross Griswold, Delores Hardin, Cathey Hardy, Raterta Kalish, Eldora Madison, Anita Martin, Vickie McKenny, Ida Mitchell, Michael Peters, Noreen Przislicki, Douglas S. Revolinski, Angelo Reyes, Karie Rosenown, Laureen Saathoff, Ruby Sandefur, Emma Smith, and Kathie Tillman. It is a privilege to represent these award winners in the United States Senate.

Again, I applaud them for their lifetime effort and their dedication to better the lives of others who are less fortunate. These distinguished men and women are heroes in their field, and I am proud to recognize their work.●

DAVID "MOOSE" MILLER

● Mr. BURNS. Mr. President, I rise today to pay tribute to David "Moose" Miller, husband, father, friend, community leader, sports enthusiast, and owner of the nationally known watering hole, Moose's Saloon, who lost his life to cancer recently. Moose had battled cancer for the last year and convinced himself and others that he would beat it. Today, in Kalispell, Montana, family and friends are remembering Moose Miller and I would like to take a moment to make a special acknowledgement to such a great man.

Moose played football for the University of Montana, served his country in the U.S. Army, and with his wife, converted the Corral Bar to the famous Moose's Saloon. Swinging doors, sawdust on the floor, initials carved into the heavy tables, the best pizza around, and the rustic atmosphere attracted people from all walks of life and all ages. Whether you're from Kalispell, Montana, Peoria, Illinois, or Washington, D.C., you likely know someone who knows of Moose's Saloon and Moose Miller.

I had the privilege of knowing Moose. Moose not only owned and ran a successful business in the Flathead Valley, he gave back to the community in many ways. The Kalispell Chamber of Commerce honored him as its Great Chief in 1986, recognizing his years of community service. He and his "elves" made Christmas special for many people, especially the handicapped, each year for several years, he donated proceeds from the kitchen to support the March of Dimes, was an active supporter of the University of Montana and helped administer the Flathead Youth Foundation.

Moose is leaving behind a wife, Shirley; his children; Bruce, Wallis, Royce, Lexie, Lee and Aimee; his grandchildren, Zach, Anne, Lexie, Leah, Alicia, Hannah, and Zane; and his sister, Marcie.

I know that Moose will be missed by his family and friends, as well as the entire community. May God bless them all and may his memory live on.●

JOHN "JACK" J. DRISCOLL

● Mrs. BOXER. Mr. President, on the occasion of his retirement as executive director of the Los Angeles World Airports, LAWA, I would like to recognize the important contribution Jack Driscoll has made to the City of Los Angeles and to the economy of Southern California over the past seven years.

Jack Driscoll was appointed executive director in December of 1992. His record of accomplishment can best be shown in the outstanding quality of management and development at the city's four airports: Los Angeles International, LAX, Ontario International, Palmdale Regional, and Van Nuys.

Under Mr. Driscoll's financial management, LAWA has increased its operating income by an overwhelming 329 percent through the combination of reorganization, streamlining measures, and renegotiating contracts with airport tenants. Revenues from non-aviation sources, including updated concessions and new vendor contracts, have nearly equaled revenues from aviation sources. In fact, leading investment rating agencies have rewarded LAX with their highest ratings for a stand-alone airport.

Even in adversity, Mr. Driscoll worked to maintain quality in service and operations. He was at the reins of LAWA during a major dispute between the City of Los Angeles and the airlines over landing fees. During litigation at LAX, he revived the dormant, 12-year-old plans to build new terminals at Ontario International Airport. With Mr. Driscoll's direction, this \$270-million project was completed four months ahead of schedule and \$26 million under budget. These new terminals put ONT in position to bring regional solutions to meet Southern California's ever-growing air transport needs and

made it the only airport in the region with new facilities to do so.

In addition, Mr. Driscoll initiated the LAX Master Plan, a long-term process to guide development of LAX to meet air passenger and cargo demands for the next 20 years. Since 1992, LAX has become the third busiest passenger airport in the world and the second busiest air cargo airport in the world.

To offset this growth, Mr. Driscoll committed LAWA to undertake major noise reduction and management programs, including nearly \$500 million in programs for residential soundproofing and compatible land-use; recycle water programs; and a variety of clean air programs, including alternative-fuel vehicles and traffic mitigation. All of these programs have received awards from environmental organizations and regulatory agencies for outstanding achievement.

I wish Jack Driscoll well and thank him for his contribution towards improving Southern California's aviation gateway.●

IN MEMORY OF JIM DEFRA NCIS

● Mr. ABRAHAM. Mr. President, I rise today in memory of Jim Upton DeFrancis: a great politician, a great historian, and a great family man, who died on January 1 of this year.

Jim DeFrancis was one of the most influential people in the political field, always maintaining political savvy—but not sacrificing perspective, an incredible sense of humor, and a belief that politics was an avenue for serving others. Very early in my career, I had the good fortune of working for Jim in Senator Bob Griffin's office. I will never forget the many lessons I learned from him—both directly and simply by working near him. One couldn't help but learn from Jim DeFrancis.

In addition to his 10 years with Senator Griffin, Jim DeFrancis was an integral member of the presidential campaigns of Gerald Ford and George Romney. As a member of the staff of these politicians, Jim was able to avoid the spotlight while serving Michigan and national politics, in the honorable and professional manner for which now he is recognized as a very significant member of Michigan political history.

Jim's love of politics was rooted in his love of history. He especially enjoyed reading about Winston Churchill. An avid reader, Jim collected any book on Winston Churchill that he could find, as well as other artifacts related to the late Prime Minister. During difficult times, Jim would look at Churchill's life as a model, gaining inspiration and guidance.

And while Jim's contribution to politics is exceptional—in his very actions, he inspired us to work for others through politics—his true love was his family. More than anything else, Jim DeFrancis was a family man. Survived

by his wife, three sons, his mother and sister, his family was the real focus of his life. Everyone who came in contact with him would quickly learn about his family—as he always found a way to bring them up in a conversation.

Jim DeFrancis' devotion to his family, his friends, and his career was matched by few and will be deeply missed by those who knew him. We will never forget Jim—crossing paths with Jim DeFrancis was sure to leave a lasting impact. And it is this lasting, far-reaching impact that Jim's life has had on those who knew him which calls to mind a quote that I think Jim would appreciate, not only because it is a quote by Winston Churchill, but because I believe Jim would be moved to know what an influence he had on us:

“This is not the end. It is not even the beginning of the end. But it is, perhaps, the end of the beginning.”●

BUDDY CHARLES

● Mr. DURBIN. Mr. President, I rise today to take note of an upcoming milestone in the career of a man from Illinois whose musicianship, warmth and exuberance have brought joy to all who have heard him play and sing over the past 52 years.

On Saturday, October 9th, Mr. Buddy Charles will play the final night of his most recent engagement—a 9-year stand at the Drake Hotel in Chicago. Buddy Charles is no less than a living encyclopedia of what critics call the “Golden Age” of American popular music. During the period from about 1920 to 1950, the Gershwins, Arlens, Berlins and Carmichaels of the world produced a rich legacy of songs. Although recorded versions of these songs are numerous, they are kept alive in a special way by entertainers such as Buddy Charles.

Buddy is a lifelong Chicagoan, born there 72 years ago, raised on the North Side, and a graduate of Loyola University. The roster of clubs in which he has performed since 1946 reads like a history of night life and entertainment in Chicago: London House, Spaghetti Bowl, Dubonnet, Casino, Drum Lounge. . . .

Perhaps his most memorable stand—chronicled frequently by the Chicago news media—was his 18-year engagement, from 1972 to 1990, at the Acorn on Oak. There he could be found, as the Chicago Tribune wrote, “shouting and singing when most sensible people are sleeping and dreaming, the most devilishly delightful creature of the city night.”

And it was there that Buddy became the favorite entertainer of two of Chicago's most famous personalities—Mike Royko and Harry Caray. When Mike's memorial service was held two years ago in Wrigley Field, there was Buddy at home plate, playing and singing Royko's favorite song.

Buddy's music and personality have provided refuge, relief and delight to four generations of music lovers. And through all those years, he has also been a loving husband to his wife of 45 years, Pat, a caring father to their now-grown children Teresa, Christopher, Tabitha and Amanda, and a daily churchgoer and teacher of catechism.

He has given himself to thousands of people through his music. Although it is a little sad that he won't be dispensing his brand of joy on a nightly basis any more, it is reassuring to know he is available to play when someone asks.

My sincerest good wishes to Buddy Charles and his family on this important occasion.●

FREDERIK MEIJER GARDENS DEDICATION OF LEONARDO DA VINCI SCULPTURE, IL CAVALLO

● Mr. ABRAHAM. Mr. President, I rise today to acknowledge and congratulate Frederik Meijer and the Frederik Meijer Gardens as they unveil and dedicate the Da Vinci sculpture Il Cavallo (the horse).

Frederik Meijer's incredible generosity and foresight enabled Il Cavallo to be seen at its permanent home in the Frederik Meijer Gardens. In an effort to fulfill his dream of creating a world class sculpture garden Frederik Meijer and the City of Milan, Italy (where an identical sculpture is located) allowed for the work of Da Vinci to be recommissioned and created. Il Cavallo was originally sketched and commissioned by Da Vinci in 1482 and he continued to work on it for fourteen years. However, the bronze intended to cast the sculpture was used to make cannons to defend the city of Milan, therefore Da Vinci never completed the work.

In 1977, after reading an article about the horse that Da Vinci never had the chance to create, amateur sculpture and pilot, Charles Dent created the first model of Il Cavallo. After his death in 1994 Nina Akamu sculpted the Il Cavallo that is on display today. The sculpture was cast using twenty thousand pounds of bronze, stands twenty-four feet tall and weighs fifteen tons.

Frederik Meijer is to be thanked and commended for carrying out his vision and giving a world class gift to the city of Grand Rapids and the people of Michigan. Nearly five hundred years ago Da Vinci had the vision for this great horse. Due to the acts of Frederik Meijer, a great humanitarian, this rare and magnificent work of art will stand tall in the Frederik Meijer Gardens for all to see for many years to come.●

EXPRESSING SYMPATHY FOR THOSE KILLED AND INJURED IN EARTHQUAKES IN TURKEY AND GREECE

Mr. SMITH of New Hampshire. Mr. President, on behalf of the majority leader, I ask unanimous consent that the Senate now proceed to the immediate consideration of S. Res. 198, submitted earlier by Senator SNOWE.

The PRESIDING OFFICER. The clerk will report the resolution by title.

The legislative clerk read as follows:

A resolution (S. Res. 198) expressing sympathy for those killed and injured in the recent earthquakes in Turkey and Greece and commending Turkey and Greece for their recent efforts in opening a national dialog and taking steps to further bilateral relations.

The Senate proceeded to consider the resolution.

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that the resolution be agreed to, the preamble be agreed to, the motion to reconsider be laid upon the table, and that any statements relating to the resolution be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution (S. Res. 198) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 198

Whereas in the wake of the tragic earthquakes which struck Turkey on August 17, 1999, leaving up to 16,000 dead, 24,000 injured, and 100,000 homeless, and Greece on September 7, 1999, killing 143, injuring 1,600, and leaving 16,000 homeless, an improvement of relations between Turkey and Greece has occurred;

Whereas within hours of the earthquake hitting Turkey, Greece sent rescue teams, doctors, firemen, and emergency supplies to Turkey;

Whereas immediately after the earthquake struck Greece, Turkey, already dealing with its own devastation, sent rescue personnel to Greece;

Whereas in July, senior foreign ministry officials of Greece and Turkey held talks, the first talks at this level since 1994, to discuss bilateral cooperation in the fields of tourism, the environment, trade, and the economy as well as cooperation in combating organized crime, illegal immigration, drug-trafficking, and terrorism;

Whereas in September 1999, a second round of talks between senior foreign ministry officials of Greece and Turkey were held as a follow-up to the July meeting, and a third round has been planned for October 1999;

Whereas this spirit of cooperation has led to a warming of relations and confidence building measures, including—

(1) a naval vessel of Greece calling at a port of Turkey for the first time in more than a century;

(2) Greek and Turkish news commentators agreeing to publish their columns in each other's newspapers;

(3) Greece indicating that it is prepared to accept the candidacy of Turkey for membership in the European Union as long as Turkey meets all criteria for membership in the Union; and

(4) Turkey and Greece praising the other for earthquake assistance; and

Whereas the desire to further cultivate relations between Turkey and Greece has created an atmosphere of hope: Now, therefore, be it

Resolved, That the Senate—

(1) expresses sympathy for those killed and injured in the recent earthquakes in Greece and Turkey;

(2) commends, encourages, and supports recent efforts by Greece and Turkey to improve bilateral relations between those countries; and

(3) reiterates the importance of promoting positive bilateral relations between Greece and Turkey, which are of paramount interest to the United States.

APPOINTMENTS

The PRESIDING OFFICER. The Chair, on behalf of the Majority Leader, pursuant to Public Law 105-277, announces the appointment of the following individuals to serve as members of the Parents Advisory Council on Youth Drug Abuse: Robert L. Maginnis, of Virginia (two-year term); June Martin Milam, of Mississippi (Representative of a Non-Profit Organization) (three-year term).

DESIGNATING OCTOBER 15, 1999, AS "NATIONAL MAMMOGRAPHY DAY"

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that the Senate now proceed to the immediate consideration of S. Res. 179, designating October 15, 1999, as "National Mammography Day."

The PRESIDING OFFICER. The clerk will report the resolution by title.

The legislative clerk read as follows:

A resolution (S. Res. 179) designating October 15, 1999, as "National Mammography Day."

There being no objection, the Senate proceeded to consider the resolution.

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that the resolution and preamble be agreed to, en bloc, the motion to reconsider be laid upon the table, and that any statements relating thereto be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution (S. Res. 179) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

S. RES. 179

Whereas according to the American Cancer Society, in 1999, 175,000 women will be diagnosed with breast cancer and 43,300 women will die from this disease;

Whereas in the decade of the 1990's, it is estimated that about 2,000,000 women will be diagnosed with breast cancer, resulting in nearly 500,000 deaths;

Whereas the risk of breast cancer increases with age, with a woman at age 70 years having twice as much of a chance of developing the disease as a woman at age 50 years;

Whereas at least 80 percent of the women who get breast cancer have no family history of the disease;

Whereas mammograms, when operated professionally at a certified facility, can provide a safe and quick diagnosis;

Whereas experts agree that mammography is the best method of early detection of breast cancer, and early detection is the key to saving lives;

Whereas mammograms can reveal the presence of small cancers up to 2 years or more before a regular clinical breast examination or breast self-examination, reducing mortality by more than 30 percent; and

Whereas the 5-year survival rate for localized breast cancer is currently 97 percent: Now, therefore, be it

Resolved, That the Senate—

(1) designates October 15, 1999, as "National Mammography Day"; and

(2) requests that the President issue a proclamation calling upon the people of the United States to observe such day with appropriate programs and activities.

EXECUTIVE CALENDAR

Mr. SMITH of New Hampshire. Mr. President, in executive session, I ask unanimous consent that the Agriculture Committee be discharged from further consideration of the following nomination; and further, the Senate proceed to its immediate consideration:

Andrew Fish, to be Assistant Secretary of Agriculture.

I further ask unanimous consent that the Senate proceed, en bloc, to the following nominations on the calendar:

Nos. 236, 250, 251, and 252.

Finally, I ask unanimous consent that the nominations be confirmed, the motions to reconsider be laid upon the table, that any statements relating to the nominations be printed in the RECORD, and the President be immediately notified of the Senate's action.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations considered and confirmed en bloc are as follows:

DEPARTMENT OF AGRICULTURE

Andrew C. Fish, of Vermont, to be an Assistant Secretary of Agriculture.

DEPARTMENT OF THE TREASURY

John D. Hawke, Jr., of the District of Columbia, to be Comptroller of the Currency for a term of five years.

DEPARTMENT OF JUSTICE

Robert Raben, of Florida, to be an Assistant Attorney General.

Robert S. Mueller, III, of California, to be United States Attorney for the Northern District of California for a term of four years.

John Hollingsworth Sinclair, of Vermont, to be United States Marshal for the District of Vermont for the term of four years.

ORDERS FOR FRIDAY, OCTOBER 8, 1999

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that when the Senate completes its business today, it adjourn until the hour of 9:30 a.m. on Friday, October 8.

I further ask unanimous consent that on Friday, immediately following the prayer, the Journal of the proceedings be approved to date, the morning hour be deemed to have expired, the time for the two leaders be reserved for their use later in the day, and the Senate then proceed to executive session for consideration of the Comprehensive Nuclear Test Ban Treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT FILING DEADLINE

Mr. SMITH of New Hampshire. Mr. President, in executive session, I ask unanimous consent that the deadline for amendments to be filed at the desk on the Nuclear Test Ban Treaty be 9:45 a.m. on Tuesday, October 12.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS CONSENT AGREE- MENT—AGRICULTURE APPROPRIATIONS CONFERENCE REPORT

Mr. SMITH of New Hampshire. Mr. President, I ask unanimous consent that debate resume on the Agriculture appropriations conference report at 4:30

p.m. on Tuesday, October 12, and the time be equally divided between the two leaders.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. SMITH of New Hampshire. Mr. President, for the information of all Senators, the Senate will begin consideration of the Nuclear Test Ban Treaty at 9:30 a.m. on Friday. By previous consent, debate time is limited to 14 hours equally divided between the two leaders. Debate on the treaty is expected to take place throughout the day tomorrow and will resume at 9:30 a.m. on Tuesday.

As a reminder, cloture was filed on the conference report to accompany the Agriculture appropriations bill today.

By a previous consent, the Senate will proceed to the cloture vote Tuesday, October 12, at 5:30 p.m. It is hoped that the vote regarding the Nuclear Test Ban Treaty can be stacked to follow that 5:30 vote. Therefore, the next rollcall vote will occur at 5:30 p.m. on Tuesday, October 12.

ADJOURNMENT UNTIL 9:30 A.M.
TOMORROW

Mr. SMITH of New Hampshire. Mr. President, if there is no further business to come before the Senate, I now ask unanimous consent that the Senate stand in adjournment under the previous order.

There being no objection, the Senate, at 8:15 p.m., adjourned until Friday, October 8, 1999, at 9:30 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate October 7, 1999:

DEPARTMENT OF THE TREASURY

JOHN D. HAWKE, JR., OF THE DISTRICT OF COLUMBIA, TO BE COMPTROLLER OF THE CURRENCY FOR A TERM OF FIVE YEARS.

DEPARTMENT OF AGRICULTURE

ANDREW C. FISH, OF VERMONT, TO BE AN ASSISTANT SECRETARY OF AGRICULTURE.

THE ABOVE NOMINATIONS WERE APPROVED SUBJECT TO THE NOMINEES' COMMITMENT TO RESPOND TO REQUESTS TO APPEAR AND TESTIFY BEFORE ANY DULY CONSTITUTED COMMITTEE OF THE SENATE.

DEPARTMENT OF JUSTICE

ROBERT RABEN, OF FLORIDA, TO BE AN ASSISTANT ATTORNEY GENERAL.

ROBERT S. MUELLER, III, OF CALIFORNIA, TO BE UNITED STATES ATTORNEY FOR THE NORTHERN DISTRICT OF CALIFORNIA FOR A TERM OF FOUR YEARS.

JOHN HOLLINGSWORTH SINCLAIR, OF VERMONT, TO BE UNITED STATES MARSHAL FOR THE DISTRICT OF VERMONT FOR THE TERM OF FOUR YEARS.

EXTENSIONS OF REMARKS

HONORING RETIRING STAFF OF
THE ARCHITECT OF THE CAPITOL

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. HOYER. Mr. Speaker, on Friday, October 1, 1999, I celebrated a final day of work with twenty-seven members of the Architect of the Capitol staff from the House Office Buildings. Of the twenty-seven employees leaving us, eighteen are my constituents. These valued employees are retiring under a buyout program developed earlier this year by the Architect of the Capitol and approved by the House Administration Committee, of which I am the Ranking Member. The buyout program has provided excellent retirement opportunities, while at the same time creating new avenues of advancement for the staff of the Architect who continue with us.

The staffers retiring today have an average of twenty-nine years of service each, and together, they have provided 798 years of service! The Architect of the Capitol fields a work force that is indispensable to us, and often labors unnoticed in the shadows, or more aptly, in the basements and tunnels of these buildings. Like public employees everywhere, they do some of the toughest jobs under the most adverse conditions in the country. They do it always with smiles and friendly greetings, and a job well done. These employees were never looking to get rich and they do not do it for public acclaim. They do their jobs and they do them well because they know we all rely on them. Lyndon Johnson understood this. He said of public service "so much of what we achieve as people depends upon the caliber and the character of the civil service."

I would like to take this opportunity to say thank you on behalf of all my colleagues, both Democrat and Republican. Farewell to those employees leaving us today, we will miss them and we thank them for their contribution to our daily lives. They are: Lewis Bowles, Jr., John Callahan, Jr., Douglas Colbert, Ernest Cook, Margaret Donnelly, Lillie Drayton, Alvin Gayan, Hubert Gray, David Ingram, Solomon Landers, Earl Lemings, Carroll Lumpkins, Jr., Norman Lynch, James Mattingly, Luke Mattingly, William McWilliams, Bernard Merritt, Robert Merryman, Walter Montgomery, Allen Nichols, Talmadge Nowden, Anthony Pilkerton, James Quade, Robert Quade, Raymond Stager, George Stein, and Leonard Vanryswick.

"FIFTY YEARS OF SERVICE" TO
THE GREATER DUNDALK COM-
MUNITY

HON. ROBERT L. EHRlich, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. EHRlich. Mr. Speaker, on October 14, 1949, twenty-five members of the Dundalk community formed a new organization known as the Optimist Club of Dundalk, sponsored by the Optimist Club of Baltimore. They established their motto as "Friend of the Boy" and began to sponsor sports programs, oratorical contests, and archery programs in the schools to honor the male students that excelled in academics and athletics.

In 1950, The Dundalk Optimist Foundation, Inc. was formed to ensure the planned and approved programs were financially assured, and to plan for the construction of a building they could call their own. Through the years, the club grew in size and effectiveness. The club became a Century Club in 1969, and earned the District Achievement Award for the first time. Over the years, the programs began serving girls and the motto was changed to "Friends of Youth." In January of 1988, the Optimist Club membership voted to allow women to be eligible for membership, and the Club continued to expand and increase their outreach in the community. The dream of a building was realized in 1995, with the opening of their Clubhouse at 4528 Northpoint Boulevard in Dundalk.

Today, the Optimist Club of Dundalk, Inc. continues to provide wonderful opportunities for the community's youth to learn, grow, and excel both in academics and athletics. I commend this organization for these first fifty years of excellent and dedicated service, and I join in looking forward to the next fifty.

PROFILES OF SUCCESS HONORS

MR. ED DELCI

HON. ED PASTOR

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. PASTOR. Mr. Speaker, I rise before you today to pay tribute to an outstanding fellow Arizonan who is an exemplary role model for Arizona and the nation, Mr. Ed Delci.

Ed Delci is a committed and tenacious individual who recently received the Exemplary Leadership Award at Valley del Sol's Annual Profiles of Success Leadership Awards in Phoenix. Valle's award ceremony is the premiere Latino recognition event in Arizona each year that acknowledges Arizona's leaders and their contributions.

As an academic advisor at Arizona State University, Ed has dedicated himself to help-

ing young people succeed in their pursuits of higher education. He inspires young Hispanics to succeed in their studies, graduate from ASU and maintain an active involvement in their community. I believe he has positively impacted the graduate rate of Latinos at ASU.

He also has been the principal advisor of ASU's MEChA (Movimiento Estudiantil Chicanos de Aztlan) chapter for many years. Due to Ed's dedication, the group has become a vibrant and forceful organization that received the Student Organization of 1999 and Social Conscience of 1998 and 1999 awards. At ASU, he also is involved in the Cesar Chavez Leadership Institute for Youth and the ASU Concilio, a student-led council of Hispanic students.

But his work does not end off campus. A former Peace Corps volunteer, Ed is one of the hardest working Latino "activistas," or activist in Arizona who truly exemplifies the "servant leader" concept. Originally from Chandler, Ariz., he galvanized the community to fight against the city of Chandler for the unfair detainment of Mexican-American citizens by city police. In 1998, Ed organized the Chandler Coalition for Civil and Human Rights to help Chandler residents explore issues around immigration and to launch a lawsuit against the city government. He has also championed for issues significant to the Latino community as part of the Arizona Hispanic Community Forum. In addition, he works with the Arizona Friends of the United Farm Workers and Centro de Amistad in Guadalupe, Ariz.

Not only is Ed a tireless worker in education and civil rights issues, he spends many hours volunteering for voter registration and political campaigns. He leads by example, working hard in any type of activity that is needed, such as setting up sound systems, driving and talking to voters, walking door-to-door to obtain petition signatures, setting up tables and chairs and putting them away. He is not afraid of doing the "dirty work" when needed.

As you can see, Ed leads by example. He is truly an outstanding individual who deserves to be recognized. Therefore I ask you to please join me in thanking my friend Ed Delci and wishing him continued success.

TRIBUTE TO RICHARD MIZE, A
TRUE COMPETITOR

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. McINNIS. Mr. Speaker, it is with great pleasure that I take this moment to recognize a man who has proven himself as one of the most successful mountaineers of our time. This man, who is now 63, is still competing and winning. He is a dedicated individual whose hard work deserves to be honored.

● This "bullet" symbol identifies statements or insertions which are not spoken by a Member of the Senate on the floor.

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

Richard Mize has always had a love for skiing. At Western State College in Gunnison, Colorado he took advantage of every opportunity to go skiing. It paid off when he was awarded the 1956 Don Johnson Memorial trophy, which is given to the outstanding American skier in the NCAA cross country championships. He also became a two time, All-American cross country skier. Since college, Richard has gone on to accomplish feats that are equally, if not more, impressive. He competed in the World Biathlon Championship in 1958 and 1959. Also, in 1960 he earned a spot on the U.S. Olympic Biathlon Team, where he placed 21st in the inaugural year of the event in the Olympics. Since 1983, Richard Mize has competed on the Masters Circuit and, in every year since 1988 he has earned at least one first place finish in the U.S. Masters Division. In 1988, at the World and U.S. Championships in Lake Placid, New York he won the World Championship in the 20K freestyle and 10K classic races. As you can see, this man is a fierce competitor—his accolades however, do not stop there. Richard has won his age group seven times in the last nine years at the Tour of Anchorage 50K Freestyle competition.

Mr. Speaker, there are few people in our time that have accomplished so many amazing feats. Richard has done this and he has continued to do this well into his later years. So it is with this that I say congratulations to this man on his induction into the Mountaineer Sports Hall of Fame.

CELEBRATING THE LIFE OF
MURIEL DARLENE GIST WINGATE

HON. JULIAN C. DIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. DIXON. Mr. Speaker, today I want to recognize and celebrate the life of Muriel Darlene Gist Wingate, a wonderful and loving mother and grandmother, who for more than 25 years served with distinction as a loyal and outstanding assistant to internationally acclaimed Howard University Hospital oncologist and general surgeon Dr. LaSalle D. Leffall, Jr.

Muriel, or "Meme" as she was affectionately known to her family and many friends, passed away on Tuesday, June 8, 1999. Kind, patient, and always ready with a reassuring word, Muriel was the person to whom hundreds of Dr. Leffall's patients turned in times of difficulty. She was the glue that helped many of them hold sway while dealing with troubling medical diagnoses.

For the hundreds of residents and medical students who secured a coveted spot on Dr. Leffall's rotation, she was the surrogate mother, the woman who provided constant encouragement and assurance that with determination, perseverance, stamina, and the same trademark sense of humor which had endeared her to so many and helped her too during periods of difficulty, they would indeed make it through their medical school and/or surgical residency program. As a show of how much she was loved, many of the young doctors and medical students whom she supervised while working with Dr. Leffall, returned to

EXTENSIONS OF REMARKS

pay their respects at the service celebrating her life, which was held on Thursday, June 17, 1999, at Hemingway Memorial A.M.E. Church in Chapel Oaks, Maryland.

"Miss Wingate," as she was respectfully and fondly known to so many of Dr. Leffall's patients, was born in Washington, D.C., on November 11, 1941, to Ruby N. Gist and the late Sherwood Gist. She graduated from Fairmont Heights High School in 1959 and set course on a career in the field of health care. She loved to travel to exotic places, and often regaled others with stories about her adventures. She had a smile that simply illuminated the room, and an eternally optimistic outlook that would become an important and essential asset in her work with Dr. Leffall's patients.

Muriel Darlene Gist Wingate was beloved by many, but cherished most of all by her lovely daughters, Joy Arminta Diggs and Kelly Lynn Wingate, and granddaughter, Camille Nicole Wingate. Her untimely passing also leaves to mourn her loving mother, Mrs. Ruby N. Gist; three sisters: Shirley A. Courtney, Elaine T. Johnson, and Janiero L. Dougans; three brothers: Dennis, Milton, and Gregory, and a host of other relatives.

Mr. Speaker, to have the love, admiration, and respect of your family, friends, and colleagues, is, I believe the ultimate measure of success. Muriel Wingate was blessed with all of these. I am proud to have the occasion to celebrate her memory with my colleagues, and ask that you join me in extending our heartfelt condolences to her family, friends, and colleagues on the passing of a truly exceptional woman.

RECOGNIZING COMMANDER
ARTHUR J. OHANIAN

HON. JOHN S. TANNER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. TANNER. Mr. Speaker, I rise today to recognize Commander Arthur J. Ohanian, United States Navy. Commander Ohanian will retire after 20 years of distinguished and superior service to our country.

In his most recent position he served as the Manpower and Personnel analyst for the Programming, Planning and Development Branch, Chief of Naval Operations Staff. A P-3 Instructor Pilot, Commander Ohanian served in a number of leadership positions in the fleet, including the Commander Naval Education and Training Mobil Training Team. He also served in a number of different positions within squadrons deployed in the Mediterranean.

Commander Ohanian is the recipient of the Meritorious Service Medal, Navy Commendation Medal, and the Navy Achievement Medal.

Again, Mr. Speaker, I am proud to extend my best wishes to Commander Arthur J. Ohanian. May you continue the success you have enjoyed and thank you for your faithful service from a grateful Nation.

October 7, 1999

CONFERENCE REPORT ON H.R. 1906,
AGRICULTURE, RURAL DEVELOP-
MENT, FOOD AND DRUG ADMIN-
ISTRATION, AND RELATED
AGENCIES APPROPRIATIONS
ACT, 2000

SPEECH OF

HON. SAXBY CHAMBLISS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 1, 1999

Mr. CHAMBLISS. Mr. Speaker, I rise in support of H.R. 1906. H.R. 1906 contains funding for many vitally important programs in agriculture. This bill provides appropriations for those programs that were authorized in the 1996 farm bill. Furthermore, this bill provides important funding for the foundation of agriculture research. Continued research will provide answers that enable farmers to continue to improve efficiency in providing food for our table.

Specifically the bill includes funds for the National Center for Peanut Competitiveness, a program that establishes a broad-based research program directed toward assuring the competitiveness of U.S. peanuts in the world market. Also included is funding to allow the University of Georgia to research tomato spotted wilt virus, a plant virus that has become a major yield-limiting constraint on many important food crops in South Georgia. The bill also contains funds for peanut allergy collaborative research as well as onion research.

In addition, our farmers have once again faced another disastrous year. Farmers who were fortunate to have a crop are faced with the lowest prices in decades. Adverse weather conditions have resulted in another disaster. This bill also contains disaster assistance for farmers who have suffered yet another crop failure. My farmers cannot afford to wait any longer on relief.

Mr. Speaker, I am disappointed that dairy and sanction provisions were not included in the current appropriations bill. The funds appropriated in the bill will aid farmers in surviving another year of adverse weather conditions and low commodity. Peanut and tobacco farmers will all receive aid in the form of market assistance payments, market loss payments or direct payments. The bill also includes funds to replenish the step two cotton program. In addition fruit and vegetable growers along with dairy and livestock producers will receive assistance from this package and other essential measures that are critical to our producers.

This bill is not a cure all. However, it is imperative that we don't delay this funding any longer. I urge all my colleagues to support passage of conference report.

October 7, 1999

A SALUTE TO BOSTON LAW
SCHOOL

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

HON. WILLIAM D. DELAHUNT

OF MASSACHUSETTS

HON. MICHAEL E. CAPUANO

OF MASSACHUSETTS

HON. ROBERT C. SCOTT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. MARKEY. Mr. Speaker, My colleagues, Messrs. DELAHUNT, CAPUANO, SCOTT and I submit the following proclamation:

Whereas, Boston College Law School was officially founded on September 26, 1929, in the Lawyer's Building at 11 Beacon Street with a class of 22 students, one full-time faculty and three part-time faculty members.

Whereas, after spending nearly 25 years in downtown Boston, the Law School continued its march toward the Heights by joining the Boston College campus community in 1954 at St. Thomas More Hall, under the leadership of the Rev. William J. Kenealy, S.J., the Dean who was charged with building a law school for a new era.

Whereas, it was Rev. Robert F. Drinan, S.J., the sixth dean of the Law School and later member of the United States House of Representatives from Massachusetts, whose foresight and indefatigable spirit brought about the Law School's rise in statute and transformation from a regional to a highly-respected national law school.

Whereas, Dean Richard G. Huber built upon these traditions in expanding the law school faculty and program, and in 1975 secured the eventual move of the Law School to its current site on the Newton campus, providing urgently needed space for the educational component as well as for students and faculty offices and meeting facilities.

Whereas, under the leadership of Deans Daniel R. Coquillette and Aviam Soifer, the University embarked on a campaign to build a new physical plant for the Law School on its present site, which facility would reflect the breadth and stature of the law school's programs, and which would allow for the full integration of technology in legal teaching and research.

Whereas, we also celebrate a revered member of the Law School faculty, Professor Emil Slizewski, who this year retires from his teaching responsibilities at Boston College Law School after 56 years of distinguished service to the Law School and the legal profession.

Whereas, on October 8, 1999, members of the Law School and the Boston College communities join together in celebration of an institution which has launched the careers of illustrious government officials and leaders in the profession, and which has inspired an unwavering commitment to social justice among its esteemed graduates. After 70 years of academic excellence, students, administrators, alumni and faculty join together today to celebrate the opening of a new academic wing at Boston College Law School.

Now, therefore, I, Congressman Edward J. Markey, hereby request that my colleagues in the United States House of Representatives join me in saluting Boston College Law School as it celebrates 70 years of excellence in legal education.

EXTENSIONS OF REMARKS

PROFILES OF SUCCESS HONORS
MS. LORRAINE LEE

HON. ED PASTOR

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. PASTOR. Mr. Speaker, I rise before you today to draw attention to the accomplishments of a woman who has long been an activist for all Arizonans and who has is at the ready when it comes to championing for the Latino community and the issues that affect them. The woman of whom I speak is Ms. Lorraine Lee, a good friend and an invaluable community leader in southern Arizona.

Ms. Lee has been the vice president of Chicanos Por La Causa in Tucson for the past 15 years. She is a much esteemed leader who has worked diligently on empowerment, self-sufficiency and goal attainment for not only members of the Tucson community but, Chicanos nationwide.

Recently, Lorraine was recognized at Valle del Sol's Annual Profiles of Success Leadership Awards. Valle's award ceremony is the premiere Latino recognition event in Arizona each year that acknowledges Arizona's leaders and their contributions.

Lorraine received the Special Recognition Award for her efforts in spearheading the anti-Unz initiative in southeastern Arizona and nationwide. This initiative is named after the man who started the movement against bilingual education in California. In Tucson, Unz is trying to bring the same movement to Arizona. But in Tucson, the birthplace of the first official bilingual education program, Lorraine has initiated efforts to raise social awareness in ethnically diverse segments of the community. She is currently working with several community representatives in organizing a coalition to ensure that the Unz initiative does not appear on this year's upcoming ballot. This effort consists of educating citizens from the public and private sector, including politicians and youth, about the importance of bilingual education programs.

But beyond the issue of bilingual education, Ms. Lee has been a well-respected activist in Arizona who does not shy from leadership roles and is ready to take on new challenges to strengthen the Latino community.

That is why I ask you to join me in paying tribute to my friend Lorraine Lee and in wishing her great success.

QUALITY CARE FOR THE
UNINSURED ACT OF 1999

SPEECH OF

HON. RON PAUL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 6, 1999

Mr. PAUL. Mr. Speaker, as an MD, I know that when I advise on medical legislation I may be tempted to allow my emotional experience as a physician to influence my views, but nevertheless I am acting the role of legislator and politician. The MD degree grants no wisdom as to the correct solution to our managed

24561

care mess. The most efficient manner to deliver medical services, as it is with all goods and other services, is determined by the degree the market is allowed to operate. Economic principles determine efficiency of markets, even the medical care market; not our emotional experiences dealing with managed care.

Contrary to the claims of many advocates of increased government regulation of health care, the problems with the health care system do not represent market failure, rather they represent the failure of government policies which have destroyed the health care market. In today's system, it appears on the surface that the interest of the patient is in conflict with rights of the insurance companies and the Health Maintenance Organizations (HMOs). In a free market this cannot happen. Everyone's rights are equal and agreements on delivering services of any kind are entered into voluntarily, thus satisfying both sides. Only true competition assures that the consumer gets the best deal at the best price possible, by putting pressure on the providers. Once one side is given a legislative advantage, in an artificial system, as it is in managed care, trying to balance government dictated advantages between patient and HMOs is impossible. The differences cannot be reconciled by more government mandates which will only makes the problem worse. Because we are trying to patch up an unworkable system, the impasse in Congress should not be a surprise.

No one can take a back seat to me regarding the disdain I hold for the HMOs' role in managed care. This entire unnecessary level of corporatism that rakes off profits and undermines care is a creature of government interference in health care. These non-market institutions and government could have only gained control over medical care through a collusion among organized medicine, politicians, and the HMO profiteers, in an effort to provide universal health care. No one suggests that we should have "universal" food, housing, TV, computer and automobile programs and yet many of the "poor" do much better getting these services through the marketplace as prices are driven down through competition.

We all should become suspicious when it is declared we need a new "Bill of Rights" such as a Taxpayer's Bill of Rights, or now a Patient's Bill of Rights. Why don't more Members ask why the original Bill of Rights is not adequate in protecting all rights and enabling the market to provide all services. If over the last fifty years we had a lot more respect for property rights, voluntary contracts, state jurisdiction and respect for free markets, we would not have the mess we're facing today in providing medical care.

The power of special interests influencing government policy has brought us this managed care monster. If we pursue the course of more government management—in an effort to balance things—we're destined to make the problem much worse. If government mismanagement, in an area that the government should not be managing at all, is the problem, another level of bureaucracy—no matter how well intended—cannot be helpful. The law of unintended consequences will prevail and the

principle of government control over providing a service will be further entrenched in the nation's psyche. The choice in actuality is government provided medical care and it's inevitable mismanagement or medical care provided by a market economy.

Partial government involvement is not possible. It inevitably leads to total government control. Plans for all the so-called Patient's Bill of Rights are a 100% endorsement of the principle of government management and will greatly expand government involvement, even if the intention is to limit government management of the health care system to the extent "necessary" to curtail the abuses of the HMOs. The Patients' Bill of Rights concept is based on the same principles that have given us the mess we have today. Doctors are unhappy, HMOs are being attacked for the wrong reasons, and the patients have become a political football over which all sides demagogue.

The problems started early on when the medical profession, combined with tax code provisions making it more advantageous for individuals to obtain first-dollar health care coverage from third-parties rather than pay for health care services out of their own pockets, influenced the insurance industry into paying for medical services instead of sticking with the insurance principle of paying for major illnesses and accidents for which actuarial estimates could be made. A younger, healthier and growing population was easily able to afford the fees required to generously care for the sick. Doctors, patients and insurance companies all loved the benefits until the generous third-party payment system was discovered to be closer to a Ponzi scheme than true insurance. The elderly started living longer, and medical care became more sophisticated, demands because benefits were generous and insurance costs were moderate until the demographics changed with fewer young people working to accommodate a growing elderly population—just as we see the problem developing with Social Security. At the same time governments at all levels become much more involved in mandating health care for more and more groups.

Even with the distortions introduced by the tax code, the markets could have still sorted this all out, but in the 1960s government entered the process and applied post office principles to the delivery of medical care with predictable results. The more the government got involved the greater the distortion. Initially there was little resistance since payments were generous and services were rarely restricted. Doctors liked being paid adequately for services that in the past were done at discount or for free. Medical centers, always willing to receive charity patients for teaching purposes in the past liked this newfound largesse by being paid by the government for their services. This in itself added huge costs to the nation's medical bill and the incentive for patients to economize was eroded. Stories of emergency room abuse are notorious since "no one can be turned away."

Artificial and generous payments of any service, especially medical, produces a well-known cycle. The increase benefits at little or no cost to the patient leads to an increase in demand and removes the incentive to econo-

mize. Higher demands raises prices for doctor fees, labs, and hospitals; and as long as the payments are high the patients and doctors don't complain. Then it is discovered the insurance companies, HMOs, and government can't afford to pay the bills and demand price controls. Thus, third-party payments leads to rationing of care, limiting choice of doctors, deciding on lab tests, length of stay in the hospital, and choosing the particular disease and conditions that can be treated as HMOs and the government, who are the payers, start making key medical decisions. Because HMOs make mistakes and their budgets are limited however, doesn't justify introducing the notion that politicians are better able to make these decisions than the HMOs. Forcing HMOs and insurance companies to do as the politicians say regardless of the insurance policy agreed upon will lead to higher costs, less availability of services and calls for another round of government intervention.

For anyone understanding economics, the results are predictable: Quality of medical care will decline, services will be hard to find, and the three groups, patients, doctors and HMOs will blame each other for the problems, pitting patients against HMOs and government, doctors against the HMOs, the HMOs against the patient, the HMOs against the doctor and the result will be the destruction of the cherished doctor-patient relationship. That's where we are today and unless we recognize the nature of the problem Congress will make things worse. More government meddling surely will not help.

Of course, in a truly free market, HMOs and pre-paid care could and would exist—there would be no prohibition against it. The Kaiser system was not exactly a creature of the government as is the current unnatural HMO-government-created chaos we have today. The current HMO mess is a result of our government interference through the ERISA laws, tax laws, labor laws, and the incentive by many in this country to socialize medicine "American style," that is the inclusion of a corporate level of management to rake off profits while draining care from the patients. The more government assumed the role of paying for services the more pressure there has been to managed care.

The contest now, unfortunately, is not between free market health care and nationalized health care but rather between those who believe they speak for the patient and those believing they must protect the rights of corporations to manage their affairs as prudently as possible. Since the system is artificial there is no right side of this argument and only political forces between the special interests are at work. This is the fundamental reason why a resolution that is fair to both sides has been so difficult. Only the free market protects the rights of all persons involved and it is only this system that can provide the best care for the greatest number. Equality in medical care services can be achieved only by lowering standards for everyone. Veterans hospital and Medicaid patients have notoriously suffered from poor care compared to private patients, yet, rather than debating introducing consumer control and competition into those programs, we're debating how fast to move toward a system where the quality of medicine for everyone will be achieved at the lowest standards.

Since the problem with our medical system has not been correctly identified in Washington the odds of any benefits coming from the current debates are remote. It looks like we will make things worse by politicians believing they can manage care better than the HMO's when both sides are incapable of such a feat.

Excessive litigation has significantly contributed to the ongoing medical care crisis. Greedy trial lawyers are certainly part of the problem but there is more to it than that. Our legislative bodies throughout the country are greatly influenced by trial lawyers and this has been significant. But nevertheless people do sue, and juries make awards that qualify as "cruel and unusual punishment" for some who were barely involved in the care of the patient now suing. The welfare ethic of "something for nothing" developed over the past 30 to 40 years has played a role in this serious problem. This has allowed judges and juries to sympathize with unfortunate outcomes not related to malpractice and to place the responsibility on those most able to pay rather than on the ones most responsible. This distorted view of dispensing justice must someday be addressed or it will continue to contribute to the deterioration of medical care. Difficult medical cases will not be undertaken if outcome is the only determining factor in deciding lawsuits. Federal legislation prohibiting state tort law reform cannot be the answer. Certainly contractual arrangements between patients and doctors allowing specified damage clauses and agreeing on arbitration panels would be a big help. State-level "loser pays" laws, which discourage frivolous and nuisance lawsuits, would also be a help.

In addition to a welfare mentality many have developed a lottery jackpot mentality and hope for a big win through a "lucky" lawsuit. Fraudulent lawsuits against insurance companies now are an epidemic, with individuals feigning injuries in order to receive compensation. To find moral solutions to our problems in a nation devoid of moral standards is difficult. But the litigation epidemic could be ended if we accepted the principle of the right of contract. Doctors and hospitals could sign agreements with patients to settle complaints before they happen. Limits could be set and arbitration boards could be agreed upon prior to the fact. Limiting liability to actual negligence was once automatically accepted by our society and only recently has this changed to receiving huge awards for pain and suffering, emotional distress and huge punitive damages unrelated to actual malpractice or negligence. Legalizing contracts between patients and doctors and hospitals would be a big help in keeping down the defensive medical costs that fuel the legal cost of medical care.

Because the market in medicine has been grossly distorted by government and artificially managed care, it is the only industry where computer technology adds to the cost of the service instead of lowering it as it does in every other industry. Managed care cannot work. Government management of the computer industry was not required to produce great services at great prices for the masses of people. Whether it is services in the computer industry or health care all services are best delivered in the economy ruled by market

forces, voluntary contracts and the absence of government interference.

Mixing the concept of rights with the delivery of services is dangerous. The whole notion that patient's "rights" can be enhanced by more edicts by the federal government is preposterous. Providing free medication to one segment of the population for political gain without mentioning the cost is passed on to another segment is dishonest. Besides, it only compounds the problem, further separating medical services from any market force and yielding to the force of the tax man and the bureaucrat. No place in history have we seen medical care standards improve with nationalizing its delivery system. Yet, the only debate here in Washington is how fast should we proceed with the government takeover. People have no more right to medical care than they have a right to steal your car because they are in need of it. If there was no evidence that freedom did not enhance everyone's well being I could understand the desire to help others through coercive means. But delivering medical care through government coercion means not only diminishing the quality of care, it undermines the principles of liberty. Fortunately, a system that strives to provide maximum freedom for its citizens, also supports the highest achievable standard of living for the greatest number, and that includes the best medical care.

Instead of the continual demagoguery of the issue for political benefits on both sides of the debate, we ought to consider getting rid of the laws that created this medical management crisis.

The ERISA laws requiring businesses to provide particular programs for their employees should be repealed. The tax codes should give equal tax treatment to everyone whether working for a large corporation, small business, or is self employed. Standards should be set by insurance companies, doctors, patients, and HMOs working out differences through voluntary contracts. For years it was known that some insurance policies excluded certain care and this was known up front and was considered an acceptable provision since it allowed certain patients to receive discounts. The federal government should defer to state governments to deal with the litigation crisis and the need for contract legislation between patients and medical providers. Health care providers should be free to combine their efforts to negotiate effectively with HMOs and insurance companies without running afoul of federal anti-trust laws—or being subject to regulation by the National Labor Relations Board (NLRB). Congress should also remove all federally-imposed roadblocks to making pharmaceuticals available to physicians and patients. Government regulations are a major reason why many Americans find it difficult to afford prescription medicines. It is time to end the days when Americans suffer because the Food and Drug Administration (FDA) prevented them from getting access to medicines that were available and affordable in other parts of the world!

The most important thing Congress can do is to get market forces operating immediately by making Medical Savings Accounts (MSAs) generously available to everyone desiring one. Patient motivation to save and shop would be

a major force to reduce cost, as physicians would once again negotiate fees downward with patients—unlike today where the government reimbursement is never too high and hospital and MD bills are always at maximum levels allowed. MSAs would help satisfy the American's people's desire to control their own health care and provide incentives for consumers to take more responsibility for their care.

There is nothing wrong with charity hospitals and possibly the churches once again providing care for the needy rather than through government paid programs which only maximizes costs. States can continue to introduce competition by allowing various trained individuals to provide the services that once were only provided by licensed MDs. We don't have to continue down the path of socialized medical care, especially in America where free markets have provided so much for so many. We should have more faith in freedom and more fear of the politician and bureaucrat who think all can be made well by simply passing a Patient's Bill of Rights.

CONGRATULATING PROFESSOR
KAY KAUFMAN SHELEMAY

HON. MICHAEL E. CAPUANO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. CAPUANO. Mr. Speaker, I rise today to extend my congratulations to Professor Kay Kaufman Shelemay. Yesterday, Professor Shelemay was appointed to the Board of Trustees of the American Folklife Center at the Library of Congress; a position she had long sought and no doubt deserved.

Professor Shelemay is profoundly accomplished in the arts. Most of her life has been dedicated to the study and education of music and ethnomusicology. The distinguished author of several publications reflecting the relationship between ethnicity and music, Professor Shelemay has recently served as president of the Society for Ethnomusicology. On two occasions, she has served as a fellow for the National Endowment for Humanities. She was also chairwoman of the Fromm Music Foundation, and she has taught music at several prestigious universities including Harvard, Columbia, and NYU.

Professor Shelemay began her association with AFC as a panelist during 1987 and 1988 in the midst of her burgeoning career. Her involvement with the AFC has spanned over a decade, hence, overseeing operations at the American Folklife Center will come easily for her.

With her background, experience, and passion for ethnomusicology and the folk arts, I am certain Professor Shelemay will be a valuable addition to AFC's Board of Trustees as it pursues programs in the areas of multicultural education, preservation of national archives, and documentation of American Folklife and music.

I wish Professor Shelemay the best of luck in her new role at the American Folklife Center.

RECOGNITION OF OPPORTUNITY, INC.: AN ORGANIZATION THAT LIVES UP TO ITS NAME

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. PORTER. Mr. Speaker, I am pleased to rise today to recognize Opportunity, Inc., an outstanding organization located in Highland Park, Illinois. This is truly a remarkable enterprise and a magnificent example of the initiative needed to help people move welfare to work and a better life.

Opportunity, Inc. is a unique, not-for-profit contract manufacturer of single-use medical products that has been registered with the FDA since 1977, and that employs persons with developmental physical and/or emotional disabilities. Founded in 1976 by local construction executive John Cornell, who still serves as an Emeritus member of the Board of Directors, the company will hold its annual "Handicapable Leadership" Award Dinner in Chicago on Tuesday, October 16, 1999. The keynote speaker will be Ted Kennedy, Jr., a nationally known spokesperson and a leading advocate for the civil rights of people with disabilities.

The company's mission is twofold: (1) to provide a mainstream plant environment in which Handicapable people can work and earn a paycheck as well as the dignity that comes from being employed productively on a full-time basis; and (2) to provide its private sector customers with the best possible quality, price and service.

As everyone understands, budget constraints compel us to look for ways to effectively address important needs without government subsidies, and Opportunity, Inc. is leading the way in this regard. A model of community response and innovation, the company demonstrates how competitive and productive handicapable employees can be. Opportunity, Inc. built and continues to operate the nation's only not-for-profit, certified class 100,000 "clean rooms" for medical and surgical packaging.

When I visited Opportunity, Inc., however, I learned that its business success, while impressive, pales in significance to the positive contributions it has made to its employees' lives. I experienced firsthand how proud, dedicated and competitive they are. As one man said to me, "Congressman, all we need is a fair chance to compete. That's what we get there at Opportunity and just look at the results!" Clearly, Opportunity, Inc. is an organization that lives up to its name.

Mr. Speaker, I am proud to represent a congressional district that includes enterprises of this caliber. It is my pleasure to salute the employees, management and directors of Opportunity, Inc., and the Grand Marshall of Ceremonies John Cortesi on the occasion of their annual dinner, and to extend my personal congratulations to Sage Products and Allegiance Healthcare, who are the recipient of this year's Handicapable Leadership Award.

CONFERENCE REPORT ON H.R. 2606,
FOREIGN OPERATIONS, EXPORT
FINANCING, AND RELATED PRO-
GRAMS APPROPRIATIONS ACT,
2000

SPEECH OF

HON. ROBERT WEXLER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 5, 1999

Mr. WEXLER. Mr. Speaker, I rise in strong opposition to the Foreign Operations conference report.

America loses when we fail to properly fund our foreign operations budget. The report we are considering is almost \$2 billion below the level requested by President Clinton and \$1 billion below last year's budget.

Without adequate funding for our international affairs operations, we will not be equipped to protect the security and the prosperity of Americans at home and abroad, and we risk losing our status as the world's remaining superpower.

American foreign policy should not embrace the short-sighted views of isolationists. Instead, we should meet the myriad of challenges facing the global community. America is at its best when we promote our values abroad by supporting struggling democracies and their efforts to make the transition to market economies.

Mr. Speaker, this conference report provides no Wye Aid funding which we promised our partners in the Middle East. It fails to provide adequate funding for emerging democracies in Africa and fails to assist our neighbors in the Western Hemisphere. It also ignores the needs of Asian countries recovering from financial devastation.

But the greatest disgrace of this conference report is our failure to lend a helping hand to the world's children. The children of Sierra Leone, for example, who have suffered the violent amputation of their limbs, sexual abuse, displacement from their homes, and the ravaging to their innocence and youth, lose yet again when we cut our foreign aid and humanitarian assistance. Programs to provide them food and medical intervention and to return them to their homes and neighborhoods can never succeed. And yet, what greater humanitarian purpose can our foreign policy serve than to bring prosthetic arms and hands to babies whose entire lives lie ahead of them?

I urge my colleagues to join me today and defeat this poorly funded conference report. America's front line of foreign policy should not be shortchanged.

RECOGNIZING BISHOP CHARLES
BUSWELL

HON. SCOTT McINNIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. McINNIS. Mr. Speaker, I would like to take a moment to recognize a man whose dedication to his faith and community is unpar-

alleled. Bishop Charles Buswell served selflessly as a priest for 60 years and this year marks 40 years since he was ordained bishop.

Bishop Buswell was born in Kingfisher, Oklahoma in July 1939. There, he served in a variety of positions in the diocese and also founded a parish, Christ the King. In September 1959, he was ordained Bishop of Pueblo. It was at this point in time he was elected to the Second Vatican Council in Rome, which he called the most significant event of his lifetime. There, during his service from 1962 to 1965, he was one of 2,500 Catholic bishops who discussed possible liturgical changes with Pope John XXIII. For Bishop Buswell it was an exciting time in which he felt he could truly make a difference. He is now one of only thirty living American bishops who attended the Council.

Bishop Buswell took on tough issues of the time. He led the way on issues such as antiwar, racism, just wages, and women's causes both in and out of the Church. Today, long after his 1979 resignation, he is regarded as a prominent clerical figure in the peace movement.

It is with this, Mr. Speaker, that I say thank you to a man who had a truly remarkable career of giving his time to help others. I would also like to recognize the 40th anniversary of his consecration as a bishop. The people of Colorado and every corner of the United States owe a debt of gratitude to this man who has fought so hard to make a difference.

TRIBUTE TO LEWIS E. PLATT

HON. ANNA G. ESHOO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Ms. ESHOO. Mr. Speaker, I rise today to honor Lewis E. Platt, Chairman of the Board, President and Chief Executive Officer of Hewlett-Packard who is retiring after 33 years of service to the Company.

Hewlett-Packard has flourished under Lew Platt's leadership. The Company, based in the heart of Silicon Valley, Palo Alto, has increased its revenues every year since Mr. Platt was elected President and Chief Executive Officer.

But Lew Platt's success cannot be measured by sales figures only. Lew Platt took it upon himself to create a workplace second-to-none in its acceptance of women and minorities. Because of his passion and commitment to create a level playing field for all his employees, he built upon the established "HP Way," to the much-celebrated corporate values instituted by the Company's founders Bill Hewlett and David Packard. And because of Lew Platt's leadership, Hewlett-Packard is consistently among the top ten of Fortune's Best Companies to Work For in America.

Mr. Platt has focused Hewlett Packard's corporate giving on three objectives: significantly improving K-12 science and math achievement, increasing the number of women and minorities studying and teaching science and mathematics, and ensuring that all children are ready to learn when they begin school. Under Mr. Platt's guidance, the Company has donated approximately \$55 million each year to education.

Lew Platt's leadership has extended well beyond Hewlett-Packard. In 1995, he was appointed by President Clinton to the Advisory Committee on Trade Policy Negotiations. He has served as Chairman of one of its three task forces, the World Trade Organization Task Force. He also serves on the Cornell University Council and the Wharton School Board of Overseers.

Lew Platt has also exemplified the best in leadership in his own community—Silicon Valley. In 1996, he was elected Co-Chair of the Board of Directors of Joint Venture: Silicon Valley, an organization formed to strengthen our local economy and help make our region a better place to live for everyone. Under his leadership, Joint Venture: Silicon Valley has launched a number of initiatives that bring people together from business, government, and education to identify and act on regional issues affecting our economic vitality and our quality of life. He has also served as a member of the California Business Roundtable.

Mr. Platt's leadership in California's 14th Congressional District and Silicon Valley which I'm so privileged to represent is a model for all to follow. Through his extraordinary leadership of H-P and the industry, Lew Platt has contributed mightily to our community and our country.

I ask my colleagues to join me in saluting Lew Platt for who he is and all he has done. We are indeed a better country and a better people because of this man.

CONGRATULATING MR. LEWIS E.
PLATT

HON. ZOE LOFGREN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. LOFGREN. Mr. Speaker, today I wish to congratulate Mr. Lewis E. Platt, Chairman of the Board, President, and Chief Executive Officer of the Hewlett-Packard Company, who is retiring after six years as Chairman of the Board and 33 years of service to the Hewlett-Packard Company. A friend and a neighbor in Silicon Valley from the beginning of his tenure with HP, Lew Platt has understood the importance both of giving back to the community that has given so much to his company and of improving the cities in which he lives and does business. In 1996 Mr. Platt was elected Co-chair, along with San Jose Mayor Ron Gonzales, of the Joint Venture Silicon Valley (Calif.) Network, an organization formed in 1991 to strengthen the local economy and make the area a better place in which to live.

Yet by far, Mr. Platt's greatest contributions to my constituents in Silicon Valley and to the nation as a whole have come through the educational programs he has established and sponsored through Hewlett-Packard, aiding students at all levels of school. Lewis Platt has focused HP's national efforts around three stated company goals: significantly improving K-12 science and math achievements, increasing the number of women and minorities studying and teaching science and mathematics, and ensuring that all children are ready to learn when they begin school.

These platitudes might ring hollow were they not backed by substantive action, but under Mr. Platt's guidance Hewlett-Packard has established a tremendous philanthropy program in order to truly provide help to students of all ages. Because of Lew Platt's efforts and commitment, HP currently donates approximately \$55 million each year to education, with \$8 million going towards K-12 education. In my district, for instance, Hewlett-Packard has helped sponsor the San Jose Diversity in Education Partnership with San Jose State University, East Side Union High School District and Alum Rock Elementary School District. This initiative aims to increase the number of students who are prepared for college and interested in careers in engineering, and has worked with HP's Email Mentor Program, another initiative begun under Lew Platt, encouraging 5th through 12th graders to remain interested in math and science.

Mr. Platt has also helped establish a partnership between Hewlett-Packard and Independence, Silver Creek, and Overfelt High Schools in San Jose to encourage students to stay in school and continue their education after graduation from high school. The benefits of Lew Platt's belief in education, however, stretch far beyond the neighborhood of Hewlett-Packard's corporate headquarters in California. Under the guidance of Mr. Platt, Hewlett-Packard has undertaken and funded similar educational initiatives in Washington, Oregon, Colorado, Idaho, Georgia, Maryland, Delaware, and Massachusetts.

These broad educational efforts, which have meant so much to my constituents and to students across the country, have in many ways been a direct result of Lew Platt's vision, and for this all people who care about the education of our children owe him a debt of gratitude. Wrote Mr. Platt in an open company letter, "At HP, we recognize that supporting education is one of the most important things we can do to realize success for future generations, for our company, and for society as a whole." Lew Platt's corporate achievements at the Hewlett-Packard Company will be long remembered, the successes of the children he helped educate through HP will remain as an even stronger living reminder of the fine work he has done.

TRIBUTE TO MICHAEL CATANEO

HON. ROBERT L. EHRLICH, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. EHRLICH. Mr. Speaker, recently the City of Baltimore lost a beloved and respected gentleman, Mr. Michael Cataneo. "Big Mike" as he was widely known throughout his long career on the docks of Baltimore owned Cataneo Line Service, truly an example of the American Dream. His family immigrated from Italy, built the business from scratch and became a leading force in the development of the Port of Baltimore.

Those who knew "Big Mike" often referred to him as the walking encyclopedia of the Baltimore waterfront—not only could he relate every facet about every ship that had ever

been in the port of Baltimore, but he could provide one with all of his information, be it good or bad, about every person who worked on the waterfront, and all the politicians downtown, as well!

"Big Mike" will be remembered for his hard work, compassion, and sense of humor; for being a respected business leader; and for his contributions on behalf of the working men and women of the Port of Baltimore. The priest who presided at his funeral characterized Mike as a person who related to the little guy. His treated everyone with the same respect others showed him. Mike would help a needy person because he wanted that person to then be able to help others.

He and his lovely wife, Annie, were residents of Lutherville, Maryland and the Second Congressional District of Maryland for 38 years, and it has been my honor to represent them in Congress.

HONORING IRENE HANSON

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. KILDEE. Mr. Speaker, I rise today to recognize the accomplishments of a woman, who, for nearly 40 years, has worked to improve the quality of life for our citizens. On Tuesday, October 12, members of Flint's International Institute will gather to present to Mrs. Irene Hanson, its prestigious Golden Door Award, given annually to an individual who has made a positive impact on the greater Flint community and the Institute itself.

Born in December of 1920, in Breslau, Germany, what is now Wroclaw, Poland, Irene spent her early years as an apprentice in a wholesale paper company, and upon completing her apprenticeship, remained with the company as its bookkeeper.

After the war, Irene and her family, including her mother and two daughters lived in Hanover, West Germany, until the Displaced Persons Act brought them to Flint in 1952, under the sponsorship of Calvary Lutheran Church. Soon after, a third child, a son, was born.

After settling in Flint, Irene sought out and forged a relationship with the International Institute, a relationship that has continued to this day. She has served a great number of roles, including teacher, presenter, activities chair, and board member. It is in each of these positions that she has excelled in her efforts to enhance the lives of those she comes into contact with. Other positions followed, such as in 1962, where she worked as a receptionist, bookkeeper, and fitter at Flint Limb and Brace Company. In 1964, Irene began teaching German for Mott Adult Education, which she still continued to do.

In addition to her work with the International Institute, Irene has also been involved and remains active with the German American National Congress, the American Association of Teachers of German, and the St. Cecilia Society. She has also been an avid supporter of the Flint Institute of Music, Flint Institute of Arts, and the Sloan Museum.

Mr. Speaker, I am always fascinated by stories such as Irene Hanson's. Through tremen-

dous adversity, she was able to fulfill the true American Dream, and find success in her new homeland. She is truly an inspiration to all who come into contact with her. I ask my colleagues in the 106th Congress to please join me to congratulate and wish Irene the very best.

HONORING BISHOP VERNON RANDOLPH BYRD, 105TH BISHOP OF THE AFRICAN METHODIST EPISCOPAL CHURCH

HON. KAREN MCCARTHY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Ms. MCCARTHY of Missouri. Mr. Speaker, I rise to honor the newly elected and consecrated Bishop of the African Methodist Episcopal (AME) Church, the Right Reverend Vernon Randolph Byrd. He joins Rev. Dr. W. Bartalette Finney, Sr., Presiding Elder, Rev. Ralph J. Crabbe, and leaders in our community who contribute to the spiritual needs of our greater metropolitan area.

Bishop Byrd's spiritual education began at the age of twelve when he received his call to preach. By the time he was a teenager, he was ordained to preach by the late Bishop Frank Madison Reed, Sr. Bishop Byrd was a success in school and graduated from the public schools of South Carolina, and earned degrees at Allen University, and Boston University.

Prior to his tenure at the Northwest Missouri Conference Fifth District AME Church in Kansas City, Bishop Byrd served as a Pastor and Presiding Elder at several churches. His ministry served congregations including the Macedonia AME Church in Delaware, the St. Paul AME Church in Bermuda, the Newark District-New Jersey Conference, the Macedonia AME Church in New Jersey, the Morris Brown AME Church in Pennsylvania, and the St. James AME Church in New Jersey.

In 1984, Bishop Byrd was elevated to the episcopacy at the seat of the Forty-Second Quadrennial Session of the General Conference. A recipient of numerous awards, he has been honored with the Trumiunz Award for outstanding work with retarded children in Delaware. He was recognized as an Honorary Member of the British Empire Medal by Her Majesty Queen Elizabeth II, who bestowed the award to him for helping bring order to the Bermuda Isles during a period of civil unrest in 1964. Byrd was also named the 1966 Outstanding Young Man of the Year by the Bermuda Chamber of Commerce and given an Honorary Doctorate Degree from the Payne Theological Seminary in 1994.

Always involved with his community, he is an active member of civil and fraternal organizations, the Phi Beta Sigma Fraternity, the Royal Masonic Lodge of Scotland, and the NAACP. Bishop Byrd is married to retired school teacher, Theora Lindsey Byrd who serves the Church as the Women's Missionary Society Supervisor where they teach to others that "Unless Souls Are Saved * * * Nothing Is Saved!" They are the parents of two daughters and two sons and grandparents to six grandchildren.

Mr. Speaker, I am proud to acknowledge and congratulate Bishop Vernon Randolph Byrd as the 105th Bishop of the African Methodist Episcopal Church.

RECOGNIZING RILEY HOSPITAL
FOR CHILDREN'S 75TH BIRTHDAY

HON. JULIA CARSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Ms. CARSON. Mr. Speaker, it is with a great deal of pleasure that I rise today to celebrate Riley Hospital for Children's 75th birthday.

Founded in 1924, Riley Hospital is named after the famous Hoosier poet, James Whitcomb Riley. Upon his death in 1916, Mr. Riley's heartfelt love for children inspired his friends to decide that a children's hospital would be a perfect memorial for Mr. Riley. More than 40,000 Hoosiers gave over 1.2 million dollars to build the James Whitcomb Riley Hospital for children.

As the New York Times observed on October 10, 1924, "Indiana has made her mourning [to Riley] one of ministry rather than of mourning . . . The institution which bears his name will do much to make the children of Indiana what he imagined them to be. Indiana has made, as human monuments go, the perfect memorial to her poet."

Since opening its doors on October 7, 1924, Riley Hospital for Children has cared for thousands of children from the City of Indianapolis, the State of Indiana, and indeed across the country. Annually, there are more than 135,000 patient visits, including 7,100 admissions and more than 128,000 outpatient visits. Riley Hospital cares for children from each of Indiana's 92 counties. In 75 years, no Hoosier child has been turned away because of an inability to pay.

To continue to meet the needs of children and families, Riley Hospital has grown as it spanned the decades of the 20th century. Today, Riley Hospital is one of the ten largest children's hospitals in the nation, and is Indiana's only children's hospital located on a university campus. It is also one of the two most care-bedded children's hospitals in the United States.

As it has grown, Riley Hospital has endeavored to maintain a standard of excellence respecting patient care. In 1971, Indiana's only pediatric burn unit opened at Riley Hospital. In 1989, Riley Hospital performed Indiana's first newborn and infant heart transplants. Eighty to Ninety percent of Indiana's children with cancer are treated at Riley Hospital's—and Indiana's only—Children's Cancer Center. In addition, Riley Hospital houses the only pediatric dialysis center and pediatric stem cell transplant unit in the State of Indiana.

Though the medical technology at Riley Hospital is remarkable, it is the caring staff that the children and their families depend on to see them through difficult circumstances and turbulent times. Whether it be a doctor, nurse, therapist, social worker, teacher, administrative staff or maintenance worker, their professionalism is unparalleled.

EXTENSIONS OF REMARKS

Mr. Speaker, the children, families, and communities of Indiana have been enriched by the life-saving work of Riley Hospital for Children. As we approach the threshold of the 21st Century, I am confident that this wonderful tribute to James Whitcomb Riley will continue to make a brighter horizon for our children.

LEGISLATION TO AUTHORIZE REHABILITATION OF THE MUNICIPAL WATER SYSTEM ON THE JICARILLA APACHE RESERVATION

HON. TOM UDALL

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. UDALL of New Mexico. Mr. Speaker, today I rise to introduce a bill to authorize and direct the Bureau of Reclamation to conduct a feasibility study with regards to the rehabilitation of the municipal water system of the Jicarilla Apache Reservation, located in the State of New Mexico. I am very pleased to be joined by several of my colleagues in the introduction of this important bill—including the other two Representatives from New Mexico, Congressman SKEEN and Congresswoman WILSON; as well as Congressmen KILDEE, HAYWORTH, YOUNG, MILLER, KENNEDY, and BECERRA.

Sadly, Mr. Speaker, the Jicarilla Apache Reservation relies on one of the most unsafe municipal water systems in the country. While the system is a federally owned entity, the Environmental Protection Agency has nevertheless found the system to be in violation of national safe drinking water standards for several years running—and, since 1995, the water system has continually failed to earn renewal of its National Pollutant Discharge Elimination permit.

The sewage lagoons of the Jicarilla water system are now operating well over 100 percent capacity—spilling wastewater into the nearby arroyo that feeds directly into the Navajo River. Since this river serves as a primary source of groundwater for the region, the resulting pollution of the stream not only affects the Reservation but also travels downstream—creating public health hazards for families and communities both within and well beyond the Reservation's borders. Alarming, Jicarilla youth are now experiencing higher than normal incidences of internal organ diseases affecting the liver, kidneys and stomach—ailments suspected to be related to the contaminated water.

Moreover, because of the lack of sufficient water resources, the Jicarilla Tribe is not only facing considerable public health concerns, but it has also necessarily had to put a brake on other important community improvement efforts, including the construction of much needed housing and the replacement of deteriorating public schools. For all of these reasons, the Tribal Council has declared a state of emergency for the Reservation and has already appropriated over \$4.5 million of its own funds to begin the process of rehabilitating the water system.

October 7, 1999

Following a disastrous 6-day water outage last October, the Jicarilla investigated and discovered the full extent of the deplorable condition of the water system. Acting immediately to address the problem, the tribe promptly contacted the Bureau of Indian Affairs, the Indian Health Service, the Environmental Protection Agency and other entities for help in relieving their situation. Yet, due to budget constraints and other impediments, these agencies were unable to provide financial assistance or take any other substantial action to address the problem. In particular, the Bureau of Indian Affairs, having found itself to be poorly suited for the operation and maintenance of tribal water systems, has discontinued its policy of operating its own tribal water systems in favor of transferring ownership directly to the tribes. Unfortunately, however, the dangerous condition of the Jicarilla water system precludes its transfer to the tribe until it has been rehabilitated.

Fortunately, the Bureau of Reclamation is appropriately suited to assist the Jicarilla Apache and the BIA in assessing the feasibility of rehabilitating the tribe's water system. In consultation with the Jicarilla Tribe, the Bureau of Reclamation has indicated both its willingness and its ability to complete the feasibility study should it be authorized to do so as required by law. Recognizing this as the most promising solution for addressing the serious water safety problems plaguing the Jicarilla, I and my fellow cosponsors are introducing this important bill to allow this process to move forward. I hope the rest of our colleagues will similarly join us in passing this bill to remedy this distressing situation.

A TRIBUTE IN HONOR OF BAY
COUNTY WOMEN'S CENTER

HON. JAMES A. BARCIA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. BARCIA. Mr. Speaker, I rise today to pay tribute to an organization which has done much to increase awareness of domestic violence in the United States as well as in my home town of Bay City, Michigan. The Bay County Women's Center provides essential support services for victims of physical or sexual assault, many of whom are women in violent domestic situations.

The Women's Center was established in 1975 by twelve dedicated volunteers who had recognized the need for a local support organization which provided essential services for abused persons. The Center now offers victims a wide range of crisis intervention services, such as counseling, advocacy, information and referral services, as well as extensive community education services. This means that a woman who is being abused has someone to turn to twenty-four hours a day, 365 days a year. The Women's Center has truly proved to be the saving grace for thousands upon thousands of women.

Mr. Speaker, the statistics on domestic violence are staggering. Approximately one family in three will experience domestic violence. And in our country, four women are killed

each day by their husband or partner. The victim is killed by someone who, if one uses traditional marriage vows, has promised "to cherish and honor until death do us part"—which, of course, is a far cry from "to cherish and honor until I decide to kill you". Battery and abuse are particularly horrific because they destroy a sacred bond through violence, and leave these women isolated from their community, their family and in mortal fear of their partner.

The Bay County Women's Center, funded in part by the United Way of Bay County, and sustained by many dedicated and caring individuals, is an organization which is a model for all community agencies devoted to protecting adults and child victims against domestic violence and sexual assault. This month is designated National Domestic Violence Awareness Month, and to mark this, the Women's Center plans their annual Candlelight Vigil for survivors to domestic violence. The Center is committed to ending domestic violence in Bay County, and for that very fact, it deserves our respect. Mr. Speaker, I invite you and all our colleagues to join me in honoring the work of the Bay County Women's Center. May I also offer my deepest condolences to the victims of domestic violence, and my support for all the survivors. It is my sincerest hope that with the guiding example of the Bay County Women's Center, we can all join together to work against the horrific crime of domestic violence and abuse.

PERSONAL EXPLANATION

HON. PATRICK J. KENNEDY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. KENNEDY of Rhode Island. Mr. Speaker, on October 4, 1999, I was unavoidably detained and consequently missed two votes. Had I been here I would have voted: "Yes" on the passage of H. Res. 181. "Yes" on the passage of H.R. 1451.

CONGRATULATIONS TO FRANZ FRUEHWIRTH ON HIS INDUCTION TO THE FLORICULTURE HALL OF FAME

HON. RANDY "DUKE" CUNNINGHAM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. CUNNINGHAM. Mr. Speaker, my district in San Diego is home to some of our nation's largest flower growers. This industry plays a key role in the economy of San Diego County, the state of California, and the entire country. Flower growers, wholesalers, and retail shops produce a product that makes all of our lives more beautiful.

Last week, the Society of American Florists recognized the achievements of two outstanding individuals in the floral industry. I want to personally commend one of those individuals, who also happens to be my constituent. The Society of American Florists gave out its highest award—induction into the Flori-

culture Hall of Fame—to Franz Fruehwirth, a scientist, inventor and breeder for the Paul Ecke Ranch, in Encinitas, California.

We should thank Franz every time a poinsettia—the number one flowering potted plant in the United States—is bought, sold and enjoyed. As one of the premier poinsettia breeders in the world, Franz has created many "firsts," including Lilo, the first long-lasting, dark leaf poinsettia that set the standard for all future varieties. He also created the first yellow poinsettia, "Lemon Drop." He bred the classic Freedom poinsettia, which now represents more than 60 percent of the poinsettia production in the United States.

Franz is more than a plant breeder. He is also responsible for developing the first hanging basket container and the first self-watering container. He also premiered a technique to produce the poinsettia in a tree form. He has shown his dedication to the floral industry as a 31-year member of the Ohio Florists' Association and the San Diego County Flower Growers Association.

In his acceptance speech, Franz simply said that he had been privileged to spend his life doing what he really considers to be fun: playing with his plants and seeing what new and exciting varieties he can develop. What a great lesson for all of us: here is a man who, by loving his work and devoting his life to that love, has given a great gift to us all.

Few of us can remember a time when Christmas celebrations did not include the poinsettia, but we would not have poinsettias at Christmas time without Franz Fruehwirth. The floral industry, my good friend Paul Ecke, of the Paul Ecke Ranch, and all of us in America are fortunate to have Franz Fruehwirth, who has changed American floriculture forever. And I am very proud to have him as my constituent.

I have attached an article from the San Diego Union Tribune that further highlights Mr. Fruehwirth's career.

POINSETTIA BREEDER RECOGNIZED WITH A SLOT IN HORTICULTURAL HALL OF FAME

(By Dan Kraft)

Ecke, now that's a name synonymous with poinsettias.

Franz Fruehwirth's name may not be as well-known, but he, too, has been instrumental in the proliferation of the popular plants.

Fruehwirth's contributions to the floral industry were recognized in Tucson last week, when he was inducted into the Society of American Florists' Floriculture Hall of Fame at the group's annual convention.

Fruehwirth, 66, is the chief breeder, or hybridizer, at the Paul Ecke Ranch in Encinitas, which claims to be the world's largest producer and breeder of poinsettias. For the latter half of that claim, they have Fruehwirth to thank.

Although Ecke sells about 500,000 poinsettias grown in its own greenhouses each Christmas season, its genetic work has been licensed to growers around the globe and accounts for about 80 percent of poinsettias sold in the world. That genetic work is largely Fruehwirth's.

"Until he started breeding, almost all the poinsettias in the world had been mutations," said Marc Cathey, president emeritus of the American Horticultural Society and one of those who wrote letters recommending Fruehwirth for induction. "He is

unique because he has no scientific training to do what he does, yet he has beat all the big boys in the world."

Fruehwirth, a native of Hungary, immigrated to the United States from Germany in 1960 with his wife, Lilo, and their daughter Monika. He was 27 at the time and did not speak English. He worked at a tailor's shop in Oceanside when Paul Ecke Jr., a customer at the shop, hired Lilo as a housekeeper and nanny and offered Fruehwirth a job caring for his plants. That was in 1962, at a time when the ranch was converting from field-grown plants to greenhouses.

"Very quickly it became obvious that he was intelligent and creative, and Dad and Grandpa began promoting him," said Paul Ecke III. "He was instrumental in figuring out how to grow the poinsettias inside."

In 1968, Fruehwirth introduced the first new poinsettia genetics created at the Ecke Ranch. In 1991, a new variety he bred, called Freedom, was introduced. Today, it accounts for 60 percent of the poinsettias sold in the United States and Canada.

"I feel there are a lot of people who deserve recognition like this, and I'm very fortunate that I have the honor," Fruehwirth said. "I love my work and am humbled to get (the Hall of Fame induction)."

According to the Society of American Florists, induction into its Hall of Fame is reserved for those who have made a unique contribution to the industry and changed the way it does business.

"Most of those honored have a Ph.D. or are owners of major floral companies," Cathey said. "It's very rare for someone like Franz to receive this award."

During his 37-year tenure with the Eckes, Fruehwirth's "cultivars" have become increasingly dark in color and hearty, which enables florists to ship the plants greater distances and gives them a longer shelf life.

Fruehwirth, who lives in Encinitas with his wife, has no plans to retire. He is still hard at work evaluating the potential of 6,000 to 10,000 seedlings each year.

"As long as I have a positive influence, I'll keep working", he said in Tucson last week. "I still can't believe (the honor)."

A TRIBUTE TO PAYNE & DOLAN, INC., WINNER OF A 1999 EXEMPLARY VOLUNTEER EFFORTS AWARD FROM THE U.S. DEPARTMENT OF LABOR

HON. GERALD D. KLECZKA

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. KLECZKA. Mr. Speaker, I rise today to bring attention to an exemplary act of community spirit and corporate citizenship. A company located in Wisconsin's Fourth Congressional District, Payne & Dolan, Incorporated, a Waukesha, Wisconsin-based highway construction company, has been named a 1999 recipient of the prestigious Exemplary Volunteer Efforts (EVE) Award from the U.S. Department of Labor.

The Department of Labor has recognized Payne & Dolan for an innovative minority hiring, training and development program that has provided outstanding opportunities for more than 160 minorities and women and invested more than \$3 million into Milwaukee's central city.

Payne & Dolan is the first highway construction company ever to receive this award. The company's comprehensive equal opportunity program includes proactive hiring efforts in Milwaukee's central city, community involvement and partnerships, scholarships, employee training and development, minority business mentoring and more.

The company has worked with the YWCA of Greater Milwaukee, the Wisconsin Department of Transportation and other community partners to develop a pilot program called Transportation Alliance for New Solutions, or TrANS. This program recruits and raises awareness of industry opportunities among minorities and women.

In addition, Payne & Dolan helped spearhead development of the Central City Workers' Center (CCWC), a centralized "one-stop shop" to link highway contractors with potential employees. This one-of-a-kind collaboration among unions, government, industry and community-based organizations seeks to provide family-sustaining incomes to a minimum of 150 central city residents over the next two years.

Payne & Dolan's success stories are the life stories of people like Sean McDowell, who began working for Payne & Dolan in 1993 and today, with the company's guidance and support, owns his own asphalt company. People like Roger Carson, who was hired as a laborer in 1991 and has been a foreman for two years. And people like Wendy Young, who was hired as an unskilled laborer in 1994 and is now an apprentice operating engineer.

Mr. Speaker, I would like to recognize the contributions and commitment of Payne & Dolan and its CEO, Ned Bechthold, as well as salute the employees who have worked hard to make this equal opportunity program succeed and to make the EVE award possible. It is clear that Payne & Dolan is building much more than highways—it is also building a direct path to opportunity. I commend Payne & Dolan, and I commend the United States Department of Labor for its recognition of this outstanding corporate citizen.

GERMAN-AMERICAN DAY

HON. ROD R. BLAGOJEVICH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. BLAGOJEVICH. Mr. Speaker, I rise today to celebrate German-American Day and the many great contributions German-Americans made to our society. Through their loyalty, determination, spirit, and culture, German-Americans have significantly enriched the lives of all Americans.

In 1987, Congress formally recognized the achievements of German-Americans by proclaiming October 6th to be German-American Day. As we celebrate this October 6th, the thirteenth celebration of German-American Day, all Americans have the opportunity to reflect upon the cultural legacy of German-Americans.

America's German heritage predates our nation's independence. Our first German immigrants arrived in Philadelphia in 1683. Since

that time, America has enjoyed the immeasurable contributions of such creative German-American minds as Carl Schurz, Baron von Steuben, Levy Strauss, John Jacob Astor, and Peter Zenger. More recently, the works of Albert Einstein, Wernher von Braun, and Henry Kissinger are testimony to the industriousness, loyalty, and talent of German-Americans.

In addition to the contributions of these German-Americans, 57 million Americans of German descent have helped enrich America through their participation in the workforce and the arts. In the 1990s, when my home city of Chicago experienced rapid growth, German immigrants arrived in their largest numbers. By sharing their industry and arts with our city, they helped Chicago become one of the world's great cities. Although Germans were only twenty-nine percent of the city's population, they constituted fifty percent of the city's bakers, forty-four percent of brick and tile makers, and thirty-seven percent of machinists. While German-American craftsmen and skilled workers fueled Chicago's industrial growth, German art, music, and literature also helped mold the cultural developments of the city.

After the Great Fire of 1871, German-Americans took an active role in rebuilding Chicago. Their efforts can be seen even today in the city's world renowned architectural beauty. The Chicago Symphony Orchestra was founded by a German-American violinist and flourished due to talented German musicians who made Chicago's Symphony Orchestra into one of the world's greatest musical institutions. In addition, German theater introduced the classical works of Schiller and Goethe as well as many other European works.

While the contributions of German-Americans have shaped American cultural and industrial development, they are easily overlooked, largely because they have been overwhelmingly embraced by Americans and are now thought of as simply "American." October 6, 1999 once again calls attention to all Americans of German descent and their contributions to the vibrancy and strength of the United States.

ABRAHAM LINCOLN BICENTENNIAL COMMISSION ACT

SPEECH OF

HON. BARON P. HILL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 4, 1999

Mr. HILL of Indiana. Mr. Speaker, I want to offer my full support of H.R. 1451, the Abraham Lincoln Bicentennial Commission Act.

This bill would authorize the creation of the Abraham Lincoln Bicentennial Commission, a group charged with the responsibility of recommending to Congress activities to celebrate the bicentennial of President Lincoln's birth.

I am particularly pleased that the bill has been amended to include commission members from my home state of Indiana.

This is important because many people don't realize President Lincoln spent 14 years of his life on a small farm in Lincoln City, Indiana. There he helped his father on the farm

and developed his love of reading. It was in Lincoln City that he also lost his mother, Nancy Hanks Lincoln, when he was nine years old. These events during his formative years in Indiana contributed greatly to the development of President Lincoln's extraordinary character.

Mr. Speaker, the residents of Indiana are proud of this heritage. H.R. 1451 will help highlight the extraordinary life of our 16th president. No commemoration would be complete without noting southern Indiana's part in the Abraham Lincoln story. I encourage all Americans wishing to learn more about this American hero to visit Lincoln City, Indiana, and the Lincoln Boyhood National Memorial.

I am pleased Congress is taking the initiative to promote and support the commemoration of such a remarkable figure in our American history.

RAY SAUL HONORED

HON. PAUL E. KANJORSKI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. KANJORSKI. Mr. Speaker, I rise today to pay tribute to a distinguished journalist, community leader, and close friend from my District in Hazleton, Pennsylvania—Ray Saul. This month, the Sons of Italy Lodge 1043 will honor Ray as "Italian American of the Year." I am pleased to have been asked to participate in this event.

A native of Hazleton, Ray is a graduate of Hazleton High School and Penn State, where he earned a Bachelor's degree in journalism. He was the editor of his college yearbook and was cited by the All College Board for outstanding achievement as a student leader. A Navy veteran of World War II, Ray entered the service as an apprentice seaman and retired as a Lieutenant Commander after a combined 21 years of active and reserve service.

Ray is best known to the community for his 47 years of dedicated journalism at the Hazleton Standard-Speaker newspaper. Ray was sports editor at the Standard-Speaker for twenty-seven years and managing editor for the last fifteen years. Since his retirement in 1997, he continues to write sports columns and other features for the newspaper. As a journalist, Ray was an active member of the Associated Press Sports Editors Association and the Managing Editors Association.

In 1995, he was honored by the Department of Defense for his feature stories of various Hazletonians serving in World War II. Ray received an Associated Press Citation for a story on a local basketball team's success. In recognition of his writing and participation in sports, he was honored by several chapters of the Pennsylvania Sports Hall of Fame and the PIAA District 2.

Ray Saul has always recognized the unique responsibilities inherent in leading a local newspaper which is truly the voice of its community. Under his leadership, the Standard-Speaker could be relied on for fair and accurate reporting of stories important to the Greater Hazleton area. Ray always put the interests of the community first.

Ray's accomplishments are far reaching into the community as well. He is an active Kiwanian and has been awarded the International Tablet of Honor once and the Kiwanian of the Year twice. He has been an active Penn State alum, helping to raise funds for new buildings on the Hazleton Campus. In 1984, he was the fifth person in the then-50 year history of the Hazleton campus to receive the Penn Stater Award, for outstanding service to the university.

Mr. Speaker, Ray is the son of the late Santo Saul and Genevieve DeJoseph. All four of his grandparents were Italian immigrants. From his distinguished Navy career his beloved journalism career, Ray is a true example of an American success story. Even in retirement, he and his wife Nell are respected, active members of the community. I applaud the Sons of Italy for their choice of this year's honoree and am proud to congratulate Ray on yet another prestigious award. I send him my heartiest best wishes for continued health and happiness.

PERSONAL EXPLANATION

HON. BOB ETHERIDGE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. ETHERIDGE. Mr. Speaker, on Monday, October 4, I was unavoidably detained and missed four votes on the House floor. Had I been present, I would have voted "yes" on rollcall votes 470-473.

HONORING BILL WALTERS

HON. WILLIAM F. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. GOODLING. Mr. Speaker, I rise today to honor Mr. Bill Walters, who holds the office of Registrar of Wills in York, Pennsylvania. Mr. Walters has never lost an election, primary or general, and has been on the ballot 38 consecutive times as either a candidate for Springettsbury township, Register of Wills, or Republican Committeeman. After years of committed service to the people of York and York County, he will be retiring at the end of this term.

Bill Walters came to York, Pennsylvania from Connecticut, but regards York as his home and plans to remain here after retirement. He has always been a big supporter of mine as well as good friend.

Mr. Speaker, I salute Bill Walters as he steps down from his position with the City of York, and wish him well in his upcoming retirement from a life of public service.

IN HONOR OF GEORGE LYKOURETZOS, 1999 CHARLES E. PIPER AWARD RECIPIENT

HON. WILLIAM O. LIPINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. LIPINSKI. Mr. Speaker, I rise today to honor Mr. George Lykouretzos, a business owner in Berwyn, Illinois. Mr. Lykouretzos will be receiving the Charles E. Piper Award for Business Achievement.

The Charles E. Piper Award is named for one of Berwyn's original developers. Each year, the Berwyn Development Corporation honors business men and women from the community who contribute to the growth and economic development of the community. This year, George Lykouretzos has been chosen because of his commitment to the community.

George Lykouretzos is the owner of Skylite Family Restaurant and the Skylite West Banquets located in Berwyn, Illinois. Because of his outstanding business practices and his commitment to the investing back into the community, the Berwyn Development Corporation chose to honor George Lykouretzos with the Charles E. Piper Award on October 23, 1999.

I would like to commend George Lykouretzos and his family and staff on their excellent service to their customers. I would also like to extend my personal congratulations on Mr. Lykouretzos' achievement and wish him and his family well with their future success and their commitment to the community.

20 YEARS OF AFFORDABLE HOUSING

HON. BOB FILNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. FILNER. Mr. Speaker, I rise today to pay tribute to the San Diego Housing Commission on the occasion of its 20th anniversary. During these two decades, the Housing Commission has helped to provide approximately a half million San Diegans with quality housing opportunities. In the process, neighborhoods have been revitalized and the economy vastly improved.

The Housing Commission has invested billions of dollars in San Diego, resulting in the development of 10,000 apartment units—including nearly 5,500 designed for lower income San Diegans—and in the stabilization of rents for thousands of San Diegans through rental assistance.

The Housing Commission has been a leader in our nation. Its approach to developing and managing its 1,860 public housing units has earned it acclaim and national awards. The awards recognize the Commission for the design and maintenance of its properties and for the Commission's philosophy of distributing public housing throughout the city.

The residents in San Diego public housing benefit from the Housing Commission's pro-

grams that have set national standards in helping residents achieve self-sufficiency. The six learning opportunity centers at the Commission's sites provide a way for residents to escape dependence on welfare.

The residents are active partners with the Commission in improving their lives—the Small Business Administration and San Diego Chamber of Commerce Welfare-to-Work Entrepreneur of the Year in 1998 was won by a Housing Commission resident, Yohannes Miles, who became a painting contractor. Needless to say, Mr. Miles is now a former client of the Commission—he has moved into his own home!

The Housing Commission has improved our whole City. It has helped more than 8,000 families rehabilitate their homes and has paved the way for 3,100 low- to moderate-income people to purchase their first home.

The Housing Commission employees are dedicated—15 have been with the agency since its founding. In its 20 years, Commission employees have helped the agency win countless national awards and honors, including high performance ratings each year from the Department of Housing and Urban Development, the first Award of Excellence for Enduring Design from the National Association of Redevelopment Officials, and an award for consensus building in developing public housing.

I want to wish the employees and the officials of the San Diego Housing Commission, and the forward thinking city leaders who started the agency, a happy anniversary. May you provide many others with the basic opportunity and right of housing in San Diego in the years to come.

CALVARY CHILDREN'S CENTER

HON. BOB BARR

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. BARR of Georgia. Mr. Speaker, it is my distinct honor today to recognize an exceptional organization that has made a significant difference in the lives of hundreds of Georgia's children. That organization is Calvary Children's Home.

The Calvary Children's Home was founded in 1966 by Reverend Ben F. Turner, and has been located in Cobb County, Georgia, for 33 years. Rev. Turner's first vision of Calvary took place on the streets of Jerusalem, when a poor woman offered to sell her baby to his tour group for money to support her other children. Then, in 1965 a local father and mother of six were returning from shopping when both were killed in an automobile accident. However, as much as the children were disturbed by the loss of their parents, they were equally upset with the prospect of being separated from each other in the foster care system, especially after such a great loss.

In September 1997, Rev. Turner's ultimate dream was finally realized, as the Calvary Children's Home moved from its original dormitory-style complex into three beautiful homes located on 13 acres of land near Powder Springs, Georgia. In January a new administrative center featuring a dining hall, library, and counseling center was completed

on the property under the direction of Administrator Snyder Turner. The home has always been funded entirely by generous private funding from churches, businesses, organizations, and individuals dedicated to giving children in need a second chance.

The Calvary Children's Home presently houses 26 children, and has housed more than 400 children since first opening its doors 33 years ago. The center is a nonprofit, charitable organization providing long-term residential care for children who are victims of broken homes, abuse, neglect, or abandonment. The majority of its residents are brothers and sisters who otherwise would have been separated from each other and placed into separate homes through the foster care system.

The Calvary Children's Home is an excellent example of private individuals reaching out and making a difference in the lives of our youth, without public mandates or tax dollars. It speaks well of Georgia's Seventh District that such an organization can survive. I wish Administrator Turner, the staff, residents, and donors well in continuing their commitments to love, spiritual values, and improving the lives of our young people.

IN HONOR OF YOLANDA'S ACADEMY OF MUSIC AND DANCE ON ITS 25TH ANNUAL RECITAL AND ITS FOUNDER, MS. YOLANDA FERNANDEZ-QUINCOCES

HON. ROBERT MENENDEZ

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. MENENDEZ. Mr. Speaker, I rise today to recognize Yolanda's Academy of Music and Dance on the celebration of its 25th Annual Recital and its founder, Ms. Yolanda Fernandez-Quincoces, for her many accomplishments. She has made every effort to provide a forum in which the young people of Hudson County, and particularly of Union City, NJ, are able to express their interest in the arts.

Born in Havana, Cuba, Ms. Fernandez demonstrated tremendous artistic ability at a very young age. After moving to the United States with her family, Ms. Fernandez begun taking lessons in ballet and piano at the age of five. She continued her training at the New Jersey Ballet, Oneida's Dance Studio, and the American Ballet Theater, where she also excelled in Flamenco dance and piano while attending classes with renowned leaders in the fields of study.

Ms. Fernandez, since receiving her bachelor's degree in Music Education from New York University, has served as a music and dance educator at the Woodrow Wilson School for the Integrated Arts in my hometown of Union City, NJ, where she is known for her remarkable commitment to her student's education.

Ms. Fernandez has demonstrated her dedication to the arts and education through her involvement in such associations as the Dance Educators of America, the Dance Masters of America, the National Guild of Piano Teachers, and the National Education Asso-

ciation. Her participation in the advancement of the arts includes making personal appearances at the New Jersey Opera and on various television broadcasts. In addition, she produced and hosted her own television program called "Art Beat."

Ms. Fernandez's artistic contributions to the community and her unwavering commitment to promoting the arts in our schools have not gone unnoticed. In 1996, she was named "Teacher of the Year" by Union City, Hudson County, and the Governor of the State of New Jersey. In 1996 and 1997, she received the prestigious "Outstanding Choreographer" Award from the Dance Educators of America in New York City.

In recognition of Ms. Fernandez's impassioned devotion to promoting the arts in our schools and communities, I ask that my colleagues join me in congratulating her, as well as Yolanda's Academy of Music and Dance, on this occasion, the 25th Annual Recital, and wishing Ms. Fernandez continued success in her endeavors.

IN TRIBUTE TO SENIOR MASTER SERGEANT ALBERT M. ROMANO, JR.

HON. ELTON GALLEGLY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. GALLEGLY. Mr. Speaker, I rise to pay tribute to Senior Master Sergeant Albert M. Romano, Jr., one of 12 U.S. Air Force Outstanding Airmen of the Year.

"Buddy" Romano hails from Oxnard, California, in my district, where he starred in varsity football and baseball at Santa Clara High School and was ranked 32nd in California for motocross racing.

He married his high school sweetheart, the former Jennifer Suytar, also of Oxnard. The couple now have three children, 12-year-old Tyler, 9-year-old Megan, and 5-year-old Zachary, who must be very proud of their father for all he has achieved.

The Outstanding Airmen Award program began in 1956 during the Air Force Association's national convention as a way to highlight an Air Force military manpower crisis at the time. It proved so popular that it became an official Air Force award the following year.

Competition for Airman of the Year is strenuous. Nominations are sent from each command, separate operating agency, direct reporting unit, Air Force Reserve and Air National Guard to the Air Force Manpower Personnel Center. A high-ranking selection board narrows the field, then the final selections are validated and approved by the U.S. Air Force Chief of Staff.

The criteria for this honor is "unique, unusual, or outstanding individual involvement and achievement within the preceding 12 months." Selection considerations include: superior general job performance; job knowledge and leadership qualities applied to a specific Air Force problem or situation; development of new techniques or procedures resulting in increased mission effectiveness; noteworthy self-improvement through on- or off-duty edu-

cational studies, participation in professional or cultural societies/associations, or development of creative abilities; participation in social, cultural, or religious activities in the military and/or civilian community which contribute directly or indirectly to community or group welfare, morale, or status; other significant achievements on- or off-duty which by their nature or results clearly distinguish the Airman from others of equal or higher grade; Air Force or civilian awards in recognition of personal service or contribution; and demonstrated ability as an articulate and positive Air Force spokesperson.

Buddy Romano must have been an easy selection.

He joined the Air Force in 1981 and quickly established himself as an outstanding airman. In 1983, he was named NCO of the Year. In 1984, he earned the Distinguished Graduate Award from the 15th Air Force NCO Leadership School at Ellsworth Air Force Base in South Dakota. He maintained a 96 percent fully mission capable rating during his first year—his unit's highest—as Dedicated Crew Chief at the 388th Fighter Wing, Hill Air Force Base, Utah. In 1987, he served in Operation Desert Storm. In 1988, he earned the NCO of the Year for the 548th Aircraft Generation Squadron, while maintaining a place on the Dean's List for Embry Riddle Aeronautical University. In 1992, he earned his degree in Aircraft Maintenance from the Community College of the Air Force.

Somehow, he has free time. Buddy has filled it by coaching or umpiring during almost every intramural varsity, high school, or youth basketball and baseball season since he became an airman. He has volunteered countless hours to the Equal Opportunity and Treatment Program, Anglo American sports day, Special Olympics, Arrive Alive Program, Toys for Tots Program, Top Three events, and countless other Air Force-sponsored events.

His military decorations include the Meritorious Service Medal, with two clusters; the Air Force Commendation Medal, with one cluster; the Air Force Achievement Medal; the Air Force Good Conduct Medal, with five oak leaf clusters; the National Defense Service Medal; the Armed Forces Expeditionary Medal; the Southwest Asia Service Medal, the Humanitarian Service Medal; and the Kuwait Liberation Medal.

Mr. Speaker, I had the pleasure of recently meeting with Senior Master Sergeant and Jennifer Romano. They serve as a model for military couples, dedicating their lives to their family and their country. I know my colleagues will join me in saluting Albert M. Romano, Jr., for earning the respect and gratitude of his peers, his officers, and his country.

RECOGNIZING BORUNDA INC. AND PLAZA VENTANA RESTAURANT

HON. GEORGE RADANOVICH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. RADANOVICH. Mr. Speaker, I rise today to recognize David Borunda as President and CEO of Borunda Inc., along with

Plaza Ventana Restaurant. Borunda Inc. is a corporation specializing in the food service business; and Plaza Ventana is a product of David's perseverance to become an entrepreneur.

David Borunda originally established his business in 1977 by opening Plaza Mexican Restaurant. Due to the tremendous success of the restaurant, Borunda was invited to join the food court at Fresno's Manchester Mall, in which his operation became the largest volume food operation in the facility. Borunda's career further escalated in 1984 when he was invited to join the food court at Fresno's Fashion Faire Shopping Center. Thus, he opened his third location and immediately assumed the number one volume store in the food court. Branching away from food courts, Borunda opened a full sit down restaurant located in the Times Square Shopping Center in Fresno. Plaza Ventana was well received and immediately became a success. As a result, this location was expanded by an additional one thousand square feet, which included a full service bar and an additional dining area.

Borunda was born and raised in Fresno, California and is well rooted in the community. He served as president of the California Restaurant Association Fresno Chapter in 1993 and 1994, and has over 50 employees. As proof of Borunda's enormous success, one has to look no further than the three Best Mexican Restaurant award, given by the California Restaurant Association, he has won.

Mr. Speaker, it is my pleasure to honor David Borunda for his tremendous success as an entrepreneur. I urge my colleagues to join me in wishing David many more years of continued success.

QUALITY CARE FOR THE
UNINSURED ACT OF 1999

SPEECH OF

HON. HOWARD P. "BUCK" McKEON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 6, 1999

Mr. McKEON. Mr. Speaker, I join my colleagues today in supporting this bill that addresses the problem of the rising number of Americans who cannot afford health insurance. Under this plan, we will be able to extend health care options to the 44 million people in our country who remain uninsured.

We know that most people without health insurance have one thing in common: they cannot afford health care. They are either self-employed or they work in a small business that cannot afford to pay for health benefits.

The Quality Care for the Uninsured Act creates Association Health Plans to combat the high cost of health care in our country. Small businesses and self-employers will now have the ability to join together under the umbrella of trade and professional organizations to buy health insurance for themselves and their employees.

Association Health Plans will bring more choices and greater flexibility to those who need it most. Estimates show that small businesses will save between 10 and 20 percent on health care costs with Association Health

Plans. By cutting costs, we can expand health care coverage for the millions of hard-working Americans that are currently uninsured.

I commend Representative TALENT and Representative SHADEGG for their dedication to this important issue, and I urge my colleagues to support this bill.

THE PENSION REDUCTION
DISCLOSURE ACT OF 1999

HON. ROBERT T. MATSUI

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. MARSUI. Mr. Speaker, I am pleased to introduce bipartisan legislation, developed with my colleague on the Ways and Means Committee Mr. WELLER and in conjunction with the Administration, which will provide increased notice to employees when their employers convert their pension plans from traditional defined benefit plans to so-called "cash balance" plans.

The Pension Reduction Disclosure Act of 1999 revises existing section 204(h) of ERISA and adds related ERISA and tax provisions providing for the following: (1) a basic advance notice must be given for amendments that reduce the rate of future benefit accrual in a pension plan; (2) an enhanced advance notice must be given when applicable large plans are converted to cash balance plans or otherwise amended to reduce the rate of future benefit accrual; (3) individuals receiving the enhanced notice have the right to receive supporting general plan information, such as the plan's benefit formula and actuarial factors; and (4) individuals receiving the enhanced notice also have the right to receive individual benefit statements relating to the projected effect of the amendment on them. In general, the information required to be provided under the Act must be written in a manner calculated to be reasonably understood by the average plan participant. The Act imposes minimum notice and information requirements; employers may choose to provide information (in the required notice or otherwise) that is in addition to that required under the Act.

Basic advance notice: Current law requires 15 days' advance notice for amendments that reduce the rate of future benefit accrual in a pension plan. Pension plans subject to the Act requirements are those plans subject to existing section 204(h) of ERISA. The Act increases this to 45 days before the effective date. The Act eliminates the current law requirement that notice be provided only after the plan amendment has been adopted. A plan is not to be treated as failing to meet the notice requirements of the Act merely because notice is provided before the adoption of the amendment if no modification of the amendment occurs before the amendment is adopted that would affect the information required to be in the notice. The notice must include the effective date and the classes of individuals under the plan to which the amendment applies. The notice must state that the amendment significantly reduces the rate of future benefit accrual and must summarize the important terms of the amendment. For example,

in the case of a money purchase pension plan in which the rate of future contributions for all salaried employees is reduced from 7% of compensation to 4% of compensation, the basic notice must state that the plan is being amended to significantly reduce the rate of future contributions, that the rate of future contributions is being reduced from 7% of compensation to 4% of compensation, and that the amendment applies to all participants who are salaried employees on or after the effective date, which must be specified in the notice.

Enhanced advance notice: The enhanced advance notice applies to plans with at least 100 active participants at the end of the prior plan year (this information is on the Form 5500). This notice must provide the following additional information concerning the amendment: (1) a more detailed description of the plan amendment; (2) illustrative examples; (3) supporting information; and (4) individual benefit statements.

More detailed description. The enhanced notice provided to an affected participant must describe the normal and, if applicable, the early retirement benefit formulas under which the participant had been earning benefits before the amendment, describe the formulas under the plan as amended, and explain the effect of the amendment on the participant's normal and early retirement benefits. The enhanced notice, like the basic notice, must also state that the amendment is expected to significantly reduce the rate of future benefit accrual.

In addition, the enhanced notice must explicitly disclose any "wearaway" or "benefit plateau" or temporary period, expected to result from the amendment, during which there are no accruals or only minimal accruals. For example, if a large pension plan were amended from a traditional defined benefit plan to a cash balance plan through an amendment that reduced the rate of future benefit accrual, and the amendment provided for the establishment of an opening account balance using a formula or factors that resulted in the opening account balance being less than certain participants' section 417(e) lump sum value, the enhanced notice would have to identify the participants likely to experience a temporary cessation of accruals and explain why the wearaway occurred (for example, because the opening account balance was established using a different interest rate than required by the law to value lump sum benefits or because the formula used to establish the opening account balance did not take into account early retirement subsidies).

Illustrative examples. The enhanced notice must also include illustrative examples showing at representative future dates the estimated effect of the amendment on the participants in the examples. The illustrative examples will include estimates that provide a meaningful comparison of benefits that would be earned under the amended plan with benefits that would have been earned assuming the plan had not been amended. At a minimum, for a comparison to be meaningful, it must show benefits under the old and new formulas in the same form and at the same time. Accordingly, a comparison of an immediate lump sum under a new cash balance formula

with an age 65 annuity under the pre-amendment final average pay formula would not satisfy the requirement that the comparison be meaningful; instead, the comparison must be in a life annuity form or a form authorized under Treasury regulations (which may, for example, authorize the comparison to be based on a lump sum form provided that that form is used for both the old and the new formulas). The notice (including the basic notice, but not including the supporting information) must be written in a manner reasonable calculated to be understood by the average plan participant.

Representative categories: The examples must be selected in a manner that is fully and fairly representative of the various categories of adversely affected individuals depending on whether the amendment results in similar reductions. While the classes of participants identified in the basic notice will generally be able to be determined under the plan document (e.g. salaried vs. hourly, Subsidiary A vs. Subsidiary B), it is intended that the categories used in the enhanced notice be more refined. While the determination of differing categories will depend on the plan's formulas before and after the amendment, the factors relevant to the determination of the number of categories appropriate to illustrate the effects of the amendment may include age, service and early or normal retirement eligibility. For example, in the case of an amendment that reduces the normal and early retirement benefits, employees who are already eligible for early retirement might be grouped together in a single category.

Supporting information required to be made available at time of advanced enhanced notice: The supporting information required to be made available upon a participant's request will include the factors used to convert the cash balance to an annuity, early retirement reduction factors, and similar assumptions for benefit projections, but the employer will not be required to make available the participant's personal information, such as the participant's date of hire, service history, or compensation. It is understood that, because the information may contain formulas and definitions of plan terms, it may not be practical for this information to be presented in a manner that can be readily understood by the average plan participant, but this information, along with the personal information, should be sufficient so that a professional advisor for the participant can perform the calculations. It is expected that employers could satisfy these requirements by making available appropriate computer programs or other appropriate technology, or providing a plan document with necessary supplemental schedules of current interest and mortality assumptions.

Individual benefit statements: Each individual to whom the enhanced advance notice has been, or is required to have been, furnished can make one request for an individual benefit statement at any time up to one year after the effective date of any amendment that requires section 204(h) enhanced disclosure. As under current law, no charge may be imposed for furnishing the required individual benefit statement. Under section 502(c)(2) of ERISA, an administrator is subject to liability up to \$100 a day if the individual benefit statement is not provided within 30 days after the

date of the request. In no event is the statement required to be provided earlier than 90 days after the effective date of the plan amendment. The Secretary of Labor may in her discretion determine that the statement may be provided at a later date. For example, the Secretary of Labor may determine in a particular case or by guidance of general applicability that the statement can be provided up to 60 days after the request (or, if later, six months after the effective date) in exceptional circumstances. Such exceptional circumstances might include, for example, cases in which the participant's accrual credit is in part based on periods during which the participant has worked for a predecessor or another party other than the plan sponsor, and the participant's work history with the other party is not readily available.

However, it is not intended that any such extension of time is to be permitted to be used as a pretext for a broad-based delay in delivering individual benefit statements that can reasonably be furnished at an earlier date.

Anti-abuse intent: It is intended that the protections of the Act are not to be evaded, so that, for example, if a plan seeks to evade the enhanced notice requirements by freezing benefits and then resuming accruals at a reduced accrual rate, a second enhanced notice would be required (taking into account the new accrual rate).

No inference: The fact that enhanced disclosure is required as to certain effects of an amendment on certain classes of participants is not intended to imply that the amendment or the plan design change effected by the amendment complies with current law.

Alternative methods of compliance: The Secretary of the Treasury is authorized to prescribe alternative or simplified methods of compliance with section 204(h) for the enhanced notice and related information, including and exemption, from some or all of these requirements, in situations not involving a fundamental change in the manner in which accruals are calculated where such other methods are adequate to reasonably inform applicable individuals of the nature of the reductions (such as a complete suspension of accruals under the plan, certain uniform reductions in the benefit accrual formula, or an incremental change in the period taken into account to determine career average or other plan compensation). A fundamental change in the manner in which accruals are calculated would not include certain changes in the compensation taken into account or a uniform reduction in the percentage of compensation on which contributions or accruals are based, but would include, for example, a conversion from a traditional plan (i.e., a flat dollar benefit, career average pay or final pay defined benefit pension plan) to a hybrid pension plan, such as a cash balance plan. A simplified or alternative method may also be permitted in order to ensure that the Act does not discourage consolidation of an individual's plan benefits, for example, if a buyer's plan is involved in a merger or consolidation with the seller's plan or if the buyer's plan receives a transfer from the seller's plan, the buyer is not subject to requirements that would not apply if the buyer's plan had not accepted a transfer from the seller's plan.

The Secretary of the Treasury may also issue guidance under which a plan may provide the notice only 15 days before the effective date in cases in which a 45-day advance notice would be unduly burdensome either because the amendment is contingent on a merger, acquisition, disposition or other similar transaction or because 45-day advance notice would be impracticable (such as where benefits are being reduced as part of a liquidation or reorganization in bankruptcy or insolvency proceedings).

Sanctions: An excise tax applies to a failure to satisfy the notice requirements and, in the case of an egregious violation, the individual is entitled to the greater of the benefit under the amended plan or the plan before the amendment. Except in the case of a multiemployer plan, the tax is imposed on the employer. If a plan (other than a multiemployer plan) is sponsored by a party other than an employer, it is intended that the plan sponsor will be treated as the employer for this purpose. An egregious violation includes a situation in which there has been no intentional failure to provide notice, but the employer fails to take reasonable corrective steps after discovering that there was a failure to provide notice to some individuals.

Effective date exception where information provided within 120 days of enactment: The notice and information required under the Act is not required to be provided earlier than 120 days after the date of enactment of the Act. For example, if a large pension plan is amended to reduce benefits effective on the day after the enactment of the Act, the amendment could go into effect on the day after the enactment of the Act, but the plan could provide the required enhanced notice and related information (and also furnish any requested individual benefit statements) as late as 120 days after the date of enactment.

HONORING THE BROOKLYN CHINESE-AMERICAN ASSOCIATION'S EIGHTH AVENUE SENIOR CENTER ON ITS SIX YEARS OF SERVICE

HON. NYDIA M. VELÁZQUEZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Ms. VELÁZQUEZ. Mr. Speaker, I rise today to recognize the achievements of the Brooklyn Chinese-American Association, and the sixth anniversary of its Eighth Avenue Senior Center.

For more than a decade, the Brooklyn Chinese-American Association has provided vital assistance to tens of thousands of the Chinese-American residents who constitute one of New York's fastest-growing communities. Six years ago, recognizing a critical need in this community, the Association opened the Eighth Avenue Senior Center, which provides daily congregate meals, citizenship classes, medical check-ups and screenings, monthly birthday parties, field trips and many other services.

Operating out of modest facilities but with exceptional heart and dedication, the center

October 7, 1999

has a membership of almost 2,000 and offers services to over 160 senior members daily.

The centerpiece of this year's sixth anniversary commemoration is the Millennial Roundtable Celebration. Fulfilling an extraordinary and touching ceremony, tables will be organized with seating for 12 seniors who are each at least 84 years of age—totaling 1,000 years. For the first time, to commemorate the end of the century and the turn of the millennium, a Double Millennial Roundtable will be featured, with seating for 23 seniors who are at least 87 years of age and totaling 2,000 years of age.

A poet wrote, "I like spring, but it is too young. I like summer, but it is too proud. So I like best of all autumn, because its tone is mellower, its colors are richer, and it is tinged with a little sorrow. Its golden richness speaks not of the innocence of spring, nor the power of summer, but of the mellowness and kindly wisdom of approaching age."

Mr. Speaker, I urge all my colleagues to join me when I commend the Eighth Avenue Senior Center, and the Brooklyn Chinese-American Association, for its work to ensure golden richness in the lives of our seniors.

PROVIDING FOR CONSIDERATION
OF H.R. 2990, QUALITY CARE FOR
THE UNINSURED ACT OF 1999,
AND H.R. 2723, BIPARTISAN CON-
SENSUS MANAGED CARE IM-
PROVEMENT ACT OF 1999

SPEECH OF

HON. JAY INSLEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 6, 1999

Mr. INSLEE. Mr. Speaker, I rise in opposition to the rigged rule for debate on the patients' bill of rights. Ever since this session began, I have been working with my colleagues to bring 'bipartisan patients' bill of rights to the floor for a vote. But now that Republicans have been forced to allow a vote on the bipartisan consensus managed care bill, they have written a rule designed to kill the measure.

Instead of providing a fair and open rule considering the patients' bill of rights, the Republican Leadership has stacked the deck by writing a rule that blends the managed care bill with a measure riddled with special interest "poison pills" designed to kill the measure, and that denies us the opportunity to offset any potential revenue losses from the measure.

The Republican Leadership is combining the bipartisan managed care bill with a so-called insurance access bill, which is not paid for. In addition, the Republican leadership is denying a bipartisan group of members the right to offer an amendment to offset the cost of the bill and be fiscally responsible.

If we can defeat this flawed rule, bipartisan advocates of managed care reform will return with a fair and open rule that will permit enactment of managed care reform. My constituents deserve patients' bill of rights. I urge my colleagues to vote down this rule and to support real managed care reform and bipartisan patients' bill of rights.

EXTENSIONS OF REMARKS

HONORING THE RAMSEY FIRE DE-
PARTMENT ON ITS 100TH ANNI-
VERSARY

HON. MARGE ROUKEMA

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mrs. ROUKEMA. Mr. Speaker, I rise to congratulate the Ramsey Fire Department on its 100th Anniversary. This volunteer unit is one of the finest in New Jersey and deserves the thanks and support of every resident of our community.

Volunteer firefighters are among the most dedicated public servants in our communities. They set aside their own convenience—indeed, their own safety—to protect the lives and property of their neighbors and ask nothing in return. Volunteer firefighters turn out to do their duty in the darkness of freezing winter nights and in the heat of suffocating summer days without hesitation.

The Ramsey Fire Department was established in 1899 with 32 original members. The new fire company made a \$25 deposit on their first fire engine, an 1885 Babcock Chemical Wagon purchased second-hand from the Rutherford Fire Department. The Dater family of Ramsey donated property near the railroad tracks for the first firehouse, built at a cost of \$197, and the Ramsey Fire Department was in business. The first alarm was a brush fire near the tracks in April and the first building fire followed in January 1900.

The department grew quickly during the early years of the century, soon adding a horse-drawn ladder wagon and going to motorized fire trucks in 1912. A modern pumper was added in 1927 and the Ladies Auxiliary was founded in 1935 with 23 charter members. Additional equipment was purchased in subsequent years and the Island Avenue fire station constructed in 1951 to accommodate the growing fleet. A substation in the form of a three-bay addition to the borough garage was added in the 1960s. The 1970s saw the formation of the Junior Fire Brigade to encourage young people to become involved and a conversion from the traditional "fire engine red" paint scheme on equipment to lime yellow.

The Ramsey Fire Department has twice received the Box 54 Unit Citation Award from the New Jersey-New York Volunteer Firemen's Association for daring rescues, once in 1975 and again in 1984. In 1981, the department found itself the victim of arson when fire destroyed the second floor of the Island Avenue building. The building was repaired and rededicated the next year.

Major renovations of the fire department headquarters on Island Avenue were completed in 1992, including a room to display antique fire apparatus, a new radio room, a chief officer's room, an office for administrative officers and a 150-foot radio communications tower. Since 1996, the headquarters building has been known as the Robert E. Litchult Fire Safety Building in honor of Litchult, who served a record 63 years with the department.

Responding to nationwide difficulties in recruiting volunteer firefighters, the department in 1994 formed a Recruitment and Retention Program to solicit new members.

24573

Throughout its long and distinguished history, the Ramsey Fire Department has protected both lives and property through professionalism, dedication and skill of its many members. The department has grown vastly in personnel, equipment and other resources. Today, it is among the finest firefighting organizations in the State of New Jersey. Members constantly train to improve performance in order to do their jobs as safely and efficiently as possible.

The Ramsey Fire Department has come a long way from its founding. Today's state-of-the-art fire engines and high-tech equipment put Ramsey on par with any other fire department in the region. But it takes more than equipment and buildings to run a fire department. It takes dedicated, hard-working individuals willing to put the safety and property of their neighbors first. People like President Ken Bell and Fire Chief George Sutherland and all the officers and firefighters of the Ramsey Fire Department deserve our most special thanks.

The Ramsey Fire Department was founded 100 years ago on the principle of neighbors helping neighbors. That principal has made the department a success and will continue to do so in the future.

I would like to ask my colleagues in the House to join me in congratulating the Ramsey Fire Department on 100 years of meritorious service to the community, and in paying tribute to the brave and dedicated firefighters who have sacrificed personal safety in response to the needs of others. All past and present members of this very professional "volunteer" fire department deserve our deepest thanks for their work on the behalf of our community.

THE SENIOR CITIZENS
PROTECTION ACT

HON. RICK LAZIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. LAZIO. Mr. Speaker, I rise today to introduce a bill to cut fraud and abuse in our Medicare system, restore balance in our health care system, and give us all a better quality of life. Federal, state, and local governments need more tools at their disposal to crack down on rampant health care fraud. Congress needs to empower law enforcement to preserve and protect Medicare, decrease the crime rate, and let each and every one of us feel safe and secure in our retirement years.

The Health and Human Services' Office of the Inspector General recently released startling information on their audit of the Health Care Financing Administration (HCFA). According to the audit, the Medicare Program lost \$20 billion in fraud and improper payments in Fiscal Year 1997. What is unconscionable is that only \$4 billion was recovered.

A recently published Focus Group Study of Medicare Insurance Counselors found that most officials believe a significant amount of fraud exists and continues to undermine the Medicare program. In the study, many experts said HCFA took no action after being notified

of fraud. The May 1998 study further cited that HCFA did not have adequate systems and procedures in place to root out fraud.

A major reason health care fraud is at historic levels is because current law bars state officials from even investigating Medicare fraud. They are limited to investigating suspected fraud in the Medicaid. This creates an enforcement gap because an entity defrauding Medicaid is often linked to fraud in other federal health programs.

An example from my district on Long Island illustrates this predicament perfectly. A provider was suspected of defrauding Medicaid. The state and its Medicaid Fraud Control Unit began an investigation. That investigation spilled over into allegations of Medicare fraud and the state could not investigate because it lacked the requisite authority. Despite repeated requests from the state, the Federal Government did not investigate or prosecute the allegations. While the state was trying to wrest control of the investigation for the Federal Government, the provider billed nearly \$2 million. If the state had the power to investigate, some fraud could have been stopped and stolen money would have been recovered and returned to the government coffers.

My bill, the Senior Citizens Protection Act of 1999, will empower the states and their Medicaid Fraud Control Units by allowing them to investigate Medicare fraud cases when Medicaid fraud has been alleged.

A second reason health care fraud remains unchecked is because current law prohibits states from investigating patient abuse in assisted living and residential-care facilities. Currently, a state only has the authority to investigate patient abuse in facilities that receive Medicaid reimbursement, usually nursing facilities. Yet today, more and more of our friends and family reside in assisted living and other residential-care facilities. Normally, federal and local governments do not investigate suspected patient abuse in these non-traditional health care facilities and the state lacks the power to delve into these cases. The result is a high number of cases falling through the cracks.

My bill would authorize the states and the Medicaid Fraud Control Units to investigate these patient abuse cases in long-term care facilities.

The government should be doing more—much more—to combat fraud and abuse. “White collar” crimes in the health care industry can be stopped. The Senior Citizens Protection Act requires coordination of anti-fraud efforts, keeps our senior citizens safe, returns all recoveries to the Federal Government, and does not cost the Federal Government anything.

Our government should be given all the tools necessary to combat fraud in our health care system and give Americans the peace of mind that their moms and dads are well cared for in their retirement years. We need to ferret out providers who rip off the system, and Americans need to rest comfortably at night knowing our family members and friends receive the highest quality health care without the fear of being physically, mentally, or financially abused. I urge my colleagues to support the Senior Citizens Protection Act of 1999 because it will provide health care security to our

seniors and restore their trust in the people who care for them from morning until night.

HONORING THE MADERA COLLEGE CENTER

HON. GEORGE RADANOVICH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. RADANOVICH. Mr. Speaker, I rise today to honor the Madera College Center for the State Center Community College District. The Board of Trustees for the college held a groundbreaking ceremony for the first permanent building on their campus on September 24, 1999.

The Madera Center has been in existence for approximately 15 years. The college offers a wide variety of programs and opportunities for students. The full-service campus includes a library, bookstore, distance learning classroom, cafeteria, and computer laboratories. Utilizing services and course catalogs from its sister institution, Reedley College, the Madera Community College Center is able to afford its students a choice of more than 40 Associate Degrees and Certificates of Achievement.

The building for which ground was broken will consist of a lecture hall, library, classrooms, laboratories and offices. It is projected that the facility will be completed by August 2000, allowing for the attendance of students for the fall 2000 semester. In addition, parking lots and play fields will be installed as a part of this \$12.7 million development project.

Mr. Speaker, I rise to recognize the Madera College Center and its Board of Trustees, for their dedication to providing quality education to students in the Madera area. I urge my colleagues to join me in wishing the Madera Center many more years of success and continued growth.

IN HONOR OF CAPT. CLELL NEIL AMMERMAN, U.S. NAVY (RET.)

HON. ELTON GALLEGLY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. GALLEGLY. Mr. Speaker, I rise to honor Capt. Clell Neil Ammerman, U.S. Navy (Ret.), who passed away last week.

Captain Ammerman had a long and distinguished career serving his country in the United States Navy. He graduated with honors from the U.S. Naval Academy in 1954 and quickly proved himself as a capable officer. In 1957, he commanded the USS *Ely*, one of the first ships to transit the new St. Lawrence Seaway. In 1958, he was assigned to the National Security Agency, and in 1961 received his master's degree in applied mathematics and physics.

Captain Ammerman returned to the sea, and in August 1964 was involved in the initial action in the Gulf of Tonkin as an officer aboard the USS *Oklahoma City*. In 1967, he completed his work in the field of nuclear weapons effects at the Lawrence Radiation

Laboratory in Livermore, California, for which he received the Joint Services Commendation Medal.

After another year at sea, Captain Ammerman served as Assistant to the Deputy Director, Research and Technology, ODDR&E. That stint earned him the Legion of Merit for outstanding management of research and development programs. But a Navy man belongs to the sea, and in September 1971, Captain Ammerman assumed command of the USS *John S. McCain*. Between April and October 1972, Captain Ammerman actively engaged the enemy off the coast of the Republic of Vietnam and was awarded the Bronze Star with the Combat “V.”

He then entered the academic life, serving as professor of naval science and commanding officer for the NROTC Unit at UCLA. In 1976, he again returned to sea, then moved to Newport, Rhode Island, in 1978 to command the Navy's prestigious Surface Warfare Officer's School. Finally, he served as Chief of Staff of Battle Force Seventh Fleet, homeported in Subic Bay, the Philippines.

In June of 1984, Captain Ammerman retired from the Navy and settled in Camarillo, California, which is in my district. Until 1995, he continued his relationship with the Navy through his work with naval contractors.

His wife of 20 years, Pamela, is national director of the Navy League of the United States. She has also served as my campaign manager for years. Aside from Pam, Captain Ammerman is survived by six children and four grandchildren.

Mr. Speaker, I know my colleagues will join me for a moment of prayer for Capt. Clell Neil Ammerman, and in sending our condolences to Pam and all of his family.

IN HONOR OF THE IRONBOUND COMMUNITY CORPORATION FOR 30 YEARS OF SERVICE TO NEWARK, NEW JERSEY

HON. ROBERT MENENDEZ

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. MENENDEZ. Mr. Speaker, I rise today to recognize the Ironbound Community Corporation as it celebrates its 30th anniversary of service and dedication to the people of the “Ironbound” and East Ward sections of Newark, NJ.

Serving one of the most ethnically and culturally diverse neighborhoods in the State, the Ironbound Community Corporation (ICC) has been a progressive and vocal force in the community since it opened its door in 1969. It has led the way in addressing the particular needs and concerns faced by a multicultural and multilingual community.

For 30 years, the ICC has planned, implemented, and operated a number of vital programs for residents of the Ironbound. From a nationally accredited preschool child care program to an extensive “Meals on Wheels” delivery service for seniors to environmental clean-ups to GED, English, and college courses, the ICC has worked diligently to improve the quality of life in Newark's Ironbound.

October 7, 1999

This weekend, led by President Susanna Stradiotti and Executive Director Joseph Della Fave, the ICC will commemorate its 30th anniversary by honoring three members of the community who embody the intent and purpose of the organization and three individuals who directly benefited from ICC's various programs.

This year's three honorees are: Patricia Moreira, Preschool Teacher for 30 years at the Ironbound Children's Center; June Kruszewski, resident of the community for 72 years, volunteer for 20 years, co-chair of the Ironbound Committee Against Toxic Waste, and member of the ICC Board of Trustees; and, Joseph Rendeiro, principal of the Hawkins St. School and former teacher at the Ironbound Adult Education Project.

This year's ICC Success Story honorees are: Rosa Coneicao, graduate of the ICC Adult Education Project, Director of Work First at Essex County College, Fellow at Leadership Newark, and member of the ICC Board of Trustees; Fred Linhares, graduate of the Iron-

EXTENSIONS OF REMARKS

24575

bound Children's Center, President of the Portuguese American Congress, and Municipal Judge; Ed Norton, graduate of the ICC Community School and Owner/Operator of the Dalfen Printing Co.

For its unwavering commitment to the Ironbound and East Ward sections of Newark, and for its continued leadership in community service, I ask my colleagues to join me in congratulating the Ironbound Community Center on its 30th anniversary.

YWCA OF COBB COUNTY

HON. BOB BARR

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 7, 1999

Mr. BARR of Georgia. Mr. Speaker, it is my distinct honor today to recognize the YWCA, and particularly the YWCA of Cobb County for its efforts to combat violence, by celebrating a "Week Without Violence," from October 17-23.

The YWCA "Week Without Violence" is a public awareness campaign that seeks to advocate practical and sustainable alternatives to violence in our homes, schools, workplaces, and neighborhoods. Since it was launched in 1995, the YWCA "Week Without Violence" has grown from a grassroots initiative into a global movement with women, men, and children participating in events throughout all 50 dates and in more than 20 countries on six continents.

I especially applaud the YWCA of Cobb County for its efforts to bring together people from throughout the community to fight violence against all people, regardless of age, race, income, or sex. The grassroots efforts are an excellent example of Americans joining together to fight for what is right about our great nation. By devoting time and effort to this cause YWCAs across America are demonstrating a widespread desire to improve our communities.

SENATE—Friday, October 8, 1999

The Senate met at 9:30 a.m. and was called to order by the President pro tempore [Mr. THURMOND].

PRAYER

The Chaplain, Dr. Lloyd John Ogilvie, offered the following prayer:

Almighty God, all power and authority belongs to You. You hold the universe in Your hands and focus Your attention on the planet Earth. We humble ourselves before You, for You alone are Lord of all nations, and You have called our Nation to be a leader in the family of nations. By Your providence, You have brought to this Senate the men and women through whom You can rule wisely in soul-sized matters that affect the destiny of humankind. With awe and wonder at Your trust in them, the Senators enter executive session today to confront the issues of the Comprehensive Nuclear Test-Ban Treaty.

Grip their minds with three great assurances to sustain them especially today and next Tuesday: You are Sovereign of this land, and they are accountable to You; You are able to guide their thinking, speaking, and decisions if they will but ask You; and You will bring unity so that they may lead our Nation in its strategies of defense, and the world in its shared obligation to use nuclear power for creative and not destructive purposes.

O God of peace, hear our prayer, for You are our Lord and Savior. Amen.

PLEDGE OF ALLEGIANCE

The Honorable MIKE DEWINE, a Senator from the State of Ohio, led the Pledge of Allegiance, as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

RECOGNITION OF THE ACTING MAJORITY LEADER

The PRESIDING OFFICER (Mr. DEWINE). The acting majority leader is recognized.

SCHEDULE

Mr. KYL. Mr. President, today the Senate will begin consideration of the Comprehensive Nuclear Test-Ban Treaty with debate taking place throughout the day. Debate time is limited to 14 hours and will resume at 9:30 a.m. on Tuesday, October 12. I encourage my colleagues to come to the floor to discuss this important issue.

As a reminder, cloture was filed on the conference report to accompany

the Agriculture appropriations bill on Thursday, and by previous consent the Senate will proceed to that cloture vote on Tuesday at 5:30 p.m. It is hoped that the vote regarding the treaty can be stacked to follow the 5:30 vote.

I thank my colleagues for their attention.

PRIVILEGE OF THE FLOOR

Mr. KYL. Mr. President, I ask unanimous consent that Brad Sweet, staff assistant on the Government Affairs Subcommittee on International Security, Proliferation, and Federal Services be given floor privileges during consideration of the Comprehensive Nuclear Test-Ban Treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KYL. Mr. President, the Chairman of the Senate Foreign Relations Committee, Senator HELMS, has asked that I manage the time until he is able to arrive, and in that regard I would like to make an opening statement.

EXECUTIVE SESSION

COMPREHENSIVE NUCLEAR TEST-BAN TREATY

The PRESIDING OFFICER. The clerk will report the resolution of ratification.

The legislative clerk read as follows:

Resolved, (two-thirds of the Senators present concurring therein),

That the Senate advise and consent to the ratification of the Comprehensive Nuclear Test-Ban Treaty, opened for signature and signed by the United States at New York on September 24, 1996, including the following annexes and associated documents, all such documents being integral parts of and collectively referred to in this resolution as "Treaty", (contained in Senate Treaty Document 105-28):

- (1) Annex 1 to the Treaty entitled "List of States Pursuant to Article II, Paragraph 28";
- (2) Annex 2 to the Treaty entitled "List of States Pursuant to Article XIV";
- (3) Protocol to the Comprehensive Nuclear Test-Ban Treaty.
- (4) Annex 1 to the Protocol.
- (5) Annex 2 to the Protocol.

Mr. KYL. Mr. President, let me just pose one unanimous-consent request before we begin. To the extent that it is possible with respect to people in the Chamber ready to make statements, I ask unanimous consent that the debate on the proposition be divided in a way that proponents and opponents speak in opposition to each other, one following the other.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Arizona.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. It has been raised whether or not that is a good idea. As I understand the unanimous-consent request, it is to the extent possible we will try to alternate between Democrat and Republican, opponents and proponents. That is the same as saying, with one exception, for and against. I do not expect that to mean that we would not engage each other in colloquy and debate so we don't just have statement after statement.

The PRESIDING OFFICER. The Senator from Arizona.

Mr. KYL. That is precisely why I framed it the way I did.

Mr. DORGAN. Reserving the right to object—

Mr. KYL. It would not be appropriate to say Republican and Democrat, since I know Senator SPECTER would like to speak not in opposition.

Mr. DORGAN. Mr. President, reserving the right to object, I hope the Senator would not put forth any unanimous-consent request. I hope we would simply have an agreement among the two leaders in the Chamber that they will alternate back and forth. The difficulty with a unanimous-consent agreement is you may get a circumstance where you have no one on one side and three or four speakers on the other side.

I think it is practical to manage it the way the Senator has suggested.

Mr. KYL. With the understanding that Senator BIDEN and I just reached, and the Senator just articulated, I withdraw the request, and I assume we can proceed in that fashion.

Mr. President, I rise today to explain why I strongly oppose the Comprehensive Test Ban Treaty that has been submitted to the Senate for its advice and consent.

I think the words of six distinguished Americans who formerly bore the responsibility for safeguarding our nation's security as Secretary of Defense frame the issue before the Senate quite well. In a letter to the majority leader this week, James Schlesinger, Dick Cheney, Frank Carlucci, Caspar Weinberger, Donald Rumsfeld, and Melvin Laird who served as Secretaries of Defense in the Reagan, Bush, Ford, and Nixon administrations, stated:

As the Senate weighs whether to approve the Comprehensive Test Ban Treaty (CTBT), we believe Senators will be obliged to focus on one dominant, inescapable result were it to be ratified: over the decades ahead, confidence in the reliability of our nuclear weapons stockpile would inevitably decline,

thereby reducing the credibility of America's nuclear deterrent.

For this reason, these former Secretaries of Defense conclude that the CTBT is "incompatible with the Nation's international commitments and vital security interests . . . Accordingly, we respectfully urge you and your colleagues to preserve the right of this nation to conduct nuclear tests necessary to the future viability of our nuclear deterrent by rejecting approval of the present CTBT."

I couldn't agree more with the considered judgment of these distinguished Americans who have had the awesome responsibility of maintaining the U.S. nuclear deterrent throughout the cold war and beyond.

Before discussing some of the flaws of the CTBT and how it will undermine the credibility of our nuclear deterrent, a few words on the importance of nuclear deterrence, and the limits of arms control I think are in order.

As my colleagues recall, during the cold war, the Soviet Union enjoyed a tremendous advantage in conventional military forces in Europe. The United States was able to offset this advantage in conventional forces, and to guarantee the security of Western Europe until the cold war ended peacefully, through the maintenance of a credible nuclear deterrent. Our nuclear "umbrella," as it is called, was extended to our allies in other parts of the world as well.

Since the end of the cold war, some have argued that nuclear deterrence is an outdated concept, and the U.S. no longer needs to retain a substantial nuclear weapons capability. However, deterrence is not a product of the cold war and has been around since the beginning of diplomacy and war. Over 2,500 years ago, the Chinese philosopher Sun Tzu wrote about the value of deterrence stating, "To win one hundred victories in one hundred battles is not the acme of skill. To subdue the enemy without fighting is the acme of skill."

Furthermore, the end of the cold war does not mean national security threats to the United States have evaporated. James Woolsey, President Clinton's first Director of Central Intelligence, aptly described the current security environment when he said, "We have slain a large dragon [the Soviet Union]. But we live now in a jungle filled with a bewildering variety of poisonous snakes."

Rogue nations like North Korea, Iran, and Iraq have weapons of mass destruction programs and are hostile to the United States. China is an emerging power whose relationship with the United States has been rocky at best. And Russia retains significant military capabilities, including over 6,000 strategic nuclear warheads.

The gulf war is an excellent case study of the continuing importance of nuclear deterrence in the post-cold-war

world. In that conflict, the maintenance of a credible nuclear weapons capability, coupled with the understanding that it was possible that the United States would respond with nuclear weapons if attacked with other weapons of mass destruction, saved lives by deterring such an attack.

As my colleagues recall, Iraq possessed a large arsenal of chemical weapons that it had used against its Kurdish population, and against Iranian troops during the Iran-Iraq war in the 1980s. It is widely acknowledged that Iraq did not use chemical weapons against the United States-led coalition during the gulf war because we possessed a credible nuclear deterrent.

