FEDERAL REGISTER

Vol. 77 Friday,

No. 170 August 31, 2012

Pages 53141–53768

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.ofr.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.fdsys.gov*, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpo@custhelp.com.*

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 77 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, September 11, 2012
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 9572]

RIN 1545–BK53

Dividend Equivalents From Sources Within the United States

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Temporary regulations; correcting amendment.

SUMMARY: This document amends temporary regulations relating to dividend equivalents for purposes of section 871(m) of the Internal Revenue Code (Code). The regulations affect nonresident aliens and foreign corporations that hold notional principal contracts (NPCs) providing for payments determined by reference to payments of dividends from sources within the United States.

DATES: *Effective Date:* These regulations are effective August 31, 2012.

Applicability Date: For dates of applicability, see § 1.871–16T(g).

FOR FURTHER INFORMATION CONTACT: Mark E. Erwin or D. Peter Merkel at (202) 622–3870 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

On January 23, 2012, the Department of the Treasury (Treasury) and the Internal Revenue Service (IRS) published in the **Federal Register** a temporary regulation and a notice of proposed rulemaking relating to dividend equivalents from sources within the United States. *See* TD 9572, 77 FR 3108 (Temporary Regulations); REG–120282–10, 77 FR 3202 (Proposed Regulations). Section 871(m)(2) defines the term ''dividend equivalent'' to include, in part, any payment made pursuant to a specified notional principal contract (specified NPC) that is contingent upon or determined by reference to a U.S. source dividend. Section 871(m)(3)(A) provides a definition for the term specified NPC that is applicable to payments made through March 18, 2012. Section 1.871–16T(b) of the Temporary Regulations provides that the definition of specified NPC contained in paragraphs (i) through (iv) of section 871(m)(3)(A) will apply to payments made after March 18, 2012, and before January 1, 2013. The Proposed Regulations provide a different definition of specified NPC that would apply to payments made on or after January 1, 2013.

Explanation of Provisions

Treasury and the IRS received numerous comments on the Proposed Regulations, stating that the proposed effective date of January 1, 2013, would not allow taxpayers sufficient time to build and test the systems required to implement the withholding rules for specified NPCs and equity-linked instruments. In response to these comments, this document amends § 1.871–16T(b) of the Temporary Regulations so that the definition of a specified NPC contained in paragraphs (i) through (iv) of section 871(m)(3)(A) will apply to payments made after March 18, 2012, and before January 1, 2014. When final regulations are issued adopting the Proposed Regulations, Treasury and the IRS intend that the rules contained in the final regulations will apply to payments made on or after January 1, 2014.

Treasury and the IRS continue to consider the other public comments made on the Temporary Regulations and the Proposed Regulations.

Drafting Information

The principal author of these regulations is D. Peter Merkel, the Office of Associate Chief Counsel (International). Other personnel from Treasury and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Section 1.871–16T also issued under 26 U.S.C. 871(m).

§ 1.871–16T(b) [Amended]

■ **Par. 2.** Section 1.871–16T(b) is amended by removing the language ''2013'' and adding the language ''2014'' in its place wherever it appears.

Steven T. Miller,

Deputy Commissioner for Services and Enforcement.

Approved: August 16, 2012.

Mark J. Mazur,

Assistant Secretary of the Treasury (Tax Policy).

BILLING CODE 4830–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2012–0821]

Drawbridge Operation Regulation; Columbia River, Vancouver, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of temporary deviation from regulations.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Interstate 5 (I–5) Bridges across the Columbia River, mile 106.5, between Portland, OR and Vancouver, WA. This deviation is necessary to facilitate heavy maintenance on the bridges lift-spans. This deviation allows height-restricted lifts which will reduce the vertical clearance available to vessels transiting beneath the bridges.

DATES: This deviation is effective from 7 a.m. on September 15, 2012 through 6 p.m. October 14, 2012.

ADDRESSES: Documents mentioned in this preamble as being available in the docket are part of docket USCG–2012–0821 and are available online by going to *http://www.regulations.gov,* inserting USCG–2012–0821 in the ''Keyword''

box and then clicking ''Search''. They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email the Bridge Administrator, Coast Guard Thirteenth District; telephone 206–220–7282 email *randall.d.overton@uscg.mil*. If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION: The Oregon Department of Transportation has requested that the Interstate 5 Bridges which cross the Columbia River at mile 106.5 only be required to lift to a reduced height of 130 feet above Columbia River Datum for a 30 day period. The height restricted lifts are necessary to facilitate heavy maintenance on the bridges lift-spans. The I–5 Bridges cross the Columbia River at mile 106.5 and provide three designated navigation channels with vertical clearances ranging from 39 to 72 feet above Columbia River Datum while the lift spans are in the closed position. Vessels which do not require a full bridge opening may continue to transit beneath the bridges during this maintenance period. Under normal operation the bridges are governed by 33 CFR 117.869, which requires that the draws open fully and promptly on signal except that the draws need not open from 6:30 a.m. to 9 a.m. and from 2:30 p.m. to 6 p.m. Monday through Friday excluding federal holidays. The lift-spans when fully opened provide 178 feet of vertical clearance above Columbia River Datum. This deviation period is from 7 a.m. on September 15, 2012 through 6 p.m. October 14, 2012. The deviation allows the lift spans of the I–5 Bridges across the Columbia River, mile 106.5, to be raised to a reduced height of 130 feet above Columbia River Datum from 7 a.m. on September 15, 2012 through 6 p.m. October 14, 2012. Scaffolding will be attached to the bridge during this maintenance evolution which will restrict the height the lift-spans can be raised. Lift heights greater than 130 feet above Columbia River Datum will not be capable during this maintenance period from September 15, 2012 until October 14, 2012. The bridge shall operate in accordance with 33 CFR 117.869 at all other times. Waterway usage on this stretch of the Columbia River includes vessels ranging from commercial tug and tow vessels to recreational pleasure craft. Mariners will be notified and kept informed of the bridge's operational status via the Coast Guard Notice to Mariners publication.

In accordance with 33 CFR 117.35(e), the drawbridges must return to their regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 21, 2012.

Randall D. Overton,

Bridge Administrator.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2012–0814]

RIN 1625–AA00

Safety Zone; Cleveland National Air Show, Cleveland, OH

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on Lake Erie and Cleveland Harbor at Burke Lakefront Airport, Cleveland, OH. This safety zone is intended to restrict vessels from a portion of Lake Erie and Cleveland Harbor (near Burke Lakefront Airport). This temporary safety zone is necessary to protect participants, spectators, and vessels from the hazards associated with aerial insertions and aircraft maneuvers.

DATES: This rule is effective from 11:30 a.m. on August 30, 2012, until 6:00 p.m. on September 3, 2012.

ADDRESSES: Documents mentioned in this preamble are part of docket [USCG–2012–0814]. To view documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* type the docket number in the ''SEARCH'' box and click ''SEARCH.'' You may visit the Docket Management Facility, Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email LT Christopher Mercurio, Chief of Waterway Management, U.S. Coast Guard Sector Buffalo; telephone 716–843–9343, email *SectorBuffaloMarineSafety@uscg.mil.* If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because doing so would be impracticable and contrary to the public interest. The final details for this event were not known to the Coast Guard until there was insufficient time remaining before the event to publish an NPRM. Thus, delaying the effective date of this rule to wait for a comment period to run would be both impracticable and contrary to the public interest because it would inhibit the Coast Guard's ability to protect spectators and vessels from the hazards associated with aerial insertions and aircraft maneuvering, which are discussed further below.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, waiting for a 30 day notice period to run would be impracticable and contrary to the public interest.

B. Basis and Purpose

The Cleveland National Air Show has been taking place annually since 1964. During the 2012 show, as with shows in the past, there will be various high speed aerial and military tactical demonstrations on and over Burke Lakefront to include various maneuvers by U.S. Navy Blue Angels and civilian aircraft and by personnel on the Burke

Lakefront Airport grounds. Specifically, this year's aerial and military tactical demonstrations will take place between 11:30 a.m. to 4:30 p.m. on August 30, 2012, 10:00 a.m. to 4:30 p.m. on August 31, 2012, and 8:00 a.m. to 6:00 p.m. on September 1, 2012 through September 3, 2012. A heavy amount of recreational boating traffic is expected for these demonstrations. The Captain of the Port Buffalo has determined that the maneuvers combined with a high concentration of recreational vessels will create significant risks for the boating public.

C. Discussion of Final Rule

With the aforementioned risks in mind, the Captain of the Port Buffalo has determined that this temporary safety zone is necessary to ensure the safety of participants and the boating public during the Marine Event. This safety zone will be effective from 11:30 a.m. on August 30, 2012 until 6:00 p.m. on September 3, 2012. It will only be enforced, however, from 11:30 a.m. to 4:30 p.m. on August 30, 2012, 10:00 a.m. to 4:30 p.m. on August 31, 2012, and 8:00 a.m. to 6:00 p.m. on September 1 through 3, 2012.

The safety zone will encompass a portion of Lake Erie and Cleveland Harbor near Burke Lakefront Airport from position 41°30′20″ N and 081°42′20″ W to 41°30′50″ N and 081°42′49″ W, to 41°32′09″ N and 081°39′49″ W, to 41°31′53″ N and 081°39′24″ W, then return to the original position (NAD 83).

All persons and vessels shall comply with the instructions of the Coast Guard Captain of the Port or the designated on scene Patrol Commander (PATCOM). Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Buffalo or his designated on-scene representative. Only state, federal, and local vessels will be allowed in the safety zone. The Captain of the Port or his designated on-scene representative may be contacted via VHF Channel 16.

D. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes and executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders. It is not ''significant'' under the regulatory policies and procedures of the Department of Homeland Security (DHS). We conclude that this rule is not a significant regulatory action because we anticipate that it will have minimal impact on the economy, will not interfere with other agencies, will not adversely alter the budget of any grant or loan recipients, and will not raise any novel legal or policy issues. The safety zone created by this rule will be relatively small and enforced for relatively short time. Also, the safety zone is designed to minimize its impact on navigable waters. Furthermore, the safety zone has been designed to allow vessels to transit around it. Thus, restrictions on vessel movement within that particular area are expected to be minimal. Under certain conditions, moreover, vessels may still transit through the safety zone when permitted by the Captain of the Port.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This temporary final rule may affect the following entities, some of which might be small entities: The owners of operators of vessels intending to transit or anchor in a portion of Lake Erie and Cleveland Harbor from 11:30 a.m. to 4:30 p.m. on August 30, 2012, 10:00 a.m. to 4:30 p.m. on August 31, 2012, and 8:00 a.m. to 6:00 p.m. on September 1 through 3, 2012.

This safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: This rule will be in effect for approximately ten hours each day in an area with low commercial vessel traffic. Also, in the event that this temporary safety zone affects shipping, commercial vessels may request permission from the Captain of the Port Buffalo to transit through the safety zone. Additionally, the Coast Guard will give advanced notice to the public via a local Broadcast Notice to Mariners that the regulation is in effect. Moreover, the COTP will suspend enforcement of the safety zone if the event for which the zone is established ends earlier than the expected time.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INTFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of

their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a ''significant energy action'' under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of a safety zone, and therefore, it is categorically excluded from further review under paragraph 34(g) of Figure 2–1 of the Commandant Instruction. A final environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR parts 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 46 U.S.C. Chapters 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T09–0814 to read as follows:

§ 165.T09–0814 Safety Zone; Cleveland National Air Show, Cleveland, OH.

(a) *Location.* The safety zone will encompass a portion of Lake Erie and Cleveland Harbor near Burke Lakefront Airport from position 41°30′20″ N and 081°42′20″ W to 41°30′50″ N and 081°42′49″ W, to 41°32′09″ N and 081°39′49″ W, to 41°31′53″ N and 081°39′24″ W, then return to the original position (NAD 83).

(b) *Enforcement Period.* This regulation will be enforced from 11:30 a.m. to 4:30 p.m. on August 30, 2012, 10:00 a.m. to 4:30 p.m. on August 31, 2012, and 8:00 a.m. to 6:00 p.m. on September 1 through 3, 2012.

(c) *Regulations.* (1) In accordance with the general regulations in section 165.23 of this part, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Buffalo or his designated on-scene representative.

(2) This safety zone is closed to all vessel traffic, except as may be permitted by the Captain of the Port Buffalo or his designated on-scene representative.

(3) The ''on-scene representative'' of the Captain of the Port Buffalo is any Coast Guard commissioned, warrant or petty officer who has been designated by the Captain of the Port Buffalo to act on his behalf.

(4) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port Buffalo or his on-scene representative to obtain permission to do so. The Captain of the Port Buffalo or his on-scene representative may be contacted via VHF Channel 16. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port Buffalo, or his on-scene representative.

Dated: August 22, 2012.

S.M. Wischmann,

Captain, U.S. Coast Guard, Captain of the Port Buffalo.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2012–0116; FRL–9338–2]

Nitric Acid; Exemption From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of nitric acid (CAS Reg. No. 7697–37–2) when used as an inert ingredient in antimicrobial pesticide formulations applied to food-contact surfaces in public eating places, dairy processing equipment, and food-processing equipment and utensils at a maximum level in the end-use concentration of 1,000 parts per million (ppm). Ecolab Inc. submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting establishment of an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of nitric acid.

DATES: This regulation is effective August 31, 2012. Objections and requests for hearings must be received on or before October 30, 2012, and must be filed in accordance with the instructions provided in 40 CFR part

178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2012–0116, is available at *http://www.regulations.gov* or at the OPP Docket in the Environmental Protection Agency Docket Center (EPA/DC), located in EPA West, Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at *http://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Lisa Austin, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (703) 305–7894; email address: *austin.lisa@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 180 through the Government Printing Office's e-CFR site at *http://ecfr.gpoaccess.gov/cgi/t/text/text-idx?&c=ecfr&tpl=/ecfrbrowse/Title40/40tab_02.tpl.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2012–0116 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing, and must be received by the Hearing Clerk on or before October 30, 2012. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing that does not contain any CBI for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit a copy of your non-CBI objection or hearing request, identified by docket ID number EPA–HQ–OPP–2012–0116, by one of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), Mail Code: 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.
- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *http://www.epa.gov/dockets/contacts.htm.*

II. Petition for Exemption

In the **Federal Register** of April 7, 2000 (65 FR 18324) (FRL–6499–7), EPA issued a notice pursuant to section 408 of FFDCA, 21 U.S.C. 346a, announcing the filing of a pesticide petition (PP 9E6029) by Ecolab Inc., 370 N. Wabasha Street, St. Paul, MN 55102. The petition requested that 40 CFR 180.940 be amended by establishing an exemption from the requirement of a tolerance for residues of nitric acid (CAS Reg. No. 7697–37–2) when used as an inert ingredient in antimicrobial pesticide formulations applied to food-contact surfaces in public eating places, dairy processing equipment, and food-processing equipment and utensils at a maximum level in the end-use concentration of 1,000 parts per million (ppm). That notice referenced a summary of the petition prepared by Ecolab Inc., the petitioner, which is available in the docket, *http://www.regulations.gov.* There were no comments received in response to the notice of filing.

III. Inert Ingredient Definition

Inert ingredients are all ingredients that are not active ingredients as defined in 40 CFR 153.125 and include, but are not limited to, the following types of ingredients (except when they have a pesticidal efficacy of their own): Solvents such as alcohols and hydrocarbons; surfactants such as polyoxyethylene polymers and fatty acids; carriers such as clay and diatomaceous earth; thickeners such as carrageenan and modified cellulose; wetting, spreading, and dispersing agents; propellants in aerosol dispensers; microencapsulating agents; and emulsifiers. The term ''inert'' is not intended to imply nontoxicity; the ingredient may or may not be chemically active. Generally, EPA has exempted inert ingredients from the requirement of a tolerance based on the low toxicity of the individual inert ingredients.

IV. Aggregate Risk Assessment and Determination of Safety

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(b)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue * * *.''

EPA establishes exemptions from the requirement of a tolerance only in those cases where it can be clearly demonstrated that the risks from aggregate exposure to pesticide chemical residues under reasonably foreseeable circumstances will pose no appreciable risks to human health. In order to determine the risks from aggregate exposure to pesticide inert ingredients, the Agency considers the toxicity of the inert in conjunction with possible exposure to residues of the inert ingredient through food, drinking water, and through other exposures that

occur as a result of pesticide use in residential settings. If EPA is able to determine that a finite tolerance is not necessary to ensure that there is a reasonable certainty that no harm will result from aggregate exposure to the inert ingredient, an exemption from the requirement of a tolerance may be established.

Consistent with section 408(c)(2)(A) of FFDCA, and the factors specified in FFDCA section 408(c)(2)(B), EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for nitric acid including exposure resulting from the exemption established by this action. EPA's assessment of exposures and risks associated with nitric acid follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered their validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. Specific information on the studies received and the nature of the adverse effects caused by nitric acid as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies are discussed in this unit.

Nitric acid is a highly corrosive inorganic acid. In a concentrated form, nitric acid is corrosive at the site of contact and does not elicit systemic toxicity. Acute dermal and eye exposures to concentrated forms of nitric acid can result in skin burns and irreversible eye corrosion. Acute inhalation exposure to nitric acid can result in severe respiratory irritation followed by pulmonary edema. Acute ingestion of nitric acid may result in ulceration, hemorrhage and perforation of the esophagus and stomach.

The U.S. Occupational Safety and Health Administration (OSHA) Permissible Exposure Limit (PEL) for nitric acid as well as the American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (TLV) for nitric acid is 2 ppm (5 milligrams/meter (mg/m^3)).

While there are no data on the toxicity of dilute forms of nitric acid following oral exposure, the toxicity of dilute nitric acid would be expected to be comparable to the toxicity of the NO_3-anion known as nitrate.

Sodium nitrate. Several studies were available for sodium nitrate. These studies included a 6-week oral toxicity range-finding study, chronic/carcinogenicity studies in rodents and a 2-generation toxicity study in rabbits. In a 6-week oral toxicity study in F344 rats, sodium nitrate was administered in the diet. Signs of toxicity were manifested as decreased body weight gain at ≥5% (approximately 2,500 milligrams/kilograms/day (mg/kg/day)). In the International Agency for Research On Cancer (IARC) Monographs on the Evaluation of Carcinogenic Risks to Humans (Vol 94), the carcinogenic potential of sodium nitrate was evaluated in several studies in rodents. In two studies in mice, no evidence of carcinogenic activity of sodium nitrate alone was observed in the drinking water at concentrations up to approximately 5,000 mg/kg/day. In four studies in rats, no increased incidence of tumors was observed when sodium nitrate alone was administered in the drinking water or in the diet at concentrations up to approximately 2,500 mg/kg/day. Therefore, IARC concluded that there is inadequate evidence in humans for the carcinogenicity of nitrate in food or drinking water.

There were no treatment related effects observed in the 2-generation reproduction study in rabbits. In addition, the Food and Drug Administration (FDA) sponsored several reproductive and developmental studies in rodents, hamsters and rabbits treated with sodium nitrate. No adverse effects were observed in maternal reproductive parameters nor was there fetotoxicity or fetal malformations up to the maximum doses tested in each species (41 mg/kg/day in mice and hamsters and 66 mg/kg/day in rats and rabbits).

Immunotoxicity studies for nitric acid were not available for review. However, there was no evidence of potential immunotoxicity in any of the submitted studies. Therefore, nitric acid is not expected to be immunotoxic.

There were three human epidemiological studies available for review. These epidemiological studies reported that cases of infant methemoglobinemia are associated with exposure to nitrate in drinking water. The American Public Health Association (APHA) conducted a survey to identify clinical cases of infantile methemoglobinemia that were associated with ingestion of nitrate-contaminated water. They concluded that greater incidences of methemoglobinemia were observed in infants consuming >1.8 mg/kg/day of sodium nitrate. Methemoglobinemia was not observed in any of the studies where infants consumed water containing less than 1.6 mg/kg/day of sodium nitrate.

Specific information on the studies received and the nature of the adverse effects caused by nitric acid as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-adverse-effect-level (LOAEL) from the toxicity studies can be found at *http://www.regulations.gov* in document ''Nitric Acid; Human Health Risk Assessment and Ecological Effects Assessment to Support Proposed Exemption from the Requirement of a Tolerance When Used as Inert Ingredients in Pesticide Formulations,'' pp. 9–26 in docket ID number EPA–HQ–OPP–2012–0116.

B. Toxicological Points of Departure/Levels of Concern

Once a pesticide's toxicological profile is determined, EPA identifies toxicological points of departure (POD) and levels of concern to use in evaluating the risk posed by human exposure to the pesticide. For hazards that have a threshold below which there is no appreciable risk, the toxicological POD is used as the basis for derivation of reference values for risk assessment. PODs are developed based on a careful analysis of the doses in each toxicological study to determine the dose at which no adverse effects are observed (the NOAEL) and the lowest dose at which adverse effects of concern are identified (the LOAEL). Uncertainty/safety factors are used in conjunction with the POD to calculate a safe exposure level—generally referred to as a population-adjusted dose (PAD) or a reference dose (RfD)—and a safe margin of exposure (MOE). For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see *http://www.epa.gov/pesticides/factsheets/riskassess.htm.*

The chronic reference dose (cRfD) of 1.6 mg/kg/day and an uncertainty factor of 1X were established based on the results of the American Public Health Association's epidemiology study in infants. The endpoint was based on the concentration of sodium nitrate (1.6 mg/kg/day) in water at which methemoglobinemia was not observed in infants. Data from this study represented the most sensitive endpoint

in the most sensitive population; therefore, the standard uncertainty factors were reduced to 1X.

A summary of the toxicological endpoints for nitric acid used for human risk assessment is shown in the Table of this unit.

TABLE —SUMMARY OF TOXICOLOGICAL DOSES AND ENDPOINTS FOR NITRIC ACID FOR USE IN HUMAN RISK ASSESSMENT

Exposure/scenario	Point of departure and uncertainty/safety factors	RfD, PAD, LOC for risk assessment	Study and toxicological effects
Acute dietary (all populations).	There were no effects that could be attributed to a single dose in the database. Therefore, an acute dietary assessment was not necessary.		
Chronic dietary (All populations).	NOAEL= 1.6 mg/kg/day UF_A = 1x UF_H = 1x FQPA SF = 1x	Chronic RfD = 1.6 mg/kg/day cPAD = 1.6 mg/kg/day	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Incidental oral short-term (1 to 30 days).	NOAEL= 1.6 mg/kg/day UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Incidental oral intermediate-term (1 to 6 months).	NOAEL= 1.6 mg/kg/day UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Dermal short-term (1 to 30 days).	NOAEL= 1.6 mg/kg/day UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Dermal intermediate-term (1 to 6 months).	NOAEL= 1.6 mg/kg/day UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Inhalation short-term (1 to 30 days).	NOAEL= 1.6 mg/kg/day (inhalation absorption rate = 100%) UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Inhalation (1 to 6 months) ...	NOAEL= 1.6 mg/kg/day (inhalation absorption rate = 100%) UF_A = 1x UF_H = 1x FQPA SF = 1x	LOC for MOE = 1	APHA Human Epidemiological Survey LOAEL = 1.8–3.2 mg/kg/day based on early clinical signs of methemoglobinemia in excess of 10% in 0–3 months old infants.
Cancer (Oral, dermal, inhalation).	Not likely to be carcinogenic based on the lack of evidence of carcinogenicity in the submitted studies.		

UF_A = extrapolation from animal to human (interspecies). UF_H = potential variation in sensitivity among members of the human population (intraspecies). UF_L = use of a LOAEL to extrapolate a NOAEL. UF_S = use of a short-term study for long-term risk assessment. UF_{DB} = to account for the absence of data or other data deficiency. FQPA SF = Food Quality Protection Act Safety Factor. PAD = population adjusted dose (a = acute, c = chronic). RfD = reference dose. MOE = margin of exposure. LOC = level of concern.

C. Exposure Assessment

In evaluating dietary exposure to nitric acid, EPA considered exposure under the petitioned-for exemption from the requirement of a tolerance. EPA assessed dietary exposures from nitric acid in food as follows:

The requested exemption from the requirement of a tolerance for the use of nitric acid could allow for uses in food contact surface sanitizing solutions in which residues of nitric acid could migrate to food or otherwise be ingested.

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to nitric acid, EPA considered exposure under the proposed exemption from the requirement of a tolerance. In the absence of actual dietary exposure data resulting from this use, the EPA has utilized a conservative, health-protective method of estimating dietary intake that is based upon conservative assumptions related to the amount of residues that can be transferred to foods as a result of the proposed use of nitric acid in food contact sanitizing pesticide products. This same methodology has been utilized by EPA in estimating dietary exposures to antimicrobial pesticides used in food-handling settings. A complete description of the approach used to assess dietary exposures resulting from food contact sanitizing solution uses of nitric acid can be found at *http://www.regulations.gov* in document ''Nitric Acid; Human Health Risk Assessment and Ecological Effects Assessment to Support Proposed Exemption from the Requirement of a Tolerance When Used as Inert Ingredients in Pesticide Formulations,'' pp. 9–26 in docket ID number EPA–HQ–OPP–2012–0116.

EPA assessed dietary exposures from nitric acid in food as follows:

i. *Acute exposure.* No adverse effects attributable to a single exposure of nitric acid were seen in the toxicity databases. Therefore, an acute dietary exposure assessment for nitric acid is not necessary.

ii. *Chronic exposure.* In conducting the chronic dietary exposure assessment, the Agency believes the assumptions used to estimate chronic dietary exposures lead to an extremely conservative assessment of chronic dietary risk due to a series of compounded conservatisms. First, when a surface is treated with a disinfectant, a quantity of the disinfectant remains on the surface (Residual Solution). In the absence of any other data, EPA has used

an estimated worst-case concentration of 1 mg of solution per square centimeter (cm) of treated surface area for this quantity.

Second, the conservatism of this methodology is compounded by EPA's decision to assume a worst case scenario that all food that an individual consumes will come into contact with 4,000 cm^2 of sanitized non-porous food-contact surfaces. This contact area represents all the surface area from silverware, china, and glass used by a person who regularly eats three meals per day at an institutional or public facility. The surface area of counter tops that comes in contact with food is expected to be smaller than the surface area for food utensils. As a conservative estimate, EPA assumed that 2,000 cm^2 of treated counter top surface area, comes into contact with an individual's food per day.

Third, EPA assumes that 100% of the material present on food contact surfaces will migrate to food.

iii. *Cancer.* Sodium nitrate did not cause an increase in tumors in rodents at doses up to 2,500 mg/kg/day. Therefore, based on the weight of evidence, nitric acid is not likely to cause cancer in humans and a cancer dietary exposure assessment is not necessary to assess cancer risk.

2. *Dietary exposure from drinking water.* The proposed use of nitric acid will not result in its presence in surface water or ground water and therefore not contribute to dietary exposure.

3. *From non-dietary exposure.* The term ''residential exposure'' is used in this document to refer to non-occupational, non-dietary exposure (e.g., textiles (clothing and diapers), carpets, swimming pools, and hard surface disinfection on walls, floors, tables).

Nitric acid is not used as an inert ingredient in pesticide products that are registered for specific uses that may result in both indoor and outdoor residential exposures. Therefore, a residential exposure and risk assessment was not conducted for nitric acid.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.''

EPA has not found nitric acid to share a common mechanism of toxicity with any other substances, and nitric acid does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that nitric acid does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's Web site at *http://www.epa.gov/pesticides/cumulative.*

D. Safety Factor for Infants and Children

1. *In general.* Section 408(b)(2)(C) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the Food Quality Protection Act (FQPA) Safety Factor (SF). In applying this provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. *Prenatal and postnatal sensitivity.* There is no concern for fetal susceptibility. There were no treatment related effects observed in the 2-generation reproduction study in rabbits. Also, the FDA sponsored several reproductive and developmental studies in rodents, hamsters and rabbits treated with sodium nitrate. No adverse effects were observed in maternal reproductive parameters nor was there fetotoxicity or fetal malformations up to the maximum doses tested in each species (41 mg/kg/day in mice and hamsters and 66 mg/kg/day in rats and rabbits). Fetal susceptibility was not observed in these any of these studies. Therefore, there are no concerns for residual uncertainties concerning prenatal and postnatal toxicity.

3. *Conclusion.* EPA has determined that reliable data show the safety of infants and children would be adequately protected if the FQPA SF were reduced to 1X. That decision is based on the following findings:

i. The toxicity database for nitric acid is adequate as it is based on the use of sodium nitrate data for which there is a robust toxicity database. The NOAEL used for risk assessment was derived from the critical toxic effect in the most sensitive human subpopulation (infants age 8 days to 5 months).

ii. There is no indication that nitric acid is a neurotoxic chemical and there is no need for a developmental neurotoxicity study or additional UFs to account for neurotoxicity.

iii. There is no indication that nitric acid is a immunotoxic chemical and there is no need additional UFs to account for immunotoxicity.

iv. There is no evidence that nitric acid results in increased susceptibility in *in utero* rodents. Several reproductive and developmental studies in rodents, hamsters and rabbits showed no evidence of increased fetal susceptibility at doses as high as 41 mg/kg/day in mice and hamsters and 66 mg/kg/day in rats and rabbits. Further, although effects in infants were found in an epidemiological study, the cRfD (1.6 mg/kg/day) is based on a clear NOAEL established in that study.

v. There are no residual uncertainties identified in the exposure databases. EPA made conservative (protective) assumptions regarding dietary exposure to nitric acid. This assessment will not underestimate the exposure and risks posed by nitric acid.

E. Aggregate Risks and Determination of Safety

EPA determines whether acute and chronic pesticide exposures are safe by comparing aggregate exposure estimates to the aPAD and cPAD. The aPAD and cPAD represent the highest safe exposures, taking into account all appropriate SFs. EPA calculates the aPAD and cPAD by dividing the POD by all applicable UFs. For linear cancer risks, EPA calculates the probability of additional cancer cases given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the POD to ensure that the MOE called for by the product of all applicable UFs is not exceeded.

1. *Acute risk.* An acute aggregate risk assessment takes into account acute exposure estimates from dietary consumption of food and drinking water. No adverse effect resulting from a single oral exposure was identified and no acute dietary endpoint was selected. Therefore, nitric acid is not expected to pose an acute risk.

2. *Chronic risk.* Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to nitric acid from dietary exposure will utilize 24% of the cPAD for children 1–2 years old, the population group receiving the greatest exposure. There are no residential uses for nitric acid.

3. *Short-term risk.* Short-term aggregate exposure takes into account short-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

Because no short-term adverse effect was identified, nitric acid is not expected to pose a short-term risk.

4. *Intermediate-term risk.* Intermediate-term aggregate exposure takes into account intermediate-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level).

Because no intermediate-term adverse effect was identified, nitric acid is not expected to pose an intermediate-term risk.

5. *Aggregate cancer risk for U.S. population.* Based on the lack of evidence of carcinogenicity in adequate rodent carcinogenicity studies, nitric acid is not expected to pose a cancer risk to humans.

6. *Determination of safety.* Based on these risk assessments, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to nitric acid residues under reasonably foreseeable circumstances. Therefore, the establishment of an exemption from tolerance under 40 CFR 180.940(a) for residues of nitric acid when used as an inert ingredient in pesticide formulations applied to food-contact surfaces in public eating places, dairy processing equipment, and food-processing equipment and utensils at a maximum level in the end-use concentration of 1,000 ppm, is safe under FFDCA section 408.

V. Other Considerations

A. Analytical Enforcement Methodology

An analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation.

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). The Codex Alimentarius is a joint U.N. Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level.

The Codex has not established a MRL for nitric acid.

VI. Conclusions

Therefore, an exemption from the requirement of a tolerance is established under 40 CFR 180.940(a) for nitric acid (CAS No. 7697–37–2) when used as an inert ingredient in pesticide formulations applied to food-contact surfaces in public eating places, dairy processing equipment, and food-processing equipment and utensils at a maximum level in the end-use concentration of 1,000 ppm.

VII. Statutory and Executive Order Reviews

This final rule establishes a tolerance under section 408(d) of FFDCA in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled *Regulatory Planning and Review* (58 FR 51735, October 4, 1993). Because this final rule has been exempted from review under Executive Order 12866, this final rule is not subject to Executive Order 13211, entitled *Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use* (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled *Protection of Children from Environmental Health Risks and Safety Risks* (62 FR 19885, April 23, 1997). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* nor does it require any special considerations under Executive Order 12898, entitled *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations* (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under section 408(d) of FFDCA, such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply.

This final rule directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of section 408(n)(4) of FFDCA. As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled *Federalism* (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled *Consultation and Coordination with Indian Tribal Governments* (65 FR 67249, November 9, 2000) do not apply to this final rule. In addition, this final rule does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, section 12(d) (15 U.S.C. 272 note).

VIII. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the **Federal Register**. This final rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: August 17, 2012.

Lois Rossi,

Director, Registration Division, Office of Pesticide Programs.

■ Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.940(a), the table is amended by adding alphabetically the following inert ingredient to read as follows:

§ 180.940 Tolerance exemptions for active and inert ingredients for use in antimicrobial formulations (Food-contact surface sanitizing solutions).

[Docket No. 120306154–2241–02]

RIN 0648–XC162

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; inseason General category retention limit adjustment.

SUMMARY: NMFS is adjusting the Atlantic tunas General category daily Atlantic bluefin tuna (BFT) retention limit from one to three large medium or giant BFT for the September, October, November, and December time periods of the 2012 fishing year, based on consideration of the regulatory determination criteria regarding inseason adjustments. This action applies to Atlantic tunas General category permitted vessels and to Highly Migratory Species (HMS) Charter/Headboat category permitted vessels when fishing commercially for BFT.

DATES: Effective September 1, 2012, through December 31, 2012.

FOR FURTHER INFORMATION CONTACT: Sarah McLaughlin or Brad McHale, 978–281–9260.

SUPPLEMENTARY INFORMATION: Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) governing the harvest of BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR part 635. Section 635.27 subdivides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) among the various domestic fishing categories, per the allocations established in the 2006 Consolidated Atlantic HMS Fishery Management Plan (Consolidated HMS FMP) (71 FR 58058, October 2, 2006) and in accordance with implementing regulations. NMFS is required under ATCA and the Magnuson-Stevens Act to provide U.S. fishing vessels with a reasonable opportunity to harvest the ICCAT-recommended quota.

The 2010 ICCAT recommendation regarding western BFT management resulted in baseline U.S. quotas for 2011 and for 2012 of 923.7 mt (not including the 25 mt ICCAT allocated to the United States to account for bycatch of BFT in pelagic longline fisheries in the Northeast Distant Gear Restricted Area). The 2011 BFT quota rule (76 FR 39019, July 5, 2011) established a quota of 435.1 mt for the General category fishery (the commercial tunas fishery in which handgear is used). Each of the General category time periods (January, June through August, September, October through November, and December) is allocated a portion of the annual General category quota. Through a November 2011 final rule implementing adjustments to the BFT General and Harpoon category regulations (76 FR 74003, November 30, 2011), the January BFT fishery may remain open until the January subquota is reached or March 31 (whichever happens first). Consistent with the allocation scheme established in the Consolidated HMS FMP and implementing regulations, the baseline category subquotas were established in the 2011 BFT quota rule as follows: 23.1 mt for January; 217.6 mt for June through August; 115.3 mt for September; 56.6 mt for October through November; and 22.6 mt for January. Although NMFS published quota specifications for 2012 (77 FR 44161, July 27, 2012), the baseline General category quota and subquotas as codified have not changed from the amounts established for the 2011 fishing year.

Unless changed, the General category daily retention limit starting on September 1 would be the default retention limit of one large medium or giant BFT (measuring 73 inches (185 cm) curved fork length (CFL) or greater) per vessel per day/trip (§ 635.23(a)(2)). This default retention limit applies to General category permitted vessels and to HMS Charter/Headboat category permitted vessels when fishing commercially for BFT.

Adjustment of General Category Daily Retention Limit

Under § 635.23(a)(4), NMFS may increase or decrease the daily retention limit of large medium and giant BFT over a range of zero to a maximum of five per vessel based on consideration of the relevant criteria provided under § 635.27(a)(8), which include: The usefulness of information obtained from catches in the particular category for biological sampling and monitoring of the status of the stock; effects of the adjustment on BFT rebuilding and overfishing; effects of the adjustment on accomplishing the objectives of the fishery management plan; variations in seasonal BFT distribution, abundance, or migration patterns; effects of catch rates in one area precluding vessels in another area from having a reasonable opportunity to harvest a portion of the category's quota; and review of dealer reports, daily landing trends, and the availability of the BFT on the fishing grounds. Unused General category quota rolls forward within a fishing year to the subsequent subquota time period, e.g., from the June through August period to the September period, and so on.

For the 2011 fishing year, NMFS adjusted the General category limit from the default level of one large medium or giant BFT as follows: Two large medium or giant BFT for the January subquota period (75 FR 79309, December 20,

2010); three large medium or giant BFT for June through November 5 (76 FR 32086, June 3, 2011; and 76 FR 52886, August 24, 2011); and two large medium or giant BFT for November 6 through December 31, 2011 (76 FR 69137, November 8, 2011). The November 2011 adjustment was in conjunction with an inseason quota transfer of 50 mt from the Reserve category to the General category.

NMFS adjusted the limit for the 2012 January subquota period from the default level of one large medium or giant BFT to two large medium or giant BFT (76 FR 76900, December 9, 2011). That retention limit was effective from January 1, 2012, until January 22, 2012, when NMFS closed the fishery because the January subquota had been met (77 FR 3637, January 25, 2012). For the June through August 2012 period, NMFS adjusted the limit to three large medium or giant BFT (77 FR 28496, May 15, 2012).

NMFS has considered the criteria at § 635.27(a)(8) and their applicability to the General category BFT retention limit for the September through December 2012 General category fishery. These considerations include, but are not limited to, the following: Biological samples collected from BFT landed by General category fishermen and provided by BFT dealers continue to provide NMFS with valuable parts and data for ongoing scientific studies of BFT age and growth, migration, and reproductive status. As this action would be taken consistent with the quotas previously established and analyzed in the 2011 BFT quotas final rule (76 FR 39019, July 5, 2011), and consistent with objectives of the Consolidated HMS FMP, it is not expected to negatively impact stock health. A principal consideration is the objective of providing opportunities to harvest the full General category quota without exceeding it based upon the Consolidated HMS FMP goal: ''Consistent with other objectives of this FMP, to manage Atlantic HMS fisheries for continuing optimum yield so as to provide the greatest overall benefit to the Nation, particularly with respect to food production, providing recreational opportunities, preserving traditional fisheries, and taking into account the protection of marine ecosystems.'' Commercial-sized BFT migrated to the fishing grounds off New England by early June and are actively being landed. Lastly, despite the three-fish daily retention limit, 2012 General category landings remain low.

As of August 14, 2012, 137.3 mt of the 2012 General category quota of 435.1 mt have been landed, and landings rates remain at approximately 1 mt per day. Given the rollover of unused quota from the one time period to the next, current catch rates, and the fact that the daily retention limit will automatically revert to one large medium or giant BFT per vessel per day on September 1, 2012, absent agency action, NMFS anticipates the full 2012 General category quota may not be harvested. However, based on the pattern exhibited over the last few years, NMFS anticipates an increase in both landings of BFT (in number) and average fish weight for the remainder of the year, relative to the same period of 2011, such that a continued three-fish limit may result in higher landings than in previous years.

A lower retention limit could result in unused quota being added to the later portion of the General category season (i.e., rolling forward to the subsequent subquota time period). Increasing the daily retention limit from the default may mitigate rolling an excessive amount of unused quota from one time period to the next. Increasing the daily limit from three to four or five fish, however, may risk exceeding the available General category quota. As referred to above, by late October 2011, NMFS determined that the General category had reached 95 percent of its 2011 quota of 435.1 mt under the three-fish limit that was in effect. In order to extend fishing opportunities and allow continued collection of biological samples from General category landings throughout the remainder of 2011, NMFS transferred 50 mt of available quota from the Reserve to the General category and reduced the daily retention limit from three to two fish in November 2011 (76 FR 69137, November 8, 2011).

Based on these considerations, NMFS has determined that a three-fish General category retention limit is warranted. It would provide a reasonable opportunity to harvest the U.S. quota of BFT without exceeding it, while maintaining an equitable distribution of fishing opportunities, help achieve optimum yield in the General category BFT fishery, allow collection of a broad range of data for stock monitoring purposes, and be consistent with the objectives of the Consolidated HMS FMP. Therefore, NMFS increases the General category retention limit from the default limit to three large medium or giant BFT per vessel per day/trip, effective September 1, 2012, through December 31, 2012.

Regardless of the duration of a fishing trip, the daily retention limit applies upon landing. For example, whether a vessel fishing under the General category limit takes a two-day trip or makes two trips in one day, the daily limit of three fish may not be exceeded upon landing. This General category retention limit is effective in all areas, except for the Gulf of Mexico, and applies to those vessels permitted in the General category, as well as to those HMS Charter/Headboat permitted vessels fishing commercially for BFT.

Monitoring and Reporting

NMFS will continue to monitor the BFT fishery closely through the mandatory dealer landing reports, which NMFS requires to be submitted within 24 hours of a dealer receiving BFT. Depending on the level of fishing effort and catch rates of BFT, NMFS may determine that additional retention limit adjustments are necessary to ensure available quota is not exceeded or to enhance scientific data collection from, and fishing opportunities in, all geographic areas.

Closures or subsequent adjustments to the daily retention limits, if any, will be published in the **Federal Register**. In addition, fishermen may call the Atlantic Tunas Information Line at (888) 872–8862 or (978) 281–9260, or access *www.hmspermits.gov,* for updates on quota monitoring and retention limit adjustments.

Classification

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

The regulations implementing the Consolidated HMS FMP provide for inseason retention limit adjustments to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. Affording prior notice and opportunity for public comment to implement these retention limits is impracticable as NMFS needs to wait until it has necessary data and information about the fishery before it can select the appropriate retention limit for a time period prescribed by regulation. By the time NMFS has the needed data, implementing the retention limit following a public comment period would preclude fishermen from harvesting BFT that are legally available consistent with all of the regulatory criteria. Analysis of available data shows that the General category BFT retention limits may be increased with minimal risks of exceeding the ICCAT-allocated quota.

Delays in increasing these retention limits would adversely affect those General and Charter/Headboat category

vessels that would otherwise have an opportunity to harvest more than the default retention limit of one BFT per day/trip and may exacerbate the problem of low catch rates and quota rollovers. Limited opportunities to harvest the respective quotas may have negative social and economic impacts for U.S. fishermen that depend upon catching the available quota within the time periods designated in the Consolidated HMS FMP. Adjustment of the retention limit needs to be effective September 1, 2012, or as soon as possible thereafter, to minimize any unnecessary disruption in fishing patterns, to allow the impacted sectors to benefit from the adjustment, and to not preclude fishing opportunities for fishermen who have access to the fishery only during this time period. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For these reasons, there is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness.

This action is being taken under 50 CFR 635.23(a)(4) and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 971 *et seq.* and 1801 *et seq.*

Dated: August 28, 2012.

Lindsay Fullenkamp,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

RIN 0648–XC202

Fisheries of the Exclusive Economic Zone Off Alaska; Reallocation of Pacific Cod in the Bering Sea and Aleutian Islands Management Area

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; reallocation.

SUMMARY: NMFS is reallocating the projected unused amounts of Pacific cod from vessels using jig gear, catcher vessels greater than 60 feet (18.3 meters) length overall (LOA) using hook-and-line gear, and catcher vessels using trawl gear to catcher vessels less than 60 feet (18.3 meters) LOA using hook-and-line or pot gear in the Bering Sea and Aleutian Islands management area. This action is necessary to allow the 2012 total allowable catch of Pacific cod to be harvested.

DATES: Effective August 28, 2012, through 2400 hrs, Alaska local time (A.l.t.), December 31, 2012.

FOR FURTHER INFORMATION CONTACT: Obren Davis, 907–586–7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the Bering Sea and Aleutian Islands (BSAI) according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The 2012 Pacific cod total allowable catch (TAC) specified for vessels using jig gear in the BSAI is 1,463 metric tons (mt) as established by the final 2012 and 2013 harvest specifications for groundfish in the BSAI (77 FR 10669, February 23, 2012). The Administrator, Alaska Region, NMFS, (Regional Administrator) has determined that jig vessels will not be able to harvest 1,000 mt of the remaining 2012 Pacific cod TAC allocated to those vessels under § 679.20(a)(7)(ii)(A)(*1*). Therefore, in accordance with § 679.20(a)(7)(iii)(A), NMFS apportions 1,000 mt of Pacific cod to catcher vessels less than 60 feet (18.3 meters(m)) LOA using hook-and-line or pot gear.

The 2012 Pacific cod TAC specified for catcher vessels greater than or equal to 60 feet LOA using hook-and-line gear in the BSAI is 465 mt as established by the final 2012 and 2013 harvest specifications for groundfish in the BSAI (77 FR 10669, February 23, 2012). The Regional Administrator has determined that catcher vessels greater than or equal to 60 feet LOA using hook-and-line gear will not be able to harvest 435 mt of the remaining 2012 Pacific cod TAC allocated to those vessels under § 679.20(a)(7)(ii)(A)(*3*). Therefore, in accordance with § 679.20(a)(7)(iii)(A), NMFS apportions 435 mt of Pacific cod to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear.

The 2012 Pacific cod total allowable catch specified for catcher vessels using trawl gear in the BSAI is 51,509 mt as established by the final 2012 and 2013 harvest specifications for groundfish in the BSAI (77 FR 10669, February 23, 2012). The Regional Administrator has determined that catcher vessels using trawl gear will not be able to harvest 500 mt of the 2012 Pacific cod TAC allocated to those vessels under § 679.20(a)(7)(ii)(A)(*9*). Therefore, in accordance with § 679.20(a)(7)(iii)(A), NMFS reallocates 500 mt of Pacific cod from catcher vessels using trawl gear to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear.

The harvest specifications for Pacific cod included in the final 2012 harvest specifications for groundfish in the BSAI (77 FR 10669, February 23, 2012) and inseason adjustment (77 FR 8176, February 14, 2012) are revised as follows: 463 mt for vessels using jig gear, 30 mt for catcher vessels greater than or equal to 60 feet (18.3 m) LOA using hook-and-line gear, 51,009 mt for vessels using trawl gear, and 8,380 mt to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the reallocation of Pacific cod specified from other sectors to catcher vessels less than 60 feet (18.3 m) LOA using hook-and-line or pot gear. Since the fishery is currently open, it is important to immediately inform the industry as to the revised allocations. Immediate notification is necessary to allow for the orderly conduct and efficient operation of this fishery, to allow the industry to plan for the fishing season, and to avoid potential disruption to the fishing fleet as well as processors. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 27, 2012.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 28, 2012.

Lindsay Fullenkamp,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register
Vol. 77, No. 170
Friday, August 31, 2012

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2012–0885; Directorate Identifier 2012–NE–18–AD]

RIN 2120–AA64

Airworthiness Directives; Thielert Aircraft Engines GmbH Models TAE 125–02–99 and TAE 125–02–114 Reciprocating Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all TAE 125–02–99 and TAE 125–02–114 reciprocating engines. This proposed AD was prompted by an in-flight shutdown of an airplane equipped with a TAE 125–02–99 engine. This proposed AD would require inspection of the oil filler plug vent hole at the next scheduled maintenance or within 110 flight hours after the effective date of this AD. If chips are found to be blocking the vent hole, additional corrective action is required before next flight. We are proposing this AD to prevent engine in-flight shutdown or power loss, possibly resulting in reduced control of the airplane.

DATES: We must receive comments on this proposed AD by October 30, 2012.

ADDRESSES: You may send comments by any of the following methods:

- *Federal Rulemaking Portal:* Go to *http://www.regulations.gov* and follow the instructions for sending your comments electronically.
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

For service information identified in this proposed AD, contact Thielert Aircraft Engines GmbH, Platanenstrasse 14 D–09350, Lichtenstein, Germany, telephone: +49–37204–696–0; fax: +49–37204–696–2912; email: *info@centurion-engines.com.* You may review copies of the referenced service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov;* or in person at the Docket Operations office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received and other information. The street address for the Docket Operations office (phone: 800–647–5527) is the same as the Mail address provided in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Frederick Zink, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; email: *frederick.zink@faa.gov;* telephone: 781–238–7779; fax: 781–238–7199.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2012–0885; Directorate Identifier 2012–NE–18–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact with FAA personnel concerning this proposed AD. Using the search function of the Web site, anyone can find and read the comments in any of our dockets, including, if provided, the name of the individual who sent the comment (or signed the comment on behalf of an association, business, labor union, etc.). You may review the DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78).

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA Airworthiness Directive No. 2012–0112, dated June 22, 2012 (referred to after this as ''the MCAI''), to correct an unsafe condition for the specified products. The MCAI states:

> An engine in-flight shutdown has been reported on an aeroplane equipped with a TAE 125–02–99 engine. The results of the investigation showed that this was due to blockage of the gearbox oil filling plug vent hole, which caused pressurisation in the gearbox, resulting in oil leakage and a slipping clutch. This condition, if not corrected, could result in further cases of engine in-flight shutdown and consequent loss of control of the aeroplane.

Further investigation revealed that the blockage to the oil cap vent was the result of a residual chip from machining the oil cap vent hole. The chip is from the manufacturing process and did not fall off the oil plug. This is not the result of material in the oil system causing the blockage. You may obtain further information including the affected gearbox serial number list by examining the MCAI in the AD docket.

Relevant Service Information

Thielert Aircraft Engines has issued Service Bulletin TM TAE 125–1015 P1, Initial Issue, dated April 27, 2012. The actions described in this service information are intended to correct the unsafe condition identified in the MCAI.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by Germany and is approved for operation in the United States. Pursuant to our bilateral agreement with Germany, EASA has notified us of the unsafe condition described in the MCAI and

service information referenced above. We are proposing this AD because we evaluated all information provided by EASA and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design. The proposed AD would require inspection of the oil filler plug vent hole at the next scheduled maintenance or within 110 flight hours after the effective date of this AD. If chips are found to be blocking the vent hole, additional corrective action is required before next flight.

Costs of Compliance

We estimate that this proposed AD would affect about 45 engines installed on airplanes of U.S. registry. We also estimate that it would take about 2.5 work-hours per product to comply with this proposed AD. The average labor rate is $85 per work-hour. Required parts would cost about $30 per engine. Based on these figures, we estimate the cost of the proposed AD to U.S. operators to be $10,913.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs,'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in ''Subtitle VII, Part A, Subpart III, Section 44701: General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866;

2. Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and

3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared a regulatory evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new AD:

Thielert Aircraft Engines: Docket No. FAA–2012–0885; Directorate Identifier 2012–NE–18–AD.

(a) Comments Due Date

We must receive comments by October 30, 2012.

(b) Affected Airworthiness Directives (ADs)

None.

(c) Applicability

This AD applies to all TAE 125–09–99 and TAE 125–02–114 reciprocating engines.

(d) Reason

This AD was prompted by an in-flight shutdown of an airplane equipped with an TAE 125–02–99 engine. We are issuing this AD to prevent engine in-flight shutdown or power loss, possibly resulting in reduced control of the airplane.

(e) Actions and Compliance

Unless already done, within 110 flight hours after the effective date of this AD, or at the next scheduled maintenance, do the following.

(1) Remove the oil filler plug and check for chips blocking the vent hole in accordance with TAE Service Bulletin (S/B) TM TAE 125–1015 P1, Initial Issue, dated April 27, 2012.

(2) If chips are found during the inspection in paragraph (e)(1) of this AD, disassemble the gearbox and check the radial shaft sealing rings (at the clutch and the propeller shaft) for leakage. If leakage is noted, replace the gearbox before the next flight.

(f) Installation Prohibition

After the effective date of this AD, do not install a gearbox with an S/N listed in TAE S/B TM TAE 125–1015, Initial Issued, dated April 27, 2012, into any engine unless the oil filler plug has passed the inspection required by paragraph (e)(1) of this AD.

(g) Alternative Methods of Compliance (AMOCs)

The Manager, Engine Certification Office, FAA, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19.

(h) Related Information

(1) For more information about this AD, contact Frederick Zink, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803; email: *frederick.zink@faa.gov;* telephone (781) 238–7779; fax (781) 238–7199.

(2) Refer to MCAI Airworthiness Directive No. 2012–0112, dated June 22, 2012, and TAE S/B TM TAE 125–1015 P1, Initial Issue, dated April 27, 2012 for related information.

(3) For service information identified in this AD, contact Thielert Aircraft Engines GmbH, Platanenstrasse 14 D–09350, Lichtenstein, Germany, telephone: +49–37204–696–0; fax: +49–37204–696–2912; email: *info@centurion-engines.com.* You may review copies of the referenced service information at the FAA, Engine & Propeller Directorate, 12 New England Executive Park, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Issued in Burlington, Massachusetts, on August 24, 2012.

Robert G. Mann,

Acting Manager, Engine & Propeller Directorate, Aircraft Certification Service.

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Supplemental notice of proposed rulemaking (NPRM); reopening of comment period.

SUMMARY: We are revising an earlier proposed airworthiness directive (AD) for certain The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER series airplanes. That NPRM proposed to require checking the escape slide girt for serviceability, and

replacement if necessary; modifying the cable routing provision; replacing the regulator padding; modifying the aspirator orientation; and modifying the valise. That NPRM also proposed to require, for certain airplanes, modifying or replacing the Vespel piston, modifying the pilot valve regulator, installing a new firing cable and safety pin, and modifying the slide valise. That NPRM was prompted by reports of escape slides failing to deploy from the forward and aft right-hand doors during scheduled maintenance slide deployments. This action revises that NPRM by adding airplanes to the applicability of that NPRM and specifying revised service information. We are proposing this supplemental NPRM to prevent failure of an escape slide to deploy, which could result in the slide being unusable during an emergency evacuation and increased likelihood of injury to passengers or crewmembers due to the difficulty in evacuating the airplane. Since these actions impose an additional burden over that proposed in the NPRM, we are reopening the comment period to allow the public the chance to comment on these proposed changes.

DATES: We must receive comments on this supplemental NPRM by October 15, 2012.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Goodrich Corporation, Aircraft Interior Products, Attn: Technical Publications, 3414 South Fifth Street, Phoenix, Arizona 85040; phone: 602–243–2270; Internet: *http://www.goodrich.com/TechPubs.* You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov;* or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Sarah Piccola, Aerospace Engineer, Cabin Safety & Environmental Systems Branch, ANM–150S, Seattle Aircraft Certification Office (ACO), FAA, 1601 Lind Avenue SW., Renton, Washington 98057–3356; phone: 425–917–6483; fax: 425–917–6590; email: *sarah.piccola@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2011–1222; Directorate Identifier 2010–NM–268–AD'' at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov,* including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We issued an NPRM to amend 14 CFR part 39 to include an AD that would apply to The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER series airplanes. That NPRM published in the **Federal Register** on November 8, 2011 (76 FR 69159). That NPRM proposed to require checking the escape slide girt for serviceability and replacement if necessary, modifying the cable routing provision, the aspirator orientation, the valise, and replacing the regulator padding. That NPRM also proposed to require, for certain airplanes, modifying or replacing the Vespel piston, modifying the pilot valve regulator, modifying the slide valise, and installing a new firing cable and safety pin.

Actions Since Previous NPRM (76 FR 69159, November 8, 2011) Was Issued

Since we issued the previous NPRM (76 FR 69159, November 8, 2011), new service information has been issued that provides clarifications and minor corrections, and adds data. Additionally, an error was discovered in the part numbers (P/Ns) specified in paragraph (c), ''Applicability,'' of that NPRM. The specification of ''P/N 5A3307–1, –3, –5, or –301, S/N BNG0001 through BNG5707 inclusive,'' is incorrect. The part number should have read ''P/N 5A3307–1, –3, –5, or –301, S/N BNG0001 through BNG14499 inclusive.'' We have changed the supplemental NPRM in this regard.

Comments

We gave the public the opportunity to comment on the previous NPRM (76 FR 69159, November 8, 2011). The following presents the comments received on the NPRM and the FAA's response to each comment.

Requests To Use Revised Service Information

Boeing, United Airlines (United), and Goodrich Corporation (Goodrich) requested that the previous NPRM (76 FR 69159, November 8, 2011) be changed to incorporate revised service information to ensure that operators are incorporating the most current revision of the service information.

We agree that current service information should be incorporated into this supplemental NPRM. Goodrich Service Bulletin 5A3307–25–389, Revision 2, dated May 4, 2012; and Goodrich Service Bulletin 5A3307–25–339, Revision 5, dated May 4, 2012; provide minor corrections, updated pricing, and additional data. The technical content of these documents has not been changed. We have changed paragraphs (g) and (h)(1) of the supplemental NPRM to refer to Goodrich Service Bulletin 5A3307–25–389, Revision 2, dated May 4, 2012; and Goodrich Service Bulletin 5A3307–25–339, Revision 5, dated May 4, 2012; as applicable. We have changed paragraph (i) of the supplemental NPRM to include credit for modifications of the escape slide done before the effective date of the AD using Goodrich Service Bulletin 5A3307–25–339, Revision 3, dated May 8, 2009; or Revision 4, dated October 1, 2011. Modification of the escape slide specified in Goodrich Service Bulletin 5A3307–25–389, Revision 2, dated May 4, 2012, consists of modifying the cable routing provision, replacing the

regulator padding, modifying the aspirator orientation, and modifying the valise. Modification of the escape slide specified in Goodrich Service Bulletin 5A3307–25–339, Revision 5, dated May 4, 2012, consists of modifying the pilot valve regulator P/N 4A3865–2, –3, or –4, as applicable; installing a new firing cable and safety pin; and modifying the slide valise.

Requests To Change Applicability

Goodrich, Boeing, United, AirTran Airways (AirTran), and Southwest Airlines (Southwest) requested that we change or clarify the applicability of the pervious NPRM (76 FR 69159, November 8, 2011) to include slide P/N 5A3307–1, –3, –5, or –301, S/Ns BNG0001 through BNG14499 inclusive. Boeing stated that this change ''will ensure that all applicable 5A3307 series evacuation slides have been identified for incorporation of the Goodrich Service Bulletin 5A3307–25–389 modifications.''

We agree that S/Ns BNG0001 through BNG14499 inclusive should be included in the applicability of this supplemental NPRM as explained previously. We have changed paragraph (c) of the supplemental NPRM to include P/N 5A3307–1, –3, –5, or –301, S/N BNG0001 through BNG14499 inclusive.

Requests To Remove Slide Part Numbers From the NPRM (76 FR 69159, November 8, 2011)

Goodrich, United, and Boeing requested that we remove slide P/N 5A3086–1, –3, or –301, S/Ns B3F001 through B3F611 inclusive; P/N 5A3088–1, –3, or –301, S/Ns B3A001 through B3A685 inclusive; from the NPRM (76 FR 69159, November 8, 2011). Goodrich stated that specification of slide P/N 5A3086–1, –3, or –301, S/Ns B3F001 through B3F611 inclusive; and P/N 5A3088–1, –3, or –301, S/Ns B3A001 through B3A685 inclusive; is inappropriate for the proposed AD, because the unsafe condition that the proposed AD addresses is not an issue for the P/Ns 5A3086 and 5A3088 series slides. Goodrich also stated that the design of the P/Ns 5A3086 and 5A3088 series slides precludes the type of event that has been experienced with the P/N 5A3307 series slides. Goodrich provided detailed information to support its request.

We agree. Including these additional parts is confusing and is not directly related to the unsafe condition addressed by this supplemental NPRM. We have changed paragraph (c) of the supplemental NPRM to remove slide P/N 5A3086–1, –3, or –301, S/Ns B3F001 through B3F611 inclusive; and P/N 5A3088–1, –3, or –301, S/Ns B3A001 through B3A685 inclusive; from the supplemental NPRM.

Request To Remove Girt Check

Goodrich requested that the girt check be removed from the previous NPRM (76 FR 69159, November 8, 2011). Goodrich stated that the girt condition was not a causative factor in the unsafe condition described in the previous NPRM. The girt condition check is not a configuration requirement of the slide modification, which addresses the slide nondeployment issue. Rather, the girt condition check is included in the Goodrich service information because it falls under the heading of good general maintenance practice. Goodrich stated that the girt check specified in the Goodrich service information was not a causative factor in the unsafe condition described by the previous NPRM and questions the need for it to be called out in the AD.

We agree. The girt condition check is not a configuration requirement of the slide modification, which addresses the slide non-deployment issue. We have removed the girt condition check from paragraph (g) of the supplemental NPRM.

Requests To Remove Parts Installation Restriction

United, American, WestJet, Southwest, Goodrich, and AirTran requested that we remove paragraph (j) of the NPRM (76 FR 69159, November 8, 2011), which prohibits installing certain parts on any airplane after the effective date of the AD. The commenters stated that this prohibition would prevent the use of affected spare slide assemblies (un-modified) during modification of the slide units of the previous NPRM, as well as the removal and reinstallation of the same affected unit on an airplane. The commenters asserted that this requirement could restrict an airline's ability to return an airplane to service due to a shortage of parts.

Boeing requested that we remove paragraphs (j)(1) and (j)(3) from the previous NPRM (76 FR 69159, November 8, 2011). The P/N 5A3086–1, –3, and –301 evacuation slides; and P/N 5A3088–1, –3, and –301 evacuation slides are not affected by Goodrich Service Bulletin 5A3307–25–389, Revision 1, dated October 1, 2011, which is the subject of the previous NPRM. Boeing stated that, once the evacuation slide has been modified as specified in Goodrich Service Bulletin 5A3307–25–389, Revision 1, dated October 1, 2011, into the new P/N 5A3307–7 configuration, the old regulator and regulator valve padding parts will have been replaced with new parts; therefore, just listing P/N 5A3307–1, –3, –5, and –301 evacuation slides would cover the old regulator and regulator valve padding parts.

We agree with removing the parts installation restriction, since this prohibition could make it difficult for operators to maintain their airplanes. After the effective date of the AD, if the slides are removed for any reason, this prohibition could lead to an airplane with slides having mixed part numbers. We have removed paragraph (j) from the supplemental NPRM, and redesiginated subsequent paragraphs accordingly.

Request To Remove Repeated Wording

United requested that we address the need for repeating accomplishment instructions within paragraphs (g) and (h) of the previous NPRM (76 FR 69159, November 8, 2011). United stated that this information is already contained within Goodrich Service Bulletins 5A3307–25–389, Revision 1, dated October 1, 2011; and 5A3307–25–339, Revision 4, dated October 1, 2011; respectively, and by repeating this information, the AD could contain dated information.

We agree that repeating the specifics of the accomplishment instructions in paragraphs (g) and (h) of the supplemental NPRM is unnecessary in this case. We have changed paragraphs (g) and (h) of the supplemental NPRM to require modifying the escape slide in accordance with the applicable service information. We have described the specifics of modifying the escape slide in paragraphs (g) and (h) of the supplemental NPRM in the previous response under comment ''Request to Use Revised Service Information.'' No further change is necessary in this regard.

Request To Remove Certain Part Numbers

United requested that we address repetitive slide part numbers in the previous NPRM (76 FR 69159, November 8, 2011), which have already been subjected to previous AD rulemaking. United stated that including slide part numbers that were subjected to previously issued rulemaking, such as AD 2008–24–08, Amendment 39–15748 (73 FR 72320, November 28, 2008), undermines the rulemaking process and forces operators to demonstrate compliance against certain part numbers for a second time.

We agree and have removed P/Ns 5A3307–1 and 5A3307–3, which were the subject of previous rulemaking (AD 2008–24–08, Amendment 39–15748 (73

FR 72320, November 28, 2008)), from this supplemental NPRM.

FAA's Determination

We are proposing this supplemental NPRM because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design. Certain changes described above expand the scope of the original NPRM. As a result, we have determined that it is necessary to reopen the comment period to provide additional opportunity for the public to comment on this supplemental NPRM.

Proposed Requirements of the Supplemental NPRM

This supplemental NPRM would require accomplishing the actions specified in the service information described previously.

Costs of Compliance

We estimate that this proposed AD affects 557 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Modify girt and valise, and replace padding.	2 work-hours × $85 per hour = $170	$223	$393	$218,901.
Modify regulator valve, install cable and pin, and modify slide valise.	1 work-hour × $85 per hour = $85	Between $1,749 and $1,836.	Between $1,834 and $1,921.	Between $1,021,538 and $1,069,997.
Modify Vespel piston	1 work-hour × $85 per hour = $85	$0	$85	$47,345.
Optional Vespel piston replacement.	Up to 1 work-hour × $85 per hour = $85	Up to $612	Up to $697	Up to $388,229.

We estimate the following costs to do any necessary replacements that would be required based on the results of the check of the girt. We have no way of determining the number of aircraft that might need these replacements.

