purposes that are not detrimental to the survival of the species and that are not primarily commercial.

The ZSSD applied for and was granted a permit in 1995 to import two giant pandas for scientific research. They imported the pandas in September 1996. Conditions of the permit require the ZSSD to submit an annual report summarizing the research they conducted for that year. The ZSSD’s research is primarily focused on investigating the communication system of giant pandas, particularly their olfactory modality. Their investigations on captive pandas can have implications for management of pandas in the wild. Olfactory signaling plays a key role in mate location, maintaining community social structure and spatial regulation. The ZSSD’s panda research has four basic goals: (1) to develop new methodologies for assessing population trends and habitat use; (2) to increase the understanding of physiology, behavior, and reproductive biology, in particular those aspects that would assist in the management of the wild population; (3) to contribute to a more viable collaborative structure for international research efforts in all spheres where giant pandas are found; and (4) to contribute to the process of educating governments, conservation NGOs and the general public on the giant panda’s attributes and vulnerability to extinction.

The ZSSD is addressing these goals through a series of studies that have specific aims. The reports reflect the progress that the ZSSD has made toward these goals.