Prior to the start of the gulf war, U.S. leaders practiced the art of deterrence by issuing clear warnings to Saddam Hussein. Secretary of Defense Dick Cheney stated:

He [Saddam Hussein] needs to be made aware that the President will have available the full spectrum of capabilities. And were Saddam Hussein foolish enough to use weapons of mass destruction, the U.S. response would be absolutely overwhelming and it would be devastating. He has to take that into consideration, it seems to me, before he embarks upon a course of using those kinds of capabilities.

President Bush also sent a strongly worded message to Saddam Hussein which said:

Let me state, too, that the United States will not tolerate the use of chemical or biological weapons. . . . The American people would demand the strongest possible response. You and your country will pay a terrible price if you order unconscionable acts of this sort.

Iraqi officials have confirmed that these statements deterred Baghdad from using chemical and biological weapons. In 1995, Foreign Minister Tariq Aziz reported to Rolf Ekeus, chairman of the U.N. commission charged with inspecting Iraqi weapons of mass destruction facilities, that Iraq was deterred from using its arsenal of chemical and biological weapons because the Iraqi leadership had interpreted Washington's threats of devastating retaliation as meaning nuclear retaliation.

Aziz's explanation is corroborated by a senior defector, General Wafic Al Sammarai, former head of Iraqi military intelligence, who stated:

Some of the Scud missiles were loaded with chemical warheads, but they were not used. We didn't use them because the other side had a deterrent force. I do not think Saddam was capable of taking a decision to use chemical weapons or biological weapons, or any other type of weapons against the allied troops, because the warning was quite severe, and quite effective. The allied troops were certain to use nuclear arms and the price will be too dear and too high.

Mr. President, as these statements show, a credible nuclear deterrent remains vitally important to our nation. I would hope that we could begin this debate on the CTBT by agreeing that a

strong U.S. nuclear deterrent remains essential and that the Senate should reject any actions that would undermine the credibility of this deterrent.

To the second preliminary point, the fallacy of arms control:

Unfortunately, the CTBT negotiated by the Clinton administration would do just that. This is not surprising since the Clinton administration has sought to protect our national security with a fixation on arms control that columnist Charles Krauthammer aptly calls "Peace through Paper."

Of course, arms control is not a new idea. After all, in the year 1139, the Roman Catholic Church tried to ban the crossbow. Like so many other well-intentioned arms control measures, this one was doomed to failure from the start.

And who can forget the Kellogg-Briand treaty, ratified by the United States in 1929, that outlawed war as an instrument of national policy. This agreement and others spawned in its wake left the United States and Britain unprepared to fight and unable to deter World War II.

Yet despite these and many other notable failures, the Clinton administration still looks to arms control as the best way to safeguard our security. Under Secretary of State John Holum explained this philosophy during a speech in 1994, stating:

The Clinton Administration's policy aims to protect us first and foremost through arms control—by working hard to prevent new threats—and second, by legally pursuing the development of theater defenses for those cases where arms control is not yet successful.

The administration continues to cling tenaciously to the ABM Treaty, which prevents us from defending ourselves against missile attack, and numerous other arms control measures have been proposed by senior officials like Secretary of State Madeleine Albright, such as bans of shoulder-fired surface-to-air missiles, laser weapons, anti-satellite weapons, landmines, and even a proposal to limit the availability of assault rifles.

As George Will has said of the administration's arms control philosophy, "The designation 'superstition' fits because the faith of believers in arms control is more than impervious to evidence, their faith is strengthened even by evidence that actually refutes it."

There is enduring wisdom in President Reagan's statement of "Peace through strength."

In 1780, our Nation's first President, George Washington said, "There is nothing so likely to produce peace as to be well prepared to meet an enemy." Two hundred years later another President, Ronald Reagan, called this doctrine "Peace Through Strength."

I urge Senators to think about the enduring wisdom of these statements in the coming days as we debate the

Comprehensive Test Ban Treaty and the negative effects its ratification would have on our Nation's security.

Let me turn now to a discussion of the CTBT's many flaws.

America's nuclear weapons are the most sophisticated in the world. This was the point of the letter of the former Secretaries of Defense. They pointed out that each one typically has thousands of parts, and over time in nuclear materials and high-explosive triggers in our weapons deteriorate, and we lack the experience predicting the effect of these changes.

Some of the materials used in our weapons, like plutonium, enriched uranium, and tritium, are radioactive materials that decay, and as they decay they also change the properties of other materials within the weapon. We lack experience predicting the effects of such aging on the safety and reliability of our weapons.

We did not design our weapons to last forever. The shelf life of our weapons was expected to be about 20 years. In the past, we did not encounter problems with aging weapons, because we were fielding new designs and older designs were retired. But under the CTBT, we could not field new designs to replace older weapons, because testing would be required to develop new designs.

Remanufacturing components of existing weapons that have deteriorated also poses significant problems. Over time, manufacturing processes will change, some chemicals previously used in the production of our weapons have been banned by environmental regulations, and our documentation of the technical characteristics of older weapons, in some cases, is incomplete. Furthermore, as James Schlesinger—who formerly served as Secretary of defense and Secretary of Energy—has testified to the Senate, the plutonium pits in some of our weapons are approaching the end of this life-span. According to Dr. Schlesinger, one of our national laboratories estimates the pits used in some of our weapons will last 35 years. Since many of the pits used in the current arsenal are about 30 years old, this means that we will soon need to replace these pits. But without testing, we will never know if these replacement parts will work as their predecessors did.

As the former Director of the Lawrence Livermore National Laboratory, Dr. John Nuckolls said last month in a letter to me:

Key components of nuclear warheads are "aging" by radioactive decay and chemical decomposition and corrosion. Periodic remanufacture is necessary, but may copy existing defects and introduce additional defects. Some of the remanufactured parts may differ significantly from the original parts—due to loss of nuclear test validated personnel who manufactured the original parts, the use of new material and fabrication processes, and inadequate specification of origi-

nal parts. There are significant risks of reducing stockpile reliability when remanufactured parts are involved in warhead processes where there are major gaps in our scientific understanding.

The fact is that, despite our technical expertise, there is much we still do not understand about our own nuclear weapons. As C. Paul Robinson, Director of the Sandia National Laboratory has said, "some aspects of nuclear explosive design are still not understood at the level of physical principles."

These gaps in our knowledge do not merely present a theoretical problem. As President Bush noted in a report to Congress in January 1993, "Of all U.S. nuclear weapons designs fielded since 1958, approximately one-third have required nuclear testing to resolve problems arising after deployment."

Furthermore, in 1987, Lawrence Livermore Lab produced a report titled "Report to Congress on Stockpile Reliability, Weapon Remanufacture, and the Role of Nuclear Testing" in which it extolled the importance of testing, noting that "... there is no such thing as a 'thoroughly tested' nuclear weapon." The report also goes on to state that of the one-third of weapons designs introduced into the stockpile since 1958 that have required testing to fix, "In three-fourths of these cases, the problems were discovered only because of the ongoing nuclear testing." This report went on to say that "Because we frequently have difficulty understanding fully the effects of changes particularly seemingly small changes on the nuclear performance, nuclear testing has been required to maintain the proper functioning of our nation's deterrent."

Secretary of Defense Caspar Weinberger summed this point up nicely in 1986 when he said:

The irreducible fact is that nuclear testing is essential to providing for the safety and security of our warheads and weapons systems. It also is essential if we are to maintain their reliability. This is not a matter of conjecture, but a lesson learned through hard experience. For example, in the case of one nuclear system—the warhead for the Polaris [SLBM]—testing allowed us to fix defects that were suddenly discovered. Until corrected, these defects could have rendered the vast majority of weapons in our sea-based deterrent completely inoperable.

The importance of testing to the maintenance of any complex weapon or machine cannot be underestimated. As the six former Secretaries of Defense noted in this letter opposing the CTBT,

The history of maintaining complex military hardware without testing demonstrates the pitfalls of such an approach. Prior to World War II, the Navy's torpedoes had not been adequately tested because of insufficient funds. It took nearly two years of war before we fully solved the problems that caused our torpedoes to routinely pass harmlessly under the target or to fail to explode on contact. For example, at the Battle of Midway, the U.S. launched 47 torpedo air-

craft, without damaging a single Japanese ship. If not for our dive bombers, the U.S. would have lost the crucial naval battle of the Pacific war.

The Clinton administration has proposed a program that it hopes will replace actual nuclear tests with computer simulations and a much greater emphasis on science-based experiments. It is called the Stockpile Stewardship Program. According to the Fiscal Year 2000 Stockpile Stewardship Plan Executive Overview, released by the Department of Energy in March this year:

The overall goal of the Stockpile Stewardship program is to have in place by 2010 . . . the capabilities that are necessary to provide continuing high confidence in the annual certification of the stockpile without the necessity for nuclear testing.

I support the Stockpile Stewardship Program because it will improve our knowledge about our nuclear weapons. But as former Secretary of State Henry Kissinger, former National Security Advisor Brent Scowcroft, and former CIA Director John Deutch said in a letter this week, "the fact is that the scientific case simply has not been made that, over the long term, the United States can ensure the nuclear stockpile without nuclear testing."

First, the Stockpile Stewardship Program faces tremendous technical challenges. As the Director of Sandia National Laboratories, Dr. Robinson has said, "the commercially available and laboratory technologies of today are inadequate for the stockpile stewardship tasks we will face in the future. Another hundred-to-thousand-fold increase in capability from hardware and software combined will be required."

Dr. Victor Reis, the architect of the stewardship program, said this about it during a speech in Albuquerque:

Think about it—we are asked to maintain forever, an incredibly complex device, no larger than this podium, filled with exotic, radioactive materials, that must create, albeit briefly, temperatures and pressures only seen in nature at the center of stars; do it without an integrating nuclear test, and without any reduction in extraordinarily high standards of safety and reliability. And, while you're at it downsize the industrial complex that supports this enterprise by a factor of two, and stand up critical new manufacturing processes.

This within an industrial system that was structured to turn over new designs every fifteen years, and for which nuclear explosive testing was the major tool for demonstrating success.

Senior officials at the Department of Energy and our nuclear labs are generally careful in how they couch their remarks about the Stockpile Stewardship Program. They typically state that the stewardship program is the best approach to maintaining our weapons in the absence of testing. But they are also careful not to guarantee that, despite the unquestioned brilliance of the scientists, the Stockpile Stewardship Program will succeed in replacing testing.

In fact, the Stockpile Stewardship Program has already experienced setbacks. For example, the National Ignition Facility, which is the linchpin of the program, has recently fallen behind schedule and is over budget. It still faces a critical technical uncertainty about a major goal of its design: will it be able to achieve thermonuclear ignition?

Another problem with relying on computer simulation to replace testing is the increased risk of espionage. Former Lawrence Livermore National Lab Director John Nuckolls made this point in his letter to me as well: "Espionage is facilitated when U.S. progress is frozen, and classified information is being concentrated and organized in electronic systems." In short, in order to achieve the vast increases in computing power required for the stewardship program, much of the computer code required for the program will be written by hundreds of people at participating universities and colleges—in many cases by people who are not even American citizens.

Mr. President, the bottom line is that a credible nuclear deterrent is just too important to put all our eggs in the stewardship basket.

In addition to impairing the reliability of our nuclear arsenal, the CTBT will prevent us from making our nuclear weapons as safe as they can be. This is extraordinarily important.

Nuclear weapon safety has always been a paramount concern of the United States. Throughout the history of our nuclear weapons program, we have made every effort to ensure that even in the most violent of accidents there would be the minimum chance of a nuclear explosion or radioactive contamination. The results of such an accident would be catastrophic.

That's why President Clinton's Secretary of Defense, Bill Cohen, opposed a test moratorium when he was a Senator. During debate on an amendment imposing a moratorium on testing, August 3, 1993, then-Senator Cohen said,

A vote to halt nuclear testing today is a vote to condemn the American people to live with unsafe nuclear weapons in their midst for years and years—indeed until nuclear weapons are eliminated. Not just a few unsafe nuclear weapons, but a nuclear stockpile in which most of the weapons do not have critical safety features.

I digress a moment to note when he was asked about this statement this week, now-Secretary Cohen said, we have replaced those weapons with weapons in our inventory now that are safe.

I know defense Secretary Cohen would agree, that is not a correct statement. All of the weapons in our current inventory lack one or more of the essential safety features that we have been talking about here.

As the Director of Los Alamos National Lab, Dr. Sig Hecker, indicated in a letter to me in 1997, "with a CTBT it

will not be possible to make some of the potential safety improvements for greater intrinsic warhead safety that we considered during the 1990 time frame." The reason is that nuclear tests must be done in many cases to confirm that once new safety features are incorporated, the weapons are reliable and still operate as intended. The CTBT makes it pointless to try to invent new, improved safety features because they could not be adopted without nuclear testing. Even worse, the CTBT eliminates the possibility of improving the safety of current weapons through the incorporation of existing, well understood safety features.

Safety features include items such as insensitive high explosive and fire resistant pits. Insensitive high explosive in the primary of a nuclear weapon is intended to prevent the premature detonation of the high explosive trigger, resulting in a potential nuclear explosion should the weapon be subjected to unexpected stress, like being dropped or penetrated by shrapnel or a bullet. Fire resistant pits are intended to prevent the dispersal of plutonium resulting in radioactive contamination of an area should the weapon be exposed to a fire, such as an accidental blaze during loading of a weapon on an aircraft.

Unfortunately, few people know that many of our current weapons do not contain all the safety features that already have been invented by our National Laboratories. Only one of the nine weapons in the current stockpile incorporates all six available safety features. In fact, three of the weapons in the stockpile—the W78 warhead, which is used on the Minuteman III ICBM, and the W76 and W88 warheads, which sit atop missiles carried aboard Trident submarines—incorporate only one of the six safety features. Another weapon, the W62 warhead, does not have any of the six safety features incorporated into its design.

The bottom line is that a ban on nuclear testing prevents us from making our weapons as safe as we know how to make them and creates a disincentive to making such safety improvements.

Mr. President, another point I think is extraordinarily important as we debate this CTBT is that the purpose of the treaty cannot be achieved by its ratification. In addition to undermining our nuclear deterrent, as I have just spoken to, the treaty will not achieve its goal of halting nuclear proliferation.

Supporters of the treaty say the United States must lead by example, and that by halting nuclear tests ourselves, we will persuade others to follow our example. Yet the history of the last eight years shows this theory is false. Since the United States halted testing in 1992, India, Pakistan, Russia, China, and France have all conducted tests.

Furthermore, the CTBT will not establish a new international norm

against nuclear weapons testing or possession. The Nuclear Nonproliferation Treaty, the NPT ratified by 185 countries has already established such a norm. The NPT calls for parties to the treaty, other than the five declared nuclear powers—the United States, the United Kingdom, Russia, China, and France—to pledge not to pursue nuclear weapons programs.

Yet North Korea and Iraq, to name two who are parties to the NPT, have, of course, violated it. They have pursued nuclear weapons programs despite their solemn international pledge never to do so. The CTBT will not add anything useful to the international nonproliferation regime since these nations, in effect, would be pledging not to test the nuclear weapons they have already promised never to have under the NPT. So much for the international norm.

Nor will the CTBT pose a significant impediment to the acquisition of nuclear weapons by rogue nations since, although nuclear testing is essential to maintaining the sophisticated nuclear weapons in the U.S. arsenal today, it is not required to develop relatively simple first-generation nuclear devices, like those needed or being developed by Iran and Iraq. For example, the United States bomb dropped on Hiroshima was never tested, and the Israeli nuclear arsenal has been constructed without testing.

Incidentally, the Clinton administration does not dispute this point. In Senate testimony in 1997, CIA Director George Tenet stated:

Nuclear testing is not required for the acquisition of a basic nuclear weapons capability (i.e. a bulky, first-generation device with high reliability but low efficiency.) Tests using high-explosive detonations only ([with] no nuclear yield) would provide reasonable confidence in the performance of a first generation device. Nuclear testing becomes critical only when a program moves beyond basic designs to incorporate more advanced concepts.

I believe Director Tenet is absolutely correct, based on the letter of the Secretary of Defense that I quoted earlier. We can't afford to underestimate the weapon described by Director Tenet—a "bulky, first generation device with high reliability but low efficiency" is a lot like the bomb we dropped on Hiroshima to change world history. It is a strategic weapon—if North Korea or Iran were able to deploy such a weapon, they could—to put it mildly—severely reduce our ability to protect our interests in East Asia or the Persian Gulf. These are weapons that would be designed to intimidate and kill large numbers of people in cities, not destroy purely military targets, as the United States weapons are designed to do.

Another problem with the CTBT is that it is totally unverifiable. It cannot be verified despite the vast array of expensive sensors and detection technology being established under the

treaty, so it will be possible for other nations to conduct militarily significant nuclear testing with little or no risk of detection. Effective verification requires high confidence that militarily significant cheating will be detected in a timely manner. The United States cannot now, and will not in the near future, be able to confidently detect and identify militarily significant nuclear tests of one kiloton or less by the way, that is roughly 500 times larger than the blast which destroyed the Murrah Building in Oklahoma City. We cannot detect a test of that magnitude.

What is "militarily significant" nuclear testing? Definitions of the term might vary, but I think we'd all agree that any nuclear test that gives a nation information to maintain its weapons or to develop newer, more effective weaponry is militarily significant.

In the course of U.S. weapons development, nuclear tests with yields between 1 kiloton and 10 kilotons have generally been large enough to provide "proof" data on new weapons designs. Other nations might have weaponry that could be assessed at even lower yields. As we know, crude but strategically significant weapons, like the bomb we dropped on Hiroshima, don't need to be tested at all. But for the sake of argument, let's be conservative and assume that other nations would also need to conduct tests at a level above 1 kiloton to develop a new nuclear weapon design.

The verification system of the CTBT is supposed to detect nuclear blasts above 1 kiloton, so it would seem at first glance that it will be likely that most cheaters would be caught. But look at the Treaty's fine print—the CTBT's International Monitoring System will be able to detect tests of 1 kilotons or more if they are nonevasive. This means that the cheater will be caught only if he does not try to hide his nuclear test.

But what if he does want to hide it? What if he conducts his test evasively?

It is a very simple task for Russia, China, or others to hide their nuclear tests. One of the best known means of evasion is detonating the nuclear device in a cavity such as a salt dome or a room mined below ground. Because it surrounds the explosion with empty space, this technique—called decoupling—reduces the noise, or the seismic signal, of the nuclear detonation.

The signal of a decoupled test is so diminished—by as much as a factor of 70—that it will not be possible to reliably detect it. For example, a 1,000-ton hidden test would have a signal of a 14-ton open test. This puts the signal of the illicit test well below the threshold of detection.

Decoupling is a well-known technique and is technologically simple to achieve. In fact, it is quite possible that Russia and China have continued to conduct nuclear testing during the

past 7 years, while the United States has refrained from doing so. They could have done so by decoupling.

There are also other means of cheating that can circumvent verification. One is open-ocean testing. A nation could put a device on a small boat or barge, tow it into the ocean, and detonate it anonymously. It would be virtually impossible to link the test to the cheater.

While evasive techniques are expensive and complex, the costs are relatively low compared to the expense of a nuclear weapons program, and no more complicated than weapons design. Further, established nuclear powers are well positioned to conduct clandestine testing to assure the reliability and undertake at least modest upgrades of their arsenals. Russia and China do not have good records on compliance with arms control and non-proliferation commitments. In addition, according to the Washington Times, United States intelligence agencies believe China conducted a small underground nuclear test in June and Russia is believed to have conducted a nuclear test earlier this month. While neither country has ratified the CTBT, both have signed the treaty and have promised to adhere to a testing moratorium. Again, so much for the norm.

The bottom line is that a determined country has several means to conceal its weapons tests and the CTBT is not effectively verifiable.

Let me stress here that my assessment is not based on opinions. Our inability to verify a whole range of nuclear testing is well-known and has been affirmed by the U.S. Intelligence Community. As the Washington Post reported earlier this week, our intelligence agencies lack the ability to confidently detect low-yield tests. We would be irresponsible in the extreme to ratify an unverifiable arms control treaty—especially when that treaty will inevitably reduce our confidence in our own nuclear deterrent.

President Clinton's first Director of the Central Intelligence Agency, James Woolsey, summed up the problems with verification of the treaty stating in Senate testimony that,

I believe that a zero-yield Comprehensive Test Ban Treaty is extraordinarily difficult, to the point of near impossibility—and possibly to the point of impossibility—to verify from afar.

In addition to the negative consequences that would result from treaty ratification, I would also point out that this accord is very poorly crafted. The CTBT is weakest at its very foundation—it actually fails to say what it bans. Nowhere in its 17 articles and 2 annexes are the terms "nuclear weapon test explosion" or "nuclear explosion" defined or quantified and these are the terms used in the treaty's basic obligations.

Acting Under Secretary of State John Holum admitted this point in responses to questions for the record on June 29 of this year stating:

The U.S. decided at the outset of negotiations not to seek international agreement on a definition of "nuclear weapon test explosion" in the Treaty text. The course of negotiations confirmed our judgment that it would have been extremely difficult, and possibly counterproductive, to specify in technical terms what is prohibited by the Treaty.

May I read that again:

The course of negotiations confirmed our judgment that it would have been extremely difficult, and possibly counterproductive, to specify in technical terms what is prohibited by the Treaty.

But another nation might choose to apply a less restrictive definition and conduct very low-yield testing, what we call hydronuclear testing. While the United States interprets the treaty to ban all nuclear explosives testing—that is why they call it a zero ban test—other nations could conduct very low-yield testing, as I said, which we could not verify but which they would consider in compliance with the treaty. This so-called hydronuclear testing is very useful to nuclear weapons programs by helping improve the understanding of fundamental nuclear weapons physics, develop new weapons concepts, ascertain existing weapons' reliability, and exercise the skills of scientists, engineers, and technicians. The nuclear energy released in a hydronuclear test can be less than the equivalent released by four pounds of conventional high explosives. This is virtually nothing, and such a low-yield test would almost certainly escape detection.

This is where the treaty's vagueness is actually harmful to our interests. Even if we were able to detect it, the nation conducting a hydronuclear test could simply argue that it was legal under the treaty. And they would have the historical CTBT negotiating record on their side. Many drafts of the CTBT prior to the Clinton administration allowed for low-yield "permitted experiments."

The verification regime of the CTBT—centered around the International Monitoring System, or IMS—will not be able to detect tests with far greater yields than hydronuclear tests. These tests can be conducted with virtually no risk of detection by either the IMS system or U.S. technical means.

There is much more to say about this treaty, but I believe I have outlined the primary reasons why the only prudent course for the Senate is to reject the CTBT. It will jeopardize rather than enhance our national security. It will undermine our vital nuclear deterrent by jeopardizing the reliability of our nuclear stockpile. It will prevent us from making our weapons as safe as they can be. It will not stop nuclear

proliferation, and it is not verifiable. It is not worthy of Senate approval.

The PRESIDING OFFICER (Mr. GORTON). The Senator from Delaware.

Mr. BIDEN. Mr. President, I am anxious to respond point by point to my friend. I suggest, to believe his arguments, as the old saying goes, requires the suspension of disbelief. I find them to be well intended but half true. I will be very specific about each one of them, beginning with this notion of the value of deterrence.

I find it fascinating, my colleagues talk about these other nations can have a Hiroshima-type bomb and build without testing and that would radically affect our security; yet we cannot rely in the future on our certainty of 6,000 sophisticated nuclear weapons in the stockpile. I urge my friends to read today's New York Times and Washington Post where our allies are apoplectic about the fact my colleagues are going to reject this treaty.

The absolute notion that this idea is—don't let them kid you about this debate, folks, anybody watching this. You do not have to be a nuclear scientist to understand. You do not have to be a sophisticated foreign policy specialist to grasp what is at stake.

Think of it this way when they tell you the security of our nuclear stockpile is going to become so unreliable over time, that, as Dr. Schlesinger has said and my friend from Arizona has alluded, our enemies are going to know we do not have confidence in it and that is going to embolden them, and our allies such as Germany and Japan are going to go nuclear because they cannot count on us.

That is fascinating. Why did all of our allies sign and ratify this treaty? Why are they apoplectic about the prospect that we will not sign this treaty? I ask my colleagues when is the last time they can remember the Prime Minister of Great Britain or the President of France saying publicly: My Lord, I hope the Senate doesn't do that.

You cannot have it both ways. This is an argument that I find absolutely preposterous. Although one can technically make it, it does require the suspension of disbelief in order to arrive at that conclusion.

One has to be an incredible pessimist to conclude that the 6,000 nuclear weapons configured in nine different warheads are going to atrophy after spending \$45 billion over the next 10 years, and after having been able to certify without testing for the last 3 years that it is in good shape, that some nation is going to say: We got them now, guys; I know they don't believe their system is adequate; maybe one of those bombs won't go off, maybe 10 of them, maybe 100 of them, maybe 1,000 of them, maybe 3,000 of them.

We still have 3,000 left. Back when the Senator from Nebraska and I were

kids and Vietnam was kicking up, we used to see bumper stickers: One atom bomb can ruin your day.

I am going to go into great detail on every point my friend raised and talk about, for example, the idea we cannot modernize these weapons when we find a defect; we cannot deal with them without testing.

Dr. Garwin yesterday—one of the most brilliant scientists we have had, who has been involved in this program since 1950—says, you can replace the whole physics package without changing.

By the way, I am going to yield to my friend from Pennsylvania.

Names are mentioned here: Dr. Robinson, of Sandia; Victor Reis, the architect of the program, whom I spent 2½ hours with the other day. They do not tell you the end of the sentence. The end of the sentence is: They both are for this treaty. They both are for this treaty, along with 32 Nobel laureates in physics. I ask unanimous consent that the list be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A LETTER FROM PHYSICS NOBEL LAUREATES

To Senators of the 106th Congress:

We urge you to ratify the Comprehensive Test Ban Treaty.

The United States signed and ratified the Limited Test Ban Treaty in 1963. In the years since, the nation has played a leadership role in actions to reduce nuclear risks, including the Non-Proliferation Treaty extension, the ABM Treaty, STARTs I and II, and the Comprehensive Test Ban Treaty negotiations. Fully informed technical studies have concluded that continued nuclear testing is not required to retain confidence in the safety, reliability and performance of nuclear weapons in the United States' stockpile, provided science and technology programs necessary for stockpile stewardship are maintained.

The Comprehensive Test Ban Treaty is central to future efforts to halt the spread of nuclear weapons. Ratification of the Treaty will mark an important advance in uniting the world in an effort to contain and reduce the dangers of nuclear arms. It is imperative that the CTBT be ratified.

Bethe, Cornell University, 1967 Nobel Prize; Nicolaas Bloembergen, Harvard University 1981 Nobel Prize; Owen Chamberlain, UC, Berkeley, 1959 Nobel Prize; Steven Chu, Stanford University, 1997 Nobel Prize; Leon N. Cooper, Brown University, 1972 Nobel Prize; Hans Dehmelt, University of Washington, 1989 Nobel Prize; Bal L. Fitch, Princeton University, 1980 Nobel Prize; Jerome Friedman, MIT, 1990 Nobel Prize; Donald A. Glaser, UC, Berkeley, 1960 Nobel Prize; Sheldon Glashow, Harvard University, 1979 Nobel Prize; Henry W. Kendall, MIT, 1990 Nobel Prize; Leon M. Lederman, Illinois Institute of Technology, 1988 Nobel Prize; David M. Lee, Cornell University, 1996 Nobel Prize; T.D. Lee, Columbia University, 1957 Nobel Prize; Douglas D. Osheroff, Stanford University 1996 Nobel Prize; Arno Penzias, Bell Labs, 1978 Nobel Prize; Martin L. Perl, Stanford Univer-

sity, 1995 Nobel Prize; William Phillips, Gaithersburg, 1997 Nobel Prize; Norman F. Ramsey, Harvard, 1989 Nobel Prize; Robert C. Richardson, Cornell University, 1996 Nobel Prize; Burton Richter, Stanford University, 1976 Nobel Prize; Arthur L. Schawlow, Stanford University, 1981 Nobel Prize; J. Robert Schrieffer, Florida State University, 1972 Nobel Prize; Mel Schwartz, Columbia University, 1988 Nobel Prize; Clifford G. Shull, MIT, 1994 Nobel Prize; Joseph H. Taylor, Jr., Princeton University, 1993 Nobel Prize; Daniel C. Tsui, Princeton, 1998 Nobel Prize; Charles Townes, UC, Berkeley, 1964 Nobel Prize; Steven Weinberg, Univ. of Texas, Austin, 1979 Nobel Prize; Robert W. Wilson, Harvard-Smithsonian, 1978 Nobel Prize; Kenneth G. Wilson, Ohio State University, 1982 Nobel Prize.

Mr. BIDEN. Five of the last six Chairmen of the Joint Chiefs of Staff are for this treaty, along with people such as Paul Nitze of the Reagan administration, Stansfield Turner, Charles Curtis, and so on. I ask unanimous consent that a list of those in support of the treaty be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PROMINENT INDIVIDUALS AND NATIONAL GROUPS IN SUPPORT OF THE CTBT

CURRENT CHAIRMAN AND FORMER CHAIRMEN OF THE JOINT CHIEFS OF STAFF

General Hugh Shelton, Chairman of the Joint Chiefs of Staff.

General John Shalikashvili, former Chairman of the Joint Chiefs of Staff.

General Colin Powell, former Chairman of the Joint Chiefs of Staff.

General David Jones, former Chairman of the Joint Chiefs of Staff.

Admiral William Crowe, former Chairman of the Joint Chiefs of Staff.

FORMER MEMBERS OF CONGRESS

Senator John C. Danforth.

Senator J. James Exon.

Senator Nancy Kassebaum Baker.

Senator Mark O. Hatfield.

Senator John Glenn.

Representative Bill Green.

Representative Thomas J. Downey.

Representative Michael J. Kopetski.

Representative Anthony C. Beilenson.

Representative Lee H. Hamilton.

DIRECTORS OF THE THREE NATIONAL LABORATORIES

Dr. John Browne, Director of Los Alamos National Laboratory.

Dr. Paul Robinson, Director of Sandia National Laboratory.

Dr. Bruce Tarter, Director of Lawrence Livermore National Laboratory.

OTHER PROMINENT NATIONAL SECURITY OFFICIALS

Ambassador Paul H. Nitze, arms control negotiator, Reagan Administration.

Admiral Stansfield Turner, former Director of the Central Intelligence Agency.

Charles Curtis, former Deputy Secretary of Energy.

OTHER PROMINENT MILITARY OFFICERS

General Eugene Habiger, former Commander-in-Chief of Strategic Command.

General John R. Galvin, Supreme Allied Commander, Europe.

Admiral Noel Gayler, former Commander, Pacific.

General Charles A. Horner, Commander, Coalition Air Forces, Desert Storm, former Commander, U.S. Space Command.

General Andrew O'Meara, former Commander U.S. Army Europe.

General Bernard W. Rogers, former Chief of Staff, U.S. Army; former NATO Supreme Allied Commander.

General William Y. Smith, former Deputy Commander, U.S. Command, Europe.

Lt. General Julius Becton.

Lt. General John H. Cushman, former Commander, I Corps (ROK/US) Group (Korea).

Lt. General Robert E. Pursley.

Vice Admiral William L. Read, former Commander, U.S. Navy Surface Force, Atlantic Command.

Vice Admiral John J. Shanahan, former Director, Center for Defense Information.

Lt. General George M. Seignious, II, former Director Arms Control and Disarmament Agency.

Vice Admiral James B. Wilson, former Polaris Submarine Captain.

Maj. General William F. Burns, JCS Representative, INF Negotiations, Special Envoy to Russia for Nuclear Dismantlement.

Rear Admiral Eugene J. Carroll, Jr., Deputy Director, Center for Defense Information.

Rear Admiral Robert G. James.

OTHER SCIENTIFIC EXPERTS

Dr. Hans Bethe, Nobel Laureate, Emeritus Professor of Physics, Cornell University; Head of the Manhattan Project's theoretical division.

Dr. Freeman Dyson, Emeritus Professor of Physics, Institute for Advanced Study, Princeton University.

Dr. Richard Garwin, Senior Fellow for Science and Technology, Council on Foreign Relations; consultant to Sandia National Laboratory, former consultant to Los Alamos National Laboratory.

Dr. Wolfgang K.H. Panofsky, Director Emeritus, Stanford Linear Accelerator Center, Stanford University.

Dr. Jeremiah D. Sullivan, Professor of Physics, University of Illinois at Urbana-Champaign.

Dr. Herbert York, Emeritus Professor of Physics, University of California, San Diego; founding director of Lawrence Livermore National Laboratory; former Director of Defense Research and Engineering, Department of Defense.

Dr. Sidney D. Dreil, Stanford Linear Accelerator Center, Stanford University.

Sources: Coalition to Reduce Nuclear Dangers and Statement by President Clinton, 7/20/99.

Mr. BIDEN. Mr. President, this idea that the stockpile is not going to be reliable, that you can't—we have thousands of parts, and the Russians have missiles with bombs with only 100 parts, and that has some significance. I have said it before.

I will yield now. I used to practice law with a guy named Sidney Balick—a good trial lawyer. Every time he would start a jury trial, he would start off by saying: I want you to take a look at my client. I want you to look at him. They're going to tell you he's not such a good looking guy. He's not. They're going to tell you you would not want to invite him home for dinner to meet your daughter. I wouldn't either. They're going to tell you—and he would go on like that. But he would say: I want you to keep your eye on the ball. Keep your eye on the ball. Follow the bouncing ball. Did he kill Cock Robin? That is the question.

The question is, At the end of the day, if we reject this treaty, are we better off in terms of our strategic interest and our national security or are we better off if we accept and ratify the treaty that all our allies have ratified? Which is better? Keep your eye on the ball.

I will respond, as I said, in due time to every argument my friend has made, from "the safety features argument" to "the purpose can't be achieved" to "nations that don't have sophisticated weapons are going to be able to cheat," and so on and so forth. But in the meantime, out of a matter of comity, which is highly unusual, because I should do a full-blown opening statement, I will yield to my friend from Pennsylvania because he has other commitments. Then I will come back to a point-by-point rebuttal of the statement by my friend from Arizona.

How much time is the Senator seeking?

Mr. SPECTER. I think I can do it in 20 minutes. It might take a little longer.

Mr. BIDEN. It can't take any longer. I will yield 20 minutes to the Senator.

PRIVILEGE OF THE FLOOR

I ask unanimous consent that Patrick Cottrell be able to be on the floor for the remainder of this debate.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Pennsylvania.

Mr. SPECTER. I thank the Senator from Delaware for yielding me time at this time.

Mr. President, this debate on the Comprehensive Test Ban Treaty may one day be classified as a historic debate. The issue which is being framed today, in my opinion, is the most important treaty issue, international issue which has faced this Senate since the Treaty of Versailles, which was rejected by the Senate, setting off an era of isolationism and, for many, enormous international problems resulting in World War II.

It is my hope this treaty will be ratified. I do not expect it to be ratified in a vote on Tuesday because the picture is clear that there are not enough Senators to provide the two-thirds constitutional balance. But it is my hope

before that scheduled vote arises on Tuesday that we will have worked out an operation to defer the vote on this treaty.

I agree with my distinguished colleague from Arizona, Senator KYL, that a nuclear deterrent is vital for the national security of the United States. When he cites the Comprehensive Test Ban Treaty as being negotiated by the Clinton administration—really an idea of the Clinton administration—I would point to the statements of President Eisenhower more than 40 years ago when he articulated the national interest in a comprehensive test ban treaty.

In a speech on August 22, 1958, President Eisenhower said this:

The United States . . . is prepared to proceed promptly to negotiate an agreement with other nations which have tested nuclear weapons for the suspension of nuclear weapons tests. . . .

In a very succinct statement in a letter to Bulganin, on January 12, 1958, President Eisenhower said:

. . . that, as part of such a program which will reliably check and reverse the accumulation of nuclear weapons, we stop the testing of nuclear weapons, not just for two or three years, but indefinitely.

It is hard to give a more emphatic bipartisan flavor than President Eisenhower's specific statements.

When the Senator from Arizona cites a list of six preeminent former Secretaries of Defense, I say that is, indeed, impressive. I would look to the assurances which we have today from Gen. Hugh Shelton, the Chairman of the Joint Chiefs of Staff, and the Secretary of Defense, William Cohen, in analyzing the two basic issues which have been set forth in the parameters by Senator KYL. And they are: Can we assure stability of our stockpile? Can we reasonably verify compliance by others?

There is a balance of risks. There is no test which will be absolute in its terms. But the essential question on balancing the risks and balancing the judgment is whether we would be better off with the Comprehensive Test Ban Treaty or without it.

The United States has an enormous lead on nuclear weapons. We have the nuclear deterrent. We have seen other nations—India and Pakistan—starting the test process. We have reason to be gravely concerned about North Korea's capacity with nuclear weapons. We worry about rogue nations such as Iraq, Iran, Libya, and others. So that, at least as I assess the picture, on a balance of risks, we are much better off if we limit testing than if we proceed to have testing.

The Stockpile Stewardship Program, I think, is reasonably effective. Is it perfect? No, it is not. The issue of verification, I think, is reasonably effective. It does not get some of the low-yield weapons. And activities are underway to try to solve that.

Secretary of Energy Richardson was in Moscow within the past week working with the Soviets on the so-called transparency test—illustrative of one of the efforts among many being undertaken to narrow the gap on verification. But again, it is a matter of balancing the risks. With or without the treaty, where are we better off?

I had an occasion to talk to Gen. Hugh Shelton, Chairman of the Joint Chiefs of Staff, earlier this week. I asked General Shelton the details of these questions, about the stability of our nuclear stockpile and the verification procedures. General Shelton said that we were in good shape on both issues.

Then I asked General Shelton the obvious question: Was his view, was his judgment colored to any extent by being in the administration of President Clinton as President Clinton's Chairman of the Joint Chiefs of Staff? It is not unheard of for even four-star generals to be a little concerned about what the Commander in Chief might prefer. General Shelton looked me in the eye and said: Senator, these are my honest views. If they weren't, I wouldn't state them; and rather than state views I didn't believe in, I could always retire.

I had occasion to talk at some length with Secretary of Defense William Cohen. It is true, as the Senator from Arizona outlines, at one point then-Senator Cohen had a different view. And as Secretary Cohen testified in hearings this week, a number of factors have led him to a different conclusion.

The question might also be raised as to whether the Commander in Chief of the Secretary of Defense might color, to some extent, his views. I am satisfied that Bill Cohen, with whom I worked in this body for some 16 years, would not put America at risk if he didn't believe what he said, that this Comprehensive Test Ban Treaty, balancing all considerations, was appropriate.

Once moving beyond the study of the treaty, which I have done, having announced my support for the treaty some time ago, after study and after looking at some of the experts, the question, in my judgment, is essentially a political question. I believe the lessons of history support arms control. That is a view I have held for some time.

I started my own personal studies of the United States-Soviet relations as a college senior, majoring in international relations at the University of Pennsylvania, and wrote my college thesis on United States-U.S.S.R. relations. One of the first resolutions I offered, coming to the Senate in early 1982, was a resolution for arms control. In 1982, Senators were pretty well lined up on philosophical grounds, those who favored arms control and those who did not favor arms control.

I recall that as a very tough debate against the chairman of the Armed Services Committee, John Tower. Who is ARLEN SPECTER to tell the President what to do in pushing for a summit agreement? Senator Tower put me through the paces, so to speak, and we talked about our nuclear deterrence.

Fortunately, I had been to Grand Forks, ND, taken a look at the Minuteman silo, absolutely terrified to see that enormous missile, looked down; about 100 feet into the ground it went. I had gone to Charleston, SC, to take a look at our nuclear submarines. I had been to Edwards Air Force Base to take a look at some of our latest bombers. The Senate decided with my position, on a vote of 90-8, we ought to have a summit. President Reagan was a major proponent of arms control, and President Reagan then pushed the summit concept. So the idea of arms control is not an idea which has originated with President Clinton, with President Eisenhower, President Reagan four-square behind it.

I have not hesitated to buck the arms control concept if I thought the United States had some technical advantage to be gained by stepping out on our own, if that would promote our national security. Attending the Geneva arms control talks in the mid-1980s, I became persuaded that the Strategic Defense Initiative was a sound proposition, though very controversial, that turned on our ability to develop the SDI, the Strategic Defense Initiative, as to whether the Anti-Ballistic Missile Treaty was subject to the broad interpretation or the narrow interpretation.

There were some very heated debates on the floor of the Senate. Senator MOYNIHAN was involved. Senator NUNN, a leading expert in the entire field, argued very strenuously for the narrow interpretation of the Anti-Ballistic Missile Treaty. I argued for the broad interpretation, which I thought was legitimate, because it would give leave to develop the strategic arms initiative. That was a complex issue. Many people said it was Star Wars, spy in the sky, couldn't be done.

I recollected, historically, that Vanevar Bush, a leading expert in the field, testified before Congress during World War II, actually in 1945, that it would be "impossible to develop intercontinental ballistic missiles." Fanciful as it may have been in 1945, we now know they have been developed.

Then-Secretary of Defense Robert McNamara said, in 1945, that the United States had such a tremendous lead, the Soviets could never catch us. He was wrong, too. They caught us and surpassed us. We know the story that is not apocryphal, that a clerk in the Patent Office resigned at the turn of 19th century because there was nothing new to be discovered. I agreed with President Reagan's vision on the Strategic Defense Initiative that we spent a

lot of money on it, and I don't think the money was wasted because we still are working and, more recently, with some success on missile defense.

In that context, President Reagan had an idea for control. President Reagan spoke out about sharing what we would learn with the Soviets to give them our defense system so there would not be an imbalance, so the nuclear deterrence on both sides, that balance of power, would not be affected.

I had occasion to have a long discussion with President Reagan on September 17, 1987, the 200th anniversary of the signing of the Constitution of the United States. President Reagan went to my hometown, Philadelphia. We had a long plane ride and a fair-sized car ride. I asked the President how he could see to it that the Soviet Union had our secrets when it really wouldn't be a matter during his Presidency and really it is a matter up to Congress. Candidly, President Reagan had no absolute answer to that point. But it was his vision that we would have the Strategic Defense Initiative and that we would share it with the Soviet Union.

When we take a look at the specifics and the technicalities, my sense is, there are reasonable assurances but it is a matter of balancing the risks.

We had a remarkable closed session of 5 hours in S-407 upstairs, which is the room where we have our secret briefings. After 5 hours, there was no doubt that it is a complicated subject. The distinguished chairman of the Arms Services Committee, Senator WARNER, came to the Republican luncheon caucus on Tuesday and said there is an adequate record to assure a negative vote on the Comprehensive Test Ban Treaty. I later had a chance to discuss with my distinguished colleague from Virginia the converse question. May the RECORD show he is on the floor now; nothing behind his back.

Mr. WARNER. Mr. President, no, indeed; I am right here. At such point as the Senator will entertain a question, I will be happy to put it to my colleague.

Mr. SPECTER. We may come to that.

I will repeat the assurances that Senator WARNER gave me, that while he said there was an adequate record for a negative vote, he also said there was an adequate record for an affirmative vote, depending on how one looked at the evidence. So my view is, it comes down to a judgment call. It comes down to an issue which is essentially a political question as to how the national security of the United States is better served by relying on our superiority today and stopping other nations from achieving superiority.

I believe the United States would be well advised to move ahead to ratify this treaty and to show the world we still have a preeminent role of world

leadership in moral terms as well as in armament terms.

We have the unprecedented event just this morning, where we have the op-ed piece appearing in the New York Times with the Prime Minister of Britain, the President of France, Chancellor of Germany, all urging this Senate to ratify the Comprehensive Test-Ban Treaty.

I had occasion to travel to Ukraine in August; I talked to the President of Ukraine, Foreign Minister, and other ranking officials. The ratification of the Comprehensive Test-Ban Treaty was high on their agenda. Ukraine has taken a unique attitude in giving up nuclear weapons. Many nations around the world seek nuclear weapons as a sign of their national power. Ukraine is prepared to give them up. I asked the leader of that country why. President Kuchma responded: Well, we prefer the Japanese model of economic strength. Also, we have had the terrible experience at Chernobyl, and we do not want to have nuclear weapons for fear of what happened at Chernobyl. But high on the agenda of the Ukraine top officials is ratification by the United States.

Senator HANK BROWN and I had occasion to travel to the subcontinent in 1995. We talked to Indian Prime Minister Rao.

He told us that he would be very interested in seeing the subcontinent nuclear free. A day or two later, we were in Pakistan talking to Prime Minister Benazir Bhutto, and we related to Prime Minister Bhutto what Premier Rao had to say. She said, "Did you get it in writing?" We thought it was a little flip, perhaps.

We said, "No," and countered with, perhaps, an equally flip question: "When was the last time you talked to the Prime Minister of India?" She said, "We don't talk." Senator BROWN and I said, "Well, we think you should."

The next day, August 28, we had departed for Damascus. Senator BROWN and I sent a letter to the President urging him to call into the Oval Office the Prime Minister of India and the Prime Minister of Pakistan.

I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, DC, August 28, 1995.

The PRESIDENT

The White House, Washington, DC.

DEAR MR. PRESIDENT: I think it important to call to your personal attention the substance of meetings which Senator Hank Brown and I have had in the last two days with Indian Prime Minister Rao and Pakistan Prime Minister Benazir Bhutto.

Prime Minister Rao stated that he would be very interested in negotiations which would lead to the elimination of any nuclear weapons on his subcontinent within ten or fifteen years including renouncing first use of such weapons. His interest in such negotiations with Pakistan would cover bilateral

talks or a regional conference which would include the United States, China and Russia in addition to India and Pakistan.

When we mentioned this conversation to Prime Minister Bhutto this morning, she expressed great interest in such negotiations. When we told her of our conversation with Prime Minister Rao, she asked if we could get him to put that in writing.

When we asked Prime Minister Bhutto when she had last talked to Prime Minister Rao, she said that she had no conversations with him during her tenure as Prime Minister. Prime Minister Bhutto did say that she had initiated a contact through an intermediary but that was terminated when a new controversy arose between Pakistan and India.

From our conversations with Prime Minister Rao and Prime Minister Bhutto, it is my sense that both would be very receptive to discussions initiated and brokered by the United States as to nuclear weapons and also delivery missile systems.

I am dictating this letter to you by telephone from Damascus so that you will have it at the earliest moment. I am also telefaxing a copy of this letter to Secretary of State Warren Christopher.

Sincerely,

ARLEN SPECTER.

Mr. SPECTER. There is great power in the Oval Office. No one declines an invitation to the Oval Office—at least, I don't know of anybody who has declined an invitation to the Oval Office. I had occasion to speak to the President about it later in 1995, and he said he thought it was a good idea, but he wanted to defer it until after the 1996 election. I talked to him after the 1996 election, and he said he still wasn't ready to do it, and what would happen with China and India.

I am not going to criticize the President for not calling them in. I hope he will yet. But I think when India and Pakistan tested nuclear weapons in the spring of 1998, it was a very dangerous sign for the world. How can the United States ask India and Pakistan not to test nuclear weapons when we won't ratify the Comprehensive Test-Ban Treaty? It simply doesn't make any sense. And that is why I think the national security of the United States would be enhanced on a balance of risks. It may not be perfect on verification, or it may not be perfect on the stability of our stockpiles, but whatever risk is involved there, I believe it is minimal. It is a small risk compared to having India and Pakistan test nuclear weapons and set off an arms race there that can be duplicated around the world.

The failure of the United States to ratify the Comprehensive Test-Ban Treaty has caused a ripple around the world. People wonder why the United States has not ratified this treaty. But if the Senate were to reject the treaty on a Senate vote, there would be a wave around the world, and it would be a tidal wave. What is now a ripple of wonderment would turn into a tidal wave of disbelief and could cause a chain reaction, which would be—

The PRESIDING OFFICER. The 20 minutes yielded to the Senator has expired.

Mr. SPECTER. I ask unanimous consent for an additional 5 minutes.

Mr. MOYNIHAN. With great pleasure. We are listening and learning.

Mr. WARNER. Mr. President, I will ask for an additional minute on our side, to be charged to our time, to ask a question of my good colleague.

The PRESIDING OFFICER. The entire debate is evenly divided. There are many hours on each side.

Mr. MOYNIHAN. I think the Senator from Virginia will have all the time he wishes.

The PRESIDING OFFICER. The Senator from Pennsylvania may continue.

Mr. SPECTER. To repeat my last thought, which might have been lost in the UC request, the failure of the United States, up to date, to ratify the Comprehensive Test-Ban Treaty has caused a ripple of wonderment. A vote by the Senate rejecting the Comprehensive Test-Ban Treaty would cause a tidal wave of astonishment. It might set off a chain reaction around the world, which would be even more serious than the chain reaction of the atomic bombs in Nagasaki and Hiroshima.

When we take a look at what is scheduled for next Tuesday, where we have the vote, it is my hope that we will find a way yet to work our way out of the unanimous consent request. I believe that a vote of rejection on Tuesday—and I have used this word before, and I use it advisedly, but I think it is accurate—I think rejecting the treaty would be catastrophic.

We are in a situation where our distinguished majority leader, Senator LOTT, is unwilling to defer the vote if he is going to have to face a crescendo of demands during next year. Senator LOTT did not want to schedule the Comprehensive Test-Ban Treaty vote at this time. I know because I had asked him to do so. I had asked him to do so in private conversations. When he had given me his reasons, I awaited his judgment. There was substantial urging, maybe even agitation, maybe even goading on the Senate floor by some that Senator LOTT should schedule this vote. He finally responded to it. He responded to it in a context where the treaty is assured to be defeated.

President Clinton held a dinner last Tuesday evening, which was attended by a number of people here, including Senators WARNER, BIDEN, HAGEL, myself, and others. I think it is fair to comment, as it has been in the media.

The President declined to ask that the vote be deferred on the condition that the President not ask that it be taken up all during the year 2000. I think the President felt that would signify backing off, and he thought some events might develop where he had to call for the treaty to be ratified. He

said, candidly, he would have a hard time explaining it to our allies.

Well, I can understand Senator LOTT not wanting to see this matter become a political football in the year 2000. It has that potential, whether the parties intend it or not. If there is a crescendo of demand for the treaty to be ratified, taken up in the spring, fall, or summer of next year, it could have an affect on the election in 2000. I think it is realistic to take it out of the election.

Senator LEVIN, the distinguished ranking member of Armed Services, made a public comment in the hearings that he thought the treaty should not come up for ratification before the election. I think that is a sound judgment. There may be a way out of that dilemma by scheduling the treaty debate and vote on November 15 of the year 2000. That will take it out of the election cycle and it would allow President Clinton, who has advocated the treaty, to be a spokesman and have it decided on his watch.

There is another alternative, which is not as good as doing it in November of 2000, but that would be to schedule the debate and vote between January 3 and January 20 of 2001. We would not have a lame duck Senate, and it would be out of the election cycle.

I think it is very important to take this treaty out of politics and out of partisanship. There is an overhang that we should not ignore—a partisan overhang to this debate. All 45 Democrats are said to be in favor of the treaty. The number of Republicans is unknown precisely, but very, very limited. That is bad for America and that is bad for the world. When we had the vote on the use of force in the Gulf in January of 1991, it was largely partisan, where 42 Republicans and only 10 Democrats backed a Republican President. When we had a vote on the use of airstrikes in Yugoslavia earlier this year, it was 58 to 41. Only 17 of 55 Republicans joined the Democrats. That partisanship is highly undesirable.

I ask for one additional minute.

Mr. BIDEN. Mr. President, I will do that. We have 7 hours of debate, and we have 31 people. This is the last minute, and not one second over. I love him, but I will object.

Mr. SPECTER. Love doesn't last very long if it is only up to a minute.

I think there ought to be a recognition of another problem, which I will state in 20 seconds. There is a certain lack of trust between Capitol Hill and the White House, and that is a fact that we have to take into account in our calculations. Within 20 seconds, I can't recount why.

In conclusion—the two most popular words in any speech—I think we ought to avoid playing nuclear roulette with the Comprehensive Test-Ban Treaty. Russian roulette is a great sport, played with a revolver in which one chamber has the bullet.

But I think in this matter, we are playing with nuclear roulette if we go to a vote next Tuesday and reject this treaty.

I urge my colleagues to work hard to find a way to debate and vote this issue at a later time.

The PRESIDING OFFICER. Who yields time?

Mr. WARNER. Mr. President, I yield time.

Mr. KYL. Mr. President, I yield to the Senator from Virginia.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. WARNER. Mr. President, on the time allocated to those in opposition, I want to ask my good friend a question.

First, we joined this institution at about the same time a number of years ago. I very much respect the Senator. So much of the Senator's career has been devoted to international relations, and he reflects very warmly one of the great teachers he had, and that was Senator Tower, former chairman of the Senate Armed Services Committee.

But I want to go back to a particular reference that the Senator made in his opening remarks to the support by the uniformed officers of the chairman of the Joint Chiefs and others for this treaty. It is true that there is a division of opinion between the Joint Chiefs. I don't speak in terms of those in opposition today, but I mean those who precede.

We have letters on both sides pointing out how men and women of good conscience—men and women who have had extensive experience in these fields—are different on this treaty. But the question I put to my good friend relates to the President's letter of transmittal of this treaty on September 22, 1997. I am reading from that document which accompanied the treaty to the Senate. There is a provision in there called "the safeguards."

I recite a sentence of that.

The understanding that if the President of the United States is informed by the Secretary of Defense and the Secretary of Energy (DOE)—advised by the Nuclear Weapons Council, the Directors of DOE's nuclear weapons laboratories, and the Commander of the U.S. Strategic Command—that a high level of confidence in the safety or reliability of a nuclear weapon type that the two Secretaries consider to be critical to our nuclear deterrent could no longer be certified, the President, in consultation with the Congress, would be prepared to withdraw from the CTBT under the standard "supreme national interests" clause in order to conduct whatever testing might be required.

Speaking for myself—and I have in the course of the last several days as Chairman of the Armed Services Committee dealt extensively with this entire issue before the Senate today—I have time and time again referred to the fact that it is my conclusion, drawn from talking with a number of these senior military officers who have

given their support, and who in years past have given their support, that it is this clause that is the foundation for their opinion of support.

But I say to my good friend that were we to ratify this treaty, and if it would go into force, then many nations could rely on the act of the United States—as a matter of fact, one of the principal reasons for this treaty is to induce other nations to follow—and then 8, 10, or 15 years down the road we exercise the right under this, what happens to those nations? They are left out there stripped of protection that they could, with their own systems, have developed. And, worse yet, if we were ever compelled to announce to the world that we have concern about the credibility and safety of our nuclear arsenal, that would send a frightening message across the land that what we have had in place these 50 years, referred to as the "nuclear umbrella," which umbrella preserved the peace from major conflict in Europe for 50 years, is now in doubt.

Mr. President, as you talk about who is supporting the treaty, let's go back and examine the reasons.

I say that the military relied very heavily on that clause. In my judgment, if that clause were ever utilized, this country would be in a far worse position than if the Senate were to exercise its right and withhold the advice and consent on ratification.

I ask my good friend, if that clause were invoked, what would be the reality among the world's community of nations? What would be the reality of the signal going out that our credible deterrent is in question?

Mr. SPECTER. Mr. President, I am delighted to respond to that question from the distinguished chairman of the Armed Services Committee on a number of levels.

First of all, the clause is there, so that when the Chairman of the Joint Chiefs and others support the treaty because of the presence of that clause, that is a very important factor. And that clause is worth relying upon.

That is the reason, if there should be a problem either with the stability of our stockpile, or with the verification, and we felt it was necessary for national security to invoke that clause and withdraw, that we would do so.

With respect to other nations which might ratify the treaty based on our leadership, they do so with the full knowledge that that clause is present, and that we have the right to withdraw in our supreme national interest, so that if we should exercise the right of this entire affair in our dealings with those nations because they have known from the very outset that is a distinct possibility, there is nothing hidden about that.

When you ask the pointed question at the very end of the series of implicit questions, when you ask the question,

how would it look for our national security if we made a concession that we had a test, and withdrew from the treaty, I would say to my distinguished colleague from Virginia that is no worse than if we did not have the treaty and we started to test.

The only reason we would exercise that clause and withdraw from the treaty would be so that we could start to test.

Assume that we don't have the treaty. Assume down the road that we start to test. That is going to be a loud signal, an explosive signal, to the world that we are not satisfied with the status quo when we have to test.

I think that exercising that clause would be no more emphatic or no more of a problem for the United States than not doing so.

But I think when you take a look behind General Shelton, and other Chairmen of the Joint Chiefs—General Shalikashvili, Colin Powell, David Jones, Bill Crowe, only Admiral Vessey, Chairman Vessey, was on the other side.

I think that is a very weighty consideration.

Mr. WARNER. Mr. President, I simply focus your attention on one or more nations, should this treaty be ratified, saying there is no necessity for us to launch our own program because there stands the United States, the leader. And nowhere in the history of the United States have we ever exercised such a clause as this, I say to my good friend. I don't think there is a precedent in our 200-year history of ever pulling out. But, nevertheless, we could be faced with those facts. Otherwise, there would have been no reason to have put that clause in there.

It was a real situation to the President at that time in transmitting the treaty to the Senate that these conditions could arise, and he put that clause in. I daresay it was put in there such as the military uniformed community could lend their support.

But what happens to that nation that did not start this program and 10 or 12 years hence is left out there? Take, for example, Japan. It has the capacity to generate a program in a matter of a few years. They have relied in many respects on our nuclear deterrent. But if that is ever put in doubt, that nation and others would want to start this program. But it would take a decade for them—perhaps not Japan but most nations—to put into place any credible nuclear deterrent.

I say to my good friend—I know other Senators want to speak; it is important, and we are going to have a good debate today—in my opinion, you jeopardize substantially the world community if at any time you say we might pull out pursuant to that clause.

Mr. SPECTER. Mr. President, if I may respond briefly, I think that Japan is well advised to rely on the

United States and our nuclear deterrent for whatever risk there may be of pulling out. But Japan has, up to the present time, as the Senator from Virginia knows, relied upon the United States. Japan has had ample opportunity to develop whatever nuclear system they could have wanted. They have made the decision to the present time not to. There is no reason to believe they are about to change, regardless of what the United States does.

However, when we talk about the withdrawal provision, that is not unique to the Comprehensive Test Ban Treaty. We have debated repeatedly on the floor of this Senate the provisions of the Anti-Ballistic Missile Treaty which allows withdrawal on notice—again, for supreme national interests. So the insertion of this clause in the treaty is no signal that we are considering using it. I think that is a standard provision.

Mr. WARNER. Mr. President, in fairness to other Senators, we must yield the floor. However, I hope at some point this issue is revisited with my good friend, the distinguished Senator from Delaware.

I yield the floor.

Mr. BIDEN. I yield myself 2 minutes, and then I yield to my friend from New York.

First, the very essential safeguards the chairman indicated all military guys want, I find it fascinating that the Republican leadership would not allow the Senate to include those in the treaty. That indicates what a stacked deck this is and how outrageous is this approach of how we are proceeding on this is.

The very things all the Joint Chiefs and the President of the United States said they wanted in the treaty as the six safeguards when we brought this up in the unanimous consent agreement, we were not allowed to include those as part of the treaty. I think that is telling.

The second point. The Senator says, Have we ever exercised this clause? The appropriate question is, Have we ever needed to? The answer is, we have never concluded we needed to. Such a clause, or a variation, is in every treaty the United States of America signs. This is a bit of a red herring. In every treaty we sign of consequence relating to our national security, there is a supreme national interest clause. The reason we haven't exercised it is that no President has concluded there was a need.

The third point I make, if my friend is concerned—as I know he is—about our friends at one point not being able to rely upon the United States and deciding to go their own route, I ask him why Tony Blair and Jacques Chirac are making a personal appeal to the President of the United States, for goodness sake, pass this treaty. Japan and Germany are saying please, please, pass a treaty. We signed it; we ratified it.

How much time does the Senator from New York require?

Mr. MOYNIHAN. Twenty minutes.

Mr. BIDEN. I am delighted to yield 20 minutes to my friend from New York.

The PRESIDING OFFICER (Mr. SESSIONS). The Senator from New York.

Mr. MOYNIHAN. Mr. President, to continue on the point made by our distinguished ranking member that the leaders of Britain, France, and Germany are appealing to the Senate this very day to sign this treaty, I make a point to the Senate which I don't know has ever been made. That is that in the aftermath of the Cold War we find ourselves the one nation on Earth that has the power to shape events all over the Earth.

Coral Bell, of the Australian National University, wrote about this in an article in the recent issue of "The National Interest," called "American Ascendancy." There is a striking passage. She writes:

During the 1990s, the United States has mostly tiptoed through the current unipolar structure of the society of states with a sort of ponderous tact, like a benign Ferdinand-type bull making its way delicately around a china shop of unknown value. That prudence has been well justified: the situation is still quite new and of uncertain import to all the world's policymakers. History is not much help, for no equal degree of unipolarity has existed since the high point of the Roman world, almost two millennia ago.

I repeat, there has been no such unipolarity since the high point of the Roman world, two millennia ago.

The central balance of power had seen the main agenda of world politics for more than five centuries.

We think of the Congress of Vienna of 1815, of the British role in the balance of power in Europe, and such the like.

Bell continues, "... this 'intermission,' even for a time whose length remains a matter of speculation, is a truly transformatory event."

A truly transformatory event. Nothing such has happened in two millenia.

As if evidence were required, in this morning's New York Times, Jacques Chirac, the President of France, and Tony Blair, Prime Minister of Britain, and Gerhard Schroeder, Chancellor of Germany, wrote an op-ed article pleading with the Senate to ratify this treaty. I ask unanimous consent to have that article printed after my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit 1.)

Mr. MOYNIHAN. At any time in our history, can anyone imagine the effective heads of the Governments of the United Kingdom, France, and Germany pleading with the Senate in our own press to do what we had led the world to do in the first place.

The point has been made that the idea of a Comprehensive Test Ban Treaty was first proposed by President Eisenhower in 1958. I note that when we

finally got around to drafting one, the United States was the first signatory on that same day in New York. The other four of the five declared nuclear powers also signed. However, we were the first to propose it, as we were the first to develop nuclear power as a weapon; the first to propose ending tests to continue expanding our arsenals; and now the first to sign such a treaty, almost a generation after Eisenhower proposed it.

There were increments along the way. I was in the Kennedy administration at the time the Atmospheric Test Ban Treaty was signed. It seemed such a large event, and it was.

Governor Harriman was a negotiator in Moscow and made the point—I had served him in Albany, and we talked about this—he said that when he arrived, the Soviets had already decided to sign this treaty, but of course we had to have days of intense negotiations to reach the point where they would agree to do what they had already decided to do. The Soviets had said yes, there is too much danger to mankind.

That was something they had not previously concerned themselves over much with, save as a revolutionary state.

Just a line from the article by the three heads of government:

The decisions we take now will help determine, for generations to come, the safety of the world we bequeath to our children. As we look to the next century, our greatest concern is proliferation of weapons of mass destruction, and chiefly nuclear proliferation. We have to face the stark truth that nuclear proliferation remains the major threat to world safety.

They are speaking to us in this near-empty Chamber. Some of our most distinguished authorities in these matters are here. Most Senators are not. The powers that dominated the last 500 years of politics: England, France, Germany—Spain somehow not there for the moment—pleading with us.

May I be specific, if I can, on the matter of particular interest? You may be sure it was on the minds of the leaders who have written to us today, and that is the situation in the subcontinent, which is to say India and Pakistan. I was Ambassador to India in 1974 when the Indians set off what they called a "peaceful nuclear explosion." They intended it as such. In conversations with Prime Minister Gandhi, she was persuasive that they were not going to build a bomb; they simply wanted to establish that they had the capacity to do so. It was a matter of prestige. It was a matter of reminding Westerners that Indian physicists, such as Satyendranath Bose, had been as much a part of the great era of discovery early in the century as the Europeans, and more than Americans.

A quarter century goes by. The Congress Party with its universalist tendencies and professions has gone into a

minority. A new party, a Hindu party, as it calls itself, the BJP, came to power in March of 1998. Two months later, India set off a series of five nuclear explosions. That was followed almost instantly with Pakistan doing the same. At the same time, they demonstrated a missile, probably of North Korean origin, which they named the Ghauri, in honor of the first Islamic invader of Hindu India.

Here you have all those things that conspire to destruction. This spring there was a Pakistan offensive in the Kargil mountains of Kashmir. The Indian Government quite successfully held it back and repulsed it, I believe, but not before Pakistani military officers had said: Keep this up and there are other options available to us.

Those other options of course include the nuclear option.

Here an important distinction is to be made. In India, to its great credit, nuclear development is a matter directly under the control of the Prime Minister and is not under the control of the military. The Indian military have been very apolitical, kept out of politics, and have followed civilian command from the beginning. Not so Pakistan. The Pakistan bomb is in the armamentarium of the Pakistan military.

Here, if I can make a point on which I do have total confidence, but I believe is a shared judgment: It is not clear that the Indian tests last year were all that successful. They probably did not achieve a hydrogen bomb as they proclaimed. Even the 1974 test was exaggerated in its volume. The Indians have kept the military out of nuclear matters, but their scientists know they have not sufficiently succeeded, and they want to test more.

In the report from India in this morning's press announcing the BJ Party has been returned to office with a very solid coalition, it was noted that the outgoing government, which will now be coming back in, had committed itself to further testing. They need to do that because they are, obviously, at a disadvantage as regards their adversary, the Pakistanis. They need, as it were, to show the Pakistanis they have the weapons that they have claimed to have. In turn, the Pakistanis will respond.

Pakistan is not a stable country, not a country with civil authority very secure, and an impoverished country, a country that will be selling nuclear weapons. They will be selling them to the Middle East. A Saudi prince has recently visited Pakistan and was shown nuclear facilities. We have to expect this migration. It is ineluctable, unless we get this treaty.

The point I finally make is we dare not reject the treaty but we need not instantly ratify it. The treaty, very carefully drawn, provides that 44 states must have ratified this treaty before it

goes into effect—44. As of today, of the 44 states required, 41 have signed the treaty but only 26 have ratified it, which is to say another 18 countries, including the United States, have to do so before it goes into effect. Of these countries, the most significant clearly are India and Pakistan. I assure you—well, I withdraw that remark—I prophesy that, should we turn this treaty down, the forces in New Delhi and in Islamabad will say: "You see, there are the Western imperialists demanding their own liberties to do anything they wish—tests, they have already the 1,030 tests—and they want now to deny them to us? No. That day is over."

Can we not listen to our closest friends and allies? We cannot ratify today. Someday we will, but we must not reject this treaty. It would be sending a ruinous signal. The complexities of our procedures in the Senate are not understood abroad, and they need not be in that sense. The word will be we said no, just as in 1919 we said no to the Treaty of Versailles, we would not become involved in the affairs of Europe. And how many years was it until D-Day when we had to land our forces there?

Mr. WARNER. Mr. President, will the Senator yield for a question on my time?

Mr. MOYNIHAN. I am happy to do so and honored.

Mr. WARNER. Mr. President, I have had some discussions with the distinguished senior Senator from New York, as have others, on the question of the timing of the Senate's final deliberation of the treaty. Indeed, I think our leadership and all of us are looking at this in a very serious way. But it seems to me—and this is my judgment—that an element of such consideration has to be a recognition that under our Constitution, next year elections are held across this Nation for the Office of the Presidency, one-third of the Senate, and the entire House. To inject a treaty which, in the minds of many—not this Senator, but I respect the views of others—is so vital to our security interests into that atmosphere and the dynamics of an election year, in my judgment, would not give a fair and objective opportunity for this treaty to be considered solely on its merits. I use the phrase "solely on its merits." Does my colleague agree with me?

Mr. MOYNIHAN. I entirely agree with the Senator, if we can preface his remarks by the statement that we do not have the votes to ratify the treaty today.

Mr. WARNER. I say to my friend, I will work during the course of the day, and he has indicated a willingness to join me in this venture.

Mr. MOYNIHAN. I most certainly have.

Mr. WARNER. I thank the Senator. I yield the floor because I know others are anxious to speak.

Mr. MOYNIHAN. I shall be honored to work with the Senator from Virginia and the Senator from Delaware. This may be a very productive moment in what looks like a perilous time.

Mr. President, I have spoken at some length. I am happy to yield the floor.

EXHIBIT 1

[From the New York Times, Oct. 8, 1999]

A TREATY WE ALL NEED

(By Jacques Chirac, Tony Blair and Gerhard Schröder)

During the 1990's, the United States has made a vital contribution to arms control and nonproliferation. Thanks to the common resolve of the world's powers, we have achieved a substantial reduction in nuclear arsenals, the banning of chemical weapons, the indefinite and unconditional extension of the Nuclear Non-Proliferation Treaty and, in 1996, the conclusion of negotiations on the Comprehensive Test Ban Treaty. South Africa, Ukraine, Kazakhstan and Belarus have renounced nuclear weapons in the same spirit.

The decisions we take now will help determine, for generations to come, the safety of the world we bequeath to our children. As we look to the next century, our greatest concern is proliferation of weapons of mass destruction, and chiefly nuclear proliferation. We have to face the stark truth that nuclear proliferation remains the major threat to world safety.

Failure to ratify the Comprehensive Test Ban Treaty will be a failure in our struggle against proliferation. The stabilizing effect of the Non-Proliferation Treaty, extended in 1995, would be undermined. Disarmament negotiations would suffer.

Over half the countries that must ratify the new treaty to bring it into force have now done so. Britain, France and Germany ratified last year. All the political parties in our countries recognize that the treaty is strongly in our interests, whether we are nuclear powers or not. It enhances our security and is verifiable.

The treaty is an additional barrier against proliferation of nuclear weapons. Unless proliferators are able to test their devices, they can never be sure that any new weapon they design or build is safe and will work.

Congress realized this in 1992 when it compelled the United States Presidential Administration to seek the conclusion of a Comprehensive Test Ban Treaty by 1996. It was a welcome move for the world's strongest power to show the way.

The treaty is effectively verifiable. We need have no fear of the risk of cheating. We will not be relying on the good will of a rogue state to allow inspectors onto its territory. Under the treaty, a global network of stations is being set up, using four different technologies to identify nuclear tests. The system is already being put in place. We know it will work.

Opponents of the treaty claim that, without testing, it will not be possible to guarantee the continuing safety and reliability of nuclear weapons. All nuclear powers, including the United States, Britain and France, examined this issue carefully. All reached the same conclusion. With the right investment and modern technology, the necessary assurance of safety and reliability can be maintained without further nuclear tests.

Rejection of the treaty in the Senate would remove the pressure from other states still hesitating about whether to ratify it. Rejection would give great encouragement

to proliferators. Rejection would also expose a fundamental divergence within NATO.

The United States and its allies have worked side by side for a Comprehensive Test Ban Treaty since the days of President Eisenhower. This goal is now within our grasp. Our security is involved, as well as America's. For the security of the world we will leave to our children, we urge the United States Senate to ratify the treaty.

The PRESIDING OFFICER. The Senator from Arizona.

Mr. KYL. Mr. President, I yield 12 minutes to the Senator from Nebraska, Mr. HAGEL.

The PRESIDING OFFICER. The Senator from Nebraska is recognized.

Mr. HAGEL. I thank the Chair.

Mr. President, what is the objective of a comprehensive test ban treaty? What is the objective of what we are about? The objective is to stop nuclear proliferation. The objective is to make the world safer for mankind. Unfortunately, this noble effort now must be rescued from partisan politics. We are trapped in a political swamp as we attempt to compress a very important debate on a very important issue.

A few minutes ago, there was an exchange about timing. We only have a few hours to debate. My goodness, is that any way to responsibly deal with what may, in fact, be the most critical and important vote any of us in this Chamber will ever make? It is not. We cannot have a serious debate about nuclear proliferation when artificial timelines prevent that important debate. Unfortunately, the political environment has captured this issue.

Aside from all the technical debate that will go on, as has begun this morning, and rightfully so, about this treaty, this treaty is symbolic. It represents 50 years of America's leadership throughout the world in dealing with our allies and, yes, our adversaries, in trying to curb nuclear proliferation.

Much has been said this morning by my distinguished colleagues about our allies, Great Britain and France. They moved forward in good faith last year and ratified this treaty. Consequently, they are dismantling their nuclear testing facilities. What do we say to them if we defeat this treaty? What do we say to the rest of the world, and what is that symbol, what is the message we project?

We are far better off to take the time necessary to work our way through the critical questions and issues. This debate needs to be taken down many layers, many levels in the questions that are relevant. We have forced hearings this week in three committees. The committee on which I serve, Foreign Relations, had more than 6 hours of hearings yesterday. They were informative and important. There is a great amount of doubt and question and concern about the governance language in this treaty: Who governs the implementation of this treaty, who is in

charge, aside from all the technical questions. We could take days on the provisions for site inspections alone, and we should.

What are the consequences of us pulling out of this treaty? I hear from a number of my friends: If it is a bad treaty, we sign it and go ahead, and if the President of the United States says in the supreme national security interests of America we will pull out of the treaty—my goodness, do we think it is that easy to arbitrarily pull out of a treaty we led for over 50 years under the leadership of President Eisenhower, that was further anchored by the actions of President Kennedy with the first ban on nuclear testing in 1963? Do we think the political environment would be such that we could just arbitrarily pull out when we wanted? Do we not understand the consequences of that?

What about side agreements? We learned yesterday, for example, in the Foreign Relations Committee hearings that there are side agreements. That does not mean it is bad, but what are those side agreements? How do they affect us? What is the management? What is the governance? Who makes the deal? Do those side agreements have force behind them? What happens in 10 years when there are new governments?

My colleagues understand and share with me the same fundamental responsibility to this country, and that is, America's security is paramount; nothing else is more important. That is our premier responsibility as Senators as we debate this issue. The fundamental principle we must follow is not to jeopardize the security of our people and our country.

The U.S. nuclear deterrent has prevented a worldwide conflagration for over 40 years. As former Secretary of Defense Caspar Weinberger said yesterday in the hearings, that effective deterrence depends entirely on the assurance that our nuclear arsenal will work when it needs to work. It is a huge issue, a huge question. The safety and reliability of the nuclear arsenal, therefore, must be maintained above all.

We might be able to do that with computers and other means, other than testing. That may well be feasible. But I want to be assured a lot more than I am now that, in fact, can be done without jeopardizing the security of the United States.

We heard much about intelligence reports in all three committees that held hearings this week. The administration says those intelligence reports are not yet complete. Why are we rushing to a vote when we do not have all the intelligence, when we do not have all the information? Why is there this arbitrary test timeline that we must have a vote?

What about the next administration? There will be a new administration,

Democrat or Republican. I read this morning Donald Trump is interested in a Trump administration. There may be a Jesse Ventura administration, I say to Senator BIDEN. We do not know.

Mr. BIDEN. Will the Senator yield?

Mr. HAGEL. Certainly.

Mr. BIDEN. Never mind; I withdraw it.

Mr. HAGEL. I suspect his contribution would not be relevant to the debate. The very serious fact is, we will have a new administration.

Is this treaty, essentially born 50 years ago from Eisenhower forward, relevant to the challenges of today?

Is it relevant to the new challenges of this next new century, the new challenges that this new administration, this new President will have to deal with? Are we boxing in this new administration? Shouldn't this new administration coming in, in January 2001, have an opportunity to review arms control, look at what those needs are, what is relevant?

The world has changed. It has changed in 10 years. The world used to be rather simple when we took this issue up 50 years ago, 20 years ago, 10 years ago: Two superpowers, the Soviets, the Americans; they were the ones with the nukes. Therefore, we created a structure, a protocol, a treaty that dealt with that. That has changed.

I strongly urge the President of the United States, as I did the other night—telling him directly, and my leader and the Democratic leader, and all of my colleagues—to not allow us to get into a box we cannot get out of and take a vote on Tuesday. It is irresponsible. It will surely go down. There will be consequences for that vote. It is the wrong thing to do for America. It is not responsible governance.

What do we do? Why not continue to hold hearings on this very important issue, take this down to as many levels as we need, get the answers? Maybe we have to restructure; I don't know. But the way it is now, we are not prepared to vote. Why not inform the American public? Why not allow the American public to understand what we are doing? Why not allow all of our Senators to understand a little bit more than we do now about this issue?

The tough questions must be asked, the consequences played out. We must not allow ourselves to get trapped again in a timeline.

I heard this morning, Why not take a vote right after the election next year? That is interesting. Why not float it out? Why not do this up or down? But why force an artificial timeline? If the political environment is not right to have an honest, open, legitimate debate, it is not right. That is a fact of life. But do not rush something that is going to have dire consequences for the future of the world to satisfy some political dynamic or someone's interest in driving a timeline or driving a political determination. That is irresponsible.

Regrettably, I must say to my colleagues, if that vote is held on Tuesday, I will have to vote against this treaty. That will be regrettable because I would like to have more time to ask more questions, to understand what we are doing, because I, as do all my colleagues, take this responsibility very seriously. I say again, this vote, if it does come Tuesday or next year or in 2001, may in fact be the most critical vote any of us ever cast.

With that, I yield the floor.

Mr. MOYNIHAN. Mr. President, would the Senator yield for a question?

Mr. HAGEL. I surely will, I say to the Senator.

Mr. MOYNIHAN. Do I take it, from what the Senator so ably set forth about his concerns on both sides, that he would be receptive to a proposal to put off this vote?

Mr. HAGEL. That is correct, I say to the Senator. I think it is a wise course of action. I so informed the President the other night at the White House. I so informed my colleagues. I again say, as I did, if I have to vote Tuesday, I will vote against it. That will be regrettable because I believe arms control, the focused management of nuclear proliferation, is a responsibility this country has had.

We have taken the lead position on that for 50 years. I am proud of that. You are proud of that. To box ourselves in, surely knowing the impending defeat, I think would be a catastrophe for our leadership in the world.

Mr. MOYNIHAN. I agree "catastrophic" is not too strong a term. And the Senator would be receptive to postponing a foregone catastrophe on Tuesday?

Mr. HAGEL. I would, sir.

Mr. MOYNIHAN. I thank the Senator.

Mr. KYL. I yield 15 minutes to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 15 minutes.

Mr. INHOFE. I thank the Chair and thank the Senator from Arizona for giving me this valuable time because we do not have a lot of time.

First of all, let me say I respect the Senator from Nebraska so much, and yet I have to disagree with him. I respect certainly the senior Senator from New York as well as the Senator from Delaware. But the reason I disagree with them is, it is not as if this came up all of a sudden and we did not have any time to look at it. This treaty has been here for 2 years. We could read it. We could study it. We could prepare amendments. We could spend time evaluating it, talk to the experts. I have been doing this. I assume many of my colleagues have been doing this.

So procedurally let me just explain, so there is no misunderstanding where we are, what my position is.

We had a unanimous-consent request propounded—it was agreed to a few

days ago—that said we were going to have possibly up to two amendments, not necessarily, but if we did, it would be 4 hours of debate equally divided. Then we would have a vote on the treaty. There would be 14 hours of debate, which we are in the process of having right now.

This was done by unanimous consent. That means any one of these Senators we have been listening to this morning could have objected to that unanimous-consent request. Certainly, the senior Senator from New York could have done it, the Senator from Nebraska, the Senator from Delaware. Anyone could have done it. Only one Senator has said he would not have done it if he had been on the floor or if he had been aware of it. That was the Senator from West Virginia, Mr. BYRD.

That is the way the Senate is run. It is run by unanimous consent. So anyone could have stopped it. And they did not do it. But they could have.

It takes unanimous consent to vitiate that unanimous consent agreement. If this happens, I made an announcement yesterday and the day before, sitting on the Armed Services Committee—with such distinguished witnesses as our Secretary of Defense, Bill Cohen; as General Shelton, the Chairman of the Joint Chiefs of Staff; as the Directors of all the labs, all three of them—and I said in the event someone asks for a unanimous-consent agreement to delay this vote, I will object. I want everybody to know right now, I will object to that.

There may be some parliamentary maneuvering where they can figure out a way to get around my objection. If they do, I am sure it will have to be passed on by the Parliamentarian. And that might happen. I might lose this thing.

But we have been looking at this right now for over 2 years. Certainly we have had ample time to study it and digest it. It is not something that just jumped up. Any Senator, of 100 Senators, could have stopped the vote that is supposed to take place on Tuesday or Wednesday when the debate time expires. So let me just serve notice I will be here to object to that, so we get down to it. The reason is, we do not need to keep delaying and delaying this thing.

The President has been yelling for 2 years: Bring it up. Bring it up. We want to bring this up for a vote. Yet now that it is up and he knows—he suspects; he does not know—he suspects he does not have the votes for ratification, he wants to bring it back. So anyway, that is where we are today.

Let me just respond to a few of the comments that have been made on the floor. The distinguished Senator from Delaware talked about the distinguished list of supporters of this test ban treaty. I would like to submit for the RECORD a list of those who are op-

posed to the ratification of this treaty. They include six former Secretaries of Defense—Schlesinger, Cheney, Rumsfeld, Laird, Carlucci, Weinberger—and several former Directors of Central Intelligence; 13 generals, commanding generals, who are now retired.

In fact, I would suggest—I might be challenged on this so I will say probably most of the military officials who are supporting the ratification of this treaty now are serving in the capacity in which they are serving at the will of the President.

So I ask unanimous consent this distinguished list of some 33 leaders saying we should oppose and vote down this treaty be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

PARTIAL LIST OF OPPONENTS OF CTBT

Jim Schlesinger (Former Secretary of Defense); Dick Cheney (Former Secretary of Defense); Don Rumsfeld (Former Secretary of Defense); Melvin Laird (Former Secretary of Defense); Frank Carlucci (Former Secretary of Defense); Caspar Weinberger (Former Secretary of Defense); Jim Woolsey (Former Director of Central Intelligence); Bob Dole; Governor George W. Bush; Elizabeth Dole; Judge William Clark (Reagan National Security Adviser); Richard Allen (Reagan National Security Adviser); Jeane Kirkpatrick (Former US Ambassador to the United Nations); William Graham (Reagan Science Adviser); Gen. Russ Dougherty, USAF (Former Commander, Strategic Air Command).

Gen. Louis Wilson (Former Commandant, US Marine Corps); Gen. Jim Johnson (Former Commanding General, 1st US Army); Gen. Albion Knight (Former Director, Atomic Energy Commission); Gen. Larry Skantze (Former Vice Chief of Staff, US Air Force); Gen. Tom Kelly (Former Director for Operations, Joint Chiefs of Staff); Gen. Jack Singlaub (Former Chief of Staff, US Forces in Korea); Gen. Mike Loh (Former Commander, Air Combat Command); Gen. Fred Kroesen (Former Commander, US Army in Europe); Gen. Don Starry (Former Commander, US Readiness Command); Gen. Milnor Roberts (Former Chief, US Army Reserve); Gen. Lewis Wagner (Former Commander, Army Materiel Command); Gen. Joseph Went (Former Assistant Commandant, US Marine Corps); Admiral Jerry Miller (Former Deputy Director, Strategic Planning Staff); Troy Wade (Former Assistant Secretary of Energy for Defense Programs); Edwin Meese (Former Attorney General); William Middendorf (Former Secretary of the Navy); Midge Decter (Former President, Free World Committee); Norman Podhoretz (Former Editor, Commentary Magazine).

Mr. INHOFE. Secondly, the Senator from Delaware is talking about our allies—I am very sensitive to our allies—and our allies have signed this treaty, so if our allies have signed this treaty, we have to do it.

Frankly, I am not concerned about our allies. I am concerned about our adversaries. I am not at all concerned that Great Britain is going to send a missile over to the United States. I am concerned about China and Russia and now North Korea. Right now, as we

speak, the President is sending money and making promises to North Korea so they will not test a missile they have called a Taepo Dong 2 that will reach Washington, DC, from anyplace in the world, take 35 minutes to get over here, and we do not have any defense against this thing. So those are the ones about whom I am concerned. Have they ratified this treaty? No, certainly not China, not Russia, not North Korea. North Korea hasn't even signed it. Those are the ones about whom I am concerned.

Thirdly, certification. Certification doesn't mean we have weapons we know will be operative at any point in the future. It merely says we don't know that they won't be; we don't know of any. We can certify we don't know of any problems. How can they know of problems, if they are not testing them? I think that is a very weak argument.

Lastly, I would like to address the reference made by the Senator from Delaware to Dr. Paul Robinson. He is the Director of the Sandia Laboratory. He is the one the Senator from Delaware talked about as being, apparently, a credible source, or he would not have mentioned his name in his opening statement. Dr. Robinson says:

We know today that a test ban cannot prevent states from acquiring nuclear weapons if they are determined to do so. Credible nuclear weapons can be constructed without nuclear testing, as several nations, including South Africa, have demonstrated. The underground nuclear tests by India and Pakistan in 1998 are another example. These events were not developmental tests. They were demonstrations of nuclear capability that had been developed much earlier with little or no testing.

Those who claim that by ending nuclear testing we will close off the threat of terrorist development and use of nuclear explosives mislead themselves. Congress should not accept such arguments as a basis for endorsing the test ban.

Further, Dr. Paul Robinson said:

It is indeed correct that the United States would be ill-advised to place a sophisticated nuclear explosive design into the stockpile that had not been previously tested and validated. There is no question that actual testing of designs to confirm their performance is the desired regimen of any high technology device, from cars and airplanes to medical equipment and computers. For a device as highly consequential as a nuclear weapon, testing of the complete system, both when it is first developed and periodically throughout its lifetime to ensure that aging effects do not invalidate its performance, is also the preferred methodology. I and others who are or have been responsible for the safety and reliability of the United States stockpile for nuclear weapons have testified to this obvious conclusion many times in the past. To forgo that validation through testing is, in short, to live with uncertainty.

I don't want to live with uncertainty. There is no way of knowing that we have a nuclear deterrent if we have to live with uncertainty.

There is no one I respect more highly than Secretary Bill Cohen, our Sec-

retary of Defense. I served with him on the Armed Services Committee of the Senate, and he is certainly a most knowledgeable individual. I do have to say this: He has certainly changed his story since he was in the Senate. I am going to quote what Secretary Cohen said in 1992, when at that time he was the most vigorous opponent of a ban on nuclear testing we had in the Senate. This is Secretary Bill Cohen when he was a Senator:

Many of these nuclear weapons which we intend to keep in our stockpile for the indefinite future are dangerously unsafe. Equally relevant is the fact that we can make these weapons much safer if limited testing is allowed to be conducted. So when crafting our policy regarding nuclear testing, this should be our principal objective—to make the weapons we retain safe. The amendment that was adopted last week [speaking of 1992] does not meet this test, because it would not permit the Department of Energy to conduct the necessary testing to make our weapons safe.

When I asked that question, there was some suggestion that maybe we are talking about different weapons. We are not talking about different weapons. These are the nine weapons we are talking about today. These same nine weapons were there in 1992, the same ones to which Secretary Cohen alluded.

This chart tells us that there are five tests for safety features. These are the five tests. The most significant ones are the intensive high explosive and the fire resistance pit. That is to make sure they don't inadvertently explode during use or during storage; the same with the fire. If we look right here, we see that only one of these weapons—that is the W84—has any type of safety. I guess all five of the hazards are listed. The W62 has none. So this was true in 1992. It is true again today.

Some people have said, well, in the worst-case scenario, if something happens to the safety of this thing, we have a way of getting out of this thing. It is called safeguard F. Safeguard F is one sentence in the treaty. That sentence says that there is a way out in the event that it becomes a supreme national interest to get out. So that would be interpreted by our Commander in Chief or President, whoever is President at that time. I have often said—I don't think anyone is going to refute it—that we have a President who has a very difficult time telling the truth. Let us assume he is telling the truth. This is what he said his interpretation would be in his application of safeguard F: In the event that I were informed by the Secretary of Defense, the Secretary of Energy, advised by the Nuclear Weapons Council, the directors of the Energy Department's nuclear weapons labs and the commander of the U.S. Strategic Command that a high level of confidence in the safety or reliability of a nuclear weapons type, which the two Secretaries

consider to be critical to our nuclear deterrent, could no longer be certified, I would be prepared, in consultation with Congress, to exercise the supreme national interest under the CTBT in order to conduct whatever testing might be required.

He is saying, even if these five people; that is, everyone who has anything to do with or any knowledge of these nuclear weapons, even if all of them insist on it, he didn't say he would do it. He said he would be prepared to do it. That is a very weak statement. It doesn't mean he would do it at all. I don't find any comfort at all in what he stated.

Coming close to the end of my time, let me share a couple other thoughts about which I do have strong feelings. We had all three Directors of our three labs before our committee yesterday. All three of them testified that we have to test these nuclear weapons in order to make sure they will continue to work if called upon. These are the ones who are responsible for doing that. Verification has to be talked about.

It is kind of interesting. I will read an article that was in the paper a couple of days ago. It was an article in the Washington Post by Robert Suro, entitled "CIA Unable to Precisely Track Testing." This was last Sunday, I believe, talking about something that might have occurred on Saturday, less than a week ago right now. Again, it was entitled "CIA Unable to Precisely Track Testing." Among the troubling facts uncovered:

According to senior officials, the CIA has concluded that it cannot monitor low-level nuclear tests by Russia precisely enough to ensure compliance with the CTBT. . . . Twice last month, the Russians carried out what might have been nuclear explosions at its Novaya Zemlya testing site in the Arctic. The CIA found that the data from the seismic sensors and other monitoring equipment were insufficient to allow analysts to reach a firm conclusion about the nature of the events.

Having read that and then having had Gen. Henry Shelton and Secretary Cohen on the same panel, I asked them the question: Can you sit here and tell us that the Russians did not conduct those tests just a few months ago referred to in the article in last Sunday's Washington Post? They said: No, we can't.

We asked the same question of the Directors of the lab. They said: No, there is no way of knowing it.

Verification has always been a real serious problem with me.

Mr. President, I ask for 5 more minutes. I think that will be acceptable. The time I am asking for is from our side.

Mr. KYL. How much time does the Senator wish?

Mr. INHOFE. About 4 minutes should be enough.

Mr. KYL. I ask that the Senator from Oklahoma conclude his remarks in 4

minutes, after which the time would go to that side.

Mrs. HUTCHISON. Mr. President, parliamentary inquiry. I wonder what the other timetable is. I have a flight I have to catch at 12:15. Is there a short time that would be available to me soon?

Mr. BIDEN. Mr. President, we have been alternating. We have had two Republicans, and the Senator from Michigan needs additional time.

Mr. LEVIN. If it is all right with the others in line, that is all right with me.

Mr. BIDEN. If the Senator is brief, we will be happy to yield to you. That will have been three Republicans in a row, but to accommodate, we are happy to do that.

Mr. LEVIN. Mr. President, after the Senator from Texas goes ahead of us—which is fine if she has to catch a flight—could there be two Democrats at that point?

Mr. KYL. Mr. President, I have no objection to that. Senator ALLARD is waiting. Unfortunately, about three people have gone ahead of him. He has also presided. Maybe he can have some time.

Mr. ALLARD. I would not want to lose my time. I have an appointment I need to attend, so I hope I can get out of here by 1:30.

Mr. KYL. Mr. President, after their two speakers, Senator ALLARD will be next.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 4 minutes.

Mr. INHOFE. I will conclude in less time than that. I want to accommodate the wishes of others who want to be heard.

As I look at this, if we allow ourselves to be put in a situation where we do not know whether we have a nuclear deterrent, that is nothing short of unilateral disarmament. I know there are differing philosophies around here. I believe in the White House they honestly believe that if we all stand in a circle and hold hands and disarm, everybody is going to be happy. But I am not at all satisfied with that. I believe we need to have a nuclear deterrent.

Right now, we are faced with a situation where, because of the vetoes of this President, we don't have a national missile defense system. That is to say, if they should deploy one of these missiles from North Korea, China, or Russia, which takes 35 minutes to get here, we have no way of knocking it down. We would be dependent upon a nuclear stockpile to have something to send back that is more significant. And not knowing whether or not those weapons would work would be worse than knowing they would not work.

So the time is here to do it. I have applied this to my "wife test," which I often apply to things. I asked, "Can we take a chance on not being able to fire

missiles?" She agrees with me, and she is never wrong.

Seeing the junior Senator from Texas, I recall something the senior Senator from Texas has said many times, which I think is very appropriate to quote at this time:

We have to remain strong. We all wish for the day and hope for the day when the lion and the lamb can lie down together. But when that day comes, I want to make sure we are the lion.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mrs. HUTCHISON. Mr. President, I thank my colleagues across the aisle for allowing me to go forward.

This is such an important debate. It is an important issue for our country but also for the world. There is no question the cold war ended with communism in full retreat and democracy on the rise throughout the world largely because the United States maintained an awesome military capability that deterred war.

No American should forget that our stockpile of safe and reliable nuclear weapons has deterred nuclear conflict for these past 50 years. When Saddam Hussein threatened to use weapons of mass destruction prior to Desert Storm, it was the certain knowledge that the United States would respond overwhelmingly that prevented Saddam Hussein from unleashing his own chemical and biological weapons.

This is a question of whether or not we, as a nation, intend to maintain our nuclear deterrent capability—so vitally important to us over the last 50 years in maintaining peace in the world—or if we intend to unilaterally disarm. Make no mistake, that is the question before us.

Our founders purposely made it hard to enter into treaties and required a two-thirds majority in the Senate for ratification. Thomas Jefferson wrote, "We had better have no treaty than a bad one."

I am afraid this test ban treaty is a bad one and it would be better not to have it. A treaty is permanent. It requires great vision and caution. Ratification of this test ban treaty would ultimately endanger our national security. I hope our citizens are paying close and careful attention.

There are really two questions before us: First, if we ratify this treaty, will the United States be able to maintain a safe, reliable, and credible nuclear capability? Second, will we be able to verify that this treaty is being enforced by other countries that have joined us? Unless both questions can be answered "yes," then we cannot possibly ratify this treaty.

On the issue of reliability, nuclear tests are the only proven method to assure confidence in the reliability and safety of our nuclear weapons. We have heard testimony to this effect from scientists and other experts. They worry

that as we make advances in material science and component technology for these very complex weapons, the inability to test these advances through actual detonations will leave us with doubt about whether they will work if used.

This treaty prohibits all nuclear tests, even of the lowest yield. The new diagnostic tools are still unbuilt and unproven. Scientists admit with humility that actual tests have often radically altered their chalkboard theories drawn out in the laboratory. At this point, anything short of testing is not sufficient to assure reliability and safety. Reliability of our weapons means they will work as intended. So it is clear that reliability is key to our national strategy.

My second concern is that once the United States ratifies this treaty, we will stop testing our weapons because we abide by treaties, but rogue nations will not. Several countries that signed the Nuclear Non-Proliferation Treaty, agreeing not to produce nuclear weapons, violated the treaty. They built the nuclear weapons anyway. Now we are expecting them to sign this treaty and agree not to test.

I agree with Dr. Kathleen Bailey of Lawrence Livermore Labs, who noted in testimony before the Armed Services Committee that this treaty expects nations to "agree not to test weapons they previously agreed not to acquire."

The Secretary of Defense has acknowledged in his own testimony that "we would not be able to detect every evasively conducted test."

In fact, I pursued this direct line of questioning with former Chairman of the Joint Chiefs of Staff, John Shalikashvili, in Defense appropriations hearings on March 5, 1997. He was the Joint Chiefs Chairman at the time, and he did his best. But even then, he could not say he would guarantee the safety.

General Shalikashvili said, "With each year that goes by and we are further and further away from having done the last test, it will become more and more difficult. That is why it is very important that we do not allow the energy budget to slip, but continue working on this science-based stockpile verification program and that we get this thing operating. But even then, Senator, we won't know whether that will be sufficient not to have to test. What we are talking about is the best judgment by scientists that they will be able to determine the reliability through these technical methods."

I then asked him, "Do you think we should have some time at which we would do some testing just to see if all of these great assumptions are, in fact, true?"

General Shalikashvili responded, "I don't know. I won't pretend to understand the physics of this enough. But I

did meet with the nuclear laboratory directors and we talked about it at great length. They are all convinced that you can do that. But when I ask them for a guarantee, they cannot give it to you until all of the pieces are stood up."

He continued, "Obviously if we stand it up and we cannot do that, then we will have to back the President and say we will have to test. Hopefully it will work out. But we are still a number of years away before we will have that put together so that we can tell you for sure it will not work or it will."

I said, "Well, mark one Senator down as skeptical."

General Shalikashvili responded, "Mark one Chairman of the Joint Chiefs of Staff joining in that skepticism. I just don't know."

Mr. President, "just don't know" is being unsure. Close is not good enough. It is not good enough when you are talking about a permanent treaty and when it comes to nuclear safety.

The recent letter to the majority and minority leaders from six former Secretaries of Defense of both parties was even more chilling. This letter from six former Secretaries of Defense from both parties:

As the Senate weighs whether to approve the Comprehensive Test Ban Treaty (CTBT), we believe Senators will be obliged to focus on one dominant, inescapable result were it to be ratified: over the decades ahead, confidence in the reliability of our nuclear weapons stockpile would inevitably decline, thereby reducing the credibility of America's nuclear deterrent.

They go on to say:

The nuclear weapons in our nation's arsenal are sophisticated devices, whose thousands of components must function together with split-second timing and scant margin for error. A nuclear weapon contains radioactive material, which in itself decays, and also changes the properties of other materials within the weapon. Over time, the components of our weapons corrode and deteriorate, and we lack experience predicting the effects of such aging on the safety and reliability of the weapons. The shelf life of U.S. nuclear weapons was expected to be some 20 years. In the past, the constant process of replacement and testing of new designs gave some assurance that weapons in the arsenal would be both new and reliable. But under the CTBT, we would be vulnerable to the effects of aging because we could not test "fixes" of problems with existing warheads.

I think it is clear from the experts, from former Secretaries of Defense and from former Chairmen of the Joint Chiefs that they cannot give us a guarantee.

We are talking about nuclear safety. We are talking about the major tool we have for deterrence. We are talking about the security of the United States of America, and we have a treaty before us that is permanent.

How could we go forward with a treaty such as this with these kinds of questions? Close is not good enough when we are talking about perma-

nence, and when we are talking about our own national security.

In fact, when it came to a test-ban treaty, President Reagan and other Cold War Presidents supported a ban only on high-yield nuclear tests. These tests would be of sufficient explosive power to be detected and identified by the sophisticated equipment designed to monitor underground explosions.

Under that proposal, lower yield tests would be permitted, to help ensure that our weapons were reliable. It makes sense not to ban low-yield tests because they're too small to detect and identify with the monitoring equipment. That was a sensible approach that has unfortunately been discarded by the Clinton Administration.

In fact, just last month, it appears the Russians may have conducted low-level nuclear tests at an Arctic test site. I say "may have" because the Central Intelligence Agency has concluded that seismic sensors and other monitoring equipment simply can not provide the data needed to know for sure.

Supporters of the treaty say it will result in a more extensive monitoring program, including inspections by experts. But a more extensive inspection system is not going to increase our capability to detect violations in advance. And having the right to request on-site inspections of test facilities doesn't give any added assurance of verification either. Let's face it: We've had that right in Iraq for the last eight years, and it's not worth the paper it's printed on.

Look at recent events in North Korea as an example of this Administration's policy of buying compliance with treaties and agreements. That policy has actually promoted nuclear and missile proliferation.

When the administration became convinced North Korea was building a nuclear device, in violation of their commitments under the Nuclear Non-Proliferation Treaty, it threatened a variety of sanctions.

The North Koreans responded that sanctions were tantamount to a declaration of war and soon we were at the negotiating table with this rogue nation. Prior to their possession of a nuclear weapon, it had been a tenet of our foreign policy for over 40 years that the United States would not negotiate directly with the North Koreans without our South Korean allies at the table.

However, once it became clear that North Korea was trying to enter the nuclear club, we began to negotiate. We set a lavish buffet of incentives—cash transfers, fuel, helping them build safer nuclear reactors. This began a dangerous cycle in which the North Koreans threaten to act badly and we bribe them not to.

After that pattern, despite our warnings and threats, Pakistan soon thereafter tested a nuclear weapon and

claimed membership in the nuclear club.

As former Majority Leader Bob Dole has pointed out, "We refer to states as rogue regimes because they regularly violate international law and refuse to be held accountable to international norms. The best way to deal with them is to deter them."

This treaty will not end nuclear testing. A "feel good treaty" doesn't make the world a safer place. The world is safer only when America is strong. A critical element of our military strength is a credible nuclear capability. This treaty will not result in a nuclear weapons free world. It will only result in a nuclear weapons free America, and that would be a much more dangerous world.

I urge my colleagues not to go forward with this treaty that we will have to abide by, on a permanent basis, not knowing if we will be able to keep our arsenal up to date and safe. This is a chance we cannot afford to take as the stewards of the national defense of our country.

I urge my colleagues to vote no on this treaty if it does come forward.

Once again, Mr. President, I thank Senator ALLARD from Colorado, Senator LEVIN, Senator DORGAN, and all who have allowed me to speak.

The PRESIDING OFFICER (Mr. HAGEL). The Senator from Michigan.

Mr. LEVIN. Mr. President, I thank the Chair.

I wish to begin also by thanking the chairman of the Senate Armed Services Committee, Senator WARNER, for holding 3 days of hearings on the Comprehensive Nuclear Test-Ban Treaty. These hearings were well balanced and very informative. They were also very much overdue. But at least we have begun the process of exploring this treaty.

What do we know after 3 days of those hearings?

We know the best professional judgment of our senior military leaders is that the Comprehensive Nuclear Test-Ban Treaty is in our Nation's national security interest. The best professional judgment of our senior military leaders, civilian and uniform, is that we are better off with this treaty than without it. We know after these hearings that the Comprehensive Test Ban Treaty will make it harder and more expensive for other countries to maintain existing stockpiles. We know the treaty would make it harder and more expensive for nations that do not yet have nuclear weapons to develop and deploy those weapons. We know that the treaty, as all treaties, is not perfectly verifiable. But we also know that tests conducted below our level of detection would not militarily disadvantage the United States.

That doesn't come from me, although I believe it. It comes from our senior military leaders.

We know that our overall monitoring and verification capabilities are very capable today and will improve with the entry into force of the treaty. We know, despite a 7-year moratorium on nuclear testing, that the U.S. nuclear stockpile remains safe and reliable today. We haven't tested in 7 years. We have relied on our Stockpile Stewardship Program. That program is up and running. We rely on it every year for a certification that our stockpile is safe and reliable.

This isn't some future concept that is being discussed. It is a Stockpile Stewardship Program that is, of course, not finished. It may never be finished. But it has made significant progress. We rely on it. We have invested billions in it. And our lab Directors have said three times, based on a Stockpile Stewardship Program that we now have up and running, that our nuclear inventory is safe and reliable. Without that stewardship program, they cannot make those certifications now on which we so heavily rely.

So the Stockpile Stewardship Program is already serving as a basis for certifying safety and reliability of this stockpile. We also know that its capabilities will improve substantially in the future, but that if at any point in the future the Stockpile Stewardship Program is not adequate to certify the safety and reliability of our stockpile at that point under the guarantees that are in the letter from the President—and that we will write into the ratification resolution—then the United States will exercise its supreme national interest clause and begin testing again.

We have informed every signatory that is what we will have the right to do. We have put all the parties on notice as to what our supreme national interest is. We have said that if we can't certificate safety and reliability without testing—and we believe that we can do it without testing—we will then return to testing.

We also know there is no military requirement for the United States to resume testing at the present time and there are no plans to resume testing with or without a Comprehensive Nuclear Test-Ban Treaty.

Most important of all, we know that if we do not ratify this treaty, we will miss an opportunity, which is a historic opportunity, to stem the tide of nuclear proliferation, and we will instead be encouraging a new and possibly worldwide nuclear arms race.

Prohibition of nuclear weapons tests have been the goal of Presidents since President Eisenhower. It was President Eisenhower who said almost 40 years ago that not achieving a nuclear test ban, in his words, "would have to be classed as the greatest disappointment of any administration of any decade of any time and of any party."

The whole world, including nuclear weapons powers and countries that

might want to become nuclear weapons powers, will be watching what the Senate does with this treaty. Our action is going to affect the willingness of other nations to ratify the treaty and our ability to persuade other nations to refrain from future nuclear testing. Rejection of this treaty will have a profound negative impact on the battle against proliferation of nuclear weapons.

We urge other countries—particularly, most recently India and Pakistan—to give up nuclear testing, to sign this treaty. India and Pakistan test weapons and we say: Stop it for your sake, for the world's sake. It is a road you should no longer walk. It is a road which could lead to your mutual total destruction and could spread to other parts of the world.

We make those pleas to India, Pakistan, and other countries. How in the world can we expect other countries to refrain from nuclear testing if we are unwilling to do so? How will we have any standing to ask India, Pakistan, China, and other countries to stop nuclear testing for the sake of the world, for the sake of our kids, and their kids? How would we have the gall to ask other countries to refrain from testing if we, ourselves, are unwilling to do so?

Our Secretary of Defense, our Joint Chiefs, four former chairmen of the Joint Chiefs—including General Shalikashvili, General Powell, Admiral Crowe, General Jones—have reviewed this treaty and have told the Senate Armed Services Committee that they also support this test ban treaty. General Shalikashvili's name was brought in by the Senator from Texas. I want to read what General Shalikashvili said this week. We heard what he said 2 years ago; now let's see what he says today. By the way, it is even stronger than where he was leading 2 years ago.

In short, the chief and I have supported this treaty, together with the safeguards package, because it answered our military concerns and because our country is better off with this treaty than it is without it.

That is General Shalikashvili putting in a nutshell what the issue is: Is this country better off with or without this treaty? His answer is, it is.

General Shelton, who is the current Chairman of our Joint Chiefs, testified as follows before our committee:

This treaty will help limit the development of more advanced and destructive weapons and inhibit the ability of more countries to acquire nuclear weapons. It is true that the treaty cannot prevent proliferation or reduce current inventory, but it can restrict nuclear weapons progress and reduce the risk of proliferation.

In short, our top uniform military official says the world will be a safer place with the treaty than without it, and it is in our national security interests to ratify the treaty.

Secretary Cohen, at the same hearings this week, testified that the treaty would restrain other nations from

creating and building nuclear arsenals. He said:

By banning nuclear explosive testing, the treaty removes a key tool that a proliferator would need in order to acquire high confidence in its nuclear weapons design. Further, the treaty helps make it more difficult for Russia, China, India and Pakistan to improve existing types of nuclear weapons and to develop advanced new types of nuclear weapons. In this way, the treaty contributes to the reduction of the global nuclear threat. Thus, while the treaty cannot prevent proliferation or reduce the current nuclear threat, it can make more difficult the development of advanced new types of nuclear weapons and thereby help cap the nuclear threat.

Opponents of ratification have raised two major arguments. They contend other nations could cheat because a low-yield nuclear test might not be picked up by our sensors; and second, we need to conduct nuclear tests in order to maintain the safety and reliability of our nuclear stockpile.

General Shelton and Secretary Cohen, on the basis of current intelligence information, have said that we would be able to detect any militarily significant level of nuclear testing. Secretary Cohen explained the conclusion this way:

Is it possible for States to cheat on the treaty without being detected? The answer is, yes. We would not be able to detect every evasively conducted nuclear test, and from a national security perspective we do not need to.

This is his conclusion.

Secretary Cohen said:

I believe that the United States will be able to detect a level of testing, the yield and the number of tests by which a state could undermine the U.S. nuclear deterrent.

General Shelton also pointed out that the treaty, if it comes into effect, will increase our ability to observe and monitor tests because it will create an international monitoring system of over 300 monitoring stations in 90 countries.

Some refer to information developed by the intelligence community over the last 18 months. I specifically asked the Chairman of the Joint Chiefs and the Secretary of Defense whether or not their testimony, their opinion, includes consideration of all of the intelligence community's information that has been gathered in the last 18 months and before.

Secretary Cohen states:

I have been apprised of all the developments. I am not aware of any information at this point that would call into question our ability to maintain our strong nuclear deterrent, that any balance has shifted or would call into question our ability to defend ourselves.

With regard to the safety of the stockpile, it is now safe, it is certified as safe, even though we have done no testing since 1992.

The answer of the heads of our laboratories—when I directly asked them this question: Are you signed on to this treaty?—was:

Yes, provided the safeguards are written into the ratification resolution and providing there is robust funding of our safeguards and our stockpile security program.

The lab Directors are, in the words of one of them, "on board" under those conditions and those conditions now exist.

My friend from Virginia apparently has a question, and I yield.

The PRESIDING OFFICER (Mr. INHOFE). The Senator from Virginia.

Mr. WARNER. Earlier, my distinguished colleague referred to General Powell. I have had the opportunity to be counseling with General Powell, soliciting his views, and he has been soliciting mine for some several days. He just telephoned me because he is watching this debate. He authorized me to say the following, that in view of the mounting conflicting testimony—primarily before the Senate Armed Services Committee in the course of the three hearings which my colleague is now addressing and I shall address at some point here—in view of the mounting conflict of testimony, particularly as it relates to the credibility of this deterrent and, indeed, safety issues—we need only look at the testimony by the lab Directors yesterday—he has authorized me to say at this time he joins those who recommended the delay of final consideration of the treaty at this point in time.

That should be clearly understood. He feels it should not be killed because he thinks, hopefully, if it is modified in certain ways, that it can be another brick in our walkway leading towards nonproliferation and stronger arms control regimes. However, at this time, he wishes to be on record as saying the Senate should not act and should not act because of the mounting conflicting testimony on the key essential elements that he and other uniformed officers—I addressed this earlier in the safeguards provision and likewise, which says at some point in time a President could withdraw from this treaty because of information brought to his attention.

So that is an important part of the treaty. It is under the "supreme" clause, which is in all of our treaties, but it is amplified. So I just wanted to correct the record.

Mr. LEVIN. You are not correcting the record at all. You are amplifying the record, if I may say to my good friend from Virginia.

Mr. WARNER. You said he supported the treaty but at this point in time—

Mr. LEVIN. I said he supported the treaty; and I am glad to hear he supports delay in the vote, and I hope our colleagues will listen to both of his statements, both that we should not now vote on this treaty—because he is correct for many reasons—and also I hope they will listen to his statement of January 27, 1998, when he, along with General Shalikashvili, former Chair-

man Crowe, and former Chairman Jones said the following:

On September 22, 1997, President Clinton submitted the Comprehensive Nuclear Test Ban (CTB) Treaty to the United States Senate for its advice and consent, together with six Safeguards that define the conditions under which the United States will enter into this Treaty. These Safeguards will strengthen our commitments in the areas of intelligence, monitoring and verification, stockpile stewardship, maintenance of our nuclear laboratories, and test readiness. They also specify the circumstances under which the President would be prepared, in consultation with Congress, to exercise our supreme national interest rights under the CTB to conduct necessary testing if the safety or reliability of our nuclear deterrent could no longer be certified.

This is his conclusion, General Powell, on January 27, 1998:

With these Safeguards, we support Senate approval of the CTB Treaty.

Those are his words. I am glad to have this printed in the RECORD and I am happy to hear at this point, at least, General Powell does support the delay in the vote. I think that is a wiser course to take for three reasons, and I will conclude with those reasons.

Mr. WARNER. The reasons he gave me are in view of the conflicting testimony that has evolved since the point in time at which he made that statement. That is the predicate on which he now thinks the vote should be delayed.

Mr. LEVIN. There are at least three predicates I would support for delaying this treaty. I am glad to hear he reaches the same conclusion for whatever reason he wants to give now.

Mr. WARNER. They are very important reasons, Mr. President.

Mr. LEVIN. I am not going to comment on his reasons. I am delighted he reached the conclusion he did. I disagree with his reasoning as to how he reached his conclusion because I think the evidence is overwhelming, and the testimony, if anything, has grown stronger. In fact, one of the arguments against this treaty is that we need somehow to defeat it in order to protect our allies; that they are relying on our deterrent—which, of course, they are—that somehow or other our allies would be disadvantaged if we ratified this treaty.

Yet three key allies have taken an unusual step. I do not remember when this has ever happened, when the heads of three states closely allied with us have urged this Senate directly to ratify a treaty. Yet that is what they are now doing.

We have heard arguments for the last few days: Look how important our strategic deterrent is, not just to us, which it is, but to our allies, which it has been and will continue to be.

What does President Chirac say and what does Prime Minister Blair say and what does Chancellor Schroeder say? They say: We need this treaty,

Senate. They are directly addressing the U.S. Senate. I do not remember that ever happening.

Mr. MOYNIHAN. Never.

Mr. LEVIN. Directly, directly asking the U.S. Senate to ratify the comprehensive test ban.

What do they say:

Rejection of the treaty in the Senate would remove the pressure from other states still hesitating about whether to ratify it. Rejection would give great encouragement to proliferators. Rejection would also expose a fundamental divergence within NATO.

The United States and its allies [they say] have worked side by side for a Comprehensive Test Ban Treaty since the days of President Eisenhower. This goal is now within our grasp. Our security is involved as well as America's. For the security of the world we will leave to our children, we urge the U.S. Senate to ratify the treaty.

So much for the argument that somehow or other defeating this treaty is not only good for us but it is good for our allies. Not in their view, it is not. Not in my view, it is not. And I hope not in the view of the majority of this Senate.

But I want to go back to the delay, and I am going to wind up because I do happen to agree, we should not vote on this treaty at this time—for a number of reasons.

First of all, because it would be tragic to reject this treaty, and if it comes to a vote now, it is going to be rejected. It would be tragic for our security—that is our top military leaders saying that, and I feel that keenly. It would be tragic for the world for us to defeat this treaty. It would reverse the direction in which we are heading, which is an ongoing effort to try to reduce the threat of proliferation of nuclear weapons. That effort, which I hope all of us share, will be damaged severely if we reject this treaty. And because we will reject this treaty if it comes to a vote, I think we should delay it.

No. 2, this treaty should not be involved in any way in Presidential politics, partisan politics, political meanderings, conflicts. We ought to be looking at this treaty based on its merits without this political environment being heeded. We cannot and are not doing that at this moment. It is a good reason to delay this treaty.

We delayed the Chemical Weapons Convention. The reason we delayed our vote, even though it was scheduled—and I tell my good friend who is presiding, even though we had actually scheduled a vote on the Chemical Weapons Convention, by unanimous consent I believe, too—when Senator Dole came out against that Chemical Weapons Convention shortly before we were voting, and while he was running for President, we decided as a Senate we would delay that vote until after that Presidential election.

We then, taking calm deliberation, adding conditions, reservations—we

then ratified that treaty. We took the time to do it. In fact, we spent a lot of time in the Old Senate Chamber, as I remember, as part of that deliberation. We should do that here.

The third reason we should not proceed to vote at this time is that we as a Senate have a responsibility to deliberate on a treaty. We put ourselves in a position, through a unanimous consent agreement, where we could not do that adequately. I think that was a mistake. But we do not have to compound our mistakes and make a worse mistake by voting on it just because we agreed to a unanimous consent agreement that we would begin the debate on it. That does not force us to proceed to vote on that treaty.

We have done some good with this unanimous consent agreement already, although I believe, looking back, it was a mistake to constrain ourselves as we did—that we could not add amendments other than one on each side, could not add reservations, could not add conditions, and so forth. What we have done as an institution is to put ourselves in a straitjacket with this unanimous consent reservation, which is not in keeping with the great traditions of the Senate. Senator BYRD, Senator MOYNIHAN, and others made that point. I think they made it eloquently. I keenly believe it. We have a responsibility here to deliberate on a treaty, to be open to considering conditions, qualifications, reservations, statements—to complete our committee work.

My good friend from Virginia knows—in fact he was the one, I think, who brought this out—we are currently in the middle of receiving a national intelligence estimate which is not yet completed. We should see that completed. We should have whatever hearings are needed.

By the way, we should have a committee report. I cannot remember a treaty which has ever come to the floor of the Senate—at least of this magnitude—without a committee report. On the Chemical Weapons Convention, we had a committee report of 350 pages for consideration by this body. We do not have one page from any of the committees.

So it seems to me it makes the most sense for us, under these circumstances—I am going to be perfectly candid; one of the reasons that compels me is that I believe if we voted now, this would be defeated. I think that would be a tragic setback in the fight against proliferation. But there are other very important institutional reasons, which I hope will appeal to others, that we should not ever as a body put ourselves in a position where we need to vote, or have to vote, on something which is not ready to be voted on.

Mr. WARNER. Mr. President, if the Senator will yield on our time. The dis-

tinguished ranking member of the Armed Services Committee and I, the distinguished ranking member of the Foreign Relations and Senator MOYNIHAN—a group of us are trying to work on a framework for the purpose of our two respective leaders, and, indeed, the President is involved.

Yesterday, in the course of our hearings, I addressed my concern—I support the delay of the final consideration, as now under the UC, but I am also very concerned that whenever the Senate resumes consideration of this treaty it be done in a time period after careful records have been created on this treaty and questions that concern General Powell about the conflict of testimony have been resolved to the best of our ability, and that it not be done under the dynamics of the U.S. constitutional process of electing a President and the Members of the Congress. That is the thing that concerns me. Those dynamics might, in all fairness, affect the outcome of this treaty which could be adverse to the national security interests of this Nation and our allies who depend upon us.

In searching for the format of a consensus to move off the UC consent of having the vote next week, we need to address that issue. Will my dear colleague say exactly what he did in open session yesterday about how he basically endorses my concerns over the year of the national elections under our Constitution?

Mr. LEVIN. As I said yesterday, indeed, the day before, in the absence of circumstances that I cannot foresee—

Mr. WARNER. Primarily, Mr. President, international intervention of some type.

Mr. LEVIN. No, I do not limit it to that.

Mr. WARNER. Each Senator has an opportunity to address that.

Mr. LEVIN. That is correct. But in the absence of circumstances I cannot foresee, I would oppose bringing this treaty up next year for the reasons I have given. In conclusion, at a minimum, I believe we should do no harm. At least let us do no harm in the battle against proliferation. Bringing this treaty up now for a vote—not for debate, which we are doing under a UC, but for a vote—in my judgment, would do harm to the battle against the proliferation of nuclear weapons. I hope we will be able to find a way that we not reach that vote. I yield the floor.

Mr. WARNER. Mr. President, I concur in my good friend's comments. In other words, I have been urging him to say these things for some time. I thank him because this is very helpful as I and other Senators, hopefully with him, continue to work to provide our leadership with a framework within which this can be achieved.

Mr. LEVIN. If I can have 10 more seconds, I have not been reluctant at all to say this over the last few days. I

have been very open about my feelings on this issue and that bringing this treaty to a vote now would do harm. I join my friend from Virginia in that belief.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, if it will help my colleagues, we have been trying to equalize this. I am about to yield to Senator DORGAN for 15 minutes, but I say to Democrats who are waiting to speak, we have Tuesday as well. I will be yielding in the 5-to-7-minute range for people who wish to speak after this, if people want to speak. We will reserve enough time at the conclusion of this debate.

I yield 15 minutes to Senator DORGAN who has been, quite frankly, the leader on our side of this issue who has been trying very hard for a year to get us to this point of debate. I yield 15 minutes to my friend from North Dakota.

The PRESIDING OFFICER. The Senator from North Dakota.

Mr. DORGAN. Mr. President, for all the anxiety that is expressed in this Chamber about when we might vote and the consequences of that vote, I at least observe that we are finally on the right subject. This is an important issue. This is an important matter for the Senate to consider. There are big issues and then there are small issues. There are important issues and some not so important. Stopping the spread of nuclear weapons, in my judgment, is a big, important issue.

Will the United States of America be a leader, will it assume its moral responsibility in the world to provide leadership to stop the spread of nuclear weapons and reduce the risk of nuclear war? That is the question before the Senate.

Sadly, some in this Chamber answer that question by saying: No, not us, not now. In fact, some, if you look at their record on arms control agreements say: Not us, never.

This treaty is not so difficult to understand, despite the protestations of some.

Forty years ago, President Eisenhower called for a treaty of this type. Seven years ago, the United States decided we would unilaterally stop the testing of nuclear weapons. Nearly 5 years ago, our country was a leader in convening nations to negotiate a comprehensive test ban treaty. Two years ago, that Comprehensive Test Ban Treaty was sent to the Senate for ratification. Not 1 day of hearings was held in the Senate Foreign Relations Committee in 2 years—not 1.

Then abruptly, 10 days ago, we were told there would be 14 hours of debate and 10 days hence we would have a vote on the Comprehensive Test Ban Treaty.

That was not and is not a thoughtful way for the Senate to deal with this issue, especially an issue of this importance.

Now to the debate. Mark Twain once said when asked if he would participate in a debate: Absolutely, provided I can take the negative side.

They said: We have not told you what the debate is about.

He said: It doesn't matter, you don't need time to prepare for the negative side.

I will not ascribe those motives to those who are strongly in opposition to this treaty, but some of the charges and allegations made just seem, to me, to be preposterous. I heard an hour or so ago in this Chamber the term "unilateral disarmament" applied to the U.S. ratifying this treaty. What a preposterous charge, unilateral disarmament.

Let's look at who supports this treaty. I heard a discussion about Gen. Colin Powell. Gen. Colin Powell supports this treaty. He said so. We have the date, the time, the place, the statement. He now, apparently, in a telephone call he said he would like to defer the vote because of questions raised in hearings, hearings that were 2 years in the making. Gen. Colin Powell, General Shalikashvili, the last four Chairmen of the Joint Chiefs of Staff; General Shelton, the present Chairman and the Secretary of Defense—all of whom say they support this treaty. Why? Because they believe this treaty protects this country's security interests. They believe this treaty is in this country's interest.

I will read some statements because those who come to the floor talking about the military consequences of this treaty need to understand to what all the senior military leaders in this country now testify.

The Joint Chiefs, the senior military leaders in this country, say:

In a very real sense, one of the best ways to protect our troops and our interests is to promote arms control. . . . In both the conventional and nuclear realms, arms control can reduce the chances of conflict. . . . Our efforts to reduce the number of nuclear weapons coincide with the efforts to control testing of nuclear weapons. . . . The Joint Chiefs support the ratification of this treaty.

Colin Powell and others in January 1998 said:

We support Senate approval of the CTBT.

Gen. Colin Powell supports the ratification of this treaty. We are told he wants the vote delayed. So that does not change the fact that he is on record saying he supports the ratification of the Comprehensive Test Ban Treaty.

What about monitoring? We hear all this noise about if we ratify this treaty, countries will cheat.

Our military leaders—and certainly the scientists—but especially our military leaders say that if we ratify this treaty, we will have monitors all around the world.

I show the situation on these charts: Here are the monitors without ratification; here are the monitors with ratifi-

cation. The number of monitors is dramatically enhanced. The ability to detect nuclear tests, detect cheating will be dramatically enhanced. No one that I know of can credibly or thoughtfully argue that we are not enhancing our capability in this country by ratifying this treaty.

What about the scientists? Thirty-two Nobel laureates in physics and chemistry, the most powerful intellects in this country were at the White House a couple of days ago. One who testified yesterday worked on developing the first nuclear bomb; one who testified the day before invented radar and then invented the laser—what do these scientists tell us about this treaty? They say: Ratify this treaty. This treaty is in the country's best interest.

Scientifically, they tell us that we can safeguard our nuclear stockpile; we can more effectively monitor tests around the world. They say, without equivocation: Ratify this treaty. That is from scientists.

What about the American people? Surveys show 80 percent of the American people say: Ratify this.

It is interesting to me, military leaders do not count; scientists do not count; the American people do not count. There is this cold war mentality, I guess, that nothing has changed. Some who have never supported an arms control agreement are back here again today saying this will not work either.

Other arms control agreements have worked, and we know it. We have seen the destruction of nuclear weapons by sawing wings off bombers, by destroying missiles and warheads, and not by hostility but by arms control agreements that call for reducing the numbers of nuclear weapons. That has happened. These arms control agreements have been successful. This treaty will be successful if this Senate will ratify it.

The support of military leaders and scientists—and, for that matter, the American people—seems to matter little in this Chamber. The scientific opinion of the most respected scientists in the world are second-guessed by those who believe they can understand this issue in a matter of a day or two.

Thirty-two Nobel Prize winners, two seismology organizations, three current weapons lab Directors, the Secretary of Energy, the Joint Chiefs of Staff, and the Secretary of Defense all have a common position on this country's ability to solve the scientific and technical tasks required in this test ban treaty; and all of them say that this treaty is in the country's interests.

The spread of nuclear weapons, that is what all this is about—stopping the spread of nuclear weapons. India and Pakistan detonated nuclear weapons not too long ago under each other's

chin. These are two countries that do not like each other. Ought that not send some fear all around the world about the proliferation of nuclear weapons?

Or maybe some do not understand nuclear weapons. They think that they are just bombs. There is an Indian author named Arundhati Roy who is one of the most acclaimed young authors in the world right now. She writes about a nuclear attack and nuclear weapons. Let me read some of this for a moment. She talks about the sentiments of survivors of a nuclear attack:

What shall we do then, those of us who are still alive? Burned and blind and bald and ill, carrying the cancerous carcasses of our children in our arms, where shall we go? What shall we eat? What shall we drink? What shall we breathe?

. . . There's nothing new or original left to be said about nuclear weapons. . . . (But) under the circumstances, silence would be indefensible. Let's not forget that the stakes we're playing for are huge. Our fatigue and our shame could mean the end of us.

We have a responsibility as a country. Those who raise arguments I have heard today—I wonder how can they sleep at night, if they believe our nuclear weapons are unsafe.

A physicist yesterday said: We have had them for 40 and 50 years. We know how they work. We know how to safeguard them. We know how to keep them over time. Yet we have people on the floor of the Senate talking about the fact that the stockpile may not be safe.

One of my colleagues said: Drop some of them on your State. You think they'd work? Of course they would. You would not, in a million years, guess about whether it would detonate on your State if a nuclear weapon were aimed at your State. We know our stockpile works and is maintained at great cost.

Cannot monitor? Nonsense. That does not even deserve much of a response. Everybody says our monitoring will be enhanced.

Unilateral disarmament? Rubbish. There is nothing here that suggests that. This country already decided we were not going to test 7 years ago.

The question now is, Will we give others a green light to test? We decide that we won't test, but we will refuse to ratify a treaty that says to others: We don't want you to test either.

It is a curious set of circumstances by which this comes to the floor.

Every other arms control issue has been dealt with seriously.

The ABM Treaty: 8 days of Foreign Relations Committee hearings, and 18 days of Senate debate on the floor of the Senate.

The Intermediate Nuclear Forces Treaty in 1988: 23 days of committee hearings in the Foreign Relations Committee; 2 days of Senate floor consideration.

START I: 19 days of hearings; 5 days on the Senate floor.

START II: 8 days of Foreign Relations Committee hearings; 3 days on the Senate floor.

Chemical weapons: 14 days of hearings; 3 days on the Senate floor.

NATO enlargement: 7 days of hearings; 8 days on the floor.

The Comprehensive Test Ban Treaty: 2 years it was here. Not 1 day of hearings in the Senate Foreign Relations Committee during 2 years; and then we are told, 14 hours of debate.

The New York Times today has the spectacle—welcomed from my standpoint, by the way—but the spectacle of the leaders of England, France, and Germany asking us to assume our role as a leader, asking us to ratify the Comprehensive Test Ban Treaty.

No one ought to ask us to do what we have a responsibility to do. We ought not to be in the position of having other countries have to ask us to assume leadership in trying to stop the spread of nuclear weapons and reduce the risk of nuclear war. We ought to be leading on this issue, not following.

Omar Bradley, that great general said some many years ago, and it applies especially today, it seems to me:

The world has achieved a brilliance without conscience. Ours is a world of nuclear giants and ethical infants. If we continue to develop our technology without wisdom or prudence, our servants may prove to be our executioner.

Everyone in this Chamber knows our responsibility. Our duty—as the nuclear superpower on this Earth—our duty is to lead. And we cannot and we must not shrink from that duty ever.

There is great anxiety about what happens at the end of 14 hours, and what if, as some now speculate, many Senators, especially on the other side of the aisle, decide they cannot support this treaty. Some say that would be a chilling, chilling result, with devastating results around the rest of the world.

I know this: This is a difficult, uncertain time, with many countries wishing to possess and acquire nuclear weapons. It is a difficult time, with India and Pakistan detonating nuclear weapons. It is a difficult time, with rogue nations and terrorist groups that want to threaten much of civilization.

We have unloosed the nuclear genie, and we must assume responsibility in providing an opportunity for the entire world to stop the spread of nuclear weapons. One way to do that—an important and effective way to do that—is to decide as a Senate to ratify this treaty.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. DORGAN. Mr. President, I yield the floor.

Mr. KYL. Mr. President, I yield 15 minutes to the Senator from Colorado, Mr. ALLARD.

Mr. ALLARD. If the Chair will notify me when I have a minute left, I would appreciate it.

The PRESIDING OFFICER. The Chair recognizes the patient Senator from Colorado.

Mr. ALLARD. Mr. President, there are three areas I will respond to, contained in previous comments made on the floor. One has to do with the number of hearings we have had in relation to this issue. Another is what previous Presidents have accepted. Another is our ability to monitor what has happened as far as nuclear testing is concerned.

We have had hearings in the Armed Services Committee. I have served on that committee. I have been there personally. I know they have been there. We have had hearings in the Intelligence Committee. To make a statement that this has been brought to the floor without a hearing and discussion in committee is false. We have had those hearings. I believe I have been adequately briefed, as a Member of the Senate, on the pros and cons of moving ahead with the ratification of this particular treaty.

As far as previous Presidents pushing for a nuclear test ban, none of the Presidents, except for this President, has worked for zero tolerance. That is unprecedented. Because of that zero tolerance, it creates special problems for this country when it comes to monitoring. We have shown, through our own scientific testing, that it is possible, with low-level nuclear testing, it can be camouflaged. One can let off a low-level test without any kind of detection. When we get to a zero-tolerance level, this all becomes a problem, as far as monitoring. We do have real problems with monitoring.

This week we have begun the very important debate regarding the Comprehensive Test Ban Treaty, better known as the CTBT, and whether its ratification is in the best interest of the United States. I believe this debate is timely. I have been studying the issue during the course of the last year; attended as many of the hearings as possible; carefully reviewed much of the record; and I listened closely to all my colleagues and the experts with their many varied opinions. After all this, I have come to the conclusion that the CTBT is not in the best interest of this country at this time.

As we move into the 21st century, America is confronting new and improved threats. More countries have acquired and are attempting to acquire weapons of mass destruction. This despite all the treaties in place today. Unfortunately, the reality of this threat means that the United States needs not a weakened nuclear deterrent but a stronger and more reliable nuclear deterrent.

During the cold war, we were in a bipolar strategic stance. It was the U.S. versus the Soviet Union. When we signed up to treaties, we were really only negotiating with the USSR. How-

ever, with the fall of the USSR, we are in a completely different strategic situation. Our main threats are rogue states whose goals are completely different than the former Soviet Union. I do not believe that these rogue states—Iran, Iraq, North Korea, and the like—really care if we ratify the CTBT. They will do what they believe is in their best interest.

For example, what do we do if we ratify the treaty and Iraq conducts a nuclear test? Some would say that we can punish them or shame them. How? Are we going to bomb them? Are we going to place heavy economic sanctions on them? To me, this treaty will do nothing to stop the people we want to stop from testing. While we do not need to go "mano y mano" anymore with another state in numbers of warheads, we do need to have a strong nuclear deterrent and to do this we need the technology and industrial base capable of assuring that our weapons stay strong. I believe we use the deterrent approach until we have the technology available to destroy a nuclear threat over the country of origin at which time it becomes a liability to the rogue country.

These requirements cannot be confidently met if the United States is obliged to adhere to a zero-yield and permanent CTBT. Despite what we have heard, no other administration has called for this treaty. President Eisenhower proposed a test ban but only for a limited duration. Neither President Kennedy nor President Johnson supported a zero yield test ban. President Nixon agreed to limit test above 150 kilotons and President Carter sought only a ten year ban with tests up to two kilotons. Presidents Reagan and Bush did not pursue a test ban at all.

The permanent zero-yield treaty has only been sought by President Clinton. And from my understanding, this has not been the position for the entirety of his administration. As recently as 1995, the Department of Defense position was that it could support a CTBT only if tests of up to 500 tons were permitted. However, the military chiefs were overruled by the civilian leadership after President Clinton agreed to a zero yield test ban.

This treaty prohibits all underground nuclear tests, even those so low that they cannot be confidently detected. If this treaty is ratified, we would be permanently prohibited from conducting the sorts of tests we have relied upon in the past to assure the safety, reliability, and effectiveness of our nuclear people.

Some of the CTBT proponents believe that the Stockpile Stewardship Program is the antidote to nuclear testing. This program supposes to be able to simulate nuclear explosions through the use of computer modeling. The estimate is that the program will cost at least \$4.5 billion a year over 10 years.

While Stockpile Stewardship may be the answer in the future, the problem is that with any scientific experiment you must have a comparable element, and in this case a nuclear test. The best way to ensure that the Stockpile Stewardship program is working is to ensure that the results of the model match the results of a test. We must be able to calibrate the model before we should end all testing. I believe this is the height of irresponsibility.

With this being said, let me stress one major concern I have about the treaty, and regarding the 6 safeguards proposed by the President.

First, as a member of the Intelligence Committee and the Armed Services Committee, I believe the Comprehensive Test Ban Treaty submitted to this Senate by President Clinton is not verifiable. This means that, despite the vast array of expensive sensors and detection technology being established under the treaty, it will be possible for other nations to conduct militarily significant nuclear testing with little or no risk of detection.

What is militarily significant nuclear testing? The definitions of the term might vary, but I think we'd all agree that any nuclear test that gives a nation information to develop newer, more effective weaponry is military significant.

In the case of the United States, nuclear tests will yields between between 1,000 tons and 10,000 tons are generally large enough to provide "proof" data on new weapons designs. Other nations might have weaponry that could be assessed at even lower yields. For the sake of argument, however, lets be conservative and assume that other nations would also need to conduct tests at a level above 1,000 tons to develop a new nuclear weapon design.

The verification system of the CTBT is supposed to detect nuclear blasts above 1,000 tons, so it would seem at first glance that it will be likely that most cheaters would be caught. We need to look at the fine print, however. In reality, the CTBT system will be able to detect tests of 1,000 tons or more if they were nonevasive and take place at known test sites. This means that the cheater will be caught only if he does not try to hide his nuclear test. But, what if he does want to hide it? What if he conducts his test evasively?

From the hearings I have attended, it seems that evasive testing may be a very simple task for Russia, China, or others. One of the best known means of evasion is detonating the nuclear device in a cavity such as a salt dome or a room mined below ground. This technique—called decoupling—reduces the noise, or the seismic signal, of the nuclear detonation.

The change in the signal of a decoupled test is so significant—it can be reduced by as much as a factor of 70—that it will be impossible for any

known technology to detect it. For example, a 1,000-ton evasive test would have a signal of a 14-ton nonevasive test. This puts the signal of the illicit test well below the threshold of detection. Decoupling is a well-known technique and is technologically simple to achieve. In fact, it is quite likely that Russia and China have continued to conduct nuclear testing during the past 7 years, while the United States has refrained from doing so.

If the CTBT were not going to affect U.S. capabilities, it would not be important whether the treaty were verified or not. The fact is, however, that the CTBT will freeze the U.S. nuclear weapons program and will make it impossible to assess with high confidence whether modifications made to the current stockpile will function as intended. And because there are limits to verifying compliance with the treaty, it will not effectively constrain other nations in the same way. That means they will ultimately be able to gain advantage, at the expense of the United States and our defensive posture.

Second, I want to touch on an issue that does not regard the text of the treaty, but the so-called six safeguards. I will not be able to get into detail on all of them, but it seems these safeguards have been discussed as if they were part of the treaty itself. In reality, these safeguards are just promises made by President Clinton. Even if they are contained in the Resolution of Ratification, these safeguards are still subject to congressional and budgetary pressures.

