The VA Medical Center joined with Harvard Medical School to become a training facility for surgical residents in the late 1980's and has remained an active teaching hospital for Harvard and Dartmouth Medical School residents. Through the years, students aspiring to become nurses, dentists, physical therapists, physician assistants, occupational therapists, optometrists, medical assistants, dieticians, and pharmacists, have found a diverse clinical experience there.

Recognizing the need to address the long-term residential health care need of aging veterans, the Hospital dedicated a Nursing Home Care Unit in the late 1970's. Expansion continued in 1977 with the groundbreaking for a new Ambulatory Care wing.

Outpatient care became an important priority in the years that followed. Those patients requiring specialty care were previously required to travel to other VA hospitals in the region to receive care. After determining veterans should not have to travel long distances for their care, the staff formed specialty clinics including Orthopaedics, Optometry, Audiology, Neurology, Pain, Ear, Nose, and Throat.

Locally accessible care continues today in the form of Center-sponsored health screenings in local communities throughout the state. The Manchester VA Hospital also serves as a research center for a large number of health care programs. Of note is the facility's Post-Traumatic Stress Disorder research center which has received both national and international recognition for its work.

Although New Hampshire's veterans' population has decreased, their health care needs remain a high priority. These men and women sacrificed a great deal for each and every American and their needs continue to be met today. Community Based Outreach Clinics can be found throughout the state including the communities of Tilton and Newington and future facilities are planned for Lancaster, Conway, Wolfeboro, and Keene.

Through its changes, the VA's importance holds strong with a purpose "to be there when veterans need us."
