

Denver, CO 80202-2466, (303) 312-6125.

SUPPLEMENTARY INFORMATION: The UIC program was implemented under the federal, Safe Drinking Water Act to prevent contamination of all underground sources of drinking water (USDW), which are aquifers capable of yielding a significant amount of water containing less than 10,000 mg/liter of total dissolved solids. If the application by the Montana Board of Oil and Gas Conservation is approved, the State would be responsible for preventing endangerment of USDWs by the following activities: (1) Disposal (via injection wells) of fluids produced in conjunction with primary oil and gas development and production, including gas plant waste; (2) injection for the purpose of storing liquid hydrocarbons; and (3) injection of fluids for the purpose of enhanced recovery of oil and gas. The program proposed by the State will regulate Class II injection activities by establishing state permits which will include technical requirements for the protection of USDWs. Such requirements include criteria for construction, testing, operation, monitoring and abandonment of injection wells.

At present, there are approximately 1,232 Class II injection wells in Montana. The USEPA has held primary administrative and enforcement authority for the UIC program in Montana since the program was implemented in 1984. The application from the Montana Board of Oil and Gas Conservation requests that EPA delegate to the State primary authority for the regulation of all Class II injection wells on all lands subject to the State's police power and taxing authority and all lands owned or under the jurisdiction of the United States, except those wells located within the exterior boundaries of an Indian Reservation pursuant to 40 CFR Section 144.3. The application includes program description, copies of all applicable rules and forms, a quality assurance plan, a statement of legal authority and appropriate memoranda of agreement.

Dated: December 7, 1995.