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Girt replacement (Goodrich Service Bulletin 5A3307–25–389, Revision 2, dated May 4, 2012).	1 work-hour × $85 per hour = $85	$942	$1,027

According to the parts supplier, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. ''Subtitle VII: Aviation Programs'' describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Is not a ''significant rule'' under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

The Boeing Company: Docket No. FAA–2011–1222; Directorate Identifier 2010–NM–268–AD.

(a) Comments Due Date

We must receive comments by October 15, 2012.

(b) Affected ADs

This AD affects AD 2008–24–08, Amendment 39–15748 (73 FR 72320, November 28, 2008).

(c) Applicability

This AD applies to The Boeing Company Model 737–600, –700, –700C, –800, –900, and –900ER series airplanes; certificated in any category; with Goodrich Corporation door escape slide part number (P/N) 5A3307–1, –3, –5, or –301, serial number (S/N) BNG0001 through BNG14499 inclusive.

(d) Subject

Joint Aircraft System Component (JASC)/Air Transport Association (ATA) of America Code 25, Equipment/Furnishings.

(e) Unsafe Condition

This AD was prompted by reports of escape slides failing to deploy from the forward and aft right-hand doors during scheduled maintenance slide deployments. We are issuing this AD to prevent failure of an escape slide to deploy, which could result in the slide being unusable during an emergency evacuation and increased likelihood of injury to passengers or crewmembers due to the difficulty in evacuating the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Slide Modification

Within 36 months after the effective date of this AD: Modify the escape slide in accordance with the Accomplishment Instructions of Goodrich Service Bulletin 5A3307–25–389, Revision 2, dated May 4, 2012.

(h) Concurrent Requirements

(1) For slide P/N 5A3307–301: Prior to or concurrently with accomplishing the actions required by paragraph (g) of this AD, modify the escape slide in accordance with the Accomplishment Instructions of Goodrich Service Bulletin 5A3307–25–339, Revision 5, dated May 4, 2012.

(2) For slide P/N 5A3307–301 or 5A3307–5: Prior to or concurrently with accomplishing the actions required by paragraph (g) of this AD, modify the Vespel piston in the regulator valves, or replace the Vespel piston with a new or serviceable Vespel piston P/N 3A3566–2 or 3A3832–2, as applicable, in accordance with the Accomplishment Instructions of Goodrich Service Bulletin 25–349, Revision 1, dated January 11, 2010.

(i) Credit for Previous Actions

(1) This paragraph provides credit for the actions required by paragraph (h)(1) of this AD, if those actions were performed before the effective date of this AD using Goodrich Service Bulletin 5A3307–25–339, Revision 1, dated September 26, 2003; Revision 2, dated March 31, 2004; Revision 3, dated May 8, 2009; or Revision 4, dated October 1, 2011; which are not incorporated by reference in this AD.

(2) This paragraph provides credit for the modification or replacement of the Vespel piston in the regulator valves required by paragraph (h)(2) of this AD, if those actions were performed before the effective date of this AD using Goodrich Service Bulletin 25–349, dated September 15, 2004, which is not incorporated by reference in this AD.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in the Related Information section of this AD. Information may be emailed to: *9-ANM-Seattle-ACO-AMOC-Requests@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Related Information

(1) For more information about this AD, contact Sarah Piccola, Aerospace Engineer, Cabin Safety & Environmental Systems Branch, ANM–150S, Seattle Aircraft Certification Office (ACO), FAA, 1601 Lind Avenue SW., Renton, Washington 98057–3356; phone: 425–917–6483; fax: 425–917–6590; email: *sarah.piccola@faa.gov.*

(2) For service information identified in this AD, contact Goodrich Corporation, Aircraft Interior Products, ATTN: Technical Publications, 3414 South Fifth Street, Phoenix, Arizona 85040; phone: 602–243–2270; Internet: *http://www.goodrich.com/TechPubs.* You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, the FAA, 1601 Lind Avenue SW., Renton, Washington. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on August 24, 2012.

Ali Bahrami,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

Proposed Amendment to Class B Airspace; Detroit, MI

Correction

In proposed rule document 2012–19902, beginning on page 48476–48491 in the issue of Thursday, August 14, 2012, make the following corrections:

1. In the first column titled ''Area C'', third paragraph, fifth line, ''5-mile arc'' should read, ''15 mile arc.''

2. In the first column titled ''Area C'', third paragraph, eighth line, ''5-mile arc'' should read, ''15 mile arc.''

3. In the first column titled ''Area C'', third paragraph, twenty-second line, ''5-mile arc'' should read, ''15 mile arc.''

4. In the first column titled ''Area C'', third paragraph, twenty-third line, ''5-mile arc'' should read, ''15 mile arc.''

5. In the second column titled ''Area D'', first paragraph, eighth line, ''5-mile arc'' should read, ''15 mile arc.''

6. In the second column titled ''Area D'', first paragraph, eleventh line, ''5-mile arc'' should read, ''15 mile arc.''

7. In the second column titled ''Area E'', first paragraph, twenty-fourth line, ''5-mile arc'' should read, ''15 mile arc.''

8. In the second column titled ''Area E'', first paragraph, twenty-seventh line, ''5-mile arc'' should read, ''15 mile arc.''

[Docket No. FAA–2012–0752]

Passenger Use of Portable Electronic Devices on Board Aircraft

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of policy; request for comments.

SUMMARY: The FAA seeks comments on current policy, guidance, and procedures that aircraft operators (ranging from pilots of general aviation aircraft up to and including air carrier certificate holders at the major airlines) use when determining if passenger use of portable electronic devices (PEDs)

may be allowed during any phase of flight on their aircraft. Current FAA regulations generally prohibit the use of all PEDs during flight, with the exception of portable voice recorders, hearing aids, heart pacemakers, and electric shavers. These regulations also provide an exception for any other PED that the aircraft operator has determined will not cause interference with the navigation or communication systems on the aircraft. To better effectuate the safety purposes of these regulations, this notice requests comments about key areas of policy and guidance that are used by aircraft operators when making these determinations. It also requests comments about other technical challenges for addressing the problems associated with determining if and when PEDs can be used. The desired outcome of this solicitation is to have sufficient information to allow operators to better assess whether more widespread use of PEDs during flight is appropriate, while maintaining the highest levels of safety to passengers and aircraft. The Agency stresses that the existing regulations allow the operator to authorize the use of PEDs, and that no specific FAA approval is required. The aircraft operator is responsible for assuring that the interference from PEDs does not pose a flight risk. Once all the comments have been collected, the FAA intends to establish an Aviation Rulemaking Committee (ARC) to review the comments and provide recommendations that might permit the more widespread use of PEDs during flight while maintaining the highest levels of safety for the passengers and aircraft. The FCC will be a key partner in this activity working collaboratively with the FAA, airlines, and the manufacturers to explore broader use of PEDS in flight.

DATES: Written comments must be received on or before October 30, 2012.

ADDRESSES: Send comments identified by docket number FAA–2012–0752 using any of the following methods:

- *Email:* Submit your comments via email to *PEDcomment@faa.gov.*
- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: The FAA will post all comments it receives, without change, to *http://www.regulations.gov,* including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA dockets, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478), as well as at *http://DocketsInfo.dot.gov.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or contact Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: For questions concerning this action, contact Timothy W. Shaver, Avionics Maintenance Branch, Flight Standards Service, AFS–360, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone (202) 385–4292; facsimile (202) 385–6474; email *tim.shaver@faa.gov.*

SUPPLEMENTARY INFORMATION: We are reviewing the policies, guidance, and procedures that establish the methods and criteria aircraft operators use to determine if they can allow PED usage during flight. The FAA has long recognized that PEDs have the potential for causing interference with aircraft navigation or communication systems. Title 14, Code of Federal Regulations (14 CFR) §§ 91.21, 121.306, 125.204, and 135.144 establish the requirements prohibiting the use of PEDs without the authorization of the aircraft operator.

The FAA's first published rulemaking [1] to address this issue was in 1966. That rulemaking was prompted after studies of PED interference conducted between 1958 to 1961 concluded that portable frequency modulation (FM) radio receivers caused interference to navigation systems such as very high frequency (VHF) Omni Range (VOR) navigation systems.

During that rulemaking process, the FAA received comments on the subject of FAA involvement in the authorization of use of PEDs. The public expressed concerns that authorization of devices not specifically excepted in the rule (e.g., portable voice recorders, hearing aids, heart pacemakers, and electric shavers) would subject operators to a considerable amount of ''red tape.'' In response to those comments, the FAA concluded that the aircraft operators were best suited to make the determination of which PEDs would not cause interference with the navigation or communication system on their aircraft. The FAA also recognized that for it to place requirements upon itself to conduct or verify tests of every conceivable PED, as an alternative to a determination made by the operator, would thereby place an excessive and unnecessary burden on the agency.

The potential for aircraft interference depends on the aircraft and its electrical and electronic systems, as well as the type of PED being used. Prior to fly-by-wire flight controls, the primary concern was the susceptibility of sensitive aircraft communication and navigation radio receivers to spurious radio frequency emissions from PEDs. Many of these aircraft using this older technology are still in service and are as susceptible today to interference as they were when they first entered service. When aircraft included fly-by-wire controls and electronic displays, the susceptibility of these aircraft systems also became a concern. The FAA defined requirements for high-intensity radiated fields (HIRF) that provide assurance that newer aircraft with such systems have sufficient protection to continue to operate safely when exposed to spurious emissions [2] of PEDs and intentional transmissions [3] from transmitting PEDs. While the highly critical fly-by-wire controls and electronic displays were designed and certified to withstand the fields from transmitting PEDs, all aircraft electrical and electronic systems were not designed to withstand these fields. These newer aircraft still have sensitive navigation, communication, and surveillance radio receivers that may be susceptible at certain frequencies to spurious radio frequency emissions from PEDs.

[1] 14 CFR 91.19, Docket No. 7247; Amdt 91–35 (later superseded by §§ 91.21, 121.306, 125.204, and 135.144).

[2] A spurious emission is any radio frequency not deliberately created or transmitted.

[3] Intentional transmission is the transmission of signals through free space by electromagnetic waves on specific radio frequencies that are used to communicate information between devices.

PEDs have changed considerably in the past few decades and output a wide variety of signals. Some devices do not transmit or receive any signals but generate low-power, radio frequency emissions. Other PEDs, such as e-readers, are only active in this manner during the short time that a page is being changed. Of greater concern are intentional transmissions from PEDs. Most portable electronic devices have internet connectivity that includes transmitting and receiving signals wirelessly using radio waves, such as Wi-Fi,[4] Bluetooth,[5] and various other cellular technologies. These devices transmit high-powered emissions and can generate spurious signals at undesired frequencies, particularly if the device is damaged.

Avionics equipment has also undergone significant changes. When the regulations were first established, communication and navigations systems were basic systems. In today's avionics, there are various systems—global positioning, traffic collision and avoidance, transponder, automatic flight guidance and control, and many other advanced avionics systems—that depend on signals transmitted from the ground, other aircraft, and satellites for proper operation. In addition, there are advanced flight management systems that use these avionics as a critical component for performing precision operational procedures. Many of these systems are also essential to realize the capabilities and operational improvements envisioned in the Next Generation airspace system. As such, harmful interference from PEDs cannot be tolerated.

Under FAA regulation, the aircraft operator is responsible for determining which PEDs may be used by the passengers and during which phase of flight this utilization may occur. The aircraft operator is best suited to make the determination of which PEDs would not cause interference with the navigation or communication system on its aircraft. The operators' PED policy determines what types of devices may be used on board their aircraft and during which phase(s) of flight. The responsibility for enforcing an aircraft operator's PED policy typically falls on the cabin crew. On occasion, enforcement of a commercial airline's PED policy results in a conflict between a flight attendant and a passenger. Noncompliance with crewmember safety instructions on the use of PEDs has resulted in passengers being removed from an aircraft and, in some cases, has caused in-flight diversions. The FAA provides oversight of aircraft operators to ensure that they have established and are currently following robust PED-allowance procedures.

Policy and Guidance

As aircraft and consumer electronics evolved, the FAA recognized that the industry needed assistance to keep up with the challenges of determining if devices would interfere with the aircraft navigation or communication systems. In 1958, at the FAA's request, the first RTCA, Inc., (previously Radio Technical Commission for Aeronautics) documents[6] were written to help airlines make the PED allowance determination. Since that time, the FAA has requested three other activities; the most recent concluded in 2008. The current guidelines to assist aircraft operators in developing their PED policy are in Advisory Circular (AC) 91–21–1B, *Use of Portable Electronic Devices Aboard Aircraft,* dated August 25, 2006, which references industry-developed guidelines identified in RTCA/DO–233 and RTCA/DO–294.

These joint industry-government committees studied the risks associated with PED usage and are the basis for the FAA's guidance today. For instance, based on these studies, FAA has recommended that operators allowing passenger use of PEDs do so only during non-critical phases of flight and prohibit PED use during takeoff and landing. See AC 91–21–1B. While these recommendations are non-binding, most commercial airlines allow the use of non-transmitting PEDs in flight after the aircraft has reached a safe altitude, and those airlines continue to allow PED usage until near the end of the flight.

The FAA has also published AC 20–164, *Designing and Demonstrating Aircraft Tolerance to Portable Electronic Devices.* This AC is based on RTCA/DO–307, *Aircraft Design and Certification for Portable Electronic Device (PED) Tolerance,* dated October 11, 2007. Further, AC 20–164 provides guidance to demonstrate aircraft electrical and electronic system tolerance to the use of PEDs. This approach allows the aircraft designers to build in protections to help prevent interference to navigation or communication systems.

PEDs Today

Smart phones, personal computers, and wireless technology have become ingrained in peoples' day-to-day lives. Passengers not only use these devices to remain connected to their work, family, and friends, but also to read books, play games, and accomplish many of their day-to-day tasks. This has naturally led to the passengers' desire to use PEDs from the time they board an aircraft until they exit the aircraft at their destination. In some cases, a transmitting radio is embedded in a PED so that the operation of the transmitter is not apparent to the user. Many of these devices incorporate transmitters such as Bluetooth, Wi-Fi, and cellular phone modems, which may operate without specific actions from the passenger.[7]

While FAA regulations allow aircraft operators to demonstrate when and which PEDs can be safely used, few aircraft operators have allowed use of devices during critical phases of flight (e.g., takeoff and landing). Recognizing that some passengers may wish to use their devices throughout a flight, the FAA is requesting comments regarding the FAA's policies, guidance, and procedures that aircraft operators use to determine whether to allow a particular PED for usage during flight.

Request for Information

Considerations for Comment

The FAA is interested in obtaining comments related to the use of PEDs on aircraft from the viewpoints of aircraft

[4] Wi-Fi is defined as ''wireless local area network (WLAN) products that are based on the Institute of Electrical and Electronics Engineers' (IEEE) 802.11 standards.'' Wi-Fi is a trademark of the Wi-Fi Alliance.

[5] Bluetooth is managed by the Bluetooth Special Interest Group (SIG). The SIG is the body that oversees the development of Bluetooth standards and the licensing of the Bluetooth technologies and trademarks to manufacturers. The SIG is a privately held, not-for-profit trade association founded in September 1998.

[6] RTCA is a private, not-for-profit corporation that functions as a Federal Advisory Committee for the FAA. It develops consensus-based recommendations regarding communications, navigation, surveillance, and air traffic management (CNS/ATM) system issues. See FAA Order 1110.77T, RTCA Inc. (utilized as an Advisory Committee) (Apr. 1, 2011). The following are RTCA recommendations and guidance documents regarding PEDS:

DO–307, *Aircraft Design and Certification for Portable Electronic Device (PED) Tolerance,* issued 10–11–07, and Change 1, issued 12–16–08. Prepared by SC–202.

DO–294C, *Guidance on Allowing Transmitting Portable Electronic Devices (T–PEDs) on Aircraft,* issued 12–16–08. Prepared by SC–202.

DO–233, *Portable Electronic Devices Carried on Board Aircraft,* issued 8–20–96. Prepared by SC–177. Errata issued 8–18–99.

DO–199, *Potential Interference to Aircraft Electronic Equipment from Devices Carried Aboard,* issued 9–16–88. Prepared by SC–156. Supersedes DO–119.

DO–119, *Interference To Aircraft Electronic Equipment From Devices Carried Aboard,* issued 9–16–88. Prepared by SC–88.

[7] This notice does not address flightcrew member use of PEDs during flight. Section 44732 of Title 49 of the United States Code generally prohibits flightcrew member use of PEDs on the flightdeck while the aircraft is being operated.

operators, passengers, and other stakeholders. We are soliciting comments on the following:

- Aircraft operators' concerns, both technical and operational;
- Flight attendants' and pilots' concerns;
- Security concerns;
- Manufacturers and designers of PEDs;
- Passenger perspectives; and
- How the FAA can support the aviation industry in considering how to allow greater use of PEDs.

The FAA has identified the following specific areas for comments.

(1) *Procedures and methods for operators to allow the use of PEDs.* Guidance on the procedures and methods that an operator can use to determine allowance of PEDs is published in AC 91–21–1B. This AC references the industry-developed guidelines of RTCA/DO–233 and RTCA/DO–294C. Those guidelines address testing and analysis procedures for advanced avionics system interference from both transmitting and non-transmitting PEDs.

- What processes and methods are aircraft operators currently using to evaluate PED technology interference?
- How can those procedures and methods be improved?
- Is additional FAA guidance and policy needed?

One concept is for operators to improve the sharing of test and compatibility data, so that the same compatibility testing could be leveraged to support many aircraft operators. Data concerning PED and aircraft compatibility could be used by the operators to analyze incidents involving PED interference.

- Should the industry develop data sharing for this purpose?

(2) *Reliability of aircraft systems.* Future aircraft could be manufactured to be immune to the PED environment. To support commercial aircraft operators' authorization of PED use, the FAA has issued AC 20–164 describing criteria for aircraft manufacturers and modifiers to establish PED-tolerance for new and existing aircraft.

- Is it necessary to establish aircraft certification regulations to require new aircraft to be PED-tolerant?

In addition, many aircraft systems have already qualified for operation in high intensity radiated field environments.

- How can these demonstrations best be leveraged to help an operator allow the use of PEDs?

(3) *Aircraft Immunity to PED Interference.* Some aircraft manufacturers and avionics equipment manufacturers have already demonstrated PED and aircraft system compatibility.

- Should aircraft manufacturers and avionics equipment manufacturers provide documentation of aircraft PED tolerance, aircraft systems that meet RF susceptibility requirements, interference path loss, etc., to the operators to support the operator's PED allowance determination?
- Should it be mandatory that aircraft manufacturers and modifiers provide this information to the operators for new and modified aircraft?

(4) *Promote aircraft-compatible PED transmissions.* The transmissions from PEDs vary widely, making it very difficult for an aircraft operator to discriminate between PEDs that may be acceptable and those that may not.

- Could the consumer electronics industry develop standards for aircraft-friendly PEDs, or aircraft-compatible modes of operation, that would reduce the risk of interference to aircraft systems by defining maximum emissions in designated bands?

(5) *Passenger perspectives on use of PEDs.* Increased access and usage of PEDs may distract passengers during crewmember safety briefings and instructions. In addition, PED usage may have an adverse impact on flight and cabin crew responsibilities and duties. In 2005, the FCC[8] solicited comments on the potential to expand the use of cellular phones in flight and received responses from passengers concerned about the use of cell phones by other passengers. One of the main concerns expressed by the public comment was the fear of passenger disruptions caused by cell phone use in a crowded public conveyance.

- If some PEDs are found to be compatible with aircraft systems, should there be restrictions on the use of PEDs for other reasons?
- Should voice communications using other technologies such as voice over IP be limited or restricted?
- Should aircraft operators be required to publish their PED policies?

(6) *PED article retention risk considerations.* Personal belongings must be stowed for take-off, approach and landing, to reduce the risk of injury from projectiles and to ensure rapid egress in the event of an emergency. Some PEDs are large enough to be of concern for egress, while smaller handheld devices may have risks comparable to a small book.

- If some PEDs are found to be compatible with aircraft systems, should requirements to stow PEDs for takeoff, approach, landing and abnormal conditions exist nonetheless to prevent personal injury?

(7) *Active monitoring for harmful interference.* A handheld device or installed system could be used by the crewmembers to detect harmful interference from PEDs. This could allow the crewmembers to identify problems and instruct passengers to disable devices when they generate harmful signals.

- Should the FAA consider working with industry to develop standards for an active PED monitoring system?

(8) *Technical Challenges.*

- What are the technical, operation, and regulatory challenges commercial aircraft operators face in expanding their PED usage policy?
- What are the technical challenges the aircraft manufacturers, modifiers, and avionics equipment manufacturers see with further PED usage allowance?
- What data and support can they provide to commercial aircraft operators to address these technical challenges?

(9) *Operational Challenges.*

- What are the operational, safety and security challenges and concerns associated with expanding PED usage policy?
- What is needed to alleviate those concerns?

Again, this information must be submitted by October 30, 2012.

Comments Invited

The FAA invites interested persons to submit written comments, data, or views. The agency also invites comments relating to the economic, environmental, energy, or federalism impacts that might result from changes in our current policy. The most helpful comments reference a specific area of concern, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should send only one copy of written comments, or if comments are filed electronically, commenters should submit only one time.

The FAA will file in the docket a summary of all comments it receives. The FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay.

Proprietary or Confidential Business Information: Commenters should not file proprietary or confidential business information in the docket. Such information must be sent or delivered directly to the person identified in the

[8] Federal Communications Commission's Notice of Proposed Rulemaking (NPRM), FCC 04–288, in WT Docket No. 04–435, adopted December 15, 2004, and released February 15, 2005.

FOR FURTHER INFORMATION CONTACT section of this document, and marked as proprietary or confidential. If submitting information on a disk or CD ROM, mark the outside of the disk or CD ROM as proprietary or confidential, and identify electronically within the disk or CD ROM the specific information that is proprietary or confidential.

Under 14 CFR 11.35(b), if the FAA is aware of proprietary information filed with a comment, the Agency does not place it in the docket. It is held in a separate file to which the public does not have access, and the FAA places a note in the docket that it has received it. If the FAA receives a request to examine or copy this information, it treats it as any other request under the Freedom of Information Act (5 U.S.C. 552). The FAA processes such a request under Department of Transportation procedures found in 49 CFR part 7.

Issued in Washington, DC on August 28, 2012.

Susan J.M. Cabler,

Asst. Manager, Aircraft Engineering Division, Aircraft Certification Service.

[Docket No. ATBCB–2012–0003]

RIN 3014–AA40

Medical Diagnostic Equipment Accessibility Standards Advisory Committee

AGENCY: Architectural and Transportation Barriers Compliance Board.

ACTION: Notice of advisory committee meeting.

SUMMARY: The Medical Diagnostic Equipment Accessibility Standards Advisory Committee (Committee) will hold its first meeting on September 27 and 28, 2012.

DATES: The Committee will meet on September 27, 2012, from 10 a.m. to 5 p.m. and on September 28, 2012, from 9 a.m. to 3 p.m.

ADDRESSES: The meeting will be held at the Access Board's Conference Room, 1331 F Street NW., suite 800, Washington, DC 20004–1111.

FOR FURTHER INFORMATION CONTACT: Rex Pace, Office of Technical and Information Services, Architectural and Transportation Barriers Compliance Board, 1331 F Street, NW., suite 1000, Washington, DC 20004–1111. Telephone number (202) 272–0023 (Voice); (202) 272–0052 (TTY). Electronic mail address: *pace@access-board.gov*.

SUPPLEMENTARY INFORMATION: On July 5, 2012, the Architectural and Transportation Barriers Compliance Board (Access Board) established an advisory committee to make recommendations to the Board on matters associated with comments received and responses to questions included in a previously published Notice of Proposed Rulemaking (NPRM) on Medical Diagnostic Equipment Accessibility Standards. See 77 FR 6916 (February 9, 2012). The NPRM and information related to the proposed standards are available on the Access Board's Web site at: *http://www.access-board.gov/medical-equipment.htm*.

The advisory committee will hold its first meeting on September 27 and 28, 2012. The agenda for the meeting includes initial remarks, introduction of committee members, consideration of the committee's charter and operating procedures, discussion of administrative issues, and discussion of issues for potential consideration by the committee. The preliminary meeting agenda, along with information about the committee, is available at the Access Board's Web site (*http://www.access-board.gov/medical-equipment.htm*).

Committee meetings are open to the public and interested persons can attend the meetings and communicate their views. Members of the public will have opportunities to address the committee on issues of interest to them during public comment periods scheduled on each day of the meeting.

The meetings will be accessible to persons with disabilities. An assistive listening system, computer assisted real-time transcription (CART), and sign language interpreters will be provided. Persons attending the meetings are requested to refrain from using perfume, cologne, and other fragrances for the comfort of other participants (see *www.access-board.gov/about/policies/fragrance.htm* for more information). Also, persons wishing to provide handouts or other written information to the committee are requested to provide electronic formats to Rex Pace via email prior to the meetings so that alternate formats can be distributed to committee members.

[Docket No. FRA–2008–0059, Notice No. 6]

RIN 2130–AC37

Railroad Workplace Safety; Adjacent-Track On-Track Safety for Roadway Workers

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Petitions for reconsideration; response status.

SUMMARY: This document provides notice that, due to the complex issues raised in both the petitions for reconsideration of the final rule published November 30, 2011, and the comments received on the petitions, FRA continues to formulate an appropriate response to the petitions and comments. FRA's response will be published as soon as practicable and will be filed in the same docket.

FOR FURTHER INFORMATION CONTACT: Kenneth Rusk, Staff Director, Track Division, Office of Safety Assurance and Compliance, FRA, 1200 New Jersey Avenue SE., RRS–15, Mail Stop 25, Washington, DC 20590 (telephone 202–493–6236); or Anna Winkle, Trial Attorney, Office of Chief Counsel, FRA, 1200 New Jersey Avenue SE., RCC–12, Mail Stop 10, Washington, DC 20590 (telephone 202–493–6166 or 202–493–6052).

SUPPLEMENTARY INFORMATION: On November 30, 2011, FRA published a final rule concerning adjacent-track on-track safety for roadway workers. *See* Docket No. FRA–2008–0059, Notice No. 4 at 76 FR 74586. In response, FRA received two petitions for reconsideration (Petitions) that raised substantive issues. One of the Petitions included a request for a delay in the effective date of the final rule until July 1, 2013.

On March 8, 2012, FRA published a final rule delaying the effective date of the November 30, 2011, final rule until July 1, 2013, and establishing a 60-day comment period in order to permit interested parties an opportunity to respond to the Petitions. *See* 77 FR 13978. FRA received five comments on the Petitions, some of which raise additional substantive issues or provide further detailed information on the issues already raised. The Petitions and comments on the Petitions are available for review in the docket for this rulemaking, and have been assigned identification numbers of FRA–2008–0059–0031 and FRA–2008–0059–0032, for the Petitions, and identification numbers of FRA–2008–0059–0034, FRA–2008–0059–0035, FRA–2008–0059–0036, FRA–2008–0059–0037, and FRA–2008–0059–0038, for the comments on the Petitions.

Due to the complex issues raised and extensive estimates provided in the Petitions and comments, FRA continues to formulate an appropriate response. FRA's response to the Petitions and comments will be published as soon as practicable and will be filed in the same docket.

Issued in Washington, DC, on August 27, 2012.

Jo Strang,

Associate Administrator for Railroad Safety/ Chief Safety Officer.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 120604138–2289–01]

RIN 0648–BC21

Magnuson-Stevens Fishery Conservation and Management Act Provisions; Fisheries of the Northeastern United States; Atlantic Surfclam and Ocean Quahog Fishery

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes to re-open a portion of the Georges Bank Closed Area to the harvest of Atlantic surfclams and ocean quahogs. The area has been closed since 1990 due to the presence of toxins known to cause paralytic shellfish poisoning. The proposed re-opening is based on a request from the Mid-Atlantic Fishery Management Council and the recent adoption of a testing protocol into the National Shellfish Sanitation Program.

DATES: Written comments must be received no later than 5 p.m. eastern standard time, on October 1, 2012.

ADDRESSES: You may submit comments, identified by NOAA–NMFS–2012–0121, by any of the following methods:

- *Electronic Submissions:* Submit all electronic public comments via the Federal e-Rulemaking portal *http://www.regulations.gov.*
- *Fax:* (978) 281–9177, Attn: Jason Berthiaume.
- *Mail:* Daniel S. Morris, Acting Regional Administrator, NMFS, Northeast Regional Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope: ''Comments on Proposed Opening of GB PSP Closed Area.''

Instructions: All comments received are part of the public record and will generally be posted to *http://www.regulations.gov* without change. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

NMFS will accept anonymous comments. Attachments to electronic comments will be accepted via Microsoft Word, Microsoft Excel, WordPerfect, or Adobe PDF file formats only.

FOR FURTHER INFORMATION CONTACT: Jason Berthiaume, Fishery Management Specialist, phone (978) 281–9177, fax (978) 281–9135.

SUPPLEMENTARY INFORMATION:

Background

The Georges Bank (GB) Closed Area, located in the Exclusive Economic Zone east of 69°00′ W. long. and south of 42°20′ N. lat., has been closed to the harvest of surfclams and ocean quahogs since 1990 due to red tide blooms that cause paralytic shellfish poisoning (PSP). The closure was implemented based on advice from the U.S. Food and Drug Administration (FDA) after samples tested positive for toxins (saxitoxins) that cause PSP. These toxins are produced by the alga Alexandrium fundyense, which can form blooms commonly referred to as red tides, or harmful algal blooms, and can produce toxins that accumulate in water column filter-feeding shellfish. Shellfish contaminated with the toxin, if eaten in large enough quantity, can cause illness or death in humans.

Due to inadequate testing or monitoring of this area for the presence of PSP-causing toxins, the closure was made permanent in 1999, under

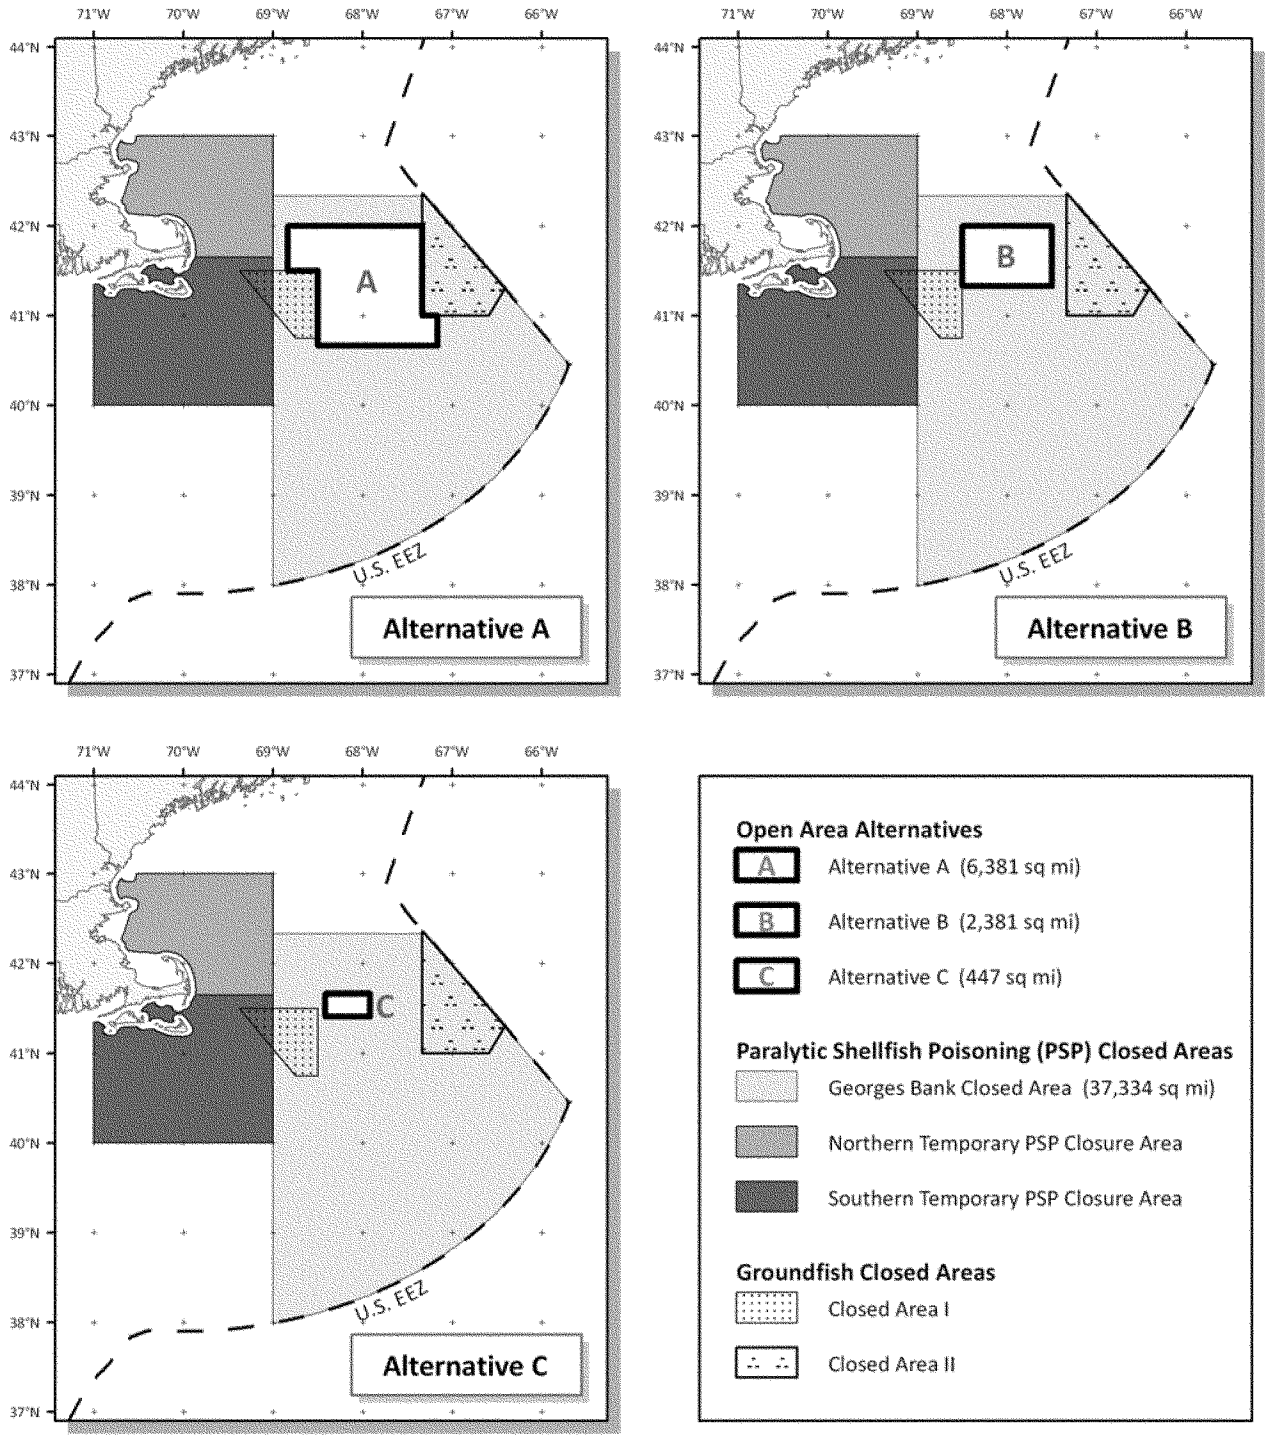
Amendment 12 to the Atlantic Surfclam and Ocean Quahog Fishery Management Plan (FMP). Since the implementation of the closure, NOAA's National Ocean Service has provided grants to the FDA, the states of Maine, New Hampshire, and Massachusetts, and a clam industry representative to collect water and shellfish samples from Federal waters off southern New England. NMFS has also issued exempted fishing permits (EFPs) since 2008 to surfclam and ocean quahog vessels to conduct research in the closure area. Testing of clams on GB by the FDA in cooperation with NMFS and the fishing industry under the EFPs demonstrate that PSP toxin levels have been well below the regulatory limit established for public health safety (FDA 2010). The FDA and NMFS also developed a Protocol for Onboard Screening and Dockside Testing in Molluscan Shellfish that is designed to test and verify that clams harvested from GB are safe. The protocol was formally adopted into the National Shellfish Sanitation Program at the October 2011 Interstate Shellfish Sanitation Conference.

On June 30, 2010, NMFS published a similar proposal in the **Federal Register** (75 FR 37745) to re-open a portion of the GB Closed Area. This proposed rule was later withdrawn due to public comments that opposed re-opening the GB Closed Area without having a testing protocol in place. Now that the protocol has been formally adopted, NMFS is proposing to re-open a portion of the GB Closed Area with the requirement that the protocol be used on all fishing trips into the area.

Three areas are being considered for re-opening. To allow the industry to access as much of the area as possible and to generate public comment on all options, NMFS is proposing to re-open the largest of the three areas (Alternative A). The Alternative A area reflects the largest area that was previously permitted for sampling under an EFP, and the other alternatives areas are smaller subsets of the larger Alternative A area. The area proposed for re-opening is defined in the table below and the remaining portion of the GB Closed Area would remain closed.

BILLING CODE 3510–22–P

Coordinate of the Area Proposed for Opening (Alternative A)		
Point	Latitude	Longitude
1	42°00'	68°50'
2	42°00'	67°20'
3	41°00'	67°20'
4	41°00'	67°10'
5	40°40'	67°10'
6	40°40'	68°30'
7	41°30'	68°30'
8	41°30'	68°50'



BILLING CODE 3510–22–C

There have been no recent PSP toxin measurements recorded above regulatory limits, and PSP toxin monitoring would be conducted under the terms of the protocol for all trips into the area. Further, NMFS has the authority to close any area to harvesting of surfclams and ocean quahogs to prevent contaminated shellfish from entering the market. Any future closures or openings within the GB Closed Area will be based upon PSP toxin testing results conducted under the terms of the protocol, the advice of the FDA, and the most current information available.

NMFS proposes to re-open the portion of the GB Closed Area to the harvest of surfclams and ocean quahogs, under its authority at § 648.76(c). However, we will continue to defer to the FDA in matters of public health and, should we receive new advice from the FDA, we will reconsider which portion of the GB Closed Area should be opened for harvesting.

In addition, while NMFS proposes to re-open a portion of the GB Closed Area as requested by the Mid-Atlantic Fishery Management Council, NMFS also recognizes that red-tide events can vary inter-annually. For that reason, NMFS has prepared an environmental assessment (EA) that analyzes the proposed re-opening and two smaller area alternatives within the GB Closed

Area, to cover the possibility that the proposed opening could shift or vary, depending on a change in conditions or if new information becomes available. Given the temporal nature of PSP conditions, NMFS is seeking public comment on whether this proposed re-opening should be implemented and, if so, which of the three areas should be re-opened (Alternatives A, B, or C).

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the Assistant Administrator for Fisheries, NOAA, has determined that this proposed rule is consistent with the Atlantic Surfclam and Ocean Quahog FMP, other provisions of the Magnuson-Stevens Act, and other applicable law, subject to further consideration after public comment.

NMFS prepared a draft EA for this action that analyzes the impacts of this proposed rule. A copy of the draft EA is available from the Federal e-Rulemaking portal *http://www.regulations.gov.* Type ''NOAA–NMFS–2012–0121'' in the Enter Keyword or ID field and click search. A copy of the EA is also available upon request from NMFS Northeast Acting Regional Administrator, Daniel S. Morris (see **ADDRESSES**).

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is as follows.

The proposed measures would only affect vessels holding an active Federal open access surfclam and/or ocean quahog permit. In 2011, there were 47 Federal open-access surfclam and/or ocean quahog permitted vessels that landed surfclams and/or ocean quahogs. All of these vessels fall within the SBA's definition of a small business. This action proposes to re-open an area that has previously been closed. The surfclam and ocean quahog fishery is managed under an Individual Transferable Quota system, and, since overall quotas are not being changed as a result of this action, no additional harvest would be permitted with this action. Participating vessels would still be able to fish in any of the existing areas open to the harvest of surfclams and ocean quahogs. Those vessels that may fish in the area proposed to be opened may experience increased operational costs, if they choose to fish there; however, these costs may be offset due to increased productivity and efficiency of the fishing effort because of greater abundance of surfclams and ocean quahogs in the GB Closed Area. Regardless, any increased costs would not be considered significant.

In addition, for the past 5 years, NMFS has issued EFPs allowing the harvest of surfclams using the FDA-approved Protocol for Onboard Screening and Dockside Testing in Molluscan Shellfish. Because NMFS has issued EFPs to harvest surfclams within the GB Closure Area, and given that surfclams are more valuable than ocean quahogs, it is likely that vessels would continue this trend of targeting surfclams from the GB Closed Area. Due to the seasonal variability of PSP toxin levels, any or all of the areas associated with this action could open or close based on PSP conditions. Given this uncertainty as to whether the area would remain open, it is not anticipated that there would be an overall increase in participation in the surfclam and ocean quahog fishery due to the opening of this area. Therefore, because this action only proposes to re-open an area that has previously been closed, and because no net change in fishing effort, participation in the fishery, or fishery expenses is expected, this action will not have a significant economic effect on a substantial number of small entities. As a result, an initial regulatory flexibility analysis is not required and none has been prepared.

List of Subjects in 50 CFR Part 648

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: August 28, 2012.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, performing the functions and duties of the Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 648 is proposed to be amended as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. In § 648.76, paragraph (a)(4) is revised to read as follows:

§ 648.76 Closed areas.

(a) * * *

(4) *Georges Bank.* The paralytic shellfish poisoning (PSP) contaminated area, which is located on Georges Bank, and is located east of 69° W. long., and south of 42°20′ N., lat., is closed to the harvest of surfclams and ocean quahogs. A portion of the Georges Bank Closed Area is open to harvest surfclams and ocean quahogs provided the vessel complies with the requirements specified in paragraph (a)(4)(i) of this section. The open portion of the Georges Bank Closed Area is defined by straight lines connecting the following points in the order stated:

OPEN PORTION OF THE GEORGES BANK CLOSED AREA

Point	N. Latitude	W. Longitude
1	42°00′	68°50′
2	42°00′	67°20′
3	41°00′	67°20′
4	41°00′	67°10′
5	40°40′	67°10′
6	40°40′	68°30′
7	41°30′	68°30′
8	41°30′	68°50′

(i) *Requirements for Vessels Fishing in the Open Portion of the Georges Bank Closed Area.* A vessel may fish in the open portion of the Georges Bank Closed Area as specified in this paragraph (a)(4), provided it complies with the following terms and conditions:

(A) A valid letter of authorization issued by the Regional Administrator must be onboard the vessel; and

(B) The vessel must adhere to the terms and conditions of the PSP testing protocol as adopted into the National Shellfish Sanitation Program by the Interstate Shellfish Sanitation Conference. All surfclams and ocean quahogs harvested from the area must be handled in accordance with the terms and conditions of the protocol from the first point of harvest through completion of testing and release by the State Shellfish Control Authority as required by the PSP testing protocol; and

(C) Prior to leaving port at the start of a fishing trip, the vessels' owner or operator must declare its intent to fish in the area through the vessel's vessel monitoring system.

Vol. 77, No. 170
Friday, August 31, 2012

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

August 27, 2012.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), *OIRA_Submission@OMB.EOP.GOV* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–8958.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Agricultural Research Service

Title: Electronic Mailing List Subscription Form—Water Quality Information Center.

OMB Control Number: 0518–0045.

Summary of Collection: The National Agricultural Library's Water Quality Information Center (WQIC) currently maintains an on-line announcement list. The current voluntary ''Electronic Mailing List Subscription Form'' gives individuals interested in the subject area of water quality and agriculture an opportunity to receive and post messages to this list. The Electronic Mailing List Subscription is available for completion on-line at the Web site of the Water Quality Information Center. The authority for the National Agricultural Library to collect the information can be found at CFR, Title 7, Volume 1, Part 2 Subpart K, Section 2.65 (92).

Need and Use of the Information: The information requested on the form includes: name, email address, job title, work affiliation, and topics of interest. Data collected using the form will help WQIC determine a person's eligibility to join the announcement list. In order to make sure people have a significant interest in the topic area, it is necessary to collect the information. WQIC will use the collected information to approve subscription to the Enviro-News on-line announcement list.

Description of Respondents: Individuals or households; Business or other for-profit; Not-for-profit institutions; Federal Government; State, Local, or Tribal Government.

Number of Respondents: 60.

Frequency of Responses: Reporting: On occasion.

Total Burden Hours: 1.

Ruth Brown,

Departmental Information Collection Clearance Officer.

Forest Service

Olympic Peninsula Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Olympic Peninsula Resource Advisory Committee will meet in Olympia, WA. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with the title II of the Act. The meeting is open to the public. The purpose of the meeting is to review and recommend projects authorized under title II of the Act.

DATES: The meeting will be held September 12, 2012, from 9:00 a.m. until 4:00 p.m.

ADDRESSES: The meeting will be held at Olympic National Forest, Supervisor's Office, in the Willaby Conference Room, located at 1835 Black Lake Blvd. SW., Olympia, WA 98512. A conference call line will be made available for members of the public who would like to call in. For conference call line access information, please contact Grace Haight at 360–956–2303.

Written comments may be submitted as described under Supplementary Information. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at Olympic National Forest, Supervisor's Office, located in Olympia, WA. Please call ahead to Grace Haight at 360–956–2303 to view comments.

FOR FURTHER INFORMATION CONTACT: Donna Nemeth, Public Affairs Officer, Olympic National Forest, Supervisor's Office, 360–956–2274, *dnemeth@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8:00 a.m. and 8:00 p.m.,

Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The following business will be conducted: The Olympic Peninsula Resource Advisory Committee will review 2013 Title II project proposals and make funding recommendations. More information can be viewed at *http://www.fs.usda.gov/detail/olympic/workingtogether/advisorycommittees?cid=fsbdev3_049547.*

Anyone who would like to bring related matters to the attention of the committee may file written statements with the committee staff before or after the meeting. The agenda will include time for people to make oral statements of three minutes or less. Individuals wishing to make an oral statement should request in writing by September 5, 2012 to be scheduled on the agenda. Written comments and requests for time for oral comments must be sent to Olympic National Forest, 1835 Black Lake Blvd. SW., Olympia, WA 98512, attention Grace Haight, or by email to *gahaight@fs.fed.us* or via facsimile to 360–956–2330. A summary of the meeting will be posted at *http://www.fs.usda.gov/detail/olympic/workingtogether/advisorycommittees?cid=fsbdev3_049547* within 21 days of the meeting.

Meeting Accommodations: If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpreting, assistive listening devices or other reasonable accommodation for access to the facility or proceedings by contacting the person listed under **FOR FURTHER INFORMATION CONTACT.** All reasonable accommodation requests are managed on a case by case basis. Wheelchair accessibility is available at the front entrance of the Supervisor's Office.

Dated: August 24, 2012.

Amanda McAdams,

Acting Forest Supervisor.

Rural Business-Cooperative Service

Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Rural Business-Cooperative Service.

ACTION: Proposed collection; Comments requested.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Rural Business-Cooperative Service's (RBS) intention to request an extension for a currently approved information collection in support of the program for Business and Industry Guaranteed Loans.

DATES: Comments on this notice must be received by October 30, 2012 to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: David Lewis, Business and Industry Loan Servicing Branch, Rural Business-Cooperative Service, U.S. Department of Agriculture, STOP 3224, 1400 Independence Avenue SW., Washington, DC 20250–3224, telephone (202) 690–0797, or by email to *david.lewis@wdc.usda.gov.*

SUPPLEMENTARY INFORMATION:

Title: Business and Industry Guaranteed Loan Servicing.

OMB Number: 0570–0016.

Expiration Date of Approval: November 30, 2012.

Type of Request: Extension of Paperwork Burden.

Abstract: The purpose of the Business and Industry Guaranteed Loan Program is to improve, develop, or finance business, industry, and employment and to improve the economic and environmental climate in rural communities. This purpose is achieved by bolstering the existing private credit structure through the guarantee of quality loans which will provide lasting community benefits. The information requested is necessary and vital in order for the Agency to make prudent credit and financial decisions.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average .85 hours per response.

Respondents Number: 3,800.

Estimated Number of Respondents: 3,800.

Estimated Number of Responses per Respondent: 1.

Estimated Number of Responses: 23,703.

Estimated Total Annual Burden on Respondents: 20,452.

Copies of this information collection can be obtained from Jeanne Jacobs,

Regulations and Paperwork Management Branch at (202) 692–0040.

Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of RBS, including whether the information will have practical utility; (b) the accuracy of RBS's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to Jeanne Jacobs, Regulations and Paperwork Management Branch, U.S. Department of Agriculture, Rural Development, STOP 0742, 1400 Independence Ave. SW., Washington, DC 20250.

All responses to this notice will be summarized and included in the request for the Office of Management and Budget (OMB) approval. All comments will also become a matter of public record.

Dated: August 27, 2012.

John C. Padalino,

Acting Administrator, Rural Business-Cooperative Service.

[FR Doc. 2012–21597 Filed 8–30–12; 8:45 am]

BILLING CODE 3410–XY–P

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: U.S. Census Bureau.

Title: American Community Survey Methods Panel Tests.

OMB Control Number: 0607–0936

Form Number(s): ACS–1, ACS–1(SP), ACS–1PR, ACS–1PR(SP), ACS CATI(HU), ACS CAPI(HU), ACS (Internet).

Type of Request: Revision of a currently approved collection.

Burden Hours: 276,645.

Number of Respondents: 444,150.

Average Hours per Response: 34 minutes.

Needs and Uses: The U.S. Census Bureau requests authorization from the Office of Management and Budget (OMB) to conduct the American Community Survey (ACS) Methods Panel tests. The ACS collects detailed socioeconomic data from about 3.5 million households in the United States and 36,000 in Puerto Rico each year. Resulting tabulations from that data collection are provided on a yearly basis. The ACS allows the Census Bureau to provide timely and relevant housing and socio-economic statistics for even small levels of geography.

An ongoing data collection effort with an annual sample of this magnitude requires continuous research, testing and evaluations aimed at improving questionnaire content and data collection operations. The ACS Methods Panel is a research program that is designed to address and respond to emerging issues and survey needs. During the 2013–2015 period, the Methods Panel may include testing methods for increasing survey efficiencies, reducing survey cost, lessening respondent burden, and improving response rates. Testing may also include methods that might increase data quality. At this time, plans are in place to propose several tests: a 2013 Questionnaire Design Test, a 2015 ACS Content Test, and a series of Internet tests. Because we cannot anticipate issues that may arise in the production survey or from the proposed studies, we may conduct additional testing as needed. Additional testing would focus on methods for reducing data collection costs, improving data quality or testing new questions that have an urgent need to be included on the ACS.

In September through December 2010, the Census Bureau conducted the 2010 ACS Content Test that included testing revisions to current ACS questions as well as two new questions (Computer ownership and Internet usage, and Parental Place of Birth). During the Content Test, the Census Bureau determined that the ACS paper questionnaire did not contain enough space to accommodate certain configurations of proposed content changes. While selected content from the test does fit on the current form, we need to be proactive to accommodate future content requests on the ACS mail questionnaire. In the 2013 ACS Questionnaire Design Test, we will study the impact of a longer (36-page) questionnaire against our current 28-page form. The experimental treatments are noted below, but we have not finalized the forms for this test at the time. We will also study whether changing the size of the form to a standard size (8.5 x 11) booklet has an impact on response, compared to both the 28- and 36-page forms. The results of this testing will help the Census Bureau to decide which questionnaire format change has the least negative impact on response and data quality.

Because the 8.5×11 questionnaire will be roughly 44-pages long, we cannot fold the form before mailing it as we do with the current 36-page questionnaire. Thus, this test will also include an experimental panel where a 36-page questionnaire is mailed flat (without folding) so that we can cleanly determine the effect of questionnaire size versus folding.

This test will also include several changes to make the questionnaire more compatible with optical character recognition software, including altering the response box formats for numeric write-in fields to allow them to be captured automatically rather than keyed. This part of the test will allow us to examine any changes to response behavior as well as to estimate anticipated cost savings from the automatic capture. Lastly, this test will include a test of variations in the relationship question and the marital status series per the OMB initiative to ensure these questions are inclusive of all relationship types and partnerships. Based on the results of this testing, a secondary, follow-up test may be needed to refine the questionnaire identified as the best alternative from this test.

Second, in response to Federal agencies' requests for new and revised ACS questions, the Census Bureau plans to conduct the 2015 ACS Content Test. We will determine the changes to the current ACS content and the addition of new content through the OMB Interagency Committee for the ACS in 2013. OMB must approve requests for content changes prior to testing. The objective of the 2015 ACS Content Test, for both new and existing questions, is to determine the impact of changing question wording, response categories, and redefinition of underlying constructs on the quality of the data collected. The Census Bureau proposes to evaluate changes to the questions by comparing the revised questions to the current ACS questions, or for new questions, to compare the performance of question versions to each other as well as to other well-known sources of such information. We plan to design the test similar to past content tests, using two experimental panels to compare current versus revised content. We will

also use a reinterview to help generate measures of response error.

Third, we want to implement several iterative ACS Internet tests based on issues that arose from two ACS Internet tests conducted in 2011. Both of these tests studied the impact of different notifications of an Internet option in the survey invitations. Production ACS will begin collecting data using the Internet in January 2013. One problem detected in the 2011 tests was the impact to item nonresponse for questions in the later parts of the survey due to Internet break-offs. The Internet tests in 2013–2015 will look at potential ways to restructure messaging and change the Internet design to help reduce break-offs and encourage response in a timely manner. Testing will also include a reexamination of the potential for using the Internet to collect data in Puerto Rico, since results from the 2011 test did not show any distinct advantage. Testing plans are largely undefined at this point, but we will submit more detailed information once plans are solidified.

Other considerations for testing include a second Content Reinterview Survey to build upon the results from the first Content Reinterview Survey that is currently in the field due to the introduction of the web mode and content changes. We are also considering testing designed to improve data collection operations in Group Quarters, such as the introduction of a web option and developing a separate questionnaire for institutionalized populations. There are no specific test plans for these projects at this point.

Other testing is being considered, but the specific details of these tests are not known at this time. However, these tests cover similar testing topics of content and methods to address emergent issues or needs. The tests may be conducted on both residential households or group quarters.

The Census Bureau is still in the early stages for planning and implementing the proposed tests. Subsequently the materials to be used in the tests have not been developed. For changes to the tests described in this justification, the Census Bureau will submit a non-substantive change request documenting the change.

The ACS must collect data on a continual basis and aggregate one, three, or five years worth of data to release data for all states, Congressional districts, counties, cities, and small towns down to the census tract and block group level. Essentially the ACS collects data every day of the year, either by mail, Internet (beginning in January 2013), telephone interviews or personal-visit interviews. There are many federal programs that distribute funds based on population and income data from the Census Bureau, including data from the ACS. Federal agencies use ACS data to determine appropriate funding for state and local governments through block grants. State and local governments use ACS data for program planning, administration and evaluation. Thus, the reliability and the quality of the data must remain high in order for the users to rely on the data for funding decisions.

So that the Census Bureau can provide critical information to governments and the private sector, the ACS collects comprehensive demographic, social, economic, and housing statistics covering every community in the nation. The ACS provides a continuous stream of updated information for states and local areas on an annual basis, and has revolutionized the ways the country uses data to understand communities and plan for the future.

ACS Methods Panel testing, such as the Questionnaire Design Test, Internet Tests, and the 2015 Content Test, provide a mechanism to investigate ways to reduce or at least maintain data collection costs and improve the quality of the data.

Affected Public: Individuals or households.

Frequency: One time.

Respondent's Obligation: Mandatory.

Legal Authority: Title 13, United States Code, Sections 141, 193, and 221.

OMB Desk Officer: Brian Harris-Kojetin, (202) 395–7314.

Copies of the above information collection proposal can be obtained by calling or writing Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482–0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *jjessup@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to Brian Harris-Kojetin, OMB Desk Officer either by fax (202–395–7245) or email (*bharrisk@omb.eop.gov*).

Dated: August 28, 2012.

Glenna Mickelson,

Management Analyst, Office of the Chief Information Officer.

International Trade Administration

[A–533–843, A–570–901, C–533–844]

Certain Lined Paper Products From India and the People's Republic of China: Continuation of Antidumping and Countervailing Duty Orders

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the Department of Commerce (the Department) that revocation of the antidumping duty (AD) orders on certain lined paper products (lined paper) from India and the People's Republic of China (PRC) would likely lead to continuation or recurrence of dumping, that revocation of the countervailing duty (CVD) order on lined paper from India would likely lead to continuation or recurrence of a countervailable subsidy, and the determinations by the International Trade Commission (the ITC) that revocation of these AD and CVD orders would likely lead to a continuation or recurrence of material injury to an industry in the United States, the Department is publishing this notice of the continuation of these AD orders and CVD order.

DATES: *Effective Date:* August 31, 2012.

FOR FURTHER INFORMATION CONTACT: James Terpstra (AD orders) or Eric Greynolds (CVD order), AD/CVD Operations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–3965, and (202) 482–6071, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 1, 2011, the Department initiated and the ITC instituted sunset reviews of the AD and CVD orders on lined paper from India, and the AD order on lined paper from the PRC pursuant to sections 751(c) and 752 of the Tariff Act of 1930, as amended (the Act).[1] As a result of its reviews, the Department found that revocation of the AD orders would likely lead to

[1] *See Initiation of Five-Year (''Sunset'') Review,* 76 FR 45778 (August 1, 2011) and *Certain Lined Paper School Supplies From China, India, and Indonesia—Institution of Five-Year Reviews Concerning the Countervailing Duty Orders on Certain Lined Paper School Supplies From India and Indonesia and the Antidumping Duty Orders on Certain Lined Paper School Supplies From China, India, and Indonesia,* 76 FR 45851 (August 1, 2011).

continuation or recurrence of dumping and that revocation of the CVD order would likely lead to continuation or recurrence of a countervailable subsidy, and notified the ITC of the margins of dumping and the countervailable subsidy rates likely to prevail were the orders revoked.[2]

On August 24, 2012, the ITC published its determination, pursuant to section 751(c) of the Act, that revocation of the AD and CVD orders on lined paper from India and the PRC would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time.[3]

Scope of the Orders

The products covered by these AD and CVD orders include certain lined paper products, typically school supplies,[4] composed of or including paper that incorporates straight horizontal and/or vertical lines on ten or more paper sheets,[5] including but not limited to such products as single- and multi-subject notebooks, composition books, wireless notebooks, looseleaf or glued filler paper, graph paper, and laboratory notebooks, and with the smaller dimension of the paper measuring 6 inches to 15 inches (inclusive) and the larger dimension of the paper measuring 8¾ inches to 15 inches (inclusive). Page dimensions are measured size (not advertised, stated, or ''tear-out'' size), and are measured as they appear in the product (*i.e.,* stitched and folded pages in a notebook are measured by the size of the page as it appears in the notebook page, not the size of the unfolded paper). However, for measurement purposes, pages with tapered or rounded edges shall be measured at their longest and widest points. Subject lined paper products may be loose, packaged or bound using any binding method (other than case bound through the inclusion of binders board, a spine strip, and cover wrap). Subject merchandise may or may not contain any combination of a front cover, a rear cover, and/or backing of any composition, regardless of the inclusion of images or graphics on the cover, backing, or paper. Subject merchandise is within the scope of these orders whether or not the lined paper and/or cover are hole punched, drilled, perforated, and/or reinforced. Subject merchandise may contain accessory or informational items including but not limited to pockets, tabs, dividers, closure devices, index cards, stencils, protractors, writing implements, reference materials such as mathematical tables, or printed items such as sticker sheets or miniature calendars, if such items are physically incorporated, included with, or attached to the product, cover and/or backing thereto.

Specifically excluded from the scope of these orders are:

- Unlined copy machine paper;
- Writing pads with a backing (including but not limited to products commonly known as ''tablets,'' ''note pads,'' ''legal pads,'' and ''quadrille pads''), provided that they do not have a front cover (whether permanent or removable). This exclusion does not apply to such writing pads if they consist of hole-punched or drilled filler paper;
- Three-ring or multiple-ring binders, or notebook organizers incorporating such a ring binder provided that they do not include subject paper;
- Index cards;
- Printed books and other books that are case bound through the inclusion of binders board, a spine strip, and cover wrap;
- Newspapers;
- Pictures and photographs;
- Desk and wall calendars and organizers (including but not limited to such products generally known as ''office planners,'' ''time books,'' and ''appointment books'');
- Telephone logs;
- Address books;
- Columnar pads & tablets, with or without covers, primarily suited for the recording of written numerical business data;
- Lined business or office forms, including but not limited to: preprinted business forms, lined invoice pads and paper, mailing and address labels, manifests, and shipping log books;
- Lined continuous computer paper;
- Boxed or packaged writing stationery (including but not limited to products commonly known as ''fine business paper,'' ''parchment paper,'' and ''letterhead''), whether or not containing a lined header or decorative lines;
- Stenographic pads (steno pads), Gregg ruled,[6] measuring 6 inches by 9 inches;

Also excluded from the scope of these orders are the following trademarked products:

- Fly™ lined paper products: A notebook, notebook organizer, loose or glued note paper, with papers that are printed with infrared reflective inks and readable only by a Fly™ pen-top computer. The product must bear the valid trademark Fly™.[7]
- Zwipes™: A notebook or notebook organizer made with a blended polyolefin writing surface as the cover and pocket surfaces of the notebook, suitable for writing using a specially-developed permanent marker and erase system (known as a Zwipes™ pen). This system allows the marker portion to mark the writing surface with a permanent ink. The eraser portion of the marker dispenses a solvent capable of solubilizing the permanent ink allowing the ink to be removed. The product must bear the valid trademark Zwipes™.[8]
- FiveStar® Advance™: A notebook or notebook organizer bound by a continuous spiral, or helical, wire and with plastic front and rear covers made of a blended polyolefin plastic material joined by 300 denier polyester, coated on the backside with PVC (poly vinyl chloride) coating, and extending the entire length of the spiral or helical wire. The polyolefin plastic covers are of specific thickness; front cover is 0.019 inches (within normal manufacturing tolerances) and rear cover is 0.028 inches (within normal manufacturing tolerances). Integral with the stitching that attaches the polyester spine covering, is captured both ends of a 1″ wide elastic fabric band. This band is located 2⅜″ from the top of the front plastic cover and provides pen or pencil storage. Both ends of the spiral wire are cut and then bent backwards to overlap with the previous coil but specifically outside the coil diameter but inside the

[2] *See Final Results of Expedited Sunset Review of Antidumping Duty Orders: Lined Paper Products From India, Indonesia, and the People's Republic of China,* 76 FR 76123 (December 6, 2011) (*Expedited Sunset*). In *Expedited Sunset,* the Department incorrectly noted the case number for the AD order on lined paper from the PRC as ''A–579–901.'' The correct AD case number is ''A–570–901.'' *See also Final Results of Expedited Sunset Review of Countervailing Duty Order: Certain Lined Paper Products From India,* 76 FR 76147 (December 6, 2011).

[3] *See Certain Lined Paper School Supplies From China, India, and Indonesia,* 77 FR 51570 (August 24, 2012). *See also Certain Lined Paper School Supplies from China, India, and Indonesia,* Inv. Nos. 701–TA–442–443 and 731–TA–1095–1097 (Review), USITC Publication 4344 (August 2012). With regard to the AD and CVD orders on lined paper from Indonesia, the ITC determined that the revocation of those orders would not be likely to lead to the continuation or recurrence of material injury to an industry in the United States.

[4] For purposes of this scope definition, the actual use or labeling of these products as school supplies or non-school supplies is not a defining characteristic.

[5] There shall be no minimum page requirement for looseleaf filler paper.

[6] ''Gregg ruling'' consists of a single- or double-margin vertical ruling line down the center of the page. For a six-inch by nine-inch stenographic pad, the ruling would be located approximately three inches from the left of the book.

