FULLY FUND THE E-RATE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CROWLEY) is recognized for 5 minutes.

Mr. CROWLEY. Madam Speaker, I rise this evening to talk about E-Rate. I strongly urge my colleagues to fully fund the Universal Service Fund program for schools and libraries, commonly called the E-Rate. The E-Rate has successfully helped provide equal access to opportunity and education for school children and the public at large.

In just 18 months, the E-Rate has connected over 600,000 classrooms in over 80,000 schools and libraries across this great Nation. At a recent roundtable discussion that I held in my district with educators, I asked principals and superintendents in my 7th congressional district, what is the one thing I can do right now in Congress to help education, and unanimously they said, continue the E-Rate program. Do not let the E-Rate program die, do not let it diminish. It is effective, it is working. It is connecting our schools to the future.

Most importantly, the E-Rate program enables all schools and libraries to provide Internet access to children, regardless of their means. For most schools and libraries, the cost of both telephone and Internet access is cut in half, and for some of our most poorest schools, access will be almost free, almost free.

The E-Rate is helping to close the digital divide. Children in the most isolated inner city or rural town will have access to the same expansive knowledge and technology as a child in the most affluent suburbs.

This House approved this program in 1996 and should continue to support this program today, especially because of the scope and influence of the Internet on our children’s lives.

Recently, surveys have shown that the American public strongly supports the introduction of information technology into our Nation’s schools and libraries. A nonpartisan poll was commissioned by EdLiNC and conducted by Lake, Snell, Perry and Associates and the Tarrance Group. The results of this poll are impressive and send a clear signal that the American people support the concept of the E-Rate.

Madam Speaker, 67 percent of Americans support discounts to schools and libraries. Eighty-three percent of Americans think that access to the Internet in schools and libraries will improve educational opportunities for all Americans. Eighty-seven percent of Americans support continuing discounts for libraries and schools. Seventy-nine percent of Americans believe that PCs are an effective alternative for teaching subjects such as math and reading.

Tomorrow the FCC will vote on the funding level for the Universal Service Fund for America’s schools and libraries for the year beginning July 1, 1999. I urge every member of this House to lend their support to fully funding the E-Rate program.

JOHN HART: ONE OF AMERICA’S TREASURES

Mr. CROWLEY. Madam Speaker, I just want to shift gears for a moment. We all know there is a very, very important weekend coming up and that is Memorial Day weekend. Where we commemorate and commemorate all those of whom we were born. Where we commemorate and commemorate all of those who fought for the saving of this country in all our world wars. In particular, I just want to mention a good friend of mine, a neighbor, a mentor of mine as I was growing up. Mr. John Hart, actually my next door neighbor. I am proud to say that this weekend John Hart will be the grand marshal of the Woodside, Queens Memorial Day Parade.

John Hart is one of America’s treasures. He served our country in World War II and saw action in Europe. He came back from that war and he and his wife, Pat, raised four children in the community. John, like so many other Americans who gave of themselves that we might be free, is still alive today and is having an opportunity to walk amongst his fellow citizens in Woodside so that they can show their appreciation for John and men and women like him.

So when my colleagues are eating hot dogs and hamburgers and having corn on the cob this weekend, think of John Hart and think of all of those men and women who gave so much of themselves so that we today are free.

UNITED STATES’ NATIONAL SECURITY COMPROMISED BY CHINESE ESPIONAGE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FOSSELLA) is recognized for 5 minutes.

Mr. FOSSELLA. Madam Speaker, I would like to compliment my colleague and friend from New York (Mr. CROWLEY) and congratulate Mr. Hart as well. Memorial Day is I think too often taken for granted in this country, and it is an opportunity, however, for most of us to appreciate and demonstrate our support for our armed forces who were willing to give their lives for our country, too many of whom made the supreme sacrifice, physically, mentally scared for life. So I compliment those in Woodside, Queens and of course in St. Andrew where we believe it is an appropriate opening to what I wanted to talk about tonight.

I will read my colleagues a little clause here. “The People’s Republic of China has stolen classified design information on the United State’s most advanced thermonuclear weapons. The stolen United States’ nuclear secrets give the People’s Republic of China design information on thermonuclear weapons on par with our own.”

So begins the United States national security and military commercial concerns of the People’s Republic of China from the Select Committee, commonly known now as the Cox Report that was declassified in the last couple of days. Madam Speaker, we talk about a lot of things here in Washington, and clearly, many of them are important and affect everybody across this country. But I think to me and so many others here, there is nothing more vital than protecting our national security. Frankly, I think if any American can, they should read the Cox report. What I am going to do is just read some takeouts from this.

“The stolen information includes classified information on seven U.S. thermonuclear warheads, including every currently deployed thermonuclear warhead in the United States ballistic missile arsenal. The stolen information also includes classified design information for enhanced radiation weapons, commonly known as the neutron bomb, which neither the United States nor any other Nation has yet deployed. The People’s Republic of China has obtained classified information on the following United States thermonuclear warheads, as well as a number of associated reentry vehicles, the hardened shell that protects the thermonuclear warhead during reentry.”
Might I add, this Cox Committee was a bipartisan committee, Democrats and Republicans in the House of Representatives, and clearly demonstrates, for example:

“The People’s Republic of China has stolen United States design information and other classified information for neutron bomb warheads. China has stolen classified U.S. information about the neutron bomb from a U.S. national weapons laboratory. The United States learned of the theft of this classified information on the neutron bomb in 1996,” and practically nothing was done.

