Health Care Financing Administration

[45x93]EFFECTIVE DATE:

Federal Register Year 1996” published elsewhere in this

Physician Fee Schedule for Calendar Year

and Medicare Volume Performance Standard Rates of

Increase for Federal Fiscal Year 1996

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final notice.

SUMMARY: This final notice announces the calendar year 1996 updates to the Medicare physician fee schedule and the Federal fiscal year 1996 volume performance standard rates of increase for expenditures for physicians’ services under the Medicare Supplementary Medical Insurance (Part B) program as required by sections 1848 (d) and (f), respectively, of the Social Security Act. The fee schedule update for calendar year 1996 is 3.8 percent for surgical services, –2.3 percent for primary care services, and 0.4 percent for other nonsurgical services. While it does not affect payment for any particular service, there was a 0.8 percent increase in the update for all physicians’ services for 1996. The physician volume performance standard rates of increase for Federal fiscal year 1996 are –0.5 percent for surgical services, 9.3 percent for primary care services, 0.6 percent for other nonsurgical services, and a weighted average of 1.8 percent for all physicians’ services.

In our July 26, 1995 proposed rule concerning revisions to payment policies under the Medicare physician fee schedule for calendar year 1996, we proposed using category-specific volume and intensity growth allowances in calculating the default Medicare Volume Performance Standard (MVPS). We received 20 comments on this proposal. Since this proposal is related to the MVPS and this notice deals with MVPS issues, we are responding to those comments in this notice instead of in the final rule for the fee schedule entitled “Medicare Program; Revisions to Payment Policies and Adjustments to the Relative Value Units Under the Physician Fee Schedule for Calendar Year 1996” published elsewhere in this Federal Register issue.

EFFECTIVE DATE: The volume performance standard rates of increase are effective on October 1, 1995. The Medicare physician fee schedule update is effective on January 1, 1996.

ADDRESSES: Copies: To order paper copies of the Federal Register containing this document, send your request to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954. Specify Stock Number 069–001–00090–4 and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512–1800 or by faxing to (202) 512–2250. The cost for each paper copy is $8. As an alternative, you can view and photocopy the Federal Register document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the Federal Register.

To order copies of the source files for this document on high density 3.5 inch personal computer diskettes, send your request to: Superintendent of Documents, Attention: Electronic Products, P.O. Box 37082, Washington, DC 20013–7082. Enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512–1530 or by faxing to (202) 512–1262. The cost for the diskettes is $20. The file format on the diskettes is comma delimited ASCII.

Content information: Contact either Don Thompson, (410) 786–4586, or Rick Ensor, (410) 786–5617.

SUPPLEMENTARY INFORMATION:

I. Background and Summary of Legislation

A. The Physician Fee Schedule Update and Medicare Volume Performance Standard

Section 1848 of the Social Security Act (the Act) requires the Secretary of Health and Human Services to—

• Establish annual updates to payment rates under the Medicare physician fee schedule, and

• Establish volume performance standard rates of increase to help control the rate of growth in expenditures for physicians’ services.

Under section 1848(b)(1) of the Act, payment for physicians’ services, except for anesthesia services, equals the product of the relative value units (RVUs) for a service, a geographic adjustment factor, and a conversion factor. Anesthesia services are paid under a different relative value system, and payment is equal to the sum of the base and time units for the service multiplied by a geographically adjusted anesthesia-specific conversion factor. The RVUs and anesthesia base units reflect the relative amount of resources used by physicians to furnish the service, and the geographic adjustment factor measures practice cost differences between areas. The geographically adjusted RVUs are multiplied by a conversion factor to obtain the physician fee schedule payment amounts. The 1996 conversion factors are $15.28 for anesthesia services, $40.786 for surgical services, $35.4173 for primary care services, and $34.6293 for other nonsurgical services.

1. Physician Fee Schedule Update

Section 1848(d) of the Act requires the Secretary to provide the Congress with her recommendation of a physician fee schedule update by April 15 of each year. Under section 1848(d)(2)(A) of the Act, the Secretary is required to consider a number of factors, including the following:

• The percentage change in the Medicare economic index (MEI), a measure of the change in the cost of operating a medical practice.

• The growth in actual expenditures for physicians’ services in the prior fiscal year.

• The relationship between that growth and the volume performance standard rate of increase.

• Changes in the volume and intensity of services.

Other factors that may contribute to changes in the volume and intensity of services or access to services.