[7] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

[8] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

polyester covering. During construction, the polyester covering is sewn to the front and rear covers face to face (outside to outside) so that when the book is closed, the stitching is concealed from the outside. Both free ends (the ends not sewn to the cover and back) are stitched with a turned edge construction. The flexible polyester material forms a covering over the spiral wire to protect it and provide a comfortable grip on the product. The product must bear the valid trademarks FiveStar® Advance™.[9]

- FiveStar Flex™: A notebook, a notebook organizer, or binder with plastic polyolefin front and rear covers joined by 300 denier polyester spine cover extending the entire length of the spine and bound by a 3-ring plastic fixture. The polyolefin plastic covers are of a specific thickness; front cover is 0.019 inches (within normal manufacturing tolerances) and rear cover is 0.028 inches (within normal manufacturing tolerances). During construction, the polyester covering is sewn to the front cover face to face (outside to outside) so that when the book is closed, the stitching is concealed from the outside. During construction, the polyester cover is sewn to the back cover with the outside of the polyester spine cover to the inside back cover. Both free ends (the ends not sewn to the cover and back) are stitched with a turned edge construction. Each ring within the fixture is comprised of a flexible strap portion that snaps into a stationary post which forms a closed binding ring. The ring fixture is riveted with six metal rivets and sewn to the back plastic cover and is specifically positioned on the outside back cover. The product must bear the valid trademark FiveStar Flex™.[10]

Currently, merchandise subject to these orders is typically imported under headings 4810.22.5044, 4811.90.9050, 4820.10.2010, 4820.10.2020, 4820.10.2030, 4820.10.2040, 4820.10.2060, and 4820.10.4000 of the Harmonized Tariff Schedule of the United States (HTSUS). The tariff classifications are provided for convenience and customs purposes; however, the written description of the scope of the orders is dispositive.

Since the issuance of the PRC AD order, the Department has clarified the scope of that order in response to numerous scope inquiries. In addition, on September 23, 2011, the Department revoked, in part, the PRC AD order with respect to FiveStar® Advance™ notebooks and notebook organizers without PVC coatings.[11]

Continuation of the Orders

As a result of the determinations by the Department and the ITC that revocation of these AD and CVD orders would likely lead to continuation or recurrence of dumping or a countervailable subsidy, and of material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, the Department hereby orders the continuation of the AD and CVD orders on lined paper from India and the AD order on lined paper from the PRC.

U.S. Customs and Border Protection will continue to collect cash deposits at the rates in effect at the time of entry for all imports of subject merchandise. The effective date of the continuation of these orders is the date of publication in the **Federal Register** of this notice of continuation. Pursuant to section 751(c)(2) of the Act, the Department intends to initiate the next five-year review of these finding/orders not later than 30 days prior to the fifth anniversary of the effective date of the continuations.

These five-year (sunset) reviews and notice are in accordance with section 751(c) of the Act and published pursuant to sections 751(c) and 777(i)(1) of the Act, as well as 19 CFR 351.218(f)(4).

Dated: August 24, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

Certain Lined Paper Products From Indonesia: Revocation of Antidumping and Countervailing Duty Orders

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the International Trade Commission (the ITC) that revocation of the antidumping duty (AD) and countervailing duty (CVD) orders on certain lined paper products (lined paper) from Indonesia would not be likely to lead to the continuation or recurrence of material injury to an industry in the United States, the Department of Commerce (the Department) is revoking these AD and CVD orders.

DATES: *Effective Date:* September 28, 2011.

FOR FURTHER INFORMATION CONTACT: Mary Kolberg or Nancy Decker, AD/CVD Operations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–1785 or (202) 482–0196, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 1, 2011, the Department initiated and the ITC instituted sunset reviews of the AD and CVD orders on lined paper from Indonesia pursuant to sections 751(c) and 752 of the Tariff Act of 1930, as amended (the Act), respectively.[1] As a result of its reviews, the Department found that revocation of the AD order would likely lead to continuation or recurrence of dumping and that revocation of the CVD order would likely lead to continuation or recurrence of subsidization, and notified the ITC of the margins of dumping and the subsidy rates likely to prevail were the orders revoked.[2]

On August 24, 2012, the ITC published its determination, pursuant to section 751(c) of the Act, that revocation of the AD and CVD orders on lined paper from Indonesia would not be likely to lead to the continuation or recurrence of material injury within a reasonably foreseeable time.[3]

[3] *See Certain Lined Paper School Supplies From China, India, and Indonesia,* 77 FR 51570 (August 24, 2012). *See also Certain Lined Paper School Supplies from China, India, and Indonesia,* Inv. Nos. 701–TA–442–443 and 731–TA–1095–1097 (Review), USITC Publication 4344 (August 2012).

Scope of the Orders

The products covered by these orders include certain lined paper products, typically school supplies,[4] composed of or including paper that incorporates straight horizontal and/or vertical lines on ten or more paper sheets,[5] including but not limited to such products as single- and multi-subject notebooks, composition books, wireless notebooks, looseleaf or glued filler paper, graph paper, and laboratory notebooks, and with the smaller dimension of the paper measuring 6 inches to 15 inches (inclusive) and the larger dimension of the paper measuring 8¾ inches to 15 inches (inclusive). Page dimensions are measured size (not advertised, stated, or ''tear-out'' size), and are measured as they appear in the product (*i.e.,* stitched and folded pages in a notebook are measured by the size of the page as it appears in the notebook page, not the size of the unfolded paper). However, for measurement purposes, pages with tapered or rounded edges shall be measured at their longest and widest points. Subject lined paper products may be loose, packaged or bound using any binding method (other than case bound through the inclusion of binders board, a spine strip, and cover wrap). Subject merchandise may or may not contain any combination of a front cover, a rear cover, and/or backing of any composition, regardless of the inclusion of images or graphics on the cover, backing, or paper. Subject merchandise is within the scope of these orders whether or not the lined paper and/or cover are hole punched, drilled, perforated, and/or reinforced. Subject merchandise may contain accessory or informational items including but not limited to pockets, tabs, dividers, closure devices, index cards, stencils, protractors, writing implements, reference materials such as mathematical tables, or printed items such as sticker sheets or miniature calendars, if such items are physically incorporated, included with, or attached to the product, cover and/or backing thereto.

Specifically excluded from the scope of these orders are:

- Unlined copy machine paper;
- Writing pads with a backing (including but not limited to products commonly known as ''tablets,'' ''note pads,'' ''legal pads,'' and ''quadrille pads''), provided that they do not have a front cover (whether permanent or removable). This exclusion does not apply to such writing pads if they consist of hole-punched or drilled filler paper;
- Three-ring or multiple-ring binders, or notebook organizers incorporating such a ring binder provided that they do not include subject paper;
- Index cards;
- Printed books and other books that are case bound through the inclusion of binders board, a spine strip, and cover wrap;
- Newspapers;
- Pictures and photographs;
- Desk and wall calendars and organizers (including but not limited to such products generally known as ''office planners,'' ''time books,'' and ''appointment books'');
- Telephone logs;
- Address books;
- Columnar pads & tablets, with or without covers, primarily suited for the recording of written numerical business data;
- Lined business or office forms, including but not limited to: preprinted business forms, lined invoice pads and paper, mailing and address labels, manifests, and shipping log books;
- Lined continuous computer paper;
- Boxed or packaged writing stationery (including but not limited to products commonly known as ''fine business paper,'' ''parchment paper,'' and ''letterhead''), whether or not containing a lined header or decorative lines;
- Stenographic pads (steno pads), Gregg ruled,[6] measuring 6 inches by 9 inches;

Also excluded from the scope of these orders are the following trademarked products:

- Fly™ lined paper products: A notebook, notebook organizer, loose or glued note paper, with papers that are printed with infrared reflective inks and readable only by a Fly™ pen-top computer. The product must bear the valid trademark Fly™.[7]
- Zwipes™: A notebook or notebook organizer made with a blended polyolefin writing surface as the cover and pocket surfaces of the notebook, suitable for writing using a specially-developed permanent marker and erase system (known as a Zwipes™ pen). This system allows the marker portion to mark the writing surface with a permanent ink. The eraser portion of the marker dispenses a solvent capable of solubilizing the permanent ink allowing the ink to be removed. The product must bear the valid trademark Zwipes™.[8]
- FiveStar® Advance™: A notebook or notebook organizer bound by a continuous spiral, or helical, wire and with plastic front and rear covers made of a blended polyolefin plastic material joined by 300 denier polyester, coated on the backside with PVC (poly vinyl chloride) coating, and extending the entire length of the spiral or helical wire. The polyolefin plastic covers are of specific thickness; front cover is 0.019 inches (within normal manufacturing tolerances) and rear cover is 0.028 inches (within normal manufacturing tolerances). Integral with the stitching that attaches the polyester spine covering, is captured both ends of a 1″ wide elastic fabric band. This band is located 2⅜″ from the top of the front plastic cover and provides pen or pencil storage. Both ends of the spiral wire are cut and then bent backwards to overlap with the previous coil but specifically outside the coil diameter but inside the polyester covering. During construction, the polyester covering is sewn to the front and rear covers face to face (outside to outside) so that when the book is closed, the stitching is concealed from the outside. Both free ends (the ends not sewn to the cover and back) are stitched with a turned edge construction. The flexible polyester material forms a covering over the spiral wire to protect it and provide a comfortable grip on the product. The product must bear the valid trademarks FiveStar® Advance™.[9]
- FiveStar Flex™: A notebook, a notebook organizer, or binder with plastic polyolefin front and rear covers joined by 300 denier polyester spine cover extending the entire length of the spine and bound by a 3-ring plastic fixture. The polyolefin plastic covers are of a specific thickness; front cover is 0.019 inches (within normal manufacturing tolerances) and rear cover is 0.028 inches (within normal manufacturing tolerances). During construction, the polyester covering is sewn to the front cover face to face (outside to outside) so that when the book is closed, the stitching is concealed from the outside. During construction, the polyester cover is

[4] For purposes of this scope definition, the actual use or labeling of these products as school supplies or non-school supplies is not a defining characteristic.

[5] There shall be no minimum page requirement for looseleaf filler paper.

[6] ''Gregg ruling'' consists of a single- or double-margin vertical ruling line down the center of the page. For a six-inch by nine-inch stenographic pad, the ruling would be located approximately three inches from the left of the book.

[7] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

[8] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

[9] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

sewn to the back cover with the outside of the polyester spine cover to the inside back cover. Both free ends (the ends not sewn to the cover and back) are stitched with a turned edge construction. Each ring within the fixture is comprised of a flexible strap portion that snaps into a stationary post which forms a closed binding ring. The ring fixture is riveted with six metal rivets and sewn to the back plastic cover and is specifically positioned on the outside back cover. The product must bear the valid trademark FiveStar Flex™.[10]

Currently, merchandise subject to these orders is typically imported under headings 4811.90.9035, 4811.90.9080, 4820.30.0040, 4811.90.9050, 4810.22.5044, 4811.90.9090, 4820.10.2010, 4820.10.2020, 4820.10.2030, 4820.10.2040, 4820.10.2050, 4820.10.2060 and 4820.10.4000 of the Harmonized Tariff Schedule of the United States (HTSUS). The tariff classifications are provided for convenience and customs purposes; however, the written description of the scope of the orders is dispositive.

Determination

As a result of the determinations by the ITC that revocation of these AD and CVD orders would not be likely to lead to continuation or recurrence of material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, the Department is revoking the AD and CVD orders on lined paper from Indonesia. Pursuant to section 751(d)(2) of the Act and 19 CFR 351.222(i)(2)(i), the effective date of revocation is September 28, 2011 (*i.e.,* the fifth anniversary of the effective date of publication in the **Federal Register** of these orders).[11]

The Department will notify U.S. Customs and Border Protection, 15 days after publication of this notice, to terminate suspension of liquidation and collection of cash deposits on entries of the subject merchandise, entered or withdrawn from warehouse, on or after September 28, 2011. Entries of subject merchandise prior to the effective date of revocation will continue to be subject to suspension of liquidation and antidumping and countervailing duty deposit requirements.

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return/destruction or conversion to judicial protective order of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Failure to comply is a violation of the APO which may be subject to sanctions.

These five-year (sunset) reviews and notice are in accordance with section 751(d)(2) the Act and published pursuant to section 777(i)(1) of the Act.

Dated: August 24, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–827]

Certain Cased Pencils From the People's Republic of China: Final Results of Antidumping Duty Changed Circumstances Review, and Determination To Revoke Order, in Part

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: On July 18, 2012, the Department of Commerce (''the Department'') published a notice of initiation and preliminary results of a changed circumstance review and intent to revoke, in part, the antidumping duty (''AD'') order of certain cased pencils from the People's Republic of China (''PRC''). The final results do not differ from the preliminary results of review, and we are revoking the order, in part, with respect to novelty drumstick pencils. This partial revocation is effective June 1, 2011.

DATES: *Effective Date:* June 1, 2011.

FOR FURTHER INFORMATION CONTACT: Mahnaz Khan at (202) 482–0914 or Yasmin Nair at (202) 482–3813; AD/CVD Operations, Office 1, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

Background

On December 28, 1994, the Department published in the **Federal Register** the AD order on certain cased pencils from the PRC. *See Antidumping Duty Order: Certain Cased Pencils from the People's Republic of China,* 59 FR 66909 (December 28, 1994) (''AD order''). On May 23, 2012, in accordance with section 751(b) and 751(d)(1) of the Tariff Act of 1930, as amended (''the Act''), 19 CFR 351.216(b), and 19 CFR 351.222(g)(1), ThinkGeek, a U.S. importer of subject merchandise, requested revocation, in part, of the AD order with respect to its novelty pencil, which is shaped like a drumstick. ThinkGeek's novelty drumstick pencil is made to look like a pencil, except that it is shaped as a drumstick. This pencil is longer than regular wooden pencils and does not contain an eraser. ThinkGeek requested that the Department conduct the changed circumstances review on an expedited basis pursuant to 19 CFR 351.221(c)(3)(ii).

On July 18, 2012, the Department published its concurrent initiation and preliminary results of this changed circumstances review. *See Certain Cased Pencils From the People's Republic of China: Initiation and Preliminary Results of Antidumping Duty Changed Circumstances Review, and Intent To Revoke Order in Part,* 77 FR 42276 (July 18, 2012) (''*Preliminary Results*''). The Department preliminary determined to revoke, in part, the AD order on certain cased pencils from the PRC with respect to novelty drumstick pencils. In the *Preliminary Results,* we stated that interested parties could submit comments to the Department no later than 14 days after the publication of the *Preliminary Results* in the **Federal Register**. No interested parties submitted comments on the changed circumstances review.

Scope of the Order

Imports covered by the order are shipments of certain cased pencils of any shape or dimension (except as described below) which are writing and/or drawing instruments that feature cores of graphite or other materials, encased in wood and/or man-made materials, whether or not decorated and whether or not tipped (*e.g.,* with erasers, *etc.*) in any fashion, and either sharpened or unsharpened. The pencils subject to the order are currently classifiable under subheading 9609.10.00 of the Harmonized Tariff Schedule of the United States (''HTSUS''). Specifically excluded from the scope of the order are mechanical pencils, cosmetic pencils, pens, non-cased crayons (wax), pastels, charcoals, chalks, and pencils produced under U.S. patent number 6,217,242, from paper infused with scents by the means covered in the above-referenced patent, thereby having odors distinct from those that may emanate from pencils lacking

[10] Products found to be bearing an invalidly licensed or used trademark are not excluded from the scope.

[11] *See Notice of Amended Final Determination of Sales at Less Than Fair Value: Certain Lined Paper Products from the People's Republic of China; Notice of Antidumping Duty Orders: Certain Lined Paper Products from India, Indonesia and the People's Republic of China; and Notice of Countervailing Duty Orders: Certain Lined Paper Products from India and Indonesia,* 71 FR 56949 (September 28, 2006).

the scent infusion. Also excluded from the scope of the order are pencils with all of the following physical characteristics: (1) *Length:* 13.5 or more inches; (2) *sheath diameter:* not less than one-and-one quarter inches at any point (before sharpening); and (3) *core length:* not more than 15 percent of the length of the pencil.

In addition, pencils with all of the following characteristics are excluded from the order: novelty jumbo pencils that are octagonal in shape, approximately ten inches long, one inch in diameter before sharpening, and three-and-one eighth inches in circumference, composed of turned wood encasing one-and-one half inches of sharpened lead on one end and a rubber eraser on the other end. Also excluded are novelty drumstick pencils that are shaped like drumsticks, longer than regular wooden pencils, and do not contain erasers.

Although the HTSUS subheading is provided for convenience and customs purposes, the written description of the scope and order is dispositive.

Final Results of Changed Circumstances Review

Based on the Department's analysis in the *Preliminary Results* (which we incorporate herein by reference) and in light of the fact that no interested parties submitted any comments on the Department's preliminary results, the Department hereby determines to revoke, in part, the AD order with respect to novelty drumstick pencils. For the reasons indicated in the *Preliminary Results,* the effective date of this determination is June 1, 2011. *See Preliminary Results,* 77 FR at 42277. In addition, the Department has modified the scope of the AD order, as reflected above, consistent with these final results.

We will instruct U.S. Customs and Border Protection (''CBP'') to liquidate without regard to antidumping duties all unliquidated entries of novelty drumstick pencils entered, or withdrawn from warehouse, for consumption on or after June 1, 2011. The Department will further instruct CBP to refund with interest any estimated antidumping duties collected with respect to these entries, in accordance with section 778 of the Act and 19 CFR 351.222(g)(4).

This changed circumstances administrative review, partial revocation of the antidumping duty order and notice are in accordance with sections 751(b) and (d), 777(i), and 782(h) of the Act and 19 CFR 351.216(e) and 351.222(g).

Dated: August 27, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–580–867]

Large Power Transformers From the Republic of Korea: Antidumping Duty Order

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* August 31, 2012.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (the Department) and the International Trade Commission (ITC), the Department is issuing an antidumping duty order on large power transformers from the Republic of Korea (Korea).

FOR FURTHER INFORMATION CONTACT: David Cordell or Brian Davis, AD/CVD Operations, Office 7, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone (202) 482–0408 or (202) 482–7924, respectively.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 735(d) and 777(i)(1) of the Tariff Act of 1930, as amended (the Act), on July 11, 2012, the Department published the final determination of sales at less than fair value in the antidumping duty investigation of large power transformers from Korea. *See Large Power Transformers from the Republic of Korea: Final Determination of Sales at Less Than Fair Value,* 77 FR 40857 (July 11, 2012). On August 24, 2012, the ITC notified the Department of its affirmative determination that an industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act by reason of less-than-fair-value imports of large power transformers from Korea. *See Large Power Transformers from Korea* (Investigation No. 731–TA–1189 (Final), USITC Publication 4346, August 2012). Pursuant to section 736(a) of the Act, the Department is publishing an antidumping duty order on the subject merchandise.

Scope of the Order

The scope of this order covers large liquid dielectric power transformers (large power transformers) having a top power handling capacity greater than or equal to 60,000 kilovolt amperes (60 megavolt amperes), whether assembled or unassembled, complete or incomplete.

Incomplete large power transformers are subassemblies consisting of the active part and any other parts attached to, imported with or invoiced with the active parts of large power transformers. The ''active part'' of the transformer consists of one or more of the following when attached to or otherwise assembled with one another: the steel core or shell, the windings, electrical insulation between the windings, the mechanical frame for a large power transformer.

The product definition encompasses all such large power transformers regardless of name designation, including but not limited to step-up transformers, step-down transformers, autotransformers, interconnection transformers, voltage regulator transformers, rectifier transformers, and power rectifier transformers.

The large power transformers subject to this order are currently classifiable under subheadings 8504.23.0040, 8504.23.0080 and 8504.90.9540 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this order is dispositive.

Antidumping Duty Order

As stated above, on August 24, 2012, in accordance with section 735(d) of the Act, the ITC notified the Department of its final determination in this investigation, in which it found material injury with respect to large power transformers from Korea. Because the ITC determined that imports of transformers from Korea are materially injuring a U.S. industry, all unliquidated entries of such merchandise from Korea, entered or withdrawn from warehouse, are subject to the assessment of antidumping duties.

Therefore, in accordance with section 736(a)(1) of the Act, the Department will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by the Department, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price (or constructed export price) of the merchandise, for all relevant entries of

large power transformers from Korea. These antidumping duties will be assessed on unliquidated entries of large power transformers from Korea entered, or withdrawn from warehouse, for consumption on or after February 16, 2012, the date on which the Department published its *Preliminary Determination*,[1] but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final injury determination as further described below.

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, we will instruct CBP to continue to suspend liquidation on all entries of large power transformers from Korea. We will also instruct CBP to require cash deposits equal to the estimated amount by which the normal value exceeds the U.S. price as indicated below. These instructions suspending liquidation will remain in effect until further notice.

Accordingly, effective on the date of publication of the ITC's final affirmative injury determination, CBP will require, at the same time as importers would normally deposit estimated duties on this subject merchandise, a cash deposit equal to the estimated weighted-average antidumping duty margins listed below. *See* section 736(a)(3) of the Act.

Provisional Measures

Section 733(d) of the Act states that instructions issued pursuant to an affirmative preliminary determination may not remain in effect for more than four months except where exporters representing a significant proportion of exports of the subject merchandise request the Department to extend that four-month period to no more than six months. At the request of exporters that account for a significant proportion of large power transformers from Korea, we extended the four-month period to no more than six months. *See* letters to the Department from Hyosung Corporation and Hyundai Heavy Industries, dated December 22, 2011 and January 5, 2012, respectively. In the underlying investigation, the Department published the *Preliminary Determination* on February 16, 2012. *See Preliminary Determination*. Therefore, the six-month period beginning on the date of the publication of the *Preliminary Determination* ended on August 13, 2012. Furthermore, section 737(b) of the Act states that definitive duties are to begin on the date of publication of the ITC's final injury determination.

Therefore, in accordance with section 733(d) of the Act and our practice, we will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to antidumping duties, unliquidated entries of large power transformers from Korea entered, or withdrawn from warehouse, for consumption after August 13, 2012, the date provisional measures expired, until and through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation will resume on the date of publication of the ITC's final injury determination in the **Federal Register**.

The weighted-average dumping margins are as follows:

Manufacturer/Exporter	Weighted-Average margin (percent)
Hyundai Heavy Industries Co., Ltd.	14.95
Hyosung Corporation	29.04
All Others	22.00

This notice constitutes the antidumping duty order with respect to large power transformers from Korea pursuant to section 736(a) of the Act. Interested parties can find an updated list of antidumping duty orders currently in effect at *http://ia.ita.doc.gov/stats/iastats1.html*.

This order is published in accordance with section 736(a) of the Act and 19 CFR 351.211.

Dated: August 27, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

National Oceanic and Atmospheric Administration

RIN 0648–XC198

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Scallop Oversight Committee to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This meeting will be held on Monday, September 18, 2012 at 9 a.m.

ADDRESSES: The meeting will be held at the Fairfield Inn & Suites, 185 MacArthur Drive, New Bedford, MA 02740; telephone: (774) 634–2000; fax: (774) 634–2001.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Paul J. Howard, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION: The Committee will discuss the same issues identified above for the Advisory Panel meeting. In addition, the Committee will briefly review the overall findings of the recent biological opinion of the sea scallop fishery related to sea turtles and Atlantic sturgeon. Other business may be discussed.

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Paul J. Howard, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 28, 2012.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The Pacific Fishery Management Council's (Pacific Council) Model Evaluation Workgroup (MEW) will hold a work session to review work products individual members have been developing prior to submission to the 2012 salmon methodology review process. The meeting is open to the public.

DATES: The work session will be held Monday, September 17, 2012, from 12:30 p.m. to 3:30 p.m.

ADDRESSES: The work session will be held at the Northwest Indian Fisheries Commission Conference Room, 6730 Martin Way East, Olympia, WA 98516; telephone: (360) 438–1180.

Council address: Pacific Council, 7700 NE Ambassador Place, Suite 101, Portland, OR 97220–1384.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Burner or Mr. Chuck Tracy, Salmon Management Staff Officer, Pacific Council; telephone: (503) 820–2280.

SUPPLEMENTARY INFORMATION: The purpose of the work session is to review work products, including possible bias in the Fishery Regulation Assessment Model associated with multiple encounters during mark selective fisheries. The results of the analyses will be submitted for review during the Pacific Council's 2012 salmon methodology review process.

Although non-emergency issues not contained in the meeting agendas may come before the MEW for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the intent to take final action to address the emergency.

Special Accommodations

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Mr. Kris Kleinschmidt at (503) 820–2280 at least 5 days prior to the meeting date.

Dated: August 28, 2012.

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Additions to the Procurement List.

SUMMARY: The Committee is proposing to add products and a service to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: Comments Must be Received On or Before: 10/1/2012.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Jefferson Plaza 2, Suite 10800, 1421 Jefferson Davis Highway, Arlington, Virginia 22202–3259.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments, contact Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products and service listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. If approved, the action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the products and service to the Government.

2. If approved, the action will result in authorizing small entities to furnish the products and service to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the products and service proposed for addition to the Procurement List.

Comments on this certification are invited. Commenters should identify the statement(s) underlying the certification on which they are providing additional information.

End of Certification

The following products and service are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Products

NSN: 1095–01–446–4348—Knife, Combat, Drop Point, Automatic, with Sheath.
NSN: 1095–01–456–4457—Knife, Combat, Tanto Point, Automatic.
NPA: DePaul Industries, Portland, OR.
Contracting Activity: Defense Logistics Agency Land and Maritime, Columbus, OH.
Coverage: C-List for 100% of the requirement of the Department of Defense, as aggregated by the Defense Logistics Agency Land and Maritime, Columbus, OH.

Service

Service Type/Location: Custodial Services, U.S. Border Patrol Checkpoint 808, I–8 Westbound 70.8 Mile Marker, Winterhaven, CA.
NPA: ARC-Imperial Valley, El Centro, CA.
Contracting Activity: Dept of Homeland Security, U.S. Customs and Border Protection, Border Enforcement Contracting Division, Washington, DC.

ACTION: Additions to the Procurement List.

SUMMARY: This action adds services to the Procurement List that will be provided by nonprofit agencies employing persons who are blind or have other severe disabilities.

DATES: *Effective:* October 1, 2012.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Jefferson Plaza 2, Suite 10800, 1421 Jefferson Davis Highway, Arlington, Virginia 22202–3259.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Additions

On 6/15/2012 (77 FR 35942–35944) and 6/29/2012 (77 FR 38775–38776), the Committee for Purchase From People Who Are Blind or Severely Disabled published notices of proposed additions to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the services and impact of the additions on the current or most recent contractors, the Committee has determined that the services listed below are suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will provide the services to the Government.

2. The action will result in authorizing small entities to provide the services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the services proposed for addition to the Procurement List.

End of Certification

Accordingly, the following services are added to the Procurement List:

Services

Service Type/Location: Custodial and Landscaping Services, Ft. Pierce U.S. Federal Courthouse, 101 South U.S. Highway 1, Ft. Pierce, FL.
NPA: Goodwill Industries of South Florida, Inc., Miami, FL.
Contracting Activity: General Services Administration, Public Buildings Service, Atlanta, GA.
Service Type/Locations: Custodial and Grounds Services, Anderson Federal Building-Courthouse, 315 South McDuffie Street, Anderson, SC.
Donald A. Russell Federal Building-Courthouse, 201 Magnolia Street, Spartanburg, SC.
NPA: SC Vocations & Individual Advancement, Inc., Greenville, SC.
Contracting Activity: General Services Administration, Public Buildings Service, Atlanta, GA.
Service Type/Location: Grounds Maintenance Service, National Aeronautics and Space Administration, Goddard Space Flight Center, Wallops Flight Facility, Bldg. E105, Room 319, Wallops Island, VA.
NPA: Didlake, Inc., Manassas, VA.
Contracting Activity: National Aeronautics and Space Administration, Goddard Space Flight Center, Greenbelt, MD.
Service Type/Location: Custodial Service, National Aeronautics and Space Administration, Goddard Space Flight Center, Wallops Flight Facility, Bldg. E105, Room 319, Wallops Island, VA.
NPA: The ARC of the Virginia Peninsula, Inc., Hampton, VA.
Contracting Activity: National Aeronautics and Space Administration, Goddard Space Flight Center, Greenbelt, MD.

Barry S. Lineback,

Director, Business Operations.

BILLING CODE 5001–06–C

Transmittal No. 12–36

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Kingdom of Saudi Arabia.

(ii) *Total Estimated Value:*

Major Defense Equipment*	$ 0 million
Other	850 million
TOTAL	850 million

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:* Follow on support and services for the Royal Saudi Air Force (RSAF) aircraft, engines and weapons; publications and technical documentation; airlift and aerial refueling; support equipment; spare and repair parts; repair and return; personnel training and training equipment; U.S. Government and contractor technical and logistics support services; and other related elements of logistical and program support.

(iv) *Military Department:* Air Force (CCZ, Amd #7).

(v) *Prior Related Cases, if any:*

FMS case CCZ—$48.4M—12Aug02
FMS case GAG—$38.0M—4Apr10
FMS case KCZ—$95.4M—27Feb07
FMS case KDB—$120.0M—15Feb10
FMS case QAY—$147.4M—5Jun10
FMS case QBI—$250.0M—16Jun10
FMS case QDE—$202.4M—15Mar06
FMS case QZQ—$54.3M—5May04
FMS case QZX—$62.4M—24Dec03

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* None.

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* None.

(viii) *Date Report Delivered to Congress:* 6 August 2012.

POLICY JUSTIFICATION

Kingdom of Saudi Arabia—Follow-On Support

The Kingdom of Saudi Arabia has requested a possible sale of follow-on support and services for the Royal Saudi Air Force aircraft, engines and weapons; publications and technical documentation; airlift and aerial refueling; support equipment; spare and repair parts; repair and return; personnel training and training equipment; U.S. Government and contractor technical and logistics support services; and other related elements of logistical and program support. The estimated cost is $850 million.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a friendly country that has been, and continues to be, an important force for political stability and economic progress in the Middle East.

Saudi Arabia needs this follow on support to continue to procure maintenance and logistical support in order to sustain the combat and operational readiness of its existing aircraft fleet.

The proposed sale of this support and services will not alter the basic military balance in the region.

There is no prime contractor involved in this proposed sale. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this sale will not require the assignment of any additional U.S. Government personnel or contractor representatives to Saudi Arabia.

There will be no adverse impact on U.S. defense readiness as a result of this sale.

Transmittal No. 12–34

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended (U)

(i) *Prospective Purchaser:* Thailand

(ii) *Total Estimated Value:*

Major Defense Equipment*	$15
Other	3
Total (millions)	18

* as defined in Section 47(6) of the Arms Export Control Act.

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:* Nine Evolved SEASPARROW Missiles (ESSM); three MK25 Quad Pack canisters; and four MK783 shipping containers; spare and repair parts; support and test equipment; publications and technical documentation; personnel training and training equipment; U.S. Government and contractor engineering; technical and logistics support services; and technical assistance; and other related elements of logistical and program support.

(iv) *Military Department:* Navy (AKL)

(v) *Prior Related Cases, if any:* None

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* See Attached Annex

(viii) *Date Report Delivered to Congress:* 7 August 2012.

POLICY JUSTIFICATION

Thailand—Evolved SEASPARROW Missiles (ESSM),

The Government of Thailand has requested a possible sale of nine Evolved SEASPARROW Missiles (ESSM); three MK25 Quad Pack canisters; and four MK783 shipping containers; spare and repair parts; support and test equipment; publications and technical documentation; personnel training and training equipment; U.S. Government and contractor engineering; technical and logistics support services; and technical assistance and other related elements of logistical and program support. The estimated cost is $18 million.

This proposed sale will contribute to the foreign policy and national security of the United States by increasing the ability of Thailand to contribute to regional security and improving interoperability with the U.S. Military in operational and exercise scenarios. It is consistent with U.S. national interests to assist Thailand in developing and maintaining a strong and ready ship self-defense capability which will contribute to the military balance in the area.

ESSM provides ship self-defense capability. The proposed sale will add to Thailand's capability to meet current and future threats from anti-ship weapons.

The proposed FMS case includes support equipment, training and technical assistance required for the RTN to effectively incorporate the ESSM into its fleet. With this support, the RTN will have no difficulty absorbing the ESSM into its frigates and being fully operational.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government or contractor representatives to Thailand.

The prime contractors will be Raytheon Missile Systems in Tucson, Arizona and BAE Systems in Aberdeen, South Dakota.

There are no known offset agreements proposed in connection with this potential sale.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 12–34

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) (1) of the Arms Export Control Act

Annex—Item No. vii

(vii) Sensitivity of Technology

1. The Evolved SEASPARROW missile (ESSM) includes the guidance section, warhead section, transition section, propulsion section, control section and Thrust Vector Control (TVC). The guidance section and transition section and technical documentation to be provided under this sale are classified Confidential. Certain operating frequencies and performance characteristics of the missile guidance section are classified Secret.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, primarily performance characteristics, engagement algorithms and transmitter specific frequencies, the information could be used to develop countermeasures that might reduce weapon system effectiveness.

3. Release of this technology is within the disclosure authority delegated for Thailand as stipulated in the National Disclosure Policy (NDP–1).

Transmittal No. 12–22

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Kingdom of Saudi Arabia (KSA)

(ii) *Total Estimated Value:*

Major Defense Equipment*	$ 2 million.
Other	255 million.
Total	257 million.

*as defined in 47(6) of the Arms Export Control Act.

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:* Ten Link-16 capable data link systems and Intelligence, Surveillance, and Reconnaissance (ISR) suites for four KSA-provided King Air 350ER aircraft and associated ground support, with an option to procure, via Foreign Military Sales, an additional four King Air 350ER aircraft with enhanced PT6A–67A engines and spare parts equipped with the same ISR suites. The ISR suites include a Com-Nav Surveillance/Air Traffic Management cockpit, RF–7800M–MP High Frequency Radios with encryption, AN/ARC–210 Very High Frequency/Ultra High Frequency/Satellite Communication Transceiver Radios with Have Quick II and encryption, a High Speed Data Link, an AN/APX–114/119 Identification Friend or Foe Transponder, Embedded Global Positioning System/Inertial Navigations Systems (GPS/INS) with a Selective Availability Anti-spoofing Module (SAASM), AN/AAR–60 Infrared Missile Warning and AN/ALE–47 Countermeasures System, Electro-Optical Sensor, SIGINT System, Synthetic Aperture Radar. Also included are Ground Stations, Training Aids, C4I Integration, aircraft modifications, spare and repair parts, support equipment, publications and technical data, personnel training and training equipment, aircraft ferry, U.S. Government and contractor technical, engineering, and logistics support

services, and other related elements of logistics support.

(iv) *Military Department:* Air Force (QBP)

(v) *Prior Related Cases, if any:* None

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* none

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* See Annex attached

(viii) *Date Report Delivered to Congress:* 9 Aug 2012

POLICY JUSTIFICATION

Kingdom of Saudi Arabia—King Air 350ER Intelligence, Surveillance, and Reconnaissance (ISR) Aircraft and Support

The Government of the Kingdom of Saudi Arabia (KSA) has requested a possible sale of ten Link-16 capable data link systems and Intelligence, Surveillance, and Reconnaissance (ISR) suites for four KSA-provided King Air 350ER aircraft and associated ground support, with an option to procure, via a Foreign Military Sales, an additional four King Air 350ER aircraft with enhanced PT6A–67A engines and spare parts equipped with the same ISR suites. The ISR suites include a Com-Nav Surveillance/Air Traffic Management cockpit, RF–7800M–MP High Frequency Radios with encryption, AN/ARC–210 Very High Frequency/Ultra High Frequency/Satellite Communication Transceiver Radios with Have Quick II and encryption, a High Speed Data Link, an AN/APX–114/119 Identification Friend or Foe Transponder, Embedded Global Positioning System/Inertial Navigations Systems (GPS/INS) with a Selective Availability Anti-spoofing Module (SAASM), AN/AAR–60 Infrared Missile Warning and AN/ALE–47 Countermeasures System, Electro-Optical Sensor, SIGINT System, Synthetic Aperture Radar. Also included are Ground Stations, Training Aids, C4I Integration, aircraft modifications, spare and repair parts, support equipment, publications and technical data, personnel training and training equipment, aircraft ferry, U.S. Government and contractor technical, engineering, and logistics support services, and other related elements of logistics support. The estimated cost is $257 million.

This proposed sale of airborne ISR assets to KSA will contribute to the foreign policy and national security of the United States by helping to improve the security of a friendly country that has been, and continues to be, an important force for political stability and economic progress in the Middle East.

The RSAF needs additional ISR capability to provide persistent, real-time route surveillance, facility, infrastructure and border security, counter-terrorism and smuggling interdiction, support for naval and coastal operations, internal defense and search and rescue operations. Currently, the RSAF's RE–3 aircraft is in depot maintenance and will not be available until after 2015. In the interim, the King AIR 350ER–ISR aircraft will allow the RSAF to perform a portion of the RE–3 mission. All systems will be compatible with and will continue to supplement the capabilities of the RSAF RE–3 aircraft. The KSA will have no difficulties absorbing and using these King Air ISR aircraft.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime contractors will be L–3 Communications, Mission Integration Division in Greenville, Texas; Hawker Beechcraft in Wichita, Kansas; Raytheon in Aberdeen Proving Grounds, Maryland; Rockwell Collins in Cedar Rapids, Iowa; Harris in Rochester, New York; ATK in Ridgecrest, California; BAE Systems in Austin, Texas; and VIASAT in Carlsbad, California. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will involve annual Program Management Reviews in Saudi Arabia. Estimated U.S. participation will include up to six USAF personnel and four contractor personnel for a period of up to six weeks per year. There will be approximately six contractors in Saudi Arabia providing technical assistance on a full-time basis until these systems are delivered and integrated into the operational units.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 12–22

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex—Item No. vii

(vii) *Sensitivity of Technology*

1. This sale will involve the release of classified and sensitive technology to the Kingdom of Saudi Arabia (KSA). The King Air 350ER–ISR system will be classified up to Secret.

2. *King Air 350ER:* The King Air 350ER Intelligence, Surveillance, and Reconnaissance (ISR) aircraft is a specifically modified B350ER capable of operating in austere environments while providing real-time ISR. It is equipped with an integrated electro-optical and infrared (EO/IR), Eye-safe Laser Range Finder and Laser Pointer sensor suite which gives it a day/night ISR capability. Additionally, the aircraft will have a signal intercept system capable of searching, direction finding (geo-locating), collection, and on-board analysis of simple signals of interest in the very high frequency (VHF) and ultra high frequency (UHF) broadcast bands. It will also have synthetic aperture radar (SAR) to provide spot and strip ground mapping along with ground moving target indicator (GMTI) modes. It will also have two onboard workstations that will control the intercept system while one workstation will control the EO/IR system. The system will provide voice and data communication with personnel on the ground to share collected data (more details on specific equipment listed below). Aircraft hardware and software are Unclassified; technical data and documentation to be provided are Unclassified.

3. *Signals Intelligence Collection and Processing System:* This will be a tactical signals intelligence (SIGINT) intercept system that will search, direction-find, geo-locate, collect, and display the relevant information to two operators for analysis and recording. Hardware, software, technical data and documentation provided could be classified up to Secret.

4. *Electro-Optical Infrared System (Wescam MX–15 or suitable substitute):* This is a gyro-stabilized, multi-spectral, multi-field of view EO/IR system. The system provides color daylight TV and night time IR video with a laser range finder and laser pointer through use of an externally mounted turret sensor unit and internally mounted sensor control. Video imagery is displayed in the aircraft real time and may be recorded for subsequent ground analysis. Hardware and technical data and documentation to be provided are Unclassified.

5. *Synthetic Aperture Radar (Selex Galileo Picosar or suitable substitute*): This is an active electronically scanned array (AESA) radar providing strip and spotlight SAR imaging and ground moving target indicator (GMTI) capability for all-weather and wide range surveillance. Hardware and technical data and documentation to be provided are Unclassified.

6. *Link 16:* This is a command, control, communications, and intelligence (C3I) system incorporating high-capacity, jam-resistant, digital communication links for exchange of

near real-time tactical information, including both data and voice, among air, ground, and sea elements. The Link 16 hardware, publications, performance specifications, operational capability, parameters, vulnerabilities to countermeasures, and software documentation are classified Confidential. The classified information to be provided is necessary for the operation, maintenance, and repair (through intermediate level) of the data link terminal, installed systems, and related software.

7. *Remote Operation Video Enhanced Receive (ROVER*): This system allows personnel on the ground to receive the generated video and overlays, but not aircraft overlays. This system is Unclassified and has no critical technology.

8. *Ultra High Frequency/Very High Frequency (UHF/VHF) Radios (AN/ARC–210*): The ARC 210 [RT–1851A (C)] UHF/VHF secure radios with HAVE QUICK II are voice communications radio systems that can operate in either normal, secure, and/or jam-resistant modes. They can employ cryptographic technology that is classified Secret. Classified elements include operating characteristics, parameters, technical data, and keying material.

9. *UHF/VHF Air-to-Ground Radio (RF–7800M–MP*): This is a wideband air-to-ground tactical radio incorporating encrypted voice and data communication. Classified elements, up to Secret, include operating characteristics, parameters, technical data, and keying material.

10. *Identification Friend or Foe transponder interrogator system (AN/APX–114/119*): This system is Unclassified unless encrypted Mode 4 operational evaluator parameters, which are Secret, are loaded into the equipment.

11. *Inertial Navigation/Global Positioning System (INS/GPS) (LN–100 or H764G*): This is a highly accurate inertial navigation system with an embedded GPS for blended GPS/INS, free-inertial, and GPS only navigation solutions. Classified elements up to Secret include a Selective Availability Anti-spoofing Module (SAASM) for decryption of precision GPS signals.

12. *Counter-Measures Dispensing System (CMDS) (AN/ALE–47):* The CMDS is an integrated, threat-adaptive, software-programmable dispensing system capable of dispensing chaff, flares, and active radio frequency expendables. The threats countered by the CMDS include radar-directed anti-aircraft artillery (AAA), radar command-guided missiles, radar homing-guided missiles, and infrared (IR) guided missiles. The system is internally mounted and may be operated as a stand-alone system or may be integrated with other on-board EW and avionics systems. The AN/ALE–47 uses threat data received over the aircraft interfaces to assess the threat situation and to determine a response. Expendable routines tailored to the immediate aircraft and threat environment may be dispensed using one of four operational modes. The hardware is Confidential. The software when loaded into the ALE–47 is classified Confidential. Technical data and documentation to be provided are Unclassified.

13. *Missile Launch Detection System (MLDS) (AN/AAR–60*): The MLDS is a passive, true imaging sensor device that is optimized to detect the radiation signature of a threat missile's exhaust plume within the Ultra-Violet (UV) solar blind spectral band. Functionally, the architecture detects incoming missile threats and indicates their direction of arrival with the 'maximum' warning time. The system is further noted as featuring inherently high-spatial resolution, advanced temporal processing, a very high declaration rate, and the virtual elimination of false alarm rates, fast threat detection and the automatic initiation of appropriate countermeasures. Physically, a typical application comprises four to six self-contained detector units each of which provides full signal processing. Hardware, software, and technical data and documentation to be provided are Unclassified.

14. Additional sensitive areas include operating manuals and maintenance technical orders containing performance information, operating and test procedures, and other information related to support operations and repair. The hardware, software, and data identified are classified to protect vulnerabilities, design and performance parameters and other similar critical information.

15. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software, the information could be used to develop countermeasures, which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Advisory Council on Dependents' Education; Notice of Open Meeting

AGENCY: Department of Defense Education Activity (DoDEA), DoD.

ACTION: Open meeting notice.

SUMMARY: Under the provisions of the Federal Advisory Committee Act of 1972, the Government in the Sunshine Act of 1976, the Department of Defense announces that the following Federal advisory committee meeting of the Advisory Council on Dependents' Education will take place.

DATES: Tuesday, October 16, 2012, Alexandria, Virginia (via Video Teleconference or Telephone Conference), from 8 a.m. to 12 p.m., Eastern Daylight Savings Time (EDST); Stuttgart and Wiesbaden, Germany, from 2 p.m. to 6 p.m., Central European Summer Time (CEST); Okinawa, Japan, from 9 p.m. to 1 a.m., Japan Standard Time (JST); Honolulu, Hawaii, from 2 a.m. to 6 a.m., Hawaii-Aleutian Standard Time (H–AST); Peachtree City, Georgia, from 8 a.m. to 12 p.m., Eastern Daylight Savings Time (EDST).

ADDRESSES: 4800 Mark Center Drive, Alexandria, VA 22350; USAG Stuttgart, Stuttgart, Germany; DoDDS-Europe Area Office, Wiesbaden, Germany; DoDDS-Pacific Area Office, Okinawa, Japan; Pacific Command, Honolulu, Hawaii; DDESS Area Office, Peachtree City, Georgia.

FOR FURTHER INFORMATION CONTACT: Mr. Joel K. Hansen at (571) 372–5812 or *Joel.Hansen@hq.dodea.edu.*

SUPPLEMENTARY INFORMATION:

Purpose of the Meeting: Recommend to the Director, DoDEA, general policies for the operation of the Department of Defense Dependents Schools (DoDDS); to provide the Director with information about effective educational programs and practices that should be considered by DoDDS; and to perform other tasks as may be required by the Secretary of Defense.

Agenda: The meeting agenda will reflect current DoDDS schools operational status, educational practices, and other educational matters that come before the Council.

Public Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165 and the availability of space, this meeting is open to the public. Seating is limited and is on a first-come basis. All members of the public who wish to attend the public meeting at the Mark

Center must contact Mr. Joel Hansen at the number listed in **FOR FURTHER INFORMATION CONTACT** no later than noon on Tuesday, October 9, 2012, to make arrangements for entrance to the Mark Center. The public attendees should arrive at the Mark Center no later than 7:30 a.m. on October 16. To receive access to the Mark Center, please come prepared to present a picture identification card.

Committee's Point of Contact: Mr. Joel K. Hansen at (571) 372–5812, 4800 Mark Center Drive, Alexandria, VA 22350 or *Joel.Hansen@hq.dodea.edu.*

Special Accommodations: Individuals requiring special accommodations to access the public meeting should contact Mr. Hansen at least five (5) business days prior to the meeting so that appropriate arrangements can be made.

Pursuant to 41 CFR 102–3.105(j) and 102–3.140 and section 10(a)(3) of the Federal Advisory Committee Act of 1972, the public or interested organizations may submit written statements to the Advisory Council on Dependents' Education about its mission and functions. Written statements may be submitted at any time or in response to the stated agendas of the planned meeting of the Advisory Council on Dependents' Education.

All written statements shall be submitted to the Designated Federal Officer (DFO) for the Advisory Council on Dependents' Education, Mr. Joel K. Hansen, 4800 Mark Center Drive, Alexandria, VA 22350; *Joel.Hansen@hq.dodea.edu.*

Statements being submitted in response to the agendas mentioned in this notice must be received by the DFO at the address listed in **FOR FURTHER INFORMATION CONTACT** at least fourteen calendar days prior to the meeting, which is the subject of this notice. Written statements received after this date may not be provided to or considered by the Advisory Council on Dependents' Education until its next meeting.

The DFO will review all timely submissions with the Advisory Council on Dependents' Education Chairpersons and ensure they are provided to all members of the Advisory Council on Dependents' Education before the meeting that is the subject of this notice.

Oral Statements by the Public to the Membership: Pursuant to 41 CFR 102–3.140(d), time will be allotted for public comments to the Advisory Council on Dependents' Education. Individual comments will be limited to a maximum of five minutes duration. The total time allotted for public comments will not exceed thirty minutes.

Dated: August 28, 2012.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2012–21534 Filed 8–30–12; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Army

Advisory Committee on Arlington National Cemetery (ACANC)

AGENCY: Department of the Army, DoD.

ACTION: Notice of open committee meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Sunshine in the Government Act of 1976 (5 U.S.C. 552b, as amended) and 41 Code of the Federal Regulations (41 CFR 102–3. 140 through 160), the Department of the Army announces the following committee meeting:

Name of Committee: Advisory Committee on Arlington National Cemetery.

Date of Meeting: Thursday, September 13, 2012.

Time of Meeting: 9:30 a.m.–4:00 p.m.

Place of Meeting: Women in Military Service for America Memorial, Conference Room, Arlington National Cemetery, Arlington, VA.

Proposed Agenda: Purpose of the meeting is to approve minutes from the previous meeting on March 8, 2012; provide updates on the three subcommittees' efforts; receive updates from the Army National Cemeteries Program leadership and Arlington National Cemetery's Horticulture Division; and set the proposed calendar for follow-on meetings.

Public's Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, and the availability of space, this meeting is open to the public. Seating is on a first-come basis.

FOR FURTHER INFORMATION CONTACT: Lieutenant Colonel Stephanie Ahern; *stephanie.ahern@us.army.mil* or 571.256.4325.

SUPPLEMENTARY INFORMATION: The following topics are on the agenda for discussion:

- Army National Cemeteries Program leadership update
- Arlington National Cemetery Horticulture Division update
- Subcommittee Activities:
  - ''Honor'' Subcommittee: independent recommendations of methods to address the long-term future of Arlington National Cemetery, including how best to extend the active burials and on what ANC should focus once all available space has been used.
  - ''Remember'' Subcommittee: recommendations on preserving the marble components of the Tomb of the Unknown Soldier, including the cracks in the large marble sarcophagus, the adjacent marble slabs, and the potential replacement of the marble stone for the sarcophagus already gifted to the Army.
  - ''Explore'' Subcommittee: recommendations on Section 60 Mementos study and improving the quality of visitors' experiences, now and for generations to come.

The Committee's mission is to provide the Secretary of Defense, through the Secretary of the Army, independent advice and recommendations on Arlington National Cemetery, including, but not limited to:

a. Management and operational issues, including bereavement practices;

b. Plans and strategies for addressing long-term governance challenges;

c. Resource planning and allocation; and

d. Any other matters relating to Arlington National Cemetery that the Committee's co-chairs, in consultation with the Secretary of the Army, may decide to consider.

Filing Written Statement: Pursuant to 41 CFR 102–3.140d, the Committee is not obligated to allow the public to speak; however, interested persons may submit a written statement for consideration by the Committee. Written statements must be received by the Designated Federal Officer at the following address: Advisory Committee on Arlington National Cemetery, Attn: Designated Federal Officer (DFO) (LTC Ahern), Arlington National Cemetery, Arlington, Virginia 22211 not later than 5:00 p.m., Monday, September 10, 2012. Written statements received after this date may not be provided to or considered by the Advisory Committee on Arlington National Cemetery until the next open meeting. The Designated Federal Officer will review all timely submissions with the Committee Chairperson and ensure they are provided to the members of the Advisory Committee on Arlington National Cemetery.

Brenda S. Bowen,

Army Federal Register Liaison Officer.

BILLING CODE 3710–08–P

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Public Meetings for the Draft Legislative Environmental Impact Statement for the Proposed Renewal of the Chocolate Mountain Aerial Gunnery Range Land Withdrawal, California

AGENCY: Department of the Navy, DoD. Cooperating Agencies: Bureau of Reclamation and Bureau of Land Management, Department of the Interior.

ACTION: Notice.

SUMMARY: Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370h); the Council on Environmental Quality regulations for implementing the procedural provisions of NEPA (40 CFR 1500–1508); Department of the Navy (DoN) Procedures for Implementing NEPA (32 CFR Part 775); and Marine Corps NEPA directives (Marine Corps Order P5090.2A), the DoN, in cooperation with the Bureau of Land Management (BLM) and Bureau of Reclamation, has prepared and filed with the U.S. Environmental Protection Agency a Draft Legislative Environmental Impact Statement (LEIS) that evaluates the potential environmental consequences that may result from renewing the withdrawal of approximately 228,465 acres of public land for continued use as part of the Chocolate Mountain Aerial Gunnery Range (CMAGR) in Imperial and Riverside counties, California.

With the filing of the Draft LEIS, the United States Marine Corps (USMC) is initiating a 90-day public comment period and has scheduled four public meetings to receive oral and written comments on the Draft LEIS. Federal, state, and local agencies; Native American tribes; and interested parties are encouraged to provide comments in person at any of the public meetings, or in writing anytime during the public comment period. This notice announces the dates and locations of the public meetings and provides supplementary information about the environmental planning effort. These public meetings also meet the requirement set forth in Section 806 of the California Desert Protection Act for the Secretary of the Navy to hold a public hearing in the State of California to receive public comments on the Draft LEIS.

DATES AND ADDRESSES: The Draft LEIS public review period will begin on August 31, 2012 and end on November 30, 2012. All comments regarding the Draft LEIS must be received by November 30, 2012 to ensure full consideration in the Final LEIS. Each of the four public meetings will be conducted in an open house meeting format. The public meetings will be held from 5:30 p.m. to 8:00 p.m. on the following dates and at the following locations:

1. October 22, 2012 at the Yuma County Library, 2951 S. 21st Drive, Rooms B–C, Yuma, AZ.

2. October 23, 2012 at the Southwest High School, 2001 Ocotillo Dr., El Centro, CA.

3. October 24, 2012 at the Mizell Senior Center, 480 South Sunrise Way, Palm Springs, CA.

4. October 25, 2012 at the Oceanside Public Library, 330 North Coast Highway, Oceanside, CA.

Public meeting schedules and locations will also be published in local newspapers. The public is invited to attend these meetings to view project-related displays; speak with DoN, the USMC, and Department of the Interior representatives; and submit public comments.

Availability of the Draft LEIS: The Draft LEIS is available at the project Web site, *www.chocolatemountainrenewal.com* and at the following local libraries:

1. County Library (Main Branch): 2951 S. 21st Drive, Yuma, AZ.

2. Public Library: 400 Main Street, Brawley, CA.

3. Public Library (San Ysidro Branch): 101 W. San Ysidro Blvd., San Diego, CA.

4. Palo Verde Valley Library: 125 West Chanslor Way, Blythe, CA.

5. Community Center Branch Library: 375 South 1st Street, El Centro, CA.

Comments: Attendees will be able to submit written comments at the public meetings. A court reporter will be available to accept oral comments. Equal weight will be given to oral and written statements. Comments on the Draft LEIS may be submitted by: (1) Attending one of the public hearings and providing oral or written comments, (2) completing the comment form on the project's public Web site at *www.chocolatemountainrenewal.com/Comment/Default.aspx,* or (3) by sending a letter to the CMAGR LEIS Project Manager (Attn: Ms. Kelly Finn), NAVFAC Southwest, 1220 Pacific Highway, Building 1 Central IPT, San Diego, CA 92132–5190. All comments must be postmarked or electronically dated no later than November 30, 2012 to ensure they become part of the public record. All statements (oral transcription and written) submitted during the public review period will become part of the public record on the Draft LEIS and will be addressed in the Final LEIS. Before including your address, telephone number, email address, or other personal identifying information in your comment, please be aware that your entire comment—including any personal identifying information—may be made publicly available at any time. Although requests can be made to withhold personal identifying information from public review, it may not be possible to keep this information from disclosure.

FOR FURTHER INFORMATION CONTACT: CMAGR LEIS Project Manager (Attn: Ms. Kelly Finn), NAVFAC Southwest, 1220 Pacific Highway, Building 1 Central IPT, San Diego, CA 92132–5190; phone 619–532–4452. Additional supplementary information regarding the CMAGR Draft LEIS is available at *www.chocolatemountainrenewal.com.* Please submit requests for special assistance, sign language interpretation for the hearing impaired, or other auxiliary aids needed at the public meetings to the LEIS Project Manager at least five business days before the meeting date.

SUPPLEMENTARY INFORMATION: A Notice of Intent to prepare the Draft LEIS was published in the **Federal Register** on September 24, 2010 (Vol. 75, No. 185, p. 58370).

Purpose and Need: The CMAGR has served as an aerial bombing and gunnery training range since the 1940s, and currently provides approximately 458,530 acres (about 716 square miles) of land to support military training. Training at the CMAGR is also supported by overlying and adjacent special-use airspace that extends laterally for several thousands of square miles. The CMAGR is needed to provide live-fire training that is essential for developing and maintaining the readiness of USMC and Navy aviators. The range is also vital for training select USMC and Navy land combat forces; including Naval Special Warfare (NSW) forces. Among other activities, the CMAGR and associated airspace supports training in air combat maneuvering and tactics; close air support (where air-to-ground ordnance is delivered directly in support of friendly forces); airborne laser system operations; air-to-air gunnery; and air-to-ground bombing, rocketry, and strafing. Ground-based artillery, demolition, small arms, and NSW training are also conducted within the range. The CMAGR is a centerpiece in a much larger training complex that incorporates adjacent and nearby special use airspaces and ranges to

support full-spectrum combat operations so that Marines can realistically train as they will fight.

The purpose of renewing the CMAGR land withdrawal is to retain the training range. The U.S. military is fully invested in the principle that high quality training is essential to the success and survival of its forces in combat; the CMAGR is needed to provide the quality training that provides a realistic approximation of the conditions that Marines, sailors, airmen, and soldiers will face in combat as individuals and in small or large units. Access to ranges that offer flexible, diverse, and realistic training is essential to preparing tactical forces of the highest possible quality. Thus, the necessity of keeping the CMAGR fully in service can best be understood from two main perspectives: (1) The necessity of providing high quality training and (2) the superlative qualities of the CMAGR for supporting that training.

Proposed Action: The Proposed Action is to renew the military land withdrawal and reservation of the CMAGR. The Proposed Action includes four elements: (1) Defining a proposed range boundary and land withdrawal area; (2) either a set duration for the proposed land withdrawal with an option for requesting a subsequent renewal, a land withdrawal without a termination date, or transferring the land to the DoN; (3) proposals for redefining DoN and BLM management responsibilities for the CMAGR; and (4) provisions for the disposal and management of land that is not included in the renewal.

Alternatives Considered in the Draft LEIS: A range of alternatives for the proposed renewal and administration of the CMAGR land withdrawal were developed in consideration of comments received from the public, Native American tribes, and government agencies during the scoping process. Four action alternatives (Alternatives 1 through 4) would renew the land withdrawal and keep the CMAGR available to support military training. The no-action alternative (Alternative 5) would allow the current land withdrawal to expire in October 2014, which would result in the closure of the CMAGR for military training.

The Draft LEIS evaluates realigning the CMAGR boundary in three locations: South of the Niland-Blythe Road on the eastern side of the range, along the Bradshaw Trail at the northern end of the range, and along the Union Pacific Railroad (UPRR) at the southwestern side of the range. The Bradshaw Trail and UPRR realignments are proposed to align the CMAGR boundary with these prominent geographic features, which would increase public awareness of the location of the range boundary and facilitate maintenance of prohibited entry and hazardous area warning signs along the CMAGR perimeter.

Two parcels of currently withdrawn BLM land located south of the Niland-Blythe Road, which are not needed for military purposes, are proposed to be excluded from the withdrawal renewal.

Two alternatives for realigning the CMAGR boundary along the south side of the Bradshaw Trail are considered in the Draft LEIS. The full Bradshaw Trail realignment would align the CMAGR boundary along the southern side of the trail for the entire 36 miles over which it intersects the range. The full realignment would (1) release about 647 acres of DoN land and about 1,924 acres of currently withdrawn BLM land, including the Bradshaw Trail National Backcountry Byway, north of the realigned boundary from the CMAGR and (2) require the first-time withdrawal of about 530 acres of BLM land and potential acquisition of about 455 acres of private and 10 acres of State land to the interior of the new boundary. The land proposed for release is not needed for military purposes. The partial Bradshaw Trail realignment would align the CMAGR boundary along the southern side of an aggregate of about 20 miles of segments of the Bradshaw Trail that traverse either DoN or currently withdrawn BLM land. This action would release about 647 acres of DoN land and about 1,640 acres of currently withdrawn BLM land from the ranges that are not needed for military purposes. The boundary would not be realigned from its present locations where BLM, State, or private land south of the Bradshaw Trail is not presently part of the CMAGR.

The proposed UPRR realignment on the southwestern side of the CMAGR would follow the eastern side of the UPRR right-of-way, the northern side of the Mesquite Regional Landfill Rail Spur right-of-way, and an existing road. This action would include (1) the first-time withdrawal of about 11,903 acres of BLM land that are not currently in the CMAGR and (2) the potential acquisition of about 658 acres of State land.

The boundary realignment proposals create four boundary and land withdrawal alternatives:

1. Renew the CMAGR boundary and land withdrawal area without change from the existing condition (Alternative 1).

2. Renew the CMAGR boundary and land withdrawal area per the existing conditions except incorporate the full Bradshaw Trail, UPRR, and south of Niland-Blythe Road realignments (Alternative 2).

3. Renew the CMAGR boundary and land withdrawal area per the existing conditions except incorporate the full Bradshaw Trail and south of Niland-Blythe Road realignments (Alternative 3).

4. Renew the CMAGR boundary and land withdrawal area per the existing conditions except incorporate only the partial Bradshaw Trail realignment (Alternative 4).

The boundary realignment and land withdrawal area proposals of Alternatives 2, 3, and 4 would each release some BLM and DoN land from the CMAGR. Alternatives considered for the disposal and management of land released from range include:

1. Released DoN land would be transferred to BLM; BLM would manage transferred DoN and formerly withdrawn BLM land per FLPMA (Alternative 2).

2. Released DoN land would be disposed of through existing General Services Administration (GSA) authorities and procedures; DoN would manage released land per the Sikes Act until disposal is complete and BLM would manage formerly withdrawn BLM land per FLPMA (Alternatives 3 and 4).

Three options are proposed for the duration of the renewed CMAGR land withdrawal: 20 years (Alternative 1, existing condition); 25 years (Alternatives 2 and 4); or indefinite (Alternative 3).

Three options are proposed for administering federal land management responsibilities for the DoN and BLM lands within the current CMAGR boundary and for BLM land that may be included in the range for the first time as a part of a proposed boundary realignment. The options include:

1. Retain the existing DoN and BLM management assignments within the renewed CMAGR, which provide that the DoN is responsible for managing DoN land in accordance with the Sikes Act and the BLM is responsible for managing BLM land in accordance with the Federal Land Policy and Management Act (FLPMA) (Alternative 1, existing condition).

2. Transfer management responsibility for BLM land within the renewed CMAGR to the DoN for the duration of the land withdrawal, which would make the DoN responsible for managing both the DoN and withdrawn BLM lands within the range in accordance with the Sikes Act (Alternatives 2 and 4).

3. Transfer jurisdiction for the BLM land within the renewed CMAGR to the DoN, which would make the DoN responsible for managing all land within the range in accordance with the Sikes Act until such time that the need for the range may end and it is deactivated and closed (Alternative 3).

The no-action alternative (Alternative 5) would result in the closure of the CMAGR for military training. Selection of this alternative would trigger planning and actions to compensate for the displacement of training from the range and planning and actions for the decommissioning, decontamination and cleanup, and potential reuse of at least portions of the range. The BLM would resume full administrative responsibility for about 226,825 acres of currently withdrawn BLM land, with the possible exception of parcels that the Secretary of the Interior may not be able to accept because of potential expended ordnance contamination. The Secretary of the Navy would be responsible for custodial management of parcels with unacceptable levels of expended ordnance contamination. The Secretary of the Navy would also retain administrative responsibility for about 229,256 acres of DoN land from the closed CMAGR until such time as a portion or all of that land could be transferred to another federal agency, the State of California, or otherwise disposed of through existing GSA authorities and procedures. The State of California holds reversionary rights for about 11,311 acres of DoN land in the CMAGR that were acquired in fee from the State. California also holds some or all mineral rights on an additional 10,981 acres of the DoD land.

Dated: August 24, 2012.

C.K. Chiappetta,

Lieutenant Commander, Office of the Judge Advocate General, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF ENERGY

Ultra-Deepwater Advisory Committee

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Ultra-Deepwater Advisory Committee. The Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Wednesday, September 26, 2012, 8:00 a.m.–5:00 p.m. (CST).

ADDRESSES: Hyatt North Houston, 425 North Sam Houston Parkway East, Houston, TX 77060.

FOR FURTHER INFORMATION CONTACT: Elena Melchert, U.S. Department of Energy, Office of Oil and Natural Gas, Washington, DC 20585. Phone: (202) 586–5600.

SUPPLEMENTARY INFORMATION:

Purpose of the Committee: The purpose of the Ultra-Deepwater Advisory Committee is to provide advice to the Secretary of Energy on development and implementation of programs related to ultra-deepwater architecture; and to provide comments and recommendations and priorities for the Department of Energy Annual Plan per requirements of the Energy Policy Act of 2005, Title IX, Subtitle J, Section 999D.

Tentative Agenda

September 26, 2012

7:30 a.m.–8:00 a.m. Registration.

8:00 a.m.–12:00 p.m. Call to Order, Welcome, Introductions, Opening Remarks, Overview of the Oil and Gas Ultra-Deepwater Research Portfolio.

1:00 p.m.–4:45 p.m. Overview of *Draft 2013 Annual Plan.*

4:45 p.m.–5:00 p.m. Public Comments, if any.

5:00 p.m. Adjourn.

Public Participation: The meeting is open to the public. The Designated Federal Officer and the Chairman of the Committee will lead the meeting for the orderly conduct of business. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. If you would like to make oral statements regarding any of the items on the agenda, you should contact Elena Melchert at the telephone number listed above. You must make your request for an oral statement at least three business days prior to the meeting, and reasonable provisions will be made to include all who wish to speak. Public comment will follow the three minute rule.

Minutes: The minutes of this meeting will be available for public review and copying within 60 days at the following Web site: *www.fossil.energy.gov/programs/oilgas/advisorycommittees/UltraDeepwater.html.*

Issued at Washington, DC, on August 27, 2012.