For instance, safeguard A states that the Stockpile Stewardship Program must be able to ensure a high level of confidence in the safety and reliability of nuclear weapons in the active stockpile. My concern is, what if the program runs into budgetary programs and a few Congressmen decide we are spending too much money on the program and attempt to kill the program?

Also, I know there are special interest groups that support the CTBT but oppose the Stockpile Stewardship Program and will put domestic political pressure on all of us to reduce and end the Stockpile Stewardship Program and instead fund other programs.

Another example of budgetary and political pressures can be associated with a safeguard E. This safeguard insists on the continuing development of a broad range of intelligence gathering and analytical capabilities. This safeguard is already being tested. This administration already attempted to cancel the WC-135 aircraft, citing funding considerations. The WC-135 is essential to U.S. monitoring of nuclear tests. As a member of the Intelligence Committee, I fought for its continued funding. If safeguard E were taken seriously by this administration, they would not be attempting to cancel a

program that is essential to monitoring, but would be fully funding these important programs.

For these reasons and many others, I must oppose this treaty—not because I want testing, but for the fact that I cannot yet rely upon an untested future program for the safety of our nuclear deterrent. Maybe one day I can support a zero-yield plan. But now is not the time.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, I would like to ask my friend one question on my time, if he is willing.

Does the Senator believe that if we defeat this treaty and allow for continued testing, there will be the consensus in this Congress, or in any future Congress, to spend \$4.5 billion a year for the next 10 years to fund the Stockpile Stewardship Program?

Mr. ALLARD. I think that, right now, we have the desire within this Congress to continue to fund the stockpile program. I think many of us believe it is an option. It needs to be scientifically developed. We don't have the science there. I personally have that commitment. I also believe we are developing the technology where we can take our own defense systems—we can take our own rocket and meet it with another rocket that has a nuclear warhead on it, intercept it. Lately, we have begun to demonstrate our ability to do that.

I think ultimately we will be able to stop nuclear proliferation when we eliminate the threat of the nuclear warhead going over any other country other than the country from which it was shot. So if we shoot it off over the country from which the missile was launched, then the only hazard is to the country that has the warhead. When we develop that technical capability, then I think we will have a real deterrence. And I don't believe that is far away, by the way.

Mr. BIDEN. Mr. President, regarding that, I point out to my friend that the ability to do that is in direct proportion to the lack of a MIRV'd capability on the part of other countries—that is, other countries being able to put multi-reentry nuclear missiles on a vehicle to fire at us.

All of the technology and testimony from all sources has indicated that for countries that don't have that capability now to be able to move to that capability, which requires them to have a much lighter physics package, or nuclear package on top of a missile—it must be lighter, and it must have a boost capacity—in order for them to develop that, they will have to have testing which is detectable beyond anybody's doubt.

So I make the point that the ability to establish a credible missile defense is directly dependent upon the ability

of us to keep other nations from developing the ability to have MIRV'd re-entry vehicles.

I yield 10 minutes now to my friend from Minnesota.

The PRESIDING OFFICER. The Senator from Minnesota is recognized.

Mr. WELLSTONE. Mr. President, my father, Leon Wellstone, was born in Odessa in the Ukraine. His family moved several times to stay ahead of the pogroms. Most of his earlier years he spent in Khabarovsk, Siberia, Far East Russia. He came to our country in 1914. He fled persecution. He never could go back home. In all likelihood, his parents were murdered by Stalin.

Mr. President, my father spent most of his life in our country in Washington, DC, and during the night of August 7, 1945, he wrote this essay to himself:

I ask unanimous consent it be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

On the day after Hiroshima, I endlessly wandered around town, dazed, lost, adrift. Like a man who suddenly lost all his earthly possessions, his family, his hopes; who is completely and inconsolably bereft; who is stupefied with misery of a depth and poignancy beyond words; who no longer knows where he is going to or why; who can think of nothing but appalling ruin, and nothing save the keenest anxiety and travail and death.

Then, too tired to walk any more, I headed for an old hotel downtown and came in and sat down. Some months ago I had discovered its lobby. It was shabby and ancient, full of old and creaky furniture that spoke of innumerable years of service bolstered by many fixings and patchings and new coats of paint.

Everywhere was evidence of age and wear and tear and fatigue. And yet, for all that, the lobby radiated an air of confidence and determined survival.

Whatever else was in question—an endless list!—one thing at least had appeared certain: that, though changing with the years in manner and pace, life would go on. It was infinitely comforting and appealing to think that it would.

Now that thought was rudely and cruelly shaken by the blast of a bomb. It was a thing we had only imagined in myths and fables. A fiery augury of the world's end. A revelation, stunning and merciless and naked, that this seemingly solid and enduring world of iron, brick, concrete, flesh and bone can vanish as quickly as a sizzling drop of moisture on a hot stove.

Try as I might I could not rid myself of direct premonitions, nor halt my urgent questionings, nor feel a measure of security any longer, nor imagine how the outlook might brighten, nor decide how some peace of mind could be recaptured.

I sat there miles deep in searching thought, unaware of time's passing, hating to return to normal duties. What was the sense of hurrying now? Or the need or purpose to any activity? Why was I, of all men, so shocked and grieved? A life of doubt is possible. But a life of the keenest distress is not. I had found life and the society of men greatly wanting. I had been a pessimist, but now all this was pointless, irrelevant, outlandish.

Only he finds life wanting who also loves it. The idea that this world might soon be no more was an outrage on all logic. It made no sense that a thing of such scope and infinite variety should be doomed to final erasure. I did not care about my own life; I have lived most of it and might not live much longer. But there were the children. And natural beauty. And pictures in the galleries. And fine musical scores. And great books.

I thought of all this and looked about. Never had I felt the lobby so quaint, dear, beguiling. Now I liked its creaking chairs—music to my ears. I liked the shabby walls that have watched so long people drift in and out. I liked the ridiculous pictures on the walls with their flavor of bygone days. I liked the wornout rugs.

Why should I care if the world were turned to cinders? I, who had in the past thought on occasion that it had abundantly merited such a fate? Yet I cared—fiercely, greatly, vehemently. And I could not still my indignation or contain my bitter revulsion.

Finally I left the lobby. I could see nothing ahead but ruin. But outside, on the street, life was as ever. Oh, the wonder, stimulation, the comfort of the living scene when you had just thought of charred nullity!

There were tears in my heart.

Many people then were cheering after they dropped that bomb. I think my father was profound.

Leon, your words are part of the official CONGRESSIONAL RECORD, part of the Senate deliberations, and I believe your words have a poignancy and a relevancy to this historic debate on the floor of the U.S. Senate today.

Mr. President, three years ago, President Clinton became the first world leader to sign the Comprehensive Test Ban Treaty. On that day, the President praised the treaty as the "longest-sought, hardest-fought prize in the history of arms control."

We as a nation cannot afford to lose this valuable prize. With the ratification of the Comprehensive Test Ban Treaty, we have a unique opportunity in the Senate to help end nuclear testing once and for all. Ratification is the single most important step we can take—here and now—to reduce the threat of nuclear war, which is what my father was talking about.

The Comprehensive Test Ban Treaty is in the interest of the American people and it has widespread public support. It will strengthen our nuclear nonproliferation efforts by reassuring non-nuclear weapon states that states with nuclear weapons will be unable to develop and deploy new types of nuclear weapons. It will keep non-nuclear countries from deploying advanced nuclear weapons systems even if they have the capability to design them. Further, it will improve our ability to detect any nuclear weapons test, with other countries paying 75 percent of the bill for the International Monitoring System.

Ratification will help push India and Pakistan to sign and ratify the Test Ban Treaty. This may be one of the few steps taken to bring these two countries back from the brink of nuclear

war, until there is a resolution of the terrible conflict in Kashmir. Further, ratification by the Senate will encourage Russia, China, and other states to follow suit, just as we witnessed when the United States first ratified the Chemical Weapons Convention.

Some say ratification of the treaty is a bad idea because it would be too risky. They say the treaty is too risky because countries might cheat. As Secretary Albright said yesterday in the Foreign Relations Committee, "By approving the treaty, what exactly would we be risking? With no treaty, other countries can test without cheating, and without limit."

In 1963, President Kennedy negotiated the landmark Limited Test Ban Treaty with the Soviet Union to ban tests in the atmosphere. That year, he spoke of his vision of a broader treaty in his commencement address at American University. As he said:

The conclusion of such a treaty, so near and yet so far, would check the spiraling arms race in one of its most dangerous areas. It would place the nuclear powers in a position to deal more effectively with one of the greatest hazards which man faces in 1963, the further spread of nuclear arms. It would increase our security—it would decrease the prospects of war. Surely this goal is sufficiently important to require our steady pursuit, yielding neither to the temptation to give up the whole effort nor the temptation to give up our insistence on vital and responsible safeguards.

These words are as true today as they were in 1963. Some of the geopolitical circumstances have changed, the Soviet empire has collapsed, as have the names and the faces of those on the floor debating today. But, in other very important ways, the debate today is quite similar:

Then, as now, there were concerns about our ability to maintain a strong nuclear deterrent under the treaty;

Then, as now, there were questions about whether Moscow would cheat; and,

Then as now, there were concerns about the ability of the United States to effectively verify the Treaty.

Fortunately, the forces in favor of nonproliferation won that battle. The story since 1963 has been one in which our deterrent posture did not suffer, even though we gave up certain types of testing. Further, we gained the respect of the world for reining in the nuclear arms race. That achievement led five years later to U.S. diplomatic success in negotiating the Nuclear Non-Proliferation Treaty and the treaty banning nuclear weapons in Latin America—treaties that have been profoundly successful in constraining the proliferation of nuclear weapons.

Like our colleagues in the Senate in 1963, we must put away partisan politics and ratify the treaty before us. This Comprehensive Test Ban Treaty is a good treaty. It is not perfect, but no treaty produced by over a hundred

countries will ever be. The benefits outweigh the risk. We must act on it.

I hope my colleagues who now oppose the CTBT, or who are undecided, will think hard about what the consequences would be if the treaty were not approved. I believe it is not an exaggeration to say that there will be jubilation among our foes and despair among our friends. North Korea, Iran, and Iraq will feel entirely without constraints in pursuing their nuclear aspirations. With China, we will have thrown away a valuable tool for slowing the modernization of its nuclear arsenal. We will have reduced our credibility on nonproliferation issues with Moscow when we have continually urged it to take proliferation seriously.

No matter what some of my colleagues in this body might believe, we cannot do this alone. We need cooperation from our European allies in controlling exports if we are to prevent states from acquiring nuclear weapons. France, for instance, which has ratified the CTBT, will be even less inclined to listen to us, if we walk away from the treaty, when we implore them to contain Iraq and Iran.

I urge each of my colleagues to think carefully before voting, put partisan politics aside, and to cast your vote on behalf of a safer world, and in favor of the Comprehensive Test Ban Treaty.

Mr. KYL. Mr. President, I ask unanimous consent that a series of letters be printed at an appropriate place in the RECORD.

These are letters from the six former secretaries of defense, former majority leader, Bob Dole, and Dr. Edward Teller, among others.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SEPTEMBER 8, 1999.

Hon. TRENT LOTT,
Majority Leader, U.S. Senate,
Washington, DC.

DEAR SENATOR LOTT: We write to express the strong opposition of our organizations and the millions of Americans we represent to the Comprehensive Test Ban Treaty (CTBT).

As conservatives, we believe that the first responsibility of government is to provide for the common defense. This treaty will make it difficult, if not impossible, to maintain the safety and reliability of our nuclear deterrent—a military capability that has for fifty years been central to our defense, and that is likely to continue to do so for the foreseeable future.

President Clinton has explicitly embraced a policy he and former Energy Secretary Hazel O'Leary have called "denuclearization." In a 1996 report issued by the House National Security Committee, its chairman, Rep. Floyd Spence, warned that the effect of this policy is "erosion [of our nuclear deterrent] by design."

Were the United States to become party to a binding prohibition on nuclear testing, this policy would be made practically irreversible and its insidious effects accelerated. Unfortunately, nations whose nuclear weapons programs cause us concern (e.g., Russia,

China, North Korea, Pakistan, Iran, Iraq, etc.), however, would likely not be similarly affected. They generally are less concerned than we about the need for safety and effectiveness that has driven America's nuclear arsenal to be comprised of the world's most sophisticated weapons. Alternatively, they can always cheat without fear of detection, thanks to the CTBT's unverifiability.

We are also troubled by the evidence that many proponents of the CTBT seem to have more than unilateral American disarmament in mind. In a manner all too reminiscent of the nuclear freeze movement of the 1980s, left-wing activists and their allies appear intent on using the effort to compel the Senate to approve this Treaty as a device for energizing their political base. The stakes associated with this misbegotten accord are too great for it to be addressed in such a cynical way.

For all these reasons, we commend you for your strong opposition to the ratification of the Comprehensive Test Ban Treaty. We urge your colleagues to join you in taking the steps necessary to ensure that a safe and reliable nuclear deterrent remains a key ingredient in our common defense.

Sincerely,

Frank J. Gaffney, Jr., President, Center for Security Policy; David Horowitz, President, Center for the Study of Popular Culture; David A. Keene, Chairman, American Conservative Union; Grover Norquist, President, Americans for Tax Reform; Paul Weyrich, President, Free Congress Foundation; Morton C. Blackwell, Virginia Republican National Committeeman; Felita Blowe, Legislative Coordinator, Concerned Women for America; James H. Broussard, Citizens Against Higher Taxes; Kelly Anny Fitzpatrick, CEO & President, The Polling Company; Mark Green, Editorial Writer, Daily Oklahoman; Barbara Ledeen, Executive Director, Independent Women's Forum; Telly Lovelace, Director, External Affairs, Coalition on Renewal and Education; Martin Mawyer, President, This Nation; Mayor F. Andy Messing, Jr., USA (Ret.), Executive Director, National Defense Council Foundation; William J. Murray, Chairman, Government Is Not Good—PAC; C. Preston Noell III, President, Tradition, Family, Property Inc.; Ronald W. Pearson, President, Pearson & Pipkin, Inc.; Denesha Reid, Director, Public Policy and Research, Concerned Women for America; Phyllis Schlafly, President, Eagle Forum; Robert A. Schadler, President, Center for First Principles; Dick Simms, Director, Cornerstone; Rev. Louis P. Sheldon, Chairman, Traditional Values Coalition; Ann Stone, CEO, The Stone Group, Inc.; Jeff Taylor, Director, Government Relations, Christian Coalition; Timothy Teepel, Executive Director, Madison Project; Harry Valentine, President, Capitol Hill Prayer Alert.

October 6, 1999.

Hon. TRENT LOTT,
Majority Leader, U.S. Senate,
Washington, DC.

Hon. TOM DASCHLE,
Democratic Leader, U.S. Senate,
Washington, DC

DEAR SENATORS LOTT AND DASCHLE: As the Senate weighs whether to approve the Comprehensive Test Ban Treaty (CTBT), we believe Senators will be obliged to focus on one

dominant, inescapable result were it to be ratified: over the decades ahead, confidence in the reliability of our nuclear weapons stockpile would inevitably decline, thereby reducing the credibility of America's nuclear deterrent. Unlike previous efforts at a CTBT, this Treaty is intended to be of unlimited duration, and though "nuclear weapon test explosion" is undefined in the Treaty, by America's unilateral declaration the accord is "zero-yield," meaning that all nuclear tests, even of the lowest yield, are permanently prohibited.

The nuclear weapons in our nation's arsenal are sophisticated devices, whose thousands of components must function together with split-second timing and scant margin for error. A nuclear weapon contains radioactive material, which in itself decays, and also changes the properties of other materials within the weapon. Over time, the components of our weapons corrode and deteriorate, and we lack experience predicting the effects of such aging on the safety and reliability of the weapons. The shelf life of U.S. nuclear weapons was expected to be some 20 years. In the past, the constant process of replacement and testing of new designs gave some assurance that weapons in the arsenal would be both new and reliable. But under the CTBT, we would be vulnerable to the effects of aging because we could not test "fixes" of problems with existing warheads.

Remanufacturing components of existing weapons that have deteriorated also poses significant problems. Manufacturers go out of business, materials and production processes change, certain chemicals previously used in production are now forbidden under new environmental regulations, and so on. It is a certainty that new processes and materials—untested—will be used. Even more important, ultimately the nuclear "pits" will need to be replaced—and we will not be able to test those replacements. The upshot is that new defects may be introduced into the stockpile through remanufacture, and without testing we can never be certain that these replacement components will work as their predecessors did.

Another implication of a CTBT of unlimited duration is that over time we would gradually lose our pool of knowledgeable people with experience in nuclear weapons design and testing. Consider what would occur if the United States halted nuclear testing for 30 years. We would then be dependent on the judgment of personnel with no personal experience either in designing or testing nuclear weapons. In place of a learning curve, we would experience an extended unlearning curve.

Furthermore, major gaps exist in our scientific understanding of nuclear explosives. As President Bush noted in a report to Congress in January 1993, "Of all U.S. nuclear weapons designs fielded since 1958, approximately one-third have required nuclear testing to resolve problems arising after deployment." We were discovering defects in our arsenal up until the moment when the current moratorium on U.S. testing was imposed in 1992. While we have uncovered similar defects since 1992, which in the past would have led to testing, in the absence of testing, we are not able to test whether the "fixes" indeed work.

Indeed, the history of maintaining complex military hardware without testing demonstrates the pitfalls of such an approach. Prior to World War II, the Navy's torpedoes had not been adequately tested because of insufficient funds. It took nearly two years of war before we fully solved the problems that

caused our torpedoes to routinely pass harmlessly under the target or to fail to explode on contact. For example, at the Battle of Midway, the U.S. launched 47 torpedo aircraft, without damaging a single Japanese ship. If not for our dive bombers, the U.S. would have lost the crucial naval battle of the Pacific war.

The Department of Energy has structured a program of experiments and computer simulations called the Stockpile Stewardship Program, that it hopes will allow our weapons to be maintained without testing. This program, which will not be mature for at least 10 years, will improve our scientific understanding of nuclear weapons and would likely mitigate the decline in our confidence in the safety and reliability of our arsenal. We will never know whether we should trust Stockpile Stewardship if we cannot conduct nuclear tests to calibrate the unproven new techniques. Mitigation is, of course, not the same as prevention. Over the decades, the erosion of confidence inevitably would be substantial.

The decline in confidence in our nuclear deterrent is particularly troublesome in light of the unique geopolitical role of the United States. The U.S. has a far-reaching foreign policy agenda and our forces are stationed around the globe. In addition, we have pledged to hold a nuclear umbrella over our NATO allies and Japan. Though we have abandoned chemical and biological weapons, we have threatened to retaliate with nuclear weapons to such an attack. In the Gulf War, such a threat was apparently sufficient to deter Iraq from using chemical weapons against American troops.

We also do not believe the CTBT will do much to prevent the spread of nuclear weapons. The motivation of rogue nations like North Korea and Iraq to acquire nuclear weapons will not be affected by whether the U.S. tests. Similarly, the possession of nuclear weapons by nations like India, Pakistan, and Israel depends on the security environment in their region, not by whether or not the U.S. tests. If confidence in the U.S. nuclear deterrent were to decline, countries that have relied on our protection could well feel compelled to seek nuclear capabilities of their own. Thus, ironically, the CTBT might cause additional nations to seek nuclear weapons.

Finally, it is impossible to verify a ban that extends to very low yields. The likelihood of cheating is high. "Trust but verify" should remain our guide. Tests with yields below 1 kiloton can both go undetected and be militarily useful to the testing state. Furthermore, a significantly larger explosion can go undetected—or be mistaken for a conventional explosion used for mining or an earthquake—if the test is "decoupled." Decoupling involves conducting the test in a large underground cavity and has been shown to dampen an explosion's seismic signature by a factor of up to 70. The U.S. demonstrated this capability in 1966 in two tests conducted in salt domes at Chilton, Mississippi.

We believe that these considerations render a permanent, zero-yield Comprehensive Test Ban Treaty incompatible with the Nation's international commitments and vital security interests and believe it does not deserve the Senate's advice and consent. Accordingly, we respectfully urge you and your colleagues to preserve the right of this nation to conduct nuclear tests necessary to the future viability of our nuclear deterrent by rejecting approval of the present CTBT.

Respectfully,

JAMES R. SCHLESINGER.

FRANK C. CARLUCCI.
DONALD H. RUMSFELD.
RICHARD B. CHENEY.
CASPAR W. WEINBERGER.
MELVIN R. LAIRD.

WASHINGTON, DC,
October 5, 1999.

Hon. TRENT LOTT,
Majority Leader, U.S. Senate,
Washington, DC.

DEAR TRENT: I am responding to your October 4 letter, in which you ask for my views on the Comprehensive Test Ban Treaty (CTBT).

As you know, I believe that matters of foreign policy and national security should be approached from a nonpartisan perspective. As such, I have supported a number of Clinton administration initiatives when I believed them to be in the national interest—for example, NATO action in Kosova and ratification of the Chemical Weapons Convention. Unfortunately, in this substance, I cannot support President Clinton's effect to secure Senate approval of the CTBT.

In my view, ratifying the CTBT would endanger the national security of the United States, primarily by preventing nuclear testing essential to maintaining the safety and reliability of our nuclear deterrent. It is through explosive testing that the United States has maintained its confidence in the safety and reliability of the U.S. nuclear stockpile and, thus, the credibility of our nuclear arsenal. Without explosive testing, the credibility of our arsenal will, with time, erode. As credibility erodes, the deterrent effect of our nuclear force erodes, leaving not only America increasingly vulnerable, but also our allies who depend on the American nuclear umbrella.

While the Stockpile Stewardship program is worth pursuing, it should be viewed as a complement to our nuclear testing program—not a substitute for it. Explosive nuclear testing is a proven method of identifying stockpile problems. The Stockpile Stewardship Program is not yet in place and is therefore unproved. Deciding in 1999 to forego testing and instead to rely on a program that will be in place in 2010—it all goes well—is, in short, irresponsible.

Furthermore, agreeing to the CTBT would most certainly lead to a false sense of security. The Administration has argued that by embracing the CTBT, the United States will persuade other countries, including notable proliferators such as North Korea, to halt their quest for nuclear weapons and the means to deliver them. If a regime like Pyongyang has been susceptible to moral suasion or felt bound by international norms, it would never have violated the Nuclear Nonproliferation Treaty (NPT). The idea that rogue regimes are persuaded by American or broader international adherence to legal obligations is wishful thinking. These regimes are called rogue regimes for the very reason that they regularly violate international law and refuse to be held accountable to international norms. The only way to deal effectively with threats from rogue states is to deter them.

There should be no doubt that the best way to protect the United States from the consequences of proliferation is to develop and deploy effective missile defenses. There is no arms control treaty that can protect American territory from nuclear attack. And, with each day, America's enemies come closer to acquiring the capabilities to attack the United States with nuclear, chemical, and biological weapons. The best deterrents are a

credible nuclear stockpile and a national missile defense system.

Neither President Reagan nor President Bush pursued a zero-yield test ban treaty of unlimited duration, and for good reason. The CTBT is an ill-conceived and misguided arms control agreement, the ultimate result of which will be the de-nuclearization by other means, of the United States. This treaty is hardly the "longest sought, hardest fought prize in arms control history," as claimed by this Administration.

I support arms controls that increase the security of the United States, not ones that increase the vulnerability of our nation to terrorists and regimes bent on nuclear proliferation.

Sincerely,

BOB DOLE.

GARRISON, MN,
October 5, 1999.

Hon. JOHN W. WARNER,
Chairman, Armed Services Committee, U.S. Senate,
Washington, DC.

DEAR SENATOR WARNER: If the news reports are correct, the Armed Services Committee will be addressing the proposed Comprehensive Test Ban Treaty (CTBT) in the next few days. Although I will not be able to be in Washington during the hearings, I want you to have at least a synopsis of my views on the matter.

I believe that ratifying the treaty requiring a permanent, zero-yield ban on all underground nuclear tests is not in the security interest of the United States.

From 1945 through the end of the Cold War, the United States was clearly the pre-eminent nuclear power in the world. During much of that time, the nuclear arsenal of the Soviet Union surpassed ours in numbers, but friends and allies, as well as potential enemies and other nations not necessarily friendly to the United States, all understood that we were the nation with the very modern, safe, secure, reliable, nuclear deterrent force which provided the foundation for the security of our nation and for the security of our friends and allies, and much of the world. Periodic underground nuclear tests were an essential part of insuring that our nuclear deterrent force remained modern, safe, secure, reliable and usable. The general knowledge that the United States would do whatever was necessary to maintain that condition certainly reduced the proliferation of nuclear weapons during the period and added immeasurably to the security cooperation with our friends and allies.

Times have changed; the Soviet Union no longer exists; however, much of its nuclear arsenal remains in the hands of Russia. We have seen enormous political, economic, social and technological changes in the world since the end of the Cold War, and these changes have altered the security situation and future security requirements for the United States. One thing has not changed. Nuclear weapons continue to be with us. I do not believe that God will permit us to "uninvent" nuclear weapons. Some nation, or power, will be the preeminent nuclear power in the world, and I, for one, believe that at least under present and foreseeable conditions, the world will be safer if that power is the United States of America. We jeopardize maintaining that condition by eschewing the development of new nuclear weapons and by ruling out testing if and when it is needed.

Supporters of the CTBT argue that it reduces the chances for nuclear proliferation. I

applaud efforts to reduce the proliferation of nuclear weapons, but I do not believe that the test ban will reduce the ability of rogue states to acquire nuclear weapons in sufficient quantities to upset regional security in various parts of the world. "Gun type" nuclear weapons can be built with assurance they'll work without testing. The Indian and Pakistani "tests" apparently show that there is adequate knowledge available to build implosion type weapons with reasonable assurance that they will work. The India/Pakistan explosions have been called "tests", but I believe it be more accurate to call them "demonstrations", more for political purposes than for scientific testing.

Technological advances of recent years, particularly the great increases in computing power coupled with improvements in modeling and simulation have undoubtedly reduced greatly the need for active nuclear testing and probably the size of any needed tests. Some would argue that this should be support for the United States agreeing to ban testing. The new technological advantages are available to everyone, and they probably help the "proliferator" more than the United States.

We have embarked on a "stockpile stewardship program" designed to use science, other than nuclear testing, to ensure that the present weapons in our nuclear deterrent remain safe, secure and reliable. The estimates I've seen are that we will spend about \$5 billion each year on that program. Over twenty years, if the program is completely successful, we will have spent about \$100 billion, and we will have replaced nearly every single part in each of those complex weapons. At the end of that period, about the best that we will be able to say is that we have a stockpile of "restored" weapons of at least thirty-year-old design that are probably safe and secure and whose reliability is the best we can make without testing. We will not be able to say that the stockpile is modern, nor will we be assured that it is usable in the sense of fitting the security situation we will face twenty years hence. To me that seems to foretell a situation of increasing vulnerability for us and our friends and allies to threats from those who will not be deterred by the Nonproliferation Treaty or the CTBT, and there will surely be such states.

If the United States is to remain the pre-eminent nuclear power, and maintain a modern safe, secure, reliable, and usable nuclear deterrent force, I believe we need to continue to develop new nuclear weapons designed to incorporate the latest in technology and to meet the changing security situation in the world. Changes in the threat, changes in intelligence and targeting, and great improvements in delivery precision and accuracy make the weapons we designed thirty years ago less and less applicable to our current and projected security situation. The United States, the one nation most of the world looks to for securing peace in the world, should not deny itself the opportunity to test the bedrock building block of its security, its nuclear deterrent force, if conditions require testing.

To those who would see in my words advocacy for a nuclear buildup or advocacy for large numbers of high-yield nuclear tests, let me say that I believe we can have a modern, safe, secure, reliable and usable nuclear deterrent force at much lower numbers than we now maintain. I believe we can keep it modern and reliable with very few actual nuclear tests and that those tests can in all likelihood be relatively low-yield tests. I also believe that the more demonstrably

modern and usable is our nuclear deterrent force, the less likely are we to need to use it, but we must have modern weapons, and we ought not deny ourselves the opportunity to test if we deem it necessary.

Very respectfully yours,
JOHN W. VESSEY,
General, USA (Ret.),
Former Chairman, Joint Chiefs of Staff.

WASHINGTON, DC,
October 5, 1999.

Hon. TRENT LOTT,
Majority Leader, U.S. Senate
Hon. THOMAS A. DASCHLE,
Minority Leader, U.S. Senate,
Washington, DC.

DEAR SENATORS LOTT AND DASCHLE: The Senate is beginning hearings on the Comprehensive Test Ban Treaty ("CTBT"), looking to an October 12 vote on whether or not to ratify. We believe, however, that it is not in the national interest to vote on the Treaty, at least during the life of the present Congress.

The simple fact is that the Treaty will not enter into force any time soon, whether or not the United States ratifies it during the 106th Congress. This means that few, if any, of the benefits envisaged by the Treaty's advocates could be realized by Senate ratification now. At the same time, there could be real costs and risks to a broad range of national security interests—including our non-proliferation objectives—if Senate acts prematurely.

Ratification of the CTBT by the U.S. now will not result in the Treaty coming into force this fall, as anticipated at its signing. Given its objectives, the Treaty wisely requires that each of 44 specific countries must sign and ratify the document before it enters into force. Only 23 of those countries have done so thus far. So the Treaty is not coming into force any time soon, whether or not the U.S. ratifies. The U.S. should take advantage of this situation to delay consideration of ratification, without prejudice to eventual action on the Treaty. This would provide the opportunity to learn more about such issues as movement on the ratification process, technical progress in the Department of Energy's Stockpile Stewardship Program, the political consequences of the India/Pakistan detonations, changing Russian doctrine toward greater reliance on nuclear weapons, and continued Chinese development of a nuclear arsenal.

Supporters of the CTBT claim that it will make a major contribution to limiting the spread of nuclear weapons. This cannot be true if key countries of proliferation concern do not agree to accede to the Treaty. To date, several of these countries, including India, Pakistan, North Korea, Iran, Iraq, and Syria, have not signed and ratified the Treaty. Many of these countries may never join the CTBT regime, and ratification by the United States, early or late, is unlikely to have any impact on their decisions in this regard. For example, no serious person should believe that rogue nations like Iran or Iraq will give up their efforts to acquire nuclear weapons if only the United States signs the CTBT.

Our efforts to combat proliferation of weapons of mass destruction not only deserve but are receiving the highest national security priority. It is clear to any fair-minded observer that the United States has substantially reduced its reliance on nuclear weapons. The U.S. also has made or committed to dramatic reductions in the level of deployed nuclear forces. Nevertheless, for

the foreseeable future, the United States must continue to rely on nuclear weapons to contribute to the deterrence of certain kinds of attacks on the United States, its friends, and allies. In addition, several countries depend on the U.S. nuclear deterrent for their security. A lack of confidence in that deterrent might itself result in the spread of nuclear weapons.

As a consequence, the United States must continue to ensure that its nuclear weapons remain safe, secure, and reliable. But the fact is that the scientific case simply has not been made that, over the long term, the United States can ensure the nuclear stockpile without nuclear testing. The United States is seeking to ensure the integrity of its nuclear deterrent through an ambitious effort called the Stockpile Stewardship Program. This program attempts to maintain adequate knowledge of nuclear weapons physics indirectly by computer modeling, simulation, and other experiments. We support this kind of scientific and analytical effort. But even with adequate funding—which is far from assured—the Stockpile Stewardship Program is not sufficiently mature to evaluate the extent to which it can be a suitable alternative to testing.

Given the absence of any pressing reason for early ratification, it is unwise to take actions now that constrain this or future Presidents' choices about how best to pursue our non-proliferation and other national security goals while maintaining the effectiveness and credibility of our nuclear deterrent. Accordingly, we urge you to reach an understanding with the President to suspend action on the CTBT, at least for the duration of the 106th Congress.

Sincerely,
BRENT SCOWCROFT.
HENRY A. KISSINGER.
JOHN DEUTCH.

Mr. KYL. Mr. President, I am going to take just a couple of minutes until Senator COVERDELL arrives, at which point I will suspend my remarks so that he can make some comments.

I want to talk a little bit about a common thread of the remarks of many of the people who are in opposition to the treaty; that is, that it is difficult for the United States to sustain our position as the world leader, that many in the international community would find it objectionable if the United States rejected the Comprehensive Test Ban Treaty, and that this would hurt our ability to lead with respect to proliferation of nuclear weapons in the world.

Let me quote from a newspaper story today in the Washington Post, the headline of which is, "U.S. Allies Urge Senate To Ratify Test Ban."

It is certainly true that they have done that. There are a variety of them that made comments hoping we would adopt the treaty, not defeat it. Let me quote a couple of things.

International anxiety also has been compounded by new worries over U.S. efforts to escape constraints imposed by the Anti-Ballistic Missile (ABM) Treaty, which limits the ability of the United States to build systems to defend against missile attack.

Russia and China say it would destabilize the strategic balance if the United States built a missile defense system, because

Washington could be tempted to attack others if it felt invulnerable to retaliation.

Jayantha Dhanapala, the U.N. under secretary for disarmament affairs, said many countries agreed to a permanent inspection regime four years ago only on the basis of a written guarantee by the nuclear powers to negotiate and ratify a worldwide test ban as one of several key steps toward nuclear disarmament.

I read two parts of the Washington Post story to suggest the world community, which does not want the United States to develop a ballistic missile defense, which doesn't want the United States to do anything that requires an amendment to the ABM Treaty, and some of which is very much in favor of total nuclear disarmament and has agreed to participate in this treaty only after leaders promised them this Comprehensive Test Ban Treaty would be one of several key steps toward nuclear disarmament, all of those people in the world, I submit, are not people who we want to make U.S. national defense policy. Their goals are not the same as our goals.

We have an obligation as the leader of the free world to ensure our nuclear deterrent is safe and reliable; they don't. We may have to do things they could never dream of doing, including nuclear testing to ensure the safety and reliability of our nuclear stockpile. They don't have to worry about that, but we do. While they can lament the fact that the United States is not willing to sign onto the treaty, they don't have the same responsibility as we do, just as they can call for us not to amend the ABM Treaty or to build a national missile defense or even theater missile defenses without the obligations that The United States has.

The United States has to defend our troops around the world—which most of these countries don't have to do—to defend allies around the world and, of course, even to defend the United States. I, frankly, don't care much if people around the world who don't want the United States to defend itself against ballistic missile attack are going to criticize the Senate for rejecting a flawed unverifiable ineffective CTBT.

Finally, quoting from the last two paragraphs of this article:

I don't like to talk about any country exercising world leadership, but in this case we see that the United States must play a special role, Sha Zukang, China's top arms control official, said in an interview. Sha added that China is even more alarmed by U.S. efforts to develop a regional missile defense system than by the Senate's reluctance to approve a test ban treaty.

So I presume that next, in order to assuage the concerns of the Chinese, we will forego the development of a regional missile defense system because it would upset them if we proceeded with that. Why would it upset them? Because, of course, they wouldn't be able to threaten Taiwan. We have obligations that other countries don't

have. If we are to be the great leader that people on this side of the aisle have urged the United States to be, then we have to exercise leadership. Sometimes that means doing things other people in the world are uncomfortable with.

Boris Kvok, Russia's deputy chief of disarmament issues, said the U.S. decision on the test ban treaty would not affect the deliberations of Russia's parliament on the pact or alter his country's test moratorium. "But if the U.S. moves ahead with ballistic missile defense, it would be a disaster . . . and we would have to start developing new weapons. . . ."

He is saying we don't really care about the CTBT in terms of what we are going to do, but if the United States moves ahead with ballistic missiles, that would be a disaster. I presume next we hear people come to the Senate floor and say international opinion says we should not develop a missile defense to protect the people of the United States so we should not move forward with that.

My point is this: The United States cannot be held hostage to world opinion. We have obligations they don't have, and if they don't care about building a defense for their people, we need to because we can be a target of rogue nations whereas other countries may not be. They are not making the decisions and actions in the world that may cause these terrorists or rogue states to want to retaliate against them. However, the United States, by taking a world leadership role, has put itself in that position.

It is not a political issue; it is a physics issue. We have to have confidence in our nuclear stockpile.

The whole world thought Ronald Reagan was wrong, that he had left his senses when he said no to Mikhail Gorbachev at Reykjavik. They both talked about trying to rid the world of nuclear weapons. When Gorbachev said the price of that agreement was that the United States would have to forego the development of the Strategic Defense Initiative, Reagan said no. All of the world leaders gasped—except Margaret Thatcher. But the rest of the world leaders gasped and said: Mr. President, you should reconsider that.

All of the arms control advocates said it was a bad mistake for President Reagan to have said no. Of course, it later transpires that George Shultz mentioned the fact that Mikhail Gorbachev told him that was the turning point of the cold war. That is when Gorbachev concluded that he could not win the cold war and called it the turning point.

Ronald Reagan, in calling the Soviet Union the evil empire, upset a lot of the world leaders, but he stood his ground and history has proven him correct. I submit that history will prove us correct if we return this flawed treaty and say let's go back to the drawing board.

We can do better. We can persuade world leaders it is in the best interest of long-term peace that we do better than this flawed treaty.

Mr. BIDEN. Mr. President, I yield myself a few minutes to respond. I will take no more than 3 minutes.

I hope all Members have observed why my friend from Arizona is such a good lawyer. He did get your eye off the ball. He started off talking about England and France and our allies and Japan and then shifted to Sri Lanka, China, and Russia and talked about why we should not yield to international opinion. No one has suggested we yield to Sri Lanka, China, and Russia in international opinion.

The suggestion made is exactly stated: Allies urge ratifying a test ban treaty. Why? Because they believe it is in their critical interest. They don't lack confidence in our ability to maintain our stockpile. They signed and ratified the treaty.

This circular argumentation going on is we should not ratify because we won't be able to protect our allies; but our allies say you should ratify because we want you to ratify, we feel fully protected.

Who do you believe? Our allies saying they want us? They signed; we want to sign.

Second, I point out this missile defense rests upon our allies in Great Britain and in France and in Norway allowing us to be able to put sensors in their country in order to be able to have a missile defense. That is the way it will work.

What will happen is, we turn down this treaty that they signed, that they think is in their interests, and now we go to them and say: By the way, we want you to help us with a missile defense for our country—not yours, a theater missile defense for our country. How about it, fellows, what do you think?

The third point I would make is: China can only be a threat to our theater missile defense. They have about 18 weapons right now. They can only be a threat to us if they are able to MIRV their missiles, if they are able to get sophisticated. Under this agreement, the intelligence community uniformly concludes that we could detect anything they are doing to get to the point where they were MIRVing those missiles, taking any of the stolen data they have gotten from us and using it. So what are we going to do? We reject this treaty, thereby giving a green light to them to do what they want to do without violation of any international law, thereby putting in jeopardy the very missile defense system my friend from Arizona thinks is so critical for our security.

I find it fascinating. Keep your eye on the ball.

I yield the floor. I see the leader. Welcome, leader.

The PRESIDING OFFICER. The majority leader.

Mr. LOTT. Mr. President, I will have a full statement on Tuesday. But I did want to get into the RECORD today some of the facts I think are very important for Senators to have access to, some views of a number of important experts.

I would entitle this statement with these words, a quote from Churchill: Facts are better than dreams. And the facts in this case argue against this treaty. The underlying premise of this treaty is flawed. The argument is, if we ratify this Comprehensive Test Ban Treaty, then the rest of the world will be nice and follow suit.

Do you really believe that is applicable to North Korea, Iraq, Iran, India, Pakistan, China, Russia? We are going to act on faith? There are those who will say we must lead, we must show the way, but that is a very dangerous thing to do when you are dealing with something of this importance.

Just in the last 2 days, in hearings before the Armed Services Committee and the Foreign Relations Committee, it has become apparent that this treaty is flawed, should not be ratified now or in the foreseeable future. When you look at yesterday's testimony of the leaders of the country's three nuclear weapons laboratories, it makes it very clear that, as far as safety and reliability are concerned, without testing at this time we do not have the ability to make sure our weapons are safe and would be reliable if there were a need for them.

The headline, even in the New York Times, says, "Experts Say Test Ban May Impair Nuclear Arms Safety." That is a fact. That is a scary fact. Do the American people want us to have nuclear arms that are not tested, that are not safe? I do not think so. So I think we need to be very careful about going forward with a treaty that has the problems this treaty has now, in terms of what it would do and the fact that we do not have the ability to detect or verify what other countries may be doing. Just this past week, the CIA said they could not guarantee they could detect low-level testing in Russia. Then you add to that the testimony of the labs experts. We should defeat this treaty.

Let me correct the record, or remind our colleagues and the country a little bit about why we are where we are. Why is this up? Why did we get a unanimous consent agreement to bring up this treaty, debate it, and have a vote? The President has been demanding it for 2 years. In his State of the Union Addresses and on other occasions, he has been saying: Call it up, have a debate, and vote. Quote after quote I have here with me. The President said in remarks on the 50th anniversary of the Chairman of the Joint Chiefs of Staff, August 9, 1999:

I ask the Senate . . . to vote for ratification as soon as possible.

He has said:

. . . give its advice and consent to the Comprehensive Test Ban Treaty this year.

In his State of the Union Address in 1998, he said:

. . . approve the CTBT this year.

That was last year.

The Vice President, Mr. GORE has said:

The U.S. Congress should act now to ratify the Comprehensive Test Ban Treaty.

"Act now." That was July 23, 1998.

Forty-five Democrats sent a letter to Senator HELMS saying a number of things, but basically this is the upshot of it: Give the Senate the opportunity to consider ratification of the CTBT before the conference begins. That is a conference of ratifying states. That conference is underway now. They wanted to have it up. We got it up and started the debate today. They were demanding that it be called up and considered before then.

The minority leader has said:

[W]e are certainly willing to have a debate and have the vote.

Not call it up and pass it; he said have a debate, have a vote.

On September 30, 1999, he said:

I still think, one way or the other, we ought to get to this treaty, get it to the floor, debate it, and vote on it.

What I am saying is for 2 years there has been this agitation to get this treaty up and have a vote on it. So finally they got what they said they wanted, and then they didn't want what they said they wanted.

Then they said: Wait a minute, wait a minute, no, we didn't mean "now." Like this thing was just sprung on us. For 2 years we have been hearing about it. Senators are not uninformed on this treaty. There are hearings underway right now, excellent hearings by the chairman of the Armed Services Committee, Senator WARNER, and the Foreign Relations Committee, Senator HELMS. What happened was they found, when they actually got what they said they wanted—that is, the treaty was going to come up—that the treaty is flawed and it is going to be defeated. This treaty is not going to be ratified. It is not going to happen. They say: Wait, wait, wait; not now; it's too quick; we need more time; it is being given short shrift.

I have some interesting facts on that, too. You talk about the amount of time. When we get through with this treaty and have a vote, we will have probably somewhere around 16 to 18 hours discussing it, debating it, listening to each other, excellent statements on both sides, men and women very serious about this, treating it the way it should be treated. Today, the problem has not been to get speakers. It is that we have so many people who want to speak. We are going to have a good de-

bate today. But let's compare it to other treaties in the past.

The CFE, the Conventional Forces in Europe Treaty, we debated for 6 hours and voted on. The START treaty, 9½ hours; START II, 6 hours; Chemical Weapons Convention—which I know a lot about and showed, during the debate on that issue and the vote, that I was willing to do what I thought was right for the country even under a lot of pressure opposing it. I still get criticized for that.

But when you come to treaties of this magnitude of international import, you have to look at the substance and you have to do what is right for your country, for the world situation, and for your children. Actually, it should be in the reverse order: For your children and your grandchildren. We spent 18 hours on it, and we voted on it.

The CFE flank agreement, 2 hours. As a matter of fact, we are going to have more time spent debating this issue, when it is over, than any recent treaty, with the exception of chemical weapons, which I presume would be about the same time.

So that is how we got to where we are. Because it was demanded. Senators were threatening to hold up Senate floor action if we did not have a vote. Senators had resolutions they wanted to offer with regard to this treaty that were unrelated to other matters being considered on the floor, including the Labor-HHS-Education appropriations bill.

So I really thought, in view of the demands and the discussion that had gone on and the overall best interests of the Senate and the country, that this treaty should come up. So we got a unanimous consent agreement. It was not one that was sprung on anybody. I suggested it on Wednesday. We did not get it finally agreed to and locked in until Friday. So the discussions went on for 2 days. Nobody was surprised. The White House knew full well what we were about to agree to. Now they say set it aside.

I am very worried; should this issue not be voted on now, it might be set aside to be brought back next year and that it become much more of a political issue. And it should not be. We have for a long time worked together in this Senate on a bipartisan basis, and bicameral, and with administrations, on trying to do the right thing on arms control. We should continue to do that. This treaty should not come up next year during a Presidential campaign and be used for political purposes on either side. So I called this up, as was demanded. We got a reasonable time agreement, more than was usually granted for treaties.

There have been hearings underway. The Senators are not uninformed. Senators know what is in this treaty as they get to know more and listen to experts, such as Senator LUGAR yesterday

who had a six-page statement about how this treaty was wrong.

To my colleagues I say, we have done what was requested by the President and by Senators. Let's have this debate and, as for myself, I am ready to vote.

Mr. President, proponents and opponents of the Comprehensive Test Ban Treaty find themselves in agreement on the starting point for this debate: That nuclear deterrence is fundamental to the national security of the United States. In his May of 1997 report entitled "A National Security Strategy for a New Century," President Clinton states, and I quote, "The United States must continue to maintain a robust triad of strategic forces sufficient to deter any hostile foreign leadership with access to any nuclear forces and to convince it that seeking a nuclear advantage would be futile." While the United States must be prepared for the prospect that nuclear deterrence may not always work, in no way does the possibility of failure render deterrence valueless.

Nuclear deterrence was crucial to U.S. security in the past, and will continue to be in the future.

It was, for example, nuclear deterrence which helped guarantee the security of Western Europe from the late 1940s until the Soviet Union collapsed and the cold war ended peacefully. President Eisenhower called on the U.S. nuclear deterrent to stop Chinese attacks against the islands of Quemoy and Matsu in 1958. In 1962 it was the U.S. nuclear deterrent that enabled President Kennedy to demand that the Soviet Union peacefully withdraw its nuclear missiles from Cuba. Again, President Nixon called on the U.S. nuclear deterrent to stop Soviet armed intervention into the Middle East during the 1973 Yom Kippur War. And, most recently, the U.S. nuclear deterrent was essential in persuading Saddam Hussein not to use chemical or biological weapons during the 1991 gulf war, undoubtedly saving thousands of lives. Time and again nuclear deterrence has effectively protected U.S. security without a shot being fired, and, along with the President and many others, I expect our deterrent to continue to be vital for the indefinite future.

Credibility is the key to deterrence. Our nuclear deterrent must be credible not only to would-be aggressors, but also to America's leaders. To contemplate the use of nuclear weapons, our leaders must be confident in the safety and reliability of our nuclear arsenal. Our adversaries must believe that U.S. leaders possess the will to use the nuclear force if need be, and must also believe that our nuclear weapons can be used—that they are safe and reliable enough for U.S. leaders to consider seriously the possibility of their use. Without these conditions American threats of retaliation become less

than credible, and the contribution of nuclear deterrence to the national security strategy of the United States would be unacceptably eroded.

It is the paradox of the nuclear age that ensuring nuclear weapons are never used depends on ensuring they can be used.

It is through testing of the U.S. nuclear stockpile that the United States has maintained its confidence in the safety and reliability of our nuclear weapons. In 1987 the Lawrence Livermore Lab produced a reported entitled Report to Congress on Stockpile Reliability, Weapon Remanufacture, and the Role of Nuclear Testing. This report, though 12 years old, remains the single best explanation of the need for nuclear testing.

According to the Livermore report, and I quote, ". . . there is no such thing as a 'thoroughly tested' nuclear weapon." The report gives several reasons for testing, to include, and I quote, ". . . testing is done to maintain the proper functioning of the current stockpile of weapons," and, "testing is done to modernize the existing stockpile for enhanced safety, security, or effectiveness. . . ."

Moreover, on many occasions the Labs have discovered problems with weapons only because of testing. According to the Livermore report,

Nuclear weapons are fabricated from chemically and radiologically active materials. Much as a piece of plastic becomes brittle when it is left in the sunlight, nuclear weapons age and their characteristics change in subtle, often unpredictable ways. Testing is sometimes required to find problems and to assess the adequacy of the fixes that are implemented. Experience has shown that testing is essential. One-third of all the weapon designs introduced into the stockpile since 1958 have required and received post-deployment nuclear tests to resolve problems related to deterioration or aging or to correct a design that is found not to work properly under various conditions. In three-fourths of these cases, the problems were discovered only because of the ongoing nuclear testing. Because we frequently have difficulty understanding fully the effects of changes, particularly seemingly small changes on the nuclear performance, nuclear testing has been required to maintain the proper functioning of our nation's deterrent.

Accordingly to Dr. John Nuckolls, Director Emeritus of the Lawrence Livermore Lab, in a September 2, 1999, letter to Senator JON KYL, "Nuclear testing has been essential to the discovery and resolution of many problems in the stockpile." Testing has been important in ensuring that our weapons work and are safe. It has been important in finding problems in our weapons. It has been important in certifying the solutions to the problems that have been found.

It is because of this testing that the United States has been able to maintain its confidence in the safety and reliability of the nuclear stockpile, which is a fundamental requirement of nuclear deterrence.

In promoting the Comprehensive Test Ban Treaty, the Clinton administration asserts it can assure the requisite level of confidence in the safety and reliability of America's nuclear stockpile—that is, of the weapons comprising our deterrent, upon which nuclear deterrence is based—without testing.

To do this the administration has embarked upon the "Stockpile Stewardship Program." According to the Fiscal Year 2000 Stockpile Stewardship Plan Executive Overview, released by the Department of Energy in March of 1999, and I quote, "The overall goal of the Stockpile Stewardship program is to have in place by 2010 * * * the capabilities that are necessary to provide continuing high confidence in the annual certification of the stockpile without the necessity for nuclear testing."

The Stockpile Stewardship Program is an excellent program, and my comments should not be misunderstood as criticism of the program, per se. In fact, the United States has always had some form of stockpile stewardship even while testing. The fundamental question with respect to this program, however, is whether and when it will provide the requisite confidence in the safety and reliability of the stockpile even if it meets all of its design goals. As stated by the Department of Energy in the FY 2000 Stockpile Stewardship Plan Executive Overview, "At the heart of the Stockpile Stewardship Program is the issue of confidence."

To their credit, senior officials at the Department of Energy and the nuclear labs are generally careful in how they couch their remarks about the Stockpile Stewardship Program. The usual formulation is to state the belief in Stockpile Stewardship as the "best approach" in the absence of testing. That is a responsible reply, as it would be unreasonable to argue that the Department of Energy or our labs should be able to guarantee the success of the Stockpile Stewardship Program. The scientists and engineers at the heart of stockpile stewardship are, in many cases, engaged in activities that are at the cutting edge of the science and technology of nuclear weapons. They can't guarantee success.

According to the administration's estimates, it won't even be completely in place until the year 2010. But proponents of the Comprehensive Test Ban Treaty are willing to put the Stockpile Stewardship cart before the nuclear horse, willing to gamble that the United States can give up nuclear testing now in the hope that Stockpile Stewardship will work in the future.

Proponents try to reassure us by saying that if the Stockpile Stewardship Program ends up being insufficient, the United States can exercise the "supreme national interest" clause in the treaty to resume testing. Given the unwillingness of administrations to make use of this standard clause in other arms control agreements even when compelling facts exist, there is little reason to believe it would be used with the Comprehensive Test Ban Treaty.

It may surprise some that we cannot be certain of the future success of the Stockpile Stewardship Program. But we should all understand that this lack of certainty comes from a lack of detailed knowledge of many of the key processes in our nuclear weapons, even after all these years of studying, designing, building, and testing nuclear weapons. Accordingly to the FY 2000 Stockpile Stewardship Plan Executive Overview, "The science and engineering of nuclear weapons are extremely complex, requiring the integration of over 6,000 components. There are many parameters and unknowns that greatly influence the performance of nuclear warheads." This report goes on to state, "There are many areas of warhead operation that cannot be adequately addressed with existing tools and the current knowledge base of the weapons scientists and engineers." Thus the need for the several components of the Stockpile Stewardship Program, each of which is, in its own right, a major program.

The importance of major components of Stockpile Stewardship being on schedule and on budget is made clear in the administration's FY 2000 Stockpile Stewardship Plan Executive Overview. This report states that the success of the Stockpile Stewardship plan is, "dependent on a highly integrated and interdependent program of experimentation, simulation, and modeling. . . ." The report also states, "The success of this strategy depends on the effective integration of every major activity described in this Executive Overview . . ." and, "Full implementation of the Stockpile Stewardship Program is required to sustain a safe and reliable nuclear deterrent. . . ." Simply put, this means that each of the major parts of the Stockpile Stewardship Program must work if, as stated by the administration, our country can do without nuclear testing while ensuring the safety and reliability of our nuclear deterrent.

I will not go through each part of the Stockpile Stewardship Program, but I will take a moment to discuss the National Ignition Facility, which has been described by senior Department of Energy officials as one of the key elements of Stockpile Stewardship. In fact, a senior Energy Department official has briefed Senate staff that the Stockpile Stewardship Program cannot succeed if the National Ignition Facility does not succeed.

The purpose of the National Ignition Facility, being built by the Lawrence Livermore National Lab, is to achieve a better understanding of the part of the nuclear weapon known as the "primary." The primary is the first and most critical stage in a nuclear explosion, and also happens to be the least understood part of our nuclear weapons. While other problems can affect the reliability of our nuclear weapons, we know that a nonfunctioning or deficient primary means that the weapon will either not work or not work as planned. In either case, this would be a major problem for our nuclear deterrent, and, hence, for our strategy of nuclear deterrence.

Senate staff were briefed at length on the National Ignition Facility during a visit to the Livermore Lab last January. During this briefing they were told explicitly that the National Ignition Facility was on schedule for completion in October of 2003 and on budget. This program at that time was estimated to cost \$1.2 billion.

We have recently learned that the National Ignition Facility is not on schedule and budget, contrary to the representations that were made last January to staff. The same representation was made in testimony in March of 1999 to the Senate Armed Services Committee by Dr. C. Bruce Tarter, Director of the Lawrence Livermore Lab, when he stated, "I am pleased to report that NIF [National Ignition Facility] construction is on budget and on schedule." In fact, however, the Washington Post reported on September 6, 1999, that, "Energy Department officials said mismanagement may cause the project's cost to soar as much as \$350 million above the originally projected \$2 billion and delay completion by as much as two years," Dr. Tarter's statement demonstrates that each part of the Stockpile Stewardship Program is a complex undertaking, the success of which cannot be assured, whether for reasons of technological or managerial deficiencies.

It shouldn't be a surprise that the Stockpile Stewardship Program is having difficulties. After all, nearly every aspect of this program is attempting to push the borders of our scientific and engineering knowledge of nuclear weapons. Additionally, the Department of Energy's record of successful completion of major programs leaves much to be desired. According to the General Accounting Office, "From 1980 through 1996, DOE terminated 9 of 18 major Defense Program projects after spending \$1.9 billion and completed only 2 projects—one behind schedule and over budget with the other behind schedule but under budget. 'Schedule slippages' and cost overruns had occurred on many of the remaining 7 projects ongoing in 1996." In the FY 2000 Stockpile Stewardship Plan Executive Overview Dr. Vic Reis states, "Maintaining the

U.S. nuclear weapons stockpile without nuclear testing will continue to challenge DOE's best capabilities."

Mr. President, there are many other reasons to be concerned about whether the Stockpile Stewardship Program is a sufficient alternative to testing. I will not address these questions in detail, but hope other Senators will.

First, even if Stockpile Stewardship works as planned, and on time, and is affordable, is it good enough?

Second, will Stockpile Stewardship accurately tell us about the effects of aging on nuclear weapons, which is one of the key challenges in stockpile whose weapons are being extended far beyond their design life? Will it tell us for example, what happens to plutonium as it ages? The issue of aging and its effects on the nuclear stockpile is particularly important, and is recognized as such in the FY 2000 Stockpile Stewardship Plan Executive Overview, which makes the following important statements about aging,

1. "The DOE has never before had large numbers of 30 to 50 year-old warheads in the stockpile. Until last year, the average age of a stockpile warhead had always been less than 13 years. As a result, new types of aging-related changes and problems in these older warheads are expected to be encountered."

2. "Some changes may have little or no effect, whereas others could make a major difference."

3. "Nuclear warheads are not static objects. Materials change over time (e.g., radioactive decay, embrittlement, corrosion). Some of these changes do not adversely affect warhead safety or reliability, but others may. In addition, not all changes have reached current detection thresholds, but nonetheless may potentially impact safety or reliability."

4. " * * * warheads will remain in the stockpile well beyond their anticipated design life and beyond DOE's base of experience."

Third, will Stockpile Stewardship be good enough to certify the many new manufacturing processes, to include those for new plutonium pit production? And how will we know that the Stockpile Stewardship certifications of new manufacturing processes are accurate?

Fourth, will Stockpile Stewardship enable the United States to make its weapons as safe as the technology allows, which used to be the standard against which nuclear weapons safety was measured? We have already received testimony, for example, that insensitive high explosives—an important safety measure—cannot be put in all of our deployed nuclear weapons without testing.

Fifth, how will we know the answers to any of these questions without calibrating the finished Stockpile Stewardship product, if or whenever we get

to that point, against actual tests of aged weapons currently in the stockpile? Though the United States performed 1,030 nuclear tests, much of the data is of such low quality or on weapons no longer in the stockpile that it can't be used in Stockpile Stewardship.

The Advanced Strategic Computing Initiative, one of the major parts of the Stockpile Stewardship Program, has made impressive advances in super-computing capability. But it still must improve the capabilities of its super-computers by many orders of magnitude above what it has already attained. If this can be affordably accomplished—something that has not yet been determined—the United States will still be in the position of then having to rely upon computer simulations to integrate all the data being produced out of the other pieces of Stockpile Stewardship. As we all know, computer simulations can always be made to work; the question is whether they faithfully model reality. And without calibrating these models against actual tests of weapons currently in the stockpile, the United States will be forced into the position of hoping its models and simulations are accurate.

Sixth, will Stockpile Stewardship incorporate and replace the experience base in Department of Energy and Lab personnel as most of the scientists and engineers with design, manufacturing, and test experience retire in the next 10 years? According to the FY 2000 Stockpile Stewardship Plan Executive Overview, "Many of the scientists and engineers with actual weapons design, production, and test experience have already retired, and most of those remaining will likely retire within the next decade. A new generation of weapons scientists and engineers must be trained and their competence validated before the current generation leaves the workforce."

Seventh, is Stockpile Stewardship's funding sufficient and sustainable? This question is asked because the lab directors originally told the administration they needed \$4.8 billion per year, but were told to design a \$4.5 billion per year program. After doing so they were then told the \$4.5 billion per year would be in current dollars, and would therefore not be adjusted over time for inflation. And most recently, the labs were told that the cost of producing tritium would have to be accommodated within the \$4.5 billion per year, though it was not included by the labs in their \$4.5 billion per year budget. In testimony before the Senate Assistant Secretary of Energy Vic Reis stated, "A production source of tritium would be in addition to" the \$4.5 billion per year for Stockpile Stewardship. Dr. Reis, however, is directly contradicted by the FY 2000 Stockpile Stewardship Plan Executive Overview, which states, "FY '00 funding for the tritium source is included within this level" of \$4.5

billion. Thus, the labs are getting less than they said they needed for the Stockpile Stewardship Program; they're sustaining funding reductions because of inflation; and, their program is being further reduced by having additional requirements levied upon Stockpile Stewardship without the provision of additional resources.

Finally, and most important, since Stockpile Stewardship is supposed to tell us about problems, many of which we've never seen before—such as those caused by aging—how will we know if Stockpile Stewardship "works"? How will we know we're finding problems that we've never seen before?

According to the President's statement of August 11, 1995, "I am assured by the Secretary of Energy and directors of our nuclear labs that we can meet the challenge of maintaining our nuclear deterrent under a CTB through a science-based stockpile stewardship program without nuclear testing."

The directors of the labs have not "assured" the President that the Stockpile Stewardship Program will maintain the U.S. nuclear deterrent, in the President's words, "without nuclear testing." What the lab directors actually have said in quite different: that Stockpile Stewardship represents the best chance to maintain the deterrent without testing. But there was absolutely no assurance given the President by the lab directors concerning Stockpile Stewardship. They have never said, individually or collectively, "we can maintain the safety and reliability of our nuclear weapons without testing." In a letter to Senator JON KYL of September 24, 1997, the director of the Los Alamos Lab, Dr. Sigfried Hecker, stated, "We agreed with the Department of Energy that without nuclear testing, the SSMP [Stockpile Stewardship and Management Program] provides the most logical approach for certifying the stockpile today and decades from now. We said that we could not guarantee that the SSMP would work, although we had reasonable confidence that it would * * *." That certainly doesn't sound like an "assurance" to me.

Recognizing that the eventual success of the Stockpile Stewardship Program is not a self-evident fact, during a visit to the Los Alamos National Lab on February 3rd, 1998, President Clinton said, "* * * I don't think we can get the Treaty ratified unless we can convince the Senate that the Stockpile Stewardship Program works * * *." As good as this program is, we do not know if Stockpile Stewardship will be good enough. We do not know when, if ever, the Stockpile Stewardship Program will be good enough, particularly as its promised completion is still over a decade away. And until we know, it would be irresponsible to forswear nuclear testing. Stockpile Stewardship is simply not a proven alternative to nu-

clear testing. Nuclear deterrence is too important to the security of the United States for our nuclear deterrent to be propped up by hopes instead of set in a foundation of facts.

The CTBT purports to ban an activity it does not define.

My opposition to the Comprehensive Test Ban Treaty is not derived solely from the questions emanating from the unfinished Stockpile Stewardship Program, though these uncertainties constitute more than sufficient grounds to object to the treaty. The CTBT is itself seriously flawed in many ways, four of which I will discuss.

First, the Comprehensive Test Ban Treaty purports to ban an activity it does not define. Nowhere in the treaty can the definition of "test" be found. That is not to say that negotiators didn't spend a significant amount of time trying to define this most fundamental of terms. They did, but left the word undefined purposely because they simply found it too difficult to reach consensus on its meaning.

So, the Senate is being asked to render advice and consent to ratification of a treaty that not only bans an activity, but does so comprehensively. We just don't quite know what activity is being banned.

The Comprehensive Test Ban Treaty does state in Article I, "Each State Party undertakes not to carry out any nuclear weapon test explosion or any other nuclear explosion * * *." The Clinton administration has interpreted this to mean the CTBT is a "zero-yield" treaty, so one could expect that the treaty bans nuclear explosions from which a nuclear yield is derived. Unfortunately, the truth is not that simple, which is why the word "test" in the Comprehensive Test Ban Treaty is undefined.

In fact, for the first two-and-a-half years of the Clinton administration, negotiators pursued a comprehensive test ban treaty that would allow some level of yield from tests; that is, the Clinton administration's position was to negotiate a comprehensive test ban that would allow low-yield testing. Until August 11, 1995, when President Clinton decided to pursue a zero-yield CTBT, the Defense Department position was that it could agree to a comprehensive test ban treaty only if it permitted tests with nuclear yields of up to 500 tons. Other parts of the administration resisted a zero-yield treaty because they knew such a treaty couldn't be verified. But the nuclear weapon states couldn't agree on how much yield should be allowed, and the non-nuclear weapon states viewed this approach as an attempt by members of the nuclear club to enjoy the rhetorical benefits of being part of a nuclear test ban treaty while continuing to have the ability to improve their nuclear arsenals. So ultimately, in large part because some believed the indefinite extension of the Nuclear Nonproliferation

Treaty hung in the balance, the United States endorsed a zero-yield Comprehensive Test Ban Treaty while leaving the meaning of "test" undefined and "zero-yield" ambiguous. In fact, the phrase "zero-yield" is not even in the treaty.

Hydro nuclear testing is a perfect example of this problem. Hydronuclear testing is very low-yield testing, and is particularly useful in assessing nuclear weapon safety issues. Until the Clinton administration adopted its "zero-yield" position, it held that hydronuclear tests would be permissible under a comprehensive test ban treaty. After the administration adopted zero-yield as its position, though, American representatives declared hydronuclear testing to be contrary to this standard. Other countries, such as Russia, however, have declared hydronuclear testing to be consistent with its understanding of the treaty. Victor Mikhailov, formerly the Russian Minister of Atomic Energy and currently the First Deputy Minister at that ministry, stated on April 23, 1999, that the Russian nuclear program has to focus on, in his words, "three basic directions" in a CTBT environment: "new computer equipment, non-test-site 'simulation' experiments, and so-called test-site hydronuclear experiments, where there is practically no release of nuclear energy." Neither Russia nor, for that matter, China, has agreed even to the U.S. definition of what constitutes a hydronuclear test.

After Russia signed the Comprehensive Test Ban Treaty in 1996, Arzamas-16, one of Russia's two nuclear weapons labs, published a book in 1997 entitled *Nuclear Tests of the USSR*. According to this book, "Explosive experiments with nuclear charges in which the amount of nuclear energy released is comparable to energy of the HE [high explosive] charge, belong to the category of hydronuclear tests, and they also are not nuclear tests * * *." In plain English this means that one of Russia's two nuclear design labs does not consider low-yield testing to be a violation of the Comprehensive Test Ban Treaty.

The Russian position is not without merit, as the treaty's failure to define the meaning of the word "test" or even to include the phrase "zero-yield" gives rise to these kinds of fundamental ambiguities. Indeed, in testimony to the Senate, Mr. Spurgeon Keeny, President of the Arms Control Association, stated that during President Eisenhower's nuclear testing moratorium of 1958-1961, the President authorized a number of hydronuclear tests, ". . . related to some very specific safety problems that existed at the time." So during President Eisenhower's zero-yield nuclear testing moratorium he authorized the conduct of tests which this administration says would violate today's zero-yield Com-

prehensive Test Ban Treaty. It's not hard to see why other nations could think hydronuclear tests are permissible.

This ambiguity will lead to greater tensions as some accuse others of violating the treaty. It will enable some countries to improve their weapons and cloak the activities of other nations as they pursue acquisition of nuclear weapons, while the United States abides strictly by the treaty. While arms control proponents suggest that arms control treaties enhance relations between nations, the failure to define the Comprehensive Test Ban Treaty's most fundamental term can hardly be expected to build confidence between nations; instead, it's likely to create discord.

There is no evidence that the CTBT will reduce proliferation.

The second key problem with the treaty is that, contrary to assertions by treaty proponents, there is no evidence that the Comprehensive Test Ban Treaty will reduce proliferation.

Nations acquire nuclear weapons to enhance their national security. Will America's failure to test change that? The evidence indicates not. Indeed, though the United States hasn't tested since 1992—and didn't resume testing even after France and China conducted their tests in the mid-1990s—India and Pakistan chose to conduct nuclear tests in the spring of 1998. Each country did this for the simple reason that they found such conduct to be consistent with their national security interests.

The idea that the Comprehensive Test Ban Treaty will be an effective nonproliferation barrier should be examined in the context of the Nuclear Nonproliferation Treaty, or NPT. Except for the United States, Britain, France, Russia and China—the so-called "P-5"—the NPT establishes a norm against the development or acquisition of nuclear weapons. Yet, despite the establishment of this norm more than 30 years ago, nations other than the P-5 have continued to seek and acquire nuclear weapons. This pursuit and acquisition of nuclear weapons has occurred by both members and non-members of the NPT. Thus, while some of these nations, by virtue of their NPT membership, have explicitly violated the terms of that treaty—North Korea and Iraq immediately come to mind—the rest, though not NPT members, have flouted the NPT-established international norm.

So, the CTBT-established "norm" against testing is essentially superfluous. To violate this norm, nations, except for the P-5, must first violate the NPT-established norm against acquiring nuclear weapons. And if they are willing to violate the first norm, why not the second, and lesser, CTBT-established norm? Nations willing to violate the NPT norm to acquire the

weapon in the first place can hardly be expected not to violate the CTBT norm of testing their ill-gotten weapon. Mr. Spurgeon Keeny, President of the Arms Control Association, even testified to the Senate that the NPT, "is the principal constraint on testing by non-nuclear weapon states." Which would seem to make the CTBT extraneous.

Nonetheless, CTBT proponents contend the treaty will be an effective tool against "horizontal proliferation"—that is, against the acquisition of nuclear weapons by nations that don't already have them—and also against "vertical proliferation," or the improvement of nuclear arsenals by those nations already possessing these weapons.

According to Dr. Kathleen Bailey, the former Assistant Director of the Arms Control and Disarmament Agency and now retired from the Lawrence Livermore Laboratory, in testimony before the Senate, "It is quite feasible for a nation to develop a device that will work as long as it does not matter if the yield is exactly known and there are no exacting specifications which must be met." Nations that do not now have nuclear weapons can build relatively unsophisticated nuclear weapons. The knowledge necessary to build these weapons is readily available, in textbooks, classrooms, libraries, and on the Internet. Treaty proponents do not dispute this; in testimony before the Senate, Mr. Keeny of the Arms Control Association, said, ". . . a rogue state could develop a first generation nuclear weapon without testing."

For proliferating nations seeking a nuclear weapon capability, first generation nuclear weapons need not be tested for the user to have adequate confidence in their utility. The United States would not have sufficient confidence in an untested or marginally tested weapon because of its requirements for weapon safety and reliability, but other nations will not necessarily have the same stringent requirements. Even if a country has low confidence that its relatively unsophisticated nuclear weapon will work if used militarily, in a crisis the United States cannot take the chance that another country's weapon, however unsophisticated, won't work. In this respect, mere possession of a nuclear weapon could be enough to dissuade the United States from acting. As a minimum, this possession will be enough to constrain America's options in time of crisis.

With respect to "vertical" proliferation, were the CTBT to receive consent to ratification by the Senate I am confident it would constrain the ability of the United States to modernize its nuclear arsenal. But other nations that already possess nuclear weapons will improve their arsenals—by exploiting the ambiguity inherent in the treaty's

failure to define "test," or embarking upon testing which we can't detect though it provides militarily useful data, or by espionage, as we have already seen in the case of China. China's acquisition of information on our most modern nuclear warhead, the W-88, demonstrates that some nuclear powers can improve their arsenals without extensive testing.

The Comprehensive Test Ban Treaty could also have the perverse effect of engendering proliferation. There are several advanced nations, most of which are U.S. allies, that decided to forego their own nuclear arsenals for the explicit reason that their safety would be guaranteed under the American nuclear umbrella. If these allies lose their confidence in the safety and reliability of the U.S. nuclear deterrent, then they could also lose faith in the idea of finding their own protections within America's extended deterrent. These nations could then decide it to be in their own national security interests to acquire nuclear weapons; at a minimum, U.S. participation in the CTBT would require them to examine the question of whether they need their own nuclear deterrent.

The Comprehensive Test Ban Treaty's supposed nonproliferation benefits are based on hope, not fact. The CTBT adds nothing to the NPT. The evidence simply does not support the assertion that the CTBT would be an effective nonproliferation tool.

The CTBT verification scheme will have little effect.

The third significant deficiency of the Comprehensive Test Ban Treaty is its verification provisions. As the treaty is supposed to be a "zero yield" test ban, this is particularly troubling. While it is reasonable to hope that a nation's assumption of treaty obligations is sufficient to bind it by the treaty's terms and conditions, it is an unfortunate fact that some nations violate arms control treaties when convenient. The Senate recognized this problem, for example, when it provided advice and consent to ratification of the START II agreement, declaring its concern about, "... the clear past pattern of Soviet noncompliance with arms control agreements and continued cases of noncompliance by the Russian Federation. . . ." This is why effective verification of arms control treaties is so important, and I will explain three of the ways the CTBT's verification regime is deficient.

First, treaty supporters hope that the International Monitoring System set up under the CTBT will enable detection with high confidence of very low yield nuclear tests. We know, however, that it is possible to conduct a nuclear test with the intention of evading systems designed to detect the explosion's telltale seismic signature. This can be done through a technique known as "decoupling," whereby a nu-

clear test is conducted in a large underground cavity, thus muffling the test's seismic evidence. In a speech to the Council on Foreign Relations last year, Dr. Larry Turnbull, Chief Scientist of the Intelligence Community's Arms Control Intelligence Staff, said,

The decoupling scenario is credible for many countries for at least two reasons: First, the worldwide mining and petroleum literature indicates that construction of large cavities in both hard rock and salt is feasible, with costs that would be relatively small compared to those required for the production of materials for a nuclear device; second, literature and symposia indicate that containment of particulate and gaseous debris is feasible in both salt and hard rock.

So not only is this "decoupling" judged to be "credible" by the Intelligence Community, but, according to Dr. Turnbull, the technique can reduce a nuclear test's seismic signature by up to a factor of 70. This means a 70-kiloton test can be made to look like a 1-kiloton test, which the CTBT monitoring system will not be able to detect. And a 70-kiloton test, even much less than a 70-kiloton test, can be extraordinarily useful both to nations with nuclear weapons and to nations seeking nuclear weapons. Bear in mind that the first atomic bomb used in combat had a yield of only 15 kilotons.

The final verification problems I will discuss is one that is present in, though not particular to, this treaty, and has to do with the ability of proliferators to utilize information gained from the verification system. In short, the verifications regime could serve as a training ground for those who wish to use the treaty to mask their continued pursuit of new or improved nuclear weapons. We have seen this problem in the past, and the aftermath of the Gulf War provides an excellent example.

Mr. David Kay, the first head of the UNSCOM inspection team in Iraq, has recounted on various occasions his experiences in searching for the Iraqi missile and weapons of mass destruction programs. One such experience involves UNSCOM's search for Iraq's nuclear weapons program. The UNSCOM inspectors searched long and hard, knowing the evidence was well hidden, and over many months, despite the best efforts of Iraq to frustrate UNSCOM's efforts, gradually uncovered much information about the broad scope of the Iraqi nuclear program.

The UNSCOM inspectors were particularly interested in learning how Iraq had managed to fool the International Atomic Energy Agency for so long. According to Dr. Kay, the response they received from the director of Iraq's Atomic Energy Commission "Nuclear Safeguards Department"—someone who had repeatedly lied to UNSCOM inspectors until he was confronted with incontrovertible evidence—was that he had learned how to beat the IAEA system of inspections from his experience as an IAEA inspec-

tor. After all, Iraq is a member of the NPT, and Iraqis therefore have every right to work at the IAEA.

Mr. President, we must expect that the same will happen under the CTBT. The treaty's own implementation mechanisms could teach some countries how to appear to be adhering to this treaty while actually using it to shield the advancement of their clandestine nuclear programs.

It is important to understand that our ability to verify a treaty is confined to the limits and fallibility of intelligence collection and analysis. In a 1998 speech to the National Defense University Foundation, Dr. Kay, stated, "We ought to remember in the case of Iraq, we [UNSCOM] found in the nuclear area a program that had sucked up \$10 billion in the 1980s; 15,000 people working on it; 25 sites of production of various components, 12 really major ones; elaborate deception and denial operations . . . Can you imagine, if you had the DCI in here and asked him, 'Is there a country that can engage over ten years in a program to build nuclear weapons, spend \$10 billion, have 15,000 people working in it, five major avenues of enriching uranium, and get within 18 months of building the program and you will not have detected it?'" Sometimes, unfortunately, our Intelligence Community will miss even very large clandestine programs.

The CTBT verification problem is compounded by the fact that it is supposed to be a "zero-yield" treaty. Commenting on this in testimony this year before the Senate Foreign Relations Committee, James Woolsey, President Clinton's first Director of Central Intelligence, stated, "I do not believe that the zero level is verifiable. Not only because it is so low, but partially because of the capability a country has that is willing to cheat on such a treaty, of decoupling its nuclear tests by setting them off in caverns or caves and the like. . . . And to my mind, that makes it a worse than a weak reed on which to rely." Mr. Woolsey is correct; the false assurance of the CTBT's verification system is in many ways worse than no assurance at all. The treaty's verification flaws alone are sufficient reason to vote against the Comprehensive Test Ban Treaty.

The CTBT prevents the United States from making our weapons safer and from adapting our nuclear stockpile to new threats.

The fourth major deficiency of the Comprehensive Test Ban Treaty is that it will prevent the United States from both improving its current arsenal and building new types of weapons, should the need arise. Though treaty proponents view this as a positive development, I will briefly explain why it is in fact a problem.

Dr. Robert Barker recently retired from the Lawrence Livermore National Lab after spending his entire professional life as part of the U.S. nuclear

complex, as a weapon designer, tester, and as the Assistant to the Secretary of Defense for Atomic Energy for three different secretaries. According to Dr. Barker, the safety standard for U.S. nuclear weapons has always been to make these weapons as safe as our technology will permit. This means that as technology improves, so too should the safety features of our nuclear weapons.

But some safety features, such as insensitive high explosives, cannot be added to some of the weapons in our stockpile without testing. Therefore, the effect of the CTBT on the U.S. nuclear stockpile is to make it less safe than it otherwise would be. According to Dr. Barker in testimony to the Senate, "The history of U.S. nuclear weapon development is that with the design of each new weapon, efforts were made to incorporate the latest safety features in a steadily evolving technology of safety. When weapons remained in the stockpile so long that their safety features were too deficient with respect to then current standards, these systems were retired solely because of this deficiency."

So because the CTBT does not allow testing for safety or for any other reason, the United States will face the dilemma of fielding weapons that aren't as safe as they should be or doing without the weapons. For those whose ultimate objective is the denuclearization of the United States, this is a good reason to support the treaty. But it is not a good reason for those of us who understand the continuing necessity of nuclear deterrence to the national security of the United States.

It is also risky to insist that the United States will not have a future need for new types of nuclear weapons. Our nuclear deterrent must be configured such that it contains weapons to meet all conceivable needs. Over the years, in fact, one of the reasons the United States has continued to produce new types of weapons has been to respond to new requirements. Assuming the immutability of the current U.S. nuclear weapon requirements is, in my view, an unacceptable gamble. According to an unclassified March 1999 report by the Los Alamos Nuclear Laboratory entitled *The U.S. Nuclear Stockpile: Looking Ahead*, "[The] CTBT has reduced our flexibility and options to meet future nuclear deterrent requirements."

The major problem with an outmoded nuclear stockpile is that it reduces the credibility of the U.S. nuclear deterrent and, hence, undermines America's strategy of nuclear deterrence. As new threats develop for which the United States has no weapon that can be used, our adversaries will grow to view U.S. deterrent threats as less than credible. Obviously no one wants to use our nuclear weapons; but ensuring nuclear weapons are never used depends on en-

suring they can be used. When they become unusable, or when we are faced with a situation for which we don't have the proper weapon, the American nuclear deterrent will have lost its relevance. This is good news for those who view the CTBT as an important step on the path to denuclearization, but bad news for everyone who understands the continuing importance of nuclear deterrence to America's national security.

The four deficiencies I have just discussed are by no means the only faults of the Comprehensive Test Ban Treaty, but I will leave it to others to examine additional treaty shortcomings. While I'm sure some will take issue with my characterization of the CTBT as replete with problems, the simple fact of the matter is that even President Clinton recognizes that the Comprehensive Test Ban Treaty is brimming with serious deficiencies. This is why the President announced that the United States would sign the CTBT subject to the establishment of so-called "safeguards," and this is why the administration and treaty supporters are asking that these safeguards be made part of the resolution of ratification. What these safeguards tell us is that the administration does not want the Senate to consider the Comprehensive Test Ban Treaty on its own; that the administration does not believe the Comprehensive Test Ban Treaty to be capable of standing on its own merits.

These so-called "safeguards" are themselves deficient.

On August 11, 1995, President Clinton released a statement which said, "The United States will now insist on a test ban that prohibits any nuclear weapons test explosion, or any other nuclear explosion. I am convinced this decision will speed the negotiations so that we can achieve our goal of signing a comprehensive test ban next year. As a central part of this decision, I am establishing concrete, specific safeguards that define the conditions under which the United States will enter into a comprehensive test ban."

This announcement marked President Clinton's decision to seek a zero-yield test ban treaty, and part of what the President said is worth repeating, "As a central part of this decision, I am establishing concrete, specific safeguards that define the conditions under which the United States will enter into a comprehensive test ban."

The six conditions that President Clinton announced are not part of the Comprehensive Test Ban Treaty, but entirely separate from the treaty. The safeguards were announced for the simple reason that the treaty is itself inadequate, or there would have been no need for the so-called safeguards. Indeed, the support of the Joint Chiefs of Staff for the Comprehensive Test Ban Treaty is conditioned on these safeguards. As stated in their Posture

Statement of February 2, 1999, "The Joint Chiefs of Staff support the ratification of this Treaty, with the safeguards package, that establishes conditions under which the United States would adhere to the Treaty." So the Joint Chiefs support the ratification of the treaty only with the safeguards package. And the President supports U.S. entry into the CTBT with the safeguards package. But the fact of the matter is that the safeguards package, upon which the President and the Joint Chiefs have invested so much importance, is not part of the treaty.

The secret of the Comprehensive Test Ban Treaty is that it does not stand on its own merits, but is propped up by this "safeguards package" which has been accepted by no other nation that has signed or ratified the CTBT. So the Senate is being asked, essentially, to provide advice and consent to ratification of this treaty because of words that are not in the treaty. The Senate is being asked to provide its consent to something that no other nation understands to be the Comprehensive Test Ban Treaty. Even worse, the so-called "safeguards package" is itself inadequate in several ways, three of which I will now describe.

Safeguard A calls for, "The conduct of a Science Based Stockpile Stewardship Program to insure a high level of confidence in the safety and reliability of nuclear weapons in the active stockpile. . . ." I have already explained why this safeguard is inadequate.

Safeguard C calls for, "The maintenance of the basic capability to resume nuclear test activities prohibited by the CTBT should the United States cease to be bound to adhere to this treaty." But when Senate staff visited the Nevada Test Site earlier this year they found funding and personnel problems which call into question the sincerity of this safeguard.

Safeguard F calls for,

The understanding that if the President of the United States is informed by the Secretary of Defense and the Secretary of Energy (DOE)—advised by the Nuclear Weapons Council, the Directors of DOE's nuclear weapons laboratories and the Commander of the U.S. Strategic Command—that a high level of confidence in the safety or reliability of a nuclear weapon type which the two Secretaries consider to be critical to our nuclear deterrent could no longer be certified, the President, in consultation with Congress, would be prepared to withdraw from the CTBT under the standard "supreme national interests" clause in order to conduct whatever testing might be required.

This safeguard is particularly important. Each of the nuclear weapons lab directors has testified that this safeguard is of critical importance to them because it reassured them that President Clinton was not eliminating the possibility of resuming testing despite agreeing to a comprehensive, and in his interpretation zero-yield, test ban treaty. According to Dr. C. Bruce Tarter,

the director of the Lawrence Livermore National Lab, in a letter to Senator JON KYL of September 29, 1997, "I regard of utmost importance the ability to exercise the 'supreme national interest' clause of the CTBT to address concerns that I have outlined here in my answers. This option mitigates the risks in pursuing a no-nuclear-testing strategy. We must be prepared for the possibility that a significant problem could arise in the stockpile that we will be unable to resolve. The fact that the President's Safeguard F specifically cites this provision reinforces its importance."

In essence, the lab directors rendered their technical judgment on entering into the Comprehensive Test Ban Treaty based upon a political commitment. But the fact is that Safeguard F isn't even a commitment; it doesn't say the United States will resume testing if the lab directors can't certify a high level of confidence in the safety or reliability of a weapon in our nuclear stockpile. It doesn't say the "supreme national interest" clause will be invoked to resume testing if a problem is found which requires testing. Rather, it says that several different levels of interested parties all have to agree that there is a problem, and that they have to agree that the problem is in a weapon that the United States can't do without. So this opens the door for responding to a problem in our nuclear stockpile by deciding to eliminate from our stockpile entire types of our nuclear weapons. Removing weapons types with problems is a convenient way, after all, of eliminating problems from the stockpile. But it ignores the fact that we have these weapons in the stockpile because we need them.

Furthermore, Safeguard F is of little, if any, value because it doesn't commit to resume testing even if a problem is found in a weapon that it is determined the United States cannot do without. Safeguard F only makes this commitment: That, "... the President, in consultation with Congress, would be prepared to withdraw from the CTBT under the standard 'supreme national interests' clause in order to conduct whatever testing might be required."

To my knowledge, the United States has never made use of this clause in any treaty. But more importantly, we must recognize that neither the lab directors nor the United States Senate has received a commitment under this safeguard that testing will be resume if necessary. The only commitment here is that the President will consult with Congress and be prepared to leave the treaty to test. This safeguard should reassure no one.

It is a falsehood to say that this CTBT is "The longest sought, hardest fought prize in arms control history."

President Clinton has said that the Comprehensive Test Ban Treaty is, "The longest sought, hardest fought

prize in arms control history." The phrase has a nice ring to it; unfortunately, it is not true.

President Eisenhower, who imposed a testing moratorium from 1958 to 1961, supported the idea of a comprehensive test ban treaty. Except that the test ban he proposed was of limited duration (four to five years), and would have allowed low-yield testing. And during the 1958-1961 moratorium President Eisenhower authorized Hydro nuclear low-yield tests for safety reasons, which the Clinton administration maintains would violate the CTBT now before the Senate.

During the Kennedy administration the Limited Test Ban Treaty, which banned nuclear testing in the atmosphere, space, or underwater, was negotiated. No serious attempt was made to negotiate a comprehensive test ban treaty; this was also the case during the Johnson administration.

President Nixon's administration negotiated the Threshold Test Ban Treaty, but also didn't make any serious attempt to negotiate a comprehensive test ban treaty. There was no activity on this subject during the Ford administration.

During the Carter administration, the Peaceful Nuclear Explosion Treaty was signed. Serious consideration was given to a comprehensive test ban treaty, though, in Senate testimony in 1997, Dr. James Schlesinger, President Carter's Secretary of Energy, stated, "[when] President Carter dealt with the issue of the CTBT, it was at a time when we were seeking a 10-year treaty and the yields of up to two kilotons would be permissible." In other words, President Carter favored a limited-term treaty that allowed for low-yield testing.

Neither President Reagan nor President Bush pursued a comprehensive test ban treaty. In fact, responding to the Hatfield-Exon-Mitchell amendment on testing in the Fiscal Year 1993 Energy and Water Appropriations Act, President Bush stated in a report to Congress,

... the administration has concluded that it is not possible to develop a test program within the constraints of Public Law 102-377 [the FY '93 Energy and Water Appropriations Act] that would be fiscally, militarily, and technically responsible. The requirement to maintain and improve the safety of our nuclear stockpile and to evaluate and maintain the reliability of U.S. forces necessitates continued nuclear testing for those purposes, albeit at a modest level, for the foreseeable future. The administration strongly urges the Congress to modify this legislation urgently in order to permit the minimum number and kind of underground nuclear tests that the United States requires, regardless of the action of other States, to retain safe, reliable, although dramatically reduced deterrent forces.

Only the Clinton administration has actively sought an unlimited duration comprehensive test ban treaty. And only the Clinton administration has

sought a zero-yield test ban treaty, though until August of 1995—two and a half years into President Clinton's first term—even his administration's proposals in the Conference on Disarmament allowed for low-yield testing.

President Clinton's statement that "The CTBT is the longest sought, hardest fought prize in arms control history" is false. I hope my colleagues will not be misled by the administration's transparent attempt to imbue this treaty with historical legitimacy it does not deserve.

Mr. President, we all agree that nuclear deterrence continues to be essential to the national security strategy of the United States. Where proponents and opponents of the Comprehensive Test Ban Treaty begin to diverge is over the question of whether nuclear testing continues to be vital to ensure the safety and reliability of America's nuclear deterrent.

The administration says that Stockpile Stewardship will provide us with the requisite confidence in our nuclear deterrent, and that this confidence will therefore be sufficient for our deterrent to continue to form the foundation of deterrence. It is my judgement that the Stockpile Stewardship is a well conceived and an important program, but we don't yet know whether it will become an adequate replacement for testing. And until we know this, it would be dangerous to bind our nation to a treaty that prohibits testings.

I have pointed out some of the more significant shortcomings in the Comprehensive Test Ban Treaty to explain that the Stockpile Stewardship Program's uncertainty, while itself sufficient justification to oppose the treaty, is not the only reason for such opposition. In failing to define the word "test" the treaty leaves ambiguous its most fundamental terms. There is no factual basis upon which to determine that the CTBT will be an effective non-proliferation tool. The CTBT is not verifiable. And it constrains the United States from maintaining high safety standards for the nuclear stockpile and from ensuring that our stockpile, in its configuration, is credible, a necessary condition for nuclear deterrence.

Furthermore, the so-called "safeguards" announced by the President are nothing but a crutch, demonstrating that the Comprehensive Test Ban Treaty cannot stand on its own merits.

Finally, I have taken the time to dispel the myth that this treaty before us is the "longest sought, hardest fought prize in arms control history." This zero-yield test ban treaty is unlike any treaty attempted by any previous administration. While a few sporadic and mostly half-hearted attempts have been made to attain some form of a comprehensive test ban treaty in the past none of these efforts was in pursuit of a zero-yield, indefinite duration

treaty. There is not an unbroken lineage, extending back some 40 years, for this treaty, and it is factually incorrect to suggest otherwise.

Mr. President, arms control treaties must be judged by the straightforward standard of whether or not they enhance the national security of the United States. The Comprehensive Test Ban Treaty fails to attain this standard.

Given the limitations of current technology, it is simply not possible to be simultaneously for nuclear deterrence and for this Comprehensive Test Ban Treaty. The two positions are mutually exclusive.

In his book *The Gathering Storm*, Winston Churchill observed, "Facts are better than dreams." "Facts are better than dreams." Applying this observation to the Comprehensive Test Ban Treaty leaves one no choice but to oppose this treaty.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, I find the leader's comment extremely fascinating. I want to set the record straight on a couple of minor details, as they are.

No. 1: The letter we sent was on July 20. The opening paragraph said:

We urge you to hold hearings on the Comprehensive Nuclear Test-Ban Treaty and report it to the full Senate for debate. Most importantly, we ask this be done in sufficient time to allow the United States to actively participate in the treaty's inaugural conference of ratifying states to be held in early September.

We wrote that in July. The assumption, anyone in good faith would assume, was we have hearings now—July, August, and September. We had none. We did not have any. Zip. None.

The majority leader said, "Hearings are underway now." That is his quote. They are not underway now. The day before the treaty, the Foreign Relations Committee held its first hearing, on the day after we are discharged of responsibility. With all due respect to my friend from the great State of Virginia, chairman of the powerful Armed Services Committee, the only committee of jurisdiction under the rules is the Foreign Relations Committee. Their input is important. We love to hear their opinion, as we do the Intelligence Committee. They have no jurisdiction. It gets sent to our committee, not to theirs. And we have 1 day of hearings after we are discharged? Give me a break.

Mr. WARNER. Will the Senator—

Mr. BIDEN. I will not yield now. The Anti-Ballistic Missile Treaty had 8 days; SALT I, 8 days of Foreign Relations Committee hearings, 18 days on the floor of the Senate; the INF Treaty in 1988, 23 days of Foreign Relations Committee hearings, 9 days on the Senate floor; Conventional Forces in Europe Treaty, 1991, 5 days of Foreign Re-

lations Committee hearings, 2 days on the floor; START I, 19 days of hearings in the Foreign Relations Committee, 5 days on the floor; START II, 1996, 8 days in the committee, 3 days on the floor; chemical weapons, 14 days in committee, 3 days on the floor; NATO enlargement, 7 days in committee, 8 days on the floor; Comprehensive Test Ban Treaty, 1 day of hearings after we are discharged. No committee report.

Look on your desks, I say to my colleagues. Find the report. Find me a report that makes any recommendation. Come on. Come on, this is a stacked deck. The idea that we are going to vote on a treaty that everyone acknowledges, opponents and proponents, is maybe the single most significant treaty we will vote on to determine the direction of this country in terms of strategic rationale, and we do not even have a committee report?

If you want to go down the list, the number of months between the time the treaty was sent to us and the time it got to the floor, we are talking over 2 years. In the case of ABM, 2 months; INF, 4 months; CFE, 8 months; START I, 13; START II, 32; chemical weapons, 37. We keep going higher and higher. Look at who is in charge when we have these.

But, my Lord, the idea we have had hearings, we have had sufficient time to consider it, don't get me wrong; in each of these other treaties, an incredible, valuable contribution and report was filed by the Armed Services Committee and an incredible, valuable position was taken and a report by the Intelligence Committee. They were absolutely necessary and needed, neither of which are available now. That is why Senators are arguing about the determinations.

For example, I just spoke to General Powell, as my friend from Virginia spoke to General Powell. I wrote down exactly what he said. I just got off the phone with him.

He said the most important reason why he wants this delay is so it does not get defeated. That is an important little point.

The second point he said was: I still support this treaty.

The third point was: But in light of the way this is being taken up and the confusion raised, it is better for the country and everybody to have all this sorted out in an orderly fashion so we all know what we are talking about.

He knows what he is talking about. He still supports the treaty, but he made a central point, the point Senator HAGEL made, and that was: We have not had sufficient debate. Therefore, we can have the kinds of comments made, honest disagreements, my friends from Virginia can say: This is not verifiable. And the Senator from Delaware says: It is verifiable.

For example, my friend from the Intelligence Committee, the distin-

guished Senator from Arizona, quoted in his opening statement the Washington Times with regard to verifiability. I will discuss this in detail later. He is on the Intelligence Committee. He knows nobody in the intelligence community came in and said they have evidence that Russia has, in fact, detonated a nuclear weapon. He knows that.

Mr. KYL. Since the Senator says I know certain things, may I simply interject to make this point: As Senator BIDEN is well aware, it is important for Senators to quote only open-source material, such as newspapers, and never to refer to matters in the Intelligence Committee which are classified. So this Senator will refrain from quoting classified material and will be bound by our rules only to refer to articles and newspapers, such as the Washington Times.

Mr. BIDEN. I respectfully suggest if you quote newspaper articles and you have some reason to believe a newspaper article is not consistent with what you know, then maybe we should not quote the newspaper articles.

The point I am making is a very simple one: Nobody in here has enough evidence, based upon a record, other than the probably 10 or 12 of us to whom responsibility is assigned to know this material; I doubt whether if you poll this Senate, intelligent women and men, that their degree of confidence—and I will be devil's advocate—for or against the treaty is as high as it has been in the past with other treaties because we have had extensive debate before.

When we talk about this notion that we are, in fact, in a position where what we asked for—and I wish the majority leader was still here. It was the Biden resolution that was going to be attached to an education bill that called for a sense of the Senate that we, in fact, hold hearings. Standing in this well, the leader—and he has acknowledged this and he made a point of this—walked up to me and said: If you will withhold that resolution, we can work out giving you a vote on this. He did say that, and I said fine.

The point is, we were not asking for a vote without hearings, ever. The point is also, accurately stated by many, in retrospect, in hindsight, should some of us have objected to the unanimous consent agreement? The answer is yes. Yes.

Here is where we are, and it is true, it is totally within the power of any single Senator to insist we vote. If that is the case, so be it. I am ready to debate the last few hours we have, and we vote. But I defy anyone to suggest this is the way in which they want the Senate in the future on other treaties of any nature, arms control or not, to proceed, which is to wait 2 years, do nothing, have no hearings in the committee of jurisdiction, wait until the

committee of jurisdiction is discharged, hold 1 day of hearings, leave 14 hours of debate with one amendment available to each leader. I do not ever remember any treaty on which we restricted amendments or covenants. I do not remember that.

On the chemical weapons treaty, we had a whole range of amendments, all developed in the Foreign Relations Committee after extensive hearings.

So, folks, this is not the way to do business. But if we are going to do business this way, so be it. I cannot do anything about it except agree with the Senator from Virginia that we should not go forward. I agree with former General Powell. I agree; we should not go forward. If we do, we do. But it is going to be upon those who conclude that this is the way we should conduct business.

I think we are setting bad precedent after bad precedent after bad precedent by the way in which we are proceeding. Again, it is true, tactically those who oppose the treaty are in a very strong position now. I give them credit for their tactic. But I hope they will put tactical advantage beneath substantive responsibility.

If their case is as strong as they say, I would assume they would feel even better to have it debated at length, have the committees thoroughly explore it, and have it made clear to the American people so that when they vote it down, the American people—on average, 80 percent of whom support the treaty, based on all the polling data anybody has read—will not have to wonder why they went against the public will. They will be able to make their case, even if it is for no other reason than that.

So, Mr. President—

Mr. WARNER. Would the Senator yield for a question?

Mr. BIDEN. On his time, I am happy to yield. Again, I apologize to my friend from Georgia. I told him he could come and speak. I will yield to him. I did not anticipate the majority leader coming to characterize the circumstances different than—he is entitled to do that; I am not criticizing him—the views of the Senator from Delaware of the characterization.

Mr. WARNER. On our time, Mr. President.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. WARNER. Mr. President, this is the time for cool heads, sound minds, to make most difficult decisions. I listened very carefully to our distinguished majority leader. And I have listened to my colleague and friend from Delaware.

My colleague from Delaware dwells on the process. This situation today is solely the result of the unanimous consent agreement, proposed at first by the majority leader of the Senate, and studied for a period of 3 days. Our ma-

majority leader has a right to believe that 3-day period of study enabled my good friend from Delaware and all others to examine this situation and determine, on the fairness, the propriety and, indeed, the national interest of bringing this treaty up today and Tuesday for floor debate.

And for having hearings in the Senate Armed Services Committee—I am sorry that my friend somewhat disparages the jurisdiction of this committee. But we have the jurisdiction. And I can point to the rules over the critical part of this debate, and that is the stockpile of nuclear weapons; that is the exclusive province of our committee. It is an integral part.

In that vein, we held 3 days of hearings. One was behind closed doors, when the intelligence community, to the extent I can reveal it, on their own initiative brought up the need to start a total new survey about the ability of this country, and indeed others, to monitor the terms of this treaty. We did not ask for it. They did it on their own initiative. They brought it up. That survey and study will take a period of some months and go into next year.

But the point is, I say to my distinguished friend from Delaware, this institution operates on the basis of rules. It was total comity between the distinguished majority leader and the distinguished minority leader for a period of 3 days; and finally the Senate—all 100 Senators—participated either by being on the floor or consultation with their respective leaders in the unanimous consent agreement. So process is behind us.

To me, to constantly bring up, as the Senator from Delaware did, the issue of the process, it has been covered by our distinguished leader today. It has been covered by the Senator from Delaware. We should move forward at this moment with this serious debate on the fundamental issue; and that is whether or not this treaty is in America's national security interest.

I think the press is accurately reporting the facts of the hearing held yesterday, again in the Armed Services Committee, when the Directors of the laboratories—these are not politicians, these individuals who have served in their capacity as top scientists for our country for 10, 12, 15 years—came before the Senate Armed Services Committee and told us, with the Secretary of Energy, their boss, sitting right there, their own opinions.

Any reasonable individual, in examining their statements in their totality, must come to the conclusions which are accurately reported in the very article that appeared today in the New York Times: They cannot give that degree of opinion that is needed to move forward on this treaty. They simply cannot do that.

Mr. BIDEN. Will the Senator yield on my time?

Mr. WARNER. Yes, of course.

Mr. BIDEN. I want to make two points.

What I said about the lack of an intelligence community, CIA conclusion that Russia has exploded a nuclear device was cleared by the CIA to be able to be said. The operative word is "conclusion." They reached no such conclusion, and that was cleared. I did not speak out of turn.

No. 2, with regard to yesterday's—and through the kindness of my friend from Virginia, he has allowed a lowly member of the Foreign Relations Committee to sit in on his hearings. Yesterday, in front of the Armed Services Committee, all three lab Directors testified that our stockpile today is safe and reliable.

Let me read what Dr. Browne said. Dr. Browne said:

I am confident that a fully supported and sustained program will enable us to continue to maintain America's nuclear deterrent without nuclear testing.

Let me further lay out for you that each Director—all three—answered this when Senator LEVIN asked the following question. Senator LEVIN asked the following question to all three Directors:

Are you on board with this treaty?

Every single one of the lab Directors said, "Yes."

People will say: How can the honorable Senator from Virginia—and he is—say what he said and the Senator from Delaware say what he said? How can they be in disagreement? I will answer the question for you.

Remember, I said at the beginning "keep your eye on the ball here." It is true, if we do not fully fund the stockpile at \$4.5 billion per year for 10 years, that all three of them lose confidence in the ability to do that.

It is kind of ironic. The main reason why we fear that we will fund this—and I challenge anyone to show me this is wrong—is because a Republican-controlled House of Representatives is balking at funding it, not because we have not; we have funded it. The distinguished ranking member of the Appropriations Committee is sitting behind me. We did our part.

Mr. WARNER. Mr. President, I believe the Senator from Virginia has the floor for the purposes of a question. But the distinguished Senator from Georgia—it had been indicated he could speak.

Mr. BIDEN. If we will all yield, I will yield. I just wanted to set the record straight.

Mr. WARNER. We will resume our colloquy thereafter. I think it is important that we have our colleague's remarks.

Mr. BIDEN. I do, too. I think it is very important we have the benefit of precision—precision—precision.

Mr. WARNER. Following that, we could resume our colloquy.

Mr. BIDEN. Following that, I will yield to my friend from New Mexico.

Mr. WARNER. Having had the floor, I have to reply to the assertions you made about yesterday's hearings over which I presided and sat there for 5 hours and 10 minutes.

Mr. BIDEN. Mr. President, I challenge my friend between now and the time—

Mr. WARNER. I will reply to that challenge, Mr. President.

Mr. BIDEN. Let me say it another way. I respectfully request my friend answer two questions while he is getting ready to respond: Did or did not Dr. Browne say: "I am confident that a fully supported and sustained program will enable us to continue to maintain America's nuclear deterrent without nuclear testing"? I will give him that. Secondly, would he be able to respond and tell me how I am wrong, that when all three Directors were asked, "Are you on board with this treaty?" and every single one answered: "Yes."

Mr. WARNER. I will provide that. We have to extend Senatorial courtesies to our colleague.

Mr. BIDEN. I yield the floor.

Mr. WARNER. I will be here throughout the entire day, Mr. President.

The PRESIDING OFFICER. The Senator from Georgia.

Mr. COVERDELL. Mr. President, I compliment the Senator. The debate is now beginning to occur on this very important subject. I associate myself with the remarks of the Senator from Virginia, as he explained to the Senate and to the public the nature of the procedure by which we have arrived at this event and this process that the leadership of both sides of the aisle, over a 3-day period, concluded, which was agreed to by unanimous consent, would be the process for discussing the treaty. It is very important, in light of certain debates that had more to do with the process than the treaty. That was decided by the leadership. We are now debating the treaty, not the number of hearings, et cetera.

In the modern Senate, in my judgment, individual Senators come to decisions on monumental issues, such as this treaty, far more from their personal and internal counsel than they do whether or not there have been a series of hearings. Not very many Senators are able to attend those hearings, but they are gathering the information unto themselves, and they have been weighing the facts about this treaty for a long, long time. That is where the personal decision is likely to be made. I know that is the case in my case.

Therefore, I rise in strong opposition to the Comprehensive Test Ban Treaty. Despite what we are hearing from the other end of Pennsylvania Avenue and the other side of the aisle, ratification of this treaty is dangerous and would jeopardize the national security of the United States. President Clinton, the

strongest proponent of this treaty, claims it would "constrain the development of nuclear weapons, contribute to preventing nuclear proliferation, and enhance the ability of the United States to monitor suspicious nuclear activities in other countries."

I believe the President and those advocates of that point of view are wrong on every count. The treaty will not prevent countries from obtaining or developing nuclear weapons. Take the 1970 Nuclear Non-Proliferation Treaty, a treaty designed to stop the proliferation of nuclear weapons. Despite its good intentions, which, of course, this treaty also embraces, nuclear proliferation continues today for one simple reason—nations act in accordance with their own national security interests.

The 1970 Nuclear Non-Proliferation Treaty did not prevent countries such as China, Iran, and Pakistan from acquiring or transferring nuclear technology. We cannot be so naive as to believe that such countries will behave differently if we pass this treaty. We must also take into account that our own conventional arms superiority will encourage other nations to cheat on the treaty.

My point is this: As the world understands that the United States cannot be challenged in conventional warfare—we are clearly the most powerful Nation in the world on any conventional act of warfare—that means other nations which may be adversaries will be pushed toward the need to have nuclear capacity as a quid pro quo to the United States. Strangely enough, even the administration admits that the treaty does not represent an effective deterrent for nuclear proliferation or modernization. In testimony before the Senate in 1998, the Acting Under Secretary of State for Arms Control and International Security Affairs said he could not identify a single nation that wouldn't seek nuclear weapons, if the treaty were to enter into force.

Second, the treaty is not verifiable. Former Director of Central Intelligence, James Woolsey, testified before the Senate Foreign Relations Committee last year that "a zero yield Comprehensive Test Ban Treaty is extraordinarily difficult to the point of impossibility to verify from afar."

The distinguished chairman of the Foreign Relations Committee recently brought to this body's attention a Washington Post article which reported that the CIA cannot monitor low-level nuclear tests by Russia. So while our Central Intelligence Agency is telling us it can't verify compliance with the treaty, our administration persists in its misguided efforts to ratify the treaty. In effect, this administration is proposing that the United States adhere scrupulously to such a treaty while other nations will not be

verifiably doing so by continuing to develop and acquire nuclear weapons. Ratification, then, means that the rogue and other nations would be gaining militarily over the United States.

Third, despite what the administration would have us believe, nuclear testing is essential to maintaining a strong and credible U.S. nuclear arsenal and deterrent. Most experts agree that nuclear tests are necessary to maintain the proper functioning of nuclear weapons and warheads and to modernize the existing stockpile for enhanced safety and effectiveness.

I want to digress a moment. If the world ever begins to believe that our arsenal is less than effective, it encourages bad behavior. If we ever come to believe we are not certain about our nuclear arsenal and its capacity, we become destabilized as a nation.

Many weapons believed to be reliable and thoroughly tested nevertheless developed problems which were only discovered and could only be fixed through nuclear testing. One-third of all the weapon designs placed in the stockpile since 1958 have required and received postdeployment nuclear tests to resolve problems. In three-quarters of these cases, the problems were only identified and assessed as a result of nuclear testing and could only be fixed by nuclear testing.

The proponents of the treaty think we can do this through computer modeling, but most experts will quickly tell us that we don't know whether the computer modeling will work and probably won't know for another 10 years.

In short, only by testing will the United States be able to maintain a nuclear stockpile that is able to defend against threats from abroad, rogue nations, to provide a credible deterrent to hostile nations and maintain confidence in the safety and reliability of our nuclear weapons, and to make sure those other nations understand we have a reliable, effective nuclear deterrent.

It is important to note that the value of America's nuclear arsenal diminishes dramatically if nations, rogue or otherwise, come to believe our deterrent is not safe and not reliable. The nuclear umbrella extended for decades to cover allies such as Germany and Japan has been an important factor in convincing these technologically proficient nations not to acquire their own weapons, precisely because of the safety and reliability of our weapons. So what kind of decisions do they begin to make if they ever believe they cannot count on the U.S. nuclear deterrent?

Mr. President, I want to make a couple of closing comments.

The other day, Senator BIDEN of Delaware, in his earlier remarks about the treaty, said something to the effect that this decision would "hang over the heads" of each of us who will be called upon to vote. The inference was,

well, if those of us who oppose the treaty make an error, that will hang over all of our heads. I point out to the Senator from Delaware that this decision will live with each of us, no matter what decision we make.

Mr. BIDEN. Will the Senator yield on my time?

Mr. COVERDELL. Yes.

Mr. BIDEN. The inference was not that those who voted no were the only ones who would be taking a chance; the inference was that whomever among us turned out to be wrong is going to, in fact, have a long time to pay.

These are big stakes. If, in fact, you vote no, and if proliferation accelerates, whether or not because of this, mark my words, those who voted no will pay. Conversely, if you vote yes and we find out a year or 2 or 3 from now that all those horrible concerns about the treaty turned out to be true and the Soviets have a superiority and the Chinese are doing this, then those of us who voted for the treaty will be held accountable, as we should. I wasn't applying it to one side.

Mr. COVERDELL. He has clarified and made the very point I was going to make—that, clearly, if somehow proliferation accelerated, those who have voted no would have to feel they made an error in judgment. On the other hand, if those who voted for it found themselves in a situation where the U.S. deterrent had diminished, that the new testing procedures were not as effective, and that world rogues had suddenly become very weighty in the world, much would hang over their heads.

My closing point is this: Which mistake is worse? In other words, if the mistake is another nation has a weapon that it didn't today, that would not be good. I personally don't think this treaty is going to stop those nations. But, on the other hand, if the conclusion of the error is that we are unable to defend ourselves, first—or secondarily, we have somehow destabilized our allies and have made the world less safe, which is a worse error? I think of a poster I have seen in the office of Senator GRAMM of Texas. It says: When the day comes, if the lion lies down with the lamb, we better be darn sure we are the lion.

The emotion the Senator has expressed today is laudable. It is a weighty decision. I think the Senator gives more to the reports and the process than I would, from my limited experience. He has been here a lot longer. As I said, while he was off the floor, I think personal counsel has a weightier importance on these kinds of issues. In the limited time I have been here, we have been through three of them now in the process. But if I were to have to pick between where we would be on the balance of mistakes, I would pick the safer one, where we have the capacity to defend ourselves.

Mr. BIDEN. Mr. President, on my time, in response, I think the Senator from Georgia has narrowed it precisely. Let me tell you why I think the side on which he errs is the biggest chance. There is a safeguard F in this treaty which says that if at any time those laboratory Directors certify that they cannot certify the reliability of our stockpile—and they must do it once a year—and communicate that to the Secretary of Defense and the Secretary of Energy, and they concur with that judgment, which most assuredly they would, barring their place in history being besmirched in a significant way, then we have in this treaty the absolute authority, under safeguard F, to withdraw.

So the reason I believe we should err on the side of not testing nuclearly—knowing that if, in fact, it becomes necessary to safeguard us, we can get out legally in a moment's notice—is that failing to take that very small chance, we open up a door that cannot be closed, or is difficult to close. If, as a consequence of no treaty, China begins significant testing and MIRVs ICBMs and moves them from 18 to 800, or 8,000, or 5,000, if in fact Pakistan and India test further so they can deploy their weapons on the nose cones of missiles that can be fired, it is incredibly more difficult to turn that clock back, to put that genie back in the bottle, than it is for a President of the United States, upon the recommendation of the Secretaries of Defense and Energy, saying, Mr. President, get out, get out.

The last point I will make is this: I know of no program—and I stand to be corrected—where there has been a quantum leap in the capacity of a country that has taken us by total surprise, where we have had less than a year's notice. The likelihood of any fundamental change in the strategic balance during the year period, during the last certification and the next certification, is not reasonable. We are the only Nation in the world with the sophisticated capability to even approach that possibility. So that is why I respect my friend from Georgia, and he knows I do. That is why I decided we are taking very little chance relative to a gigantic chance if we turn the treaty down.

I yield the floor.

Mr. COVERDELL. Mr. President, the Senator from Delaware knows the respect is mutual. I just point out that people of honor and good faith can come down on very different sides of these questions, as we have seen among experts.

Ultimately, each of us will have to personally balance this equation. The political process that has already developed this treaty is the very thing that worries me about the escape clause you talk about. I don't have any confidence in it. I just don't believe, as you do, that this treaty will put any

genie in the bottle. I will close with that. I admire the Senator from Delaware for his work. We simply have come to two different conclusions in this matter.

I yield the floor.

Mr. BIDEN. Again, as usual, my friend from Georgia goes to the heart of the issue. If you put everything else aside, you take all the detail away, you will find at its root—I am not suggesting that everybody who opposes this treaty doesn't believe everything they are saying; they do. But at its root, it comes down to a belief that has been the case in almost all the debates on treaties—and I am not suggesting that everybody has opposed every treaty. But they have argued one final piece, and that is simply that they lack faith in the political will of this country to do whatever is required. That has been the closing and legitimate argument raised. It was raised in START I, START II, SALT I, and SALT II.

The issue was whether or not we would so change the political climate that we lull ourselves to sleep. My friend from New Mexico remembers the argument that we would not have the political will to reengage. It is a legitimate argument. I do not give it short shrift. I think it is the single most serious argument against this treaty.

I will close by saying, as the kids say, I will put my experts up against your experts. I have more of them, numerically.

Mr. President, I think it is our turn. I yield 10 minutes to Senator BINGAMAN.

Mr. BINGAMAN. Mr. President, I thank the Senator from Delaware, Mr. BIDEN, for yielding time and also for his eloquent statements in opposition to going to a vote on this treaty.

First, I know everyone says we shouldn't talk about the process, that the process is history. But I think we should talk about the process and talk about the fact that next Tuesday is not the time this Senate should dispose of this issue. The reality is that there is a lot of uncertainty and a lot of confusion.

I learned early in my career that when you are uncertain, the best thing to do is sleep on it, take a little time, and let the issue resolve itself in your mind before you move ahead. And clearly there are a lot of unknowns out there that we need to know before we finally vote on this issue.

I hope that leadership—particularly the majority leader—will find a way to step back from this vote and give the Senate time to get the newest estimate from the intelligence community about what the capabilities of Russia are with regard to low-yield weapons development and also to get other expert advice.

Clearly, this is an issue of monumental importance. As we start a new century, we should not rush to judgment before we have given every Senator an opportunity to learn the issue

and to understand the implications of it.

Our nuclear arsenal was developed, and has been maintained, because we believe having a safe and credible and reliable nuclear arsenal has improved and continues to improve U.S. security. I believe that. I am sure we will continue to maintain that nuclear arsenal as long as we still have that judgment.

The Comprehensive Test Ban Treaty, which is the issue now before us, raises the question of whether we can continue to maintain our nuclear deterrent and maintain our national security through having that nuclear deterrent under a regime of no additional nuclear testing. I believe we can.

I believe the benefits we derive from going ahead with this treaty and in slowing the spread, and the improvement, of nuclear weapons around the world by others make this treaty very much in our national interest.

Some have argued that without the ability to test nuclear weapons, we cannot have 100-percent confidence that those weapons will work as intended. I agree with that. I think it is undoubtedly true that an unlimited testing regime will give us a higher degree of confidence in our own nuclear weapons than no testing at all. Clearly, that is true for all of our potential adversaries as well. They will do better at developing weapons, and they will have a more capable, reliable nuclear arsenal to point at us—potential adversaries will—if we go ahead and have them pursue unconstrained testing.

But we can, in my view, have sufficient confidence in the reliability of our weapons through the work we have labeled the Stockpile Stewardship Program. This is a program that has been discussed frequently on the Senate floor. It is one I have spent many hours studying and trying to understand in the nuclear weapons laboratories in my State—Los Alamos and Sandia.

I think we need to balance against this concern about lack of 100-percent confidence. We need to balance against that the consequences that would result from a rejection of this treaty by the Senate.

Senator MOYNIHAN spoke about the likely reaction of a rejection of this treaty in India and Pakistan, both countries which have demonstrated their nuclear capability already and are on the way toward developing a real nuclear arsenal that can be used against each other or other countries.

Other Senators have talked on the floor about the likely effect of a rejection of this treaty on China or on Russia. The simple fact is that the United States is far ahead of any other country in the world in our ability to maintain our nuclear deterrent under a no-testing regime.

Our allies—and that includes our allies who have nuclear weapons—believe

it is in their interest and in the interest of the world for us to go forward with this treaty and believe that, on balance, their security will be enhanced if we go forward with this treaty. If that is their judgment—those nuclear-capable countries depend much more on testing than we do—that a no-testing regime will, on balance, improve their national security, then I have trouble seeing how entry into a test ban treaty can put us at a comparative disadvantage when we have tremendous capability to determine the reliability and safety of our weapons without testing—not 100-percent capability, but we have great capability and capability that far exceeds that of any other potential adversary.

Let me say, in closing, I would like to go back to this issue of procedure and where we go. Since it is clear to me, and I think to all Senators and all observers of the Senate, that the two-thirds votes necessary under our Constitution to ratify this treaty are not present today in the Senate and are not likely to be on Tuesday, I think it would be a tragic mistake for us to go ahead with that vote next week. I hope very much that cooler heads prevail, as the Senator from Virginia said earlier in the discussion. I hope cooler heads prevail and we find a way to put this off to a time when we can approach it with more knowledge and better judgment.

In the final analysis, the question we must decide is whether this treaty will reduce the proliferation of nuclear weapons, reduce the number of states with nuclear arsenals, and lessen the likelihood of nuclear weapons being used in the next century. That is the issue before us. I believe it will accomplish each of those end results. I believe the treaty will have that effect. When it does come to a vote, I hope very much that two-thirds of the Members of this Senate have the good judgment to support the treaty.

Mr. President, I see there is another Senator wishing to speak. I yield the floor, and I yield the remainder of our time.

The PRESIDING OFFICER. The Senator from Alabama is recognized.

Mr. SESSIONS. Mr. President, I am excited and optimistic about our next century and about the next millennium. We made great human technical progress in the 19th century. A lot of things happened in that century that were good. We continued that technological progress in the 20th century. Unfortunately, the forces of totalitarianism, war, fascism, and communism have run loose in the 20th century to an unprecedented degree. Millions died as a result. I do believe, though, the next century, the 21st century, can be the greatest in the history of mankind.

Hitler and his forces of national socialism were crushed in this century.

Communism and the “Evil Soviet Empire” collapsed. The world is a better place with even greater possibilities. We can work together and promote peace, order, stability, and ensure economic, technological, and medical progress to an unprecedented degree. This, I believe, can and will happen.

Yes, there will be problems. Ambition, ignorance, greed, and hatred will not be eliminated from the face of this Earth. These will abide. But from a global perspective, they can be contained, and peace and progress can be expanded in the next century to an unprecedented degree. For this to happen, however, the United States must lead. It cannot be Russia. They have deep economic and political problems. It can't be China. They are driven by the Communist chimeras and old ambitions. It can't be Europe, for they have not achieved the political unity or the military strength to act quickly and decisively. The United States has the burden to lead for peace. And not just peace—we need peace with justice, a much harder goal.

We are a nation composed of immigrants from all the nations of the Earth. People from all over the world came here to live in freedom. We have also been blessed with the economic, technological, and military strength in addition to the cultural diversity that enables America to be a unique world leader.

Yes, many criticize the United States, but they all fundamentally recognize our critical role in a stable and healthy world order. This doesn't mean we are to be the world's policeman for every little matter, but we must lead with confidence and strength. It is necessary, therefore, for our country to have credibility when we speak, to be respected by all, to be feared by expansionist and dangerous forces, and to continue, with even more skill, our self-confident world leadership that we have shown in recent years.

That is why I have decided it is necessary for me to oppose the Comprehensive Test Ban Treaty. I am of the firm opinion this treaty will do at least two things. It will certainly cause our current nuclear stockpiles to be degraded. Simulated tests, all agree, can never be as good as actual tests. Secondly, it will reduce our capacity and, more importantly, perhaps, our will to improve our weapons systems—to keep up with scientific advancements. The result, therefore, will be that the United States will see its nuclear power degraded and its capacity for world leadership eroded. This means less stability in the world. Our allies will have less confidence in our nuclear umbrella. Our adversaries will be more confident, more active, more willing to be aggressive and to push the limits. In addition, our confidence in our own ability to act and lead will be diminished. Our President and Congress must be certain of our ability to act.

Senator WARNER, chairman of the Armed Services Committee, a tremendous patriot with extraordinary experience in matters military, a man who loves his country, who supports our President when he can and believes he should, who opposes this treaty steadfastly, recently said there can be no doubt in the credibility of that stockpile. That is it, fundamentally. We can't have doubts, our adversaries can't have doubts, and our allies can't have doubts.

There have been a lot of discussions about verification. This treaty cannot be adequately verified. We have talked about a lot of other issues today. Safety—how can we be sure of safety if we are not testing our weapons?

I will discuss for a few minutes specifically what I believe is a fundamental danger or effect of a complete ban of all testing forever, which this treaty does. In effect, the goal of this treaty will be and is to cap, to freeze, to stop improvements in weapons systems. It will include our weapons systems.

Some say: JEFF, we can still do research and they don't have to do all this testing.

That is not entirely accurate. Yesterday, as the Director of the Sandia Laboratory testified, they have design data at this time that could be used to produce a new weapon, but they cannot test it to bring it online. That is a significant statement, I believe. We have that capability now, and we are not going to use it.

Of course, basic weapons, the Hiroshima-type bomb, do not need to be tested. Everybody who is of scientific sophistication in the world—and there are 44 countries today that are either estimated to be or are actually nuclear-capable—all over the world people have the capability of building a basic nuclear bomb. We ought to know this ban would have no impact on that. This treaty would have no impact on buying and selling of nuclear weapons from a country that has already produced.

What this treaty is doing—and I want Members to think about this—is attempting an act that is extraordinary. We will attempt to stop research and testing on new materials and new weapons. If the United States signs such a treaty, we know we will comply with it; we will comply with the spirit and we will not continue to research and develop through testing. Such a decision, I believe, would be unwise and would be contrary to human nature and our tendency to progress, improve, and advance—characteristics of humanity.

To pass a treaty such as this will certainly slow our interest in modernization, but it is not likely to slow the research of other capable nuclear nations. They are behind. They—many, at least—will be determined to catch up.

They will use this treaty to catch up, similar to the yellow caution flag when there is an accident on a race course—allowing those off the lead lap to catch up to the leaders. CTBT will allow other states that opportunity.

Secondly, in their efforts to catch up, our adversaries may well even achieve a breakthrough, a technological advancement that could leapfrog them even beyond the United States into nuclear leadership in this world. That will not only be bad for America, it will be a setback for stability and peace and justice for the whole world. We have an obligation to work to promote peace and stability.

The goal of this Nation, I so strongly believe, is to be a preeminent world power. We have to understand what comes with that: The responsibility to be strong.

President Reagan said a number of years ago:

Our policy is simple: We are not going to betray our friends, reward the enemies of freedom, or permit fear and retreat to become American policies, especially in this hemisphere. None of the four wars in my lifetime came about because we were too strong. It is weakness—weakness that invites adventurous adversaries to make mistaken judgments.

I think that is the history of mankind. Winston Churchill warned England about that when Nazi Germany was on the early march and they could have been stopped earlier at much less cost.

I have seen it argued by some that the passage of this treaty will freeze our nuclear leadership in place. I believe that is not sound reasoning. That is a foolhardy concept. It will stop America from improving our arsenal. It will stop America from improving our technology. It will allow, I submit, our adversaries to catch up and, God forbid, pass us.

Some may believe all the world powers are the same. They used to say we are just a bunch of scorpions in a bottle. I disagree. The United States has a unique role in the world, a unique ability to lead for good. Our leadership has been good for the world. I defy anyone to dispute it. When historians write of our role in the next century, I want them to write that we used our power to lead the world in great progress toward peace, with justice and economic and technological and medical prosperity.

This goal is not going to be furthered by fuzzy thinking. It will not be achieved if we just sign away, by this treaty, capabilities we have that enable America to lead. That is why we are able to lead—because we have superiority. If there are two football teams—and in Alabama we have a lot of them—some of them like to throw a pass and some maybe cannot throw a pass so well. It would be nice to have a treaty beforehand that the one with the ability to pass would sign away

that ability. That doesn't happen on a football field, and it won't happen in the world.

Our leadership is important, and our military power is crucial to it. That is the solid foundation on which we have to build. We benefited from a certain number of treaties with the Soviet Union that dealt with nuclear weapons in the past. I believe we can continue our efforts to reduce the number of weapons in our arsenal. I believe we can perhaps reduce by 50 percent the nuclear stockpile we have. Yes, we can do that. There are a lot of things we can do that promote peace. But to ban all testing of all nuclear weapons? That is a mistake. I do not believe that will promote peace.

I do not believe so. I favor our doing all we can do to stop proliferation, the spread of nuclear weapons around the world. The truth is, this will probably be done best on a nation-by-nation basis. When Pakistan and India had their fuss earlier last year and one tested, then the other one tested. Why? Because they felt their existence at stake, and no piece of paper is going to stop any nation from developing what it believes it has to develop to maintain its freedom, to maintain its autonomy, its independence as a nation. That will not happen.

What we have done, as the United States, is provide a nuclear umbrella. We have been able to say to nations: We are not going to let other nuclear powers do you in. Don't develop weapons, we will be there, we will stand firm. We have the capability to destroy anyone who attempts to destroy you.

People have relied on that. Many nations have. Germany and Japan could easily develop nuclear weapons. They have declined to do so based on our assurances.

Mr. BIDEN. Will the Senator yield for a question?

Mr. SESSIONS. Yes.

Mr. BIDEN. Why did they ratify the treaty, then, and why did they directly contact us in an extraordinary way through their leadership and say: Please, U.S. Senate, ratify it?

Mr. SESSIONS. I appreciate that question. It is my view—sometimes it is internal politics. Sometimes, though, it is a lack of being able to walk in our shoes.

This is a very significant time for us. We need to ask ourselves who we are as a nation. We are in a class of one. A treaty such as this would be good for Japan. It would be good for Germany, perhaps. But it would constrain us and, in the long run—they may not realize it—it could jeopardize our ability to guarantee their freedom.

So on the proliferation question, 44 nations have this ability to develop nuclear weapons and have them. It is already out there. Others are going to continue to get it. It will not stop.

I say to America: Please listen. We are a unique world power. We must use

that power for good. We must maintain nuclear leadership in the world, and we cannot forfeit our power by signing it away for a treaty at the urging of politically correct and fuzzy thinkers.

I have a vision in my mind about treaties. We have to watch them, I think. It is Gulliver in the land of Lilliputians, stretched out, unable to move because he has been tied down by a whole host of threads. Powerful Gulliver, unable to move, tied down by strings and threads of multiple numbers.

We are not one of equals. The United States is in a category of its own at this point in history. This treaty might be good for Japan, England, France. It will not be good for us, and in the long term, the long run, I am convinced for world peace.

I remember—I wasn't in this body—a number of years ago in Europe there was a fuss—Senator WARNER remembers it, and Senator BIDEN—about whether or not to put Pershing nuclear missiles and intermediate-range missiles into Germany. The Germans, despite the most intense anti-nuke Greens and so forth who were there, agreed with President Reagan to do so. Critics said it would cause war and could lead to nuclear war. But the truth is, it led to peace. That strength, that commitment unequivocally made, saying we will not allow Germany, we will not allow Europe—we are willing to put our necks on the line, our nuclear power on the line, to guarantee the independence and freedom of Western Europe. It was a blow for peace. It helped lead to the collapse of the Soviet Union.

I recall a few years ago a discussion on Firing Line between William Buckley, Jr. and a liberal editor. At the end of the wonderful discussion, the editor poured forth his hopes and dreams for a more peaceful world.

Mr. Buckley paused respectfully for a while and then he said:

Well, friend, I hope you won't mind if I work to defend the Republic while you are working on these grand plans.

That is where we are today. I believe we have a burden. I believe we ought not to sign away the unique capacity that we have as a nation to improve our nuclear arsenal. One of the things we do so well, and most people may not know, is that we have produced sophisticated, highly targetable weapons—weapons capable of being very accurately targeted to attack military targets, hardened defensive targets, not just aiming them at population centers. So the extent to which we can improve our arsenal may give us the ability to be stronger militarily and actually avoid any more loss of life than would be necessary in such a conflict.

I think we are at an important time. The President asked for and wanted this debate. It is not as if anybody did not know it was out there. It had been

discussed for quite a number of years. The truth is, there are not votes to pass this treaty. Some say maybe we ought to pass on it and not vote on it this time and keep it alive. I thought about that. Some good people think that may be the right idea. But I have my doubts.

I think it might be a good thing for the world to see the Senate vote this treaty down. It is not a good treaty. I think it would send the world the word, and I think around the capitals of the globe we would have some hard-headed world leaders saying: Wow, we thought the United States could be moved by all this anguish and talk and pleas and political correctness. This is odd. They are able to act in their own self-interest and show leadership. I am impressed.

I think that might be the long-term result of this, instead of some of the calamities our friends would say will happen. I just do not think the world is so fragile that the United States, acting in its own rational self-interest that this treaty is not good, turns it down, that we are going to head for a nuclear holocaust. I think, indeed, it could cause us to go back once again to perhaps craft a treaty that is justifiable, that will work, that will allow us to modernize and innovate and at the same time promote security and peace in the world.

I yield the floor.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. BIDEN addressed the Chair.

Mr. WARNER. I think I have recognition.

Mr. BIDEN. Will the Senator withhold for a moment? We were going back and forth. I assured the Senator from New Jersey that he would be able to go next. He is not going to take all that long. Since you and I are going to be here, is it appropriate?

Mr. WARNER. Mr. President, we are going to be here. But as a matter of courtesy, I just wanted to thank my colleague for his very valuable contribution.

He is a member of our committee. He attended the hearings that we have had in the course of this week, and he referred, with great accuracy, to the testimony that was given to our committee.

But clearly, good, sound, public servants, nonpoliticians, having spent anywhere from a decade to three decades of their lives working in their respective fields—whether it was the technical field, with the laboratory directors, or the military field, they had honest differences of opinion. There was no consensus, no strong consensus except the case, the weight of the case against the treaty grew day, by day, by day from that testimony, culminating, as you know, in this article in the New York Times this morning, which addresses the very heart of this treaty in

which these lab directors—I don't know whether they are Republicans or Democrats or what they are; they are not wrapped up in this process of the Senate; they are not arguing a unanimous consent—are simply telling their fellow scientists the world over, the citizens of this country, the scientists in charge of maintaining the safety and reliability of the Nation's nuclear arsenals, they might not be able to do their job without nuclear tests. That is actual firing of weapons that would be outlawed—outlawed, they used the word—under this treaty.

I thank the Senator. I want to come back to the laboratory, the testimony my colleague from Delaware and I were in colloquy about. We intermittently yield to other Senators. I yield at this time.

Mr. SESSIONS. Will the chairman yield? I would like to say how much I enjoyed serving with Senator WARNER, the chairman of the Armed Services Committee. He has had full hearings on this matter. I have seen his conviction grow as day, after day, testimony in hearings has indicated this is not a good treaty.

I know the Senator from Virginia would support it if he believed it was the right thing. I know he has developed a firm view that it is not the right thing. I certainly respect that. It certainly has impacted my view of it, and I agree with him.

My instincts are that this is not good for America, and when we say no, it is not going to hurt us in the world. People are going to respect us because we are acting in our legitimate, just interests. We are acting for peace and stability, as a great leader of the world ought to act, and we ought not to be pushed around by some polling data to pass some treaty that is going to undermine our strength as a nation. I thank the chairman for his leadership.

Mr. WARNER. I thank the Senator, and I yield the floor.

Mr. BIDEN. I yield to my friend from New Jersey—how much time would he like?

Mr. TORRICELLI. Seven minutes.

Mr. BIDEN. I yield 10 minutes to my friend from New Jersey.

The PRESIDING OFFICER (Mr. FRIST). The Senator from New Jersey is recognized for 10 minutes.

Mr. TORRICELLI. Mr. President, I first note my appreciation, and I suspect all Senators, for the manner in which Senator WARNER and Senator BIDEN have conducted a debate of profound national importance. It speaks well of the quality and tone of debate in the Senate.

There are always moments in our lives we suspect we will always remember, those times that punctuate our activities and our experiences. Several nights ago, on the eve of the Senate's consideration of this treaty, President Clinton, sitting in the residence, reminded some of us that the last time

the Senate rejected a treaty was in 1920, the Treaty of Versailles. The Treaty called for the establishment of a League of Nations. The United States, as reflected by the Senate, was so traumatized by the First World War, so anxious for the creation of a time that it would never visit again, that it drew all the wrong lessons from the First World War. As a consequence, it defeated the Treaty. A Treaty that was, in Woodrow Wilson's words, "the last hope of mankind."

We now find ourselves in this debate 80 years later. Yet having emerged from the cold war, the trauma and sacrifices of generations in dealing with that enormous national struggle, I fear that, once again, we are drawing all the wrong lessons. Essentially, it is the belief of many of my colleagues that the arms control regimes of the last 40 years were successful; that the bipartisan foreign policy from Eisenhower to Clinton, based on a concept of non-proliferation and arms control regimes, could provide real security for the United States; and, that seeking security in arms races and technological military dominance was illusory.

It is extraordinary that, during this debate, we demonstrate a lack of confidence in arms control regimes or believe the United States is better defended outside of these treaties because that is such a contradiction with national experience.

In the last 40 years, the United States, from Eisenhower to Nixon, Kennedy, Johnson, Carter, Bush, and Reagan have ratified START I and II, SALT I and II, the ABM Treaty, the Chemical Weapons Convention, Biological Weapons Convention, the Non-proliferation Treaty, the Limited Test Ban Treaty, the Conventional Forces in Europe Treaty, Partial Test Ban Treaty, the Open Skies Agreement, the Outer Space Agreement, and signed the Missile Technology Control Regime. The nation is profoundly more secure because of each and every one of those treaties and regimes.

Every Senate and each President at a moment in history faced the same judgment we face today. Are we better off by allowing other nations and ourselves to develop weapons outside of these regimes or should we have confidence in our ability to verify and be more secure within their limits?

It appears the Senate may, for the first time in a generation and for the second time in this century, believe that it is better to reject a treaty negotiated by an American President and operate outside of its regime. It is a profound decision with enormous consequences. The simple truth is, arms control regimes have enhanced the security of the United States; indeed, they have enhanced the security of all nations.

Since 1945, despite their development, possession, and deployment by a vari-

ety of nations, nuclear weapons have never been used in a hostile environment. It may be the first or certainly the longest period in human history that weapons were developed and not used. Indeed, nations have even gone to war with each other or been in severe conflict and not used these weapons. It is the ultimate testament that arms control works to protect national security.

I would understand if the leader of the Iranian Parliament or the North Korean Supreme People's Assembly were to rise in their respective chambers and argue passionately against this treaty. They would have their reasons. The treaty will allow the United States to maintain the preeminent nuclear stockpile in the world, having the only effective means of continuing to test its weapons by simulation, while the treaty would make it difficult for those nations to continue to develop and modernize their nuclear arsenal. Their opposition would be rational. Our opposition is irrational.

It would be understandable if members of the National People's Congress in Beijing would rise in indignation against China becoming a signatory to the treaty. The thought that China, a great power, possessing 18 missiles capable of delivering a weapon, now on the verge of developing important new and dangerous technology both to deliver these weapons and to miniaturize them to threaten a potential adversary in the United States or Russia or Europe, would join this treaty would be troubling to them.

The Chinese, by entering into this treaty, would be unable to test those weapons, making it difficult to know their effectiveness or their reliability. Their opposition would be understandable; it would be rational. Ours is not.

This treaty is an endorsement of the international military status quo, and at this snapshot in time in the life of this planet, the military status quo is that the United States is the preeminent military power with an abundance of weapons, sophistication of weapons, delivery of weapons. If this current arrangement and distribution of power is to be preserved for a generation, it means that every nation is accepting American preeminence. By their endorsement of this treaty and their signature of this treaty, extraordinarily, every other nation seems to be willing to accept that preeminence, ironically except us. We would reject the treaty and allow other nations at a relative disadvantage to test, develop, or deploy effective weapons.

There are several important consequences in the defeat of this treaty the Senate needs to consider: first, the damage, not necessarily militarily, but diplomatically to the leadership of the United States. This country has recognized for more than 50 years the only real security of this country is an alli-

ance based principally on the foundation of NATO rested on the credibility of American political leadership.