If the Congress does not set the update, section 1848(d)(3) of the Act establishes the process for updating the physician fee schedule. Under section 1848(d)(3), unless otherwise specified by the Congress, the fee schedule update for a category of physicians’ services equals the appropriate update index (the MEI) adjusted by the number of percentage points by which expenditure growth exceeded or was less than the volume performance standard rates of increase for the second preceding year for that category of physicians’ services. That is, the calendar year 1996 update would equal the 1996 MEI increased or decreased by the difference between the rate of increase in expenditures for fiscal year 1994 and the volume performance standard for that year.

However, section 1848(d)(3)(B) of the Act limits the maximum downward adjustment for 1995 and any succeeding year to 5.0 percentage points. There is
no restriction on upward adjustments to the MEI.

Section 1848(d)(1)(C) of the Act requires the Secretary to publish in the Federal Register, within the last 15 days of October, the updates for the following calendar year. The updates are required by the Medicare statute, and any budget implications associated with them are due to the requirements of the law and not this notice.

2. Medicare Volume Performance Standard Rates of Increase Section 1848(f) of the Act requires the Secretary to establish volume performance standard rates of increase for Medicare expenditures for physicians' services. The use of volume performance standard rates of increase is intended to control the rate of increase in expenditures for physicians' services. The volume performance standard rates of increase are not limits on expenditures. Payments for services are not withheld if volume performance standard rates of increase are exceeded. Rather, the appropriate fee schedule update, as specified in section 1848(d)(3)(A) of the Act, is adjusted to reflect the success or failure in meeting the volume performance standard rates of increase.

Section 1848(f) of the Act sets forth the process for establishing the volume performance standard rates of increase by requiring the Secretary to recommend to the Congress the physician volume performance standard rates of increase for the following Federal fiscal year by not later than April 15. The Secretary is required to recommend MVPS rates for surgical, primary care, other nonsurgical, and all physicians' services. In making the recommendations, the Secretary is required to confer with organizations that represent physicians and to consider the following factors:

- Inflation.
- Changes in the number and age composition of Medicare enrollees under Part B (excluding risk health maintenance organization enrollees).
- Changes in technology.
- Evidence of inappropriate utilization of services.
- Evidence of lack of access to necessary physicians' services.
- Other appropriate factors as determined by the Secretary.

If the Congress does not set the volume performance standard rates of increase, section 1848(f)(2) (A) and (B) of the Act requires the Secretary to set MVPS rates for all physicians' services and each category of physicians' services equal to the product of the following four factors reduced by a performance standard factor, which for fiscal year 1996 is 4.0 percentage points:

- 1.0 plus the Secretary's estimate of the weighted-average percentage increase (divided by 100) in fees for all physicians' services or for the category of physicians' services for the portions of calendar year 1995 and calendar year 1996 contained in fiscal year 1996.
- 1.0 plus the Secretary's estimate of the percentage change (divided by 100) in the average number of Part B enrollees (excluding risk health maintenance organization enrollees) from fiscal year 1995 to fiscal year 1996.
- 1.0 plus the Secretary's estimate of the average annual percentage growth (divided by 100) in the volume and intensity of all physicians' services or of the category of physicians' services for fiscal year 1990 through fiscal year 1995.

MVPS rates have been established under section 1848 of the Act since fiscal year 1990. Calendar year 1992 was the first year in which the update was affected by expenditures under the MVPS system. The following tables illustrate the MVPS rates in each fiscal year since their inception, the actual rates of increase in expenditures, and the corresponding updates in the second subsequent calendar year.

B. Physicians’ Services

Section 1848(f)(5)(A) of the Act defines physicians’ services for purposes of the volume performance standard rates of increase as including other items or services (such as clinical diagnostic laboratory tests and radiology services), specified by the Secretary, that are commonly performed by a physician or furnished in a physician’s office. Section 1861(s) of the Act defines medical and other health services covered under Part B. As provided for in the fiscal year 1990 volume performance standard rates of increase notice in the Federal Register on December 29, 1989 (54 FR 53819), we are including the following medical and other health services in section 1861(s) of the Act in the physician volume performance standard rates of increase if bills for the items are processed and paid for by Medicare carriers:

- Physicians’ services.
- Services and supplies furnished incident to physicians’ services.
- Outpatient physical therapy and speech therapy services, and outpatient occupational therapy services.
- Antigens prepared by or under the direct supervision of a physician.
- Services of physician assistants, certified registered nurse anesthetists, certified nurse midwives, clinical psychologists, clinical social workers, nurse practitioners, and clinical nurse specialists.
- Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests.
- X-ray, radium, and radioactive isotope therapy.
- Surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations.

