

proposed surface location. The directional well alternative will not require USIBWC to issue a license since no work will be done within the LRGFCP. The directional well alternative is considered not workable because of a lack of an available surface drillsite outside the Main Floodway and technical problems associated with a bottomhold location some 457 meters or more from the surface location.

#### Environmental Assessment

The USIBWC received from Quisto a completed Environmental Assessment (EA) for the proposed gas well and related features. The EA is currently available for review and comment.

#### Finding of the Final Environmental Assessment

The Final EA finds that the proposed action for Quisto to construct, operate, and maintain a gas well within the Main Floodway of the USIBWC LRGFCP (and USIBWC to issue a license for such work) does not constitute a major federal action which would cause a significant local, regional, or national adverse impact on the environment based on the following facts:

1. The United States Army Corps of Engineers has determined that no waters of the United States including the wetlands will be impacted by the proposed gas well and related features.
2. The United States Fish and Wildlife Service has determined that federally listed endangered or threatened species are unlikely to be adversely affected by the proposed gas well and related features.
3. The Texas Historical Commission has determined that no survey is required and the project may proceed.
4. The USIBWC has determined that the proposed gas well and related features will have no significant effect upon the flood carrying capacity of the Main Floodway.