The defeat of this treaty will put us at variance with the leaders of Germany, France, and Britain, who even on this day have appealed to the Senate to endorse this treaty. France and Britain have communicated their strong desire. They have reminded us that they have made changes in their own doctrine, and their own weapons choices, based on this treaty. They have also reminded us that if we defeat this treaty, we are in some measure separating not simply our judgments but our future planning and security from our traditional allies—the foundation of our international alliance system of our security. It will cause damage to our credibility and our leadership that will not be easily repaired.

Second, defeat of this treaty, for all practical purposes, is an end to our efforts, undertaken on a bipartisan basis for a generation, on nonproliferation. It is a practical end to our non-proliferation efforts because it sends a message to each rogue regime, every nation that possesses the capability to develop nuclear weapons, that there is this new sense of legitimacy in them doing so, because the United States has rejected a treaty that would have contained this threat. The United States will lose credibility with nations, like India and Pakistan, when we argue that they should not test again or deploy weapons.

Third—perhaps most profoundly and immediately—it will lead to the possibility of the testing and the development of the technologies that China has obtained from the United States, through espionage or other means, and allow them to develop a full capability.

There is a final factor. The Senate has convened to debate the question of a treaty on a comprehensive test ban. But it is not the only treaty that is at issue. The defeat of this Comprehensive Test Ban Treaty will certainly mean that the START agreement pending before the Russian Duma will never be adopted.

Our chance, with a stroke of a pen, to destroy thousands of Russian nuclear warheads, potentially aimed at the United States—the greatest single threat to the security of this Nation under changed political circumstances—will never be destroyed. We debate one treaty, but we are deciding the future of two.

Earlier in this day debates centered on procedures and hearings, whether or not the treaty was fully considered. I serve as a member of the Foreign Relations Committee. I, too, must express my profound disappointment, as a representative of the State of New Jersey, and as a member of that committee, of not being given the opportunity to fully debate, to consider, to hear witnesses on what potentially could be the

most important vote I will ever cast as a Senator.

People of good judgment might be able to differ on the merits of this treaty, but no one can defend that an issue of this profound importance to the life of this country did not receive the consideration it deserved or Senators within the comity of this institution were not given the due consideration to learn, debate, and be heard.

Because I believe, however, this issue is so important—while I am convinced of its merits and the need for immediate ratification—I end much as I began with that memory of 1920.

Most of us are probably convinced the Senate made the wrong judgment on the League of Nations, setting the world on a dangerous downward spiral of confrontation, having come to the false conclusion that America would be secure alone behind her oceans, that in isolation somehow we would find peace. It was wrong.

But in truth, if the moment could be revisited, President Wilson, while right on the issue, should have been less proud, more willing to meet his adversaries, and given them extra consideration on the treaty. While I profoundly believe President Clinton was right to endorse this treaty and to urge its adoption, I urge him to do the same today.

Let us make it unequivocally clear that the President of the United States, upon being told by the Director of the CIA that he cannot provide complete assurances that any unexplainable explosions of any source within Russia or China—by our national technical means—that it cannot be identified, it will cause the United States, unless explanations and inspections are made immediately available, to abrogate the treaty.

Second, the President make abundantly clear that any refusal to allow inspections, even if not absolutely required by the treaty, because it is in the national interest, would cause us to abrogate the treaty.

Third, the President commit the United States immediately to develop a national technical means to distinguish between different forms of explosions and small-level nuclear testing, and a program begin immediately.

And fourth, that if, indeed, as I believe is provided in the treaty, this President is informed by lab Directors that they can no longer assure the safety or the operational capability of our weapons, we will abrogate the treaty.

Let that be clear to the Senate and to the American people, let there be no question. And if there is no question on those issues, then there is no argument against this treaty.

I can remember as a boy asking a history teacher why it was, if history occurred as a continuum, from generation to generation through the cen-

turies, history was written in chapters and in volumes, which both began and ended? And I remember she told me: Because that is how it occurs.

We are between the volumes of history. If this Senate is to decide that the bipartisan commitment to arms control as an element of national security for the last 40 years has been an error, we are ending not only a chapter but a volume of the military and diplomatic history of this country, we are entering into a very uncertain future, for our security is dictated only by what weapons are designed, deployed, and used—a lawless time that is not safer than the 20th century, but where the 21st century will be profoundly less safe.

It will be a time in which, I believe, Members of this Senate will have difficulty looking in the eyes of their children and their children's children explaining how there was a brief moment when we could commit all the nations of the world not to test these nuclear weapons and therefore as a practical matter to be unable, by many nations, to deploy them or ever to use them—and we lost the moment.

You may feel confident in your vote today; it may make political sense. You may be convinced of your own rhetoric, but you will never ever—if one of these weapons is ever used in a hostile environment; if one of these rogue regimes, from North Korea to Iran, ever tests one of these weapons—you will never look your own children in the eye with confidence in your judgment or feeling that you served them or your country. I have not been in this institution long, but long enough to know this treaty does not have enough votes to be ratified.

The President of the United States, recognizing the enormous potential diplomatic damage of its defeat and the consequences militarily of sending a message to other nations that there will be no further proliferation efforts or control on testing, has asked, as the Commander in Chief, the elected representative of the American people, that this vote not occur. What have we come to as a Senate, if the President of the United States makes such a request in the interest of our national security and our diplomatic position in the world and we turn a deaf ear? If you cannot do good by voting for this treaty, do not do harm by defeating it. Allow the moment to pass. At least allow the world to live with an ambiguous result rather than a definitive conclusion to our national commitment to arms control.

We vote on this treaty, but, indeed, we vote on whether to ratify or reject a national strategy of a generation and whether arms control will continue to be part of the security of the United States and our strategy of dealing with potentially hostile nations. It is not a judgment I would have had to mark the

beginning of the 21st century. It shows a profound failure to learn the lessons of the 20th century, but it is what it is. At least we should be able to lose this moment and go on to debate and make judgments another day. I beseech of other Members of the Senate, do not hold this vote.

The PRESIDING OFFICER. Who yields time?

Mr. BIDEN. Mr. President, I don't see my Republican colleague on the floor. If there is no Republican wishing to speak, with the permission of my friend from Arizona, I yield to Senator BYRD.

Mr. KYL. Mr. President, may I inquire about the time remaining on both sides. I think we are roughly equal at this point.

The PRESIDING OFFICER. The majority has 4 hours 11 minutes; the minority, 4 hours 20 minutes.

Mr. BIDEN. I yield 15 minutes to the Senator from West Virginia. If he needs more, I am happy to yield as well.

Mr. BYRD. I thank Senator BIDEN. He is certainly one of the most knowledgeable of all Senators on this particular subject. I appreciate the fact that he has sat in on the hearings that the Armed Services Committee has held in the past 2 to 3 days.

Mr. President, the debate on which we embark today is of far-reaching consequence. We are deliberating a major treaty, the Comprehensive Nuclear Test Ban Treaty. Unfortunately, we embark on this debate effectively shackled, gagged, and, to a considerable extent, blindfolded.

I have had the privilege of hearing three days of extremely detailed and complex testimony on this Treaty—three days! And I am one of a select few Senators, members of the Senate Armed Services Committee, together with Senator BIDEN, ranking member of the Foreign Relations Committee, who were exposed to that information. In a similar vein, the Senate Foreign Relations Committee conducted one full scale hearing on the Treaty this week. But the fact remains that many, if not most, of my colleagues have had little opportunity to hear from the experts testimony on the pros and cons of this Treaty.

To be sure, there are a number of Senators who are well versed in the details of the Comprehensive Test Ban Treaty, but they are few in number. Senator LEVIN is one of those. Senator WARNER is one of those Senators. The rest of us are flying virtually blind. I wonder how many Senators have taken the time to read the Treaty? I wonder how many Senators have consulted with foreign leaders, those who will have to join the United States in ratifying this Treaty if it is to go into force, to get their opinions of the Treaty?

Mr. President, when I was majority leader, I visited other capitals and took

Senators with me to talk with the leaders in foreign capitals about a treaty.

The Washington Post reported this morning that envoys from nearly 100 nations have implored the United States not to reject the CTBT. I wonder how many Senators fully understand the concerns of those nations? I wonder how many Senators fully understand our concerns?

Those who have read the text of the Treaty may be familiar with the broad brush strokes of the Treaty. But for even those Senators, the details—the implications of the Articles, the Annexes, and the Protocols to the Treaty—may be murky at best.

Mr. President, the hearings that the Chairman and Ranking Member of the Senate Armed Services Committee, Senator WARNER and Senator LEVIN, organized this week were extremely informative. So informative that I am overwhelmed by the amount of detail that I have heard.

I have often said that the Senator from Michigan, Mr. LEVIN, is a Senator who is exact. He scrupulously and agonizingly, it seems, peers through a microscope at every bit of minutia when it comes to details. That is the kind of study we need to give a treaty of this nature.

The President may sign a bill into law today. If, per chance, both Houses suddenly realized that that bill had to be repealed, we can do it. We could pass a repealer in one day in both Houses. We could do it, if the emergency existed. But not a treaty; it isn't that way with a treaty. We cannot approve the resolution of ratification today, send it to the President, the President cannot enter into the treaty formally tomorrow, and then on the second day or third day of next week, we adopt a new treaty or we take action to negate the treaty we have entered into. So a treaty is much different from a bill.

From Secretary William Cohen and General Shelton, Chairman of the Joint Chiefs, I heard that this treaty is in the national security interests of the United States. I respect their judgments. But from former Defense Secretary James Schlesinger, whom I also respect, and whose judgment I also respect, I heard that the treaty is flawed in terms of its duration—a permanent ban on nuclear weapons testing—and in its premise that only testing that can meet a so-called zero yield threshold is acceptable. I do respect Dr. Schlesinger's judgment. I heard confidence in the Stockpile Security Program expressed by Energy Secretary Bill Richardson, and I heard some caution expressed by the directors of the Energy Department's nuclear laboratories. Some caution there. Some caution. In short, I have heard some complex and conflicting testimony in a short period of time.

I must ask, why on earth is the United States Senate allowing a treaty

of this magnitude and complexity to be rammed through the body with a maximum of 14 hours of debate, and with a limit of two leadership amendments? Have we totally lost all sense of responsibility? What would be wrong with having the vote next year after we have seen the new assessment, which we were told is on its way and will be completed somewhere around the first of the year, as I remember. What would be wrong? Or even, as some would prefer, what would be wrong with putting it off until the following year? Why do we have to do it now? Why do we have to do it next week? I am not one of those who have been saying we have to have a vote on the treaty. I don't cast any aspersions on anybody by that statement. But lest there be some here who think I am one of those who have been clamoring for a vote, I am not; and lest there be some who think that I have been prevailed upon by the administration to express opposition to our voting next week. I have not been contacted by the administration.

I am concerned about my country. I have heard various Senators say, well, if I am wrong, this will happen, or if he is wrong, that will happen; or which would you want to bet on, or some such. I am not interested in who is right or who is wrong, for the sake of this Senator or that Senator. I am interested from the standpoint of my country if we make the wrong decision. It is my country. And then, being one who is dedicated to this institution, having served in it for 41 years, I am also concerned that this institution is not doing its duty in connection with the approval of the ratification of a treaty. I said something to the effect that we are talking about the separation of powers here. And we are, because the constitutional framers did not feel it wise to leave in the hands of a chief executive alone the making and the carrying into effect of a treaty. And so the framers formulated this great system that we have of the separation of powers.

Hence, the approval of the ratification of treaties by the U.S. Senate is a facet of the separation of powers, in the great scheme of things. Now, are we, as Members of the Senate—we who have taken an oath to support and defend that Constitution of the United States—are we, who are the trusted legatees of those framers who met in Philadelphia in 1787, to put aside our portion, our responsibility in that system of separation of powers and say, oh, well, the President is right, the administration is right, give it to them, and wash our hands of it, let's not spend anymore time on it? I don't think it is my proper responsibility to say I am ready to vote on it just because an administration—whether it be my party or somebody else's party—says I should vote on it.

We Senators have a responsibility under our separation of powers to do

our share of the work. The Senate is supposed to have that responsibility by virtue of the Constitution. I say that we are shirking our duty if we fail to uphold our end of the separation of powers doctrine, if we don't take the time to know what we are doing here. There have been questions raised.

Are we seriously going to cede, without a murmur, our duty to advise and consent to the ratification of treaties? Are we seriously going to allow this travesty of the separation of powers to occur? It would be nobody's fault but ours if we do. I am not saying reject the treaty nor am I saying we should approve it. I have to hold my hand up before my Creator and say I don't honestly know how I shall vote on this treaty. I will not be pressured by anybody. And politics has nothing to do with it, in my view; in this instance, certainly.

Mr. President, I bring before the Senate two issues that were raised by Dr. Schlesinger that I believe merit consideration. The first is the duration of the treaty. It imposes a permanent ban on the testing of nuclear weapons. Now, we are all for nonproliferation. That is not the argument here. We are all for nonproliferation, but there are other things involved here.

First is the duration of the treaty. It imposes a permanent ban on the testing of nuclear weapons. Frankly, I would be delighted to see a permanent ban on the testing of nuclear weapons—if we could be sure that the United States could maintain the reliability of its nuclear weapons stockpile without testing. But what I have heard this week from some people is that the Stockpile Stewardship Program is not far enough along in development to be absolutely certain, or even almost certain, that it will be an effective substitute for testing.

Our weapons are aging, and the nuclear scientists who developed and tested those weapons are aging also. For every year that the weapon ages, the scientist who tested that weapon ages a year. We can replace components of the weapons, but as Dr. Schlesinger and Dr. Paul Robinson, Director of Sandia National Laboratories, pointed out in their testimony, it is not so easy to replace the knowledge, the skill, and the judgment of the scientists who built those weapons. Can we really replace seasoned physicists with computer scientists? That is a question that I have, and an answer that I do not yet have.

Dr. Schlesinger also questions the advisability of the zero-yield threshold for nuclear weapons testing. Now, I am fairly certain that most American families will not be discussing over the dinner table this evening the relative merits of zero-yield versus low-yield testing. I doubt that many of my colleagues in the Senate will be discussing such matters over this Columbus Day

holiday. But it is a vital issue in the deliberation of this treaty. I don't know enough about it, and I have read, I have listened, and I have researched, to a limited degree, the issue. I still have questions. I have doubts. It may be that my doubts are unfounded. It may be that my questions can be satisfactorily answered. But not in the time constraints and under the procedural constraints with which we are faced.

Mr. President, the Senate has a solemn duty to offer its advice and consent in the matter of treaties.

We are not only not offering our advice, but we may be offering the wrong consent if we vote next week. We may be going the wrong way. We may be ill advised in the consent that we give.

Not just consent, as I say, but advice as well. Advice comes in the form of understandings, reservations, amendments, conditions, and the like. But not on this treaty under these circumstances. On this treaty under these circumstances, amendments, understandings, reservations, motions, or any other binding expression of opinion are out of bounds. They are off limits, save for one amendment each to be offered by the two leaders of the Senate. On a treaty binding the United States of America to a permanent ban on the testing of the very weapons that form the core of our national security; on a treaty of such incredible importance, the Senate is proceeding to a vote under a self-imposed—a self-imposed—gag order.

Has this body lost all sense of proportion? Has the Senate become so absolutely blind to its constitutional duties and so dedicated to its partisan political objectives that it is willing to abdicate to the executive branch the Senate's responsibility to give both its advice and consent on the ratification of treaties? Is the Senate truly willing to limit its role in the consideration of treaties to that of either rubber-stamping whatever the executive branch chooses to send us, or, alternatively, jettisoning it out of hand? That is no way to deliberate on a treaty, particularly one such as the Comprehensive Test Ban Treaty, which holds such promise, and likewise, perhaps, such peril for the future of America's national security.

I respect the passion with which many of my colleagues view this treaty. They can state with absolute certitude that it is in the best interests of this country to approve the ratification of this treaty. And I respect that view. If I thought like they do, I would also express with absolute certitude that I was confident in the treaty. But they have spent more time—far more time—than I have spent on it. And I admire them for that and compliment them for it. Conversely, others with equal certitude say that the treaty should be rejected.

I compliment Senator LEVIN, I compliment Senator WARNER, and others

on the leadership they have demonstrated. I compliment my great friend from New York, the Senior Senator from New York, before whom I bow with great reverence. But think of the experience the Senator from New York has had in the field of foreign affairs. I don't know what his position on the treaty is. But I daresay that he, too, would say we need more time.

What is the driving force that says we absolutely cannot wait for a few more months, or even another year? I am not bound on having a vote next year. But this treaty is permanent. This is for keeps.

I respect the strongly held views of others. I wish I could share their certainty either in the merits or dangers of this treaty. If we wait 6 months, I might still be uncertain. But I would have had my chance. I would have had my day in court. The Senate would have fulfilled its duty under the Constitution. To me that is important.

I have spent 41 years of my 82 years right here in this Senate, and I have respected its rulings, its precedents, its rules, its history, and its customs. And I have to say to Senators that I often bow my head in sorrow at the way this Senate has changed since I came here.

I cannot imagine that Senator Russell, Senator Dirksen, Senator Fulbright, Senator McClellan—I cannot imagine that those Senators would have been happy, would have been satisfied. They would have been restless. They would have been very uncomfortable with saying that we have to go through with this unanimous consent request which was sent around on the telephone to all Senators' offices—on a Friday—I believe it was Friday. All Senators are busy. It is all right with an ordinary bill, an ordinary matter, that comes before the Senate. But when it comes to a major treaty, everybody recognizes a major treaty.

That is not a simple treaty with one or two other nations—which can be very important, however. But this is a major treaty, a far-reaching treaty. It involves the security interests of our country. It involves our children, and our grandchildren.

Why shouldn't we take a little more time to be sure that Senators know that this is what we are about to do? We are about to take from every Senator his normal right to offer a reservation or an understanding or an amendment on a major treaty. But, as Shakespeare says, "What's done 'tis done." Yet can we not rectify this horrible mistake and give this Senate a few more months so that we can have some hearings, so that we can have more experts, so that we can take time to read the treaty and to understand it and to talk with foreign leaders? I cannot understand why we have thrown away our rights so cavalierly.

Mr. President, I come not to bury Caesar nor do I come here to call Laz-

arus from the tomb. I do not come here today to make a case for or against this treaty. I am here only to plead that we have more time so we can study it and be better prepared to render a proper and right judgment. That is why I am here on this floor today.

I joined with other Senators in a letter some time ago urging the chairman of the Foreign Relations Committee to hold hearings. That is the extent of the efforts that I have put forth in either direction.

I want to state for the RECORD, I am only here to urge that this Constitution requires this Senate to advise and consent to treaties that have been made by the President of the United States. That is all I am urging—and that we be given sufficient additional time. We are moving toward what appears to be a sure rejection of the treaty next week for all the wrong reasons.

It may be that this treaty is not in the best interests of the United States. It may be that it is in the best interests of the United States. Only one thing is sure: It is not in the best interests of the United States or the Senate to be driven by little more than political gamesmanship—and all sides, I suppose, to some extent, have been tarnished by that.

This is not necessarily leveling an arrow from my bow toward any particular side—political gamesmanship, I say, to an all-or-nothing vote on the treaty next week with 3 days' worth of hearings, less than 2 full days' worth of debate, and virtually no opportunity to improve or to modify the Resolution of Ratification.

I close by urging the Senate to put off what promises to be a fatal vote on the Comprehensive Test Ban Treaty, and proceed, instead, with educating the Senate and the American people, so we can deliberate and decide the fate of this treaty and, who knows, this country and perhaps the world, with a better understanding of the consequences of our action.

I thank all Senators for their indulgence.

Mr. WARNER. Mr. President, could I ask my dear colleague and friend a question in the friendliest of veins?

Mr. BYRD. Yes.

Mr. WARNER. We serve together on the Armed Services Committee. The Senator from West Virginia came to every hearing and listened. And he asked the question that elicited a critical answer which indicated that the intelligence community needed time within which to complete this analysis regarding the ability of our country tomorrow or in the future to monitor another nation's testing if that testing constituted cheating under the treaty. The Senator was there yesterday throughout the laboratory hearing, and he had the courage to stand on this

floor and say that he listened to those Directors, and, indeed, those raised the legitimate concerns.

Mr. BYRD. They did in my mind.

Mr. WARNER. They did in my mind also. The Senator from West Virginia knows in private conversations I have had with him and other colleagues that this Senator on this side of the aisle is doing what I can, although I will vote against that treaty today, and tomorrow, and the next day, as it is currently written. I recognize its importance.

I stayed here until 9:30 last night working with others to see what we can do to adopt a framework. I just left the Press Gallery. They asked me, Senator, what are the components? I said the essential component is for the President to share equally the responsibility of the very serious decision that our two leaders, Democrat and Republican, are faced with about vitiating this time agreement. The Senator from West Virginia recognizes that as a former majority leader himself.

I have just been handed this document.

Mr. BIDEN. Will the Senator yield? Is he speaking on his own time?

Mr. WARNER. Absolutely. Do not worry about small matters. Worry about what I am about to tell my dear friend.

We are all making the best of efforts. I am listening to Senator BYRD, in a very clear and precise way, an even-handed way, state his case. Then I am handed the President's speech in Ottawa.

A Reuters report states:

It is clear now that the level of opposition to the treaty and the time it would take to craft the necessary safeguard to get the necessary votes are simply not there. So I hope the Senate will reach an agreement to delay that vote.

That expresses our common purpose.

All I have called upon the President to do is to share the burden the leaders would bear should this decision go forward.

I turn the page. Again, quoting:

Establish an orderly process, a nonpolitical orderly process to systematically deal with all the issues that are out there and take whatever time is necessary to do it.

As I told the press a few minutes ago, the President, each day, is taking a step in realization of what has to be done. His National Security Adviser is quoted this morning saying the President asked the vote be delayed. The day before, the Secretary of State said for another day this treaty should be decided by the Senate.

I say to my good friend, Senator BYRD, the last quote of the President: "The whole thing is about politics."

Is everything you are saying today about politics?

Mr. BIDEN. Will the Senator read the whole letter?

Mr. WARNER. I am reading a press report.

Mr. BIDEN. If the Senator will yield, the remainder of that comment was:

... and to systematically deal with all the issues that are out there and to take whatever time is necessary to do it. With this treaty other nations will find it hard to acquire and to modernize nuclear weapons and we will gain the means to detect and deter. If we don't have the treaty for the United States, we will continue to refrain from testing and giving a green light to every other country in the world to develop and modernize nuclear weapons. I think it is clear what we ought to do but it is also clear we ought not rush to this vote until there has been an appropriate process in the Senate.

Mr. WARNER. Put it in context; is the Senator reading from the Ottawa speech?

Mr. BIDEN. I am reading from the President's statement on CTBT, October 8, 1999, in Ottawa as reported, a copy of which was made and given to me.

Mr. WARNER. I add to it this phrase in which he concluded: "The whole thing is about politics."

I have been here since 9 o'clock this morning, and the Senator has been here the same period; we are working throughout the day. We will be the last Senators to leave this floor tonight and return on Tuesday.

This is not about politics. This is about trying to help our colleagues reach a correct decision on the security interests of this country, I say to Senator BYRD.

Mr. BIDEN. Will the Senator yield?

Mr. WARNER. Yes.

Mr. BIDEN. He was at the same dinner as I was with the President of the United States when two present colleagues said: "Mr. President, I'm sad to say the political process has taken this over. This is about politics."

The truth of the matter is, politics is implicated in this. No one is suggesting the politics is good or bad on either side, that one side is better than the other. But two of our Republican colleagues at that dinner—the Senator heard them—said the same thing the President said.

We are acknowledging reality. We can all pretend here, with all the niceties, that politics has no part in this. Let's be real simple: The honest-to-God truth is, this is similar to the guy who says the emperor has no clothes on who usually gets shot after he acknowledges that.

Mr. BYRD. That was a child.

Mr. BIDEN. I am no child, but I may get shot politically for saying this.

Mr. WARNER. I say to my colleague from Delaware, I will not comment on the comments made at the dinner. I was there, but I think what was said there was confidential. I have always, as a policy when dealing with Presidents, not commented.

I am not criticizing the Senator.

I ask unanimous consent to have printed remarks by President Clinton from October 8, 1999.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

So they want me to give them a letter to cover the political decision they have made that does severe damage to the interest of the United States and the interest of nonproliferation in the world? I don't think so. That's not what this is about. They have to take responsibility for whether they want to reverse 50 years of American leadership in nonproliferation that the Republicans have been just as involved in as the Democrats, to their everlasting credit.

Now, they have to make that decision. I cannot bring this treaty up again unless they want to. I have asked them to put it off because we don't have the votes. I have talked to enough Republicans to know that some of them have honest, genuine reservations about this treaty, and they ought to have the opportunity to have them resolved, instead of being told that they owe it to their party to vote against the treaty and that the leadership of their party will do everything they can to keep us from writing safeguards into the treaty which answer their reservations, which is what we do on every other thing.

So I don't want to get into making this political. But they shouldn't tie the Senate up or themselves up in knots thinking that some letter from me will somehow obscure from the American people next year the reality that they have run the risk of putting America on the wrong side of the proliferation issue for the first time in 50 years. And they want to do it and then they don't want to get up and defend it before the American people in an election year. That's what this whole thing is about. That is the wrong thing to do.

We don't have the votes. I'm not going to try to bring it up without the votes. Let them take it down, but also agree on a legitimate process to take this out of politics. I will not criticize them as long as they are genuinely working through the issues, the way we did in the Chemical Weapons Treaty.

Mr. KYL. Mr. President, I ask unanimous consent a letter dated October 6 to the majority and minority leaders signed by two former Secretaries of Energy, John Herrington and James Watkins, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OCTOBER 6, 1999.

Hon. TRENT LOTT,
Majority Leader, U.S. Senate, Washington, DC.

Hon. TOM DASCHLE,
Democratic Leader, U.S. Senate, Washington, DC.

DEAR SENATORS LOTT and DASCHLE: We are writing to urge the Senate to reject the Comprehensive Test Ban Treaty (CTBT). We were each formerly responsible for managing the United States' nuclear weapons programs in our role as Secretary of Energy. We believe that unless and until the United States can ensure and prove the safety and reliability of its nuclear stockpile without testing, it should refrain from ratifying the current "zero-yield" CTBT, which is intended to be of unlimited duration.

Over the course of our history with nuclear weapons, testing has been essential for maintaining the performance of the stockpile, as well as the key to designing and certifying new weapons. As President Bush noted in a report to Congress in January 1993, "Of all

U.S. nuclear weapons designs fielded since 1958, approximately one-third have required nuclear testing to resolve problems arising after deployment."

A modern nuclear weapon has about the same number of parts as an automobile, but it is much more complex. Some materials in our weapons, such as plutonium, are radioactive. Over time, these materials radioactively decay, altering both their own properties and contributing to changes age makes in the properties of other materials in the weapon. Even today, major gaps exist in our scientific understanding of nuclear explosives and how these weapons change as they age. These gaps in our knowledge increase the risk of undetected problems that could make our weapons unsafe or unreliable.

In 1992, the United States adopted a self-imposed moratorium on nuclear testing. The following year, the Administration and Congress initiated the Stockpile Stewardship Program. According to the FY 2000 Stockpile Stewardship Plan Executive Overview released by the Department of Energy (DOE) in March 1999, "The overall goal of the Stockpile Stewardship program is to have in place by 2010 . . . the capabilities that are necessary to provide continuing high confidence in the annual certification of the stockpile without the necessity for nuclear testing." This report also states that the success of the program is "dependent on a highly integrated and interdependent program of experimentation, simulation, and modeling."

We support the Stockpile Stewardship Program and the important research and development work that is being conducted at American weapons laboratories. But no one can state with a high degree of certainty that this program of experiments and computer simulations will be able to provide the same level of confidence in the safety and reliability of our nuclear weapons as we have historically achieved through testing. Therefore, the United States must retain the option of testing; not only to be able to verify the safety and reliability of our nuclear deterrent, but also to validate the Stockpile Stewardship Program itself. In 1987, the Congress required the Energy Department to craft a program that would ". . . prepare the stockpile to be less susceptible to unreliability during long periods of substantially limited testing." DOE was also required to ". . . describe ways in which existing and/or new types of calculations, non-nuclear testing, and permissible but infrequent low yield nuclear testing might be used to move toward these objectives." DOE responded to this requirement by designing a test-ban readiness program which anticipated a 10 year, 10 nuclear test per year program, which included comparing the results from new calculational tools and non-nuclear testing facilities to the results of nuclear tests. This program was never pursued because, throughout the Reagan and Bush Administrations, further limitations on nuclear testing were not viewed as necessary or desirable.

The Stockpile Stewardship Program is already falling short of its goal. For example, the National Ignition Facility, the flagship of the stewardship program, faces a key technical uncertainty: will it be able to reach thermonuclear ignition, a major goal for which it was designed? Furthermore, this important facility has recently fallen behind schedule and over budget. And, there may be new security risks because classified information under the Stockpile Stewardship Program will be concentrated in consumer

systems, and much of the new computer code required for the program will be written by hundreds of people at participating colleges and universities.

Besides replacing testing, the Stockpile Stewardship Program is aimed at ensuring effective production capability. Even with the end of the Cold War, many production tasks remain essential for weapons maintenance. These include disassembly for inspection or repair, and the fabrication of components to replace those that have decayed or corroded. Some remanufactured components may be significantly different from the original parts due to the use of new manufacturing processes and materials. We risk introducing new defects into the stockpile if we are not permitted to conduct nuclear tests, when analysis clearly so demands, in order to verify that these remanufactured components do not affect the safety or reliability of the original design.

Responsible stewardship of the nuclear weapons stockpile has provided the foundation for U.S. deterrent strategy for the past half-century and, despite dramatic transformations in the geopolitical and international security environment, the stockpile will continue to make a critical contribution to U.S. security for the foreseeable future. Although we ascribe to the existing moratorium, the jury is still out as to whether nuclear testing should be eliminated by treaty. We consider it premature to make such a move at this time.

As a result, we are of the unqualified opinion that the United States should not ratify the Comprehensive Test Ban Treaty.

Sincerely,

JOHN S. HERRINGTON.

JAMES D. WATKINS.

Mr. KYL. In this letter, the two former Secretaries of Energy urge the Senate to reject the Comprehensive Test Ban Treaty.

I also note, part of my submission for the RECORD earlier was letters from various former public officials who urged rejection of the treaty. Behind me is a chart detailing who some of these people are. I thought it important, since I didn't read the entire list to Senator BIDEN earlier, to acknowledge who some of these people are.

These are people who believe it would be a bad idea for this treaty to be ratified and who speak from experience based upon their positions in the U.S. Government. I mentioned earlier the six former Secretaries of Defense. Secretary Schlesinger testified, and his testimony was just cited by Senator BYRD as important testimony in opposition to the treaty. People such as Dick Cheney and others are in that list of six. Secretary Weinberger testified, as well.

In addition to that, four former National Security Advisers; in addition to that, four former Directors of the Central Intelligence Agency. In addition to that, four former Directors of the National Laboratories—this is important because once an individual is no longer in the position of the lab Director, accountable to the Congress, to the Secretary of Energy, and to the President, that person is free to speak his mind—have been very clear about the reasons

the National Laboratory Stockpile Stewardship Program cannot be an adequate substitute for testing, in addition to the former Secretaries of Energy I mentioned, former Chairmen of the Joint Chiefs of Staff, and the former Commanders of the U.S. Strategic Command.

Let me also make a point I think the majority leader tried to make a few minutes ago but several people have reiterated a contrary view; that is, we have not had enough time to learn about this treaty. The message from the President of the United States transmitting this treaty was dated September 23, 1997, but the treaty was open for signature and signed by the United States a year before that, September 24, 1996. So the President waited over a year to send this treaty to the Senate for its action. Not long after that, however, the President began urging us to take it up, in two State of the Union Messages and in a variety of comments thereafter.

I took the President at his word, and I began studying the treaty, and I began talking to experts. I daresay there are not very many people in this body who know more about the treaty, as Senators, than I do. I know people such as Senator BIDEN and Senator LEVIN have done the same thing. They went to school and they became experts on this treaty. I recognize them as having an enormous quantity of information about it. I did, too, for a couple of years. All Senators had that opportunity. If they listened to the President, he was asking them to understand it and to bring it up.

There have been a variety of hearings, not just in the Foreign Relations Committee but in other committees as well. I have committee reports here. Let's see; this is from the Committee on Governmental Affairs. I have three different reports here, I believe: March 18, 1998; October 27, 1997; February 12, 1997; the Armed Services Committee hearings that have been specifically held, and so on. Of course, our knowledge does not need to exclusively come from hearings; we do have the ability to read and to talk to experts.

The point is, we have had ample opportunity to learn about this treaty. The problem is, there are many in this body who for months demanded a vote, but what they really want is to only have a vote when they think they can win. They do not want a vote when they are going to lose. That is why you had this cacophony of voices calling for a vote and all of a sudden, when the majority leader accommodated them and they realized they did not have the votes to win, they began saying: Oh, we need more time. We need to put this off. We need to study it more.

There was ample opportunity to study it. I spent a lot of time studying this treaty. I suppose I could have been doing something else, but I spent the

time studying it. And every one of my colleagues could have done the same.

Finally, there is this notion, the President says: This is the longest-sought, hardest-fought prize in arms control history. Every President has sought this. That is simply not true. Let's go through the record.

President Eisenhower, who imposed a testing moratorium for 3 years, supported the idea of a test ban treaty. But his test ban treaty would have been of limited duration, 4 to 5 years, and would have allowed for low-yield testing. As Senator BYRD noted a moment ago, two of the most salient points of former Secretary Schlesinger's testimony were to impress upon us the fact that this is a treaty in perpetuity that the President is asking us to sign. President Clinton's test ban treaty is for a zero yield, and everyone acknowledges you cannot verify a zero-yield treaty. That was not the treaty President Eisenhower wanted, so let's not say this all started with President Eisenhower and this is a treaty he wanted.

During the Kennedy administration, the Limited Test Ban Treaty which banned nuclear testing in the atmosphere, space, or underwater, was negotiated. But there was no serious effort to negotiate a Comprehensive Test Ban Treaty as of the kind President Clinton submitted. Incidentally, the Johnson administration took the same position as the Kennedy administration.

President Nixon's administration negotiated the Threshold Test Ban Treaty but also did not make any attempt to negotiate a Comprehensive Test Ban Treaty of the kind President Clinton has submitted.

There was no activity on the subject during the Ford administration.

During the Carter administration—and Secretary Schlesinger has presented some very interesting comments on this—the Peaceful Nuclear Explosion Treaty was signed and consideration was given to a Comprehensive Test Ban Treaty, though the United States at that time was seeking a 10-year treaty where yields of up to 2 kilotons would have been permissible.

Neither President Reagan nor President Bush pursued a Comprehensive Test Ban Treaty. In fact, responding to the Hatfield-Exon-Mitchell prohibition on testing in the 1993 Energy and Water Appropriations Act, here is what President Bush said to the Congress:

The administration has concluded that it is not possible to develop a test program within the constraints of Public Law 102-377 that would be fiscally, militarily and technically responsible. The requirement to maintain and improve the safety of our nuclear stockpile, and to evaluate and maintain the reliability of U.S. forces, necessitates continued nuclear testing for those purposes, albeit at a modest level, for the foreseeable future. The administration strongly urges the Congress to modify this legislation urgently in order to permit the

minimum number and kind of underground nuclear tests that the United States requires, regardless of the action of other states, to retain safe, reliable, although dramatically reduced deterrent forces.

So much for the proposition that all of the Presidents from Eisenhower through Bush support the notion of the Clinton forever zero yield Comprehensive Test Ban Treaty. It is simply not true.

There is another important point that President Kennedy made. President Kennedy was asked to comment on his experience with the 1958-1961 test moratorium. The reason this is important is, of course, we are looking at an 8-year moratorium on testing already here in the United States. This treaty would impose upon us a moratorium in perpetuity, with only one possible way out, and that is, it would be at least theoretically possible for the United States, if it believed, in its supreme national interest, it was required to do so—for the President to, in effect, step out of the treaty for the purpose of conducting one or more tests.

Here is what President Kennedy had to say about the difficulty of doing that. He said:

Some may urge us to try a moratorium again, keeping our preparations to test in a constant state of readiness. But in actual practice, particularly in a society of free choice, we cannot keep top-flight scientists concentrating on the preparation of an experiment which may or may not take place or on an uncertain date in the future, nor can large technical laboratories be kept fully alert on a standby basis, waiting for some other nation to break an agreement. This is not merely difficult or inconvenient; we have explored this alternative thoroughly and found it impossible of execution.

That is what scientists tell me would be the result of a Comprehensive Test Ban Treaty. We already know it would take at least 2 years to regenerate the support for a nuclear test at the Nevada Test Site. There is already significant testimony on the record that it would be exceedingly difficult to get the scientific expertise concentrated for the development of such a test. There is also significant comment on the fact that, obviously, this would send a very dangerous signal to our potential adversaries because there is only one reason to conduct such a test. Under the terms of the safeguard President Clinton has offered up here, it would be in the event of concern about the safety or reliability of our stockpile. So the whole world would know, if the United States began preparations to conduct a test, we had a problem. That would be a problem.

One of my friends at one of the National Laboratories has in fact said, regardless of our need to do so—although we can always gain significant scientific knowledge from a test—we ought to remain capable of conducting a test and have at least one a year, just so we avoid the problem of nations be-

lieving we have problems with our stockpile. That way, we would not only have the benefit of a test but we would never signal to anyone in the outside world we were testing because we had a problem.

There is another reason to have a test. When the United States began thinking about this moratorium, there was a request of the laboratories to design a way to substitute for testing, and the Stockpile Stewardship Program came from that request. But as part of that, the Directors of the laboratories recommended that a series of 10 tests a year for 10 years be conducted to validate the Stockpile Stewardship Program. Those tests have never been held.

One of the reasons there is great discomfort with the notion that the Stockpile Stewardship Program could actually be a substitute for testing is that it has never been validated. I note that some of our allies, countries Senator BIDEN referred to earlier such as France, that conducted tests within the last 3 years, as well as some that perhaps would not be categorized as allies, such as China, that also conducted tests within the last 3 years, as well as other countries, could well have concluded—and part of this would have to get into classified information—could well have concluded that it was in their national interests to conduct tests in order to validate scientific experiments, in order to prepare for a long period of time in which they could not test, in order to develop warheads of the kind the Russians have developed, which are very robust and which can be reproduced every several years without the necessity of testing, something which the United States never did.

Our moratorium was imposed, in effect, in the middle of our nuclear development program. Our weapons have all been designed to be replaced with new designs on the assumption that there would always be testing.

We never did this testing to get us to the point where we could prepare for a moratorium, let alone an absolute ban on any testing in perpetuity. That is why the argument is absolutely false some make that we need to freeze in our advantage before others acquire the weapon; exactly the opposite is the case.

Some countries have developed what they believe will hold them for a long period of time in the future based on testing, while the United States rather abruptly stopped its program with President Bush and others suggesting we should go forward with testing for a variety of reasons, but we did not do so.

We are now caught in the position where we have aging stockpiles with several of our warheads exceeding their shelf life, with all the problems attendant with that, and a moratorium in

which we have not tested for 8 years and a prospect we would have a treaty to bind us, never to test again, never having validated the substitute program.

This is a reason why I think those who heard testimony from lab Directors, from people such as Johnny Foster and Robert Barker and other experts who have been involved in this area for years, have been rather shocked at what they have heard and why many of them have suggested they think they need to hear more about this.

There is, indeed, a great body of scientific evidence that suggests it could be a very bad thing for the United States to adopt this zero-yield test in perpetuity, and no amount of more time is going to change that result. That is why, again, there is no reason to extend the time of this treaty in order to refute these scientific facts. These scientists are not going to change their views. The science does not change. Plutonium and uranium radioactively decay. That is a scientific principle, so there is some constant here and nothing, including the passage of time, is going to change that.

Mr. President, I ask Senator WARNER if he wants to make a comment.

Mr. WARNER. Mr. President, the Senator can go right ahead and take all the time he wants.

Mr. KYL. I certainly do not want to do that.

There is one thing Senator BIDEN said with which I must take a little bit of issue. He noted we have some 6,000 warheads in our inventory, that this was a lot of warheads and certainly they would not all atrophy; in any event, we would always have enough, even if they were not all good.

I think it important to understand what our stockpile consists of right now, again, without getting into classified material. There are nine types of nuclear weapons in our arsenal. We used to have many more than that. We used to have redundant systems. Now, however, we have nine types, each of which are different. They have a different mission, and they are delivered on different delivery vehicles or by means of different platforms.

The total number of warheads can be divided, in effect, by nine. If any one or two or three of those classes of warheads have defects in them, it is a matter that affects all of the warheads of that category. It is not as if you have one car that is a lemon. Instead, it is as if you have a car that has to be recalled because every one of that make and model has the same problem. That is the way we have found our weapon defects to have existed in the past.

Let's say one-third of the weapon types have some defect. Roughly, that means about one-third of the weapons. What that means is that about one-

third of the ability of the United States to respond with respect to certain targets would be inhibited, but more than that, there may be many targets that are unique to that particular kind of warhead against which we have no capability. It is not as if these warheads are fungible and we can throw any of them at any target with any delivery system. Each one has a specific purpose, and it is delivered on a specific platform. That is why we should not be so cavalier about concluding that since we have a lot of warheads we, in effect, can roll the dice.

I have a final point, since Senator WARNER is about ready, on a comment made by my friend, Senator SPECTER, who talked about the chain reaction if India and Pakistan should begin to detonate these devices and how can we ask them to sign on to this treaty if we are not willing to set the norm, set the standard of signing.

I remind my colleagues, for 8 years we have been setting the norm. We have had a moratorium; we are not testing. Did that stop India? Did it stop Pakistan? Has it stopped any other number of countries that believe in their national interest they want to acquire these weapons? No. Are many of these countries signatories to the NPT? Yes. They have already forsworn these weapons. We would be asking them to also forswear the testing of weapons that we now know they already have.

I believe we ought to do what is in the best interest of the United States for our own security and not get into this business of questioning what other people in the world will think of us if we do not go along with what they think is a great idea. Internationally, there are a lot of great ideas in the United Nations among countries, some of whom are not friendly and some are, but the United States has tried to be a leader in the world. I suggest we lead best if we go back to the drawing board and try to do this right, perhaps along the lines of some previous Presidents, rather than the unique way President Clinton proposes to do it with the zero-yield testing in perpetuity.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. WARNER. Mr. President, I commend my colleague. He has been steadfast throughout this period of the week when we had hearings and attended some of the hearings himself. Throughout the day, he has been very skillful and evenhanded in the way he has helped me and others, the leadership, Senator HELMS, who is going to join us momentarily in handling this floor situation. I thank my colleague.

Mr. WARNER. Our distinguished chairman of the Foreign Relations Committee has joined us. He has been in contact with me frequently through this day.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. While the chairman of the Foreign Relations Committee is assuming his seat, I wish to say to my colleagues, I know of no one else on this side who wishes to speak today. I am anxious to hear what my friend from North Carolina has to say. I will sit here and listen to all of it. And I sincerely am anxious to hear it. But I want my colleagues to know for scheduling purposes, I indicated to Senator KYL I am going to respond specifically to some of the points he raised because—again, I am not being solicitous—I think he is one of the best lawyers in this place. He knows this area very well. I think each of his points warrants a very specific response. But I will attempt to do that on Tuesday when we are back in. So I want to put people on notice, I am prepared to debate the issue if people wish to, but as far as I am concerned, we do not intend on using any more time today, unless for some reason my colleagues conclude I should.

I yield the floor.

Mr. SESSIONS addressed the Chair.

The PRESIDING OFFICER (Mr. WARNER). The Senator from Alabama.

PRIVILEGE OF THE FLOOR

Mr. SESSIONS. Mr. President, I ask unanimous consent that Steve Shope be granted floor privileges in the proceedings today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SESSIONS. I want to share a few additional thoughts.

Earlier today I discussed my belief that if the United States is going to be a leader for peace, it needs to be a leader militarily in the world. It has fallen uniquely to be our responsibility, our burden, our role to do that. I think if we fail to do that, history will record that we abdicated a responsibility. That is critically important.

Presiding in the chair is the chairman of the Armed Services Committee. We have had a number of days of hearings—some top-secret, code-word briefings and hearings. Some have been public.

I want to share a few things, as I interpret what occurred in those hearings. It is consistent with the headline as has been cited earlier in the New York Times: "Experts Say Test Ban Could Impair Nuclear Arms Safety." That is the way it was interpreted by a New York Times reporter. That is the way I believe it is fair to be concluded.

The lab Directors were pressed aggressively by Senator LEVIN, one of the finer questioners that I have ever observed in this body. He asked them firmly and consistently: Were they on board? They maneuvered around a bit, but they eventually did say they were on board. But Senator ROBERT BYRD astutely noted they were "uneasy" with those answers. In fact, they indicated

they were on board only after a good deal of insistence and debate about signing on to the CTBT concept. They indicated that they would sign on and be on board, if the six safeguards could be included. These are employees of the executive branch of the United States Government. They work for the President. They know the Secretary of Energy was testifying there at the same time.

The chairman of the committee noted that their testimony was inconsistent with the testimony of the Secretary of Energy at the same hearing on the same day. The Secretary of Energy is a fine person, but he is not a nuclear engineer. He has not been given the responsibility to monitor the safety and security of our weapons. He says they are OK. The President says they are OK. But the experts didn't quite say that. In fact, they said it could impair nuclear arms safety. I think that is important. We do not have one voice about this matter.

They talked about the Stockpile Stewardship Program, and they were not nearly so confident in that program as some would suggest. In fact, it almost seemed, I suggest, that they were saying that the President, in 1993, just unilaterally said: We are not going to test, so they are not doing that. This apparently gave them some belief that they could have some other kind of testing, so that is better than nothing. I may be misinterpreting those comments, but I don't think so. I think they basically said stockpile stewardship was not a guaranteed thing, but that they would do their best with it, as patriotic Americans. They said they could not be sure the Stockpile Stewardship Program would work, and they admitted there would be no way to validate the Stockpile Stewardship Program other than through live-fire tests—tests of explosions, nuclear explosions.

I ask, is this, indeed, in the best interest of the United States to tie our invaluable deterrent responsibility to an undeveloped, untested, and unvalidated simulation regime?

The preamble to the treaty states that cessation of testing is an effective measure of nuclear disarmament. Dr. Robinson, Director of the Sandia Lab, testified that nonnuclear components in today's weapons will ultimately become obsolete and irreproducible—they cannot be reproduced. That is, without testing, our nuclear capability will vanish. If it does, it is a distinct possibility that other states will find the world's situation having changed significantly, and they may decide to determine to expand their own capability. It will, in fact, be, and these words irritate a number of people, but it has a ring of truth to it. It will be a form of unilateral disarmament, we, being the world leader, signing a piece of paper that ultimately leads us to a

point where we cannot continue to be the world leader.

We know a test ban can't prevent nations from acquiring nuclear weapons. Tests by India and Pakistan showed that. The Sandia Lab Director further testified that, "[t]hose who claim that by ending nuclear testing, we will close off the threat of terrorist development and use of nuclear explosives mislead themselves." And Congress should not accept such arguments as a basis for endorsing a test ban treaty.

I hope, Mr. President, we can develop a way to continue to reduce the presence of nuclear weapons. This Congress, this Senate has supported massive reductions in the number of weapons we possess. We have continued to explore other treaties and agreements.

I like limited, bilateral agreements with nations such as Russia or China or England or France, where we know what we are doing and it has an end time. We have an agreement. We have a precise understanding of the benefits and risks involved. These broad treaties, to which we are committing with the whole world of nations, many of whom are not going to comply with them, make me nervous. It is not necessarily good for a great nation to do that. A great nation has to be cautious. A great nation can't blithely go out and start signing up to a bunch of treaties and thinking that it will all work out sometime in the future. It is a serious matter.

I am glad the chairman and others, Senator KYL, Senator HELMS, have taken such a lead in this. I am glad to see Chairman HELMS here. Chairman HELMS has said consistently, this treaty is not good for America. He has refused to endorse it. He opposes it. Now we have had hearings and debate, and a growing number in this Senate are agreeing with him. I don't believe there are votes sufficient to pass it, because I do not believe that it is good for the country. I think the opinion of Senator HELMS on that is being validated daily by the experts, as well as Members of this body.

Mr. President, I thank the chairman for his leadership. I appreciate Senator BIDEN's ability to articulate and to advocate. It makes us all think carefully about what we are doing. I think it has been a good debate. I think we have learned a lot. In the end, I think this Senate will conclude this is not the time to ratify this treaty.

I yield the floor.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, I am going to take about 5 minutes to respond to my friend from Alabama. He may have to catch a plane or something. I hope he will understand that, if he is not on the floor.

First of all, I find it fascinating. I think he may want to amend the record—I am being a bit facetious, a

little tongue in cheek—amend the record by suggesting that he has greater faith in headline writers and reporters than he does in the transcript I am about to read.

I don't know whether he has ever been bitten by a headline. We all know headline writers read—and no one knows this better than my friend from North Carolina—the part of the copy that is given to them, and they get to write the headline they want. Sometimes it bears little resemblance to what happened. I hope we don't put any faith in a headline. I am not suggesting we shouldn't put faith in what is written by reporters sometimes. What was said in this article is accurate, but it is not complete. As my friend from Alabama said, we do not have one voice speaking on this, but we do have one record, one record from the hearing. I have a copy of the record from the hearing conducted in the Armed Services Committee yesterday, page 59. I will read the whole thing. It will take a minute.

Senator LEVIN. Therefore, what you are telling us is that if this safeguard [the Strategic Stockpile Program] and other safeguards are part of this process that you can rely upon, that in your words, Dr. Robinson, you are on board in terms of this treaty; is that correct?

Dr. ROBINSON. I am on board that science-based stockpile stewardship has a much higher chance of success and I will accept it as a substitute.

Going on to page 60.

Dr. ROBINSON. As a substitute for requiring yield tests for certification.

The tests he is referring to are nuclear tests. Then further on down, Dr. Tarter says:

I can only testify to the ability of stockpile stewardship to do the job. It is your job, about the treaty.

Senator LEVIN. Are you able to say that, providing you can rely on safeguard F—

My description: Safeguard F is the safeguard that allows the President to get out of the treaty if the lab Director certifies that he is not able to certify the safety and reliability.

Senator LEVIN. Are you able to say that, providing you can rely on safeguard F and at some point decide that you cannot certify it, that you are willing under that condition to rely on this stewardship program as a substitute for actual testing?

Dr. TARTER. Yes.

Further down, same page:

Dr. BROWN. Senator LEVIN, if the government [the laboratories] provides us with the sustained resources, the answer is yes, and if safeguard F is there, yes.

Now I am not suggesting all else that is quoted is not accurate. But it is useful to have a punchline at the end of the quotes. It may be viewed as tortuous; it may be viewed in any way you want. I don't think my friend from Alabama means that because these renowned scientists happen to work for the Federal Government—they also, by the way, are in the employ, if I am not

mistaken, of outside laboratories and industries as well, or at least on loan from them—I hope nobody is suggesting—and I am sure he is not—that they would alter their testimony because the President of the United States or the Secretary of Energy takes a position that is consistent with theirs, and that is why they are taking it.

I know my friend from Virginia will want to respond to this today, or Tuesday, or whenever he wants to do it. We will have plenty of time. I did not want there to be a hiatus between the comments of my friend from Alabama and my responding. I will conclude, I say to my friend from North Carolina. I think we should be—and believe me, I need this admonition for myself as well—a little careful about some of the words we use, such as “unilateral disarmament.” I don’t think anybody is arguing we are unilaterally disarming.

At any rate, I see my friend from Virginia has come down from on high and I assume wants to respond.

I yield the floor.

(Mr. INHOFE assumed the Chair.)

Mr. WARNER. Mr. President, I am anxious to receive the remarks of our distinguished chairman. But I was right there when Senator LEVIN asked the questions. I will put in the RECORD my edification of their replies.

We have to understand, this Stockpile Stewardship Program, SSP, is basically a computer and other adjuncts, scientific devices that we are going to put in place—that is the key, “put in place”—at the minimum, 5 or 6 years from now, but more likely 10 years from now. In the opinion of the Director of Sandia Laboratories, it could be 20 years. That is all in the RECORD in response to my question.

These Directors carefully said: Yes, we are meeting the current milestones in putting together this computer and other high-tech test programs, but we are a long way away. It could be as much as 20 years. So we could go to a period of, at a minimum, 8 to 10 years without any testing of the type that is a substitute for actual testing. Today, the stockpile is safe. Tomorrow, it is credible and safe. But as the years go on—and Senator BYRD used the words, as the years go on—the natural degrading under the law of physics of metallic parts, of chemical parts, and other parts takes place.

Therefore, this hope for SSP, in sum, is almost a dream, but these men conscientiously are working on it day and night. Hopefully, in a period of anywhere from 6, 7, 8, 9, 10, maybe 20 years, it will be on line for that type of database which actual testing will give.

In the meantime, we are going through with part of the SSP program, but not all of it—bits and pieces of it—largely relying on the test data of a bank of information we have in this country developed over the period of 50 years in which we did actual tests.

I thank my colleague.

Mr. BIDEN. Mr. President, I will pursue this more on Tuesday. I respectfully suggest that argument was based on a fallacy, and that is, the Stockpile Stewardship Program will not stay at zero until it is completed. We began this years ago. It is already working. We already use testing methods that do not require nuclear explosions.

The Senator will remember the chart James Schlesinger had with the arrows going up and down, and I quote from Dr. Sig Hecker, the Director of Los Alamos in 1997, whom everybody quotes these days, wrote a letter to the Senator from Arizona and said:

... there have been several instances since the cessation of nuclear testing in September 1992, where we have found problems ... for which in the past we would have turned to a nuclear test in the kiloton range to resolve. In the absence of testing, we have used the methodology of [Stockpile Stewardship] to evaluate the problem and suggest fixes if required.

This has included more extensive calculations, non-nuclear laboratory experiments, comparison to previous nuclear test data, and the extensive experience of our designers and engineers. Moreover, our assessment has been checked against the rigors of peer review by the Lawrence Livermore National Laboratory. We have examined several problems of this nature during this year’s certification cycle.

At this time, we have sufficient confidence in our solutions to certify the stockpile without a resumption of nuclear testing. If our confidence in the fixes were not sufficiently high, we would not certify the stockpile.

He is no longer the lab Director, but I assume my colleagues all believe him to be an honorable man. When they say testing is not needed at this time—that is, the Directors—I ask my colleagues whether or not they agree with Jim Schlesinger, who said it is not needed at this time and he doubts it will be needed in the future.

Let me explain. We are using data from 1,000 past nuclear tests—as my friend says, from nonnuclear subcritical experiments and from high-tech simulations to understand what is happening and what may happen in the weapons stockpile.

Four facilities that will not be ready until 2005 are—they are called the National Ignition Facilities—a contained firing facility, dual-access radiographic hydrodynamics test facility, and the Atlas Plus power facilities. These facilities—and this is important—are all logical successors to older, less capable facilities. Our scientists are pushing the envelope but are not engaging in flights of fancy. That is why our labs and the Department of Energy are confident the National Ignition Facility will work, even though it has cost overruns. These facilities will serve several purposes and increase knowledge of basic physics of nuclear weapons. That new knowledge will lead to more accurate and precise computer

simulations. The facilities can also be used to test the particular weapons problems. That is why I say our weapons will still be tested, even without full-scale nuclear weapons testing.

Another key tool we are developing is this advanced supercomputing accelerated strategic computing initiative, another generation of supercomputers that will be able to synthesize test data from the past, and all of the testing done on weapons components, to provide three-dimensional simulations of all aspects of nuclear weapons and how they react. Already, our scientists and engineers are working with industry and several universities to develop computers that are capable of running more than 3 trillion operations per second. That is a new record level of computing power, and it gives us new safety.

Our goal, admittedly, over the next 5 years is for those supercomputers to be able to do 100 trillion operations per second. That is not something we need in our stockpile today. In fact, it represents a 100,000-fold increase in today’s computational ability, and everybody says today’s computational ability is sufficient to guarantee the stockpile. But when our weapons reach their so-called shelf life, then it is going to be needed, and we anticipate needing that sophisticated modeling. No one thinks that sophisticated modeling is needed now.

Finally, I have real questions about my colleagues’ concern that the stockpile stewardship cannot work. Our scientists are the best in the world. They know what they are doing. They define scientific challenges that must meet the military performance and reliability standards. After defining these challenges, they believe they can meet them. I believe they know what they are talking about. But I see one problem. The one problem the Stockpile Stewardship Program faces now and in the future is that some may not fund it. That is what our colleagues at the laboratories are talking about.

Let me quote and conclude from a news release released today by the Department of Energy. I will submit it for the RECORD. It is “For Immediate Release,” dated October 8, 1999, and is a joint statement by Directors of three nuclear weapons laboratories—I note parenthetically that my guess is they probably read the New York Times article—C. Paul Robinson, Sandia; John C. Browne, Los Alamos; C. Bruce Tarter, Lawrence Livermore National Lab.

I will read only from the fourth paragraph:

While there can never be a guarantee that the stockpile will remain safe and reliable indefinitely without nuclear testing, we have stated that we are confident that a fully supported and sustained stockpile stewardship program will enable us to continue to maintain America’s nuclear deterrent without nuclear testing.

Mr. President, I ask unanimous consent that the entire statement be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the DOE News, October 8, 1999]
JOINT STATEMENT BY THREE NUCLEAR
WEAPONS LABORATORY DIRECTORS

(C. Paul Robinson, Sandia National Laboratories; John C. Browne, Los Alamos National Laboratory; and C. Bruce Tarter, Lawrence Livermore National Laboratory)

"We, the three nuclear weapons laboratory directors, have been consistent in our view that the stockpile remains safe and reliable today.

"For the last three year, we have advised the Secretaries of Energy and Defense through the formal annual certification process that the stockpile remains safe and reliable and that there is no need to return to nuclear testing at this time.

"We have just forwarded our fourth set of certification letters to the Energy and Defense Secretaries confirming our judgment that once again the stockpile is safe and reliable without nuclear testing.

"While there can never be a guarantee that the stockpile will remain safe and reliable indefinitely without nuclear testing, we have stated that we are confident that a fully supported and sustained stockpile stewardship program will enable us to continue to maintain America's nuclear deterrent without nuclear testing.

"If that turns out not to be the case, Safeguard F—which is a condition for entry into the Test Ban Treaty by the U.S.—provides for the President, in consultation with the Congress, to withdraw from the Treaty under the standard "supreme national interest" clause in order to conduct whatever testing might be required."

Mr. BIDEN. Mr. President, let me conclude by pointing out that I find it kind of interesting. The very people who stand up here and say, as I happen to believe, that they have confidence that our scientists in the future are going to be able to shoot out of the sky like a bullet meeting a bullet incoming nuclear weapons over the ocean traveling at multithousand miles per hour and do it with certainty and accuracy—they have faith in the ability of that to occur, but they don't have faith in the ability of our scientists at the three laboratories, who say they are well on their way to doing that, to be able to say what they need.

I find it kind of interesting. I must admit it is a double-edged sword. I find my Democratic colleagues who do not support any national defense initiative—because they say this star wars notion can't work, it is too far out—I do not know how they come and rely so easily upon the likelihood that a \$45 billion investment is going to guarantee these supercomputers will function to the degree they are needed to when these weapons reach their shelf life. But let's be fair. You can't have it both ways. I would respectfully submit that the ability to guarantee MIRV nuclear warheads fired in the hundreds or the thousands at the United States

could be blown out of the sky with impunity by a missile defense initiative on our part is a mildly greater scientific feat than what the stockpile requires.

As someone said: "The faith of our father"—"the faith of our father"—has always been that if we put our mind to it, if we invest the money, we have the intelligence, the ingenuity, and the know-how to get it done. I would respectfully suggest our three present laboratory Directors and all the doubts they express are primarily related to whether or not safeguard F and funding of \$45 billion for the stockpile would be forthcoming.

I yield the floor.

The PRESIDING OFFICER. The Senator from Virginia.

Mr. WARNER. Mr. President, the best deterrent from keeping those thousands of missiles coming in is precisely what we have had these 50-plus years—a credible safe deterrent in our stockpile. And the person whose finger is on the button firing those missiles knows that.

I am reading from yesterday's proceedings of the Senate Armed Services Committee on page 50 where the chairman, myself, asked the following questions. This is one of the laboratory Directors testifying:

"We moved this year toward the development of the SSP, and last year toward putting in place the supercomputers on a path that we think we need to have. We are on a path that by 2004 we will have a supercomputer in place that begins"—begins—"to get us into the realm of what we need to do this job"—namely certifying the stockpiling.

"The issue that I think you are trying to address"—this is the hardest point I think as a scientist—"is that we cannot predict that by such and such a date we will know everything we need to know."

"It is an evolving process. Each year we learn something else."

Bit by bit, year by year.

I then asked: "My time is running out."

And it is running out. We want to control time.

"Give us your best estimate, doctor," Senator WARNER said.

"Dr. Brown: I think we are going to be in the best position sometime between 2005 and 2010."

"Chairman WARNER: Dr. Tarter."

"Dr. Tarter: I agree with Dr. Brown."

"Dr. Robinson: My guess is somewhere in the 10 years hence to 20 years hence period."

There it is, short answers directed to the question.

Mr. BIDEN. Would my friend yield for a question? From what page of the record was he reading?

Mr. WARNER. Page 50 of the official transcript of the Armed Services Committee.

Mr. BIDEN. I don't doubt it. I read from page 59 to get the significance?

Do you get the significance?

That was stated on 50 and 51 and 52. This is 59. After all is said and done, the question was asked: Do you believe with the safeguards you can rely upon the stockpile, the strategic stockpile, approach as opposed to nuclear testing?

They said yes.

It follows. Page 59 and 60, I am reading from. Maybe there is something after page 61 in the testimony that would undermine what I have just said. I respectfully suggest I am unaware of it if it is. I stand ready to hear it if it has been.

It is one of those deals, folks. You have to go to the end. It "ain't over until the fat lady sings." It ain't over until you read the whole transcript. The last thing stated was: We have confidence.

Then, after the testimony, after the testimony and after the New York Times article, the Department of Energy and in the name of the three scientists quoted—and I will read it again.

"While there can be no guarantee"—the point he is making on page 50—"that the stockpile remains safe and reliable indefinitely without nuclear testing, we have stated that we are confident that a fully supported and sustained stockpile stewardship program will enable us to continue to maintain America's nuclear deterrent without nuclear testing."

I yield the floor.

Mr. WARNER. Mr. President, it is 117 pages. I sat there for 5 hours 10 minutes. How well I know the various parts of this system. I was weary after 3 days of testimony. But it is all here for all Senators to read. I invite them to spend as much time as they can on the record.

It comes down to honest men, well-intentioned individuals—men and women on both sides of the issue—cannot agree, and should we move forward with a treaty that will vitally affect our security interests, unless the preponderance of the evidence is overwhelming, and beyond a reasonable doubt? Give us the certainty to make that step.

I yield the floor.

The PRESIDING OFFICER (Mr. WARNER). The Senator from Oklahoma is recognized.

Mr. INHOFE. Mr. President, I have a few brief comments to make in response to the very eloquent remarks from the Senator from West Virginia, in which I thought he covered it quite well. He had a concern for whether the intelligence estimate was going to be forthcoming.

I would suggest, and get into the RECORD at this time, that back in December of 1995 we were waiting for the NEI report to come out. And it came out.

That report said we would not have to defend ourselves in the United States of America for a limited attack in terms of—the discussion, of course, was the national missile defense—until approximately 15 years, not any less than 15 years.

We found out later that was actually imminent at that time.

I can recall so well writing the Chairman and Joint Chiefs of Staff, General Shelton, on the 24th of August of this last year—1998—and asking him to be specific in terms of taking the national intelligence estimate and all the information that he could garner and tell me at approximately what date North Korea would be able to fire a missile, a multiple-stage rocket. He came back and said it would be more than 5 years.

Seven days later—on the 31st of August, 1998—they fired one.

I think we all know right now that they have another type of missile that can reach Washington, DC, from any place in the world in about 35 minutes, and we don't have any defense against that.

I don't think, if we are going to rely on the NEI information, we are relying on something that is going to be in the best interests of defending our country.

The Senator from West Virginia also talked about the ratification process and about needing more time.

We hear over and over again from every single person who stood up to defend the CTBT we need more time, we have to have more time. Yet if one reads what those same individuals are saying, the President of the United States said on the 16th of May, 1998:

Now it's all the more important that the Senate act quickly, this year, so we can increase the pressure on, and isolation of, other nations that may be considering their own nuclear test explosions.

Also the President said:

... I ask the Senate to approve it [CTBT] this year.

That was 1998—last year; here it is 1999.

Vice President AL GORE said the same thing:

The U.S. Congress should act now to ratify the Comprehensive Test Ban Treaty.

That is July of 1998.

Secretary Albright said:

We need this Treaty now.

That was on September 23, a few days ago, this year.

She said, further:

For American leadership, for our future, the time has come to ratify CTBT—this year, this session, now.

I could go on and on; the leaders have said we have to do it now.

As far as taking up this treaty, knowing what is in it, the treaty has been there for 2 years. We have all had an opportunity. Have I read the entire treaty? No, but I read the areas that concern me on verification, on zero-yield thresholds, things where I know

we cannot verify what would be done. Verification is not there.

I remind Members, every Senator, including the illustrious Senator from Delaware, had the opportunity to object to the unanimous consent request propounded and agreed to a few days ago calling for the vote to take place after the 14 hours of debate which should be some time on Tuesday or Wednesday.

The only Senator from that side who is not openly supporting this yet is the Senator from West Virginia who said, by his own mistake, he was not able to get down in time to object to the unanimous consent request.

We had an opportunity for every Senator to have slowed this train down so they wouldn't have to vote on it and they elected not to do it.

I think it is very important we all keep that in mind. This is significant. It is something we have reviewed over a long period of time. It is something we understand. We have heard the professional testimony. We have attended many meetings. I along with the Presiding Officer, have sat through hours of committee meetings and subcommittee meetings that I have held in my committee on this very subject. I think we understand it and I agree with the statements of all of those, including the President, Vice President, and the Secretary of State, who I quoted. We need to do it now.

I will be here to object to any unanimous consent that would in some way vitiate the vote that we believe should be imminent next week.

I yield the floor.

Mr. BIDEN. Mr. President I will take 1 minute.

The President doesn't need any more time; he read it and negotiated it. I don't need any more time; I spent over 100 hours on that. It is my job on the committee of responsibility. The Senator presiding doesn't need more time; he spent hundreds of hours. The Senator from Oklahoma doesn't need more time because he spent hundreds of hours on it. I defy anyone to find five other Members of the Senate who have spent as much time.

Usually what happens is we take on the responsibility to inform our colleagues based on our committees because we have more expertise when assigned the job. When it is tax policy, I don't know what the Tax Code says on major changes, but I rely upon the committee headed on the Democratic side by my friend from New York to tell me what is in it from spending hundreds of hours going through the detail.

This is a different way to do business. I don't ever remember Members having voted on a treaty without there being a significant report from the relevant committees on the floor.

The President doesn't need any more time. I don't need any more time. Sen-

ator BYRD says he needs more time, and I don't know anybody more conscientious than Senator BYRD. But the reason for more time is there haven't been any hearings.

I yield the floor.

The PRESIDING OFFICER. The chairman of the Senate Foreign Affairs Committee, the Senator from North Carolina.

Mr. HELMS. Mr. President, I assure my friend from Delaware, the ranking Democrat on the Foreign Affairs Committee, I enjoy hearing him and hearing him and hearing him.

I guess it is sort of similar to what the President said in one of his strong moments not long ago: I guess it depends on what the definition of "is" is.

This afternoon in Canada, President Clinton held a press conference in which he explicitly rejected the offer I made along with a number of other Republican Senators that the Senate would put off a vote on the CTBT if the President requested in writing (a) that the treaty be withdrawn and (b) that it not be considered for the duration of his presidency.

Considering that the President acknowledged he does not have the votes to ratify the treaty, this seemed to many of us a generous offer which the President rejected with a strange rhetorical outburst.

When asked about our offer today, he said:

They want me to give them a letter to cover the political decision they have made that does severe damage to the interest of the United States and the interest of non-proliferation in the world? I don't think so.

The Mr. President further suggested, strangely and absurdly, that the reason we made the offer in the first place was because, as he put it, Republicans are afraid to go through with a vote. He said:

... they want to [kill the treaty] and don't want to get up and defend it before the American people in an election year. ... [They think] that some letter from me will somehow obscure [that fact] . . .

Mr. President, among those who are urging that the Senate kill this dangerous treaty are: six former Secretaries of Defense, four former National Security Advisors, four former Directors of Central Intelligence, and two former Chairmen of the Joint Chiefs of Staff.

Yet, Mr. Clinton suggests that Republicans are afraid to vote? The fact is, the President and his advisors have done everything possible to discourage a solution.

Let's make it clear so the President can get his confusing rhetoric straightened out: Since he has rejected our offer, I will object, along with many of my Republican colleagues, to any effort to put off next week's vote on the Comprehensive Test Ban Treaty.

This is a dangerous treaty, contrary to the national security interests of

the American people. The Senate should go on record as planned: The Senate should vote this treaty down.

Mr. President, may I make an inquiry how much time has expired on each side since this morning when the Senate convened?

The PRESIDING OFFICER. The Chair advises the distinguished chairman of a remarkable coincidence: The opponents have used 204 minutes, the proponents, 208 minutes.

Mr. HELMS. Mr. President, pursuant to the unanimous-consent agreement by the Senate, consideration has begun regarding an arms control treaty that has been the longest-sought, hardest-fought item on the unilateral nuclear disarmament agenda. Strangely, the Clinton administration has used every fanciful reasoning in its attempt to portray the Comprehensive Test Ban Treaty (CTBT) as an agreement long pursued by every administration since President Eisenhower, a claim that is bewilderingly untrue. Even the administration's own negotiator acknowledged that the administration's claims are "hyperbole."

You see, Mr. President, the truth of the matter is that not one administration (prior to the current one) ever proposed a zero-yield, unverifiable, permanent duration test ban. Indeed, as Ambassador Ledogar admitted, even the Clinton administration itself did not want such a treaty initially.

Someone has commented that the CTBT now before the Senate is the clearest case of "parchment worship" ever seen. It was neither carefully negotiated nor well-thought through. It does not even define exactly what it bans.

Instead, the CTBT is the product of a mad scramble to: (1) Create an arms control "legacy" for the Clinton-Gore administration; or (2) provide an excuse for this administration's lack of any nonproliferation policy; or (3) obscure the fact that this administration presided over the collapse of the single-most significant reduction in nuclear weapons with Russia ever negotiated—the START II Treaty—which would have eliminated all MIRVed ICBMs and the SS-18 missile. (The likelihood is that all three played a major role in the administration's decision to try to ram through this Senate this unwise and dangerous treaty.)

Unfortunately, in the race to fashion a last-minute rickety "legacy", the Clinton administration abandoned longstanding United States policy on nuclear testing and signed up to a "zero yield," unverifiable, permanent duration test ban. As several of us have noted, for a number of reasons relating to verification and U.S. nuclear weapons requirements, this is something to which no other administration ever agreed. For instance, President Eisenhower—who has been repeatedly and mistakenly blamed with authorship of

the CTBT—insisted that nuclear tests with a seismic magnitude of less than 4.75 be permitted.

The reason that the United States historically has refused to sign on to a zero yield test ban is that five problems are created by such a prohibition. First, confidence in the safety and the reliability of the weapons stockpile will erode. Second, warheads cannot be "remanufactured" to capitalize upon modern technologies. Third, no further designs or capabilities can be added to the nuclear stockpile. Fourth, critical infrastructure and hardware cannot be thoroughly "hardened" against nuclear weapons effects. Fifth, the U.S. can have no confidence that other countries are abiding by the CTBT because a zero yield ban cannot be verified.

By preventing the United States from testing, the CTBT will erode our ability to discover and fix problems with the nuclear stockpile and to make safety improvements. Confidence that the weapons will perform as needed will erode. Already, leaders of our own nuclear weapons design laboratories have stated that problems with the stockpile have arisen that formerly would have prompted nuclear tests.

Further, several of the weapons are not as safe as they could be. As this chart demonstrates, only one warhead of the nine in the stockpile is equipped with all of the modern surety features available. One weapon—the W62—does not have any safety features at all, and three of the weapons—the W76, W78, and W88—are only equipped with "enhanced detonator safety" measures.

Mr. President, several important safety improvements cannot be made to these weapons unless subsequent nuclear testing is allowed to ensure that modified devices will function properly with these changes. I will underscore that for Senators. The CTBT will prevent the United States from making critical safety improvements to its warheads. I, for one, agree with the Governor of North Dakota who wrote to me opposing the CTBT stating:

As a governor of a state that hosts a sizable percentage of our nation's nuclear weapons, I have an obligation to the people of North Dakota to ensure that these warheads are as safe and reliable as they can be made. It troubles me that several U.S. warheads do not contain the most modern safety features available, such as fire-resistant pits and insensitive high explosives. Yet these warheads cannot capitalize upon such improvements without nuclear testing.

I hope Senators will understand that the CTBT will gradually undermine the safety of the U.S. deterrent by precluding the incorporation of modern safety features.

Moreover, nuclear testing is essential if the United States is to discover and fix problems with the stockpile. These problems usually are associated with aging. The materials and components of weapons can degrade in unpredictable ways and can cause the weapon to

fail. Many weapons believed to be reliable and thoroughly tested nevertheless developed problems which were only discovered, and could only be fixed, through nuclear testing. In fact, one-third of all the weapon designs placed in the stockpile since 1958 have required and received post-deployment nuclear tests to resolve problems.

In three quarters of these cases, the problems were identified and assessed only as a result of nuclear testing, and only could be fixed through testing.

The United States has chosen to remanufacture aging weapons in the enduring stockpile rather than designing and building new ones. This presents problems because many of the materials and processes used in producing the original weapon are no longer available. New materials and processes need to be substituted, but they can only be validated to assure that the remanufactured weapon works as intended through nuclear testing.

Exact replication, especially of older systems, is impossible without testing. In part, this is because documentation has never been sufficiently exact to ensure replication. Nuclear testing is the most important step in product certification; it provides the data for valid certification. As a case in point, the United States attempted to remanufacture both the W52 and W68 warheads on the basis of simulations. However, when actually tested, both weapons had a measured yield well short of what test-experienced weapons designers predicted. This is a lesson that the administration, in supporting the CTBT, seems willing to forget.

The CTBT also will prevent the United States from developing new weapons to counter new technological advances by adversaries. Nuclear testing is essential to such modernization. Without it, the nuclear triad will become obsolete.

I fail to see the logic behind the argument that the United States has no need to modernize its deterrent if Russia, China, and others are similarly constrained. Such a claim just won't fly; in fact, given the demonstrable inability to verify a total test ban, I am persuaded that such assertions are founded upon the mistaken presumption that nuclear weapons modernization is driven by the evolution of other nuclear deterrents. Historically, this simply has not been the case.

Indeed, nuclear weapons modernization is generally driven either by new mission requirements, or by non-nuclear technological evolution in defensive systems. For instance, during the cold war, advances in air defense and anti-submarine warfare created needs for new weapons. Nuclear testing was needed to create the B83 bomb, a gravity bomb—a "laydown weapon" because it enabled the B-1B to drop its payload, at low altitude and high speed, and thereby escape the resulting explosion.

This weapon was needed in response to advances in air defense capability. For the same reason, the U.S. developed the nuclear air-launched cruise missile, which allows U.S. bombers to fulfill their mission outside of air defense ranges.

Nuclear testing was needed for the Trident II missile's warheads, W76 and W88. Testing was essential to optimize the system, giving the missile, and thus the submarine as well, increased striking range. This was needed in response to advances in anti-submarine warfare. Without the ability to test and modernize, the airmen and sailors aboard our bombers and submarines will be put at increased risk as they try to perform their duties with obsolete technology. Senators should think carefully about the implications of the CTBT, and the risk it poses—not just to the nuclear weapons themselves—but to our servicemen.

Our clear, future need facing the United States is the requirement to develop new or modified warheads to respond to developments in missile defense—particularly in the area of directed energy. It would be impossible to adapt to such developments under a complete test ban.

Further, without the ability to design new weapons, such as a warhead optimized to kill biological plagues or to destroy deeply-buried targets, the U.S. will be unable to respond to serious emerging threats to our security. I could not agree more with one of the former Directors of Lawrence Livermore National Laboratory, Dr. Roger Batzel, who warned that; "A nuclear arsenal which is unable to keep pace with a changing security environment is unlikely, in the long run, to prove much of a deterrent."

Fourth, the CTBT would make the United States increasingly vulnerable to foreign nuclear programs. Critical systems such as satellites cannot be hardened and thoroughly protected against electro-magnetic pulse attack without nuclear testing. Computers cannot simulate a nuclear environment. Neither can controlled radiation sources. It takes a nuclear explosion to create the heat and complex interplay of radiation needed to evaluate the resistance of systems to these nuclear effects.

Historically, the United States often has been surprised by how systems which seemingly performed as needed during non-nuclear simulations then failed to function properly in an actual nuclear environment. Indeed, surprises have been found in the vulnerability to nuclear effects of all U.S. strategic nuclear systems except the Minuteman II. The CTBT will allow counties to exploit a growing U.S. vulnerability brought about by an increasing reliance on high-tech weaponry and a decision not to test in order to harden systems.

Finally, a "zero yield" test ban is not verifiable. While the exact thresholds are classified, it is commonly understood that the United States cannot detect nuclear explosions below a few kilotons of yield. Countries are able to resort to a number of techniques, ranging from "unattended detonations" to seismic decoupling, that will enable them to conduct significant nuclear explosions with little chance of being detected.

The proposed verification regime under the CTBT offers scant reassurance in this matter. The seismic detection thresholds of the International Monitoring System are sufficiently high that a large amount of clandestine testing could occur without fear of seismic detection. Moreover, the on-site inspection regime is riddled with loopholes and deficiencies.

The bottom line is that if the Senate were to make the mistake of approving this treaty, the United States would scrupulously adhere to the CTBT, thereby losing confidence in its nuclear deterrent. Other nations, however, most likely would violate the treaty and escape detection, building new weapons to capitalize upon the U.S. deficiencies and vulnerabilities created by the CTBT. For these reasons, I oppose the CTBT and I am gratified that more and more Senators are making clear their opposition to ratification of an unwise, even dangerous, proposal to deprive the American people of the protection they need and deserve.

Mr. President, for just a moment I suggest the absence of a quorum and then I will resume.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HELMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. I thank the Chair.

Mr. President, I ask unanimous consent that it be in order for me to suggest the absence of a quorum and the time be divided equally from both sides.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. MOYNIHAN addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the senior Senator from New York.

Mr. MOYNIHAN. Mr. President, I rise simply to express the thanks of this Senator to the eminent chairman of the Committee on Foreign Relations for the careful discourse he has presented to us, for the facts, they are complex. No one understands complexity better than he or is more willing to live with it. If we do not come to the same conclusions, it is not for lack of respect and, indeed, a reverence.

Mr. HELMS. Mr. President, I do thank my friend from New York—our friend from New York—whom we will sorely miss before very long.

I thank the Senator and suggest the absence of a quorum.

The PRESIDING OFFICER. Hearing no objection to the unanimous consent request from the Senator from North Carolina, without objection, it is so ordered. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MURKOWSKI. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HELMS). Without objection, it is so ordered.

Mr. MURKOWSKI. Mr. President, the Senate will soon exercise its constitutional duty of "advice and consent" for international treaties. This is a solemn task. And the treaty before us, the Comprehensive Test Ban Treaty or "CTBT," relates to an issue of utmost importance, the proliferation of nuclear weapons.

As I have evaluated this treaty, I have kept one question first and foremost in my mind: Will ratification of this treaty by the United States serve to protect the national security of the United States? And after careful consideration, my position is that the CTBT weakens the national security of the United States, and I will therefore oppose ratification.

Although I support the lofty goals of the Test Ban Treaty—preventing the spread of nuclear weapons—I think only the good guys will play by the rules. Test ban advocates argue that setting a good example will lead others to play by the rules. The United States has not tested a bomb since 1992, but India and Pakistan went ahead with testing bombs, despite U.S. sanctions and condemnation.

Test Ban advocates also argue that the threat of sanctions will keep countries in line. As my colleagues will recall, North Korea violated the Nuclear Non-Proliferation Treaty—in fact, are still violating the NPT—and the Clinton Administration has rewarded the DPRK with aid, and more recently, with the removal of sanctions. I suspect the same pattern if rogue nations like North Korea even ratify the CTBT.

But even more fundamentally, I believe this zero-yield treaty of unlimited duration fundamentally threatens the United States' nuclear deterrent by preventing nuclear testing essential to maintaining the safety and reliability of our nuclear stockpile. Our nuclear weapons are the most sophisticated designs in the world, yet over time, the nuclear materials and high explosives triggers deteriorate, and we lack the experience in predicting the effects of these changes.

According to expert testimony, one-third of all weapons designs introduced

into the nuclear weapons stockpile since 1985 have required and received post-deployment nuclear tests to resolve problems. In three-fourths of these cases, the problems were discovered only because of on-going nuclear tests. In each case, the weapons were thought to be reliable and thoroughly tested.

How confident can we be in the reliability of our nuclear stockpile if we are unable to test these weapons to determine the degradation effects of aging? If we cannot be confident in our own weapons' effectiveness, what do you suppose other nations will conclude? The use of nuclear weapons as a deterrent is only effective when other parties believe in their capability as well.

Although the Stockpile Stewardship Program should be pursued, we must remember that the Program is in its infancy. Deciding in 1999 to rely on an untested program that will be operational in 2010 is reckless. In the future, I hope that nuclear tests can be replaced by computer simulations and laboratory-based experiments. But I am not willing to bet my grandchildren's security on it.

In light of hearings this past year before the Energy and Natural Resources Committee on Chinese espionage allegations, I also am not comfortable placing the results of our nuclear testing in the memory banks of the National Labs' computers which are vulnerable to espionage or sabotage.

Finally, I would like to address the problem of verifying other nations' compliance with the Comprehensive Test Ban Treaty. Recent reports from the intelligence community indicate that we are unable to monitor low-level nuclear tests precisely enough to distinguish between a conventional explosion, a low-level nuclear test, or even natural seismic activity. The United States cannot now, and may not in the foreseeable future, be able to confidently detect and identify militarily significant nuclear tests of one kiloton or less. That is roughly 500 times the size of the blast which destroyed the Murrah Building in Oklahoma City.

Twice last month Russia carried out what might have been nuclear explosions at its Novaya Zemlya testing site in the Arctic. It was reported that U.S. surveillance satellites have repeatedly observed the kind of activity that usually precedes and follows a low-level nuclear test. Yet, data from the CIA's seismic sensors and other monitoring equipment were reportedly insufficient to reach a firm conclusion as to the true nature of the explosions. If it is not possible to confirm tests such as these, how are we going to verify that countries such as Russia and China are complying with the Comprehensive Test Ban Treaty?

Mr. President, this Treaty is not in the national interest and I urge my colleagues to reject its ratification.

Mr. LUGAR. Mr. President, the Senate has begun consideration of the Comprehensive Test Ban Treaty. I regret that the Senate is taking up the treaty in an abrupt and truncated manner that is so highly politicized. Admittedly, the CTBT is not a new subject for the Senate. Those of us who over the years have sat on the Foreign Relations, Armed Services, or Intelligence Committees are familiar with it. The Senate has held hearings and briefings on the treaty in the past.

But for a treaty of this complexity and importance a more sustained and focused effort is important. Senators must have a sufficient opportunity to examine the treaty in detail, ask questions of our military and the administration, consider the possible implications, and debate at length in committee and on the floor. Under the current agreement, a process that normally would take many months has been reduced to a few days. Many Senators know little about this treaty. Even for those of us on national security committees, this has been an issue floating on the periphery of our concerns.

Presidential leadership has been almost entirely absent on the issue. Despite having several years to make a case for ratification, the administration has declined to initiate the type of advocacy campaign that should accompany any treaty of this magnitude.

Nevertheless, the Senate has adopted an agreement on procedure. So long as that agreement remains in force, Senators must move forward as best they can to express their views and reach informed conclusions about the treaty.

In anticipation of the general debate, I will state my reasons for opposing ratification of the CTBT.

The goal of the CTBT is to ban all nuclear explosions worldwide: I do not believe it can succeed. I have little confidence that the verification and enforcement provisions will dissuade other nations from nuclear testing. Furthermore, I am concerned about our country's ability to maintain the integrity and safety of our own nuclear arsenal under the conditions of the treaty.

I am a strong advocate of effective and verifiable arms control agreements. As a former Vice-Chairman of the Senate Arms Control Observer Group and a member of the Foreign Relations Committee, I have had the privilege of managing Senate consideration of many arms control treaties and agreements.

I fought for Senate consent to ratification of the INF Treaty, which banned intermediate range nuclear weapons in Europe; the Conventional Forces in Europe Treaty, which created limits on the number of tanks, helicopters, and

armored personnel carriers in Europe; the START I Treaty, which limited the United States and the Soviet Union to 6,500 nuclear weapons; the START II Treaty, which limited the U.S. and the former Soviet Union to 3,500 nuclear weapons; and the Chemical Weapons Convention, which outlawed poison gas.

These treaties, while not ensuring U.S. security, have made us safer. They have greatly reduced the amount of weaponry threatening the United States, provided extensive verification measures, and served as a powerful statement of the intent of the United States to curtail the spread of weapons of mass destruction.

I understand the impulse of the proponents of the CTBT to express U.S. leadership in another area of arms control. Inevitably, arms control treaties are accompanied by idealistic principles that envision a future in which international norms prevail over the threat of conflict between nations. However, while affirming our desire for international peace and stability, the U.S. Senate is charged with the constitutional responsibility of making hard judgments about the likely outcomes of treaties. This requires that we examine the treaties in close detail and calculate the consequences of ratification for the present and the future. Viewed in this context, I cannot support the treaty's ratification.

I do not believe that the CTBT is of the same caliber as the arms control treaties that have come before the Senate in recent decades. Its usefulness to the goal of non-proliferation is highly questionable. Its likely ineffectuality will risk undermining support and confidence in the concept of multi-lateral arms control. Even as a symbolic statement of our desire for a safer world, it is problematic because it would exacerbate risks and uncertainties related to the safety of our nuclear stockpile.

The United States must maintain a reliable nuclear deterrent for the foreseeable future. Although the cold war is over, significant threats to our country still exist. At present our nuclear capability provides a deterrent that is crucial to the safety of the American people and is relied upon as a safety umbrella by most countries around the world. One of the most critical issues under the CTBT would be that of ensuring the safety and reliability of our nuclear weapons stockpile without testing. The safe maintenance and storage of these weapons is a crucial concern. We cannot allow them to fall into disrepair or permit their safety to be called into question.

The Administration has proposed an ambitious program that would verify the safety and reliability of our weapons through computer modeling and simulations. Unfortunately, the jury is still out on the Stockpile Stewardship Program. The last nine years have seen

improvements, but the bottom line is that the Senate is being asked to trust the security of our country to a program that is unproven and unlikely to be fully operational until perhaps 2010. I believe a National Journal article, by James Kitfield, summed it up best by quoting a nuclear scientist who likens the challenge of maintaining the viability of our stockpile without testing to "walking an obstacle course in the dark when your last glimpse of light was a flash of lightning back in 1992."

The most likely problems facing our stockpile are a result of aging. This is a threat because nuclear materials and components degrade in unpredictable ways, in some cases causing weapons to fail. This is compounded by the fact that the U.S. currently has the oldest inventory in the history of our nuclear weapons programs.

Over the last forty years, a large percentage of the weapon designs in our stockpile have required post-deployment tests to resolve problems. Without these tests, not only would the problems have remained undetected, but they also would have gone unrepaired.

The Congressional Research Service reported last year that: "A problem with one warhead type can affect hundreds of thousands of individually deployed warheads; with only 9 types of warheads expected to be in the stockpile in 2000, compared to 30 in 1985, a single problem could affect a large fraction of the U.S. nuclear force." If we are to put our faith in a program other than testing to ensure the safety and reliability of our nuclear deterrent and thus our security, we must have complete faith in its efficacy. The Stockpile Stewardship Program falls well short of that standard.

The United States has chosen to remanufacture our aging stockpile rather than creating and building new weapon designs. This could be a potential problem because many of the components and procedures used in original weapon designs no longer exist. New production procedures need to be developed and substituted for the originals, but we must ensure that the remanufactured weapons will work as designed.

I am concerned further by the fact that some of the weapons in our arsenal are not as safe as we could make them. Of the nine weapon designs currently in our arsenal, only one employs all of the most modern safety and security measures. Our nuclear weapons laboratories are unable to provide the American people with these protections because of the inability of the Stockpile Stewardship Program to completely mimic testing.

At present, I am not convinced the Stockpile Stewardship Program will permit our experts to maintain a credible deterrent in the absence of testing. Without a complete, effective, and proven Stockpile Stewardship pro-

gram, the CTBT could erode our ability to discover and fix problems with the nuclear stockpile and to make safety improvements.

In fact, the most important debate on this issue may be an honest discussion of whether we should commence limited testing and continue such a program with consistency and certainty.

President Reagan's words "trust but verify" remain an important measuring stick of whether a treaty serves the national security interests of the United States. The U.S. must be confident of its ability to detect cheating among member states. While the exact thresholds are classified, it is commonly understood that the United States cannot detect nuclear explosions below a few kilotons of yield. The Treaty's verification regime, which includes an international monitoring system and on-site inspections, was designed to fill the gaps in our national technical means. Unfortunately, the CTBT's verification regime will not be up to that task even if it is ever fully deployed.

Advances in mining technologies have enabled nations to smother nuclear tests, allowing them to conduct tests with little chance of being detected. Similarly, countries can utilize existing geologic formations to decouple their nuclear tests, thereby dramatically reducing the seismic signal produced and rendering the test undetectable. A recent Washington Post article points out that part of the problem of detecting suspected Russian tests at Novaya Zemlya is that the incidents take place in a large granite cave that has proven effective in muffling tests.

The verification regime is further be-
devised by the lack of a common definition of a nuclear test. Russia believes hydro-nuclear activities and sub-critical experiments are permitted under the treaty. The U.S. believes sub-critical experiments are permitted but hydro-nuclear tests are not. Other states believe both are illegal. A common understanding or definition of what is and what is not permitted under the treaty has not been established.

Proponents point out that if the U.S. needs additional evidence to detect violations, on-site inspections can be requested. Unfortunately, the CTBT will utilize a red-light inspection process. Requests for on-site inspections must be approved by at least 30 affirmative votes of members of the Treaty's 51-member Executive Council. In other words, if the United States accused another country of carrying out a nuclear test, we could only get an inspection if 29 other nations concurred with our request. In addition, each country can declare a 50 square kilometer area of its territory as off limits to any inspections that are approved.

The CTBT stands in stark contrast to the Chemical Weapons Convention in the area of verifiability. Whereas the CTBT requires an affirmative vote of the Executive Council for an inspection to be approved, the CWC requires an affirmative vote to stop an inspection from proceeding. Furthermore, the CWC did not exclude large tracts of land from the inspection regime, as does the CTBT.

The CTBT's verification regime seems to be the embodiment of everything the United States has been fighting against in the UNSCOM inspection process in Iraq. We have rejected Iraq's position of choosing and approving the national origin of inspectors. In addition, the 50 square kilometer inspection-free zones could become analogous to the controversy over the inspections of Iraqi presidential palaces. The UNSCOM experience is one that is best not repeated under a CTBT.

Let me turn to some enforcement concerns. Even if the United States were successful in utilizing the laborious verification regime and non-compliance was detected, the Treaty is almost powerless to respond. This treaty simply has no teeth. Arms control advocates need to reflect on the possible damage to the concept of arms control if we embrace a treaty that comes to be perceived as ineffectual. Arms control based only on a symbolic purpose can breed cynicism in the process and undercut for more substantive and proven arms control measures.

The CTBT's answer to illegal testing is the possible implementation of sanctions. It is clear that this will not prove particularly compelling in the decision-making processes of foreign states intent on building nuclear weapons. For those countries seeking nuclear weapons, the perceived benefits in international stature and deterrence generally far outweigh the concern about sanctions that could be brought to bear by the international community.

Further, recent experience has demonstrated that enforcing effective multilateral sanctions against a country is extraordinarily difficult. Currently, the United States is struggling to maintain multilateral sanctions on Iraq, a country that openly seeks weapons of mass destruction and blatantly invaded and looted a neighboring nation, among other transgressions. If it is difficult to maintain the international will behind sanctions on an outlaw nation, how would we enforce sanctions against more responsible nations of greater commercial importance like India and Pakistan?

In particularly grave cases, the CTBT Executive Council can bring the issue to the attention of the United Nations. Unfortunately, this too would most likely prove ineffective, given that permanent members of the Security Council could veto any efforts to punish

CTBT violators. Chances of a better result in the General Assembly are remote at best.

I believe the enforcement mechanisms of the CTBT provide little reason for countries to forego nuclear testing. Some of my friends respond to this charge by pointing out that even if the enforcement provisions of the treaty are ineffective, the treaty will impose new international norms for behavior. In this case, we have observed that "norms" have not been persuasive for North Korea, Iraq, Iran, India, and Pakistan, the very countries whose actions we seek to influence through a CTBT.

If a country breaks the international norm embodied in the CTBT, that country has already broken the norm associated with the Non-Proliferation Treaty (NPT). Countries other than the recognized nuclear powers who attempt to test a weapon must first manufacture or obtain a weapon, which would constitute a violation of the NPT. I fail to see how an additional norm will deter a motivated nation from developing nuclear weapons after violating the longstanding norm of the NPT.

On Tuesday the Senate is scheduled to vote on the ratification of the CTBT. If this vote takes place, I believe the treaty should be defeated. The Administration has failed to make a case on why this treaty is in our national security interests.

The Senate is being asked to rely on an unfinished and unproven Stockpile Stewardship Program. This program might meet our needs in the future, but as yet, it is not close to doing so. The treaty is flawed with an ineffective verification regime and a practically nonexistent enforcement process.

For these reasons, I will vote against ratification of the CTBT.

Mr. DASCHLE. Mr. President, today the Senate formally begins consideration of whether to ratify the Comprehensive Nuclear Test Ban Treaty, CTBT. Each party to this treaty pledges not to carry out any nuclear weapons tests and to refrain from helping others to carry out such tests. CTBT has been signed by over 150 nations, 51 of which have already ratified the treaty. The question before the Senate now is whether we should join this group in an international effort to limit the spread of nuclear weapons.

Although I will have more extensive remarks on the substance of the treaty shortly before the Senate votes, I would like to say a few words now about why I believe the Senate should ratify this important treaty. As in the case of previous arms control agreements, each Senator must ask himself or herself the following series of questions: Is U.S. national security enhanced by Senate ratification of the CTBT? Is this nation better off with the CTBT? Will Senate ratification of CTBT lead to a safer world for our children?

In my view Mr. President, the answer to each of these questions is an unequivocal, unqualified yes for one simple, straightforward reason: a world with fewer countries possessing nuclear weapons is a safer, more secure world for our national security interests, our nation and our children. Senate ratification of CTBT will help us achieve just such a world.

Opponents of the treaty raise two issues: can we verify that other nations are complying with the treaty and would U.S. compliance with the treaty permit this nation to maintain a safe and reliable nuclear deterrent? On the first issue, opponents assert that it is impossible to verify a prohibition of all nuclear tests. Mr. President, let me state now that they are absolutely correct on that point. The intelligence community has confirmed that neither the United States nor the International Monitoring System that would be established under CTBT would ensure the detection of every single nuclear explosion, regardless of size and location.

However, this feature is not unique to CTBT. No arms control treaty is 100 percent verifiable. In just the last two decades, the Senate has ratified numerous treaties knowing full well at the time that it would be possible for a country to successfully skirt one provision or another for some period of time or another. The standard for the Senate on previous treaties and the standard we should apply to this treaty is "effective" verification. In the case of CTBT, effective verification means we will be able to detect, with a high degree of confidence, any tests that could undermine our nuclear deterrent. After examining the information and analysis provided by our intelligence community, our senior military leaders have testified that we can effectively verify this treaty.

Furthermore, with or without CTBT, we need to monitor the nuclear testing activities of other countries and will face the exact same problems people are assigning exclusively to CTBT—with one major difference. In a world of CTBT, the United States would have additional tools at its disposal to determine what has happened. The treaty would permit us to have access to data collected at any of the 321 monitoring sites established as part of the CTBT's International Monitoring System. Under the treaty, we will also be able to conduct on-site inspections of facilities when we suspect questionable activity has occurred. These are resources available to us only if we ratify CTBT.

As for the safety and reliability of our existing nuclear weapons, I am convinced that the science-based stockpile stewardship program will permit us to preserve our nuclear deterrent without testing. I acknowledge up front that this program, for which

we are spending \$4.5 billion annually, is still evolving and it will be a few more years before we will know for certain its effectiveness. However, critics must also acknowledge three other facts. First, our nuclear weapons are safe and reliable today and are likely to remain so for another decade—with or without a stockpile program. Second, although not fully up and running, the stockpile stewardship program has already demonstrated its viability. Although we stopped testing nuclear weapons seven years ago, for the past four years the Department of Energy has been able to certify that our nuclear stockpile is safe and reliable. In order to make this certification, the Department has relied in part on data generated by the early phases of the stockpile stewardship program. Third, the President submitted, and I strongly support, a condition to the treaty that would permit the United States to withdraw from the treaty and resume nuclear testing if we have anything other than the highest confidence in the safety and reliability of our nuclear weapons.

Having said all of this, I would like to raise another important issue today. Regardless of where members stand on the merits of the CTBT, I think there are two things every member of this body should agree upon. The process of treaty ratification is one of the most important responsibilities our founding fathers vested in the United States Senate. In the course of this nation's history, the Senate has never taken this responsibility lightly. It would be a mistake to do so now. Second, it is hard to imagine a treaty with more significant ramifications for our national security for decades to come than the treaty before the Senate today. In the few brief days that this issue has been before us, I have heard senior Senators, members who have cast thousands of votes, state that their vote on CTBT could well be one of the most consequential of their Senate careers. I agree with that assessment.

Unfortunately, we are on the verge of ignoring these two truths. For some unknown reason, the CTBT has become a political football in a high stakes, highly partisan debate. It appears that some are seeking to score political points instead of carefully weighing this nation's national security interests and our role and responsibilities in the world. If politics should stop at the waters' edge, so too should it stop at the door to this chamber when we are deliberating treaties with such tremendous national and international ramifications.

Instead, after over 2 years of inaction, the Senate now finds itself locked in a sprint to a vote that is equally unfair to both the opponents and proponents of this treaty. No member of this body can truly believe he or she has all the information needed to render such a momentous decision. No

member can truly state that the Senate has lived up to the founding fathers' expectations of how this chamber should conduct itself when giving its advice and consent on treaties. No member can really assert with a clear conscience that this was a fair and thorough process for dealing with any issue, let alone one of this magnitude.

Proceeding before we have given full airing to the numerous and complex issues surrounding the CTBT is unfair to the Senate, unfair to our national security and unfair to the American people. Before we begin the calling of the roll asking where we stand on this treaty, we should all take a step back and give ourselves time to study these issues. For the good of our nation's security and Americans for generations to come, I ask members on both sides of the aisle to join me in this effort.

LEGISLATIVE SESSION

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate resume legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

AGRICULTURE, RURAL DEVELOPMENT, FOOD AND DRUG ADMINISTRATION, AND RELATED AGENCIES APPROPRIATIONS ACT, 2000—CONFERENCE REPORT

Mr. WARNER. I ask the Chair to report the pending business.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

A conference report to accompany H.R. 1906, making appropriations for Agriculture, Rural Development, Food and Drug Administration, and Related Agencies for the fiscal year ending September 30, 2000, and for other purposes.

The Senate resumed consideration of the conference report.

CLOTURE MOTION

Mr. WARNER. Mr. President, I send a cloture motion to the desk.

The PRESIDING OFFICER. The cloture motion having been presented under rule XXII, the Chair directs the clerk to read the motion.

The legislative clerk read as follows:

CLOTURE MOTION

We the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, do hereby move to bring to a close debate on the conference report to accompany H.R. 1906, the Agriculture appropriations bill.

Trent Lott, Thad Cochran, Tim Hutchinson, Conrad Burns, Christopher Bond, Ben Lighthorse Campbell, Robert F. Bennett, Craig Thomas, Pat Roberts, Paul Coverdell, Larry E. Craig, Michael B. Enzi, Mike Crapo, Frank Murkowski, Don Nickles, and Pete Domenici.

MORNING BUSINESS

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate

proceed to a period of morning business, with Senators permitted to speak for up to 10 minutes each, with the exception of the distinguished Senator from West Virginia, who will take such time as he may require to deliver a very important address to the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

KEEPING ALCOHOL OFF CAMPUS AND ON THE SHELF

Mr. BYRD. Mr. President, over the years, the culture of college has gradually changed from one of academics and concentrated study to one consumed with partying. Gathering at the library with classmates to prepare for an exam has taken a back seat to sitting around swilling beers at keg parties or ordering a round of shots at the closest bar.

Sadly, the process does not always begin in college. Often times, experimentation with alcohol begins in high school, or even earlier. Large numbers of young people are drinking. According to the 1998 Monitoring the Future Study conducted by the University of Michigan, approximately thirty-three percent of high school seniors, twenty-one percent of tenth graders, and eight percent of eighth graders reported being drunk at least once in a given month. Yes, Mr. President, drunk.

With such startling statistics at the pre-college level, it has become increasingly important for institutions of higher education to take an even more active role in informing and educating highly impressionable, yet extremely vulnerable, college freshmen about the many dangers of this practice. Last year, I added a provision to the Higher Education Act Amendments of 1998 to establish a National Recognition Awards program to identify a select number of colleges and universities with innovative and effective alcohol and drug prevention programs in place on campus. Under the program, each award recipient receives a grant ranging from \$40,000 to \$75,000 to assist in the continuation of its important efforts. I am pleased that I was able to obtain \$850,000 in the Senate's Fiscal Year 2000 Departments of Labor, Health and Human Services, Education, and Related Agencies Appropriations bill to continue funding for this important initiative.

The U.S. Department of Education has recently named seven colleges and universities as recipients of this first-ever grant award. Mr. President, it is encouraging to know that institutions of higher education from all corners of the country are taking aim at the problem of alcohol abuse among our nation's youth through new and creative approaches.

The six recipients of this award include Bowling Green State University at Bowling Green, Ohio; Hobart and

William Smith College at Geneva, New York; the University of Arizona at Tucson, Arizona; Pennsylvania State University at University Park, Pennsylvania; the University of Northern Colorado at Greeley, Colorado; the University of Missouri at Columbia, Missouri; and Utah State University at Logan, Utah. The Bowling Green State University Peer-Based Misperception program, for example, is designed to change attitudes, behaviors, and the campus social environment with an emphasis on first-year students, members of Greek fraternal organizations, and athletes. This program incorporates small group survey research to uncover and dispel misperceptions among peer groups such as a sorority, fraternity, athletic team, or members of a residence hall. Award funds will be used to continue the program, to implement it at other institutions, and to reduce the overall binge drinking rate.

Pennsylvania State University has been recognized for its alcohol-free "HUB Late Night" program, a model alternative activity program offering students multiple forms of free entertainment as a means of curbing high-risk drinking. The goals of the program involve delivering quality entertainment, providing a variety of alcohol-free programs for a diverse student body, encouraging student involvement in designing and implementing programs, and increasing awareness of the program. Approximately 71 percent of participants reported that participation in this program resulted in less drinking for themselves and for other students.

I am pleased that a higher education institution in my state, West Virginia University (WVU), has adopted an approach similar to that at Pennsylvania State University in addressing alcohol abuse among students. West Virginia University recently created the WVU All Night program which each Thursday, Friday, and Saturday night offers students concerts, games, movies, free food, and study rooms as attractive alternatives to bars and nightclubs. According to WVU President David Hardesty, the program has been a great success from the start, attracting an average of 4,000 students each Thursday, Friday, and Saturday night.

While this grant program will certainly serve these seven schools well in providing them with the means to administer and expand their prevention programs, it is my true hope that this grant program will span far beyond dollars and cents. Soon, the Department of Education will be producing a publication highlighting these model programs, and will make this document available to high school counselors throughout the nation. When thinking about college, it is important for students and parents alike to be informed about good alcohol and drug prevention programs. This document

will serve as an important tool in helping students and their parents to make even wiser decisions about where to pursue their college education.

Moreover, the grant recipients of this year's award ought to serve as models to all higher education institutions throughout the country. Each August, many schools face the formidable challenge of determining how best to address the use and abuse of alcohol by underage students. With these model schools, new information will be available to schools still grappling with alcohol abuse problems. I encourage all Senators to pass along this information to institutions of higher education in their respective states.

Mr. President, this program will only begin to touch upon some of the fundamental areas which must be addressed in halting alcohol from rearing its evil head on other vulnerable college campuses. The work now lies ahead for all schools to endorse these noteworthy approaches and ideas which are working on select campuses throughout the United States. Let these seven schools be models for all institutions of higher education today and in the future. I congratulate the awardees of the program, and look forward to a strong, prosperous future for all college-going students, a future that is free from alcohol and other drugs.

Mr. President, I yield the floor.

THE WORK INCENTIVES IMPROVEMENT ACT OF 1999

Mr. JEFFORDS. Mr. President, right now, my home state of Vermont is celebrating Disability Employment Awareness Month. For that reason, I am delighted to speak about the "Work Incentives Improvement Act of 1999," legislation that I developed with my colleagues, Senators KENNEDY, ROTH and MOYNIHAN. This Act, also known as the Work Incentives Improvement Act (WIIA), is the most important piece of legislation for individuals with disabilities since the Americans with Disabilities Act. This legislation is bipartisan. This legislation was brought to the floor of the United States Senate with 80 cosponsors. And, most importantly, this legislation passed through the Senate on June 15th with a unanimous vote of 99-0.

The "Work Incentives Improvement Act" addresses a fundamental flaw in current law. Today, individuals with disabilities are forced to make a choice, an absurd choice. They must choose between working and receiving health care. Under current law, if people with disabilities work and earn over \$500 per month, they will lose their cash payments and health care coverage under Medicaid or Medicare. This is health care coverage that they need. This is health care coverage that they can not get in the private sector. This is not right.

Individuals with disabilities want to work. They have told me this. In fact, national surveys over the past 10 years have consistently confirmed that people with disabilities want to be part of the American workforce. But only one-third of them do work. With the enactment of WIIA, these individuals would not need to worry about losing their health care if they choose to work a forty-hour week, to put in overtime, or to pursue a career advancement. Individuals with disabilities are sitting at home right now, waiting for this legislation to become law. Having a job would provide them with a sense of self-worth. Having a job would allow them to contribute to our economy. Having a job would provide them with a living wage, which is not what one has through Social Security.

Currently, there are 7.5 million individuals with disabilities across the nation who receive health care coverage and cash payments from the federal government. 24,000 of these people live in Vermont. Only, one-half of one percent of the 7.5 million work to their full potential, because, when they earn over \$500 per month, they lose their access to health care coverage. The first part of my legislation tackles this problem. In states that elect to take up this option, WIIA provides continuing access to health care for Social Security Income and Social Security Disability Insurance beneficiaries who work and exceed the income threshold.

Recognizing that some SSI and SSDI recipients will need job training and job placement assistance, the second part of my bill provides these incentives. People with disabilities would have more choices in where to obtain vocational rehabilitation and employment services. In addition, we would increase the incentives to public and participating private providers serving these individuals.

This legislation makes sense. When I came to Congress in 1975, one of my legislative priorities was to provide individuals with disabilities access to the American dream. Through the Individuals with Disabilities Education Act, the Rehabilitation Act, the Americans with Disabilities Act, and the Assistive Technology Act, we have consistently improved the lives of people with disabilities. Unfortunately, one major flaw remains, providing health care to individuals who want to work. The enactment of the Work Incentives Improvement Act would diminish this flaw in federal policy.

The Work Incentives Improvement Act reflects what individuals with disabilities say they need. Over 100 national organizations have given us their input and endorsed our bill. The President has made it clear that he would like to sign this legislation into law by the end of the current year. The Incentives Improvement Act provides the opportunity to bring responsible

change to federal policy and to eliminate a misguided result of the current system—if you don't work, you get health care; if you do work, you don't get health care. The Work Incentives Improvement Act makes living the American dream a reality for millions of individuals with disabilities, who will no longer be forced to choose between the health care coverage they so strongly need and the economic independence they so dearly desire.

I am looking forward to having my colleagues in the House of Representatives finish their work on the Work Incentives Improvement Act. Let's send this bill to President Clinton by the end of this session of the 106th Congress.

CONFIRMATION OF COL. JOHN H. SINCLAIR TO BE UNITED STATES MARSHAL FOR DISTRICT OF VERMONT

Mr. LEAHY. Mr. President, I congratulate Col. John Sinclair on his Senate confirmation as the next United States Marshal for the District of Vermont.

As a 30-year veteran of the Vermont State Police, Col. Sinclair has served as a uniformed trooper at both the Colchester and Bethel Barracks, later joined the Fraud Unit and the Governor's security detail, and then was promoted to the post of Station Commander at the Brattleboro Barracks. He has also commanded both the Criminal Division and the Field Force. In 1996, he was appointed to his present position as director of the Vermont State Police, the department's highest-ranking uniformed post.

I have known Col. Sinclair for nearly 30 years, since the time when he was a new State trooper and I was Chittenden County's new State's attorney. We worked closely together on a number of investigations, trials, and law enforcement education programs. I have watched his career for the past three decades and consider him to be one of the finest police officers with whom I have ever worked. He is a police officer's police officer. He is a strong component of our law enforcement team in Vermont.

He has gained extensive experience with State, federal, and local law enforcement matters. It is fitting that his longstanding service to the people of Vermont culminate in this important law enforcement position. His practical experience, background and training qualify him to be Vermont's 34th United States Marshal.

Again, I congratulate Col. Sinclair and his wife, Barbara, who live in Charlotte, and their two sons, on receiving Senate confirmation as United States Marshal for the District of Vermont.

SESQUICENTENNIAL OF THE SALT LAKE COUNTY SHERIFF'S OFFICE

Mr. HATCH. Mr. President, this month the Salt Lake County Sheriff's Office is celebrating their sesquicentennial anniversary. The Sheriff's Office is a proud tradition of Utah, and I am grateful to them for keeping Salt Lake County a safe place to live and visit.

Pioneers first settled the Salt Lake Valley in 1847. In March 1849, they elected Brigham Young to be their Governor. Then, in October of the same year, John D. Parker was elected to serve as the first sheriff of what would become the state of Utah. Later, in 1852, after the federal government ratified the creation of the office of county sheriff, James B. Ferguson became John D. Parker's successor. Sheriff Ferguson was the first officially elected sheriff of Salt Lake County. This makes the Salt Lake County Sheriff's Office one of the oldest law enforcement agencies in the west. Today, the 1,254 employees of the Sheriff's Office continue that tradition.

Today, there are more than 835,000 citizens of Salt Lake County. These citizens are served by the Sheriff's Office through patrols, investigations, jails—which have held Ted Bundy, Mark Hoffman, and Charles Manson among others—court security, civil service, and specialized services, including K-9, air support, SWAT, and search and rescue units. The Sheriff's Office also coordinates local, state, and federal task forces.

Some of the more heroic deeds have received national recognition. Captain Lloyd Prescott is just one example of the kind of person we have working for the people of Utah. During a hostage situation at a Salt Lake County library, then Lieutenant Lloyd Prescott offered himself as an additional hostage to see if he could defuse the situation. After almost five hours, it was obvious that the suspect was becoming more agitated and that he would likely harm one of the hostages. Lieutenant Prescott then announced himself as a police officer and was forced to shoot the suspect. For this act of bravery and courage, Lieutenant Prescott was awarded the Presidential Commendation from President Clinton, the Governor's Commendation from Governor Leavitt, Officer of the Year from the International Association of the Chiefs of Police, Officer of the Year from the International Foot Printers Association, and Deputy Sheriff of the Year from the National Sheriff's Association. Captain Prescott continues to serve the citizens of Salt Lake County and the Sheriff's Office as the Division Commander for the Special Operations Division.

This is just one example of the many acts of courage, bravery, and simple acts of service performed daily by employees of the Salt Lake County Sher-

iff's Office. I want to extend a public thank you to all the employees and deputies of the Sheriff's Office for their hard work, service, and dedication to upholding justice and the rule of law. I offer my hearty congratulations to them on this landmark anniversary.

MEDICARE BENEFICIARIES ACCESS TO CARE ACT OF 1999

Mr. FEINGOLD. Mr. President, I rise today to express my strong support for S. 1678, the Medicare Beneficiaries Access to Care Act of 1999, a bill to ensure that Medicare beneficiaries across our nation continue to have access to the health care services that they need. The package that has been introduced addresses some of the most troubling areas in implementation of the Balanced Budget Act of 1997, and I commend the Senate Democratic Leader, Senator DASCHLE, for the hard work that he and his staff put into the creation of this bill.

I joined my Senate colleagues to vote in favor of the Balanced Budget Act of 1997, with the expectation that we would save \$100 billion that would help preserve the solvency of the Medicare program. Yet the magnitude of cuts in BBA of 1997 have been much deeper than anyone intended. Present projections indicate that actual reductions have been in the area of \$200 billion, twice as much as originally anticipated.

The unintended consequences of the Balanced Budget Act of 1997 have been severe indeed. And while there is a lot of publicity about the impact of BBA 1997 cuts on entities like hospitals, nursing homes and home health agencies, the real issue here is that the cuts are threatening the ability of our constituents—patients who rely on these entities to provide care, rehabilitation, and life-saving services—to gain access to the care they need.

Take for example the impact of the BBA 1997 Interim Payment System for home health agencies in Medicare. IPS was designed as a way to counteract fraud, waste and abuse within the Medicare program. Unfortunately, the way in which IPS was implemented created a counterintuitive and unfair system that penalizes low-cost areas for their thrift by basing reimbursement on past spending. More than 40 home health agencies in 22 counties have closed in Wisconsin since the implementation of Medicare home health IPS. IPS has ratcheted Medicare home health payments so low that Wisconsin home health agencies are losing hundreds of dollars per patient per day treating Medicare patients. Agencies in Wisconsin are not closing just because the business isn't profitable, they are closing to reduce the devastating rate of loss.

BBA 1997 cuts have also been devastating for our nursing homes and pa-

tients' ability to gain access to outpatient therapy services. Reimbursements to some nursing homes in Wisconsin has been so low that one nursing home administrator in La Crosse, Wisconsin, informed me that his agency, one of the few Medicare-certified ventilator-dependent programs in the region, was losing between \$150 and \$300 per patient per day treating patients who depend on ventilators to breathe. That agency had no choice but to stop new admissions of ventilator-dependent patients. Similarly, residents of nursing homes who require physical therapy, occupational therapy or speech pathology services are faced with an arbitrary \$1500 cap on their services, an amount that is grossly inadequate to provide the necessary rehabilitation to patients recovering from a stroke, an amputation or other life-altering event. These arbitrary caps on the provision of rehabilitative therapy, have the effect—though inadvertently—of placing a cap on the extent to which these patients can regain their independence.

One final area that I would like to raise is the expected impact on hospitals of BBA 1997 changes such as cuts to Graduate Medical Education payments and the impact of a Prospective Payment System on hospital outpatient departments. Preliminary estimates from my constituents at the Wisconsin Health and Hospital Association, WHA, indicate that Wisconsin's 28 teaching hospitals will lose almost \$25 million per year from GME cuts. In addition, WHA projects that Wisconsin hospitals will lose \$30 million over the next three years if PPS is implemented—a loss of such magnitude that several rural hospitals in Wisconsin would likely be forced to close.

S. 1678 speaks directly to these concerns by increasing payments to Medicare Dependent Hospitals and Critical Access Hospitals, of which my home state of Wisconsin has 44. S. 1678 also includes stop-loss protection to ensure that hospitals do not suffer dramatic losses under the Outpatient Prospective Payment System. Lastly, S. 1678 freezes Indirect Medical Education cuts at 6.5% over 8 years and increases the number of residency slots available in rural areas.

The provisions of S. 1678 are important to ensuring continued access to care, and I hope my colleagues will join me in supporting this legislation.

INTRODUCTION OF S. 1714

Mr. WARNER. Mr. President, I ask unanimous consent that the Senator from Virginia may proceed for not to exceed 4 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WARNER. I thank the Chair.

(The remarks of Mr. WARNER pertaining to the introduction of S. 1714

are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Williams, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

REPORT ON THE CONTINUED PRODUCTION OF THE NAVAL PETROLEUM RESERVES BEYOND APRIL 5, 2000—MESSAGE FROM THE PRESIDENT—PM 62

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, together with an accompanying report; which was referred to the Committee on Armed Services.

To the Congress of the United States:

In accordance with section 201(3) of the Naval Petroleum Reserves Production Act of 1976 (10 U.S.C. 7422)(c)(2), I am informing you of my decision to extend the period of production of the naval petroleum reserves for a period of 3 years from April 5, 2000, the expiration date of the currently authorized period of production.

Attached is a copy of the report investigating the necessity of continued production of the reserves as required by 10 U.S.C. 7422(c)(2)(B). In light of the findings contained in that report, I certify that continued production from the naval petroleum reserves is in the national interest.

WILLIAM J. CLINTON.

THE WHITE HOUSE, October 8, 1999.

MEASURE REFERRED

The following bill, previously received from the House of Representatives for the concurrence or the Senate, was read the first and second times by unanimous consent and referred as indicated:

H.R. 1907. An act to amend title 35, United States Code, to provide enhanced protection for inventors and innovators, protect patent terms, reduce patent litigation, and for other purposes; to the Committee on the Judiciary.

MEASURE PLACED ON THE CALENDAR

The following measure was discharged from the Committee on Rules

and Administration and ordered placed on the calendar:

S. 1593. A bill to amend the Federal Election Campaign Act of 1971 to provide bipartisan campaign reform.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. THOMPSON, from the Committee on Governmental Affairs, without amendment:

S. 1232. A bill to provide for the correction of retirement coverage errors under chapters 83 and 84 of title 5, United States Code (Rept. No. 106-178).

By Mr. LUGAR, from the Committee on Agriculture, Nutrition, and Forestry, with an amendment in the nature of a substitute:

S. 935. A bill to amend the National Agricultural Research, Extension, and Teaching Policy Act of 1977 to authorize research to promote the conversion of biomass into biobased industrial products, and for other purposes (Rept. No. 106-179).

By Mr. GRAMM, from the Committee on Banking, Housing, and Urban Affairs, without amendment:

S. 1712. An original bill to provide authority to control exports, and for other purposes (Rept. No. 106-180).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. HARKIN (for himself and Mr. GRAMS):

S. 1710. A bill to require the Secretary of the Treasury to mint coins in conjunction with the minting of coins by the Republic of Iceland in commemoration of the millennium of the discovery of the New World by Leif Ericson; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. MCCAIN (for himself and Mr. BURNS):

S. 1711. A bill to amend the Internal Revenue Code of 1986 to provide for a deferral of tax on gain from the sale of telecommunications businesses in specific circumstances or a tax credit and other incentives to promote diversity of ownership in telecommunications businesses; to the Committee of Finance.

By Mr. GRAMM:

S. 1712. An original bill to provide authority to control exports, and for other purposes; from the Committee on Banking, Housing, and Urban Affairs; placed on the calendar.

Mr. ABRAHAM (for himself and Mr. KENNEDY):

S. 1713. A bill to amend the Immigration and Nationality Act to extend for an additional 2 years the period for admission of an alien as a nonimmigrant under section 101(a)(15)(S) of such Act, and to authorize appropriations for the refugee assistance program under chapter 2 of title IV of the Immigration and Nationality Act; to the Committee on the Judiciary.

By Mr. WARNER:

S. 1714. A bill to amend the Internal Revenue Code of 1986 to allow penalty-free distributions from qualified retirement plans of individuals residing in presidentially de-

clared disaster areas; to the Committee on Finance.

By Mr. ROCKEFELLER:

S. 1715. A bill to provide for an interim census of Americans residing aboard, and to require that such individuals be included in the 2010 decennial census; to the Committee on Governmental Affairs.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. GRAMS:

S. Res. 200. A resolution designating the week of February 14-20 as "National Biotechnology Week."; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HARKIN (for himself and Mr. GRAMS):

S. 1710. A bill to require the Secretary of the Treasury to mint coins in conjunction with the minting of coins by the Republic of Iceland in commemoration of the millennium of the discovery of the New World by Leif Ericson; to the Committee on Banking, Housing, and Urban Affairs.

LEIF ERICSON MILLENNIUM COMMEMORATIVE COIN ACT

Mr. HARKIN. Mr. President, I am pleased to introduce the Leif Ericson Millennium Commemorative Coin Act along with my colleague Senator ROD GRAMS from Minnesota. This bipartisan legislation would authorize the U.S. Mint to issue a coin jointly with the Icelandic National Bank in commemoration of Leif Ericson and his voyage and exploration of North America. The famous Viking explorer is regarded as the first European to set foot on North American soil in the year 1000 AD. Next year marks the 1000th anniversary of Leif Ericson's Voyage of Discovery and this coin will commemorate this landmark event in North American history. This same legislation passed the House on July 19, 1999, and passed both the House and the Senate as amendments during the 105th Congress.

The Government of Iceland is an important North Atlantic Treaty Organization (NATO) ally and this action would reiterate our strong relationship with and support for their nation. Iceland votes with the United States on virtually all United Nations and NATO issues and has formulated foreign policies parallel to ours. They also are cutting costs at our military base in Keflavik. Iceland has refrained from whaling, encouraged more U.S. trade and investment and initiated a partnership with the State of Alaska. The Government of Iceland has already approved a silver 1000 Kronor Icelandic coin to be produced by the U.S. Mint that will be packaged and issued simultaneously with the U.S. Leif Ericson

Commemorative Coin. We believe jointly issuing these coins will help further relations between our nations.

Mr. President, the United States Congress strengthened United States-Icelandic relations by presenting a Leif Ericson statue as a gift to Iceland in 1930 as a gesture of memorializing Ericson's Voyage of Discovery. In 1964, President Lyndon B. Johnson made October 9 "Leif Ericson Day" in commemoration of this famous Norwegian Viking explorer. The Leif Ericson Commemorative Coin in the year 2000 would commemorate the millennial anniversary of Ericson's voyage and would display our commitment to continuing this relationship for the coming millennium.

Mr. President, the Leif Ericson Millennium Commemorative Coin Act allows a simultaneous issuance of a commemorative U.S. silver dollar coin and a silver 1000 Kroner Icelandic coin. Both coins are to be produced in limited mintages, with U.S. Mint issuing a boxed set. Mint and surcharge proceeds from the coins will fund scholarships and student exchange programs between Iceland and United States. The U.S. Mint has read and approved the identical House version as meeting all the guidelines contained in the 1995 Congressional House Banking Committee Commemorative Coins Reforms Act, which protects the taxpayer from any costs. We feel such a coin is an important step in recognizing the important role Iceland has played in North American history. In the coming days, I will be talking to my colleagues in joining me in supporting this legislation. Mr. President, I ask for unanimous consent for a copy of this bill to be included in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1710

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Leif Ericson Millennium Commemorative Coin Act".

SEC. 2. COIN SPECIFICATIONS.

(a) **\$1 SILVER COINS.**—In conjunction with the simultaneous minting and issuance of commemorative coins by the Republic of Iceland in commemoration of the millennium of the discovery of the New World by Leif Ericson, the Secretary of the Treasury (hereafter in this Act referred to as the "Secretary") shall mint and issue not more than 500,000 \$1 coins, which shall—

- (1) weigh 26.73 grams;
- (2) have a diameter of 1.500 inches; and
- (3) contain 90 percent silver and 10 percent copper.

(b) **LEGAL TENDER.**—The coins minted under this Act shall be legal tender, as provided in section 5103 of title 31, United States Code.

(c) **NUMISMATIC ITEMS.**—For purposes of section 5136 of title 31, United States Code, all coins minted under this Act shall be considered to be numismatic items.

SEC. 3. SOURCES OF BULLION.

The Secretary may obtain silver for minting coins under this Act from any available source, including stockpiles established under the Strategic and Critical Materials Stock Piling Act.

SEC. 4. DESIGN OF COINS.

(a) **DESIGN REQUIREMENTS.**—

(1) **IN GENERAL.**—The design of the coins minted under this Act shall be emblematic of the millennium of the discovery of the New World by Leif Ericson.

(2) **DESIGNATION AND INSCRIPTIONS.**—On each coin minted under this Act there shall be—

- (A) a designation of the value of the coin;
- (B) an inscription of the year "2000"; and
- (C) inscriptions of the words "Liberty", "In God We Trust", "United States of America", and "E Pluribus Unum".

(b) **SELECTION.**—The design for the coins minted under this Act shall be—

- (1) selected by the Secretary after consultation with the Leifur Eirikson Foundation and the Commission of Fine Arts; and
- (2) reviewed by the Citizens Commemorative Coin Advisory Committee.

SEC. 5. ISSUANCE OF COINS.

(a) **QUALITY OF COINS.**—Coins minted under this Act shall be issued in uncirculated and proof qualities.

(b) **MINT FACILITY.**—Only 1 facility of the United States Mint may be used to strike any particular quality of the coins minted under this Act.

(c) **COMMENCEMENT OF ISSUANCE.**—The Secretary may issue coins minted under this Act beginning January 1, 2000.

(d) **TERMINATION OF MINTING AUTHORITY.**—No coins may be minted under this Act after December 31, 2000.

SEC. 6. SURCHARGES.

(a) **IN GENERAL.**—All sales of coins minted under this Act shall include a surcharge of \$10 per coin.

(b) **DISTRIBUTION.**—All surcharges received by the Secretary from the sale of coins issued under this Act shall be promptly paid by the Secretary to the Leifur Eirikson Foundation for the purpose of funding student exchanges between students of the United States and students of Iceland.

(c) **AUDITS.**—The Leifur Eirikson Foundation shall be subject to the audit requirements of section 5134(f)(2) of title 31, United States Code, with regard to the amounts received by the Foundation under subsection (b).

SEC. 7. GENERAL WAIVER OF PROCUREMENT REGULATIONS.

(a) **IN GENERAL.**—Except as provided in subsection (b), no provision of law governing procurement or public contracts shall be applicable to the procurement of goods and services necessary for carrying out the provisions of this Act.

(b) **EQUAL EMPLOYMENT OPPORTUNITY.**—Subsection (a) shall not relieve any person entering into a contract under the authority of this Act from complying with any law relating to equal employment opportunity.

By Mr. MCCAIN (for himself and Mr. BURNS):

S. 1711. A bill to amend the Internal Revenue Code of 1986 to provide for a deferral of tax on gain from the sale of telecommunications businesses in specific circumstances or a tax credit and other incentives to promote diversity of ownership in telecommunications businesses; to the Committee on Finance.

THE TELECOMMUNICATIONS OWNERSHIP DIVERSITY ACT OF 1999

Mr. MCCAIN. Mr. President, I rise today to introduce legislation that will make sure that new entrants and small businesses will have the chance to enter and grow in today's megacorporation-dominated telecommunications marketplace. Together with my good friend and colleague, Communications Subcommittee Chairman CONRAD BURNS, I am pleased to bring forward for the Senate's consideration The Telecommunications Ownership Diversity Act of 1999.

Yesterday's Washington Post had it exactly right in reporting that, "the telecommunications world is being remade by technology, deregulation, and a relentless momentum toward greater and greater size." In the past week alone MCI/WorldComm and Sprint announced what could be the largest merger on record, the FCC approved a merger that will create the country's largest local telephone company, and it has pending before it many other major mergers, including those that would unite CBS with Viacom and Bell Atlantic with GTE.

Although this industry restructuring is unprecedented, it is not unexpected. Digital technology enables formerly-separate voice, video and data services to be offered in combination with each other. This "convergence" makes it possible for many more telecommunications companies to compete with each other. And so some telecommunications businesses sell parts of their companies in an effort to focus on specific markets, while others acquire new companies to expand into new markets.

This has opened the door for large companies to improve their business prospects. But what about new entrants and small businesses? Unfortunately, for them the story has been quite different.

Mr. President, no one needs to be told that any small business faces significant barriers in trying to enter the telecommunications industry. These barriers are even more formidable when the entrepreneur happens to be a woman or a member of a minority group, due to their historically more difficult job of obtaining needed financing. Therefore, in this current telecom industry mixer, small businesses, especially those owned by minorities or women, are often left without partners, watching as bigger, more established companies, get to dance.

That's not right, but there is an answer. The answer isn't to forbid mergers out-of-hand, or to retain hopelessly outdated FCC ownership restrictions, or to pursue constitutionally or economically doomed set-aside programs. The answer is to give established industry players economic incentives to

deal with new entrants and small businesses that counterbalance the incentives they have to deal with larger companies.

And that's what our bill does. The Telecommunications Ownership Diversity Act will promote entry into the telecommunications industry during this period of unprecedented restructuring by providing carefully-limited changes to the tax law. These changes to the tax law are an indispensable component of the solution. Under current law, smaller companies typically must purchase properties for cash, and cash transactions are fully taxable to the seller. So naturally sellers of telecommunications businesses prefer to sell for stock, which is tax-deferred, and which large companies have to offer.

The act will level the playing field for new entrants and small businesses by giving telecommunications business sellers a tax deferral when the property is bought for cash by a small business telecom company. The act will also encourage the entry of new players and the growth of existing small businesses by enabling the seller of a telecom business to claim the tax deferral or gain if it invests the proceeds of any sale of its business in purchasing an interest in an eligible small business.

In recognition of the convergence of telecommunications services and the growing importance of wireless and Internet-based services as an essential component of the telecommunications market, the telecommunications businesses eligible for this capital gains tax deferral are broadly defined to include not only broadcast and cable TV-type businesses, but also wireline and wireless telephone service providers and resellers, Internet service providers, information technology hardware and software companies, and video service providers.

The Secretary of the Treasury is directed to establish the eligibility criteria for small businesses and individuals to qualify, based on the characteristics of the different types of telecommunications businesses and on actual data from recent marketplace transactions. In setting these limits the Secretary is empowered to establish different qualifications for different classes of eligible purchasers, such as minorities and women, to the extent consistent with law. To eliminate the potential for abuse, the act would require the eligible purchaser to hold any property acquired for three years, during which time it could only be sold to an unrelated eligible purchaser. The General Accounting Office is required to thoroughly audit and report on the administration and effect of the act every two years.

Mr. President, I could say that, by utilizing tax deferral options in this way, we are sharing with smaller companies a portion of the investment ben-

efits our tax laws give to major telecom companies. That would be accurate, but the real need for this act is much more fundamental and much simpler than that. Hallmark developments in the telecommunications industry have been made by gifted individuals with small companies and unlimited vision. In this sense the telecommunications industry is a true microcosm of the American free-market system, in which the benefits produced by its entrepreneurs generate benefits that extend to all of us. It is therefore critically important that new entrants and small businesses have a chance to participate across the broad spectrum of industries that will make up the telecommunications industry in the Information Age. The act will help them do that, and Senator BURNS and I are proud to sponsor it and to work for its enactment.

By Mr. ABRAHAM (for himself and Mr. KENNEDY):

S. 1713. A bill to amend the Immigration and Nationality Act to extend for an additional 2 years the period for admission of an alien as a nonimmigrant under section 101(a)(15)(S) of such Act, and to authorize appropriations for the refugee assistance program under chapter 2 of title IV of the Immigration and Nationality Act; to the Committee on the Judiciary.

S VISA AND REFUGEE ASSISTANCE
AUTHORIZATION ACT

Mr. ABRAHAM. I rise to introduce a bill, the "S Visa and Refugee Assistance Authorization Act," to extend the authorization for two provisions of the Immigration and Nationality Act. The bill is cosponsored by Senator KENNEDY and is supported by the administration and the House immigration subcommittee. The legislation simply would extend for an additional two years the authorization of "S" temporary visas, which are used to allow individuals to stay in the United States to assist in criminal investigations. A sense of the Congress on the need to use these visas in more alien smuggling cases is also included. The bill also would extend for three years the authorization of refugee assistance. Such assistance is provided to localities and community-based organizations to help refugees upon their arrival in the United States. My hope is that these noncontroversial provisions can be passed expeditiously. I ask unanimous consent that the text of the legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1713

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "S Visa and Refugee Assistance Authorization Act".

SEC. 2. SENSE OF CONGRESS.

In light of the increasing problem of alien smuggling into the United States, it is the sense of the Congress that the Attorney General should use the provision of non-immigrant status under section 101(a)(15)(S) of the Immigration and Nationality Act in a greater number of alien smuggling investigations per year than has been done in the past.

SEC. 3. EXTENSION OF AUTHORIZATION FOR ADMISSION OF "S" VISA NON-IMMIGRANTS.

Section 214(k)(2) of the Immigration and Nationality Act (8 U.S.C. 1184(k)(2)) is amended by striking "5" and inserting "7".

SEC. 4. AUTHORIZATION OF APPROPRIATIONS FOR REFUGEE ASSISTANCE.

Section 414(a) of the Immigration and Nationality Act (8 U.S.C. 1524(a)) is amended by striking "1998 and 1999" and inserting "2000 through 2002".

By Mr. WARNER:

S. 1714. A bill to amend the Internal Revenue Code of 1986 to allow penalty free distribution from qualified retirement plans of individuals residing in presidentially declared disaster areas; to the Committee on Finance.

RETIREMENT PENALTY RELIEF FOR DISASTER
VICTIMS

Mr. WARNER. Mr. President, I introduce a bill to amend the Internal Revenue Code of 1986 to allow penalty-free distributions from qualified retirement programs of individuals residing in Presidential declared disaster areas.

I and so many of my colleagues have been visiting our States and working with our Governors and State legislators, city councilpersons and mayors particularly with regard to the devastation of floods we have seen as a consequence of the most recent hurricane.

I looked into the faces of these suffering people. And one of them—this was not my idea—one of them came to me with the simplest type of request. I thought it merited the attention of the Senate. I put it into this bill that I now introduce in the Senate.

Despite an individual's or family's best efforts to plan for the future, sometimes the unexpected strikes—hurricanes and natural disasters. When that happens, people need all the tools available to rebuild their lives, the lives of their families, and to become an integral part of those communities.

One community, Franklin, VA, which is in the central part of the State, in the old rural part of the State, dependent largely on agriculture, which has flat land—I say to my distinguished colleague, Senator HELMS, how badly his State was hit by the same storm—had 18 inches of rain in less than 2 hours. There is no large riverbed there or drainage ditches. And as a result, the water rose in this town up to the second level of the stores and the houses. It went into a railyard and toppled enormous freight cars, particularly tank cars with petroleum. And suddenly this whole community was awash in foul water of 8 to 10 to 12 feet some places in height. There was no

place for the water to run off, except gradually over this flat territory.

These people need to rebuild their lives and their homes. Families are faced with repairing and replacing damaged property and lost property. Many are forced to draw on savings, including their retirement accounts, to meet expenses. However, if they choose to tap upon their retirement plans or accounts, they are saddled with a 10-percent additional Federal tax for early distribution. That was put in the law for good reason—to deter people from going into these plans where they had some tax benefits. But let's stop to think: That may be the only recourse to financial salvation in the wake of an act of God Almighty.

They need help. Taxpayers coping with these disasters should not have to face the burden of a Federal tax penalty. This bill is very simple. It waives the 10 percent additional tax levied on early distributions from qualified retirement plans or retirement accounts for residents of federally declared disaster areas—that means the President of the United States has declared that county a disaster area—designated after July 31, 1999.

It is my intention that these distributions will be used for the repair or replacement of property destroyed or damaged by an unforeseen natural disaster or for emergency expenses arising from such a tragic event.

The taxpayer must be a resident of an area declared eligible. I point that out: a resident of an area eligible by the President for Federal disaster assistance, and the distribution must be taken within 1 year of the disaster declaration.

The current Tax Code waives the 10-percent penalty for distribution for certain medical expenses, health insurance premiums for the unemployed, higher education expenses, and the purchase of a first home. In my view, eliminating this additional tax for individuals and families suffering from the effects of unforeseen natural disasters makes plain common sense.

How grateful all of us are for our constituents coming to the great city of Washington, DC, and supplying us with ideas which probably are before us every day but somehow we overlook them.

Tropical Storm Dennis and Hurricane Floyd have had a devastating effect on my State. People in Southside and Tidewater, VA, are attempting to rebuild their lives and to recover some of what they lost. We should remove any disincentive, any roadblock that may hinder rebuilding and recovery.

By Mr. ROCKEFELLER:

S. 1715. A bill to provide for an interim census of Americans residing abroad, and to require that such individuals be included in the 2010 decennial census; to the Committee on Governmental Affairs.

CENSUS OF AMERICANS ABROAD ACT

Mr. ROCKEFELLER. Mr. President, millions of Americans live and work abroad. While living abroad, they continue to pay taxes and vote. They are Americans, and they want and deserve to be counted in the decennial Census. In order to achieve this important goal, we must plan and prepare.

The legislation introduced today directs the Secretary of Commerce to use existing authority to conduct a special census of Americans abroad in 2003 to determine how to include this population in the next decennial Census in 2010. While we wish that Americans abroad could be part of the 2000 Census, there unfortunately not the time or opportunity to do so. But it is vital that we act now to ensure that plans are in place for the future.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1715

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Census of Americans Abroad Act".

SEC. 2. FINDINGS; SENSE OF CONGRESS.

(a) FINDINGS.—Congress finds that—

(1) an estimated 3,000,000 to 6,000,000 Americans live and work overseas while continuing to vote and pay taxes in the United States;

(2) Americans residing abroad help increase exports of American goods because they traditionally buy American, sell American, and create business opportunities for American companies and workers, thereby strengthening the United States economy, creating jobs in the United States, and extending United States influence around the globe;

(3) Americans residing abroad play a key role in advancing this Nation's interests by serving as economic, political, and cultural "ambassadors" of the United States; and

(4) the major business, civic, and community organizations representing Americans and companies of the United States abroad support the counting of all Americans residing abroad by the Bureau of the Census, and are prepared to assist the Bureau of the Census in this task.

(b) SENSE OF CONGRESS.—It is the sense of Congress that—

(1) the Bureau of the Census should undertake a census of all Americans residing abroad in a special census, and that the necessary funding should be appropriated for this purpose;

(2) the Bureau of the Census should, after completing that special census, review the means by which Americans residing abroad may be included in the 2010 decennial census; and

(3) the Bureau of the Census should take appropriate measures to provide for the inclusion of Americans residing abroad in the 2010 decennial census and decennial censuses thereafter.

SEC. 3. COUNTING OF AMERICANS RESIDING ABROAD.

(a) IN GENERAL.—The Secretary of Commerce shall—

(1) using any authorities available to the Secretary under section 182 or any other provision of title 13, United States Code, take a special census of all Americans residing abroad as of April 1, 2003 (in this Act referred to as the "special census");

(2) submit the final tabulations under the special census to the President and Congress within 9 months after the date specified in paragraph (1), broken down into all appropriate categories, including—

(A) Americans residing abroad affiliated with the Federal Government, and their dependents; and

(B) Americans residing abroad not affiliated with the Federal Government, and their dependents;

(3) not later than June 30, 2005, submit to the President and Congress a report containing any recommendations the Secretary may have with respect to the inclusion of Americans residing abroad in future decennial censuses, including—

(A) counting methodologies;

(B) the purposes for which any information could or should be used; and

(C) whether Americans residing abroad can be included in the 2010 decennial census for purposes of the apportionment of Representatives in Congress among the several States and, if so, how that should be done; and

(4) take appropriate measures—

(A) to provide for the inclusion of Americans residing abroad in the 2010 decennial census and decennial censuses thereafter; and

(B) to make use of the information obtained from such censuses for such purposes as, and to the maximum extent that, the Secretary considers feasible and appropriate.

(b) INTERIM REPORT ON SPECIAL CENSUS.—Not later than June 30, 2002, the Secretary of Commerce shall submit to the committees of Congress having legislative jurisdiction over the census a report which shall include—

(1) a summary of how the plans and preparations for carrying out the special census are proceeding;

(2) a brief description or outline of how the tabulations in the special census are to be carried out; and

(3) information identifying any experts, consultants, interest groups, or other persons outside the Bureau of the Census who were consulted in connection with the special census.

(c) CONFIDENTIALITY OF INFORMATION; PENALTIES.—The provisions of section 9 and chapter 7 of title 13, United States Code, shall apply with respect to the special census.

(d) LIMITED USE OF DATA.—The data obtained from the special census may not be used for any purpose not specifically provided for under this section.

(e) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated such sums as may be necessary to carry out this Act.

ADDITIONAL COSPONSORS

S. 315

At the request of Mr. ASHCROFT, the name of the Senator from Illinois (Mr. FITZGERALD) was added as a cosponsor of S. 315, a bill to amend the Agricultural Trade Act of 1978 to require the President to report to Congress on any selective embargo on agricultural commodities, to provide a termination date

for the embargo, to provide greater assurances for contract sanctity, and for other purposes.

S. 758

At the request of Mr. ASHCROFT, the name of the Senator from Pennsylvania (Mr. SANTORUM) was added as a cosponsor of S. 758, a bill to establish legal standards and procedures for the fair, prompt, inexpensive, and efficient resolution of personal injury claims arising out of asbestos exposure, and for other purposes.

S. 868

At the request of Mr. GRAHAM, the name of the Senator from Arkansas (Mrs. LINCOLN) was added as a cosponsor of S. 868, a bill to make forestry insurance plans available to owners and operators of private forest land, to encourage the use of prescribed burning and fuel treatment methods on private forest land, and for other purposes.

S. 935

At the request of Mr. BINGAMAN, his name was added as a cosponsor of S. 935, a bill to amend the National Agricultural Research, Extension, and Teaching Policy Act of 1977 to authorize research to promote the conversion of biomass into biobased industrial products, and for other purposes.

At the request of Mr. BURNS, his name was added as a cosponsor of S. 935, supra.

S. 1020

At the request of Mr. GRASSLEY, the name of the Senator from Iowa (Mr. HARKIN) was added as a cosponsor of S. 1020, a bill to amend chapter 1 of title 9, United States Code, to provide for greater fairness in the arbitration process relating to motor vehicle franchise contracts.

S. 1109

At the request of Mr. MCCONNELL, the name of the Senator from Rhode Island (Mr. REED) was added as a cosponsor of S. 1109, a bill to conserve global bear populations by prohibiting the importation, exportation, and interstate trade of bear viscera and items, products, or substances containing, or labeled or advertised as containing, bear viscera, and for other purposes.

S. 1187

At the request of Mr. DORGAN, the name of the Senator from Nevada (Mr. BRYAN) was added as a cosponsor of S. 1187, a bill to require the Secretary of the Treasury to mint coins in commemoration of the bicentennial of the Lewis and Clark Expedition, and for other purposes.

S. 1263

At the request of Mr. JEFFORDS, the name of the Senator from Missouri (Mr. ASHCROFT) was added as a cosponsor of S. 1263, a bill to amend the Balanced Budget Act of 1997 to limit the reductions in medicare payments under the prospective payment system for hospital outpatient department services.

S. 1310

At the request of Ms. COLLINS, the name of the Senator from Virginia (Mr. WARNER) was added as a cosponsor of S. 1310, a bill to amend title XVIII of the Social Security Act to modify the interim payment system for home health services, and for other purposes.

S. 1333

At the request of Mr. WYDEN, the name of the Senator from Maine (Ms. SNOWE) was added as a cosponsor of S. 1333, a bill to expand homeownership in the United States.

S. 1448

At the request of Mr. HUTCHINSON, the name of the Senator from Michigan (Mr. ABRAHAM) was added as a cosponsor of S. 1448, a bill to amend the Food Security Act of 1985 to authorize the annual enrollment of land in the wetlands reserve program, to extend the program through 2005, and for other purposes.

S. 1485

At the request of Mr. NICKLES, the name of the Senator from Michigan (Mr. ABRAHAM) was added as a cosponsor of S. 1485, a bill to amend the Immigration and Nationality Act to confer United States citizenship automatically and retroactively on certain foreign-born children adopted by citizens of the United States.

S. 1491

At the request of Mr. GRAMS, the name of the Senator from Alaska (Mr. MURKOWSKI) was added as a cosponsor of S. 1491, a bill to authorize a comprehensive program of support for victims of torture abroad.

S. 1558

At the request of Mr. BAUCUS, the names of the Senator from Maryland (Mr. SARBANES) and the Senator from Nevada (Mr. BRYAN) were added as cosponsors of S. 1558, a bill to amend the Internal Revenue Code of 1986 to provide a tax credit for holders of Community Open Space bonds the proceeds of which are used for qualified environmental infrastructure projects, and for other purposes.

S. 1580

At the request of Mr. ROBERTS, the name of the Senator from Colorado (Mr. CAMPBELL) was added as a cosponsor of S. 1580, a bill to amend the Federal Crop Insurance Act to assist agricultural producers in managing risk, and for other purposes.

At the request of Mr. ROBERTS, the name of the Senator from Georgia (Mr. CLELAND) was withdrawn as a cosponsor of S. 1580, supra.

S. 1652

At the request of Mr. ROBERTS, his name was added as a cosponsor of S. 1652, a bill to designate the Old Executive Office Building located at 17th Street and Pennsylvania Avenue, NW, in Washington, District of Columbia, as the Dwight D. Eisenhower Executive Office Building.

S. 1673

At the request of Mr. DEWINE, the name of the Senator from Oklahoma (Mr. INHOFE) was added as a cosponsor of S. 1673, a bill to amend titles 10 and 18, United States Code, to protect unborn victims of violence.

SENATE RESOLUTION 190

At the request of Mr. CAMPBELL, the names of the Senator from Delaware (Mr. ROTH), the Senator from Nevada (Mr. BRYAN), and the Senator from Montana (Mr. BAUCUS) were added as cosponsors of Senate Resolution 190, a resolution designating the week of October 10, 1999, through October 16, 1999, as National Cystic Fibrosis Awareness Week.

SENATE RESOLUTION 200—DESIGNATING THE WEEK OF FEBRUARY 14–20 AS “NATIONAL BIOTECHNOLOGY WEEK”

Mr. GRAMS submitted the following resolution; which was referred to the Committee on the Judiciary:

S. RES. 200

Whereas biotechnology is increasingly important to the research and development of medical, agricultural, industrial, and environmental products;

Whereas biotechnology has been responsible for breakthroughs and achievements which have benefited people for centuries and, in the 20th century, has contributed to increasing the lifespan of Americans by 25 years through the development of vaccines, antibiotics, and other drugs;

Whereas biotechnology is central to research for cures to diseases such as cancer, diabetes, epilepsy, multiple sclerosis, heart and lung disease, Alzheimer's disease, Acquired Immune Deficiency Syndrome (AIDS), and innumerable other medical ailments;

Whereas biotechnology contributes to crop yields and farm productivity and enhances the quality, value, and suitability of crops for food and other uses which are critical to America's agricultural system;

Whereas biotechnology promises environmental benefits including protection of water quality, conservation of topsoil, improvement of waste management techniques, and reduction of chemical pesticide usage;

Whereas biotechnology contributes to the success of the United States in international commerce and trade;

Whereas biotechnology will be an important catalyst for creating jobs in the 21st century; and

Whereas it is important for all Americans to understand the role biotechnology contributes to their quality of life: Now, therefore, be it

Resolved, That the Senate—

(1) designates the week of February 14–20 of the year 2000 as “National Biotechnology Week”; and

(2) requests that the President issue a proclamation calling on the people of the United States to observe this week with appropriate programs, ceremonies, and activities.

• Mr. GRAMS. Mr. President, I rise today to submit a resolution which would designate the week of February 14–20 as “National Biotechnology Week.”

I'm submitting this resolution because I believe it is important for our nation to recognize the role biotechnology has played in enhancing, saving and extending our lives. Indeed, biotechnology has extended the average American's life by nearly 25 years.

Mr. President, the 20th century has shown the most significant advancements in all fields of biotechnology and there is reason to believe it will continue to deliver great hope and promise well into the 21st century. This industry is one of our fastest growing and will add thousands of new job opportunities to our economy. Just as the weeks of January and February, 2000 represent the start of a countdown to a new millennium beginning in 2001, they also represent the countdown to breakthroughs we all once thought were impossible.

Already, advances made in agricultural biotechnology have given us increased crop yields and promises of new uses for our agricultural commodities as well as the higher quality, more nutritious products to improve the competitiveness of our farmers. Great strides have been made through the use of biotechnology and health care and hold the keys to successfully treating or curing diseases such as cancer, diabetes and countless other conditions. Biotechnology has assisted us in improving water quality, conserving precious topsoil and reducing the need for pesticides which helps us improve our environment for future generations.

Mr. President, these are just a few examples of the impact biotechnology has had on our lives. I believe Americans should understand the importance of biotechnology in our way of life. With the passage of the resolution I introduce today, we provide a forum for many events in February to salute and promote this industry of the future.

I urge my colleagues to join me in recognizing this important industry.●

AMENDMENTS SUBMITTED

DISTRICT OF COLUMBIA COURT EMPLOYEES WHISTLEBLOWER PROTECTION ACT OF 1999

THOMPSON AMENDMENT NO. 2290

Mr. WARNER (for Mr. THOMPSON) proposed an amendment to the bill (H.R. 858) to amend title 11, District of Columbia Code, to extend coverage under the whistleblower protection provisions of the District of Columbia Comprehensive Merit Personnel Act of 1978 to personnel of the courts of the District of Columbia; as follows:

On page 5, strike lines 5 through 12.

On page 5, line 13, strike "(e)" and insert "(d)".

On page 5, line 18, strike "(f)" and insert "(e)".

NOTICE OF HEARING

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. MURKOWSKI. Mr. President, I would like to announce that on Wednesday, October 13, 1999, the Committee on Energy and Natural Resources and the Committee on Governmental Affairs will hold a joint oversight hearing on the Department of Energy's implementation of provisions of the Department of Defense Authorization Act which create the National Nuclear Security Administration. The hearing will begin at 10 a.m. in room 366 of the Dirksen Senate Office Building in Washington, DC.

ADDITIONAL STATEMENTS

TRIBUTE TO SGT. JOHN M. FEILER

● Mr. CRAIG. Mr. President, I rise to pay tribute to an Idaho native and his contributions to this nation. Early next week Sgt. John Feiler will be recognized here in Washington D.C. as Fort Hood's Noncommissioned Officer and Soldier of the third quarter of 1999.

Let me to tell you a little about this wonderful Idahoan. John Feiler, a native of Burley, Idaho enlisted in the Army shortly after graduating from Burley High School. He began his training as a Combat Engineer in Fort Leonard Wood, Missouri. He was then assigned to the Engineer Battalion at Camp Eschborn in Germany. While in Germany he was an active participant in Operations Desert Shield, Desert Storm, and Provide Comfort in Southwest Asia, for which he earned several awards and decorations.

After the Persian Gulf War, John was reassigned to Fort Stewart, Georgia. While there, he was promoted to the rank of sergeant, and a short time later he attended the Staff Sergeant Selection Board. During his assignment in Fort Stewart, he was selected as the Commandant's Inspection Awardee, made the Commandant's list, was nominated as the 24th ID Engineer Brigade NCO of the Year for two consecutive years ('93 & '94), and nominated to represent the 24th ID as their NCO of the Year for the XVIII Airborne Corps NCO of the Year competition.

In August of 1994 Sgt. Feiler pursued and completed the Army Recruiters Course. He served three years as a recruiter and was awarded the Gold Recruiter Badge as a permanent award.

In December of 1997 he arrived in Fort Hood, Texas and was assigned to his current unit, A Company 299th Engineer Battalion. During the eighteen months that he has served in the battalion, he has been awarded the Army Commendation Medal, two Army Achievement medals, and was chosen as one of the "Heroes of Battle" during the battalion's 99-05 NTC rotation. He is currently serving as a squad leader there.

His awards include the following: the Army Commendation Medal with four oak leaf clusters, the Army Achievement Medal with nine oak leaf clusters, the Army Good Conduct Medal (third award), the National Defense Service Medal, the Southwest Asia Service Medal (Saudi Arabia), and the Liberation of Kuwait Medal (Kuwait).

Idaho and the nation are proud of the way in which Sgt. John Feiler has served our country. I am pleased to draw the Senate's attention to the outstanding contributions he has made and hope all my colleagues will join me in honoring him.●

C.B. KING UNITED STATES COURTHOUSE

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate now proceed to consideration of Calendar No. 291, S. 1567.

The PRESIDING OFFICER. The clerk will report the bill by title.

The legislative clerk read as follows:

A bill (S. 1567) to designate the United States courthouse located at 223 Broad Street in Albany, Georgia, as the "C.B. King United States Courthouse."

There being no objection, the Senate proceeded to consider the bill.

Mr. WARNER. Mr. President, I ask unanimous consent the bill be read a third time and passed, the motion to reconsider be laid upon the table, and that any statements relating to the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (S. 1567) was read the third time and passed, as follows:

S. 1567

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. DESIGNATION.

The United States courthouse located at 223 Broad Street in Albany, Georgia, shall be known and designated as the "C.B. King United States Courthouse".

SEC. 2. REFERENCES.

Any reference in a law, map, regulation, document, paper, or other record of the United States to the United States courthouse referred to in section 1 shall be deemed to be a reference to the "C.B. King United States Courthouse".

SANDRA DAY O'CONNOR UNITED STATES COURTHOUSE

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate now proceed to the consideration of Calendar No. 292, S. 1595.

The PRESIDING OFFICER. The clerk will report the bill by title.

The legislative clerk read as follows:

A bill (S. 1595) to designate the United States courthouse at 401 West Washington Street in Phoenix, Arizona, as the "Sandra Day O'Connor United States Courthouse".

There being no objection, the Senate proceeded to consider the bill.

Mr. WARNER. Mr. President, I ask unanimous consent that the bill be read a third time and passed, the motion to reconsider be laid upon the table, and that any statements relating to the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (S. 1595) was read the third time and passed, as follows:

S. 1595

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. DESIGNATION OF SANDRA DAY O'CONNOR UNITED STATES COURTHOUSE.

The United States courthouse at 401 West Washington Street in Phoenix, Arizona, shall be known and designated as the "Sandra Day O'Connor United States Courthouse".

SEC. 2. REFERENCES.

Any reference in a law, map, regulation, document, paper, or other record of the United States to the United States courthouse referred to in section 1 shall be deemed to be a reference to the "Sandra Day O'Connor United States Courthouse".

JOSE V. TOLEDO FEDERAL BUILDING AND UNITED STATES COURTHOUSE

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate now proceed to the consideration of Calendar No. 294, H.R. 560.

The PRESIDING OFFICER. The clerk will report the bill by title.

The legislative clerk read as follows:

A bill (H.R. 560) to designate the Federal building and United States courthouse located at the intersection of Comercio and San Justo Streets, in San Juan, Puerto Rico, as the "Jose V. Toledo Federal Building and United States Courthouse."

There being no objection, the Senate proceeded to consider the bill.

Mr. WARNER. Mr. President, I ask unanimous consent that the bill be read a third time and passed, the motion to reconsider be laid upon the table, and that any statements relating to the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill (H.R. 560) was read the third time and passed.

DISTRICT OF COLUMBIA COURT EMPLOYEES WHISTLEBLOWER PROTECTION ACT OF 1999

Mr. WARNER. Mr. President, I ask unanimous consent that the Senate now proceed to the consideration of calendar No. 295, H.R. 858.

The PRESIDING OFFICER. The clerk will report the bill by title.

The legislative clerk read as follows:

A bill (H.R. 858) to amend title 11, District of Columbia Code, to extend coverage under the whistleblower protection provisions of the District of Columbia Comprehensive Merit Personnel Act of 1978 to personnel of the courts of the District of Columbia.

There being no objection, the Senate proceeded to consider the bill which

had been reported from the Committee on Government Affairs, with an amendment, as follows:

(The part of the bill intended to be stricken is shown in boldface brackets and the part of the bill intended to be inserted in shown in italic.)

H.R. 858

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

[This Act may be cited as the "District of Columbia Court Employees Whistleblower Protection Act of 1999".

SEC. 2. WHISTLEBLOWER PROTECTION FOR PERSONNEL OF THE COURTS OF THE DISTRICT OF COLUMBIA.

[(a) IN GENERAL.—Subchapter II of chapter 17 of title 11, District of Columbia Code, is amended by adding at the end the following new section:

["§ 11-1733. Whistleblower protection for court personnel

["Notwithstanding any other provision of law, section 1503 of the District of Columbia Comprehensive Merit Personnel Act of 1978 (DC Code, sec. 1-616.3) shall apply to court personnel, except that court personnel may institute a civil action pursuant to subsection (c) of such section in the Superior Court of the District of Columbia or the United States District Court for the District of Columbia.".

[(b) CLERICAL AMENDMENT.—The table of sections for subchapter II of chapter 17 of title 11, District of Columbia Code, is amended by adding at the end the following new item:

["11-1733. Whistleblower protection for court personnel.".]

SECTION 1. SHORT TITLE.

This Act may be cited as the "District of Columbia Court Employees Act of 1999".

SEC. 2. COMMUNICATIONS WITH CONGRESS BY DISTRICT OF COLUMBIA COURTS PERSONNEL.

(a) IN GENERAL.—Subchapter II of chapter 17 of title 11, District of Columbia Code, is amended by adding at the end the following new section:

"§ 11-1733. Court personnel communications with Congress

"(a) In this section, the term—
"(1) 'Congress' means the United States Congress and includes any member, employee, or agent of Congress; and

"(2) 'District of Columbia court' means the Superior Court of the District of Columbia and the District of Columbia Court of Appeals.

"(b) Nonjudicial employees of the District of Columbia court shall be treated as employees of the Federal Government solely for purposes of section 7211 of title 5, United States Code (relating to employees' right to petition Congress).

"(c)(1) An employee or former employee may file a civil action in the United States District Court for the District of Columbia for relief of a violation of subsection (b), if—

"(A) the employee or former employee reasonably believes that such a violation occurred;

"(B) the employee or former employee files a grievance relating to such violation with the Joint Committee on Judicial Administration of the District of Columbia not later than 270 days after the violation occurred;

"(C) the Joint Committee—

"(i) makes a final decision; or

"(ii) makes no decision within 60 days after the filing of the grievance; and

"(D) the employee or former employee files such civil action not later than 1 year after the date of the violation.

"(2) Relief in an action filed under paragraph (1) may include—

"(A) an injunction to restrain continued violation of this section;

"(B) rescission of a retaliatory action;

"(C) the reinstatement of the employee or former employee to the same position held before the retaliatory action, or to an equivalent position;

"(D) the reinstatement of the employee's or former employee's full fringe benefits and seniority rights;

"(E) compensation for lost wages and benefits; and

"(F) the payment by the District of Columbia court of the employee's or former employee's reasonable costs and attorney fees, if the employee or former employee is the prevailing party.

"(d) In any civil action filed under subsection (c), the District of Columbia court may file a motion for an award of reasonable attorney fees and court costs. The presiding judge may order such fees and costs to be awarded to the District of Columbia court, if the judge determines that an action brought by an employee or former employee under this section was not well grounded in fact and not warranted by law.

"(e) The filing of a civil action in accordance with this section shall constitute the employee's or former employee's exclusive remedy under the laws of the United States or the District of Columbia for violation of this section.

"(f) The District of Columbia court shall conspicuously display notices of an employee's protections and obligations under this section, and shall use other appropriate means to keep all employees informed of such protections and obligations."

(b) TECHNICAL AND CONFORMING AMENDMENT.—The table of sections for subchapter II of chapter 17 of title 11, District of Columbia Code, is amended by adding at the end the following new item:

"11-1733. Court personnel communications with Congress."

SEC. 3. EFFECTIVE DATE.

The amendments made by section 2 shall take effect as if included in the enactment of title XI of the Balanced Budget Act of 1997.

Amend the title so as to read: "An Act to amend chapter 17 of title 11, District of Columbia Code, to provide for personnel protection for District of Columbia court employees."

AMENDMENT NO. 2290

(Purpose: To make certain technical and conforming amendments, and for other purposes)

Mr. WARNER. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Virginia [Mr. WARNER], for Mr. THOMPSON, proposes an amendment numbered 2290.

The amendment is as follows:

On page 5, strike lines 5 through 12.

On page 5, line 13, strike "(e)" and insert "(d)".

On page 5, line 18, strike "(f)" and insert "(e)".

Mr. WARNER. Mr. President, I ask unanimous consent that the amendment be agreed to, the committee amendment, as amended, be agreed to, the bill be read the third time and passed, the title amendment be agreed

to, the motion to reconsider be laid upon the table, and that any statements relating to the bill be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment (No. 2290) was agreed to.

The committee amendment, as amended, was agreed to.

The bill, as amended, was read the third time, and passed.

The title was amended so as so read:

An Act to amend chapter 17 of title 11, District of Columbia Code, to provide for personnel protection for District of Columbia court employees.

MEASURE PLACED ON CALENDAR—S. 1593

Mr. WARNER. Mr. President, I ask unanimous consent that S. 1593 be discharged from the Rules Committee and placed on the calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR TUESDAY, OCTOBER 12, 1999

Mr. WARNER. Mr. President, I ask unanimous consent that when the Senate completes its business today, it adjourn until the hour of 9 a.m. Tuesday, October 12. I further ask unanimous consent that on Tuesday, immediately following the prayer, the Journal of the proceedings be approved to date, the morning hour be deemed to have expired, the time for the two leaders be reserved for their use later in the day, and the Senate then resume executive session to resume consideration of the Comprehensive Nuclear Test-Ban Treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. WARNER. Mr. President, for the information of all Senators, the Senate will resume consideration of the Comprehensive Nuclear Test Ban Treaty at 9 a.m. on Tuesday, October 12. On Tuesday, there will be approximately 6 hours of debate remaining on the treaty. Therefore, that debate will consume the day until 4:30 p.m., at which time the Senate will resume consideration of the conference report to accompany the Agriculture appropriations bill. Cloture was filed on the conference report on Thursday with a vote scheduled to occur at 5:30 on Tuesday. It is expected that the vote on the CTBT will occur on Wednesday, at some point following the adoption of the Agriculture Appropriations conference report. Therefore, the next rollover vote will occur at 5:30 p.m. on Tuesday, October 12.

Mr. President, in addition, as a reminder, the two amendments in order

to the CTBT must be filed at the desk by 9:45 a.m. on Tuesday, October 12.

ORDER FOR ADJOURNMENT

Mr. WARNER. Mr. President, if there is no further business to come before the Senate, I now ask unanimous consent that the Senate turn to the remarks of the distinguished Senator from West Virginia and thereafter stand in adjournment under the order.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER (Mr. MOYNIHAN). The Chair recognizes the distinguished Senator from West Virginia.

Mr. BYRD. Mr. President, I thank the Chair. I thank the distinguished Senator from Virginia, Mr. WARNER, for the great patriot, fine citizen, and extraordinary American that he is.

Mr. WARNER. Mr. President, I thank my colleague for those kind remarks. I return the same.

Mr. BYRD. I thank the Senator.

SENATOR PAT MOYNIHAN PRESIDING

Mr. BYRD. Mr. President, I call attention to something that I have not seen in the Senate, now, in over 5 years. It has been 5 years since I saw a Democrat in that chair. But who better than the distinguished senior Senator from New York, PAT MOYNIHAN, to grace that chair. This is truly a record day. We will be celebrating Columbus Day on next Tuesday, but I am ready to start now because there sits Senator MOYNIHAN—in the chair.

Let me comment just a little further on that. Imagine our good Republican friends allowing a Democrat to sit in the Presiding Officer's chair. They trust him. I think it was with great grace that JESSE HELMS, the senior Senator from North Carolina, the State in which I was born and the State whose motto is "to be rather than to seem," that he chose PAT MOYNIHAN to preside over these last few minutes.

COLUMBUS DAY 1999

Mr. BYRD. Mr. President, many Americans are preparing to enjoy a three-day weekend. Most could tell you that their holiday was to honor Christopher Columbus, and a fair number might be able to recite "in fourteenth and ninety-two, Columbus sailed the ocean blue" on his way to discovering America. An even smaller number might be able to recount the ongoing controversy over just where along the continent Columbus first came to land. But few, I hazard to guess, can truly appreciate the magnitude of his great daring, though we all appreciate the bounty of his great mistake. Few may even realize that it is next Tuesday, October 12, that is the

true anniversary of Christopher Columbus' discovery of the New World, some 507 years ago.

Oh, Columbus, that scion of Eratosthenes, that son of Ptolemy, that kin in spirit to Marco Polo, what fascinating history he built upon when first he set out on his great journey. Although he was surely a brave man, Columbus did not sail blindly off to the west not knowing whether he would drop off the edge, as some children's books might lead one to believe. No, Columbus had the wisdom of the ancients to guide him and the lure of another adventurer's tales to entice him. He had history, mathematics, and science as his guides and greed as his goad to whip him along his journey.

Long before Columbus' day, Eratosthenes, the ancient Greek scholar commonly called the Father of Geography, had determined with amazing accuracy the circumference of the earth. Born around 276 B.C. at a Greek colony in Cyrene, Libya, Eratosthenes was educated at the academies in Athens and was appointed to run the Great Library at Alexandria, in what is now Egypt, in 240 B.C. During his time there, he wrote a comprehensive volume about the world, called "Geography," the first known coining of that word. Eratosthenes used known distances and geometry on a grand scale to calculate the circumference of the earth to within 100 miles of its true girth at the equator, 24,901 miles. His work was still available in Columbus' time.

A later Greek geographer, Posidonius, felt that Eratosthenes' circumference was too large and recalculated the figure at 18,000 miles, some 7,000 miles too short. What is interesting about this fact is that Christopher Columbus deliberately used Posidonius's shorter figure to convince his backers that he could quickly reach Asia by sailing west from Europe. It may not have been the first time that financial backers have been duped using doctored numbers, but I am confident that it has not been the last!

So, we know that Columbus knew the earth was round—no fear of falling off the edge—and that it was between 18,000 or 25,000 miles around at its midpoint—still a very long journey in either case for ships the size that Columbus sailed on. But what led him to think sailing west from Europe to Asia was feasible? For that, Columbus would have looked to a Roman scholar, Claudius Ptolemaeus, more commonly known as Ptolemy. Like Eratosthenes before him, Ptolemy, who lived from approximately 90 to 170 A.D., worked in the Great Library at Alexandria, from 127 to 150 A.D. Perhaps inspired by Eratosthenes' work, Ptolemy also published a scholarly work called "Geography," in addition to a volume on astronomy and geometry, and a work on

astrology. Ptolemy's "Geography" consisted of eight volumes, and it introduced critical elements of map-making to the world. Ptolemy advanced the efforts of mapmakers in representing the spherical world on flat paper, in what are known as map projections. He is responsible for the now universal practice of placing north at the top of the map. Ptolemy also invented latitude and longitude—that is, he created a grid system to lay over the globe in order to chart locations. His volumes charted some eight thousand places around the world he knew, revealing for future generations a geographic knowledge of the Roman empire of the second century.

Like many ancient works, Ptolemy's "Geography" was lost for over a thousand years after it was first published. But in the early fifteenth century, his work was rediscovered, translated into Latin, and published in multiple editions. It would have been readily available to Christopher Columbus, who was influenced both by Ptolemy's erroneous shorter circumference of the earth and by his depiction of the Indian Ocean as a large inland sea, bordered on the south by beguiling Terra Incognita, the unknown land. I think there can be few things more mysterious, more alluring, than an old map with large blank land masses labeled simply "terra incognita" or, on some medieval maps, by the phrase "here be dragons."

Marco Polo's fantastic tales of Cathay and the exotic spices and goods that he brought back to Italy sparked a huge appetite for such things, which only increased when the returning Crusaders opened the overland trade routes between Europe and the Orient. However, when Constantinople fell to the Turks in 1453, two years after Columbus was born, the overland spice routes between Europe and Asia were closed off. Every power in Europe was eager—eager—to reopen the very profitable trade, by land or by some unknown sea route. Seeking an eastern sea route, Bartholomeu Dias reached the Cape of Good Hope in Africa in 1488, and Vasco da Gama reached India in 1498, but the eastern voyages were long and perilous. Anyone who could find a shorter route would make a fortune for himself and his backers.

Columbus himself was born in Genoa in 1451 to Susanna Fontanarossa and Domenico Colombo, the eldest of their five children. Growing up in a major port city, Columbus would have learned a lot about the sea, in addition to hearing and reading the tales of riches beyond the horizon.

True to his adventurous inclinations, Christopher Columbus took to the sea. After an attack by the French at sea in the Strait of Gibraltar in 1476, the ship Columbus was sailing on was sunk, forcing him to swim to land. He was able to grab an oar and swim to land in Portugal. Three years later, he married

into the Portuguese aristocracy when he wed Felipa Perestrelo. The marriage resulted in one son, Diego, and an entré into the financial backing of the Portuguese and Spanish nobility. In the simple history of Christopher Columbus that we may recall from elementary school, which was a long time ago for me, it was King Ferdinand and Queen Isabella of Spain who finally provided the ships, the fabled *Niña*, *Pinta*, and *Santa Maria*, in which Columbus set off on August 3, 1492, to discover the western shortcut to the fabled wealth of the Indies. At roughly 2 a.m. on October 12, 1492, after 71 grueling days at sea trusting in God, Eratosthenes, Ptolemy, and Polo, Columbus made landfall in what he believed was the Indies.

Columbus found no gold, silks, spices or valuable wood in his misnamed Indies, but he did bring tobacco back to Europe. After establishing a fort called Natividad, built of timbers from the wrecked *Santa Maria*, Columbus returned to Spain.

Columbus made three other journeys to his new-found land, which he named Hispaniola. His second voyage left Spain in September 1493 and returned to Spain in 1496 after establishing a more substantial colony. His third voyage led to his return to Spain in chains, prisoner of the colonists who rose up against his bad management. Columbus was able to clear his name and made a fourth and final voyage to the New World before he died in Spain on May 20, 1506. The great irony, however, is that Christopher Columbus believing that he had discovered some untouched part of the Indies, or distant outpost of China, not a continent previously unknown to the Europeans. He had made a mistake, but what a glorious mistake it was! For us, it was a very fortunate mistake. Christopher Columbus had discovered what for Europeans was truly Terra Incognita, a new and unknown land, a treasury of natural riches that we, as his heirs, enjoy to this day.

I am glad that we celebrate this brave man. We celebrate a man who made a great gamble, a man who set off to seek a back door to the Far East by setting his sights west and trusting in ancient scholars. We celebrate a man who appreciated the romance of a traveler's tales and who sensed the riches and wonders that await the bold. We celebrate an imperfect man, a man who failed in his goal but who achieved much nonetheless. We celebrate a man whose daring, whose courage, who sheer persistence, moved history forward.

We talk about profiles in courage. These are profiles in political courage. Here was an intrepid man who perhaps could claim the greatest—or one of the greatest—profiles ever written on the record of humankind. Imagine him out there on the deep waters. He had no

wireless telegraph; he had no radio; he had no weather forecasters. All he had was the compass. There were no ships in the area to rescue him if his ship sank. There was no way to hear back from home or to speak to those back home if he became ill. There was no helicopter to take him to the nearby hospital or to a sister ship. There he was, alone on the great blue waters.

Just imagine what courage he must have had, never knowing whether he would be able to return against the winds that were blowing from the east, no refrigerator in which to keep the hard tack. His son, Ferdinand, who accompanied him on his fourth journey, I believe it was, wrote that he, Ferdinand, had seen the sailors wait until after dark before they ate the hard tack so it would not be possible to see the maggots on the hard tack. No sanitation with respect to the water and the food was cooked in an open stove with wood on the decks of the small ship.

What intrepidity. But how fortunate we are today that there was a man who was so intrepid as to face down the mutinous crew and who persisted in his faith to say an oath.

Today we look forward to that weekend and to next Tuesday, which is actually the day, 507 years later, when Columbus made the great discovery. We will celebrate the life and the accomplishments of Christopher Columbus, the first European to see the low green land on the horizon that was North America.

I would like to close with the words of Joaquin Miller:

Behind him lay the gray Azores,
Behind the gates of Hercules!
Before him not the ghost of shores,
Before him only shoreless seas.
The good mate said: "Now must we pray,
For lo! The very stars are gone.
Brave Adm'r'l, speak; what shall I say?"
"Why, say: 'Sail on! sail on! and on!'"

"My men grow mutinous day by day;
My men grow ghastly wan and weak."
The stout mate thought of home; a spray
Of salt wave washed his swarthy cheek.
"What shall I say, brave Admiral, say,
If we sight naught but seas at dawn?"
"Why you shall say at break of day,
Sail on! sail on! sail on! and on!"

They sailed and sailed, as winds might blow,
Until at last the blanched mate said:
"Why, now not even God would know
Should I and all my men fall dead.
These very winds forget their way.
For God from these dread seas is gone.
Now speak, brave Admiral; speak and say."
He said: "Sail on! sail on! and on!"

They sailed. They sailed. Then spake the mate:

"This mad sea shows his teeth tonight.
He curls his lip, he lies in wait,
With lifted teeth, as if to bite!
Brave Adm'r'l, say but one good word:
What shall we do when hope is gone?"
The words leapt like a leaping sword:
"Sail on! sail on! sail on! and on!"

Then pale and worn, he kept his deck,
And peered through darkness. Ah, that night
Of all dark nights! And then a speck—

October 8, 1999

CONGRESSIONAL RECORD—SENATE

24649

A light! a light! a light! a light!
It grew, a starlet flag unfurled.
It grew to be Time's burst of dawn.
He gained a world; he gave that world
It's grandest lesson: "On! sail on!"

The PRESIDING OFFICER. The Chair wishes to express the gratitude of the Senate to the revered senior Senator from West Virginia for his eloquent and moving address on this easily overlooked occasion.

Mr. BYRD. I thank the chair.

ADJOURNMENT UNTIL TUESDAY,
OCTOBER 12, 1999

The PRESIDING OFFICER. The Senate, under the previous order, will stand adjourned until 9 a.m., Tuesday, October 12, 1999.

Thereupon, the Senate, at 6:05 p.m., adjourned until Tuesday, October 12, 1999, at 9 a.m.

NOMINATIONS

Executive nominations received by the Senate October 8, 1999:

DEPARTMENT OF STATE

ALAN PHILLIP LARSON, OF IOWA, TO BE UNDER SECRETARY OF STATE (ECONOMIC, BUSINESS AND AGRICULTURAL AFFAIRS); VICE STUART E. EIZENSTAT.

CAROL MOSELEY-BRAUN, OF ILLINOIS, TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA TO NEW ZEALAND.

OFFICE OF PERSONNEL MANAGEMENT

AMY L. COMSTOCK, OF MARYLAND, TO BE DIRECTOR OF THE OFFICE OF GOVERNMENT ETHICS FOR A TERM OF FIVE YEARS, VICE STEPHEN D. POTTS.

HOUSE OF REPRESENTATIVES—Friday, October 8, 1999

The House met at 10 a.m. and was called to order by the Speaker pro tempore (Mr. PEASE).

DESIGNATION OF THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

WASHINGTON, DC,
October 8, 1999.

I hereby appoint the Honorable EDWARD A. PEASE to act as Speaker pro tempore on this day.

J. DENNIS HASTERT,
Speaker of the House of Representatives.

PRAYER

The Chaplain, Reverend James David Ford, D.D., offered the following prayer:

Let us pray using the words of Psalm 92:

It is good to give thanks to the Lord,
To sing praises to Your name, O most high;
to declare Your steadfast love in the morning,

And Your faithfulness by night,
to the music of the lute and the harp,
to the melody of the lyre.

For you, O God, have made me
glad by Your work;

at the works of Your hands I sing for joy.
Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

PLEDGE OF ALLEGIANCE

The SPEAKER pro tempore. Will the gentleman from Guam (Mr. UNDERWOOD) come forward and lead the House in the Pledge of Allegiance.

Mr. UNDERWOOD led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

SPECIAL ORDERS

The SPEAKER pro tempore. Under the Speaker's announced policy of January 6, 1999, and under a previous order of the House, the following Members will be recognized for 5 minutes each.

U.S. NAVY AND MSC SEND AMERICAN SHIPYARDS JOBS OVERSEAS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Guam (Mr. UNDERWOOD) is recognized for 5 minutes.

Mr. UNDERWOOD. Mr. Speaker, for years in this Nation we have passed all kinds of laws and regulations to help protect American jobs and America's industrial base. Indeed, the U.S. military has long supported this assertion, and has been an integral part of maintaining a high level of readiness through the preservation and maintenance of a strong domestic industrial base. Along with this capacity comes the value and know-how of America's skilled work force.

In a day and age where the American skilled worker has sometimes become an endangered species, the Federal Government, in particular the Department of Defense, should try to preserve and defend these jobs. For 80 years these types of jobs were the backbone of the middle class in many communities throughout our country, including my home island of Guam.

Mr. Speaker, one would think that U.S. tax dollars would be spent here in this country to preserve this legacy. One would think that the Department of Defense would sooner spend these tax dollars here to preserve American jobs. But sadly, it seems that the U.S. military would rather spend these tax dollars in Japan or Korea or Singapore, to the loss of U.S. jobs.

Here is the outrageous truth, Mr. Speaker: The U.S. Navy and the Military Sealift Command annually send U.S. jobs overseas so they can save a few bucks. This is the truth. The MSC asks every year the Navy permission to have U.S.-flagged, U.S.-crewed, U.S.-owned and operated military ships to be repaired in foreign shipyards because it is cheaper.

We may ask ourselves, will lower costs to the Navy mean my tax dollars may go further? This is what the Navy and the MSC say. They tell me that they are cost-driven.

The fact is that foreign shipyards can always beat U.S. shipyards in terms of price for several reasons, primarily because foreign shipyards are subsidized by their central governments. Foreign shipyards do not have to pay their workers decent wages. Foreign shipyards do not have to comply with health and safe work environments.

We tried to solve this problem by an amendment that I introduced in the

104th Congress to title X which requires the Navy, including MSC, their vessels, to make sure that their ships are repaired in American shipyards. My amendment added Guam to that, because Guam is part of the United States.

But in recent years, the Navy has adopted a subterfuge in this. They have established an internal waiver policy that essentially defeats the congressional intent of title X, and the Navy has implemented a policy of not designating any home port for Military Sealift Commands, so they can undermine the intent of this law. This has resulted in the denial of Navy MSC work to Guam, Hawaiian, Alaskan, and Californian shipyards.

Mr. Speaker, this sham that the Navy and MSC purports will save money is a farce. It may save money, but at the cost of thousands of jobs. This will then increase reliance on unemployment insurance and welfare rolls, and further erode America's industrial capacity.

In summary, the Navy and MSC are doing two things. They are violating the congressional spirit and intent of the law to preserve jobs and save a few dollars. Two, they are handing U.S. shipyards jobs overseas.

I will be sending a Dear Colleague letter around to sign onto a letter to Secretary of Defense Bill Cohen to tell him that this practice is wrong, it is harmful to the national security of this Nation, and impedes readiness. I hope Members of this body will join me in this endeavor.

THE PROBLEMS WITH THE DINGELL-NORWOOD HEALTH CARE REFORM BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. NETHERCUTT) is recognized for 5 minutes.

Mr. NETHERCUTT. Mr. Speaker, yesterday the House of Representatives voted on different versions of health care reform. I believe that every one of our colleagues who spoke on this issue and voted on this issue had the best interests of patients in mind as they cast their votes.

There were two issues that were discussed this week in connection with health care reform and patient care. First, we passed legislation this week to increase the access of patients to health care insurance coverage. That was a very important effort that was

□ This symbol represents the time of day during the House proceedings, e.g., □ 1407 is 2:07 p.m.

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

undertaken by the House of Representatives.

Second and most recently, yesterday we considered changes in the law to deal with the problems that patients have had with their health maintenance organizations, a problem that was illustrated time and time again by Members who stood here on the floor of the House.

For me, I believe insurers should be held accountable for their actions if they cause actions that hurt a patient or inactions that hurt a patient that is covered by a plan. I happen to support the coalition substitute amendment introduced by the gentleman from Florida (Mr. GOSS) and the gentleman from California (Mr. THOMAS), the gentleman from Oklahoma (Mr. COBURN) and the gentleman from Arizona (Mr. SHADEGG), among others.

This legislation provided the protection I felt patients needed, and encourages care rather than lawsuits. It contained an internal and external appeals process that requires a faster response than required by the bill which ultimately passed the House yesterday afternoon, as sponsored by the gentleman from Georgia (Mr. NORWOOD) and the gentleman from Michigan (Mr. DINGELL).

The coalition bill, the bill that I supported, requires expedited appeals to be resolved in 48 hours, as opposed to the 72 hours that are set forth in the Norwood bill. I want my colleagues and others, Mr. Speaker, to understand that there were many similarities in the Norwood bill and the coalition bill, which I will call it.

Both guarantee patients the right to choose a doctor outside their network. Both guarantee women direct access to obstetrical-gynecological care. Both guarantee access to specialists. Both guarantee children direct access to pediatric care. Both guarantee coverage for emergency medical services without prior authorization, which is an important issue. Both guarantee coverage of a terminated provider for patients undergoing a course of treatment. Both prohibit so-called gag clauses. Both forbid insurers from offering providers incentives for denying coverage. Both provided a grievance process for beneficiaries to file complaints.

Both allow patients to appeal denial of benefits, but the coalition bill actually requires a faster response than mandated by the Norwood bill, the difference between the 48-hour expedited appeals process and the 72-hour process in the Norwood bill.

Both allow patients to sue their health maintenance organizations if they are hurt by them. The coalition bill allows patients to sue their HMOs in Federal court once they have exhausted the internal and external appeals process. The Norwood bill allows patients to bring lawsuits in State

courts, which have 50 different States with 50 different sets of rules. To me, that was a cumbersome process, and very difficult for employers to try to deal in 50 different States with 50 different laws relative to liability.

The Norwood bill puts employers at risk for lawsuits. I know there was a great deal of debate on that issue, and interpretation of language and counter-interpretation of language. But the facts are that the Norwood bill puts employers at risk for lawsuits, greater risk, without having a more extensive, exhaustive process before we ever get to a lawsuit.

Employers offer health insurance benefits voluntarily. I fear that if the stability of their business is at risk due to a threat of a lawsuit, under the measure that was passed yesterday, employers would just say, no, we are not going to offer health insurance any longer.

Washington State, my State, is currently facing a crisis in its individual insurance market. Excessive regulations have driven insurers out of our State. Those who have remained are no longer taking new enrollees. That is a problem for people in my State who seek insurance coverage. Individuals can no longer buy insurance in most of our State, even if they have the money.

So excessive regulation, frivolous lawsuits, and risk to employers created by the Norwood bill will create the same problem in the group insurance market across the country. I think that would be an unintended consequence of our debate that occurred here yesterday and earlier this week.

The last thing we need, Mr. Speaker, is a government-run, massively complicated health care program. I fear we are heading toward that if the Norwood bill becomes law.

So my hope would be that those who are conferees on this issue and others who have an interest in this debate would work hard to get the facts out about the potential consequences or unintended consequences of an extensive, mandated legislation for health care that will drive people off the insurance rolls and then lead to, ultimately, the unintended consequence of a massive health care plan run by the Federal Government that was rejected so forcefully in 1993 and 1994.

□ 1015

NORTH CAROLINA IN AFTERMATH OF HURRICANE FLOYD

The SPEAKER pro tempore (Mr. PEASE). Under a previous order of the House, the gentlewoman from North Carolina (Mrs. CLAYTON) is recognized for 5 minutes.

Mrs. CLAYTON. Mr. Speaker, the sunshine is shining in eastern North Carolina, the rivers have crested, and the water has receded. People are be-

ginning to have a sense of hope. But at the same time, there is great devastation as a result of the floods of the century having occurred in eastern North Carolina.

More than 32 counties were affected by Hurricane Floyd. Out of the 32 counties, there was severe flooding in at least 20 or more of those counties. Fourteen of those counties happen to be in my district. At the last count, more than 54,000 persons had called FEMA's telephone on-line intake service indicating they needed service. At the peak of this hurricane, there were more than 46,000 individuals huddled in various makeshift shelters throughout the district. People were sleeping in cars, neighbors took other people in, and roads were in great devastation. The lives that were lost, the last count as of last Friday, there were 48 persons who were dead in North Carolina as a result of Hurricane Floyd. In fact, some 66 from the East Coast, including persons who died in Pennsylvania and New York as well as in Virginia.

This hurricane has brought great devastation and has taken the lives of a lot of people. Teshika Vines I have here is one of those casualties, but her story is the story of a neighbor helping neighbors. The story is that her grandfather had taken she and three other members of the family out on a boat to safety, saw their neighbors and took onto their boat four other persons. When the boat landed on the shore, it was missing six persons. The grandfather and Teshika, one person from the other family, and only one person from Teshika's family still lives. Actually towns became rivers. We have the scene of Tarboro here. East Tarboro was completely flooded. That was the area that the President visited, in that area. The waters have now receded, yet those businesses cannot function because they stayed underwater so long. Right next to East Tarboro is a town called Princeville. Princeville is a town that was founded by newly freed slaves in 1884, became incorporated in 1885, in fact was the first town of American free slaves to be incorporated. That whole town was flooded and stayed underwater at least 10 days. That whole town is lost. Forty percent of Edgecombe County was lost. Princeville is not the only community. There was Kinston. Much of that town was lost. It is a town of 35,000 people. Downtown, they had six hotels. Only two were not flooded. Many of the shopping centers in Rocky Mount were flooded. Water systems were closed down. Wastewater systems became nonfunctional and may not function for many years to come unless they are really improved.

Our infrastructure also was greatly damaged. This one is the road of 301 which was the main highway going north and south before we had Interstate 95. I-95 was flooded. I-95 is where

people go as they go to Disney World. You can imagine, they did not build I-95 inadequately. But I-95 was flooded from Emporia to Benson. This is 301, the road that used to be the main north and south thoroughfare. This big gaping hole also undergirded the Amtrak trains, the water system. We have a tremendous amount of devastation that happened to our roads, to our water system, our wastewater system, to the houses. It is reported more than 35,000 houses had some impact from actually the storm. Some 10,000 houses are reported to be uninhabitable, that they will be destroyed. They are non-functional to the extent they need to be destroyed. There was great, great devastation and a need for rebuilding and reconstruction.

This week, this floor, and I want to express appreciation to my colleagues, unanimously supported a resolution that said they empathized, sympathized with the people affected by Hurricane Floyd and they went on record as saying, further than just sympathy, they wanted to provide support. They will have that opportunity very, very soon. Hopefully there will be an emergency spending bill that will be adequate not only to respond to North Carolina's needs but the East Coast, from New York, Pennsylvania, New Jersey, Virginia, Florida, as well as North Carolina.

North Carolina alone has a need for \$2.5 billion just for emergency. The agricultural needs in North Carolina are said to be \$1.3 billion. We have erosion of land. We have lost more than 2.3 million chickens. More than 120,000 pigs were destroyed. Wildlife was destroyed. Horses were destroyed. There was a tremendous loss in terms of forestry, an untold amount of loss in terms of fisheries. As if that were not enough, the impact that was made on the environment and the water system, the fertilizers, the poisons, the pollutants that are in the water. So in addition to having structural loss and having loss of human life, we also have the potential of environmental loss that would be there for years to come. It is yet not known how much there would be.

I want to keep before my colleagues this urgent need of the citizens in eastern North Carolina for emergency relief certainly, and hopefully we will do the right thing for them. But beyond the emergency relief, there needs to be a commitment on the part of this Congress that we will rebuild and restore, we will put the kind of resources, bring some sort of normalcy and a sense of community as we do with our foreign investment, that here is an opportunity to respond to American people as we do, appropriately I think, in foreign countries. We need a plan that says not only do we sympathize and empathize, but we recognize that we have a commitment to restore their lives and their communities.

ON TRUCK SAFETY

The SPEAKER pro tempore. Under the Speaker's announced policy of January 6, 1999, the gentleman from Virginia (Mr. WOLF) is recognized for 60 minutes as the designee of the majority leader.

Mr. WOLF. Mr. Speaker, today I stand up for the 5,374 families who lost loved ones in truck accidents last year and to note that the Congress could be about ready to walk away from them.

Last week, Mr. Speaker, this House voted overwhelmingly for the transportation appropriations conference report which included a provision requiring a change in the way the Federal Government conducts oversight of the trucking industry. For the record, the vast majority of truck drivers and trucking companies do their level best to operate safely and efficiently and they are an important part of our commerce. But it is those few on the margins, Mr. Speaker, who last year took the lives of 5,374 people and 5,398 the year before that, a decade high. That is like a major airplane crash taking place every 2 weeks with regard to the deaths in the trucking industry.

Section 338 of the bill, which the President is expected to sign soon, prohibits the Department of Transportation from funding the Office of Motor Carrier and Highway Safety, the OMC, within the Federal Highway Administration. The Federal Highway Administration does a good job at maintaining and building our Nation's infrastructure but they have fallen woefully behind in the area of truck safety. This means that Congress can pass legislation directing the DOT to move the Office of Motor Carrier and Highway Safety to a better place, or the administration can do it by executive order. Either way, Mr. Speaker, someone has got to do something and the language in the appropriations conference report requires action, action that has been lacking since myself and others have brought this issue to the attention of the Congress over the past year. The status quo where people are dying daily because of truck accidents is unacceptable.

Everyone in this Chamber and those who are watching on television, those who will later read the CONGRESSIONAL RECORD, have experienced the anxiety associated with being around large trucks on our Nation's highways. They are big, they are fast, they are heavy and they are dangerous. And when a truck is involved in an accident, regardless of who is at fault, it is likely someone is going to die or be seriously injured. Plain and simple, I think it is incumbent, therefore, to ensure that trucks are as safe as they can be. Under the current system, I do not think the Federal Government is doing a good enough job to make sure that is the case.

As I mentioned, last year 5,374 people died in truck-related accidents. The

year before that, 5,398 people died, a decade high. Just think about those figures and let them sink in for a moment. The number of deaths associated with truck accidents is equal to a jetliner loaded with passengers crashing every other week. With an airplane crashing every other week, the Congress would be outraged. People would be calling their Congressmen on the telephones and the Congress would say, "We're committed to do something about it." The Nation would be up in arms. Hearings would be held, accident investigations would be taking place, and grieving families would be on television to illustrate the sorrow of losing a loved one.

Why, then, does the issue of truck safety, where over 5,000 people a year have died, not command the same attention? Why is the Federal office responsible for the regulation of the trucking industry, which some say is larger than the aviation industry, buried in the Federal Highway Administration with only .06 of the budget? Could it be because of the lobbyists and others who have been hired by the trucking companies?

Last year, Mr. Speaker, the Department of Transportation appropriations conference report included a similar provision. But in the dead of the night and in the waning hours of the Congress, the trucking lobbyists prevailed. As a result of that, since that time in the middle of the night when this provision was taken out, thousands have died on the road.

The Department of Transportation Inspector General looked at this issue and found that not only were lobbyists hired working against this proposal, which would force greater scrutiny on truck safety, but several of the employees of the Office of Motor Carriers, which is responsible for regulating the trucking industry, were afraid of this provision and what would be found when we looked at truck oversight, and they, the employees of the Department of Transportation, conspired to defeat this measure. The Inspector General noted that employees of the Office of Motor Carriers who regulate the trucking industry had contacted those that they regulated soliciting their help in staving off additional scrutiny. A few employees, these are government employees, paid by the families of the people that have died, then drafted letters for the trucking industry to send to Members of Congress to defeat this proposal.

□ 1030

That is right, the regulators at the Office of Motor Carriers, these employees, paid for by the taxpayer, were meeting with the lobbyists for the trucking industry, drafting letters for them to send to Members of Congress to keep this provision from taking place, whereby thousands would continue to die.

As a result of these unfortunate circumstances, the Department of Transportation disciplined four people. They were disciplined. One left. A couple are still there, but they were disciplined.

Why did top employees of the Office of Motor Carriers, which regulates the industry, work to stymie the move? Because they knew that the state of the trucking industry was in such poor condition that it was they who would be called to account. How do we explain that deaths were up, inspections were down? At the same time that deaths were rising, the number of inspections was decreasing.

Three years ago, each safety inspector at the Office of Motor Carriers conducted five reviews per month of the companies. Two years ago each inspector did an average of 2.5 reviews per month. Last year, each inspector did only one per month. When inspections over the course of 2 years dropped from 5 inspections to one inspection per month, something must be wrong and sorely needs to be changed.

In fact, the Inspector General found one truck that left California going to Virginia, the State that I live in, made the trip in 48 hours, and when the guy pulled in, the driver, had several bottles of urine in the cab. He had not even stopped to go to the bathroom.

Mr. Speaker, I hope that the trucking lobbyists, every time they see an accident where someone dies, think in terms of how they made this happen, and those employees know because of this lack of inspections, that more people are dying.

The Office of Motor Carriers knows it. The IG conducted a survey of the Office of Motor Carriers employees asking them if they thought the Office of Motor Carriers should move, and where. Mr. Speaker, less than 20 percent of those employees surveyed were opposed to moving, only 20 percent. Of those people responsible for trucking oversight, only 20 percent wanted the status quo.

The employees of OMC deserve credit for the work they do. Most work very hard, and they are very dedicated. Unfortunately, there are some in the management who have not caught the vision. If the employees of the Office of Motor Carriers do not favor the status quo, why should the Congress?

In 3 short months, trucks from Mexico may be able to cross the border to the U.S. under NAFTA. The IG recently found that Mexico has no hours of service requirements, no log books requirements for truckers, no vehicle maintenance standards, no roadside inspections, and no safety rating systems. Can we be sure these trucks will not present a safety problem on our highways come January? All of these trucks will cross the border and be able to go throughout the entire United States.

Mr. Speaker, we cannot stop the drugs coming across the border on the

trucks, and I will tell the Members, those trucks will be unsafe and many, many more people could die.

When the IG conducted a survey of the effects of NAFTA, he found today 3.5 million trucks are crossing the border from Mexico, only to designated commercial zones in the U.S. Of those 3.5 million trucks crossing the border, the Office of Motor Carriers only inspected 17,332. Of those inspected, 44 percent were in such poor condition that they were taken off the road immediately.

Some of these trucks are intended only to serve border traffic, but many others may be driving on all the highways in America, come January. If the Congress and others feel comfortable about this, allowing this situation to persist, so be it. But I in good conscience cannot. We can no longer sit idly by while thousands of Americans are dying every year on our roads and do nothing about it.

If others claim to be concerned about the provision contained in the Department of transportation appropriations conference report, I welcome the company. But do something about it. To this date, more than a year after this terrible problem was brought to America's attention, not one bill bringing relief to this situation has been brought before this House, let alone been signed into law, not one.

If Members do not like the provision contained in this year's Department of Transportation appropriations conference report, do something about it, but the status quo is unacceptable.

Let me just address for a minute some of the allegations regarding section 338 of the conference report. Some have suggested that this provision harms safety. It is nonsense and they know it. I have been urging improvements to truck safety for over a year now, and I have been out on several truck inspections where, when we go out, we see lug nuts sheared off, bald tires, brakes that are not working.

To really let the American people understand this, one out of every five trucks that we see on the highway today is so unsafe that if it would be inspected, it would be taken off the road.

The last truck inspection we went out to, we found bald tires. We found air brake systems rotted and rusted out. There were so many violations, and they then go on and are involved in accidents that kill people.

Yesterday the Department of Transportation's general counsel testified that section 338 would prevent the DOT from conducting only two functions in truck safety, the assessment of civil penalties, and protection of migrant worker transportation, which the States have taken the lead on, anyhow. So that leaves DOT with one real shortcoming, which could have been very easily fixed in a minor technical

correction bill, the ability to levy civil penalties.

DOT can still conduct border inspections, they can still place unsafe vehicles out of service, and they can still conduct an effective oversight program. To suggest otherwise is nothing more than an effort to scare this body in returning to the status quo.

Others have said, let us give the OMC time. They will make the necessary changes on their own. This Congress has given them time. If Members think times have changed, every Member should know that they are wrong. Earlier this week, the Office of Motor Carrier Management sent out an e-mail memo to all its employees suggesting that section 338 would prevent the organization from conducting further oversights.

Without judging whether the memo was intentionally false or not, it is clear the OMC still does not get it. The memo was 180 degrees inaccurate. Indeed, the Secretary had to order that a correcting memo be distributed.

When my staff called the Office of Motor Carriers to clarify the memo's inaccuracies, they were told that the Office of Motor Carrier staff would not take the call. When they asked to speak with the head of the office, which is standard procedure, they were informed that she was out of town. When they asked for who, therefore, was in charge, they were told it was one of those punished for their improper efforts last year. The person that was running the Office of Motor Carriers responsible for the memo to go out was one of the people cited by the Inspector General who was disciplined by the Department of Transportation.

When we drive on the highways today, on the Beltway, when we drive on I-81 in the Shenandoah Valley, when we drive on I-95, whether north and south of Washington, think of all those trucks, and think about how some employees who are now running the office which inspects these trucks have been so close to the trucking industry that it has been basically an incestuous relationship, and therefore, they are trying to undermine a provision which will bring about truck safety.

In closing, Mr. Speaker, next week the Congress may consider on the suspension calendar a bill to overturn section 338 of the conference report. I urge Members to vote against the bill. If the reorganization of the motor carrier office does not take place, more people will die. We will get into next year, and next year is an election year. The contributions will begin flowing from the trucking industry to the Congress, and they will make up reasons why we do not have time to deal with truck safety.

We will also be faced with the trucks from Mexico coming across the border. Some 80 thousand more trucks could enter the market next year than this

year. Many families will experience the pain and agony of getting that telephone call to say that a loved one has been involved in an accident with regard to trucks.

Mr. Speaker, the bottom line to this entire issue is safety.

So if a bill comes up, I urge Members to vote no.

CONFERENCE REPORT ON H.R. 2561

Mr. LEWIS of California submitted the following conference report and statement on the bill (H.R. 2561) making appropriations for the Department of Defense for the fiscal year ending September 30, 2000, and for other purposes.

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 2561) "making appropriations for the Department of Defense for the fiscal year ending September 30, 2000, and for other purposes", having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment, as follows:

In lieu of the matter stricken and inserted by said amendment, insert:

That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending September 30, 2000, for military functions administered by the Department of Defense, and for other purposes, namely:

TITLE I

MILITARY PERSONNEL

MILITARY PERSONNEL, ARMY

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), and expenses of temporary duty travel between permanent duty stations, for members of the Army on active duty (except members of reserve components provided for elsewhere), cadets, and aviation cadets; and for payments pursuant to section 156 of Public Law 97-377, as amended (42 U.S.C. 402 note), to section 229(b) of the Social Security Act (42 U.S.C. 429(b)), and to the Department of Defense Military Retirement Fund, \$22,006,361,000.

MILITARY PERSONNEL, NAVY

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), and expenses of temporary duty travel between permanent duty stations, for members of the Navy on active duty (except members of the Reserve provided for elsewhere), midshipmen, and aviation cadets; and for payments pursuant to section 156 of Public Law 97-377, as amended (42 U.S.C. 402 note), to section 229(b) of the Social Security Act (42 U.S.C. 429(b)), and to the Department of Defense Military Retirement Fund, \$17,258,823,000.

MILITARY PERSONNEL, MARINE CORPS

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements),

and expenses of temporary duty travel between permanent duty stations, for members of the Marine Corps on active duty (except members of the Reserve provided for elsewhere); and for payments pursuant to section 156 of Public Law 97-377, as amended (42 U.S.C. 402 note), to section 229(b) of the Social Security Act (42 U.S.C. 429(b)), and to the Department of Defense Military Retirement Fund, \$6,555,403,000.

MILITARY PERSONNEL, AIR FORCE

For pay, allowances, individual clothing, subsistence, interest on deposits, gratuities, permanent change of station travel (including all expenses thereof for organizational movements), and expenses of temporary duty travel between permanent duty stations, for members of the Air Force on active duty (except members of reserve components provided for elsewhere), cadets, and aviation cadets; and for payments pursuant to section 156 of Public Law 97-377, as amended (42 U.S.C. 402 note), to section 229(b) of the Social Security Act (42 U.S.C. 429(b)), and to the Department of Defense Military Retirement Fund, \$17,861,803,000.

RESERVE PERSONNEL, ARMY

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Army Reserve on active duty under sections 10211, 10302, and 3038 of title 10, United States Code, or while serving on active duty under section 12301(d) of title 10, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United States Code, or while undergoing reserve training, or while performing drills or equivalent duty or other duty, and for members of the Reserve Officers' Training Corps, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$2,289,996,000.

RESERVE PERSONNEL, NAVY

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Navy Reserve on active duty under section 10211 of title 10, United States Code, or while serving on active duty under section 12301(d) of title 10, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United States Code, or while undergoing reserve training, or while performing drills or equivalent duty, and for members of the Reserve Officers' Training Corps, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$1,473,388,000.

RESERVE PERSONNEL, MARINE CORPS

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Marine Corps Reserve on active duty under section 10211 of title 10, United States Code, or while serving on active duty under section 12301(d) of title 10, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United States Code, or while undergoing reserve training, or while performing drills or equivalent duty, and for members of the Marine Corps platoon leaders class, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$412,650,000.

RESERVE PERSONNEL, AIR FORCE

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Air Force Reserve on active duty under sections 10211, 10305, and 8038 of title 10, United States Code, or while serving on active duty under section 12301(d) of title 10, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United

States Code, or while undergoing reserve training, or while performing drills or equivalent duty or other duty, and for members of the Air Reserve Officers' Training Corps, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$892,594,000.

NATIONAL GUARD PERSONNEL, ARMY

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Army National Guard while on duty under section 10211, 10302, or 12402 of title 10 or section 708 of title 32, United States Code, or while serving on duty under section 12301(d) of title 10 or section 502(f) of title 32, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United States Code, or while undergoing training, or while performing drills or equivalent duty or other duty, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$3,610,479,000.

NATIONAL GUARD PERSONNEL, AIR FORCE

For pay, allowances, clothing, subsistence, gratuities, travel, and related expenses for personnel of the Air National Guard on duty under section 10211, 10305, or 12402 of title 10 or section 708 of title 32, United States Code, or while serving on duty under section 12301(d) of title 10 or section 502(f) of title 32, United States Code, in connection with performing duty specified in section 12310(a) of title 10, United States Code, or while undergoing training, or while performing drills or equivalent duty or other duty, and expenses authorized by section 16131 of title 10, United States Code; and for payments to the Department of Defense Military Retirement Fund, \$1,533,196,000.

TITLE II

OPERATION AND MAINTENANCE

OPERATION AND MAINTENANCE, ARMY

(INCLUDING TRANSFER OF FUNDS)

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Army, as authorized by law; and not to exceed \$10,624,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Army, and payments may be made on his certificate of necessity for confidential military purposes, \$19,256,152,000 and, in addition, \$50,000,000 shall be derived by transfer from the National Defense Stockpile Transaction Fund: Provided, That of the funds made available under this heading, \$5,000,000, to remain available until expended, shall be transferred to "National Park Service—Construction" within 30 days of enactment of this Act, only for necessary infrastructure repair improvements at Fort Baker, under the management of the Golden Gate Recreation Area: Provided further, That of the funds appropriated in this paragraph, not less than \$355,000,000 shall be made available only for conventional ammunition care and maintenance: Provided further, That of the funds appropriated under this heading, \$4,000,000 shall not be available until thirty days after the Secretary of the Army provides to the congressional defense committees the results of an assessment, solicited by means of a competitive bid, on the prospects of recovering costs associated with the environmental restoration of the Department of the Army's government-owned, contractor-operated facilities: Provided further, That of the funds made available under this heading, \$7,000,000 shall only be available to the Secretary of the Army, acting through the Chief of Engineers, only for demolition and removal of facilities, buildings, and structures used at MOTBY (a Military Traffic Management Command facility): Provided further, That

notwithstanding section 2215 of title 10, United States Code, of the funds appropriated in this paragraph, \$975,666 is authorized to be transferred to the Presidential Advisory Commission on Holocaust Assets in the United States, to remain available until March 31, 2001.

OPERATION AND MAINTENANCE, NAVY
(INCLUDING TRANSFER OF FUNDS)

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Navy and the Marine Corps, as authorized by law; and not to exceed \$5,155,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Navy, and payments may be made on his certificate of necessity for confidential military purposes, \$22,958,784,000 and, in addition, \$50,000,000 shall be derived by transfer from the National Defense Stockpile Transaction Fund.

OPERATION AND MAINTENANCE, MARINE CORPS

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Marine Corps, as authorized by law, \$2,808,354,000.

OPERATION AND MAINTENANCE, AIR FORCE
(INCLUDING TRANSFER OF FUNDS)

For expenses, not otherwise provided for, necessary for the operation and maintenance of the Air Force, as authorized by law; and not to exceed \$7,882,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of the Air Force, and payments may be made on his certificate of necessity for confidential military purposes, \$20,896,959,000 and, in addition, \$50,000,000 shall be derived by transfer from the National Defense Stockpile Transaction Fund: Provided, That notwithstanding any other provision of law, of the funds available under this heading, \$950,000 shall only be available to the Secretary of the Air Force for a grant to Florida Memorial College for the purpose of funding minority aviation training.

OPERATION AND MAINTENANCE, DEFENSE-WIDE
(INCLUDING TRANSFER OF FUNDS)

For expenses, not otherwise provided for, necessary for the operation and maintenance of activities and agencies of the Department of Defense (other than the military departments), as authorized by law, \$11,489,483,000, of which not to exceed \$25,000,000 may be available for the CINC initiative fund account; and of which not to exceed \$32,300,000 can be used for emergencies and extraordinary expenses, to be expended on the approval or authority of the Secretary of Defense, and payments may be made on his certificate of necessity for confidential military purposes: Provided, That of the amount appropriated under the heading "Operation and Maintenance, Defense-Wide" in division B, title I, of Public Law 105-277, the amount of \$202,000,000 not covered as of July 12, 1999, by an official budget request under the fifth proviso of that section is available, subject to such an official budget request for that entire amount, only for the following accounts in the specified amounts:

"Other Procurement, Air Force", \$102,000,000; and

"Procurement, Defense-Wide", \$100,000,000: Provided further, That none of the amount of \$202,000,000 described in the preceding proviso may be made available for obligation unless the entire amount is released to the Department of Defense and made available for obligation for the accounts, and in the amounts, specified in the preceding proviso: Provided further, That of the amounts provided under this heading, \$20,000,000 to remain available until expended, is available only for expenses relating to certain classified activities, and may be transferred as

necessary by the Secretary of Defense to operation and maintenance, procurement, and research, development, test and evaluation appropriations accounts, to be merged with and to be available for the same time period as the appropriations to which transferred: Provided further, That the transfer authority provided under this heading is in addition to any other transfer authority provided in this Act: Provided further, That of the funds made available under this heading, \$10,000,000 shall be available only for retrofitting security containers that are under the control of, or that are accessible by, defense contractors.

OPERATION AND MAINTENANCE, ARMY RESERVE

For expenses, not otherwise provided for, necessary for the operation and maintenance, including training, organization, and administration, of the Army Reserve; repair of facilities and equipment; hire of passenger motor vehicles; travel and transportation; care of the dead; recruiting; procurement of services, supplies, and equipment; and communications, \$1,469,176,000.

OPERATION AND MAINTENANCE, NAVY RESERVE

For expenses, not otherwise provided for, necessary for the operation and maintenance, including training, organization, and administration, of the Navy Reserve; repair of facilities and equipment; hire of passenger motor vehicles; travel and transportation; care of the dead; recruiting; procurement of services, supplies, and equipment; and communications, \$958,978,000.

OPERATION AND MAINTENANCE, MARINE CORPS RESERVE

For expenses, not otherwise provided for, necessary for the operation and maintenance, including training, organization, and administration, of the Marine Corps Reserve; repair of facilities and equipment; hire of passenger motor vehicles; travel and transportation; care of the dead; recruiting; procurement of services, supplies, and equipment; and communications, \$138,911,000.

OPERATION AND MAINTENANCE, AIR FORCE RESERVE

For expenses, not otherwise provided for, necessary for the operation and maintenance, including training, organization, and administration, of the Air Force Reserve; repair of facilities and equipment; hire of passenger motor vehicles; travel and transportation; care of the dead; recruiting; procurement of services, supplies, and equipment; and communications, \$1,782,591,000.

OPERATION AND MAINTENANCE, ARMY NATIONAL GUARD

For expenses of training, organizing, and administering the Army National Guard, including medical and hospital treatment and related expenses in non-Federal hospitals; maintenance, operation, and repairs to structures and facilities; hire of passenger motor vehicles; personnel services in the National Guard Bureau; travel expenses (other than mileage), as authorized by law for Army personnel on active duty, for Army National Guard division, regimental, and battalion commanders while inspecting units in compliance with National Guard Bureau regulations when specifically authorized by the Chief, National Guard Bureau; supplying and equipping the Army National Guard as authorized by law; and expenses of repair, modification, maintenance, and issue of supplies and equipment (including aircraft), \$3,161,378,000.

OPERATION AND MAINTENANCE, AIR NATIONAL GUARD

For operation and maintenance of the Air National Guard, including medical and hospital treatment and related expenses in non-Federal hospitals; maintenance, operation, repair, and other necessary expenses of facilities for the training and administration of the Air National

Guard, including repair of facilities, maintenance, operation, and modification of aircraft; transportation of things, hire of passenger motor vehicles; supplies, materials, and equipment, as authorized by law for the Air National Guard; and expenses incident to the maintenance and use of supplies, materials, and equipment, including such as may be furnished from stocks under the control of agencies of the Department of Defense; travel expenses (other than mileage) on the same basis as authorized by law for Air National Guard personnel on active Federal duty, for Air National Guard commanders while inspecting units in compliance with National Guard Bureau regulations when specifically authorized by the Chief, National Guard Bureau, \$3,241,138,000.

OVERSEAS CONTINGENCY OPERATIONS TRANSFER FUND

(INCLUDING TRANSFER OF FUNDS)

For expenses directly relating to Overseas Contingency Operations by United States military forces, \$1,722,600,000, to remain available until expended: Provided, That the Secretary of Defense may transfer these funds only to operation and maintenance accounts within this title, the Defense Health Program appropriation, and to working capital funds: Provided further, That the funds transferred shall be merged with and shall be available for the same purposes and for the same time period, as the appropriation to which transferred: Provided further, That upon a determination that all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation: Provided further, That the transfer authority provided in this paragraph is in addition to any other transfer authority contained elsewhere in this Act.

UNITED STATES COURT OF APPEALS FOR THE ARMED FORCES

For salaries and expenses necessary for the United States Court of Appeals for the Armed Forces, \$7,621,000, of which not to exceed \$2,500 can be used for official representation purposes.

ENVIRONMENTAL RESTORATION, ARMY

(INCLUDING TRANSFER OF FUNDS)

For the Department of the Army, \$378,170,000, to remain available until transferred: Provided, That the Secretary of the Army shall, upon determining that such funds are required for environmental restoration, reduction and recycling of hazardous waste, removal of unsafe buildings and debris of the Department of the Army, or for similar purposes, transfer the funds made available by this appropriation to other appropriations made available to the Department of the Army, to be merged with and to be available for the same purposes and for the same time period as the appropriations to which transferred: Provided further, That upon a determination that all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation.

ENVIRONMENTAL RESTORATION, NAVY

(INCLUDING TRANSFER OF FUNDS)

For the Department of the Navy, \$284,000,000, to remain available until transferred: Provided, That the Secretary of the Navy shall, upon determining that such funds are required for environmental restoration, reduction and recycling of hazardous waste, removal of unsafe buildings and debris of the Department of the Navy, or for similar purposes, transfer the funds made available by this appropriation to other appropriations made available to the Department of the Navy, to be merged with and to be available for the same purposes and for the same time period as the appropriations to which transferred: Provided further, That upon a determination that

all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation.

ENVIRONMENTAL RESTORATION, AIR FORCE

(INCLUDING TRANSFER OF FUNDS)

For the Department of the Air Force, \$376,800,000, to remain available until transferred: Provided, That the Secretary of the Air Force shall, upon determining that such funds are required for environmental restoration, reduction and recycling of hazardous waste, removal of unsafe buildings and debris of the Department of the Air Force, or for similar purposes, transfer the funds made available by this appropriation to other appropriations made available to the Department of the Air Force, to be merged with and to be available for the same purposes and for the same time period as the appropriations to which transferred: Provided further, That upon a determination that all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation.

ENVIRONMENTAL RESTORATION, DEFENSE-WIDE

(INCLUDING TRANSFER OF FUNDS)

For the Department of Defense, \$25,370,000, to remain available until transferred: Provided, That the Secretary of Defense shall, upon determining that such funds are required for environmental restoration, reduction and recycling of hazardous waste, removal of unsafe buildings and debris of the Department of Defense, or for similar purposes, transfer the funds made available by this appropriation to other appropriations made available to the Department of Defense, to be merged with and to be available for the same purposes and for the same time period as the appropriations to which transferred: Provided further, That upon a determination that all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation.

ENVIRONMENTAL RESTORATION, FORMERLY USED DEFENSE SITES

(INCLUDING TRANSFER OF FUNDS)

For the Department of the Army, \$239,214,000, to remain available until transferred: Provided, That the Secretary of the Army shall, upon determining that such funds are required for environmental restoration, reduction and recycling of hazardous waste, removal of unsafe buildings and debris at sites formerly used by the Department of Defense, transfer the funds made available by this appropriation to other appropriations made available to the Department of the Army, to be merged with and to be available for the same purposes and for the same time period as the appropriations to which transferred: Provided further, That upon a determination that all or part of the funds transferred from this appropriation are not necessary for the purposes provided herein, such amounts may be transferred back to this appropriation.

OVERSEAS HUMANITARIAN, DISASTER, AND CIVIC AID

For expenses relating to the Overseas Humanitarian, Disaster, and Civic Aid programs of the Department of Defense (consisting of the programs provided under sections 401, 402, 404, 2547, and 2551 of title 10, United States Code), \$55,800,000, to remain available until September 30, 2001.

FORMER SOVIET UNION THREAT REDUCTION

For assistance to the republics of the former Soviet Union, including assistance provided by contract or by grants, for facilitating the elimination and the safe and secure transportation and storage of nuclear, chemical and other weapons; for establishing programs to prevent

the proliferation of weapons, weapons components, and weapon-related technology and expertise; for programs relating to the training and support of defense and military personnel for demilitarization and protection of weapons, weapons components and weapons technology and expertise, \$460,500,000, to remain available until September 30, 2002: Provided, That of the amounts provided under this heading, \$25,000,000 shall be available only to support the dismantling and disposal of nuclear submarines and submarine reactor components in the Russian Far East.

QUALITY OF LIFE ENHANCEMENTS, DEFENSE

For expenses, not otherwise provided for, resulting from unfunded shortfalls in the repair and maintenance of real property of the Department of Defense (including military housing and barracks), \$300,000,000, for the maintenance of real property of the Department of Defense (including minor construction and major maintenance and repair), which shall remain available for obligation until September 30, 2001, as follows:

Army, \$77,000,000;
Navy, \$77,000,000;
Marine Corps, \$58,500,000;
Air Force, \$77,000,000; and
Defense-Wide, \$10,500,000:

Provided, That notwithstanding any other provision of law, of the funds appropriated under this heading for Defense-Wide activities, the entire amount shall only be available for grants by the Secretary of Defense to local educational authorities which maintain primary and secondary educational facilities located within Department of Defense installations, and which are used primarily by Department of Defense military and civilian dependents, for facility repairs and improvements to such educational facilities: Provided further, That such grants to local educational authorities may be made for repairs and improvements to such educational facilities as required to meet classroom size requirements: Provided further, That the cumulative amount of any grant or grants to any single local educational authority provided pursuant to the provisions under this heading shall not exceed \$1,500,000.

PENTAGON RENOVATION TRANSFER FUND

For expenses, not otherwise provided for, resulting from the Department of Defense renovation of the Pentagon Reservation, \$222,800,000, for the renovation of the Pentagon Reservation, which shall remain available for obligation until September 30, 2001.

TITLE III PROCUREMENT

AIRCRAFT PROCUREMENT, ARMY

For construction, procurement, production, modification, and modernization of aircraft, equipment, including ordnance, ground handling equipment, spare parts, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$1,451,688,000, to remain available for obligation until September 30, 2002.

MISSILE PROCUREMENT, ARMY

For construction, procurement, production, modification, and modernization of missiles, equipment, including ordnance, ground handling equipment, spare parts, and accessories therefor; specialized equipment and training de-

velopment; expansion of public and private plants, including the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$1,322,305,000, to remain available for obligation until September 30, 2002.

PROCUREMENT OF WEAPONS AND TRACKED COMBAT VEHICLES, ARMY

For construction, procurement, production, and modification of weapons and tracked combat vehicles, equipment, including ordnance, spare parts, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$1,586,490,000, to remain available for obligation until September 30, 2002.

PROCUREMENT OF AMMUNITION, ARMY

For construction, procurement, production, and modification of ammunition, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including ammunition facilities authorized by section 2854 of title 10, United States Code, and the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$1,204,120,000, to remain available for obligation until September 30, 2002.

OTHER PROCUREMENT, ARMY

For construction, procurement, production, and modification of vehicles, including tactical, support, and non-tracked combat vehicles; the purchase of not to exceed 36 passenger motor vehicles for replacement only; and the purchase of 3 vehicles required for physical security of personnel, notwithstanding price limitations applicable to passenger vehicles but not to exceed \$200,000 per vehicle; communications and electronic equipment; other support equipment; spare parts, ordnance, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$3,738,934,000, to remain available for obligation until September 30, 2002.

AIRCRAFT PROCUREMENT, NAVY

For construction, procurement, production, modification, and modernization of aircraft, equipment, including ordnance, spare parts, and accessories therefor; specialized equipment; expansion of public and private plants, including the land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval

of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway, \$8,662,655,000, to remain available for obligation until September 30, 2002.

WEAPONS PROCUREMENT, NAVY

For construction, procurement, production, modification, and modernization of missiles, torpedoes, other weapons, and related support equipment including spare parts, and accessories therefor; expansion of public and private plants, including the land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway, \$1,383,413,000, to remain available for obligation until September 30, 2002.

PROCUREMENT OF AMMUNITION, NAVY AND MARINE CORPS

For construction, procurement, production, and modification of ammunition, and accessories therefor; specialized equipment and training devices; expansion of public and private plants, including ammunition facilities authorized by section 2854 of title 10, United States Code, and the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$525,200,000, to remain available for obligation until September 30, 2002.

SHIPBUILDING AND CONVERSION, NAVY

For expenses necessary for the construction, acquisition, or conversion of vessels as authorized by law, including armor and armament thereof, plant equipment, appliances, and machine tools and installation thereof in public and private plants; reserve plant and Government and contractor-owned equipment layaway; procurement of critical, long leadtime components and designs for vessels to be constructed or converted in the future; and expansion of public and private plants, including land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title, as follows:

NSSN (AP), \$748,497,000;
 CVN-77 (AP), \$751,540,000;
 CVN Refuelings (AP), \$345,565,000;
 DDG-51 destroyer program, \$2,681,653,000;
 LPD-17 amphibious transport dock ship, \$1,508,338,000;
 LHD-8 (AP), \$375,000,000;
 ADC(X), \$439,966,000;
 LCAC landing craft air cushion program, \$31,776,000; and

For craft, outfitting, post delivery, conversions, and first destination transportation, \$171,119,000;

In all: \$7,053,454,000, to remain available for obligation until September 30, 2004: Provided, That additional obligations may be incurred after September 30, 2004, for engineering services, tests, evaluations, and other such budgeted work that must be performed in the final stage of ship construction: Provided further, That none of the funds provided under this heading for the construction or conversion of any naval vessel to be constructed in shipyards in the United States shall be expended in foreign facilities for the construction of major components of such vessel: Provided further, That none of the funds provided under this heading shall be

used for the construction of any naval vessel in foreign shipyards: Provided further, That the Secretary of the Navy is hereby granted the authority to enter into a contract for an LHD-1 Amphibious Assault Ship which shall be funded on an incremental basis.

OTHER PROCUREMENT, NAVY

For procurement, production, and modernization of support equipment and materials not otherwise provided for, Navy ordnance (except ordnance for new aircraft, new ships, and ships authorized for conversion); the purchase of not to exceed 50 passenger motor vehicles for replacement only; expansion of public and private plants, including the land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway, \$4,320,238,000, to remain available for obligation until September 30, 2002.

PROCUREMENT, MARINE CORPS

For expenses necessary for the procurement, manufacture, and modification of missiles, armament, military equipment, spare parts, and accessories therefor; plant equipment, appliances, and machine tools, and installation thereof in public and private plants; reserve plant and Government and contractor-owned equipment layaway; vehicles for the Marine Corps, including the purchase of not to exceed 43 passenger motor vehicles for replacement only; and expansion of public and private plants, including land necessary therefor, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title, \$1,300,920,000, to remain available for obligation until September 30, 2002.

AIRCRAFT PROCUREMENT, AIR FORCE

For construction, procurement, lease, and modification of aircraft and equipment, including armor and armament, specialized ground handling equipment, and training devices, spare parts, and accessories therefor; specialized equipment; expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes including rents and transportation of things, \$8,228,630,000, to remain available for obligation until September 30, 2002.

MISSILE PROCUREMENT, AIR FORCE

For construction, procurement, and modification of missiles, spacecraft, rockets, and related equipment, including spare parts and accessories therefor, ground handling equipment, and training devices; expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes including rents and transportation of things, \$2,211,407,000, to remain available for obligation until September 30, 2002.

PROCUREMENT OF AMMUNITION, AIR FORCE

For construction, procurement, production, and modification of ammunition, and accessories therefor; specialized equipment and train-

ing devices; expansion of public and private plants, including ammunition facilities authorized by section 2854 of title 10, United States Code, and the land necessary therefor, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; and procurement and installation of equipment, appliances, and machine tools in public and private plants; reserve plant and Government and contractor-owned equipment layaway; and other expenses necessary for the foregoing purposes, \$442,537,000, to remain available for obligation until September 30, 2002.

OTHER PROCUREMENT, AIR FORCE

For procurement and modification of equipment (including ground guidance and electronic control equipment, and ground electronic and communication equipment), and supplies, materials, and spare parts therefor, not otherwise provided for; the purchase of not to exceed 53 passenger motor vehicles for replacement only; lease of passenger motor vehicles; and expansion of public and private plants, Government-owned equipment and installation thereof in such plants, erection of structures, and acquisition of land, for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon, prior to approval of title; reserve plant and Government and contractor-owned equipment layaway, \$7,146,157,000, to remain available for obligation until September 30, 2002.

PROCUREMENT, DEFENSE-WIDE

(INCLUDING TRANSFER OF FUNDS)

For expenses of activities and agencies of the Department of Defense (other than the military departments) necessary for procurement, production, and modification of equipment, supplies, materials, and spare parts therefor, not otherwise provided for; the purchase of not to exceed 103 passenger motor vehicles for replacement only; the purchase of 7 vehicles required for physical security of personnel, notwithstanding price limitations applicable to passenger vehicles but not to exceed \$250,000 per vehicle; expansion of public and private plants, equipment, and installation thereof in such plants, erection of structures, and acquisition of land for the foregoing purposes, and such lands and interests therein, may be acquired, and construction prosecuted thereon prior to approval of title; reserve plant and Government and contractor-owned equipment layaway, \$2,249,566,000, to remain available for obligation until September 30, 2002: Provided, That of the funds available under this heading, not less than \$39,491,000, including \$6,000,000 derived by transfer from "Research, Development, Test and Evaluation, Defense-Wide", shall be available only to support Electronic Commerce Resource Centers.

NATIONAL GUARD AND RESERVE EQUIPMENT

For procurement of aircraft, missiles, tracked combat vehicles, ammunition, other weapons, and other procurement for the reserve components of the Armed Forces, \$150,000,000, to remain available for obligation until September 30, 2002: Provided, That the Chiefs of the Reserve and National Guard components shall, not later than 30 days after the enactment of this Act, individually submit to the congressional defense committees the modernization priority assessment for their respective Reserve or National Guard component.

DEFENSE PRODUCTION ACT PURCHASES

For activities by the Department of Defense pursuant to sections 108, 301, 302, and 303 of the Defense Production Act of 1950 (50 U.S.C. App. 2078, 2091, 2092, and 2093), \$3,000,000 only for microwave power tubes and to remain available until expended.

TITLE IV

RESEARCH, DEVELOPMENT, TEST AND
EVALUATIONRESEARCH, DEVELOPMENT, TEST AND
EVALUATION, ARMY

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, \$5,266,601,000, to remain available for obligation until September 30, 2001.

RESEARCH, DEVELOPMENT, TEST AND
EVALUATION, NAVY

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, \$9,110,326,000, to remain available for obligation until September 30, 2001: Provided, That funds appropriated in this paragraph which are available for the V-22 may be used to meet unique requirements of the Special Operation Forces: Provided further, That of the funds available under this heading, no more than \$7,000,000 shall be available only to initiate a cost improvement program for the Intercooled Recuperated Gas Turbine Engine program: Provided further, That the funds identified in the immediately preceding proviso shall be made available only if the Secretary of the Navy certifies to the congressional defense committees that binding commitments to finance the remaining cost of the ICR cost improvement program have been secured from non-federal sources: Provided further, That should the Secretary of the Navy fail to make the certification required in the immediately preceding proviso by July 31, 2000, the Secretary shall make the funds subject to such certification available for DD-21 ship propulsion risk reduction: Provided further, That the Department of Defense shall not pay more than one-third of the cost of the Intercooled Recuperated Gas Turbine Engine cost improvement program.

RESEARCH, DEVELOPMENT, TEST AND
EVALUATION, AIR FORCE

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, \$13,674,537,000, to remain available for obligation until September 30, 2001.

RESEARCH, DEVELOPMENT, TEST AND
EVALUATION, DEFENSE-WIDE

For expenses of activities and agencies of the Department of Defense (other than the military departments), necessary for basic and applied scientific research, development, test and evaluation; advanced research projects as may be designated and determined by the Secretary of Defense, pursuant to law; maintenance, rehabilitation, lease, and operation of facilities and equipment, \$9,256,705,000, to remain available for obligation until September 30, 2001: Provided, That of the amount appropriated in section 102 of division B, title I, of Public Law 105-277 (112 Stat. 2681-558), the amount of \$230,000,000 not covered as of July 12, 1999, by an official budget request under the third proviso of that section is available, subject to such an official budget request for that entire amount, only for the following programs in the specified amounts:

“Theater High-Altitude Area Defense System—TMD—EMD”, \$38,000,000;

“PATRIOT PAC-3 Theater Missile Acquisition—EMD”, \$75,000,000; and

“National Missile Defense Dem/Val”, \$117,000,000;

Provided further, That none of the amount of \$230,000,000 described in the preceding proviso may be made available for obligation unless the

entire amount is released to the Department of Defense and made available for obligation for the programs, and in the amounts, specified in the preceding proviso.

DEVELOPMENTAL TEST AND EVALUATION,
DEFENSE

For expenses, not otherwise provided for, of independent activities of the Director, Test and Evaluation in the direction and supervision of developmental test and evaluation, including performance and joint developmental testing and evaluation; and administrative expenses in connection therewith, \$265,957,000, to remain available for obligation until September 30, 2001.

OPERATIONAL TEST AND EVALUATION, DEFENSE

For expenses, not otherwise provided for, necessary for the independent activities of the Director, Operational Test and Evaluation in the direction and supervision of operational test and evaluation, including initial operational test and evaluation which is conducted prior to, and in support of, production decisions; joint operational testing and evaluation; and administrative expenses in connection therewith, \$31,434,000, to remain available for obligation until September 30, 2001.

TITLE V

REVOLVING AND MANAGEMENT FUNDS

DEFENSE WORKING CAPITAL FUNDS

For the Defense Working Capital Funds, \$90,344,000: Provided, That during fiscal year 2000, funds in the Defense Working Capital Funds may be used for the purchase of not to exceed 295 passenger motor vehicles for replacement only for the Defense Security Service.

NATIONAL DEFENSE SEALIFT FUND

For National Defense Sealift Fund programs, projects, and activities, and for expenses of the National Defense Reserve Fleet, as established by section 11 of the Merchant Ship Sales Act of 1946 (50 U.S.C. App. 1744), \$717,200,000, to remain available until expended: Provided, That none of the funds provided in this paragraph shall be used to award a new contract that provides for the acquisition of any of the following major components unless such components are manufactured in the United States: auxiliary equipment, including pumps, for all shipboard services; propulsion system components (that is; engines, reduction gears, and propellers); shipboard cranes; and spreaders for shipboard cranes: Provided further, That the exercise of an option in a contract awarded through the obligation of previously appropriated funds shall not be considered to be the award of a new contract: Provided further, That the Secretary of the military department responsible for such procurement may waive the restrictions in the first proviso on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate that adequate domestic supplies are not available to meet Department of Defense requirements on a timely basis and that such an acquisition must be made in order to acquire capability for national security purposes.

TITLE VI

OTHER DEPARTMENT OF DEFENSE
PROGRAMS

DEFENSE HEALTH PROGRAM

For expenses, not otherwise provided for, for medical and health care programs of the Department of Defense, as authorized by law, \$11,154,617,000, of which \$10,522,647,000 shall be for Operation and maintenance, of which not to exceed 2 per centum shall remain available until September 30, 2001; of which \$356,970,000, to remain available for obligation until September 30, 2002, shall be for Procurement; and of which \$275,000,000, to remain available for obligation until September 30, 2001, shall be for Research, development, test and evaluation.

CHEMICAL AGENTS AND MUNITIONS
DESTRUCTION, ARMY

For expenses, not otherwise provided for, necessary for the destruction of the United States stockpile of lethal chemical agents and munitions in accordance with the provisions of section 1412 of the Department of Defense Authorization Act, 1986 (50 U.S.C. 1521), and for the destruction of other chemical warfare materials that are not in the chemical weapon stockpile, \$1,029,000,000, of which \$543,500,000 shall be for Operation and maintenance to remain available until September 30, 2001, \$191,500,000 shall be for Procurement to remain available until September 30, 2002, and \$294,000,000 shall be for Research, development, test and evaluation to remain available until September 30, 2001: Provided, That of the funds available under this heading, \$1,000,000 shall be available until expended each year only for a Johnston Atoll off-island leave program: Provided further, That the Secretaries concerned shall, pursuant to uniform regulations, prescribe travel and transportation allowances for travel by participants in the off-island leave program.

DRUG INTERDICTION AND COUNTER-DRUG
ACTIVITIES, DEFENSE

(INCLUDING TRANSFER OF FUNDS)

For drug interdiction and counter-drug activities of the Department of Defense, for transfer to appropriations available to the Department of Defense for military personnel of the reserve components serving under the provisions of title 10 and title 32, United States Code; for Operation and maintenance; for Procurement; and for Research, development, test and evaluation, \$847,800,000: Provided, That of the funds appropriated under this heading, \$10,800,000 is hereby transferred to appropriations available for “Military Construction, Air Force” for fiscal year 2000, and the transferred funds shall be available for study, planning, design, architect and engineer services at forward operating locations in the area of responsibility of the United States Southern Command: Provided further, That the funds appropriated under this heading shall be available for obligation for the same time period and for the same purpose as the appropriation to which transferred: Provided further, That the transfer authority provided under this heading is in addition to any transfer authority contained elsewhere in this Act.

OFFICE OF THE INSPECTOR GENERAL

For expenses and activities of the Office of the Inspector General in carrying out the provisions of the Inspector General Act of 1978, as amended, \$137,544,000, of which \$136,244,000 shall be for Operation and maintenance, of which not to exceed \$700,000 is available for emergencies and extraordinary expenses to be expended on the approval or authority of the Inspector General, and payments may be made on the Inspector General’s certificate of necessity for confidential military purposes; and of which \$1,300,000 to remain available until September 30, 2002, shall be for Procurement.

TITLE VII

RELATED AGENCIES

CENTRAL INTELLIGENCE AGENCY RETIREMENT
AND DISABILITY SYSTEM FUND

For payment to the Central Intelligence Agency Retirement and Disability System Fund, to maintain proper funding level for continuing the operation of the Central Intelligence Agency Retirement and Disability System, \$209,100,000.

INTELLIGENCE COMMUNITY MANAGEMENT
ACCOUNT

(INCLUDING TRANSFER OF FUNDS)

For necessary expenses of the Intelligence Community Management Account, \$158,015,000, of which \$34,923,000 for the Advanced Research

and Development Committee shall remain available until September 30, 2001: Provided, That of the funds appropriated under this heading, \$27,000,000 shall be transferred to the Department of Justice for the National Drug Intelligence Center to support the Department of Defense's counter-drug intelligence responsibilities, and of the said amount, \$1,500,000 for Procurement shall remain available until September 30, 2002, and \$1,000,000 for Research, development, test and evaluation shall remain available until September 30, 2001.

PAYMENT TO KAHO'OLAWA ISLAND CONVEYANCE, REMEDIATION, AND ENVIRONMENTAL RESTORATION FUND

For payment to Kaho'olawe Island Conveyance, Remediation, and Environmental Restoration Fund, as authorized by law, \$35,000,000, to remain available until expended.

NATIONAL SECURITY EDUCATION TRUST FUND

For the purposes of title VIII of Public Law 102-183, \$8,000,000, to be derived from the National Security Education Trust Fund, to remain available until expended.

**TITLE VIII
GENERAL PROVISIONS**

SEC. 8001. No part of any appropriation contained in this Act shall be used for publicity or propaganda purposes not authorized by the Congress.

SEC. 8002. During the current fiscal year, provisions of law prohibiting the payment of compensation to, or employment of, any person not a citizen of the United States shall not apply to personnel of the Department of Defense: Provided, That salary increases granted to direct and indirect hire foreign national employees of the Department of Defense funded by this Act shall not be at a rate in excess of the percentage increase authorized by law for civilian employees of the Department of Defense whose pay is computed under the provisions of section 5332 of title 5, United States Code, or at a rate in excess of the percentage increase provided by the appropriate host nation to its own employees, whichever is higher: Provided further, That this section shall not apply to Department of Defense foreign service national employees serving at United States diplomatic missions whose pay is set by the Department of State under the Foreign Service Act of 1980: Provided further, That the limitations of this provision shall not apply to foreign national employees of the Department of Defense in the Republic of Turkey.

SEC. 8003. No part of any appropriation contained in this Act shall remain available for obligation beyond the current fiscal year, unless expressly so provided herein.

SEC. 8004. No more than 20 per centum of the appropriations in this Act which are limited for obligation during the current fiscal year shall be obligated during the last 2 months of the fiscal year: Provided, That this section shall not apply to obligations for support of active duty training of reserve components or summer camp training of the Reserve Officers' Training Corps.

(TRANSFER OF FUNDS)

SEC. 8005. Upon determination by the Secretary of Defense that such action is necessary in the national interest, he may, with the approval of the Office of Management and Budget, transfer not to exceed \$1,600,000,000 of working capital funds of the Department of Defense or funds made available in this Act to the Department of Defense for military functions (except military construction) between such appropriations or funds or any subdivision thereof, to be merged with and to be available for the same purposes, and for the same time period, as the appropriation or fund to which transferred: Provided, That such authority to transfer may not be used unless for higher priority items,

based on unforeseen military requirements, than those for which originally appropriated and in no case where the item for which funds are requested has been denied by Congress: Provided further, That the Secretary of Defense shall notify the Congress promptly of all transfers made pursuant to this authority or any other authority in this Act: Provided further, That no part of the funds in this Act shall be available to prepare or present a request to the Committees on Appropriations for reprogramming of funds, unless for higher priority items, based on unforeseen military requirements, than those for which originally appropriated and in no case where the item for which reprogramming is requested has been denied by the Congress.

(TRANSFER OF FUNDS)

SEC. 8006. During the current fiscal year, cash balances in working capital funds of the Department of Defense established pursuant to section 2208 of title 10, United States Code, may be maintained in only such amounts as are necessary at any time for cash disbursements to be made from such funds: Provided, That transfers may be made between such funds: Provided further, That transfers may be made between working capital funds and the "Foreign Currency Fluctuations, Defense" appropriation and the "Operation and Maintenance" appropriation accounts in such amounts as may be determined by the Secretary of Defense, with the approval of the Office of Management and Budget, except that such transfers may not be made unless the Secretary of Defense has notified the Congress of the proposed transfer. Except in amounts equal to the amounts appropriated to working capital funds in this Act, no obligations may be made against a working capital fund to procure or increase the value of war reserve material inventory, unless the Secretary of Defense has notified the Congress prior to any such obligation.

SEC. 8007. Funds appropriated by this Act may not be used to initiate a special access program without prior notification 30 calendar days in session in advance to the congressional defense committees.

SEC. 8008. None of the funds provided in this Act shall be available to initiate: (1) a multiyear contract that employs economic order quantity procurement in excess of \$20,000,000 in any 1 year of the contract or that includes an unfunded contingent liability in excess of \$20,000,000; or (2) a contract for advance procurement leading to a multiyear contract that employs economic order quantity procurement in excess of \$20,000,000 in any 1 year, unless the congressional defense committees have been notified at least 30 days in advance of the proposed contract award: Provided, That no part of any appropriation contained in this Act shall be available to initiate a multiyear contract for which the economic order quantity advance procurement is not funded at least to the limits of the Government's liability: Provided further, That no part of any appropriation contained in this Act shall be available to initiate multiyear procurement contracts for any systems or component thereof if the value of the multiyear contract would exceed \$500,000,000 unless specifically provided in this Act: Provided further, That no multiyear procurement contract can be terminated without 10-day prior notification to the congressional defense committees: Provided further, That the execution of multiyear authority shall require the use of a present value analysis to determine lowest cost compared to an annual procurement.

Funds appropriated in title III of this Act may be used for multiyear procurement contracts as follows:

Longbow Apache Helicopter; Javelin missile; Abrams M1A2 Upgrade; F/A-18E/F aircraft; C-17 aircraft; and F-16 aircraft.

SEC. 8009. Within the funds appropriated for the operation and maintenance of the Armed

Forces, funds are hereby appropriated pursuant to section 401 of title 10, United States Code, for humanitarian and civic assistance costs under chapter 20 of title 10, United States Code. Such funds may also be obligated for humanitarian and civic assistance costs incidental to authorized operations and pursuant to authority granted in section 401 of chapter 20 of title 10, United States Code, and these obligations shall be reported to Congress on September 30 of each year: Provided, That funds available for operation and maintenance shall be available for providing humanitarian and similar assistance by using Civic Action Teams in the Trust Territories of the Pacific Islands and freely associated states of Micronesia, pursuant to the Compact of Free Association as authorized by Public Law 99-239: Provided further, That upon a determination by the Secretary of the Army that such action is beneficial for graduate medical education programs conducted at Army medical facilities located in Hawaii, the Secretary of the Army may authorize the provision of medical services at such facilities and transportation to such facilities, on a nonreimbursable basis, for civilian patients from American Samoa, the Commonwealth of the Northern Mariana Islands, the Marshall Islands, the Federated States of Micronesia, Palau, and Guam.

SEC. 8010. (a) During fiscal year 2000, the civilian personnel of the Department of Defense may not be managed on the basis of any end-strength, and the management of such personnel during that fiscal year shall not be subject to any constraint or limitation (known as an end-strength) on the number of such personnel who may be employed on the last day of such fiscal year.

(b) The fiscal year 2001 budget request for the Department of Defense as well as all justification material and other documentation supporting the fiscal year 2001 Department of Defense budget request shall be prepared and submitted to the Congress as if subsections (a) and (b) of this provision were effective with regard to fiscal year 2001.

(c) Nothing in this section shall be construed to apply to military (civilian) technicians.

SEC. 8011. Notwithstanding any other provision of law, none of the funds made available by this Act shall be used by the Department of Defense to exceed, outside the 50 United States, its territories, and the District of Columbia, 125,000 civilian workyears: Provided, That workyears shall be applied as defined in the Federal Personnel Manual: Provided further, That workyears expended in dependent student hiring programs for disadvantaged youths shall not be included in this workyear limitation.

SEC. 8012. None of the funds made available by this Act shall be used in any way, directly or indirectly, to influence congressional action on any legislation or appropriation matters pending before the Congress.

SEC. 8013. (a) None of the funds appropriated by this Act shall be used to make contributions to the Department of Defense Education Benefits Fund pursuant to section 2006(g) of title 10, United States Code, representing the normal cost for future benefits under section 3015(d) of title 38, United States Code, for any member of the armed services who, on or after the date of the enactment of this Act, enlists in the armed services for a period of active duty of less than three years, nor shall any amounts representing the normal cost of such future benefits be transferred from the Fund by the Secretary of the Treasury to the Secretary of Veterans Affairs pursuant to section 2006(d) of title 10, United States Code; nor shall the Secretary of Veterans Affairs pay such benefits to any such member: Provided, That these limitations shall not apply to members in combat arms skills or to members who enlist in the armed services on or after July

1, 1989, under a program continued or established by the Secretary of Defense in fiscal year 1991 to test the cost-effective use of special recruiting incentives involving not more than nineteen noncombat arms skills approved in advance by the Secretary of Defense: Provided further, That this subsection applies only to active components of the Army.

(b) None of the funds appropriated by this Act shall be available for the basic pay and allowances of any member of the Army participating as a full-time student and receiving benefits paid by the Secretary of Veterans Affairs from the Department of Defense Education Benefits Fund when time spent as a full-time student is credited toward completion of a service commitment: Provided, That this subsection shall not apply to those members who have reenlisted with this option prior to October 1, 1987: Provided further, That this subsection applies only to active components of the Army.

SEC. 8014. None of the funds appropriated by this Act shall be available to convert to contractor performance an activity or function of the Department of Defense that, on or after the date of the enactment of this Act, is performed by more than ten Department of Defense civilian employees until a most efficient and cost-effective organization analysis is completed on such activity or function and certification of the analysis is made to the Committees on Appropriations of the House of Representatives and the Senate: Provided, That this section and subsections (a), (b), and (c) of 10 U.S.C. 2461 shall not apply to a commercial or industrial type function of the Department of Defense that: (1) is included on the procurement list established pursuant to section 2 of the Act of June 25, 1938 (41 U.S.C. 47), popularly referred to as the Javits-Wagner-O'Day Act; (2) is planned to be converted to performance by a qualified nonprofit agency for the blind or by a qualified nonprofit agency for other severely handicapped individuals in accordance with that Act; or (3) is planned to be converted to performance by a qualified firm under 51 per centum Native American ownership.

(TRANSFER OF FUNDS)

SEC. 8015. Funds appropriated in title III of this Act for the Department of Defense Pilot Mentor-Protege Program may be transferred to any other appropriation contained in this Act solely for the purpose of implementing a Mentor-Protege Program developmental assistance agreement pursuant to section 831 of the National Defense Authorization Act for Fiscal Year 1991 (Public Law 101-510; 10 U.S.C. 2301 note), as amended, under the authority of this provision or any other transfer authority contained in this Act.

SEC. 8016. None of the funds in this Act may be available for the purchase by the Department of Defense (and its departments and agencies) of welded shipboard anchor and mooring chain 4 inches in diameter and under unless the anchor and mooring chain are manufactured in the United States from components which are substantially manufactured in the United States: Provided, That for the purpose of this section manufactured will include cutting, heat treating, quality control, testing of chain and welding (including the forging and shot blasting process): Provided further, That for the purpose of this section substantially all of the components of anchor and mooring chain shall be considered to be produced or manufactured in the United States if the aggregate cost of the components produced or manufactured in the United States exceeds the aggregate cost of the components produced or manufactured outside the United States: Provided further, That when adequate domestic supplies are not available to meet Department of Defense requirements on a timely basis, the Secretary of the service respon-

sible for the procurement may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations that such an acquisition must be made in order to acquire capability for national security purposes.

SEC. 8017. None of the funds appropriated by this Act available for the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) shall be available for the reimbursement of any health care provider for inpatient mental health service for care received when a patient is referred to a provider of inpatient mental health care or residential treatment care by a medical or health care professional having an economic interest in the facility to which the patient is referred: Provided, That this limitation does not apply in the case of inpatient mental health services provided under the program for the handicapped under subsection (d) of section 1079 of title 10, United States Code, provided as partial hospital care, or provided pursuant to a waiver authorized by the Secretary of Defense because of medical or psychological circumstances of the patient that are confirmed by a health professional who is not a Federal employee after a review, pursuant to rules prescribed by the Secretary, which takes into account the appropriate level of care for the patient, the intensity of services required by the patient, and the availability of that care.

SEC. 8018. Funds available in this Act may be used to provide transportation for the next-of-kin of individuals who have been prisoners of war or missing in action from the Vietnam era to an annual meeting in the United States, under such regulations as the Secretary of Defense may prescribe.

SEC. 8019. Notwithstanding any other provision of law, during the current fiscal year, the Secretary of Defense may, by executive agreement, establish with host nation governments in NATO member states a separate account into which such residual value amounts negotiated in the return of United States military installations in NATO member states may be deposited, in the currency of the host nation, in lieu of direct monetary transfers to the United States Treasury: Provided, That such credits may be utilized only for the construction of facilities to support United States military forces in that host nation, or such real property maintenance and base operating costs that are currently executed through monetary transfers to such host nations: Provided further, That the Department of Defense's budget submission for fiscal year 2001 shall identify such sums anticipated in residual value settlements, and identify such construction, real property maintenance or base operating costs that shall be funded by the host nation through such credits: Provided further, That all military construction projects to be executed from such accounts must be previously approved in a prior Act of Congress: Provided further, That each such executive agreement with a NATO member host nation shall be reported to the congressional defense committees, the Committee on International Relations of the House of Representatives and the Committee on Foreign Relations of the Senate 30 days prior to the conclusion and endorsement of any such agreement established under this provision.

SEC. 8020. None of the funds available to the Department of Defense may be used to demilitarize or dispose of M-1 Carbines, M-1 Garand rifles, M-14 rifles, .22 caliber rifles, .30 caliber rifles, or M-1911 pistols.

SEC. 8021. Notwithstanding any other provision of law, none of the funds appropriated by this Act shall be available to pay more than 50 per centum of an amount paid to any person under section 308 of title 37, United States Code, in a lump sum.

SEC. 8022. No more than \$500,000 of the funds appropriated or made available in this Act shall

be used during a single fiscal year for any single relocation of an organization, unit, activity or function of the Department of Defense into or within the National Capital Region: Provided, That the Secretary of Defense may waive this restriction on a case-by-case basis by certifying in writing to the congressional defense committees that such a relocation is required in the best interest of the Government.

SEC. 8023. A member of a reserve component whose unit or whose residence is located in a State which is not contiguous with another State is authorized to travel in a space required status on aircraft of the Armed Forces between home and place of inactive duty training, or place of duty in lieu of unit training assembly, when there is no road or railroad transportation (or combination of road and railroad transportation between those locations): Provided, That a member traveling in that status on a military aircraft pursuant to the authority provided in this section is not authorized to receive travel, transportation, or per diem allowances in connection with that travel.

SEC. 8024. In addition to the funds provided elsewhere in this Act, \$8,000,000 is appropriated only for incentive payments authorized by section 504 of the Indian Financing Act of 1974 (25 U.S.C. 1544): Provided, That contractors participating in the test program established by section 854 of Public Law 101-189 (15 U.S.C. 637 note) shall be eligible for the program established by section 504 of the Indian Financing Act of 1974 (25 U.S.C. 1544).

SEC. 8025. During the current fiscal year, funds appropriated or otherwise available for any Federal agency, the Congress, the judicial branch, or the District of Columbia may be used for the pay, allowances, and benefits of an employee as defined by section 2105 of title 5, United States Code, or an individual employed by the government of the District of Columbia, permanent or temporary indefinite, who—

(1) is a member of a Reserve component of the Armed Forces, as described in section 10101 of title 10, United States Code, or the National Guard, as described in section 101 of title 32, United States Code;

(2) performs, for the purpose of providing military aid to enforce the law or providing assistance to civil authorities in the protection or saving of life or property or prevention of injury—

(A) Federal service under sections 331, 332, 333, or 12406 of title 10, or other provision of law, as applicable; or

(B) full-time military service for his or her State, the District of Columbia, the Commonwealth of Puerto Rico, or a territory of the United States; and

(3) requests and is granted—

(A) leave under the authority of this section; or

(B) annual leave, which may be granted without regard to the provisions of sections 5519 and 6323(b) of title 5, if such employee is otherwise entitled to such annual leave:

Provided, That any employee who requests leave under subsection (3)(A) for service described in subsection (2) of this section is entitled to such leave, subject to the provisions of this section and of the last sentence of section 6323(b) of title 5, and such leave shall be considered leave under section 6323(b) of title 5, United States Code.

SEC. 8026. None of the funds appropriated by this Act shall be available to perform any cost study pursuant to the provisions of OMB Circular A-76 if the study being performed exceeds a period of 24 months after initiation of such study with respect to a single function activity or 48 months after initiation of such study for a multi-function activity.

SEC. 8027. Funds appropriated by this Act for the American Forces Information Service shall

not be used for any national or international political or psychological activities.

SEC. 8028. Notwithstanding any other provision of law or regulation, the Secretary of Defense may adjust wage rates for civilian employees hired for certain health care occupations as authorized for the Secretary of Veterans Affairs by section 7455 of title 38, United States Code.

SEC. 8029. None of the funds appropriated or made available in this Act shall be used to reduce or disestablish the operation of the 53rd Weather Reconnaissance Squadron of the Air Force Reserve, if such action would reduce the WC-130 Weather Reconnaissance mission below the levels funded in this Act.

SEC. 8030. (a) Of the funds for the procurement of supplies or services appropriated by this Act, qualified nonprofit agencies for the blind or other severely handicapped shall be afforded the maximum practicable opportunity to participate as subcontractors and suppliers in the performance of contracts let by the Department of Defense.

(b) During the current fiscal year, a business concern which has negotiated with a military service or defense agency a subcontracting plan for the participation by small business concerns pursuant to section 8(d) of the Small Business Act (15 U.S.C. 637(d)) shall be given credit toward meeting that subcontracting goal for any purchases made from qualified nonprofit agencies for the blind or other severely handicapped.

(c) For the purpose of this section, the phrase "qualified nonprofit agency for the blind or other severely handicapped" means a nonprofit agency for the blind or other severely handicapped that has been approved by the Committee for the Purchase from the Blind and Other Severely Handicapped under the Javits-Wagner-O'Day Act (41 U.S.C. 46-48).

SEC. 8031. During the current fiscal year, net receipts pursuant to collections from third party payers pursuant to section 1095 of title 10, United States Code, shall be made available to the local facility of the uniformed services responsible for the collections and shall be over and above the facility's direct budget amount.

SEC. 8032. During the current fiscal year, the Department of Defense is authorized to incur obligations of not to exceed \$350,000,000 for purposes specified in section 2350j(c) of title 10, United States Code, in anticipation of receipt of contributions, only from the Government of Kuwait, under that section: Provided, That upon receipt, such contributions from the Government of Kuwait shall be credited to the appropriations or fund which incurred such obligations.

SEC. 8033. Of the funds made available in this Act, not less than \$26,588,000 shall be available for the Civil Air Patrol Corporation, of which \$22,888,000 shall be available for Civil Air Patrol Corporation operation and maintenance to support readiness activities which includes \$1,418,000 for the Civil Air Patrol counterdrug program: Provided, That funds identified for "Civil Air Patrol" under this section are intended for and shall be for the exclusive use of the Civil Air Patrol Corporation and not for the Air Force or any unit thereof.

SEC. 8034. (a) None of the funds appropriated in this Act are available to establish a new Department of Defense (department) federally funded research and development center (FFRDC), either as a new entity, or as a separate entity administered by an organization managing another FFRDC, or as a nonprofit membership corporation consisting of a consortium of other FFRDCs and other non-profit entities.

(b) No member of a Board of Directors, Trustees, Overseers, Advisory Group, Special Issues Panel, Visiting Committee, or any similar entity of a defense FFRDC, and no paid consultant to any defense FFRDC, except when acting in a

technical advisory capacity, may be compensated for his or her services as a member of such entity, or as a paid consultant by more than one FFRDC in a fiscal year: Provided, That a member of any such entity referred to previously in this subsection shall be allowed travel expenses and per diem as authorized under the Federal Joint Travel Regulations, when engaged in the performance of membership duties.

(c) Notwithstanding any other provision of law, none of the funds available to the department from any source during fiscal year 2000 may be used by a defense FFRDC, through a fee or other payment mechanism, for construction of new buildings, for payment of cost sharing for projects funded by government grants, for absorption of contract overruns, or for certain charitable contributions, not to include employee participation in community service and/or development.

(d) Notwithstanding any other provision of law, of the funds available to the department during fiscal year 2000, not more than 6,206 staff years of technical effort (staff years) may be funded for defense FFRDCs: Provided, That of the specific amount referred to previously in this subsection, not more than 1,105 staff years may be funded for the defense studies and analysis FFRDCs.

(e) The Secretary of Defense shall, with the submission of the department's fiscal year 2001 budget request, submit a report presenting the specific amounts of staff years of technical effort to be allocated for each defense FFRDC during that fiscal year.

SEC. 8035. None of the funds appropriated or made available in this Act shall be used to procure carbon, alloy or armor steel plate for use in any Government-owned facility or property under the control of the Department of Defense which were not melted and rolled in the United States or Canada: Provided, That these procurement restrictions shall apply to any and all Federal Supply Class 9515, American Society of Testing and Materials (ASTM) or American Iron and Steel Institute (AISI) specifications of carbon, alloy or armor steel plate: Provided further, That the Secretary of the military department responsible for the procurement may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate that adequate domestic supplies are not available to meet Department of Defense requirements on a timely basis and that such an acquisition must be made in order to acquire capability for national security purposes: Provided further, That these restrictions shall not apply to contracts which are in being as of the date of the enactment of this Act.

SEC. 8036. For the purposes of this Act, the term "congressional defense committees" means the Armed Services Committee of the House of Representatives, the Armed Services Committee of the Senate, the Subcommittee on Defense of the Committee on Appropriations of the Senate, and the Subcommittee on Defense of the Committee on Appropriations of the House of Representatives.

SEC. 8037. During the current fiscal year, the Department of Defense may acquire the modification, depot maintenance and repair of aircraft, vehicles and vessels as well as the production of components and other Defense-related articles, through competition between Department of Defense depot maintenance activities and private firms: Provided, That the Senior Acquisition Executive of the military department or defense agency concerned, with power of delegation, shall certify that successful bids include comparable estimates of all direct and indirect costs for both public and private bids: Provided further, That Office of Management

and Budget Circular A-76 shall not apply to competitions conducted under this section.

SEC. 8038. (a)(1) If the Secretary of Defense, after consultation with the United States Trade Representative, determines that a foreign country which is party to an agreement described in paragraph (2) has violated the terms of the agreement by discriminating against certain types of products produced in the United States that are covered by the agreement, the Secretary of Defense shall rescind the Secretary's blanket waiver of the Buy American Act with respect to such types of products produced in that foreign country.

(2) An agreement referred to in paragraph (1) is any reciprocal defense procurement memorandum of understanding, between the United States and a foreign country pursuant to which the Secretary of Defense has prospectively waived the Buy American Act for certain products in that country.

(b) The Secretary of Defense shall submit to Congress a report on the amount of Department of Defense purchases from foreign entities in fiscal year 2000. Such report shall separately indicate the dollar value of items for which the Buy American Act was waived pursuant to any agreement described in subsection (a)(2), the Trade Agreement Act of 1979 (19 U.S.C. 2501 et seq.), or any international agreement to which the United States is a party.

(c) For purposes of this section, the term "Buy American Act" means title III of the Act entitled "An Act making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes", approved March 3, 1933 (41 U.S.C. 10a et seq.).

SEC. 8039. Appropriations contained in this Act that remain available at the end of the current fiscal year as a result of energy cost savings realized by the Department of Defense shall remain available for obligation for the next fiscal year to the extent, and for the purposes, provided in section 2865 of title 10, United States Code.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8040. Amounts deposited during the current fiscal year to the special account established under 40 U.S.C. 485(h)(2) and to the special account established under 10 U.S.C. 2667(d)(1) are appropriated and shall be available until transferred by the Secretary of Defense to current applicable appropriations or funds of the Department of Defense under the terms and conditions specified by 40 U.S.C. 485(h)(2)(A) and (B) and 10 U.S.C. 2667(d)(1)(B), to be merged with and to be available for the same time period and the same purposes as the appropriation to which transferred.

SEC. 8041. During the current fiscal year, appropriations available to the Department of Defense may be used to reimburse a member of a reserve component of the Armed Forces who is not otherwise entitled to travel and transportation allowances and who occupies transient government housing while performing active duty for training or inactive duty training: Provided, That such members may be provided lodging in kind if transient government quarters are unavailable as if the member was entitled to such allowances under subsection (a) of section 404 of title 37, United States Code: Provided further, That if lodging in kind is provided, any authorized service charge or cost of such lodging may be paid directly from funds appropriated for operation and maintenance of the reserve component of the member concerned.

SEC. 8042. The President shall include with each budget for a fiscal year submitted to the Congress under section 1105 of title 31, United States Code, materials that shall identify clearly and separately the amounts requested in the budget for appropriation for that fiscal year for

salaries and expenses related to administrative activities of the Department of Defense, the military departments, and the Defense agencies.

SEC. 8043. Notwithstanding any other provision of law, funds available for "Drug Interdiction and Counter-Drug Activities, Defense" may be obligated for the Young Marines program.

SEC. 8044. During the current fiscal year, amounts contained in the Department of Defense Overseas Military Facility Investment Recovery Account established by section 2921(c)(1) of the National Defense Authorization Act of 1991 (Public Law 101-510; 10 U.S.C. 2687 note) shall be available until expended for the payments specified by section 2921(c)(2) of that Act: Provided, That none of the funds made available for expenditure under this section may be transferred or obligated until thirty days after the Secretary of Defense submits a report which details the balance available in the Overseas Military Facility Investment Recovery Account, all projected income into the account during fiscal years 2000 and 2001, and the specific expenditures to be made using funds transferred from this account during fiscal year 2000.

SEC. 8045. Of the funds appropriated or otherwise made available by this Act, not more than \$119,200,000 shall be available for payment of the operating costs of NATO Headquarters: Provided, That the Secretary of Defense may waive this section for Department of Defense support provided to NATO forces in and around the former Yugoslavia.

SEC. 8046. During the current fiscal year, appropriations which are available to the Department of Defense for operation and maintenance may be used to purchase items having an investment item unit cost of not more than \$100,000.

SEC. 8047. (a) During the current fiscal year, none of the appropriations or funds available to the Department of Defense Working Capital Funds shall be used for the purchase of an investment item for the purpose of acquiring a new inventory item for sale or anticipated sale during the current fiscal year or a subsequent fiscal year to customers of the Department of Defense Working Capital Funds if such an item would not have been chargeable to the Department of Defense Business Operations Fund during fiscal year 1994 and if the purchase of such an investment item would be chargeable during the current fiscal year to appropriations made to the Department of Defense for procurement.

(b) The fiscal year 2001 budget request for the Department of Defense as well as all justification material and other documentation supporting the fiscal year 2001 Department of Defense budget shall be prepared and submitted to the Congress on the basis that any equipment which was classified as an end item and funded in a procurement appropriation contained in this Act shall be budgeted for in a proposed fiscal year 2001 procurement appropriation and not in the supply management business area or any other area or category of the Department of Defense Working Capital Funds.

SEC. 8048. None of the funds appropriated by this Act for programs of the Central Intelligence Agency shall remain available for obligation beyond the current fiscal year, except for funds appropriated for the Reserve for Contingencies, which shall remain available until September 30, 2001: Provided, That funds appropriated, transferred, or otherwise credited to the Central Intelligence Agency Central Services Working Capital Fund during this or any prior or subsequent fiscal year shall remain available until expended.

SEC. 8049. Notwithstanding any other provision of law, funds made available in this Act for the Defense Intelligence Agency may be used for the design, development, and deployment of General Defense Intelligence Program intelligence communications and intelligence infor-

mation systems for the Services, the Unified and Specified Commands, and the component commands.

SEC. 8050. Of the funds appropriated by the Department of Defense under the heading "Operation and Maintenance, Defense-Wide", not less than \$8,000,000 shall be made available only for the mitigation of environmental impacts, including training and technical assistance to tribes, related administrative support, the gathering of information, documenting of environmental damage, and developing a system for prioritization of mitigation and cost to complete estimates for mitigation, on Indian lands resulting from Department of Defense activities.

SEC. 8051. Amounts collected for the use of the facilities of the National Science Center for Communications and Electronics during the current fiscal year pursuant to section 1459(g) of the Department of Defense Authorization Act, 1986, and deposited to the special account established under subsection 1459(g)(2) of that Act are appropriated and shall be available until expended for the operation and maintenance of the Center as provided for in subsection 1459(g)(2).

SEC. 8052. None of the funds appropriated in this Act may be used to fill the commander's position at any military medical facility with a health care professional unless the prospective candidate can demonstrate professional administrative skills.

SEC. 8053. (a) None of the funds appropriated in this Act may be expended by an entity of the Department of Defense unless the entity, in expending the funds, complies with the Buy American Act. For purposes of this subsection, the term "Buy American Act" means title III of the Act entitled "An Act making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes", approved March 3, 1933 (41 U.S.C. 10a et seq.).

(b) If the Secretary of Defense determines that a person has been convicted of intentionally affixing a label bearing a "Made in America" inscription to any product sold in or shipped to the United States that is not made in America, the Secretary shall determine, in accordance with section 2410f of title 10, United States Code, whether the person should be debarred from contracting with the Department of Defense.

(c) In the case of any equipment or products purchased with appropriations provided under this Act, it is the sense of the Congress that any entity of the Department of Defense, in expending the appropriation, purchase only American-made equipment and products, provided that American-made equipment and products are cost-competitive, quality-competitive, and available in a timely fashion.

SEC. 8054. None of the funds appropriated by this Act shall be available for a contract for studies, analysis, or consulting services entered into without competition on the basis of an unsolicited proposal unless the head of the activity responsible for the procurement determines—

(1) as a result of thorough technical evaluation, only one source is found fully qualified to perform the proposed work;

(2) the purpose of the contract is to explore an unsolicited proposal which offers significant scientific or technological promise, represents the product of original thinking, and was submitted in confidence by one source; or

(3) the purpose of the contract is to take advantage of unique and significant industrial accomplishment by a specific concern, or to insure that a new product or idea of a specific concern is given financial support:

Provided, That this limitation shall not apply to contracts in an amount of less than \$25,000, contracts related to improvements of equipment that is in development or production, or contracts as

to which a civilian official of the Department of Defense, who has been confirmed by the Senate, determines that the award of such contract is in the interest of the national defense.

SEC. 8055. (a) Except as provided in subsections (b) and (c), none of the funds made available by this Act may be used—

(1) to establish a field operating agency; or
(2) to pay the basic pay of a member of the Armed Forces or civilian employee of the department who is transferred or reassigned from a headquarters activity if the member or employee's place of duty remains at the location of that headquarters.

(b) The Secretary of Defense or Secretary of a military department may waive the limitations in subsection (a), on a case-by-case basis, if the Secretary determines, and certifies to the Committees on Appropriations of the House of Representatives and Senate that the granting of the waiver will reduce the personnel requirements or the financial requirements of the department.

(c) This section does not apply to field operating agencies funded within the National Foreign Intelligence Program.

SEC. 8056. Funds appropriated by this Act and in Public Law 105-277, or made available by the transfer of funds in this Act and in Public Law 105-277 for intelligence activities are deemed to be specifically authorized by the Congress for purposes of section 504 of the National Security Act of 1947 (50 U.S.C. 414) during fiscal year 2000 until the enactment of the Intelligence Authorization Act for Fiscal Year 2000.

SEC. 8057. Notwithstanding section 303 of Public Law 96-487 or any other provision of law, the Secretary of the Navy is authorized to lease real and personal property at Naval Air Facility, Adak, Alaska, pursuant to 10 U.S.C. 2667(f), for commercial, industrial or other purposes: Provided, That notwithstanding any other provision of law, the Secretary of the Navy may remove hazardous materials from facilities, buildings, and structures at Adak, Alaska, and may demolish or otherwise dispose of such facilities, buildings, and structures: Provided further, That notwithstanding any other provision of law, not more than \$4,650,000 of the funds provided under the heading "Operation and Maintenance, Army" in title II of this Act shall be available to the Secretary of the Army, acting through the Chief of Engineers, only for demolition and removal of facilities, buildings, and structures formerly used as a District Headquarters Office by the Corps of Engineers (Northwest Division, CENWW, Washington State), as described in the study conducted regarding the headquarters pursuant to the Energy and Water Development Appropriations Act, 1992 (Public Law 102-104; 105 Stat. 511).

(RESCISSIONS)

SEC. 8058. Of the funds provided in Department of Defense Appropriations Acts, the following funds are hereby rescinded as of the date of the enactment of this Act, from the following accounts and programs in the specified amounts:

"Other Procurement, Navy, 1998/2000", \$2,167,000;

"Aircraft Procurement, Air Force, 1998/2000", \$15,800,000;

"Other Procurement, Army, 1999/2001", \$13,700,000;

"Aircraft Procurement, Navy, 1999/2001", \$41,500,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1999/2003":

New Attack Submarine, \$32,400,000;

CVN-69, \$11,400,000;

"Other Procurement, Navy, 1999/2001", \$13,784,000;

"Aircraft Procurement, Air Force, 1999/2001", \$29,729,000;

"Missile Procurement, Air Force, 1999/2001", \$130,000,000;

“Research, Development, Test and Evaluation, Army, 1999/2000”, \$5,400,000;

“Research, Development, Test and Evaluation, Navy, 1999/2000”, \$14,900,000;

“Research, Development, Test and Evaluation, Air Force, 1999/2000”, \$15,900,000; and

“Research, Development, Test and Evaluation, Defense-Wide, 1999/2000”, \$23,500,000.

SEC. 8059. None of the funds available in this Act may be used to reduce the authorized positions for military (civilian) technicians of the Army National Guard, the Air National Guard, Army Reserve and Air Force Reserve for the purpose of applying any administratively imposed civilian personnel ceiling, freeze, or reduction on military (civilian) technicians, unless such reductions are a direct result of a reduction in military force structure.

SEC. 8060. None of the funds appropriated or otherwise made available in this Act may be obligated or expended for assistance to the Democratic People's Republic of North Korea unless specifically appropriated for that purpose.

SEC. 8061. During the current fiscal year, funds appropriated in this Act are available to compensate members of the National Guard for duty performed pursuant to a plan submitted by a Governor of a State and approved by the Secretary of Defense under section 112 of title 32, United States Code: Provided, That during the performance of such duty, the members of the National Guard shall be under State command and control: Provided further, That such duty shall be treated as full-time National Guard duty for purposes of sections 12602(a)(2) and (b)(2) of title 10, United States Code.

SEC. 8062. Funds appropriated in this Act for operation and maintenance of the Military Departments, Unified and Specified Commands and Defense Agencies shall be available for reimbursement of pay, allowances and other expenses which would otherwise be incurred against appropriations for the National Guard and Reserve when members of the National Guard and Reserve provide intelligence or counterintelligence support to Unified Commands, Defense Agencies and Joint Intelligence Activities, including the activities and programs included within the National Foreign Intelligence Program (NFIP), the Joint Military Intelligence Program (JMIP), and the Tactical Intelligence and Related Activities (TIARA) aggregate: Provided, That nothing in this section authorizes deviation from established Reserve and National Guard personnel and training procedures.

SEC. 8063. During the current fiscal year, none of the funds appropriated in this Act may be used to reduce the civilian medical and medical support personnel assigned to military treatment facilities below the September 30, 1999 level: Provided, That the Service Surgeons General may waive this section by certifying to the congressional defense committees that the beneficiary population is declining in some catchment areas and civilian strength reductions may be consistent with responsible resource stewardship and capitation-based budgeting.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8064. (a) None of the funds appropriated in this Act may be transferred to or obligated from the Pentagon Reservation Maintenance Revolving Fund, unless the Secretary of Defense certifies that the total cost for the planning, design, construction and installation of equipment for the renovation of the Pentagon Reservation will not exceed \$1,222,000,000.

(b) The Secretary shall, in conjunction with the Pentagon Renovation, design and construct secure secretarial offices and support facilities and security-related changes to the subway entrance at the Pentagon Reservation.

SEC. 8065. (a) None of the funds available to the Department of Defense for any fiscal year for drug interdiction or counter-drug activities

may be transferred to any other department or agency of the United States except as specifically provided in an appropriations law.

(b) None of the funds available to the Central Intelligence Agency for any fiscal year for drug interdiction and counter-drug activities may be transferred to any other department or agency of the United States except as specifically provided in an appropriations law.

(TRANSFER OF FUNDS)

SEC. 8066. Appropriations available in this Act under the heading “Operation and Maintenance, Defense-Wide” for increasing energy and water efficiency in Federal buildings may, during their period of availability, be transferred to other appropriations or funds of the Department of Defense for projects related to increasing energy and water efficiency, to be merged with and to be available for the same general purposes, and for the same time period, as the appropriation or fund to which transferred.

SEC. 8067. None of the funds appropriated by this Act may be used for the procurement of ball and roller bearings other than those produced by a domestic source and of domestic origin: Provided, That the Secretary of the military department responsible for such procurement may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate, that adequate domestic supplies are not available to meet Department of Defense requirements on a timely basis and that such an acquisition must be made in order to acquire capability for national security purposes.

SEC. 8068. Notwithstanding any other provision of law, funds available to the Department of Defense shall be made available to provide transportation of medical supplies and equipment, on a nonreimbursable basis, to American Samoa, and funds available to the Department of Defense shall be made available to provide transportation of medical supplies and equipment, on a nonreimbursable basis, to the Indian Health Service when it is in conjunction with a civil-military project.

SEC. 8069. None of the funds in this Act may be used to purchase any supercomputer which is not manufactured in the United States, unless the Secretary of Defense certifies to the congressional defense committees that such an acquisition must be made in order to acquire capability for national security purposes that is not available from United States manufacturers.

SEC. 8070. Notwithstanding any other provision of law, the Naval shipyards of the United States shall be eligible to participate in any manufacturing extension program financed by funds appropriated in this or any other Act.

SEC. 8071. Notwithstanding any other provision of law, each contract awarded by the Department of Defense during the current fiscal year for construction or service performed in whole or in part in a State (as defined in section 381(d) of title 10, United States Code) which is not contiguous with another State and has an unemployment rate in excess of the national average rate of unemployment as determined by the Secretary of Labor, shall include a provision requiring the contractor to employ, for the purpose of performing that portion of the contract in such State that is not contiguous with another State, individuals who are residents of such State and who, in the case of any craft or trade, possess or would be able to acquire promptly the necessary skills: Provided, That the Secretary of Defense may waive the requirements of this section, on a case-by-case basis, in the interest of national security.

SEC. 8072. During the current fiscal year, the Army shall use the former George Air Force Base as the airhead for the National Training Center at Fort Irwin: Provided, That none of the funds in this Act shall be obligated or ex-

pendent to transport Army personnel into Edwards Air Force Base for training rotations at the National Training Center.

