NUCLEAR REGULATORY COMMISSION

[Docket No. 50-213]

Connecticut Yankee Atomic Power Company; Haddam Neck Plant; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR-61, issued to Connecticut Yankee Atomic Power Company (CYAPCO, the licensee), for operation of the Haddam Neck Plant, located in Middlesex County, Connecticut.

Environmental Assessment

Identification of the Proposed Action

The proposed amendment will revise the Haddam Neck Technical Specifications (TS) to support Cycle 19 operation with the use of Westinghouse Vantage 5H fuel assemblies with up to 5.0 weight percent (w/o) nominal fuel into the reactor core. The proposed action is in accordance with the licensee's amendment request dated May 17, 1994, as supplemented September 9, 1994.

The Need for the Proposed Action

Beginning with Cycle 19, the fuel vendor for the licensee will change from Babcock & Wilcox Fuel Company (B&WFC) to Westinghouse (W). CYAPCO plans to operate Cycle 19 for 490 effective full power days (EFPD) with approximately one-third of the core containing Westinghouse Vantage 5H fuel assemblies. The use of the Westinghouse fuel will require the performance of various analyses to ensure safe operation of the plant. The TS change is necessary to allow the Haddam Neck Plant to load up to 5.0 weight percent (w/o) nominal fuel into the reactor core and to incorporate by reference the appropriate methodologies used for the fuel analyses into the TSs.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the TS. The staff has concluded that the proposed TS changes involving the change in the linear heat generation rate (LHGR) uncertainties, use of the WRB-1 methodology, removal of cycle specific references and inclusion of additional references are primarily administrative in nature and support the use of the Westinghouse Vantage 5H fuel assemblies in the Haddam Neck reactor core. The plant will continue to
