CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an e-mail to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Background and Brief Description: Differences in incidence of invasive cervical cancer exist among some minority populations. Among women older than 29 years cervical cancer incidence for Hispanic women was approximately twice that for non-Hispanic women. Papanicolaou (Pap) tests can prevent cervical cancer. Nevertheless, recent studies suggest that Hispanic women in the United States and Puerto Rico under-use cervical cancer screening tests. Additionally, survey data have shown that Hispanic women in the international border region of the United States under-utilize these Pap tests compared to non-Hispanic women in the same region. The need exists to increase Pap test screening among Hispanic women living in the United States.

The purpose of this project is to refine a multi-component behavioral intervention delivered by lay health workers to increase cervical cancer screening among U.S. and foreign-born Mexican women. The proposed study will use personal interviews and workshops. There will be no cost to respondents other than their time.

Estimate of Annualized Burden Hours:
