

to assume responsibility for their own lives and the future of their communities.

TNL has made significant strides in this area by designing a leadership development program for middle school students, providing \$88,000 in scholarship moneys through Texas Southern University (TSU), and most importantly, sponsoring our annual Take a Youth to Work Day. Every year this milestone event pairs African American males between the ages of 13 and 18 with professional Black men for a day of mentoring. By partnering with the current administration, TNL seeks to expand our outreach efforts. We will achieve this through continued advancements in technology, creation of charter organizations, and drawing upon the expertise of African American leaders both past and present.

THE HISTORICAL UNDER-COUNT IN THE PAST CENSUS & THE IMPACT ON AFRICAN AMERICANS

Since the inception of the census count, Blacks have been consistently under-counted. As a result, the Black community has been grossly misrepresented and ample funding has not been secured. One area of vital importance is health care. In this area, a new generation of African Americans continue to lead in the disparity of diseases such as: infant mortality, diabetes, cancer screening and management, heart disease, AIDS and immunizations (diseases identified by the Administration's initiative to end racial and ethnic health disparities). As we move towards a new millennium, an under-count in Census 2000 will have an enormous impact on the reapportionment efforts in this country. These efforts in turn could jeopardize minority political representation on the local, state and federal levels.

REMEDYING PAST UNDER-REPRESENTATION OF AFRICAN AMERICANS

It is the contention of TNL that one glaring example of the apathy and distrust of government deals with the under-count of Blacks in the census. While it is understood that federal moneys have been set aside to actively outreach underserved communities, TNL believes that additional steps are needed to address this long standing problem.

TNL recommends that the White House introduce an initiative similar to the one introduced by the Kennedy Administration that encouraged Americans to join the Peace Corps. This initiative would focus on training and empowering young people to become active in government. TNL believes that such an initiative will not only address the issues of inadequate reapportionment, but also concerns regarding reparations as well as the equitable treatment of Black Americans caught up in this nation's burgeoning criminal justice system.

CONCLUSION

In their purest form, true leaders empower the constituency they represent, they take control of adverse circumstances, and they assume the responsibility for a better way of life. The best way to instill this ideology is to train and equip individuals that have been consistently and systematically denied the liberties this country has afforded other citizens.

Therefore, TNL believes that the most effective way to tackle these issues begin with empowering every African-American to become motivated and actively engage in the principals of democracy. If we can accomplish this, we will balance the scales of justice, ensuring fairness and equitable treatment for all, irrespective of race, creed, or color.

A new era. A new America. The possibilities are endless.

FORMER SENATOR PAUL SIMON COMMENTS ON MEDICAL RESEARCH FUNDING

HON. ROSA L. DeLAURO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, November 1, 1999

Ms. DeLAURO. Mr. Speaker, I submit the following article for the RECORD.

[From Parade Magazine, Sept. 12, 1999]

"I HAD NO SYMPTOMS OF HEART ATTACK . . ."

(By Paul Simon)

As I look back on my 22 years in the House and Senate, I realize I would like to change a few of the votes I cast. Most people—and politicians probably more than most—hate to admit they are wrong. I was wrong though, and that was brought home to me recently in a most dramatic way.

It started when I happened to read a magazine article on a new device for measuring blockage of the heart arteries. The device takes a type of picture of the heart and coronary arteries (called a "heart scan," something like an X-ray) that can pick up hidden problems. I had no symptoms of heart trouble, such as chest pain or shortness of breath, but the article noted that about 20 percent of those over 60 (I am 70) who have a heart attack or stroke have no advance warnings.

I set up an appointment for a heart scan at Rush-Presbyterian-St. Luke's Medical Center in Chicago on Nov. 10 last year. The scan took 10 minutes, but the results were startling: I was headed for a heart attack or stroke. As a result, last Jan. 5 I had a six-way heart bypass operation.

Today, I'm doing fine. It turns out that the heart scan—developed as a result of research done by Douglas Boyd at the University of California at San Francisco—probably saved my life. Sadly, I had to admit to myself that supporting funds for medical research was not something I devoted much time or effort to when I served in the Congress. I felt other issues were more important. Now I know how wrong I was. All around me are others—former colleagues and friends—who have benefited from medical research:

The TV talk-show host Larry King, who has had serious heart problems and undergone bypass surgery, often says, "Because of research, I'm alive today."

Sen. Ted Stevens (R., Alaska) and former Sen. Bob Dole (R., Kan.) had successful surgery for prostate cancer thanks to the benefits of medical discoveries.

U.S. Rep. Rosa DeLauro (D., Conn.) has been successfully treated for ovarian cancer.

But I also think of those who lost their battles or still struggle because not enough research has been done:

Jay Monahan, husband of the Today host Katie Couric, died at age 42 from colon cancer, because we don't yet have enough weapons against that disease.

Rep. Morris Udall (D., Ariz.) died of Parkinson's disease, another illness for which we're still seeking a cure. I watched Udall—a brilliant legislator with a great sense of humor—gradually decline in health. What a waste of talent that could have been prevented with more research!

My first memories of Christopher Reeve are of a dynamic, vibrant actor interested in public affairs. He is still vibrant and dynamic but more focused in his public-affairs interest as he presses with an understandable zealotry for research in spinal-cord injuries.

Rachel Mann, a marvelous young woman and family friend, had cystic fibrosis, the largest genetic killer of children. Because of her, I did push for additional funds for research into this disease when I was in Congress, but she ultimately lost her battle at age 25.

WE CAN DO BETTER

A century ago, the average U.S. citizen lived to be 48. Now we live to an average of 76—thanks in large part to medical research. Pharmaceutical companies do an excellent job in research, and they increased their research spending from \$2 billion in 1980 to \$20 billion in 1998. But we can't rely on them for basic research efforts. That's why funding for the National Institutes of Health, which does basic research that can benefit us all, is so important. Its funding has doubled in the last 15 years—to \$15 billion. But while \$15 billion is a sizable sum, it is inadequate when compared to what we spend on legalized gambling (\$638 billion in 1997), alcohol (\$95 billion) and cigarettes (\$50 billion). Two-thirds of Americans agree that funding for medical research should be doubled, according to a poll taken last year by the nonprofit advocacy group Research! America. Yet, for the fiscal year beginning Oct. 1, President Clinton has asked for just a 2.1 percent increase—barely above the inflation rate.

That's not nearly enough. We must do more. Greater focus on research would be a marvelous gift to future generations of my family and of yours. I know. It already has been a marvelous gift to me.

MATTYDALE, N.Y. SCHOOL CELEBRATES "VETERANS AWARENESS WEEK"

HON. JAMES T. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 1, 1999

Mr. WALSH. Mr. Speaker, I want to bring to the attention of the House of Representatives today the patriotic and noble intentions of students at St. Margaret's School in Mattydale, New York, in my home district. These young people, by way of Ms. Kimberly Arnold's Social Studies class, have taken it upon themselves this year to institute a new celebration honoring veterans of U.S. military service.

On November 8, 1999 the students will celebrate the first Veterans Awareness Week. The program will include patriotic songs by the school choir, essay contest readings, distribution of ribbons and special recognition by children to veterans in their immediate families.

This is a remarkable and worthy celebration of the sacrifices made by veterans in the United States. Worthy, because of the great service veterans have given our nation and the free world. Remarkable, because these young people have taken the initiative to recognize veterans in a time of peace. That their young lives include sensitivity to the fact that freedom is not free is wonderful tribute to our armed forces, past and present, and to the Founders of the United States of America.