LaTanya R. Butler,

Acting Deputy Committee Management Officer.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE–EM and site management in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda

1:00 p.m. Call to Order by Deputy Designated Federal Officer (DDFO), Ed Worth
- Establishment of a Quorum: Roll Call and Excused Absences, Staff
- Welcome and Introductions, Ralph Phelps, Chair
- Approval of Agenda and August 29, 2012 Meeting Minutes

1:30 p.m. Public Comment Period
1:45 p.m. Old Business
- Written Reports
- Other Items

2:00 p.m. New Business
- Consideration and Action on Fiscal Year (FY) 2013 Committee Work Plans
- Discuss Meeting Locations and Schedule for 2013
- Appoint Ad Hoc Committee for Annual Self-Evaluation

2:30 p.m. Items from the DDFO, Ed Worth
- Update from DOE
- Other Items

2:45 p.m. Break
3:00 p.m. Presentation of FY 2013 Work Priorities, New Mexico Environment Department (NMED) and DOE
4:00 p.m. Items from Liaison Members
- Los Alamos National Laboratory, Bruce Schappell
- Environmental Protection Agency (Region 6), Ed Worth for Rich Mayer
- Data Input and Validation and Verification Process

4:15 p.m. Update on Chromium
5:00 p.m. Dinner Break on the Patio
6:00 p.m. Public Comment Period
6:15 p.m. Consideration and Action on Draft Recommendation(s) to DOE, Ralph Phelps
6:45 p.m. Wrap-Up and Comments from Board Members, Ralph Phelps
7:00 p.m. Adjourn, Ed Worth, DDFO

Public Participation: The EM SSAB, Northern New Mexico, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Menice Santistevan at least seven days in advance of the meeting at the telephone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Menice Santistevan at the address or telephone number listed above. Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments will be provided a maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing or calling Menice Santistevan at the address or phone number listed above. Minutes and other Board documents are on the Internet at: *http://www.nnmcab.energy.gov/.*

Issued at Washington, DC, on August 27, 2012.

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Idaho National Laboratory

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Idaho National Laboratory. The Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Thursday, September 20, 2012, 8:00 a.m.–5:00 p.m.

Opportunities for public participation will be from 11:00 a.m. to 11:15 a.m. and from 3:15 p.m. to 3:45 p.m.

These times are subject to change; please contact the Federal Coordinator (below) for confirmation of times prior to the meeting.

ADDRESSES: Sun Valley Inn, 1 Sun Valley Road, Sun Valley, Idaho 83402.

FOR FURTHER INFORMATION CONTACT: Robert L. Pence, Federal Coordinator, Department of Energy, Idaho Operations Office, 1955 Fremont Avenue, MS–1203, Idaho Falls, Idaho 83415. Phone (208) 526–6518; Fax (208) 526–8789 or email: *pencerl@id.doe.gov* or visit the Board's Internet home page at: *http://inlcab.energy.gov/.*

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE–EM and site management in the areas of environmental restoration, waste management, and related activities.

Tentative Topics (agenda topics may change up to the day of the meeting; please contact Robert L. Pence for the most current agenda):

- Recent Public Involvement and Outreach
- Progress to Cleanup Status

- Integrated Waste Treatment Unit Investigation Report and Corrective Actions
- Idaho Treatment Group Recovery Plan/Projected Performance Status
- Small Business Subcontracting Programs—INL Contractors & DOE-Idaho
- Accelerated Retrieval Project Status—Projected Execution
- Idaho Cleanup Project (ICP) Contract Accomplishments
- ICP Contract Closeout Process

Public Participation: The EM SSAB, Idaho National Laboratory, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Robert L. Pence at least seven days in advance of the meeting at the phone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral presentations pertaining to agenda items should contact Robert L. Pence at the address or telephone number listed above. The request must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments will be provided a maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing or calling Robert L. Pence, Federal Coordinator, at the address and phone number listed above. Minutes will also be available at the following Web site: *http://inlcab.energy.gov/pages/meetings.php.*

Issued at Washington, DC, on August 27, 2012.

LaTanya R. Butler,

Acting Deputy Committee Management Officer.

[Docket No. ER12–2511–000]

C.P. Crane LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding, of C.P. Crane LLC's application for market-based rate authority, with an accompanying rate schedule, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability is September 17, 2012.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding(s) are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER12–2513–000]

Raven Power Marketing LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding, of Raven Power Marketing LLC's application for market-based rate authority, with an accompanying rate schedule, noting that such application includes a request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability is September 17, 2012.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding(s) are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email *FERCOnlineSupport@ferc.gov* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: August 27, 2012.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2009–1017; FRL–9357–6]

Cancellation Order for Certain Pesticide Registrations: MGK 264, Pyrethrins, Pyriproxyfen, and Permethrin; Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; correction.

SUMMARY: EPA issued notices in the **Federal Register** of November 23, 2011 and February 15, 2012, concerning the voluntary cancellation of several pesticide products, including Amrep, Inc.'s MGK–264/Pyrethrins/Pyriproxyfen/Permethrin product EPA Reg. No. 010807–00448. This document corrects typographical errors in the November 23, 2011 notice and February 15, 2012 cancellation order regarding

the EPA registration numbers of the Amrep, Inc., MGK 264/Pyrethrins/Pyriproxyfen/Permethrin product affected by the cancellation order.

FOR FURTHER INFORMATION CONTACT: Katie Weyrauch, Pesticide Re-evaluation Division, (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (703) 308–0166; email address: *weyrauch.katie@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

The Agency included in the notice a list of those who may be potentially affected by this action.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2009–1017, is available at *http://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), EPA West Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at http://www.epa.gov/dockets.

II. What does this correction do?

1. FR Doc. 2011–29990 published in the **Federal Register** of November 23, 2011 (76 FR 72405) (FRL–9327–2) is corrected as follows:

On page 72407, Table 1, under the heading Registrations with Pending Requests for Cancellation, in the first column, registration number ''010807–00448'' is corrected to read ''010807–447.'' On page 72407, in Table 1, in the second column, correct product name ''Country Vet Flea & Tick Fogger with Growth Inhibitor'' to read ''Purge Insecticide.'' On page 72407, in Table 1, in the third column, correct active ingredients ''MGK 264 Pyrethrins Pyriproxyfen Permethrin'' to read ''Piperonyl butoxide Pyrethrins.''

2. FR Doc. 2012–2982 published in the **Federal Register** of February 15, 2012 (77 FR 8863) (FRL–9336–3) is corrected as follows:

On page 8863, Table 1, under the heading Product Cancellations, in the first column, registration number ''010807–00448'' is corrected to read ''010807–447.'' On page 8863, in Table 1, in the second column, correct product name ''Country Vet Flea & Tick Fogger with Growth Inhibitor'' to read ''Purge Insecticide.'' On page 8863, in Table 1, in the third column, correct active ingredients ''MGK 264 Pyrethrins Pyriproxyfen Permethrin'' to read ''Piperonyl butoxide Pyrethrins.''

ENVIRONMENTAL PROTECTION AGENCY

[AMS–FRL–9724–4]

California State Motor Vehicle Pollution Control Standards; Advanced Clean Car Program; Request for Waiver of Preemption; Opportunity for Public Hearing and Public Comment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Opportunity for Public Hearing and Comment.

SUMMARY: The California Air Resources Board (CARB) has notified EPA that it has developed an Advanced Clean Car program (ACC) which combines the control of smog and soot causing pollutants and greenhouse gas (GHG) emissions into a single coordinated package of requirements for passenger cars, light-duty trucks and medium-duty passenger vehicles (and limited requirements related to heavy-duty vehicles). The ACC program includes revisions to California's Low Emission Vehicle (LEV) program as well as its Zero Emission Vehicle (ZEV) program. By letter dated June 27, 2012, CARB submitted a request that EPA grant a waiver of preemption under section 209(b) of the Clean Air Act (CAA), 42 U.S.C. 7543(b) for the revisions to the LEV program. CARB also seeks confirmation that the amendments to the ZEV program are within-the-scope of prior waiver decisions issued by EPA, or in the alternative requests a waiver for these revisions. This notice announces that EPA has scheduled a public hearing concerning California's request and that EPA is accepting written comment on the request.

DATES: EPA has scheduled a public hearing concerning CARB's request on September 19, 2012, beginning at 9:00 a.m. Any party planning to present oral testimony should notify EPA by September 14, 2012, expressing its interest. EPA will hold the public hearing at EPA's offices at 1310 L Street NW., Washington, DC 20460. Any party may submit written comments by October 19, 2012.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–OAR–2012–0562, by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email: dickinson.david@epa.gov.*
- *Fax:* (202) 343–2804.
- *Mail:* U.S. Environmental Protection Agency, EPA West (Air Docket), 1200 Pennsylvania Ave., NW., Room B108, Mail Code 6102T, Washington, DC 20460, Attention Docket ID No. EPA–HQ–OAR–2012–0562. Please include a total of two copies.
- *Hand Delivery:* EPA Docket Center, EPA/DC, EPA West, Room B102, 1301 Constitution Ave., NW., Washington, DC Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information. Instructions: Direct your comments to Docket ID No EPA–HQ–OAR–2012–0562.

EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or email.

The *http://www.regulations.gov* Web site is an ''anonymous access'' system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *http://www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy.

EPA will make available for in person inspection, at the Air and Radiation Docket and Information Center, written comments received from interested parties, in addition to any testimony given at the public hearing. The official public docket is the collection of materials that is available for public viewing at the Air and Radiation Docket in the EPA Docket Center, (EPA/DC) EPA West, Room B102, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air and Radiation Docket is (202) 566–1743. The reference number for this docket is EPA–HQ–OAR–2012–0562.

EPA will make available an electronic copy of this Notice on the Office of Transportation and Air Quality's (OTAQ's) homepage (*http://www.epa.gov/otaq/*). Users can find this document by accessing the OTAQ homepage and looking at the path entitled ''Regulations.'' This service is free of charge, except any cost you already incur for Internet connectivity. Users can also get the official **Federal Register** version of the Notice on the day of publication on the primary Web site: (*http://www.epa.gov/docs/fedrgstr/EPA-AIR/*).

Please note that due to differences between the software used to develop the documents and the software into

which the documents may be downloaded, changes in format, page length, etc., may occur.

FOR FURTHER INFORMATION CONTACT: David Dickinson, Compliance Division (6405J), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460. Telephone: (202) 343–9256, Fax: (202) 343–2804, email address: *Dickinson.David@EPA.GOV.*

mailto:Dickinson.David@EPA.GOV.

SUPPLEMENTARY INFORMATION:

I. CARB's New Waiver Request and Prior Greenhouse Gas Emission Waivers

CARB's June 27, 2012, letter to the Administrator notified EPA that CARB had adopted its ACC regulatory package in January 2012 and that the package contains amendments to its low emission vehicle (LEV) program to address both smog forming pollutants and greenhouse gases, and amendments to its zero emission vehicle program (ZEV).[1] The amendments to the LEV program are referred to as LEV III. CARB requests that EPA grant a new waiver for its LEV III program. CARB also seeks confirmation that amendments to its ZEV program are within-the-scope of previous waivers issued by EPA. In the alternative, CARB requests that EPA grant a new waiver for its ZEV program.

CARB's waiver request discusses in detail both its ZEV program amendments and its LEV III amendments. CARB's waiver request includes an ''analysis setting forth California's basis for the waiver requests. The analysis sets forth a summary of the regulatory actions, a review of the criteria governing EPA's evaluation of a California waiver request, and the legal arguments that support and compel EPA to grant California's request.'' [2] With respect to the LEV III greenhouse gas standards, CARB notes that it plans to adopt a rule which would allow manufacturers to demonstrate compliance with California's greenhouse gas regulations for the 2017 through 2025 model years by demonstrating compliance with EPA's greenhouse gas requirements for the 2017 through 2025 model years (commonly referred to as the 'deemed to comply' provision), subject to review of the contents of EPA's final rule for these model years.[3]

CARB plans to commence its ''deemed to comply'' rulemaking shortly after EPA finalizes the light-duty vehicle greenhouse gas emission standards for model years 2017–2025, conditioned on its review of EPA's final GHG rule. As discussed below, EPA invites comment on all aspects of CARB's waiver request, and specifically invites comment on CARB's waiver request in light of CARB's plans concerning adoption of a deemed to comply provision into its LEV III GHG standards. This will allow EPA to consider any deemed to comply provision and comments on it when taking action on CARB's request for a waiver.

EPA previously granted CARB a waiver of preemption for its 2009 and subsequent model year new motor vehicle greenhouse gas emission standards on July 8, 2009 (74 FR 32744). Subsequently, CARB adopted a series of amendments to those regulations, including a deemed to comply rule whereby compliance with EPA's GHG standards for model years 2012 through 2016 would serve as compliance with California's GHG standards for those model years. On June 14, 2011 (76 FR 34693), EPA confirmed that these series of amendments were within-the-scope of the waiver granted on July 8, 2009. EPA has most recently issued waivers and within-the-scope decisions for CARB's ZEV program in 2006 (71 FR 78190, December 28, 2006) and 2011 (76 FR 61095, October 3, 2011). EPA's most recent waivers and within-the-scope decisions for CARB's LEV II program were issued in 2003 (68 FR 19811, April 22, 2003), 2005 (70 FR 22034, April 28, 2005), and 2010 (75 FR 44948, July 30, 2010).

II. Scope of Preemption and Criteria for a Waiver Under the Clean Air Act

Section 209(a) of the Clean Air Act, as amended (''Act''), 42 U.S.C. 7543(a), provides:

> No State or any political subdivision thereof shall adopt or attempt to enforce any standard relating to the control of emissions from new motor vehicles or new motor vehicle engines subject to this part. No state shall require certification, inspection or any other approval relating to the control of emissions from any new motor vehicle or new motor vehicle engine as condition precedent to the initial retail sale, titling (if any), or registration of such motor vehicle, motor vehicle engine, or equipment.

Section 209(b) of the Act requires the Administrator, after notice and opportunity for public hearing, to waive application of the prohibitions of section 209(a) for any state that has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, if the state determines that the state standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards. California is the only state that is qualified to seek and receive a waiver under section 209(b). The Administrator must grant a waiver unless she finds that (A) the determination of the state is arbitrary and capricious, (B) the state does not need the state standards to meet compelling and extraordinary conditions, or (C) the state standards and accompanying enforcement procedures are not consistent with section 202(a) of the Act. Previous decisions granting waivers of Federal preemption for motor vehicles have stated that State standards are inconsistent with section 202(a) if there is inadequate lead time to permit the development of the necessary technology giving appropriate consideration to the cost of compliance within that time period or if the Federal and State test procedures impose inconsistent certification procedures.[4]

III. Request for Comment

When EPA receives new waiver requests from CARB, EPA traditionally publishes a notice of opportunity for public hearing and comment and then, after the comment period has closed, publishes a notice of its decision in the **Federal Register**. In contrast, when EPA receives within-the-scope waiver requests from CARB, EPA usually publishes a notice of its decision in the **Federal Register** and concurrently invites public comment if an interested party is opposed to EPA's decision. In this case, for the ZEV amendments CARB requests a within-the-scope determination, or in the alternative a waiver.

Since CARB has submitted a within-the-scope request for its ZEV amendments as they affect both the 2012–2017 model years (MYs) and 2018 and subsequent MYs, EPA invites

[1] The amendments and adoption of regulations can be found at title 13, California Code of Regulations, sections 1961.2 and 1961.3 (adoption) and sections 1900, 1956.8, 1960.1, 1961, 1961.1, 1965, 1968.2, 1968.5, 1976, 1978, 2037, 2038, 2062, 2112, 2139, 2140, 2145, 2147, 2235, 2317, and Documents incorporated by reference (amendments).

[2] Letter from Mary D. Nichols, CARB, dated June 27, 2012 at p. 2.

[3] ''CLEAN AIR ACT § 209(b) WAIVER SUPPORT DOCUMENT SUBMITTED BY THE CALIFORNIA AIR RESOURCES BOARD, May 2012,'' at p. 9 (accompanying June 27, 2012 letter).

[4] To be consistent, the California certification procedures need not be identical to the Federal certification procedures. California procedures would be inconsistent, however, if manufacturers would be unable to meet the state and the Federal requirements with the same test vehicle in the course of the same test. See, *e.g.,* 43 FR 32182 (July 25, 1978).

comment on the following issues. First, should California's ZEV amendments, as they affect the 2012–2017 MYs and/or the 2018 and later MYs, be considered under the within-the-scope criteria or should they be considered under the full waiver criteria? Second, to the extent part or all of those ZEV amendments should be considered as a within-the-scope request, do such amendments meet the criteria for EPA to confirm that they are within-the-scope of prior waivers? Please also provide comments to address the full waiver analysis (noted below for the remainder of the ACC program), in the event that EPA cannot confirm that some or all of CARB's ZEV amendments are within-the-scope of previous waivers.

We are requesting comment on all aspects of the full waiver analysis with regard to the ACC program (the LEV III criteria pollutant and GHG regulations, and the ZEV amendments to the extent EPA does not consider them under the within-the-scope analysis noted above). This includes consideration of the following three criteria: whether (a) California's determination that its motor vehicle emission standards are, in the aggregate, at least as protective of public health and welfare as applicable Federal standards is arbitrary and capricious, (b) California needs such standards to meet compelling and extraordinary conditions, and (c) California's standards and accompanying enforcement procedures are consistent with section 202(a) of the Clean Air Act. As noted above, CARB plans to propose a deemed to comply rule for its GHG standards shortly after EPA finalizes its light-duty vehicle greenhouse gas emission standards, conditioned on its review of EPA's final GHG rule. As such, EPA specifically invites comment on CARB's waiver request in light of CARB's plans concerning adoption of a deemed to comply provision into its LEV III GHG standards. This will allow EPA to consider any deemed to comply provision and comments on it when taking action on CARB's request for a waiver.

IV. Procedures for Public Participation

The Agency will make a verbatim record of the proceedings at the hearing. Interested parties may arrange with the reporter at the hearing to obtain a copy of the transcript at their own expense. EPA will keep the record open until October 19, 2012. Upon expiration of the comment period, the Administrator will render a decision on CARB's request based on the record of the public hearing, relevant written submissions, and other information that she deems pertinent.

Persons with comments containing proprietary information must distinguish such information from other comments to the greatest possible extent and label it as ''Confidential Business Information'' (CBI). If a person making comments wants EPA to base its decision in part on a submission labeled CBI, then a non-confidential version of the document that summarizes the key data or information should be submitted for the public docket. To ensure that proprietary information is not inadvertently placed in the docket, submissions containing such information should be sent directly to the contact person listed above and not to the public docket. Information covered by a claim of confidentiality will be disclosed by EPA only to the extent allowed and by the procedures set forth in 40 CFR part 2. If no claim of confidentiality accompanies the submission when EPA receives it, EPA will make it available to the public without further notice to the person making comments.

Dated: August 28, 2012.

Gina McCarthy,

Assistant Administrator, Office of Air and Radiation.

EXPORT-IMPORT BANK

Economic Impact Policy

This notice is to inform the public that the Export-Import Bank of the United States has received an application for a $21 million guarantee to support the $19 million export of a wire rod mill to the Czech Republic. The U.S. export will replace an existing facility and enable the Czech company to expand its production of wire rod by approximately 50,000 metric tons annually during the 8.5-year repayment term of the obligation. Available information indicates that the additional wire rod production will be sold domestically in the Czech Republic and Slovakia, Germany, and Italy.

Interested parties may submit comments on this transaction by email to *economic.impact@exim.gov* or by mail to 811 Vermont Avenue NW., Room 947, Washington, DC 20571, within 14 days of the date this notice appears in the **Federal Register**.

Kathryn Hoff-Patrinos,

Deputy General Counsel.

FEDERAL RESERVE SYSTEM

Federal Open Market Committee; Domestic Policy Directive of July 31–August 1, 2012

In accordance with Section 271.7(d) of its rules regarding availability of information (12 CFR part 271), there is set forth below the domestic policy directive issued by the Federal Open Market Committee at its meeting held on July 31–August 1, 2012.[1]

The Federal Open Market Committee seeks monetary and financial conditions that will foster price stability and promote sustainable growth in output. To further its long-run objectives, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to continue the maturity extension program it announced in June to purchase Treasury securities with remaining maturities of 6 years to 30 years with a total face value of about $267 billion by the end of December 2012, and to sell or redeem Treasury securities with remaining maturities of approximately 3 years or less with a total face value of about $267 billion. For the duration of this program, the Committee directs the Desk to suspend its current policy of rolling over maturing Treasury securities into new issues. The Committee directs the Desk to maintain its existing policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in the System Open Market Account in agency mortgage-backed securities. These actions should maintain the total face value of domestic securities at approximately $2.6 trillion. The Committee directs the Desk to engage in dollar roll transactions as necessary to facilitate settlement of the Federal Reserve's agency MBS transactions. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System's balance sheet that could affect the attainment over time of the Committee's objectives of maximum employment and price stability.

[1] Copies of the Minutes of the Federal Open Market Committee at its meeting held on July 31–August 1, 2012, which includes the domestic policy directive issued at the meeting, are available on the Board's Web site, *www.federalreserve.gov.* The minutes are also published in the Federal Reserve Bulletin and in the Board's Annual Report.

By order of the Federal Open Market Committee, August 22, 2012.

William B. English,

Secretary, Federal Open Market Committee.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 26, 2012.

A. Federal Reserve Bank of New York (Ivan Hurwitz, Vice President) 33 Liberty Street, New York, New York 10045–0001:

1. *RSB Bancorp, MHC and RSB Bancorp, Inc., both of Roselle, New Jersey,* to become bank holding companies by acquiring 100 percent of Roselle Savings Bank, Roselle, New Jersey.

B. Federal Reserve Bank of Philadelphia (William Lang, Senior Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105–1521:

1. *First Priority Financial Corp, Malvern, Philadelphia,* to acquire 100 percent of Affinity Bancorp, Inc., Wyomissing, Philadelphia, and thereby indirectly acquire Affinity Bank of Pennsylvania, Wyomissing, Philadelphia.

Board of Governors of the Federal Reserve System, August 28, 2012.

Margaret McCloskey Shanks,

Associate Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–10443 and CMS–10149]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Centers for Medicare & Medicaid Services (CMS) is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

1. *Type of Information Collection Request:* New collection. *Title of Information Collection:* Transcatheter Valve Therapy Registry and KCCQ–10. *Use:* The data collection is required by the Centers for Medicare and Medicaid Services (CMS) National Coverage Determination (NCD) entitled, ''Transcatheter Aortic Valve Replacement (TAVR)''. The TAVR device is only covered when specific conditions are met including that the heart team and hospital are submitting data in a prospective, national, audited registry. The data includes patient, practitioner and facility level variables that predict outcomes such as all cause mortality and quality of life. CMS finds that the Society of Thoracic Surgery/ American College of Cardiology Transcatheter Valve Therapy (STS/ACC TVT) Registry, one registry overseen by the National Cardiovascular Data Registry, meets the requirements specified in the NCD on TAVR. The TVT Registry will support a national surveillance system to monitor the safety and efficacy of the TAVR technologies for the treatment of aortic stenosis.

The data will also include the variables on the eight item Kansas City Cardiomyopathy Questionnaire (KCCQ–10) to assess heath status, functioning and quality of life. In the KCCQ, an overall summary score can be derived from the physical function, symptoms (frequency and severity), social function and quality of life domains. For each domain, the validity, reproducibility, responsiveness and interpretability have been independently established. Scores are transformed to a range of 0–100, in which higher scores reflect better health status.

The conduct of the STS/ACC TVT Registry and the KCCQ–10 is in accordance with Section 1142 of the Social Security Act (the Act) that describes the authority of the Agency for Healthcare Research and Quality (AHRQ). Under section 1142, research may be conducted and supported on the outcomes, effectiveness, and appropriateness of health care services and procedures to identify the manner in which disease, disorders, and other health conditions can be prevented, diagnosed, treated, and managed clinically. Section 1862(a)(1)(E) of the Act allows Medicare to cover under coverage with evidence development (CED) certain items or services for which the evidence is not adequate to support coverage under section 1862(a)(1)(A) and where additional data gathered in the context of a clinical setting would further clarify the impact of these items and services on the health of beneficiaries.

The data collected and analyzed in the TVT Registry will be used by CMS to determine if the TAVR is reasonable and necessary (e.g., improves health outcomes) for Medicare beneficiaries under Section 1862(a)(1)(A) of the Act. Furthermore, data from the Registry will assist the medical device industry and the Food and Drug Administration (FDA) in surveillance of the quality, safety and efficacy of new medical devices to treat aortic stenosis. For purposes of the TAVR NCD, The TVT Registry has contracted with the Data Analytic Centers to conduct the analyses. In addition, data will be made available for research purposes under the terms of a data use agreement that

only provides de-identified datasets. *Form Number:* CMS–10443 (OCN: 0938-New); *Frequency:* Annual; *Affected Public:* Individuals, Households and Private Sector; *Number of Respondents:* 12,000; *Total Annual Responses:* 24,000; *Total Annual Hours:* 7,000. (For policy questions regarding this collection contact JoAnna Baldwin at 410–786–7205. For all other issues call 410–786–1326.)

2. *Type of Information Collection Request:* Reinstatement without change of a previously approved collection; *Title of Information Collection:* Health Insurance Reform: Electronic Security Standards; *Use:* This information collection corresponds to existing regulations establishing standards for the security of electronic protected health information to be implemented by health plans, health care clearinghouses and certain health care providers, as required under title II, subtitle F, sections 261 through 264 of the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104–191. The use of the security standards improves Federal health programs, private health programs, and the effectiveness and efficiency of the health care industry in general by establishing a level of protection for certain electronic health information. This information collection request does not propose any changes to this information collection related to future modifications of the underlying HIPAA security standards. *Form Number:* CMS–10149 (OCN: 0938–0949); *Frequency:* Occasionally; *Affected Public:* Business or other for-profit, Not-for-profit institutions, Federal Government, and State, Local or Tribal Government; *Number of Respondents:* 135,560; *Total Annual Responses:* 285,560; *Total Annual Hours:* 536,743. (For policy questions regarding this collection contact William Parham at 410–786–4669. For all other issues call 410–786–1326.)

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS' Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995,* or Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov,* or call the Reports Clearance Office on (410) 786–1326.

In commenting on the proposed information collections please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in one of the following ways by *October 30, 2012:*

1. *Electronically.* You may submit your comments electronically to *http://www.regulations.gov.* Follow the instructions for ''Comment or Submission'' or ''More Search Options'' to find the information collection document(s) accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: CMS–R–284 (OCN 0938–0345), Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

Dated: August 28, 2012.

Martique Jones,

Director, Regulations Development Group, Division B, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–359 and CMS–360]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the Agency's function; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

1. *Type of Information Collection Request:* Extension without change of a currently approved collection. *Title of Information Collection:* Comprehensive Outpatient Rehabilitation Facility (CORF) Eligibility and Survey Forms. *Use:* CMS–359 serves as the application for facilities wishing to participate in the Medicare/Medicaid program as CORFs. The form initiates the process for obtaining a decision as to whether the conditions of participation are met. It also promotes data reduction (key punching) or introduction to and retrieval from the Medicare/Medicaid Automated Certification System, ASPEN, by the CMS Regional Offices. Should any question arise regarding the structure of the organization, this information is readily available without going through the process of completing the form again.

CMS–360 is used by the State survey agency to record data collected to determine provider compliance with individual conditions of participation and to report it to the federal government. CMS has the responsibility and authority for certification decisions which are based on provider compliance with the conditions of participation. The information needed to make these decisions is available to CMS only through the information abstracted from the survey checklists. The form is primarily a worksheet designed to facilitate key punching into ASPEN by the state agency after the survey is completed. *Form Number:* CMS–359 (CORF Eligibility Form) and CMS–360 (CORF Survey Report Form); (OCN 0938–0267); *Frequency:* Occasionally. *Affected Public:* Private Sector (Business or other for-profits). *Number of Respondents:* 295. *Total Annual Responses:* 42. *Total Annual Hours:* 137. (For policy questions regarding this collection contact Georgia Johnson at 410–786–6859. For all other issues call 410–786–1326.)

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS Web site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995,* or Email your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov,* or call the Reports Clearance Office on (410) 786–1326.

To be assured consideration, comments and recommendations for the proposed information collections must be received by the OMB desk officer at the address below, no later than 5 p.m. on October 1, 2012. OMB, Office of Information and Regulatory Affairs, Attention: CMS Desk Officer, Fax Number: (202) 395–6974, Email: *OIRA_submission@omb.eop.gov.*

Dated: August 28, 2012.

Martique Jones,

Director, Regulations Development Group, Division B, Office of Strategic Operations and Regulatory Affairs.

[CMS–3274–N]

Medicare Program; Meeting of the Medicare Evidence Development and Coverage Advisory Committee—November 14, 2012

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces that a public meeting of the Medicare Evidence Development & Coverage Advisory Committee (MEDCAC) (''Committee'') will be held on Wednesday, November 14, 2012. The Committee generally provides advice and recommendations concerning the adequacy of scientific evidence needed to determine whether certain medical items and services can be covered under the Medicare statute. This meeting will focus on the use of ventricular assist devices (VADs), a clinical strategy for the management of heart failure. This meeting is open to the public in accordance with the Federal Advisory Committee Act (5 U.S.C. App. 2, section 10(a)).

DATES: *Meeting Date:* The public meeting will be held on Wednesday, November 14, 2012 from 7:30 a.m. until 4:30 p.m., Eastern Standard Time (EST).

Deadline for Submission of Written Comments: Written comments must be received at the address specified in the **ADDRESSES** section of this notice by 5 p.m., Eastern Daylight Time (EDT), Monday, October 15, 2012. Once submitted, all comments are final.

Deadlines for Speaker Registration and Presentation Materials: The deadline to register to be a speaker and to submit PowerPoint presentation materials and writings that will be used in support of an oral presentation is 5:00 p.m., EDT on Monday, October 15, 2012. Speakers may register by phone or via email by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Presentation materials must be received at the address specified in the **ADDRESSES** section of this notice.

Deadline for All Other Attendees Registration: Individuals may register online at *http://www.cms.gov/apps/events/upcomingevents.asp?strOrderBy=1&type=3* or by phone by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by 5 p.m. EST, Wednesday, November 7, 2012. We will be broadcasting the meeting live via Webcast at *http://www.cms.gov/live/.*

Deadline for Submitting a Request for Special Accommodations: Persons attending the meeting who are hearing or visually impaired, or have a condition that requires special assistance or accommodations, are asked to contact the Executive Secretary as specified in the **FOR FURTHER INFORMATION CONTACT** section of this notice no later than 5:00 p.m., EDT Friday, November 2, 2012.

ADDRESSES: *Meeting Location:* The meeting will be held in the main auditorium of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244.

Submission of Presentations and Comments: Presentation materials and written comments that will be presented at the meeting must be submitted via email to *MedCACpresentations@cms.hhs.gov* or by regular mail to the contact listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the date specified in the **DATES** section of this notice.

FOR FURTHER INFORMATION CONTACT: Maria Ellis, Executive Secretary for MEDCAC, Centers for Medicare & Medicaid Services, Center for Clinical Standards and Quality, Coverage and Analysis Group, S3–02–01, 7500 Security Boulevard, Baltimore, MD 21244 or contact Ms. Ellis by phone (410–786–0309) or via email at *Maria.Ellis@cms.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

MEDCAC, formerly known as the Medicare Coverage Advisory Committee (MCAC), provides advice and recommendations to CMS regarding clinical issues. (For more information on MCAC, see the December 14, 1998 **Federal Register** (63 FR 68780). This notice announces the Wednesday, November 14, 2012, public meeting of the Committee. During this meeting, the Committee will discuss the use of VADs, a clinical strategy for the management of heart failure. Background information about this topic, including panel materials, is available at *http://www.cms.gov/medicare-coverage-database/indexes/medcac-meetings-index.aspx?bc=BAAAAAAAAAAA&.* CMS will no longer be providing paper copies of the handouts for the meeting. Electronic copies of all the meeting materials will be on the CMS Web site no later than 2 business days before the meeting. We encourage the participation of appropriate organizations with expertise in the use of VADs.

II. Meeting Format

This meeting is open to the public. The Committee will hear oral presentations from the public for approximately 45 minutes. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, CMS may conduct a lottery to determine the speakers for the scheduled open public hearing session. The contact person will notify interested persons regarding their request to speak by October 22, 2012. Your comments should focus on issues specific to the list of topics that we have proposed to the Committee. The list of research topics to be discussed at the meeting will be available on the following web site prior to the meeting: *http://www.cms.gov/medicare-coverage-database/indexes/medcac-meetings-index.aspx?bc=BAAAAAAAAAAA&.* We require that you declare at the meeting whether you have any financial involvement with manufacturers (or their competitors) of any items or services being discussed.

The Committee will deliberate openly on the topics under consideration. Interested persons may observe the deliberations, but the Committee will not hear further comments during this time except at the request of the chairperson. The Committee will also allow a 15-minute unscheduled open public session for any attendee to address issues specific to the topics under consideration. At the conclusion of the day, the members will vote and the Committee will make its recommendation(s) to CMS.

III. Registration Instructions

CMS' Coverage and Analysis Group is coordinating meeting registration. While there is no registration fee, individuals must register to attend. You may register online at *http://www.cms.gov/apps/events/upcomingevents.asp?strOrderBy=1&type=3* or by phone by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the deadline listed in the **DATES** section of this notice. Please provide your full name (as it appears on your state-issued driver's license),

address, organization, telephone, fax number(s), and email address. You will receive a registration confirmation with instructions for your arrival at the CMS complex or you will be notified that the seating capacity has been reached.

IV. Security, Building, and Parking Guidelines

This meeting will be held in a Federal government building; therefore, Federal security measures are applicable. We recommend that confirmed registrants arrive reasonably early, but no earlier than 45 minutes prior to the start of the meeting, to allow additional time to clear security. Security measures include the following:

- Presentation of government-issued photographic identification to the Federal Protective Service or Guard Service personnel.
- Inspection of vehicle's interior and exterior (this includes engine and trunk inspection) at the entrance to the grounds. Parking permits and instructions will be issued after the vehicle inspection.
- Inspection, via metal detector or other applicable means of all persons brought entering the building. We note that all items brought into CMS, whether personal or for the purpose of presentation or to support a presentation, are subject to inspection. We cannot assume responsibility for coordinating the receipt, transfer, transport, storage, set-up, safety, or timely arrival of any personal belongings or items used for presentation or to support a presentation.

Note: Individuals who are not registered in advance will not be permitted to enter the building and will be unable to attend the meeting. The public may not enter the building earlier than 45 minutes prior to the convening of the meeting. All visitors must be escorted in areas other than the lower and first floor levels in the Central Building.

Authority: 5 U.S.C. App. 2, section 10(a). (Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: August 23, 2012.

Patrick Conway,

CMS Chief Medical Officer and Director, Center for Clinical Standards and Quality, Centers for Medicare & Medicaid Services.

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel, Member Conflict: Eukaryotic Parasite Vector Biology.

Date: September 20–21, 2012.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: Fouad A El-Zaatari, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3206, MSC 7808, Bethesda, MD 20814–9692, (301) 435–1149, *elzaataf@csr.nih.gov.*

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group, Behavioral Medicine, Interventions and Outcomes Study Section.

Date: October 4–5, 2012.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: The Westin Riverwalk, 420 W Market Street, San Antonio, TX 78205.

Contact Person: Lee S Mann, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3186, MSC 7848, Bethesda, MD 20892, 301–435–0677, *mannl@csr.nih.gov.*

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group, Social Psychology, Personality and Interpersonal Processes Study Section.

Date: October 4–5, 2012.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Washington Marriott, 1221 22nd Street NW., Washington, DC 20037.

Contact Person: Monica Basco, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3220, MSC 7808, Bethesda, MD 20892, 301–496–7010, *bascoma@mail.nih.gov.*

Name of Committee: Vascular and Hematology Integrated Review Group, Vascular Cell and Molecular Biology Study Section.

Date: October 4–5, 2012.

Time: 8:00 a.m. to 1:00 p.m.

Agenda: To review and evaluate grant applications.

Place: Residence Inn—Bethesda Downtown, 7355 Wisconsin Ave, Bethesda, MD 20814.

Contact Person: Larry Pinkus, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4132, MSC 7802, Bethesda, MD 20892, (301) 435–1214, *pinkusl@csr.nih.gov.*

Name of Committee: Cell Biology Integrated Review Group, Cellular Mechanisms in Aging and Development Study Section.

Date: October 4–5, 2012.

Time: 8:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: St. Gregory Hotel, 2033 M Street NW., Washington, DC 20036.

Contact Person: John Burch, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institute of Health, 6701 Rockledge Drive, Room 3213, MSC 7808, Bethesda, MD 20892, 301–408–9519, *burchjb@csr.nih.gov.*

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group, Psychosocial Development, Risk and Prevention Study Section.

Date: October 4–5, 2012.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5609–N–10]

Notice of Proposed Information Collection for Public Comment: Survey of Manufactured (Mobile) Home Placements

AGENCY: Office of the Assistant Secretary for Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 30, 2012.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Reports Liaison Officer, Office of Policy Development and Research, Department of Housing and Urban Development, 451 7th Street SW., Room 8226, Washington, DC 20410.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to: Shawn Bucholtz, Department of Housing and Urban Development, 451 7th Street SW., Room 8222, Washington, DC 20410; telephone (202) 402–5538 (this is not a toll-free number), (or via email at *shawn.j.bucholtz@hud.gov*) or Erica Filipek, U.S. Census Bureau, Manufacturing and Construction Division, 4700 Silver Hill Road, Washington, DC 20233–6900, at (301) 763–5161 (or via email at *Erica.Mary.Filipek@census.gov*).

SUPPLEMENTARY INFORMATION: The Department will submit the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

I. Abstract

The Survey of Manufactured (Mobile) Home Placements collects data on the characteristics of newly manufactured homes placed for residential use including number, sales price, location, and other selected characteristics. HUD uses the statistics to respond to a Congressional mandate in the Housing and Community Development Act of 1980, 42 U.S.C. 5424 note, which requires HUD to collect and report manufactured home sales and price information for the Nation, census regions, states, and selected metropolitan areas and to monitor whether new manufactured homes are being placed on owned rather than rented lots. HUD also used these data to monitor total housing production and its affordability. Furthermore, the Survey of Manufactured (Mobile) Home Placements serves as the basis for HUD's mandated indexing of loan limits. Section 2145(b) of the Housing and Economic Recovery Act (HERA) of 2008 requires HUD to develop a method of indexing to annually adjust Title I manufactured home loan limits. This index is based on manufactured housing price data collected by this survey. Section 2145 of the HERA of 2008 also amends the maximum loan limits for manufactured home loans insured under Title I. HUD implemented the revised loan limits, as shown below, for all manufactured home loans for which applications are received on or after March 3, 2009.

Loan type	Purpose	Old loan limit	New loan limit
MANUFACTURED HOME IMPROVEMENT LOAN.	For financing alterations, repairs and improvements upon or in connection with existing manufactured homes.	$17,500	$25,090

Loan type	Purpose	Old loan limit	New loan limit
MANUFACTURED HOME UNIT(S).	To purchase or refinance a Manufactured Home unit(s)	48,600	69,678
LOT LOAN	To purchase and develop a lot on which to place a manufactured home unit.	16,200	23,226
COMBINATION LOAN FOR LOT AND HOME.	To purchase or refinance a manufactured home and lot on which to place the home.	64,800	92,904

II. Method of Collection

The methodology for collecting information on new manufactured homes involves contacting a monthly sample of new manufactured homes shipped by manufacturers. The units are sampled from lists obtained from the Institute for Building Technology and Safety. Dealers that take shipment of the selected homes are mailed a survey form for recording the status of the manufactured home. Each successive month, the dealer is contacted by telephone and provides updated status information about the home. Contact continues until the selected home is placed.

III. Data

OMB Control Number: 2528–0029.
Form Number: C–MH–9A.
Type of Review: Regular submission.
Affected Public: Business firms or other for-profit institutions.
Estimated Number of Respondents: 6,000.
Estimated Time per Response: 30 min.
Estimated Total Annual Burden Hours: 3,000.
Estimated Total Annual Cost: $60,810.
Respondent's Obligation: Voluntary.
Legal Authority: Title 42 U.S.C. 5424 note, Title 13 U.S.C. 8(b), and Title 12, U.S.C., 1701z–1.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: August 23, 2012.

Erika C. Poethig,

Acting Assistant Secretary for Policy Development and Research.

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5607–N–28]

Notice of Proposed Information Collection: Comment Request; Home Equity Conversion Mortgage (HECM) Insurance Application for the Origination of Reverse Mortgages and Related Documents

AGENCY: Office of the Assistant Secretary for Housing, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 30, 2012.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Reports Liaison Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, Room 9120 or the number for the Federal Information Relay Service (1–800–877–8339).

FOR FURTHER INFORMATION CONTACT: Karin Hill, Director, Office of Single Family Program Development, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, telephone (202) 708–4308 (this is not a toll free number) for copies of the proposed forms and other available information.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Home Equity Conversion Mortgage (HECM) Insurance Application for the Origination of Reverse Mortgages (and Related Documents) and the Home Equity Reverse Mortgage Information Technology System (HERMIT).

OMB Control Number, if applicable: 2502–0524.

Description of the need for the information and proposed use: The Residential Loan Application for Reverse Mortgages and related documents are used to determine borrower eligibility, property analysis, underwriting analysis, and collection of mortgage insurance premiums for loans that meet statutory, regulatory, state and FHA requirements. HUD's Home Equity Reverse Mortgage Information Technology (HERMIT) System is HUD's system of record for the HECM program and it interfaces with other HUD systems.

Agency form numbers, if applicable: HUD–92900–A, Fannie Mae 1009, HUD–92901, HUD–1, HUD–1 Addendum, HUD–92051, HUD–92561, HUD 92800.5B, Fannie Mae 1004, Fannie Mae 1004C, Fannie Mae 1025, Fannie Mae 1073,

Estimation of the total numbers of hours needed to prepare the information collection including number of

respondents, frequency of response, and hours of response: The number of burden hours is 284,728. The number of respondents is 6,010, the number of responses is 997,050, the frequency of response is on occasion, and the burden hour per response is 3.753.

Status of the proposed information collection: This is a revision of a currently approved collection.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 27, 2012.

Laura M. Marin,

Acting General Deputy Assistant Secretary for Housing-Acting General Deputy Federal Housing Commissioner.

Notice of Proposed Information Collection: Comment Request; Request for Approval of Advance of Escrow Funds

AGENCY: Office of the Assistant Secretary for Housing, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 30, 2012.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Reports Liaison Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, Room 9120 or the number for the Federal Information Relay Service (1–800–877–8339).

FOR FURTHER INFORMATION CONTACT: Daniel J. Sullivan, Acting Director, Office of Multifamily Housing Development, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, telephone (202) 402–6130 (this is not a toll free number) for copies of the proposed forms and other available information.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Request for Approval of Advance of Escrow Funds.

OMB Control Number, if applicable: 2502–0018.

Description of the need for the information and proposed use: The information collected on the ''Request for Approval of Advance of Escrow Funds'' form is to ensure that escrowed funds are disposed of correctly for completion of offsite facilities, construction changes, construction cost not paid at final endorsement, non-critical repairs and capital needs assessment. The mortgagor must request withdrawal of escrowed funds through a depository (mortgagee). The HUD staff, Mortgage Credit Examiner, Inspector, and Architect, must use information collected to approve the withdrawal of escrowed funds for each item.

Agency form numbers, if applicable: HUD–92464.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The number of burden hours is 2,448. The number of respondents is 2,480, the number of responses is 1,224, the frequency of response is monthly, and the burden hour per response is 2.

Status of the proposed information collection: This is an extension of a currently approved collection.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 27, 2012.

Laura Marin,

Acting General Deputy Assistant Secretary for Housing—Federal Housing Commissioner.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

The Department is looking at ways to reduce Public Housing Agency (PHA) burden through a wide range of activities from resident recertification and PHA unit inspection activities to improving access to HUD systems and information. The purpose of the survey is to determine whether the burden reduction activities have been effective.

DATES: *Comments Due Date: October 1, 2012.* Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB approval Number (2502–0416) and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: *OIRA_Submission@omb.eop.gov,* fax: 202–395–5806.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number (2577–New) and should be sent to: Reports Liaison Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, Room 9120 or the number for the Federal Information Relay Service (1–800–877–8339).

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov.* or telephone (202)

402–3400. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard. Copies of the proposed forms and other available information may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Public Housing Agency Burden Reduction Survey.

OMB Control Number: 2577–New.

Form Numbers: None.

Description of the Need for the Information and its Propose: The Department is looking at ways to reduce Public Housing Agency (PHA) burden through a wide range of activities from resident recertification and PHA unit inspection activities to improving access to HUD systems and information. The purpose of the survey is to determine whether the burden reduction activities have been effective.

Reporting burden	Number of respondents	Annual responses	×	Hours per response	Burden hours
	4,074	1		0.699	2,851

Total Estimated Burden Hours: 2,851.

Status: New collection.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 23, 2012.

Colette Pollard,

Departmental Reports Management Officer, Office of the Chief Information Officer.

Notice of Proposed Information Collection for Public Comment: Accountability in the Provision of HUD Assistance ''Applicant/Recipient Disclosure/Update Report—HUD 2880''

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

Section 102 of the Department of Housing and Urban Development Reform Act of 1989 (HUD Reform Act) requires the Department to ensure greater accountability and integrity in the provision of assistance administered by the Department. One feature of the statute requires certain disclosures by applicants seeking assistance from HUD, assistance from states and units of local government, and other assistance to be used with respect to the activities to be carried out with the assistance. The disclosure includes the financial interests of persons in the activities, and the sources of funds to be made available for the activities, and the proposed uses of the funds. Each applicant that submits an application for assistance, within the jurisdiction of HUD, to a state or to a unit of general local government for a specific project or activity must disclose this information whenever the dollar threshold is met. This information must be kept updated during the application review process and while the assistance is being provided.

DATES: *Comments Due Date:* October 1, 2012.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number (2510–0011) and should be sent to: Reports Liaison Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, Room 9120 or the number for the Federal Information Relay Service (1–800–877–8339).

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov.* or telephone (202) 402–3400. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard. Copies of the proposed forms and other available information may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Accountability in the Provision of HUD Assistance ''Applicant/Recipient Disclosure/Update Report—HUD 2880.''

OMB Control Number, if applicable: 2510–0011.

Description of the need for the information and proposed use: Section 102 of the Department of Housing and Urban Development Reform Act of 1989 (HUD Reform Act) requires the Department to ensure greater accountability and integrity in the provision of assistance administered by the Department. One feature of the

statute requires certain disclosures by applicants seeking assistance from HUD, assistance from states and units of local government, and other assistance to be used with respect to the activities to be carried out with the assistance. The disclosure includes the financial interests of persons in the activities, and the sources of funds to be made available for the activities, and the proposed uses of the funds. Each applicant that submits an application for assistance, within the jurisdiction of HUD, to a state or to a unit of general local government for a specific project or activity must disclose this information whenever the dollar threshold is met. This information must be kept updated during the application review process and while the assistance is being provided.

Agency form numbers, if applicable: HUD–2880.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The form, HUD 2880, must be submitted as part of an applicant's application for competitively funded assistance.

Number of respondents	Burden hours	Frequency of response	Total burden hours
16,900	2.0	1.2	40,560

Status of the proposed information collection: This is an extension of a previously approved information collection.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 24, 2012.

Colette Pollard,

Departmental Reports Management Officer, Office of the Chief Information Officer.

Notice of Proposed Information Collection: Comment Request Strong Cities Strong Communities National Resource Network

AGENCY: Office of the Assistant Secretary for Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* October 1, 2012.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Reports Liaison Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, Room 9120 or the number for the Federal Information Relay Service (1–800–877–8339).

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone (202) 402–3400. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard. Copies of the proposed forms and other available information may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Strong Cities Strong Communities National Resource Network.

OMB Control Number, if applicable: 2528—Pending.

Description of the need for the information and proposed use: This is a new data collection for application and reporting information related to the proposed Strong Cities Strong Communities National Resource Network. The U.S. Department of Housing and Urban Development Appropriations Act, 2012 (Pub. L. 112–55, approved Nov. 18, 2011) funds technical assistance for HUD programs under the Transformation Initiative (TI) account. Through the Strong Cities Strong Communities National Resource Network, HUD and its partners will offer a central portal to connect America's most economically distressed local communities to national and local experts with wide-ranging experience and skills.

Agency form numbers, if applicable: SF–424, SF–424 supp, SF–LLL, and SF 425.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The number of burden hours is 617. The number of respondents is 25, the frequency of response is 1, and the burden hour per response is 23.4.

Status of the proposed information collection: This is a new collection.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: August 24, 2012.

Colette Pollard,

Departmental Reports Management Officer, Office of the Chief Information Officer.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5601–N–34]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT: Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402–3970; TTY number for the hearing- and speech-impaired (202) 708–2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for ''off-site use only'' recipients of the property will be required to relocate the building to their own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to Theresa Ritta, Division of Property Management, Program Support Center, HHS, room 5B–17, 5600 Fishers Lane, Rockville, MD 20857; (301) 443–2265. (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1–800–927–7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (i.e., acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses—*Air Force:* Mr. Robert Moore, Air Force Real Property Agency, 143 Billy Mitchell Blvd., San Antonio, TX 78226, (210) 925–3047; *Energy:* Mr. Mark Price, Department of Energy, Office of Engineering & Construction Management, MA–50, 1000 Independence Ave, SW., Washington, DC 20585: (202) 586–5422; *GSA:* Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040 Washington, DC 20405, (202) 501–0084; *Interior:* Mr. Michael Wright, Acquisition & Property Management, Department of the Interior, 1801 Pennsylvania Ave, NW., 4th Floor, Washington, DC 20006: 202–254–5522; (These are not toll-free numbers).

Dated: August 16, 2012.

Ann Marie Oliva,

Deputy Assistant Secretary for Special Needs (Acting).

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5415–FA–29]

Announcement of Funding Awards; Service Coordinators in Multifamily Housing Program, Fiscal Year (FY) 2010

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Announcement of funding awards.

SUMMARY: In accordance with section 102(a)(4)(C) of the Department of Housing and Urban Development Reform Act of 1989, this announcement notifies the public of funding decisions made by the Department in a competition for funding under the FY 2010 Notice of Funding Availability (NOFA) for the Service Coordinators in Multifamily Housing program. This announcement contains the names of the awardees and the amounts of the awards made available by HUD.

FOR FURTHER INFORMATION CONTACT: Ms. Catherine M. Brennan, Director, Office of Housing Assistance and Grant Administration, Office of Housing, 451 Seventh Street SW., Room 6138, Washington, DC 20410; telephone number 202–708–3000. (This is not a toll-free number). Hearing- and speech-impaired persons may access this number via TTY by calling the Federal Relay Service toll-free at 1–800–877–8339. For general information on this and other HUD programs, visit the HUD Web site at *http://www.hud.gov.*

SUPPLEMENTARY INFORMATION: The Service Coordinators in Multifamily Housing program is authorized by Section 808 of the Cranston-Gonzalez National Affordable Housing Act (Pub. L. 101–625, approved November 28, 1990), as amended by sections 671, 674, 676, and 677 of the Housing and Community Development Act of 1992 (Pub. L. 102–550, approved October 28, 1992), and section 851 of the American Homeownership and Economic Opportunity Act of 2000 (Pub. L. 106–569, approved December 27, 2000). The Service Coordinators in Multifamily Housing program allows multifamily housing owners to assist elderly individuals and nonelderly people with disabilities living in HUD-assisted housing and in the surrounding area to obtain needed supportive services from the community, to enable them to continue living as independently as possible in their homes.

The FY 2010 awards announced in this notice identify applicants that were selected for funding based on a competition announced by a NOFA published on *www.Grants.gov* on January 25, 2011. Applications were reviewed and selected for funding on the basis of selection criteria contained in that NOFA. The funding awarded to the recipients under this NOFA, however, was appropriated by the Full-Year Continuing Appropriations Act, 2011 (Pub. L. 112–10, approved April 15, 2011), and not the Department of Housing and Urban Development Appropriations Act, 2010 (Pub. L. 111–117, approved December 16, 2009) (FY 2010 Act) as stated in the NOFA. The funding appropriated under the FY 2010 Act was used by HUD to provide one-year renewal funding to previously funded Service Coordinator in Multifamily Housing and Congregate Housing Services Program grantees

whose grants would have expired in FY 2010 and 2011.

The Catalog of Federal Domestic Assistance number for this program is 14.191.

A total of $32,733,268 was awarded to 162 owners, serving 173 projects with 19,195 units nationwide. In accordance with section 102(a)(4)(C) of the Department of Housing and Urban Development Reform Act of 1989 (103 Stat. 1987. 42 U.S.C. 3545), the Department is publishing the grantees and amounts of the awards in Appendix A of this document.

Dated: August 22, 2012.

Carol A. Galante,

Acting Assistant Secretary for Housing—Federal Housing Commissioner.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R8–ES–2012–N163 FF08E00000–FXES11120800000F2–112]

Santa Clara Valley Habitat Conservation Plan/Natural Community Conservation Plan, Environmental Impact Statement, and Implementing Agreement; California

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: The Fish and Wildlife Service (Service) announces the availability of the Final Environmental Impact Statement (EIS) on the Santa Clara Valley Habitat Conservation Plan and Natural Community Conservation Plan (Plan), along with the Implementing Agreement (IA), for review. The EIS was updated to address the comments received on the 2010 Draft EIS. We are considering issuing an incidental take permit for 18 species in response to applications from the County of Santa Clara; Cities of San Jose, Gilroy, and Morgan Hill; Santa Clara Valley Transportation Authority, and Santa Clara Valley Water District (applicants). The applicants are currently in the process of creating a Joint Powers Authority (JPA) to implement the Plan. Following its formation, the Service anticipates that the applicants will submit an application to the Service to amend the section 10(a)(1)(B) incidental take permit to add the JPA.

DATES: Written comments must be received by 5 p.m. Pacific Time, October 1, 2012.

ADDRESSES: *Obtaining Documents:* You may download copies of the Final EIS, Plan, and IA on the Internet at *http://www.fws.gov/sacramento.* Alternatively, you may use one of the methods below

to request hard copies or a CD–ROM of the documents.

Submitting Comments: You may submit comments or requests for copies or more information by one of the following methods.

- *U.S. Mail:* Cori Mustin, Senior Fish and Wildlife Biologist, Sacramento Fish and Wildlife Office, 2800 Cottage Way, W–2605, Sacramento, CA 95825.
- *In-Person Drop-off, Viewing, or Pickup:* Call 916–414–6600 to make an appointment during regular business hours at the above address.
- *Fax:* Cori Mustin, Senior Fish and Wildlife Biologist, 916–414–6713, Attn.: Santa Clara Valley Plan/EIS Comments.

Hard bound copies of the Final EIS, Plan, and IA are available for viewing at the following locations:

1. Almaden Branch Library, 6445 Camden Avenue, San Jose, CA 95120.
2. Dr. Martin Luther King, Jr. Library, 150 E San Fernando Street, San Jose, CA 95112.
3. Gilroy Library, 7387 Rosanna Street, Gilroy, CA 95020.
4. Morgan Hill Library, 660 West Main Avenue, Morgan Hill, CA 95037.
5. Central Park Library, 2635 Homestead Road, Santa Clara, CA 95051.
6. City of Palo Alto Main Library, 1233 Newell Road, Palo Alto, CA 94303.
7. Fremont Main Library, 2400 Stevenson Boulevard, Fremont, CA 94538.

FOR FURTHER INFORMATION CONTACT: Mike Thomas, Division Chief, Conservation Planning; or Eric Tattersall, Deputy Assistant Field Supervisor, Conservation Planning and Recovery; at 916–414–6600.

SUPPLEMENTARY INFORMATION:

Background

Section 9 of the Endangered Species Act (Act; 16 U.S.C. 1531 et seq.) and Federal regulations prohibit the ''take'' of fish and wildlife species listed as endangered or threatened (16 U.S.C. 1538(a)(1)(B)). The term ''take'' means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct (16 U.S.C. 1532 (19)). We have further defined ''harm'' to mean significant habitat modification or degradation that actually kills or injures listed wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, and sheltering (50 CFR 17.3(c)). Under limited circumstances, we may issue permits to authorize incidental take of listed fish or wildlife (i.e., ''take'' that is incidental to, and not the purpose of, otherwise lawful activities). Regulations governing incidental take permits for threatened and endangered species are found in 50 CFR 17.32 and 17.22, respectively. If we issue a permit, the applicants would receive assurances for all species covered by the permit in accordance with our ''No Surprises'' regulations at 50 CFR 17.22(b)(5) and 17.32(b)(5) for all species covered by the permit.

Take of listed plant species is not prohibited under the Act and cannot be authorized under a section 10 permit. However, the applicants propose to include 9 plant species in the Plan to extend the Plan's conservation benefits to these species. The applicants would receive assurances under the ''No Surprises'' regulations found in 50 CFR 17.22(b)(5), 17.32(b)(5), and 222.307(g) for all proposed covered species in the Plan.

The EIS analyzes the impacts of the proposed implementation of the Plan by the applicants. The applicants are seeking a permit for the incidental take of 18 covered species, including 9 animal species (2 federally endangered, 3 federally threatened, and 4 unlisted) and 9 plant species (4 federally endangered and 5 unlisted). The permit would provide take authorization for all animal species and assurances for all plant species identified by the Plan as covered species. Take authorized for listed covered animal species would be effective upon permit issuance and adoption of all applicable local ordinances. Take authorization for currently unlisted covered animal species would become effective concurrent with listing, should the species be listed under the Act during the permit term as long as the Plan is being properly implemented.

The proposed permit would include the following five federally listed animal species: The threatened Bay checkerspot butterfly (*Euphydryas editha bayensis*), threatened California tiger salamander (Central California Distinct Population Segment) (*Ambystoma californiense*), threatened California red-legged frog (*Rana draytonii*), endangered least Bell's vireo (*Vireo bellii pusillus*), and endangered San Joaquin kit fox (*Vulpes macrotis mutica*). The proposed permit would include assurances for the following four federally listed plant species: The endangered Tiburon Indian paintbrush (*Castilleja affinis* ssp. *neglecta*), endangered coyote ceanothus (*Ceanothus ferrisae*), endangered Santa Clara Valley dudleya (*Dudleya setchellii*), and endangered Metcalf Canyon jewelflower (*Streptanthus albidus* ssp. *albidus*).

The unlisted species proposed for coverage under the Plan are the foothill yellow-legged frog (*Rana boylii*), western pond turtle (*Clemmys marmorata*), western burrowing owl (*Athene cunicularia hypugaea*), tricolored blackbird (*Agelaius tricolor*), Mount Hamilton thistle (*Cirsium fontinale* var. *campylon*), fragrant fritillary (*Fritillaria liliacea*), Loma Prieta hoita (*Hoita strobilina*), smooth lessingia (*Lessingia micradenia* var. *glabrata*), and most beautiful jewelflower (*Streptanthus albidus* ssp. *peramoenus*).

Proposed covered activities include the following seven categories of covered activities: urban development, instream capital projects, instream operation and maintenance activities, rural capital projects, rural operation and maintenance activities, rural development, and conservation strategy implementation. The proposed term of the permit is 50 years.

The proposed 508,669-acre permit area is the area where incidental take of covered species resulting from covered activities could occur and includes the Pajaro River and all or a portion of the Llagas, Uvas, Pescadero, and Pacheco subwatersheds and the Coyote Creek watershed within Santa Clara County. A large portion of the Guadalupe watershed is also contained within the permit area, as well as small areas outside of each of these watersheds.

Contained within the 508,669-acre permit area is the 48,464-acre expanded study area and permit area for burrowing owl conservation, which includes the northern portion of Santa Clara County and a small portion each of both San Mateo and Alameda Counties (see Figure 1–2 of the Plan). Incidental take in the expanded study area and permit area for burrowing owl conservation will be limited to the implementation of the Plan's western burrowing owl conservation strategy. Incidental take of the western burrowing owl in this portion of the permit area would only be provided to the applicants and those under their jurisdiction and only be provided for the western burrowing owl (not the remaining 17 species covered under the Plan).

Covered activities would result in the permanent loss of up to 17,975 acres in the permit area. Habitat models were developed for most covered species and used in the impacts analysis. Land cover surrogates were used to identify maximum allowable impacts to species for which habitat models could not be developed. The Plan also describes conditions on covered activities to avoid or minimize take of covered species.

The proposed conservation strategy includes establishing a reserve system

that would be composed of an estimated 46,496 to 46,920 acres that would be permanently preserved, monitored, and managed.

National Environmental Policy Act Compliance

Our proposal to issue an incidental take permit is a Federal action that triggers the need for compliance with the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 et seq.). The Service prepared the EIS, which is the Federal portion of the Environmental Impact Report/Environmental Impact Statement (EIR/EIS), to analyze the impacts of issuing an incidental take permit based on the Plan. Santa Clara County facilitated the preparation of the EIR portion of the Final EIR/EIS, in compliance with the California Environmental Quality Act (CEQA), but all applicants share the CEQA Lead Agency role. The California Department of Fish and Game is a CEQA Trustee and Responsible Agency. The Final EIR/EIS was developed to inform the public of the proposed action, alternatives, and associated impacts; address public comments received during the public comment period for the Draft EIR/EIS; and disclose irreversible commitments of resources.

The Final EIR/EIS evaluates the impacts of the proposed action described above (i.e., issuance of the permit and implementation of the Final Plan), as well as the No Action Alternative and Alternative A, which are described below.

No Action Alternative

Under the No Action Alternative, the Service would not issue an incidental take permit to the applicants, and the Plan would not be implemented. Under this alternative, projects that may adversely affect federally listed species would require project-level consultation with the Service pursuant to section 7 or section 10 of the Act. This project-level approach would preclude landscape-level conservation planning and would not streamline the current permitting process.

Alternative A (Reduced Permit Term)

Under Alternative A, the Service would issue an incidental take permit, and the applicants would implement a habitat conservation plan and natural community conservation plan that is similar to the Plan described in the proposed action; however, the proposed permit term would be reduced to 30 years. The extent of covered activities and the conservation strategy would be subsequently reduced relative to the proposed action.

The Final EIR/EIS includes all comments received on the Draft EIR/EIS and our responses to those comments. Following a 30-day review period, we will complete a Record of Decision that announces our decision on the action that will be implemented and discusses all factors leading to the decision.

Public Involvement

We published a notice of intent (NOI) to prepare an EIS for this project in the **Federal Register** on September 6, 2007 (72 FR 51247). The NOI announced a public scoping period during which time the public was invited to provide written comments and attend a public scoping meeting held on September 26, 2007, in Morgan Hill, California. On December 17, 2010, we published a notice of availability of the Draft Plan, EIS, and IA in the **Federal Register** (75 FR 79013). Two public meetings were held, the first on February 9, 2011, in Morgan Hill, California, and the second on February 15, 2011, in Palo Alto, California. The Draft documents were available for a 120-day public comment period, which concluded on April 18, 2011.

Public Review

Copies of the Final EIR/EIS, Plan, and IA are available for review (see **ADDRESSES**). Any comments we receive will become part of the administrative record and may be available to the public. If you wish to comment on the Final EIS, Plan, or IA, you may submit your comments to the address listed in **ADDRESSES**. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

We will evaluate the applications, associated documents, and comments submitted to determine whether the applications meet the requirements of section 10(a) of the Act. A permit decision will be made no sooner than 30 days after the publication of the Environmental Protection Agency's Final EIS notice in the **Federal Register** and completion of the Record of Decision.

Authority

This notice is provided pursuant to section 10(a) of the Act and pursuant to implementing regulations for NEPA (40 CFR 1506.6).

Dated: August 21, 2012.

Margaret Kolar,

Acting Deputy Regional Director, Pacific Southwest Region, Sacramento, California.

[FWS–R3–ES–2012–N213; FXES11130300000F3–123–FF03E00000]

Endangered and Threatened Wildlife and Plants; Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (USFWS), invite the public to comment on the following applications to conduct certain activities with endangered species. With some exceptions, the Endangered Species Act (Act) prohibits activities with endangered and threatened species unless a Federal permit allows such activity. The Act requires that we invite public comment before issuing these permits.

DATES: We must receive any written comments on or before October 1, 2012.

ADDRESSES: Send written comments by U.S. mail to the Regional Director, Attn: Lisa Mandell, U.S. Fish and Wildlife Service, Ecological Services, 5600 American Blvd. West, Suite 990, Bloomington, MN 55437–1458; or by electronic mail to *permitsR3ES@fws.gov*.

FOR FURTHER INFORMATION CONTACT: Lisa Mandell, (612) 713–5343.

