Atlantic sea scallop stocks are over-exploited and at low levels of abundance. Amendment 4 to the FMP was implemented on March 1, 1994 (59 FR 12, January 19, 1994), and was intended to eliminate overfishing through an incremental effort reduction program, gear modifications such as ring and mesh size increases, and other measures. It was also expected that the number of limited access vessels would remain stable for the duration of the 7-year schedule.

Amendment 4 to the FMP states that vessels with a DAS allocation of 150 days per year will yield revenues that are insufficient, on average, to cover the fixed costs for vessels larger than 50 gross registered tons. A DAS allocation of 150 days is projected for year 4 or 5 of the 7-year schedule, depending on the initial fishing mortality rate. The amendment further states that if recruitment falls to what is considered to be average or below average levels, many vessel operations will become uneconomic, regardless of the management in place at that time. During 1994, the first year of effort reduction under Amendment 4, recruitment has been below average. The result has been a request by scallop advisors to redistribute DAS among the remaining vessels. The amendment will not do this until the pause in DAS reductions, which is scheduled for the third year. The consolidation of DAS is expected to allow the remaining vessels to remain economically viable.

The Council's Scallop Industry Advisory Committee believes that consolidation is needed as soon as possible to minimize financial failures caused by present and future reductions in DAS and poor scallop stock conditions.

The Council is in the process of identifying management alternatives to achieve these goals. The current range of options includes, but is not limited to, a private program to buy back vessels, a government buy-back program, limits on total allowable catch with individual transferrable quotas, transferrable DAS, a use-it-or-lose-it provision under which vessels that do not use their DAS or quota allocation will lose their scallop permits, and a prohibition on shellstocking.

The Council expects that proposed regulations implementing the

recommendations of the industry advisors may have significant economic and social effects. The Council recognizes that these effects will extend beyond the individuals, families and communities that principally depend on scallops to other fisheries in the region, due to the displacement of fishing effort caused by the scallop regulations. This displacement could also potentially affect the status of these other fishery stocks. For this reason the Council has determined that it will hold scoping meetings to determine whether or not an SEIS is appropriate.
