changes they believe could most improve public education. Forty-five percent of the teachers surveyed said more technology in their classrooms would greatly improve conditions for teaching and learning (CTA for the Next Century, 1998).

It is crucial that we given students the opportunity to become familiar with technology in their classrooms because post-high school education and most good jobs require experience using computers. U.S. Commerce Secretary William M. Daley has said, “Opportunities are now dependent upon a person’s ability to use computers and engage in using the Internet” (CQ Weekly, “Digital Haves and Have Nots,” April 17, 1999). In my state, a 1997 Rand report found that there is currently a shift in the state’s economy away from manufacturing and toward higher-skill service and technology industries, and employers are placing a higher premium on the computer skills necessary for these positions (Immigration in a Changing Economy, Rand, 1997). Students are better educated when their teachers are well trained. We cannot prepare students for the increasingly technological workplace without trained teachers.

We have made great efforts to make technology available to students in their classrooms, and now we have a national student to computer ratio of 10 to 1. Seventy-eight percent of our nation’s schools have Internet access. These are good first steps.

But also essential is having teachers and students use all this technology in their day-to-day classroom activities when it can enhance learning. This will not happen until teachers are trained in how to include technology in their instruction.

One teacher expressed her frustration in an article in the National School Boards Association’s Electronic School magazine:

Most teachers have no model to show them the advantages of hooking up to the projects available on the Internet. And shrinking school budgets don’t provide nearly enough money to train teachers in new or visionary techniques. Meanwhile, we can’t escape the magazine and newspaper articles touting the Information Superhighway and heralding new ways of responding to, using, and learning information in our society. Well, who most needs to learn to traverse this road successfully? Society future leaders—and their teachers (Electronic School, “Going Global,” February 1996).

I agree.

Our teachers are not prepared to use technology in their classrooms. Students need to learn to use modern technology and it can help them learn. If we are expecting teachers to use up-to-date teaching tools, we must train them to do so. This bill will provide some of the funds needed to do that.

By introducing this bill I am not suggesting that technology is a cure-all for the problems in our schools. Technology is one of many teaching and learning tools. It can bring some efficiencies in learning, for example, providing a new way to do math and spelling drills or keeping students engaged in learning while a teacher works with other students who need extra help. It can also be an important research tool by providing easy access to information that, without a computer, is not easily available.

We expect a great deal from our teachers and students. We must give them the resources they need. This bill is one step.