SEC. 8073. (a) The Secretary of Defense shall submit, on a quarterly basis, a report to the congressional defense committees, the Committee on International Relations of the House of Representatives and the Committee on Foreign Relations of the Senate setting forth all costs (including incremental costs) incurred by the Department of Defense during the preceding quarter in implementing or supporting resolutions of the United Nations Security Council, including any such resolution calling for international sanctions, international peacekeeping operations, and humanitarian missions undertaken by the Department of Defense. The quarterly report shall include an aggregate of all such Department of Defense costs by operation or mission.

(b) The Secretary of Defense shall detail in the quarterly reports all efforts made to seek credit against past United Nations expenditures and all efforts made to seek compensation from the United Nations for costs incurred by the Department of Defense in implementing and supporting United Nations activities.

SEC. 8074. (a) LIMITATION ON TRANSFER OF DEFENSE ARTICLES AND SERVICES.—Notwithstanding any other provision of law, none of the funds available to the Department of Defense for the current fiscal year may be obligated or expended to transfer to another nation or an international organization any defense articles or services (other than intelligence services) for use in the activities described in subsection (b) unless the congressional defense committees, the Committee on International Relations of the House of Representatives, and the Committee on Foreign Relations of the Senate are notified 15 days in advance of such transfer.

(b) COVERED ACTIVITIES.—This section applies to—

(1) any international peacekeeping or peace-enforcement operation under the authority of chapter VI or chapter VII of the United Nations Charter under the authority of a United Nations Security Council resolution; and

(2) any other international peacekeeping, peace-enforcement, or humanitarian assistance operation.

(c) REQUIRED NOTICE.—A notice under subsection (a) shall include the following:

(1) A description of the equipment, supplies, or services to be transferred.

(2) A statement of the value of the equipment, supplies, or services to be transferred.

(3) In the case of a proposed transfer of equipment or supplies—

(A) a statement of whether the inventory requirements of all elements of the Armed Forces (including the reserve components) for the type of equipment or supplies to be transferred have been met; and

(B) a statement of whether the items proposed to be transferred will have to be replaced and, if so, how the President proposes to provide funds for such replacement.

SEC. 8075. To the extent authorized by subchapter VI of chapter 148 of title 10, United States Code, the Secretary of Defense may issue loan guarantees in support of United States defense exports not otherwise provided for: Provided, That the total contingent liability of the United States for guarantees issued under the authority of this section may not exceed \$15,000,000,000: Provided further, That the exposure fees charged and collected by the Secretary for each guarantee, shall be paid by the country involved and shall not be financed as part of a loan guaranteed by the United States: Provided further, That the Secretary shall provide quarterly reports to the Committees on Appropriations, Armed Services and Foreign Relations of

the Senate and the Committees on Appropriations, Armed Services and International Relations in the House of Representatives on the implementation of this program: Provided further, That amounts charged for administrative fees and deposited to the special account provided for under section 2540c(d) of title 10, shall be available for paying the costs of administrative expenses of the Department of Defense that are attributable to the loan guarantee program under subchapter VI of chapter 148 of title 10, United States Code.

SEC. 8076. None of the funds available to the Department of Defense under this Act shall be obligated or expended to pay a contractor under a contract with the Department of Defense for costs of any amount paid by the contractor to an employee when—

(1) such costs are for a bonus or otherwise in excess of the normal salary paid by the contractor to the employee; and

(2) such bonus is part of restructuring costs associated with a business combination.

SEC. 8077. (a) None of the funds appropriated or otherwise made available in this Act may be used to transport or provide for the transportation of chemical munitions or agents to the Johnston Atoll for the purpose of storing or demilitarizing such munitions or agents.

(b) The prohibition in subsection (a) shall not apply to any obsolete World War II chemical munition or agent of the United States found in the World War II Pacific Theater of Operations.

(c) The President may suspend the application of subsection (a) during a period of war in which the United States is a party.

SEC. 8078. None of the funds provided in title II of this Act for "Former Soviet Union Threat Reduction" may be obligated or expended to finance housing for any individual who was a member of the military forces of the Soviet Union or for any individual who is or was a member of the military forces of the Russian Federation.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8079. During the current fiscal year, no more than \$10,000,000 of appropriations made in this Act under the heading "Operation and Maintenance, Defense-Wide" may be transferred to appropriations available for the pay of military personnel, to be merged with, and to be available for the same time period as the appropriations to which transferred, to be used in support of such personnel in connection with support and services for eligible organizations and activities outside the Department of Defense pursuant to section 2012 of title 10, United States Code.

SEC. 8080. For purposes of section 1553(b) of title 31, United States Code, any subdivision of appropriations made in this Act under the heading "Shipbuilding and Conversion, Navy" shall be considered to be for the same purpose as any subdivision under the heading "Shipbuilding and Conversion, Navy" appropriations in any prior year, and the 1 percent limitation shall apply to the total amount of the appropriation.

SEC. 8081. During the current fiscal year, in the case of an appropriation account of the Department of Defense for which the period of availability for obligation has expired or which has closed under the provisions of section 1552 of title 31, United States Code, and which has a negative unliquidated or unexpended balance, an obligation or an adjustment of an obligation may be charged to any current appropriation account for the same purpose as the expired or closed account if—

(1) the obligation would have been properly chargeable (except as to amount) to the expired or closed account before the end of the period of availability or closing of that account;

(2) the obligation is not otherwise properly chargeable to any current appropriation account of the Department of Defense; and

(3) in the case of an expired account, the obligation is not chargeable to a current appropriation of the Department of Defense under the provisions of section 1405(b)(8) of the National Defense Authorization Act for Fiscal Year 1991, Public Law 101-510, as amended (31 U.S.C. 1551 note): Provided, That in the case of an expired account, if subsequent review or investigation discloses that there was not in fact a negative unliquidated or unexpended balance in the account, any charge to a current account under the authority of this section shall be reversed and recorded against the expired account: Provided further, That the total amount charged to a current appropriation under this section may not exceed an amount equal to 1 percent of the total appropriation for that account.

(TRANSFER OF FUNDS)

SEC. 8082. Upon enactment of this Act, the Secretary of Defense shall make the following transfers of funds: Provided, That the amounts transferred shall be available for the same purposes as the appropriations to which transferred, and for the same time period as the appropriation from which transferred: Provided further, That the amounts shall be transferred between the following appropriations in the amount specified:

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1988/2001":

SSN-688 attack submarine program, \$6,585,000;

CG-47 cruiser program, \$12,100,000;

Aircraft carrier service life extension program, \$202,000;

LHD-1 amphibious assault ship program, \$2,311,000;

LSD-41 cargo variant ship program, \$566,000;

T-AO fleet oiler program, \$3,494,000;

AO conversion program, \$133,000;

Craft, outfitting, and post delivery, \$1,688,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1995/2001":

DDG-51 destroyer program, \$27,079,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1989/2000":

DDG-51 destroyer program, \$13,200,000;

Aircraft carrier service life extension program, \$186,000;

LHD-1 amphibious assault ship program, \$3,621,000;

LCAC landing craft, air cushioned program, \$1,313,000;

T-AO fleet oiler program, \$258,000;

AOE combat support ship program, \$1,078,000;

AO conversion program, \$881,000;

T-AGOS drug interdiction conversion, \$407,000;

Outfitting and post delivery, \$219,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1996/2000":

LPD-17 amphibious transport dock ship, \$21,163,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1990/2002":

SSN-688 attack submarine program, \$5,606,000;

DDG-51 destroyer program, \$6,000,000;

ENTERPRISE refueling/modernization program, \$2,306,000;

LHD-1 amphibious assault ship program, \$183,000;

LSD-41 dock landing ship cargo variant program, \$501,000;

LCAC landing craft, air cushioned program, \$345,000;

MCM mine countermeasures program, \$1,369,000;

Moored training ship demonstration program, \$1,906,000;

Oceanographic ship program, \$1,296,000;

AOE combat support ship program, \$4,086,000;

AO conversion program, \$143,000;

Craft, outfitting, post delivery, and ship special support equipment, \$1,209,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1990/2002":

T-AGOS surveillance ship program, \$5,000,000;

Coast Guard icebreaker program, \$8,153,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1996/2002":

LPD-17 amphibious transport dock ship, \$7,192,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1998/2002":

CVN refuelings, \$4,605,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1991/2001":

SSN-21(AP) attack submarine program, \$1,614,000;

LHD-1 amphibious assault ship program, \$5,647,000;

LSD-41 dock landing ship cargo variant program, \$1,389,000;

LCAC landing craft, air cushioned program, \$330,000;

AOE combat support ship program, \$1,435,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1998/2001":

CVN refuelings, \$10,415,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1992/2001":

SSN-21 attack submarine program, \$11,983,000;

Craft, outfitting, post delivery, and DBOF transfer, \$836,000;

Escalation, \$5,378,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1998/2001":

CVN refuelings, \$18,197,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1993/2002":

Carrier replacement program (AP), \$30,332,000;

LSD-41 cargo variant ship program, \$676,000;

AOE combat support ship program, \$2,066,000;

Craft, outfitting, post delivery, and first destination transportation, and inflation adjustments, \$2,127,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1998/2002":

CVN refuelings, \$29,844,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1999/2002":

Craft, outfitting, post delivery, conversions, and first destination transportation, \$5,357,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1994/2003":

LHD-1 amphibious assault ship program, \$23,900,000;

Oceanographic ship program, \$9,000;

To:
Under the heading, "Shipbuilding and Conversion, Navy, 1994/2003":

DDG-51 destroyer program, \$18,349,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1995/1999":

DDG-51 destroyer program, \$5,383,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1996/2000":

LPD-17 amphibious transport dock ship, \$168,000;

Under the heading, "Shipbuilding and Conversion, Navy, 1999/2003":

Craft, outfitting, post delivery, conversions, and first destination transportation, \$9,000;

From:
Under the heading, "Shipbuilding and Conversion, Navy, 1996/2000":

SSN-21 attack submarine program, \$10,100,000;
LHD-1 amphibious assault ship program,
\$7,100,000;

To:

Under the heading, "Shipbuilding and Conversion, Navy, 1996/2000":

DDG-51 destroyer program, \$3,723,000;

LPD-17 amphibious transport dock ship,
\$13,477,000.

SEC. 8083. The Under Secretary of Defense (Comptroller) shall submit to the congressional defense committees by February 1, 2000, a detailed report identifying, by amount and by separate budget activity, activity group, subactivity group, line item, program element, program, project, subproject, and activity, any activity for which the fiscal year 2001 budget request was reduced because Congress appropriated funds above the President's budget request for that specific activity for fiscal year 2000.

SEC. 8084. Funds appropriated in title II of this Act and for the Defense Health Program in title VI of this Act for supervision and administration costs for facilities maintenance and repair, minor construction, or design projects may be obligated at the time the reimbursable order is accepted by the performing activity: Provided, That for the purpose of this section, supervision and administration costs includes all in-house Government cost.

SEC. 8085. During the current fiscal year, the Secretary of Defense may waive reimbursement of the cost of conferences, seminars, courses of instruction, or similar educational activities of the Asia-Pacific Center for Security Studies for military officers and civilian officials of foreign nations if the Secretary determines that attendance by such personnel, without reimbursement, is in the national security interest of the United States: Provided, That costs for which reimbursement is waived pursuant to this subsection shall be paid from appropriations available for the Asia-Pacific Center.

SEC. 8086. (a) Notwithstanding any other provision of law, the Chief of the National Guard Bureau may permit the use of equipment of the National Guard Distance Learning Project by any person or entity on a space-available, reimbursable basis. The Chief of the National Guard Bureau shall establish the amount of reimbursement for such use on a case-by-case basis.

(b) Amounts collected under subsection (a) shall be credited to funds available for the National Guard Distance Learning Project and be available to defray the costs associated with the use of equipment of the project under that subsection. Such funds shall be available for such purposes without fiscal year limitation.

SEC. 8087. Using funds available by this Act or any other Act, the Secretary of the Air Force, pursuant to a determination under section 2690 of title 10, United States Code, may implement cost-effective agreements for required heating facility modernization in the Kaiserslautern Military Community in the Federal Republic of Germany: Provided, That in the City of Kaiserslautern such agreements will include the use of United States anthracite as the base load energy for municipal district heat to the United States Defense installations: Provided further, That at Landstuhl Army Regional Medical Center and Ramstein Air Base, furnished heat may be obtained from private, regional or municipal services, if provisions are included for the consideration of United States coal as an energy source.

SEC. 8088. Notwithstanding 31 U.S.C. 3902, during the current fiscal year, interest penalties may be paid by the Department of Defense from funds financing the operation of the military department or defense agency with which the invoice or contract payment is associated.

SEC. 8089. None of the funds appropriated in title IV of this Act may be used to procure end-

items for delivery to military forces for operational training, operational use or inventory requirements: Provided, That this restriction does not apply to end-items used in development, prototyping, and test activities preceding and leading to acceptance for operational use: Provided further, That this restriction does not apply to programs funded within the National Foreign Intelligence Program: Provided further, That the Secretary of Defense may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate that it is in the national security interest to do so.

(RESCISSIONS)

SEC. 8090. Of the funds provided in the Department of Defense Appropriations Act, 1999 (Public Law 105-262), \$452,100,000, to reflect savings from revised economic assumptions, is hereby rescinded as of the date of enactment of this Act, or October 1, 1999, whichever is later, from the following accounts in the specified amounts:

"Aircraft Procurement, Army", \$8,000,000;
"Missile Procurement, Army", \$7,000,000;
"Procurement of Weapons and Tracked Combat Vehicles, Army", \$9,000,000;
"Procurement of Ammunition, Army", \$6,000,000;
"Other Procurement, Army", \$19,000,000;
"Aircraft Procurement, Navy", \$44,000,000;
"Weapons Procurement, Navy", \$8,000,000;
"Procurement of Ammunition, Navy and Marine Corps", \$3,000,000;
"Shipbuilding and Conversion, Navy", \$37,000,000;
"Other Procurement, Navy", \$23,000,000;
"Procurement, Marine Corps", \$5,000,000;
"Aircraft Procurement, Air Force", \$46,000,000;
"Missile Procurement, Air Force", \$14,000,000;
"Procurement of Ammunition, Air Force", \$2,000,000;
"Other Procurement, Air Force", \$44,400,000;
"Procurement, Defense-Wide", \$5,200,000;
"Chemical Agents and Munitions Destruction, Army", \$5,000,000;
"Research, Development, Test and Evaluation, Army", \$20,000,000;
"Research, Development, Test and Evaluation, Navy", \$40,900,000;
"Research, Development, Test and Evaluation, Air Force", \$76,900,000; and
"Research, Development, Test and Evaluation, Defense-Wide", \$28,700,000:

Provided, That these reductions shall be applied proportionally to each budget activity, activity group and subactivity group and each program, project, and activity within each appropriation account.

SEC. 8091. The budget of the President for fiscal year 2001 submitted to Congress pursuant to section 1105 of title 31, United States Code, and each annual budget request thereafter, shall include budget activity groups (known as "sub-activities") in all appropriations accounts provided in this Act, as may be necessary, to separately identify all costs incurred by the Department of Defense to support the North Atlantic Treaty Organization and all Partnership For Peace programs and initiatives. The budget justification materials submitted to Congress in support of the budget of the Department of Defense for fiscal year 2001, and subsequent fiscal years, shall provide complete, detailed estimates for all such costs.

SEC. 8092. None of the funds made available in this Act may be used to approve or license the sale of the F-22 advanced tactical fighter to any foreign government.

SEC. 8093. (a) The Secretary of Defense may, on a case-by-case basis, waive with respect to a foreign country each limitation on the procurement of defense items from foreign sources pro-

vided in law if the Secretary determines that the application of the limitation with respect to that country would invalidate cooperative programs entered into between the Department of Defense and the foreign country, or would invalidate reciprocal trade agreements for the procurement of defense items entered into under section 2531 of title 10, United States Code, and the country does not discriminate against the same or similar defense items produced in the United States for that country.

(b) Subsection (a) applies with respect to—

(1) contracts and subcontracts entered into on or after the date of the enactment of this Act; and

(2) options for the procurement of items that are exercised after such date under contracts that are entered into before such date if the option prices are adjusted for any reason other than the application of a waiver granted under subsection (a).

(c) Subsection (a) does not apply to a limitation regarding construction of public vessels, ball and roller bearings, food, and clothing or textile materials as defined by section 11 (chapters 50-65) of the Harmonized Tariff Schedule and products classified under headings 4010, 4202, 4203, 6401 through 6406, 6505, 7019, 7218 through 7229, 7304.41 through 7304.49, 7306.40, 7502 through 7508, 8105, 8108, 8109, 8211, 8215, and 9404.

(d) None of the funds appropriated or otherwise provided for the Department of Defense in this or any other Act for any fiscal year may be obligated or expended for procurement of a nuclear-capable shipyard crane from a foreign source. Subsection (a) does not apply to the limitation in the preceding sentence.

SEC. 8094. Funds made available to the Civil Air Patrol in this Act under the heading "Drug Interdiction and Counter-Drug Activities, Defense" may be used for the Civil Air Patrol Corporation's counterdrug program, including its demand reduction program involving youth programs, as well as operational and training drug reconnaissance missions for Federal, State and local government agencies; for administrative costs, including the hiring of Civil Air Patrol Corporation employees; for travel and per diem expenses of Civil Air Patrol Corporation personnel in support of those missions; and for equipment needed for mission support or performance: Provided, That of these funds, \$300,000 shall be made available to establish and operate a distance learning program: Provided further, That the Department of the Air Force should waive reimbursement from the Federal, State and local government agencies for the use of these funds.

SEC. 8095. Notwithstanding any other provision of law, the TRICARE managed care support contracts in effect, or in final stages of acquisition as of September 30, 1999, may be extended for two years: Provided, That any such extension may only take place if the Secretary of Defense determines that it is in the best interest of the Government: Provided further, That any contract extension shall be based on the price in the final best and final offer for the last year of the existing contract as adjusted for inflation and other factors mutually agreed to by the contractor and the Government: Provided further, That notwithstanding any other provision of law, all future TRICARE managed care support contracts replacing contracts in effect, or in the final stages of acquisition as of September 30, 1999, may include a base contract period for transition and up to seven one-year option periods.

SEC. 8096. None of the funds in this Act may be used to compensate an employee of the Department of Defense who initiates a new start program without notification to the Office of the Secretary of Defense, the Office of Management

and Budget, and the congressional defense committees, as required by Department of Defense financial management regulations.

SEC. 8097. In addition to the amounts provided elsewhere in this Act, notwithstanding any other provision of law, \$5,000,000 is hereby appropriated to the Office of the Secretary of Defense, and is available only for a grant to the Women in Military Service for America Memorial Foundation, Inc., only for costs associated with completion of the "Women in Military Service For America" memorial at Arlington National Cemetery.

SEC. 8098. TRAINING AND OTHER PROGRAMS. (a) PROHIBITION.—None of the funds made available by this Act may be used to support any training program involving a unit of the security forces of a foreign country if the Secretary of Defense has received credible information from the Department of State that the unit has committed a gross violation of human rights, unless all necessary corrective steps have been taken.

(b) MONITORING.—The Secretary of Defense, in consultation with the Secretary of State, shall ensure that prior to a decision to conduct any training program referred to in subsection (a), full consideration is given to all credible information available to the Department of State relating to human rights violations by foreign security forces.

(c) WAIVER.—The Secretary of Defense, after consultation with the Secretary of State, may waive the prohibition in subsection (a) if he determines that such waiver is required by extraordinary circumstances.

(d) REPORT.—Not more than 15 days after the exercise of any waiver under subsection (c), the Secretary of Defense shall submit a report to the congressional defense committees describing the extraordinary circumstances, the purpose and duration of the training program, the United States forces and the foreign security forces involved in the training program, and the information relating to human rights violations that necessitates the waiver.

SEC. 8099. The Secretary of Defense, in coordination with the Secretary of Health and Human Services, may carry out a program to distribute surplus dental equipment of the Department of Defense, at no cost to the Department of Defense, to Indian health service facilities and to federally-qualified health centers (within the meaning of section 1905(l)(2)(B) of the Social Security Act (42 U.S.C. 1396d(l)(2)(B))).

SEC. 8100. Notwithstanding any other provision in this Act, the total amount appropriated in this Act is hereby reduced by \$123,200,000 to reflect savings from the pay of civilian personnel, to be distributed as follows:

"Operation and Maintenance, Army", \$30,900,000;

"Operation and Maintenance, Navy", \$66,600,000;

"Operation and Maintenance, Air Force", \$9,200,000; and

"Operation and Maintenance, Defense-Wide", \$16,500,000.

SEC. 8101. Notwithstanding any other provision in this Act, the total amount appropriated in this Act is hereby reduced by \$171,000,000 to reflect savings from favorable foreign currency fluctuations, to be distributed as follows:

"Military Personnel, Army", \$19,100,000;

"Military Personnel, Navy", \$2,200,000;

"Military Personnel, Air Force", \$9,900,000;

"Operation and Maintenance, Army", \$80,700,000;

"Operation and Maintenance, Navy", \$13,700,000;

"Operation and Maintenance, Air Force", \$26,900,000;

"Operation and Maintenance, Defense-Wide", \$8,700,000; and

"Defense Health Program", \$9,800,000.

SEC. 8102. Notwithstanding any other provision of law, the Secretary of Defense may retain all or a portion of the family housing at Fort Buchanan, Puerto Rico, as the Secretary deems necessary to meet military family housing needs arising out of the relocation of elements of the United States Army South to Fort Buchanan.

SEC. 8103. From within amounts made available in title II of this Act, under the heading "Operation and Maintenance, Army", and notwithstanding any other provision of law, \$12,500,000 shall be available only for repairs and safety improvements to the segment of Fort Irwin Road which extends from Interstate 15 northeast toward the boundary of Fort Irwin, California and the originating intersection of Irwin Road: Provided, That these funds shall remain available until expended: Provided further, That the authorized scope of work includes, but is not limited to, environmental documentation and mitigation, engineering and design, improving safety, resurfacing, widening lanes, enhancing shoulders, and replacing signs and pavement markings: Provided further, That these funds may be used for advances to the Federal Highway Administration, Department of Transportation, for the authorized scope of work.

SEC. 8104. Funds appropriated to the Department of the Navy in title II of this Act may be available to replace lost and canceled Treasury checks issued to Trans World Airlines in the total amount of \$255,333.24 for which timely claims were filed and for which detailed supporting records no longer exist.

SEC. 8105. None of the funds appropriated or made available in this Act to the Department of the Navy shall be used to develop, lease or procure the ADC(X) class of ships unless the main propulsion diesel engines and propulsors are manufactured in the United States by a domestically operated entity: Provided, That the Secretary of Defense may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate that adequate domestic supplies are not available to meet Department of Defense requirements on a timely basis and that such an acquisition must be made in order to acquire capability for national security purposes or there exists a significant cost or quality difference.

SEC. 8106. From within amounts made available in title II of this Act under the heading "Operation and Maintenance, Defense-Wide", and notwithstanding any other provision of law, \$2,500,000 shall be available only for a grant for "America's Promise—The Alliance for Youth, Inc.", only to support, on a dollar-for-dollar matching basis with non-departmental funds, efforts to mobilize individuals, groups and organizations to build and strengthen the character and competence of the Nation's youth.

SEC. 8107. Of the funds made available in this Act, not less than \$47,100,000 shall be available to maintain an attrition reserve force of 23 B-52 aircraft, of which \$3,100,000 shall be available from "Military Personnel, Air Force", \$34,500,000 shall be available from "Operation and Maintenance, Air Force", and \$9,600,000 shall be available from "Aircraft Procurement, Air Force": Provided, That the Secretary of the Air Force shall maintain a total force of 94 B-52 aircraft, including 23 attrition reserve aircraft, during fiscal year 2000: Provided further, That the Secretary of Defense shall include in the Air Force budget request for fiscal year 2001 amounts sufficient to maintain a B-52 force totaling 94 aircraft.

SEC. 8108. Notwithstanding any other provision in this Act, the total amount appropriated in title II is hereby reduced by \$100,000,000 to re-

flect savings resulting from reviews of Department of Defense missions and functions conducted pursuant to Office of Management and Budget Circular A-76, to be distributed as follows:

"Operation and Maintenance, Army", \$34,300,000;

"Operation and Maintenance, Navy", \$22,800,000;

"Operation and Maintenance, Marine Corps", \$1,400,000; and

"Operation and Maintenance, Air Force", \$41,500,000:

Provided, That none of the funds appropriated or otherwise made available by this Act may be obligated or expended for the purpose of contracting out functions directly related to the award of Department of Defense contracts, oversight of contractors with the Department of Defense, or the payment of such contractors including, but not limited to: contracting technical officers, contact administration officers, accounting and finance officers, and budget officers.

SEC. 8109. (a) REPORT ON OMB CIRCULAR A-76 REVIEWS OF WORK PERFORMED BY DOD EMPLOYEES.—The Secretary of Defense shall submit a report not later than 90 days after the enactment of this Act which lists all instances since 1995 in which missions or functions of the Department of Defense have been reviewed by the Department of Defense pursuant to OMB Circular A-76. The report shall list the disposition of each such review and indicate whether the review resulted in the performance of such missions or functions by Department of Defense civilian and military personnel, or whether such reviews resulted in performance by contractors. The report shall include a description of the types of missions or functions, the locations where the missions or functions are performed, the name of the contractor performing the work (if applicable), the cost to perform the missions or functions at the time the review was conducted, and the current cost to perform the missions or functions.

(b) REPORT ON OMB CIRCULAR A-76 REVIEWS OF WORK PERFORMED BY DOD CONTRACTORS.—The report shall also identify those instances in which work performed by a contractor has been converted to performance by civilian or military employees of the Department of Defense. For each instance of contracting in, the report shall include a description of the types of work, the locations where the work was performed, the name of the contractor that was performing the work, the cost of contractor performance at the time the work was contracted in, and the current cost of performance by civilian or military employees of the Department of Defense. In addition, the report shall include recommendations for maximizing the possibility of effective public-private competition for work that has been contracted out.

(c) COMPTROLLER GENERAL REVIEW.—Not later than 90 days after the date on which the Secretary submits the annual report, the Comptroller General shall submit to the House and Senate Committees on Appropriations the Comptroller General's views on whether the Department has complied with the requirements for the report.

SEC. 8110. The budget of the President for fiscal year 2001 submitted to Congress pursuant to section 1105 of title 31, United States Code, and each annual budget request thereafter, shall include separate budget justification documents for costs of United States armed forces' participation in contingency operations for the Military Personnel accounts, the Procurement accounts, and the Overseas Contingency Operations Transfer Fund: Provided, That these budget justification documents shall include a description of the funding requested for each

anticipated contingency operation, for each military service, to include active duty and Guard and Reserve components, and for each appropriation account: Provided further, That these documents shall include estimated costs for each element of expense or object class, a reconciliation of increases and decreases for ongoing contingency operations, and programmatic data including, but not limited to troop strength for each active duty and Guard and Reserve component, and estimates of the major weapons systems deployed in support of each contingency.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8111. In addition to amounts appropriated or otherwise made available in this Act, \$35,000,000 is hereby appropriated, only to initiate and expand activities of the Department of Defense to prevent, prepare for, and respond to a terrorist attack in the United States involving weapons of mass destruction: Provided, That funds made available under this section shall be transferred to the following accounts:

"Reserve Personnel, Army", \$2,000,000;
 "National Guard Personnel, Army", \$2,000,000;
 "National Guard Personnel, Air Force", \$500,000;
 "Operation and Maintenance, Army", \$24,500,000; and
 "Research, Development, Test and Evaluation, Army", \$6,000,000:

Provided further, That funds transferred pursuant to this section shall be merged with and be available for the same purposes and for the same time period as the appropriation to which transferred: Provided further, That the transfer authority provided in this section is in addition to any other transfer authority available to the Department of Defense: Provided further, That of the funds transferred to "Operation and Maintenance, Army", not less than \$3,000,000 shall be made available only to establish a cost effective counter-terrorism training program for first responders and concurrent testing of response apparatus and equipment at the Memorial Tunnel Facility: Provided further, That of the funds transferred to "Operation and Maintenance, Army", not less than \$2,000,000 shall be made available only to support development of a structured undergraduate research program for chemical and biological warfare defense designed to produce graduates with specialized laboratory training and scientific skills required by military and industrial laboratories engaged in combating the threat of biological and chemical terrorism: Provided further, That of the funds transferred to "Operation and Maintenance, Army", not less than \$3,500,000 shall be made available for a National Guard Bureau and Department of Justice collaborative training program only to enhance distance learning technologies and develop related courseware to provide training for counter-terrorism and related concerns: Provided further, That of the funds transferred to "Research, Development, Test and Evaluation, Army", not less than \$3,000,000 shall be made available only to continue development and presentation of advanced distributed learning consequence management response courses and conventional courses.

SEC. 8112. (a) The Secretary of Defense shall, along with submission of the fiscal year 2001 budget request for the Department of Defense, submit to the congressional defense committees a report, in both unclassified and classified versions, which contains an assessment of the advantages or disadvantages of deploying a ground-based National Missile Defense system at more than one site.

(b) This report shall include, but not be limited to, an assessment of the following issues:

(1) The ability of a single site, versus multiple sites, to counter the expected ballistic missile threat;

(2) The optimum basing locations for a single and multiple site National Missile Defense system;

(3) The survivability and redundancy of potential National Missile Defense systems under a single or multiple site architecture;

(4) The estimated costs (including development, construction and infrastructure, and procurement of equipment) associated with different site deployment options; and

(5) Other issues bearing on deploying a National Missile Defense system at one or more sites.

SEC. 8113. The Secretary of the Navy and the Secretary of the Air Force each shall submit a report to the congressional defense committees within 90 days of enactment of this Act in both classified and unclassified form which shall provide a detailed description of the dedicated aggressor squadrons used to conduct combat flight training for the Navy, Marine Corps and Air Force covering the period from fiscal year 1990 through the present. For each year of the specified time period, each report shall provide a detailed description of the following: the assets which comprise dedicated aggressor squadrons including both aircrews, and the types and models of aircraft assigned to these squadrons; the number of training sorties for all forms of combat flight training which require aggressor aircraft, and the number of sorties that the dedicated aggressor squadrons can generate to meet these requirements; the ratio of the total inventory of attack and fighter aircraft to the number of aircraft available for dedicated aggressor squadrons; a comparison of the performance characteristics of the aircraft assigned to dedicated aggressor squadrons compared to the performance characteristics of the aircraft they are intended to represent in training scenarios; an assessment of pilot proficiency by year from 1986 to the present; Service recommendations to enhance aggressor squadron proficiency to include number of dedicated aircraft, equipment, facilities, and personnel; and a plan that proposes improvements in dissimilar aircraft air combat training.

SEC. 8114. None of the funds appropriated or otherwise made available by this or other Department of Defense Appropriations Acts may be obligated or expended for the purpose of performing repairs or maintenance to military family housing units of the Department of Defense, including areas in such military family housing units that may be used for the purpose of conducting official Department of Defense business: Provided, That the Department of Defense Office of the Inspector General shall provide a report to the House and Senate Committees on Appropriations not later than 90 days after the enactment of this Act which assesses the compliance of each of the military services with applicable appropriations law, Office of Management and Budget circulars, and Undersecretary of Defense (Comptroller) directives which govern funding for maintenance and repairs to flag officer quarters: Provided further, That this report shall include an assessment as to whether there have been violations of the Anti-Deficiency Act resulting from instances of improper funding of such maintenance and repair projects.

SEC. 8115. Notwithstanding any other provision of law, funds appropriated in this Act under the heading "Research, Development, Test and Evaluation, Defense-Wide" for any advanced concept technology demonstration project may only be obligated thirty days after a report, including a description of the project and its estimated annual and total cost, has been provided in writing to the congressional defense committees: Provided, That the Secretary of Defense may waive this restriction on a case-by-case basis by certifying to the congressional defense committees that it is in the na-

tional interest to do so: Provided further, That none of the funds appropriated under the heading "Research, Development, Test and Evaluation, Defense-Wide" in the Department of Defense Appropriations Act, 1999 (Public Law 105-262) which remain available for obligation are available for the Line of Sight Anti-Tank Program: Provided further, That of the funds appropriated under the heading "Research, Development, Test and Evaluation, Defense-Wide" in Public Law 105-262, \$10,027,000 shall be available only for the Air Directed Surface to Air Missile.

SEC. 8116. None of the funds appropriated under the heading "Research, Development, Test and Evaluation, Defense-Wide" in the Department of Defense Appropriations Act, 1999 (Public Law 105-262) which remain available for obligation are available for the Medium Extended Air Defense System or successor systems.

SEC. 8117. Of the funds appropriated in title II of this Act under the heading "Operation and Maintenance, Army", \$250,000 shall be available only for a grant to the Nebraska Game and Parks Commission for the purpose of locating, identifying the boundaries of, acquiring, preserving, and memorializing the cemetery site that is located in close proximity to Fort Atkinson, Nebraska. The Secretary of the Army shall require as a condition of such grant that the Nebraska Game and Parks Commission, in carrying out the purposes of which the grant is made, work in conjunction with the Nebraska State Historical Society. The grant under this section shall be made without regard to section 1301 of title 31, United States Code, or any other provision of law.

SEC. 8118. Notwithstanding any other provision of law, for the purpose of establishing all Department of Defense policies governing the provision of care provided by and financed under the military health care system's case management program under 10 U.S.C. 1079(a)(17), the term "custodial care" shall be defined as care designed essentially to assist an individual in meeting the activities of daily living and which does not require the supervision of trained medical, nursing, paramedical or other specially trained individuals: Provided, That the case management program shall provide that members and retired members of the military services, and their dependents and survivors, have access to all medically necessary health care through the health care delivery system of the military services regardless of the health care status of the person seeking the health care: Provided further, That the case management program shall be the primary obligor for payment of medically necessary services and shall not be considered as secondarily liable to Title XIX of The Social Security Act, other welfare programs or charity based care.

SEC. 8119. During the current fiscal year—

(1) refunds attributable to the use of the Government travel card and refunds attributable to official Government travel arranged by Government Contracted Travel Management Centers may be credited to operation and maintenance accounts of the Department of Defense which are current when the refunds are received; and

(2) refunds attributable to the use of the Government Purchase Card by military personnel and civilian employees of the Department of Defense may be credited to accounts of the Department of Defense that are current when the refunds are received and that are available for the same purposes as the accounts originally charged.

SEC. 8120. During the current fiscal year and hereafter, any Federal grant of funds to an institution of higher education to be available solely for student financial assistance or related administrative costs may be used for the purpose for which the grant is made without regard to

any provision to the contrary in section 514 of the Departments of Labor, Health and Human Services, Education, and Related Agencies Appropriations Act, 1997 (10 U.S.C. 503 note), or section 983 of title 10, United States Code.

SEC. 8121. (a) REGISTERING INFORMATION TECHNOLOGY SYSTEMS WITH DOD CHIEF INFORMATION OFFICER.—After March 31, 2000, none of the funds appropriated in this Act may be used for a mission critical or mission essential information technology system (including a system funded by the defense working capital fund) that is not registered with the Chief Information Officer of the Department of Defense. A system shall be considered to be registered with that officer upon the furnishing to that officer of notice of the system, together with such information concerning the system as the Secretary of Defense may prescribe. An information technology system shall be considered a mission critical or mission essential information technology system as defined by the Secretary of Defense.

(b) CERTIFICATIONS AS TO COMPLIANCE WITH CLINGER-COHEN ACT.—(1) During fiscal year 2000, a major automated information system may not receive Milestone I approval, Milestone II approval, or Milestone III approval within the Department of Defense until the Chief Information Officer certifies, with respect to that milestone, that the system is being developed in accordance with the Clinger-Cohen Act of 1996 (40 U.S.C. 1401 et seq.). The Chief Information Officer may require additional certifications, as appropriate, with respect to any such system.

(2) The Chief Information Officer shall provide the congressional defense committees timely notification of certifications under paragraph (1). Each such notification shall include, at a minimum, the funding baseline and milestone schedule for each system covered by such a certification and confirmation that the following steps have been taken with respect to the system:

- (A) Business process reengineering.
- (B) An analysis of alternatives.
- (C) An economic analysis that includes a calculation of the return on investment.
- (D) Performance measures.
- (E) An information assurance strategy consistent with the Department's Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) Architecture Framework.

(c) DEFINITIONS.—For purposes of this section: (1) The term "Chief Information Officer" means the senior official of the Department of Defense designated by the Secretary of Defense pursuant to section 3506 of title 44, United States Code.

(2) The term "information technology system" has the meaning given the term "information technology" in section 5002 of the Clinger-Cohen Act of 1996 (40 U.S.C. 1401).

(3) The term "major automated information system" has the meaning given that term in Department of Defense Directive 5000.1.

SEC. 8122. During the current fiscal year, none of the funds available to the Department of Defense may be used to provide support to another department or agency of the United States if such department or agency is more than 90 days in arrears in making payment to the Department of Defense for goods or services previously provided to such department or agency on a reimbursable basis: Provided, That this restriction shall not apply if the Department is authorized by law to provide support to such department or agency on a nonreimbursable basis, and is providing the requested support pursuant to such authority: Provided further, That the Secretary of Defense may waive this restriction on a case-by-case basis by certifying in writing to the Committees on Appropriations of the House of Representatives and the Senate that it is in the national security interest to do so.

SEC. 8123. (a) RECOVERY OF CERTAIN DOD ADMINISTRATIVE EXPENSES IN CONNECTION WITH FOREIGN MILITARY SALES PROGRAM.—Charges for administrative services calculated under section 21(e) of the Arms Export Control Act (22 U.S.C. 2761(e)) in connection with the sale of defense articles or defense services shall (notwithstanding paragraph (3) of section 43(b) of such Act (22 U.S.C. 2792(b))) include recovery of administrative expenses incurred by the Department of Defense during fiscal year 2000 that are attributable to (1) salaries of members of the Armed Forces, and (2) unfunded estimated costs of civilian retirement and other benefits.

(b) REIMBURSEMENT OF APPLICABLE MILITARY PERSONNEL ACCOUNTS.—During the current fiscal year, amounts in the Foreign Military Sales Trust Fund shall be available in an amount not to exceed \$63,000,000 to reimburse the applicable military personnel accounts in title I of this Act for the value of administrative expenses referred in subsection (a)(1).

(c) REDUCTIONS TO REFLECT AMOUNTS EXPECTED TO BE RECOVERED.—(1) The amounts in title I of this Act are hereby reduced by an aggregate of \$63,000,000 (such amount being the amount expected to be recovered by reason of subsection (a)(1)).

(2) The amounts in title II of this Act are hereby reduced by an aggregate of \$31,000,000 (such amount being that amount expected to be recovered by reason of subsection (a)(2)).

SEC. 8124. (a) The Communications Act of 1934 is amended in section 337(b) (47 U.S.C. 337(b)), by deleting paragraph (2). Upon enactment of this provision, the FCC shall initiate the competitive bidding process in fiscal year 1999 and shall conduct the competitive bidding in a manner that ensures that all proceeds of such bidding are deposited in accordance with section 309(j)(8) of the Act not later than September 30, 2000. To expedite the assignment by competitive bidding of the frequencies identified in section 337(a)(2) of the Act, the rules governing such frequencies shall be effective immediately upon publication in the Federal Register, notwithstanding 5 U.S.C. 553(d), 801(a)(3), 804(2), and 806(a). Chapter 6 of such title, 15 U.S.C. 632, and 44 U.S.C. 3507 and 3512, shall not apply to the rules and competitive bidding procedures governing such frequencies. Notwithstanding section 309(b) of the Act, no application for an instrument of authorization for such frequencies shall be granted by the Commission earlier than 7 days following issuance of public notice by the Commission of the acceptance for filing of such application or of any substantial amendment thereto. Notwithstanding section 309(d)(1) of such Act, the Commission may specify a period (no less than 5 days following issuance of such public notice) for the filing of petitions to deny any application for an instrument of authorization for such frequencies.

(b)(1) Not later than 15 days after the date of the enactment of this Act, the Director of the Office of Management and Budget and the Federal Communications Commission shall each submit to the appropriate congressional committees a report which shall—

(A) set forth the anticipated schedule (including specific dates) for—

- (i) preparing and conducting the competitive bidding process required by subsection (a); and
- (ii) depositing the receipts of the competitive bidding process;

(B) set forth each significant milestone in the rulemaking process with respect to the competitive bidding process;

(C) include an explanation of the effect of each requirement in subsection (a) on the schedule for the competitive bidding process and any post-bidding activities (including the deposit of receipts) when compared with the schedule for the competitive bidding and any post-bidding

activities (including the deposit of receipts) that would otherwise have occurred under section 337(b)(2) of the Communications Act of 1934 (47 U.S.C. 337(b)(2)) if not for the enactment of subsection (a);

(D) set forth for each spectrum auction held by the Federal Communications Commission since 1993 information on—

- (i) the time required for each stage of preparation for the auction;
- (ii) the date of the commencement and of the completion of the auction;
- (iii) the time which elapsed between the date of the completion of the auction and the date of the first deposit of receipts from the auction in the Treasury; and

(iv) the dates of all subsequent deposits of receipts from the auction in the Treasury; and (E) include an assessment of how the stages of the competitive bidding process required by subsection (a), including preparation, commencement and completion, and deposit of receipts, will differ from similar stages in the auctions referred to in subparagraph (D).

(2) Not later than October 5, 2000, the Director of the Office of Management and Budget and the Federal Communications Commission shall each submit to the appropriate congressional committees the report which shall—

(A) describe the course of the competitive bidding process required by subsection (a) through September 30, 2000, including the amount of any receipts from the competitive bidding process deposited in the Treasury as of September 30, 2000; and

(B) if the course of the competitive bidding process has included any deviations from the schedule set forth under paragraph (1)(A), an explanation for such deviations from the schedule.

(3) The Federal Communications Commission may not consult with the Director in the preparation and submittal of the reports required of the Commission by this subsection.

(4) In this subsection, the term "appropriate congressional committees" means the following: (A) The Committees on Appropriations, the Budget, and Commerce of the Senate.

(B) The Committees on Appropriations, the Budget, and Commerce of the House of Representatives.

(C) Nothing in this section shall be construed to supercede the requirements placed on the Federal Communications Commission by 47 U.S.C. 337(d)(4).

SEC. 8125. (a) REPORT REQUIRED.—Not later than January 31, 2000, the Secretary of Defense shall submit to the congressional defense committees in both classified and unclassified form a report on the conduct of Operation Desert Fox and Operation Allied Force (also referred to as Operation Noble Anvil). The Secretary of Defense shall submit to such committees a preliminary report on the conduct of these operations not later than December 15, 1999. The report (including the preliminary report) should be prepared in consultation with the Chairman of the Joint Chiefs of Staff, the Commander in Chief of the United States Central Command, and the Commander in Chief of the United States European Command.

(b) REVIEW OF SUCCESSES AND DEFICIENCIES.—The report should contain a thorough review of the successes and deficiencies of these operations, with respect to the following matters:

(1) United States military objectives in these operations.

(2) With respect to Operation Allied Force, the military strategy of the North Atlantic Treaty Organization (NATO) to obtain said military objectives.

(3) The command structure for the execution of Operation Allied Force.

(4) The process for identifying, nominating, selecting, and verifying targets to be attacked

during Operation Desert Fox and Operation Allied Force.

(5) A comprehensive battle damage assessment of targets prosecuted during the conduct of the air campaigns in these operations, to include—

(A) fixed targets, both military and civilian, to include bridges, roads, rail lines, airfields, power generating plants, broadcast facilities, oil refining infrastructure, fuel and munitions storage installations, industrial plants producing military equipment, command and control nodes, civilian leadership bunkers and military barracks;

(B) mobile military targets such as tanks, armored personnel carriers, artillery pieces, trucks, and air defense assets;

(C) with respect to Operation Desert Fox, research and production facilities associated with Iraq's weapons of mass destruction and ballistic missile programs, and any military units or organizations associated with such activities within Iraq; and

(D) a discussion of decoy, deception and counter-intelligence techniques employed by the Iraqi and Serbian military.

(6) The use and performance of United States military equipment, weapon systems, munitions, and national and tactical reconnaissance and surveillance assets (including items classified under special access procedures) and an analysis of—

(A) any equipment or capabilities that were in research and development and if available could have been used in these operations' respective theater of operations;

(B) any equipment or capabilities that were available and could have been used but were not introduced into these operations' respective theater of operations; and

(C) any equipment or capabilities that were introduced to these operations' respective theater of operations that could have been used but were not.

(7) Command, control, communications and operational security of NATO forces as a whole and United States forces separately during Operation Allied Force, including the ability of United States aircraft to operate with aircraft of other nations without degradation of capabilities or protection of United States forces.

(8) The deployment of United States forces and supplies to the theater of operations, including an assessment of airlift and sealift (to include a specific assessment of the deployment of Task Force Hawk during Operation Allied Force, to include detailed explanations for the delay in initial deployment, the suitability of equipment deployed compared to other equipment in the U.S. inventory that was not deployed, and a critique of the training provided to operational personnel prior to and during the deployment).

(9) The use of electronic warfare assets, in particular an assessment of the adequacy of EA-6B aircraft in terms of inventory, capabilities, deficiencies, and ability to provide logistics support.

(10) The effectiveness of reserve component forces including their use and performance in the theater of operations.

(11) The contributions of United States (and with respect to Operation Allied Force, NATO) intelligence and counterintelligence systems and personnel, including an assessment of the targeting selection and bomb damage assessment process.

(c) The report should also contain:

(1) An analysis of the transfer of operational assets from other United States Unified Commands to these operations' theater of operations and the impact on the readiness, warfighting capability and deterrence value of those commands.

(2) An analysis of the implications of these operations as regards the ability of United States

armed forces and intelligence capabilities to carry out the current national security strategy, including—

(A) whether the Department of Defense and its components, and the intelligence community and its components, have sufficient force structure and manning as well as equipment (to include items such as munitions stocks) to deploy, prosecute and sustain operations in a second major theater of war as called for under the current national security strategy;

(B) which, if any aspects, of currently programmed manpower, operations, training and other readiness programs, and weapons and other systems are found to be inadequate in terms of supporting the national military strategy; and

(C) what adjustments need to be made to current defense planning and budgets, and specific programs to redress any deficiencies identified by this analysis.

SEC. 8126. None of the funds provided in this Act may be used to transfer to any nongovernmental entity ammunition held by the Department of Defense that has a center-fire cartridge and a United States military nomenclature designation of "armor penetrator", "armor piercing (AP)", "armor piercing incendiary (API)", or "armor-piercing incendiary-tracer (API-T)", except to an entity performing demilitarization services for the Department of Defense under a contract that requires the entity to demonstrate to the satisfaction of the Department of Defense that armor piercing projectiles are either (1) rendered incapable of reuse by the demilitarization process or (2) used to manufacture ammunition pursuant to a contract with the Department of Defense or the manufacture of ammunition for export pursuant to a License for Permanent Export of Unclassified Military Articles issued by the Department of State.

SEC. 8127. Notwithstanding any other provision of law, the Chief of the National Guard Bureau, or his designee, may waive payment of all or part of the consideration that otherwise would be required under 10 U.S.C. 2667, in the case of a lease of personal property for a period not in excess of one year to any organization specified in 32 U.S.C. 508(d), or any other youth, social, or fraternal non-profit organization as may be approved by the Chief of the National Guard Bureau, or his designee, on a case-by-case basis.

SEC. 8128. In the current fiscal year and hereafter, funds appropriated for the Pacific Disaster Center may be obligated to carry out such missions as the Secretary of Defense may specify for disaster information management and related supporting activities in the geographic area of responsibility of the Commander in Chief, Pacific and beyond in support of a global disaster information network: Provided, That the Secretary may enable the Pacific Disaster Center and its derivatives to enter into flexible public-private cooperative arrangements for the delegation or implementation of some or all of its missions and accept and provide grants, or other remuneration to or from any agency of the Federal government, state or local government, private source or foreign government to carry out any of its activities: Provided further, That the Pacific Disaster Center may not accept any remuneration or provide any service or grant which could compromise national security.

SEC. 8129. Notwithstanding any other provision in this Act, the total amount appropriated in Title I of this Act is hereby reduced by \$1,838,426,000 to reflect amounts appropriated in Public Law 106-31. This amount is to be distributed as follows:

"Military Personnel, Army", \$559,533,000;

"Military Personnel, Navy", \$436,773,000;

"Military Personnel, Marine Corps", \$177,980,000;

"Military Personnel, Air Force", \$471,892,000;

"Reserve Personnel, Army", \$40,574,000;

"Reserve Personnel, Navy", \$29,833,000;

"Reserve Personnel, Marine Corps", \$7,820,000;

"Reserve Personnel, Air Force", \$13,143,000;

"National Guard Personnel, Army",

\$70,416,000; and

"National Guard Personnel, Air Force",

\$30,462,000.

SEC. 8130. Notwithstanding any other provision of law, that not more than thirty-five percent of funds provided in this Act, may be obligated for environmental remediation under indefinite delivery/indefinite quantity contracts with a total contract value of \$130,000,000 or higher.

SEC. 8131. Of the funds made available under the heading "Operation and Maintenance, Air Force", \$5,000,000 shall be transferred to the Department of Transportation to enable the Secretary of Transportation to realign railroad track on Elmendorf Air Force Base.

SEC. 8132. None of the funds appropriated by this Act shall be used for the support of any nonappropriated funds activity of the Department of Defense that procures malt beverages and wine with nonappropriated funds for resale (including such alcoholic beverages sold by the drink) on a military installation located in the United States unless such malt beverages and wine are procured within that State, or in the case of the District of Columbia, within the District of Columbia, in which the military installation is located: Provided, That in a case in which the military installation is located in more than one State, purchases may be made in any State in which the installation is located: Provided further, That such local procurement requirements for malt beverages and wine shall apply to all alcoholic beverages only for military installations in States which are not contiguous with another State: Provided further, That alcoholic beverages other than wine and malt beverages, in contiguous States and the District of Columbia shall be procured from the most competitive source, price and other factors considered.

SEC. 8133. MULTI-YEAR AIRCRAFT LEASE PILOT PROGRAM. (a) The Secretary of the Air Force may establish a multi-year pilot program for leasing aircraft for operational support purposes, including transportation for the combatant Commanders in Chief, on such terms and conditions as the Secretary may deem appropriate, consistent with this Section.

(b) Sections 2401 and 2401a of Title 10, United States Code shall not apply to any aircraft lease authorized by this Section.

(c) Under the aircraft lease Pilot Program authorized by this Section:

(1) The Secretary may include terms and conditions in lease agreements that are customary in aircraft leases by a non-government lessor to a non-government lessee.

(2) The term of any individual lease agreement into which the Secretary enters under this section shall not exceed ten years.

(3) The Secretary may provide for special payments to a lessor if either the Secretary terminates or cancels the lease prior to the expiration of its term or aircraft are damaged or destroyed prior to the expiration of the term of the lease. Such special payments shall not exceed an amount equal to the value of one year's lease payment under the lease. The amount of special payments shall be subject to negotiation between the Air Force and lessors.

(4) Notwithstanding any other provision of law, any payments required under a lease under this Section, and any payments made pursuant to Subsection (3) above may be made from:

(A) Appropriations available for the performance of the lease at the time the lease takes effect;

(B) Appropriations for the operation and maintenance available at the time which the payment is due; and

(C) Funds appropriated for those payments.

(5) The Secretary may lease aircraft, on such terms and conditions as the Secretary may deem appropriate, consistent with this section, through an operating lease consistent with OMB Circular A-11.

(6) The Secretary may exchange or sell existing aircraft and apply the exchange allowance or sale proceeds in whole or in part toward the cost of leasing replacement aircraft under this Section.

(7) Lease arrangements authorized by this Section may not commence until:

(A) The Secretary submits a report to the congressional defense committees outlining the plans for implementing the Pilot Program. The Report shall describe the terms and conditions of proposed contracts and the savings in operations and support costs expected to be derived from retiring older aircraft as compared to the expected cost of leasing newer replacement aircraft; and

(B) A period of not less than 30 calendar days has elapsed after submitting the Report.

(8) Not later than one year after the date on which the first aircraft is delivered under this Pilot Program, and yearly thereafter on the anniversary of the first delivery, the Secretary shall submit a report to the congressional defense committees describing the status of the Pilot Program. The Report will be based on at least six months of experience in operating the Pilot Program.

(9) No lease of operational support aircraft may be entered into under this Section after September 30, 2004.

(d) The authority granted to the Secretary of the Air Force by this Section is separate from and in addition to, and shall not be construed to impair or otherwise affect, the authority of the Secretary to procure transportation or enter into leases under a provision of law other than this section.

(e) The authority provided under this section may be used to lease not more than a total of six (6) aircraft for the purposes of providing operational support.

SEC. 8134. Notwithstanding any other provision in this Act, the total amount appropriated in this Act for "Operation and Maintenance, Air Force" is hereby reduced by \$100,000,000 to reflect supplemental appropriations provided under Public Law 106-31 for Readiness/Munitions.

SEC. 8135. Section 8106(a) of the Department of Defense Appropriations Act, 1997 (titles I through VIII of the matter under section 101(b) of Public Law 104-208; 110 Stat. 3009-111; 10 U.S.C. 113 note), is amended—

(1) by striking "not later than June 30, 1997,"; and

(2) by striking "\$1,000,000" and inserting "\$500,000".

SEC. 8136. None of the funds provided for the Joint Warfighting Experimentation Program may be obligated until the Vice Chairman of the Joint Chiefs of Staff reports to the congressional defense committees on the role and participation of all unified and specified commands in the Joint Warfighting Experimentation Program.

SEC. 8137. In addition to the amounts appropriated or otherwise made available elsewhere in this Act for the Department of Defense, \$5,000,000, to remain available until September 30, 2000 is hereby appropriated to the Department of Defense: Provided, That the Secretary of Defense shall make a grant in the amount of \$5,000,000 to the American Red Cross for Armed Forces Emergency Services.

SEC. 8138. The Department of the Army is directed to conduct a live fire, side-by-side oper-

ational test of the air-to-air Starstreak and air-to-air Stinger missiles from the AH-64D Longbow helicopter. The operational test is to be completed utilizing funds provided for in this Act in addition to funding provided for this purpose in the Fiscal Year 1999 Defense Appropriations Act (P.L. 105-262): Provided, That notwithstanding any other provision of law, the Department is to ensure that the development, procurement or integration of any missile for use on the AH-64 or RAH-66 helicopters, as an air-to-air missile, is subject to a full and open competition which includes the conduct of a live-fire, side-by-side test as an element of the source selection criteria: Provided further, That the Under Secretary of Defense (Acquisition & Technology) will conduct an independent review of the need, and the merits of acquiring an air-to-air missile to provide self-protection for the AH-64 and RAH-66 from the threat of hostile forces. The Secretary is to provide his findings in a report to the congressional defense committees, no later than March 31, 2000.

SEC. 8139. During the current fiscal year, under regulations prescribed by the Secretary of Defense, the Center of Excellence for Disaster Management and Humanitarian Assistance may also pay, or authorize payment for, the expenses of providing or facilitating education and training for appropriate military and civilian personnel of foreign countries in disaster management and humanitarian assistance: Provided, That not later than April 1, 2001, the Secretary of Defense shall submit to the congressional defense committees a report regarding the training of foreign personnel conducted under this authority during the preceding fiscal year for which expenses were paid under the section: Provided further, That the report shall specify the countries in which the training was conducted, the type of training conducted, and the foreign personnel trained.

SEC. 8140. Of the funds appropriated in title II under the heading "OPERATION AND MAINTENANCE, DEFENSE-WIDE" for the Office of the Special Assistant to the Deputy Secretary of Defense for Gulf War Illnesses, up to \$10,000,000 may be made available for carrying out the first-year actions under the 5-year research plan outlined in the report entitled "Department of Defense Strategy to Address Low-Level Exposures to Chemical Warfare Agents (CWAs)", dated May 1999, that was submitted to committees of Congress pursuant to section 247(d) of the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 (Public Law 105-261; 112 Stat. 1957).

SEC. 8141. (a) The Department of Defense is authorized to enter into agreements with the Veterans Administration and federally-funded health agencies providing services to Native Hawaiians for the purpose of establishing a partnership similar to the Alaska Federal Health Care Partnership, in order to maximize Federal resources in the provision of health care services by federally-funded health agencies, applying telemedicine technologies. For the purpose of this partnership, Native Hawaiians shall have the same status as other Native Americans who are eligible for the health care services provided by the Indian Health Service.

(b) The Department of Defense is authorized to develop a consultation policy, consistent with Executive Order 13084 (issued May 14, 1998), with Native Hawaiians for the purpose of assuring maximum Native Hawaiian participation in the direction and administration of governmental services so as to render those services more responsive to the needs of the Native Hawaiian community.

(c) For purposes of this section, the term "Native Hawaiian" means any individual who is a descendant of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in

the area that now comprises the State of Hawaii.

SEC. 8142. None of the funds appropriated or otherwise made available by this or any other Act may be made available for reconstruction activities in the Republic of Serbia (excluding the province of Kosovo) as long as Slobodan Milosevic remains the President of the Federal Republic of Yugoslavia (Serbia and Montenegro).

SEC. 8143. In addition to the amounts provided elsewhere in this Act, the amount of \$5,000,000 is hereby appropriated for "OPERATION AND MAINTENANCE, DEFENSE-WIDE", to be available, notwithstanding any other provision of law, only for a grant to the United Service Organizations Incorporated, a federally chartered corporation under chapter 2201 of title 36, United States Code. The grant provided for by this section is in addition to any grant provided for under any other provision of law.

SEC. 8144. None of the funds in this Act shall be available to initiate a multiyear procurement contract for the Abrams M1A2 Tank Upgrade Program until 30 days after the Department of the Army has submitted a report to Congress detailing its efforts to reduce the costs of the tank upgrade program, to include the effects and potential savings that would result from any alternate fixed price or fixed quantity option contracts.

SEC. 8145. The multi-year authority for the C-17 granted in this Act shall become effective once the Secretary of the Air Force certifies to the congressional defense committees that the average unit flyaway price of C-17 aircraft P121 through P180 purchased under a multi-year contract will be at least twenty-five (25) percent below the average unit flyaway price of the C-17 under the current 80 aircraft multiyear procurement program, with both prices calculated in fiscal year 1999 dollars.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8146. (a) In addition to amounts appropriated elsewhere in this Act, \$1,000,000,000 is hereby appropriated for the F-22 program: Provided, That these funds shall only be available for transfer to the appropriate F-22 program R-1 and P-1 line items of Titles IV and III of this Act for the purposes of F-22 program research, development, test and evaluation, and advance procurement: Provided further, That of this amount, not more than \$277,100,000 may be transferred to the "Aircraft Procurement, Air Force" account only for advance procurement of F-22 aircraft: Provided further, That any funds transferred for F-22 advance procurement shall not be available for obligation until the Secretary of Defense certifies to the congressional defense committees that all 1999 Defense Acquisition Board exit criteria have been met: Provided further, That the transfer authority provided in this section is in addition to any other transfer authority contained elsewhere in this Act.

(b) Notwithstanding any other provision of law, the Secretary of Defense may use funds provided under this section and transferred to Titles IV and III of this Act to continue acquisition of F-22 test aircraft for which procurement funding has been previously provided.

(c) The Secretary of the Air Force shall adjust the amounts of the limitations set forth in subsections (a) and (b) of section 217, Public Law 105-85 accordingly, and may modify any F-22 contracts to implement the requirements of this section.

(d) Funds appropriated in this Act or any other prior Act for "Research, Development, Test and Evaluation, Air Force" and "Aircraft Procurement, Air Force" may not be used for acquisition of more than a total of 17 flight-capable test vehicles for the F-22 aircraft program.

(e) The Secretary of the Air Force may not award a full funding contract for low-rate initial production for the F-22 aircraft program until—

(1) the first flight of an F-22 aircraft incorporating Block 3.0 software has been conducted;

(2) the Secretary of Defense certifies to the congressional defense committees that all Defense Acquisition Board exit criteria for the award of low-rate initial production of the aircraft have been met; and

(3) upon completion of the requirements under (e)(1) and (e)(2) the Director of Operational Test and Evaluation submits to the congressional defense committees a report assessing the adequacy of testing to date to measure and predict performance of F-22 avionics systems, stealth characteristics, and weapons delivery systems.

(f) The funds transferred under the authority provided within this section shall be merged with and shall be available for the same purposes, and for the same time period, as the appropriation to which transferred.

(INCLUDING TRANSFER OF FUNDS)

SEC. 8147. (a) In addition to the amounts appropriated elsewhere in this Act, \$300,000,000 is hereby appropriated for F-22 program termination liability or for other F-22 program contractual requirements in lieu of termination liability obligations: Provided, That these funds shall only be available for transfer to the appropriate F-22 program R-1 and P-1 line items of Titles IV and III of this Act for the purposes specified in this section: Provided further, That the transfer authority provided in this section is in addition to any other transfer authority contained elsewhere in this Act: Provided further, That these funds shall not be available for expenditure until October 1, 2000.

(b) The funds transferred under the authority provided within this section shall be merged with and shall be available for the same purposes, and for the same time period, as the appropriation to which transferred.

SEC. 8148. In addition to the amounts provided elsewhere in this Act, the amount of \$5,500,000 is hereby appropriated for "OPERATION AND MAINTENANCE, DEFENSE-WIDE", to be available, notwithstanding any other provision of law, only for a grant to the High Desert Partnership in Academic Excellence Foundation, Inc., for the purpose of developing, implementing, and evaluating a standards and performance based academic model at schools administered by the Department of Defense Education Activity.

SEC. 8149. None of the funds appropriated in this Act may be used for the payment of a fine or penalty that is imposed against the Department of Defense or a military department arising from an environmental violation at a military installation or facility unless the payment of the fine or penalty has been specifically authorized by law. For purposes of this section, expenditure of funds to carry out a supplemental environmental project that is required to be carried out as part of such a penalty shall be considered to be a payment of the penalty.

SEC. 8150. Section 8145 of the Department of Defense Appropriations Act, 1999 (Public Law 105-262; 112 Stat. 2340), is amended by inserting before the period at the end the following: ", and for such additional environmental restoration activities at such former base as may be accomplished within such total amount".

SEC. 8151. Of the funds made available in this Act under the heading "Operation and Maintenance, Defense-Wide", up to \$5,000,000 shall be available to provide assistance, by grant or otherwise, to public school systems that have unusually high concentrations of special needs military dependents enrolled: Provided, That in selecting school systems to receive such assistance, special consideration shall be given to school systems in states that are considered overseas assignments.

SEC. 8152. Funds appropriated by the paragraph under the heading "MILITARY CONSTRUCTION TRANSFER FUNDS" in the 1999 Emergency Supplemental Appropriations Act (Public Law 106-31; 113 Stat. 85) may be transferred to military construction accounts, as authorized by that paragraph, and shall be merged with and shall be available for the same purposes and for the same time period as the account to which transferred.

SEC. 8153. Section 127 of the Military Construction Appropriations Act, 1995 (Public Law 103-307; 108 Stat. 1666) is amended—

(1) in subsection (B)(1), by striking "an amount" and all that follows and inserting "\$3,400,000."; and

(2) by adding at the end the following:

"(i) COMPLETION OF CONVEYANCE BY END OF FISCAL YEAR 2000.—The Secretary shall endeavor to complete any conveyance under this section not later than September 30, 2000."

SEC. 8154. Notwithstanding any other provision of law, funds appropriated in this Act under the heading "Operation and Maintenance, Army" shall be available for expenses associated with characterization and remediation activities at the Massachusetts Military Reservation, Cape Cod, Massachusetts, resulting from environmental problems pertaining to use of Camp Edwards as a training range and impact area and any administrative orders issued by the U.S. Environmental Protection Agency to address those problems.

SEC. 8155. (a) IN GENERAL.—Notwithstanding any other provision of law, the Secretary of the Air Force may convey at no cost to the Air Force, without consideration, to Indian tribes located in the States of North Dakota, South Dakota, Montana, and Minnesota relocatable military housing units located at Grand Forks Air Force Base and Minot Air Force Base that are excess to the needs of the Air Force.

(b) PROCESSING OF REQUESTS.—The Secretary of the Air Force shall convey, at no cost to the Air Force, military housing units under subsection (a) in accordance with the request for such units that are submitted to the Secretary by the Operation Walking Shield Program on behalf of Indian tribes located in the States of North Dakota, South Dakota, Montana, and Minnesota.

(c) The Operation Walking Shield program shall resolve any conflicts among request of Indian tribes for housing units under subsection (a) before submitting requests to the Secretary of the Air Force under paragraph (b).

(d) INDIAN TRIBE DEFINED.—In this section, the term "Indian tribe" means any recognized Indian tribe included on the current list published by the Secretary of Interior under Section 104 of the Federally Recognized Indian Tribe Act of 1994 (Public Law 103-454; 108 Stat. 4792; U.S.C. 479a-1).

SEC. 8156. Of the amounts appropriated in the Act under the heading "Research, Development, Test and Evaluation, Defense-Wide", \$45,000,000 shall be available for the purpose of adjusting the cost-share of the parties under the Agreement between the Department of Defense and the Ministry of Defence of Israel for the Arrow Deployability Program.

SEC. 8157. The Secretary of Defense shall fully identify and determine the validity of healthcare contract additional liabilities, requests for equitable adjustment, and claims for unanticipated healthcare contract costs: Provided, That the Secretary of Defense shall establish an equitable and timely process for the adjudication of claims, and recognize actual liabilities during the Department's planning, programming and budgeting process, including fiscal year 2000 supplemental appropriation requests if appropriate: Provided further, That not later than December 1, 1999, the Secretary of

Defense shall submit a report to the congressional defense committees on the scope and extent of healthcare contract claims, and on the action taken to implement the provisions of this section: Provided further, That nothing in this section should be construed as congressional direction to liquidate or pay any claims that otherwise would not have been adjudicated in favor of the claimant.

SEC. 8158. Of the funds appropriated in title II of this Act under the heading "Operation and Maintenance, Defense-Wide", \$8,000,000 shall be available only for a community retraining, reinvestment, and manufacturing initiative to be conducted by an academic consortia with existing programs in manufacturing and retraining: Provided, That the \$8,000,000 made available in this section shall be obligated by grant not later than fifteen days after enactment of this Act.

SEC. 8159. (a) REPORT REQUIRED.—Not later than 90 days after the date of the enactment of this Act, the Secretary of Defense shall submit to the congressional defense committees a report on the management of the chemical weapons demilitarization program.

(b) REPORT ELEMENTS.—The report under subsection (a) shall include the following:

(1) A description and assessment of the current management structure of the chemical weapons demilitarization program, including the management of the assembled chemical weapons assessment (ACWA) program.

(2) An assessment of the feasibility and advisability for the management of the chemical weapons demilitarization program of the assignment of a panel for oversight of the management of program, which panel would—

(A) consist of officials of the Department of Defense and of other departments and agencies of the Federal Government having an interest in the safe and timely demilitarization of chemical weapons; and

(B) prepare annual reports on the schedule, cost, and effectiveness of the program.

(3) Any other matters relating to the management of the chemical weapons demilitarization program, including the improvement of the management of the program, that the Secretary considers appropriate.

SEC. 8160. Notwithstanding any other provision of law, all military construction projects for which funds were appropriated in Public Law 106-52 are hereby authorized.

SEC. 8161. The Secretary of Defense may treat the opening of the National D-Day Museum in New Orleans, Louisiana, as an official event of the Department of Defense for the purposes of the provision of support for ceremonies and activities related to that opening.

SEC. 8162. DWIGHT D. EISENHOWER MEMORIAL. (a) FINDINGS.—Congress finds that—

(1) the people of the United States feel a deep debt of gratitude to Dwight D. Eisenhower, who served as Supreme Commander of the Allied Forces in Europe in World War II and subsequently as 34th President of the United States; and

(2) an appropriate permanent memorial to Dwight D. Eisenhower should be created to perpetuate his memory and his contributions to the United States.

(b) COMMISSION.—There is established a commission to be known as the "Dwight D. Eisenhower Memorial Commission" (referred to in this section as the "Commission").

(c) MEMBERSHIP.—The Commission shall be composed of—

(1) 4 persons appointed by the President, not more than two of whom may be members of the same political party;

(2) 4 Members of the Senate appointed by the President Pro Tempore of the Senate in consultation with the Majority Leader and Minority Leader of the Senate, of which not more

than two appointees may be members of the same political party; and

(3) 4 Members of the House of Representatives appointed by the Speaker of the House of Representatives in consultation with the Majority Leader and Minority Leader of the House, of which not more than two appointees may be members of the same political party.

(d) CHAIR AND VICE CHAIR.—The members of the Commission shall select a Chair and Vice Chair of the Commission. The Chair and Vice Chair shall not be members of the same political party.

(e) VACANCIES.—Any vacancy in the Commission shall not affect its powers if a quorum is present, but shall be filled in the same manner as the original appointment.

(f) MEETINGS.—

(1) INITIAL MEETING.—Not later than 45 days after the date on which a majority of the members of the Commission have been appointed, the Commission shall hold its first meeting.

(2) SUBSEQUENT MEETINGS.—The Commission shall meet at the call of the Chair.

(g) QUORUM.—A majority of the members of the Commission shall constitute a quorum but a lesser number of members may hold hearings.

(h) NO COMPENSATION.—A member of the Commission shall serve without compensation, but may be reimbursed for expenses incurred in carrying out the duties of the Commission.

(i) DUTIES.—The Commission shall consider and formulate plans for such a permanent memorial to Dwight D. Eisenhower, including its nature, design, construction, and location.

(j) POWERS.—The Commission may—

(1) make such expenditures for services and materials for the purpose of carrying out this section as the Commission considers advisable from funds appropriated or received as gifts for that purpose;

(2) accept gifts to be used in carrying out this section or to be used in connection with the construction or other expenses of the memorial; and

(3) hold hearings, enter into contracts for personal services and otherwise, and do such other things as are necessary to carry out this section.

(k) REPORTS.—The Commission shall—

(1) report the plans under subsection (i), together with recommendations, to the President and Congress at the earliest practicable date; and

(2) in the interim, make annual reports on its progress to the President and Congress.

(l) APPLICABILITY OF OTHER LAWS.—The Federal Advisory Committee Act (5 U.S.C. App) shall not apply to the Commission.

(m) APPROPRIATION OF FUNDS.—In addition to amounts provided elsewhere in this Act, there is appropriated to the Commission \$300,000, to remain available until expended.

SEC. 8163. (a) The Secretary of the Air Force may accept contributions from the State of New York for the project at Rome Research Site, Rome, New York authorized in section 2301(a) of the National Defense Authorization Act for Fiscal Year 2000, for purposes of carrying out military construction relating to the consolidation of Air Force Research Laboratory facilities at the Rome Research Site, Rome, New York. Any contributions received from the State of New York shall be in addition to the funds authorized for the project in section 2304(a)(1) of the National Defense Authorization Act for Fiscal Year 2000.

(b) The item for “New York, Rome Research Site”, in the table in Section 2301(a) of the National Defense Authorization Act for Fiscal Year 2000 is amended by striking “12,800,000” and inserting in lieu thereof “25,800,000”.

SEC. 8164. Chapter 1 of title I of division B of the Omnibus Consolidated and Emergency Supplemental Appropriations Act, 1999 (Public Law 105-277; 112 Stat. 2681-553) is amended in the

paragraph under the heading “Operation and Maintenance, Defense-Wide” by inserting before the period at the end the following: “: Provided further, That an amount not to exceed \$75,000,000 of the funds provided under this heading shall remain available without fiscal year limitation after transfer from this account: Provided further, That, notwithstanding any other provision of law, the Secretary of Defense is authorized to transfer the funds referred to in the immediately preceding proviso to other activities of the Federal Government pursuant to section 1535 of title 31, United States Code (referred to as the ‘Economy Act’)”.

SEC. 8165. REVIEW OF LOW DENSITY, HIGH DEMAND ASSETS. (a) REPORT TO CONGRESSIONAL DEFENSE COMMITTEES.—The Secretary of Defense shall submit to the congressional defense committees a report assessing the requirements, plans, and resources needed to maintain, update, modernize, restore, and expand the Department of Defense fleet of specialized aircraft and related equipment commonly described as “Low Density, High Demand Assets”. The report shall be submitted no later than May 15, 2000 and shall be submitted in both classified and unclassified versions.

(b) ASSETS TO BE COVERED.—The report shall cover the following aircraft and equipment:

(1) Electronic warfare aircraft and specialized jamming equipment.

(2) Intelligence, surveillance, and reconnaissance (ISR) platforms and major systems, including—

- (A) U-2 aircraft;
 - (B) AWACS aircraft;
 - (C) JSTARS aircraft;
 - (D) RIVET JOINT aircraft;
 - (E) tactical unmanned aerial vehicles (UAVs);
 - (F) interoperable/secure communications;
 - (G) command and control systems;
 - (H) new data links; and
 - (I) data fusion capability.
- (3) Strategic and tactical airlift aircraft.
- (4) Aerial refueling aircraft.
- (5) Strategic bomber aircraft.

(c) REPORT ELEMENTS.—The report shall include for each asset specified in subsection (b) the following:

- (1) A description of—
 - (A) inventory, age, capabilities, current deficiencies, usage rates, current and remaining service life, and expected rates of fatigue;
 - (B) ability to provide logistical support;
 - (C) planned replacement dates; and
 - (D) number of sorties, percentage of inventory used, and overall effectiveness in Operation Desert Fox and in Operation Allied Force.

(2) A comparison of the Department’s plans and resource requirements to update, replace, modernize, or restore the asset as contained in the Future Years Defense Plan for fiscal year 2000 with those plans and resource requirements for that asset as contained in the Future Years Defense Plan for fiscal year 2001, and an explanation for any significant difference in those plans and requirements.

(3) A detailed listing, by fiscal year, of—

(A) the total amount required to fulfill mission needs statements and documented inventory objectives for the asset in order to improve critical warfighting capabilities over the next 10 years; and

(B) of that total amount for each such year, the portion (stated as an amount and as a percentage) that is not included in the fiscal year 2001 Future Years Defense Plan.

SEC. 8166. Of the funds appropriated in Title II of this Act under the heading “Operation and Maintenance, Army”, \$5,000,000 shall be available only for a grant to the Chicago Public Schools for conversion and expansion of the former Eighth Regiment National Guard Armory (Bronzeville).

SEC. 8167. Notwithstanding any other provision of law, \$10,000,000, is hereby appropriated and authorized for “Military Construction, Army National Guard”, to remain available until September 30, 2004, for construction, and, contributions therefor, of an Army Aviation Support Facility at West Bend, Wisconsin.

SEC. 8168. (a) PURPOSE.—The purpose of this section is to evaluate and demonstrate methods for more efficient operation of military installations through improved capital asset management and greater reliance on the public or private sector for less-costly base support services, where available.

(b) AUTHORITY.—(1) The Secretary of the Air Force may carry out at Brooks Air Force Base, Texas, a demonstration project to be known as the “Base Efficiency Project” to improve mission effectiveness and reduce the cost of providing quality installation support at Brooks Air Force Base.

(2) The Secretary may carry out the Project in consultation with the Community to the extent the Secretary determines such consultation is necessary and appropriate.

(3) The authority provided in this section is in addition to any other authority vested in or delegated to the Secretary, and the Secretary may exercise any authority or combination of authorities provided under this section or elsewhere to carry out the purposes of the Project.

(c) EFFICIENT PRACTICES.—(1) The Secretary may convert services at or for the benefit of the Base from accomplishment by military personnel or by Department civilian employees (appropriated fund or non-appropriated fund), to services performed by contract or provided as consideration for the lease, sale, or other conveyance or transfer of property.

(2) Notwithstanding section 2462 of title 10, United States Code, a contract for services may be awarded based on “best value” if the Secretary determines that the award will advance the purposes of a joint activity conducted under the Project and is in the best interest of the Department.

(3) Notwithstanding that such services are generally funded by local and State taxes and provided without specific charge to the public at large, the Secretary may contract for public services at or for the benefit of the Base in exchange for such consideration, if any, the Secretary determines to be appropriate.

(4)(A) The Secretary may conduct joint activities with the Community, the State, and any private parties or entities on or for the benefit of the Base.

(B) Payments or reimbursements received from participants for their share of direct and indirect costs of joint activities, including the costs of providing, operating, and maintaining facilities, shall be in an amount and type determined to be adequate and appropriate by the Secretary.

(C) Such payments or reimbursements received by the Department shall be deposited into the Project Fund.

(d) LEASE AUTHORITY.—(1) The Secretary may lease real or personal property located on the Base and not required at other Air Force installations to any lessee upon such terms and conditions as the Secretary considers appropriate and in the interest of the United States, if the Secretary determines that the lease would facilitate the purposes of the Project.

(2) Consideration for a lease under this subsection shall be determined in accordance with subsection (g).

(3) A lease under this subsection—

(A) may be for such period as the Secretary determines is necessary to accomplish the goals of the Project; and

(B) may give the lessee the first right to purchase the property at fair market value if the

lease is terminated to allow the United States to sell the property under any other provision of law.

(4)(A) The interest of a lessee of property leased under this subsection may be taxed by the State or the Community.

(B) A lease under this subsection shall provide that, if and to the extent that the leased property is later made taxable by State governments or local governments under Federal law, the lease shall be renegotiated.

(5) The Department may furnish a lessee with utilities, custodial services, and other base operation, maintenance, or support services performed by Department civilian or contract employees, in exchange for such consideration, payment, or reimbursement as the Secretary determines appropriate.

(6) All amounts received from leases under this subsection shall be deposited into the Project Fund.

(7) A lease under this subsection shall not be subject to the following provisions of law:

(A) Section 2667 of title 10, United States Code, other than subsection (b)(1) of that section.

(B) Section 321 of the Act of June 30, 1932 (40 U.S.C. 303b).

(C) The Federal Property and Administrative Services Act of 1949 (40 U.S.C. 471 et seq.).

(e) PROPERTY DISPOSAL.—(1) The Secretary may sell or otherwise convey or transfer real and personal property located at the Base to the Community or to another public or private party during the Project, upon such terms and conditions as the Secretary considers appropriate for purposes of the Project.

(2) Consideration for a sale or other conveyance or transfer of property under this subsection shall be determined in accordance with subsection (g).

(3) The sale or other conveyance or transfer of property under this subsection shall not be subject to the following provisions of law:

(A) Section 2693 of title 10, United States Code.

(B) The Federal Property and Administrative Services Act of 1949 (40 U.S.C. 471 et seq.).

(4) Cash payments received as consideration for the sale or other conveyance or transfer of property under this subsection shall be deposited into the Project Fund.

(f) LEASEBACK OF PROPERTY LEASED OR DISPOSED.—(1) The Secretary may lease, sell, or otherwise convey or transfer real property at the Base under subsections (b) and (e), as applicable, which will be retained for use by the Department or by another military department or other Federal agency, if the lessee, purchaser, or other grantee or transferee of the property agrees to enter into a leaseback to the Department in connection with the lease, sale, or other conveyance or transfer of one or more portions or all of the property leased, sold, or otherwise conveyed or transferred, as applicable.

(2) A leaseback of real property under this subsection shall be an operating lease for no more than 20 years unless the Secretary of the Air Force determines that a longer term is appropriate.

(3)(A) Consideration, if any, for real property leased under a leaseback entered into under this subsection shall be in such form and amount as the Secretary considers appropriate.

(B) The Secretary may use funds in the Project Fund or other funds appropriated or otherwise available to the Department for use at the Base for payment of any such cash rent.

(4) Notwithstanding any other provision of law, the Department or other military department or other Federal agency using the real property leased under a leaseback entered into under this subsection may construct and erect facilities on or otherwise improve the leased

property using funds appropriated or otherwise available to the Department or other military department or other Federal agency for such purpose.

(g) CONSIDERATION.—(1) The Secretary shall determine the nature, value, and adequacy of consideration required or offered in exchange for a lease, sale, or other conveyance or transfer of real or personal property or for other actions taken under the Project.

(2) Consideration may be in cash or in-kind or any combination thereof. In-kind consideration may include the following:

(A) Real property.

(B) Personal property.

(C) Goods or services, including operation, maintenance, protection, repair, or restoration (including environmental restoration) of any property or facilities (including non-appropriated fund facilities).

(D) Base operating support services.

(E) Improvement of Department facilities.

(F) Provision of facilities, including office, storage, or other usable space, for use by the Department on or off the Base.

(G) Public services.

(3) Consideration may not be for less than the fair market value.

(h) PROJECT FUND.—(1) There is established on the books of the Treasury a fund to be known as the "Base Efficiency Project Fund" into which all cash rents, proceeds, payments, reimbursements, and other amounts from leases, sales, or other conveyances or transfers, joint activities, and all other actions taken under the Project shall be deposited. All amounts deposited into the Project Fund are without fiscal year limitation.

(2) Amounts in the Project Fund may be used only for operation, base operating support services, maintenance, repair, or improvement of Department facilities, payment of consideration for acquisitions of interests in real property (including payment of rentals for leasebacks), and environmental protection or restoration, in addition to or in combination with other amounts appropriated for these purposes.

(3) Subject to generally prescribed financial management regulations, the Secretary shall establish the structure of the Project Fund and such administrative policies and procedures as the Secretary considers necessary to account for and control deposits into and disbursements from the Project Fund effectively.

(4) All amounts in the Project Fund shall be available for use for the purposes authorized in paragraph (2) at the Base.

(i) FEDERAL AGENCIES.—(1)(A) Any Federal agency, its contractors, or its grantees shall pay rent, in cash or services, for the use of facilities or property at the Base, in an amount and type determined to be adequate by the Secretary.

(B) Such rent shall generally be the fair market rental of the property provided, but in any case shall be sufficient to compensate the Base for the direct and overhead costs incurred by the Base due to the presence of the tenant agency on the Base.

(2) Transfers of real or personal property at the Base to other Federal agencies shall be at fair market value consideration. Such consideration may be paid in cash, by appropriation transfer, or in property, goods, or services.

(3) Amounts received from other Federal agencies, their contractors, or grantees, including any amounts paid by appropriation transfer, shall be deposited in the Project Fund.

(j) REPORTS TO CONGRESS.—(1) Section 2662 of title 10, United States Code, shall not apply to transactions at the Base during the Project.

(2)(A) Not later than March 1 each year, the Secretary shall submit to the appropriate committees of Congress a report on any transactions at the Base during the preceding fiscal year that would be subject to such section 2662.

(B) The report shall include a detailed cost analysis of the financial savings and gains realized through joint activities and other actions under the Project authorized by this section and a description of the status of the Project.

(k) LIMITATION.—None of the authorities in this section shall create any legal rights in any person or entity except rights embodied in leases, deeds, or contracts.

(l) EXPIRATION OF AUTHORITY.—The authority to enter into a lease, deed, permit, license, contract, or other agreement under this section shall expire on September 30, 2004.

(m) DEFINITIONS.—In this section:

(1) The term "Project" means the Base Efficiency Project authorized by this section.

(2) The term "Base" means Brooks Air Force Base, Texas.

(3) The term "Community" means the City of San Antonio, Texas.

(4) The term "Department" means the Department of the Air Force.

(5) The term "facility" means a building, structure, or other improvement to real property (except a military family housing unit as that term is used in subchapter IV of chapter 169 of title 10, United States Code).

(6) The term "joint activity" means an activity conducted on or for the benefit of the Base by the Department, jointly with the Community, the State, or any private entity, or any combination thereof.

(7) The term "Project Fund" means the Base Efficiency Project Fund established by subsection (h).

(8) The term "public services" means public services (except public schools, fire protection, and police protection) that are funded by local and State taxes and provided without specific charge to the public at large.

(9) The term "Secretary" means the Secretary of the Air Force or the Secretary's designee, who shall be a civilian official of the Department appointed by the President with the advice and consent of the Senate.

(10) The term "State" means the State of Texas.

(n) The authorities provided in this section shall not take effect until June 15, 2000.

SEC. 8169. Notwithstanding any other provision of this Act, the total amount appropriated in this Act is hereby reduced by \$400,000,000, to be distributed as follows:

"Operation and Maintenance, Army", \$115,000,000;

"Operation and Maintenance, Navy", \$150,000,000;

"Operation and Maintenance, Marine Corps", \$20,000,000; and

"Operation and Maintenance, Air Force", \$115,000,000;

Provided, That of the unobligated amounts made available in Section 2008 of title II, chapter 3 of Public Law 106-31, \$400,000,000 shall be made available only for depot level maintenance and repair, as follows:

"Operation and Maintenance, Army", \$115,000,000;

"Operation and Maintenance, Navy", \$150,000,000;

"Operation and Maintenance, Marine Corps", \$20,000,000; and

"Operation and Maintenance, Air Force", \$115,000,000.

SEC. 8170. Notwithstanding any other provision of this Act, the total amount appropriated in this Act is hereby reduced by \$550,000,000, to be distributed as follows:

"Operation and Maintenance, Army", \$170,000,000;

"Operation and Maintenance, Navy", \$170,000,000;

"Operation and Maintenance, Marine Corps", \$40,000,000; and

"Operation and Maintenance, Air Force", \$170,000,000;

Provided, That of the unobligated amounts made available in Section 2007 of title II, chapter 3 of Public Law 106-31, \$550,000,000 shall be made available only for spare and repair parts and associated logistical support necessary for the maintenance of weapons systems and equipment, as follows:

"Operation and Maintenance, Army", \$170,000,000;

"Operation and Maintenance, Navy", \$170,000,000;

"Operation and Maintenance, Marine Corps", \$40,000,000; and

"Operation and Maintenance, Air Force", \$170,000,000.

SEC. 8171. Notwithstanding any other provision of this Act, the total amount appropriated in this Act is hereby reduced by \$100,000,000, to be distributed as follows:

"Operation and Maintenance, Army", \$60,000,000;

"Operation and Maintenance, Navy", \$20,000,000; and

"Operation and Maintenance, Air Force", \$20,000,000;

Provided, That of the unobligated amounts made available in Section 2011 of title II, chapter 3 of Public Law 106-31, \$100,000,000 shall be made available only for base operations support costs at Department of Defense facilities, as follows:

"Operation and Maintenance, Army", \$60,000,000;

"Operation and Maintenance, Navy", \$20,000,000; and

"Operation and Maintenance, Air Force", \$20,000,000.

SEC. 8172. Notwithstanding any other provision of this Act, the total amount appropriated in this Act is hereby reduced by \$356,400,000, to be distributed as follows:

"Weapons Procurement, Navy", \$50,900,000;

"Procurement of Ammunition, Navy and Marine Corps", \$113,500,000;

"Aircraft Procurement, Air Force", \$20,800,000; and

"Procurement of Ammunition, Air Force", \$171,200,000;

Provided, That the Secretary of Defense shall allocate these reductions to reflect savings available as a result of the increased procurement of munitions resulting from funds made available in Title II, chapter 3 of Public Law 106-31.

SEC. 8173. (a) Notwithstanding any other provision of this Act, amounts otherwise provided by this Act in title II for the following accounts and activities are reduced by the following amounts:

"Operation and Maintenance, Army", \$1,572,947,000;

"Operation and Maintenance, Navy", \$1,874,598,000;

"Operation and Maintenance, Marine Corps", \$228,709,000;

"Operation and Maintenance, Air Force", \$1,707,150,000;

"Operation and Maintenance, Defense-Wide", \$939,341,000;

"Operation and Maintenance, Army Reserve", \$120,072,000;

"Operation and Maintenance, Navy Reserve", \$77,598,000;

"Operation and Maintenance, Marine Corps Reserve", \$11,346,000;

"Operation and Maintenance, Air Force Reserve", \$145,393,000;

"Operation and Maintenance, Army National Guard", \$258,115,000;

"Operation and Maintenance, Air National Guard", \$264,731,000;

in all: \$7,200,000,000.

(b) In addition to amounts appropriated elsewhere in this Act there are hereby appropriated

the following amounts for the following accounts:

"Operation and Maintenance, Army", \$1,572,947,000;

"Operation and Maintenance, Navy", \$1,874,598,000;

"Operation and Maintenance, Marine Corps", \$228,709,000;

"Operation and Maintenance, Air Force", \$1,707,150,000;

"Operation and Maintenance, Defense-Wide", \$939,341,000;

"Operation and Maintenance, Army Reserve", \$120,072,000;

"Operation and Maintenance, Navy Reserve", \$77,598,000;

"Operation and Maintenance, Marine Corps Reserve", \$11,346,000;

"Operation and Maintenance, Air Force Reserve", \$145,393,000;

"Operation and Maintenance, Army National Guard", \$258,115,000;

"Operation and Maintenance, Air National Guard", \$264,731,000;

in all: \$7,200,000,000.

Provided, That the entire amount shall be available only to the extent an official budget request for \$7,200,000,000, that includes designation of the entire amount of the request as an emergency requirement as defined in the Balanced Budget and Emergency Deficit Control Act of 1985, as amended, is transmitted by the President to the Congress: Provided further, That the entire amount is designated by the Congress as an emergency requirement pursuant to section 251(b)(2)(A) of such Act.

SEC. 8174. None of the funds appropriated or otherwise made available in this Act may be used for the American Heritage Rivers Initiative.

SEC. 8175. Notwithstanding any other provision of law, the Department of Defense shall make progress payments based on progress no less than 12 days after receiving a valid billing and the Department of Defense shall make progress payments based on cost no less than 19 days after receiving a valid billing.

SEC. 8176. Notwithstanding any other provision of law, the Department of Defense shall make adjustments in payment procedures and policies to ensure that payments are made no less than 29 days after receipt of a proper invoice.

TITLE IX

WAIVER OF CERTAIN SANCTIONS AGAINST INDIA AND PAKISTAN

(a) WAIVER AUTHORITY.—Except as provided in subsections (b) and (c) of this section, the President may waive, with respect to India and Pakistan, the application of any sanction contained in section 101 or 102 of the Arms Export Control Act (22 U.S.C. 2799aa or 22 U.S.C. 2799aa-1), section 2(b)(4) of the Export Import Bank Act of 1945 (12 U.S.C. 635(b)(4)), or section 620E(e) of the Foreign Assistance Act of 1961, as amended, (22 U.S.C. 2375(e)).

(b) EXCEPTION.—The authority to waive the application of a sanction or prohibition (or portion thereof) under subsection (a) shall not apply with respect to a sanction or prohibition contained in subparagraph (B), (C), or (G) of section 102(b)(2) of the Arms Export Control Act, unless the President determines, and so certifies to Congress, that the application of the restriction would not be in the national security interests of the United States.

(c) TERMINATION OF WAIVER.—The President may not exercise the authority of subsection (a), and any waiver previously issued under subsection (a) shall cease to apply, with respect to India or Pakistan, if that country detonates a nuclear explosive device after the date of enactment of this act or otherwise takes such action which would cause the President to report pur-

suant to section 102(b)(1) of the Arms Export Control Act.

(d) TARGETED SANCTIONS.—

(1) SENSE OF THE CONGRESS.—

(A) It is the sense of the Congress that the broad application of export controls to nearly 300 Indian and Pakistani entities is inconsistent with the specific national security interests of the United States and that this control list requires refinement; and

(B) export controls should be applied only to those Indian and Pakistani entities that make direct and material contributions to weapons of mass destruction and missile programs and only to those items that can contribute to such programs.

(2) REPORTING REQUIREMENT.—Not later than 60 days after the date of enactment of this Act, the President shall submit both a classified and unclassified report to the appropriate congressional committees listing those Indian and Pakistani entities whose activities contribute to missile programs or weapons of mass destruction programs.

(e) CONGRESSIONAL NOTIFICATION.—The issuance of a license for export of a defense article, defense service, or technology under the authority of this section shall be subject to the same requirements as are applicable to the export of items described in section 36(c) of the Arms Export Control Act (22 U.S.C. 2776(c)), including the transmittal of information and the application of congressional review procedures.

(f) REPEAL.—The India-Pakistan Relief Act (title IX of the Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations Act, 1999, as contained in section 101(a) of Public Law 105-277) is repealed effective October 21, 1999.

This Act may be cited as the "Department of Defense Appropriations Act, 2000".

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the

amendment of the Senate to the bill (H.R. 2561), making appropriations for the Department of Defense for the fiscal year ending September 30, 2000, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

The conference agreement on the Department of Defense Appropriations Act, 2000, incorporates some of the provisions of both the House and Senate versions of the bill. The language and allocations set forth in House Report 106-244 and Senate Report 106-53 should be complied with unless specifically addressed in the accompanying bill and statement of the managers to the contrary.

Senate Amendment: The Senate deleted the entire House bill after the enacting clause and inserted the Senate bill. The conference agreement includes a revised bill.

DEFINITION OF PROGRAM, PROJECT, AND ACTIVITY

The conferees agree that for the purposes of the Balanced Budget and Emergency Deficit Control Act of 1985 (Public Law 99-177) as amended by the Balanced Budget and Emergency Deficit Control Reaffirmation Act of 1987 (Public Law 100-119) and by the Budget Enforcement Act of 1990 (Public Law 101-508), the term program, project, and activity for appropriations contained in this Act shall be defined as the most specific level of budget items identified in the Department of Defense Appropriations Act, 2000, the accompanying House and Senate Committee reports, the conference report and accompanying joint explanatory statement of the managers of the Committee of Conference, the related classified annexes and reports, and the P-1 and R-1 budget justification documents as subsequently modified by Congressional action. The following exception to the above definition shall apply:

For the Military Personnel and the Operation and Maintenance accounts, the term "program, project, and activity" is defined as the appropriations accounts contained in the Department of Defense Appropriations Act. At the time the President submits his budget for fiscal year 2001, the conferees direct the Department of Defense to transmit to the congressional defense committees budget justification documents to be known as the "M-1" and "O-1" which shall identify, at the budget activity, activity group, and subactivity group level, the amounts requested by the President to be appropriated to the Department of Defense for operation and maintenance in any budget request, or amended budget request, for fiscal year 2001.

CONGRESSIONAL SPECIAL INTEREST ITEMS

The conferees direct that projects for which funds are provided as indicated in the tables or paragraphs of the Conference Report in any appropriation account are special interest items for the purpose of preparation of the DD Form 1414. The conferees also direct that the funding adjustments outlined in the tables shall be provided only for the specific purposes outlined in the table.

TITLE I—MILITARY PERSONNEL

The conferees agree to the following amounts for the Military Personnel accounts:

[In thousands of dollars]				
	Budget	House	Senate	Conference
Active Personnel:				
Army	22,006,632	21,475,732	22,041,094	22,006,361
Navy	17,207,481	16,737,072	17,236,001	17,258,823
Marine Corps	6,544,682	6,353,622	6,562,336	6,555,403
Air Force	17,899,685	17,565,811	17,873,759	17,861,803
Reserve Personnel:				
Army	2,270,964	2,235,055	2,278,696	2,289,996
Navy	1,446,339	1,425,210	1,450,788	1,473,388
Marine Corps	409,189	403,822	410,650	412,650
Air Force	881,170	872,978	884,794	892,594
National Guard Personnel:				
Army	3,570,639	3,486,427	3,622,479	3,610,479
Navy	1,486,512	1,456,248	1,494,496	1,533,196
Total Military Personnel	73,723,293	72,011,977	73,855,093	73,894,693

PAY INCREASE AND RETIREMENT REFORM

The conferees recommend an increase of \$165,000,000 to the Active, Reserve, and Guard Military Personnel accounts to provide for a 4.8 percent military pay raise, effective January 1, 2000. This is an increase of 0.4 percent over the budget request of 4.4 percent. In addition, the National Defense Authorization Act for Fiscal Year 2000 revised the budget's legislative proposal to repeal the Redux retirement system which results in savings to the personnel accounts. Accordingly, the conferees recommend a total reduction of \$136,000,000 to the Active, Reserve, and Guard Military Personnel accounts for modifications to the 1986 Military Retirement Reform Act.

PERSONNEL UNDEREXECUTION SAVINGS

The conferees recommend a total reduction of \$219,000,000 to the Active Military Personnel accounts due to lower than budgeted fiscal year 1999 end strengths, and differences in the actual grade mix of officers and enlisted recommended in the budget request. The General Accounting Office estimates that the active components will have approximately 9,700 fewer personnel on board to begin fiscal year 2000, and as a result, the fiscal year 2000 pay and allowances requirements for personnel are incorrect and the budgets overstated.

FORCE STRUCTURE CHANGES

The conferees recommend a total of \$103,600,000 in the Military Personnel and Operation and Maintenance accounts for force structure that was not included in the budget request, as follows:

[In thousands of dollars]				
	Milpers	O&M	Proc.	Total
Navy AOE-1 replenishment ships ..	5,000	5,000
Marine Corps Security Guards	6,600	4,100	10,700
Air Force B-52 aircraft	3,100	25,000	8,900	37,000
Air Force Reserve Test Support Mission	2,300	2,300
Army National Guard civilian technicians	20,000	20,000
Army National Guard RAID Teams AGR's	7,000	7,000
Army National Guard AGR's	15,000	15,000
Air National Guard RAID Teams AGR's	4,600	4,600

[In thousands of dollars]

	Milpers	O&M	Proc.	Total
Air National Guard C-130 restoration	500	1,500	2,000

DFAS SALARY MISALIGNMENT

At the request of the Air Force, the conferees recommend realigning \$39,200,000 from "Military Personnel, Air Force" to "National Guard Personnel, Air Force" due to a Defense Finance and Accounting Service error involving Air Force personnel salaries.

BASIC ALLOWANCE FOR HOUSING REFORM

The conferees recommend an increase of \$100,000,000 across the Active Military Personnel accounts for Basic Allowance for Housing (BAH) reform. The additional funds will allow the Department to complete the transition phase of BAH reform, as directed by the National Defense Authorization Act for Fiscal Year 2000.

ARMY CONTINGENCY OPERATIONS

The conferees recommend a reduction of \$80,000,000 to "Military Personnel, Army" to reflect the reduced U.S. troop levels in Bosnia, and the associated military personnel pay and allowance costs requested in the fiscal year 2000 budget request.

RECRUITING AND RETENTION

The conferees recommend an additional \$399,200,000 in the Military Personnel and Operation and Maintenance accounts to support the Department's recruiting, advertising, and retention programs. The conferees are aware that some of the Services are experiencing difficulty in meeting accession goals and that first and second term retention rates, along with pilot retention rates, are of major concern. Therefore, the conferees recommend additional funds to improve the Services' recruiting and retention efforts in the following programs:

[In thousands of dollars]

Enlistment Bonuses	\$88,200
Selective Reenlistment Bonuses ..	74,000
Student Loan Repayment Program	4,000
Navy College Fund	5,000
Recruiting and Advertising	78,000
Recruiting Support	27,000
College First Program	7,000
Tuition Assistance	6,000
Aviation Continuation Pay	110,000

ACTIVE END STRENGTH

[Fiscal year 2000]

	Budget	Conference	Conference vs. Budget
Army	480,000	480,000
Navy	371,781	372,037	+256
Marine Corps	172,148	172,518	+370
Air Force	360,877	360,877
Total, Active Personnel	1,384,806	1,385,432	+626

Military Personnel, Army

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)				
	Budget	House	Senate	Conference

NATIONAL GUARD AND RESERVE FORCES

The conferees agree to provide \$10,212,303,000 in Reserve Personnel appropriations, \$10,752,172,000 in Operation and Maintenance appropriations, and \$150,000,000 in the National Guard and Reserve Equipment appropriation. These funds support a Selective Reserve end strength of 865,298, as shown below.

SELECTED RESERVE END STRENGTH

[Fiscal year 2000]

	Budget	Conference	Conference vs. budget
Selected Reserve:			
Army Reserve	205,000	205,000
Navy Reserve	90,288	90,288
Marine Corps Reserve	39,624	39,624
Air Force Reserve	73,708	73,708
Army National Guard	350,000	350,000
Air National Guard	106,678	106,678
Total	865,298	865,298
AGR/TARS:			
Army Reserve	12,804	12,804
Navy Reserve	15,010	15,010
Marine Corps Reserve	2,272	2,272
Air Force Reserve	1,078	1,134	+56
Army National Guard	21,807	22,430	+623
Air National Guard	11,091	11,162	+71
Total	64,062	64,812	+750
Technicians:			
Army Reserve	6,474	6,474
Air Force Reserve	9,785	9,785
Army National Guard	23,161	23,957	+796
Air National Guard	22,589	22,596	+7
Total	62,009	68,812	+803

NATIONAL GUARD RAID TEAMS

The conferees support the establishment of 17 Rapid Assessment and Initial Detection (RAID) teams. Accordingly, the conferees

provided funding for an additional 198 Army National Guard and 66 Air National Guard full-time (AGR) personnel to facilitate this mission. Operation and maintenance funding of \$79,635,000 for RAID teams is provided within the amounts allocated to combating terrorism.

ARMY NATIONAL GUARD CENTER

The conferees understand that the armory used by Headquarters, 53rd Support Battalion, Army National Guard is in extensive need of repair and renovation. The conferees have provided additional funds for Real Property Maintenance for the Army National Guard's backlog of repair and maintenance projects, and directs that \$1,000,000 be designated for repair of the armory in Florida.

C-130 OPERATIONS

The conferees recommend a total of \$13,450,000 for personnel and operation and maintenance costs to support Air Force Reserve and Air National Guard C-130 operational support aircraft and those stand-alone aircraft currently utilized by selected States.

ARMS CONTROL PROGRAMS

The conferees have agreed to reduce funding for certain arms control activities in the Army and the Air Force. If additional funds prove necessary to meet emergent requirements stemming from valid treaty obligations, the conferees expect the Department of Defense to submit a reprogramming request subject to normal, prior approval reprogramming procedures.

COMBATING TERRORISM

Within the operation and maintenance appropriations, the conferees have provided significant resources for the antiterrorism activities of the Department. No later than June 30, 2000, the Secretary of Defense shall submit to the congressional defense committees a report which describes the use of all funds appropriated for combating terrorism activities.

HOMESTEAD AIR FORCE BASE

It has been more than seven years since the devastation of Homestead Air Force Base by Hurricane Andrew. The region was further impacted by the subsequent decision of the Base Realignment and Closure Commission

to close and realign the installation in 1993. This, coupled with the delay in economic redevelopment, has created a devastating economic impact throughout the local area. This region is also experiencing extremely high unemployment rates far above the national average. The conferees recognize these adverse economic conditions and urge the Air Force to expeditiously complete requisite environmental studies prior to conveying certain real property parcels on the installation to facilitate interim use activities that will benefit the local economy.

DOD WORKER SAFETY ENHANCEMENT

The conferees are frustrated by the Department's poor record on safety and worker incident rates relative to private industry and other federal agencies. Accordingly, the conferees direct the Department to initiate programs funded from within existing Operation and Maintenance accounts at designated DOD facilities that employ alternative, private sector proven, models of safety to determine the best way to improve the Department's record with respect to injury incidence rates and associated costs.

RAILROAD SAFETY STUDY

The conferees direct the Corps of Engineers to study the feasibility of realigning the railroad tracks between Fort Wainwright and Eielson Air Force Base to improve the overall safety and efficiency of the line. The report should be provided to the Committees on Appropriations no later than June 15, 2000.

SMALL BUSINESS ADVERTISING

The conferees understand that there are many qualified minority-owned businesses, women-owned businesses, and small businesses that design and place advertising and advertising campaigns, which can assist the Department in its recruiting efforts using print, electronic, and the radio media. The conferees believe these firms can provide valuable new insights and expertise to service wide recruiting programs. The conferees expect the Department to increase the use of these qualified businesses in the initiation, design and placement of its advertising in the print, radio and electronic media.

OPERATION AND MAINTENANCE, ARMY

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)				
	Budget	House	Senate	Conference

GENERAL PURPOSE TENTS

Of the funds made available in Operation and Maintenance, Army the conferees direct that \$14,000,000 be made available for the purpose of meeting prospective requirements for modular general purpose tents (M.G.P.T.) associated with wartime and other mobilizations as described in the report accompanying the House Department of Defense Appropriations bill for fiscal year 2000.

REAL PROPERTY MAINTENANCE

The conferees direct the Secretary of the Army to submit a report to the Appropriations Committees no later than thirty days after the enactment of this Act which details the allocation of funds appropriated for real property maintenance. The report shall detail the allocation of real property maintenance funding by major command.

FIREFIGHTING EQUIPMENT CONVEYANCE

The Secretary of the Army may, notwithstanding title II of the Federal Property and Administrative Services Act of 1949, convey without consideration to the Bayonne Local Redevelopment Authority, Bayonne, New Jersey, and to the City of Bayonne, New Jer-

sey, jointly, all right, title, and interest of the United States in and to the firefighting equipment from the Military Ocean terminal, Bayonne, New Jersey as described below: a Pierce Dash 2000 Gpm Pumper, manufactured September 1995; a Pierce Arrow 100-foot Tower Ladder, manufactured February 1994; a Pierce Hazardous Materials truck, manufactured 1993; Ford E-350, manufactured 1992; a Ford E-302, manufactured 1990; and a Bauer Compressor, manufactured November 1989. The conveyance and delivery shall be at no cost to the Department of Defense.

The Secretary may require such additional terms and conditions in connection with this conveyance as he considers appropriate to protect the interests of the Department.

TOUSSAINT RIVER

The conferees direct that of the funds provided in Operations and Maintenance, Army, \$450,000 be provided for a study of the costs and feasibility of a project to remove ordnance from the Toussaint River.

AVTEC FIBERS FACILITY

Of the funding available in Operation and Maintenance, Army, the conferees agree to

provide \$5,000,000 for cleanup activities at this facility.

JOINT COMPUTER-AIDED ACQUISITION AND LOGISTICS SYSTEM

The conferees have provided the full amount requested in the President's Budget for the Joint Computer-Aided Acquisition and Logistics System (JCALS). Consistent with the Senate's intent, the \$20,000,000 provided in JCALS defense information infrastructure (DII) funds are allocated to the JCALS southeast regional technical center. Of these funds, \$11,450,000 is for standard JCALS DII activities only and \$8,450,000 is transferred to the core JCALS program for expansion of the southeast regional center's activities beyond the center's current location.

YUMA PROVING GROUND

The conferees encourage the Army to go forward with necessary studies to determine federal interest in creating a public-private partnership to establish and maintain a hot weather test track and free fall simulator.

OPERATION AND MAINTENANCE, NAVY

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

	Budget	House	Senate	Conference

9725 Communications Reduction	-19,000
9730 Maritime Fire Training Center	300

MARITIME FIRE TRAINING CENTER

Of the funds provided in Operation and Maintenance, Navy, \$300,000 shall be used only for final design, site planning, preparation and development, and materials and equipment acquisition for the Maritime Fire Training Center at MERTS.

EXECUTIVE EDUCATION DEMONSTRATION PROGRAM

The conference agreement provides \$1,000,000 of the funds from Operation and Maintenance, Navy for the Executive Education Demonstration Program at the University of San Diego. This initiative provides local executive education to naval personnel in the region including an enhanced doctoral program in leadership and an intensive executive management training in global leadership for senior line officers. The program will be offered on-site, at naval installations, and by means of distance learning at remote sites and at sea.

REGIONAL TELECOMMUNICATIONS SYSTEM

The conferees direct that of the funds provided in Operation and Maintenance, Navy not less than \$2,000,000 shall be available only for the Integrated Regional Telecommunications System in the Pacific Northwest.

PACIFIC MISSILE RANGE FACILITY

The conferees agree to increase funding for Tactical Warfare by \$5,000,000 to improve facilities at the Pacific Missile Range as recommended by the Senate. This increase is in addition to the funding which shall be provided to sustain base and range operations at PMRF at the fiscal year 1999 level.

CONCORD NWS JOINT USE REPORT

The conferees agree that the due date for the joint use report specified in the House report shall be January 15, 2000.

OCEANOGRAPHIC RESEARCH

Within the funds provided for Operation and Maintenance, Navy, the conferees direct that \$7,450,000 be used only to fund backlogs in oceanographic research.

OPERATION AND MAINTENANCE, MARINE CORPS

ADJUSTMENTS TO BUDGET ACTIVITIES
Adjustments to the budget activities are as follows:

[In thousands of dollars]

Budget Activity 1: Operating Forces:	
10050 Soldier Support—Initial Issue	15,000
10050 Rotational Training—MCAGCC Improvements	25,700
10050 Training and OPTEMPO (III MEF Airlift Requirements)	10,000
10050 Soldier Support—Body Armor	3,000
10050 NBC Defense Equipment	1,100
10100 Corrosion Control	6,000
10100 Fuel Conversion to JP 5/8	1,100

10150 Depot Maintenance	20,000
10350 Care in Storage (WRM Materials)	2,000
Budget Activity 3: Training and Recruiting:	
10650 Naval ROTC-Marine Option	450
11000 Distance Learning	1,000
11200 Recruiting and Advertising	10,000
11250 Off-Duty and Voluntary Education	1,450
11300 Junior ROTC	1,600
Budget Activity 4: Administration and Servicewide Activities:	
11650 DFAS Reduction	-2,000

Undistributed:	
11905 Real Property Maintenance (Transfer from Quality of Life Enhancements)	120,225
11945 Base Operations Support	10,000
12030 Reduction in JCS Exercises	-2,400
12070 Marine Corps Security Guards	4,100
12075 Spares/War Reserve Materiel	25,000
12085 Communications Reductions	-150
12090 IRV Transfer	-3,850

SOLDIER SUPPORT INITIATIVES

Within the adjustments provided for Soldier Support, the conferees recommend that continued requirements for enhanced pack systems be sustained at current levels.

OPERATION AND MAINTENANCE, AIR FORCE

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

	Budget	House	Senate	Conference

16850 Depot Maintenance—Rivet Joint #15-16/COBRA BALL 3	15,000
16855 Air Force MTAP	4,000
16870 Communications Reduction	-16,000
16875 Administrative underexecution	-450

RADIOACTIVE IODINE EXPERIMENTATION

The conferees strongly support the Air Force in its efforts to provide funding for the North Slope Borough for costs and expenditures associated with health care, monitoring and other issues arising from experimentation conducted in the 1950s. The conferees direct the Air Force to resolve this matter as soon as possible.

MTAPP

The conference agreement includes \$4,000,000 above the budget request for MTAPP program. Of this amount, not less than \$2,000,000 shall be available to the current pilot program manager, and \$2,000,000 to expand the program to Pennsylvania.

OPERATION AND MAINTENANCE, DEFENSE-WIDE

19295 Undistributed—Human Resources Enterprise Strategy	4,000
19305 Undistributed—Headquarters and Management	-30,000
19335 Undistributed—Contract and Advisory Services	-10,000
19336 Undistributed—Community Retraining Initiative	8,000
19347 Undistributed—Pentagon Renovation Transfer Fund	-68,300
19348 Undistributed—Armed Forces Retirement Homes (RPM)	5,000
19349 Undistributed—Pacific Command Regional Initiative	10,000
DEFENSE ACQUISITION UNIVERSITY	
From within the funds provided for the Defense Acquisition University, up to \$5,000,000 may be spent on a pilot program using state-of-the-art training technology that would train the acquisition workforce in a simulated government procurement environment.	
CIVIL/MILITARY PROGRAMS	
The conferees recommend a total of \$83,803,000 for the Department's civil/military programs for fiscal year 2000 as shown below. The conferees direct the Department to report to the Committees on Appropriations on the status of the obligation of these funds not later than March 15, 2000.	
[Dollars in thousands]	
National Guard Youth Challenge Program	\$62,503
Innovative Readiness Training Program	20,000
Starbase Program	6,300
Total	88,803
IMPROVED CARGO METHODS	
The conferees recommend \$4,000,000, only to test, develop and implement cost saving	

opportunities identified in ongoing studies of private sector logistics technology, practices and procedures to move military cargo more cheaply, with greater speed and with greater reliability. To ensure diverse views of the state of the art in third party logistics management and other emerging techniques are brought to bear, the conferees intend that these funds be used to provide the Government access to a range of qualified organizations or entities having detailed knowledge of commercial logistics processes that may have value for the military.

CHILD CARE FACILITIES

The conferees are concerned that service members in some career fields with extended duty requirements are experiencing problems with access to day care facilities. The conferees direct the Department to report, no later than April 1, 2000, on the day care access policies of the various services, with particular attention to the problems generated by extended duty requirements.

In addition, the conferees direct the Department to review how the Services could expand the use of the Family Child Care subsidy program. The report should include options to address the needs of families who require extended hours of child care as a result of irregular duty hours or temporary duty deployments, and the costs associated with any such policy changes.

UNALLOCATED REDUCTIONS

The House report included language in Operation and Maintenance, Defense-wide, specifically exempting the Joint Vision 2010 initiative and the Office of Net Assessment from any unallocated reductions. The Senate had no such provision. The House recedes to the Senate.

ARMED FORCES RETIREMENT HOMES

The conferees provide \$5,000,000 to be available for real property maintenance and repair requirements at the Armed Forces Retirement Homes.

PACIFIC COMMAND REGIONAL INITIATIVE

The conferees agree to provide \$10,000,000 to be available for the U.S. Pacific Command to enhance regional cooperation, military training, readiness and exercises. The Commander in Chief, U.S. Pacific Command, shall report to the House and Senate Committees on Appropriations on plans and priorities to utilize these funds to achieve key mission readiness and warfighting priorities not later than December 1, 1999.

STUDY GROUP ON MULTILATERAL EXPORT CONTROLS

The conferees direct that the Department convene a Study Group of senior-level executive branch and congressional officials, as well as outside experts, to develop the framework for a new effective, COCOM-like agreement that would regulate certain military useful goods and technologies on a multilateral basis. The final product shall be a written final report to be completed by January, 2001. The Department shall make available up to \$1,000,000 from within the funds available in Operation and Maintenance, Defense-wide for this purpose.

Operation and Maintenance, Army Reserve

The conference agreement on items addressed by either the House or the Senate is as follows:

28175 Recruiting Support	2,000	
28180 National Guard State Partnership Program	1,000	
28185 Project Alert	2,200	

OVERSEAS CONTINGENCY OPERATIONS TRANSFER FUND

The conferees agree to provide \$1,722,600,000 for the Overseas Contingency Operations Transfer Fund. This amount provides for continuing operations in Bosnia and Southwest Asia and takes into account amounts which carry over due to the early cessation of the air campaign in Kosovo.

UNITED STATES COURT OF APPEALS FOR THE ARMED FORCES

The conference agreement provides \$7,621,000 for the United States Court of Appeals for the Armed Forces.

ENVIRONMENTAL RESTORATION, ARMY

The conference agreement provides \$378,170,000 for Environmental Restoration, Army.

ENVIRONMENTAL RESTORATION, NAVY

The conference agreement provides \$284,000,000 for Environmental Restoration, Navy.

ENVIRONMENTAL RESTORATION, AIR FORCE

The conference agreement provides \$376,800,000 for Environmental Restoration, Air Force.

ENVIRONMENTAL RESTORATION, DEFENSE-WIDE

The conference agreement provides \$25,370,000 for Environmental Restoration, Defense-Wide.

ENVIRONMENTAL RESTORATION, FORMERLY USED DEFENSE SITES

The conference agreement provides \$239,214,000 for Environmental Restoration, Formerly Used Defense Sites.

Environmental Contracting

The conferees are concerned about the effect of the Department's use of large indefi-

tracts on small businesses. Therefore, the conferees included a general provision (Section 8130) which directs that not more than 35 percent of the funds obligated by the Department of Defense for environmental remediation shall be executed through IDIQ contracts with a total contract amount of \$130,000,000. Furthermore, the conferees direct that the Secretary of Defense provide a report to the congressional defense committees no later than January 15, 2000 on the Department's use of IDIQ contracts during fiscal year 1999 and that this information be provided quarterly throughout fiscal year 2000. The January 15th report should also include an analysis comparing IDIQ contracts with other contract options in terms of cost, involvement of small businesses, and the inclusion of local companies.

Joliet Army Ammunition Plant

The Department of the Army manufactured munitions and explosives at the Joliet Ammunition Plant from the 1940s until approximately 1976. Portions of the property became heavily contaminated as a result of this use. The U.S. Environmental Protection Agency listed a portion of the arsenal on the National Priority List in 1987. In consultation with the U.S. Environmental Protection Agency and the Illinois Environmental Protection Agency, the Army developed a Record of Decision (ROD) outlining the remediation of the arsenal. The Army and the Joliet Arsenal Development Authority continue to work closely to better coordinate those issues concerning the Army's cleanup of the Joliet Arsenal. The conferees strongly encourage the Army to continue to fully support the cleanup and conversion projects at this site and ensure the cleanup is completed in a timely manner.

Iowa Army Ammunition Plant

The Secretary of the Army shall conduct a review of past nuclear weapons activities of the Iowa Army Ammunition Plant in order to determine possible environmental contamination, and possible exposure of former nuclear weapons workers and the local community to such activities. This review shall be conducted in coordination with the Department of Energy and provided to the congressional defense committees not later than June 15, 2000.

Massachusetts Military Reservation

The conferees are aware that the Massachusetts Military Reservation (MMR) located on Cape Cod, Massachusetts is undergoing extensive environmental characterization and remediation. The portion of MMR leased to the Army and licensed back to Massachusetts for training and support of the MA Army National Guard, known as Camp Edwards, is subject to two administrative orders issued in 1997 by the U.S. Environmental Protection Agency—Region 1 under the authority of the Safe Drinking Water Act. Those orders specifically require characterization activities at and near the

training range/impact area at Camp Edwards to determine the impact of military-related activities on the underlying groundwater. In order to facilitate compliance with those orders, the conferees include a general provision (Section 8154) that provides for the use of funds appropriated to Operation and Maintenance, Army to pay for costs associated with such characterization and any ensuing remediation.

El Toro

The conferees are concerned about the status of the former Marine Corps Air Station El Toro and encourage the Department to take all necessary environmental remediation measures.

Newmark

The conferees continue to have serious concern about the Department's failure to respond at a senior level to groundwater contamination at the Newmark and Muscoy Superfund sites in California. The conferees understand that both the Environmental Protection Agency (EPA) and the City of San Bernardino believe that the contamination is a direct result of industrial waste from Camp Ono, a World War II depot and maintenance facility. The EPA has reported that there is "no other reasonable source for the contamination," than the former Army base, and, more recently, that the Army is "a likely source of the contamination."

Report language in the conference reports accompanying the fiscal year 1997 and 1998 Defense Appropriations Bills highlighted the urgency of this program and requested adequate funding and prompt action by the Department to remediate this site. The conferees are disappointed with the Department's response. The Department has effectively ignored a September, 1998 court order to mediate the dispute. The conferees are particularly concerned by the Department's lack of a response to the conferees November, 1998 request for senior-level mediation involving the Department and the Environmental Protection Agency. As a result, the conferees strongly believe that the Department should, within 60 days of enactment of this Act, initiate senior-level mediation in this matter with the EPA, the City of San Bernardino, and the State of California and report to the congressional defense committees fully explaining the Department's plan to reach a timely resolution to this matter.

OVERSEAS HUMANITARIAN, DISASTER, AND CIVIC AID

The conference agreement provides \$55,800,000 for Overseas Humanitarian, Disaster, and Civic Aid.

FORMER SOVIET UNION THREAT REDUCTION

The conference agreement provides \$460,450,000 for the Former Soviet Union Threat Reduction program.

EXPLANATION OF PROJECT LEVEL ADJUSTMENTS

REPROGRAMMING POLICY

The conferees direct the Secretary of Defense not to implement any reprogramming actions (including notification reprogrammings) submitted to the congressional defense committees unless the Committees on Appropriations communicate approval of the reprogrammings. This direction applies to all defense accounts.

INTERIM CONTRACTOR SUPPORT

The conference agreement retains funding in Air Force procurement accounts for Interim Contractor Support (ICS) for Fiscal Year 2000. For the C-17, E-8, and B-2 programs, the conferees provided ICS funding in separate procurement line-items to facilitate better oversight in Congress and in the Department of Defense of the large levels of ICS in these programs. These line-items are subject to the same reprogramming procedures as other line-items in these accounts.

The conferees direct the Secretary of Defense to ensure procurement programs expeditiously transition these efforts to operation and maintenance accounts. In particular, the conferees direct the Secretary of Defense to transition C-17 ICS (known as Flexible Sustainment) to the operations and maintenance account in the fiscal year 2001 budget submission. The conferees further direct that ICS be clearly identified in procurement budget documentation.

AIRCRAFT PROCUREMENT, ARMY

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

PATRIOT UPGRADE

The conferees have provided \$50,840,000 for the Patriot missile upgrade program, an increase of \$20,000,000 only for a service life extension program. The conferees direct that none of the additional funds may be obligated until the Secretary of Defense provides an assessment of various Patriot missile modification programs, including, but not limited to, the Patriot Anti-Cruise Missile and the GEM upgrade programs. The assessment is to include the capability of each system against all potential target sets, to in-

clude cruise missiles and the development and acquisition costs associated with each modification program. Thirty days after the Secretary's findings are submitted to the defense committees, the funds may be used to upgrade/extend the life of Patriot missiles in the Army inventory.

JAVELIN

The conferees agree to provide the authority for the Army to enter into a Javelin multi-year contract. However, the conferees direct that the Army may not enter into

such a contract until thirty days after the Secretary of Defense certifies the quantities purchased are correct and that any outstanding technical and manufacturing issues have been resolved and tested.

STARSTREAK

The conferees urge the Department of the Army to reprogram the funds necessary to complete a live fir, side-by-side operational test and evaluation of the air-to-air Starstreak and air-to-air Stinger missiles fired from the AH-64D Apache helicopter.

ABRAMS TANK UPGRADE MULTI-YEAR
PROCUREMENT

With some reluctance, the conferees have approved the Army's request to renew multi-year procurement authority to continue the M1A2 Abrams tank upgrade program subject to the condition described below. The conferees seriously question the Army's proposal to enter a new follow-on multi-year agreement that would increase the average unit cost of a tank upgrade (M1 to M1A2 SEP) from \$5.6 million per tank in FY 1999 to \$6.7 million per tank starting in FY 2001. The conferees note that, in general, the trend throughout the Department has been that follow-on multi-year agreements show significant unit price decreases as production efficiencies improve and mature. While much of the cost increase for this program can be attributed to lower planned production rates, the conferees remain puzzled why greater efforts have not been made to lower unit costs, especially when the cost of this upgrade now threatens to equal the cost of procuring a new tank.

The conferees agree that the Army shall not enter into a new multi-year procurement agreement for the M1A2 SEP program until it has conducted a detailed and thorough reexamination of the costs of this program and has reevaluated the overall program struc-

ture in light of the Army's ongoing reevaluation of its overall modernization strategy and plan. The conference agreement therefore restricts approval of the new MYP agreement until 30 days after the Army has submitted a report to Congress detailing the results of its M1A2 SEP cost and program structure review. The conferees expect this report to:

Describe renewed efforts by the Army and by industry to reduce production cost in all areas;

Recommend ways to improve cost accounting practices to shift overhead costs not directly attributable to production of this tank upgrade to the proper accounts;

Reexamine options (in concert with any new armored force revisions made as part of the larger strategic review) to use newer tank chassis' for the upgrade that might significantly lower unit cost;

Reexamine the planned rates of production for this program;

Reassess the cost and benefits of installing an auxiliary power unit as part of this upgrade;

Review ways to further reduce the cost of the second generation FLIR system; and provide a detailed description of the terms and conditions of its proposed multi-year procurement agreement.

The conferees believe the Army should revisit its decision to commit to inefficient rates of 80 tanks per year over three years and only 43 tanks in year four and 24 tanks in year five.

With respect to reevaluation of the APU, the conferees are disturbed that more consideration and priority has not been given to upgrades that would reduce the very high cost of operation of this tank. The one proposed modification to reduce cost was the on-board auxiliary power unit, which was subsequently dropped from the package for "affordability" reasons. Given the well known problems with the Abrams power plant, the conferees would think that any modification that would reduce the significant O&S costs for the equipment would receive high priority. The conferees strongly urge the Army to revise its plan to include this equipment.

The conferees also direct the Secretary of the Army to submit a report, no later than June 15, 2000, that outlines the additional costs required to completely equip the "first to fight corps" with top line equipment and the Army's reasons for adopting a plan that deviates from this concept. The conferees do not expect the time required to submit this additional report to impact on the award of the multi-year contract.

PROCUREMENT OF AMMUNITION, ARMY

FAMILY OF MEDIUM TACTICAL VEHICLES

The conferees support the Army's competition strategy and their desire to engage in practices which seek to lower acquisition costs and improve the quality of the Family of Medium Tactical Vehicle truck. Additionally, the conferees understand that the Army must use funds appropriated for the FMTV program to establish and conduct any competition that will determine the future producers of FMTV trucks. The conferees direct that there be no delay in the competition for follow-on FMTV contract awards.

The conferees direct the Secretary of Army to develop an acquisition strategy using competitive procedures for the next FMTV production contract based on, but not limited to, a validated FMTV technical data package which will serve as the baseline for the FMTV configuration. Furthermore, the conferees direct the Army to provide a report on the status of the acquisition strategy no later than March 15, 2000.

GLOBAL COMBAT SUPPORT SYSTEM—ARMY

The conferees are concerned about the Department's tendency to begin fielding an information technology system prior to the system actually passing Milestone III. Therefore the conferees direct the Army not to spend \$11,900,000 of the funds provided in Other Procurement, Army for the Global Combat Support System—Army until after the system has received Milestone III approval.

PACIFIC MOBILE EMERGENCY RADIO SYSTEM (PACMERS)

The conferees are concerned that the existing emergency radio capability of the Pacific Command may have become an inadequate stovepipe system, consisting mainly of analog technology non-interoperable with the new and emergency technologies used by other federal, State and local governments. The maintenance and operation of existing equipment is no longer feasible nor cost effective.

The proposed follow-on system, the Pacific Mobile Emergency Radio Systems

(PACMERS), will allow total interoperability with all military services, federal law enforcement, and State and local agencies. PACMERS will provide the capabilities to insure emergency communications for first-responders to weapons of mass destruction and counter-terrorism activities, consequence management, as well as other situations derived by civil disobedience or natural disaster. The capabilities of PACMERS will support Presidential Directive 62 and 63.

True cost savings will be realized by utilization of a total turn-key, leased system, which will negate government risk associated with the maintenance, technological obsolescence, and capital investment of a procured system. The anticipated cost-savings and economies of scale associated with the anticipated enhancements of PACMERS are of great interest to the conferees. In an expression of support for the PACMERS system concept, the Department of Defense is encouraged to accelerate installation, leading to a full operational capability as soon as is feasible.

AV-8B

The conferees agree to provide an additional \$10,000,000 for AV-8B advance procurement and encourage the Department of the Navy to budget for at least 16 additional re-manufactured AV-8B aircraft starting in fiscal year 2001, at the end of the current multi-year contract. Additional aircraft are needed by the Marine Corps to maintain its inventory level until the Joint Strike Fighter is field.

ADVANCED TACTICAL AIR RECONNAISSANCE SYSTEM (ATARS)

The conferees agree that no reduction should be applied to the ATARS program. Additionally, the conferees agree that 50 percent of the fiscal year 2000 funding shall not be obligated until the Operational Evaluation is complete.

WEAPONS PROCUREMENT, NAVY

The conference agreement on items addressed by either the House or the Senate is as follows:

JOINT STARS

The conferees agree with the Senate direction regarding the initiation of a pilot program to re-engine the JSTARS fleet with leased commercial engines. The conferees note that lease authority applies only to JSTARS and not to KC-135 aircraft.

ON-BOARD OXYGEN GENERATING SYSTEM
(OBOGS)

The House recedes to the Senate with modifications. The conferees concur with the Senate report language directing the Secretary of the Air Force to provide a report on compliance with previous Congressional direction regarding installation of OBOGS on various aircraft, including implementation costs and potential cost savings. The Senate report further directs that OBOGS purchases from qualified vendors, including small business, be conducted on a competitive basis.

The conferees fully support the competitive procurement of OBOGS for those aircraft models for which OBOGS procurement action has not been initiated.

C-135 MODIFICATIONS

The conferees have provided \$104,000,000 for re-engining of KC-135 tankers. The conferees are aware of multiple options for re-engining KC-135 aircraft. A number of options exist, including a new proposal to shift modified C-141 engines to these aircraft.

The conferees believe that the KC-135 re-engining program should proceed under a comprehensive plan based on requirements and cost, utilizing competition and commercial practices to the maximum extent practicable. The conferees direct the Department of Defense to analyze all options for re-engining KC-135 aircraft. The conferees direct that the plan assess the annual and

total cost of all options and the range of capability improvements offered by each option. The conferees direct that this plan be provided to the congressional defense committees no later than February 25, 2000, and prior to the obligation of the added funds.

DEFENSE AIRBORNE RECONNAISSANCE PROGRAM

The conferees agree to provide \$10,800,000 for the Theater Airborne Warning System (TAWS) on the RC-135 Rivet Joint. The conferees direct that no more than fifty (50) percent of these funds may be obligated prior to the Secretary of the Air Force providing a letter to the congressional defense committees which certifies that the TAWS program is fully funded in the fiscal year 2001-2006 budget submitted to Congress and identifies all of the outyear funds budgeted for the TAWS program.

MISSILE PROCUREMENT, AIR FORCE

The U-2 is the premier tactical reconnaissance asset requested by the CINCs around the world. This system of aircraft, pilot, ground crew and equipment is tasked daily to support military operations, monitor conflicts, and maintain peace agreements. The recent NATO campaign in Kosovo, where the U-2 provided 24-hour in-theater coverage, showcased the capabilities of the system. The conferees understand that the U-2 was considered by many to be the "backbone" of the airborne Intelligence, Surveillance, and Reconnaissance (ISR) mission in Kosovo.

The conferees are concerned that the increased number of missions, along with the limited number of U-2 aircraft and the de-

clining number of qualified pilots in the Air Force, will adversely affect the ability of the U-2 to meet future ISR requirements.

Therefore, the conferees request the Secretary of Defense submit a report to the defense subcommittees of the House and Senate Committees on Appropriations, which addresses the following:

1. The performance and contributions of the U-2 aircraft in Operation Allied Force;
2. The status of qualified U-2 pilots and training needs for new pilots;
3. The number of U-2 aircraft required to maintain current capabilities, train new pilots, and continue to fulfill the Air Force's high altitude reconnaissance mission; and

4. The Air Force's plan to sustain the U-2 weapon system, with its multi-sensor payloads, and sensor-to-shooter flexible targeting assets until such time as a replacement with equal or greater capability can be operationally fielded.

This report is due to the Committees within 90 days of enactment of this Act.

The conferees agree to provide a total of \$10,000,000 for U-2 cockpit and defensive systems. The Air Force should prioritize these upgrades and apply the \$10,000,000 as necessary to meet the most pressing requirements.

MISCELLANEOUS EQUIPMENT

The conferees agree that each of the Chiefs of the Reserve and National Guard components should exercise control of modernization funds provided in this account including aircraft and aircraft modernization. The conferees further agree that separate submissions of a detailed assessment of its modernization priorities by the component commanders is required to be submitted to the defense committees. The conferees expect the component commanders to give priority consideration to the following items: Modular airborne fire fighting systems, F-16 ALR-56M radar warning receivers, ALR-56 radar warning receivers, Deployable rapid assembly shelters, FAASV ammunition carriers, Mobile radar approach control (RAPCON), F/A-18 modernization including avionics and engineering upgrades, Bradley AO-A20DS, KC-135 reengining, Paladin, P-3 modernization including P-3C Update III BMUP Kits, Night vision devices and goggles, CH-47 helicopters, AN/PEQ-2A TPIALs, AN/PAQ-4C Infrared aiming lights, Master crane aircraft component hoisting systems, Aluminum mesh gas tank liners for C-130 aircraft and Army ground vehicles, A/B FIST 21 training systems, CH-60S combat search and rescue kits, Super scooper aircraft, C-40A aircraft, C-22 replacement aircraft, Se-

cure communications and data systems, CH-60 helicopters, M270A1 long-range surveillance launchers, AN/AVR-2A(V) laser detecting sets, ALQ-184(V)9 electronic countermeasure pods, Extended cold weather clothing systems, HEMTT trucks, Multi-role bridge companies, Medium tactical wreckers, Rough terrain container cranes, CH-47 cargo compartment expanded range fuel systems, C-38A aircraft, C-17 communication suite upgrades, Internal crashworthy fuel cells, DFIRST, UH-60Q kits, MLRS launchers, Meteorological measuring systems, Improved target simulators, C-17 Maintenance training systems, Multiple launch rocket systems, Onboard oxygen generating systems field evaluation, LITENING II targeting pod systems, F-16 mid-life upgrade, SINCGARS radios, UH-1 modernization, UH-60 upgrades, C-130E, C-130 H2/H3 ATS-Eng. changes, C-130 Carry-on SADL, F-16 color display, F-16 SADL "D", B-1 weapons modules, Aircraft lighting systems, Logistics service support, JANUS, M915A4 Upgrade kits, Rough terrain container handlers, E-2C SATCOM, ALR-67 radar warning receivers, KC-130T avionics modernization, Bradley fighting vehicle upgrades, F-15 modernization, C-130J support, MT ANG-RACTS pods rangeless training systems, HMMWV striker vehicles, Tactical construction equipment, Eagle vision anten-

nas, Advanced surgical suite for trauma casualties, Modern burning units, AN/TMQ41 meteorological measuring systems, Vehicle intercom systems, Air defense brigade automated command and control equipment, Avenger table top trainers (ATTT), Ground bases sensors for Avenger battalions, Support equipment for Patriot missile air defense battalions and Sandbagger.

SUPPORT TO NON-PROFIT ORGANIZATIONS

The conferees have included a general provision (Section 8127) which allows National Guard units to assist with the use or transportation of equipment to youth, social, fraternal, and other non-profit organizations, and allows the Chief of the National Guard Bureau to waive payment for this assistance. The conferees urge the Secretary of Defense to review current regulations and policy guidelines concerning the leasing of equipment to non-profit organizations, and provide a report to the defense committees no later than June 1, 2000, on the implementation of this waiver authority.

DEFENSE PRODUCTION ACT

The conference agreement on items addressed by either the House or the Senate is as follows: \$3,000,000 only for microwave tubes.

Army Sustainment Center (Note: Project was titled "Best Practices" in House Report)		2,000	0	2,000

WARFIGHTER ADVANCED TECHNOLOGY

The conferees support the development of environmentally compatible products and services essential for the efficient operation of the military and civilian sectors and recognize the unique factors in tropical and subtropical regions that provide the technological and resource base for these products and services. The conferees agree to provide \$6,000,000, as recommended by the Senate, to

pursue the applied research, development, and demonstration of biosystems-derived food, fiber, textile, biomedical, industrial and environmentally compatible products and services to meet military and civilian needs under the cooperative management of the U.S. Army Natick Soldier Center and the U.S. Department of Agriculture Sustainable Economic Activity Program.

CRUSADER

The conferees support the Army's continued development of the Crusader advanced field artillery system to address support deficiencies. The conferees have reduced funding for the Crusader program by \$75,806,000 due to schedule delays. The conferees do not view the decrement as a lack of support for

the Crusader program and strongly encourage the Army to adequately fund the program in subsequent budget requests.

Lightweight 155 Towed Howitzer Program

The conferees are concerned that the Lightweight 155mm Towed Howitzer program has been suffering from contractor and program deficiencies, which has led to a two-year delay in the program. The program has failed to fully utilize the expertise of Army arsenals in the development and design of the howitzer. Considering the long history of the arsenals in advancing howitzer producibility techniques, it is important that they be actively involved in the program, especially during the crucial EMD/prototype phase to ensure that efficient production techniques are designed at the earliest possible stage of the program. In addition, the arsenals constitute an important resource in providing spare parts and special development items for howitzer forces in time of war and national emergencies.