SUPPLEMENTARY INFORMATION:

Background

We invite public comment on the following permit applications for certain activities with endangered species authorized by section 10(a)(1)(A) of the Act (16 U.S.C. 1531 *et seq.*) and our regulations governing the taking of endangered species in the Code of Federal Regulations (CFR) at 50 CFR 17. Submit your written data, comments, or request for a copy of the complete application to the address shown in **ADDRESSES**.

Permit Applications

Permit Application Number: TE82665A

Applicant: Melody Myers-Kinzie, Commonwealth Biomonitoring, Brownsburg, IN.

The applicant requests a permit to take (capture and release) the fanshell mussel (*Cyprogenia stegaria*), clubshell (*Pleurobema clava*), northern riffleshell (*Epioblasma torulosa*), pink mucket pearlymussel (*Lampsilis abrupta*), snuffbox (*Epioblasma triquetra*), and white catspaw (*Epioblasma obliquata perobliquata*) within the States of Indiana and Ohio. Proposed activities are to survey and monitor populations for the recovery and enhancement of survival of the species in the wild.

Permit Application Number: TE113009

Applicant: Steve A. Ahlstedt, Norris, TN.

The applicant requests a permit renewal to take (capture and release) the white catspaw within the States of Indiana and Ohio. Proposed activities are to survey and monitor populations for the recovery and enhancement of survival of the species in the wild.

Permit Application Number: TE023666

Applicant: Eric R. Britzke, U.S. Army Corps of Engineers—ERDC, Clinton, MS.

The applicant requests a permit renewal, with amendment, to take (capture and release; conduct non-lethal sampling) Indiana bats (*Myotis sodalis*), gray bats (*Myotis grisescens*), Virginia big-eared bats (*Corynorhinus townsendii virginianus*), Ozark big-eared bat (*C. t. ingens*), and Northern flying squirrel (*Glaucomys sabrinus*) throughout the range of the species in Alabama, Arkansas, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin. Proposed activities are for the recovery of the species through research and population monitoring.

Permit Application Number: TE82666A

Applicant: Justin G. Boyles, Southern Illinois University, Carbondale, IL.

The applicant requests a permit renewal, with amendments, to take (capture and release; conduct non-lethal sampling) Indiana bats and gray bats throughout the range of the species in Alabama, Arkansas, Connecticut, Delaware, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin. Proposed activities are for the recovery of the species and enhancement of survival of the species in the wild.

Public Comments

We seek public review and comments on these permit applications. Please refer to the permit number when you submit comments. Comments and materials we receive are available for public inspection, by appointment, during normal business hours at the address shown in the **ADDRESSES** section. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 22, 2012.

Lynn Lewis,

Assistant Regional Director, Ecological Services, Midwest Region.

[FR Doc. 2012–21500 Filed 8–30–12; 8:45 am]

BILLING CODE P

DEPARTMENT OF THE INTERIOR

Geological Survey

[USGS–GX12EE000101000]

Coastal and Marine Ecological Classification Standard

AGENCY: Department of the Interior, U.S. Geological Survey.

ACTION: Notice of endorsement of coastal and marine ecological classification standard.

SUMMARY: The Federal Geographic Data Committee (FGDC) has endorsed the Coastal and Marine Ecological Classification Standard (CMECS) as the first-ever comprehensive federal data standard for classifying and describing coastal and marine ecosystems.

CMECS provides a means of classifying ecological and habitat units using a common terminology. It provides a uniform protocol for identifying, characterizing and naming ecological units in support of monitoring, protection, and restoration of unique biotic assemblages, protected species, critical habitat, and important ecosystem components.

FOR FURTHER INFORMATION CONTACT: Documentation for the standard is available for download at *www.csc.noaa.gov/cmecs.* A searchable online catalog of CMECS units and their descriptions is available at *www.cmecscatalog.org.*

FOR FURTHER INFORMATION CONTACT: Dr. Rebecca Allee, NOAA Coastal Services Center—Gulf Coast Region, Building 1100, Suite 232, Stennis Space Center, MS 39529, Email: *nos.csc.cmecs_ig@noaa.gov.*

SUPPLEMENTARY INFORMATION: CMECS offers a simple standard framework and common terminology for describing natural and human influenced ecosystems, from the upper tidal reaches of estuaries to the deepest portions of the ocean. The framework is organized into two settings, biogeographic and aquatic, and four components, water column, geoform, substrate, and biotic. Each describes a separate aspect of the environment and biota. Settings and components can be used in combination or independently to describe ecosystem features. The hierarchical arrangement of units in the settings and components allows users to apply CMECS to the scale and specificity that best suits their needs. Modifiers allow users to customize the classification to meet specific needs.

CMECS is designed to meet the needs of many users, including coastal resource managers and planners, development interests, engineers, mappers, and researchers from government, industry, and academia. The system was also developed to address applications on scales ranging from local and regional to national and beyond.

FGDC member agencies the National Oceanic and Atmospheric Administration, the U.S. Environmental Protection Agency, and the U.S. Geological Survey, along with NatureServe, worked with over one hundred scientists and coastal managers to develop and test the standard. CMECS has been applied in projects in a variety of geographies. A rigorous four month public and peer review process led to consideration of and response to more than 800 individual comments from 31 individuals and organizations.

The use and application of CMECS will improve our knowledge of marine ecosystems and may bring to light other necessary additions and adjustments to the standard. Users are encouraged to provide suggestions about possible changes to CMECS, which will follow a regular peer review and revision cycle. Protocols and tools for this process are currently in development.

Practical applications for CMECS include:

- Ecosystem inventory and mapping
- Coastal and marine spatial planning

- Marine Protected Area selection, evaluation, and assessment
- Resource management and monitoring
- Conservation status assessment
- Habitat modeling

The FGDC coordinates the development of the National Spatial Data Infrastructure (NSDI), which encompasses the policies, standards, and procedures for organizations to cooperatively produce and share geospatial data. Federal agencies that make up the FGDC develop the NSDI in cooperation with organizations from State, local and tribal governments, the academic community, and the private sector. The authority for the FGDC is OMB Circular No. A–16, ''Revised on Coordination of Geographic Information and Related Spatial Data Activities (Revised August 19, 2002).'' Additional information on the FGDC and the NSDI is available at *www.fgdc.gov.*

Dated: August 23, 2012.

Ivan DeLoatch,

Executive Director, Federal Geographic Data Committee.

DEPARTMENT OF THE INTERIOR

Geological Survey

[USGS–GX12GG00995NP00]

National Earthquake Prediction Evaluation Council (NEPEC)

AGENCY: Department of the Interior, U.S. Geological Survey.

ACTION: Notice of meeting.

SUMMARY: Pursuant to Public Law 96–472, the National Earthquake Prediction Evaluation Council (NEPEC) will hold a 1½ day meeting on September 17 and 18, 2012, at the U.S. Geological Survey National Earthquake Information Center (NEIC), 1711 Illinois Avenue, Golden, Colorado 80401. The Council is comprised of members from academia and the Federal Government. The Council shall advise the Director of the U.S. Geological Survey on earthquake predictions, on the completeness and scientific validity of the available data related to earthquake predictions, and on related matters as assigned by the Director. Additional information about the Council may be found at *http://earthquake.usgs.gov/aboutus/nepec/*.

At the meeting, the Council will receive briefings on: ongoing and planned work with social and behavioral scientists on improving hazard and risk messages; development of a strategic plan for operational earthquake forecasting including calculation of short-term aftershock probabilities; discussions with emergency managers and other decision-makers about their needs for earthquake information, scientific evaluations, and hazard and risk forecasts; status of the project intended to deliver an updated Uniform California Earthquake Rupture Forecast (UCERF3); and on the delivery of near-real-time earthquake information by the NEIC.

A draft meeting agenda is available from the Executive Secretary on request (contact information below), and will be posted to the web site (above) when finalized. In order to ensure sufficient seating and hand-outs, it is requested that visitors pre-register by September 13, 2012. Members of the public wishing to make a statement to the Council should provide notice of that intention by September 13 so that time may be allotted in the agenda.

DATES: The meeting will be held at the USGS National Earthquake Information Center on the campus of the Colorado School of Mines, 1711 Illinois Avenue, in Golden, Colorado 80401. The meeting will commence in the early afternoon of Monday, September 17, 2012, and continue the following day, beginning at 9 a.m. and adjourning at 4 p.m. Times are approximate. Guests are encouraged to contact the Executive Secretary for a copy of the agenda and instructions for parking and locating the meeting room.

Contact: Dr. Michael Blanpied, Executive Secretary, National Earthquake Prediction Evaluation Council, U.S. Geological Survey, MS 905, 12201 Sunrise Valley Drive, Reston, Virginia 20192, (703) 648–6696, Email: *mblanpied@usgs.gov*.

Dated: August 28, 2012.

David J. Newman,

USGS Federal Register Liaison.

BILLING CODE 4311–AM–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Draft Environmental Impact Statement for the Proposed Seminole Tribe of Florida Fee-to-Trust, City of Coconut Creek, Broward County, FL

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of availability.

SUMMARY: This notice advises the public that the Bureau of Indian Affairs (BIA) as lead agency, with the Seminole Tribe of Florida (Tribe), City of Coconut Creek (City), and Broward County serving as cooperating agencies, intends to file a Draft Environmental Impact Statement (DEIS) with the U.S. Environmental Protection Agency (EPA) for the Seminole Tribe of Florida Fee-to-Trust Project, City of Coconut Creek, Florida, Broward County, Florida. This notice announces that the DEIS is now available for public review and the date, time, and location of a public hearing to receive comments on the DEIS.

DATES: The DEIS will be available for public comment beginning August 31, 2012. Written comments on the DEIS must arrive by October 15, 2012. The public hearing will be held on Tuesday, October 9, 2012, starting at 6 p.m. and will run until the last public comment is received.

ADDRESSES: You may mail or hand-deliver written comments to Mr. Franklin Keel, Eastern Regional Director, Bureau of Indian Affairs, 545 Marriott Drive, Suite 700, Nashville, TN 37214. The public hearing will be held at the City of Coconut Creek Commission Chamber, 4800 West Copans Road, Coconut Creek, Florida, 33063.

FOR FURTHER INFORMATION CONTACT: Chester McGhee, Environmental Protection Specialist, Bureau of Indian Affairs, Eastern Region, 545 Marriott Drive, Suite 700, Nashville, TN 37214; fax (615) 564–6701; phone (615) 564–6832.

SUPPLEMENTARY INFORMATION: Public review of the DEIS is part of the administrative process for the evaluation of tribal application to the BIA for the Federal trust acquisition of approximately 45 acres in Coconut Creek, Broward County, Florida. The Tribe proposes to construct a hotel/resort on the trust property subsequent to the trust acquisition. A Notice of Intent (NOI) was published in the Sun-Sentinel on August 5, 6, and 7, 2010 and in the **Federal Register** on August 6, 2010 (75 FR 47616). The BIA held a public scoping meeting for the project on September 15, 2010, at the Coral Springs High School Auditorium, in Coral Springs, Florida. Pursuant to Council on Environmental Quality (CEQ) National Environmental Policy Act (NEPA) regulations (40 CFR 1506.10), the publication of this Notice of Availability in the **Federal Register** initiates a 45-day public comment period.

Background

The Tribe has requested that the Secretary of the Interior acquire approximately 45 acres of Tribal-owned land in Federal trust for the Tribe in the City of Coconut Creek, Florida. The

project site is located northeast of the intersection of U.S. Highway 7/US–441 and Sample Road. The property surrounds on three sides the existing Seminole Coconut Creek Trust Property, currently housing the Coconut Creek Casino. The Proposed Action consists of transferring the 45± acres of property and the subsequent development of a hotel/resort and other ancillary uses (Proposed Project). At full build-out, the proposed hotel/resort facility would total approximately 47,000 square-feet (sf) of retail space, 54,000 sf of dining, a 2,500 seat showroom, and a 1,000-room hotel. The hotel tower would not exceed 275 feet above ground level. Access to the project site would be provided via one driveway along Sample Road, one driveway along SR–7/US–441, and one driveway along NW 54th Avenue. The following alternatives are considered in the DEIS:

- Alternative A—Proposed Project;
  - Sub-Alternative A–1—No Coconut Creek Approvals or Agreements;
- Alternative B—Reduced Intensity Alternative;
- Alternative C—No Action by Federal Government;
  - Sub-Alternative C–1—No Coconut Creek Approvals or Agreements.

Environmental issues addressed in the DEIS include geology and soils, water resources, air quality, biological resources, cultural and paleontological resources, socioeconomic conditions (including environmental justice), transportation and circulation, land use, public services, noise, hazardous materials, aesthetics, cumulative effects, and indirect and growth inducing effects.

Directions for Submitting Comments: Please include your name, return address, and the caption: ''DEIS Comments, Seminole Tribe of Florida Fee-to-Trust Project,'' on the first page of your written comments.

Locations where the DEIS is Available for Review: The DEIS is available for review at the Broward County Northwest Regional Library located at 3151 University Drive, Coral Springs, Florida, 33065 and the City of Coconut Creek City Hall located at 4800 West Copans Road, Coconut Creek, Florida, 33063. The DEIS is also available online at: *http://www.seminoleeis.com.*

To obtain a compact disk copy of the DEIS, please provide your name and address in writing or by voicemail to Chester McGhee, Environmental Protection Specialist, Bureau of Indian Affairs, Eastern Regional Office. Contact information is listed below in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Individual paper copies of the DEIS will be provided upon payment of applicable printing expenses by the requestor for the number of copies requested.

Public Comment Availability: Comments, including names and addresses of respondents, will be available for public review at the BIA mailing address shown in the **ADDRESSES** section of this notice, during regular business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: This notice is published pursuant to Sec. 1503.1 of the Council of Environmental Quality Regulations (40 CFR parts 1500 through 1508) and Sec. 46.305 of the Department of Interior Regulations (43 CFR part 46), implementing the procedural requirements of the NEPA of 1969, as amended (42 U.S.C. 4371, et seq.), and is in the exercise of authority delegated to the Assistant Secretary—Indian Affairs by 209 DM 8.

Dated: August 9, 2012.

Donald E. Laverdure,

Acting Assistant Secretary—Indian Affairs.

Final Environmental Impact Statement for the Susquehanna to Roseland 500-kilovolt Transmission Line, Appalachian National Scenic Trail; Delaware Water Gap National Recreation Area and Middle Delaware National Scenic and Recreational River

AGENCY: National Park Service, Interior.

ACTION: Notice of Availability.

SUMMARY: Pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969 and the Council on Environmental Quality regulations, the National Park Service (NPS) has prepared a Final Environmental Impact Statement (Final EIS) for the permit for the Susquehanna to Roseland 500-kilovolt (kV) transmission line to pass through three units of the National Park System: The Appalachian National Scenic Trail, Delaware Water Gap National Recreation Area, and Middle Delaware National Scenic and Recreational River. This Final EIS describes and analyzes six alternatives for the transmission line that will guide the decision to grant or deny the construction and Right-of-Way (ROW) permits requested by the applicants.

SUPPLEMENTARY INFORMATION: The Appalachian National Scenic Trail, Delaware Water Gap National Recreation Area, and the Middle Delaware National Scenic and Recreational River are famed for the recreational, scenic, natural, and cultural resources they contain. Each year, Delaware Water Gap National Recreation Area receives 5.2 million recreational visitors, and the Delaware

River is one of the primary recreational attractions in the park. Approximately 27 miles of the Appalachian National Scenic Trail occur within the boundaries of Delaware Water Gap National Recreation Area; the Appalachian National Scenic Trail attracts 4 million visitors each year.

The existing transmission line ROW predates the establishment of the Appalachian National Scenic Trail in 1937, Delaware Water Gap National Recreation Area in 1965, and the Middle Delaware National Scenic and Recreational River in 1978. The applicants, PPL Electric Utilities Corporation and the Public Service Electric and Gas Company, request NPS permission to expand the size of the current ROW, access the ROW through existing natural and cultural areas, construct new and taller power line towers, and remove and replace the existing 230-kV Bushkill-to-Kittatinny (B–K) Line with a new double-circuit 500-kV transmission line (the S–R line). The purpose of the Final EIS is to respond to the applicants' need in light of the purposes and resources of the affected units of the National Park System, as expressed in statutes, regulations, and policies.

The NPS has developed the Final EIS under section 102(2)(C) of the National Environmental Policy Act of 1969 (as amended), and consistent with NPS laws, regulations, and policies, and the purposes of these three parks. The Final EIS describes and analyzes six alternatives (1, 2, 2b, 3, 4, and 5). The applicants have proposed construction of a 500-kV transmission line from the Susquehanna Substation (Berwick, Pennsylvania) to the Roseland Substation (Roseland, New Jersey). The construction and ROW permits would allow the construction through Delaware Water Gap National Recreation Area, Middle Delaware National Scenic and Recreational River, and Appalachian National Scenic Trail in Pennsylvania and New Jersey. The alternatives follow existing ROWs to reduce the impacts from construction and operation of the transmission line.

Under Alternative 1 (no action), the permit to allow construction of the applicant's proposal would be denied and current conditions would be presumed to continue. Alternative 2 (applicant's proposed route) would cross approximately 4.3 miles of NPS lands along the existing B–K Line corridor and require the cleared ROW to be expanded to 350 feet wide. Alternative 2b (applicant's alternate route) would follow the same route as Alternative 2, but would be constructed within the applicant's existing deeded ROW without expansion. Alternative 3 would cross approximately 5.4 miles of NPS lands along a different existing transmission line corridor and would require a ROW 350 feet in width. Alternative 4 would cross approximately 1.5 miles of NPS lands along another existing transmission line corridor and would require a ROW 350 feet in width. This alternative would not cross the Middle Delaware National Scenic and Recreational River. Alternative 5 would follow the same route as Alternative 4, but would not include a 0.6-mile stretch of NPS land west of the Bushkill substation. Alternative 2 is the NPS preferred alternative and Alternative 1 is the environmentally preferable alternative.

The Final EIS analyzes the impacts of the alternatives in detail for geologic resources (including topography and paleontology), flood plains, wetlands, vegetation, landscape connectivity, wildlife habitat and wildlife, special-status species, rare and unique communities, archeological resources, historic structures, cultural landscapes, socioeconomics, infrastructure, access and circulation, visitor use and experience, visual resources, soundscapes, wild and scenic rivers, park operations, and health and safety.

The Draft EIS was released in November 2011 and was available for public and agency review and comment beginning with publication of the Notice of Availability in the **Federal Register**. Comments were accepted during the 60-day public comment period. After this public review, NPS identified the preferred alternative and revised this document in response to public comments.

The Final EIS is now available. Interested persons and organizations may obtain the Final EIS online at *http://parkplanning.nps.gov/dewa.* A 30-day no-action period will follow this Notice of Availability in the **Federal Register**. After this period, the alternative or actions constituting the approved plan will be documented in a Record of Decision that will be signed by the Regional Director of the Northeast Region of the NPS. Notice of approval of the EIS would be published similarly.

Dated: August 15, 2012.

Dennis R. Reidenbach,

Regional Director, Northeast Region, National Park Service.

Notice of Public Meetings for Cedar Creek and Belle Grove National Historical Park Advisory Commission

AGENCY: National Park Service, Interior.

ACTION: Notice of Meetings.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act that meetings of the Cedar Creek and Belle Grove National Historical Park Advisory Commission will be held to discuss the implementation of the Park's general management plan.

Date: September 20, 2012.

Location: Warren County Government Center, 220 North Commerce Avenue, Front Royal, VA 22360.

Date: December 20, 2012.

Location: Strasburg Town Hall Council Chambers, 174 East King Street, Strasburg, VA 22657.

Date: March 21, 2013.

Location: Middletown Town Council Chambers, 7875 Church Street, Middletown, VA 22645.

Date: June 20, 2013.

Location: Warren County Government Center, 220 North Commerce Avenue, Front Royal, VA 22630.

Agenda

The Commission meetings will consist of the following:

1. General Introductions
2. Review and approval of Commission Meeting Notes
3. Reports and Discussions
4. Old Business
5. New Business
6. Closing Remarks

All meetings are open to the public and begin at 8:30 a.m.

FOR FURTHER INFORMATION CONTACT: Diann Jacox, Superintendent, Cedar Creek and Belle Grove National Historical Park, P.O. Box 700, Middletown, Virginia 22645, telephone (540) 868–9176.

SUPPLEMENTARY INFORMATION: All meetings are open to the public. Topics to be discussed include: visitor services and interpretation—including directional and interpretive signage and visitor facilities, land protection planning, historic preservation, and natural resource protection.

The Park Advisory Commission was designated by Congress to advise on the preparation and implementation of the park's general management plan. Individuals who are interested in the

Park, the implementation of the plan, or the business of the Commission are encouraged to attend the meetings. Interested persons may make oral comments to the Commission. Scheduling of public comments during the Commission meeting will be determined by the chairperson of the Commission.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 27, 2012.

Diann Jacox,

Superintendent, Cedar Creek and Belle Grove National Historical Park.

Native American Graves Protection and Repatriation Review Committee: Meeting

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act, 5 U.S.C. Appendix (1988), of a meeting of the Native American Graves Protection and Repatriation Review Committee (Review Committee). This meeting will be open to the public. The agenda may include requests to the Review Committee for a recommendation to the Secretary of the Interior, as required by law, in order to effect the agreed-upon disposition of Native American human remains determined to be culturally unidentifiable; presentations by Indian tribes, Native Hawaiian organizations, museums, Federal agencies, and the public; requests to the Review Committee, pursuant to 25 U.S.C. 3006 (c)(3), for review and findings of fact related to the identity or cultural affiliation of human remains or other cultural items, or the return of such items; and facilitation of the resolution of disputes among parties are convened by the Review Committee pursuant to 25 U.S.C. 3006 (c)(4).

DATES: The Review Committee will meet on May 22–23, 2013. Presentation requests must be received by March 22, 2013. Requests for disposition or for findings of fact must be received by March 9, 2013. Requests to convene parties and facilitate resolution of a dispute must be received by February 3, 2013.

ADDRESSES: The Review Committee will meet in the History Colorado Center of the History Colorado Museum, 1200 Broadway, Denver, CO 80203. Electronic submissions are to be sent to: *Sherry_Hutt@nps.gov.* Mailed submissions are to be sent to: Designated Federal Officer, NAGPRA Review Committee, National Park Service, National NAGPRA Program, 1201 Eye Street NW., 8th Floor (2253), Washington, DC 20005.

SUPPLEMENTARY INFORMATION: Notice is hereby given in accordance with the Federal Advisory Committee Act, 5 U.S.C. Appendix (1988), of a meeting of the Native American Graves Protection and Repatriation Review Committee (Review Committee). The Review Committee will meet on May 22–23, 2013, in the History Colorado Center of the History Colorado Museum, 1200 Broadway, Denver, CO 80203. This meeting will be open to the public.

The agenda for this meeting will include the appointment of the subcommittee to draft the Review Committee's Report to the Congress for 2013, and discussion of the scope of the Report; and National NAGPRA Program reports. In addition, the agenda may include requests to the Review Committee for a recommendation to the Secretary of the Interior, as required by law, in order to effect the agreed-upon disposition of Native American human remains determined to be culturally unidentifiable; presentations by Indian tribes, Native Hawaiian organizations, museums, Federal agencies, and the public; requests to the Review Committee, pursuant to 25 U.S.C. 3006 (c)(3), for review and findings of fact related to the identity or cultural affiliation of human remains or other cultural items, or the return of such items; and facilitation of the resolution of disputes among parties are convened by the Review Committee pursuant to 25 U.S.C. 3006 (c)(4). The agenda and materials for this meeting will be posted on or before April 22, 2013, at *http://www.nps.gov/nagpra.*

The Review Committee is soliciting presentations by Indian tribes, Native Hawaiian organizations, museums, and Federal agencies on the following two topics: (1) The progress made, and any barriers encountered, in implementing NAGPRA and (2) the outcomes of dispute resolution facilitated by the Review Committee pursuant to 25 U.S.C. 3006 (c)(4). The Review Committee also will consider other presentations by Indian tribes, Native Hawaiian organizations, museums, Federal agencies, and the public. A presentation request must, at minimum, include an abstract of the presentation and contact information for the presenter(s). Presentation requests must be received by March 22, 2013.

The Review Committee will consider requests for a recommendation to the Secretary of the Interior, as required by law, in order to effect the agreed-upon disposition of Native American human remains determined to be culturally unidentifiable (CUI). A CUI disposition request must include the appropriate, completed form posted on the National NAGPRA Program Web site and, as applicable, the ancillary materials noted on the form. To access and download the appropriate form—either the form for CUI with a ''tribal land'' or ''aboriginal land'' provenience or the form for CUI without a ''tribal land'' or ''aboriginal land'' provenience—go to *http://www.nps.gov/nagpra,* and then click on ''Request for CUI Disposition Form.'' CUI disposition requests must be received by March 9, 2013.

The Review Committee will consider requests, pursuant to 25 U.S.C. 3006 (c)(3), for review and findings of fact related to the identity or cultural affiliation of human remains or other cultural items, or the return of such items, where consensus among affected parties is unclear or uncertain. A request for findings of fact must be accompanied by a statement of the fact(s) at issue and supporting materials, including those exchanged by the parties to consultation concerning the Native American human remains and or other cultural items. Requests for findings of fact must be received by March 9, 2013.

The Review Committee will consider requests, pursuant to 25 U.S.C. 3006 (c)(4), to convene parties and facilitate resolution of a dispute, where consensus clearly has not been reached among affected parties regarding the identity or cultural affiliation of human remains or other cultural items, or the return of such items. A request to convene parties and facilitate resolution of a dispute must be accompanied by a statement of the decision of the museum or Federal agency subject to the dispute resolution request, a statement of the issue and supporting materials, including those exchanged by the parties to consultation concerning the Native American human remains and or

other cultural items. Requests to convene parties and facilitate resolution of a dispute must be received by February 3, 2013.

Submissions may be made in one of three ways:

1. Electronically, as an attachment to a message (preferred for submissions of 10 pages or less). Electronic submissions are to be sent to: Sherry_Hutt@nps.gov.

2. By mail, on a single compact disc (preferred for submissions of more than 10 pages). Mailed submissions are to be sent to: Designated Federal Officer, NAGPRA Review Committee, National Park Service, National NAGPRA Program, 1201 Eye Street NW., 8th Floor (2253), Washington, DC 20005.

3. By mail, in hard copy.

Such items are subject to posting on the National NAGPRA Program Web site prior to the meeting. Items submitted at the meeting are subject to posting after the meeting.

Information about NAGPRA, the Review Committee, and Review Committee meetings is available on the National NAGPRA Program Web site, at *http://www.nps.gov/nagpra.* For the Review Committee's meeting procedures, click on ''Review Committee,'' then click on ''Procedures.'' Meeting minutes may be accessed by going to the Web site; then clicking on ''Review Committee'' and then clicking on ''Meeting Minutes.'' Approximately fourteen weeks after each Review Committee meeting, the meeting transcript is posted for a limited time on the National NAGPRA Program Web site.

The Review Committee was established in Section 8 of the Native American Graves Protection and Repatriation Act of 1990 (NAGPRA), 25 U.S.C. 3006. Review Committee members are appointed by the Secretary of the Interior. The Review Committee is responsible for monitoring the NAGPRA inventory and identification process; reviewing and making findings related to the identity or cultural affiliation of cultural items, or the return of such items; facilitating the resolution of disputes; compiling an inventory of culturally unidentifiable human remains that are in the possession or control of each Federal agency and museum, and recommending specific actions for developing a process for disposition of such human remains; consulting with Indian tribes and Native Hawaiian organizations and museums on matters affecting such tribes or organizations lying within the scope of work of the Committee; consulting with the Secretary of the Interior on the development of regulations to carry out NAGPRA; and making recommendations regarding future care of repatriated cultural items. The Review Committee's work is carried out during the course of meetings that are open to the public.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 8, 2012.

Notice of Meeting for Acadia National Park Advisory Commission

AGENCY: National Park Service, Interior.

ACTION: Notice of meeting.

SUMMARY: This notice sets the date of the Acadia National Park Advisory Commission meeting.

DATES: The public meeting of the Advisory Commission will be held on Monday, September 10, 2012, at 1:00 p.m. (Eastern).

Location: The meeting will be held at Headquarters, Acadia National Park, Bar Harbor, Maine 04609.

Agenda

The September 10, 2012, Commission meeting will consist of the following:

1. Committee reports:
   —Land Conservation
   —Park Use
   —Science and Education
   —Historic
2. Old Business
3. Superintendent's Report
4. Chairman's Report
5. Public Comments

FOR FURTHER INFORMATION CONTACT: Sheridan Steele, Superintendent, Acadia National Park, P.O. Box 177, Bar Harbor, Maine 04609, telephone (207) 288–3338.

SUPPLEMENTARY INFORMATION: The meeting is open to the public. Interested persons may make oral/written presentations to the Commission or file written statements. Such requests should be made to the Superintendent at least seven days prior to the meeting. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Notice of Public Meeting: Concessions Management Advisory Board

AGENCY: National Park Service, Interior.

ACTION: Notice of public meeting.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act that the 25th meeting of the Concessions Management Advisory Board (the Board) will be held as indicated below.

DATES: The meeting will be held September 18, 2012, in Shenandoah National Park, Historic Conference Building, Skyline Drive, Mile Marker 41.7, Luray, Virginia, beginning at 9 a.m. Members of the public are invited to attend. A public comment period will be held.

FOR FURTHER INFORMATION CONTACT: National Park Service, Commercial Services Program, 1201 Eye Street NW., Washington, DC 20005, Telephone: 202/513–7156.

SUPPLEMENTARY INFORMATION: The Board was established by Title IV, Section 409 of the National Parks Omnibus Management Act of 1998, November 13, 1998 (Pub. L. 105–391). The purpose of the Board is to advise the Secretary and the National Park Service on matters relating to management of concessions in the National Park System. The members of the Advisory Board are: Dr. James J. Eyster, Ms. Ramona Sakiestewa, Mr. Richard Linford, Mr. Phil Voorhees, Mr. Edward E. Mace, and Ms. Michele Michalewicz.

Topics that will be presented during the meeting include:

- General Commercial Services Program Updates
- Concession Contracting Status Update
- Standards, Evaluations, and Rate Approval Project Update
- Open Discussion of Incentive Programs for Concessioners
- Public Comment—Limited to 3 minutes per person

The meeting will be open to the public, however, facilities and space for accommodating members of the public are limited, and persons will be accommodated on a first-come-first-served basis.

Assistance to Individuals With Disabilities at the Public Meeting

The meeting site is accessible to individuals with disabilities. If you plan to attend and will require an auxiliary aid or service to participate in the meeting (*e.g.,* interpreting service, assistive listening device, or materials in an alternate format), notify the contact person listed in this notice at least 2 weeks before the scheduled meeting date. Attempts will be made to meet any request(s) we receive after that date, however, we may not be able to make the requested auxiliary aid or service available because of insufficient time to arrange for it.

Anyone may file with the Board a written statement concerning matters to be discussed. The Board may also permit attendees to address the Board, but may restrict the length of the presentations, as necessary to allow the Board to complete its agenda within the allotted time. Such requests should be made to the Director, National Park Service, Attention: Chief, Commercial Services Program, at least 7 days prior to the meeting. Draft minutes of the meeting will be available for public inspection approximately 6 weeks after the meeting, at the Commercial Services Program office located at 1201 Eye Street NW., 11th Floor, Washington, DC.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 23, 2012.

Landmarks Committee of the National Park System Advisory Board Meeting

AGENCY: National Park Service, Interior.

ACTION: Notice of meeting.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act, 5 U.S.C. Appendix (1988), that a meeting of the Landmarks Committee of the National Park System Advisory Board will be held beginning at 10 a.m. on November 7, 2012, at the following location. The meeting will continue beginning at 9:30 a.m. on November 8, 2012.

DATES: The meeting will be held on November 7, 2012, from 10 a.m. to 4:30 p.m.; and November 8 from 9:30 a.m. to 1 p.m., Eastern Standard Time, inclusive.

Location: The meeting will be held at the General Federation of Women's Clubs, 1734 N Street NW., 2nd Floor Parlor, Washington, DC 20036.

Agenda: The National Park System Advisory Board and its Landmarks Committee may consider the following nominations:

Alabama

EDMUND PETTUS BRIDGE, Dallas County

Connecticut

HARRIET BEECHER STOWE HOUSE, Hartford

Illinois

SECOND PRESBYTERIAN CHURCH, Chicago

Kentucky

CAMP NELSON HISTORIC AND ARCHEOLOGICAL DISTRICT, Jessamine County
GEORGE T. STAGG DISTILLERY, Frankfort

Maine

CAMDEN AMPHITHEATRE AND PUBLIC LIBRARY, Camden

New Hampshire

EPIC OF AMERICAN CIVILIZATION MURALS, BAKER LIBRARY, Hanover

New Jersey

HINCHCLIFFE STADIUM, Paterson

New York

YADDO, Saratoga Springs

Oklahoma

HONEY SPRINGS BATTLEFIELD, McIntosh and Muskogee Counties

Puerto Rico

CASA DRA. CONCHA MELÉNDEZ RAMÍREZ, San Juan
OLD SAN JUAN HISTORIC DISTRICT (DISTRITO HISTÓRICO DEL VIEJO SAN JUAN), San Juan

Virginia

PEAR VALLEY, Eastville

Proposed Amendments to Existing Designations

OCEAN DRIVE HISTORIC DISTRICT, Newport, RI (updated documentation)
PENNSYLVANIA STATE CAPITOL COMPLEX, Harrisburg, PA (boundary expansion and updated documentation)

FOR FURTHER INFORMATION CONTACT: Patricia Henry, National Historic Landmarks Program, National Park Service; 1849 C Street NW. (2280); Washington, DC 20240; Telephone (202) 354–2216; Email: *Patty_Henry@nps.gov*.

SUPPLEMENTARY INFORMATION: The purpose of the meeting of the Landmarks Committee of the National Park System Advisory Board is to evaluate nominations of historic properties in order to advise the National Park System Advisory Board of the qualifications of each property being proposed for National Historic Landmark (NHL) designation, and to make recommendations regarding the possible designation of those properties as National Historic Landmarks to the National Park System Advisory Board at a subsequent meeting at a place and time to be determined. The Committee also makes recommendations to the National Park System Advisory Board regarding amendments to existing designations and proposals for withdrawal of designation. The members of the Landmarks Committee are:

Mr. Ronald James, Chair
Dr. James M. Allan
Dr. Cary Carson
Dr. Darlene Clark Hine
Mr. Luis Hoyos, AIA
Dr. Barbara J. Mills
Dr. William J. Murtagh
Dr. Franklin Odo
Dr. William D. Seale
Dr. Michael E. Stevens

The meeting will be open to the public. Pursuant to 36 CFR Part 65, any

member of the public may file, for consideration by the Landmarks Committee of the National Park System Advisory Board, written comments concerning the National Historic Landmarks nominations, amendments to existing designations, or proposals for withdrawal of designation.

Comments should be submitted to J. Paul Loether, Chief, National Register of Historic Places and National Historic Landmarks Program, National Park Service; 1849 C Street NW. (2280); Washington, DC 20240; Email: *Paul_Loether@nps.gov*.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 17, 2012.

Bureau of Reclamation

[INT–FES 12–40]

Final Environmental Impact Statement for the Odessa Subarea Special Study—Columbia Basin Project Adams, Franklin, Grant, and Lincoln Counties, WA

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of availability.

SUMMARY: The Bureau of Reclamation, in cooperation with the Washington State Department of Ecology (Ecology), the joint lead agency, is notifying the public that they have prepared a final environmental impact statement and has made it available to the public for review.

DATES: The Bureau of Reclamation will not make a decision on the proposed action until at least 30 days after filing of the final environment impact statement with the Environmental Protection Agency. After the 30-day waiting period, the Bureau of Reclamation may complete a Record of Decision that identifies a selected action for implementation and discusses the rationale upon which the decision was made.

ADDRESSES: Requests for copies of the final environmental impact statement and comments should be addressed to Candace McKinley, Environmental Program Manager, Bureau of Reclamation, Columbia-Cascades Area Office, 1917 Marsh Road, Yakima, Washington 98901; or by email at *odessa@usbr.gov*.

FOR FURTHER INFORMATION CONTACT: Contact Candace McKinley, Environmental Program Manager, Telephone (509) 575–5848 x603. Information on this project can also be found at: *http://www.usbr.gov/pn/programs/ucao_misc/odessa/index.html*.

SUPPLEMENTARY INFORMATION: The final environmental impact statement (FEIS) was completed pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969 (NEPA), as amended, 42 U.S.C. 4332, and also will comply with requirements of the Washington State Environmental Policy Act (SEPA), Chapter 43.21C, Revised Code of Washington (RCW). Reclamation published a Notice of Availability for the Draft EIS in the **Federal Register** on October 25, 2010 (75 FR 65503) with an extended public comment period ending on January 31, 2011. Reclamation and Ecology have clarified the FEIS is the initial environmental analysis within a tiered process under NEPA and SEPA. Reclamation and Ecology expect that some projects or actions advanced out of this first tier EIS may be subject to subsequent second tier, project-level, environmental analysis under NEPA and SEPA before being approved for implementation. Tiering refers to the process of addressing a broad, general program, policy or proposal in an initial analysis followed by analyses of a more precisely defined site-specific proposal related to the initial program, policy, or proposal when that proposal is ready to be carried forward. Any subsequent NEPA project-level analysis could include a combination of EIS(s), supplemental EIS(s), environmental assessments(s), and/or categorical exclusion(s) along with corresponding SEPA reviews, as appropriate, depending on the proposed action, phasing of implementation, and potential for adverse impacts. Actions described in this FEIS that are analyzed in full, such as canal expansion will not undergo a second tier NEPA/SEPA review. Decisions relative to the general scope of the action alternative which include acreage, water supply, and general site locations would also not be subject to additional review. The FEIS includes written responses to public comments received on the Draft EIS.

Background Information

The Grand Coulee Dam Project was authorized for construction by the Rivers and Harbors Act of August 30, 1935, and reauthorized and renamed in the Columbia Basin Project Act of March 10, 1943. The Columbia Basin Project (CBP) is a multipurpose water development project in the central part of the State of Washington. Congress authorized the CBP to irrigate a total of 1,029,000 acres; about 671,000 acres are currently irrigated.

Section 9(a) of the Reclamation Project Act of 1939 gave authority to the Secretary of the Interior (Secretary) to approve a finding of feasibility and thereby authorize construction of a project upon submitting a report to the President and the Congress. The Secretary approved a plan of development for the CBP, known as House Document No. 172 in 1945. House Document No. 172 anticipated that development of the CBP would occur in phases over a 70-year period. The Odessa Subarea Special Study is conducted under the authority of the CBP Act of 1943, as amended, and the Reclamation Project Act of 1939.

In response to the public's concern about declining groundwater supplies in the Odessa aquifer and associated economic and other effects, Congress has funded Reclamation to investigate this problem. Ecology has partnered with Reclamation by providing funding and collaborating on various technical studies. In February 2006, the Washington State Legislature passed the Columbia River Water Resource Management Act (Chapter 90.90 RCW) that directs Ecology to aggressively pursue development of water benefiting both instream and out-of-stream uses through storage, conservation, and voluntary regional water management agreements. The Odessa Subarea Special Study is one of several activities identified in the legislation and was initiated by Reclamation and Ecology in 2008.

Reclamation and Ecology are studying the potential to replace the current and increasingly unreliable groundwater supplies used for irrigation in the Odessa Subarea Special Study Area (Study Area) within the CBP authorized boundary with a surface water supply as part of continued phased development of the CBP.

The alternatives being considered include the No Action Alternative as required by NEPA and SEPA, and six action alternatives that address the Purpose and Need. The six action alternatives rely on several different water supply and delivery options, and fall within the following three categories:

Partial Replacement: This group of delivery alternatives focuses on enlarging the existing East Low Canal and providing CBP surface water to approximately 57,000 acres in the Study Area that currently are irrigated with groundwater. Nearly all of the acreage served would be south of Interstate 90 (I–90). A small portion of the remaining groundwater-irrigated acres in the Study Area north of I–90, nearest the East Low Canal, may also be served.

Full Replacement: This group of delivery alternatives would provide CBP surface water to most groundwater-irrigated acreage in the Study Area (approximately 102,600 acres), both north and south of I–90. Lands south of I–90 would be served by enlarging the East Low Canal. Lands north of I–90 would be served by constructing a new East High Canal system.

Modified Partial Replacement: This group of delivery alternatives would provide replacement water for approximately 70,000 acres of existing groundwater-irrigated lands both north and south of I–90. Approximately 25,000 acres of 70,000 acres would be located north of I–90, while the remaining 45,000 acres would be south of I–90.

The two modified partial replacement alternatives were developed in response to comments received on the draft EIS. These two alternatives include lands, facilities, and quantities of water that are within the range of alternatives and alternative impacts considered in the Draft EIS.

Two water supply options are being considered that would use storage from Banks Lake reservoir and Lake Roosevelt either individually or in combination, as follows: Option A—Banks Lake reservoir, would use storage through additional drawdowns from Banks Lake reservoir, exclusively; and Option B—Banks Lake and Lake Roosevelt, would use existing storage in Banks Lake and Lake Roosevelt, resulting in additional drawdowns from both reservoirs. Reclamation and Ecology have identified the Modified Partial Replacement Alternative with water supply option A (Banks Only) as their preferred alternative.

The FEIS is available for public inspection at the following locations:

- Bureau of Reclamation, Columbia-Cascades Area Office, 1917 Marsh Road, Yakima, Washington; telephone: (509) 575–5848
- Bureau of Reclamation, Pacific Northwest Regional Office, 1150 North Curtis Road, Suite 100, Boise, Idaho; telephone: (208) 378–5012
- Bureau of Reclamation, Ephrata Field Office, 32 C Street Northwest, Ephrata, Washington; telephone (509) 754–0214
- Washington State Department of Ecology, 15 W. Yakima Avenue, Suite 200, Yakima, Washington; telephone (509) 575–2490

- Washington State Department of Ecology, 4601 North Monroe, Spokane, Washington; telephone (509) 329–3400

BILLING CODE 4310–MN–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 332–534]

Renewable Energy and Related Services: Recent Developments

AGENCY: United States International Trade Commission.

ACTION: Institution of investigation and scheduling of public hearing.

SUMMARY: Following receipt of a request on July 30, 2012 from the U.S. Trade Representative (USTR) under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)), the U.S. International Trade Commission (Commission) instituted investigation No. 332–534, *Renewable Energy and Related Services: Recent Developments.*

DATES:

November 15, 2012: Deadline for filing requests to appear at the public hearing.

November 19, 2012: Deadline for filing pre-hearing briefs and statements.

November 29, 2012: Public hearing.

December 17, 2012: Deadline for filing post-hearing briefs and statements.

March 1, 2013: Deadline for filing all other written submissions.

June 28, 2013: Transmittal of Commission report to USTR.

ADDRESSES: All Commission offices, including the Commission's hearing rooms, are located in the United States International Trade Commission Building, 500 E Street SW., Washington, DC. All written submissions should be addressed to the Secretary, United States International Trade Commission, 500 E Street SW., Washington, DC 20436. The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov/edis3-internal/app.*

FOR FURTHER INFORMATION CONTACT: Project Leader Lisa Alejandro (202–205–3486 or *Lisa.Alejandro@usitc.gov*) or Deputy Project Leader Samantha Brady Pham (202–205–3459 or *Samantha.Pham@usitc.gov*) for information specific to this investigation. For information on the legal aspects of this investigation, contact William Gearhart of the Commission's Office of the General Counsel (202–205–3091 or *william.gearhart@usitc.gov*). The media should contact Margaret O'Laughlin, Office of External Relations (202–205–1819 or *margaret.olaughlin@usitc.gov*). Hearing-impaired individuals may obtain information on this matter by contacting the Commission's TDD terminal at 202–205–1810. General information concerning the Commission may also be obtained by accessing its Internet server (*http://www.usitc.gov*). Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000.

Background: In his letter the USTR requested that the Commission prepare two reports, one on environmental and related services, and a second on renewable energy and related services, and deliver the reports in 8 and 11 months, respectively, after receipt of the letter. This notice announces the institution of an investigation and schedule, including the date for a public hearing, relating to the preparation of the second report, on renewable energy and related services; the Commission published notice of the institution of the first investigation, No. 332–533, *Environmental and Related Services,* in the **Federal Register** of August 21, 2012.

As requested by the USTR, the Commission will provide a report on renewable energy and related services that, to the extent practicable:

- Defines types of renewable energy and related services, identifies leading suppliers, and generally describes the relationship of renewable energy services to the development of renewable energy projects worldwide;
- Estimates the size of the U.S. and global markets for certain renewable energy services, identifies key export and import markets for such services, and describes factors affecting supply and demand;
- Examines U.S. and global renewable energy services trade during 2007–11, and highlights recent trends in investment in renewable energy projects and firms, including new business strategies or practices;
- Identifies barriers to U.S. trade and investment in renewable energy services, and examines recent efforts to liberalize trade in leading markets for such services; and
- Examines the role of clean energy incentive programs in encouraging investment in and creating markets for renewable energy goods and services.

As requested by the USTR, the report will focus on services incidental to the development, generation, and distribution of renewable energy, with particular emphasis on wind energy (onshore and offshore) and solar energy, and other technologies that the Commission's research shows to be of significance. The USTR defined such services to include scientific and technical consulting, services incidental to energy distribution, professional services, construction and engineering services, management consulting and related services, and maintenance and repair of equipment, among others.

As requested, the Commission expects to deliver this second report to the USTR no later than June 28, 2013.

Public Hearing: A public hearing in connection with this investigation will be held at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC, beginning at 9:30 a.m. on November 29, 2012. Requests to appear at the public hearing should be filed with the Secretary no later than 5:15 p.m., November 19, 2012. All pre-hearing briefs and statements should be filed no later than 5:15 p.m. November 6, 2012 and all post-hearing briefs and statements should be filed no later than 5:15 p.m., December 17, 2012. All pre- and post-hearing briefs and statements must be filed in accordance with the requirements in the ''Written Submissions'' section below. In the event that no witnesses are scheduled to appear at the hearing as of the close of business on November 15, 2012, the hearing will be canceled. Any person interested in attending the hearing as an observer or nonparticipant should contact the Office of the Secretary at 202–205–2000 after November 1, 2012, for information concerning whether the hearing will be held.

Written Submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to file written submissions concerning this investigation. All written submissions (other than those related to the hearing) should be addressed to the Secretary, and should be received no later than 5:15 p.m., March 1, 2013. All written submissions must conform with the provisions of section 201.8 of the *Commission's Rules of Practice and Procedure* (19 CFR 201.8). Section 201.8 and the Commission's Handbook on Filing Procedures require that interested parties file documents electronically on or before the filing deadline and submit eight (8) true paper copies by 12:00 p.m. eastern time on the next business day. In the event that confidential treatment of a document is requested, interested parties must file, at the same time as the eight paper copies, at least four (4) additional true paper copies in which the confidential information must be deleted (see the following paragraph for further information regarding confidential business information). Persons with questions regarding electronic filing should contact the Secretary (202–205–2000).

Any submissions that contain confidential business information (CBI) must also conform with the requirements in section 201.6 of the *Commission's Rules of Practice and Procedure* (19 CFR 201.6). Section 201.6 of the rules requires that the cover of the document and the individual pages be clearly marked as to whether they are the ''confidential'' or ''non-confidential'' version, and that the confidential business information be clearly identified by means of brackets. All written submissions, except for confidential business information, will be made available for inspection by interested parties.

In the request letter, the USTR stated that his office intends to make the Commission's report available to the public in its entirety, and asked that the Commission not include any confidential business information or national security classified information in the report. Any confidential business information received by the Commission in this investigation and used in preparing this report will not be published in a manner that would reveal the operations of the firm supplying the information.

By order of the Commission.

Issued: August 27, 2012.

Lisa R. Barton,

Acting Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–817]

Certain Communication Equipment, Components Thereof, and Products Containing the Same, Including Power Over Ethernet Telephones, Switches, Wireless Access Points, Routers and Other Devices Used in LANs, and Cameras; Commission Determination Not to Review Initial Determinations Terminating Respondent Avaya Inc. Based on Settlement and Terminating the Investigation Based on Withdrawal of the Complaint; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review two initial determinations (''IDs'') (Order Nos. 23–24) of the presiding administrative law judge (''ALJ'') granting a joint motion by Complainant and Respondent Avaya Inc. (''Avaya'') to terminate the investigation for Respondent Avaya based on settlement and a motion by Complainant to terminate the investigation in its entirety based on withdrawal of the complaint.

FOR FURTHER INFORMATION CONTACT: Amanda S. Pitcher, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2737. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on December 7, 2011, based on a complaint filed by ChriMar Systems, Inc. d/b/a DMS Technologies (''ChriMar'') of Farmington Hills, Michigan. 76 FR 76436–37 (Dec. 7, 2011). The complaint alleges a violation of section 337 by reason of infringement of certain claims of U.S. Patent No. 7,457,250 by certain communication equipment, components thereof, and products containing the same, including power over ethernet telephones, switches, wireless access points, routers and other devices used in LANs, and cameras. The Notice of Investigation named a number of respondents, including Avaya of Basking Ridge, New Jersey; Cisco Consumer Products LLC of Irvine, California, Cisco Systems International B.V. of the Netherlands, Cisco-Linksys LLC of Irvine, California (collectively, ''Cisco''); Hewlett-Packard Co. (''HP'') of Palo Alto, California; and Extreme Networks, Inc. (''Extreme'') of Santa Clara, California.

On July 18, 2012, ChriMar and Avaya filed a joint motion to terminate respondent Avaya from the investigation based on settlement. The Commission investigative attorney filed a response in support of the motion and the remaining respondents did not oppose the motion. On August 1, 2012, the ALJ issued Order No. 23 granting the motion. ChriMar and Avaya represented that there are no other agreements, written or oral, express or implied, between them. The ALJ found that there is no evidence that the settlement agreement would have an adverse impact on the public interest. No petitions for review of Order No. 23 were filed.

On July 20, 2012, ChriMar filed a motion for termination of the investigation in its entirety based on withdrawal of the complaint against respondents Cisco, Extreme and HP. Cisco, Extreme, HP and the Commission investigative attorney filed responses in support of the motion. On August 1, 2012, the ALJ granted ChriMar's motion. Order No. 24. The ALJ found that there is good cause for termination based on withdrawal of the complaint. In addition, the ALJ stated that he is not aware of ''extraordinary circumstances'' that would preclude granting the motion to terminate. No petitions for review of Order No. 24 were filed.

The Commission has determined not to review the IDs.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in section 210.42–44 of the Commission's Rules of Practice and Procedure (19 CFR 210.42–44).

By order of the Commission.

Issued: August 27, 2012.

Lisa R. Barton,

Acting Secretary to the Commission.

[FR Doc. 2012–21491 Filed 8–30–12; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Under the Clean Air Act

Notice is hereby given that on August 24, 2012, a proposed consent decree in *United States of America and Mecklenburg County* v. *Emerald Carolina Chemical, LLC,* Civil Action No. 3:12-cv-00554, was lodged with the United States District Court for the Western District of North Carolina.

In this action the United States and Mecklenburg County sought civil penalties and injunctive relief for alleged violations of Clean Air Act regulations at Emerald Carolina Chemical's chemical processing plant at 8309 Wilkinson Boulevard, Charlotte, Mecklenburg County, North Carolina. In particular, the complaint alleged violations of leak detection and repair requirements applicable to certain equipment at the plant. The proposed consent decree requires Emerald Carolina Chemical to pay a civil penalty of $62,500 to the United States and $62,500 to Mecklenburg County. Further, Emerald Carolina Chemical will implement additional inspection and monitoring procedures and analyze potential hazards associated with its amino resins and glyoxal production units.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and either emailed to *pubcomment-ees.enrd@usdoj.gov* or mailed to P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611, and should refer to *United States of America and Mecklenburg County* v. *Emerald Carolina Chemical, LLC,* D.J. Ref. 90–5–2–1–09526.

During the public comment period, the proposed consent decree may also be examined on the following Department of Justice Web site, *http://www.usdoj.gov/enrd/Consent_Decrees.html.* A copy of the decree may also be obtained by mail from the Consent Decree Library, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611 or by faxing or emailing a request to ''Consent Decree Copy'' (*EESCDCopy.ENRD@usdoj.gov*), fax no. (202) 514–0097, phone confirmation number (202) 514–5271. If requesting a copy from the Consent Decree Library by mail, please enclose a check in the amount of $11 (25 cents per page reproduction cost) payable to the U.S. Treasury or, if requesting by email or fax, forward a check in that amount to the Consent Decree Library at the address given above.

Henry Friedman,

Assistant Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–P

LEGAL SERVICES CORPORATION

Sunshine Act Meeting Notice

DATE AND TIME: The Institutional Advancement Committee of the Legal Services Corporation's Board of Directors will meet telephonically on September 4, 2012. The meeting will commence at 11:00 a.m., Eastern Daylight Time, and will continue until the conclusion of the Committee's agenda.

LOCATION: F. William McCalpin Conference Room, Legal Services Corporation Headquarters, 3333 K Street NW., Washington, DC 20007.

PUBLIC OBSERVATION: Members of the public who are unable to attend in person but wish to listen to the public proceedings may do so by following the telephone call-in directions provided below but are asked to keep their telephones muted to eliminate background noises. To avoid disrupting the meeting, please refrain from placing the call on hold. From time to time, the presiding Chair may solicit comments from the public.

CALL-IN DIRECTIONS FOR OPEN SESSIONS:

- Call toll-free number: 1–866–451–4981;
- When prompted, enter the following numeric pass code: 5907707348.
- When connected to the call, please immediately ''MUTE'' your telephone.

STATUS OF MEETING: Open.

MATTERS TO BE CONSIDERED:

1. Approval of agenda
2. Approval of minutes of the Committee's meeting of July 27, 2012
3. Consider and act on the Development Plan
4. Public comment
5. Consider and act on other business
6. Consider and act on motion to adjourn the meeting

CONTACT PERSON FOR INFORMATION: Katherine Ward, Executive Assistant to the Vice President & General Counsel, at (202) 295–1500. Questions may be sent by electronic mail to *FR_NOTICE_QUESTIONS@lsc.gov.*

NON-CONFIDENTIAL MEETING MATERIALS: Non-confidential meeting materials will be made available in electronic format at least 24 hours in advance of the meeting on the LSC Web site, at *http://www.lsc.gov/board-directors/meetings/board-meeting-notices/non-confidential-materials-be-considered-open-session.*

ACCESSIBILITY: LSC complies with the Americans With Disabilities Act and Section 504 of the 1973 Rehabilitation Act. Upon request, meeting notices and

materials will be made available in alternative formats to accommodate individuals with disabilities. Individuals who need other accommodations due to disability in order to attend the meeting in person or telephonically should contact Katherine Ward, at (202) 295–1500 or *FR_NOTICE_QUESTIONS@lsc.gov,* at least 2 business days in advance of the meeting. If a request is made without advance notice, LSC will make every effort to accommodate the request but cannot guarantee that all requests can be fulfilled.

Dated: August 28, 2012.

Victor M. Fortuno,

Vice President & General Counsel.

BILLING CODE 7050–01–P

NATIONAL SCIENCE FOUNDATION

Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978 (Pub. L. 95–541)

AGENCY: National Science Foundation.

ACTION: Notice of Permit Applications Received under the Antarctic Conservation Act of 1978, Public Law 95–541.

SUMMARY: The National Science Foundation (NSF) is required to publish a notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act at Title 45 Part 670 of the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by October 1, 2012. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 755, Office of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230.

FOR FURTHER INFORMATION CONTACT: Polly A. Penhale at the above address or (703) 292–7420.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas a requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

The applications received are as follows:

Permit Application: 2013–019

1. *Applicant:* Lockheed Martin IS&GS, Antarctic Support Contract, 7400 S. Tucson Way, Centennial, CO 80112–3938.

Activity for Which Permit Is Requested

Enter Antarctic Specially Protected Areas. The applicant plans to enter ASPA 105-Beaufort Island, ASPA 121-Cape Royds, ASPA 122-Arrival Heights, ASPA 124-Cape Crozier, ASPA 130-Transway Ridge, ASPA 131-Canada Glacier, ASPA 137-Northwest White Island, ASPA 138-Linnaeus Terrace, and, ASPA 154-Botany Bay to conduct a review of their management plans. The Antarctic Support Contract (ASC) Environmental Health and Safety (EHS) Department would enter the ASPA's to collect information on site status in anticipation of the 5 year ASPA review, general management and maintenance concerns such as ensuring that all signs and boundary markers are legible and secured, or to address any environmental concerns or potential environmental release with the ASPA. Information would be gathered on any installations or facilities that may be present, verify that the reasons for special protection remain valid, verify that the management measures in place are sufficient to provide protection, and, recommend any management measures that may be necessary to maintain the values being protected. The plan revisions will take into account recent developments within the Antarctic Treaty System to ensure consistency with recently adopted plans, policies and guidelines amongst the Treaty Nations.

Location

ASPA 105-Beaufort Island, ASPA 121-Cape Royds, ASPA 122-Arrival Heights, ASPA 124-Cape Crozier, ASPA 130-Transway Ridge, ASPA 131-Canada Glacier, ASPA 137-Northwest White Island, ASPA 138-Linnaeus Terrace, and, ASPA 154-Botany Bay.

Dates

August 15, 2012 to August 31, 2017.

Nadene G. Kennedy,

Permit Officer, Office of Polar Programs.

[FR Doc. 2012–21604 Filed 8–30–12; 8:45 am]

BILLING CODE 7555–01–P

NEIGHBORHOOD REINVESTMENT CORPORATION

Sunshine Act Meeting Notice

Corporate Administration Committee Meeting of The Board of Directors

TIME AND DATE: 1 p.m., Thursday, September 13, 2012.

PLACE: 1325 G Street NW., Suite 800, Boardroom, Washington, DC 20005.

STATUS: Open.

CONTACT PERSON FOR MORE INFORMATION: Erica Hall, Assistant Corporate Secretary; (202) 220–2376; *ehall@nw.org.*

AGENDA:

I. Call to Order
II. Nominations
III. Employee Performance Management System
IV. Policy Changes
V. Human Resources Update
VI. Washington, DC Lease Update
VII. Adjournment

Erica Hall,

Assistant Corporate Secretary.

BILLING CODE 7570–02–P

NUCLEAR REGULATORY COMMISSION

[NRC–2010–0143]

Proposed International Isotopes Fluorine Extraction Process and Depleted Uranium Deconversion Plant in Lea County, New Mexico

AGENCY: Nuclear Regulatory Commission.

ACTION: Final environmental impact statement; issuance.

SUMMARY: Notice is hereby given that the U.S. Nuclear Regulatory Commission (NRC or the Commission) has published the Final Environmental Impact Statement (EIS) for the proposed International Isotopes Fluorine Extraction Process and Depleted Uranium Deconversion Plant (INIS) in Lea County, New Mexico. On December 30, 2009, International Isotopes Fluorine Products, Inc. (IIFP), a wholly-owned subsidiary of International Isotopes, Inc., submitted a license application that proposes the construction, operation, and decommissioning of a fluorine extraction and depleted uranium deconversion facility (the ''proposed action''). IIFP proposes to locate the facility near Hobbs, New Mexico.

ADDRESSES: Please refer to Docket ID NRC–2010–0143 when contacting the

NRC about the availability of information regarding this document. You may access information related to this document using any of the following methods:

• *Federal Rulemaking Web site:* Go to *http://www.regulations.gov* and search for Docket ID NRC–2010–0143. Address questions about NRC dockets to Carol Gallagher; telephone: 301–492–3668; email: *Carol.Gallagher@nrc.gov.*

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may access publicly-available documents online in the NRC Library at *http://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''ADAMS Public Documents'' and then select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* Additional information regarding accessing materials related to this action is under the Document Availability heading in the **SUPPLEMENTARY INFORMATION** section of this document.

• *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

FOR FURTHER INFORMATION CONTACT: For information about the Final EIS or the environmental review process, please contact Asimios Malliakos, telephone: 301–415–6458; email: *Asimios.Malliakos@nrc.gov;* Office of Federal and State Materials and Environmental Management Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. For general or technical information associated with the licensing process as it relates to the INIS application, please contact Matthew Bartlett, telephone: 301–492–3119; email: *Matthew.Bartlett@nrc.gov;* Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

Discussion

IIFP submitted a license application and Environmental Report (ER) in support of its proposed facility on December 30, 2009. The proposed site is located in Lea County, New Mexico, approximately 22.55 kilometers (km) (14 miles [mi]) west of the city of Hobbs.

The Final EIS is being issued as part of the NRC's process to decide whether to issue a license to IIFP, pursuant to Part 40 of Title 10 of the Code of Federal Regulations (10 CFR), to construct and operate the proposed depleted uranium deconversion facility. Specifically, IIFP proposes to deconvert depleted uranium hexafluoride (DUF_6) into oxide compounds for long-term disposal. In the Final EIS, the NRC staff assessed the potential environmental impacts from construction, operation, and decommissioning of the proposed INIS project.

The Final EIS was prepared in compliance with the *National Environmental Policy Act of 1969,* as amended (NEPA), and the NRC's regulations for implementing NEPA in 10 CFR Part 51. The NRC staff assessed the impacts of the proposed action on land use, historic and cultural resources, visual resources, climatology, meteorology, and air quality, geology, minerals, and soil, water resources, ecological resources, socioeconomics and environmental justice, traffic and transportation, noise, public and occupational health, and waste management. Additionally, the NRC staff analyzed and compared the benefits and costs of the proposed action. In preparing this Final EIS, the NRC staff also reviewed, considered, evaluated, and addressed the public comments received on the Draft EIS.

In addition to the proposed action, the NRC staff considered a reasonable range of alternatives, including the no-action alternative. Under the no-action alternative, the NRC would deny IIFP's request to construct and operate a depleted uranium deconversion facility in Hobbs, New Mexico. The no-action alternative serves as a baseline for comparison of the potential environmental impacts of the proposed action. Other alternatives the NRC staff considered but eliminated from further analysis include: (1) Alternative sites; (2) alternative technologies; (3) shipment of the U.S. generated DUF_6 to overseas facilities; (4) indefinite storage at the enrichment facilities; and (5) construction and operation of deconversion facilities at the four U.S.-based uranium enrichment companies. These alternatives were eliminated from further analysis due to economic, environmental, or other reasons.

After weighing the impacts of the proposed action and comparing alternatives, the NRC staff, in accordance with 10 CFR 51.91(d), sets forth its recommendation regarding the proposed action. The NRC staff recommends that, unless safety issues mandate otherwise, the proposed license be issued to IIFP. In this regard, the NRC staff has concluded that the environmental impacts of the proposed action are generally small, and taken in combination with the proposed IIFP environmental monitoring program and proposed mitigation measures discussed in the Final EIS would eliminate or substantially lessen any adverse environmental impacts associated with the proposed action.

Document Availability

Documents related to this notice are available on the NRC's Licensing Web Site at: *http://www.nrc.gov/materials/fuel-cycle-fac/inisfacility.html.* The Final EIS for the proposed INIS project may also be accessed at: *http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/* by selecting ''NUREG–2113.''

The IIFP's license application, Environmental Report, and the NRC's Final EIS are available in ADAMS under Accession Numbers ML100630503, ML100120758, and ML12220A380.

A copy of the Final EIS will be available at the Hobbs Public Library, 509 North Shipp, Hobbs, New Mexico 88240.

Dated at Rockville, Maryland, this 22nd day of August, 2012.

For the Nuclear Regulatory Commission.

Gregory Suber,

Acting Deputy Director, Environmental Protection and Performance Assessment Directorate, Division of Waste Management and Environmental Protection, Office of Federal and State Materials and Environmental Management Programs.

BILLING CODE 7590–01–P

OFFICE OF PERSONNEL MANAGEMENT

Submission for Review; Information Collection: Freedom of Information/ Privacy Act Record Request Form (INV 100)

AGENCY: U.S. Office of Personnel Management.

ACTION: 60-Day Notice and request for comments.

