

samples, take measurements and attach satellite relay data loggers (SRDL) and VHF radio tags. The purpose for these activities is to determine and better understand the foraging strategies utilized by marine predators in the face of meso- and fine-scale ecological variability. The collected samples will be imported into the U.S. for further analysis.

Location: Within the seasonal pack ice in Marguerite Bay, West Antarctic Peninsula.

Dates: April 1, 2001 to August 31, 2003.

2. *Applicant*—Permit Application No. 2001-026: Bruce D. Sidell, School of Marine Sciences, University of Maine, Orono, ME 04469-5471.

Activity for Which Permit is Requested: Introduce into Antarctica. The applicant proposes to use a mixture of species of frozen fish tissues from species native to Patagonian Chile, specifically *Macruronis magellanicus* and *Dissostichus eleganoides*, as bait in experimental fishing of fish traps/pots in the Antarctic peninsula area. The bait will be used to attempt to capture Antarctic fishes, in particular Channichthyid icefishes, for ongoing studies of the physiology and biochemistry of Antarctic icefishes. In all previous research seasons to date, capture of fish specimens has been carried out exclusively by benthic trawling. If use of the fish traps proves to be successful, this method could reduce the necessity and frequency for use of movable bottom gear and resultant disruption to benthic communities and could yield a much more diverse sample of fish species for research work.

Location: Antarctic peninsula area in the vicinities of Low, Brabant, Anvers, Livingston Islands and Deallmann Bay.

Dates: June 1, 2001 to July 31, 2001.

Acting Permit Officer, Office of Polar Programs.
