Notice of Availability of the Draft Southwestern Willow Flycatcher Recovery Plan for Review and Comment

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of Document Availability.

SUMMARY: The U.S. Fish and Wildlife Service announces the availability for public review of a draft Recovery Plan for the southwestern willow flycatcher (*Empidonax traillii extimus*). The breeding range of this bird includes southern California, southern Nevada, southern Utah, Arizona, New Mexico, western Texas, southwestern Colorado, and possibly extreme northern portions of the Mexican states of Baja, California del Norte, Sonora, and Chihuahua. Within this region, the species breeds in dense riparian tree and shrub communities associated with rivers, swamps, and other wetlands including lakes (e.g., reservoirs). Most of these habitats are classified as forested wetlands or scrub-shrub wetlands. The Service solicits review and comment from the public on this draft plan.

DATES: Comments on the draft Recovery Plan must be received on or before October 4, 2001 to receive consideration by the Service.

ADDRESSES: Persons wishing to review the draft Recovery Plan may obtain a copy by contacting Greg Beatty, Arizona Ecological Services Field Office, U.S. Fish and Wildlife Service, 2321 West Royal Palm Road, Suite 103, Phoenix, Arizona, 85021-4951 (602/242-0210). Written comments and materials regarding the plan should be addressed to the Field Supervisor at this same address. Comments and materials

received are available on request for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Greg Beatty (see **ADDRESSES**).

SUPPLEMENTARY INFORMATION:

Background

Restoring an endangered or threatened animal or plant species to the point where it is again a secure, self-sustaining member of its ecosystem is a primary goal of the Service's endangered species program. To help guide the recovery effort, the Service is working to prepare recovery plans for most of the listed species native to the United States. Recovery plans describe actions considered necessary for conservation of species, establish criteria for the recovery levels for downlisting or delisting them, and estimate time and cost for implementing the recovery measures needed.

The Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 *et seq.*), requires the development of recovery plans for listed species unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act, as amended in 1988, requires that public notice and an opportunity for public review and comment be provided during recovery plan development. The Service will consider all information presented during a public comment period prior to approval of each new or revised recovery plan. The Service and other Federal agencies will also take these comments into account in the course of implementing approved recovery plans.

The Draft Southwestern Willow Flycatcher Recovery Plan describes the status, current management, recovery objectives and criteria, and specific actions needed to reclassify the southwestern willow flycatcher from endangered to threatened, and to ultimately delist it. The draft Plan was developed by: Deborah M. Finch, U.S. Forest Service, Rocky Mountain Research Station, Albuquerque, New Mexico (Team Leader); Stephen I. Rothstein, University of California, Santa Barbara, California (Vice Team Leader); Jon C. Boren, New Mexico State University, Las Cruces, New Mexico; Jerry L. Holechek, New Mexico State University, Las Cruces, New Mexico; Barbara E. Kus, U.S. Geological Survey (USGS) Western Ecological Research Center, San Diego State University, San Diego, California; Robert M. Marshall, The Nature Conservancy, Tucson, Arizona; Susan J. Sferra, U.S. Bureau of Reclamation, Phoenix, Arizona; Mark K.

Sogge, USGS Forest and Rangeland Ecosystem Science Center, Colorado Plateau Field Station, Flagstaff, Arizona; Julie C. Stromberg, Arizona State University, Tempe, Arizona; Bradley A. Valentine, California Department of Fish and Game, Santa Rosa, California; Mary J. Whitfield, Southern Sierra Research Center, Weldon, California; Sartor O. Williams III, New Mexico Department of Game and Fish, Santa Fe, New Mexico; and geographically-based teams of stakeholders (Implementation Subgroups), which include representatives of Native American Tribes, State and local governments, ranchers, private land owners and managers, agency representatives, and others.

The southwestern willow flycatcher is known to currently breed in dense riparian vegetation in southern California, southern Nevada, southern Utah, Arizona, New Mexico, and southwestern Colorado. Although extreme northwestern Mexico and western Texas are considered part of its breeding range, no nesting birds are presently known to occur in these areas. The dense riparian vegetation that is needed for breeding was historically rare and sparsely distributed, and is now more rare. Destruction and modification of riparian habitats have been caused mainly by: reduction or elimination of surface and subsurface water due to diversion and groundwater pumping; changes in flood and fire regimes due to dams and stream channelization; clearing and controlling vegetation, livestock grazing; changes in water and soil chemistry due to disruption of natural hydrologic cycles; and establishment of non-native plants. Concurrent with habitat loss have been increases in brood parasitism by the brown-headed cowbird (*Molothrus ater*) and the presence of nest predation which inhibits reproductive success and further reduces population levels. Actions needed to recover the southwestern willow flycatcher are those that would increase and improve breeding habitat by restoring and/or recreating natural physical and biotic processes that influence riparian ecosystems, and reducing other stresses on the flycatcher. Specific actions include: changing management of surface and groundwater, including fundamental changes in dam operations, and restoring flood cycles; reducing impacts of domestic livestock, wild burros, and native ungulates; improving metapopulation stability; securing long-term protection of breeding habitat; managing exotic plant species; reducing brood parasitism by brown-headed

