

contributions, costing taxpayers another \$150 million a year.

Now this plan, H.R. 4844, would reduce both employer and employee contributions to the retirement fund. Let me say that again. They are going to reduce both employee and employer contributions to the retirement fund while providing substantial increases in benefits, so they reduce the contribution, they increase benefits, and they charge the American taxpayers for these private business pension plans.

Specifically, the bill will, number one, repeal a 26.5 cent per hour employer contribution for supplemental annuities; two, it will reduce employer contributions from the current 16.1 percent to 14.2 percent in the year 2002; three, it will expand benefits for widows; four, it will reduce the vesting requirement from 10 to 5 years; five, it will repeal the current cap on payments of earned benefits; six, it is going to reduce the minimum retirement age to 60.

This legislation fails to move to a privatized retirement system. It reduces contributions of the employee and employer and while substantially increasing benefits. It is going to cost the taxpayers of the country huge amounts to subsidize these kinds of pension plans for private sector business. The bill as written should not be passed.

---

#### IN MEMORY OF WILLIAM RUSSELL MOTE

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Florida (Mr. MILLER) is recognized during morning hour debates for 5 minutes.

Mr. MILLER of Florida. Mr. Speaker, a friend of mine died this past week. His name was William Russell Mote. He was not only my friend, he was the Members', too, and a friend of all Americans, as well. As a matter of fact, he was a friend to people all over the world.

I would like to tell the Members why. Bill Mote was born in my State of Florida in the city of Tampa at the turn of the century. The world was a far different place for Bill Mote back in the early part of the last century. Teddy Roosevelt was President. There was a world without jet planes, without television. No man had flown in space. It was a world that encouraged a young boy to go fishing in the beautiful waters of the Gulf of Mexico.

It was also a time that encouraged entrepreneurs, and Bill Mote took full advantage. He could not wait to venture out into the world and start his own business. While he never earned a college degree, Bill Mote was a well-educated individual whose charisma and charm paved him a very successful path in the business world.

Mr. Mote's love for the world extended far beyond the realm of his exciting business ventures. He loved the adventure of travel and the excitement of the sea. He visited many places after he sold his company, and concentrated on trips that would enable him to be with marine scientists, oceanographers, and biologists.

Bill recognized very early on that irresponsible global habits were endangering his beloved sea. What a shame it would be that we would be destroying one of our two unexplored frontiers; a vast one at that, covering three-fourths of the world. To Bill Mote, that was just as exciting as man landing on the moon. Discovering and protecting our oceans became his passion.

It is not surprising to people who knew Bill to understand how his passion was superseded only by his generosity in his goal. He definitely put his money where his heart was. He met Eugenie Clark. Some may know her as the famous "shark lady" on PBS nature shows.

Bill and Dr. Clark started a partnership that would last over 35 years, and would be the root of Mr. Mote's philanthropic mission to save our oceans. Always drawn to the water, he settled on the West Coast of Florida, in Sarasota, with the intent to build a marine laboratory. He used what he learned from his travels and joined Dr. Clark in establishing one of the finest marine laboratories in the world.

When Mr. Mote discovered Cape Haze Laboratory in 1965, he immediately set his mind into catapulting the small marine research facility into a world-renowned program. Henceforth, the Mote Marine Laboratory, named after its principal benefactor, has been the catalyst for breeding and mammal programs which benefit sea life all over the world.

The lab first became known internationally for shark research, and in 1991, Congress designated Mote Marine Laboratory as the National Center for Shark Research. Bill Mote, who himself never had the opportunity of higher education, initiated a Scholar Chair in Fisheries Ecology and Enhancement at Florida State University.

He also encouraged younger people to become interested in marine life. Schoolchildren were exposed to the smallest creatures as well as the magnificent sharks and dolphins at Mote Marine Laboratories Aquarium. A new state of the art Marine Mammal Rescue Center gives all visitors a firsthand look at the expert veterinary care that Mote's Marine biologists provide.

