

### Option 6—Hybrid to Emphasize Small System Need

Small water systems will likely have a greater need for DWSRF monies than larger systems that have better access to other sources of funding. Small water systems have a comparatively high per-household need and analysis of data shows that small water systems have more trouble than other systems in maintaining compliance with drinking water regulations.

A formula could be constructed to give extra weight to small systems, which could be defined as systems serving fewer than 10,000, or 3,300, or some other level, as appropriate. For example, 50 percent of the formula could be based on Total Need (or Current Need, or Current SDWA Need) and the other 50 percent could be based on the Total Need (or Current Need, or Current SDWA Need) of systems serving fewer than 10,000 persons. Such a formula could include or exclude distribution need tied to the coliform rule.
