I. Information About IRIS

EPA’s IRIS program is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to chemical substances found in the environment. Through the IRIS Program, EPA provides the highest quality science-based human health assessments to support the Agency’s regulatory activities. The IRIS database contains information for more than 540 chemical substances that can be used to support the first two steps (hazard identification and dose-response evaluation) of the risk assessment process. When supported by available data, IRIS provides oral reference doses (RfD) and inhalation reference concentrations (RfC) for chronic noncancer health effects and cancer assessments. Combined with specific exposure information, government and private entities use IRIS to help manage health risks of chemical substances in a site-specific situation and thereby support risk management decisions designed to protect public health.