The conferees direct the Army and the Marine Corps to develop a plan to include Rock Island Arsenal in producibility and manufacturing aspects of howitzer production, including recoil mechanisms and carriages for the Lightweight 155mm Towed Howitzer Program and other Army/Marine Corps future towed artillery programs. The conferees expect the Army and the Marine Corps to issue a report to the Senate and House Appropriations Subcommittees on Defense no later than sixty days after the enactment of this Act outlining the plan.

ANTI-ARMOR WEAPONS MASTERPLAN

Last year, the conferees directed the Secretary of Defense to provide an Anti-Armor Weapons Masterplan with the fiscal year 2000 budget request. The plan, which was delivered five months after the budget submission, did not address the concerns outlined in the statement of the managers. The conferees are disappointed in the plan because it showed no evidence or future prospects of reducing the number of programs being pur-

sued, no evidence of authority or control being exercised by OSD, and little evidence of rigorous critique of claimed requirements. OSD was directed to submit a report "with the purpose of identifying and eliminating excess capabilities." The report does not outline a strategy for the future, but merely justifies the current anti-armor weapons budget.

Therefore the conferees direct the Secretary of Defense to provide an analysis with the fiscal year 2001 budget request that evaluates the joint effectiveness of the existing anti-armor weapons in addressing the threat depicted in the defense planning guidance and how the planned anti-armor weapons are expected to fill shortfalls in current capability in the defense planning guidance scenarios. Based on this analysis, the Secretary should prioritize the Department's anti-armor weapon acquisition programs. The analysis is to be submitted with the fiscal year 2001 budget request.

RESEARCH, DEVELOPMENT, TEST AND EVALUATION, NAVY

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

MANNED RECONNAISSANCE SYSTEMS	30,857	39,958	30,958	39,958
SHARP		9,000	0	9,000
Note: Funds are only for the acquisition and testing of a lightweight SAR and for other related program requirements such as a software integration for the F/A-18C/D.				

ATLANTIC COMMAND EXPERIMENTATION

The conferees agree to restrictions recommended by the House concerning use of fiscal year 1999 and 2000 funds which should be noted on the Base for Reprogramming (DD Form 1414) for fiscal year 2000. The conferees recognize, however, that the Atlantic Command will work in areas such as the Single Integrated Air Picture, which facilitate improved attack of critical mobile targets. Funds provided in this Act for Atlantic Command Experimentation are only for an integrated program which addresses the short, mid, and long terms and may not be used on a program which fails to consider short and near term war fighting improvements. The conferees do not agree to House language requiring quarterly reports to the defense congressional committees, but direct instead that the Secretary of Defense provide semi-annual reports for the next two years.

SURFACE EFFECTS SHIP

The conferees urge the Department of the Navy to procure a 110 foot surface effects ship if needed to fulfill a fast patrol craft requirement.

MARITIME TECHNOLOGY

In the fiscal year 1999 DoD Appropriations Conference Report, the conferees directed the Secretary of the Navy to provide funds to the Maritime Administration to complete testing of the potential interim solution to remediate potential damage resulting from oil spills from existing tank vessels. Based on additional information, the conferees have determined that the Maritime Administration is not the appropriate organization to execute this effort. Therefore, the conferees direct the fiscal year 1999 RDT&E funds be redirected to the office of Naval Reserve for program execution.

COMMERCIAL OPERATIONS AND SUPPORT SAVINGS INITIATIVE (COSSI)

The conferees have provided \$3,000,000 for MTTC/IPI in COSSI. The conferees fully expect MTTC/IPI to abide by program cost-sharing requirements in the future consistent with OSD requirements. However, for the initial award, the intent is for the requirement for cost sharing to be waived.

SOFTWARE PROGRAM MANAGERS NETWORK

The conferees continue to support service programs and related activities provided by the Software Program Managers Network (SPMN). The conferees direct the Department to continue this program at last year's level of effort and, in addition, the conferees provide \$1,000,000 to develop pilot projects to attract, train and retain skilled software personnel.

RESEARCH, DEVELOPMENT, TEST AND EVALUATION, AIR FORCE

The conference agreement on items addressed by either the House or the Senate is as follows:

MATERIALS

The conferees are aware of the potential for fuel cells to reduce the logistics requirements for batteries and liquid fuels, and improve operational effectiveness of various systems. The conferees note that a full-scale demonstration of an advanced solid polymer electrolyte fuel cell that uses PBO based membranes holds great promise in increasing the performance of and reducing the cost of fuel cells. The conferees request that the Secretary of the Air Force provide a report by February 1, 2000 reviewing PBO fuel cell technology and evaluating its potential to meet the demanding requirements of the 'Air Expeditionary Force Deployment' concept of operation.

CREW SYSTEMS AND PERSONNEL PROTECTION TECHNOLOGY

The conference agreement includes \$12,000,000 only for ejection seat risk reduction efforts. These funds shall be divided equally between all viable competitors and are to be used to bring each candidate seat to a common qualification standard consistent with joint Air Force-Navy requirements. This effort is to be designated as a Joint Ejection Seat Program, with program management responsibilities to rotate between the Air Force and Navy in accordance with a schedule specified by the Secretary of Defense. The conferees direct the Air Force and the Navy, in conjunction with their fiscal year 2001 budget requests, to provide a program and associated funding plans that will bring each candidate seat to a common qualification standard in an expeditious manner. The Air Force and the Navy should include sufficient funds for each ejection seat, consistent with that plan, in their budget requests. The conferees expect this program will lead to development of fully qualified seats that can be competed for installation into the Joint Strike Fighter and other current and future aircraft.

MILSTAR

The conference agreement funds the MILSTAR program in the Research, Development, Test, and Evaluation, Air Force account as in past years. While the Air Force has indicated that the sixth and last satellite will not be used for Independent Operational Test and Evaluation and therefore would have been more appropriately funded in procurement, the conferees acknowledge that this satellite is now 60% assembled. The conferees therefore believe that it is impractical to transfer funding for this satellite to the procurement account at this stage in the program.

F-22

The conferees have included \$1,222,232,000, the budget request amount, for the F-22 engineering and manufacturing development program. In addition, the conferees have included two general provisions providing funds for the F-22 program. The first provision appropriates an additional \$1,000,000,000 which is available for transfer for the purposes of F-22 program research, develop-

ment, test and evaluation, and advance procurement. This provision includes a prohibition on the award of a full funding contract for low-rate initial production for the F-22 aircraft program until the first flight of an F-22 aircraft incorporation Block 3.0 software has been conducted. The conferees agree that up to \$277,100,000 of the funds appropriated by this provision may be transferred to the "Aircraft Procurement, Air Force", account only for advance procurement of F-22 aircraft. The conferees further agree that any funds transferred for F-22 advance procurement shall not be available for obligation until the Secretary of Defense certifies to the congressional defense committees that all 1999 Defense Acquisition Board exit criteria have been met. The conferees direct the Air Force to establish cost accounting procedures which allow the accurate tracking of the cost of the additional test aircraft apart from other F-22 development efforts. The conferees further direct that costs associated with the additional test aircraft be separately identified in future research and development budget documents using the budget categories of the F-22 "P-5" budget exhibit. A second provision appropriates an additional \$300,000,000 for F-22 program termination liability or for other F-22 program contractual requirements in lieu of termination liability obligations. The conferees agree that the funds provided under this provision are not available for expenditure until October 1, 2000.

SPACE BASED INFRARED SYSTEM (SBIRS)—HIGH

The conferees direct that no more than \$100,000,000 of the funds provided for SBIRS High shall be obligated until the Secretary of Defense certifies that the production program complies with all DoD full funding policies (including the policy against funding more than 20% of the end-item cost using advance procurement) and that the program concurrency risk has been reduced relative to the acquisition strategy proposed by the Joint Estimating Team. The conferees further direct that concurrent with the Secretary of Defense certification above, the Director of Operational Test and Evaluation submit an assessment of whether the SBIRS high acquisition strategy allows for adequate testing to support a production decision.

GLOBAL POSITIONING SYSTEM SPECTRUM HARMONIZATION

The conferees continue to support the development of global positioning system technologies as being vital to the national security and economic interests of the United States. It has come to the attention of the conferees that increases in the aggregate noise that is generated into the spectrum band restricted for the delivery of GPS by users of spectrum in other frequency bands may pose a significant threat to the delivery of GPS. The conferees once again recognize the critical national security, public safety and economic interests that are implicated by this threat to the delivery of GPS, and therefore direct the DOD to initiate a spectrum harmonization study to be conducted

by the National Telecommunications and Information Administration of the United States Department of Commerce to be delivered to the defense appropriations committees no later than January 31, 2000.

THEATER AIR COMMAND AND CONTROL SIMULATION FACILITY (TACCSF)

Of the amount appropriated for infrastructure upgrades at TACCSF's new facility, \$450,000 will be made available to Sandia National Laboratories and Los Alamos National Laboratories to initiate a process to leverage their scientific, analytical, and computational capacities to advance and expand the simulation and modeling activities at TACCSF.

MARIAH II WIND TUNNEL

In 1998, Congress combined the Air Force's and NASA's Hypervelocity Wind Tunnel programs under the name of Mariah II. This was done in recognition of the Air Force's requirements for Air Defense as well as the reputation of Arnold Engineering Development Center in the development and use of wind tunnels. The conferees believe that a hypervelocity ground test facility is critical for the development of the next generation of space and re-entry vehicles. The conferees are also concerned that the Air Force has been hesitant to adequately fund this successful high technology project. Any delays in this program would not only defeat the research momentum of all of the partners, but it would destroy the excellent teaming that has enabled the success to date. The conferees encourage the Department of the Air Force to support this necessary research and urge the Department of Defense to budget funds for fiscal year 2001 and beyond.

HIGH ALTITUDE ENDURANCE VEHICLE

GLOBAL HAWK UNMANNED AERIAL VEHICLE

The conferees are very concerned that the Air Force is planning to proceed with a revised Global Hawk program that has not been formally presented to Congress for approval. Additionally, it is unclear how this new program, if approved, would be funded in the out-years. The conferees understand that the total cost of the program could exceed \$800,000,000 and that the Air Force may divert funds budgeted or appropriated for other Intelligence, Surveillance, and Reconnaissance (ISR) assets, to fully fund the revised Global Hawk program. The conferees agree that using other ISR assets as a "bank" from which to draw funds for the Global Hawk program would likely not serve the best interests of the Department of Defense.

Therefore, while the conferees have agreed to provide an increase of \$15,000,000 for Global Hawk, this should not be perceived as an approval of the revised Global Hawk program. The conferees agree that if the revised Global Hawk program is what the Administration plans to pursue, the program should be presented in a future budget request. Any shortfall in funding in fiscal year 2000 may be accommodated by approval of a reprogramming request.

RESEARCH, DEVELOPMENT, TEST AND EVALUATION, DEFENSE-WIDE

The conference agreement on items addressed by either the House or the Senate is as follows:

SEISMIC RESEARCH

Last year's nuclear tests in South Asia raises serious concerns about the Department's ability to support a robust operational nuclear test monitoring program. The conferees direct that from within avail-

able funds, \$10,000,000 shall be available only for peer-reviewed basic and applied research only to support operational nuclear test monitoring. Of this amount, \$2,450,000 shall be available only for peer-reviewed seismic research; and \$7,450,000 shall be available

only for peer-reviewed basic research—\$6,450,000 of which is only for explosion seismicology research. The conferees direct that

the basic and applied seismic research program consider the specific prioritized research topics recommended to the Department by the National Research Council.

The conferees direct the Defense Threat Reduction Agency to award these funds through a competitive peer panel review process; to segregate the basic and applied research funds for this program into clearly identifiable projects within the 6.1 and 6.2 budget categories; and to improve integration of the basic and applied components of the program. Further, the conferees direct the Department to provide, by December 1, 1999, a detailed report to the Congressional Defense Committees on the plan for obligating these funds. Finally, the conferees direct the Department to sustain funding for these activities in future budgets to ensure the expertise needed in this critical operational program.

NATIONAL MISSILE DEFENSE RISK REDUCTION

To take full advantage of joint ballistic missile defense efforts with allied nations, the conferees direct the Director of the Ballistic Missile Defense Organization to provide a report to the Appropriations Committees of the House and Senate by February 1, 2000, on those technologies, designs, or technical approaches developed by, or in coopera-

tion with, allied ballistic missile defense programs that would help reduce the level of technical, schedule, or cost risk to any element of the U.S. national missile defense program.

ADVANCED RESEARCH CENTER

The conferees direct the Ballistic Missile Defense Organization not to establish any new missile defense data centers.

Further, the conferees have provided an additional \$2,450,000 for the operational support of the Army's Advanced Research Center (ARC) for a total level of funding of \$14,450,000. The conferees understand this level to be sufficient to maintain modeling and simulation capability at the facility in support of Theater and National Missile Defense Programs while providing the necessary infrastructure support for the facility. As such, users should not be required to offset operational costs with program funding in any form. Only peculiar and unique support should require such contributions and under no condition should such fees be assessed or required by higher commands. The conferees direct BMDO to maintain and plan for adequate levels of operational support for the ARC without reliance upon program user fees.

TRANSPORTATION TECHNOLOGIES

The House report recommended that the Center for Commercial Deployment of Transportation Technologies be considered for up to \$15,000,000 of the funds provided in Operation and Maintenance, Defense-wide. To be consistent with United States Transportation Command's established funding mechanism and management system the conferees believe that the Center should be considered for up to \$15,000,000 of the funds provided in Research, Development, Test and Evaluation, Defense-wide instead.

Discoverer II

The conferees agree to provide a total of \$40,000,000 for the Discoverer II satellite technology demonstration program, a reduction of \$68,450,000 to the budget request. The conferees agree that this funding shall be provided in equal portions to the Air Force, and Defense Advanced Research Project Agency (DARPA), and the National Reconnaissance Office (NRO).

The conferees direct that the funding provided in fiscal year 2000 may only be used to complete the Phase I study portion of the program, and any associated program management costs.

DEVELOPMENTAL TEST AND EVALUATION, DEFENSE

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

	Budget	House	Senate	Conference
DEVELOPMENTAL TEST & EVAL, DEFENSE				
CENTRAL TEST AND EVALUATION INVESTMENT DEVELOPMENT....	121,741	140,241	120,241	134,241

EXPLANATION OF PROJECT LEVEL ADJUSTMENTS

[In thousands of dollars]

	Budget	House	Senate	Conference
CENTRAL TEST AND EVALUATION INVESTMENT DEVELOPMENT	121,741	140,241	120,241	134,241
Roadway simulator		8,450	13,450	10,000
Resource enhancement project			- 15,000	- 5,000
Airborne separation video system		5,000		4,000
Magdalena ridge observatory		5,000		3,450

OPERATIONAL TEST AND EVALUATION, DEFENSE

The conference agreement on items addressed by either the House or the Senate is as follows:

(In thousands of dollars)

	Budget	House	Senate	Conference
OPERATIONAL TEST & EVALUATION, DEFENSE				
LIVE FIRE TESTING.....	9,832	14,832	19,832	16,832

EXPLANATION OF PROJECT LEVEL ADJUSTMENTS

[In thousands of dollars]

	Budget	House	Senate	Conference
Live fire testing	9,832	14,832	19,832	16,832
Live fire testing and training initiative		5,000	10,000	7,000

TITLE V—REVOLVING AND MANAGEMENT FUNDS

The conferees agree to the following amounts for Revolving and Management Funds programs:

[In thousands of dollars]

	Budget	House	Senate	Conference
Defense Working Capital Funds	90,344	90,344	90,344	90,344
National Defense Sealift Fund	354,700	729,700	354,700	717,200
Total, Revolving and Management Funds	445,044	820,044	445,044	807,544

DEFENSE WORKING CAPITAL FUNDS

The conferees agree to provide \$90,344,000 for the Defense Working Capital Fund.

NATIONAL DEFENSE SEALIFT FUND

The conferees agree to provide an additional \$320,000,000 for procurement of a new Large Medium-Speed Roll-on roll-off (LMSR) ship for the Army; \$30,000,000 for conversion of an existing LMSR ship to meet Marine Corps requirements for a maritime prepositioning force ship; and \$12,450,000 to convert an RRF sealift vessel into a training ship for the Massachusetts Maritime Academy.

TITLE VI—OTHER DEPARTMENT OF DEFENSE PROGRAMS

The conference agreement is as follows:

[In thousands of dollars]

	Budget	House	Senate	Conference
Defense Health Program	10,834,657	11,078,417	11,184,857	11,154,617
Armed Forces Retirement Home	0	0	68,295	0
Chemical Agents and Munitions Destruction, Army	1,169,000	781,000	1,029,000	1,029,000
Drug Interdiction and Counter-Drug Activities, Defense	788,100	883,700	842,300	847,800
Office of the Inspector General	140,844	140,844	137,544	137,544
Total, Other Department of Defense Programs	12,932,011	12,883,961	13,261,996	13,168,961

DEFENSE HEALTH PROGRAM

EXPLANATION OF PROJECT LEVEL ADJUSTMENTS

[In thousands of dollars]

Peer-reviewed Prostate Cancer research program	75,000		75,000	75,000

EXPLANATION OF PROJECT LEVEL ADJUSTMENTS—Continued

[In thousands of dollars]

	Budget	House	Senate	Conference
Peer-reviewed medical research			50,000	25,000

MEDICAL RESEARCH

The conferees applaud the medical research and development efforts and accomplishments of the Department of Defense, and, within funding provided for the Defense Health Program, \$275,000,000 for medical RDT&E efforts to be conducted by the Department. Within these funds, \$175,000,000 is for the Army's peer reviewed Breast Cancer Research Program (BCRP), and \$75,000,000 is for the Army's peer reviewed Prostate Cancer Research Program (PCRP).

The remaining funds of \$25,000,000 are to be made available for peer reviewed medical research grants and activities. The conferees direct that the Secretary of Defense, in conjunction with the service Surgeons General, establish a process to select medical research projects of clear scientific merit and direct relevance to military health.

Such projects could include: acute lung injury research; advanced soft tissue modeling; alcohol abuse prevention research; Defense and Veterans Head Injury Program; Dengue fever vaccine research; childhood asthma; diabetes; digital mammography imaging; Gulf War Illnesses; Padgett's disease; retinal display technology; smoking cessation; stem cell research; and volumetrically controlled manufacturing.

The conferees direct the Department to provide a report by March 1, 2000, on the status of this peer reviewed medical research program, to include the corresponding funds provided in fiscal year 1999.

CUSTODIAL CARE

The conference agreement includes a general provision clarifying the definition of

custodial care as it pertains to the delivery of health care services provided by and financed under the military health care system's case management program. This provision also sets the overall policy for access of military health care system beneficiaries in the case management program. The House bill included a similar provision. The Senate bill contained no similar provision. The conferees expect the Department to expeditiously revise its regulations to comply with this provisions.

ANTHRAX VACCINE IMMUNIZATION PROGRAM (AVIP)

The Comptroller General shall study the immunization program and report on the following: effects on military morale, retention, and recruiting; the civilian costs and burdens associated with adverse reactions for members of the reserve components; adequacy of long- and short-term health monitoring; assessment of the anthrax threat, including but not limited to foreign doctrine, weaponization, quality of intelligence, and other biological threats. A classified annex may be submitted to meet this requirement.

The Department is directed to enter into a contract with the National Research Council to independently study the effectiveness and safety of the anthrax vaccine. The following issues shall be considered in the report: the types and severity of adverse reactions, including gender differences; long-term health implications; inhalational efficacy of the vaccine against all known anthrax strains; correlation of animal models to safety and effectiveness in humans; validation of the manufacturing process focusing on, but not

limited to discrepancies identified by the Food and Drug Administration in February 1998; definition of vaccine components in terms of the protective antigen and other bacterial products and constituents; identification of gaps in existing research.

Preliminary reports addressing these issues will be submitted to the Committee on Appropriations and the Committee on Armed Services of both the House and the Senate by April 1, 2000.

OXFORD HOUSE

The conferees direct the Department to conduct a pilot project to improve treatment outcomes for alcoholism and drug addiction. The pilot project should evaluate the effectiveness and cost efficiency of Oxford House recovery homes in improving recovery without relapse following treatment for alcoholism and drug addiction among active and retired military personnel and their dependents. The conferees direct the Department to provide a report by March 1, 2000 on the status of this pilot project.

TRISERVICE NURSING RESEARCH PROGRAM

The conferees recommend \$6,000,000 for the TriService Nursing Research Program (TSNRP). Within these funds, the conferees encourage the Department to leverage telehealth and distance learning capabilities, and to continue efforts in developing tele-metered passive physiological monitoring for field conditions. Further, the conferees encourage the Department to begin funding the TSNRP in the Department's annual budget.

CHEMICAL AGENTS AND MUNITIONS DESTRUCTION, ARMY

The conference agreement is as follows:

(In thousands of dollars)

	Budget	House	Senate	Qty	Conference
CHEM AGENTS & MUNITIONS DESTRUCTION, ARMY					
CHEM DEMILITARIZATION - O&M.....	593,500	492,000	543,500	--	543,500
CHEM DEMILITARIZATION - PROC.....	241,500	116,000	191,500	--	191,500
CHEM DEMILITARIZATION - RDTE.....	334,000	173,000	294,000	--	294,000

CHEMICAL MUNITIONS DESTRUCTION, ARMY

The conferees concur with the decision of the Department of Defense to conduct evaluations of three additional alternative technologies under the Assembled Chemical Weapons Assessment (ACWA) Program. The conferees direct that \$40,000,000 of the funds made available for Chemical Agents and Munitions Destruction, Army are only to conduct the additional ACWA evaluations. The conferees direct that the ACWA program is to proceed under the same guidelines as contained in Public Law 104-208, and continue to use the Dialogue process and Citizens Advisory Technical Teams and their consultants.

The conferees agree that the current budget execution rates for the Chemical Agents and Munitions Destruction program are unacceptable and hopes that the Army improves the budget execution rates in fiscal year 2000. In the event that program budget execution rates improve during the fiscal year, and additional funds are required to sustain the establishment and operation of the nine chemical demilitarization facilities, the conferees expect the Army to submit a reprogramming request subject to normal, prior approval reprogramming procedures.

The conferees disagree with the House direction with regard to an Inspector General report on the Chemical Agents and Munitions Destruction Program, Army. The conferees agree with House language directing the General Accounting Office to submit a report on the budget activities and management of the program.

DRUG INTERDICTION AND COUNTER-DRUG ACTIVITIES, DEFENSE

The conference agreement is as follows:

[In thousands of dollars]

Drug Interdiction and counter-drug activities:	
Budget	788,100
House	883,700
Senate	842,300
Conference	847,800

SUMMARY OF CONFERENCE AGREEMENT

The conference agreement on items addressed by either the House or the Senate is as follows:

[In thousands of dollars]

National Guard Counter-drug Support	+20,000
Gulf States Initiative	+10,000
RCTA	+2,000
Marijuana Eradication/Guard Counter-drug activities	
Kentucky	+3,200

[In thousands of dollars]

	Budget	House	Senate	Conference
Intelligence Community Management Account	149,415	144,415	149,415	158,015
Central Intelligence Agency Retirement and Disability System Fund	209,100	209,100	209,100	209,100
Payment to Kaho'olawe Island Conveyance, Remediation, and Environmental Restoration Trust Fund	15,000	15,000	35,000	35,000
National Security Education Trust Fund	8,000	8,000	8,000	8,000

INTELLIGENCE COMMUNITY MANAGEMENT ACCOUNT

Details of the adjustments to this account are addressed in the classified annex accompanying this report.

TITLE VIII—GENERAL PROVISIONS

The conference agreement incorporates general provisions of the House and Senate versions of the bill which were not amended. Those general provisions that were amended in conference follow:

Hawaii	+2,450
Counter-drug Intelligence and Infrastructure Support	+30,000
Northeast Regional Counter-drug Training Center	+2,000
Counter-narcotics Center at Hammer	+5,000
Technologies Assessment	+2,450
Southwest Border Fence	+4,000
Lake County HIDTA	+1,000
MJTFTC	+4,000
Southwest Border States Initiative	+6,000
NICI	+2,000
Young Marines	+1,450
Forward Operating Locations	-27,000
Ground Based Radars	-4,000
Tethered Aerostat Radar System	-5,000

TECHNOLOGIES ASSESSMENT

The conferees agree to provide \$2,450,000 to assess technologies to detect air, land and maritime platforms which are evading currently operating detection and monitoring systems either because of their technological deficiencies or their locations. The conferees specifically direct that the assessment consider the utility of an additional Relocatable Over The Horizon Radar site, a Wide Aperture Radar Facility, and a ground station to support a tropical remote sensing radar. The conferees direct that the assessment be concluded by April 1, 2000 and that its findings be included in a report to the defense committees not later than May 15, 2000.

COUNTER-DRUG INTELLIGENCE AND INFRASTRUCTURE SUPPORT

The conferees agree to provide \$30,000,000 for Counter-drug Intelligence and Infrastructure Support in order to support numerous initiatives including those outlined by the Senate in the Drug Free Century Act and those identified in House Report 105-244 to include Operation Caper Focus, P-3 FLIRs, observation aircraft, mothership operations, A-10 aircraft, and other joint military intelligence programs. The conferees direct the Deputy Assistant Secretary of Defense for Drug Enforcement Policy to provide a plan for utilization of these funds to the defense committees within 60 days of the enactment of this Act.

A-10 LOGISTICAL AND DEMILITARIZATION SUPPORT

The conferees direct the Deputy Assistant Secretary of Defense for Drug Enforcement Policy and Support and the Assistant Secretary of State, Bureau of International Narcotics and Law Enforcement Affairs to submit a joint report to Congress within thirty days of enactment of the accompanying Act assessing the cost effectiveness of using re-

furished A-10 aircraft (currently in storage at AMARC) for the Department of State's coca eradication mission in Colombia. This report shall also discuss the time saved in returning such upgraded aircraft to combat condition should they be needed, compared to the time to bring a storage aircraft to the same combat configuration, and assess the fiscal and operational impacts on the active A-10 combat force of such a transfer. The conferees agree that, if this report contains a joint recommendation to use these aircraft for this mission, \$5,000,000 shall be made available from the sums provided under "Counter-drug Intelligence and Infrastructure Support" only for this purpose, in accordance with the directive of the House.

FORWARD OPERATING LOCATIONS

The conferees agree to a reduction of \$27,000,000 to the budget request for Forward Operating Locations (FOLs). The conferees agree to provide \$10,800,000 to be transferred to Military Construction, Air Force for planning and design of FOLs. The conferees also agree to provide \$5,000,000 for transfer to Operation and Maintenance, Air Force only to be used for improvement and repair at the Curacao, Aruba, and Ecuador FOLs. Although the conferees are aware that the Commander in Chief of the U.S. Southern Command recommends that construction at these locations begin as soon as possible, the conferees are concerned that no formal permanent binding long-term agreements for the use of these facilities have been executed between any of the FOL host nations and the United States. Funding beyond that needed for planning and design activities is premature without such agreement in place. The conferees direct that future requests for Military Construction funding for these projects be contained in budget requests for Military Construction.

OFFICE OF THE INSPECTOR GENERAL

The conferees agree to provide \$137,544,000 for the Office of the Inspector General. Of this amount, \$136,244,000 shall be for operation and maintenance activities and \$1,300,000 shall be for procurement.

EMERGENCY AND EXTRAORDINARY EXPENSES

The conferees have agreed to increase the amount made available for emergencies and extraordinary expenses to \$700,000 and direct the Inspector General to submit an expenditures report in compliance with the requirements contained in section 127 of Title 10, United States Code.

TITLE VII—RELATED AGENCIES

The conferees agree to the following amounts for Related Agencies:

	Budget	House	Senate	Conference
Intelligence Community Management Account	149,415	144,415	149,415	158,015
Central Intelligence Agency Retirement and Disability System Fund	209,100	209,100	209,100	209,100
Payment to Kaho'olawe Island Conveyance, Remediation, and Environmental Restoration Trust Fund	15,000	15,000	35,000	35,000
National Security Education Trust Fund	8,000	8,000	8,000	8,000

The conferees included a general provision (Section 8005) which amends language to provide authority to the Department to transfer not more than \$1.6 billion of working capital funds or funds made available in this Act.

The conferees included a general provision (Section 8008) which amends language authorizing multi-year procurements.

The conferees included a general provision (Section 8034) which amends language that governs the activities of defense federally funded research and development centers (FFRDCs).

The conferees included a general provision (Section 8044) which amends language regarding funds available in the Department of Defense Overseas Military Facility Investment Recovery Account.

The conferees included a general provision (Section 8058) which amends language recommending rescissions. The rescissions agreed to are:

FISCAL YEAR 1998	
Other Procurement, Navy: Combat Survivor Evader Radio	- \$2,167,000
Aircraft Procurement, Air Force: F-16 savings	- 4,000,000
C-130 Avionics Mod- ernization Program	- 1,800,000
JSTARS contract sav- ings	- 10,000,000
FISCAL YEAR 1999	
Other Procurement, Army: CSEL	- 13,700,000
Aircraft Procurement, Navy: Universal Jet Air Start Unit	- 41,450,000
Under the heading, Ship- building and Conver- sion, Navy: New Attack Submarine overhead savings	- 32,400,000
CVN-69 Overhaul con- tract savings	- 11,400,000
Other Procurement, Navy: Combat Survivor Evader Radio	- 6,384,000
MK-12 IFF contract sav- ings	- 1,900,000
FFG upgrades	- 5,450,000
Aircraft Procurement, Air Force: F-16 savings	- 3,000,000
C-130 Avionics Mod- ernization Program	- 2,700,000
T-38 Avionics Upgrade Program	- 10,000,000
C-17 prior year savings ...	- 7,300,000
B-1 prior year savings	- 6,729,000
Missile Procurement, Air Force: Classified program	- 130,000,000
Research, Development, Test and Evaluation, Army: Mines	- 4,000,000
Force XXI initiative	- 1,400,000
Research, Development, Test and Evaluation, Navy: AV-8B Mods, termi- nation of life extension program	- 11,000,000
NTACMS	- 3,900,000
Research, Development, Test and Evaluation, Air Force: GBS reduced receiver suites	- 5,300,000
B-2 JASSM savings	- 7,000,000
B-1B prior year savings ..	- 3,600,000
Research, Development, Test and Evaluation, Defense-Wide: ACTD	- 7,000,000
Computing Systems and Communications	- 5,000,000
Tactical Technology	- 7,000,000
Sensors and Guidance	- 4,450,000

The conferees included a general provision (Section 8079) which amends House language that allows for the transfer of funds to provide services and support to organizations and activities outside of the Department, if they are incidental to training.

The conferees included a general provision (Section 8082) which amends language to reflect the latest ship cost adjustment proposed by the Navy.

The conferees included a general provision which amends (Section 8093) language con-

cerning Buy American requirements to address shipyard cranes.

The conferees included a general provision (Section 8100) which amends Senate language to reduce funding available to the Operation and Maintenance accounts by \$123,200,000 due to civilian personnel underexecution.

The Conferees included a general provision (Section 8103) which amends House language to repair and upgrade the road providing access to the National Training Center.

The Conferees included a general provision (Section 8105) which amends House language concerning restrictions on the procurement of main propulsion engines and propulsors for the ADC(X) class of ships.

The Conferees included a general provision (Section 8107) which amends House language earmarking funds in support of the B-52 force structure.

The Conferees included a general provision (Section 8111) which amends House language to appropriate funds only for Weapons of Mass Destruction Domestic (WMD) Preparedness.

The conference agreement provides an additional \$35,000,000 to enhance efforts underway within the Department to develop a comprehensive and integrated domestic emergency response capability against terrorist attacks using weapons of mass destruction. The conference agreement also includes bill language specifying certain expenditures as amended by the conferees. These funds are provided, as follows:

Military Support Detachment (Light).—To provide the training and preliminary equipment issue to field an initial operating capability for traditional drilling Military Support Detachments (Light).

Appropriation	Amount
National Guard Personnel, Army	\$2,000,000
National Guard Personnel, Air Force	450,000
Operation and Maintenance, Army	12,180,000

Additional Training/Exercises/Interagency Integration and Interoperability.—To enhance the training, organization, and support of DoD response forces to prepare for and respond to WMD terrorism, and enhance interoperability and connectivity between local, state, and federal interagency WMD response forces.

Appropriation	Amount
Reserve Personnel, Army	\$2,000,000
Operation and Maintenance, Army	12,320,000
Research, Development, Test and Evaluation, Army	6,000,000

The Conferees included a general provision (Section 8114) which amends House language that prohibits the Department of Defense from using funds provided in Department of Defense Appropriations Acts for the repair and maintenance of military family housing, and requires a review of Department of Defense practices by the DoD Office of the Inspector General.

The Conferees included a general provision (Section 8115) which amends House language which requires the Secretary of Defense to report on Advanced Concept Technology Demonstrations (ACTDs) prior to the obligation of funds, prohibits the further obligation of fiscal year 1999 funds for Line-of-Sight Anti-Tank (LOSAT) and provides that of funds available under the heading, "Research, Development, Test and Evaluation, Defense-Wide" in Public Law 105-262, \$10,027,000 is only available for the Air Defense Surface to Air Missile.

The conferees included a general provision (Section 8116) which amends House language which provides that none of the funds under the heading, "Research, Development, Test and Evaluation, Defense-Wide" in Public Law 105-262 are available for the Medium Extended Air Defense System.

The conferees included a general provision (Section 8121) which amends House language to enhance DoD oversight of information technology systems.

The conferees included a general provision (Section 8124) which amends House language that permits competitive auction of communication frequencies.

The new subsection (subsection (c)) reaffirms Congressional intent, as reflected in section 337(d)(4) of the Balanced Budget Act of 1997, that the FCC must ensure that the spectrum to be used for public safety is protected from interference. Section 337(a)(1) of that Act directed the FCC to allocate 24 megahertz for public safety uses, while the current legislation would accelerate the timing of the auction of 36 megahertz of neighboring spectrum which had been allocated in section 337(d)(2) of the 1997 Act. Because the public safety spectrum is adjacent to the spectrum now being auctioned, it is important to affirm that the interference directive in section 337(d) is not being superceded by the current legislation.

The Congress, in the Balanced Budget Act of 1997, required that public safety services be permitted to operate free from interference from neighboring spectrum. This subsection will reiterate, along with the statutory direction that the auction will be accelerated, that such protection for public safety spectrum must be maintained.

The conferees included a general provision (Section 8126) which amends House language prohibiting the transfer of armor piercing ammunition to any non-governmental entity.

The conferees included a general provision (Section 8127) which amends Senate language to provide for the waiver of payments by the National Guard for the use of equipment by certain non-profit organizations.

The conferees included a general provision (Section 8129) which amends Senate language that reflects the amounts appropriated for military personnel pay and retirement reform in the Fiscal Year 1999 Supplemental Appropriations Act.

The conferees included a general provision (Section 8130) which amends Senate language to limit the funding that can be obligated through indefinite delivery/indefinite quantity environmental contracts.

The conferees included a general provision (Section 8133) as proposed by the Senate and amended, providing the Secretary of the Air Force the authority to lease aircraft for operational support purposes. The conferees direct that aircraft leased under this pilot program shall be commercially available, serving similar purposes in the commercial marketplace. The conferees believe that the Department of Defense could realize significant operations and support savings through employing the fewest aircraft types of a common configuration. In that regard, the Secretary shall make every attempt to lease aircraft of the type and configuration common to the DoD inventory and use accompanying logistics support mechanisms already in place. Modifications to these aircraft should be kept to a minimum to allow timely conversion to a marketable, civilian configuration, at minimum cost, if the aircraft are subsequently replaced.

The conferees included a new general provision (Section 8134) which reduces funding

for Operation and Maintenance, Air Force to reflect unobligated amounts available in Public Law 106-31 for Readiness/Munitions.

The conferees included a general provision (Section 8136) which amends Senate language on the U.S. Atlantic Command joint experimentation program.

The conferees included a general provision (Section 8137) which amends Senate language concerning the American Red Cross for Armed Forces Emergency Services.

The conferees included a new general provision (Section 8143) which provides funds for the United Service Organizations (USO).

The conferees included a new general provision (Section 8144) which directs the Department of the Army to submit a report to the Congress detailing its efforts to reduce the costs the Abrams M1A2 Tank Upgrade program before initiating a multi-year procurement contract.

The conferees included a new general provision (Section 8145) which conditions the new C-17 multiyear authority provided in this Act upon certification by the Secretary of the Air Force that the average unit flyaway price of C-17 aircraft in a new multiyear contract will be at least twenty-five percent less than the average unit flyaway price of aircraft in the current multiyear contract.

The conferees included a new general provision (Section 8146) which establishes a transfer account for additional F-22 test aircraft and advanced procurement.

The conferees included a new general provision (Section 8147) which provides \$300,000,000 for F-22 termination liability.

The conferees included a new general provision (Section 8148) which provides a grant for evaluating a standards and performance based academic model at DoD schools.

The conferees included a new general provision (Section 8149) which prohibits the payment of environmental fines or penalties unless specifically authorized by law.

The conferees included a new general provision (Section 8150) which amends Section 8145 of the fiscal year 1999 Department of Defense Appropriations Act concerning the demolition of buildings at the former Norton Air Force Base.

The conferees included a new general provision (Section 8151) which provides a grant for public schools with a high concentration of special needs military dependents.

The conferees included a new general provision (Section 8152) which makes a technical correction regarding the transfer of Military Construction funds appropriated in the fiscal year 1999 Emergency Supplemental Appropriations Act.

The conferees included a new general provision (Section 8153) which amends Section 127 of the fiscal year 1995 Military Construction Appropriations Act regarding the conveyance of Navy Reserve Center, Seattle, Washington.

The conferees included a new general provision (Section 8154) which permits the Army to use Operation and Maintenance, Army funds for remediation activities at Camp Edwards.

The conferees included a new general provision (Section 8155) which allows the Air Force to convey surplus relocatable housing.

The conferees included a new general provision (Section 8156) which allows the Department of Defense to adjust the cost-share for the Arrow Deployability Program.

The conferees included a new general provision (Section 8157) that directs the Department of Defense to identify additional liabilities and requests for equitable adjustments

and provide a report to the congressional defense committees on the extent of health care contract claims.

The conferees included a new general provision (Section 8158) which provides funds for a community retraining, reinvestment and manufacturing initiative.

The conferees have included a new general provision (Section 8159) which directs the Secretary of Defense to submit a report on the management of the chemical weapons demilitarization program.

The conferees included a new general provision (Section 8160) regarding fiscal year 2000 military construction projects.

The conferees included a new general provision (Section 8161) which allows the Secretary of Defense to treat the opening of the National D-Day Museum as an official event.

The conferees included a new general provision (Section 8162) which establishes the Dwight D. Eisenhower Memorial Commission.

The conferees included a new general provision (Section 8163) which allows the Secretary of the Air Force to accept contributions from the State of New York for the Rome Research Site.

The conferees included a new general provision (Section 8164) which is a technical correction related to funds provided in Public Law 105-277.

The conferees included a new general provision (Section 8165) requiring a report from the Secretary of Defense on the status and adequacy of planned expenditures for low density, high demand military assets.

The conferees included a new general provision (Section 8166) which provides funds for Chicago Public Schools for the conversion and expansion of the former Eighth Regiment National Guard Armory.

The conferees included a new general provision (Section 8167) which provides \$10,000,000 for an aviation support facility for the Army National Guard.

The conferees included a new provision (Section 8168), as proposed by the Senate, and amended by the House, which provides for the Brooks Air Force Base Demonstration Project known as the "Base Efficiency Project". Implementation of this provision is delayed until June 15, 2000. It is the conferees' intention that the Committees on Appropriations conduct a thorough review to ensure that this legislation is in the best interest of the Department of Defense and does not prejudice the Base Realignment and Closure process.

The conferees included a new general provision (Section 8169) which reduces the amounts provided in title II of the conference report for depot level maintenance and repair by \$400,000,000, and directs that \$400,000,000 of the funds appropriated in section 2008 of title II, chapter 3 of Public Law 106-31 (the fiscal year 1999 Emergency Supplemental Appropriations Act) that remain unobligated be made available to fund these requirements.

The conferees included a new general provision (Section 8170) which reduces the amounts provided in title II of the conference report for spare and repair parts and associated logistical support by \$550,000,000, and directs that \$550,000,000 of the funds appropriated in section 2007 of title II, chapter 3 of Public Law 106-31 that remain unobligated be made available to fund these requirements.

The conferees included a new general provision (Section 8171) which reduces the amounts provided in title II of the conference report for base operations support

costs by \$100,000,000, and directs that \$100,000,000 of the funds appropriated in section 2011 of title II, chapter 3 of Public Law 106-31 that remain obligated be made available to fund these requirements.

The conferees included a new general provision (Section 8172) which reduces funding for various accounts in the title III of the conference report for procurement of munitions, taking into account various munitions procurements which will be accomplished with funds provided in title II, chapter 3 of Public Law 106-31. These reductions are to be allocated as follows, consistent with the increased funding for these items which was provided in Public Law 106-31 and since has been designated as emergency appropriations by the President:

Weapons Procurement, Navy—Tomahawk Procurement of Ammunition, Navy and Marine Corps—General Purpose Bombs, JDAM

Aircraft Procurement, Air Force—ALE-50 Procurement of Ammunition, Air Force—General Purpose Bombs, JDAM

The conferees included a new general provision (Section 8173) which reduces operation and maintenance funding, and provides emergency funding for the same activities.

The conferees included a new general provision (Section 8174) which prohibits the use of any funds in this bill for the American Heritage Rivers Initiative.

The conferees included a new general provision (Section 8175) to adjust the payment of progress payments.

The conferees included a new general provision (Section 8176) to adjust payment procedures and policies.

The conferees included a new title IX, as proposed by the Senate (Senate title X) as amended, relating to sanctions on India and Pakistan.

CONFERENCE TOTAL—WITH COMPARISONS

The total new budget (obligational) authority for the fiscal year 2000 recommended by the Committee of Conference, with comparisons to the fiscal year 1999 amount, the 2000 budget estimates, and the House and Senate bills for 2000 follow:

[In thousands of dollars]

New budget (obligational) authority, fiscal year 1999	\$250,520,548
Budget estimates of new (obligational) authority, fiscal year 2000	263,265,959
House bill, fiscal year 2000	268,661,503
Senate bill, fiscal year 2000	264,693,100
Conference agreement, fiscal year 2000	267,795,360
Conference agreement compared with:	
New budget (obligational) authority, fiscal year 1999	+17,274,812
Budget estimates of new (obligational) authority, fiscal year 2000	+4,529,401
House bill, fiscal year 2000	-866,143
Senate bill, fiscal year 2000	+3,102,260

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. UNDERWOOD) to revise and extend their remarks and include extraneous material:)

Mr. UNDERWOOD, for 5 minutes, today.

Mrs. CLAYTON, for 5 minutes, today.

(The following Members (at the request of Mr. NETHERCUTT) to revise and extend their remarks and include extraneous material:)

Mr. NETHERCUTT, for 5 minutes, today.

ADJOURNMENT

Mr. WOLF. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 40 minutes a.m.), under its previous order, the House adjourned until Tuesday, October 12, 1999, at 12:30 p.m. for morning hour debates.

EXECUTIVE COMMUNICATIONS

Under clause 8 of rule XII, executive communications were taken from the Speaker's table and referred as follows:

4711. A communication from the President of the United States, transmitting a report to Congress, consistent with the War Powers Resolution, regarding U.S. military forces in East Timor; (H. Doc. No. 106-141); to the Committee on International Relations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LEWIS of California: Committee of Conference. Conference report on H.R. 2561. A bill making appropriations for the Depart-

ment of Defense for the fiscal year ending September 30, 2000, and for other purposes (Rept. 106-371). Ordered to be printed.

DISCHARGE OF COMMITTEE

Pursuant to clause 5 of rule X, the Committee on Commerce discharged, H.R. 354 referred to the Committee of the Whole House on the State of the Union, and ordered to be printed.

Pursuant to clause 5 of rule X, the Committee on the Judiciary discharged, H.R. 1858 referred to the Committee of the Whole House on the State of the Union, and ordered to be printed.

Pursuant to clause 5 of rule X, the Committee on the Judiciary discharged, H.R. 2130 referred to the Committee of the Whole House on the State of the Union, and ordered to be printed.

MEMORIALS

Under clause 3 of rule XII, memorials were presented and referred as follows:

267. The SPEAKER presented a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 205 memorializing the United States Congress to amend federal law relating to the compensation of retired military personnel to permit full, concurrent receipt of military longevity pay and service-connected disability compensation pay; to the Committee on Armed Services.

268. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 157 memorializing the United States Congress to take such actions as are necessary to ensure that the United States military service personnel under the age of twenty-one are not sent to participate in any combat operations carried out by ground troops in Yugoslavia; to the Committee on Armed Services.

269. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 215 memorializing the U.S. Congress to condemn and reject an article in the July 1998 Psychological Association (Vol. 124, No. 1, pp. 22-53) which suggests that sexual relations between adults and children may not always be harmful to children; to the Committee on Education and the Workforce.

270. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 185 memorializing the United States Congress to restore budget cuts to the U.S. Geological Survey's water resources programs, particularly the State-Federal Cooperative program; to the Committee on Resources.

271. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 159 memorializing the United States Congress to support the efforts of United States Senators MARY LANDRIEU and JOHN BREAUX and United States Representatives CHRIS JOHN, BILLY TAUZIN, JIM MCCRERY, WILLIAM JEFFERSON, and JOHN COOKSEY to enact the Conservation and Reinvestment Act of 1999; to the Committee on Resources.

272. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 107 memorializing the United States Congress to amend the Federal Migratory Bird Conservation Act to authorize certain states to issue temporary federal duck stamp privileges through electronic license issuance systems; to the Committee on Resources.

273. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 216 memorializing the United States Congress to take such actions as are necessary to adequately fund and staff the DeRidder Automated Flight Service Station; to the Committee on Transportation and Infrastructure.

274. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 134 memorializing the United States Congress to enact legislation to allow Louisiana to impose requirements on the storage and transportation of hazardous materials by rail car that are more stringent than federal requirements; to the Committee on Transportation and Infrastructure.

275. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 197 memorializing the Congress of the United States to preserve the right of state and local governments to operate pension plans for their employees in the federal social security system and to develop legislation for responsible reform of the federal social security system that does not include mandatory participation by employees of state and local governments; to the Committee on Ways and Means.

276. Also, a memorial of the Legislature of the State of Louisiana, relative to House Concurrent Resolution No. 128 memorializing the United States Congress to enact the Estuary Habitat Restoration Partnership Act; jointly to the Committees on Transportation and Infrastructure and Resources.

ADDITIONAL SPONSORS

Under clause 7 of the rule XII, sponsors were added to public bills and resolutions as follows:

H.R. 8: Ms. BERKLEY.

H.R. 809: Mr. MCHUGH.

H.R. 2822: Mr. GOODE.

DISCHARGE PETITIONS

Under clause 2 of rule XV, the following discharge petition was filed:

Petition 6, October 5, 1999, by Mr. BONIOR on House Resolution 301 has been signed by the following Members: David E. Bonior, Robert A. Borski, Robert A. Brady, Gene Green, Robert E. Wise, Jr., James P. McGovern, Elliot L. Engel, Michael E. Capuano, Carolyn B. Maloney, Anna G. Eshoo, Albert Russell Wynn, Rosa L. DeLauro, Sam Gejdenson, John Elias Baldacci, Martin Frost, Ciro D. Rodriguez, Eddie Bernice Johnson, Anthony D. Weiner, Nancy Pelosi, Tom Lantos, Steny H. Hoyer, Jim McDermott, Tammy Baldwin, Charles A. Gonzalez, Max Sandlin, Alcee H. Hastings, Julian C. Dixon, John B. Larson, Thomas M. Barrett, Joseph Crowley, Ron Klink, William (Bill) Clay, Lynn C. Woolsey, Barbara Lee, Donald M. Payne, Danny K. Davis, Nydia M. Velázquez, Bruce F. Vento, Joseph M. Hoeffel, Zoe Lofgren, Robert A. Weygand, Rush D. Holt, Bob Clement, Earl F. Hilliard, Juanita Millender-McDonald, James E. Clyburn, Bennie G. Thompson, Sanford D. Bishop, Jr., Bobby L. DISCHARGE PETITIONS—
ADDITIONS OR DELETIONS

The following Members added their names to the following discharge petition:

Petition 4 by Ms. DEGETTE on House Resolution 192: David Wu.

SENATE—Tuesday, October 12, 1999

The Senate met at 9:01 a.m. and was called to order by the President pro tempore [Mr. THURMOND].

PRAYER

The Chaplain, Dr. Lloyd John Ogilvie, offered the following prayer:

Dear Father, today we focus our attention on a question we need to ask every day: Who gets the glory? Our purpose is to glorify You in all we say and do. And yet so often we grasp the glory for ourselves. Help us to turn attention from ourselves to You and openly acknowledge You as the source of our strength. You have taught us that there is no limit to what we can accomplish when we do give You the glory. May our realization that we could not breathe a breath, think a thought, or give leadership without Your blessing, free us from so often seeking recognition. Make us so secure in Your up-building esteem that we are able to help others with whom we work.

We glorify You, gracious God. We consecrate the decisions of this day, and when the Senators come to the end of the day, may they experience that sublime joy of knowing it was You who received the glory. Amen.

PLEDGE OF ALLEGIANCE

The Honorable CONRAD BURNS, a Senator from the State of Montana, led the Pledge of Allegiance, as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

RECOGNITION OF THE ACTING MAJORITY LEADER

The PRESIDING OFFICER (Mr. BURNS). The Senator from Arizona.

SCHEDULE

Mr. KYL. Mr. President, today the Senate will resume consideration of the Comprehensive Nuclear Test-Ban Treaty, with approximately 6 hours of debate time remaining. As a reminder, the two amendments in order to the treaty must be filed at the desk by 9:45 a.m. today.

By previous consent, at 4:30 p.m. the Senate will resume debate on the conference report to accompany the Agriculture appropriations bill. Following 1 hour of debate, the Senate will proceed to a cloture vote on the conference report. Therefore, the first rollcall vote of the day will occur at approximately 5:30 p.m.

For the information of all Senators, this week will be extremely busy so that action on the CTBT and the Agriculture appropriations conference report can be completed. The Senate will also begin consideration of the campaign finance reform legislation and take up any conference reports available for action. Senators may expect votes throughout the day and into the evening.

RESERVATION OF LEADER TIME

The PRESIDING OFFICER. Under the previous order, the leadership time is reserved.

EXECUTIVE SESSION**COMPREHENSIVE NUCLEAR TEST-BAN TREATY**

The PRESIDING OFFICER. Under the previous order, the Senate will now go into executive session and resume consideration of Executive Calendar No. 3, which the clerk will report.

The legislative clerk read as follows:

Resolution to Advise and Consent to the Ratification of treaty document No. 105-28, Comprehensive Nuclear Test-Ban Treaty.

The PRESIDING OFFICER. The Senator from Nevada.

Mr. REID. Will the Chair inform the two managers what time is remaining for both sides on the debate.

The PRESIDING OFFICER. The Chair advises the Senator from Nevada that the majority has 2 hours 53 minutes; the minority, 3 hours 23 minutes.

Mr. REID. I say to my friends from Arizona and Virginia that we will try to speak now and even out the time.

Mr. President, I give myself such time as I may consume.

We have heard a lot about nuclear testing recently, but no one has experienced nuclear testing as has the State of Nevada. Just a few miles from Las Vegas is the Nevada Test Site. There we have had almost 1,000 tests, some above ground and some below ground. You can travel to the Nevada Test Site now and go and look at these test sites. You can see where the above-ground tests have taken place. You can drive by one place where bleachers are still standing where people—press and others—would come and sit to watch the nuclear tests in the valley below. You can see some of the buildings that still are standing following a nuclear test. You can see large tunnels that are still in existence where scores and scores of tests were set off in the same tunnels. You can go and look at very deep

shafts where underground tests were set off.

The State of Nevada understands nuclear testing. At one time, more than 11,000 people were employed in the Nevada desert dealing with nuclear testing. Now, as a result of several administrations making a decision to no longer test nuclear weapons, there are only a little over 2,000 people there. Those 2,000 people are there by virtue of an Executive order saying we have to be ready if tests are deemed necessary in the national interest. So the Nevada Test Site is still there. The people are standing by in case there is a need for the test site to again be used.

The cessation of testing caused the largest percentage reduction of defense-related jobs in any Department of Energy facility. Today, as I indicated, there are a little over 2,000 of those jobs.

The State of Nevada is very proud of what we have done for the security of this Nation. Not only have we had the above-ground nuclear tests and the below-ground nuclear tests, but we have Nellis Air Force Base which is the premier fighter training center for the U.S. Air Force—in fact, it is the premier fighter training center for all allied forces around the world. I had a meeting recently with the general who runs Nellis Air Force Base. He was preparing for the German Air Force to come to Las Vegas to be involved in the training systems available for fighting the enemy in fighter planes.

Also, 400 miles from Las Vegas and Nellis Air Force Gunnery Range, you have Fallon Naval Air Station. It is the same type of training facility, not for the Air Force but the Navy. Virtually every pilot who lands on a carrier has been trained at Fallon. It is the premier fighter training center for naval aircraft—Fallon Naval Air Station.

There are many other facilities that have been used over the years. Today, we have Indian Springs Air Force Base which is 50 miles out of Las Vegas—actually less than that—where they are testing drones, the unmanned aircraft. So we have given a lot to the security of this Nation; we continue to do so.

When we talk about nuclear testing, I can remember as a young boy, I was raised 60 miles from Las Vegas.

We were probably 125 miles from where the actual detonations took place. We would get up early in the morning at my home in Searchlight and watch these tests. They would announce when the tests were coming.

We always saw the flash of light with the above-ground tests. Sometimes we

did not hear the sound because it would sometimes bounce over us.

We were the lucky ones, though, because the winds never blew toward Searchlight or Las Vegas. The winds blew toward southern Utah and Lincoln County in Nevada.

As a result of these above-ground tests, many people developed radiation sickness. They did not know it at the time. People did not understand what fallout was all about.

Yes, in Nevada, we understand nuclear testing as well as anyone in the world.

Nevada is going to continue its national service whether this treaty is ratified or not. We have already stopped testing in the traditional sense.

I want everyone to understand that even though I am a supporter of this treaty, I believe it would be much better, rather than having everyone march in here tonight and vote up or down on this treaty, that we spend some more time talking about it. I am convinced it is a good thing for this country, a good thing for this Nation, but I have some questions. We should answer some questions.

I have the good fortune of serving on the Energy and Water Subcommittee of the Appropriations Committee. I am the ranking Democrat on that subcommittee, with the head Republican on the subcommittee, Senator DOMENICI of New Mexico. It is our responsibility to appropriate the money for the nuclear defense capabilities of this country. We do that. We spend billions of dollars every year.

One of the things we have tried to do, recognizing we do not have traditional testing—that is underground testing or above-ground testing; of course, we do not do above-ground testing—is to provide other ways to make sure our nuclear stockpile is safe and reliable. No matter what we have done in the past, we have to make sure our weapons are safe and reliable.

How can we do that? We are attempting in this country to do the right thing. We have the Stockpile Stewardship Program under which we are conducting tests now. They are not explosions. We are doing it through computers. We have some names for some of our tests.

One of them is subcritical testing. What does that mean? It means we set off an explosion involving nuclear materials, but before the material becomes critical, we stop it. There is no nuclear yield. Then through computerization, in effect, we try to determine what would have happened had this test gone critical. That is an expensive program, but it is a program that is absolutely necessary, again, for the safety and reliability of our nuclear stockpile.

About 2 years ago, I gave a statement before our subcommittee. This was a

statement on the Comprehensive Test Ban Treaty on which we had a hearing. In that statement, I wrote about the loss of confidence in new weapons that could not be tested under the treaty and how this loss of confidence would prevent recurrence of the costly and dangerous nuclear arms race of the past 50 years.

I wrote about the confidence between former adversaries that would come from the treaty because no longer would we or they have to worry about significant new imbalances in deterrent forces, because no new weapons could be built.

I wrote about how that confidence would lead to more and more reductions in nuclear stockpiles and move the world even further away from nuclear annihilation.

I wrote about how the international example of refraining from nuclear testing, along with stockpile reductions, would reduce the incentives for non-nuclear states to develop nuclear weapons.

I did not write 2 years ago about the upcoming Comprehensive Test Ban Treaty review conference in which only states that have ratified the treaty will have effective membership.

That review conference will be able to change the conditions under which the treaty goes into force, and the United States, I am sorry to report, will have no place at that table unless the treaty is ratified by this Senate before that conference.

I wrote about more than the benefits of this treaty. I also wrote about some of its uncertainties and some of the concerns, I believe, we need to study and review, and about the debate that is needed for their resolution.

I pointed out that a prohibition against any and all nuclear explosions would reduce confidence in stockpile reliability and safety unless some other means was developed to maintain that confidence.

I noted that the Stockpile Stewardship Program was conceived to provide that other means. We have had 2 years of experience with this program, but I wrote about the uncertainties faced by science-based stockpile stewardship. I noted the plan depends critically on dramatic increases in computational capability. That is why in our subcommittee we have worked very hard to spend hard-earned tax dollars to develop better computers. The development of computers is going on around the world, but no place is it going on at a more rapid pace than with the money we have provided through this subcommittee. We are doing it because we believe through computerization, we can have a more safe and more reliable stockpile.

It is only through, as I wrote, these dramatic increases in computational capability and equally dramatic increases in resolution with which non-

nuclear experiments can be measured that we can go forward with certainty of having a safe and reliable nuclear stockpile.

I noted persistent support by Congress and the administration was absolutely necessary, not on a short-term basis but on a long-term basis. I noted Congress and the administration had to support the science-based Stockpile Stewardship Program; that we must set the pattern for the world; it can be done, and we can do it.

I did say that the support of Congress and the administration was absolutely necessary but not necessarily sufficient because the stewardship program is being developed at the same time that its architects are learning more about it. It is a study in progress. I wrote then, and I believe now, the learning process will continue.

I pointed out that the test ban treaty would not prevent nuclear weapons development. It would only inhibit the military significance of such development. We are not going to develop new weapons. We have not developed new weapons.

Let's talk, for example, about what can be done. You can have the development of crude nuclear explosives that are difficult to deliver, but these could be developed with confidence without testing. We know, going back to the early days of things nuclear, that "Fat Man" had not been tested. That was the bomb that was dropped on Hiroshima. There was no test. It was a huge weapon, as large as the side of a house. They had to build a pit in the runway to load it. They had to reconfigure the B-29 so it could drop this huge weapon, but it was not tested.

Stopping testing is not going to stop the development of nuclear weapons. Rogue nations and other nations can develop these weapons if they see fit. But these crude weapons will not upset the deterrent balance.

Also, some say the treaty would prevent the introduction of new modern weapons that could weaken strategic deterrence. For example, nations could not build sophisticated new weapons; they would be stuck with what they have. What they have may be good, may be bad.

I pointed out the treaty could not guarantee total cessation of nuclear testing because very low-yield tests and higher yield "decoupled" tests might not be detected with confidence. You could have small, very small tests. It would be very hard to detect.

You could also have the situation where a signatory nation could execute a high-yield "unattended" explosion. What does that mean? What it means is that for a high-yield "unattended" explosion in a clandestine operation—nobody could identify the signatory nation that was being noncompliant.

For example, let's say someone developed a nuclear device and secretly

dropped it in the ocean and then left. When the device went off someplace deep in the ocean, the country that dropped it in the ocean could certainly know that it exploded. But others could not identify who did it. It would be very hard to develop or make a new stockpile doing it this way, but it is possible. There are ways around everything.

But in spite of all these things that you could throw up as ways to get around the treaty—the “decoupled” tests and dropping them in the ocean, of course, you can do those kinds of things—but in spite of that, the positive nature of this treaty far outweighs any of these things that I have mentioned.

I did say in that statement I made before our subcommittee that the United States takes its treaty obligations seriously. We would not in any manner do what I have just outlined. But other nations might conduct themselves in that fashion. You cannot conduct your foreign policy believing that everybody is going to do everything the right way.

I do say that in all of these areas of uncertainty, I wrote about the need of the United States for a prolonged, comprehensive investigation and debate. That is where we have failed. We should have had hearings that went over a period of years, not a few days.

It is through consultation and the testimony of experts, and debate among Members of this body and the other body, that the issues and questions can be properly framed, examined, and resolved.

I was overly optimistic when I wrote in the conclusion of my statement to the hearing as follows:

These uncertainties and their associated issues will be the subject of intense debate by the Senate as we move toward a policy decision that will define an appropriate balance between the treaty's costs, its risks, and its promised benefits.

There has been no intense debate. I was too optimistic because we did not “move” toward a policy decision; we did not do anything. We stumbled, lurched perhaps. I was too optimistic because intense debate has not been conducted by the Senate. There have been a few little things that have gone on. For example, in my subcommittee we have done a few things. But we have needed extensive debate.

What have we had in the last few days, literally? We have had some experts come in. We have had some hurriedly conducted hearings. That isn't the way you approach, perhaps, one of the most important treaties this country has ever decided.

I think the chairmen and the ranking members of both the Armed Services Committee and the Foreign Relations Committee, during the last few days, have done the best they could under the circumstances. I commend them

for trying. But I do not think we should base this treaty on what has gone on in the last few days.

I was too optimistic because I did not realize we would enter a time agreement to debate this most important issue for 14 hours. I do not think it is appropriate. I think it prevents amendments that may be necessary.

I indicate that I rise in support of this treaty. I do it without any reluctance. I do say, however, that we should have more debate. We should have more consultation. We should have more hearings. That would allow us to arrive at a better, more informed decision.

I have heard some people speak on this floor saying they want more information. They are entitled to that. I think we are rushing forward on a vote on this. We should step back. I think if there is an opportunity today to avoid the vote this afternoon or tomorrow, we should do that. I do not think we need to rush into this.

The President has written a letter indicating, for the good of the country, this vote should be put off. I agree with that. I am not afraid to cast my vote. I have indicated several times this morning that I will vote in favor of the treaty. I do not, for a moment, believe that there are others who feel any differently than I in our responsibility. Our job is to cast votes. I only wish Members were given the time and opportunity to become as informed as possible so that all Members are given an opportunity to improve this treaty—through debate, through dialogue, and perhaps even through amendment.

Again, I rise in support of this treaty, not because I had an opportunity to consider all the issues and the expert opinion on these issues. I rise in support of the treaty because on the whole we are much, much, much better off with it than without it.

I have only a partial list of prominent individuals and national groups in support of this test ban treaty: Current and former Chairmen and Vice Chairmen of the Joint Chiefs of Staff; former Secretaries of Defense; former Secretaries of State; former Secretaries of Energy; former Members of Congress; Directors of the three National Laboratories; we have other prominent national security officials; arms control negotiators; we have many prominent military officers who have been members of the Chiefs of Staff; scientific experts from all over the United States with the greatest academic institutions; we have Nobel laureates—more than a score of Nobel laureates who support this treaty—former senior Government officials and advisors; ambassadors; national groups; medical and scientific groups; public interest groups; religious groups.

I have eight or nine pages of prominent individuals and national groups in support of the Comprehensive Nuclear

Test-Ban Treaty that I ask unanimous consent be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PARTIAL LIST OF PROMINENT INDIVIDUALS AND NATIONAL GROUPS IN SUPPORT OF THE CTBT—OCTOBER 9, 1999

CURRENT AND FORMER CHAIRMEN/VICE-CHAIRMEN OF THE JOINT CHIEFS OF STAFF

General Hugh Shelton, Chairman of the Joint Chiefs of Staff.

General John Shalikashvili, former Chairman of the Joint Chiefs of Staff.

General Colin Powell, former Chairman of the Joint Chiefs of Staff.

General David Jones, former Chairman of the Joint Chiefs of Staff.

Admiral William Crowe, former Chairman of the Joint Chiefs of Staff.

General Joseph Ralston, Vice Chairman.

Admiral William Owens, former Vice Chairman.

FORMER SECRETARIES OF DEFENSE

Robert McNamara.

Harold Brown.

William Perry.

FORMER SECRETARIES OF STATE

Warren Christopher.

Cyrus Vance.

FORMER SECRETARIES OF ENERGY

Hazel O'Leary.

Federico Peña.

FORMER ACDA DIRECTORS

Ambassador Ralph Earle II.

Major General William F. Burns.

Lt. General George M. Seignious II.

Ambassador Paul Warnke.

Kenneth Adelman.

FORMER MEMBERS OF CONGRESS

Senator Dale Bumpers.

Senator Alan Cranston.

Senator John C. Danforth.

Senator J. James Exon.

Senator John Glenn.

Senator Mark O. Hatfield.

Senator Nancy Landon Kassebaum.

Senator George Mitchell.

Representative Bill Green.

Representative Thomas J. Downey.

Representative Michael J. Kopetski.

Representative Anthony C. Bellenson.

Representative Lee. H. Hamilton.

DIRECTORS OF THE THREE NATIONAL LABORATORIES

Dr. John Browne, Director of Los Alamos National Laboratory.

Dr. Paul Robinson, Director of Sandia National Laboratory.

Dr. Bruce Tarter, Director of Lawrence Livermore National Laboratory.

OTHER PROMINENT NATIONAL SECURITY OFFICIALS

Ambassador Paul H. Nitze, arms control negotiator, Reagan Administration.

Admiral Stansfield Turner, former Director of the Central Intelligence Agency.

Charles Curtis, former Deputy Secretary of Energy.

Anthony Lake, former National Security Advisor.

PROMINENT MILITARY OFFICERS—SERVICE CHIEFS

General Eric L. Shinseki, Army Chief of Staff.

General Dennis J. Reimer, former Army Chief of Staff.

General Gordon Russell Sullivan, former Army Chief of Staff.

General Bernard W. Rogers, former Chief of Staff, U.S. Army; former NATO Supreme Allied Commander.

General Michael E. Ryan, Air Force Chief of Staff.

General Merrill A. McPeak, former Air Force Chief of Staff.

General Ronald R. Fogleman, former Air Force Chief of Staff.

General James L. Jones, Marine Corps Commandant.

General Charles C. Krulak, former Marine Corps Commandant.

General Carl E. Mundy, former Marine Corps Commandant.

Admiral Jay L. Johnson, Chief of Naval Operations.

Admiral Frank B. Kelso II, former Chief of Naval Operations.

Admiral Elmo R. Zumwalt, Jr., former Chief of Naval Operations.

General Eugene Habiger, former Commander-in-Chief of Strategic Command.

General John R. Galvin, Supreme Allied Commander, Europe.

Admiral Noel Gayler, former Commander, Pacific.

General Charles A. Horner, Commander, Coalition Air Forces, Desert Storm, former Commander, U.S. Space Command.

General Andrew O'Meara, former Commander U.S. Army Europe.

General Bernard W. Rogers, former Chief of Staff, U.S. Army; former NATO Supreme Allied Commander.

General William Y. Smith, former Deputy Commander, U.S. Command, Europe.

Lt. General Julius Becton.

Lt. General John H. Cushman, former Commander, I Corps (ROK/US) Group (Korea).

Lt. General Robert E. Pursley.

Vice Admiral William L. Read, former Commander, U.S. Navy Surface Force, Atlantic Command.

Vice Admiral John J. Shanahan, former Director, Center for Defense Information [19].

Lt. General George M. Seignious II, former Director Arms Control and Disarmament Agency.

Vice Admiral James B. Wilson, former Polaris Submarine Captain.

Maj. General William F. Burns, JCS Representative, INF Negotiations, Special Envoy to Russia for Nuclear Dismantlement.

Rear Admiral Eugene J. Carroll, Jr., Deputy Director, Center for Defense Information.

Rear Admiral Robert G. James.

OTHER SCIENTIFIC EXPERTS

Dr. Hans Bethe, Nobel Laureate; Emeritus Professor of Physics, Cornell University; Head of the Manhattan Project's theoretical division.

Dr. Freeman Dyson, Emeritus Professor of Physics, Institute for Advanced Study, Princeton.

Dr. Richard Garwin, Senior Fellow for Science and Technology, Council on Foreign Relations; consultant to Sandia National Laboratory, former consultant to Los Alamos National Laboratory.

Dr. Wolfgang K.H. Panofsky, Director Emeritus, Stanford Linear Accelerator Center, Stanford University.

Dr. Jeremiah D. Sullivan, Professor of Physics, University of Illinois at Urbana-Champaign.

Dr. Herbert York, Emeritus Professor of Physics, University of California, San Diego; founding director of Lawrence Livermore, National Laboratory; former Director of Defense Research and Engineering, Department of Defense.

Dr. Sidney D. Drell, Stanford Linear Accelerator Center, Stanford University.

NOBEL LAUREATES

Philip W. Anderson.

Hans Bethe.

Nicolaas Bloembergen.

Owen Chamberlain.

Steven Chu.

Leon Cooper.

Hans Dehmelt.

Val F. Fitch.

Jerome Friedman.

Donald A. Glaser.

Sheldon Glashow.

Henry W. Kendall.

Leon M. Lederman.

David E. Lee.

T.D. Lee.

Douglas D. Osheroff.

Arno Penzias.

Martin Perl.

William Phillips.

Norman F. Ramsey.

Robert C. Richardson.

Burton Richter.

Arthur L. Schawlow.

J. Robert Schrieffer.

Mel Schwartz.

Clifford G. Shull.

Joseph H. Taylor, Jr.

Daniel C. Tsui.

Charles Townes.

Steven Weinberg.

Robert W. Wilson.

Kenneth G. Wilson.

FORMER SENIOR GOVERNMENT OFFICIALS AND ADVISORS

Ambassador George Bunn, NPT Negotiations and former General Counsel of ACDA.

Ambassador Jonathan Dean, MBFR negotiations.

Ambassador James E. Goodby, Ambassador to Finland and to U.S.-Russian Nuclear negotiations.

Ambassador Thomas Graham, Jr., Special Representative of the President for Arms Control, Non-Proliferation and Disarmament.

The Honorable Paul Ignatius, Secretary of the Navy.

The Honorable Spurgeon Keeny, Deputy Director of ACDA.

The Honorable Lawrence Korb, Assistant Secretary of Defense.

Ambassador Steven Ledogar, CTBT negotiations.

Ambassador James Leonard, Deputy U.N. Representative.

Jack Mendelsohn, senior arms control negotiator.

Lori Murray, Assistant Director of ACDA.

Ambassador Michael Newlin, Deputy Assistant Secretary of State for Export Controls and Policy.

Ambassador Robert B. Oakley, U.S. Ambassador to Pakistan.

Daniel B. Poneman, Senior Director, National Security Council.

The Honorable Stanley Resor, Secretary of the Army and Undersecretary of Defense for Policy.

The Honorable John Rhinelander, Legal Adviser to SALT I Delegation.

Elizabeth Rindskopf, General Counsel of CIA and National Security Agency.

Ambassador Robert Gallucci, DPRK Agreed Framework negotiations.

The Honorable Lawrence Scheinman, Assistant Director of ACDA.

Ambassador James Sweeney, Special Representative of the President for Non-Proliferation.

Ambassador Frank Wisner, U.S. Ambassador to India.

FORMER GOVERNMENT ADVISERS

Paul Doty.

Richard Garwin.

John Holdren.

Wolfgang Panofsky.

Frank Press.

John D. Steinbruner.

Frank N. von Hippel.

Mr. FEINGOLD addressed the Chair.
 The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. WARNER addressed the Chair.
 The PRESIDING OFFICER. The Senator from Virginia.

Mr. WARNER. Mr. President, I thought it was understood that we would alternate sides as we proceeded this morning.

Mr. REID. I would only say to my friend from Virginia, I am happy to alternate. The only thing is, you will have to speak less than we do. Your speeches will have to be shorter because you have less time. I spoke with the Senator from Arizona. What is the time now?

The PRESIDING OFFICER. The majority has 2 hours 53 minutes; the minority, 3 hours 2 minutes.

Mr. REID. So it has narrowed down to about the same time. Fine, we will alternate back and forth.

Mr. WARNER. The time—
 Mr. REID. Is very close to being equal.

Mr. WARNER. As an opponent to the treaty, I would like to proceed, Mr. President.

The PRESIDING OFFICER. Is that all right with the Senator from Wisconsin?

Mr. FEINGOLD. My understanding is, I would be next in line after the Senator from Virginia.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Virginia.
 Mr. WARNER. I thank the Senator from Wisconsin.

During the period of last week, a number of Senators sought to obtain from the President a letter addressing his views on the timing of a vote on this treaty. Over the weekend, in consultation with the White House staff, I learned that this letter would be delivered. It was delivered to the Senate leadership yesterday afternoon.

I shall now read it and place it in the RECORD:

DEAR MR. LEADER:

Tomorrow, the Senate is scheduled to vote on the Comprehensive Test Ban Treaty. I

firmly believe the Treaty is in the national interest. However, I recognize that there are a significant number of Senators who have honest disagreements. I believe that proceeding to a vote under these circumstances would severely harm the national security of the United States, damage our relationship with our allies, and undermine our historic leadership over 40 years, through administrations Republican and Democratic, in reducing the nuclear threat.

Accordingly, I request that you postpone consideration of the Comprehensive Test Ban Treaty on the Senate floor.

Sincerely,

BILL CLINTON.

Throughout this debate, the hallmark has been differing views, differing views by honestly motivated colleagues on both sides of the aisle. I am not suggesting everyone on this side, in other words, is opposed to the treaty, but the practical matter is, there seems to be a division along this aisle.

In addition, as recited by my good friend, the deputy leader of the Democrat side, the Senate has received communications from a wide range of individuals, again, on both sides of this issue. The Armed Services Committee held three consecutive hearings. Secretary Schlesinger came forward with a very clear statement in opposition to the treaty and expressed, on behalf of five other former Secretaries of Defense, the same viewpoint. That occurred immediately following the current Secretary of Defense, Secretary Cohen, appearing before the Armed Services Committee, together with General Shelton, and taking the view in support of the treaty. All through last week intermittently these communications came to the Senate in writing, orally or otherwise—former Secretary of State Kissinger, former National Security Adviser Brent Scowcroft, again, communicating their desire to see that the treaty not be voted upon at this time.

I mention that because of the seriousness of the treaty, one that lasts in perpetuity—theoretically, in perpetuity—asking this Nation to take certain steps with regard to our ability to monitor the effectiveness and the safety of our nuclear arsenal. To me, it is clear such a treaty should only be voted on when those types of conflicting opinions have been, as nearly as possible, resolved. The laboratory Directors, likewise, came before our committee; they are not involved in the political arena. But one after the other in testimony tried to indicate where they are in the test program. We are not there yet. It could be anywhere from 5 and, one even said, 20 years before the milestones now scheduled are put in place for this substitute scientific, largely computerized test program will take the place of the actual tests.

Against that background—and I speak only for myself—I have joined with Senator MOYNIHAN and, hopefully, others in preparing a Dear Colleague

letter, which will be circulated this morning, with the Senator from Virginia opposed to the treaty, prepared tonight to vote against it or tomorrow, whenever the case may be, and my distinguished colleague, the senior Senator from New York, who spent much of his lifetime in foreign affairs, a recognized expert, steadfastly in favor of the treaty and prepared to vote in support of it. I find on both sides of the aisle there are Senators of a like mind who believe that in the interest of national security, today is not the time to vote for that treaty.

The letter from the President, it was hoped by some, would refer to his belief as to the scheduling of when this treaty should next be addressed in terms of a vote by the Senate. It is clear; his last paragraph does not address that issue. He simply says: Accordingly, I request that you postpone consideration on the Senate floor.

Given that situation, it seems to me it is incumbent upon, hopefully, a majority of Senators, hopefully 25 or more from each side, to come forward and state that they firmly believe the final consideration of this treaty should be laid at a time beyond the current Congress and that final vote should not take place until the convening of the 107th Congress. The Senate at that time would review the entirety of the record. A new President will be in office, and the combination of a new President and his perspective, the Senate constituted, as it will be in the 107th, and that point in time is the critical moment for this Senate to determine the merits and demerits of this treaty to the extent that, through reservations and other means, changes could be brought about and then, if it is the desire of the majority of the Senate, to move towards a vote.

That, to me, is a reasonable course of action. Next year constitutional elections of the United States take place. We all are very familiar with the dynamics of that critical period in American history, particularly in the months preceding the election. Should this treaty be subjected to the rifts of the dynamics of an election year, given its importance to our national security? Clearly in this Senator's mind, I say no. My distinguished colleague from New York has joined me in the same conclusion. This country has exercised a leadership role in arms control for 40 years. Indeed, this treaty has—not in my judgment in its present form—in the minds of others a potential to be another milestone in our progress towards arms control and the reduction of the threat of nuclear weapons.

In fairness to all sides, would it not be wiser to delay the vote and make certain it is the consensus of a majority of this Chamber, before that decision is finalized today or tomorrow, the majority of this Chamber saying we

concur in the observation for a number of reasons, one of which clearly came before the Armed Services Committee, and that is, that the Intelligence Committee, on its own initiative, has initiated a new study of the capabilities of the United States to monitor low-level tests of actual weapons, should some nation, a signatory to this treaty or otherwise, decide to test live weapons.

We are at a crossroads in history which will affect this Nation for decades to come. What possible rush to judgment compels a vote tonight or tomorrow? Would it not be more prudent that such a vote now be by a majority of the Senate in support of the two leaders, Senator LOTT and Senator DASCHLE, both of whom have handled this matter, in my judgment, conscientiously, always foremost in mind the security interests of this country today, tomorrow, and the indefinite future? I salute both leaders.

That is my brief opening. I wish to continue and summarize what our committee did last week. We received over 15 hours of testimony from a wide range of witnesses, from the Secretary of Defense and the Chairman of the Joint Chiefs to current and former National Laboratory Directors and career professionals in the field of nuclear weapons. We also received letters from many public officeholders, former Secretaries of Defense, State, Secretaries of Energy, Chairmen of the Joints Chiefs, Directors of Central Intelligence, and former lab Directors on the merits and the pitfalls of the CTB Treaty. Other public officeholders came forward in favor, but there is a strong division.

I don't think anyone, the President or, indeed, the Senate, could have foreseen the outpouring of conscientious opinion, opinions directed solely in the best interests of this country, not politics, by these former officials. They are in the RECORD for all to see. These are people with decades of experience in national security. Their statements reflect honest disagreements, disagreements primarily with the stance taken by the President and senior members of his administration.

In my view, the body of facts that the Armed Services Committee has accumulated over the past several days clearly puts the arguments of many of the administration officials in serious question. We have learned we do not have the full confidence in the United States' technical capability to verify this treaty to the zero-yield threshold that President Clinton unilaterally imposed, more or less, on this country. And other countries can conduct military-significant live bomb tests at levels below our detection capability. That is the essence of it. We do not have all of the seismic equipment, in the judgment of the Intelligence Committee, in place and ready to meet the deadlines of this treaty so we could de-

tect another nation that desired to use live tests in violation of their commitments under this treaty.

We have learned that our nuclear weapons will, to some degree, deteriorate over time. That is pure science. The physical properties of the materials deteriorate over a period of time. We cannot guarantee the safety and reliability of our highly sophisticated nuclear weapons in perpetuity—always remember, in perpetuity. Testing is needed.

The Stockpile Stewardship Program is the concept of a substitute for the live testing that we have had these 50 years. That 50-year record of testing gives us the confidence today, and for a number of years forward, in the reliability and safety of our stockpile. But there is some point in time, due to the deterioration of weapons, and other factors, that we will have to shift to a new means of testing. The administration's proposal under this treaty is the Stockpile Stewardship Program. It is a computer simulation substitute for actual testing. The scientists tell us this will not be proven—this substitute—for perhaps 5, 10, maybe up to 20 years. I repeat, milestones are being put in place, but there is no certainty as to when, collectively, those milestones will constitute a system to replace actual testing. The estimates vary from 5, 6, 7 years, perhaps out to 20.

Yet we are being asked to ratify a treaty affirming that we shall never again, in perpetuity, actually test any of our nuclear weapons. We have learned the CTBT will do nothing—not a single thing—to stop proliferation by rogue nations and terrorists. Iraq and Iran will sit back and laugh. Right now, Iraq is defying the world over similar arms control agreements, similar U.N. sanctions, and the United Nations is entangled in what appears to be a hopeless debate over how to resolve the need to continue to monitor Saddam Hussein's program of weapons of mass destruction. A clear example of how the most well-intentioned international agreements have failed is right there, today.

Rogue nations can easily develop and field, with a high degree of confidence, a single stage device—a “dirty old bomb,” as they refer to it—without any testing. Ironically, the first weapon dropped by the United States was never tested with an actual test.

Many of my colleagues, again, honestly disagree on the conclusions, pointing out that reasonable people can examine the same body of facts and reach different conclusions. That is my grave concern. We should not be ratifying a treaty as long as reasonable doubt to that degree exists as to whether the treaty is in the national security interest of the United States. The stakes are far too high.

The Armed Services Committee began its hearings with a closed hearing, where we heard from career professionals and experts with decades of experience, from the Department of Energy, the National Laboratories, and the Intelligence Committee. Their testimony focused on recent facts—facts that were not fully known at the time this treaty was signed by the President some 2 years ago. Their assessment is they would have to go back and reexamine a lot of facts to determine the viability, or lack of viability, of the capability of this Nation to monitor low-level tests.

Much of that information we learned was developed over the last 18 months. Therefore, those facts were not available to the Congress or the President when the CTBT was signed in 1996. The information presented to the Armed Services Committee on Tuesday is highly classified and, of course, cannot be discussed in open session. But one fact is very relevant. Because of disturbing new information, the Intelligence Committee—on its own initiative—decided to revisit and update the 1997 NIE, national intelligence estimate, on the U.S. ability to monitor the CTBT. I have been informed, as have other members of the committee, that it will take until next year to complete that work. That is a clear, credible basis for not moving forward today or tomorrow on a vote.

I advised Secretary Cohen and General Shelton on the following day, Wednesday morning, when they testified before the Armed Services Committee that they had the opportunity to make their case for this treaty before the elected representatives of the American people, and that they did. I believe the burden is on the administration to prove—maybe beyond a reasonable doubt—that ratification of this treaty is in the national security interest of our Nation. They simply did not make that case. And I say that with all due respect to my good friend and former colleague, Secretary Cohen.

We are being asked to give up—permanently—our tried and true, proven ability to maintain the safety and reliability of our nuclear stockpile and to rely instead on a computer simulation and modeling capability that will not be fully developed or proven for many years—if at all. We are being asked today to put at some degree of risk our nuclear deterrent capability, in exchange for the promise that we may have a way to adequately certify that capability at some uncertain future date. The question before the Senate is, Can we afford to take such a gamble? This Senator believes the answer is no.

For more than 50 years, one of the top national security priorities of every American President has been to maintain a credible nuclear arsenal and deterrent to aggression against ourselves and our allies, and it has

worked. The credibility of the United States in the world is a direct reflection of our military capability. If that credibility is ever called into question by our inability to ensure the safety and reliability of nuclear weapons—a vital segment of our military capability—then we have done our Nation a great disservice. The stakes for this debate are very high.

For 50 years, our nuclear umbrella—the deterrent provided by the U.S. nuclear arsenal—has kept peace in Europe. Unquestionably, the threats in Europe following World War II were deterred by this capability. Yet it is that very deterrent that could be jeopardized by this treaty. Dr. Schlesinger stated it clearly when he asked, “Do we want a world that lacks confidence in the U.S. deterrent or not?”

I hope all Members will take the time to examine carefully the body of facts that the Armed Services Committee and, indeed, the Foreign Relations Committee have accumulated and recorded for Senators.

Simply put, the CTBT, at this time, jeopardizes our ability to maintain the safety and reliability of our nuclear arsenal—perhaps not right away but almost certainly over the long run. According to Dr. James Robinson, Director of Sandia National Laboratory: “To forego testing is to live with uncertainty.”

Much has been said about what other Presidents have done. They have all examined the possibility of entering into some type of international treaty. But no previous President has ever opposed a test ban of zero yield and unlimited duration. President Eisenhower insisted that nuclear tests of less than 4.75 kilotons be permitted and, in fact, continued low-yield testing through his administration’s test ban moratorium. President Kennedy terminated a 3-year moratorium on testing when the adverse consequences of the moratorium were realized, and he declared that “never again” would the United States make such a mistake. President Kennedy then embarked on the most aggressive series of nuclear tests in the history of the U.S. nuclear weapons program. President Carter also opposed a zero-yield test ban while in office.

To have an effective nuclear deterrent, we must have confidence in the safety and reliability of our nuclear weapons. These weapons are the most sophisticated designs in the world. It is a certainty that, over time, these arsenals, high explosives, and electronic components contained in these weapons will experience some level of deterioration. That is simple science. The nature of our nuclear weapons program over the past five decades provides little practical experience in predicting the effects of these changes.

What do we say to our sailors, soldiers, airmen, and marines who live and work in close proximity with these

nuclear weapons? What do we say to the people of our Nation, and indeed nations around the world, who live in the vicinity of our nuclear weapons? These are weapons that are stored in various locations around the world, that rest in missile tubes literally several feet away from the bunks of our submarine crews, that are regularly moved across roads and airfields around the world. How can we take any action which in any way jeopardizes or calls into question the safety of these weapons? As Dr. Bob Barker, former Assistant to the Secretary of Defense for Atomic Energy, told the Armed Services Committee on Thursday, “to leave in place weapons that are not as safe as they could be is unconscionable.”

History tells us that weapons believed to be reliable and thoroughly tested, nevertheless, develop problems which, in the past were only discovered, and could only be fixed, through nuclear testing. As President Bush noted in a report to Congress in January 1993: “Of all U.S. nuclear weapons designs fielded since 1958, approximately one-third have required nuclear testing to resolve problems arising after deployment.” In three-quarters of these cases, the problems were identified and assessed only as a result of nuclear testing, and could be fixed only through testing. Let me emphasize, most of these problems were related to safety.

The Clinton administration has proposed remanufacturing aging weapons rather than designing and building new ones. The problem is that we simply don’t know if this new approach is possible. Almost every weapons designer we have heard from over the past 3 years has raised concerns with any attempts to change components, such as plutonium and high explosives, in the heart of the weapon. Many of the materials and methods used in producing the original weapons are no longer available. To assure that the remanufactured weapons work as intended most agree the new weapons would have to be validated through underground nuclear testing.

Every system will become obsolete at some point in time—if for no other reason, for deterioration due to aging. CTBT will not allow us to replace aging or unsafe systems in the future.

Supporters of the treaty, argue that if a problem with the stockpile is identified, the President can always exercise “Safeguard F” and withdraw from the treaty and test. The military leaders and the three lab directors have all conditioned their support for CTBT on the guarantee that the President would exercise “Safeguard F” and withdraw from the treaty if a problem develops with our nuclear stockpile. But how realistic is that? It is highly unlikely that this safeguard would ever be used by the United States to withdraw from

the treaty even if serious problems should occur in the stockpile. Has the United States ever withdrawn from a treaty? We are struggling today under the weight of the ABM Treaty which was signed in 1972 with a nation that no longer exists: withdrawing from the treaty is simply without precedent.

And what would the international ramifications be of such a withdrawal from the treaty? Wouldn't it be worse to withdraw years down the road, after other nations have presumably followed our lead, than to simply not ratify in the first place?

In addition, the notion of being able to test quickly in an emergency is unrealistic. Even if the United States should decide to withdraw from CTBT, the lab directors report that it would take at least 2 to 3 years of preparation before a test could be conducted, and our testing infrastructure continues to deteriorate. By withdrawing, the United States would be announcing to the world that we have such a serious problem with our nuclear deterrent that we have lost confidence in the reliability of our nuclear stockpile, and that we must initiate a program to repair or replace the weapon or weapons and conduct tests to confirm the results. Such an action would be highly destabilizing.

Proponents of the CTBT have asserted that the treaty will have no adverse impacts on U.S. national security, that we will be able to confidently maintain and modernize U.S. strategic and theater nuclear forces to the extent necessary without ever conducting another nuclear explosive test. In fact, the CTBT will force the United States to forgo any number of important initiatives that may be required to ensure the long-term viability and safety of our strategic and theater nuclear deterrent forces.

The CTBT will lock the United States into retention of a nuclear arsenal that was designed at the height of the cold war. Many of the nuclear systems that we developed to deter the Soviet Union are simply not suited to the subtle, and perhaps more difficult, task of deterring rogue states from using nuclear, chemical, or biological weapons. Such deterrence will require the United States to possess nuclear weapons that pose a credible threat to targets such as rogue state biological weapon production facilities that may be located deep underground in hardened shelters. At the same time, for such weapons to be credible deterrents, they must not threaten to create significant collateral damage or radioactive fallout. Such weapons do not exist today in the U.S. arsenal.

I am also concerned that this treaty's zero yield test ban is not verifiable. It is difficult, if not impossible, to detect tests below a certain level. And testing at yields below detection may allow countries, such as

Russia, to develop new classes of low-yield, tactical nuclear weapons. This possibility makes recent statements by senior Russian officials claiming that they are now developing tactical nuclear weapons especially troubling. For example, this August, the Russian Deputy Minister for Atomic Energy, Lev Ryabev, stated that a key Russian objective was the development of a tactical nuclear system. This April, President Yeltsin reportedly approved a blueprint for the development and use of non-strategic nuclear weapons. Would we be able to detect tests of such tactical weapons? The development of any nuclear weapon, regardless of its yield, is militarily significant to this Senator.

Further, countries that want to evade detection can do so by masking or muffling tests in mines, underground cavities, salt domes, or other geological formations. I am convinced that the United States and the international community cannot now, and will not in the foreseeable future, be able to detect such cheating or testing below a certain level.

Proponents of the CTBT argue that the International Monitoring System established under the treaty will put in place capabilities exceeding those that the United States and its allies can field today. These monitoring sites will be owned and operated by the host countries, which I believe calls into serious question the reliability of the information collected and, thus, its value to our ability to detect a nuclear test.

Proponents of CTBT also argue that although the treaty may not be verifiable through detection methods, the on-site inspections make the CTBT verifiable. I disagree. The treaty requires an affirmative vote of 30 of 51 members of the Executive Council to initiate an inspection. The likelihood of obtaining that number, which could include such countries as Iran and North Korea, is remote, if not impossible. Further, the United States would have to present a case to the Executive Council which would most likely compromise sensitive U.S. intelligence sources and methods. The timelines imposed by the treaty for on-site inspections permit considerable coverup and deterioration of evidence. In addition, there is no guarantee that Americans will be on the inspection teams. In fact, any state is explicitly permitted to block inspectors from countries it does not like. The treaty gives the inspected state the final say in any dispute with inspectors.

Finally, ambiguities in the CTBT may allow other nations to legally circumvent the clear intent of the treaty. The treaty does not define what constitutes a nuclear test. However, President Clinton has said that the United States will interpret nuclear test to mean any nuclear explosion, thus all tests are banned unless they are zero-

yield. However, if other signatory nations interpret a less restrictive definition, they could conduct very low-yield tests and argue that they are not violating the language of the treaty.

I am concerned that while the United States would adhere to the CTBT, thereby losing confidence over time in our nuclear deterrent, other countries would capitalize upon U.S. deficiencies and vulnerabilities created by the CTBT and violate the treaty, by escaping detection and building new weapons.

I believe the risk the CTBT poses to U.S. national security by far outweighs any of the benefits that have been identified.

Mr. President, I shall reengage in this debate as the day progresses. I will pursue with Senator MOYNIHAN the final presentation of our Dear Colleague letter in the hopes that a number of Senators will see the wisdom in giving the leadership of the Senate the support they deserve should a decision be made not to go forward today. That decision should embrace very clearly that it would be in the Senate's interest, in the Nation's interest, and our security interest to revisit this treaty in terms of a final vote in the balance of this Congress.

I yield the floor.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

Mr. FEINGOLD. I thank the Chair.

Mr. President, I rise today in strong support of Senate advice and consent to the ratification of the Comprehensive Nuclear Test Ban Treaty.

As a member of the Senate Committee on Foreign Relations, I have advocated for consideration of this treaty since President Clinton submitted it to this body for advice and consent on September 22, 1997. Now, more than 2 years later, this important treaty is being considered on the Senate floor. While I am pleased that we are having this debate, I am concerned about the manner in which we reached this point. I regret that the Foreign Relations Committee, of which I am a member, had only one day of hearings on this important arms control agreement and that the committee did not consider and mark up a resolution of ratification.

I am concerned that this debate is too limited in duration and scope. This is obviously serious business. And I hope that the manner in which this treaty was brought to the floor does not doom it to failure. This treaty should be fully debated on its merits. And this body should have the opportunity to offer any statements, declarations, understandings, or conditions that we deem necessary. But this treaty should not be defeated simply because the Senate has backed itself into a corner in which the choice is to vote up or down now without the option to postpone this important vote in

favor of further consideration. Some of our colleagues have expressed their desire for further consideration. But they have said that if they are forced to vote today, they will oppose this treaty—not necessarily because they do not support the treaty, but rather because they feel they cannot yet fully support it without further study.

I think putting Senators in this position is an irresponsible course of action.

As my colleagues know, I support this treaty. And I will vote in favor of it today should it come to that. But I hope we will consider the consequences of defeating this treaty, not on its merits, but because of the political box in which we find ourselves. This treaty must not fall victim to politics. The consequences of its defeat will be felt from Moscow to New Delhi to Beijing to Baghdad. And this body, the greatest deliberative body in the world, would be sending the message that we did not want to spend more time on one of the most important issues facing the world today.

We do live in dangerous times, Mr. President. Weapons capable of mass destruction have replaced more conventional weapons in our world. New threats continue to emerge. But we have the power to stem the tide of nuclear proliferation. Perhaps we cannot stop it completely. But we can make sure that the nuclear arms race is stopped in its tracks and we can make it extremely difficult for those with nuclear aspirations to develop a weapon in which they can have high confidence.

And we should do everything in our power to make the world safer for future generations. And if that includes delaying the vote on this treaty, then we should swallow our political pride and do that.

As a number of my colleagues have already said, both in committee and on this floor, the idea of a nuclear test ban dates back to the Eisenhower administration. For more than 40 years, Presidents of both parties have advocated for such a treaty.

In a speech delivered on June 10, 1963, President John F. Kennedy discussed his support for the negotiation of a comprehensive test ban treaty. He said—and I quote:

The conclusion of such a treaty, so near and yet so far, would check the spiraling arms race in one of its most dangerous areas. It would place the nuclear powers in a position to deal more effectively with one of the greatest hazards which man faces in 1963, the further spread of nuclear arms. It would increase our security—it would decrease the prospects of war. Surely this goal is sufficiently important to require our steady pursuit, yielding neither to the temptation to give up the whole effort nor the temptation to give up our insistence on vital and responsible safeguards.

Mr. President, those words are as relevant today as they were when Presi-

dent Kennedy spoke them 36 years ago. Nuclear weapons are still one of the greatest hazards on the planet. And they have been joined by chemical, biological, and other weapons of mass destruction. President Kennedy spoke from the perspective of the cold war and the still escalating arms race with the Soviet Union. Now, in 1999, the cold war is over and the Soviet Union is no more. But we are on the brink of another nuclear arms race, this time in south Asia. India and Pakistan are watching, Mr. President. And we have the opportunity to end their nuclear aspirations once and for all. Or to give them the cover they need to continue testing.

We have the opportunity today at long last to become a party to a comprehensive nuclear test ban treaty that will both stop the nuclear arms race in its tracks and maintain our option to withdraw from its provisions if our national security is threatened.

I hope that will be our paramount consideration in the coming hours as we decide whether to put this treaty up for a vote today or tomorrow.

Mr. President, as many of my colleagues have noted throughout this debate, there are many reasons why the United States should become a party to this important treaty. I will address three of them here.

First, this treaty will allow the United States to maintain our strong nuclear deterrent. This treaty does not require the parties to dismantle their existing nuclear stockpiles. It does not prevent them from maintaining those stockpiles through scientific means. Rather, this treaty prohibits further nuclear testing. The United States has not conducted any nuclear tests for 7 years, and the administration has testified that we have no intention of performing any further tests. The Departments of Defense and Energy already have a substantial database of information on the more than 1,000 nuclear tests that we have already performed. And this information has been the basis for the development of the Stockpile Stewardship Program, which the high-ranking administration officials have testified is an effective mechanism for maintaining the safety and reliability of our nuclear arsenal.

Second, this treaty will help to create a worldwide nuclear status quo. Parties to the CTBT will be unable to conduct nuclear explosive tests to improve their existing weapons or develop stronger ones. This means that the nuclear arms race will be literally frozen where it is. This is beneficial to the United States for several reasons. It will allow us to maintain our nuclear superiority. It will protect us from the threat of stronger weapons in the future. And, in fact, it ensures that we will have the dubious distinction of having won the nuclear arms race.

The third point in favor of this treaty I will make is this: the CTBT is ef-

fectively verifiable. Some have argued that this treaty is not verifiable. It seems that argument echoes in these halls every time we debate an arms control treaty. But, again, that argument rings hollow. Verification is a tricky thing. All treaties, including arms control treaties, are largely based on good faith among the parties to them. Good faith in the sense that the parties who have ratified the treaty have promised to comply with the treaty's provisions. Collectively, the parties have agreed to a set of provisions, in the case of the CTBT to not perform nuclear tests. Alone, a country can decide to no longer perform nuclear tests—as the United States has already done—but no other nation knows for sure if that country is living up to its promise.

Under a multilateral treaty such as the CTBT, all parties have agreed to the provisions and are subject to a verification regime that otherwise would not exist. The CTBT says that if one party to the treaty has evidence that a test has occurred, that party can request an onsite inspection. This inspection will occur if 30 of the 51 members of the CTBT's Executive Council agree that the evidence warrants such an inspection. This type of onsite inspection cannot occur outside the CTBT regime, Mr. President. And this inspection will allow the parties to the treaty to obtain information that cannot be obtained outside the treaty regime.

No one here will claim that any treaty is 100 percent verifiable or that some countries may try to cheat. But the Pentagon has said that this treaty is effectively verifiable. And that is the key. The International Monitoring System created by this treaty includes 230 data gathering stations around the world in addition to those already operating in the United States. Last week, Secretary of Defense William Cohen told the Senate Armed Services Committee that “the information collected by these sensor stations would not normally be available to the U.S. intelligence community.” In addition to this enhanced capability, the United States is also permitted, under the provisions of the treaty and in accordance with international law, to use our own national technical means to detect nuclear tests.

Mr. President, some people say that, because the United States has already made the decision not to do any further nuclear testing—and indeed that we have not tested in seven years—that this treaty is unnecessary. They claim that the CTBT merely reinforces what we have already done and that there is no real benefit to our ratification. In fact, as many of my colleagues have already addressed during this debate, and as I have already noted, there are many benefits to this treaty. We retain our leadership in the arms control

arena. We maintain our nuclear superiority. And, importantly, we gain the ability to request and participate in onsite inspections of suspected nuclear testing abroad. And, if the President is unable to certify that our nuclear arsenal is sound, we have the option to withdraw from the treaty.

Mr. President, in urging my colleagues to support this important treaty, I will again quote President Kennedy:

The United States, as the world knows, will never start a war. We do not want a war. We do not now expect a war. This generation of Americans has already had enough—more than enough—of war and hate and oppression. We shall be prepared if others wish it. We shall be alert to try to stop it. But we shall also do our part to build a world of peace where the weak are safe and the strong are just. We are not helpless before that task or hopeless of its success. Confident and unafraid, we labor on—not toward a strategy of nuclear annihilation but toward a strategy of peace.

Thank you, Mr. President.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. WARNER. Mr. President, I yield to the Senator from Arizona such time as he may consume.

The PRESIDING OFFICER. The Senator from Arizona.

Mr. KYL. Thank you, Mr. President.

Mr. President, a number of us have concluded that we cannot support ratification of the CTBT, that it will be defeated. But some have urged that we put the vote off out of concern that rejection would send an undesirable message to the world.

I believe, however, that we should vote precisely because the world would get a desirable message that the Senate took a stand that treaties such as this must meet at least minimum standards for sensible arms control. The CTBT fails that test. It is a sloppy, altogether substandard piece of work, and it deserves rejection.

Our colleague, DICK LUGAR, opposes the CTBT ratification, as he has explained, because he does not believe the treaty is of the same caliber as arms control agreements that have come before the Senate in recent decades. He cites two of the CTBT's many deficiencies: "an ineffective verification regime and a practically non-existent enforcement process."

Contrary to what treaty supporters have argued, the CTBT's rejection would strengthen the hands of U.S. diplomats on such matters in future negotiations. When they insist on more effective provisions, citing the need to satisfy a rigorous U.S. Senate, their warnings would become credible and influential. Such warnings would help free the United States from having to go along with wrong-headed treaty terms dictated by countries that lack U.S. responsibilities around the world.

I note that as a good example of our negotiators changing their position

from that originally supported by the administration to go directly to the heart of key objections to this particular treaty. As you know, no President had ever sought a zero-yield test ban treaty in perpetuity. In this case, the Joint Chiefs of Staff argued that we should not have such a treaty.

The original position of the administration in the negotiations was to grant the United States an option without having to invoke the supreme national interest clause to retire from the treaty after 10 years and not to insist upon a zero-yield but, rather, to permit low-yield, what are called hydronuclear tests. Over time, our negotiators' position was undercut, and in the end, according to the very people who negotiated the treaty, in order to reach an agreement with other countries, the United States conceded on those and other important points. Those are two of the critical deficiencies in this treaty.

By rejecting the treaty now, the Senate would strengthen the hands of our future diplomats who negotiate these arms control agreements to enable them to make the point to their counterparts that the United States is serious about treaties at least achieving minimal standards; we consider these to be the kinds of minimal standards that are necessary to bind the American people; and those negotiators would know that Senate ratification would not occur unless the terms were as proposed by the United States.

As I said, no other President ever supported a zero-yield treaty, let alone one that would bind the United States forever, and neither should the Senate.

If we proceed today to reject the CTBT, future U.S. negotiators will be more inclined to seek the Senate's advice before the deal is finalized and the administration demands our consent. This will serve the U.S. national interests in various ways.

First, the Senate was never intended to be a rubber stamp, approving any ill-advised treaty negotiated by an administration. Our constitutional duty in treaty-making is to perform the equivalent of quality control. Under the Constitution, the Senate's role is of equal stature with the President's. We in the Senate are entitled—indeed, we are obliged—to second guess the President's national interest calculations regarding treaties.

There would inevitably be complaints from abroad, including from friends, if we upset the CTBT apple cart. But that unpleasantness would be minor and transitory, especially in light of the permanent harm the CTBT would do to our national security. The embarrassment of the President for buying into such a flawed treaty in the first place is not desirable, but the Senate cannot avert it at any price.

Consider again Senator LUGAR's words:

[The CTBT] is problematic because it would exacerbate risks and uncertainties related to the safety of our nuclear stockpile.

Those are the stakes, and they are serious. That crucial observation should put into perspective the issue of likely complaints from foreign foes and friends.

The Senate must fulfill its constitutional duty to ensure that treaties meet at least minimum standards. We do the Presidency no favors by shirking, and we do the Senate and the Nation harm if we accede to the President's diplomatic recklessness simply to spare him the chore of mollifying the other states that forged the flawed treaty.

A query to my colleagues who are interested in delaying this vote to avoid the embarrassment of rejecting a treaty negotiated by the administration: Will the Senate defer to the President on the Kyoto Global Warming Treaty or the ABM multilateralization or demarcation treaties?

Some administration spokesmen have used the offensive argument that Senate rejection of the CTBT would be a message to the world that we are not serious about arms control. To the contrary, rejecting this treaty will help establish that we demand real arms control—not the show, not the empty symbols, not the flimflam treaties that cannot accomplish their purposes. In rejecting the CTBT, we will be asking the world to join in real antiproliferation measures, such as enforcement of the nonproliferation treaty which Russia, China, and North Korea violate every time they spread nuclear weapons technology.

I quote again from Senator LUGAR:

If a country breaks the international norm embodied in the CTBT, the country has already broken the norm associated with the nonproliferation treaty.

Mr. President, that is because 185-some nations have agreed not to possess these nuclear weapons, except for the nuclear powers. The testing is simply a redundant violation of the possession in the first place, which is already a violation of the NPT. So this treaty won't accomplish its minimal objective.

Second, enforcement of the United States resolutions requiring inspection of Iraq: It would be very helpful if our allies would help in this very meaningful and important activity rather than undercutting the United States at every turn.

Again, Senator LUGAR hit the point squarely:

The CTBT verification regime seems to be the embodiment of everything the United States is fighting against in the UNSCOM inspection process in Iraq . . . [which is] best not repeated under the CTBT.

Third, perhaps we could get their support in our efforts to free U.S. policy from the dead hand of the ABM Treaty and to deploy missile defenses.

These are real, meaningful actions against the proliferation of weapons of mass destruction rather than empty symbolic gestures.

In asking the Senate to postpone the vote on this treaty until he has the votes, the President is asking, first, to spare him personal embarrassment; and, second, to give him a chance to bind the United States to a treaty that most do not think should ever go into force. The CTBT will not improve with age.

Most Senators would have been content never to have voted on the treaty. But the President has now denied the Senate that option. He will not agree to forbear demanding consideration of the treaty next year when he hopes to have the votes to pass it. Republicans have not politicized this debate, but it is clear that unless we defeat this treaty now, it will be a political issue next year when allegedly changed circumstances—created, for example, by a new test by India or Pakistan—will give the President the pretext to revive the debate.

It has become clear that the assurances we may now get from the President and our Democratic colleagues will not be the ironclad commitments we recently agreed were necessary to induce the Senate to defer this vote. Therefore, to avoid the President politicizing the issue next year, we should vote now.

Sometimes it is necessary to say or do the right thing and just let the chips fall where they may. Ronald Reagan knew he would ruffle lots of foreign feathers—including some of our respected allies—when he called the Soviet Union an evil empire and when he stood his ground against Gorbachev in Reykjavik in favor of strategic defense. These messages he sent were criticized by many as disruptive. They were sound. They served our national interests and the interests of decent people around the world, and history has judged them favorably.

The Senate now has a chance to demonstrate strength and the good sense worthy of Ronald Reagan. If we do it, we will be flouting much conventional thinking, but we will, in fact, enhance our Nation's diplomatic strength, protecting our national security and vindicating the wisdom of America's founding fathers who assigned to the Senate the duty to protect the country from ill-conceived international obligations.

Let the Senate vote to reject the CTBT.

The PRESIDING OFFICER (Mr. CRAPO). The Senator from Nebraska.

Mr. KERREY. Mr. President, in the waning days of his administration, President Eisenhower proposed a test ban treaty to end all nuclear tests in the atmosphere, in the oceans, and under the ground. Nearly four decades later, the Senate stands on the verge of

a vote on ratification of the Comprehensive Test Ban Treaty. I will vote in favor of ratification. I regret the move to postpone a vote because I am of the firm conviction this treaty will help end the proliferation of nuclear weapons and increase the safety of the American people.

President Eisenhower proposed the test ban having recognized the increasing danger posed by nuclear weapons. At that time, the threat was very real. The American people had a vivid understanding of the devastating consequences of nuclear weapons.

Those of us in our fifties remember the threat and the fear that we had as children—the duck and cover drills, the constant reminders of the devastation that a single nuclear weapon could produce to our cities and to our communities. In many ways, the problem we have today comes from our success because the fear we once had has been displaced by a false sense of complacency, a sense of security that, in my view, is not justified, given the facts.

I would like to illustrate this danger by a realistic scenario, in my view, with a single Russian nuclear weapon. It is possible for a small band of discontented or terroristic members of either the Russian society or some other nation to raid a silo of Russian missiles in the Russian wilderness. Soldiers who are poorly trained, sparsely equipped, and irate at not having been paid in a year are easily overtaken or are willing to cooperate.

Let's pick one city to illustrate the damage. I, again, call to my colleagues' attention that this kind of game playing, this kind of example was quite common as recently as 10 years ago. But today, when you ask what kind of damage could occur as a result of a single nuclear blast, you are apt to have people scratching their heads, wondering what could happen. So let me take Chicago as an example.

First of all, unlike many of the other threats in the world, if a rocket left Russia, it would arrive in Chicago within an hour, probably taking a trajectory over the top of the world across the Arctic pole. It would detonate in Chicago within an hour, and on a bad day it would hit a target within a few hundred yards off Lake Michigan.

We spent a great deal of time assessing the danger of the nation of China. Their missiles are not connected to their warheads. Their warheads are disconnected; they are not together. It would take them several days and they are not targeted with the accuracy and would not arrive with the same swiftness as an unauthorized or accidental launch coming from Russia.

The first effect of the blast would be the nuclear flash. The air would be heated to 10 million degrees Celsius. The blast would move out at a few hundred kilometers a second and its heat would be sufficient to set fire to any-

thing combustible at a distance of 14 kilometers. People within 80 kilometers would be blinded. The blast effect would follow. It would travel out from ground zero. Within 3 kilometers, those who had not already been killed would die from this percussive force.

The details of this kind of a blast needs to be understood by the American people as this debate goes forward, because the good news of the end of the cold war has been replaced with the bad news that we are increasingly at risk of individuals or nonnation state people who choose to do damage to the United States of America and do not care if they die in the execution of their mission. They are willing to attack the United States of America and they are willing to take American lives without regard to the fact that they may die in the execution of their mission.

A single Russian nuclear weapon launched accidentally, or a single nuclear weapon assembled by some rogue nation and delivered by whatever the means to the United States of America, would do more damage than any other threat we currently have on the horizon. A single Russian submarine that was taken over by a similar sort of dissident faction could launch 64 one-hundred-kiloton weapons at the United States. I do not come here to alarm anybody about this. I come simply to remind people that nuclear weapons are still the only threat that could kill every single American. It would not take thousands to bring the United States of America to its knees. It would not take the kind of total attack we once feared from the Soviet Union to bring America from being the most powerful economic and military force on the Earth to being somewhat short of No. 1, not only putting us at increasing risk but putting the rest of the world at risk as well.

CTBT is by no means the only thing we must do in order to reduce the risk of proliferation. I would like to go through a few ideas prior to talking about both our capacity to verify and the confidence I have that we can maintain our stockpile without the need to test.

First, we have to maintain our intelligence capabilities: our ability to collect intelligence, to process, to disseminate, to deliver that intelligence to warfighters is far and away the best in the world. Talk to our allies in Kosovo, in Bosnia, in Desert Storm; talk to any of those whose lives were at risk and were allied with the United States of America in a military effort and they will tell you our intelligence collection and dissemination capability gave us the capacity to do the impossible.

Our intelligence agencies, from time to time, make very highly publicized mistakes. Unfortunately, the publicity given to those mistakes gives some a

lack of confidence in our capability of doing our mission. That lack of confidence is misplaced. We are an open society. As a consequence, we tend—correctly so—to examine the things we do when we make mistakes. Unfortunately, at times it produces a situation where we are afraid of doing things because we are worried we are going to make a highly publicized mistake and therefore that mistake is going to ruin our career or make it difficult for us to advance. As a consequence, we sometimes are a little too cautious.

Americans should not suffer the illusion we currently have the intelligence capacity to know everything that is going on in the world; we simply do not. Indeed, we should not. We are not, as well, allocating enough resources, in my view, to make certain policymakers of the future are informed so conflicts that might occur can be avoided and so nuclear threats can be confronted before they emerge to be challenges.

The second tool that must be maintained to confront the emerging nuclear threat is not only a strong military but an intent to use that military to meet any individual or nation state that threatens the United States of America. Our military is the envy of the world. While we must avoid the temptation of using our military forces in situations not vital to U.S. interests, we must also continue to maintain the will to use military force in instances in which our national security is at risk.

The third tool is national missile defense. I support the creation of a limited national missile defense designed to protect the United States of America from rogue state ballistic missile launches and accidental launches. While the success of the recent test of a prototype missile defense system demonstrates that limited national missile defense is possible, we must also realize it is not a panacea for the dangers we will confront.

The fourth tool in our effort to secure the post-cold-war peace is further reductions in the American and Russian nuclear arsenals. I have argued on the Senate floor previously the President should immediately take bold action to restart the arms control process. If we do not drastically reduce U.S. and Russian nuclear arsenals, the danger of their accidental use or proliferation will increase exponentially. I recognize that deep reductions—while decreasing the chance of unauthorized or accidental launch—could actually increase the danger of material proliferation. Therefore, any such parallel reductions in our nuclear forces must include arrangements and a U.S. commitment to provide funding to secure and manage the resultant nuclear material. This is the fifth tool. We are fortunate we will not begin from scratch on this problem. We can build on one of the

greatest acts of the post-cold-war statesmanship, the Nunn-Lugar Cooperative Threat Reduction Program.

The final piece of the nuclear safety puzzle is the Comprehensive Test Ban Treaty. I support the CTBT because I believe it will enhance U.S. national security, reduce nuclear dangers, and keep the American people safe. Let me explain how.

First, a fully implemented CTBT will all but halt the ability of threshold states from establishing an effective and reliable strategic nuclear force. The inability of nations such as Iran and North Korea to conduct nuclear tests will make it much less likely for them to become nuclear powers. Along the same line, the inability of existing nuclear states to conduct further nuclear tests will impede, if not stop, their efforts to make technological advances in yields and miniaturization, advances already achieved by the United States.

Bluntly speaking, we have the most effective and deadly nuclear force in the world. Therefore, to maintain our existing nuclear edge, it is in our interest to ratify the CTBT and to halt the nuclear development advancement of other nations.

In addition, we all have experienced coming to this Chamber to vote on a sanction imposed upon an individual nation as a consequence of us judging correctly that that nation poses a threat and, in many cases, a potential nuclear threat to the United States of America.

We struggle with that vote because we know a unilateral sanction by the United States of America will oftentimes be used by our allies as a means for them to capture the market share of some product we were selling to that nation. With this treaty, it is far more likely the Security Council will support multilateral sanctions that will enable us to get the desired effect without us having to suffer adverse consequences as a consequence of unilateral sanctions.

In the post-cold-war era, nuclear weapons have become the Rolex wristwatch of international security, a costly purchase whose real purpose is not the service it provides but the prestige it confers. Ratification and implementation of the CTBT is in our national security interest precisely because it will help slow the expansion of the nuclear club and make it more difficult for nations to acquire these deadly weapons.

Opponents of the CTBT focus their criticisms on two main points: verifiability of the treaty and the safety of our nuclear stockpile. Let me address each of these issues separately.

First, we can effectively monitor and verify CTBT. I purposely say “effectively monitor and verify” because absolute verification is neither attainable nor a necessary standard. But it is

the standard that some have attempted to establish as a benchmark for ratification. No treaty is absolutely verifiable.

My support for this treaty comes from my firm conviction that by using existing assets, the United States can effectively monitor and verify this treaty. I base my convictions on the testimony of Gen. John Gordon, Deputy Director of Central Intelligence, and on the briefings on this topic received by the Intelligence Committee over the years and, most important, the performance of those men and women who work in a variety of agencies whose task it is to collect, to process, to evaluate, to analyze, and to disseminate intelligence to national customers, as well as war fighters who are defending the people of the United States of America.

The United States has the capability to detect any test that can threaten our nuclear deterrence. The type of test that could be conducted without our knowledge could only be marginally useful and would not cause a shift in the existing strategic nuclear balance. In addition, the United States has the capability to detect the level of testing that would be required for another country to develop and to weaponize an advanced thermonuclear warhead.

Our intelligence community is the best in the world. This gives us an enormous lead over every other signatory. Public disclosures of intelligence community problems may have shaken confidence in our intelligence capabilities, but let me assure my colleagues that their confidence should not be shaken. U.S. intelligence has the ability to know what is occurring around the world regarding the development of nuclear weapons. It is our intelligence community that largely gives Secretary Cohen and General Shelton their confidence to say the treaty should be ratified because it is in our national interest to do so.

I will briefly describe how we will know what is happening when someone tries to cheat. I will use all caution to make certain I give away nothing that will provide our enemies with indications of what our sources or our methods are, but I urge colleagues who doubt this to get full briefings on what our collection capability is and what we are able to do to determine whether or not somebody is in violation of this treaty.

I will briefly describe, as I said, and because the existence of this highly secretive organization, the National Reconnaissance Office, has finally been declassified—we are able now to admit that from space, the United States can see you and can gather signals intelligence. I urge colleagues to get a full briefing on what the NRO can do in a classified fashion. I believe my colleagues fully understand the significance of what I just said.

Every part of the globe is accessible from space. There you will find satellite reconnaissance either watching or collecting electrical signals from those who would do damage to the United States of America. That is a tremendous capability that no one else can equal. This global accessibility from space is just one feature of a very complicated and complex system of collecting and analyzing information.

The National Security Agency is a second feature. They exploit foreign communications. That is the official unclassified description of its mission: NSA exploits foreign communications. Recently, Hollywood has enjoyed making a couple of movies showing how NSA is a threat to our Nation. Nothing could be further from the truth. It is a Hollywood make-believe story that is completely inaccurate and false. NSA is not a threat to us. If you are an unfriendly foreign government wanting to cheat on CTBT, NSA is certainly a threat to you.

To quote from their official unclassified agency description: "They are on the cutting edge of information technology." They know what is going on in the explosion of information technology.

There is a third area beyond NSA, and that is called MASINT. It is a pretty strange term for most people. It means measurement and signatures intelligence, the recognition that in addition to being seen and being heard, objects, especially electronic objects, have other signatures. Like your personal signature—if we collect enough information about someone's signature, it is not like anything else, it is unique, and we know exactly what it is, and we are collecting MASINT.

The Central Intelligence Agency gives us a fourth important feature. The CIA employs a network of agents around the world who constantly provide what is called HUMINT, human intelligence. HUMINT is a term of art which simply recognizes people tend to talk, and when they do talk, we try to have an agent listening. If an agent hears something, it is fed into a fifth and important feature of the agency, and that is the CIA Directorate of Intelligence.

The men and women of the CIA DI sift through enormous amounts of data every day and separate fact from fiction, truth from lies. Through their analysis of all intelligence sources, they provide policymakers with crisp statements of what our potential adversaries are doing and not doing. If information is out there to get, we will get it. If it is important, we will analyze it and understand it. Once we understand it, policymakers will make sound decisions if someone decides to cheat on the CTBT.

I am trying to paint a picture of just how sophisticated our intelligence community is. It is a community that

on occasion has been fooled, but it has not been fooled often, and it has rarely been fooled for very long. We have a world-class intelligence capability. We can count on the intelligence community to monitor the CTBT and effectively verify it.

A second argument that has been used against the treaty by some is based upon the suspension of nuclear testing required by the CTBT and the argument that this will jeopardize the safety and reliability of the U.S. nuclear weapons stockpile. I have an extremely high level of confidence in the nuclear stockpile even without continued testing.

The science-based Stockpile Stewardship Program, on which the United States is spending \$4.5 billion a year, is maintaining our technological edge without the need for further testing for the foreseeable future. This program is based on the most advanced science in the world. It is based on over 50 years of nuclear experience. It is based on the results of over 1,000 American nuclear tests. It is a program that relies on the ability and ingenuity of U.S. scientists to maintain our nuclear edge. But it is also a program that recognizes the need to build in adequate safeguards to ensure safety and reliability.

The Stockpile Stewardship Program requires a rigorous annual review of the entire nuclear stockpile. As a part of this regime, both the Secretary of Defense and the Secretary of Energy must certify to the President on an annual basis the stockpile is safe and is reliable. Should either Secretary be unable to offer this certification, the President, in consultation with Congress, is prepared to exercise the right of the United States to withdraw from the treaty and to resume testing.

The United States has not conducted a nuclear test for over 7 years, but the American people should understand our nuclear stockpile is safe. Both the safeguards and the science exists to continue to assure its safety well into the future. And since we have made the decision we do not need to test, it only makes sense that we use the CTBT to end testing throughout the world.

Reflecting on his time in office, and his failure to achieve the goal of a nuclear test ban, President Eisenhower stated: "Disarmament . . . is a continuous imperative. . . . Because this need is so sharp and apparent, I confess I lay down my official responsibilities in this field with a definite sense of disappointment."

The Senate now has the opportunity to ratify the Comprehensive Test Ban Treaty. We should ratify this treaty because, just as when it was first proposed nearly 4 decades ago, it is a positive step toward reducing nuclear dangers and improving the safety of the American people.

I yield the floor.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, I see my friend from the great State of Montana is up to speak. I ask the chairman of the—

Mr. SPECTER. Will the Senator from Delaware yield for a question?

Mr. BIDEN. Yes, I would be happy to yield.

Mr. SPECTER. Mr. President, the question that I have for the Senator relates to the letter from President Clinton to our distinguished majority leader, Senator LOTT, where President Clinton has asked that the Senate not consider consideration of the Comprehensive Test Ban Treaty.

I believe it is very much in the national interest that we not vote on the treaty today because it would undermine national security by sending a message to the world that we are not for this treaty. I think it would encourage nations such as India and Pakistan, and perhaps rogue nations such as Libya, Iraq, and Iran, to test.

But the first of two questions which I have for the Senator from Delaware is whether the President might go further. The Senator and I attended a dinner last Tuesday night with the President. We both had occasion to talk to the majority leader and have heard the public pronouncements. The majority leader has set a threshold, asking that the President commit in writing that he would not ask to have the treaty brought up next year. I believe we have to find a way to work this out so the treaty is not voted on.

The first question I have of the Senator from Delaware is, What are the realities of getting the President to make that request? He has come pretty close in this letter. Why not make that additional request?

Mr. BIDEN. In response to my friend from Pennsylvania, I will say that I, obviously, cannot speak for the President. But he has gone awfully far. He says: "I believe that proceeding to a vote under these circumstances would severely harm the national security of the United States, damage our relationship with our allies, and undermine our historic leadership," et cetera. "Accordingly, I request that you postpone consideration of [this] Test Ban Treaty on the Senate floor."

Unless there is something incredible that is likely to happen in the next 8 months, the President is not going to be—and I realize this is a legitimate worry on the part of some; that the President will wait until the middle of an election year and raise a political issue by forcing people to vote for or against this treaty—but the likelihood of changing the votes of 22 Republican Senators between now and the election is zero, I would respectfully suggest.

So what the President has done here is done the only thing I think a chief executive—Democrat or Republican—

should do; that is, he did just as Jimmy Carter did when he asked for SALT II to be taken down. He did not make a commitment he would not try to have it brought up. That is not what his letter said. What he said is: Bring it down. Don't vote on it now. It is not in the national interest.

To have a President of the United States say, the treaty I, in fact, negotiated—I want to go on record as saying you should not consider it at all during the remainder of my term in office, surely damages his ability to deal internationally.

So I think he is observing the reality of the circumstance, which means that there will be no vote next year on the floor of the Senate—for if that were the case, you might as well go ahead and have the vote now.

The letter Jimmy Carter sent—and I shall read it—said:

In light of the Soviet invasion of Afghanistan, I request that you delay consideration of the SALT II Treaty on the Senate floor.

The purpose of this request is not to withdraw the Treaty from consideration, but to defer the debate so that the Congress and I as President can assess Soviet actions and intentions, and devote our primary attention to the legislative and other measures required to respond to the crisis.

As you know, I continue to share your view that the SALT II Treaty is in the national security interest of the United States and the entire world, and that it should be taken up by the Senate as soon as these more urgent issues have been addressed.

Sincerely,

JIMMY CARTER.

This letter of the President of the United States—this President—goes a lot further than President Carter went in pulling down SALT II. But for the President to go beyond that, it seems to me, is to be beyond what we should be asking any executive.

The Senator from Virginia has worked mightily to try to resolve this. He has gone so far as to draft a letter which a number of Senators are likely to sign, if they have not already signed, saying: In addition to the President asking this be brought down, we the undersigned Senators ask that it be brought down. And we have no intention of bringing that treaty up next year. We do not think the treaty should be brought up in the election year.

To make the President, from an institutional standpoint, guarantee that he is now against the treaty that he ratified, it seems to me, is to be going beyond institutional good taste.

Mr. HELMS. Will the Senator yield?

Mr. BIDEN. For a question, I would be happy to yield.

Mr. HELMS. I want to ponder a question to the Chair.

Mr. BIDEN. Surely.

Mr. HELMS. It was my understanding—perhaps mistakenly—that we were to go from side to side in our discussions. If that is not the case, I ask unanimous consent that it be the

case, when both sides are on the floor seeking the floor.

The PRESIDING OFFICER. The Chair will respond. There has been a unanimous consent request that has been agreed to that to the extent possible that will be done. In this case, the ranking member sought recognition, and no other person sought recognition.

Mr. HELMS. The Senator has been on his feet 20 minutes here. And two Senators have taken the floor from him. I want it to be understood I do not want that to happen again.

Mr. BIDEN. Mr. President, it was not my intention—I thought the Senator from North Carolina, in effect, acknowledged that I should take the question from the Senator from the State of Pennsylvania. I apologize.

Mr. HELMS. I did not think it would be four questions.

Mr. BIDEN. Mr. President, I am not propounding the questions. I am just trying to answer the question. I hope I answered the Senator's question.

Mr. SPECTER. I believe I asked one question.

Mr. BIDEN. Yes.

Mr. SPECTER. I had one more.

I believe I asked one question. I had one more. I would like leave to ask one more question.

The question I have for Senator BIDEN is, Is there any other way procedurally that this vote can be put off? We are considering the treaty. There is a unanimous consent request, and while I do not agree with what the Senator said in his first response—I believe the President can say more without being against the treaty. And I believe there are political considerations which are behind not having the matter brought up in fair consideration to Senator LOTT's request there be a commitment not to take it up all year. I think it highly unlikely that there would be a shift among Republicans on a procedural matter to find 51 votes—50 votes plus the Vice President. But we are dealing here with matters of extraordinary gravity. I hope this matter can be worked out short of a procedural vote.

But I direct this question to the Senator from Delaware, whether there is any other procedural alternative to getting this vote off the Senate agenda.

Mr. BIDEN. Mr. President, I will respond very briefly and then yield to my friend from North Carolina.

My knowledge of Senate procedure pales in comparison to the Senator from North Carolina. I am not being solicitous. That is a statement of fact. But it is my understanding that the only procedural means by which we could move from this treaty to other business without a vote would be if there were a motion to move from the Executive Calendar to the legislative calendar. That would, as I understand it, require 51 votes. That is the only

thing of which I know. I do not know if anyone is going to do that.

Mr. HELMS. Will the Senator yield?
Mr. BIDEN. I yield the floor to my friend.

Mr. HELMS. I ask the Parliamentarian for his views on it now, to get that settled.

The PRESIDING OFFICER. The Parliamentarian advises that the Senator's statement is correct.

Mr. BIDEN. Mr. President, that may be the first time my procedural judgment has ever been ruled to be correct on the floor of the Senate. I am very happy the Senator suggested I ask that.

Mr. HELMS. I think the Senator has forgotten many times when he was correct.

Mr. BIDEN. The Senator is very nice to say that. Seldom procedurally. I yield the floor.

Mr. HELMS. I ask the distinguished Senator from Montana, who has been awaiting a chance to speak, be recognized for such time as he may require.

The PRESIDING OFFICER. The Senator from Montana.

Mr. BURNS. I thank the chairman of the Foreign Relations Committee and the Chair.

I listened to the exchange. It is very interesting. Why we are in this debate was not initiated by this side of the aisle. This whole process was not initiated by this side of the aisle. It was a reaction that was initiated by our friends on the other side. That is irrelevant right now. What is relevant is our Nation's security and the merits of this treaty and how it affects us and our national security. We have but one deterrent for the safety of the people who live in this country, and that is our reliable nuclear capability. Once it is questioned, then our ability to deter in this world of uncertainty would be damaged.

I rise to record my opposition to Senate passage of the Comprehensive Test Ban treaty. This treaty bans all nuclear testing forever. Thus, it is a ban on "bang" for all time; it is not a ban on bombs. No one ought to be under the illusion that this treaty ends nuclear weapons development by America's foes. At home, an essential part of the administration's plan to implement the treaty is a "safeguards package". The mere existence of the safeguards package speaks for itself: without them, the treaty poses too many risks. Unfortunately, the treaty we are asked to vote upon contains none of the safeguards because the terms of the treaty expressly preclude making the safeguards package part of the treaty. In other words, the treaty prohibits meaningful reservations. Consequently, we are asked to bet on the come that the administration can deliver all that is promised in the safeguards package, not only in the next few years but far into the future. We are told that the

Joint Chiefs of Staff support the treaty with the safeguards and is unable to comment on the merits of the treaty without the safeguards. I fully understand the Chain of Command. Our leaders also understand the Chain of Command. We do not have to read too much between the lines to conclude that without the safeguards package, this treaty poses unacceptable risks to our national security.

A total ban on all nuclear testing for all time has never been supported by prior Presidents and for sound reasons. This administration's best sales pitch for a total ban on bangs for all time is that it is an important step in the direction of doing away with the threat of nuclear war. This is a nice dream and a great idea for another planet. But on earth it is a downright dangerous false hope. The complete ban treaty has a fatal flaw in the real world: the treaty is unenforceable. In one sentence, the fatal flaw is that violations cannot be verified.

The best intentions humans can conceive are of no use if the treaty is not implemented not only by us but also by the other nuclear players. And what is the score? Well Russia and China have not ratified this treaty and they are unlikely to do so. Even if they did, either one could veto any attempts at enforcement by the U.N. Security Council. North Korea did not even participate in the negotiations about the treaty. India and Pakistan have not signed on to the treaty. The score on rogue nations such as Iraq and Libya varies but we have to ask whether they could be trusted to keep their commitments anyway. The administration has, once again, gone off and negotiated a deal that is not acceptable to the Senate. I suppose the White House media spin will again be that the United States will suffer a loss of world leadership if the Senate does not buy this pig in a pike treaty. Well maybe the negotiators should have thought of that before they put American's credibility on the line. The spinmeisters should re-read our Constitution. Treaties must be acceptable to two thirds of the Senators. That requirement has been there since the founding of the Republic. The White House should not pretend to be shocked when the Senate turns down a treaty that it does not like because the treaty has no teeth. There are too many undefined characters in the world who are unaffected by this treaty.

This treaty is not a good idea for a number of other reasons. The agreement puts international handcuffs on nuclear technology testing by the United States. Our country needs to have access to the testing of current and possible future nuclear weapons, defensive as well as offensive. We know that some nations play fast and loose with nuclear weapons technology. This is not the case generally in the United

States and is not the case specifically in Montana where we maintain many Minutemen III missiles. Part of the Safeguard Stewardship and Management Program proposed by the Administration to sell this treaty is to assure us that the nuclear stockpile remains safe and reliable. But tests needed to create the data base and methodologies for stockpile stewardship have not been done during the seven year moratoria our nation has voluntarily followed on testing and would not be done under the mandatory terms of the treaty before us. Simply stated, the technology for stockpile stewardship is unproven. Key safety and reliability data can only be obtained from the actual testing of weapons. We cannot take a chance on when or whether our nuclear weapons will go off. Can you imagine putting all your faith in an airplane flying right without making actual flight tests? The pilots I know still think an aircraft has to be flown before they are convinced of its safety and reliability. Likewise, data from past tests cannot adequately predict the impacts of ongoing problems such as aging taking into account the highly corrosive nature of materials with a shelf life of 20 years. What do we do in 25 years? The administration's answer is to rely upon computer simulations or, as a last resort, to withdraw from the treaty. The stakes are too high to depend upon theoretical models and any treaty can be killed by a later law. But I submit these actions are closing the barn door after the horses are gone. Montanans as well as all Americans must have confidence in the safety and reliability of the refurbished nuclear warheads remaining in our country. Our troops in the field must also have confidence in the nuclear weapons they carry. This test ban treaty precludes us from undertaking the technology testing that is essential for keeping confidence in our nuclear deterrent capability.

The cold war may be over but the threat posed to the United States from nuclear weapons in hostile hands is far from over. Russia refuses to ratify Start II and continues to insist (along with the administration) on strict compliance with the 1972 ABM Treaty. If ever there was a lesson about not freezing nuclear technology in time, the ABM Treaty is the model. Most Americans still do not know that our country is absolutely defenseless against ballistic missile attack not only from Russia but also from any where else. There is mounting evidence that China has stolen priceless nuclear secrets from our national laboratories. Only a complete fool would think that the actions of the Chinese indicate that they would curtail their rapid advancement towards being a nuclear power, with or without this test ban treaty. Neither India nor Pakistan have signed on to this treaty and I suppose the adminis-

tration will try to blame that on the Senate somehow. I submit, however, that the positions of Pakistan and India on their nuclear status have nothing whatsoever to do with this debate in the Senate. We are aware that there are half dozen rogue nations out there. They must really lick their lips when they think about America not testing nuclear weapons anymore. Who seriously thinks this treaty will slow down despots who pose current and future irresponsible and, perhaps, irrational nuclear threats to the United States? The administration is making a serious error in judgment in mixing up what States say at diplomatic conferences with what they go back home. This is not the time to handicap ourselves by assuming test ban obligations that we would keep but others would either violate or ignore.

I have been called by many representatives of other states and heads of states. I asked one question: Will the signing of this test ban treaty change the attitude of the Russians? Answer: No. By the PRC, the Chinese? No. Will it change the attitude in India or Pakistan or North Korea or other suspected rogue entities? No. Then why do we put ourselves in jeopardy by not testing?

In conclusion, I believe this treaty is fatally flawed because it is not enforceable and will be ignored by the very nations we distrust. Moreover, to retain a credible nuclear deterrent capability, we must retain our ability to test our weapon systems for safety and reliability. Therefore, this treaty hurts us while helping our potential enemies. My vote is to oppose advice and consent.

I yield the floor.

Mr. REED. Mr. President, I rise to express my support for the Comprehensive Test Ban Treaty. I believe the real question before us is whether or not the world will be safer with or without the nuclear test ban treaty. I believe we are safer.

From a very self-interested standpoint, if this treaty is adopted, it gives us the very real potential of locking all of our potential adversaries into permanent nuclear inferiority because they will not be able to conduct the sophisticated tests necessary to improve their technology, particularly when it comes to the miniaturization of nuclear warheads. It will, also, I think, contribute to an overall spirit which is advancing the cause of nuclear disarmament and also ending the proliferation of nuclear weapons.

On the other side of the coin, if we step back from this treaty today and vote it down, I think we will set back this progress in trying to reduce nuclear arms throughout the world. All of us have come to this floor with different viewpoints, but I suspect we would all say the process we have undertaken is somewhat suspect. I spent 12 years in the Army, and I learned to

grow up under the rule of "hurry up and wait." Well, this process resembles "wait and hurry up." The President submitted this treaty to the Senate over 2 years ago. Yet for months, no action was taken. Then last week, suddenly it was announced that we would conduct a very limited debate, that we would have hastily constructed hearings, and that we would move to a vote.

I think that process alone suggests that we wait, at least—as we consider more carefully this treaty to discharge our obligations under the Constitution—for a thorough and detailed analysis of all the consequences. Indeed, this is a very complex subject matter, as the debate on the floor today and preceding days has indicated.

I believe we need to take additional time. I hope we can take additional time. But if the measure were to come before this body for a vote, I would vote to support the treaty because, as I have said, I think passing this treaty would provide a safer world. Rejecting this treaty would, I think, disrupt dramatically any further attempts at a significant comprehensive reduction of nuclear weapons throughout the world.

I think it is somewhat naive to suggest that if this Senate rejected the treaty, we could simply go back next week and begin to negotiate again on different terms. I think we would be sending a very strong and dangerous signal to the world that we, rather than carefully considering this treaty, have rejected it almost outright. I think, also, together with other developments, such as our genuine attempts to look for a relaxation of the ABM Treaty, rejection could be construed as not suggesting we are serious about nuclear disarmament but, quite the contrary, that we ourselves are beginning to look at nuclear weapons and nuclear technology in a different light, a light less favorable.