As described in the December 2, 1993 notice (58 FR 63858) containing our definitions of surgical, primary care, or other nonsurgical services, we consider a procedure to be surgical if the following conditions are met:

- In the HCFA Part B data system, the service is classified under “type of service” as a “surgery.”
- The service is performed by surgical specialists more than 50 percent of the time.

As also discussed in the December 2, 1993 notice, section 1842(i)(4) of the Act defines primary care services as “office medical services, emergency department services, home medical services, skilled nursing, intermediate care, and long-term care medical services, or nursing home, boarding home, domiciliary, or custodial care medical services.” Since this language was the result of an amendment to the Act made by section 4042(b) of the Omnibus Budget Reconciliation Act of 1987 (OBRA 1987) (Public Law 100–203), enacted on December 22, 1987, we rely on the conference report accompanying OBRA 1987 (H. R. Rep. No. 100–495, 100th Congress, 1st Session 594–595 (1987)) to determine the HCFA Common Procedure Coding System (HCPCS) codes to be included in the definition of primary care services. In addition, section 6102(f)(10) of the Omnibus Budget Reconciliation Act of 1989 (OBRA 1989) (Public Law 101–239), enacted on December 19, 1989, indicated intermediate and comprehensive office visits for eye examinations and treatments for new patients were to be considered primary care services.

We classify physicians’ services not meeting the surgical or primary care definitions as nonsurgical services.

For a procedure code that is new in 1996 and does not meet the primary care definition, we do not have any data for determining how often the procedure is performed by surgical specialists and therefore whether the service should be classified as surgical or nonsurgical. We categorized these codes as surgical or nonsurgical based on the judgment of our medical staff. To
assist us in making these determinations, we considered the type-of-service classification within the Physicians’ Current Procedural Terminology (CPT) and the relationship of services represented by the new codes to surgical services meeting the above-described criteria. We followed a similar process to classify codes that were new in 1995. For the 1996 classification of the new 1995 codes, however, we used 6 months of 1995 data to determine whether they meet the criteria for being considered surgical services. Based on these data, we did not need to reclassify any codes as surgical or nonsurgical.

For 1996, we have classified monthly end-stage renal disease services (HCPCS codes 90918 through 90921) as primary care services. For a full discussion of this classification, see the final rule with comment period entitled “Medicare Program; Revisions to Payment Policies and Adjustments to the Relative Value Units Under the Physician Fee Schedule for Calendar Year 1996” published elsewhere in this Federal Register issue and hereafter referred to as the physician fee schedule final rule.

Also, Addendum B of the physician fee schedule final rule, published elsewhere in this Federal Register issue, lists the RVUs and related information used in determining Medicare payments for HCPCS codes. For the purposes of the physician fee schedule, we have assigned the following surgical, primary care, or other nonsurgical service update indicators to these codes:

<table>
<thead>
<tr>
<th>Update indicator</th>
<th>Interpretation</th>
</tr>
</thead>
<tbody>
<tr>
<td>S ..............</td>
<td>Surgical services.</td>
</tr>
<tr>
<td>P ..............</td>
<td>Primary care services.</td>
</tr>
<tr>
<td>N ..............</td>
<td>The physician fee schedule update applies, but the code is not defined as surgical or primary care.</td>
</tr>
<tr>
<td>O ..............</td>
<td>The physician fee schedule update does not apply.</td>
</tr>
</tbody>
</table>

The MVPS indicator for a procedure code is identical to the update indicator for codes that have a surgical, primary care, or other nonsurgical service update indicator. However, we consider some codes with an update indicator of “O” to be nonsurgical for the purposes of the MVPS, most notably the clinical diagnostic laboratory codes.

The update indicators for codes new or revised in 1996 are shown in Addendum C of the physician fee schedule final rule, published elsewhere in this Federal Register issue.