Bill will always be remembered as a promoter of education, as well as an excellent educator himself. He was at the helm when the Jason Project began at Mote Marine. That was developed as an educational venture between Dr. Ballard and Mote Marine. Dr. Ballard is using Jason and Jason II remote

submersibles, credited with the discoveries of the Titanic, the Bismarck, and other landmark discoveries beneath the depths of our oceans. Mr. Mote was constantly expanding the depths of our understanding, even to the bottom of the sea.

Even larger than his love of the oceans was his love for education. He gave not only to the studies of marine biology and oceanography, but also relentlessly promoted the fields to youth and professionals alike with his own special blend of enthusiasm. In 1968, Mr. Mote was awarded the Gold Medal of the International Oceanographic Foundation.

Many of us who knew Bill Mote have our own stories to tell. After meeting a person like Bill, his energetic and passionate love for the ocean was magnetic. His relentless drive passion and vigor was rivaled only by his charismatic personality.

Bill Mote was to all of us and will remain in our hearts a true example of what one person can do with a little determination.

I served on the board of Mote Marine before I came to Congress. I had the pleasure of knowing Bill Mote well. He was a devoted husband and brother. He was a counselor to marine biologists. He was a teacher to all ages of students. Most of all, he was a true conservationist, a self-educated man who saw a need in the world and went ahead to do something about it. He definitely graduated life with honors.

---

#### A REPUBLICAN PRESCRIPTION DRUG PROGRAM BUILT ON FALSE HOPES AND VAGUE PROMISES

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Ohio (Mr. BROWN) is recognized during morning hour debates for 5 minutes.

Mr. BROWN of Ohio. Mr. Speaker, not long ago this House debated a prescription drug coverage bill, not a Medicare prescription drug coverage proposal but a bill endorsed by the Republican majority that features private stand-alone prescription drug coverage for seniors. It was the only bill we were permitted to consider.

I joined many other Members of this House when I questioned the logic of this proposal, the feasibility of this proposal, the arrogant anti-Medicare message of this proposal.

Our concerns are not theoretical. It turns out that Nevada has adopted a prescription drug program almost identical to the Republican plan. It is not working. It is not working for the same reason the Republican plan will not work, because insurers refuse to participate. They say the risks and the costs of providing individual insurance policies for prescription drugs are simply too high. We do not actually have

to implement the national proposal to see whether insurers will participate. They have already said they will not.

This House raised the hopes of millions of seniors by passing prescription drug legislation, legislation that was forced upon this body by a majority unwilling to consider any other plan, any other bill, any other approach. Republican leadership forced this House to take seriously a proposal built on false hopes and vague promises.

The majority in this House saw a political opportunity and seized it. They decided it was time to associate themselves with the prescription drug issue. After all, Medicare beneficiaries and their families are a huge voting block, and the majority is up for grabs.

To my Republican colleagues, more power to them. If the media plays their bill right, maybe they will hold onto a few more seats, except for one thing. This is not a token issue. When Members play the prescription drug issue like a game, they are playing with the lives of real people. They are playing with the quality of those lives and the length of those lives.

To the 84-year-old woman eating 1 meal a day so she can afford the arthritis medication that permits her to walk, this is not a game. To the 67-year-old man who cannot afford to fill a blood pressure prescription that could keep him alive, this is not a game. To the adult sons and daughters wondering whether they are going to be able to find money for their parents' prescriptions, this is not a game.

Last week was the 35th anniversary of the Medicare program. The American public has financed that program and benefited from that program for 35 years. Various private insurance companies have come and gone. Private health plans have evolved from true insurance programs, where everyone paid the same rate and everyone was eligible for coverage, to selective organizations favoring the healthiest enrollees.

Medicare does not play favorites. It provides reliable coverage to all seniors. The original Medicare program is available to everyone. It never skips town. It never ratchets down benefits. It does not charge different premiums to different people based on different circumstances. It enables seniors to see the provider of their choice. No wonder it is the most popular political program, public program, in the Nation's history.

But to keep up with modern health care, the Medicare benefits package needs to be modified to include prescription drugs. Updating the Medicare benefits package, that is what the debate some weeks ago should have been about. It was an insult to the public, that instead we debated a bill that makes no sense unless the goal is not to provide a prescription drug benefit plan, but rather, to set the stage for a massive overhaul of Medicare; unless

the goal is to promote privatization of Medicare. After all, if we privatize one benefit, like prescription drugs, we might as well privatize them all.

