• Tiopronin does not inhibit the activity of ABC transporters, thereby reducing the chance of undesired side-effects during treatment
• The effects of Tiopronin correlates with the level of ABC transporter expression, allowing healthy cells to better survive treatments
• Tiopronin can also improve the effectiveness of chemotherapy by re-sensitizing resistant cells that were previously considered impervious to treatment
• Tiopronin has already been approved for use in humans for the treatment of cyanuria, facilitating the pathway for use in humans as a treatment for cancer

Development Status: Preclinical stage of development, in vitro data
Inventors: Andrew S. Goldsborough et al. (NCI)
Licensing Status: The technology is available for exclusive licensing.
Licensing Contact: David Lambertson, PhD; 301–435–4632; lambertsond@mail.nih.gov.

Collaborative Research Opportunity:
The National Cancer Institute, Multidrug Resistance Section, is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize this technology. Please contact John Hewes, PhD at 301–435–4632; lambertsond@mail.nih.gov.

Identification of EGFR as a Receptor for AAV6 Transduction

Description of Technology: AAV vectors offer unique advantages in gene therapy applications. Studies have shown that these replication deficient parovirus vectors can deliver DNA to specific tissues and confer long-term transgene expression in a variety of systems. Although many studies have looked at the tissue-specific expression elicited by each of the AAV serotypes, a true understanding of how AAV transduces these tissues is still unclear. Of the large AAV family, only a few receptors or co-receptors have been identified. The ability to better target transduction to specific tissues on the basis of the receptors that each serotype uses for entry is essential for selecting a serotype given the receptor expression in specific tissue, or to exploit altered receptor expression under disease conditions.

AAV6 has been reported to effectively transduce muscle, lung, brain, and multiple types of tumors, including gliomas and lung adenocarcinomas. By using a bioinformatics based screen approach, the NIH investigators discovered that the epidermal growth factor receptor (EGFR) is a co-receptor for AAV6 infection in mammalian cells, and is necessary for efficient vector internalization.

Applications and Market: Improved gene therapy applications.

Development Status: Pre-clinical stage of development.
Inventors: John A. Chiorini, Melodie L. Weller, Michael Schmidt (NIDCR)
Licensing Status: Available for licensing.
Licensing Contact: Betty B. Tong, PhD; 301–594–6565; tongb@mail.nih.gov.

Therapeutic Approach to Neurodegenerative Disorders Using a TFP5-Peptide

Description of Technology: This invention discloses methods for treating neurodegenerative diseases by administering cyclin dependent kinase 5 (Cdk5) inhibitory peptides derived from P35, the activator of Cdk5. Abnormally hyperactive Cdk5 has been shown to be associated with a variety of neurodegenerative disorders. Disclosed in this invention are isolated peptide fragments, pharmaceutical compositions and methods for use of such for treating subjects with a neurodegenerative disease, such as Alzheimer’s disease (AD), Amyotrophic Lateral Sclerosis (ALS) and Parkinson’s disease (PD). An inhibitory fragment, TFP5, disclosed in this invention, has been shown to ameliorate symptoms of AD in disease animal models without any evidence of toxicity. In particular, TFP5 treatment of rat cortical neurons reduced hyperactivation of Cdk5 upon neuronal stress and insults. Following intraperitoneal (ip) injection, TFP5 was capable of crossing the BBB and localizing within the brain where it was found to rescue memory deficits and pathology in a double transgenic mouse (APP/PS1) AD model.

Applications: Therapeutic developments (AD, PD, ALS)
Advantages: The products are small peptides that pass the blood brain barrier.

Market: Development for AD, PD, and ALS.
Development Status: Pre-clinical; some animal data
Inventors: Harish C. Pant (NINDS)
Licensing Status: Available for licensing.
Licensing Contact: Steven H. Standley, PhD; 301–435–4074; ssstand@mail.nih.gov.

Collaborative Research Opportunity:
The National Institute of Neurological Disorders and Stroke, Neuronal Glysoskeletal Protein Regulation Section, is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize topic of invention or related laboratory interests. Please contact Heather Gunas, J.D., M.P.H., at 301–451–3944 or gunash@mail.nih.gov for more information.

Dated: March 15, 2011.

Richard U. Rodriguez,
Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute on Drug Abuse; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The contract proposals and the discussions could disclose confidential trade secrets or commercial property such as patentable materials, and personal information concerning individuals associated with the contract proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute on Drug Abuse Special Emphasis Panel; GISTE, the Geospatial Information Systems Tool (5558).

Date: April 18, 2011.

Time: 1:30 p.m. to 3 p.m.

Agenda: To review and evaluate contract proposals.
DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Eunice Kennedy Shriver National Institute of Child Health & Human Development; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 USC, as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Date: April 14, 2011.

Time: 2 p.m. to 4 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6100 Executive Boulevard, Rockville, MD 20852 (Telephone Conference Call).

Contact Person: Peter Zelazowski, PhD, Scientific Review Officer, Division of Scientific Review, Eunice Kennedy Shriver National Institute of Child Health and Human Development, NIH, 6100 Executive Blvd., Room 5B01, Bethesda, MD 20892, 301–435–6902, peter.zelazowski@nih.gov.