II. Analysis of and Responses to Public Comments

In our July 26, 1995 proposed rule (60 FR 38400) concerning revisions to payment policies under the Medicare physician fee schedule for calendar year 1996, we invited public comments on a proposal to use category-specific volume and intensity growth allowances in calculating the default MVPS (60 FR 38416). Since this proposal is related to the MVPS and this notice deals with MVPS issues, we are responding to those comments in this notice instead of in the physician fee schedule, published elsewhere in this Federal Register issue. Our responses to the comments follow:

Comment: Several commenters stated that the use of category-specific volume and intensity growth allowances is counter to the spirit of the MVPS since categories with higher than average volume and intensity growth receive higher MVPS targets, and categories with lower than average volume and intensity growth receive lower targets.

Response: The use of category-specific volume and intensity is more consistent with section 1848(f)(2)(A) of the Act, which describes the calculation of the volume performance standards. Section 1848(f)(2)(A) states that one of the factors in calculating the volume performance standards for all physicians’ services and for each category of physicians’ services shall be equal to “1 plus the Secretary’s estimate of the annual percentage growth (divided by 100) in the volume and intensity of all physicians’ services or of the category of physicians’ services, respectively, under this part for the 5-fiscal-year period ending with the preceding fiscal year * * *”. As stated in our July 26, 1995 proposed rule, although historically the data available to us allowed an accurate estimate of the overall growth in the volume and intensity of physicians’ services, they did not allow us to estimate the volume and intensity growth for each individual category of service with the degree of accuracy required for the MVPS calculation. More recent data now allow us to do this. So while it is true that the targets move in the direction of volume and intensity growth, this is a result of the statutory volume performance standard methodology.

Comment: Several commenters stated that the proposed change in methodology does not take into account the “appropriateness” of the differential volume and intensity growth allowances.

Response: As stated in the response to the prior comment, the use of category-specific volume and intensity growth allowances is more consistent with section 1848(f)(2)(A) of the Act. The appropriateness of the volume performance standards in any given year, or of the statutory methodology itself, can be handled through the MVPS recommendation process. Section 1848(f)(1) of the Act requires the Secretary and the Physician Payment Review Commission to provide recommendations to the Congress on the MVPS for the coming year. The Congress can choose to act on these recommendations or can set the MVPS itself.

Comment: One commenter opposed the use of category-specific volume and intensity growth allowances on the grounds that it was a “stopgap” policy and recommended a legislative change to a single conversion factor and volume performance standard.

Response: As we stated in our July 26, 1995 proposed rule, we proposed this change in our regulations to address immediate problems in the physician fee schedule. The Act does not allow us to create a single conversion factor and volume performance standard for all Medicare physician fee schedule services.

Comment: One commenter believed that we provided no justification for our proposal other than to increase payment for primary care services.

Response: As stated above, the use of category-specific volume and intensity is more consistent with section 1848(f)(2)(A) of the Act. In addition, although for fiscal year 1996 this change in methodology would result in a higher primary care MVPS, this does not necessarily mean the change would have a similar result in future years. The impact on any individual category of physicians’ services is dependent on the future relationship between the average volume and intensity growth for that category and for physicians’ services overall. If future growth in the volume and intensity of primary care services is lower than overall growth in physicians’ services, this change would result in a lower MVPS for primary care services. Similar reasoning applies to the categories of surgical services and nonsurgical services other than primary care.

Comment: Several commenters believed that use of category-specific volume and intensity growth allowances would provide a more accurate baseline against which to compare volume and intensity growth. They also stated that the proposal was more consistent with our use of category-specific estimates of the MVPS factors for primary care services.

Response: As stated in the response to the prior comment, the use of category-specific volume and intensity growth allowances is more consistent with section 1848(f)(2)(A) of the Act. The appropriateness of the volume performance standards in any given year, or of the statutory methodology itself, can be handled through the MVPS recommendation process. Section 1848(f)(1) of the Act requires the Secretary and the Physician Payment Review Commission to provide recommendations to the Congress on the MVPS for the coming year. The Congress can choose to act on these recommendations or can set the MVPS itself.
resulting from changes in law or regulations.

Response: The use of category-specific volume and intensity growth will make the volume performance standards more comparable with the actual growth in allowed charges for a given category of physicians' services. In addition, we agree that the use of category-specific volume and intensity growth allowances is more consistent with our use of category-specific estimates of the MVPS factors for fees and changes in law or regulations. The language in section 1848(f)(2)(A) of the Act regarding these two MVPS factors is similar to the language describing the volume and intensity factor.

Final decision: Beginning with fiscal year 1996, we will use category-specific volume and intensity growth allowances in calculating the default volume performance standards.

