

be determined. Observations of celestial objects will be selected by students in Hawaiian and United Kingdom schools as part of educational research programs being run to support the teaching of science in schools. Research programs will include:

1. Galaxy morphology (shape of galaxies)
  2. Asteroid and comet searches
  3. Gamma-ray bursts
  4. Variable stars
  5. Extra-solar planets (planets outside our own Solar System)
- These programs are intended to result in findings that can be published in refereed journals by the professional astronomers that will be mentoring the research. Therefore, the observations will need to be of research quality. *Application accepted by Commissioner of Customs: July 11, 2002.*

Applicant:* Pennsylvania State University, 187 Materials Research Lab Building, University Park, PA 16802. *Instrument:* Optical Image Furnace and Accessories, Model SC1-MDH-20020. *Manufacturer:* NEC Machinery Corporation, Japan. *Intended Use:* The instrument is intended to be used for the growth of up

to 10 mm diameter single crystals for the study of oxide ferroic and dielectric materials. The need for the capability to grow highly uniform and sufficient in size single crystals is stemmed from the necessity to separate and understand the mechanisms in the mixed valence solid solution and often refractory ferroic crystal systems. *Application accepted by Commissioner of Customs: August 29, 2002.*