SUMMARY: Federal Investigative Services (FIS), U.S. Office of Personnel Management (OPM) offers the general public and other federal agencies the opportunity to comment on an information collection request (ICR), Office of Management and Budget (OMB) Control No. 3206–NEW, Freedom of Information/Privacy Act Record Request Form (INV 100). As required by the Paperwork Reduction Act of 1995, (Pub. L. 104–13, 44 U.S.C. chapter 35) as amended by the Clinger-Cohen Act (Pub. L. 104–106), OPM is soliciting comments for this collection. The Office of Management and Budget

is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

DATES: Comments are encouraged and will be accepted until October 30, 2012. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Federal Investigative Services, U.S. Office of Personnel Management, 1900 E Street NW., Washington, DC 20415, Attention: Laura Eury or sent via electronic mail to *FISFormsComments@opm.gov.*

FOR FURTHER INFORMATION CONTACT: A copy of this ICR, with applicable supporting documentation, may be obtained by contacting the Federal Investigative Services, U.S. Office of Personnel Management, 1900 E Street NW., Washington, DC 20415, Attention: Laura Eury or sent via electronic mail to *FISFormsComments@opm.gov.*

SUPPLEMENTARY INFORMATION: OPM's Federal Investigative Services (FIS), Freedom of Information and Privacy Act (FOI/PA) office proposes use of this optional form (INV 100) to standardize collection of data elements specific to FOIA and Privacy Act record requests submitted to FIS. Current FOIA and Privacy Act record requests are submitted to FIS–FOI/PA in a format chosen by the requester, yet consistent with the published regulations at 5 CFR 294 and 297, respectively. Often the requests are missing data elements which require contact with the requester via mail, thereby adding time to the access process. Standardization of the access process will increase the volume of perfected requests received and strike an appropriate balance between the burden to the public in submitting a request and FIS–FOI/PA being able to verify the identity of the requester, thereby ensuring Privacy Act Protected records are not inappropriately released to third parties. It is estimated that 16,626 individuals will respond annually. The INV 100 takes approximately 5 minutes to complete. The estimated annual burden is 1,386 hours.

U.S. Office of Personnel Management.

John Berry,

Director.

[FR Doc. 2012–21581 Filed 8–30–12; 8:45 am]

BILLING CODE 6325–53–P

POSTAL REGULATORY COMMISSION

Notice of Sunshine Act Meetings

TIME AND DATE: Wednesday, September 12, 2012, at 11 a.m.

PLACE: Commission Hearing Room, 901 New York Avenue NW., Suite 200, Washington, DC 20268–0001.

STATUS: Part of this meeting will be open to the public. The rest of the meeting will be closed to the public. The open session will be audiocast. The audiocast may be accessed via the Commission's Web site at *http://www.prc.gov.* A period for public comment will be offered following consideration of the last numbered item in the open session.

MATTERS TO BE CONSIDERED: The agenda for the Commission's September 12, 2012 meeting includes the items identified below.

PORTIONS OPEN TO THE PUBLIC:

1. Report on legislative activities.
2. Report on communications with the public.
3. Report on status of Commission dockets.
4. Report from the Office of Accountability and Compliance.
5. Report on international activities.
6. Report from the Office of the Secretary and Administration.

Chairman's public comment period.

PORTION CLOSED TO THE PUBLIC:

7. Discussion of pending litigation.

CONTACT PERSON FOR MORE INFORMATION: Stephen L. Sharfman, General Counsel, Postal Regulatory Commission, 901 New York Avenue NW., Suite 200, Washington, DC 20268–0001, at 202–789–6820 (for agenda-related inquiries) and Shoshana M. Grove, Secretary of the Commission, at 202–789–6800 or *shoshana.grove@prc.gov* (for inquiries related to meeting location, access for handicapped or disabled persons, the audiocast, or similar matters).

Dated: August 29, 2012.

By the Commission.

Shoshana M. Grove,

Secretary.

BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Investor Education and Advocacy, Washington, DC 20549–0213.

Extension:

Form T–6; OMB Control No. 3235–0391; SEC File No. 270–344.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (''Commission'') is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management Budget for extension and approval.

Form T–6 (17 CFR 269.9) is an application for eligibility and qualification for a foreign person or corporation under the Trust Indenture Act of 1939 (15 U.S.C. 77aaa *et seq.*). Form T–6 provides the basis for determining whether a foreign person or corporation is eligible to serve as a trustee for qualified indenture. Form T–6 takes approximately 17 burden hours per response and is filed by approximately 15 respondents annually. We estimate that 25% of the 17 hours (4.25 hours) is prepared by the filer for an annual reporting burden of 64 hours (4.25 hours per response × 15 responses).

Written comments are invited on: (a) Whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden imposed by the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collections of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to Thomas Bayer, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 6432 General Green Way, Alexandria, Virginia 22312, or send an email to: *PRA_Mailbox@sec.gov.*

Dated: August 27, 2012.

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–67732; File No. SR–NYSEArca–2012–90]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the First Trust CBOE S&P 500 VIX Tail Hedge Fund (Formerly, the First Trust CBOE VIX Tail Hedge Index Fund)

August 27, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on August 13, 2012, NYSE Arca, Inc. (''Exchange'' or ''NYSE Arca'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been substantially prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to correct the reference to the Index Provider applicable to the First Trust CBOE S&P 500 VIX Tail Hedge Fund (formerly, the First Trust CBOE VIX Tail Hedge Index Fund) (''Fund''), and to reflect changes to the name of the index underlying the Fund and to the name of the Fund, which the Commission has approved for listing and trading on the Exchange under NYSE Arca Equities Rule 5.2(j)(3). The text of the proposed rule change is available on the Exchange's Web site at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Commission has approved listing and trading on the Exchange of shares (''Shares'') of the Fund [3] under NYSE Arca Equities Rule 5.2(j)(3), the Exchange's listing standards for Investment Company Units (''Units'').[4]

The Shares will be offered by First Trust Exchange-Traded Fund (''Trust''), which is organized as a Massachusetts business trust and is registered with the Commission as an open-end management investment company.[5] The investment adviser to the Fund will be First Trust Advisors L.P. (''Adviser'' or ''First Trust''). First Trust Portfolios L.P. (''Distributor'') is the principal underwriter and distributor of the Fund's Shares. The Bank of New York Mellon Corporation (''BNY'') will serve as administrator, custodian, and transfer agent for the Fund.

According to the Prior Release, the Fund will seek investment results that correspond generally to the price and yield, before the Fund's fees and expenses, of an equity index called the CBOE S&P VIX Tail Hedge Index (''Index''). The Index is designed to provide a benchmark for investors interested in hedging tail risk in an S&P 500 portfolio.

In the Prior Notice, the Exchange represented that the Index is rules-based and is owned and was developed by Standard & Poor's Financial Services LLC (''S&P'') and that S&P is the Index Provider.[6] The Exchange further represented that the Index Provider will calculate and maintain the Index.

The Exchange seeks to correct a representation made regarding the Index Provider reflected in the Prior Release, as described below. The Exchange is revising this representation to state that, pursuant to an arrangement with the Chicago Board Options Exchange, Inc. (''CBOE''), S&P has certain rights to license the Index to third parties. S&P has licensed the Index to First Trust for use by First Trust and the Fund. CBOE compiles, maintains, and owns the Index, and CBOE is the Index Provider with respect to the Fund. CBOE is not a broker-dealer or affiliated with a broker-dealer, and has implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index.[7]

In the Prior Release, the Exchange represented that the name of the Index underlying the Fund is the CBOE S&P VIX Tail Hedge Index. The Exchange is changing this representation to state that the name of the Index underlying the Fund is the CBOE VIX Tail Hedge Index.[8]

In addition, in the Prior Release, the Exchange represented that the name of the Fund is the First Trust CBOE VIX Tail Hedge Index Fund. The Exchange is changing this representation to state that the name of the Fund has been

[3] *See* Securities Exchange Act Release No. 67485 (July 23, 2012), 77 FR 44291 (July 27, 2012) (SR–NYSEArca–2012–50) (''Prior Order''). *See also* Securities Exchange Act Release No. 67107 (June 4, 2012), 77 FR 34102 (June 8, 2012) (SR–NYSEArca–2012–50) (''Prior Notice,'' and together with the Prior Order, the ''Prior Release'').

[4] An Investment Company Unit is a security that represents an interest in a registered investment company that holds securities comprising, or otherwise based on or representing an interest in, an index or portfolio of securities (or holds securities in another registered investment company that holds securities comprising, or otherwise based on or representing an interest in, an index or portfolio of securities). *See* NYSE Arca Equities Rule 5.2(j)(3)(A).

[5] The Trust is registered under the Investment Company Act of 1940 (15 U.S.C. 80a–1) (''1940 Act''). On July 18, 2012, the Trust filed with the Commission an amendment to its registration statement on Form N–1A under the Securities Act of 1933 (15 U.S.C. 77a), and under the 1940 Act relating to the Fund (File Nos. 333–125751 and 811–21774) (''Registration Statement''). The description of the operation of the Trust and the Fund herein is based, in part, on the Registration Statement. In addition, the Commission has issued an order granting certain exemptive relief to the Trust under the 1940 Act. *See* Investment Company Act Release No. 27068 (September 20, 2005) (File No. 812–13000) (''Exemptive Order'').

[6] S&P is not a broker-dealer or affiliated with a broker-dealer, and has implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index.

[7] The change to the representation regarding the Index Provider described herein will be effective upon filing with the Commission of another amendment to the Trust's Registration Statement. *See* note 5, *supra.*

[8] The change to the name of the Index underlying the Fund was reflected in the July 18, 2012 amendment to the Registration Statement. *See* note 5, *supra.*

changed to First Trust CBOE S&P 500 VIX Tail Hedge Fund.[9]

The Adviser represents that there is no change to the Fund's investment objective. The Fund will comply with all requirements under NYSE Arca Equities Rule 5.2(j)(3).[10]

Except for the changes noted above, all other facts presented and representations made in the Prior Release remain unchanged.

All terms referenced but not defined herein are defined in the Prior Release.

2. Statutory Basis

The basis under the Act for this proposed rule change is the requirement under Section 6(b)(5)[11] that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to, and perfect the mechanism of a free and open market and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change is designed to prevent fraudulent and manipulative acts and practices in that the proposed rule change corrects the representation made in the Prior Release to state that CBOE, and not S&P, compiles, maintains, and owns the Index, and that CBOE is the Index Provider with respect to the Fund. Both S&P and CBOE are not broker-dealers and are not affiliated with a broker-dealer and have implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index. The Fund will comply with all requirements under NYSE Arca Equities Rule 5.2(j)(3), and Commentary .01(a)(A) thereto, except that the Index may include up to 1% of the Index weight in VIX call options, which are not NMS Stocks as defined in Rule 600 of Regulation NMS.

The proposed rule change is designed to promote just and equitable principles of trade and to protect investors and the public interest in that the Adviser represents that there is no change to the Fund's investment objective. Both S&P and CBOE are unaffiliated with a broker-dealer and have implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index. The functions of the Index Provider are those described in the Prior Release, and this proposed rule change corrects representations made in the Prior Release by stating that CBOE, and not S&P, is the Index Provider and compiles, maintains, and owns the Index. In addition, the Exchange seeks to reflect changes to the name of the Index underlying the Fund and to the name of the Fund, as described above.

The proposed rule change is designed to perfect the mechanism of a free and open market and, in general, to protect investors and the public interest in that, except for the changes noted above, all other representations made in the Prior Release remain unchanged. The Adviser represents that there is no change to the Fund's investment objective. In addition, with the exception noted above,[12] the Fund will comply with all requirements under NYSE Arca Equities Rule 5.2(j)(3).

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act[13] and Rule 19b–4(f)(6) thereunder.[14] The Commission notes that the proposed rule change does not significantly affect the protection of investors or the public interest and does not impose any significant burden on competition. NYSE Arca represents that there is no change to the Fund's investment objective and seeks to correct a representation made regarding the Index Provider reflected in the Prior Release to state that, pursuant to an arrangement with the CBOE, S&P has certain rights to license the Index to third parties. S&P has licensed the Index to First Trust for use by First Trust and the Fund. CBOE is the Index Provider and compiles, maintains, and owns the Index. CBOE is not a broker-dealer or affiliated with a broker-dealer and has implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index. In addition, the Exchange seeks to reflect changes to the name of the Index underlying the Fund and the name of the Fund, as described above.

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[15] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6) permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay, noting that the Commission has previously approved listing and trading of the Fund on the Exchange, the Shares have not yet commenced trading, the proposed changes in this filing will not impact the operation of the Fund or the Index as described in the Prior Release, and the Adviser is prepared to commence Exchange listing and trading prior to the end of the 30-day operative-delay period. The Exchange proposes to correct the representation made in the Prior Release to state that CBOE, and not S&P, compiles, maintains, and owns the Index, and that CBOE is the Index Provider. Both S&P and CBOE are not broker-dealers and are not affiliated with a broker-dealer and have implemented procedures designed to prevent the use and dissemination of

[9] The change to the name of the Fund was reflected in the July 18, 2012 amendment to the Registration Statement. *See* note 5, *supra.*

[10] As noted in the Prior Release, the Index for the Fund does not meet all of the ''generic'' listing requirements of Commentary .01(a)(A) to NYSE Arca Equities Rule 5.2(j)(3) applicable to the listing of Investment Company Units based upon an index of US Component Stocks, as defined in NYSE Arca Equities Rule 5.2(j)(3). Specifically, Commentary .01(a)(A) to NYSE Arca Equities Rule 5.2(j)(3) sets forth the requirements to be met by components of an index or portfolio of US Component Stocks. As described in the Prior Release, the Index consists of an S&P 500 Index stock portfolio and may consist of a position in specified VIX Index (''VIX'') call options. The Index meets all requirements of NYSE Arca Equities Rule 5.2(j)(3) and Commentary .01(a)(A) thereto except that the Index may include up to 1% of the Index weight in VIX call options, which are not NMS Stocks as defined in Rule 600 of Regulation NMS. *See* notes 3 and 5, *supra,* and accompanying text.

[11] 15 U.S.C. 78f(b)(5).

[12] *See* note 10, *supra.*

[13] 15 U.S.C. 78s(b)(3)(A).

[14] 17 CFR 240.19b–4(f)(6). As required under Rule 19b–4(f)(6)(iii), the Exchange provided the Commission with written notice of its intent to file the proposed rule change along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

[15] 17 CFR 240.19b–4(f)(6).

material, non-public information regarding the Index. In addition, the Exchange is reflecting changes to the name of the Index underlying the Fund and to the name of the Fund, as described above. The changes to the representation regarding the Index Provider described herein will be effective upon filing with the Commission of another amendment to the Trust's Registration Statement. The changes to the name of the Index underlying the Fund and the name of the Fund were reflected in a July 18, 2012 amendment to the Registration Statement.[16] The Fund will comply with all requirements under NYSE Arca Equities Rule 5.2(j)(3).[17] Except for the changes noted above, all other representations made in the Prior Release remain unchanged. For the foregoing reasons, the Commission believes that waiving the 30-day operative delay would be consistent with the protection of investors and the public interest.[18] Therefore, the Commission designates the proposal operative upon filing.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File Number SR–NYSEArca–2012–90 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2012–90. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2012–90 and should be submitted on or before September 21, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[19]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–67733; File No. SR–OCC–2012–11]

Self-Regulatory Organizations; Options Clearing Corporation; Order Approving Proposed Rule Change Relating to the Auction Process Under Options Clearing Corporation Rule 1104

August 27, 2012.

I. Introduction

On July 3, 2012, the Options Clearing Corporation (''OCC'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change SR–OCC–2012–11 pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder.[2] The proposed rule change was published for comment in the **Federal Register** on July 20, 2012.[3] The Commission received no comment letters. This order approves the proposed rule change.

II. Description

In a recent rule change, OCC proposed and the Commission approved provisions to OCC Rule 1104 and Rule 1106 to specifically provide that, in addition to all other permitted means of liquidating positions and collateral in the accounts of a suspended Clearing Member, OCC may, at its discretion, liquidate such positions and collateral through a private auction process.[4] The purpose of the current rule change is to add an interpretation .02 to Rule 1104 to provide a further general description of such a private auction process by which OCC may liquidate all or any part of a suspended Clearing Member's accounts. The proposed interpretation sets forth the basic parameters of such an auction, including the process for creating a standing pool of pre-qualified potential bidders, criteria for fixing the number of bidders to participate in any particular auction and the method of selection of such bidders. Such criteria are intended to ensure an orderly and robust auction and to ensure that auction bidders are financially able to make payment for and assume the obligations of the collateral and positions they are acquiring and able to manage the risk thereof and/or trade out of the positions without creating unnecessary further risk to the Corporation. Interpretations cross-referencing interpretation .02 to Rule 1104 will be added following Rules 1106, 1107, 2210, and 2210A, and the latter three rules are proposed to be amended to provide that the auction process is applicable to assets and obligations arising from exercised and assigned options and matured, physically-settled futures and to assets and obligations arising from the close-out of stock loan and borrow positions as well.

[3] Securities Exchange Act Release No. 67443 (July 16, 2012), 77 FR 42784 (July 20, 2012).

[4] *See* Exchange Act Release No. 65654 (October 28, 2011), 76 FR 68236 (November 3, 2011) (SR–OCC–2011–08) (Order Approving Proposed Rule Change, as Modified by Amendment No. 1, to Provide Specific Authority to Use an Auction Process as One of the Means to Liquidate a Defaulting Clearing Member's Accounts).

Each private auction will be a ''sealed bid'' auction in which pre-qualified bidders selected by OCC will submit confidential bids such that no bidder will know the bid information of any of the other bidders. The pool of prequalified potential bidders in any auction would consist of all Clearing Members who are interested in participation and willing to execute the required documentation. Participation in the pre-qualified bidder pool by certain non-Clearing Members would also be solicited. Should the Corporation determine to hold a private auction, the Corporation will review the pool of pre-qualified auction bidders and would seek to invite a fixed number of bidders for the auction based on objective criteria that the Corporation believes would optimize the effectiveness of the auction process. OCC believes that fixing the size of the desired bidder group at a number that is either too large or too small could have an adverse impact on the effectiveness and competitiveness of the auction process. A group that is too small would not provide adequate competition among bidders, while setting the target size for the group of bidders at too large a number would discourage participation because of fear that the composition of the portfolios to be bid on would be leaked beyond the bidder group, allowing non-bidders to trade ahead of the auction to the disadvantage of bidders in the auction. Attempting to organize too large a group of bidders would also cause potentially costly delay in the auction process. OCC would most likely use its secure ENCORE system or telephone contact to invite selected pre-qualified bidders to submit bids in the private auction. No invited bidder would be obligated to bid in the private auction.

At the conclusion of a private auction, OCC will, in its discretion, select the best bid submitted for the auctioned portfolio based on the totality of the circumstances.[5] For example, where an auction portfolio has a negative net asset value, negative bids may be submitted which indicate how much OCC would be required to pay a bidder to assume the auction portfolio, and the lowest rather than the highest bid may therefore be the best bid. Other factors such as any condition attached to a bid may influence the choice of best bid.

Finally, in order to increase legal certainty under potentially applicable provisions of the Uniform Commercial Code, the proposed interpretations would require Clearing Members to acknowledge that the private auction process is a commercially reasonable method of liquidating a suspended Clearing Member's accounts and that notice of a private auction to a suspended Clearing Member is not required under the auction process.

III. Discussion

Section 17A(b)(3)(F) of the Act requires that, among other things, the rules of a clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions, and, to the extent applicable, derivative agreements, contracts, and transactions.[6] The rule change sets forth the procedures that OCC will use to liquidate the open positions and margin of a defaulting member in order to meet its settlement obligations to non-defaulting members promptly and in a manner that is least disruptive to the securities markets. Section 17A(b)(3)(F) of the Act also requires that the rules of a clearing agency are, in general, designed to protect investors and the public interest and are not designed to permit unfair discrimination among participants in the use of the clearing agency.[7] The rule change sets forth the general criteria used by OCC to select bidders, invite bidders to participate in the auction, and select the best bid.

IV. Conclusion

On the basis of the foregoing, the Commission finds that the proposal is consistent with the requirements of the Act and in particular with the requirements of Section 17A of the Act[8] and the rules and regulations thereunder.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[9] that the proposed rule change (File No. SR–OCC–2012–11) be, and hereby is, approved.[10]

For the Commission by the Division of Trading and Markets, pursuant to delegated authority.[11]

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–67734; File No. SR–BYX–2012–019]

Self-Regulatory Organizations; BATS Y-Exchange, Inc.; Notice of Filing of Proposed Rule Change To Adopt a Retail Price Improvement Program

August 27, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on August 14, 2012, BATS Y-Exchange, Inc. (the ''Exchange'' or ''BYX'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange's proposed rule change would adopt new Rule 11.24 to establish a Retail Price Improvement (''RPI'') Program (the ''Program'' or ''proposed rule change'') to attract additional retail order flow to the Exchange while also providing the potential for price improvement to such order flow.

The text of the proposed rule change is available at the Exchange's Web site at *http://www.batstrading.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room. The proposed rule text can be found in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Background

The Exchange is proposing a one-year pilot program that would add new Rule 11.24 to establish an RPI Program to attract additional retail order flow to the Exchange while also providing the potential for price improvement to such order flow. Under the proposed rule change, the Exchange would create a new class of market participant called a Retail Member Organization (''RMO''), which would be eligible to submit certain retail order flow (''Retail Orders'') to the Exchange. As proposed, all Exchange Users [3] will be permitted to provide potential price improvement for Retail Orders in the form of non-displayed interest that is better than the national best bid that is a Protected Quotation (''Protected NBB'') or the national best offer that is a Protected Quotation (''Protected NBO,'' and together with the Protected NBB, the ''Protected NBBO'').[4]

Definitions

The Exchange proposes to adopt the following definitions under proposed Rule 11.24(a). First, the term ''Retail Member Organization'' would be defined as a Member [5] (or a division thereof) that has been approved by the Exchange to submit Retail Orders.

Second, the term ''Retail Order'' would be defined as an agency order that originates from a natural person and is submitted to the Exchange by an RMO, provided that no change is made to the terms of the order with respect to price or side of market and the order does not originate from a trading algorithm or any other computerized methodology.

Finally, the term ''Retail Price Improvement Order'' or ''RPI Order'' would be defined as non-displayed interest on the Exchange that is better than the Protected NBB or Protected NBO by at least $0.001 and that is identified as an RPI Order in a manner prescribed by the Exchange (''RPI interest'').[6] The price of an RPI Order would be determined by a User's entry of the following into the Exchange: (1) RPI buy or sell interest; (2) an offset, if any; and (3) a ceiling or floor price. The Exchange expects that RPI sell or buy interest typically would be entered to track the Protected NBBO. The offset would be a predetermined amount by which the User is willing to improve the Protected NBBO, subject to a ceiling or floor price. The ceiling or floor price would be the amount above or below which the User does not wish to trade. RPI Orders in their entirety (the buy or sell interest, the offset, and the ceiling or floor) will remain non-displayed. The Exchange will also allow Users to enter RPI Orders which establish the exact limit price, which is similar to a non-displayed limit order currently accepted by the Exchange today except the Exchange will accept sub-penny limit prices on RPI Orders with three numbers after the decimal. The Exchange's System [7] will monitor whether RPI buy or sell interest, adjusted by any offset and subject to the ceiling or floor price, is eligible to interact with incoming Retail Orders.

Users and RMOs may enter odd lots, round lots or mixed lots as RPI Orders and as Retail Orders respectively. As discussed below, RPI Orders will be ranked and allocated according to price and time of entry into the System consistent with Exchange Rule 11.12 and therefore without regard to whether the size entered is an odd lot, round lot or mixed lot amount. Similarly, Retail Orders will interact with RPI Orders according to the Priority and Allocation rules of the Program and without regard to whether they are odd lots, round lots or mixed lots. Finally, Retail Orders may be designated as Type 1 or Type 2 without regard to the size of the order. In accordance with rules of the consolidated tape plans, executions less than a round lot will not print to the consolidated tape or be considered the last sale.

RPI Orders would interact with Retail Orders as follows. Assume a User enters RPI sell interest with an offset of $0.001 and a floor of $10.10 while the Protected NBO is $10.11. The RPI Order could interact with an incoming buy Retail Order at $10.109. If, however, the Protected NBO was $10.10, the RPI Order could not interact with the Retail Order because the price required to deliver the minimum $0.001 price improvement ($10.099) would violate the User's floor of $10.10. If a User otherwise enters an offset greater than the minimum required price improvement and the offset would produce a price that would violate the User's floor, the offset would be applied only to the extent that it respects the User's floor. By way of illustration, assume RPI buy interest is entered with an offset of $0.005 and a ceiling of $10.112 while the Protected NBB is at $10.11. The RPI Order could interact with an incoming sell Retail Order at $10.112, because it would produce the required price improvement without violating the User's ceiling, but it could not interact above the $10.112 ceiling. Finally, if a User enters an RPI Order without an offset (i.e., an explicitly priced limit order), the RPI Order will interact with Retail Orders at the level of the User's limit price as long as the minimum required price improvement is produced. Accordingly, if RPI sell interest is entered with a limit price of $10.098 and no offset while the Protected NBO is $10.11, the RPI Order could interact with the Retail Order at $10.098, producing $0.012 of price improvement. The System will not cancel RPI interest when it is not eligible to interact with incoming Retail Orders; such RPI interest will remain in the System and may become eligible again to interact with Retail Orders depending on the Protected NBB or Protected NBO.

[3] A ''User'' is defined in BYX Rule 1.5(cc) as any member or sponsored participant of the Exchange who is authorized to obtain access to the System.

[4] The term Protected Quotation is defined in BYX Rule 1.5(t) and has the same meaning as is set forth in Regulation NMS Rule 600(b)(58). The terms Protected NBB and Protected NBO are defined in BYX Rule 1.5(s). The Protected NBB is the best-priced protected bid and the Protected NBO is the best-priced protected offer. Generally, the Protected NBB and Protected NBO and the national best bid (''NBB'') and national best offer (''NBO,'' together with the NBB, the ''NBBO'') will be the same. However, a market center is not required to route to the NBB or NBO if that market center is subject to an exception under Regulation NMS Rule 611(b)(1) or if such NBB or NBO is otherwise not available for an automatic execution. In such case, the Protected NBB or Protected NBO would be the best-priced protected bid or offer to which a market center must route interest pursuant to Regulation NMS Rule 611.

[5] A ''Member'' is defined in BYX Rule 1.5(n) as any registered broker or dealer that has been admitted to membership in the Exchange.

[6] Exchange systems would prevent Retail Orders from interacting with RPI Orders if the RPI Order is not priced at least $0.001 better than the Protected NBBO. The Exchange notes, however, that price improvement of $0.001 would be a minimum requirement and Users could enter RPI Orders that better the Protected NBBO by more than $0.001. Exchange systems will accept RPI Orders without a minimum price improvement value; however, such interest will execute at its floor or ceiling price only if such floor or ceiling price is better than the Protected NBBO by $0.001 or more. Concurrently with this filing, the Exchange has submitted a request for an exemption under Regulation NMS Rule 612 that would permit it to accept and rank the non-displayed RPI Orders. As outlined in the request, the Exchange believes that the minimum price improvement available under the Program, which would amount to $0.50 on a 500 share order, would be meaningful to the small retail investor. *See* Letter from Eric J. Swanson, Senior Vice President, General Counsel, BATS Global Markets, Inc. to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission dated August 14, 2012 (''Sub-Penny Rule Exemption Request'').

[7] The ''System'' is defined in BYX Rule 1.5(aa) as ''the electronic communications and trading facility designated by the Board through which securities orders of Users are consolidated for ranking, execution and, when applicable, routing away.''

RMO Qualifications and Approval Process

Under proposed Rule 11.24(b), any Member could qualify as an RMO if it conducts a retail business or handles retail orders on behalf of another broker-dealer. Any Member that wishes to obtain RMO status would be required to submit: (1) An application form; (2) an attestation, in a form prescribed by the Exchange, that any order submitted by the Member as a Retail Order would meet the qualifications for such orders under proposed Rule 11.24; and (3) supporting documentation sufficient to demonstrate the retail nature and characteristics of the applicant's order flow.[8]

An RMO would be required to have written policies and procedures reasonably designed to assure that it will only designate orders as Retail Orders if all requirements of a Retail Order are met. Such written policies and procedures must require the Member to (i) exercise due diligence before entering a Retail Order to assure that entry as a Retail Order is in compliance with the requirements of this rule, and (ii) monitor whether orders entered as Retail Orders meet the applicable requirements. If the RMO represents Retail Orders from another broker-dealer customer, the RMO's supervisory procedures must be reasonably designed to assure that the orders it receives from such broker-dealer customer that it designates as Retail Orders meet the definition of a Retail Order. The RMO must (i) obtain an annual written representation, in a form acceptable to the Exchange, from each broker-dealer customer that sends it orders to be designated as Retail Orders that entry of such orders as Retail Orders will be in compliance with the requirements of this rule, and (ii) monitor whether its broker-dealer customer's Retail Order flow continues to meet the applicable requirements.[9]

If the Exchange disapproves the application, the Exchange would provide a written notice to the Member. The disapproved applicant could appeal the disapproval by the Exchange as provided in proposed Rule 11.24(d), and/or reapply for RMO status 90 days after the disapproval notice is issued by the Exchange. An RMO also could voluntarily withdraw from such status at any time by giving written notice to the Exchange.

Failure of RMO To Abide by Retail Order Requirements

Proposed Rule 11.24(c) addresses an RMO's failure to abide by Retail Order requirements. If an RMO designates orders submitted to the Exchange as Retail Orders and the Exchange determines, in its sole discretion, that those orders fail to meet any of the requirements of Retail Orders, the Exchange may disqualify a Member from its status as an RMO. When disqualification determinations are made, the Exchange would provide a written disqualification notice to the Member. A disqualified RMO could appeal the disqualification as provided in proposed Rule 11.24(d) and/or reapply for RMO status 90 days after the disqualification notice is issued by the Exchange. *http://www.bloomberglaw.com/s/legal/0d8c2a43fe620ae36f925f9dd67c2081/document/X9RVKVG5GVG0?search32=C9P6UQR5E9FN6PB1E9HMGNRKCLP6QF9849P6AT31D5M20R39E5QMIP39EHSI0S3IDTJN4OBD48KJMERJEHIMQRB5CHFN6PB1E9HMGFB6C5M76P8-fn_8*

Appeal of Disapproval or Disqualification

Proposed Rule 11.24(d) provides appeal rights to Members. If a Member disputes the Exchange's decision to disapprove it as an RMO under Rule 11.24(b) or disqualify it under Rule 11.24(c), such Member (''appellant'') may request, within five business days after notice of the decision is issued by the Exchange, that the Retail Price Improvement Program Panel (''RPI Panel'') review the decision to determine if it was correct.

The RPI Panel would consist of the Exchange's Chief Regulatory Officer (''CRO''), or a designee of the CRO, and two officers of the Exchange designated by the Chief Operating Officer (''COO''). The RPI Panel would review the facts and render a decision within the time frame prescribed by the Exchange. The RPI Panel could overturn or modify an action taken by the Exchange and all determinations by the RPI Panel would constitute final action by the Exchange on the matter at issue.

Retail Liquidity Identifier

Under proposed Rule 11.24(e), the Exchange proposes to disseminate an identifier when RPI interest priced at least $0.001 better than the Exchange's Protected Bid or Protected Offer for a particular security is available in the System (''Retail Liquidity Identifier''). The Retail Liquidity Identifier will be disseminated through consolidated data streams (i.e., pursuant to the Consolidated Tape Association Plan/Consolidated Quotation Plan, or CTA/CQ, for Tape A and Tape B securities, and the Nasdaq UTP Plan for Tape C securities) as well as through proprietary Exchange data feeds.[10] The Retail Liquidity Identifier will reflect the symbol and the side (buy or sell) of the RPI interest, but will not include the price or size of the RPI interest. In particular, CQ and UTP quoting outputs will include a field for codes related to the Retail Price Improvement Identifier. The codes will indicate RPI interest that is priced better than the Exchange's Protected Bid or Protected Offer by at least the minimum level of price improvement as required by the Program.

Retail Order Designations

Under proposed Rule 11.24(f), an RMO can designate how a Retail Order would interact with available contra-side interest as follows. As proposed, a Type 1-designated Retail Order would interact with available contra-side RPI Orders and other price improving liquidity but would not interact with other available contra-side interest in the System or route to other markets. The portion of a Type 1-designated Retail Order that does not execute against contra-side RPI Orders or other price improving liquidity would be immediately and automatically cancelled. A Type 2-designated Retail Order would interact first with available contra-side RPI Orders and other price improving liquidity and then any remaining portion of the Retail Order would be executed as an Immediate or Cancel (''IOC'') Order pursuant to Rule 11.9(b)(1). A Type 2-designated Retail Order can either be submitted as a

[8] For example, a prospective RMO could be required to provide sample marketing literature, Web site screenshots, other publicly disclosed materials describing the retail nature of their order flow, and such other documentation and information as the Exchange may require to obtain reasonable assurance that the applicant's order flow would meet the requirements of the Retail Order definition.

[9] The Exchange or another self-regulatory organization on behalf of the Exchange will review an RMO's compliance with these requirements through an exam-based review of the RMO's internal controls.

[10] The Exchange notes that the Retail Liquidity Identifier for Tape A and Tape B securities will be disseminated pursuant to the CTA/CQ Plan as soon as the Program, if approved, becomes operational. If the Program is approved and becomes operational in the near future, then the Retail Liquidity Identifier for Tape C securities will only be available through the Exchange's proprietary data feeds until approximately October 1, 2012, at which time the identifier will also be available through the consolidated public market data stream for Tape C securities. October 1, 2012 is the date that the processor for the Nasdaq UTP quotation stream anticipates offering the ability to disseminate the Retail Liquidity Identifier and analogous identifiers from other market centers that operate programs similar to the RPI Program.

BATS Only Order [11] or as an order eligible for routing pursuant to Rule 11.13(a)(2). Accordingly, a Type 2-designated Retail Order could interact with other interest in the System and, if designated as eligible for routing, would route to other markets in compliance with Regulation NMS.

Priority and Order Allocation

Under proposed Rule 11.24(g), the Exchange proposes that competing RPI Orders in the same security would be ranked and allocated according to price then time of entry into the System. The Exchange further proposes that executions will occur in price/time priority in accordance with Rule 11.12. Any remaining unexecuted RPI interest will remain available to interact with other incoming Retail Orders if such interest is at an eligible price. Any remaining unexecuted portion of the Retail Order will cancel or execute in accordance with proposed Rule 11.24(f). The following example illustrates this proposed method:

Protected NBBO for security ABC is $10.00–$10.05
User 1 enters an RPI Order to buy ABC at $10.015 for 500
User 2 then enters an RPI Order to buy ABC at $10.02 for 500
User 3 then enters an RPI Order to buy ABC at $10.035 for 500

An incoming Retail Order to sell ABC for 1,000 executes first against User 3's bid for 500 at $10.035, because it is the best priced bid, then against User 2's bid for 500 at $10.02, because it is the next best priced bid. User 1 is not filled because the entire size of the Retail Order to sell 1,000 is depleted. The Retail Order executes against RPI Orders in price/time priority.

However, assume the same facts above, except that User 2's RPI Order to buy ABC at $10.02 is for 100. The incoming Retail Order to sell 1,000 executes first against User 3's bid for 500 at $10.035, because it is the best priced bid, then against User 2's bid for 100 at $10.02, because it is the next best priced bid. User 1 then receives an execution for 400 of its bid for 500 at $10.015, at which point the entire size of the Retail Order to sell 1,000 is depleted.

As a final example, assume the same facts as above, except that User 3's order was not an RPI Order to buy ABC at $10.035, but rather, a non-displayed order to buy ABC at $10.03. The result would be similar to the result immediately above, in that the incoming Retail Order to sell 1,000 executes first against User 3's bid for 500 at $10.03, because it is the best priced bid, then against User 2's bid for 100 at $10.02, because it is the next best priced bid. User 1 then receives an execution for 400 of its bid for 500 at $10.015, at which point the entire size of the Retail Order to sell 1,000 is depleted.

Implementation

The Exchange proposes that all securities traded on the Exchange would be eligible for inclusion in the RPI Program.[12]

The Exchange proposes to limit the Program during the pilot period to trades occurring at prices equal to or greater than $1.00 per share. Toward that end, Exchange trade validation systems would prevent the interaction of RPI buy or sell interest (adjusted by any offset) and Retail Orders at a price below $1.00 per share.[13] For example, if there was RPI buy interest tracking the Protected NBB at $0.99 with an offset of $0.001 and a ceiling of $1.02, Exchange trade validation systems would prevent the execution of the RPI Order at $0.991 with a sell Retail Order with a limit of $0.99. However, if the Retail Order was Type 2 as defined [sic] the Program,[14] it would be able to interact at $0.99 with liquidity outside the Program in the Exchange's order book. In addition to facilitating an orderly [15] and operationally intuitive pilot, the Exchange believes that limiting the Program to trades equal to or greater than $1.00 per share during the pilot will enable it better to focus its efforts to monitor price competition and to assess any indications that data disseminated under the Program is potentially disadvantaging retail orders. As part of that review, the Exchange will produce data throughout the pilot, which will include statistics about participation, the frequency and level of price improvement provided by the Program, and any effects on the broader market structure.

Comparison to Existing Programs

Proposed BYX Rule 11.24 is based on NYSE Rule 107C, governing NYSE's ''Retail Liquidity Program,'' which was recently approved by the Commission and commenced operations on August 1, 2012.[16] Proposed Rule 11.24 is similar to NYSE Rule 107C with three key distinctions.[17] The first distinction is that NYSE Rule 107C includes a class of participant that is registered as a provider of liquidity and provides specific procedures and rules related to such participants and their role in the NYSE RLP. NYSE Rule 107C does permit all participants to submit RPI Orders to NYSE, but provides the specific class of registered retail liquidity providers with execution fees that are lower than fees charged to other participants in exchange for a requirement to maintain RPI Orders on NYSE at least 5% of the trading day.[18] The Exchange believes that equal treatment for all Exchange Users that enter RPI Orders will result in a higher level of competition and maximize price improvement to incoming Retail Orders. Accordingly, the Exchange has not proposed to adopt a special category of retail liquidity provider.

The second distinction between proposed BYX Rule 11.24 and NYSE Rule 107C is that the Exchange proposes to in all cases execute incoming Retail Orders against resting RPI Orders *and* other resting non-displayed liquidity to

[11] A BATS Only Order is defined in BYX Rule 11.9(c)(4) and includes orders that are not eligible for routing to other trading centers.

[12] The Exchange offers trading of all NMS stocks pursuant to unlisted trading privileges, consistent with Section 12(f) of the Act and Rule 12f–5 thereunder. Accordingly, the Exchange offers trading of securities listed on BATS Exchange, Inc., the New York Stock Exchange LLC, NYSE Arca, Inc., NYSE MKT LLC (formerly the American Stock Exchange), and The NASDAQ Stock Market LLC.

[13] As discussed above, the price of an RPI would be determined by a User's entry of buy or sell interest, an offset (if any) and a ceiling or floor price. The Exchange expects that RPI sell or buy interest typically would track the Protected NBBO.

[14] Type 2 Retail Orders are treated as IOC orders that execute against displayed and non-displayed liquidity in the Exchange's order book where there is no available liquidity in the Program. Type 2 Retail Orders can either be designated as eligible for routing or as BATS Only Orders, and thus non-routable, as described above.

[15] Given the proposed limitation, the pilot Program would have no impact on the minimum pricing increment for orders priced less than $1.00 and therefore no effect on the potential of markets executing those orders to lock or cross. In addition, the non-displayed nature of the liquidity in the Program simply has no potential to disrupt displayed, protected quotes. In any event, the Program would do nothing to change the obligation of exchanges to avoid and reconcile locked and crossed markets under NMS Rule 610(d).

[16] Securities Exchange Act Release No. 67347 (July 3, 2012), 77 FR 40673 (July 10, 2012) (SR–NYSE–2011–55; SR–NYSEAmex–2011–84) (the ''RLP Approval Order''). In conjunction with the approval of the NYSE Retail Liquidity Program, a nearly identical program was proposed and approved to operate on NYSE MKT LLC (formerly, the American Stock Exchange). For ease of reference, the comparisons made in this section only refer to NYSE Rule 107C, but apply equally to NYSE MKT Rule 107C.

[17] The Exchange has proposed to accept RPIs in a manner similar to the explicitly accepted method at NYSE and NYSE MKT, specifically, with an offset as well as a ceiling or a floor (i.e., the entry of an RPI bid with an offset of $0.015 and a ceiling of $10.04; when the NBBO is $10.02 by $10.04, an incoming sell order would execute against such RPI at $10.035). The Exchange notes that like NYSE and NYSE MKT, Users will be able to submit retail price improving orders with an explicit sub-penny floor or ceiling and no offset, effectively creating a static sub-penny limit order, and the Exchange has proposed rule text to make this ability clear.

[18] NYSE Rule 107C(f).

maximize the price improvement available to the incoming Retail Order. As proposed, the Exchange will maintain its strict price/time priority model and will provide all available price improvement to incoming Retail Orders, whether such price improvement is submitted pursuant to the Program or as an order type currently accepted by the Exchange, such as non-displayed orders. In contrast, pursuant to NYSE Rule 107C(k)(1), a Type 1-designated Retail Order, ''will interact only with available contra-side Retail Price Improvement Orders and will not interact with other available contra-side interest in Exchange systems.'' [19] Accordingly, other non-displayed orders offering price improvement at prices better than resting RPI interest do not have an opportunity to interact with incoming Retail Orders pursuant to the NYSE RLP. The Exchange is proposing in all cases to provide the maximum price improvement available to incoming Retail Orders. Accordingly, Retail Orders under the Exchange's Program will always interact with available contra-side RPI Orders and any other price improving contra-side interest, in price/time priority consistent with the Exchange's Rule 11.12. Such ''other'' price improving contra-side interest will of course remain available to all participants, as it is today, while RPI Orders will only be available to RMOs, as described above.

Finally, as proposed the Exchange will provide applicable price improvement to incoming Retail Orders at potentially multiple price levels. In contrast, pursuant to NYSE Rule 107C an incoming Retail Order to NYSE will execute at the single clearing price level at which the incoming order will be fully executed. To illustrate, assume the same facts set forth in the second example above, where User 2's RPI Order to buy ABC at $10.02 was for 100 shares. Pursuant to NYSE Rule 107C, an incoming Retail Order to sell 1,000 shares would execute first against User 3's bid for 500 shares, because it is the best priced bid, then against User 2's bid for 100 shares, because it is the next best priced bid, then against 400 of the 500 shares bid by User 1. However, rather than executing at each of these price levels for the number of shares available (i.e., 500 shares at $10.035, 100 shares at $10.02 and 400 shares at $10.015), as it would under proposed BYX Rule 11.24, the Retail Order submitted to NYSE pursuant to NYSE Rule 107C executes at the single clearing price that completes the order's execution, which is $10.015 to complete the entire order to sell 1,000 shares. The Exchange intends to provide all of the price improvement in these examples to the incoming Retail Order, and thus has proposed to execute orders under the Program consistent with its existing price/time market model.

Fee Structure of Program

The Exchange will submit a separate proposal to amend its fee schedule in connection with the proposed RPI Program. Under that proposal, the Exchange expects to charge Users a fee for executions of their RPI Orders against Retail Orders and in turn would provide a credit or free executions to RMOs for executions of their Retail Orders against RPI Orders. The fees and credits for liquidity providers and RMOs will be determined based on experience with the Program in the first several months.

As explained above, the Exchange proposes to execute incoming Retail Orders against all available contra-side interest that will provide price improvement to the Retail Order, including non-displayed orders other than RPI Orders. In the event non-displayed interest other than an RPI Order interacts with a Retail Order, the Exchange anticipates proposing to charge the User that entered such non-displayed interest the same fee as is imposed for an RPI Order execution. In such cases, the fee charged to the User that entered the non-displayed interest will likely be greater than the fee charged that same User for an execution against a non-Retail Order.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[20] In particular, the Exchange believes the proposed change furthers the objectives of Section 6(b)(5) of the Act,[21] in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanism of a free and open market and a national market system. The Exchange believes that the proposed rule change is consistent with these principles because it would increase competition among execution venues, encourage additional liquidity, and offer the potential for price improvement to retail investors. The Exchange notes that a significant percentage of the orders of individual investors are executed over-the-counter.[22] The Exchange believes that it is appropriate to create a financial incentive to bring more retail order flow to a public market. The Exchange also notes that the Commission recently approved a similar proposal by NYSE and NYSE MKT.[23] Accordingly, the proposal generally encourages competition between exchange venues. In this connection, the Exchange believes that the proposed distinctions between the Exchange's proposal and the approved programs for NYSE and NYSE MKT will both enhance competition amongst market participants and encourage competition amongst exchange venues.

The Exchange understands that Section 6(b)(5) of the Act [24] prohibits an exchange from establishing rules that treat market participants in an unfairly discriminatory manner. However, Section 6(b)(5) of the Act does not prohibit exchange members or other broker-dealers from discriminating, so long as their activities are otherwise consistent with the federal securities laws. Nor does Section 6(b)(5) of the Act require exchanges to preclude discrimination by broker-dealers. Broker-dealers commonly differentiate between customers based on the nature and profitability of their business.

While the Exchange believes that markets and price discovery optimally function through the interactions of diverse flow types, it also believes that growth in internalization has required differentiation of retail order flow from

[19] Moreover, although pursuant to NYSE Rules 107C(k)(2) and 107C(k)(3), a Type 2-designated Retail Order and a Type 3-designated Retail Order can interact with other non-RPI interest in the NYSE systems, such interaction only occurs *after* a Retail Order first executes against RPI Orders. As such, non-displayed orders in NYSE systems offering prices better than resting RPI Orders interact with Retail Orders only after all RPI interest is exhausted.

[20] 15 U.S.C. 78f(b).

[21] 15 U.S.C. 78f(b)(5).

[22] *See* Concept Release on Equity Market Structure, Securities Exchange Act Release No. 61358 (January 14, 2010), 75 FR 3594 (January 21, 2010) (noting that dark pools and internalizing broker-dealers executed approximately 25.4% of share volume in September 2009). *See also* Mary L. Schapiro, Strengthening Our Equity Market Structure (Speech at the Economic Club of New York, Sept. 7, 2010) (available on the Commission's Web site). In her speech, Chairman Schapiro noted that nearly 30 percent of volume in U.S.-listed equities was executed in venues that do not display their liquidity or make it generally available to the public and the percentage was increasing nearly every month.

[23] *See* RLP Approval Order, *supra* note 16.

[24] 15 U.S.C. 78f(b)(5).

other order flow types. The differentiation proposed herein by the Exchange is not designed to permit unfair discrimination, but instead to promote a competitive process around retail executions such that retail investors would receive better prices than they currently do through bilateral internalization arrangements. The Exchange believes that the transparency and competitiveness of operating a program such as the RPI Program on an exchange market would result in better prices for retail investors. The Exchange recognizes that sub-penny trading and pricing could potentially result in undesirable market behavior. The Exchange will monitor the Program in an effort to identify and address any such behavior.

The Exchange will separately propose fees applicable to the Program, including fees for non-displayed orders offering price improvement other than RPI Orders that interact with Retail Orders. The Exchange believes any such proposal to treat such non-displayed orders differently depending on the parties with whom they interact is consistent with Section 6(b)(5) of the Act,[25] which requires that the rules of an exchange are not designed to permit unfair discrimination. The Exchange believes that such a differential pricing structure for non-displayed orders is not unfairly discriminatory. As stated in the NYSE RLP Approval Order, the ''Commission has previously recognized that the markets generally distinguish between individual retail investors, whose orders are considered desirable by liquidity providers because such retail investors are presumed on average to be less informed about short-term price movements, and professional traders, whose orders are presumed on average to be more informed.'' [26] The Exchange's proposed differential pricing structure for non-displayed orders raises substantively identical policy considerations as the rules approved by the Commission in the NYSE RLP Approval Order, which account for the difference of assumed information and sophistication level between different trading participants by providing Retail Orders access to better execution prices as well as more favorable access fees.

Finally, the Exchange proposes that the Commission approve the proposed rule for a pilot period of twelve months from the date of implementation, which shall occur no later than 90 days after Commission approval of Rule 11.24. The Program shall expire on [Date will be determined upon adoption of Rule 11.24]. The Exchange believes that this pilot period is of sufficient length to permit both the Exchange and the Commission to assess the impact of the rule change described herein.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes any burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Changes and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

(A) By order approve or disapprove such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include File No. SR–BYX–2012–019 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–BYX–2012–019. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–BYX–2012–019 and should be submitted on or before September 21, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[27]

Kevin M. O'Neill,

Deputy Secretary.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #13241 and #13242]

Oklahoma Disaster #OK–00063

AGENCY: U.S. Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for the State of Oklahoma (FEMA–4078–DR), dated 08/22/2012.

Incident: Freedom Wildfire.

Incident Period: 08/03/2012 through 08/14/2012.

Effective Date: 08/22/2012.

Physical Loan Application Deadline Date: 10/22/2012.

Economic Injury (EIDL) Loan Application Deadline Date: 05/22/2013.

ADDRESSES: Submit completed loan applications to: U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 08/22/2012, applications for disaster loans may be filed at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties (Physical Damage and Economic Injury Loans): Creek.

Contiguous Counties (Economic Injury Loans Only): Oklahoma:

Lincoln; Okfuskee; Okmulgee; Pawnee; Payne; Tulsa.

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners With Credit Available Elsewhere	3.375
Homeowners Without Credit Available Elsewhere	1.688
Businesses With Credit Available Elsewhere	6.000
Businesses Without Credit Available Elsewhere	4.000
Non-Profit Organizations With Credit Available Elsewhere	3.125
Non-Profit Organizations Without Credit Available Elsewhere	3.000
For Economic Injury:	
Businesses & Small Agricultural Cooperatives Without Credit Available Elsewhere	4.000
Non-Profit Organizations Without Credit Available Elsewhere	3.000

The number assigned to this disaster for physical damage is 132415 and for economic injury is 132420.

(Catalog of Federal Domestic Assistance Numbers 59002 and 59008).

James E. Rivera,

Associate Administrator for Disaster Assistance.

DEPARTMENT OF STATE

[Public Notice 8004]

Culturally Significant Objects Imported for Exhibition Determinations: ''Swiss Treasures: From Biblical Papyrus and Parchment to Erasmus, Zwingli, Calvin, and Barth''

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, and Delegation of Authority No. 236–3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition ''Swiss Treasures: From Biblical Papyrus and Parchment to Erasmus, Zwingli, Calvin, and Barth,'' imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at The University of Chicago Library, Special Collections Research Center in Chicago, Illinois from on or about September 24, 2012, until on or about December 14, 2012, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the exhibit objects, contact Ona M. Hahs, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6473). The mailing address is U.S. Department of State, SA–5, L/PD, Fifth Floor (Suite 5H03), Washington, DC 20522–0505.

Dated: August 22, 2012.

BILLING CODE 4710–07–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Agency Information Collection Activities: Requests for Comments; Clearance of New Approval of Information Collection: Air Traffic Slots Management

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval for an existing information collection. The FAA collects information to allocate slots and maintain accurate record of slot transfers at slot-controlled airports. The information is provided by air carriers and other operators at slot controlled airports.

DATES: Written comments should be submitted by October 30, 2012.

FOR FURTHER INFORMATION CONTACT: Kathy DePaepe at (405) 954–9362, or by email at: *Kathy.A.DePaepe@faa.gov.*

SUPPLEMENTARY INFORMATION:

OMB Control Number: 2120–XXXX.

Title: Air Traffic Slots Management.

Form Numbers: There are no FAA forms associated with this collection.

Type of Review: New clearance of an existing information collection.

Background: The FAA has implemented several initiatives to address congestion and delay issues within the National Airspace System. The FAA has issued orders limiting operations at John F. Kennedy International Airport (JFK), Newark Liberty International Airport (EWR), and LaGuardia Airport (LGA). The FAA also has designated O'Hare International Airport (ORD) and San Francisco International Airport (SFO) as Level 2 airports under the International Air Transport Association (IATA) Worldwide Slot Guidelines (WSG). These orders resulted in part from increasing congestion and delays at the airports requiring the FAA to allocate arrival and departure slots at JFK, EWR, and LGA. The designations resulted in part from increasing congestion and delays at the airports requiring FAA to implement a voluntary process to manage operational growth at ORD and SFO.

The information is reported to the FAA by carriers holding a slot at JFK, EWR, or LGA; by carriers operating at ORD or SFO; or by operators conducting unscheduled operations at LGA. At JFK and EWR, carriers must notify the FAA of: (1) Requests for confirmation of transferred slots; (2) requests for seasonal allocation of historic and additional available slots; and (3) usage of slots on a seasonal basis. At LGA, carriers must notify the FAA of: (1) Requests for confirmation of transferred slots; (2) slots required to be returned or slots voluntarily returned; (3) requests to be included in a lottery for available slots; and (4) usage of slots on a bi-monthly basis. At LGA, unscheduled operators must request and obtain a reservation from the FAA prior to conducting an operation. At ORD and SFO, carriers must notify the FAA of their intended operating schedules on a seasonal basis. The FAA estimates that all information from carriers is submitted electronically from information stored in carrier scheduling databases, and that nearly all requests for unscheduled operation reservations are submitted electronically through either an internet or touch-tone system interface.

Respondents: Approximately 500 carriers and other operators.

Frequency: Information is collected as needed; some reporting on bimonthly or semiannual basis.

Estimated Average Burden per Response: 2 minutes per unscheduled operation reservation; 6 minutes per notice of slot transfer; 2 hours per schedule submission or slot request; and 2 hours per slot usage report.

Estimated Total Annual Burden: 7,031.5 hours.

ADDRESSES: Send comments to the FAA at the following address: Ms. Kathy DePaepe, Room 126B, Federal Aviation Administration, AES–200, 6500 S. MacArthur Blvd., Oklahoma City, OK 73169.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Issued in Washington, DC, on August 27, 2012.

Albert R. Spence,

FAA Assistant Information Collection Clearance Officer, IT Enterprises Business Services Division, AES–200.

[FR Doc. 2012–21538 Filed 8–30–12; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Agency Information Collection Activities: Requests for Comments; Clearance of Renewed Approval of Information Collection: Airports Grants Program

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The FAA collects information from airport sponsors and planning agencies in order to administer the Airports Grants Program. Data is

used to determine eligibility, ensure proper use of Federal Funds, and ensure project accomplishment.

DATES: Written comments should be submitted by October 30, 2012.

FOR FURTHER INFORMATION CONTACT: Kathy DePaepe at (405) 954–9362, or by email at: *Kathy.A.DePaepe@faa.gov.*

SUPPLEMENTARY INFORMATION:

OMB Control Number: 2120–0569.

Title: Airports Grants Program.

Form Numbers: FAA forms 5100–100, 5100–101, 5100–108, 5100–125, 5100–126, and 5370–1.

Type of Review: Renewal of an information collection.

Background: Codification of Certain U.S. Transportation Laws at 49 U.S.C. (Pub. L. 103–272), which is referred to as the ''Act,'' provides funding for airport planning and development projects at airports included in the National Plan of Integrated Airport Systems. The Act also authorizes funds for noise compatibility planning and to carry out noise compatibility programs. The information required by this program is necessary to protect the Federal interest in safety, efficiency, and utility of the Airport. Data is collected to meet report requirements of 49 CFR part 18 for financial management and performance monitoring. Information is collected in the application, and grant agreement amendments; financial management; and performance reporting.

Respondents: Approximately 1,950 sponsors and planning agencies for grant projects.

Frequency: Information is collected on occasion.

Estimated Average Burden per Response: 6.75 hours.

Estimated Total Annual Burden: 80,569 hours.

ADDRESSES: Send comments to the FAA at the following address: Ms. Kathy DePaepe, Room 126B, Federal Aviation Administration, AES–200, 6500 S. MacArthur Blvd., Oklahoma City, OK 73169.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Issued in Washington, DC, on August 24, 2012.

Kathy A. DePaepe,

FAA Information Collection Clearance Officer, IT Enterprises Business Services Division, AES–200.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

International Civil Aviation Organization's (ICAO) Dangerous Goods Panel; Notice of Public Meeting

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of public meeting.

SUMMARY: In preparation for the International Civil Aviation Organization's (ICAO) Dangerous Goods Panel's (DGP's) Fall Working Group to be held October 15–19, 2012, in Montreal, Canada, the FAA's Office of Hazardous Materials Safety and the Pipeline and Hazardous Materials Safety Administration's (PHMSA) Office of Hazardous Materials Safety announce a public meeting.

DATES: The public meeting will be held on October 10, 2012 from 9:00 a.m. until 12:30 p.m.

ADDRESSES: The public meeting will be held at FAA Headquarters (FOB 10A), Bessie Coleman Conference Center, 2nd Floor, 800 Independence Avenue SW., Washington, DC 20591.

Participants are requested to register by using the following email address: *9-AWA-ASH-ADG-HazMat@faa.gov.*

Please include your name, organization, email address, and whether you will be attending in person or participating via conference call.

Conference call connection information will be provided to those who register and indicate that they will participate via conference call.

FOR FURTHER INFORMATION CONTACT: Questions regarding the meeting should be directed to Ms. Janet McLaughlin, Deputy Director, Office of Hazardous Materials Safety, ADG–2, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone (202) 385–4900. Email: *9-AWA-ASH-ADG-HazMat@faa.gov.*

We are committed to providing equal access to this meeting for all participants. If you need alternative formats or other reasonable accommodations, please call (202) 385–4900 or email *9-AWA-ASH-ADG-HazMat@faa.gov* with your request by close of business on October 1st.

Purpose of the Public Meeting

Information and viewpoints provided by stakeholders are requested as the United States delegation prepares for the International Civil Aviation Organization's Dangerous Goods Panel's (ICAO DGP's) Working Group of the Whole 12. The agenda for the Working Group is as follows:

Agenda Item 1: Development of proposals, if necessary, for amendments to Annex 18—*The Safe Transport of Dangerous Goods by Air*

Agenda Item 2: Development of recommendations for amendments to the *Technical Instructions for the Safe Transport of Dangerous Goods by Air* (Doc 9284) for incorporation in the 2015–2016 Edition

Agenda Item 3: Development of recommendations for amendments to the *Supplement to the Technical Instructions for the Safe Transport of Dangerous Goods by Air* (Doc 9284SU) for incorporation in the 2015–2016 Edition

Agenda Item 4: Development of recommendations for amendments to the *Emergency Response Guidance for Aircraft Incidents involving Dangerous Goods* (Doc 9481) for incorporation in the 2015–2016 Edition

Agenda Item 5: Issues related to lithium batteries

Agenda Item 6: Resolution, where possible, of the non-recurrent work items identified by the Air Navigation Commission or the panel:

- 6.1: Competency-based training
- 6.2: Incident data collection
- 6.3: State of overflight involvement in the exemption process
- 6.4: Coordination with the Operations Panel with regard to Annex 6
- 6.5: Coordination with international organizations (e.g. UPU)

Agenda Item 7: Other business

Papers relevant to these agenda items can be viewed at the following Web page: *http://www.icao.int/safety/DangerousGoods/Pages/DGP.aspx.*

Public Meeting Procedures

A panel of representatives from the FAA and PHMSA will be present. The meetings are intended to be informal, non-adversarial, and to facilitate the public comment process. No individual will be subject to questioning by any other participant. Government representatives on the panel may ask questions to clarify statements. Unless otherwise stated, any statement made during the meetings by a panel member should not be construed as an official position of the US government.

The meeting will be open to all persons, subject to the capacity of the meeting room and phone lines available for those participating via conference call. Every effort will be made to accommodate all persons wishing to attend. The FAA and PHMSA will try to accommodate all speakers, subject to time constraints.

Issued in Washington, DC, on August 24, 2012.

Christopher Glasow,

Director, Office of Hazardous Materials.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Annual Materials Report on New Bridge Construction and Bridge Rehabilitation

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice.

SUMMARY: Section 1114 of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA–LU) (Pub. L. 109–59; 119 Stat. 1144) continued the highway bridge program to enable States to improve the condition of their highway bridges over waterways, other topographical barriers, other highways, and railroads. Section 1114(f) amended 23 United State Code (U.S.C.) 144 by adding subsection (r), requiring the Secretary of Transportation to publish in the **Federal Register** a report describing construction materials used in new Federal-aid bridge construction and bridge rehabilitation projects. As part of the SAFETEA–LU Technical Corrections Act of 2008 (Pub. L. 110–244), 23 U.S.C. 144 subsection (r) became subsection (q), but the reporting requirement remained the same.

ADDRESSES: The report is posted on the FHWA Web site at: *http://www.fhwa.dot.gov/bridge/brdgtabs.cfm.*

FOR FURTHER INFORMATION CONTACT: Ms. Ann Shemaka, Office of Bridge Technology, (202) 366–1575, or via email at *ann.shemaka@dot.gov* or Mr. Thomas Everett, Office of Bridge Technology, (202) 366–4675, or via email at *thomas.everett@dot.gov,* or for legal questions, Robert Black, (202) 366–1359, or via email at *robert.black@dot.gov,* Federal Highway Administration, 1200 New Jersey Ave. SE., Washington, DC 20590. Office hours are from 8:00 a.m. to 4:30 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: In conformance with 23 U.S.C. 144(q), FHWA has produced a report that summarizes the types of construction materials used in new bridge construction and bridge rehabilitation projects. Data on Federal-aid and non-Federal-aid highway bridges are included in the report for completeness. The December 2009 National Bridge Inventory (NBI) dataset was used to identify the material types for bridges that were new or replaced within the defined time period. The FHWA's Financial Management Information System and the 2011 NBI were used to identify the material types for bridges that were rehabilitated within the defined time period. Currently preventative maintenance projects are included in the rehabilitation totals.

The report, which is available at *http://www.fhwa.dot.gov/bridge/brdgtabs.cfm,* consists of the following tables:

- Construction Materials for New and Replaced Bridges, a summary report which includes Federal-aid highways and non-Federal-aid highways built in 2010 and 2009.
- Construction Materials for Rehabilitated Bridges, a summary report which includes Federal-aid and non-Federal-aid highways rehabilitated in 2010 and 2009.
- Construction Materials for Combined New, Replaced and Rehabilitated Bridges, a summary report which combines the first two tables cited above.
- Federal-aid Highways: Construction Materials for New and Replaced Bridges 2010, a detailed State-by-State report with counts and areas for Federal-aid bridges built or replaced in 2010.
- Federal-aid Highways: Construction Materials for New and Replaced Bridges 2009, a detailed State-by-State report with counts and areas for Federal-aid bridges built or replaced in 2009.
- Non-Federal-aid Highways: Construction Materials for New and Replaced Bridges 2010, a detailed State-by-State report with counts and areas for non-Federal-aid bridges built or replaced in 2010.
- Non-Federal-aid Highways: Construction Materials for New and Replaced Bridges 2009, a detailed State-by-State report with counts and areas for non-Federal-aid bridges built or replaced in 2009.
- Federal-aid Highways: Construction Materials for Rehabilitated Bridges 2010, a detailed State-by-State report with counts and areas for Federal-aid bridges rehabilitated in 2010.
- Federal-aid Highways: Construction Materials for Rehabilitated Bridges 2009, a detailed State-by-State report with counts and areas for Federal-aid bridges rehabilitated in 2009.
- Non-Federal-aid Highways: Construction Materials for Rehabilitated Bridges 2010, a detailed State-by-State report with counts and areas for non-Federal-aid bridges rehabilitated in 2010.
- Non-Federal-aid Highways: Construction Materials for Rehabilitated Bridges 2009, a detailed State-by-State report with counts and areas for non-Federal-aid bridges rehabilitated in 2009.
- Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2010, which combines the 2010 reports on new, replaced and rehabilitated Federal-aid bridges.
- Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2009, which combines the 2009 reports on new, replaced and rehabilitated Federal-aid bridges.
- Non-Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2010, which combines the 2010 reports on new, replaced and rehabilitated non-Federal-aid bridges.
- Non-Federal-aid Highways: Construction Materials for New Replaced and Rehabilitated Bridges 2009, which combines the 2009 reports on new, replaced and rehabilitated non-Federal-aid bridges.

The tables provide data for 2 years: 2009 and 2010. The 2009 data is considered complete for new, replaced and rehabilitated bridges, with a minimal likelihood of upward changes in the totals. The 2010 data is considered partially complete for new bridges and complete for rehabilitated bridges, because many new bridges built in 2010 will not appear in the NBI until they are placed into service the following year. Therefore, next year's report will include 2010's data on new bridge construction, because the data will be complete.

Each table displays simple counts of bridges and total bridge deck area. Total bridge deck area is measured in square meters, by multiplying the bridge length by the deck width out-to-out. Culverts under fill are included in the counts but not in the areas because a roadway width is not collected. The data is categorized by the following material types, which are identified in the NBI: steel, concrete, pre-stressed concrete, and other. The category ''other'' includes wood, timber, masonry, aluminum, wrought iron, cast iron, and

other. Material type is the predominate type for the main span(s).

Authority: 23 U.S.C. 144(q); Sec. 1114(f), Pub. L. 109–59, 119 Stat. 1144.

Issued on: August 24, 2012.