### III. Provisions of This Final Notice

#### A. Physician Fee Schedule Update for Calendar Year 1996

Under the requirements of section 1848(d)(3) of the Act, the fee schedule update for calendar year 1996 will be 3.8 percent for surgical services, −2.3 percent for primary care services, and 0.4 percent for other nonsurgical services. While it does not affect payment, there was a 0.8 percent increase in the update for all physicians' services for 1996. We determined this update as follows:

<table>
<thead>
<tr>
<th>Factor</th>
<th>Surgical services</th>
<th>Primary care services</th>
<th>Nonsurgical services</th>
</tr>
</thead>
<tbody>
<tr>
<td>1996 MEI Update</td>
<td>2.0</td>
<td>2.0</td>
<td>2.0</td>
</tr>
<tr>
<td>MVPS Adjustment</td>
<td>1.8</td>
<td>−4.3</td>
<td>−1.6</td>
</tr>
<tr>
<td>1996 Update</td>
<td>3.8</td>
<td>−2.3</td>
<td>0.4</td>
</tr>
<tr>
<td>Total</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

In our July 26, 1995 proposed rule (60 FR 38400) concerning revisions to payment policies under the Medicare physician fee schedule for calendar year 1996, we proposed applying budget-neutrality adjustments to the conversion factors rather than to the RVUs (60 FR 38401 to 38402). As discussed in the physician fee schedule final rule, published elsewhere in this Federal Register issue, the 0.36 percent budget-neutrality adjustment for 1996 will be made on the conversion factors. However, if in the future the Congress explicitly sets a conversion factor at a fixed dollar amount for a given year, we will consider establishing a separate budget-neutrality adjuster or applying the adjustment to the RVUs.

Applying the updates and budget neutrality adjustment to the 1995 conversion factors of $39.447 for surgical services, $36.382 for primary care services, and $34.616 for nonsurgical services yields 1996 conversion factors of $40.7986 for surgical services, $35.4173 for primary care services, and $34.6293 for other nonsurgical services. The 1995 anesthesia conversion factor of $14.77, which includes the effect of the 1995 RVU budget-neutrality adjustment, will be updated by the surgical update to $15.28 for 1996, after adjusting for the 1996 budget-neutrality adjustment.

The specific calculations to determine the fee schedule updates for physicians' services for calendar year 1996 are explained in section IV.A. of this notice.

#### B. Physician Volume Performance Standard Rates of Increase for Fiscal Year 1996

Under the requirements in section 1848(f)(2) (A) and (B) of the Act, we have determined that the volume performance standard rates of increase for physicians' services for fiscal year 1996 are −0.5 percent for surgical services, 9.3 percent for primary care services, 0.6 percent for other nonsurgical services, and a weighted average of 1.8 percent for all physicians' services.

This determination is based on the following legislative factors:

<table>
<thead>
<tr>
<th>Legislative factors</th>

</table>
The specific calculations to determine the volume performance standard rates of increase for physicians' services for fiscal year 1996 are explained in section IV.B of this notice.

IV. Detail on Calculation of the Calendar Year 1996 Physician Fee Schedule Update and the Fiscal Year 1996 Physician Volume Performance Standard Rates of Increase

A. Physician Fee Schedule Update

1. The Percentage Change in the Medicare Economic Index

The MEI measures the weighted-average annual price change for various inputs needed to produce physicians' services. The MEI is a fixed-weight input price index, with an adjustment for the change in economy-wide labor productivity. This index, which has 1989 base weights, is comprised of two broad categories: (1) Physician's own time, and (2) physician's practice expense.

The physician's own time component represents the net income portion of business receipts and primarily reflects the input of the physician's own time into the production of physicians' services in physicians' offices. This category consists of two subcomponents, wages and salaries and fringe benefits. These components are adjusted by the 10-year moving average percent change in output per man-hour for the nonfarm business sector to eliminate double counting for productivity growth in physicians' offices and the general economy.

The physician's practice expense category represents the rate of price growth in nonphysician inputs to the production of services in physicians' offices. This category consists of wages and salaries and fringe benefits for nonphysician staff and other nonlabor inputs. Like physician's own time, the nonphysician staff categories are adjusted for productivity using the 10-year moving average percent change in output per man-hour for the nonfarm business sector. The physician's practice expense component also includes the following categories of nonlabor inputs: office expense, medical materials and supplies, professional liability insurance, medical equipment, professional car, and other expense. The table below presents a listing of the MEI cost categories with associated weights and percent changes for price proxies for the 1996 update. The calendar year 1996 MEI is 2.0 percent.