I urge my colleagues on the other side of the aisle to change course. I urge them to shift their support towards legislation that updates Medicaid and Medicare instead of spurning it. If we work together on a proposal like that, we can do the right thing for the American people. But if my Republican colleagues continually insist on going down this dead end street, they should not be surprised if come November it is the American voter who says, game over.

#### WILLIAM R. MOTE

The SPEAKER pro tempore. Under the Speaker's announced policy of January 19, 1999, the gentleman from Florida (Mr. GOSS) is recognized during morning hour debates for 5 minutes.

Mr. GOSS. Mr. Speaker, I rise to say a few words about William Russell Mote. Mr. Mote passed away a few days ago after a long and productive life, as Members heard my colleague, the gentleman from Florida (Mr. MILLER), announce from this podium a few minutes ago.

I suppose not every American may know the Mote name, but surely they have been affected by his life and his generosity. William Mote contributed measurably to our understanding of the oceans and the fishes and other life in the oceans, helping us to learn how to be good stewards, taking care of these natural resources.

Mr. Mote's accomplishments are very many, but I think his most notable one from my perspective was the establishment and the sustainment, the very generous sustainment, of the world-recognized Mote Marine Research Laboratory in Sarasota, Florida.

Prior to redistricting in 1990 in Florida, I used to represent Sarasota and the Mote Marine Lab where it is. I can tell Members that today it is one of the premier marine laboratories in the world, an opinion that is quickly seconded by experts in this field, I would add.

Mote Marine is a very busy, very professional, and very accomplished institution, just like its founder. While Mr. Mote has passed on, all of us are going to continue to benefit enormously from his life and the Mote Marine Laboratory, which continues on. We are in his debt for that.

I would like to pass along to the many members of the Mote Marine laboratory community and their families my sincere condolences from myself and my wife, Mariel, and of course from other friends from southwest Florida which I now represent who understand the Mote Marine Laboratory and knew Mr. Mote well.

We appreciate greatly the legacy that he leaves us of awareness about

the oceans and how fragile they are, and that the fishes and the critters and mammals in that ocean do need stewardship, now that mankind has made such a strong imprint on our globe; the educational efforts that are being made at Mote Marine to share knowledge with people who need that knowledge and want that knowledge to push forward into the horizons of the unknown in our oceans; and of course, the research that is done there in so many areas.

I have memories myself going back when I was a city councilman in the city of Sanibel trying to deal with the scourge of red tide, which is something that occasionally visits the Florida beaches. It is a very unpleasant thing, with dead fish and a bad smell, and it is bad for tourism, but it obviously says that something is wrong with the environment. We tried to understand that.

That was my first meeting with Mr. Mote, going to his laboratory and saying, can you help me understand red tide? Is there something we can do about that? That pursuit still goes on. That was back some 20 or 25 years ago, I think.

Bill Mote was a hands-on activist. He got very enthusiastically involved. He had a wonderful, charming way about going into a project. He was very pleasant. He was very knowledgeable. He was very eager to share whatever knowledge he had and pass it along.

He certainly raised awareness about sharks. I think most of us are familiar with the movie, but the facts about sharks, what they really are, how they live, what goes on with shark populations in the world, we owe a huge debt to the Mote Marine laboratory and the work that has been done there.

Dolphins, I remember going to Mote Marine to get assistance in writing legislation for dolphin protection. There is such a thing as dolphin captive program legislation now to protect our dolphin inventories, because they were being exploited at one point.

Manatee rescue operations, an endangered species in Florida. Those who have seen manatees know in what perilous shape they are and how wonderful they are, what great creatures, and the work that has been done there to try and make sure that we will continue to have manatees on this globe. All of these kinds of things are wonderful parts of the natural resource that Bill Mote found and fell in love with and decided that he would do something about.

I would suggest that Bill Mote met the test that most of us would like to meet. He left life a little better on this planet for the work that he did. I think that is his best and most wonderful legacy.
