

Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990. Comments received will be considered in preparing the final Brown Tree Snake Control Plan, which will become the basis for a cooperative and integrated Brown Tree Snake Control Program with the involvement of Federal, State, and Territorial, and local resource agencies.

**DATES:** Comments on the Draft Brown Tree Snake Control Plan should be received by June 19, 1995.

**ADDRESSES:** Written responses and requests for copies of the document should be mailed to Robert P. Smith, Chair, Brown Tree Snake Control Committee, U.S. Fish and Wildlife Service, Box 50167, Honolulu, HI 96850.

**FOR FURTHER INFORMATION CONTACT:** Robert P. Smith, Chair, Brown Tree Snake Control Committee, at (808) 541-2749.

**SUPPLEMENTARY INFORMATION:** A native of Indonesia, New Guinea, the Solomon Islands, and Australia, the brown tree snake (*Boiga irregularis*) has caused or been a major factor in a modern extinction episode beyond its native range that is unprecedented in its scope: the extirpation of most of Guam's native terrestrial vertebrates, including fruit bats, lizards, and virtually all of the island's forest birds. In addition, brown tree snakes in Guam have caused more than a thousand power outages, damaged agricultural interests by preying on poultry, killed many pets, and envenomated numerous children.

Several governmental agencies and private entities have been working to prevent similar ecological disasters on other Pacific islands, since the threat of the brown tree snake's dispersal to other islands and continents is significant. The brown tree snake is a major threat to the biodiversity of the Pacific region and other areas at risk. High densities of snakes occur in many urban areas on Guam where cargo is loaded for transport by air and sea to other Pacific islands, and dispersal has been documented by snakes discovered on islands in Hawaii and the Commonwealth of the Northern Mariana Islands, and even in the continental United States.

In recognition of this threat, the United States Congress included a section in the Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 that authorizes a cooperative program to control the brown tree snake outside of its historic range. Representatives of the Departments of Agriculture, Commerce, Defense, and the Interior; the Commonwealth of the Northern Mariana Islands; the Territory

of Guam; and the State of Hawaii formed the Brown Tree Snake Control Committee on May 1993 to develop an integrated pest management approach that would:

- Reduce existing brown tree snake population on Guam;
- Prevent the spread of brown tree snakes to other Pacific islands and mainland areas;
  - Eradicate or contain new populations as soon as detected;
  - Protect endangered species and other wildlife from brown tree snake predation;
  - Assist organizations and individuals on Guam to manage and control brown tree snake infestations, and especially to reduce disruptions of electrical supplies and human-snake encounters resulting in emotional trauma and bites;
  - Develop adequate information on the brown tree snake's biology, dispersal dynamics, and control to support Federal, State, Territorial, and Commonwealth needs; and
  - Develop more effective and environmentally sound control strategies and methods.

To meet these objectives, the Brown Tree Snake Control Committee has developed a draft plan reviewing the biology of the brown tree snake, its population development and status on various Pacific islands, its current and potential impacts on the environment and the economy, and past and present brown tree snake control activities. The draft plan also outlines specific tasks that need to be accomplished and funding needed for operational and research activities.