1 The rates of change are for the 12-month period ending June 30, 1995, which is the period used for computing the calendar year 1996 update. The price proxy values are based upon the latest available Bureau of Labor Statistics data as of September 1995.

2 The weights shown for the MEI components are the 1989 base-year weights, which may not sum to subtotals or totals because of rounding. The MEI is a fixed-weight, Laspeyres-type input price index whose category weights indicate the distribution of expenditures among the inputs to physicians' services for calendar year 1989. To determine the MEI level for a given year, the price proxy level for each component is multiplied by its 1989 weight. The sum of these products (weights multiplied by the price index levels) over all cost categories yields the composite MEI level for a given year. The annual percent change in the MEI levels is an estimate of price change over time for a fixed market basket of inputs to physicians' services.

3 The Physician's Own Time and Nonphysician Employee Compensation category price measures include an adjustment for productivity. The price measure for each category is divided by the 10-year moving average of output per man-hour in the nonfarm business sector. For example, the wages and salaries component of Physician's Own Time is calculated by dividing the rate of growth in average hourly earnings by the 10-year moving average rate of growth of output per man-hour for the nonfarm business sector. Dividing one plus the decimal form of the percent change in the average hourly earnings (1.012=1.028) by one plus the decimal form of the percent change in the 10-year moving average of labor productivity (1.012=1.012) equals one plus the change in average hourly earnings net of the change in output per man-hour (1.028/1.012=1.016). All Physician's Own Time and Nonphysician Employee Compensation categories are adjusted in this way. Due to a higher level of precision the computer-calculated quotient may differ from the quotient calculated from rounded individual percent changes.

4 The average hourly earnings proxy, the Employment Cost Index proxies, as well as the CPI-U, housing and CPI-U, private transportation are published in the Current Labor Statistics Section of the Bureau of Labor Statistics' Monthly Labor Review. The remaining CPIs and PPIs in the revised index can be obtained from the Bureau of Labor Statistics' CPI Detailed Report or Producer Price Indexes.

As required by section 1848(d)(3)(B)(i) of the Act, we are increasing the update by 1.8 percentage points for surgical services and decreasing it by 4.3 percentage points for primary care and 1.6 percentage points for other nonsurgical services to reflect the percentage increase in expenditures between fiscal year 1993 and fiscal year 1994 relative to the volume performance standard rates of increase for fiscal year 1994.

Our estimate of the percentage growth in surgical services between fiscal year 1993 and fiscal year 1994 is 7.3 percent. Because the volume performance standard rate of increase for fiscal year 1994 was 9.1 percent, the rate of increase in expenditures for surgical services was less than the volume performance standard rate of increase by 1.8 percentage points. For primary care services, the rate of increase in expenditures was 14.8 percent, 4.3 percentage points greater than the volume performance standard rate of increase of 10.5 percent. For other nonsurgical services, the rate of increase in expenditures was 10.8 percent, 1.6 percentage points greater than the volume performance standard rate of increase of 9.2 percent.

B. Fiscal Year 1996 Physician Volume Performance Standard Rates of Increase

Below we explain how we determined the increases for each of the four factors used in determining the volume performance standard rates of increase for fiscal year 1996.

Factor 1—Weighted-Average Percentage Increase in Fees for Physicians' Services (Before Applying Legislative Reductions) for Months of Calendar Years 1995 and 1996 Included in Fiscal Year 1996

This factor was calculated as a weighted average of the fee increases that apply to fiscal year 1996; that is, the fee increases that apply to the last 3 months of calendar year 1995 multiplied by 25 percent plus the fee increases that apply to the first 9 months of calendar year 1996 multiplied by 75 percent. Beginning with calendar year 1992, physicians' services are updated by a physician fee schedule update factor that is based on the MEI adjusted for several statutory factors. The update factor for a category of physicians' services for calendar year 1996 is adjusted by the number of percentage points that the rate of increase in expenditures in fiscal year 1994 compared to fiscal year 1993 was less than the volume performance standard rate of increase for the category of physicians' services in fiscal year 1994. Laboratory services are updated by increases in the Consumer Price Index for Urban Consumers (CPI-U). Table 2 shows the updates that were used to determine the weighted-average percentage increase in physician fees.

