environmental safety laws into all of our trade deals, and we need to also make sure we have worker rights embodied in the core agreements of our trade deals so that our workers are not punished here at home and the workers abroad and in developing countries as well have a chance to earn a decent wage so that they can buy the products that they are making.

SUPPORT EMBRYONIC STEM CELL RESEARCH

The SPEAKER pro tempore (Mr. KERNS). Under a previous order of the House, the gentleman from Minnesota (Mr. RAMSTAD) is recognized for 5 minutes.

Mr. RAMSTAD. Mr. Speaker, Della Mae is a wonderful, loving, 79-year-old woman with other cruel, fatal diseases—Alzheimer’s disease. Joey was a promising young man in his early 20s who died a horrible death; a cruel, tragic death from diabetes.

Mr. Speaker, Della Mae is my mother. Joey was my first cousin. On behalf of my beloved mother and my first cousin, I plead with the President and the Congress to accept the NIH report on the medical value of embryonic stem cell research and to not block Federal funding for this promising life-saving research; on behalf of not only my mother and my first cousin, but 100 million other Americans suffering from Parkinson’s Disease, Alzheimer’s disease, diabetes, juvenile diabetes, multiple sclerosis, as well as spinal cord injuries resulting in paralysis.

Mr. Speaker, I have watched several close friends devastated by Parkinson’s Disease and spinal cord injuries, conditions that could also be aided by embryonic stem cell research. Who amongst us, who amongst us has not been profoundly moved by the sight of former President Ronald Reagan, that giant of a man, now reduced to a mere shadow of his former self by Alzheimer’s disease.

Mr. Speaker, the scientific evidence is overwhelming that stem cells collected from surplus embryos have great potential to regenerate specific types of human tissues and offer hope for millions of Americans devastated by these and other cruel, fatal diseases. According to research doctors I have talked to at the Mayo Clinic as well as NIH, a vaccine to prevent the onset of Alzheimer’s is less than 5 years away, thanks in large part to stem cell research.

Yes, Mr. Speaker, using surplus embryos from in-vitro fertilization that would otherwise be discarded has the potential to save lives and prevent terrible human suffering. Members and the President need to listen to respected colleagues like Senators Orrin Hatch and Connie Mack, as well as Secretary Tommy Thompson, when they tell us this is not an abortion issue. The President and Members need to be clear, Mr. Speaker, that abortion politics should not enter into this decision and could not influence this critical decision.

Embryonic stem cell research, in fact, will prolong life, will improve life, and give hope of life for millions of American people suffering the ravages of Alzheimer’s, Parkinson’s, diabetes, and multiple sclerosis, not to mention spinal cord paralysis.

So, Mr. Speaker, on behalf of millions of Americans with debilitating, incurable disorders, I respectfully urge the President and the Congress to approve crucial Federal funding for this life-saving medical research. In approving such funding, Mr. Speaker, we can also adopt the same model of accountability and oversight that is used in fetal tissue transplantation research which allows the best possible science to progress.

Mr. Speaker, it is too late for my dear mother and my decreased cousin, but it is not too late for 100 million other Americans counting on the President and the Congress to give them hope. Let us give them hope. Let us give them life. Let us support funding for life-saving and life-extending embryonic stem cell research. It is clearly, clearly the right thing to do.

THOUGHTS ON THE U.S. FLAG AND A CONSTITUTIONAL AMENDMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. DUNCAN) is recognized for 5 minutes.

Mr. DUNCAN. Mr. Speaker, I was unable to come over today for the discussion of the flag amendment because of a commitment to my constituents and because of an important markup in the Committee on Resources. However, I would like to tell my colleagues and others about an article or a column that was written in the July 9 issue of Newsweek Magazine by a woman named Joan Jacobsen.

She told that she was an antiwar protestor in the late 1960s and early 1970s and had many very bitter arguments with her father who was a brigadier general in the Army. Then she wrote a few days after her father’s passing. She said this: “Two days after my father died, as the visiting hours at the funeral home ended and we were putting on our coats, there was one last visitor. He was a stooped, solitary man who walked slowly to the open coffin and gazed down at my father, lying in his military dress uniform. Suddenly, the visitor stood up straight, and still looking at his Army comrade, gave the brisk salute of the spirited young GI that he must have been 55 years ago. Then he slowly lowered his arm and became an old man once more, turning and shuffling out the door. His gallant gesture has come to symbolize a profound shift in my feelings toward the United States military.”

Ms. Jacobsen continued: “The following day at the funeral service, the soldiers draped the American flag over the coffin and accompanied it from the church to the cemetery. As we gathered at my father’s grave site under a light December rain, four members of the honor guard stood at attention. One soldier raised his rifle and fired three shots while the bugler played Taps. The flag was removed from the coffin and slowly and meticulously folded into a triangular shape. After one soldier inserted the empty casings into the flag’s angled pocket, the rest of the guard lined up in formation behind the highest-ranking officer, who approached my teenage son. The officer, holding the folded flag on his outstretched arm and gazing at my son, said, ‘Please accept this flag on behalf of a grateful Nation.’

And so it was, at the end, the United States Army that provided my family and me with a noble conclusion to my father’s life, while reminding me that the military traditions I had once considered unquestionably rigid endure because they serve a purpose. Every morning, as long as he was able, my father raised the American flag on the pole outside his house, observed a moment of silence, then stood at attention and saluted. I had always thought this exercise sweetly eccentric, Ms. Jacobsen said, “but also meaningless. Now, I envy the ritual.”

Mr. Speaker, I think in at least a small way, this lady has explained what this flag means to so many people in this country, and that this flag is a whole lot more than just a simple piece of cloth.

In the great song of the “Battle Hymn of the Republic,” Mr. Speaker, it says, “In the beauty of the lilies, Christ was born across the sea, with a glory in his bosom that transfigures you and me. As he died to make men holy, let us live to make men free.”

That is what so much of what we do today is all about. The battle or the struggle for freedom is ongoing. It is watched daily by despots and dictators from abroad who would take our freedom away if they had the slightest chance to do so, and there are always liberal elitists and bureaucrats from within who want to live our lives for us and spend our money for us and take away our freedom, slowly but surely.

I think of this in relation to a hearing before the Subcommittee on National Parks this morning. We talked about the Antiquities Act. Mr. Speaker, one can never satisfy government’s appetite for money or land. We talked in the hearing this morning about how 70 million acres have been locked up,
