V. Conclusion

In today’s environment of increased scrutiny of corporate conduct and increasingly large expenditures for health care, it is imperative for hospitals to establish and maintain effective compliance programs. These programs should foster a culture of compliance that begins at the highest levels and extends throughout the organization. This supplemental CPG is intended as a resource for hospitals to help them operate effective compliance programs that decrease errors, fraud, and abuse and increase compliance with Federal health care program requirements for the benefit of the hospitals and public alike.

Lewis Morris,
Chief Counsel to the Inspector General.

ACTION: Notice.

SUMMARY: The Pulmonary-Critical Care Medicine Branch (P-CCMB) in NHLBI has been investigating the role of horizontal orientation of the endotracheal tube and neck on bacterial colonization of the respiratory tract. Current clinical practice is to position the patient semirecumbent by elevating the head of the bed, to reduce gastric regurgitation. NHLBI tested whether horizontal positioning of the ETT and of the trachea combined with intermittent lateral body rotation could facilitate spontaneous removal (without tracheal suctioning) of contaminated respiratory tract secretions, whether bacteria had been introduced into the trachea during intubation or via leakage around the inflated ET cuff. The ETT and trachea are kept horizontal through a tilting bed that allows lateral body rotation.

NHLBI’s studies indicate that maintaining a patient’s trachea and tracheal tube in the horizontal plane could be expected to: (1) Obviate the need for tracheal tube suctioning; (2) prevent tracheal/bronchial and pulmonary colonization with oropharyngeal/gastric flora; and (3) in a patient with pre-existing pneumonia, reduce the incidence of antibiotic-resistant bacterial infection, as the gastric/oropharyngeal source of such bacteria is eliminated.

This CRADA project is with the Pulmonary and Cardiac Assist Devices Section within P-CCMB in NHLBI. The NHLBI is seeking capability statements from parties interested in entering into a CRADA to further develop, evaluate, and commercialize a tilting bed that allows lateral body rotation. The goals are to use the respective strengths of both parties to achieve the following: (1) Assistance in conducting clinical trials to determine the performance of the tilting bed in the prevention of ventilator-associated pneumonia and improvement of care of patients intubated and mechanically ventilated; and (2) manufacture of the tilting bed. The collaborator may also be expected to contribute financial support under this CRADA for personnel, supplies, travel, and equipment to support these projects.

CRADA capability statements should be submitted to Marianne Lynch, JD, Technology Transfer Specialist, National Heart, Lung, and Blood Institute (NHLBI), Office of Technology Transfer and Development, National Institutes of Health, 6705 Rockledge Drive, Suite 6018, MSC 7992, Bethesda, MD 20892–7992; Phone: (301) 594–4094; Fax: (301) 594–3080; E-mail: Lynchm@nhlbi.nih.gov. Capability statements must be received on or before 60 days after Federal Register Notice is published.

Carl Roth,
Director, Office of Science and Technology.