Physicians' services make up approximately 90 percent of the total expenditures in the definition of physicians' services used for purposes of the volume performance standard rates of increase; laboratory services represent approximately 10 percent. In addition to the annual updates and individual weights of the above services, one other element has an effect on the rate of increase in physician fees. Section 1842(h)(1) of the Act provides for "participating physicians" who agree to accept Medicare payment as payment in full and to bill Medicare beneficiaries only for the 20 percent coinsurance amount and any unmet portion of the $100 annual deductible amount. Sections 1842(b)(4)(A)(iv) and 1848(a)(3) of the Act provide that nonparticipating physicians are paid 5 percent less for their Medicare services than participating physicians. The nonparticipating physicians are given an opportunity at the end of each calendar year to enroll as participating physicians for the next calendar year. Participation rates have increased each year, and we assume that this trend will continue. The increase in the number of participating physicians and the fact that they are paid at a rate higher than nonparticipating physicians also add to the rate of increase in the weighted-average percentage increase in physician fees.

After taking into account all the elements described above, we estimate that the weighted-average increase in fees for physicians' services in fiscal year 1996 before applying the legislative changes will be 2.1 percent for surgical services, 2.1 percent for primary care services, 2.3 percent for other nonsurgical services, and a weighted average of 2.2 percent for all physicians' services.

Factor 2—The Percentage Increase in the Average Number of Part B Enrollees from Fiscal Year 1995 to Fiscal Year 1996

We estimate that average Medicare Part B enrollment in fiscal year 1996 will be 36.2 million. Decreasing that figure by the estimated enrollment in risk health maintenance organizations of 3.1 million (those enrolled in risk health maintenance organizations whose Medicare-covered medical care is paid for through the adjusted average per capita cost mechanism and is therefore outside the scope of the MVPs) results in an estimate of 33.0 million Part B enrollees in fiscal year 1996 not in risk health maintenance organizations.

The corresponding figures for 1995 are estimated to be 35.5 million total Part B enrollees and 2.4 million risk health maintenance organization enrollees, which result in an estimate of 33.1 million Part B enrollees not in risk health maintenance organizations. We estimate that there will be 0.1 million fewer Part B enrollees not in risk health maintenance organizations in fiscal year 1996 than in fiscal year 1995, which represents a 0.3 percent decrease from fiscal year 1995 to fiscal year 1996 for surgical services, primary care services, other nonsurgical services, and the average of all physicians' services.

Factor 3—Average Annual Growth in the Volume and Intensity of Physicians' Services for Fiscal Year 1991 through Fiscal Year 1995

Section 1848(f)(2)(A)(iii) of the Act requires the Secretary to estimate the average annual percentage growth in the volume and intensity of physicians' services or of the category of physicians' services for fiscal year 1991 through fiscal year 1995. This estimate must be based upon information contained in the most recent annual report issued by the Board of Trustees of the Supplementary Medical Insurance Trust Fund (Trustees' Report).

The data on the percentage increase in the volume and intensity of services in the Trustees' Report are based on historical trends in increases in allowed...
charges, which are not influenced by the Part B deductible. The volume performance standard rates of increase under this notice, however, have historically been compared to increases in expenditures, which are influenced by the Part B deductible. Section 1832(b) of the Act specifies that the Part B deductible will be $100 for calendar year 1991 and subsequent years. The effect of the deductible remaining fixed at $100 is that the overall annual increases in allowed charges for MVPS physicians’ services are lower than the overall annual increases in expenditures. Although we believe it would be consistent with a literal interpretation of section 1848(f)(2)(A)(iii) of the Act, it would be inappropriate to base the volume and intensity component on the lower 5-year growth in allowed charges and compare the volume performance standards to the higher growth in expenditures, so we instead compare the standards to the growth in allowed charges.

Consistent with data contained in the Trustees’ Report, we estimated Factor 3 using a definition of physicians’ services that includes certain supplies and nonphysician services not otherwise included in computing the volume performance standard rates of increase (primarily durable medical equipment and ambulance services). We included data for these services because we were required to base the estimate on data contained in the Trustees’ Report, and it was not feasible to recompute the data from the 5-year period to exclude these supplies and nonphysician services. We believe the inclusion of these nonphysician supplies and services in this component has a minimal effect on the estimate because the component measures rates of change. Since durable medical equipment and ambulance services constitute only about 10 percent of the total charges used in the Trustees’ Report, the rate of change for these nonphysician services and supplies would have to be significantly different from the rate of change for physicians’ services to have a measurable impact on this volume and intensity increase factor. (Factor 3 is the only component of the volume performance standard rate of increase that was estimated using data that included nonphysician services and supplies.) The volume increases for services performed in independent laboratories were included in the calculation of the physician increases, as were the volume increases for clinical laboratory tests performed in hospital outpatient departments.