Victor M. Mendez,

Federal Highway Administrator.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Tier 1 Environmental Impact Statement for the Chicago, IL, to Detroit-Pontiac, MI, Regional Passenger Rail System

AGENCY: Federal Railroad Administration (FRA), U.S. Department of Transportation (DOT).

ACTION: Notice of intent to prepare an environmental impact statement (EIS).

SUMMARY: FRA is issuing this notice of intent (Notice) to advise the public that FRA, with the Michigan Department of Transportation (Michigan DOT), will jointly prepare a Tier 1 Environmental Impact Statement (EIS) to evaluate passenger rail service improvements along the Chicago, Illinois to Detroit-Pontiac, Michigan regional passenger rail corridor (the Corridor), in compliance with the National Environmental Policy Act of 1969 (NEPA). Partnering state agencies in the development of the EIS are Illinois and Indiana Departments of Transportation (IDOT and IN DOT).

The objectives of the Tier 1 EIS are to evaluate a reasonable range of alternatives, select a rail corridor, and make decisions regarding future improvements to intercity passenger rail service provided in the corridor, including increased train frequency, reduced trip time, and improved on-time performance. Alternatives under consideration will include a no-action (no-build) alternative, as well as multiple build alternatives between Chicago, Illinois and Porter, Indiana, near Battle Creek, Michigan, and in the Detroit, Michigan region. The build alternatives may include infrastructure improvements to the existing rail corridor, the development of a new rail corridor, or a combination of both.

FRA is issuing this Notice to solicit public and agency input in the development of the scope of the EIS and to advise the public that FRA and Michigan DOT will conduct outreach activities for the preparation of the EIS. To ensure that all significant issues are identified and considered, all interested parties are invited to comment on the proposed scope of the environmental review. Comments on the scope of the EIS, including the proposed Project's purpose and need, alternatives to be considered, the impacts to be evaluated, and the methodologies to be used in the evaluation are encouraged.

DATES: Written comment on the scope of the Tier 1 EIS should be provided to Michigan DOT by October 15, 2012. A series of four (4) scoping meetings on September 12, 13, 26, and 27, 2012 will be hosted by Michigan DOT along the Corridor at the times and locations identified in the **ADDRESSES** section below. In addition, for those who cannot make these meetings, Michigan DOT will host an online, self-directed public scoping meeting. The online public scoping meeting will be available following the publication of this Notice at *www.GreatLakesRail.org* until October 15, 2012.

ADDRESSES: Comments may also be mailed or emailed until October 15, 2012 to Mr. Mohammed Alghurabi, Project Manager, Michigan DOT, 425 West Ottawa Street, P.O. Box 30050, Lansing, MI 48909 and email: *alghurabim@michigan.gov.* If a member of the public wishes to participate in the scoping process and cannot attend one of the in-person scoping meetings, and does not have access to the Internet, they can request an informational scoping package and comment form by contacting Mr. Mohammed Alghurabi at the above address, or directly at (517) 373–7674 and toll free at (877) 351–0853.

Scoping meetings will be held on: Wednesday, September 12, 4 to 7 p.m. at Chicago Union Station in the Union Gallery Room (off the Great Hall), 500 West Jackson Boulevard, Chicago, Illinois; Thursday, September 13, 4 to 7 p.m. at the Michigan City-City Hall, 100 East Michigan Boulevard, Michigan City, Indiana; Wednesday, September 26, 4 to 7 p.m. at the Doubletree Hotel, 5801 Southfield Expressway, Dearborn, Michigan; and Thursday, September 27, 4 to 7 p.m. at the Radisson Hotel, 100 West Michigan Avenue, Kalamazoo, Michigan (parking validation will be available for attendees parking in the structure across the street from the Radisson Hotel).

With advanced notice of seven (7) days, Michigan DOT can make additional accommodations for persons with disabilities, and/or limited English speaking ability, and persons needing auxiliary aids or services of interpreters, signers, readers, or large print. Please contact Mr. Bob Parsons, Michigan DOT Planning directly at (517) 373–9534 and toll free at (877) 351–0853 to request accommodations.

FOR FURTHER INFORMATION CONTACT: Ms. Andrea Martin, Environmental Protection Specialist, FRA, 1200 New Jersey Avenue SE., (Mail Stop 20), Washington, DC 20590 at (202) 493–6201, email: *andrea.martin@dot.gov;* or Mr. Mohammed Alghurabi, Project Manager, Michigan DOT, 425 West Ottawa Street, P.O. Box 30050, Lansing, MI 48909 at (517) 373–7674 and toll free at (877) 351–0853, email: *alghurabim@michigan.gov.*

Information and documents regarding the Tier 1 EIS and environmental process will be made available for the duration of the environmental process at *www.GreatLakesRail.org.*

SUPPLEMENTARY INFORMATION: The Chicago to Detroit-Pontiac Passenger Rail Corridor Program EIS is being developed to be consistent with the Midwest Regional Rail Initiative (MWRRI), a cooperative, multi-agency effort that began in 1996 and originally involved nine Midwest states (Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, Ohio, and Wisconsin), as well as FRA and Amtrak. The MWRRI elements include: use of 3,000 miles of existing rail right of way to connect rural and urban areas; operation of a Chicago hub and spoke passenger rail system; introduction of modern, high-speed trains operating at speeds up to 110 miles per hour (mph); and multi-modal connections to improve system access. The MWRRI envisions developing a passenger rail system that offers business and leisure travelers shorter travel times, additional train frequencies, improved reliability and connections between urban centers and smaller communities. The Tier 1 EIS will evaluate alternatives for the Corridor considering the MWRRI objective ''to meet current and future regional travel needs through significant improvements to the level and quality of passenger rail service'' (MWRRI Executive Report, September 2004).

Study Area: The Corridor extends 304 miles from Chicago Union Station, in downtown Chicago, Illinois on the west to a terminal in Pontiac, Michigan to the east. The Corridor is a federally designated high speed rail (HSR) corridor with passenger service currently provided by Amtrak's Wolverine line. The Corridor is also one of the heaviest freight railroad routes in the country. The study area identified for the Tier 1 EIS includes portions of Cook County, Illinois; Lake, Porter, and La Porte Counties in Indiana; and Berrien, Cass, Kalamazoo, Calhoun,

Jackson, Washtenaw, Wayne, and Oakland Counties in Michigan.

Service Today: Intercity passenger rail service on the Corridor currently includes three daily round trips between Chicago and Detroit-Pontiac (Amtrak Wolverine Service), with an additional daily round trip between Chicago and Battle Creek, Michigan (Amtrak Blue Water Service), which continues beyond the Corridor to Port Huron, Michigan. In 2011, over 503,290 passenger trips were made between Chicago and Detroit using Amtrak's Wolverine line. Currently, passenger trains take approximately 6.5 hours to travel from Chicago's Union Station to Pontiac, Michigan. Existing passenger trains serve stations in Chicago, Illinois; Hammond-Whiting, Indiana; Michigan City, Indiana; and New Buffalo, Niles, Dowagiac, Battle Creek, Kalamazoo, Albion, Jackson, Ann Arbor, Dearborn, Detroit, Royal Oak, Birmingham and Pontiac, Michigan.

When operating on the Corridor, the existing Amtrak Wolverine Service travels over tracks that are owned by several different railroads. In Illinois, the Amtrak Wolverine Service travels over Amtrak-owned track near Union Station and then transitions to track owned by Norfolk Southern until Porter, Indiana. Between Porter, Indiana and Kalamazoo, Michigan, the Amtrak Wolverine Service travels over Amtrak-owned track, which is the only section of track on the Corridor (and outside the Northeast Corridor) that allows trains to travel up to 110 mph (80 of the 97 miles of this Amtrak-owned track allow this maximum speed). In 2011, Michigan DOT entered into a purchase and sale agreement with Norfolk Southern, with financial assistance from FRA, pursuant to which Michigan DOT will acquire the 135 mile Norfolk Southern right-of-way between Kalamazoo and Dearborn, Michigan (with certain limited exceptions). At the time of publication of this Notice, that transaction had not yet closed. Once the transaction has been completed, Michigan DOT will own the right-of-way between Kalamazoo and Dearborn, Michigan (with certain limited exceptions), and Norfolk Southern will operate freight trains over that track pursuant to an easement. From Dearborn to West Detroit Junction, Michigan, the Amtrak Wolverine Service travels primarily on track owned and operated by Conrail Shared Assets Operations, which is jointly owned by CSX Transportation and Norfolk Southern. In addition, Canadian National Railroad owns the Corridor track between West Detroit Junction and Pontiac, Michigan, as well as a two-mile section of track within Battle Creek, Michigan.

Travel Demand: Over the last decade, there has been a demonstrated increase in demand for passenger rail within the Corridor. This growth in passenger rail travel will be diminished if existing issues affecting reliability and comfort are not addressed. Population growth in the Midwest is expected to result in increased congestion on area roadways, especially in the metropolitan areas. Michigan as a whole and Detroit in particular have seen population shrink, which emphasizes the need to implement actions to increase the attractiveness and competitiveness of the area for new business growth and reinvestment. Other pertinent demographics are projected to change that are likely to impact future ridership as well. In the near future, the number of people over age 65 will steadily increase as the baby boom generation ages. This population will begin to seek alternatives to driving automobiles as this age group's ability to safely operate motor vehicles decreases. Passenger rail can provide a needed alternative to driving the long distances between Chicago and Detroit-Pontiac. MWRRI studies report that long-term population, employment and income across the MWRRI states are all projected to grow consistently through year 2040. This growth is expected to result in a 13 percent increase in intercity travel throughout the Midwest between 2010 and 2020 and a further 28 percent increase by 2040.

Trip Time: The current passenger rail service is not competitive with other modes of travel. In 2011, Michigan's Amtrak corridor had the worst on-time performance of the Amtrak system, being on time only 33.1% of the time due to infrastructure and facility deficiencies. Amtrak's shortest existing service between Detroit and Chicago is estimated at 5 hours and 36 minutes. If infrastructure improvements are made to alleviate the congested conditions within the corridor and conditions are improved to allow train speeds to increase to 110 mph along the Corridor, end-to-end Chicago to Detroit-Pontiac travel time could be reduced by approximately 2 hours. This travel time savings would make passenger rail service more likely to succeed in attracting ridership, increasing mobility and providing greater environmental benefits within the Corridor.

Travel Options: The lack of existing capacity and the sharing of track between freight and passenger trains currently create operational problems that restrict both mobility and economic development. These restrictions are demonstrated by the lengthy delays for existing passenger rail service operating within the study area, especially between Chicago, Illinois and Porter, Indiana, near Battle Creek, Michigan, as well as in the Detroit, Michigan region. In addition, infrastructure improvements have been identified by the MWRRI as necessary for enhanced passenger rail service within the Corridor. This includes operational improvements at Chicago Union Station and upgraded track and signaling between Kalamazoo and Detroit-Pontiac. Station facilities along the Corridor are also not ideal for providing easy access to passenger rail. A good indicator of the track condition is demonstrated by the issuance of a number of slow orders by Norfolk Southern including those most recently issued in March 2012. These slow orders are issued to decrease the maximum speed on sections of track where there are safety concerns. This affects passenger rail service performance. The latest slow order decreased speeds to 25–30 mph in the affected sections of track between Kalamazoo and Detroit.

Infrastructure investment needed to increase train speed will also allow an increase in the frequency of service. Enhanced capacity of Corridor infrastructure would make the service more reliable and more likely to succeed in attracting ridership, increasing mobility and enhancing transit oriented economic development opportunities near proposed stations. Improved intercity passenger rail service in the Corridor would provide a reliable alternative travel mode to avoid increasingly congested Midwest highways and airports and substantial travel delays resulting from existing conditions, including peak hour highway delays, security, and related delays associated with air travel, and adverse weather conditions. The need to reduce highway congestion and delays at airports, and to ease the transportation-related effects of further population growth over the long term, is becoming increasingly imperative within the Corridor.

Environmental Review Process: FRA and Michigan DOT will use a tiered process, as provided for in 40 CFR 1508.28, in the completion of the environmental review of the Chicago to Detroit-Pontiac Passenger Rail Corridor Program. Tiering is a staged environmental review process applied to environmental reviews for complex projects. This process will address broad corridor-level issues and alternatives. Subsequent phases or tiers will analyze, at a greater level of detail,

narrower site-specific proposals based on the decisions made in the Tier 1 EIS.

Tier 1: The Tier 1 EIS and any subsequent environmental documents will be developed in accordance with Council on Environmental Quality (CEQ) regulations (40 CFR part 1500 et seq.) implementing NEPA and FRA's Procedures for Considering Environmental Impacts (64 FR 28545; May 26, 1999). The Tier 1 assessment will result in an EIS with the appropriate level of detail for corridor-level decisions and will address broad overall issues of concern, including but not limited to:

- Confirming the purpose and need for the proposed action.
- Confirming the study area appropriate to assess reasonable alternatives.
- Identifying a comprehensive set of goals and objectives for the corridor in conjunction with Program stakeholders. These goals and objectives will be crafted to allow comprehensive evaluation of all aspects of the Corridor necessary to achieve the goals, including train operations, vehicles, and infrastructure.
- Identifying the range of reasonable alternatives to be considered, consistent with the current and planned use of the corridor and the existing services within and adjacent to the study area, as well as considering a no-action (no-build) alternative.
- Developing alternative evaluation criteria to identify alternatives that meet the purpose and need of the proposed action and those that do not.
- Identifying the general alignment(s) of the reasonable build alternatives.
- Identifying general right-of-way requirements for the reasonable build alternatives.
- Identifying, at a corridor planning level, the infrastructure and equipment investment requirements for the reasonable build alternatives.
- Including the consideration of the no-build alternative which will be studied as the baseline for comparison with the build alternatives. The no-build alternative represents other transportation modes such as auto, air travel, intercity bus, and existing rail and the physical characteristics and capacities as they exist at the time of the Tier 1 EIS, with planned and funded improvements that will be in place at the time the Project becomes operational.
- Evaluating and describing, at a corridor planning level, the potential environmental consequences (benefits and impacts to the built and natural environment) associated with the reasonable alternative alignments and proposed changes in passenger rail train frequency, speed, and on-time performance.
- Establishing the timing and sequencing of independent actions to maintain a state of good repair and to implement the proposed action.
- Selecting a corridor route alignment for further study at Tier 2.
- Addressing subsequent component actions for Tier 2 NEPA documentation as described below.

Tier 2: The second tier assessment(s) will address component projects to be implemented within the general corridor identified in the Tier 1 EIS, and will incorporate by reference the data and evaluations included in the Tier 1 EIS. Subsequent evaluations will concentrate on the issues specific to the component of the selected alternative identified in the Tier 1 EIS, identify the site-specific alternatives that meet the purpose and need for each component project, and analyze the specific environmental consequences and measures necessary to mitigate environmental impacts at a site-specific level of detail.

Scoping and Public Involvement: FRA encourages broad participation in the EIS process during scoping and subsequent review of the resulting environmental documents. FRA and Michigan DOT are inviting comments and suggestions regarding the scope of the Tier 1 EIS from all interested parties, to ensure that all issues are addressed related to this proposal and that any significant impacts are identified. Comments or questions concerning the proposed Program and/or the Tier 1 EIS should be directed to Mr. Mohammed Alghurabi, Michigan DOT at the above address. Letters that include this Notice and related study area will be sent to the appropriate Federal, State and local agencies, Native American tribes and to private organizations who might have previously expressed or who are known to have an interest in this proposal.

Michigan DOT will lead the outreach activities, beginning with the four (4) scoping meetings and the online scoping meeting described above. Public involvement initiatives, including public meetings, newsletters, and outreach will be held throughout the course of this study. Opportunities for public participation will be announced through mailings, notices, advertisements, press releases and at *www.GreatLakesRail.org.*

Corey Hill,

Director, Rail Project Development and Delivery, Federal Railroad Administration.

[FR Doc. 2012–21587 Filed 8–30–12; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 34554 (Sub-No. 16)]

Union Pacific Railroad Company—Temporary Trackage Rights Exemption; BNSF Railway Company

Pursuant to a modified written temporary trackage rights agreement dated August 10, 2012, BNSF Railway Company (BNSF) has agreed to extend the December 18, 2011 expiration date of the local trackage rights granted to Union Pacific Railroad Company (UP) [1] over BNSF's line of railroad extending between BNSF mileposts 579.3 near Mill Creek, Okla., and 631.1 near Joe Junction, Tex., a distance of approximately 51 miles.[2]

The transaction is scheduled to be consummated on or after September 15,

[1] UP submits that the trackage rights being granted here are only temporary rights but, because they are ''local'' rather than ''overhead'' rights, they do not qualify for the Board's class exemption for temporary trackage rights at 49 CFR 1180.2(d)(8). *See R.R. Consolidation Procedures,* 6 S.T.B. 910 (2003). Therefore, UP concurrently has filed a petition for partial revocation of this exemption in *Union Pacific Railroad Company—Temporary Trackage Rights Exemption—BNSF Railway Company,* Docket No. FD 34554 (Sub-No. 17), wherein UP requests that the Board permit the proposed local trackage rights arrangement described in the present proceeding to expire on or about December 31, 2012, as provided in the parties' agreement. That petition will be addressed by the Board in a separate decision.

[2] The trackage rights were originally granted in *Union Pacific Railroad Company—Temporary Trackage Rights Exemption—The Burlington Northern and Santa Fe Railway Company,* FD 34554 (STB served Oct. 7, 2004). Subsequently, the parties filed notices of exemption several times based on their agreements to extend expiration dates of the same trackage rights. *See* FD 34554 (Sub-No. 2) (STB served Feb. 11, 2005); FD 34554 (Sub-No. 4) (STB served Mar. 3, 2006); FD 34554 (Sub-No. 6) (STB served Jan. 12, 2007); FD 34554 (Sub-No. 8) (STB served Jan. 4, 2008); FD 34554 (Sub-No. 10) (STB served Jan. 8, 2009); FD 34554 (Sub-No. 12) (STB served Dec. 31, 2009); and FD 34554 (Sub-No. 14) (STB served Feb. 11, 2011). Because the original and subsequent trackage rights notices were filed under the class exemption at 49 CFR 1180.2(d)(7), under which trackage rights normally remain effective indefinitely, in each instance the Board granted partial revocation of the class exemption to permit the authorized trackage rights to expire. *See* FD 34554 (Sub-No. 1) (STB served Nov. 24, 2004); FD 34554 (Sub-No. 3) (STB served Mar. 25, 2005); FD 34554 (Sub-No. 5) (STB served Mar. 23, 2006); FD 34554 (Sub-No. 7) (STB served Mar. 13, 2007); FD 34554 (Sub-No. 9) (STB served Mar. 20, 2008); FD 34554 (Sub-No. 11) (STB served Mar. 11, 2009); FD 34554 (Sub-No. 13) (STB served Mar. 15, 2010); and FD 34554 (Sub-No. 15) (STB served Apr. 15, 2011). At the time of the extension authorized in Docket No. FD 34554 (Sub-No. 14), the parties anticipated that the authority to allow the rights to expire would be exercised by December 18, 2011. However, the parties filed on August 16, 2012, in Docket No. FD 34554 (Sub-No. 16) their most recent notice of exemption to allow the trackage rights to be extended to on or about December 31, 2012, which we are addressing here.

2012, the effective date of the exemption (30 days after the exemption is filed).

The purpose of this transaction is to modify the temporary trackage rights exempted in Docket No. FD 34554 (Sub-No. 14) to further extend the expiration date to on or about December 31, 2012. The modified trackage rights will permit UP to continue to move loaded and empty ballast trains for use in its maintenance-of-way projects.

As a condition to this exemption, any employee affected by the trackage rights will be protected by the conditions imposed in *Norfolk & Western Railway—Trackage Rights—Burlington Northern, Inc.,* 354 I.C.C. 605 (1978), as modified in *Mendocino Coast Railway—Lease & Operate—California Western Railroad,* 360 I.C.C. 653 (1980).

This notice is filed under 49 CFR 1180.2(d)(7). If it contains false or misleading information, the exemption is void *ab initio.* Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Stay petitions must be filed by September 7, 2012 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 34554 (Sub-No. 16), must be filed with the Surface Transportation Board, 395 E Street, SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on Elisa B. Davies, General Attorney, Union Pacific Railroad Company, 1400 Douglas Street, Mail Stop 1580, Omaha, NE 68179.

Board decisions and notices are available on our Web site at *www.stb.dot.gov.*

Decided: August 27, 2012.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Derrick A. Gardner,

Clearance Clerk.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Art Advisory Panel; Notice of Closed Meeting

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of Closed Meeting of Art Advisory Panel.

SUMMARY: Closed meeting of the Art Advisory Panel will be held in Washington, DC.

DATES: The meeting will be held September 20, 2012.

ADDRESSES: The closed meeting of the Art Advisory Panel will be held on September 20, 2012 at 999 North Capitol Street NE., Washington, DC 20002, at 9:00 a.m.

FOR FURTHER INFORMATION CONTACT: Ruth M. Vriend, C:AP:P&V:ART, 999 N. Capitol Street NE., Washington, DC 20002. Telephone (202) 435–5739 (not a toll free number).

SUPPLEMENTARY INFORMATION: Notice is hereby given pursuant to section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App., that a closed meeting of the Art Advisory Panel will be held on September 20, 2012, at 999 N. Capitol Street NE., Washington, DC, at 9:00 a.m.

The agenda will consist of the review and evaluation of the acceptability of fair market value appraisals of works of art involved in Federal income, estate, or gift tax returns. This will involve the discussion of material in individual tax returns made confidential by the provisions of 26 U.S.C. 6103.

A determination as required by section 10(d) of the Federal Advisory Committee Act has been made that this meeting is concerned with matters listed in Section 552b(c)(3), (4), (6), and (7), and that the meeting will not be open to the public.

Chris Wagner,

Chief, Appeals.

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal Year 2013 Rates; Hospitals' Resident Caps for Graduate Medical Education Payment Purposes; Quality Reporting Requirements for Specific Providers and for Ambulatory Surgical Centers

AGENCY: Centers for Medicare and Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: We are revising the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems. Some of the changes implement certain statutory provisions contained in the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010 (collectively known as the Affordable Care Act) and other legislation. These changes will be applicable to discharges occurring on or after October 1, 2012, unless otherwise specified in this final rule. We also are updating the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis subject to these limits. The updated rate-of-increase limits will be effective for cost reporting periods beginning on or after October 1, 2012.

We are updating the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) and implementing certain statutory changes made by the Affordable Care Act. Generally, these changes will be applicable to discharges occurring on or after October 1, 2012, unless otherwise specified in this final rule.

In addition, we are implementing changes relating to determining a hospital's full-time equivalent (FTE) resident cap for the purpose of graduate medical education (GME) and indirect medical education (IME) payments. We are establishing new requirements or revised requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt cancer hospitals, LTCHs, and inpatient psychiatric facilities (IPFs)) that are participating in Medicare. We also are establishing new administrative, data completeness, and extraordinary circumstance waivers or extension requests requirements, as well as a reconsideration process, for quality reporting by ambulatory surgical centers (ASCs) that are participating in Medicare.

We are establishing requirements for the Hospital Value-Based Purchasing (VBP) Program and the Hospital Readmissions Reduction Program.

DATES: *Effective date:* This final rule is effective on October 1, 2012.

SUPPLEMENTARY INFORMATION:

Electronic Access

This **Federal Register** document is also available from the **Federal Register** online database through the U.S. Government Printing Office Web page at: *http://www.gpo.gov/fdsys/browse/collection.action?collectionCode=FR*. Free public access is available on a Wide Area Information Server (WAIS) through the Internet and via asynchronous dial-in. Internet users can access the database by using the World Wide Web (the Superintendent of Documents' home Web page address), by using local WAIS client software, or by telnet to *swais.access.gpo.gov*, then login as guest (no password required). Dial-in users should use communications software and modem to call (202) 512–1661; type swais, then login as guest (no password required).

Tables Available Only Through the Internet on the CMS Web Site

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to this final rule were published in the **Federal Register** as part of the annual proposed and final rules. However, beginning in FY 2012, some of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables will be available only through the Internet. The IPPS tables for this final rule are available only through the Internet on the CMS Web site at: *http://www.cms.hhs.gov/Medicare/medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Click on the link on the left side of the screen titled, ''FY 2013 IPPS Final Rule Home Page'' or ''Acute Inpatient—Files for Download''. The LTCH PPS tables for this FY 2013 final rule are available only through the Internet on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html* under the list item for Regulation Number CMS–1588–F. For complete details on the availability of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified above should contact Nisha Bhat at (410) 786–4487.

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). It also makes policy changes to programs associated with Medicare IPPS hospitals and LTCHs.

Under various statutory authorities, we are making changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2013. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).
- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; and cancer hospitals. Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.
- Sections 123(a) and (c) of Public Law 106–113 and section 307(b)(1) of Public Law 106–554 (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of long-term care hospitals (LTCHs) described in section 1886(d)(1)(B)(iv) of the Act.
- Sections 1814(l), 1820, and 1834(g) of the Act, which specifies that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.
- Section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix.
- Section 1886(d)(4)(D) of the Act, which addresses certain hospital-acquired conditions (HACs), including infections. Section 1886(d)(4)(D) of the Act specifies that, by October 1, 2007, the Secretary was required to select, in consultation with the Centers for Disease Control and Prevention (CDC), at least two conditions that: (a) Are high cost, high volume, or both; (b) are assigned to a higher paying MS–DRG when present as a secondary diagnosis (that is, conditions under the MS–DRG system that are CCs or MCCs); and (c) could reasonably have been prevented through the application of evidence-based guidelines. Section 1886(d)(4)(D) of the Act also specifies that the list of conditions may be revised, again in consultation with CDC, from time to time as long as the list contains at least two conditions. Section 1886(d)(4)(D)(iii) of the Act requires that hospitals, effective with discharges occurring on or after October 1, 2007, submit information on Medicare claims specifying whether diagnoses were present on admission (POA). Section 1886(d)(4)(D)(i) of the Act specifies that effective for discharges occurring on or after October 1, 2008, Medicare no longer assigns an inpatient hospital discharge to a higher paying MS–DRG if a selected condition is not POA.
- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act.
- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase in payments to a subsection (d) hospital for a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.
- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year. Both the performance standards and the performance period for a fiscal year are to be established by the Secretary. Section 1886(o)(1)(B) of the Act directs the Secretary to begin making value-based incentive payments under the Hospital Inpatient VBP Program to hospitals for discharges occurring on or after October 1, 2012.
- Section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act and amended by section 10309 of the Affordable Care Act, which establishes the ''Hospital Readmissions Reduction Program'' effective for discharges from an ''applicable hospital'' beginning on or after October 1, 2012, under which payments to those hospitals under section 1886(d) of the Act will be reduced to account for certain excess readmissions.

2. Summary of the Major Provisions

a. MS–DRG Documentation and Coding Adjustment, Including the Applicability to the Hospital-Specific Rates and the Puerto Rico-Specific Standardized Amount

Section 7(b)(1)(A) of Public Law 110–90 requires that, if the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different than the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, the Secretary shall make an appropriate prospective adjustment under section 1886(d)(3)(A)(vi) of the Act.

Section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an additional one-time adjustment to the standardized amounts to offset the estimated increase or decrease in aggregate payments for FYs 2008 and 2009 resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustment applied under section 7(a) of Public Law 110–90.

After accounting for adjustments made in FYs 2008 and 2009, we have found a remaining documentation and coding effect of 3.9 percent. As we have discussed, an additional cumulative adjustment of −3.9 percent would be necessary to meet the requirements of section 7(b)(1)(A) of Public Law 110–90. Without making this adjustment, our actuaries estimated that annual aggregate payments would be increased by approximately $4 billion. Furthermore, an additional one-time adjustment of −5.8 percent would be required to fully recapture overpayments (estimated at approximately $6.9 billion) due to documentation and coding that occurred in FY 2008 and FY 2009, as required by section 7(b)(1)(B) of Public Law 110–90.

CMS has thus far implemented a −2.0 percent (of a required −3.9 percent) prospective adjustment, and completed the full one-time −5.8 percent recoupment adjustment (−2.9 percent in both FYs 2011 and 2012). In FY 2013, we are completing the remaining −1.9 percent prospective adjustment, while also making a + 2.9 percent adjustment to remove the effect of the FY 2012 one-time recoupment adjustment. We have also determined that a cumulative adjustment of −5.4 percent is required to eliminate the full effect of documentation and coding changes on future payments to SCHs and MDHs. After accounting for adjustments made to the hospital-specific rate in FY 2011 and FY 2012, an additional prospective adjustment of −0.5 percent is necessary to complete the full −5.4 adjustment. For FY 2013, we are making a full −0.5 percent adjustment to the hospital-specific rate, in keeping with our policy of applying equivalent adjustments, when applicable, to other subsection (d) hospital payment systems.

In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to make an additional adjustment to account for documentation and coding effects that occurred in FY 2010. After review of comments and recommendations from MedPAC, CMS analyzed FY 2010 claims using the same methodology as previously applied to FYs 2008 and 2009 claims. CMS estimated that there was a 0.8 percentage point effect due to documentation and coding that did not reflect an actual increase in patient severity. However, in light of public comments we received on the proposed rule, we are not making an adjustment to account for this effect at this time. Therefore, the total documentation and coding adjustment for FY 2013 is a + 1.0 percent adjustment (−1.9 plus + 2.9) to the standardized amount and a −0.5 percent adjustment to the hospital-specific rate.

b. Hospital-Acquired Conditions (HACs)

Section 1886(d)(4)(D) specifies that, by October 1, 2007, the Secretary was required to select, in consultation with the Centers for Disease Control and Prevention (CDC), at least two conditions that: (a) Are high cost, high volume, or both; (b) are assigned to a higher paying MS–DRG when present as a secondary diagnosis (that is, conditions under the MS–DRG system that are CCs or MCCs); and (c) could reasonably have been prevented through the application of evidence-based guidelines. Section 1886(d)(4)(D) of the Act also specifies that the list of conditions may be revised, again in consultation with CDC, from time to time as long as the list contains at least two conditions.

In this final rule, we are adding two new conditions, Surgical Site Infection (SSI) Following Cardiac Implantable Electronic Device (CIED) Procedures and Pneumothorax with Venous Catheterization, for the HAC payment provisions for FY 2013 under section 1886(d)(4)(D) of the Act. We note that the SSI Following CEID Procedures condition will be a new subcategory of the SSI HAC category. We also are adding diagnosis codes 999.32 (Bloodstream infection due to central venous catheter) and 999.33 (Local infection due to central venous catheter) to the existing Vascular Catheter-Associated Infection HAC category for FY 2013.

c. Reduction of Hospital Payments for Excess Readmissions

We are finalizing a number of policies to implement section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, which establishes the Hospital Readmissions Reduction Program. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payments to account for excess readmissions of selected applicable conditions, which are acute myocardial infarction, heart failure, and pneumonia. We are finalizing provisions related to the applicable hospitals that are included in the Hospital Readmissions Reduction Program, the methodology to calculate the adjustment factor, the portion of the hospital's payment that is reduced by the adjustment factor, and the process under which the hospitals have the opportunity to review and submit corrections for their readmissions information prior to the information being posted on the Hospital Compare Web site.

d. Long-Term Care Hospital-Specific Market Basket

We are updating LTCH payment rates with a separate market basket comprised of data from only LTCHs, which we refer to as a ''LTCH-specific market basket.'' We are implementing a stand-alone LTCH market basket based on FY 2009 Medicare cost report data. The method used to calculate the cost weights and the price proxies used are generally similar to those used in the FY 2008-based RPL market basket that was finalized for the FY 2012 IPPS/LTCH PPS final rule. The primary difference is that we are using data from LTCH providers only.

e. Expiration of Certain Payment Rules for LTCH Services and the Moratorium on the Establishment of Certain Hospitals and Satellite Facilities and the Increase in the Number of Beds in LTCHs and LTCH Satellite Facilities

Moratoria on the implementation of certain LTCH payment policies and on the development of new LTCHs and LTCH satellite facilities and on bed increases in existing LTCHs and LTCH satellite facilities established under sections 114(c) and (d) of the MMSEA (Pub. L. 110–173) as amended by section 4302 of the ARRA (Pub. L. 111–5) and further amended by sections

3106 and 10312 of the Affordable Care Act are set to expire during CY 2012, under current law.

The moratoria established by these provisions delayed the full implementation of the following policies for 5 years beginning at various times in CY 2007:

- The full application of the ''25-percent payment adjustment threshold'' to certain LTCHs, including hospitals-within-hospitals (HwHs) and LTCH satellite facilities for cost reporting periods beginning on or after July 1, 2007, and before July 1, 2012, or cost reporting periods beginning on or after October 1, 2007, and before October 1, 2012, as applicable under the regulations at §§ 412.534 and 412.536.
- The inclusion of an ''IPPS comparable per diem amount'' option for payment determinations under the short stay outlier (SSO) adjustment at § 412.529 of the regulations for LTCH discharges occurring on or after December 29, 2007, but prior to December 29, 2012.
- The application of any one-time budget neutrality adjustment to the LTCH PPS standard Federal rate provided for in § 412.523(d)(3) of the regulations from December 29, 2007, through December 28, 2012.
- In general, the development of new LTCHs and LTCH satellite facilities, or increases in the number of beds in existing LTCHs and LTCH satellite facilities from December 29, 2007, through December 28, 2012, unless one of the specified exceptions to the particular moratorium was met.

In this final rule, we are extending the existing delay of the full implementation of the 25-percent payment adjustment threshold for an additional year; that is, for cost reporting periods beginning on or after October 1, 2012, and before October 1, 2013, as applicable. We are providing a 1-year moratorium on the application of the ''25-percent threshold'' payment adjustment for cost reporting periods beginning on or after October 1, 2012, and before October 1, 2013. However, the moratorium will expire for several types of LTCHs with cost reporting periods beginning before July 1, 2012 and September 30, 2012, prior to the effective date of the moratorium finalized in this rule. This gap in the continued application of the moratorium is a result of the July 1, 2007 effective date of section 114(c)(1) of the MMSEA, as amended by section 4302(a)(1) of the ARRA, which was based on the former July 1 through June 30 regulatory cycle for the LTCH PPS. In order to address this situation for this group of LTCHs, we are finalizing a policy that applies a supplemental moratorium on a per discharge basis beginning with discharges occurring on or after October 1, 2012, and continuing through the LTCH's cost reporting period.

We are providing for an additional 1-year extension in the delay of the full application of the 25-percent payment adjustment threshold policy because we believe that, based on a recent research initiative, we could soon be in a position to propose revisions to our payment policies that could render the 25-percent payment adjustment threshold policy unnecessary. In light of this potential result, we believe it is prudent to avoid requiring LTCHs (or CMS systems) to implement the full reinstatement of the policy for what could be a relatively short period of time.

We are not making any changes to the SSO policy as it currently exists in the regulations at § 412.529. Accordingly, consistent with the existing regulations at § 412.529(c)(3), for SSO discharges occurring on or after December 29, 2012, the ''IPPS comparable per diem amount'' option at § 412.529(c)(3)(i)(D) will apply to payment determinations for cases with a covered length of stay that was equal to or less than one standard deviation from the geometric average length of stay for the same MS–DRG under the IPPS (that is, the ''IPPS comparable threshold'').

The moratoria on the development of new LTCHs or LTCH satellite facilities and on an increase in the number of beds in existing LTCHs or LTCH satellite facilities are set to expire on December 29, 2012, under current law.

We are making a one-time prospective adjustment under § 412.523(d)(3) of the regulations (which will not apply to payments for discharges occurring on or before December 28, 2012, consistent with the statute) and to transition the application of this adjustment over a 3-year period. Regulations at § 412.523(d)(3) provide for the possibility of making a one-time prospective adjustment to the LTCH PPS rates so that the effect of any significant difference between the data used in the original computations of budget neutrality for FY 2003 and more recent data to determine budget neutrality for FY 2003 is not perpetuated in the prospective payment rates for future years.

f. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, hospitals are required to report data on measures selected by the Secretary for the Hospital IQR Program in order to receive the full annual percentage increase. In past rules, we have established measures for reporting and the process for submittal and validation of the data.

In this final rule, we are making programmatic changes to the Hospital IQR Program for the FY 2015 payment determination and subsequent years. These changes will streamline and simplify the process for hospitals and reduce burden. We are reducing the number of measures in the Hospital IQR Program from 72 to 59 for the FY 2015 payment determination. We are removing 1 chart-abstracted measure and 16 claims-based measures from the program for the FY 2015 payment determination and subsequent years. We are removing these measures for a number of reasons, including that these measures are losing NQF endorsement, are included in an existing composite measure, are duplicative of other measures in the Hospital IQR Program, or could otherwise be reported on *Hospital Compare* in the future under the authority of section 3008 of the Affordable Care Act. In addition, we are adopting three claims-based measures, one chart-abstracted measure and a survey-based measure regarding care transitions, which we will collect using the existing HCAHPS survey, to the measure set for the FY 2015 payment determination and subsequent years. We are adopting a structural measure for the FY 2016 payment determination and subsequent years.

In an effort to streamline the rulemaking process, we are retaining measures for all subsequent payment determinations, unless specifically stated otherwise, through rulemaking. We are adopting a policy under which we will use a subregulatory process to make nonsubstantive updates to the Hospital IQR Program measures. To ensure that hospitals that participate in the Hospital IQR Program are submitting data for a full year, we are providing that hospitals that would like to participate in the Hospital IQR Program for the first time, or that previously withdrew from the Program and would like to participate again, must submit a completed Notice of Participation by December 31 of the calendar year preceding the first quarter of the calendar year in which chart-abstracted data submission is required for any given fiscal year. In addition, if a hospital wishes to withdraw from the program, it will have until May 15 prior to the start of the payment year affected to do so. In order to reduce the burden associated with validation, we are reducing the base annual validation sample from 800 to 400, with an

additional targeted sample of up to 200 hospitals. All hospitals failing validation in a previous year will be included in the 200 hospital supplement, with a random sample drawn from hospitals meeting one or more additional targeting criteria. We are calculating scores for both the chart-abstracted clinical process of care and HAC measure sets and then calculating a total score reflecting a weighted average of each of the two individual scores. Hospitals must achieve a total score of 75 percent to pass validation.

g. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o)(1)(B) of the Act directs the Secretary to begin making value-based incentive payments under the Hospital Inpatient VBP Program to hospitals for discharges occurring on or after October 1, 2012. These incentive payments will be funded for FY 2013 through a reduction to the FY 2013 base operating MS–DRG payment for each discharge of 1 percent, as required by section 1886(o)(7)(B)(i) of the Act. The applicable percentage for FY 2014 is 1.25 percent, for FY 2015 is 1.5 percent, for FY 2016 is 1.75 percent, and for FY 2017 and subsequent years is 2 percent.

We previously published the requirements and related measures to implement the Hospital Inpatient VBP Program in a final rule issued in the **Federal Register** on April 29, 2011 (76 FR 26490, May 6, 2011), in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51653 through 51660), and in the CY 2012 OPPS/ASC final rule (76 FR 74527 through 74547). In this final rule, we are adding requirements for the Hospital VBP Program. Specifically, we are adding for the FY 2015 program two additional outcome measures—an AHRQ Patient Safety Indicators composite measure and CLABSI: Central Line-Associated Blood Stream Infection. We are adding a measure of Medicare Spending per Beneficiary in the Efficiency domain. We are also finalizing a number of other requirements for the program, including an appeals process, case minimums, a review and corrections process for claims-based measures, and the scoring methodology for FY 2015.

3. Summary of Costs and Benefits

• *FY 2013 Documentation and Coding Adjustment:* Section 7(b)(1)(A) of Public Law 110–90 requires that, if the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different than the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, the Secretary shall make an appropriate prospective adjustment under section 1886(d)(3)(A)(vi) of the Act. Section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an additional one-time adjustment to the standardized amounts to offset the estimated increase or decrease in aggregate payments for FYs 2008 and 2009 resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustment applied under section 7(a) of Public Law 110–90.

After accounting for adjustments made in FYs 2008 and 2009, we have found a remaining documentation and coding effect of 3.9 percent. As we have discussed in prior rules, an additional cumulative adjustment of −3.9 percent will be necessary to meet the requirements of section 7(b)(1)(A) of Public Law 110–90. Without making this adjustment, our actuaries estimated that annual aggregate payments would be increased by approximately $4 billion. Furthermore, an additional one-time adjustment of −5.8 percent will be required to fully recapture overpayments (estimated at approximately $6.9 billion) due to documentation and coding that occurred in FY 2008 and FY 2009, as required by section 7(b)(1)(B) of Public Law 110–90.

CMS has thus far implemented a −2.0 percent (of a required −3.9 percent) prospective adjustment, and completed the full one-time −5.8 percent recoupment adjustment (−2.9 percent in both FYs 2011 and 2012). In FY 2013, we are completing the remaining −1.9 percent prospective adjustment, while also making a +2.9 percent adjustment to remove the effect of the FY 2012 one-time recoupment adjustment. We have also determined that a cumulative adjustment of −5.4 percent is required to eliminate the full effect of documentation and coding changes on future payments to SCHs and MDHs. After accounting for adjustments made to the hospital-specific rate in FY 2011 and FY 2012, an additional prospective adjustment of −0.5 percent is necessary to complete the full −5.4 percent adjustment. We are making a full −0.5 percent adjustment to the hospital-specific rate, in keeping with our policy of applying equivalent adjustments, when applicable, to other subsection (d) hospital payment systems.

In addition, in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to make an additional adjustment to account for documentation and coding effects that occurred in FY 2010. After review of comments and recommendations from MedPAC, CMS analyzed FY 2010 claims using the same methodology as previously applied to FYs 2008 and 2009 claims. CMS estimated that there was a 0.8 percentage point effect due to documentation and coding that did not reflect an actual increase in patient severity. However, in light of the public comments that we received on the proposed rule, we are not making an adjustment to account for this effect at this time. Therefore, the total IPPS documentation and coding adjustment of +1.0 percent (−1.9 plus +2.9) will increase total payments by approximately $1.069 billion. The total adjustment to the hospital-specific rate will be −0.5, and will decrease total payment by $22.7 million. The combined impact of the final FY 2013 documentation and coding adjustments will increase total payments by approximately $1.042 billion.

• *Hospital-Acquired Conditions (HACs).* For FY 2013, we are continuing to implement section 1886(d)(4)(D) of the Act that addresses certain hospital-acquired conditions (HACs), including infections. We are adding two additional conditions for FY 2013, Surgical Site Infection (SSI) Following Cardiac Implantable Electronic Device (CIED) Procedures and Iatrogenic Pneumothorax with Venous Catheterization. The projected savings estimate for these two conditions is less than $1 million, with the total estimated savings from HACs for FY 2013 projected at $24 million dollars.

• *Reduction to Hospital Payments for Excess Readmissions.* We are making a number of policies to implement section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, which establishes the Hospital Readmissions Reduction Program. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payment amount to account for excess readmissions of selected applicable conditions, which are acute myocardial infarction, heart failure, and pneumonia. This provision is not budget neutral. A hospital's readmission payment adjustment is the higher of a ratio of a hospital's aggregate dollars for excess readmissions to their aggregate dollars for all discharges, or 0.99 (that is, or a 1-percent reduction) for FY 2013. In this final rule, we estimate that the Hospital Readmissions Reduction Program will result in a 0.3 percent decrease, or approximately $280 million, in payments to hospitals.

• *Long-Term Care Hospital-Specific Market Basket.* The FY 2009-based LTCH-specific market basket update (as measured by percentage increase) for FY 2013 is currently estimated to be 2.6 percent, which is slightly lower than the market basket update based on the FY 2008-based RPL market basket at 2.7 percent (currently used under the LTCH PPS). Therefore, we project that there will be no significant fiscal impact on the LTCH PPS payment rates in FY 2013 as a result of this policy. In addition, we are updating the labor-related share under the LTCH PPS for FY 2013 based on the relative importance of each labor-related cost category in the FY 2009-based LTCH-specific market basket. Although this policy will result in a decrease in the LTCH PPS labor-related share for FY 2013, we are projecting that there will be no effect on aggregate LTCH PPS payments due to the regulatory requirement that any changes to the LTCH area wage adjustment (including the labor-related share) are adopted in a budget neutral manner.

•*Update to the LTCH PPS Standard Federal Rate, including the Expiration of Certain Payment Rules for LTCH Services and the Moratorium on the Establishment of Certain Hospitals and Satellite Facilities and the Increase in the Number of Beds in LTCHs and LTCH Satellite Facilities.* Based on the best available data for the 428 LTCHs in our database, we estimate that the changes we are presenting in the preamble and Addendum of this final rule, including the update to the standard Federal rate for FY 2013, the changes to the area wage adjustment for FY 2013, and changes to short-stay outliers and high-cost outliers will result in an increase in estimated payments from FY 2012 of approximately $92 million (or approximately 1.7 percent). Although we generally project an increase in payments for all LTCHs in FY 2013 as compared to FY 2012, we expect rural LTCHs to experience a larger than average increase in payments (3.3 percent) primarily due to the changes to the area wage level adjustment. Rural hospitals generally have a wage index of less than 1; therefore, the decrease to the labor-related share results in their wage index reducing a smaller portion of the standard Federal rate, resulting in an estimated increase in payments in FY 2013 as compared to FY 2012. In addition, the effect of the extension of the moratorium on the application of the ''25 percent threshold'' payment adjustment policy, as provided by section 114(c) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(a) and 10312(a) of the Affordable Care Act, that is generally effective for cost reporting periods beginning on or after October 1, 2012, and before October 1, 2013, is estimated to result in a payment impact of approximately $170 million to LTCHs. (We note that, for certain LTCHs and LTCH satellite facilities with cost reporting periods beginning or after July 1, 2012, and before October 1, 2012, we are providing a supplemental moratorium for discharges beginning on or after October 1, 2012, and through the end of the cost reporting period. Overall, we estimate that the increase in aggregate LTCH PPS payments in FY 2013 will be $262 million.

• *Hospital Inpatient Quality Reporting (IQR) Program.* In this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for FY 2015. We estimate that approximately 95 hospitals may not receive the full annual percentage increase in any fiscal year. However, at this time, information is not available to determine the precise number of hospitals that will not meet the requirements to receive the full annual percentage increase for FY 2015.

We are adding supplements to the chart validation process for the Hospital IQR Program. Starting with the FY 2015 payment determination, we are finalizing a modest increase to the current Hospital IQR Program validation sample of 18 cases per quarter to 27 cases per quarter in order to capture data on CLABSI, CAUTI, and SSI measures. However, in order not to increase the Hospital IQR validation program's overall burden to hospitals, we are reducing the total sample size of hospitals included in the annual validation sample from 800 eligible hospitals to up to 600 eligible hospitals.

We provide payment to hospitals for the cost of sending charts to the CDAC contractor at the rate of 12 cents per page for copying and approximately $4.00 per chart for postage. Our experience shows that the average chart received by the CDAC contractor is approximately 275 pages. The requirement of an additional 9 charts per hospital submitted for validation, combined with the decreased sample size, will result in approximately 1,800 additional charts per quarter being submitted to CMS by all selected hospitals. Thus, we estimate that we would expend approximately $66,600 per quarter to collect the additional charts we need to validate all measures.

• *Hospital VBP Program.* The Hospital VBP Program is statutorily mandated to be budget neutral. We believe that the program's benefits will be seen in improved patient outcomes, safety, and experience of care. We cannot estimate these benefits in actual dollars and improved quality of care because the payment adjustments based on hospital performance will not begin to be made until FY 2013.

B. Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these ''subsection (d) hospitals.'' Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations.

If the hospital is an approved teaching hospital, it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments.

To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. Through and including FY 2006, a Medicare-dependent, small rural hospital (MDH) received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate is exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. As discussed below, for discharges occurring on or after October 1, 2007, but before October 1, 2012, an MDH will receive the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. (We note that the statutory provision for payments to MDHs expires at the end of FY 2012, that is, after September 30, 2012.) SCHs are the sole source of care in their areas, and MDHs are a major source of care for Medicare beneficiaries in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area, has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). Both of these categories of hospitals are afforded this special payment protection in order to maintain access to services for beneficiaries.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services ''in accordance with a prospective payment system established by the Secretary.'' The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR Part 412, Subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; and cancer hospitals. Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children's Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for rehabilitation hospitals and units (referred to as inpatient rehabilitation facilities (IRFs)), LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are now included as part of the IPPS annual update document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children's hospitals, cancer hospitals, and RNHCIs continue to be paid solely under a reasonable cost-based system subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR Parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123(a) and (c) of Public Law 106–113 and section 307(b)(1) of Public Law 106–554 (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH's payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006, all LTCHs are paid 100 percent of the Federal rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR Part 412, Subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v)(1)(A) of the Act and existing regulations under 42 CFR Parts 413 and 415.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital's number of residents in that period and the hospital's costs per resident in a base year. The existing regulations governing payments to the

various types of hospitals are located in 42 CFR Part 413.

C. Provisions of the Patient Protection and Affordable Care Act (Pub. L. 111–148) and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) Applicable to FY 2013

The Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), enacted on March 30, 2010, made a number of changes that affect the IPPS and the LTCH PPS. (Pub. L. 111–148 and Pub. L. 111–152 are collectively referred to as the ''Affordable Care Act.'') A number of the provisions of the Affordable Care Act affect the updates to the IPPS and the LTCH PPS and providers and suppliers. The provisions of the Affordable Care Act that were applicable to the IPPS and the LTCH PPS for FYs 2010, 2011, and 2012 were implemented in the June 2, 2010 **Federal Register** notice (75 FR 31118), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50042) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51476).

In this final rule, we are implementing, or continuing in FY 2013 to implement, the following provisions (or portions of the following provisions) of the Affordable Care Act that are applicable to the IPPS, the LTCH PPS, and PPS-exempt cancer hospitals:

- Section 3001 of Public Law 111–148, which provides for establishment of a hospital inpatient value-based purchasing program under which value-based incentive payments will be made in a fiscal year to hospitals that meet performance standards for the performance period for that fiscal year.
- Section 3004 of Public Law 111–148, which provides for the submission of quality data for LTCHs in order to receive the full annual update to the payment rates beginning with the FY 2014 rate year.
- Section 3005 of Public Law 111–148, which provides for the establishment of a quality reporting program for PPS-exempt cancer hospitals with respect to FY 2014, and for subsequent program years.
- Section 3025 of Public Law 111–148, which establishes a hospital readmissions reduction program and requires the Secretary to reduce payments to applicable hospitals with excess readmissions effective for discharges beginning on or after October 1, 2012.
- Section 3125 and 10314 of Public Law 111–148, which modified the definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals, effective only for discharges occurring during FYs 2011 and 2012. Beginning with FY 2013, the preexisting low-volume hospital qualifying criteria and payment adjustment, as implemented in FY 2005, will resume.
- Section 3401 of Public Law 111–148, which provides for the incorporation of productivity adjustments into the market basket updates for IPPS hospitals and LTCHs.
- Section 10324 of Public Law 111–148, which provides for a wage adjustment for hospitals located in frontier States.
- Sections 3401 and 10319 of Public Law 111–148 and section 1105 of Public Law 111–152, which revise certain market basket update percentages for IPPS and LTCH PPS payment rates for FY 2013.
- Section 3137 of Public Law 111–148, which requires the Secretary to submit to Congress a report that includes a plan to comprehensively reform the Medicare wage index under the IPPS. In developing the plan, the Secretary was directed to take into consideration the goals for reforming the wage index that were set forth by MedPAC in its June 2007 Report to Congress and to consult with relevant affected parties.
- Section 5503 of Public Law 111–148, as amended by Public Law 111–152 and section 203 of Public Law 111–309, which provides for the reduction in FTE resident caps for direct GME under Medicare for certain hospitals, and the ''redistribution'' of the estimated number of FTE resident slots to other qualified hospitals. In addition, section 5503 requires the application of these provisions to IME in the same manner as the FTE resident caps for direct GME.
- Section 5506 of Public Law 111–148, which added a provision to the Act that instructs the Secretary to establish a process by regulation under which, in the event a teaching hospital closes, the Secretary will permanently increase the FTE resident caps for hospitals that meet certain criteria up to the number of the closed hospital's FTE resident caps. The Secretary is directed to ensure that the aggregate number of FTE resident cap slots distributed is equal to the amount of slots in the closed hospital's direct GME and IME FTE resident caps, respectively.

D. Issuance of a Notice of Proposed Rulemaking

On May 11, 2012, we published in the **Federal Register** (77 FR 27870), a proposed rule that set forth proposed changes to the Medicare IPPS for operating costs and for capital-related costs of acute care hospitals in FY 2013. We also set forth proposed changes relating to payments for IME costs and payments to certain hospitals that continue to be excluded from the IPPS and paid on a reasonable cost basis. In addition, in the proposed rule, we set forth proposed changes to the payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2013.

Below is a summary of the major changes that we proposed to make:

1. Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we include—

- Proposed changes to MS–DRG classifications based on our yearly review.
- Proposed application of the documentation and coding adjustment for FY 2013 resulting from implementation of the MS–DRG system.
- A discussion of the Research Triangle Institute, International (RTI) reports and recommendations relating to charge compression.
- Proposed recalibrations of the MS–DRG relative weights.
- Proposed changes to hospital-acquired conditions (HACs) and a listing and discussion of HACs, including infections, that would be subject to the statutorily required adjustment in MS–DRG payments for FY 2013.
- A discussion of the FY 2013 status of new technologies approved for add-on payments for FY 2012 and a presentation of our evaluation and analysis of the FY 2013 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108–173, obtained in a town hall meeting).

2. Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to the proposed rule, we are proposing revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include the following:

- The proposed FY 2013 wage index update using wage data from cost reporting periods beginning in FY 2009.
- Analysis and implementation of the proposed FY 2013 occupational mix adjustment to the wage index for acute care hospitals.
- Proposed revisions to the wage index for acute care hospitals based on hospital redesignations and reclassifications.
- The proposed adjustment to the wage index for acute care hospitals for

FY 2013 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.

- The timetable for reviewing and verifying the wage data used to compute the proposed FY 2013 hospital wage index.
- Determination of the labor-related share for the proposed FY 2013 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs and GME Costs

In section IV. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR Parts 412, 413, and 476, including the following:

- The proposed rules for payment adjustments under the Hospital Readmissions Reduction Program based on hospital readmission measures and the process for hospital review and correction of those rates.
- Proposed clarification regarding the duration of the classification status of SCHs.
- The proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed payment adjustment for low-volume hospitals for FY 2013.
- The statutorily required IME adjustment factor for FY 2013, a clarification of the requirements of timely filing of claims for Medicare Advantage enrollees for IME, direct GME, and nursing and allied health education payment purposes, and a proposal to apply the timely filing requirements to the submission of no-pay bills for purposes of calculating the DSH payment adjustment.
- Proposal for counting labor and delivery beds in the formula for determining the payment adjustment for disproportionate share hospitals and IME payments.
- Discussion of the expiration of the MDH program in FY 2012.
- Proposed changes to the inpatient hospital update for FY 2013, including incorporation of a productivity adjustment.
- Proposed changes relating to GME and IME payments, including proposed changes in new growth period for new residency programs from 3 years to 5 years for new teaching hospitals; proposals and clarifications related to the 5-year period following implementation of reductions and increases to hospitals' FTE resident caps; and proposals and clarifications related to the preservation of resident cap positions from closed hospitals.
- Proposed conforming changes to regulations relating to reporting requirements for pension costs for Medicare cost-finding purposes.
- Discussion of the Rural Community Hospital Demonstration Program and a proposal for making a budget neutrality adjustment for the demonstration program.
- Proposed delay in the effective date of policies relating to hospital routine services furnished under arrangements.

4. FY 2013 Policy Governing the IPPS for Capital-Related Costs

In section V. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2013 and the proposed MS–DRG documentation and coding adjustment for FY 2013.

5. Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VI. of the preamble of the proposed rule, we discuss proposed changes to payments to certain excluded hospitals.

6. Changes to the LTCH PPS

In section VII. of the preamble of the proposed rule, we set forth proposed changes to the payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2013. Specifically, we proposed the following major changes: A 1-year extension of the moratorium on the full implementation of the ''25-percent threshold'' payment adjustment at 42 CFR 412.534 and 412.536; a ''one-time prospective adjustment'' to the standard Federal rate phased in over a 3-year period (which would not be applicable to payments for discharges occurring on or before December 28, 2012, consistent with the statute); an LTCH-specific market basket; and annual updates to the LTCH PPS standard Federal rate and to other payment factors.

7. Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section VIII. of the preamble of the proposed rule, we address—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program as a condition for receiving the full applicable percentage increase.
- The proposed establishment of a quality reporting program for PPS-exempt cancer hospitals.
- Proposed requirements for the Hospital Value-Based Purchasing Program.
- Proposed requirements for the quality reporting measures under the LTCH Quality Reporting (LTCHQR) Program.
- Proposed quality data reporting and other requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program.
- The establishment of the Inpatient Psychiatric Facility Quality Reporting Program (IPFQRP).

8. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2013 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2013 for certain hospitals excluded from the IPPS.

9. Determining Prospective Payment Rates for LTCHs

In the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2013 prospective standard Federal rate. We proposed to establish the adjustments for wage levels, the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the fixed-loss amount, and the LTCH cost-to-charge ratios (CCRs) under the LTCH PPS.

10. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact that the proposed changes would have on affected acute care hospitals, LTCHs, ASCs, and IPFs.

11. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2013 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.

• The standard Federal rate for hospital inpatient services furnished by LTCHs.

12. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2012 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs under the IPPS, for hospitals and distinct part hospital units excluded from the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2012 report or to obtain a copy of the report, contact MedPAC at (202) 220–3700 or visit MedPAC's Web site at: *http://www.medpac.gov*.

We received approximately 436 timely pieces of correspondence from the public in response to the FY 2013 IPPS/LTCH PPS proposed rule. We summarize these public comments and present our responses under the specific subject areas of this final rule.

II. Changes to Medicare Severity Diagnosis-Related Group (MS–DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as DRGs) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Congress recognized that it would be necessary to recalculate the DRG relative weights periodically to account for changes in resource consumption. Accordingly, section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS–DRG Reclassifications

For general information about the MS–DRG system, including yearly reviews and changes to the MS–DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43764 through 43766), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50053 through 50055), and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51485 through 51487).

C. Adoption of the MS–DRGs in FY 2008

For information on the adoption of the MS–DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

D. FY 2013 MS–DRG Documentation and Coding Adjustment, Including the Applicability to the Hospital-Specific Rates and the Puerto Rico-Specific Standardized Amount

1. Background on the Prospective MS–DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Public Law 110–90

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS–DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS–DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. (Currently, there are 751 MS–DRGs. By increasing the number of MS–DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS–DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS–DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of −4.8 percent to the national standardized amount. We provided for phasing in this −4.8 percent adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of −1.2 percent for FY 2008, −1.8 percent for FY 2009, and −1.8 percent for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007, Public Law 110–90. Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to −0.6 percent for FY 2008 and −0.9 percent for FY 2009, and we finalized the FY 2008 adjustment through rulemaking, effective October 1, 2007 (72 FR 66886).

For FY 2009, section 7(a) of Public Law 110–90 required a documentation and coding adjustment of −0.9 percent, and we finalized that adjustment through rulemaking (73 FR 48447). The documentation and coding adjustments established in the FY 2008 IPPS final rule with comment period, which reflected the amendments made by Public Law 110–90, are cumulative. As a result, the −0.9 percent documentation and coding adjustment for FY 2009 was in addition to the −0.6 percent adjustment for FY 2008, yielding a combined effect of −1.5 percent.

2. Prospective Adjustment to the Average Standardized Amounts Required by Section 7(b)(1)(A) of Public Law 110–90

Section 7(b)(1)(A) of Public Law 110–90 requires that, if the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different than the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, the Secretary shall make an appropriate adjustment under section 1886(d)(3)(A)(vi) of the Act. Section 1886(d)(3)(A)(vi) of the Act authorizes adjustments to the average standardized amounts for subsequent fiscal years in order to eliminate the effect of such coding or classification changes. These adjustments are intended to ensure that future annual

aggregate IPPS payments are the same as the payments that otherwise would have been made had the prospective adjustments for documentation and coding applied in FY 2008 and FY 2009 reflected the change that occurred in those years.

3. Recoupment or Repayment Adjustments in FYs 2010 Through 2012 Required by Public Law 110–90

If, based on a retroactive evaluation of claims data, the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different from the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an additional adjustment to the standardized amounts under section 1886(d) of the Act. This adjustment must offset the estimated increase or decrease in aggregate payments for FYs 2008 and 2009 (including interest) resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustment applied under section 7(a) of Public Law 110–90. This adjustment is in addition to making an appropriate adjustment to the standardized amounts under section 1886(d)(3)(A)(vi) of the Act as required by section 7(b)(1)(A) of Public Law 110–90. That is, these adjustments are intended to recoup (or repay, in the case of underpayments) spending in excess of (or less than) spending that would have occurred had the prospective adjustments for changes in documentation and coding applied in FY 2008 and FY 2009 precisely matched the changes that occurred in those years. Public Law 110–90 requires that the Secretary only make these recoupment or repayment adjustments for discharges occurring during FYs 2010, 2011, and 2012.

4. Retrospective Evaluation of FY 2008 and FY 2009 Claims Data

In order to implement the requirements of section 7 of Public Law 110–90, we performed a retrospective evaluation of the FY 2008 data for claims paid through December 2008 using the methodology first described in the FY 2009 IPPS/LTCH PPS final rule (73 FR 43768 and 43775) and later discussed in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43768 through 43772). We performed the same analysis for FY 2009 claims data using the same methodology as we did for FY 2008 claims (75 FR 50057 through 50068). The results of the analysis for the FY 2011 proposed and final rules, and subsequent evaluations in FY 2012, supported that the 5.4 percent estimate accurately reflected the FY 2009 increases in documentation and coding under the MS–DRG system. We were persuaded by both MedPAC's analysis (as discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50064 through 50065)) and our own review of the methodologies recommended by various commenters that the methodology we employed to determine the required documentation and coding adjustments was sound.

5. Prospective Adjustments for FY 2008 and FY 2009 Authorized by Section 7(b)(1)(A) of Public Law 110–90 and Section 1886(d)(3)(A)(vi) of the Act

In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43767 through 43777), we opted to delay the implementation of any documentation and coding adjustment until a full analysis of case-mix changes based on FY 2009 claims data could be completed. We refer readers to the FY 2010 IPPS/RY LTCH PPS final rule for a detailed description of our proposal, responses to comments, and finalized policy. After analysis of the FY 2009 claims data for the FY 2011 IPPS/LTCH PPS final rule (75 FR 50057 through 50073), we found a total prospective documentation and coding effect of 1.054 percent. After accounting for the −0.6 percent and the −0.9 percent documentation and coding adjustments in FYs 2008 and 2009, we found a remaining documentation and coding effect of 3.9 percent. As we have discussed, an additional cumulative adjustment of −3.9 percent would be necessary to meet the requirements of section 7(b)(1)(A) of Public Law 110–90 to make an adjustment to the average standardized amounts in order to eliminate the full effect of the documentation and coding changes that do not reflect real changes in case-mix on future payments. Unlike section 7(b)(1)(B) of Public Law 110–90, section 7(b)(1)(A) does not specify when we must apply the prospective adjustment, but merely requires us to make an ''appropriate'' adjustment. Therefore, as we stated in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50061), we believe we have some discretion as to the manner in which we apply the prospective adjustment of −3.9 percent. We indicated that applying the full prospective adjustment of −3.9 percent for FY 2011, in combination with the proposed recoupment adjustment of −2.9 percent in FY 2011 (discussed below) would require an aggregate adjustment of −6.8 percent. As we discussed extensively in the FY 2011 IPPS/LTCH PPS final rule, it has been our practice to moderate payment adjustments when necessary to mitigate the effects of significant downward adjustments on hospitals, to avoid what could be widespread, disruptive effects of such adjustments on hospitals. Therefore, we stated that we believed it was appropriate to not implement the −3.9 percent prospective adjustment in FY 2011 because we finalized a −2.9 percent recoupment adjustment for that year. Accordingly, we did not propose a prospective adjustment under section 7(b)(1)(A) of Public Law 110–90 for FY 2011 (75 FR 23868 through 23870). We note that, as a result, payments in FY 2011 (and in each future year until we implement the requisite adjustment) would be 3.9 percent higher than they would have been if we had implemented an adjustment under section 7(b)(1)(A) of Public Law 110–90. Our actuaries estimate that this 3.9 percentage point increase will result in an aggregate payment of approximately $4 billion. We also noted that payments in FY 2010 were also expected to be 3.9 percent higher than they would have been if we had implemented an adjustment under section 7(b)(1)(A) of Public Law 110–90, which our actuaries estimated increased aggregate payments by approximately $4 billion in FY 2010.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51489 and 51497), we indicated that because further delay of this prospective adjustment will result in a continued accrual of unrecoverable overpayments, it was imperative that we implement a prospective adjustment for FY 2012, while recognizing CMS' continued desire to mitigate the effects of any significant downward adjustments to hospitals. Therefore, we implemented a −2.0 percent prospective adjustment (a reduction of a proposed −3.15 percent adjustment) to the standardized amount to partially eliminate the full effect of the documentation and coding changes that do not reflect real changes in case-mix on future payments.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27887), for FY 2013, we proposed to complete the prospective portion of the adjustment required under section 7(b)(1)(B) of Public Law 110–90. We proposed a −1.9 percent adjustment to the standardized amount for FY 2013. We stated that this adjustment would remove the remaining effect of the documentation and coding changes that do not reflect real changes in case-mix that occurred in FY 2008 and FY 2009.