Let me suggest something else. This treaty will not prevent us from testing our nuclear technology. It will prevent us, though, from conducting tests involving nuclear detonation. We can in fact go on and test our technology. We have been testing our technology constantly over the last 7 years without a nuclear detonation.

This treaty would not ban nuclear weapons. This treaty also would provide for an extensive regime of monitoring sites—over 300 in 90 countries. It would allow for onsite inspection if, in fact, a significant number of signatories to the treaty were convinced that a violation took place. These additional monitoring sites, together with the onsite inspections, are tools that do not exist today to curb the proliferation of nuclear weapons and the development of new nuclear weapons.

There has been some discussion about our ability to monitor the development of nuclear weapons and, indeed,

to monitor clandestine tests of nuclear devices. I think the suggestion has been made—and I think it is inaccurate—that a nuclear detonation could take place without anybody knowing anything at all about it. That is not the case at all. Just last week, there was an article in the Washington Post entitled "CIA Unable To Precisely Track Testing." If you read the article, it is clear that the CIA was able to detect two suspicious detonations at a Russian test site in the Arctic from seismic data and other monitoring devices. What they could not determine is whether this detonation was high explosives of a nonnuclear category or a nuclear detonation. But certainly we will have indications, if there is a clandestine test, that the possibility of a nuclear detonation has taken place. That alone will give us, I believe, the basis to go forward and ask for onsite inspections and for an explanation, to use the levers of this treaty which we do not have at this moment.

So the issue of verification, I think, is something that is quite obvious and prominent within this treaty, and the means of verification were discussed at length by my colleague from Nebraska who pointed out all the different techniques our intelligence service has to identify possible violations of this treaty and, with this treaty, to be able to press those violations in a world forum so we can ascertain whether the treaty has been adhered to or violated.

The whole notion of controlling nuclear testing is not new. Throughout this debate, my colleagues have discussed the initiatives that began as early as the 1950s with President Eisenhower. Then, in 1963, President Kennedy was able to sign, and the Senate ratified, the Limited Test Ban Treaty which outlawed nuclear explosions in the sea, atmosphere, and in outer space. In 1974, we entered into a treaty with the Soviet Union—the Threshold Test Ban Treaty—which prohibited underground testing with yields greater than 150 kilotons. In 1992, Congress passed the Hatfield-Exon-Mitchell amendment which called for a moratorium on testing. We are still observing today.

Also, I think it would be appropriate to point out that in fact for the last 7 years, we have not detonated nuclear devices. Yet each and every year, our scientists, the experts in the Department of Defense and Department of Energy, have certified that our nuclear stockpile is both safe and reliable. So the assertion that we can never assure the reliability and safety of our nuclear stockpile without testing has been disproven over the last 7 years. We have done that.

Now, I believe we can in fact maintain a nuclear stockpile that is both safe and reliable. We can do it using the new technology we are developing, including but not exclusively related

to, computer simulations. We can do it by investing, as we are each year, billions of dollars—over \$4 billion—so we can ensure that we have a safe nuclear stockpile and that these weapons would be reliable if we were forced to use them.

There is something else I think should be pointed out. This treaty has been endorsed and recommended to us by the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, and the Secretary of Energy. These are individuals who take very seriously their responsibility for the national security of the United States. But some might suggest, well, they are part of this administration and we really know that, reading between the lines, their recommendation might not be as compelling as others.

But such logic would not suggest or explain why individuals such as Gen. John Shalikashvili, a former Chairman of the Joint Chiefs of Staff; Gen. Colin Powell; Gen. David Jones; or Adm. William Crowe would in fact be supportive of the Comprehensive Test Ban Treaty. Nobody would suggest why other prominent military officers, such as John Galvin, former Supreme Allied Commander in Europe; Gen. Charles Horner, who commanded the air forces in Desert Storm; Bernard Rogers, another former Commander of NATO and Supreme Commander in Europe, would also recommend and support this treaty. These individuals are concerned about security and have spent their lives in uniform dedicated to the security of this Nation and the protection of our people. They believe, as I do, that this will be a safer world with this treaty rather than if we reject this treaty. With this treaty, I think we can curtail dramatically the development of nuclear weapons by opposing powers to the United States.

It is true that you can develop a nuclear weapon without a test. You can develop the unsophisticated rudimentary weapons that were used in World War II. But you cannot develop the sophisticated technology which is the key to strategic nuclear power without nuclear testing.

If we accept this treaty, if we join with other nations, then we will be in a much stronger position, and the world will be in a much stronger position, to ensure that countries such as India, Pakistan, and North Korea will be very challenged to develop the kind of sophisticated nuclear weapons that will alter the strategic balance throughout the world. That in and of itself, I believe, will make it a safer world.

Of course, the elimination of testing will have a positive environmental effect. Even though our tests now throughout the world are restricted underground, there is always the possibility of leakage of radioactive material. And we know how devastating that can be.

There are those who have been here today who argued that we should reject this treaty because it is not 100 percent verifiable. I would suggest that we can, in fact, verify this treaty—that 100 percent is not the standard we would reasonably use. As I have indicated previously, we have already detected what we suspect are suspicious detonations in Russia. We would be even better prepared to do that with 300 more monitoring stations in 90 countries around the world. In fact, we would then have an international forum to take our complaints and to force an explanation, and, if necessary, an onsite inspection of a test.

I think we have an obligation to carefully review and consider this treaty. I believe that we do. And that consideration would be enhanced by additional time. I think it would be appropriate to take additional time. But it would be a terrible, I think, disservice to the process of nuclear disarmament, of nuclear nonproliferation, and of a saner world if we were to reject this treaty out of hand. And the world is watching.

President Clinton was the first head of state to sign this treaty. One-hundred and fifty nations followed. Forty-one nations have ratified the treaty, and several more, including Russia, are waiting again for our lead in ratifying. Unless we are part of this treaty, this treaty will never go into effect because it requires all of the nuclear powers—those with nuclear weapons or with nuclear capabilities—to be a party to the treaty before it can go into effect. I hope we either in our wisdom consider this more, or in our wisdom accept ratifying this treaty.

Thirty-six years ago when the Limited Test Ban Treaty came to this floor, a great leader of this Senate, Senator Everett Dirksen, was one of the forces who decided to take a very bold step that was as equally daunting and challenging as the step we face today. His words were:

A young President calls this treaty the first step. I want to take a first step, Mr. President. One my age should think about his destiny a little. I should not like to have written on my tombstone, "He knew what happened at Hiroshima, but he did not take a first step."

The treaty is not the first step. But it is, I believe, the next logical step that we must take. I believe none of us want to look back and say that we were hesitant to take this step, that we were hesitant to continue the march away from the nuclear apocalypse to a much saner and a much safer world.

I yield my time.

The PRESIDING OFFICER. Who yields time?

Mr. HELMS. Mr. President, I yield time to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky.

Mr. BUNNING. Thank you, Mr. President. I thank Senator HELMS.

Mr. President, this whole debate reminds me of what the great philosopher Yogi Berra once said: It is like "deja vu all over again."

I thought we pretty well settled this argument years ago—back in the 1970s and the 1980s—when the idea of unilateral disarmament through a nuclear freeze was proposed as the only way to end the nuclear arms race between the United States and Russia. We rejected the nuclear freeze concept. We put national security first. We won the cold war, not through unilateral disarmament and symbolic gestures but through strength, and we defeated the evil empire. The world is safer and we have been able to substantially reduce the number of nuclear warheads and the threat of nuclear conflict.

So it is difficult to understand why this argument is back before the Senate today. It is difficult to understand why a U.S. President is back before us asking us to ratify an agreement which would tie this Nation's hands behind its back and jeopardize our national security.

None of us support nuclear war. We are all against nuclear proliferation. But agreeing to forego all future testing of nuclear weapons is not the way to get there. It is a matter of national security, of safety, and of common sense.

Because we refused to accept the siren call of the nuclear freeze movement in the 1970s, we won the cold war, and we have subsequently been able to reduce our arsenal of nuclear warheads from 12,000 to 6,000 under the START II treaty. The number is expected to be reduced further to 3,000 warheads by the year 2003. But despite these reductions and this progress, the United States must maintain a reliable nuclear deterrent for the foreseeable future.

Although the cold war is over, significant threats to our country still exist. At present, our nuclear capability provides us a deterrent that is critical to our Nation and is relied on as a safety umbrella by most countries around the world.

As long as our national security and our own nuclear deterrent rely on the nuclear capability, we must be able to periodically test our existing weapons as necessary to ensure their reliability and their safety.

Reliability is essential. If our nuclear weapons are not reliable, they are not much of a credible deterrent, and the nuclear umbrella that we and our allies count on for our mutual defense will have gaping holes in it.

We have to face reality. Our nuclear stockpile is aging. Our nuclear inventory is older than it has ever been, and nuclear materials and components degrade in unpredictable ways—in some cases causing the weapons to fail. Without testing, those potential problems will go undetected. Upgrades will not be possible. Reliability will suffer.

Safety is also essential. A permanent ban on testing would jeopardize the safety of our nuclear arsenal by preventing us from integrating the most modern advanced safety measures into our weapons. Even now our nuclear arsenal is not as safe as we can make it. Of the nine weapons systems currently on hand, only one employs all of the most modern and secure measures available. Safety modifications of this kind would require testing to make sure they worked as intended.

Sure, advocates of this treaty argue there are some other measures of testing a weapon—safety and reliability. The Clinton administration has proposed an ambitious program known as the Stockpile Stewardship Program which would use computer modeling and simulations to detect reliability and safety. However, many of the components of this system are unbuilt and untested. The National Ignition Facility, which is the centerpiece of this program, is not scheduled to be completed until the year 2003. There are already reports that it is years behind schedule. It would be foolhardy to entrust our nuclear security to an unproven program which probably won't even be fully operational by the year 2010. Reliability and safety: There must be certainty; at this point only live testing provides that kind of certainty.

This treaty is based on a very noble, well-intentioned goal. There is no question that if the Senate were to ratify this treaty, it would be a grand symbolic gesture, but noble goals and symbolic gestures are no substitute for good policy and hard reality.

I have already talked about a couple of reasons why this treaty is not good policy—safety and reliability. But there are a couple of other reasons this treaty fails the hard-reality test, as well: Verification and enforcement. The hard reality is that the United States usually tries to live up to the agreements it signs. If we ratify this treaty, we will live by it; we have no guarantee other nations will be so inclined to follow the letter of the law.

Under this treaty, verification would be very difficult and enforcement would be impossible. It has no teeth. It is difficult now to detect nuclear tests with any confidence, and the verification monitoring provisions in this treaty don't add to that confidence level at all. Yes, we could request onsite inspections if we thought someone had been cheating, but that request would have to be approved by a supermajority in the 51-member executive council. In addition, each country under the treaty has the right to declare 50-square-kilometer areas off limits to any inspection.

Even if we did catch a cheater, the treaty has almost no teeth—possible trade sanctions. That's it, possible trade sanctions. And we know how difficult it is to maintain multilateral

trade sanctions against Iraq, a country that blatantly invaded and looted a neighboring country and which consistently defies international inspection teams. No one can believe we would be more effective at enforcing sanctions against more responsible nations of greater commercial importance such as India and Pakistan. There are no teeth.

That brings us back to the hard reality. Would we obey the treaty? Yes, we would obey the treaty because that is the way we are. And others would obey the treaty if it suited their whims of the moment. The hard reality is if we ratify this treaty, we sacrifice our national security, jeopardize the safety and reliability of our nuclear arsenal. And what do we get in return? A noble, symbolic gesture. Nothing more. It is not worth it.

I urge my colleagues to vote no. Unilateral disarmament was a bad idea in the 1970s and 1980s; it is a bad idea for the 21st century.

I yield the floor.

Mr. BIDEN. I yield to the Senator from Montana.

Mr. BAUCUS. Mr. President, I strongly support the Comprehensive Test Ban Treaty. Why? Various reasons.

First, we have an opportunity to vote this week. I will cast my vote in favor of ratification because I believe to do otherwise would be a tragic mistake with extremely dire consequences for our Nation and equally dire consequences for the world. However, given the likelihood the Senate will fall short of the two-thirds majority required under the Constitution for ratification, I will support efforts to postpone this vote. We cannot tell the world the United States of America, the leader of the free world, opposes this treaty. It would be a travesty.

The Comprehensive Test Ban Treaty gives America a unique opportunity to leave a safer world for our children and for our grandchildren. We cannot prevent earthquakes; we can't prevent hurricanes or tornadoes, not yet. I hope over time our ability to predict them—minimizing the destruction of human life and property—will improve. But we can prevent nuclear war. We can halt the spread of nuclear weapons. We can prevent nuclear fallout and environmental destruction caused by nuclear testing. And we can reduce the fear of a nuclear holocaust that all Americans have lived with since the start of the cold war 50 years ago. We can do all this, and we should.

Let me review some of the benefits we get from the Comprehensive Test Ban Treaty, and let me explain why this treaty will make the world safer for our children and grandchildren. First, under the CTBT, there is an absolute prohibition against conducting nuclear weapon test explosions by the signatories. This would include all countries that possess nuclear weapons, as

well as those countries that have nuclear power or research reactors. It would also include countries that do not yet have nuclear facilities. This absolute prohibition of testing makes it much harder for countries that already have advanced nuclear weapons to produce new and more sophisticated nuclear weapons. Russia and China are prime examples.

The CTBT prevents the kind of arms competition we had during the cold war. For example, without nuclear tests the Chinese will be unable to MIRV ICBMs with any degree of reliability. The Chinese have no assurance of the effectiveness of putting multiple warheads on missiles because they would not be able to test. Many believe China has made enormous strides in their nuclear weapons capability because of decades of espionage, but the CTBT provides one way to limit further sophisticated development.

The absolute prohibition on nuclear testing also helps prevent countries with smaller and less advanced nuclear weapons from developing more advanced nuclear warheads. This applies especially to India and to Pakistan. The strategy of using advanced nuclear weapons depends on confidence. It depends on reliability. India and Pakistan would not be able to build reliable and sophisticated nuclear weapons under the treaty.

The treaty's terms also help prevent nations that are seeking nuclear arms from ever developing them into advanced sophisticated weapons. I refer to countries such as Iran and Iraq.

The second major reason for adopting this treaty is that ratification is critical to our ability to enforce and maintain the Non-Proliferation Treaty, another treaty. The NPT is the bedrock of our efforts to stop the spread of nuclear arms to non-nuclear weapon states. Many of the nations that signed the NPT, the Non-Proliferation Treaty, and agreed to its indefinite extension did so on the understanding that there would be a Comprehensive Test Ban Treaty.

The third reason for support is the CTBT will improve the ability of the United States to detect nuclear explosions. Let me repeat that. It will improve our ability to detect current explosions, the status quo compared with today. The international monitoring system will have 321 monitoring stations, including 31 in Russia, 11 in China, and 17 in the Middle East. These stations will be able to detect explosions down to about 1 kiloton, the equivalent of 1,000 tons of TNT—much lower than the kinds of explosions we are talking about in this Chamber. In the case of a suspicious event—that is, a report of an explosion that could be nuclear, a mine site, or even an earthquake—any party can request an onsite inspection. With or without a treaty, we must continue all efforts at moni-

toring nuclear developments worldwide, but the treaty provides a system that far exceeds current capabilities of inspection.

Now, turning to two of the major objections to those who oppose the treaty: First, they claim actual nuclear tests—that is, explosions—are necessary to ensure that our stockpile of weapons works. We have put in place a science-based Stockpile Stewardship Program. Its purpose is to provide a high level of confidence in the safety and reliability of America's inventory of nuclear weapons. Under this program, our National Weapons Laboratories spend \$4.5 billion each year to check and to maintain these weapons. We can still test; we do test. We just cannot explode. The Secretaries of Defense and Energy, with the help of the Directors of the National Laboratories, the Commander of the U.S. Strategic Command, and the Nuclear Weapons Council, must certify every year to the President that the necessary high level of confidence exists.

Do not forget, \$4.5 billion a year is spent on this. If they cannot give that certification to the President, the President can then use the so-called Safeguard F. What is that? That is the United States will be able to withdraw from the treaty and test the weapon that is in doubt; that is, if the President is not confident, the President can withdraw.

The Directors of our weapons labs, the Chairman of the Joint Chiefs of Staff, along with four of his predecessors, and an impressive array of Nobel Prize winners believe the Stewardship Program will provide appropriate protection for our national security.

The second objection against the treaty is that it is impossible to verify that all nations are complying with the treaty. That is true. It is true we cannot detect every conceivable explosion at low yields. But our defense agencies have concluded—the Department of Defense—that we will be able to detect tests that will have an impact on our national security, and that is the threshold of concern to us.

Let me go through a few likely scenarios that would occur if we reject the treaty. First and most immediate would be on the Indian subcontinent. India and Pakistan matched each other with nuclear tests. Kashmir remains one of the world's most dangerous trigger points. U.S. rejection of the test ban treaty would destroy our ability to pressure those two countries to halt further nuclear tests. Those countries would likely begin to develop more sophisticated nuclear weapons, heightening the probability of their actual use in the region.

The second adverse consequence of rejection is this: China would certainly prepare for more tests to increase the sophistication of its nuclear arsenal.

At present, Chinese nuclear weapons do not pose a strategic threat to the United States. Our rejection of the CTBT would allow them to begin a long-term development program with testing that would make them such a threat.

The PRESIDING OFFICER. The Senator's 8 minutes have expired.

Mr. BAUCUS. I ask unanimous consent to proceed for 2 more minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAUCUS. The third adverse consequence is American efforts to promote nuclear nonproliferation would become much more difficult because other nations would believe America's moral authority and its leadership were destroyed by our rejection of the CTBT.

The United States has been the world's leader in promoting arms control. If we do not lead, no one else will. It is that simple. Our ratification of the Chemical Weapons Convention led to its approval by Russia, by China, and others. Our ratification of the Comprehensive Test Ban Treaty will lead other countries to agree to a complete ban on nuclear explosions.

As a footnote, let me add the American people, by an overwhelming margin, understand the need to control nuclear testing. In a recent poll, 82 percent of Americans responded that they would like to see the treaty approved. That is not a sufficient reason to vote for ratification, but we should take note the public well understands the dangers of nuclear testing.

President Eisenhower began the first comprehensive test ban negotiations in 1958 with the goal of constraining the nuclear arms race and halting the spread of nuclear weapons. Mr. President, 31 years later we have an opportunity to make this goal a reality. That is the legacy I want to leave my son and all the children of Montana, of the United States, and of the world.

In sum, I think each of us has a moral obligation to leave this world in as good shape or better shape than we found it, and certainly ratification of the test ban treaty fulfills that moral obligation.

The PRESIDING OFFICER. The Chair recognizes the Senator from North Carolina.

Mr. HELMS. Mr. President, the distinguished Senator from Maine is here. I yield 15 minutes to the gracious Senator.

The PRESIDING OFFICER. The Chair recognizes the Senator from Maine.

Ms. SNOWE. Mr. President, I thank the distinguished chairman of the Senate Foreign Relations Committee for his effort and cooperation.

With this debate on the Comprehensive Nuclear Test-Ban Treaty, the Senate discharges one of its most fundamental and solemn duties, the steward-

ship of our national defense. I think there is little question among us that a world free of nuclear weapons would be a world more secure. Obviously, we all look forward to the day when we do not have to rely on our nuclear stockpile as a necessary deterrent. We know full well over 80 percent of the American people share that point of view. But the fact is, that day has not yet arrived. Until it does, as the world's last remaining superpower, we walk a line both fine and blurred. This debate must be about how we walk that line. It should be about how we balance our clear and shared interests in a nuclear-free planet within the reality of a post-cold-war world.

The reality is this: At the same time the world looks to us to provide leadership in stopping the proliferation of nuclear weapons, so, too, does it rely upon us for a credible nuclear deterrent that will keep in check international aggressors, nations that seek to undermine democracy and freedom. That is the challenge before us, to move towards our shared goal in a responsible and measured manner, ever mindful that a post-cold-war world does not mean a world devoid of duplicity or danger. That is the dynamic we can neither escape nor ignore. That is the dynamic that must inform each and every one of us as we consider the ramifications of a zero-yield treaty of unlimited duration.

The question is not whether we support nonproliferation measures. We obviously make that as one of our key national security objectives. The question is, Are we going to support a treaty that is a significant departure from what every Chief Executive of the atomic age, except President Clinton, has laid down for criteria in any test ban treaty? Are we going to support a treaty predicated on a program that is yet to be tested and may remain unproven for decades? Are we going to support a treaty that assumes reliable verification when we know we cannot always detect low-level tests, when we know that rogue nations such as North Korea, Iraq, or Iran could develop crude first-generation nuclear devices with no testing at all? In fact, the CIA Director George Tenet stated, back in 1997, in response to questions submitted to him by the Senate Select Committee on Intelligence:

Nuclear testing is not required for an acquisition of a basic nuclear weapons capability. Tests using high explosive detonations only could provide reasonable confidence in the performance of a first generation device. Nuclear testing becomes critical only when a program moves beyond basic designs, incorporating more advanced concepts.

We cannot even verify what is going on in Iraq with Saddam Hussein. We all recall we set up an onsite inspection program as a condition for his surrender in the Persian Gulf war. Today he has systematically and unilaterally

dismantled the U.N. weapons inspection system regime.

So these are the pressing issues that confront us about the ratification of the Comprehensive Test Ban Treaty. That is why I am disappointed, regretting that we have had politics permeate both sides of the political aisle, both ends of Pennsylvania Avenue with respect to this debate. Because the ratification of any treaty, and certainly this one, is a solemn and unique responsibility for the Senate, and we should accord this debate the level of gravity it deserves. It is not just about process and procedure. It is certainly not about politics. It is about policy; what is in the best interests of this country as well as the security interests of the world. What is at stake is no less than our ability to stop proliferation and to ensure at the same time the continued viability of our stockpile.

When we get into debates about procedure and process, I think it ignores the overwhelming magnitude and gravity of the centerpieces of this treaty. We should not be making this agreement a political football. Duty, a constitutional duty, compels us to look at the facts before us.

I can tell you, after I sat through hours of deliberations and testimony on the Armed Services Committee last week, the facts are not reassuring. I know there is an honest difference of opinion among experts, among former Secretaries of Defense. But you have to look at the honest difference of opinion and take pause when you have six former Secretaries of Defense, two former Clinton administration CIA Directors, four former National Security Advisers, and three former National Weapons Lab Directors, all opposing the treaty before us.

Why? Because they believe a no-testing, unlimited duration policy at this time would fatally undermine confidence in the reliability of the U.S. nuclear stockpile as a sturdy hedge against the aggressive intent of once and future tyrants. That is a risk we simply cannot afford to take.

Consider the backdrop of the Rumsfeld Commission report in 1998. We are all too familiar with the stark fact that North Korea, Iran, and Iraq, to name a few, would be able to inflict major destruction on the United States within 5 to 10 years of making a decision to acquire ballistic missile capabilities.

Thanks to the testimony last week of three current National Weapons Laboratory Directors, we also know full well that the very program the administration proposes to rely on to monitor the safety, effectiveness, efficiency, and accuracy of the arsenal is between 10 and 20 years away from being fully validated and operational, and that is assuming it will work. That is 10 to 20 years. We could have weapons in our stockpile left untested and

unproven for decades while rogue states acquire the means of mass destruction.

That is what we are addressing today fundamentally: a treaty that has ultimately been negotiated by this administration with a noble long-range goal that almost everyone accepts but one which requires this country to accept an unproven and incomplete computer-model-based system for the security of our nuclear deterrent in this age of weapons proliferation. In other words, we put the cart before the horse. We ought to know that our Stockpile Stewardship Program works first before we commit to any zero-yield, unlimited-duration treaty.

As the Director of the Lawrence Livermore Laboratory, Dr. Tarter, testified to the committee last week, the program is an approach that the country must pursue "short of a return to a robust schedule of nuclear testing." By closing the door entirely, we would be making a question mark of our nuclear stockpile.

As President Bush reminded us in 1993, one-third of all U.S. nuclear weapons designs fielded since 1958—one-third—have required nuclear testing to correct deficiencies after deployment.

In his words:

The requirement to maintain and improve the safety of our nuclear stockpile and to evaluate and maintain the reliability of U.S. forces necessitates continued nuclear testing for those purposes, albeit at a modest level, for the foreseeable future.

Even within the Clinton administration, these conditions found a voice. According to Mr. Robert Bell, a member of the National Security Council staff, soon before President Clinton released his August 1995 statement of support for the treaty, Defense Department officials argued that the United States should continue to reserve the right to conduct underground nuclear tests at a threshold of 150 kilotons or below.

That would seem to be the prudent course on what we know at this moment in time. It is yet another fact today that we face a real danger of fewer and fewer scientists with the first-hand knowledge that comes from a testing process. Indeed, of the 85 remaining nuclear weapons experts at the Los Alamos and Livermore Laboratories today, only 35 have coordinated live underground tests.

Even as early as 1994, barely 18 months after the United States stopped underground nuclear testing, a report from the Congressional Research Service sounded an alarm, and my colleagues would be wise to read it. Back in 1994, it sounded the alarm that:

These trends . . . threaten to undercut U.S. ability to maintain the safety, reliability, and performance of its warheads; to correct defects that are discovered or that result from aging; and to remanufacture warheads. They also work at cross-purposes with President Clinton's declaration that the

United States will maintain the capability to resume testing if needed.

Again, we must remember that these considerations must be made in the context of a treaty that raises the bar by allowing absolutely no testing at any level in perpetuity.

As Dr. John Nuckolls, the former Director of the Lawrence Livermore Laboratory, put it, even an "extended duration test ban" would trigger the loss of all nuclear trained expert personnel as well as "major gaps in our understanding of scientific explosives."

Again, the CRS in 1994 in its report said:

This skills loss is in its greatest jeopardy.

Director Tarter, the current Director of Lawrence Livermore Laboratory, testified before our committee last week. What did he say in his testimony?

It is a race against time. Before long, our nuclear test veterans will be gone.

We are counting on our current cadre of experienced scientists to help develop and install the new tools that are only now starting to come online.

We have now heard from our Directors: A minimum of 10 years and maybe as high as 20 years from now, the Stockpile Stewardship Program will be determined to be workable.

We have the loss of our nuclear scientists trained in the testing field. That is a safety net we cannot do without as we walk the tightrope of sustaining a credible strategic nuclear deterrent and aggressively promoting global arms control. Consider that our successive agreements with the Soviet Union, and now Russia, will eventually reduce the entire American nuclear warhead stock to about 25 percent of its peak size in the cold war. Consider also that we maintain only 9 categories of nuclear weapons today from a level of more than 30 in 1985.

We are making remarkable strides, as we should, on our priorities in the arms control arena. But knowledge about the arms we must sustain as bulwarks against future military conflicts cannot be lost, and this fact suggests that time has not ripened for the United States to sacrifice a 50-year, fool-proof position to keep the testing option open as unprecedented arms reductions have occurred and must continue. Indeed, the administration itself agrees we need a viable strategic nuclear arsenal to deter conflicts that could arise in critical areas such as the Middle East, the western Pacific, or northern Asia.

In the view of the vast majority of treaty opponents and supporters alike who submitted opinions and testimony to the Armed Services Committee last week, the Stockpile Stewardship Program will produce low levels of confidence in many aspects of nuclear warhead capability for at least a decade to come and perhaps more.

Perhaps Dr. Robinson, the Director of the Sandia National Laboratory, put

it best and simplest when he told the committee:

Confidence on the reliability and safety of the nuclear weapons stockpile will eventually decline without nuclear testing.

It was expert scientists, not politicians, who told the committee that the Stockpile Stewardship Program brings the U.S. nuclear weapons complex into uncharted waters of reliability.

So, too, is confidence key when it comes to another vital component of this treaty, and that is verification. At first glance, the technology behind the treaty's verification regime seems airtight. Article IV of the accord establishes a joint international monitoring system and international data center with a total of 337 facilities around the world. If these installations detect a potentially illegal underground explosion that subsequent diplomacy cannot resolve, the accusing state may request an onsite inspection.

Fair enough, you might say, until you read the fine print. Then you discover that the onsite inspection provision requires an affirmative vote by 30 of the 51 members of the Executive Council of the Comprehensive Nuclear Test-Ban Treaty Organization authorized under article II, an awfully high threshold. Article II does not give the United States or any of its allies permanent or rotating seats on the Council.

That is not all. Science itself throws a wrench into the treaty's verification mechanism.

According to a 1995 study by the Mitre Corporation, an established scientific research center, neither the National Technical Means of the United States nor the Monitoring System envisioned by the treaty can detect very low-yield or zero-yield tests.

Finally, article V of the treaty establishes "measures to ensure compliance." The most important of these measures entrusts the Conference of States Parties, the treaty's ratifying governments, to refer urgent cases to the United Nations Security Council, a forum in which Russia or China could exercise a unilateral veto.

In other words, article V could mean if the United States diagnosed an imminent nuclear danger in a strategic region of the world, Moscow or Beijing might emerge as the final courts of appeal for sanctions or other punitive acts.

The day for a Comprehensive Test Ban Treaty may come where we could have a zero-nuclear testing regime for an unlimited period of time. It may arrive. And we may be confident that we will be able to verify that level, as well as the low-level detections of other countries when it comes to explosions. But I think we have to consider the facts as we know them now.

I think we have to look very carefully at the troubling aspects of the Stockpile Stewardship Program and

whether it is a viable alternative to nuclear testing. In the strategic and scientific communities many say it is not, and maybe we will not know for 10 to 20 years. That is what we are predicating our nuclear deterrent strategy on.

So we have to vote—if we do vote today or tomorrow—on what we know today. We may know something differently in the future. But I submit that we cannot subject our security interests to what we might know 20 years from now.

I hope we will defer the vote on ratification because of all the current concerns that I and others have cited. We would do well to heed the advice of the letter that was submitted to the majority leader asking for deferral, the letter that was written by Henry Kissinger; John Deutch, a former CIA Director for the administration; and Brent Scowcroft, that we should defer until we can give more consideration to all of the issues that are before the Senate with respect to this treaty.

I yield the floor.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Delaware.

Mr. BIDEN. Mr. President, I yield myself 10 minutes.

I respect the Senator from Maine very much, as I do the Senator from Indiana, who put out the five-page statement on why he opposes the treaty. I want to speak to some of the things that some Senators have spoken to.

First of all, the Senator from Maine says we have to deal with the facts as we know them. I hope she will keep that in mind when she votes on missile defense. I hope the rest of my colleagues, who say we have to deal with the facts as we know them, keep that in mind when we vote on missile defense.

I find it fascinating some of the very people who push the missile defense and the abandonment of the ABM Treaty—where we have only had basically one successful test, which is a far cry from what we are going to need to be able to develop a missile defense initiative—are the same ones saying: But we can't go ahead with this treaty because we don't know everything.

I respectfully suggest the ability of the scientific community to shoot multiple nuclear weapons out of the sky in the stratosphere and make sure not a single one gets through is an even more daunting and challenging program than the Stockpile Stewardship Program. But they seem to have no problem to be ready to abandon the ABM Treaty, which has been the cornerstone, since Nixon was President, for our arms control regime. But they have no faith. I find that fascinating, No. 1.

No. 2, I also find it very fascinating that everybody keeps talking about

nonverifiability. I have heard more than once this morning—not from the Senator from Maine but from others—the dictum of President Ronald Reagan: Trust, but verify. That is constantly brought up: There is a reason why we can't be for this treaty. We can't verify it.

They say this treaty is not perfectly verifiable. That is true. But it is a red herring. This body has never demanded perfect verification.

Consider Ronald Reagan's treaty, the INF Treaty, that eliminated land-based intermediate-range missiles. That treaty was signed by President Reagan, the same man who coined the phrase: Trust, but verify.

Was the INF Treaty verifiable? Give me a break. No; it was not verifiable. It was not.

Listen to what the Senate Intelligence Committee said in response to Ronald Reagan's assertion: Trust, but verify my INF Treaty. The Intelligence Committee said at the time:

Soviet compliance with some of the Treaty's provisions will be difficult to monitor. This problem is exemplified by the unresolved controversy between DIA [the Defense Intelligence Agency] and other intelligence agencies over the number of SS-20's in the Soviet inventory.

Ground-launched cruise missiles pose a particularly difficult monitoring problem as they are interchangeable with long-range Soviet sea-launched cruise missiles.

This the INF Treaty did not ban.

We are concerned that the Soviets could covertly extend the range capability of a cruise missile, or covertly develop a new ground-launched cruise missile which prohibited long-range capability. . . .

In an INF/START environment. . . the Soviet incentive to cheat could increase because of a greater difficulty in meeting targeting requirements.

Still, this Senate and my Republican colleagues—from DICK LUGAR, who quotes that he fought for the INF Treaty, and others, had no problem saying that was a verifiable treaty. The ability to hide these things in barns, to hide them in haystacks, was greater than the ability of someone to muffle a nuclear explosion.

But no, I did not hear anything over on that side. I did not hear anybody saying: No, that's not verifiable. I guess that was a Republican treaty. Maybe this is a Democrat's treaty. Maybe that is how they think about it.

But I find this absolutely fascinating. It really—if my staff gives me one more suggestion, I am going to kill them. It says: The INF was approved 93-5. I thought I kind of made that point clear.

But at any rate, let me point out what else the Intelligence Committee said about that INF Treaty. It said:

Since no verification and monitoring regime can be absolutely perfect—

Let me read it again:

Since no verification and monitoring regime can be absolutely perfect, a central focus for the Committee—

That is the Intelligence Committee—has been to determine whether any possible infractions would be of sufficient military significance to constitute a threat to our national security interests. This calculus is one which the Senate should bear in mind in its consideration of the treaty.

The Senate Intelligence Committee was right in 1988, and their standard is right today, even though this is pushed forward by a Democratic President instead of a Republican President.

To impose this utterly unrealistic standard of verifiability on Bill Clinton's test ban treaty, when no such standard was imposed on Ronald Reagan's INF Treaty, may be an effective "gotcha" in politics, but it clearly does not look to the national interest of the United States.

No inspection—no inspection—by the way, for onsite inspections in the INF Treaty, unless it was on prearranged sites. By the way, those of my colleagues who point out that we have to get 30 or 50 votes, our negotiators are pretty smart. We have 30 to 50 votes based on categories.

Let me tell you how membership on that committee would be determined.

The Executive Council is the decisionmaking body of the Treaty Organization. Among other things, it authorizes on-site inspections.

There are 51 seats on the Council, divided geographically. Ten seats are allocated to parties from North America and Western Europe.

Of these, the treaty provides that "at least one-third of the seats allocated to each geographical region shall be filled taking into account political and security interests, by States Parties in that region designated on the basis of the nuclear capabilities relevant to the Treaty. . . ."

The chief negotiator, Stephen Ledogar, told the Foreign Relations Committee on Thursday that "this is diplomatic language" that assures that the United States gets a de facto permanent seat on the Council.

Moreover, he said that there was an agreement among the Europeans and us that we would always have a seat.

Makeup of the Council is: Africa, 10 seats; Eastern Europe, 7 seats; Latin America, 9 seats; Middle East/South Asia, 7 seats; N. America/W. Europe, 10 seats; East Asia/Pacific, 8 seats.

There are 2-year terms.

A quick review of the candidates for seats that we should expect, in almost all instances, to get all the votes of the West Europe/North America group. So we start with 10.

Aside from Yugoslavia, Russia, and one of two others, the Eastern Europe group comprises strong United States allies. So that's another 5-7 votes.

Similarly, many of the Latin American states are either: (1) strong allies or (2) strongly favor the test ban. So we should usually get most of those 9 votes.

That gets us very quickly to the low-mid-20s, in most instances—even being conservative and assuming that we don't get all the votes in the above 3 groups.

That leaves Africa, 10 seats; Middle East/South Asia group, 7 seats; and the East Asia, 8 seats. There is where our work, depending on the makeup of the Council at the particular time, could get a little harder.

But even there the rosters have U.S. allies, or proponents of non-proliferation.

It is hard to see how we will not get to 30 in most instances.

In truth, it is more likely that most U.S. inspection requests, based on our intelligence and the data from the International Monitoring System, will be easily approved.

It should also be noted that, unlike the U.N., Israel is a member of a regional group, and will automatically get a seat on the Council under a special rule that guarantees that one seat within each region be filled on a rotational basis.

We can get 30 votes. We can get 30 votes any time we want. The reason why is we set up the committees the way we did. The flip side of that is, it will be hard for them to get 30 votes because the fact is that our intelligence community is saying we do not want onsite inspections in the United States. I don't know what treaty these folks are reading.

Let me make a second point. Here is the one lately that really gets me: The Soviet Union is going to be able to develop very small tactical nuclear weapons that, in fact, will lead to a different strategy in terms of their conventional defense. Guess what. We should all be standing up on this floor going hooray, we did it, because I remember last time we debated this issue of strategic weapons. What were we saying?

I watched, by the way, with great interest Dr. Edward Teller last night. I watched a long documentary because I used to have to debate him around the country on SALT. He was wrong then; he is wrong now.

We used to argue that the real concern—I have been here for 27 years—was the Soviets seeking a first strike capability. Remember? The Soviets are seeking a first strike capability. And all of their actions were designed to do that. That is why they were building these new massive SS-18s with 10 nuclear warheads, independently targeted, et cetera, et cetera. Through the leadership of a Republican President, we have an agreement whereby they are going to dismantle those if we get the treaty, the START treaty, passed. So guess what we are worried about now. The exact opposite. We are worried now that they don't have a first strike capability, that they aren't seeking nuclear predominance, but

they are acknowledging their conventional forces are so bad they need tactical nuclear defense on their territory.

As they say in my church, examine your conscience, folks. Take a look at what this is. We hear this thing, and the public says: Is it true, Joe, they really are developing a new tactical weapon? My response is, it probably is true. But guess what. They now have 10,000 tactical nuclear weapons.

I yield myself such time as I may consume.

They are worried now that they are going to be able to develop another smaller tactical nuclear weapon, as if this treaty has anything to do with that. Come on. Come on. What we should be doing is rejoicing in the fact that the whole emphasis in the Soviet program has shifted to a recognition that they have to defend their homeland—their judgment—and they do not have the conventional forces capable of doing that—their judgment—and so they are developing, allegedly, a very small tactical nuclear weapon—their judgment. Does that shift the strategic balance? Give me a break. Give me a break.

I find this one of the most fascinating debates in which I have ever been engaged. I don't know what we are talking about. When my friend from Kentucky stands up and says, I thought we decided against unilateral disarmament, me, too—an are-you-still-beating-your-wife kind of question. Who is talking about unilateral disarmament? Where is that anywhere in this treaty? Where does it say that? Where does it imply that? That is like my standing up and saying: I am very surprised my friends who oppose this treaty want to go to nuclear war; I am very surprised they are advocating nuclear war. That would be equally as unfounded and outrageous a statement as the assertion this treaty is unilateral disarmament.

I will repeat this time and again, and I will yield the floor in a moment. My problem is, we have a President of the United States of America who has sent a formal message to the Republican leader asking that a vote on this treaty be delayed. Apparently, there is a consensus on the other side, thus far at least, not to allow it to be delayed. This is the total politicization of a national security debate. Could anyone have imagined before this came up, if a President of the United States of any party said: This issue, which is of the gravest consequence to the United States of America, I respectfully ask that you delay a vote on it, could anyone have imagined anything other than a response that says: Mr. President, we will concur with the delay, unless it was for stark political reasons? I can't fathom this one. I can't fathom this. I wasn't sure the President should have sent the letter in the first place.

If this treaty is defeated and India and Pakistan test, we are going to find

ourselves in the ugliest political brawl we have seen in this place since Newt Gingrich left the House. You are going to have Democrats standing up on the floor saying: The reason why India and Pakistan have tested is because the Republicans defeated this treaty and gave a green light. That is not a provable assertion, but mark my words, we are going to hear it. Then the response is going to be even more political.

We ought to take a deep breath. My mom always said, when you lose your temper, take a deep breath, count to 10. Not that I have ever lost my temper in my life. You can tell I am not at all passionate about any of these issues. But let us count to 10. The President of the United States has asked this treaty vote be delayed. It seems to me it is common courtesy and totally consistent with national interests to grant that request.

I will speak to other aspects of this. Let me conclude by saying two things: One, to move to a very small tactical nuke on the part of the Russians is an absolute outward admission that they lack the capability in their minds for fighting the conventional war. Twenty years ago, we would have paid billions of dollars, if the Russians had come to us—I say to my friend from Massachusetts who knows a great deal about this—we would have been prepared to vote to pay them \$10-, \$20 billion if they would stop developing intercontinental range missiles that had the capacity to penetrate our airspace and in all probability hit hardened targets here. If they had said to us, we won't do that but we are going to build a very small tactical nuke, we would have paid them to do that. Now we hear on this side, if we pass this treaty, they are going to build tactical nuclear weapons that are very small, smaller than the 10,000 they now have and are able to have and legally can have. That is a very bad thing. That is why we should reject this treaty. So we encourage the Chinese to go from 18 to 800 or 8,000 nuclear weapons that have MIRV capability and are thermonuclear in capacity. That is wonderful reasoning.

There are legitimate arguments against this treaty, which I believe do not rise to the level of being against a treaty, but I haven't heard them made this morning, with all due respect.

I yield the floor.

Mr. HELMS. Mr. President, I yield to the Senator from Arizona.

Mr. KYL. Mr. President, I want 30 seconds to respond to the challenge of my friend from Delaware with respect to unilateral disarmament. I think the point the Senator from Kentucky was making was that the United States will consider itself bound to the zero-yield standard. We will abide. But we know that certain other countries don't see the treaty that way, don't interpret the language that way. We suspect they have reason to and probably will

be conducting so-called hybrid nuclear tests and, second, couldn't verify whether those kinds of tests are conducted. As a result, the United States would not be conducting any kind of nuclear tests, whereas other countries would have the capability and, indeed, the motivation to do so.

I believe that is what the Senator was talking about when he talked about the concept of unilateral disarmament.

Mr. BIDEN. Mr. President, I will take a minute to respond. I understand the point made. We have 6,000 intercontinental ballistic missiles that are on line right now. The Russians have a similar number. After you get by that, the numbers drop off precipitously. China is down in the teens. This unilateral disarmament notion or, as explained by the distinguished Senator from Arizona, I understand his point, but what are we doing? Are we going to give up? Are we freezing in place the fact that we stay at 6,000, and if they take the worst case of a stockpile that is in atrophy versus the dozen or more that the Chinese have? I mean, come on. Come on. You know, if you told me the Chinese had 6,000 nuclear weapons, MIRV capability, thermonuclear yield, or if you told me the Koreans and Libyans had that and the Russians had that, then you would have an argument. After the Soviet Union and then our allies, it drops off precipitously into double digits, max—max.

Mr. President, I yield 10 minutes to the Senator from Massachusetts.

The PRESIDING OFFICER. The Chair recognizes the Senator from Massachusetts, Mr. KERRY.

Mr. KERRY. Mr. President, I want to thank the Senator from Delaware for his terrific leadership on this issue over the last few days, and for a long period of time.

Let me quickly address, if I may, one point. The Senator from Delaware a few moments ago referred to the strange dynamic that has set in here in the Senate. I just want to underscore that, if I may, for a moment.

I grew up, as many of us did, looking at the Senate with a sense of great respect and awe for the capacity of the Senate to come together around the most significant national security issues that faced the country. I think all of us always looked at this institution as the place that, hopefully, could break through the emotions and find the most common sense solution that is in the interests of the American people.

Some of the great history of the Senate has been written about those moments where Senators crossed the aisle and found commonality in representing the interests of the Nation. I must say that in the 15 years I have been privileged now to serve here, representing Massachusetts, I have never seen the Senate as personally and ideologically

and politically divided and willing to subvert what we most easily can define as the common national interest for those pure ideological or political reasons. And I don't think that is mere rhetoric when I say that.

I noticed when Presidents Reagan and Bush were in office, there was a considerable thirst on the other side of the aisle for adventures in Granada, Panama, and Somalia, and the obvious need to respond to the threat in Iraq and the Middle East. But suddenly, with President Clinton, we saw those very people who were prepared to support those efforts, even in a Granada or in a Panama, suddenly people argued that Kosovo didn't have any meaning, Bosnia didn't have meaning, and even Haiti, where there was an incredible influx of refugees and chaos right off our shore, failed to elicit the same kind of responsible international reaction as we had seen in those prior years. Now, regrettably, this treaty finds itself being tossed around as the same kind of "political football," to a certain degree. And I think that is unfortunate, and it certainly does not serve the best interests of the Nation.

Mr. President, preventing the proliferation of nuclear weapons is one of the most important issues facing the United States today. Since the end of the Cold War, we have made great strides in reducing the danger to the American people of the vast nuclear arsenal of the former Soviet Union. But the nuclear danger persists, and the job of nuclear arms control is far from finished. Multiple nuclear tests detonated by India and Pakistan emphasize the need for greater U.S. leadership on this critical issue—not less.

In the last week, we have been told by critics of the CTBT that, for a variety of reasons, it will increase, rather than reduce the danger from nuclear proliferation. I believe that a careful examination of the criticism of this treaty will show that, on balance, it will enhance—not undermine—U.S. national security interests.

First, critics argue that, in their desire to conclude a comprehensive test ban, the Clinton administration made key concessions resulting in a flawed Treaty that is worse than no Treaty at all. Let me say at the beginning that I believe the CTBT is far from perfect. I am not going to argue with my colleagues on the other side that you can't find a legitimate point of disagreement about the Treaty. I'm not going to argue with those who don't like the way a particular compromise was arrived at in the treaty, or that think a particular principle might have been fought for harder and the absence of victory on that particular principle somehow weakens the overall implementation of the Treaty.

The negotiating record—which has been subject to great scrutiny in recent days—reflects as many compromises

from the original U.S. position as triumphs in achieving our objectives. There are legitimate reasons for concern that we did not achieve all of the original goals of the United States in negotiating this Treaty. I certainly take to heart Secretary Weinberger's admonition that you should not want the end goal so much that you give up certain substance in arriving at that end goal. I think that is a laudable and very important principle around which one ought to negotiate.

But my colleagues in this body understand better than most the necessity of compromise in finding pragmatic solutions to the many difficult problems we face. And the compromises we agreed to in the CTBT will allow us to achieve the nonproliferation goals we seek.

What has often been lost throughout this debate is that the United States enjoys a tremendous technological advantage over the other nuclear powers in both the sophistication of our weapons and our ability to maintain them reliably. The Administration and the Congress initially agreed to seek a test ban that would permit only the lowest-yield nuclear tests, which was soundly rejected by our negotiating partners because it would essentially ensure that only the United States, with the technical capacity the others lack to conduct those low-yield tests, would be permitted to continue testing its nuclear stockpile.

As Ambassador Stephen Ledogar—the head of the U.S. negotiating team—testified before the Foreign Relations Committee last Thursday, the other four nuclear powers argued that they needed a higher threshold in order to gain any useful data. Russia argued that, if a testing threshold were to be established for the five nuclear powers, it should allow for nuclear yields of up to ten tons of TNT equivalent, hardly a level that constituted an effective testing restriction.

Our negotiators quickly rejected that idea, and President Clinton decided the best way to resolve the impasse and protect U.S. interests would be to pursue a policy of zero-yield—a ban should be a ban. The Russians were not happy with this proposal, but eventually were persuaded to accept a total ban on any nuclear test that produced any nuclear yield.

Clearly, the United States would have been better off if we had been able to negotiate a test ban that allowed us to continue testing. But it is ridiculous to argue that, because the CTBT does not protect the U.S. advantage it represents a dangerous capitulation on our part. To implement and verify a zero-yield test ban, we need not be worried about distinguishing between a low-yield test and a medium-yield test to determine if the Treaty has been violated. Any test of any yield is a violation. In this regard, the Treaty's strength is in its simplicity.

Second, critics argue that we shouldn't ratify the CTBT because we can't verify compliance. There has never been an arms control treaty that is 100% verifiable, and the CTBT is no exception. We will not be able to detect nuclear tests down to the most minute level of nuclear yield. But we will be able to verify that the Test Ban is accomplishing what it is meant to accomplish: an end to nuclear testing that advances the sophistication of current nuclear stockpiles or the development of new nuclear stockpiles.

The key to a successful verification system is that a potential violator must believe that the risk of getting caught is greater than the benefit of the violation. The lower the yield of the nuclear test, the smaller the chance of detection by seismic means. But at the same time, the amount of useful information a nation would get by conducting a low-yield clandestine test would be limited. As a result, a potential violator would likely decide that the risk of getting caught is greater than the benefit of conducting the test. In addition, clandestine testing will not allow any developing weapons program to approach current U.S. capabilities.

For those who are concerned about the danger from low-yield nuclear testing, I would also argue that defeating this treaty will make it more difficult, not less, for the United States to detect those tests by denying us the benefits of the International Monitoring System that will verify the CTBT. The International Monitoring System will include 50 primary seismic monitoring stations and an auxiliary network of 120 stations, 80 radionuclide stations for atmospheric measurements, 11 hydroacoustic stations to detect underwater signals, and infrasound monitoring as well. This system will be augmented by the very powerful national intelligence-gathering technologies currently operated by the U.S. and others.

The CTBT also allows any state party to request an on-site inspection of a questionable seismic event. The Treaty calls for on-site inspection requests to be submitted to the Executive Council of the CTBT Organization—the body charged with implementing the Treaty—along with supporting data, collected either from the monitoring and data mechanisms established under the Treaty or from national technical means. The Executive Council will have representatives from every region, and nations within each region will rotate membership on the Executive Council on a set schedule. The United States has reached agreement with the nations in our region that we will always be one of the 10 nations representing our region, so we will always have a vote on the Executive Council.

Thirty of the 50 members of the Executive Council must approve an on-site

inspection request. Critics have argued that it will be very difficult for the United States to garner the support of 30 nations to allow for an on-site inspection. They argue that our traditional adversaries will use the Executive Council to block inspections that are necessary to protecting the U.S. national interest.

It is true that countries such as North Korea, Iran, Iraq and their few supporters can be counted on to block U.S. and other requests for on-site inspections. However, most of the nations of the world have no interest either in pursuing nuclear weapons or allowing their neighbors to pursue them unchecked, which is why this Treaty enjoys such strong support throughout the international community.

Rogue nations would have to find support among more than 40 percent of the Executive Council to block our request for an on-site inspection. But it is unlikely that the United States would not be able to persuade at least 30 members of the merits and importance of our inspection request.

The CTBT will give us access to tools we otherwise would not have for monitoring nuclear tests, and an option for on-site inspection of seismic events that we do not fully understand. Defeating the treaty would deny our intelligence community the additional benefits of those additional tools.

Third, critics argue that the CTBT will not end nuclear proliferation, because key countries of proliferation concern will not sign or ratify. This is an important argument, because it goes to whether this Treaty can accomplish the fundamental purpose for which it is designed—stopping the proliferation of nuclear weapons.

It is true that countries will halt nuclear testing, or not, based on a calculation of their own national interest. But by creating an international norm against nuclear testing, the CTBT will add a powerful factor in a rogue nation's assessment of whether its national interest will be helped or harmed by the conduct of a nuclear weapon. A nation that chooses to test will face considerable costs to its political, economic and security interests. U.S. ratification of the CTBT will lay the basis for universal enforcement of the Treaty, even against the few nations that may not sign.

The CTBT is a critical component of broader U.S. strategy on nuclear non-proliferation, which has the Nuclear Non-Proliferation Treaty (NPT) at its core. In 1995, states parties to the NPT agreed to extend that Treaty indefinitely, in large part based on the commitment of the declared nuclear weapons states to conclude a CTBT. The failure of the United States to ratify the CTBT will seriously undercut our ability to continue our critical leadership role in the global nuclear non-proliferation regime.

Formal entry-into-force of the Treaty requires ratification by the 44 countries that have nuclear power reactors or nuclear research reactors and are members of the Conference on Disarmament. And in my mind, it is altogether appropriate that a treaty banning the testing of nuclear weapons requires the participation of all the nuclear-capable states before it can enter into force. Of those 44, 41 have signed the CTBT, and 23 have ratified. All of our allies have signed the Treaty. Russia and China have signed the Treaty. Only India, Pakistan and North Korea have not signed.

Now, some have argued that the United States should be in no hurry to ratify the Treaty, that we should wait until Russia, China, India, Pakistan and North Korea have ratified. They worry that the United States will forfeit its ability to conduct nuclear tests with no guarantee that the countries we are most concerned about will make the same commitment. But the United States has already concluded that we do not need to conduct nuclear tests to maintain our vast nuclear superiority.

No one on the other side of the aisle is arguing we should go out and test tomorrow. Why? Because we don't need to test tomorrow. We don't need to test next year. We don't need to test for the foreseeable future, according to most scientists in this country, because we don't test the nuclear explosion itself for the purpose of safety and for making judgments about the mechanics of both the electrical and mechanical parts of a nuclear warhead.

The CTBT binds us to a decision we have already made, because it is in our national interests to stop testing. And if, at some point down the line, it becomes necessary to resume testing to preserve the reliability of our nuclear deterrent, we can withdraw from the Treaty to do so.

Clearly, we want countries like India and Pakistan to ratify the Treaty and commit themselves to refraining from nuclear testing. Aren't we more likely to convince them to do this if we ourselves have already ratified the Treaty? As Secretary Albright correctly pointed out on Thursday, waiting is not a strategy. During the debates on the Chemical Weapons Convention, there were those who advocated taking this passive approach to protecting our interests. But in fact, after the United States ratified the CWC, Russia, China, Pakistan, Iran and Cuba followed our lead. The best chance for achieving the nonproliferation goals of the CTBT is for the United States to lead. If the Senate were to reject the Treaty, international support for the test ban would be gravely undermined, and countries like India and Pakistan would have no reason to refrain from continued testing.

Aren't we better off with a treaty that gives us the capacity to monitor,

the capacity to continue to show leadership with India and Pakistan, the capacity to set up a process with China before the Chinese test in a way that gives them the ability to translate the information stolen—referred to in the Cox commission report—into a real threat to the United States?

That seems to me to be a very simple proposition. The Cox Report, and others, all acknowledge that at this point in time China has not created a new weapon or changed its nuclear capacity, using our information. And we know that, in order to do so, using on our information, they have to test. China has signed the treaty, and is prepared to adopt the restraints of this treaty. Those who argue that we are better off allowing China the window to go out and test and now profit from what it has stolen elude all common sense, in my judgment. How would the United States be better off with a China that is allowed to test and translate the stolen information into a better weapons system? That is not answered on the floor of the Senate. But some argue that that is the way they would like to proceed.

U.S. ratification of the CTBT won't end nuclear proliferation, but U.S. rejection of the Treaty undermine the credibility of U.S. leadership on non-proliferation, which will jeopardize U.S. work to prevent North Korea from developing nuclear weapons, to eliminate weapons of mass destruction in Iraq, and to block the sale of sensitive technologies that could contribute to proliferation.

Finally, critics argue that the United States will not be able to maintain a reliable nuclear deterrent without nuclear tests. I take very seriously the argument that, without nuclear testing, the credibility of the U.S. nuclear deterrent will be undermined. The security of the American people—and the security of our friends and allies around the world—depends on maintaining the credible perception that an act of aggression against us will be met with an overwhelming and devastating response. If I thought for a minute that U.S. ratification of the CTBT would undermine this deterrent, I would not—I could not—support it.

In fact, the United States has today and will continue to have in the future high confidence in the safety, reliability and effectiveness of our nuclear stockpile. This confidence is based on over 50 years of experience and analysis of over 1,000 nuclear tests, the most in the world.

Most of the nuclear tests the United States has conducted have been to develop new nuclear weapons; for the most part, we use non-nuclear tests to ensure the continued reliability of our nuclear arsenal.

This is a key point—even with no test ban, the United States would not rely primarily on detonating nuclear

explosions to ensure the safety and reliability of our nuclear stockpile. Most of the problems associated with aging nuclear weapons will relate to the many mechanical and electrical components of the warhead, and the CTBT does not restrict testing on these non-nuclear components. Moreover, we have already proven that we can make modifications to existing designs without nuclear testing. In 1998, we certified the reliability of the B-61 Mod 11, which replaced an older weapon in the stockpile, without conducting a nuclear test.

Looking to the future, the center of U.S. efforts to maintain our nuclear stockpile is the Science Based Stockpile Stewardship program, initiated by President Clinton in 1992. This 10 year, \$45 billion program has four major objectives: to maintain a safe and reliable stockpile as nuclear weapons age; to maintain and enhance capability to replace and certify nuclear weapons components; to train new weapon scientists; and to maintain and further develop an operational manufacturing capability.

And it is already working. Since our last test in 1992, the Secretaries of Defense and Energy and the Commander-in-Chief of Strategic Command have certified 3 times (and are about to certify for the fourth time) that the U.S. nuclear stockpile is safe and reliable. It is only in the distant future—2010 perhaps, but we don't know the answer to this yet—that conceivably the physics package of a nuclear weapon might provide the level of deterioration that might not be able to be replaced with totally new parts and therefore might somehow lessen our nuclear deterrent capacity. To enable us to respond to such a situation, President Clinton has established six Safeguards that define the conditions under which the U.S. will remain a party to the CTBT.

Presidential Safeguards A through F, as they are known, outline the U.S. commitment to maintaining a science-based stockpile stewardship program to insure a high degree of confidence in the reliability of the U.S. nuclear stockpile. The final safeguard, Safeguard F, states U.S. policy—as embodied in the official negotiating record of the CTBT—that, if the President is advised that the safety or reliability of the U.S. nuclear stockpile can no longer be certified, the President, in consultation with the Congress, will withdraw from the CTBT under the “supreme national interests” clause of the Treaty.

Now, critics of this Treaty have suggested that a future President, upon learning from his Secretaries of Defense and Energy that the nuclear stockpile can not be certified, and upon confronting all the scientific data that tells him our nuclear deterrent is eroding, will somehow fail to act—fail to invoke the “supreme national inter-

est” clause—and withdraw the United States from the Treaty. I ask my colleagues, Is there one among us who, when confronted with this information, would hesitate to act? When the Congress is informed of the status of the nuclear arsenal—and those reports are given in full to the Congress—is there anyone who doubts that the Congress would immediately demand that the White House take action to protect our nuclear deterrent?

Surely, the critics of this Treaty who doubt that a President could find the political will to withdraw the United States from the CTBT when our “supreme national interests” are at stake aren't suggesting that there is a confluence of political factors that could possibly place the sanctity of a treaty above the sanctity of the lives of the American people. No one can tell me that any President of the United States is going to diminish the real national security interests of this country against some desire to keep a treaty in effect for the sake of having a treaty if, indeed, doing so will threaten the real interests of this Nation.

U.S. ratification of, and adherence to, the CTBT will not jeopardize our nuclear deterrent, because the United States does not today, and will not tomorrow, rely on nuclear explosions to ensure the safety and reliability of our nuclear stockpile. We have embarked on a high-tech, science-based Stockpile Stewardship Program that will allow the United States to maintain the superiority of its nuclear arsenal. And in the event that we can not certify the reliability of our nuclear deterrent, we have given notice to our negotiating partners that we will not adhere to the CTBT at the expense of our supreme national interests.

So, in effect, we are talking about what we could achieve by passing this treaty and showing leadership on the subject of implementing an international regime of monitoring and of nonproliferation, versus continuing the completely uncontrolled capacity of nations to provide a true threat to the United States.

Mr. President, critics of this Treaty argue that the United States today faces too many uncertainties in the realm of nonproliferation to commit ourselves to a leadership position on the CTBT. I can not speak to those uncertainties, but of the following, I am absolutely certain: if the Senate rejects the Comprehensive Test Ban Treaty, there will be more nuclear tests conducted around the world, not fewer, and we will be no better equipped than we are today to detect and monitor those tests; the U.S. nuclear arsenal will not be made more reliable—and other nuclear nations will have the freedom to conduct the necessary tests to bring their weapons on a technological par with our own, undermining the strength of our nuclear

deterrent; and finally, the American people will be more vulnerable, not less, to the nuclear danger, because we will have undercut more than 30 years of work to build and fortify international norms on nuclear non-proliferation.

The Senate has before it today an opportunity to send a signal to the world that the United States will continue to lead on international efforts to reduce the nuclear danger. We also face the prospect of acting too soon, after too little time for deliberation, and sending a signal that the United States can no longer be counted on to stand against the forces of nuclear proliferation.

It seems to me that when the President of the United States makes a request in the interest of our Nation to the Senate to delay a vote, it is only politics that would drive us to have that vote notwithstanding that request.

My plea would be to my colleagues in the Senate that we find the capacity to cool down a little bit, to have a vote that delays the consideration of this treaty so that we may proceed to answer properly each of the questions raised by those who oppose it, and, if need be, make changes that would not send the message that the United States of America is rejecting outright this opportunity to embrace a policy that from Eisenhower on we have fought to try to adopt.

I hope that the leadership of the Senate on both sides of the aisle can be prevailed upon to prevent a tragic misstep that I fear will have grave consequences for the strategic interests of the United States and our friends and allies.

The PRESIDING OFFICER. Who yields time?

Mr. HELMS. Mr. President, parliamentary inquiry, please. Somewhere down the line we are going to find it wise to yield back time. That would not forbid a Senator on this side from suggesting the absence of a quorum or any other routine motion of the Senate. Is that correct?

The PRESIDING OFFICER. That is not correct. The Senator would have to have debatable time left or there would have to be a nondebatable motion. There would have to be debatable time left or there would have to be a nondebatable motion before a Senator would be able to suggest the absence of a quorum.

Mr. HELMS. Very well. I thank the Chair for the information.

The PRESIDING OFFICER. Who yields time?

The Senator from Delaware.

Mr. BIDEN. Mr. President, I say to my colleagues on the Democratic side who want to speak on this treaty, if I am not mistaken, there is less than 1 hour—approximately 1 hour—left under the control of the Senator from Dela-

ware, and 13 Members wish to speak to it; and, further, if my Republican colleagues conclude that they wish to yield back their time, the time is going rapidly as we approach this vote. I urge Senators, if they wish to speak, to be prepared, as my friend from the State of Connecticut is, to speak for 5 minutes.

I yield 5 minutes to my friend from Connecticut.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. LIEBERMAN. Mr. President, I thank my friend from Delaware.

As I have listened to my colleagues during this debate, I feel as if the Senate has backed itself at least into a procedural corner in the midst of a policy disagreement.

This is not the first time this has happened in the history of the Senate—not even in the 10½ years I have been here. But this is one of the most consequential times we have done so. For it seems to be a combination of reasons that are part ideological, part partisan, and part just plain personal. I hope we can find a way to work ourselves out of this corner because the stakes here are high.

As the debate has been going on, I have been thinking about the two big debates that have occurred here in the decade that I have been privileged to serve in this body. One was the gulf war debate and the other was the Middle East peace accords, the Oslo accords.

I think of the gulf war debate because I remember as President Bush dispatched a half million troops to the gulf that I was dismayed at how the reaction to that act by President Bush was dividing along partisan lines. It didn't seem like a partisan question to me. People could have good faith opinions on both sides, but the opinions were not based on party affiliation.

I have the same feeling as I listen to this debate, and watch the lines harden. Something unusual and unsettling has happened to our politics when party lines divide us so clearly and totally on a matter of national security. That is not the way it used to be in the Senate. And that is not the way it ought to be.

The same is true of the procedural dilemma to which we have come. We have a President—and those of us who support this treaty—acknowledging that the votes are not there to ratify it now. That says that the opponents of the treaty have won for now.

So why push for the vote? If the President of the United States has asked that it be delayed because of his fear of the consequences of a vote failing to ratify on nuclear proliferation, this is not political. This goes to the heart of our security and the hopes and fears we have for our future and our children's future.

But I will say if there is one thing, in my opinion, that would be worse than

going ahead and voting, even though we know those who oppose ratification of the treaty have won. That would be for us as a majority to voluntarily say that we will prohibit the President or ourselves from raising the question of this critical and progressive treaty again for the next year and a half. I think to do that would send an even worse signal to India, to Pakistan, to China, and to Russia.

Let's keep the hope of a more secure world alive. Let's acknowledge that we have a common goal.

Is anybody for nuclear proliferation? Don't we all agree that the atmosphere is cleaner and the likelihood of nuclear proliferation less if nations can't test? Can't we find a way across party lines to do what we have done with other treaties—to adopt reservations or safeguards or conditions which allow enough of us to come together to ratify this treaty? Why are we heading toward a wall from which there will be no good return and no good result?

I have also been thinking of the Middle East peace accords and the Oslo accords because I remember what Prime Minister Rabin said.

If you are strong you can take risks for peace.

We are the strongest nation today in the history of the world. When it comes to strategic nuclear weapons, we are dominant. We have more than 6,000. If, tragically, for whatever reason, a few of them don't work we have such—in the marvelous term of the Pentagon—"redundancy" that we have thousands of others that we can rely on in the dreadful occasion that we might need to use them.

This treaty promises to freeze our advantage in nuclear weapons. Since we are the strongest nation in history and this treaty may well make us more dominant in the crucial, terrible arena of nuclear weapons, why would we not want to take the risk of ratifying this treaty? It is, in my opinion, a very small risk for increasing peace and security for all—for our children, for our grandchildren. If we decide that testing is once again required by the United States in pursuit of our national interests, that option is protected. The treaty language is very clear: We can—and I am sure we will—withdraw.

My appeal in closing is to say, Can't we find a way to come back to some sense of common purpose and shared vision of a future? Both sides have said on the floor that nuclear proliferation is one of the great threats to our future. We are hurtling down a path, as this dreadful power spreads to other countries of the world, many of them rogue nations, where we cannot rely on the bizarre system of mutual assured destruction that saved the United States from nuclear war during the cold war. If an accident becomes more likely, the consequences will be dreadful. Can't we find a way to avoid good

old-fashioned gridlock, which is survivable on most occasions in this Senate, but I think potentially devastating on this occasion?

I appeal to my colleagues on the other side, whether there is or is not a vote now on this treaty, let's get together and figure a way we can sit, study the matter, talk to people in the Pentagon and people in allied countries, and see if we cannot find a way to agree on enough reservations, safeguards, and conditions to come back, hopefully next year, and ratify this treaty.

I yield the floor.

Mr. BIDEN. Parliamentary inquiry: If we go into a quorum call at this point, the time is taken out equally from the opponents and proponents; is that right or wrong?

The PRESIDING OFFICER. It takes unanimous consent to be charged equally. Otherwise, the time will be charged against the side which suggests the absence of a quorum.

Mr. BIDEN. I thank the Chair.

Mr. President, I yield 10 minutes to the Senator from Massachusetts, Mr. KENNEDY.

Mr. KENNEDY. Mr. President, this may be one of the most important debates the Senate will have in this recent time. In my view, the ratification of the Comprehensive Test Ban Treaty is the single most important step we can take today to reduce the danger of nuclear war. Surely we are in no position to hold a premature vote today or tomorrow on this.

After 2 years of irresponsible stonewalling, the Senate has finally begun a serious debate on this treaty. This debate should be the beginning—not the end—of a more extensive and thoughtful discussion of this extremely important issue. The stakes involved in whether to ratify or reject this treaty are clear. Our decision will reverberate throughout the world, and could very well determine the future of international nuclear weapons proliferation for years to come.

We have a unique opportunity to help end nuclear testing once and for all. The United States is the world's premiere nuclear power. The Comprehensive Test Ban Treaty locks us into that position. No other nations have the capability to assure that their nuclear arsenals are safe and reliable without testing. We have that capability now, and the prospects are excellent that we can retain that capability in the future.

Over the past 40 years, we have conducted over 1,000 nuclear tests. We currently have extensive data available to us from these tests—data that would provide us with an inherent advantage under the Treaty. As Hans A. Bethe, the Nobel Prize winning physicist and former Director of the Theoretical Division at Los Alamos Laboratory, stated in an October 3 letter to President Clinton,

Every thinking person should realize that this treaty is uniquely in favor of the United States. We have a substantial lead in atomic weapons technology over all other countries. We have tested weapons of all sizes and shapes suitable for military purposes. We have no interest in and no need for further development through testing. Other existing nuclear powers would need tests to make up this technological gap. And even more importantly, a test ban would make it essentially impossible for new nuclear powers to emerge.

As the foremost nuclear power, other nations look to us for international leadership. We led the negotiations for this treaty. We were the first of the declared nuclear powers to sign the Treaty. Yet, now, because of our inaction and irresponsibility, we have made it necessary for the leaders of three of our closest allies to plead with us not to defeat the Treaty.

These three leaders—Prime Minister Chirac of France, Prime Minister Blair of Britain, and Chancellor Schroeder of Germany—wrote in an OpEd article in the New York Times last Friday that, "Failure to ratify the Comprehensive Test Ban Treaty will be a failure in our struggle against proliferation. The stabilizing effect of the Non-Proliferation Treaty, extended in 1995, would be undermined. Disarmament negotiations would suffer." They also go on to say that, "Rejection of the treaty in the Senate would remove the pressure from other states still hesitating about whether to ratify it. Rejection would give great encouragement to proliferators. Rejection would also expose a fundamental divergence within NATO."

Our relationship with our most valuable allies is on the line. It would be the height of irresponsibility for the United States Senate to send the world a message that we don't care if other nations test nuclear weapons, or develop their own nuclear arsenals. Surely, the risks of nuclear proliferation are too great for us to send a message like that.

The United States stopped conducting nuclear tests in 1992. Doing all we can to see that other nations follow suit is critical for our national security. Russia and China have both indicated that they are prepared to ratify the Treaty if the U.S. ratifies it. If the Senate fails to ratify it, the likely result is a dangerous new spiral of nuclear testing and nuclear proliferation.

Many of my colleagues have spoken about the fact that there is no guarantee about this Treaty. I argue that there is one guarantee—if we fail to ratify the Treaty, the consequences are grave, and could be catastrophic for our country and for all nations.

Last week, we held hearings in the Armed Services Committee on the Treaty, and I commend the distinguished Chairman and Ranking Member of that Committee for taking the lead on this extremely important issue. We listened to expert witnesses on both

sides of the aisle, as they presented testimony on the Treaty and the Stockpile Stewardship Program.

General Shelton, the Chairman of the Joint Chiefs of Staff, testified that it was the unanimous conclusion of all of the Joint Chiefs, that the Treaty is in our national interest. General Shelton said, "The CTBT will help limit the development of more advanced and destructive weapons and inhibit the ability of more countries to acquire nuclear weapons. In short, the world will be a safer place with the treaty than without it, and it is in our national security interests to ratify the CTBT."

Some of my colleagues have referred to the Treaty as "unilateral disarmament." This characterization is grossly inaccurate, both in policy and in practice. A key element of our adherence to the Treaty, with the Administration's safeguards, is the Stockpile Stewardship Program.

Last Thursday, in the Armed Services Committee, each of the directors of our nuclear labs testified about that program. John Browne, the director of Los Alamos National Laboratory, said, "Through the Stockpile Stewardship program, we intend to demonstrate a technical excellence in weapons-relevant science and engineering that will project confidence in our nuclear capability. This technical excellence will be evident in our unclassified publications and presentations at scientific conferences. Other countries will see these accomplishments and will understand their connection to the quality of our weapons programs." With the Stockpile Stewardship Program, we will still be able to maintain a powerful nuclear deterrent.

Critics argue that the Treaty's not 100 percent verifiable. In reality, the Treaty enhances our current ability to monitor nuclear testing worldwide. It establishes an International Monitoring System, which creates a global network of 321 testing monitors. We would get all of the benefits of this larger system and only have to pay 25 percent of its total cost. The Treaty also establishes an on-site inspection system. Perhaps most important, it will hold other nations accountable for their actions, and require them to provide explanations for suspicious conduct.

We also have a safety valve in the Treaty—Safeguard F. The Administration didn't send this Treaty to the Senate as a stand-alone document. They sent it here with six Safeguards under which, and only under which, the United States will adhere to the Treaty.

As Safeguard F states, adherence to the Treaty is explicitly conditioned on:

... the understanding that if the President of the United States is informed by the Secretary of Defense and the Secretary of Energy that a high level of confidence in the safety or reliability of our nuclear weapons

can no longer be certified, the President, in consultation with Congress, can withdraw from the Treaty.

The importance of this safeguard cannot be overstated. It ensures that we will be able to do what is necessary to maintain our nuclear arsenal.

President Kennedy, in his address to American University on June 10, 1963, spoke about the issue of verification while discussing the Limited Test Ban Treaty. He said,

No treaty, however much it may be to the advantage of all, however tightly it may be worded, can provide absolute security against the risks of deception and evasion. But it can—if it is sufficiently effective in its enforcement and if it is sufficiently in the interests of its signers—offer far more security and far fewer risks than an unabated, uncontrolled, unpredictable arms race.

These words still hold true today. The risks posed by ratification of the Comprehensive Test Ban Treaty pale in comparison to the risks posed if we reject it. We have the opportunity, with this treaty, to open the door to a world without nuclear testing—a world that will be far safer from the danger of nuclear war.

Voting on the Comprehensive Test Ban Treaty is one of the most important decisions that many of us will ever make. This vote holds profound implications not only for our generation, but for all the generations in the future. It makes no sense to risk a premature vote now that could result in rejection of the Treaty. As the poet Robert Frost pointed out, “Two roads diverged in a wood”—and the one we take may well make all the difference between peace and nuclear war.

I reserve the remainder of my time and yield it back to Senator BIDEN.

The PRESIDING OFFICER. The Chair recognizes the Senator from Delaware.

Mr. BIDEN. Mr. President, I will yield myself 5 minutes.

The argument has been made that the United States will not be able to modernize its deterrent arsenal to meet new threats or encounter new technologies under the Strategic Stockpile Stewardship Program, and that is why some of my colleagues are saying we cannot go ahead with this treaty.

I want to make it clear, the test ban treaty does not prevent us from adapting most operational characteristics of a nuclear weapons system to changing military missions, should we determine we have to do that. Many important parts of a nuclear weapon can confidently be developed, tested, and integrated into nuclear weapons without any nuclear tests because they do not involve changes in the primary or secondary components of the warhead; that is, the so-called physics package.

Dr. Paul Robinson, the Director of the Sandia National Laboratory, told the Armed Services Committee on Thursday night:

Adapting deployed nuclear designs to new delivery systems, or even other delivery modes, is not constrained by the elimination of nuclear yield testing.

Let me put this in ordinary English. We keep being told here what has happened is, if we sign on to this treaty without this Stockpile Stewardship Program being fully completed, we are going to put ourselves at great disadvantage, amounting to nuclear disarmament; we will not be able to modernize our systems, and our systems are going to atrophy.

Dr. Robinson, the Director of Sandia, went on to describe a prominent success in the Stockpile Stewardship Program that is working now. We have nine deployed systems, nine different kinds of nuclear bombs. One of them is the B61 Mod-7 strategic bomb. That was adapted without any nuclear tests.

I have a photograph of that I will hold up now. That is a B-1 bomber. That red missile that is being dropped out of the belly of that bomber is a change in the B61 Mod-7 to a B61 Mod-11, in response to a different requirement.

What was the different requirement? The military said they needed a nuclear weapon that could destroy targets that were buried very deeply in the ground, and that Mod-7 version of the B61 nuclear warhead could not do that. So without any nuclear test, they tested a new system. It is called the Mod-11. That can penetrate the Earth deeply and destroy deeply buried targets.

This picture illustrates an important fact. You can test nearly everything in a nuclear weapon so long as you do not put enough nuclear material in it to cause an uncontrolled chain reaction. We did not set off this bomb, but we did test the bomb. You can take the plutonium out of the bomb, and put uranium in the bomb, and you can test it. It just doesn't set off this uncontrolled chain reaction. So this idea that we cannot change anything in our arsenal if we sign on to this is simply not correct.

By the way, the JASON Group, which is the most prestigious group of nuclear scientists in the United States of America, studied this, and they said the Strategic Stockpile Stewardship Program can maintain all of our systems. One particular member of that group, testifying before the committee, Dr. Garwin, points out that we can even exchange entire physics packages; that is the plutonium and that secondary package, that device that explodes it, that blows up. In my visual image of it, the best way to explain it, as I was trying to explain it to my daughter who is a freshman in college, what happens is you get this plutonium, and you have to have something to ignite it, set it off. So there is a secondary explosion that takes place, and it shoots all these rods into this plutonium at incredible speeds.

I yield myself 2 more minutes.

What happens is it detonates the weapon, this chain reaction starts, and you have a thermonuclear explosion.

The question has been raised whether or not, if we figured out that this plutonium was no longer either stable or functional or was not reliable, could you take out of the warhead the thing that makes it go boom, the thing that causes the chain reaction, the thermonuclear explosion, and put a new package in? Dr. Garwin says you sure can do that, without testing, without nuclear tests.

This year, the first W-87—that is another warhead—life extension unit was assembled in February for the Air Force at the Y12 plant in Oak Ridge. It met the first production milestone for the W-87 life extension.

These are major milestones and successes in the Stockpile Stewardship Program. I might add, as my friend from Massachusetts knows, nobody is suggesting we start to test now—nobody that I am aware of. I should not say nobody. Nobody I am aware of. There may be somebody suggesting it.

Preservation of the option of modernizing U.S. nuclear weapons to counter emerging defensive technologies, the phrase you hear, does not require ongoing nuclear testing. The most likely countermeasures would involve changes to the missile and its reentry system, not to the nuclear explosive.

It is a red herring to suggest if we sign on to this treaty, we are locking ourselves into a system that is decaying and moving into atrophy and we are going to find ourselves some day essentially unilaterally disarmed. That is a specious argument.

Mr. KENNEDY. Will the Senator yield for a question?

Mr. BIDEN. I will be happy to yield.

Mr. KENNEDY. There were some questions raised in the Armed Services Committee.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. BIDEN. I yield time to the Senator.

Mr. KENNEDY. What assurances will we have that there will be continued funding for the Stockpile Stewardship Program? I imagine that the Senator agrees, if this is indeed a concern, that we would be glad to make funding for the Stockpile Stewardship Program mandatory. And, I doubt that there would be any hesitancy, on the part of our colleagues, to get broad support for this in the Senate, if that was what was needed so that ensuring funding for this important program wasn't an issue or a question.

Many of the witnesses at the hearings said: “How do we know there will be continued funding? They may very well cut back that program.” Is this another area about which the Senator is concerned, that we don't know whether, year-to-year, the funds will be

available for the Stockpile Stewardship Program.

Can he give us some insight about his own thinking on how we can give assurances to the lab directors that there will be adequate funding for that program in the future?

Mr. BIDEN. The Senator, as usual, puts his finger on one of the incredible flaws in our opponents' reasoning. They engage in circular reasoning. It goes like this: Without spending money on the Stockpile Stewardship Program, roughly \$4.5 billion a year for 10 years, we will not be able to attain, when the shelf life of these weapons is reached 10 years out or more, a degree of certainty that they are reliable and safe.

You say: OK, we will fund it; we are for it, and the President sends up that number.

Then they say: But we have a problem. Our Republican friends in the House won't vote for that much money, and we had to fight too hard to get it and they probably won't do it next year. The reason why, they go on to say, I am against this, although I think if we funded it, it would work and it would make sense, is my Republican colleagues in the House probably won't fund it; therefore, I can't be for this treaty because you guys are not funding the stockpile.

I find that absolutely fascinating, but it is the circular reasoning which is being engaged. It strings together a group of non sequiturs that end up leading to a conclusion that makes no sense.

The Senator has been here longer than I. Can he imagine, if we vote this treaty down and other nations begin to test, and those who voted it down are saying, by doing that, we think the United States should be able to test, can you imagine this or future Congresses coming up with \$45 billion to perfect a Stockpile Stewardship Program which purpose and design is to avoid nuclear testing, to spend \$45 billion for the redundancy? Can the Senator imagine us doing that?

Mr. KENNEDY. I certainly cannot. The Senator has put his finger on one of the many reasons for supporting the Stockpile Stewardship Program which is to give the necessary assurances that funding for maintaining our weapons stockpile will be there year after year. This was something I noted was a concern during the course of our hearings—this question about the need for adequate funding. And, the Senator has responded to that concern. There is broad support, certainly on our side or for those who support this treaty, for giving the assurance that funding would be there. It is just one more of the arguments made by those who oppose this treaty that has now been rebutted. I thank the Senator.

Mr. BIDEN. I thank the Senator for his response. I will raise this when we get to the amendments. I wish to point

out there is one other ultimate safeguard. The ultimate safeguard is in the amendment, our last provision, which says, if, in fact, we do not fund the stockpile and that causes the laboratory Directors to say, "We cannot certify," and that means the Secretary of Energy says, "We cannot certify," the President of the United States, upon that determination, must withdraw from the treaty and allow us to begin to test. I am amazed at the arguments that are being made on the other side.

Mr. KENNEDY. If the Senator will yield on that question, so the amendment makes a change to the safeguards and makes this a mandatory requirement on the President to exercise the Supreme National Interest if the stockpile cannot be certified?

Mr. BIDEN. Yes.

Mr. KENNEDY. And, that is the measure that is going to be advanced by the leadership, yourself included, to be a part of the Resolution of Ratification?

Mr. BIDEN. That is correct. By the way, it is much stronger than any President wants. It is section (E) of the amendment we sent. I will read it to the Senator:

Withdrawal from Treaty.—If the President determines that nuclear testing is necessary—

The antecedent to that is the lab Directors say it—

to assure, with a high degree of confidence, the safety and reliability of the United States nuclear weapons stockpile, the President shall consult promptly with the Senate and withdraw from the Treaty pursuant to Article IX (2) of the Treaty in order to conduct whatever testing might be required.

It is pretty strong.

Mr. KENNEDY. I thank the Senator. It is about as clear as can be. I see our ranking member of the Armed Services Committee ready to speak, but I welcome again the comments of the Senator from Delaware about the risks to our international position if we fail to ratify or defeat the CTBT in terms of security and stability around the world and the continued possibility of nuclear testing over time.

As a member of the Armed Services Committee, I am pleased that we held narrowly focused hearings on the many national security implications of this treaty. It is important that we narrowly focused our attention on our own national security issues. But, these broader international security issues are powerful, and in rereviewing and reading again the letters, statements, and editorials sent in opposition to the Treaty, I think the importance of the broader international security issues, of further testing by other countries, and what the implications are going to be has been missed. I know the Senator addressed those, but I hope before we get into the final hours of this debate the Senator from Delaware will review that for the benefit of the membership.

Mr. BIDEN. Mr. President, I say to my friend from Massachusetts, this is another part of the circular reasoning. What I heard this morning on the floor and heard all day on Friday went like this: Without us being able to test, our 6,000 strategic nuclear weapons are going to become unreliable—which is ridiculous in my view. I strike the word "ridiculous." Which is highly unlikely. I am trying to be polite. It is hard.

Then they say because it is going to become unreliable, two things are going to happen. One is that our allies are going to conclude that our deterrent is no longer credible and, therefore, they are going to lose faith in us. What they are then going to do is decide—Japan and Germany, which are nonnuclear powers—to become nuclear powers, and we are going to be escalating the arms race by passing this treaty.

The same day in an unprecedented move, to the best of my knowledge, the leader of Germany, the leader of France, and the leader of Great Britain sent an open letter to the Senate saying: We, Germany, Japan, and France, have ratified this treaty. We strongly urge you, the Senate, to ratify this treaty in the interest of your country as well as ours.

One of those signatories was the Chancellor of Germany, the very country my friends on the other side say, if we pass this treaty, Germany will go nuclear. I guarantee—I cannot guarantee anything. I will bet—I guess I am betting my career on this one—I will bet you anything that if we turn down this treaty and it is clear that it cannot be revived, within a decade Germany and Japan are likely to be nuclear powers, particularly Japan, because what is going to happen is, India and Pakistan are going to continue testing. They will not sign this treaty. They say they will sign it now if we do. They will not sign the treaty. As India tests more and they move to deployment, China will test more.

China will test in order to determine whether or not they can build smaller, lighter thermonuclear devices where multiple numbers can be put on missiles. They will move from 18 nuclear weapons to God knows how many. Then Japan, sitting there in the midst of that region, is going to say, mark my words: We, Japan, have no choice but to become a nuclear power.

We have spent 50 years of our strategic and foreign policy initiatives to make sure that does not happen. But that is what will happen. So now, at the end of the day, are we likely to be more secure 15 years from now with the scenario I paint? Which is more likely? Is it more likely that turning down this treaty is going to turn Japan and Germany into nuclear powers, increase the total nuclear capacity of China, and move India and Pakistan further

along the nuclear collision path? Is that more likely?

Or is it more likely—which is their worst case scenario—that what is going to happen is we are not going to fund the stockpile, we are not going to be able, in 10 years, to count on the reliability of our weapons, the weapons lab Directors are going to come to the Secretary of Energy, the Secretary of Defense and say, we can't certify any more Messieurs Secretaries, and they go to the President of the United States and say, we can't certify, and the President is going to say, oh, that is OK; don't worry about it. We are going to be bound by the treaty.

Which is a more likely scenario? What do you think? Which is more likely, that even if the stockpile degrades, any country, from China to our allies, is going to say, gee, their B-60 M-11 may not function as they thought it would, and maybe they will only be able to fire off 4,900 strategic hydrogen bombs. Maybe they will only be able to do that; therefore, they have lost their deterrent capacity. They no longer have credibility.

That is what you have to accept. You have to accept those kinds of arguments to sign on to the notion that most of our Republican friends are arguing.

Which is the more likely scenario? I would respectfully suggest that 85 percent or 80 percent of the American people are right. They figured it out. They figured it out.

So I hope I have responded, in part at least, to the Senator's question.

Mr. KENNEDY. You did. I thank the Senator.

Mr. BIDEN. I yield to the ranking member of the Armed Services Committee, the Senator from Michigan, Mr. LEVIN.

The PRESIDING OFFICER. The Chair recognizes the Senator from Michigan.

Mr. LEVIN. I thank my good friend from Delaware. I thank him also for the leadership he has shown, both on the floor and off the floor, in trying to bring this treaty to hearings before the Foreign Relations Committee, so that the full Senate could look at the pros and cons of this in a deliberative way.

I start with a reference that Senator BIDEN made to three of our good allies—France, Germany, and Great Britain. The chairman of the Foreign Relations Committee is here and perhaps he will recollect otherwise; and I would trust his recollection on this, if he does—but I cannot remember when three of our closest allies' leaders have addressed a direct plea to the Senate. At least in the 20 years I have been here, I do not remember a letter coming in from the Chancellor of Germany and the President of France, and the Prime Minister of Great Britain pleading with us to ratify a treaty. That is how serious the stakes are in this debate.

The world is looking to the Senate. Sometimes we say that and believe it is true; but in this case we say it and know it is true. Because the world has signed on both to a nonproliferation treaty and to a Comprehensive Test Ban Treaty.

There are a few exceptions, obviously. There are some states which will not sign any such treaty. But except for a few rogue nations, the world has signed on to a nonproliferation treaty and a Comprehensive Test Ban Treaty. The world is looking at us, expecting our leadership.

Even though the world is looking to us to ratify, that does not mean we should ratify this treaty if it makes us less secure. We should do what is in our security interests. But unless all of our allies and the rest of the world are wrong, the world will be a much more secure place if we stop testing nuclear weapons and if other countries stop testing nuclear weapons as well.

How do we tell India "don't test", if we ourselves want to test? How do we tell Pakistan, "don't test; for God's sake, for your security and the world, don't test", if we say, oh, but we want to continue to test?

What does that do to our argument? I would suggest it destroys it. It destroys our standing to try to persuade countries that want to become nuclear powers, that want to add to their inventories, that want to improve their inventories—it wipes out our standing to make the argument, if we say everybody else ought to stop testing but us.

We are the only superpower in this world. That gives us certain responsibilities. But one of those responsibilities is that we should be not just a superpower, but we should be superwise as well. We should realize that we are not always going to be the world's only superpower—nuclear or otherwise. We should behave with the realization that our actions today are going to affect the rest of the world, including the direction they go in terms of nonproliferation.

As I said, I would not care if every country in the world signed or ratified this treaty if it was not in our security interests. I think we ought to listen, we ought to understand what the rest of the world is saying to us, we ought to remember our own commitments. We signed up to the indefinite extension of the nonproliferation treaty, and made a commitment to the world to conclude a comprehensive test ban treaty. We should remember our own commitments. We should consider what our allies and the rest of the world are saying to us. But if it were not in our own security interest, I would not recommend that we ratify the treaty.

But we should surely listen to our top military leaders as to what they recommend to this Senate? What does the Chairman of the Joint Chiefs of

Staff recommend strongly to the Senate? He says:

The test ban treaty will help limit the development of more advanced and destructive weapons and inhibit the ability of more countries to acquire nuclear weapons. It is true that the treaty cannot prevent proliferation or reduce current inventories, but it can restrict nuclear weapons progress and reduce the risk of proliferation.

General Shelton said:

In short, the world will be a safer place with the treaty than without it. And it is in our national security interest to ratify the CTBT.

Secretary Cohen said the following:

By banning nuclear explosive testing, the treaty removes a key tool that a proliferator would need in order to acquire high confidence in its nuclear weapons designs.

Secretary Cohen said:

Furthermore, the treaty helps make it more difficult for Russia, China, India, and Pakistan to improve existing types of nuclear weapons and to develop advanced new types of nuclear weapons.

Secretary Cohen said:

In this way, the treaty contributes to the reduction of the global nuclear threat. Thus, while the treaty cannot prevent proliferation or reduce the current nuclear threat, it can make more difficult the development of advanced new types of nuclear weapons and thereby help cap the nuclear threat.

What the three world leaders, to whom I referred before and to whom Senator BIDEN referred earlier, said in their article and in their letter to us was the following:

Rejection of the treaty in the Senate would remove the pressure from other states still hesitating about whether to ratify it. Rejection would give great encouragement to proliferators. Rejection would also expose a fundamental divergence within NATO. The United States and its allies have worked side by side for a comprehensive test ban since the days of President Eisenhower. This goal is now within our grasp. Our security is involved as well as America's. For the security of the world we will leave to our children, we urge the U.S. Senate to ratify the treaty. We have President Chirac, Prime Minister Blair, Chancellor Schroeder of Germany, from their perspective, pleading with us to ratify this treaty. We have our top military leadership, uniformed and civilian, urging us to ratify this treaty. That is the kind of assessment which has been made of the value of this treaty. That is the kind of analysis which has been made.

We should think carefully before we reject it; before we defeat a treaty that is aimed at reducing the proliferation of nuclear weapons in the world; before we give up our leadership in the fight against proliferation; and our efforts to go after proliferators. We keep saying the proliferation of weapons of mass destruction is the greatest threat this Nation faces; our military leaders tell us this treaty is an important step in the fight against proliferation. Before we give up that leadership and defeat a treaty which is adding momentum to the battle against proliferators, we surely should stop and assess what it is this Senate is about to do.

It has been argued that we need testing for the safety of our stockpile. The answer is that the stewards of the stockpile, the lab Directors, for the last 7 years have been certifying safety and reliability of the stockpile based not on testing, which we have given up for 7 years already, but based on a Stockpile Stewardship Program which has allowed them to certify with a high degree of confidence that our stockpile is safe and reliable, without one test in the last 7 years.

Will they be able to do that forever? They think they can, but they are not sure. They told us they believe they will be able to continue to certify the safety and reliability of our stockpile without testing. They have also told us something else. Here I want to read a letter from them because there has been such a misunderstanding about what these three lab Directors have told us at our hearing. After the hearing, they wrote a joint statement from which I want to read:

While there can never be a guarantee that the stockpile will remain safe and reliable indefinitely without nuclear testing, we have stated that we are confident that a fully supported and sustained stockpile stewardship program will enable us to continue to maintain America's nuclear deterrent without nuclear testing. If that turns out not to be the case, Safeguard F—which is a condition for entry into the Test Ban Treaty by the U.S.—provides for the President, in consultation with Congress, to withdraw from the treaty under the standard “supreme national interest” clause in order to conduct whatever testing might be required.

People can quote different parts of the lab Directors' testimony. I was there for it. The bottom line is, while they cannot guarantee that the Stockpile Stewardship Program will always allow them to certify safety and reliability, they believe it will be able to do so, and therefore they are, in the words of one of them, “signed onto” this treaty. That is because if they can't certify the safety and reliability of our nuclear stockpile in some future year they have the assurance in Safeguard F, by which we can withdraw from the treaty if we need to conduct a nuclear test. We have incorporated that safeguard and, indeed, strengthened it in the amendment to this resolution, that we will withdraw from this treaty and begin nuclear testing again if necessary. We do not want our stockpile to be unsafe or unreliable. Nobody does—none of us.

The question then is, Can we join the rest of the world, at least the civilized world, in a comprehensive test ban to fight the proliferation of nuclear weapons, and at the same time assure ourselves that if we need to test again, we will be able to do so by notifying the rest of the civilized world in advance that we retain the right to withdraw from the treaty and test if our security requires it? In other words, in the event the day comes when testing is

needed to certify safety and reliability, we are putting the world on notice now that we intend to exercise that withdrawal clause.

Could somebody cheat? That is the other argument which has been used, that somebody could cheat at a very low level of testing, that somebody might be able to get away with it, that our seismic detection capability is not such that we would be certain we would catch a very low level test.

This is what Secretary Cohen says about the cheating question:

Is it possible for states to cheat on the treaty without being detected? The answer is yes. We would not be able to detect every evasively conducted nuclear test. And from a national security perspective, we do not need to. But I believe that the United States will be able to detect a level of testing, the yield and number of tests, by which a state could undermine the U.S. nuclear deterrent.

So the Secretary of Defense is testifying that militarily significant cheating would be caught, that a low-level test by a power would be taking a huge risk in cheating, because there are other means besides seismic detection to get evidence of a cheating. But most importantly, if a signatory to this treaty decided to cheat and take that risk, they could not undermine our nuclear deterrent. It would not be a militarily significant cheating that could occur without our knowing it seismically. We would not have to rely on other means in order to discover a militarily significant act of cheating. Plus, General Shelton and Secretary Cohen have both told us that the treaty, if it comes into effect, will increase our ability to observe and monitor tests because it will create over 300 additional monitoring stations in 90 countries specifically in order to detect nuclear testing.

I will conclude with two points. One, this Senate is not ready to ratify this treaty. Indeed, maybe it never will ratify the treaty. But it is clear now that this Senate will not ratify the treaty at this time. I believe at a minimum we should do no damage, do no harm.

There are many of us who have not focused adequately on these issues, by the way. This has been a very truncated period of time for consideration, with very few hearings focused directly on the treaty. I know we had three hearings in the Armed Services Committee, and there was one in Foreign Relations last week that focused directly on this treaty.

We are here under a unanimous consent agreement which allows only one amendment by the majority leader and one by the Democratic leader to this treaty, an unusual restriction for consideration and deliberation of a treaty. No other amendments are in order; no other restrictions, conditions on a resolution of ratification, but the one. So we are here in a very restricted circumstance and a very short time limit. It is not a deliberative way to address a treaty. This Senate should do better.

At a minimum, my plea is, do no harm. Do no harm to the cause of antiproliferation. The way to avoid doing harm, regardless of where people think they are on the merits of the treaty, is to delay consideration of this treaty.

My final point has to do with the delay issue. There is a precedent for delaying a vote on a treaty even though a vote had actually been scheduled. The precedent is the most recent arms control treaty we looked at, I believe, which is the Chemical Weapons Convention. There was a vote actually scheduled on the Chemical Weapons Convention. There was a vote that was scheduled on the Chemical Weapons Convention for September 12, 1996. Shortly before that vote, Senator Dole, who was then a candidate for President, announced his opposition to the Chemical Weapons Convention. It was decided on the 12th, which I believe was the actual day scheduled by unanimous consent for a vote on the convention, it was decided to vitiate that unanimous consent agreement and to delay the vote on the Chemical Weapons Convention. A vote was set, by unanimous consent agreement, but given the opposition of one of the Presidential candidates—similar to what we have going on now, by the way, where we have opposing positions taken by Presidential candidates of both parties—it was decided then that it was the wiser course for the Senate to delay the vote on the Chemical Weapons Convention.

I said before on this floor last week that I think we are in an analogous situation to what occurred back in September of 1996. I raise it again for a very specific point. At that time, there were no conditions attached to the decision to delay the vote. The Senate agreed to vitiate the unanimous consent agreement, to delay the vote; but there was no requirement, no condition attached as to when it would be brought up or not brought up. It was simply to vitiate. People decided—we decided in this body—that it was a wiser course of action not to proceed under the circumstances—one similar to what exists now, but there are different circumstances now that are, I think, additional reasons not to vote at this time, including the very narrow UC under which we are operating, with the strict consideration of a total of two amendments.

I suggest we look back—and we are going to do what each of us always does, which is follow our own consciences as to what is best for this Nation. In my judgment, ratification is best, but, clearly, that is not where the Senate is now. I hope there is a majority of us who believe, for various reasons, the better course of wisdom is that we not proceed to defeat this treaty at this time—whether it is because that defeat would constitute a blow to our leadership in the battle against

proliferation in this world, as three major allies have told us, or whether it is because this institution has not had adequate time yet to fully understand and consider and deliberate over this very complicated treaty; for whatever reason—and many exist—I hope we will delay this vote. I cannot foresee a circumstance, as I have told my good friend from Virginia, where I would want to see this treaty brought up next year, given the fact that the election is at the end of next year. However, I can't preclude any circumstance from existing. I can't predict every world circumstance that would exist, where I would be comfortable saying we should under no circumstances consider this treaty, no matter what happens.

But I can, in good conscience, say I can't foresee any such circumstances because I can't. Will the world situation change? Will India and Pakistan begin testing because we fail to ratify? Will that then lead to China to begin their testing again? Will that have an impact on Russia? Will the political situation change in the United States where candidates of both parties will possibly decide that this treaty is in our best interest? Can I foresee any of that happening? No. Do I believe any of that will happen? No. But it could.

Circumstances can change. So I would not want to see us saying there are no circumstances under which anybody could even raise the question of consideration of this treaty next year. It is a very straightforward statement and, again, I conclude by saying, personally, I hope we delay the vote. Personally, I can foresee no circumstances under which this should be brought up next year. We should wait until after the Presidential elections, in the absence of some unforeseeable circumstance. But I hope that is what the Senate, in its deliberative wisdom, decides to do.

At this time, I have been authorized to yield 5 minutes to Senator DORGAN. I yield the floor.

The PRESIDING OFFICER (Mr. CRAPO). The Senator from North Dakota is recognized.

Mr. DORGAN. Mr. President, who will acquire nuclear weapons in the months and years ahead? Which countries? Which groups? Which individuals, perhaps, will acquire nuclear weapons? Many would like to acquire nuclear weapons. Terrorist groups would like access to nuclear weapons. Rogue countries would like access to nuclear weapons.

The cold war is over, the Soviet Union is gone, the Ukraine is nuclear free; the two nuclear superpowers are Russia and the United States. Between us, we have 30,000 nuclear weapons. What responsibility do we have as a country to try to prevent the spread of nuclear weapons to other countries and to reduce the nuclear weapons that now exist? Well, we have a lot of re-

sponsibility. It is our requirement as a country to exercise the moral leadership in the world, to reduce the dangers of nuclear war, and stop the spread of nuclear weapons.

Some have never supported any arms control agreements. I respect that. They have a right to do that. I don't agree with it. I think it is wrong. Nonetheless, there are those who have never supported any arms control agreements. Yet, arms control agreements work. We know they work.

I ask unanimous consent to show a piece of a Russian Backfire bomber wing on the floor of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DORGAN. This is a piece of a wing sawed off of a Russian Backfire bomber. This bomber wasn't brought down from the skies with hostile fire. This bomber wasn't destroyed because of conflict. This piece of wing came from a Russian bomber because this country and the Russians have an agreement to reduce the number of bombers, missiles, and submarines in our arsenal, and reduce the number of nuclear warheads.

This other item is copper wiring, ground up from a Russian submarine that used to carry missiles with nuclear warheads aimed at the United States of America. Did we sink that submarine in hostile waters? No, it was destroyed and the wiring ground up by the Cooperative Threat Reduction Program, under which the United States assists in the destruction of bombers, missiles, and warheads in Russia. We bring down the number of weapons in our stockpile; they bring down the weapons in theirs. The delivery systems are brought down as well.

Does arms control work? Of course, it works. We know it works. That is why I am able to hold the part of a Russian bomber here in the U.S. Senate. Of course, it works. There are some who have never supported any of this. They have that right. But, in my judgment, the decision not to support aggressive arms control efforts is inappropriate and wrong.

Now we are debating the issue of whether we will have a Comprehensive Nuclear Test-Ban Treaty—something that was aspired to by President Eisenhower nearly 40 years ago. A Comprehensive Nuclear Test-Ban Treaty was something that President Eisenhower lamented he was not able to accomplish. Forty years later—after years of negotiation—2 years ago, it was sent to the Senate, signed by the President, and asked to be ratified in the Senate. It was sent to the Senate Foreign Relations Committee. I know there have been debates about it, but there was not one hearing in that Foreign Relations Committee in 2 years on the CTBT. And then, with 10 days' notice, it is brought to the floor of the Senate for a vote. Some say, well, that

is fine. That is a consideration. That is not thoughtful consideration; that is a thoughtless way to handle this issue.

This is a serious issue, a big issue, an issue with great consequence. Ten days, no comprehensive hearings—that is a thoughtless way to handle this issue. India and Pakistan have detonated nuclear weapons literally under each other's chin. They don't like each other. That is an ominous development for the world. The question of whether it could result in a nuclear exchange or a nuclear war is a very real question. Can we as a country intervene to say, do not explode these nuclear weapons, do not test nuclear weapons? Do we have the ability to say to India and Pakistan that this is a dangerous step?

Mr. President, we had better have that resolve. That resolve must come from us.

I have heard a lot of reasons on the Senate floor why this should not be ratified all from the same folks who have never supported ratification of any treaty that would lead in the direction of arms control. All of the arguments I have heard, in my judgment, are not relevant to this treaty. It is proposed that somehow this treaty would weaken our country.

Here is what would happen when this treaty is ratified. The number of monitoring stations across the world will go to well over 300. We will substantially enhance our capability to monitor whether anyone explodes a nuclear weapon.

Here is what we have now. Here is what they will have if the CTBT enters into force.

How on Earth can anyone credibly argue that this doesn't strengthen our ability to detect nuclear explosions anywhere on the Earth? It is an absurd argument to suggest that somehow ratifying this treaty will weaken our country.

The last four Chairmen of the Joint Chiefs of Staff, all the senior military leadership now serving in this country, including Gen. Colin Powell, and previously retired Joint Chiefs of Staff support this treaty. Would they do so because they want to weaken this country? Of course not. They support this treaty because they know and we know this treaty will strengthen this country. It will strengthen our resolve to try to stop the spread of nuclear weapons. The Joint Chiefs of Staff say in a very real sense that one of the best ways to protect our troops and our interests is to promote arms control, in both the conventional and nuclear realms, arms control can reduce the chances of conflict.

Gen. Omar Bradley said, "We wage war like physical giants and seek peace like ethical infants."

There is not nearly the appetite that, in my judgment, must exist in this

country—and especially in this Senate—to stand up for important significant issues—serious issues. That is what we have here.

The military leaders say this treaty is in this country's security interest. The scientists, 32 Nobel laureates, the chemists, physicists, support ratification. Dr. Garwin, who I was out on the steps of the Capitol with last week, who worked on the first nuclear bomb in this country, says this treaty is in this country's interest. We can safeguard this country's nuclear stockpile, the scientists say; we can do that, they say. And the detractors say, no, you can't. These detractors—let me talk for a minute about this.

National missile defense: They say: Let's deploy a national missile defense system right this minute. The Pentagon and the scientists say we can't, we don't have the capability. Our friends say: No. We don't agree with you. You can and you have the capability. They say: We demand you do it, and we want you to deploy it.

On the Comprehensive Nuclear Test-Ban Treaty, the detractors say: Well, it would weaken this country because we can't detect nuclear tests and we can't maintain our stockpile. And the military leaders and the scientists say: You are wrong. We can safeguard our stockpiles. We can detect nuclear explosions.

This selective choosing of when you are willing to support the judgment of the best scientists in this country or the military leaders of this country is very interesting.

Last week, Tony Blair, Jacques Chirac, and Gerhard Schroeder, the leaders of England, France, and Germany, sent an op-ed piece to the New York Times asking this country to ratify this treaty. That ought not be the position this country is in. This country ought to be a leader on this issue. Now, we are being asked by our allies to please lead. We ought not have to be asked to provide leadership to stop the spread of nuclear weapons. What are we thinking of?

Last week, the chairman of the Foreign Relations Committee referenced comments from the Governor of my State on the floor of the Senate, saying he is worried that the nuclear stockpile is not safe and pointing out that we have nuclear weapons in our State.

It is an interesting and brand new argument that I hear. I have not heard anyone stand on the floor of the Senate in recent months saying we have a real problem with the safety of the nuclear stockpile. This is just a straw man. That is what this is.

I know the majority leader thought it was probably an interesting strategy to bring up the treaty without comprehensive hearings, without comprehensive discussions and debate, and without much of an opportunity for the American people to be involved in the debate on a Comprehensive Nuclear

Test-Ban Treaty, and then say we want to vote on it. We are going to kill this thing.

You know those who think that way I guess can grin all the way to the vote tally. But there won't be smiles on the faces of those around the world who rely on this country to be a leader in stopping the spread of nuclear weapons. This country has a greater responsibility in this area, and we can exercise that responsibility by voting to ratify this Comprehensive Nuclear Test-Ban Treaty.

The PRESIDING OFFICER (Mr. VOINOVICH). The Senator from Delaware.

Mr. BIDEN. Parliamentary inquiry: How much time is under the control of the Senator from Delaware?

The PRESIDING OFFICER. Twenty minutes.

Mr. BIDEN. Is there time on the amendment once the amendment is called up?

The PRESIDING OFFICER. There will be 4 hours equally divided on each of the two amendments that may be called up.

Mr. BIDEN. One last parliamentary inquiry. Am I able to call up the Democratic leader's amendment now, and would the time begin to run on that amendment now?

The PRESIDING OFFICER. The Senator may proceed.

AMENDMENT NO. 2291

(Purpose: To condition the advice and consent of the Senate on the six safeguards proposed by the President)

Mr. BIDEN. Mr. President, on behalf of the Democratic leader, I call up amendment No. 2291.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Delaware (Mr. BIDEN), for Mr. DASCHLE, proposes an amendment numbered 2291.

Mr. BIDEN. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Strike all after the resolved clause and insert the following:

SECTION 1. SENATE ADVICE AND CONSENT SUBJECT TO CONDITIONS.

The Senate advises and consents to the ratification of the Comprehensive Nuclear Test Ban Treaty, opened for signature and signed by the United States at New York on September 24, 1996, including the following annexes and associated documents, all such documents being integral parts of and collectively referred to in this resolution as the "Treaty," (contained in Senate Treaty document 105-28), subject to the conditions in section 2:

(1) Annex 1 to the Treaty entitled "List of States Pursuant to Article II, Paragraph 28".

(2) Annex 2 to the Treaty entitled "List of States Pursuant to Article XIV".

(3) Protocol to the Comprehensive Nuclear Test-Ban Treaty.

(4) Annex 1 to the Protocol.

(5) Annex 2 to the Protocol.

SEC. 2. CONDITIONS.

The advice and consent of the Senate to the ratification of the Treaty is subject to the following conditions, which shall be binding upon the President:

(1) STOCKPILE STEWARDSHIP PROGRAM.—The United States shall conduct a science-based Stockpile Stewardship program to ensure that a high level of confidence in the safety and reliability of nuclear weapons in the active stockpile is maintained, including the conduct of a broad range of effective and continuing experimental programs.

(2) NUCLEAR LABORATORY FACILITIES AND PROGRAMS.—The United States shall maintain modern nuclear laboratory facilities and programs in theoretical and exploratory nuclear technology that are designed to attract, retain, and ensure the continued application of human scientific resources to those programs on which continued progress in nuclear technology depends.

(3) MAINTENANCE OF NUCLEAR TESTING CAPABILITY.—The United States shall maintain the basic capability to resume nuclear test activities prohibited by the Treaty in the event that the United States ceases to be obligated to adhere to the Treaty.

(4) CONTINUATION OF A COMPREHENSIVE RESEARCH AND DEVELOPMENT PROGRAM.—The United States shall continue its comprehensive research and development program to improve its capabilities and operations for monitoring the Treaty.

(5) INTELLIGENCE GATHERING AND ANALYTICAL CAPABILITIES.—The United States shall continue its development of a broad range of intelligence gathering and analytical capabilities and operations to ensure accurate and comprehensive information on worldwide nuclear arsenals, nuclear weapons development programs, and related nuclear programs.

(6) WITHDRAWAL UNDER THE "SUPREME INTERESTS" CLAUSE.—

(A) SAFETY AND RELIABILITY OF THE U.S. NUCLEAR DETERRENT; POLICY.—The United States—

(i) regards continued high confidence in the safety and reliability of its nuclear weapons stockpile as a matter affecting the supreme interests of the United States; and

(ii) will regard any events calling that confidence into question as "extraordinary events related to the subject matter of the Treaty" under Article IX(2) of the Treaty.

(B) CERTIFICATION BY SECRETARY OF DEFENSE AND SECRETARY OF ENERGY.—Not later than December 31 of each year, the Secretary of Defense and the Secretary of Energy, after receiving the advice of—

(i) the Nuclear Weapons Council (comprised of representatives of the Department of Defense, the Joint Chiefs of Staff, and the Department of Energy),

(ii) the Directors of the nuclear weapons laboratories of the Department of Energy, and

(iii) the Commander of the United States Strategic Command, shall certify to the President whether the United States nuclear weapons stockpile and all critical elements thereof are, to a high degree of confidence, safe and reliable. Such certification shall be forwarded by the President to Congress not later than 30 days after submission to the President.

(C) RECOMMENDATION WHETHER TO RESUME NUCLEAR TESTING.—If, in any calendar year, the Secretary of Defense and the Secretary of Energy cannot make the certification required by subparagraph (B), then the Secretaries shall recommend to the President

whether, in their opinion (with the advice of the Nuclear Weapons Council, the Directors of the nuclear weapons laboratories of the Department of Energy, and the Commander of the United States Strategic Command), nuclear testing is necessary to assure, with a high degree of confidence, the safety and reliability of the United States nuclear weapons stockpile.

(D) WRITTEN CERTIFICATION; MINORITY VIEWS.—In making the certification under subparagraph (B) and the recommendations under subparagraph (C), the Secretaries shall state the reasons for their conclusions, and the views of the Nuclear Weapons Council, the Directors of the nuclear weapons laboratories of the Department of Energy, and the Commander of the United States Strategic Command, and shall provide any minority views.

(E) WITHDRAWAL FROM THE TREATY.—If the President determines that nuclear testing is necessary to assure, with a high degree of confidence, the safety and reliability of the United States nuclear weapons stockpile, the President shall consult promptly with the Senate and withdraw from the Treaty pursuant to Article IX(2) of the Treaty in order to conduct whatever testing might be required.

Mr. BIDEN. Mr. President, to put this in context, one of the unfortunate ways in which this debate has developed, in my view, on this very important treaty is that the President of the United States when he put his signature on the Comprehensive Nuclear Test-Ban Treaty attached to it a number of conditions when he referred the treaty to the Senate. He sent up, along with the treaty, a total of six conditions that he said he wanted added to the treaty before we ratified the treaty.

As we all know, in previous arms control agreements, it has been our practice in the Senate to add conditions to treaties. When it was agreed that we were given essentially an ultimatum that if we wanted to debate this treaty at all, we had to agree to the following time constraints.

I was under the impression that the starting point for this debate would be what the President said he wanted, which was he wanted us to ratify the treaty itself and the six conditions. I found out later it was only the treaty.

Although we were entitled to an amendment on each side, the Democratic side, or in this case the Democratic leader's amendment would have to be what the President said he wanted as part of the package to begin with in order to be for the treaty.

Usually what has happened, as the chairman of the Foreign Relations Committee knows, we debated at length, for instance the treaty on the Chemical Weapons Convention we had extensive hearings in the Foreign Relations Committee. The outcome of those hearings was that we voted on, or agreed upon, or we negotiated a number of conditions. There were 28 conditions before we brought it to the Senate floor.

That is the usual process. But since we didn't have the first formal hearing

on this treaty until after it was discharged—that is a fancy word for saying we no longer had any jurisdiction—and it was sent to the floor, here we are in the dubious position of having to use 2 hours on the one amendment we have available to us, an amendment to ask that the President's whole package be considered. That is where we are.

The amendment that has been submitted by the Democratic leader contains six conditions that corresponded to the six conditions that the President of the United States said were needed in order for him to be secure with the Senate ratifying this treaty. These conditions were developed in 1995 before the United States signed the treaty. They were critical to the decision by the executive branch to seek the test ban treaty in which the standard would be a zero yield; that is, zero yield resulting from an uncontrolled chain react—a nuclear explosion.

We in turn think it is critical that in providing the advice and consent to this treaty, the Senate codify these six safeguards that the President of the United States said were conditions to the Resolution of Ratification. Let me explain why.

The safeguards were announced by President Clinton in August of 1995. They were merely statements of policy by the President, and there is no way for President Clinton to bind future Presidents with such statements. However, we can.

Conditions in a Resolution of Ratification, by contrast—which is what I am proposing now—are binding upon all future Presidents. Therefore, approval of these conditions will lock them in for all time, so that any future President or future Congress, long after we are gone, will understand that these safeguards are essential to our continued participation in the Comprehensive Test Ban Treaty.

Administration witnesses who testified before the Armed Services Committee and the Foreign Relations Committee underscored the importance of these safeguards during the Senate hearings last week. I suspect that is why our Republican friends didn't allow Members to bring these up as part of the original instruments. So we started off as we would had it come out of committee, with the actual treaty, plus the conditions attached. I expect the reason they didn't want this side to do that is it would strengthen the hands of those who were for the treaty.

I understand the tactical move, but I think it is unfortunate because, as we all know, the witnesses who testified from the administration, others from the laboratories, and others who were with the laboratories and were in former administrations, all those people who testified underscored the importance of these safeguards. In other words, they didn't want the treaty without these safeguards.

During the testimony before the Armed Services Committee, Dr. Paul Robinson, Director of Sandia Laboratory, testified:

The President's six safeguards should be formalized in the resolution of ratification.

General Shelton, Chairman of the Joint Chiefs of Staff, stated:

The Joint Chiefs support ratification of CTBT with the safeguards package.

Of the six conditions, the first, the third, and the last are interrelated and probably the most important. The first condition relates to the Stockpile Stewardship Program. Anyone who has listened to this debate now understands what that is. The Stockpile Stewardship Program will be essential to ensuring the safety and reliability of our nuclear weapons in the future. It requires this condition: That the United States shall conduct a science-based Stockpile Stewardship Program to ensure a high level of confidence in the safety and the reliability of nuclear weapons in our active stockpile.

As we have all heard over the course of this debate, this Stockpile Stewardship Program is a 10-year, \$45 billion, or \$4.5 billion-a-year, project that is designed to maintain the nuclear stockpile, and it will involve cutting-edge science, as it already has. It is already underway, and the Directors of the three National Laboratories have testified they believe they can maintain the stockpile of our nuclear weapons if the funding is provided.

Already there have been difficulties, particularly in the other body, in securing this level of funding. This first condition our amendment contains will assure that the funding will be there. The third condition which is in the amendment before the Senate requires that the United States "maintain the basic capability to resume nuclear test activities prohibited by the treaty in the event that the United States ceases to be obliged to adhere to the committee." That means countries have to have a place to test the weapons underground.

We could let our underground test facilities go to seed and not maintain them, so that when the time came that we ever did have to pull out of this treaty, we would not be prepared to be able to resume testing. So we say as a further safeguard against the remote possibility that we will not be able to, through the Stockpile Stewardship Program, guarantee the reliability and safety of our weapons, a condition of the United States staying in this treaty is that the Congress appropriate the money and the President and future Presidents use the money to maintain the facilities necessary to be able to resume this testing if that event occurs.

The effort to maintain this capacity is also well underway, I might add. It is also tied to the Stockpile Stewardship Program. Subcritical experiments—and we use certain phrases so much around

here, sometimes it is easy to forget that most Members don't have nuclear weapons as their primary responsibility, and people listening on C-SPAN or the press aren't—although many are—required to spend time to know what certain phrases mean. A subcritical experiment means a country can set off an explosion that doesn't start a chain reaction. It only becomes critical when there is a chain reaction, which makes it a nuclear explosion. Subcritical means before the rods go banging into the plutonium and something is started. That is a chain reaction.

The subcritical experiments at the Nevada Test Site, which are a vital part of our stockpile stewardship, also enable test site personnel to keep and hone their skills and practice the procedures for actual nuclear weapons tests. Translated, that means we have specialized scientists who in the past have participated in the over 1,000 nuclear detonations we have used over the history of our program, and that without having detonated a nuclear explosion since 1992, these skilled scientists still keep their skills honed by going into this test site facility and doing subcritical tests; for example, using uranium instead of plutonium or performing other tests that don't require a nuclear explosion.

We are not only maintaining the capability of being able to do a nuclear explosion; we are maintaining the necessary personnel. The fact that subcritical experiments are scientifically valid and challenging also serves to make work at the test site worthwhile and attractive to skilled personnel.

The reason I bother to mention that, in an argument against the treaty by one of the scientists who testified, I think before Senator HELMS' and my committee, the Foreign Relations Committee, he said: We really like to make things go boom. He said: I'm a scientist; I like to make them go to the end of the experiment. I like to conduct them that way. But I can do it without making them go boom.

What people worry about now, if you are not going to "make 'em go boom," if you are not going to explode them, some will say scientists won't want to be involved in that; it is not as exciting as if they could actually test. That is an argument that says we will lose a whole generation of nuclear scientists who know how to conduct these tests and know how to read them.

Other scientists come along and, with the laboratories, say: No, no, no; we can keep all the interest we need to keep in a group of young scientists who will replace the aging scientific community who have been performing the tests because we will do what we call subcritical tests at the sites where we used to do the critical tests.

Part of the agreement, part of the understanding, the requirement, is these facilities have to be maintained

as opposed to saying we have a treaty now, we will not do nuclear explosions, so why spend the money on maintaining these facilities?

The answer is: To keep scientists interested and to bring a whole new next generation of brain power into this area so they will have something they believe is worthwhile to do, as opposed to them going out and inventing new widgets, or deciding they are going to develop a commercial product or something. That is one of the legitimate concerns.

The second concern has been: Once you pass this treaty, you know what you are going to do; you are going to stop funding the hundreds of millions of dollars it takes over time to maintain this place to be able to explode a nuclear weapon if we need to.

We said: Do not worry about that; we are going to pass a treaty, and we commit to spend money to continue to do it. If we do not, it is a condition not met and the President can leave the treaty. That is the third condition.

The sixth condition is a failsafe mechanism, available to future Presidents in case the critics of the stockpile program turn out to be right. Again, I might point out the critics of the stockpile program, including my good friend, and he is my good friend, are the very ones who have great faith in the Star Wars notion, great faith in the ability to put this nuclear umbrella over the United States so not a single nuclear weapon could penetrate and blow up and kill 5, 10, 20 million Americans. They have faith in that scientific capability, whether it is laser-based space weapons or whether it is land-based systems. But they do not have faith in the ability to be able to test a weapon that has not been exploded.

I understand that. It is a bit of a non sequitur for me to suggest you can have faith in one and not the other. I point out, as a nonscientist, as a plain old lawyer, it seems to me it takes a lot more to guarantee if somebody flies 2, 10, 20, 50, 100 nuclear weapons at the United States, you will be able to pick them all out of the sky before they blow up and America will be held harmless, than it would be to determine the reliability of this bomb you take out of a missile, sit on a table at a test site, and test whether or not it still works or not without exploding it. One seems more complicated than the other to me. But maybe not. At any rate, after spending \$45 billion and all this scientific know-how, we have to continue to be able to guarantee the reliability of our weapons. We have a sixth condition.

Article IX of the treaty, I remind everyone, contains a standard withdrawal clause. I am talking not about the condition; I am talking about the treaty itself now. Article IX has a standard withdrawal clause, permitting any party who signs the treaty the right to

withdraw 6 months after giving notice; that is, start testing.

We could ratify this tomorrow. We still have to wait for another 23 nations to ratify it, but we could reach the critical mass—no pun intended—where enough nations sign and the treaty is in effect, and 6 months after that the President of the United States says: I no longer think this is in the national interest of the United States of America. I am notifying you within 6 months we are going to start testing nuclear weapons and withdraw. That is what this article IX does.

But what we do is, if the President—and this is a quote:

... decides that extraordinary events related to the subject matter of the treaty have jeopardized its supreme interests[.]

—he can withdraw from the treaty.

Every year pursuant to the safeguard—I am back on the safeguards now—every year, we are saying, if this amendment is adopted, pursuant to safeguard 6, the National Laboratories' Directors at Las Alamos, Sandia and Lawrence Livermore, all three of them have to go to the Secretary of Defense and the Secretary of Energy and certify that the Stockpile Stewardship Program is still working and they, the scientists at our three National Laboratories say: We certify the reliability and safety of our nuclear weapons.

The President, then, certifies to the Congress that there is a high degree of confidence in a safe and reliable stockpile.

If any one of those National Laboratory Directors—and there is a redundancy in what they check. By the way, do you know how it works now? The way it works now, we have nine deployed systems, nine different types of hydrogen bombs located in the bellies of airplanes, on cruise missiles, in the bellies of submarines, on longer range missiles, or in a silo somewhere in the United States of America. Every year these National Laboratory Directors go out and get 11 of these warheads from each of those nine deployed systems. They take them back to the laboratories and they dissect them, they open them up, they look at them—to overstate it—to see if there is any little corrosion there in the firing pin, that sort of thing. It is much more complicated, but they check it out.

They take one of them and they dissect it, similar to what a medical student does with a cadaver. They bring in 11 people, 10 of whom they give a thorough physical, the 11th they kill, cut up, and see if everything is working when they look inside. They do that now, and there is redundancy in the system. The three laboratories do that.

Then they have to go to the Secretary of Energy and the Secretary of Defense and say: We can certify that our arsenal out there is reliable and safe.

But, if, under our condition 6, any one of those lab Directors says, "No, I

don't think I can certify this year, I don't think I can do that," then the Secretary of Energy has to be told that, and the Secretary of Energy, who is their immediate boss, has to then tell the President: No, no, we can't certify, Mr. President. And under No. 6, safeguard No. 6, the President shall consult with us and must withdraw from the treaty.

Let me read the exact language. It says this under E, page 5 of the amendment, "Withdrawal from the treaty." "If the President determines," and I just explained how he determines—if it is sent to him by the lab Directors and the Secretaries of Energy and Defense who say we can't certify:

... if the President determines that nuclear testing is necessary to assure with a high degree of confidence the safety and reliability of the United States nuclear weapons stockpile, the President shall consult promptly with the Senate and withdraw from the treaty pursuant to article IX.

He doesn't have a choice. He has to withdraw. That is the ultimate safeguard.

So for those over there who say if it turns out this Stockpile Stewardship Program doesn't work, they have to assume one of two things if that conclusion is reached. They have to assume the lab Directors are going to lie and they are going to lie to the Secretary of Energy. They are going to say: We can't verify this, we can't certify it, but we are going to do it anyway. They then have to assume the Secretary of Defense and the Secretary of Energy will say: Although we know we can't certify, we are going to lie to the President, and we are going to tell the President our nuclear stockpile is no longer reliable, but don't say anything, Mr. President.

And they have to assume, then, that the President, knowing that this stockpile is no longer reliable, would look at the U.S. Congress and say: I, President Whomever, next President, certify that we can rely on our stockpile.

They either have to assume that or they have to assume their concern about our stockpile is not a problem because the moment the President is told that, he has to call us and tell us and withdraw from the treaty, which means he can begin nuclear testing.

Remember condition 3. We said you have to keep those big old places where they do the nuclear tests up to date. So he can begin to test.

So what is the big deal? What are we worried about, unless you assume future Presidents are going to lie to the American people, they are going to lie, they are going to say we can rely on this when we cannot?

At the end of the process, if the President determines resumption of testing is necessary, then he has to start testing. That is what section 6 says. So we put the world on notice that we have a program in place to maintain a reliable stockpile.

If that does not work and we need to test, we put the world on notice as well today that we will and are prepared, politically and in practical terms, to withdraw from this treaty. I should emphasize that the certification process, as I have said, is extremely rigorous: For 3 years running, the lab Directors have certified to the safety and reliability of our stockpile, but only after detailed review by thousands of people at our labs.

The other three conditions involve the need to maintain several key elements of our national infrastructure. They require us to maintain modern nuclear laboratory facilities and programs in theoretical and exploratory nuclear technology and infrastructure of equipment and personnel, if you will—that is required—the continuation of a robust research and development program for monitoring, and, finally, our amendment requires the development of a broad range of intelligence gathering and analytical capabilities and operations to ensure accurate information about nuclear programs around the world.

These six conditions should have been part of the treaty anyway, but they would not let us add them. We are going to add them now, with the grace of God and goodwill of our neighbors and 51 votes. These six conditions are essential to ratification of the treaty. If you do not want this treaty to work, then you will vote against this amendment.

I acknowledge if these safeguards are not there, nobody wants the treaty. The President does not want the treaty. The lab Directors do not want the treaty. No one wants the treaty. There may be others that would be useful to add or even necessary for ratification of the treaty, but the leadership has said we can only have one amendment.

They will recall that my own resolution, which led to this process, proposed only hearings and final adoption by March 31 of next year. I want to put that in focus. I see others want to speak, so I will yield, but I want to make it clear it has been said time and again on the floor by the leader himself—and I am sure he unintentionally misspoke—he said he received a letter from 45 Democratic Senators saying they wanted a vote.

Mr. HELMS. I don't want the Senator to yield at an improper time—

Mr. BIDEN. I will finish this one point, and I will be delighted to yield the floor.

Mr. HELMS. I have been following the amendment.

Mr. BIDEN. I know the Senator has, and I appreciate that. I appreciate the respect he has shown for the efforts I have been making, notwithstanding we disagree on this considerably.

I want to make this closing point at this moment, and that is, it has been said by the Republican leader, Senator

LOTT, that 45 Senators demanded a vote on this treaty now. But 45 Senators signed a letter, including me. It was a Biden resolution—one that was about to be voted on when we were on another piece of legislation—that we have extensive hearings this year and that final action not occur until the end of March of next year, so everybody could have a chance to go through all of these hearings, so everybody could have a chance to debate what we are talking about at much greater length than today.

There has not been the bipartisan negotiation on conditions to this Resolution of Ratification that usually occurs during consideration of treaties.

Mr. President, I see my friend from North Carolina is seeking recognition. I will be delighted to yield the floor to him.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. HELMS. If the Senator will yield.

Mr. BIDEN. I will be delighted to.

Mr. HELMS. Mr. President, I compliment the Senator on the explanation of his amendment. I have been following him as he has been going along. We are far from being opposed to the amendment. We do not have any problem with the safeguards.

Mr. President, I ask unanimous consent that the pending amendment No. 2291 be agreed to and the motion to reconsider be laid upon the table.

Mr. BIDEN. Mr. President, reserving the right to object—and I obviously do not want to object to my own amendment—we do have a time problem. I would be delighted to do that if the Senator would allow the remainder of the time on this amendment to be used on the Resolution of Ratification, so we do not use up—I have a number of Senators who wish to speak. That means I will only have 20 minutes left to debate this entire issue. I will be delighted to have it accepted. I probably have about an hour or 20 minutes or 30 minutes or 40 minutes left on the amendment; is that correct?

Parliamentary inquiry: How much time is left on the amendment?

The PRESIDING OFFICER. Ninety-one minutes.

Mr. BIDEN. Mr. President, I ask unanimous-consent that the Senator's unanimous-consent request be agreed to, with the condition that the remaining 91 minutes and the 2 hours remaining on the side of the Republican leadership be added to the time remaining on the Resolution of Ratification.

Mr. HELMS. Mr. President, I have no objection to that.

Mr. BIDEN. I have no objection to the unanimous-consent request. I thank the Senator.

The PRESIDING OFFICER. Is there an objection to the request of the Senator from North Carolina with the proposed modification?

Without objection, it is so ordered.

The amendment (No. 2291) was agreed to.

Mr. SARBANES addressed the Chair.

Mr. BIDEN. Mr. President, we have been going back and forth. Senator SARBANES is seeking recognition, but I see our friend Senator BROWNBACK is here. It is his turn if he wishes to speak.

Mr. BROWNBACK. I am willing to yield to Senator SARBANES if he wishes to speak.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. BIDEN. How much time does the Senator need?

Mr. SARBANES. Ten or 12 minutes.

Mr. BIDEN. I yield 10 minutes to the Senator from Maryland.

The PRESIDING OFFICER (Mr. INHOFE). The Senator from Maryland.

Mr. SARBANES. Mr. President, parliamentary inquiry. The amendment was adopted; is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. SARBANES. I thank the Chair.

Mr. BIDEN. There was a motion to reconsider made as part of the unanimous consent agreement and the motion to table.

The PRESIDING OFFICER. That is correct.

The Senator from Maryland.

Mr. SARBANES. Mr. President, I rise in support of the Comprehensive Nuclear Test-Ban Treaty, the CTBT, to which the Senate has been asked to give its advice and consent. This is a landmark agreement that will help stem the tide of nuclear proliferation and reduce the risk of nuclear confrontation. In my view, it is a treaty that, on balance, will serve U.S. interests and strengthen U.S. security.

The Comprehensive Test Ban Treaty is a product of nearly 40 years of labor. The idea was first endorsed in 1958 by President Eisenhower, who recognized that the most effective way of controlling the development and spread of nuclear weapons was to ban their testing.

In 1963, the United States took the first step toward this end by signing and ratifying the Limited Test Ban Treaty, which prohibits nuclear explosions in the atmosphere, outer space, and under water.

Further limitations were established through the Threshold Test Ban Treaty, signed in 1974, and the Peaceful Nuclear Explosion Treaty, signed in 1976. Under those treaties, the United States and the Soviet Union agreed to halt underground explosions larger than 150 kilotons.

When the cold war came to an end, sentiment began to build for a comprehensive ban on nuclear testing. President Bush signed legislation establishing a moratorium on such testing that was joined by France and Russia and continues to this day.

In January 1994, the Geneva Conference on Disarmament began nego-

tiations on a treaty to forbid all nuclear explosions. An agreement was concluded in August of 1996, and the following month, President Clinton became the first world leader to sign the new treaty. It was submitted to the Senate for advice and consent to ratification just over 2 years ago, on September 24, 1997.

The Comprehensive Test Ban Treaty is relatively simple and straightforward.

First, it prohibits all explosions of nuclear devices. It does not ban the development or production of nuclear materials, nor does it affect activities to maintain a secure and reliable stockpile. By establishing a zero threshold on nuclear yield that affects all countries equally, the treaty draws a clear and consistent line between what is permitted and what is not.

Second, the treaty sets up a regime of verification and inspections, consultation and clarification, and confidence-building measures. An International Monitoring System of 321 monitoring facilities is to be established, and all data will be stored, analyzed, and disseminated by an International Data Center. In addition, information that the United States obtains through its own intelligence can be used as the basis for a short-notice, on-site inspection request.

Let me emphasize that. Information that the United States obtains through its own intelligence can be used as the basis for a short-notice, on-site inspection request.

Third, the treaty creates an organization to ensure proper implementation and compliance, and to provide a forum for consultation and cooperation among States Parties. The new body will have a Technical Secretariat responsible for day-to-day management and supervision of the monitoring and data-collection operations, as well as a 51-Member Executive Council, on which the United States would have a seat. Both the Technical Secretariat and the Executive Council are to be overseen by a Conference of States Parties, which will meet at least annually.

Finally, the treaty provides for measures to redress a situation and ensure compliance, including sanctions, and for settlement of disputes. Violations may result in restriction or suspension of rights and privileges under the treaty, as well as the recommendation of collective measures against the offending party and the referral of information and conclusions to the United Nations.

As Stephen Ledogar, who was the Chief Negotiator of the treaty for the U.S., testified before the Foreign Relations Committee, the United States objected to the inclusion of specific sanctions because of concerns about appointing an international organization "to be not just the investigator and special prosecutor, but also the judge,

jury, and jailer." He explained, "we reserve for a higher body, the United Nations Security Council in which we have a veto, the authority to levy sanctions or other measures."

The CTBT, which has been signed by some 154 countries and ratified by 48, has drawn broad support not only from among the American population, but from key U.S. military and intelligence officials and from our key allies.

It has been endorsed by the Chairman of the Joint Chiefs of Staff, Gen. Hugh Shelton, as well as former Chairmen Gen. John Shalikashvili, Gen. Colin Powell, Gen. David Jones, and Adm. William Crowe, and the directors of all three national laboratories that conduct nuclear weapons research and testing.

NATO's Defense Planning Committee and Nuclear Planning Group called for ratification and entry into force "as soon as possible." Thirty-two Nobel laureates in physics have written to the Senate stating that "it is imperative that the CTBT be ratified," and noting that "fully informed technical studies have concluded that continued nuclear testing is not required to retain confidence in the safety, reliability and performance of nuclear weapons in the United States' stockpile, provided science and technology programs necessary for stockpile stewardship are maintained."

Despite the importance of the CTBT for U.S. national security, formal consideration of the treaty has not taken place over the last 2 years. Now we are suddenly called upon to register a judgment without the benefit of proper hearings and committee debate. While I have come to the conclusion that the merits of this treaty outweigh its risks, and that it is therefore deserving of Senate advice and consent to ratification, I do regret that an issue of such significance should be taken up without the normal course of hearings and proceedings leading up to the consideration of a measure of this magnitude.

Let me outline a few of the reasons why I support this treaty. First, it will help reduce threats to U.S. national security. A complete ban on testing makes it harder for countries already possessing nuclear weapons to develop and deploy more sophisticated new designs, and for those seeking nuclear capability to initiate a nuclear weapons program. As we know, relatively simple bombs can be built without testing, but creating smaller, lighter weapons that are easier to transport and conceal and that require less nuclear material is difficult without explosive tests.

With a global ban in place, a nation intent on conducting tests would take on the burdens not only of increased expenses and technical dangers, but also the risk of detection and imposition of international sanctions. In a

very real sense, the CTBT locks in U.S. nuclear superiority while preventing reignition of arms races that constitute serious threats to our national security.

The CTBT also promotes U.S. security by strengthening the Nuclear Non-Proliferation Treaty, the NPT, which entered into force in 1970 and was extended indefinitely in 1995. The NPT is the bedrock of international arms control policy, representing a bargain in which non-nuclear weapons states promised to forswear the acquisition of nuclear weapons and accede to a permanent inspection regime so long as the nuclear powers agreed to reduce their arsenals. In order to gain approval for permanent extension of the Nuclear Non-Proliferation Treaty, the five declared nuclear powers promised to negotiate and ratify a test ban treaty.

The CTBT further advances U.S. interests by providing additional tools to enhance our current monitoring and detection capability. The International Monitoring System will record data from 321 sensor stations—262 beyond what the United States possesses today.

The new facilities include 31 primary and 116 auxiliary seismic monitoring stations, 57 radionuclide stations to pick up traces of radioactivity, 8 hydroacoustic stations to detect explosions on or in the oceans, and 50 infrasound stations to detect sound pressure waves in the atmosphere. Thirty-one of the new or upgraded monitoring stations are in Russia, 11 in China, and 17 in the Middle East, all areas of critical importance to the United States.

And one of the burden-sharing advantages of the treaty is that the United States will have access to 100 percent of the information generated by these 321 sensor stations but will pay only 25 percent of the bill for obtaining it.