cowbirds; conducting research to refine management practices and knowledge of ecology. The draft Plan will be revised and finalized based on comments received during meetings with the Implementation Subgroups, as well as comments received from the public.

Public Comments Solicited

The Service solicits written comments on the Draft Southwestern Willow Flycatcher Recovery Plan. All comments received by the date specified above will be considered prior to approval of the plan.

Authority

The authority for this action is Section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: May 17, 2001.

Geoffrey L. Haskett,

Acting Regional Director.

BILLING CODE 4310-55-P

DEPARTMENT OF THE INTERIOR

Fish And Wildlife Service

Environmental Statements; Availability, Etc: Incidental Take Permits—Houston Toad; Notice of Availability of an Environmental Assessment/Habitat Conservation Plan and Receipt of an Application for a Permit for the Incidental Take of the Houston toad (*Bufo houstonensis*) During Construction of One Single-family Residence on Approximately 0.5 Acres of the 15.704-acre Property on Gotier Trace Road, Bastrop County, Texas (Adams)

Summary: Leslie Adams (Applicant) has applied to the U.S. Fish and Wildlife Service (Service) for an incidental take permit pursuant to Section 10(a) of the Endangered Species Act (Act). The Applicants have been assigned permit number TE-041787-0. The requested permit, which is for a period of 5 years, would authorize the incidental take of the endangered Houston toad (*Bufo houstonensis*). The proposed take would occur as a result of the construction and occupation of one single-family residence on approximately 0.5 acres of the 15.704-acre property on Gotier Trace Road, Bastrop County, Texas. The Service has prepared the Environmental Assessment/Habitat Conservation Plan (EA/HCP) for the incidental take application. A determination of jeopardy to the species or a Finding of No Significant Impact (FONSI) will not be made until at least 30 days from the

date of publication of this notice. This notice is provided pursuant to Section 10(c) of the Act and National Environmental Policy Act regulations (40 CFR 1506.6).

Dates: Written comments on the application should be received on or before July 6, 2001.

Addresses: Persons wishing to review the application may obtain a copy by writing to the Regional Director, U.S. Fish and Wildlife Service, P.O. Box 1306, Room 4102, Albuquerque, New Mexico, 87103. Persons wishing to review the EA/HCP may obtain a copy by contacting Clayton Napier, U.S. Fish and Wildlife Service, 10711 Burnet Road, Suite 200, Austin, Texas, 78758 (512/490-0057). Documents will be available for public inspection by written request, by appointment only, during normal business hours (8:00 to 4:30) at the U.S. Fish and Wildlife Service, Austin, Texas. Written data or comments concerning the application and EA/HCP should be submitted to the Supervisor, U.S. Fish and Wildlife Service, Austin, Texas, at the above address. Please refer to permit number TE-041787-0 when submitting comments.

For Further Information Contact: Clayton Napier at the above U.S. Fish and Wildlife Service, Austin Office.

Supplementary Information: Section 9 of the Act prohibits the "taking" of endangered species such as the Houston toad. However, the Service, under limited circumstances, may issue permits to take endangered wildlife species incidental to, and not the purpose of, otherwise lawful activities. Regulations governing permits for endangered species are at 50 CFR 17.22.

Applicant: Leslie Adams plans to construct a single-family residence on approximately 0.5 acres of the 15.704-acre property on Gotier Trace Road, Bastrop County, Texas. This action will eliminate 0.5 acres or less of Houston toad habitat and result in indirect impacts within the property. The Applicant proposes to compensate for this incidental take of the Houston toad by providing \$2,000.00 to the National Fish and Wildlife Foundation for the specific purpose of land acquisition and management within Houston toad habitat, as identified by the Service.

Geoffrey L. Haskett,

Acting Regional Director, Region 2, Albuquerque, New Mexico.