“The Select Committee judges that if the People’s Republic of China were successful in stealing nuclear test codes, computer models and data from the United States, it could further accelerate their nuclear development. By using such stolen codes and data in conjunction with the high performance computers already acquired by the People’s Republic of China, the PRC could diminish its needs for further nuclear tests to evaluate weapons and proposed design changes.”

The small warheads that we talk about, multiple warheads, will make it possible for the People’s Republic of China to develop and deploy missiles with multiple reentry vehicles. Multiple reentry vehicles increase the effectiveness of a ballistic missile force by multiplying the number of warheads, and a single missile can carry as many as tenfold.

Multiple reentry vehicles also can help to counter missile defenses. For example, multiple reentry vehicles make it easier for the People’s Republic of China to deploy penetration aids with its ICBM warheads in order to defeat antimissile defenses.

At the beginning of the 1990s, the People’s Republic of China had only one or two silo-based ICBMs capable of attacking, attacking the United States. Since then, the People’s Republic of China has deployed up to two dozen additional silo-based ICBMs capable of attacking the United States. That is 24 additional silo-based ICBMs; has upgraded its silo-based missiles and has continued development of three mobile ICBM systems and associated modern, thermonuclear warheads, something they never had.

Even though the United States discovered in 1995, in 1995, that is almost four years ago, that the People’s Republic of China had stolen design information on the W-88 Trident D-5 warhead and technical information on a number of U.S. thermonuclear warheads, the White House has informed in response to specific interrogatories propounded by the committee that the President was not briefed about the counterintelligence failures until 1998.

Madam Speaker, this is just a disgrace, and unless something happens, we should not be here today discussing anything else until our national security is protected.

WHY I BECAME A REPUBLICAN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mrs. Fowler) is recognized for 3 minutes.

Mrs. FOWLER. Madam Speaker, I became a Republican because of the party’s long-held principles. The Republican Party was founded on two fundamental issues: free land and abolishing slavery. Since that day, the party embraced the role of leader and never shied away from taking the challenge of taking an unpopular and difficult stance. From striving successfully to abolishing slavery to being the vanguard in the struggle for women’s right to vote, the Republican Party has consistently forced all Americans to re-evaluate the role of individuals and the role of the government.

The Republican party has always believed in individuals. We have an abiding faith in the idea that individuals and local communities can accomplish more than a distant Federal Government, a government that tends to become large, bloated, and wasteful, as ours has.

As the great Republican statesman, Abraham Lincoln, said, “The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all, or cannot so well do, for themselves in their separate and individual capacities. In all that people can individually do as well for themselves, government ought not to interfere.”

There is a role for the government. Imagine an individual trying to build a freeway alone. But it is a role that should be limited.

Republicans believe the most effective government is closest to the people. After all, who knows more about educating our children, us and our child’s teacher, or a distant bureaucracy across the country in Washington, D.C.?

I chose the Republican party because I believe that each American citizen can be trusted that they know best and that they will make the best decision for themselves, and they will make the wisest choices. Whether it is how to spend their hard-earned money or how to spend their time, they should be in charge.

The Republican party’s economic policies of lower taxes and less government have reduced interest rates and sent the stock market soaring, yet inflation has remained stable. Thanks to these smart policies, every one of us is enjoying the largest sustained peace-time expansion ever.

Our commonsense agenda and leadership has produced a healthy and strong economy. Job opportunities have increased significantly, unemployment is down, the budget is balanced, and because of our welfare reform, tens of thousands have moved from the welfare rolls to the payrolls.

I have to say, while I firmly believe that all issues are women’s issues, and I resist the popular tendency to view women as a monolithic group in politics or anything else, I still must emphasize the Republican party’s accomplishments with regard to women in politics.

I want to take Members back to 1896, when it was the Republican party who became the first major party to officially favor Women’s Suffrage. That year Senator A.A. Sargent, a Republican from California, introduced a proposal in the Senate to give women the right to vote. It was defeated four times by a Democratic Senate, and it was not until the Republicans would gain control of Congress that it was finally passed in May of 1919. The first woman to serve in Congress was a Republican, Jeanette Rankin of Montana.

In 1940, the Republican party became the first major political party to endorse an Equal Rights Amendment for women in its platform.

In 1953, Republican President Eisenhower appointed the first woman Secretary of the Department of Health, Education, and Welfare, and the first woman ambassador to a major power.

In 1964, Republicans were the first major American party to nominate a woman for president, Senator Margaret Chase Smith of Maine.

In 1981, Republican President Reagan appointed the first woman Supreme Court Justice and the first woman U.S. representative to the United Nations.

In 1983, Republican President Reagan had three women serving concurrently in his cabinet, the first time in the history of this country.

Currently, Republican women chair a record seven House subcommittees and three Senate subcommittees. I serve as a deputy majority whip, along with two other women, and as a newly elected Vice Chairman of the Republican conference. I am now the highest ranking woman in the House elected leadership. The gentlewoman from Ohio (Ms. Deborah Pryce) serves as Conference Secretary.

In the 106th Congress, Democrats have no woman in their elected leadership.

We are working hard to ensure that each American has a safe, secure, and positive future.

ASTHMA AWARENESS MONTH

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Maryland (Mrs. Morella) is recognized for 5 minutes.

Mrs. MORELLA. Madam Speaker, I am a Republican woman Member of