As described earlier, the fiscal year 1996 volume performance standards were calculated using category-specific volume and intensity. The 5-year average rate of increase in volume and intensity equals 2.3 percent for surgical services, 5.3 percent for primary care services, 5.1 percent for other nonsurgical services. The weighted-average increase for all physicians’ services is 4.4 percent.

Factor 4—Percentage Increase in Expenditures for Physicians’ Services Resulting from Changes in Law or Regulations in Fiscal Year 1996 Compared with Fiscal Year 1995

Legislative changes enacted in OBRA 1993 and changes in the regulations required by this law, as well as implementation of the physician fee schedule (including refinements made in the RVUs for 1995 and 1996) will have an impact on the volume performance standard rates of increase for fiscal year 1996.

The net effect of implementing the physician fee schedule after making the RVU refinements for 1995 and 1996 will increase payment rates and, therefore, the volume performance standard for primary care services. Similarly, the net effect of refining the RVUs and implementing the fee schedule will reduce payment rates for most surgical services and many nonsurgical services other than primary care, thus, lowering the volume performance standard rates of increase for these services.

Implementing the fee schedule will have no effect on the volume performance standard rates of increase for all physicians’ services because the net effect of increases in payment for certain services and decreases in payment for other services will have a budget-neutral effect on payment for all physicians’ services.

The net adjustments to the physician fee schedule updates will have the effect of increasing the volume performance standard rate for surgical services and decreasing the rate for primary care services. It will have no effect on the rate for other nonsurgical services.

OBRA 1993 also included a provision to lower payment for practice expenses for certain services paid under the physician fee schedule, which will have the effect of lowering the MVPS for both surgical and nonsurgical services. After taking into account these provisions, this factor equals −0.6 percent for surgical services, 5.9 percent for primary care services, and −2.4 percent for other nonsurgical services, and a weighted average of −0.5 percent for all physicians’ services.

V. Inapplicability of 30-Day Delay in Effective Date

We usually provide a delay of 30 days in the effective date for final Federal Register documents. In this case, however, the volume performance standard rates of increase are required by law to be published in the last 15 days of October 1995 and are effective on October 1, 1995. Thus, the Congress has clearly indicated its intent that the rates of increase be implemented without the usual 30-day delay in the effective date and has foreclosed any discretion by us in this matter.

Therefore, the requirement for a 30-day delay in the effective date does not apply to this notice. With regard to the physician fee schedule, the effective date will be January 1, 1996, which is more than 30 days beyond the publication date of this notice.

VI. Regulatory Impact Statement

A. Regulatory Flexibility Act

We generally prepare a regulatory flexibility analysis that is consistent with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 through 612) unless the Secretary certifies that a notice will not have a significant economic impact on a substantial number of small entities. For purposes of the RFA, States and individuals are not entities, but we consider all physicians to be small entities.

We are not preparing a regulatory flexibility analysis since we have determined, and the Secretary certifies, that this notice will not have a significant economic impact on a substantial number of small entities.

Also, section 1102(b) of the Act requires the Secretary to prepare a regulatory impact analysis if a notice may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 50 beds.

We are not preparing a rural impact analysis since we have determined, and the Secretary certifies, that this notice will not have a significant impact on the operations of a substantial number of small rural hospitals.
B. Effects of the Proposal for Using Category-Specific Volume and Intensity Growth Allowances in Calculating the Physician Volume Performance Standard Rates of Increase

The use of category-specific volume and intensity growth allowances in the calculation of the MVPS is budget-neutral overall, although it does have redistributional effects on the surgical, nonsurgical, and primary care categories.

In accordance with the provisions of Executive Order 12866, this notice was reviewed by the Office of Management and Budget.

(Sections 1848(d) and (f) of the Social Security Act (42 U.S.C. 1395w-4 (d) and (f)) (Catalog of Federal Domestic Assistance Program No. 93.774, Medicare—Supplementary Medical Insurance Program)