We indicated we believe it is imperative to implement the full remaining adjustment, as any further delay would result in an overstated standardized amount in FY 2013 and any future years until a full adjustment is made. We believe that the offsetting nature of the FY 2012 recoupment adjustment (described in section II.D.6. of the proposed rule (77 FR 27887 through 27888) and the preamble of this final rule) will mitigate any negative financial impacts of this prospective adjustment.

Comment: MedPAC submitted a comment fully supporting the proposed documentation and coding adjustments, citing its 2011 comment letter regarding the FY 2012 IPPS/LTCH PPS proposed rule for its support of the CMS methodology and the calculation of documentation and coding effect estimates. MedPAC reiterated its recommendation that Congress grant the Secretary the authority to recapture overpayments due to documentation and coding effects that occurred after FY 2009.

Response: We appreciate MedPAC's analysis and continued support of the methodology to calculate the impact of documentation and coding on hospital payments. As stated in the proposed rule, at this point, we only have the authority to prospectively adjust the standardized amount to prevent future overpayments due to the effects of documentation and coding. We believe that any overpayments made in FY 2008 and FY 2009 have already been recaptured, and any additional past overpayments cannot be recovered without additional statutory authority.

Comment: Many commenters, including national hospital associations, continue to argue that the methodology employed by CMS significantly overstated the impact of documentation and coding changes. Commenters believed that the CMS methodology assumes that case-mix index has held constant over several fiscal years, and they view this as a flawed assumption. Commenters submitted a case-mix trend analysis, noting that this analysis was updated for new claims data and revised relative to similar analyses submitted as public comment on documentation and coding in prior IPPS rulemaking. According to the commenters, their case-mix trend analysis indicated only a 3.5 percent documentation and coding increase, which equals the total adjustment already implemented by CMS. These commenters argued that no further cuts are necessary to the standardized amount, and that the proposed adjustments are excessive.

Response: We disagree that the presented trend analysis provides a more accurate estimate of the documentation and coding effect. We continue to believe that the proposed methodology, which removes real-case mix growth from the calculation, yields a more straightforward and direct estimate. We also believe that the estimates obtained using our methodology are consistent with real case-mix growth as demonstrated by MedPAC in its 2011 public comment submitted on the FY 2012 IPPS/LTCH PPS proposed rule. We refer readers to our response in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51494–51496) for a more detailed response.

Comment: One commenter, a national hospital association, disagreed with CMS' response from prior year rulemaking that ''changes in case-mix do not necessarily follow a consistent pattern over time.'' The commenter indicated that the simple linear regression of case-mix growth it submitted was the most conservative estimate of potential documentation and coding effect, and that more advanced, nonlinear statistical methods were better statistical fits, and suggested an even smaller impact due to documentation and coding.

Response: We are not convinced that further statistical testing of a case-mix trend based analysis would yield more accurate results, nor did we intend to suggest that nonlinear regression of case-mix growth would be a more appropriate measure of documentation and coding effects. The estimates submitted by the commenter presented a theoretical documentation and coding effect ranging from +3.5 percent to −1.9 percent. As discussed in prior year rulemaking, the inclusion of additional years in the suggested CMI trend based analysis caused documentation and coding effect estimates to vary significantly, and now the commenter argues that different statistical interpretations also may cause large fluctuations. With respect to the trend analysis, we continue to believe that the determination of an appropriate historical trend is less straightforward than our proposed methodology, which removes real case-mix growth from the calculation. Again, we refer readers to our more detailed response to public comments in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51494 through 51496).

Comment: One commenter stated that coding offsets exceeding total case-mix growth duplicate the productivity adjustment mandated by the Affordable Care Act and should not be implemented. The commenter stated that decreases in real case-mix represent an improvement in productivity already adjusted for in the productivity adjustment.

Response: Section 3401(a) of the Affordable Care Act requires that the IPPS operating market basket update be adjusted by changes in economy-wide productivity for FY 2012 (and each subsequent fiscal year). The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, cost reporting period, or other annual period). We disagree with the commenter that this statutory provision somehow interacts with our documentation and coding adjustment authority. This statutory provision does not in any way reference our statutory documentation and coding adjustment authority, nor does our documentation and coding authority in any way reference the market basket adjustment for economy-wide productivity. The methodology used for determining the IPPS rates, and specifically our methodology for estimating documentation and coding effects was made available to the general public (through notice and comment rulemaking) prior to the enactment of the Affordable Care Act. However the law did not reference nor change our authority in light of the productivity adjustment.

In addition, as we have previously indicated, our methodology for estimating documentation and coding removes changes in real case-mix from the calculation. Although we disagree that decreases in real case-mix represent an improvement in productivity in the context of section 3401(a), even if for purposes of discussion one were to accept this assertion, this is not a documentation and coding adjustment issue. The proper place for any offset would be to the productivity adjustment. Section 3401(a) of the Affordable Care Act provides no authority for such an adjustment for decreases in real case-mix.

After consideration of the public comments we received, we do not believe that any alternative methodologies would produce more accurate estimates of documentation and coding effects. We are finalizing, as proposed, a −1.9 percent documentation and coding adjustment to the standardized amount. This adjustment will complete our statutory obligation to account for remainder of documentation and coding that did not reflect real changes in case-mix for

discharges occurring during FY 2008 or FY 2009.

6. Recoupment or Repayment Adjustment Authorized by Section 7(b)(1)(B) of Public Law 110–90

As discussed in section II.D.3. of this preamble, section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an adjustment to the standardized amounts under section 1886(d) of the Act to offset the estimated increase or decrease in aggregate payments for FY 2008 and FY 2009 (including interest) resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustments applied under section 7(a) of Public Law 110–90. This determination must be based on a retrospective evaluation of claims data. Our actuaries estimated that this 5.8 percentage point increase resulted in an increase in aggregate payments of approximately $6.9 billion. Therefore, as discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50062 through 50067), we determined that an aggregate adjustment of −5.8 percent in FYs 2011 and 2012 would be necessary in order to meet the requirements of section 7(b)(1)(B) of Public Law 110–90 to adjust the standardized amounts for discharges occurring in FYs 2010, 2011, and/or 2012 to offset the estimated amount of the increase in aggregate payments (including interest) in FYs 2008 and 2009.

It is often our practice to phase in rate adjustments over more than one year in order to moderate the effect on rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases, in the FY 2011 IPPS/LTCH PPS final rule, we made an adjustment to the standardized amount of −2.9 percent, representing approximately half of the aggregate adjustment required under section 7(b)(1)(B) of Public Law 110–90, for FY 2011. An adjustment of this magnitude allowed us to moderate the effects on hospitals in one year while simultaneously making it possible to implement the entire adjustment within the timeframe required under section 7(b)(1)(B) of Public Law 110–90 (that is, no later than FY 2012).

As we stated in prior rulemaking, a major advantage of making the −2.9 percent adjustment to the standardized amount in FY 2011 was that, because the required recoupment adjustment is not cumulative, we anticipated removing the FY 2011 −2.9 percent adjustment from the rates (in other words, making a positive 2.9 percent adjustment to the rates) in FY 2012, at the same time that the law required us to apply the remaining approximately −2.9 percent adjustment required by section 7(b)(1)(B) of Public Law 110–90.

Therefore, for FY 2012, in accordance with the timeframes set forth by section 7(b)(1)(B) of Public Law 110–90, and consistent with the discussion in the FY 2011 IPPS/LTCH PPS final rule, we completed the recoupment adjustment by implementing the remaining −2.9 percent adjustment, in addition to removing the effect of the −2.9 percent adjustment to the standardized amount finalized for FY 2011 (76 FR 51489 and 51498). Because these adjustments, in effect, balanced out, there was no year-to-year change in the standardized amount due to this recoupment adjustment for FY 2012.

The −2.9 percent adjustment in each of the two previous fiscal years completed the required recoupment for overpayments due to documentation and coding effects on discharges occurring in FYs 2008 and 2009. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27888), we proposed to make a final +2.9 percent adjustment to the standardized amount. This adjustment would remove the effect of the one-time −2.9 percent adjustment implemented in FY 2012. As stated in the proposed rule, we continue to believe that this is a reasonable and fair approach that satisfies the requirements of the statute while substantially moderating the financial impact on hospitals.

We did not receive any specific public comments regarding this adjustment. We did receive public comments requesting an additional +0.72 percent adjustment to account for cumulative overestimates of documentation and coding effects. We will address these comments in a later section. We are finalizing a +2.9 percent adjustment, as proposed, completing the recoupment portion of section 7(b)(1)(B) of Public Law 110–90. We note that with this positive adjustment, according to our estimates, all overpayments made in FY 2008 and FY 2009 have been fully recaptured with appropriate interest, and the standardized amount has been returned to the appropriate baseline.

7. Background on the Application of the Documentation and Coding Adjustment to the Hospital-Specific Rates

Under section 1886(d)(5)(D)(i) of the Act, SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge. Under section 1886(d)(5)(G) of the Act, MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital-specific rate based on the greatest of the FY 1982, FY 1987, or FY 2002 costs per discharge. (We note that, under current law, the MDH program expires at the end of FY 2012, as discussed in section IV.G. of this final rule.) In the FY 2008 IPPS final rule with comment period (72 FR 47152 through 47188), we established a policy of applying the documentation and coding adjustment to the hospital-specific rates. In that final rule with comment period, we indicated that because SCHs and MDHs use the same DRG system as all other hospitals, we believe they should be equally subject to the budget neutrality adjustment that we are applying for adoption of the MS–DRGs to all other hospitals. In establishing this policy, we relied on section 1886(d)(3)(A)(vi) of the Act, which provides us with the authority to adjust ''the standardized amount'' to eliminate the effect of changes in documentation and coding that do not reflect real changes in case-mix.

However, in the final rule that appeared in the **Federal Register** on November 27, 2007 (72 FR 66887 through 67888), we rescinded the application of the documentation and coding adjustment to the hospital-specific rates effective October 1, 2007. In that final rule, we indicated that, while we still believe it would be appropriate to apply the documentation and coding adjustment to the hospital-specific rates, upon further review, we decided that the application of the documentation and coding adjustment to the hospital-specific rates is not consistent with the plain meaning of section 1886(d)(3)(A)(vi) of the Act, which only mentions adjusting ''the standardized amount'' under section 1886(d) of the Act and does not mention adjusting the hospital-specific rates.

In the FY 2009 IPPS proposed rule (73 FR 23540), we indicated that we continued to have concerns about this issue. Because hospitals paid based on the hospital-specific rate have their Medicare claims grouped using the same MS–DRG system as other IPPS hospitals, we believe they have the potential to realize increased payments from documentation and coding changes that do not reflect real increases in patient severity of illness. In section 1886(d)(3)(A)(vi) of the Act, Congress stipulated that hospitals paid based on the standardized amount should not

receive additional payments based on the effect of documentation and coding changes that do not reflect real changes in case-mix. Similarly, we believe that hospitals paid based on the hospital-specific rates should not have the potential to realize increased payments due to documentation and coding changes that do not reflect real increases in patient severity of illness. While we continue to believe that section 1886(d)(3)(A)(vi) of the Act does not provide explicit authority for application of the documentation and coding adjustment to the hospital-specific rates, we believe that we have the authority to apply the documentation and coding adjustment to the hospital-specific rates using our special exceptions and adjustment authority under section 1886(d)(5)(I)(i) of the Act. The special exceptions and adjustment provision authorizes us to provide ''for such other exceptions and adjustments to [IPPS] payment amounts * * * as the Secretary deems appropriate.'' In the FY 2009 IPPS final rule (73 FR 48448 through 48449), we indicated that, for the FY 2010 rulemaking, we planned to examine our FY 2008 claims data for hospitals paid based on the hospital-specific rate. We further indicated that if we found evidence of significant increases in case-mix for patients treated in these hospitals that do not reflect real changes in case-mix, we would consider proposing application of the documentation and coding adjustments to the FY 2010 hospital-specific rates under our authority in section 1886(d)(5)(I)(i) of the Act.

In response to public comments received on the FY 2009 IPPS proposed rule, we stated in the FY 2009 IPPS final rule that we would consider whether such a proposal was warranted for FY 2010. To gather information to evaluate these considerations, we indicated that we planned to perform analyses on FY 2008 claims data to examine whether there has been a significant increase in case-mix for hospitals paid based on the hospital-specific rate. If we found that application of the documentation and coding adjustment to the hospital-specific rates for FY 2010 was warranted, we indicated that we would propose to make such an adjustment in the FY 2010 IPPS/RY 2010 LTCH PPS proposed rule.

8. Documentation and Coding Adjustment to the Hospital-Specific Rates for FY 2011 and Subsequent Fiscal Years

In the FY 2010 IPPS/RY 2010 LTCH PPS proposed rule and final rule, we discussed our retrospective evaluation of the FY 2008 claims data for SCHs and MDHs using the same methodology described earlier for other IPPS hospitals. We found that, independently for both SCHs and MDHs, the change due to documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 slightly exceeded the proposed 2.5 percent result discussed earlier for other IPPS hospitals, but did not significantly differ from that result. We refer readers to those FY 2010 proposed and final rules for a more complete discussion (74 FR 24098 through 24100 and 74 FR 43775 through 43776, respectively).

As we have noted previously, because hospitals paid on the basis of their hospital-specific rate, including SCHs (and MDHs until the end of FY 2012), use the same MS–DRG system as all other IPPS hospitals, we believe they have the potential to realize increased payments from documentation and coding changes that do not reflect real increases in patient severity of illness. Therefore, we believe they should be equally subject to a prospective budget neutrality adjustment that we are applying for adoption of the MS–DRGs to all other hospitals. We believe the documentation and coding estimates for all subsection (d) hospitals should be the same. While the findings for the documentation and coding effect for all IPPS hospitals are similar to the effect for SCHs (and were slightly different to the effect for MDHs), we continue to believe that this is the appropriate policy so as to neither advantage or disadvantage different types of providers. Our best estimate, based on the most recently available data, is that a cumulative adjustment of −5.4 percent is required to eliminate the full effect of the documentation and coding changes on future payments to hospitals paid on the basis of their hospital-specific rate. We note that, for FY 2013, this adjustment would only apply to the SCHs because the MDH program expires in FY 2012 (as discussed in section IV.G. of this preamble). Unlike the case of standardized amounts paid to IPPS hospitals, prior to FY 2011, we had not made any previous adjustments to the hospital-specific rates paid to SCHs (and MDHs) to account for documentation and coding changes. Therefore, the entire −5.4 percent adjustment needed to be made, as opposed to a −3.9 percent remaining adjustment for IPPS hospitals.

After finalizing a −2.9 percent prospective adjustment in FY 2011 (75 FR 50067 through 50071), we finalized a prospective adjustment to the hospital-specific rate of −2.0 percent for FY 2012 (76 FR 51499) instead of our proposed adjustment of −2.5 percent. Making this level of adjustment allowed CMS to maintain, for FY 2012, consistency in payment rates for different IPPS hospitals paid using the MS–DRG. We indicated in the final rule that because this −2.0 percent adjustment no longer reflects the entire remaining required adjustment amount of −2.5 percent, an additional −0.5 percent adjustment to the hospital-specific payment rates would be required in future rulemaking.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27889), we proposed to complete the remaining prospective adjustment to account for the documentation and coding effect that occurred in FY 2008 and FY 2009 by applying a −0.5 percent adjustment to the hospital-specific rate. We continue to believe that SCHs had the same opportunity to benefit from improvements in documentation and coding that did not reflect an increase in patient severity, and we continue to believe that any resulting adjustments should be applied similarly to all subsection (d) hospitals, when possible. For FY 2013, we proposed a prospective adjustment of −1.9 percent to the standardized amount. Therefore, we stated in the proposed rule (77 FR 27889) that we believed it was also appropriate to propose a −0.5 percent adjustment to the hospital-specific rate for FY 2013.

Comment: Commenters questioned CMS' statutory authority to apply documentation and coding adjustments to hospitals receiving the hospital-specific rate. The commenters stated that section 1886(d)(3)(A)(vi) of the Act specifically required the Secretary to determine if overpayments were made, and make appropriate adjustments to the standardized amount. The commenters contended that the broad authority granted under section 1886(d)(5)(I)(i) of the Act is not so broad as to permit CMS to extend the scope of a legislative directive that was specifically limited to hospitals paid under a prospective payment system.

Response: We continue to disagree that we do not have the authority to make prospective documentation and coding adjustments to the hospital-specific rate. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51499) for further discussion on our authority granted under section 1886(d)(5)(I)(i) of the Act. We do not believe that specific discretionary authority under section 1886(d)(3)(A)(iv) of the Act creates a limit on the broad authority granted under section 1886(d)(5)(I) of the Act. In this final rule, we are finalizing a

prospective −0.5 percent adjustment to the hospital-specific rate to account for documentation and coding effects for discharges occurring in FY 2008 and FY 2009.

9. Application of the Documentation and Coding Adjustment to the Puerto Rico-Specific Standardized Amount

a. Background

Puerto Rico hospitals are paid based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. As noted previously, the documentation and coding adjustment we adopted in the FY 2008 IPPS final rule with comment period relied upon our authority under section 1886(d)(3)(A)(vi) of the Act, which provides the Secretary the authority to adjust ''the standardized amounts computed under this paragraph'' to eliminate the effect of changes in documentation and coding that do not reflect real changes in case-mix. Section 1886(d)(3)(A)(vi) of the Act applies to the national standardized amounts computed under section 1886(d)(3) of the Act, but does not apply to the Puerto Rico-specific standardized amount computed under section 1886(d)(9)(C) of the Act.

While section 1886(d)(3)(A)(vi) of the Act is not applicable to the Puerto Rico-specific standardized amount, we believe that we have the authority to apply the documentation and coding adjustment to the Puerto Rico-specific standardized amount using our special exceptions and adjustment authority under section 1886(d)(5)(I)(i) of the Act. Similar to SCHs that are paid based on the hospital-specific rate, we believe that Puerto Rico hospitals that are paid based on the Puerto Rico-specific standardized amount should not have the potential to realize increased payments due to documentation and coding changes that do not reflect real increases in patient severity of illness. Consistent with the approach described for SCHs and MDHs in the FY 2009 IPPS final rule (73 FR 48449), we indicated that we planned to examine our FY 2008 claims data for hospitals in Puerto Rico. We indicated in the FY 2009 IPPS proposed rule (73 FR 23541) that if we found evidence of significant increases in case-mix for patients treated in these hospitals, we would consider proposing to apply documentation and coding adjustments to the FY 2010 Puerto Rico-specific standardized amount under our authority in section 1886(d)(5)(I)(i) of the Act.

b. Documentation and Coding Adjustment to the Puerto Rico-Specific Standardized Amount

As discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50071 through 50073), using the same methodology we applied to estimate documentation and coding changes under IPPS for non-Puerto Rico hospitals, our best estimate was that, for documentation and coding that occurred over FY 2008 and FY 2009, a cumulative adjustment of −2.6 percent was required to eliminate the full effect of the documentation and coding changes that do not reflect real changes in case-mix on future payments from the Puerto Rico-specific rate. As we stated above, we believe it is important to maintain both consistency and equity among all hospitals paid on the basis of the same MS–DRG system. At the same time, however, we recognize that the estimated cumulative impact on aggregate payment rates resulting from implementation of the MS–DRG system was smaller for Puerto Rico hospitals as compared to IPPS hospitals and SCHs. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50072 through 50073), we stated that we believed that a full prospective adjustment was the most appropriate means to take into full account the effect of documentation and coding changes on payments, while maintaining equity as much as possible between hospitals paid on the basis of different prospective rates.

Because the Puerto Rico-specific rate received a full prospective adjustment of −2.6 percent in FY 2011, we proposed no further adjustment in the proposed rule for FY 2012. For FY 2013, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27889), we also did not propose any adjustment to the Puerto Rico-specific rate.

10. Prospective Adjustments for FY 2010 Documentation and Coding Effect

Section 7(b)(1)(A) of Public Law 110–90 required CMS to make prospective documentation and coding adjustments under section 1886(d)(3)(A)(iv) of the Act if, based upon a review of FY 2008 and FY 2009 discharges, we determined that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix during FY 2008 or FY 2009 and that were different than the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90. However, section 1886(d)(3)(A)(vi) of the Act authorizes adjustments to the average standardized amounts if the Secretary determines such adjustments to be necessary for any subsequent fiscal years in order to eliminate the effect of coding or classification changes that do not reflect real changes in case-mix. After review of comments and recommendations received in a FY 2012 comment letter from MedPAC (available on the Internet at: *http://www.medpac.gov/documents/06172011_FY12IPPS_MedPAC_COMMENT.pdf*), we analyzed claims data in FY 2010 to determine whether any additional adjustment would be required to ensure that the introduction of MS–DRGs was implemented in a budget neutral manner. While we expect that the impacts of documentation and coding behavior in response to the introduction of MS–DRGs in FY 2008 will eventually decline to insignificant levels, we analyzed FY 2010 data on claims paid through December 2011 using the same claims-based methodology as described in previous rulemaking (73 FR 43768 and 43775). We determined a total prospective documentation and coding effect of 1.008 for FY 2010. Our actuaries have estimated that this 0.8 percentage point increase resulted in an increase in aggregate payments of approximately $1.19 billion in FY 2010. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27890), we proposed an additional −0.8 percent adjustment to account for the effects of documentation and coding changes that did not reflect real changes in case-mix in FY 2010.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27890), we stated that the combined total prospective adjustment to the standardized amount proposed for FY 2013 under Public Law 110–90 to account for documentation and coding effects in FY 2008 and FY 2009 and under section 1886(d)(3)(A)(vi) of the Act to account for documentation and coding effect in FY 2010 was −2.7 percent (−1.9 percent plus −0.8 percent). We indicated that the proposed adjustment would eliminate the effect of documentation and coding that did not reflect real changes in case-mix for discharges occurring during FYs 2008, 2009, and 2010. While we did not make proposals regarding future fiscal years in the proposed rule, we plan to continue to monitor and analyze additional claims data and make adjustments, when necessary, as authorized under section 1886(d)(3)(A)(vi) of the Act. We noted that the proposed total adjustment to the proposed FY 2013 standardized amount would be +0.2 percent because these prospective adjustments will be offset by the completion of the recoupment

adjustment under section 7(b)(1)(B) of Public Law 110–90, as discussed below.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27890), we noted that while we have decided to review FY 2010 claims data to determine whether additional prospective adjustments are necessary (as discussed earlier), section 7(b)(1)(B) of Public Law 110–90 does not authorize CMS to calculate any retrospective adjustment for overpayments made in FY 2010, nor to recover any related overpayments beyond FY 2012. The Secretary's authority under section 1886(d)(3)(A)(vi) of the Act is limited to prospective adjustments.

Consistent with our proposal for IPPS hospitals paid on the basis of the standardized amount, our special exceptions and adjustment authority under section 1886(d)(5)(I)(i) of the Act, and based upon our review of FY 2010 claims data, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27890), we also proposed an additional −0.8 percent adjustment to the hospital-specific rate to account for documentation and coding changes in FY 2010 that did not reflect real changes in case-mix. We indicated that we believed that a full prospective adjustment for hospitals paid based on the hospital-specific rate is the most appropriate means to take into account the effect of documentation and coding changes on payments, while maintaining equity as much as possible between hospitals paid on the basis of different prospective rates. Therefore, we proposed a combined adjustment of −1.3 percent (−0.5 percent + −0.8 percent) to the hospital-specific rate, accounting for all documentation and coding effects observed between FY 2008 though FY 2010.

Based upon our analysis of FY 2010 claims data, we found no significant additional effect of documentation and coding in FY 2010 that would warrant any additional adjustment to the Puerto Rico-specific rate.

Comment: Numerous comments objected to the CMS proposal to make an adjustment under section 1886(d)(3)(A)(vi) of the Act to account for payment increases due to documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2010. Commenters pointed to MedPAC's analysis in its public comment letter in response to the FY 2011 IPPS/LTCH PPS proposed rule that suggested that ''negative documentation and coding'' may have occurred under the CMS–DRGs, creating an overestimation of documentation and coding due to the introduction of MS–DRGs. MedPAC estimated that the magnitude of this effect could reach 0.36 percent in FY 2008, 0.36 percent in FY 2009, and 0.25 percent in FY 2010. CMS responded to these findings in the FY 2011 IPPS/LTCH PPS final rule by stating that MedPAC characterized this impact of any potential overestimate as ''small'' and could not be corroborated with any specific examples or analysis. Commenters indicated that they did not consider the potential impacts to be ''small'' and pointed out that if such estimates are true, hospitals would be due an additional +0.72 percent adjustment to account for overestimated recoupments (as well as similar positive adjustments to the hospital-specific and Puerto Rico-specific rate). Some commenters asserted that there are numerous examples of changes in documentation and coding that may have decreased the CMI under the CMS–DRGs, and provided five specific examples.

One commenter, compared the FY 2007 CC list to the FY 2008 CC list, identifying examples of chronic conditions that were CCs under the CMS–DRGs, but are no longer considered CCs or MCCs under the MS–DRGs, and that would also necessarily result in a lower MS–DRG assignment because more specific codes related to that condition were not developed. The commenter expressed surprise that CMS' medical coding experts were unable to do the same. The commenter identified the following common, chronic conditions which were CCs under the CMS–DRGs, but are not a CC or MCC under the MS–DRGs: atrial fibrillation; chronic blood loss anemia; mitral valve disorder; and aortic valve disorder. The commenter stated that removing these chronic conditions from the CC list under the MS–DRGs led to a substantial decrease in the reporting of these conditions as a secondary diagnosis when the MS–DRGs were implemented in FY 2008.

Specifically, after 10 years in which the proportion of IPPS cases that included atrial fibrillation as a secondary diagnosis increased each year, the proportion decreased by 20 percent immediately upon implementation of the MS–DRGs in FY 2008. This decrease in coding of atrial fibrillation would cause the CMI as measured by the FY 2007 DRG GROUPER to go down, while having no effect on the CMI as measured by the MS–DRG GROUPER. The commenter stated that if this negative documentation and coding effect is not taken into account in CMS' analysis, it will inappropriately increase CMS' estimate of documentation and coding change. The commenter also found that the secondary diagnoses of chronic blood loss anemia, mitral valve disorder and aortic valve disorder decreased in proportion immediately upon implementation of the MS–DRGs in FY 2008.

In addition, the commenter stated that hyperpotassemia was a CC under the CMS–DRGs, but is not a CC or MCC under the MS–DRGs. Because of this, there was a substantial decrease in the reporting of hyperpotassemia as a secondary diagnosis when the MS–DRGs were implemented in FY 2008. Specifically, after 9 consecutive years in which the proportion of IPPS cases that included hyperpotassemia as a secondary diagnosis increased, the proportion decreased by 37 percent immediately upon implementation of the MS–DRGs in FY 2008.

In responding to MedPAC's analysis, the commenter stated that CMS concluded that it did not believe it would be appropriate to revise its estimates based solely on MedPAC's analysis without knowing of any specific examples. Given that the commenter is now providing such specific examples, the commenter urged the agency to revise its analysis to account for what the commenter believed to be overestimation of documentation and coding as identified by MedPAC and the AHA. Specifically, the commenter recommended that CMS subtract 0.25 percentage points from its estimate of a 6.2 percent cumulative documentation and coding effect; which yields a revised cumulative effect of 5.95 percent. Under this methodology, because CMS has already implemented documentation and coding cuts of 3.5 percent, the commenter stated that the cut remaining is actually only 2.45 percent, instead of the 2.7 percent the agency proposed.

Response: We disagree with the commenter's suggestion that the removal of the codes for the chronic conditions of atrial fibrillation, chronic blood loss anemia, mitral valve disorder and aortic valve disorder from the CC list upon the implementation of MS–DRGs and the subsequent decrease in hospital reporting are examples of a ''negative'' documentation and coding effect. We note that what the commenter provided are examples of an immediate change in coding and reporting practices based on incentives under the MS–DRGs. It did not suggest that patients had fewer occurrences of the chronic conditions identified. They do suggest that hospitals were immediately aware of the incentives provided by the CC and MCC lists under MS–DRGs and began focusing on identifying and

reporting codes on the MS–DRG CC and MCC lists.

We believe the commenters' suggestions of immediate changes in coding and reporting based on incentives provided by the MS–DRGs CC and MCC lists support our view that coding practices have changed in response to incentives, which we have shown lead to increases in the case-mix index that were not based on actual changes in patient severity.

We further believe that while the MedPAC analysis suggested that a potential overestimate could have, in theory, occurred in the methodology, the estimates are theoretical maximums. It is not clear at this time, based on the information submitted, to what extent the five examples provided by commenters substantiate these theoretical maximums or any change in adjustments.

Nonetheless, we recognize that the methodological issues that surround this question are complex, and may merit further consideration. Therefore, we are not finalizing the proposed −0.8 percent adjustment to the standardized amount and the hospital-specific rate at this time until more analysis can be completed.

	Remaining prospective adjustment for FYs 2008–2009	Prospective adjustment for FY 2010	Prospective adjustment for FY 2013	Removal of onetime recoupment adjustment in FY 2013	Combined documentation & coding adjustment for FY 2013
Level of Adjustments	−1.9%	−0.0%	−1.9%	+2.9%	+1.0%

As in prior years, the FY 2008, FY 2009, and FY 2010 MedPAR files are available to the public to allow independent analysis of the FY 2008 and FY 2009 documentation and coding effects. Interested individuals may still order these files through the Web site at: *http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/* by clicking on MedPAR Limited Data Set (LDS)—Hospital (National). This Web page describes the file and provides directions and further detailed instructions for how to order.

Persons placing an order must send the following: a Letter of Request, the LDS Data Use Agreement and Research Protocol (refer to the Web site for further instructions), the LDS Form, and a check for $3,655 to:

Mailing address if using the U.S. Postal Service: Centers for Medicare & Medicaid Services, RDDC Account, Accounting Division, P.O. Box 7520, Baltimore, MD 21207–0520.

Mailing address if using express mail: Centers for Medicare & Medicaid Services, OFM/Division of Accounting—RDDC, 7500 Security Boulevard, C3–07–11, Baltimore, MD 21244–1850.

E. Refinement of the MS–DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS–DRGs and MS–DRGs.

As we implemented cost-based relative weights, some public commenters raised concerns about potential bias in the weights due to ''charge compression,'' which is the practice of applying a higher percentage charge markup over costs to lower cost items and services, and a lower percentage charge markup over costs to higher cost items and services. As a result, the cost-based weights would undervalue high-cost items and overvalue low-cost items if a single CCR is applied to items of widely varying costs in the same cost center. To address this concern, in August 2006, we awarded a contract to the Research Triangle Institute, International (RTI) to study the effects of charge compression in calculating the relative weights and to consider methods to reduce the variation in the cost-to-charge ratios (CCRs) across services within cost centers. For a detailed summary of RTI's findings, recommendations, and public comments that we received on the report, we refer readers to the FY 2009 IPPS/LTCH PPS final rule (73 FR 48452 through 48453).

In the FY 2009 IPPS/LTCH PPS final rule (73 FR 48458 through 48467), in response to the RTI's recommendations concerning cost report refinements, we discussed our decision to pursue changes to the cost report to split the cost center for Medical Supplies Charged to Patients into one line for ''Medical Supplies Charged to Patients'' and another line for ''Implantable Devices Charged to Patients.'' We acknowledged, as RTI had found, that charge compression occurs in several cost centers that exist on the Medicare cost report. However, as we stated in the FY 2009 IPPS/LTCH PPS final rule, we focused on the CCR for Medical Supplies and Equipment because RTI found that the largest impact on the MS–DRG relative weights could result from correcting charge compression for devices and implants. In determining the items that should be reported in these respective cost centers, we adopted the commenters' recommendations that hospitals should use revenue codes established by the AHA's National Uniform Billing Committee to determine the items that should be reported in the ''Medical Supplies Charged to Patients'' and the ''Implantable Devices Charged to Patients'' cost centers. Accordingly, a new subscripted line 55.30 for ''Implantable Devices Charged to Patients'' was created in July 2009 as part of CMS' Transmittal 20 update to the cost report Form CMS–2552–96. This new subscripted cost center has been available for use for cost reporting periods beginning on or after May 1, 2009.

As we discussed in the FY 2009 IPPS final rule (73 FR 48458) and in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68519 through 68527), in addition to the findings regarding implantable devices, RTI also found that the costs and charges of computed tomography (CT) scans, magnetic resonance imaging (MRI), and cardiac catheterization differ significantly from the costs and charges of other services included in the standard associated cost center. RTI also concluded that both the IPPS and the OPPS relative weights would better estimate the costs of those services if CMS were to add standard cost centers for CT scans, MRI, and cardiac catheterization in order for hospitals to report separately the costs and charges for those services and in order for CMS to calculate unique CCRs to estimate the costs from charges on claims data. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50075 through 50080), we finalized

our proposal to create standard cost centers for CT scans, MRI, and cardiac catheterization, and to require that hospitals report the costs and charges for these services under new cost centers on the revised Medicare cost report Form CMS 2552–10. (We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50075 through 50080) for a detailed discussion of the reasons for the creation of standard cost centers for CT scans, MRI, and cardiac catheterization.) The new standard cost centers for CT scans, MRI, and cardiac catheterization are effective for cost report periods beginning on or after May 1, 2010, on the revised cost report Form CMS–2552–10.

2. Summary of Policy Discussion in FY 2012

In the FY 2009 IPPS final rule (73 FR 48468), we stated that, due to what is typically a 3-year lag between the reporting of cost report data and the availability for use in ratesetting, we anticipated that we might be able to use data from the new ''Implantable Devices Charged to Patients'' cost center to develop a CCR for Implantable Devices Charged to Patients in the FY 2012 or FY 2013 IPPS rulemaking cycle. However, as noted in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43782), due to delays in the issuance of the revised cost report CMS 2552–10, we determined that a new CCR for Implantable Devices Charged to Patients might not be available before FY 2013. Similarly, when we finalized the decision in the FY 2011 IPPS/LTCH PPS final rule to add new cost centers for CT scans, MRI, and cardiac catheterization, we explained that data from any new cost centers that may be created will not be available until at least 3 years after they are first used (75 FR 50077).

Accordingly, during the FY 2012 IPPS rulemaking (76 FR 51502), we assessed the availability of data in the ''Implantable Devices Charged to Patients'' cost center. In order to develop a robust analysis regarding the use of cost data from the ''Implantable Devices Charged to Patients'' cost center, it was necessary to have a critical mass of cost reports filed with data in this cost center. We checked the availability of data in the ''Implantable Devices Charged to Patients'' cost center on the FY 2009 cost reports, but we did not believe that there was a sufficient amount of data from which to generate a meaningful analysis in this particular situation. Therefore, we did not propose to use data from the ''Implantable Devices Charged to Patients'' cost center to create a distinct CCR for ''Implantable Devices Charged to Patients'' for use in calculating the MS–DRG relative weights for FY 2012. We indicated that we would reassess the availability of data for the ''Implantable Devices Charged to Patients'' cost center for the FY 2013 IPPS/LTCH PPS rulemaking cycle and, if appropriate, we would propose to create a distinct CCR at that time.

3. Discussion for FY 2013

To calculate the MS–DRG relative weights, we use two data sources: the MedPAR file as the claims data source and the HCRIS as the cost data source. We adjust the charges from the claims to costs by applying the 15 national average CCRs developed from the cost reports. In the past several years, we have made progress in changing the cost report to add the ''Implantable Devices Charged to Patients'' cost center. At the time of development of the FY 2013 IPPS/LTCH PPS proposed rule, there was a sizeable number of hospitals in the FY 2010 HCRIS that had reported data for ''Implantable Devices Charged to Patients'' on their cost reports beginning during FY 2010. However, during the development of the proposed rule, we were able to access only those cost reports in the FY 2010 HCRIS with fiscal year begin dates on or after October 1, 2009, and before May 1, 2010. This is because cost reports with fiscal year begin dates of May 1, 2010, through September 30, 2010, were filed on the new cost report Form 2552–10, and cost reports filed on the Form 2552–10 were not accessible in the HCRIS. Normally, we pull the HCRIS dataset that is 3 years prior to the IPPS fiscal year (that is, for the FY 2013 relative weights, we would use the FY 2010 HCRIS, which includes data from cost reports that begin on or after October 1, 2009, and before October 1, 2010). However, because data from the Form 2552–10 cost reports were not available, to ensure that the relative weights are calculated with a data set that is as comprehensive and accurate as possible, in the proposed rule, we proposed to calculate the FY 2013 relative weights with data from FY 2010 cost reports for providers with fiscal year begin dates of on or after October 1, 2009, and before May 1, 2010, and to back fill with data from FY 2009 cost reports for those providers that have fiscal year begin dates on or after May 1, 2010 through September 30, 2010. Further complicating matters was that, due to additional unforeseen technical difficulties, the corresponding information regarding charges for implantable devices on hospital claims was not yet available to us in the MedPAR file. Without the breakout in the MedPAR file of charges associated with implantable devices to correspond to the costs of implantable devices on the cost report, we believed that we had no choice but to propose to continue computing the relative weights with the current CCR that combines the costs and charges for supplies and implantable devices. We stated in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27892) that when we do have the necessary supplies and implantable device data on the claims in the MedPAR file to create distinct CCRs for supplies and implantable devices, perhaps for FY 2014, we also hoped that we would have data for an analysis of creating distinct CCRs for MRI, CT scans, and cardiac catheterization. Prior to proposing to create these CCRs, we would first thoroughly analyze and determine the impacts of the data. Distinct CCRs for implantable devices, MRIs, and CT scans would be used in the calculation of the relative weights only if they were first finalized through rulemaking.

Comment: Commenters expressed concern that CMS had proposed not to use the data available from the new ''Implantable Devices Charged to Patients'' cost center for FY 2013. The commenters were concerned about the continued delays in the utilization of the new cost center data, and stated that such delays only prolong the payment inaccuracies associated with charge compression. Two commenters suggested a short-term fix to account for the lack of data and to create a CCR for implantable devices. The commenters suggested that CMS calculate a DRG-by-DRG estimate of the split of standardized supplies charges into implantable devices and routine supplies. They stated that once supplies charges are apportioned in each DRG, separate national average CCRs for implantable devices and other supplies could be applied, based on the existing cost reports. The commenters recommended using the CY 2010 Inpatient Standard Analytic File (SAF) to calculate the DRG-level factors for apportioning the supplies charges, as the file has information on charges by revenue center, allowing implantable devices to be split from routine supplies. They further suggested that CMS could calculate the CY 2010 ratios of routine supply charges to implantable device charges by DRG, apply those ratios to the FY 2011 MedPAR supplies charges, and then utilize the separate CCRs for supplies and implantable devices to estimate costs within each DRG. The commenters added that the remainder of the DRG weight

calculation would proceed at this point, now with 16 CCRs, including the implantable devices CCR. The commenters stated that CMS has information required for DRG assignment, and could run the data through the latest MS–DRG GROUPER if MS–DRG definition changes are an issue.

Several commenters requested that CMS adopt a regression-based CCR for implantable devices due to the delay in using the cost report and claims data to calculate an implantable device CCR. The commenters suggested that CMS implement this approach, which was a recommendation made by RTI and MedPAC, to the statistical disaggregation of CCRs in the ''Medical Supplies Charged to Patients'' cost center, as it would immediately address charge compression until data from the new cost centers become available.

One commenter requested that CMS use the data from the hospitals that are compliant in using the ''Implantable Devices Charged to Patients'' cost center data to establish an implantable device CCR for establishing FY 2013 relative weights. The commenter suggested that, despite data limitations of the current data, CMS continue to revise this CCR in subsequent years, as the agency does for all cost centers as more robust data are available, without further delaying needed improvements in the interim period.

Response: We acknowledge the commenters' concern that we did not propose a distinct CCR for implantable devices charged to patients for FY 2013. Nevertheless, we believe it would be inappropriate to finalize a specific CCR for implantable devices charged to patients for FY 2013 (using SAF data, a regression-based methodology, or the limited implantable devices cost report data that we do have), without an opportunity for the public to review and comment on our analysis. Rather, we believe that it is appropriate to wait until FY 2014, when we hope to be able to provide a proper impact analysis of the addition of a CCR for implantable devices charged to patients in the relative weights calculation. Accordingly, we are not implementing a regression-based CCR for implantable devices at this time, nor are we implementing any new CCRs for use in the relative weights calculation for FY 2013.

Comment: Several commenters expressed concern that CMS may not have sufficient data to establish an implantable device cost center to use in the calculation of the relative weights for FY 2014. Two commenters requested that CMS develop and discuss in this FY 2013 IPPS final rule an action plan for ensuring that FY 2011 HCRIS and MedPAR data will be available for allowing the ''Implantable Devices Charged to Patients'' cost center to be used for calculating MS–DRG relative weights for FY 2014. Another commenter requested that, rather than waiting for the next rulemaking cycle, CMS should determine if it will have the necessary data available prior to the FY 2014 proposed rule and inform stakeholders if there continues to be administrative issues with the data. The commenter believed that this will allow stakeholders to weigh in on potential solutions to avoid another year of delay in establishing the implantable device CCR.

Response: We understand the commenters' desire for reassurance that the FY 2014 rulemaking cycle will not present further unanticipated delays in the availability of both HCRIS and MedPAR data required to create distinct CCRs for implantable devices charged to patients and supplies charged to patients, respectively. We expect to have the necessary data available to begin modeling the additional CCRs before the end of calendar year 2012. Therefore, we are optimistic that, for the FY 2014 proposed rule, we will be able to provide a detailed impact analysis of the relative weights using distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization. If, for some reason, additional delays are encountered toward the end of calendar year 2012, we will consider informing stakeholders of this delay, if appropriate, and hosting a national conference call, so that alternative solutions to establishing additional CCRs can be considered in a timely fashion.

Comment: Some commenters supported our proposal of not making major refinements in the MS–DRG relative weight methodology.

Response: We appreciate the commenters' support for our proposal of not making major refinements to the MS–DRG relative weights.

Comment: One commenter recommended that, despite the delay in the implementation of the ''Implantable Devices Charged to Patients'' cost center for the IPPS relative weights, CMS should proceed with the implementation of the implantable devices cost center in the calculation of OPPS rates for CY 2013. The commenter requested that CMS work toward a solution to combine data from the two different cost reporting forms in the HCRIS data so that OPPS rates can be calculated using the cost difference reported in the ''Implantable Devices Charged to Patients'' cost center.

Response: We note that the CY 2013 OPPS/ASC proposed rule, which went on public display at the Office of the Federal Register on July 6, 2012 (available at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices-Items/CMS-1589-P.html*), in fact, includes a proposal to use data from the ''Implantable Devices Charged to Patients'' cost center to create a distinct CCR for use in calculating the OPPS relative weights for CY 2013.

Comment: Two commenters expressed continued concern about the accuracy of establishing new CT and MRI cost centers using cost report and claims data. The commenters were concerned that the data reported in the CT and MRI cost centers will not represent hospitals' full cost of providing CT and MRI for some time. The commenters stated that a large portion of the capital costs for CT and MRI equipment may have been allocated across the entire hospital, rather than to the radiology cost center, which would result in the understatement of costs of CT and MRI reported in the radiology cost center.

Response: We received similar comments regarding the allocation of capital costs for radiology equipment on the FY 2011 IPPS/LTCH PPS proposed rule. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50078), we provided a detailed response for CMS' longstanding policy on the proper reporting of such capital costs. Specifically, we stated that ''section 104 of the PRM–I contains definitions of buildings (section 104.2), building equipment (section 104.3), major moveable equipment (section 104.4), and minor equipment (section 104.5) that apply for purposes of cost report completion. We believe that it is clear that CT and MRI equipment are 'major moveable equipment' and are neither a building cost nor a building equipment cost. Specifically, section 104.4 of the PRM–I defines 'major moveable equipment' as follows: 'The general characteristics of this equipment are: (a) a relatively fixed location in the building; (b) capable of being moved, as distinguished from building equipment; (c) a unit cost sufficient to justify ledger control; (d) sufficient size and identity to make control feasible by means of identification tags; and (e) a minimum life of approximately three years. Major moveable equipment includes such items as accounting machines, beds, wheelchairs, desks, vehicles, x-ray machines, etc.' In addition to this longstanding instruction, we believe

that our view that CT scanning and MRI equipment are major moveable equipment is supported by the 2008 edition of 'Estimated Useful Lives of Depreciable Hospital Assets,' which states that the estimated useful life of a CT scanner is 5 years, an MRI is 5 years, and an X-ray unit is 7 years. Therefore, we believe that our longstanding policy makes it clear that CT scanning and MRI equipment [are] major moveable equipment and should be reported as such on the cost report. As major moveable equipment, the costs should be reported together with the rest of the hospital's major moveable equipment cost in the 'Capital Related Costs-Moveable Equipment' cost center(s) on Worksheet A (lines 2 and 4 [on the CMS Form 2552–96 and line 2 on the CMS Form 2552–10]). The costs in this cost center are allocated to all the hospital's cost centers that use major moveable equipment (including CT and MRI) using 'dollar value' or 'square feet' if the provider obtained the contractor's approval under Provider Reimbursement Manual Part II (PRM–II), Section 3617, to use the simplified cost allocation methodology. However, a hospital that is concerned that this method of allocation may result in inaccurate CCRs (on Worksheet C, Part I) for the CT scan, MRI, and other ancillary cost centers may request contractor approval under Section 2307 of the PRM–I to directly assign the cost of moveable equipment to all of the hospital's cost centers that use moveable equipment, including CT scans and MRIs. If the hospital meets all of the criteria in Section 2307 of the PRM–I, the contractor may approve the direct assignment method. This would ensure that the high cost of the CT scanning and MRI equipment would be reflected in the CCR that would be calculated for those departments and that would be used to estimate the cost of CT scanning and MRI services. In any case, hospitals with accounting systems that include the cost of CT scanning and MRI equipment in the 'Capital Related Costs—Building and Fixtures' cost center should correct their cost reporting practices to come into compliance with CMS' longstanding policy in this regard. Reporting of costs and charges on the Medicare cost report must be compliant with Medicare cost reporting principles, regardless of differing payment structures and incentives of other payers or State reporting requirements'' (75 FR 50078). Hospitals that still need to correct their cost reporting practices in this regard should do so soon, so that when we propose distinct CCRs for MRI and CT scans, hopefully for FY 2014, these CCRs will represent fairly accurately the costs of these radiology services.

In summary, in this final rule, we are finalizing our proposal to continue to use the existing 15 CCRs to calculate the MS–DRG relative weights for FY 2013. For this final rule, as we did for the proposed rule, because data from the CMS Form 2552–10 continue to be unavailable, we are using data from FY 2010 cost reports for providers with fiscal year begin dates of on or after October 1, 2009, and before May 1, 2010, and we are backfilling with data from FY 2009 cost reports for those providers that have fiscal year begin dates on or after May 1, 2010 through September 30, 2010. Depending on the availability of necessary data, we hope to be able to propose, if appropriate, for FY 2014 to use distinct CCRs for implantable devices charged to patients and supplies charged to patients, and possibly distinct CCRs for MRI, CT scans, and cardiac catheterization as well.

F. Preventable Hospital-Acquired Conditions (HACs), Including Infections

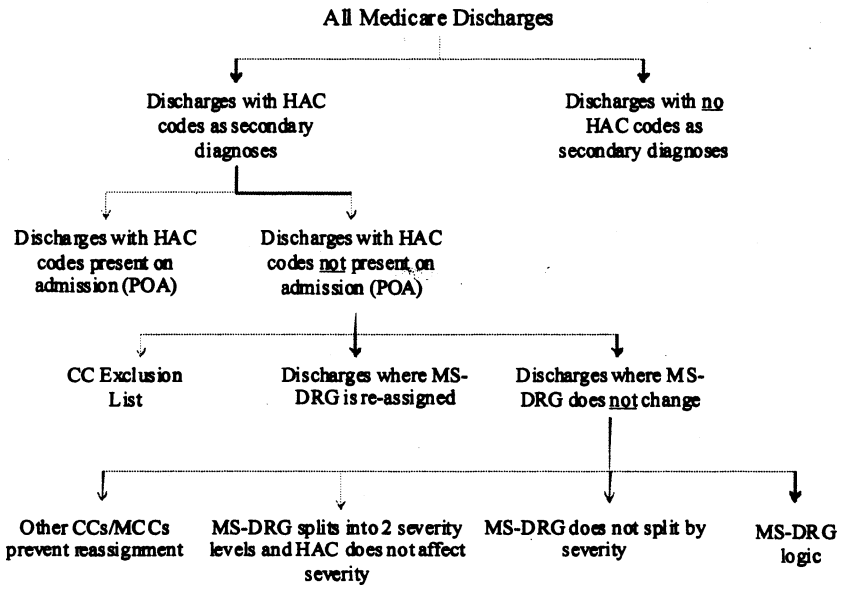
1. Background

Section 1886(d)(4)(D) of the Act addresses certain hospital-acquired conditions (HACs), including infections. This provision is part of an array of Medicare tools that we are using to promote increased quality and efficiency of care. Under the IPPS, hospitals are encouraged to treat patients efficiently because they receive the same DRG payment for stays that vary in length and in the services provided, which gives hospitals an incentive to avoid unnecessary costs in the delivery of care. In some cases, conditions acquired in the hospital do not generate higher payments than the hospital would otherwise receive for cases without these conditions. To this extent, the IPPS encourages hospitals to avoid complications.

However, the treatment of certain conditions can generate higher Medicare payments in two ways. First, if a hospital incurs exceptionally high costs treating a patient, the hospital stay may generate an outlier payment. Because the outlier payment methodology requires that hospitals experience large losses on outlier cases before outlier payments are made, hospitals have an incentive to prevent outliers. Second, under the MS–DRG system that took effect in FY 2008 and that has been refined through rulemaking in subsequent years, certain conditions can generate higher payments even if the outlier payment requirements are not met. Under the MS–DRG system, there are currently 261 sets of MS–DRGs that are split into 2 or 3 subgroups based on the presence or absence of a CC or an MCC. The presence of a CC or an MCC generally results in a higher payment.

Section 1886(d)(4)(D) specifies that, by October 1, 2007, the Secretary was required to select, in consultation with the Centers for Disease Control and Prevention (CDC), at least two conditions that: (a) Are high cost, high volume, or both; (b) are assigned to a higher paying MS–DRG when present as a secondary diagnosis (that is, conditions under the MS–DRG system that are CCs or MCCs); and (c) could reasonably have been prevented through the application of evidence-based guidelines. Section 1886(d)(4)(D) of the Act also specifies that the list of conditions may be revised, again in consultation with CDC, from time to time as long as the list contains at least two conditions.

Effective for discharges occurring on or after October 1, 2008, pursuant to the authority of section 1886(d)(4)(D) of the Act, Medicare no longer assigns an inpatient hospital discharge to a higher paying MS–DRG if a selected condition is not present on admission (POA). Thus, if a selected condition that was not POA manifests during the hospital stay, it is considered a HAC and the case is paid as though the secondary diagnosis was not present. However, even if a HAC manifests during the hospital stay, if any nonselected CC/MCC appears on the claim, the claim will be paid at the higher MS–DRG rate. In addition, Medicare continues to assign a discharge to a higher paying MS–DRG if a selected condition is POA. When a HAC is not POA, payment can be effected in a manner shown in the diagram below.



2. HAC Selection

Beginning in FY 2007, we have set forth proposals, and solicited and responded to public comments, to implement section 1886(d)(4)(D) of the Act through the IPPS annual rulemaking process. For specific policies addressed in each rulemaking cycle, including a detailed discussion of the collaborative interdepartmental process and public input regarding selected and potential candidate HACs, we refer readers to the following rules: the FY 2007 IPPS proposed rule (71 FR 24100) and final rule (71 FR 48051 through 48053); the FY 2008 IPPS proposed rule (72 FR 24716 through 24726) and final rule with comment period (72 FR 47200 through 47218); the FY 2009 IPPS proposed rule (73 FR 23547) and final rule (73 FR 48471); the FY 2010 IPPS/RY 2010 LTCH PPS proposed rule (74 FR 24106) and final rule (74 FR 43782); the FY 2011 IPPS/LTCH PPS proposed rule (75 FR 23880) and final rule (75 FR 50080); and the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25810 through 25816) and final rule (76 FR 51504 through 51522). A complete list of the 10 current categories of HACs is included on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Hospital-Acquired_Conditions.html.*

In the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25813 through 25814) and FY 2012 IPPS/LTCH PPS final rule (76 FR 51507 through 50509), we proposed but did not finalize the candidate condition Contrast-Induced Acute Kidney Injury. Instead, we deferred the decision making on this condition as a selected HAC until future rulemaking and such a time when improved coding for the condition is available.

3. Present on Admission (POA) Indicator Reporting

Collection of POA indicator data is necessary to identify which conditions were acquired during hospitalization for the HAC payment provision as well as for broader public health uses of Medicare data. In previous rulemaking, we provided both CMS and CDC Web site resources that are available to hospitals for assistance in this reporting effort. For detailed information regarding these sites and materials, including the application and use of POA indicators, we refer the reader to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51506 through 51507).

As discussed in previous IPPS proposed and final rules, there are five POA indicator reporting options, as defined by the *ICD–9–CM Official Guidelines for Coding and Reporting.* Under the HAC policy, we treat HACs coded with ''Y'' and ''W'' indicators as POA and allow the condition on its own to cause an increased payment at the CC/MCC level. We treat HACs coded with ''N'' and ''U'' indicators as Not Present on Admission (NPOA) and do not allow the condition on its own to cause an increased payment at the CC/MCC level. We refer readers to the following rules for a detailed discussion: the FY 2009 IPPS proposed rule (73 FR 23559) and final rule (73 FR 48486 through 48487); the FY 2010 IPPS/RY 2010 LTCH PPS proposed rule (74 FR 24106) and final rule (74 FR 43784 through 43785); the FY 2011 IPPS/LTCH PPS proposed rule (75 FR 23881 through 23882) and final rule (75 FR 50081 through 50082); and the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25812 through 25813) and final rule (76 FR 51506 through 51507).

Indicator	Descriptor
Y	Indicates that the condition was present on admission.
W	Affirms that the hospital has determined that, based on data and clinical judgment, it is not possible to document when the onset of the condition occurred.
N	Indicates that the condition was not present on admission.
U	Indicates that the documentation is insufficient to determine if the condition was present at the time of admission.
1	Signifies exemption from POA reporting. CMS established this code as a workaround to blank reporting on the electronic 4010A1. A list of exempt ICD–9–CM diagnosis codes is available in the *ICD–9–CM Official Guidelines for Coding and Reporting.*

Beginning on or after January 1, 2011, hospitals were required to begin reporting POA indicators using the 5010 electronic transmittal standards format. The 5010 format removes the need to report a POA indicator of ''1'' for codes that are exempt from POA reporting. We have issued CMS instructions on this reporting change as a One-Time Notification, Pub. No. 100–20, Transmittal No. 756, Change Request 7024, effective on August 13, 2010, which can be located at the following link on the CMS Web site: *http://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/downloads/R756OTN.pdf*. However, for claims that continue to be submitted using the 4010 electronic transmittal standards format, the POA indicator of ''1'' is still necessary because of reporting restrictions from the use of the 4010 electronic transmittal standards format.

In addition, as discussed in section II.G.9. of the preamble of this final rule, the 5010 format allows the reporting and, effective January 1, 2011, the processing of up to 25 diagnoses and 25 procedure codes. As such, it is necessary to report a valid POA indicator for each diagnosis code, including the principal and all secondary diagnoses up to 25.

4. HACs and POA Reporting in ICD–10–CM and ICD–10–PCS

As we stated in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51506 and 51507) and in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27894), in preparation for the transition to the ICD–10–CM and ICD–10–PCS code sets, further information regarding the use of the POA indicator with the ICD–10–CM/ICD–10–PCS classifications as they pertain to the HAC policy will be discussed in future rulemaking.

At the March 5, 2012 meeting of the ICD–9–CM Coordination and Maintenance Committee, an announcement was made with regard to the availability of the ICD–9–CM HAC list translation to ICD–10–CM and ICD–10–PCS code sets. Participants were informed that the list of the current ICD–9–CM selected HACs has been translated into codes using the ICD–10–CM and ICD–10–PCS classification system. It was recommended that the public review this list of ICD–10–CM/ICD–10–PCS code translations of the current selected HACs. The translation list is available on the CMS Web page at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/icd10_hacs.html*. We encourage the public to submit comments on these translations through the HACs Web page using the CMS ICD–10–CM/PCS HAC Translation Feedback Mailbox that has been set up for this purpose under the Related Links section titled ''CMS HAC Feedback.'' The final HAC list translation from ICD–9–CM to ICD–10–CM/ICD–10–PCS will be subject to formal rulemaking.

In the meantime, we continue to encourage readers to review the educational materials and draft code sets currently available for ICD–10–CM/ICD–10–PCS on the CMS Web site at: *http://www.cms.gov/Medicare/Coding/ICD10/index.html*. In addition, the draft ICD–10–CM/ICD–10–PCS coding guidelines can be viewed on the CDC Web site at: *http://www.cdc.gov/nchs/icd/icd10cm.html*.

Comment: Commenters expressed appreciation for CMS' decision to make this crosswalk available. Commenters noted that they would continue to review the crosswalk and provide additional comments, as warranted.

Response: We appreciate the commenters' support and continued feedback.

5. Changes to the HAC Policy for FY 2013

a. Additional Diagnosis Codes to Existing HACs

As discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27894), as changes to diagnosis codes and new diagnosis codes have been proposed and finalized for the list of CCs and MCCs, we have modified the list of selected HACs to reflect these changes. While there were not any new diagnosis codes proposed for FY 2013, there were new and revised diagnosis codes effective October 1, 2011 (FY 2012) that were not finalized in time for inclusion in the FY 2012 IPPS rulemaking. Therefore, in the proposed rule (77 FR 27894), we proposed to add two of these codes to an existing HAC category. We proposed to add diagnosis codes 999.32 (Bloodstream infection due to central venous catheter) and 999.33 (Local infection due to central venous catheter) to the Vascular Catheter-Associated Infection HAC category for FY 2013. These codes were created in response to a request discussed at the March 9–10, 2011 ICD–9–CM Coordination and Maintenance Committee meeting to better identify specific types of infections (systemic versus local) that occur as a result of central venous catheter placement.

Previously, there was only one existing HAC code (999.31 (Infection due to central venous catheter)) in the Vascular Catheter-Associated Infection HAC category. With the creation of codes 999.32 and 999.33, effective October 1, 2011, the title for code 999.31 was revised to ''Other and unspecified infection due to central venous catheter.'' Therefore, codes 999.32 and 999.33 provide further specificity as to the type of infection due to a central venous catheter. We refer readers to page 45 of the topic packet found at the following link on the CDC ICD–9–CM Web page at *http://www.cdc.gov/nchs/data/icd9/TopicpacketforMarch2011_HA1.pdf* for further information.

Shown in the table below are the two diagnosis codes that we proposed with their corresponding descriptions and their CC/MCC designations.

ICD–9–CM Code	Code descriptor	CC/MCC Designation
999.32	Bloodstream infection due to central venous catheter	CC
999.33	Local infection due to central venous catheter	CC

We invited public comments on the proposed adoption of these two ICD–9–CM diagnosis codes designated as CC/MCCs that are listed above, to be added to the Vascular Catheter-Associated Infection HAC category as indicated for FY 2013.

Comment: Several commenters supported the addition of these two codes. One commenter, a State program, indicated that it uses these codes in a statewide HAC payment incentive program.

Response: We appreciate the commenters' support.

Comment: Some commenters opposed the addition of these two diagnosis codes. Commenters also urged CMS to remove the one existing HAC code (999.31) in the Vascular Catheter-Associated Infection HAC category. They stated that CMS is proposing to add a quality measure on central line associated bloodstream infection (CLABSI), which would capture vascular catheter-associated infections

and asserted that ''this could penalize hospitals twice for the same event.'' (We note that the commenters may be referring to two different CMS programs, the Hospital IQR Program and the Hospital VBP Program.) Commenters stated that their opposition to the proposed inclusion of the two codes is not specific to the particular codes that were proposed, but that their opposition is predicated on the ''expansion of this HAC [Vascular Catheter-Associated Infection].'' Commenters also stated that they supported reducing the incidence of CLABSI as a patient safety goal and urged CMS to ''select only one program in which to measure hospital performance for vascular catheter-associated infection.''

Response: The HAC–POA Program is part of an array of tools used by the Medicare program to promote increased quality and efficiency of care. These tools include quality measurement as well as payment adjustments. Because of their importance, HACs have been included in multiple tools used by the Medicare program to measure quality of services provided and performance, and to determine payment adjustments. Under the IPPS, hospitals are encouraged to treat patients efficiently because they receive the same DRG payment for stays that vary in length and in the services provided, which gives hospitals an incentive to avoid unnecessary costs in the delivery of care. In some cases, such as when any nonselected CC/MCC appears on the claim, conditions acquired in the hospital do not generate higher payments than the hospital would otherwise receive for cases without these conditions. To this extent, the IPPS encourages hospitals to avoid complications and would not generally ''penalize hospitals twice.''

Because of their importance, measures of HACs have historically been included in the Hospital IQR Program and are simultaneously monitored by different CMS programs. The HAC/POA policy authorized under section 1886(D)(4)(d) of the Act is a claims-based payment policy, and in many cases, even if a HAC manifests during a hospital stay, if any nonselected CC/MCC appears on the claim, the claim will be paid at the higher MS–DRG rate.

Comment: One commenter supported the addition of diagnosis code 999.32, Bloodstream infection due to central venous catheter, to the Vascular Catheter-Associated Infection HAC category, however, the commenter expressed concern with the inclusion of diagnosis code 999.33, Local infection due to central venous catheter, as a condition under this same HAC category to be subject to the HAC payment policy. According to the commenter, diagnosis code 999.33 identifies and describes local infections related to the soft tissues versus infections in the central bloodstream. As such, the commenter asserted that the Vascular Catheter-Associated Infection HAC category should only include central bloodstream infections. Therefore, the commenter did not support the addition of code 999.33 to the Vascular Catheter-Associated Infection HAC category.

In addition, this same commenter recommended that CMS publish data analyses for the Vascular Catheter-Associated Infection HAC category. Specifically, the commenter requested that volume and cost data be made publicly available for diagnosis codes 999.31, Other and unspecified infection due to central venous catheter; 999.32, Bloodstream infection due to central venous catheter; and 999.33, Local infection due to central venous catheter. The commenter reiterated that they do not support the inclusion of code 999.33 as a condition under the Vascular Catheter-Associated Infection HAC category, however, the commenter stated the additional information would assist in identifying potential shifts in volume among the newer, more specific codes of 999.32 and 999.33.

Response: We appreciate the commenter's support for the addition of diagnosis code 999.32, Bloodstream infection due to central venous catheter, to the Vascular Catheter-Associated Infection HAC category. With respect to the concern expressed regarding diagnosis code 999.33, Local infection due to central venous catheter, we believe the commenter may be confused. The title of the HAC category is Vascular Catheter-Associated Infection; therefore, the emphasis is on the fact that the patient had a central venous catheter placed and subsequently developed an infection due to the presence of that catheter. We acknowledge there is widespread interest particularly in bloodstream infections due to central venous catheters, as several initiatives have been undertaken focusing on surveillance and prevention. However, for this HAC payment provision, it is our belief that local infections resulting from a central venous catheter are also of importance and deserve similar efforts among the provider community and healthcare industry with regard to surveillance and prevention, as do the other selected HAC conditions. While the condition being described by diagnosis code 999.33, Local infection due to central venous catheter is a local infection, it identifies the fact that a patient acquired the infection as a result of a central venous catheter. Therefore, we continue to believe it is appropriate to finalize this code for inclusion in this HAC category.

In response to the recommendation that CMS conduct and publish data analyses to provide further detailed information related to volume and cost for codes 999.31, 999.32 and 999.33, we note that we have provided the results for each selected condition within each HAC category beginning with FY 2009 data analysis presented in FY 2011. We refer the commenter and readers to the RTI evaluation of the HAC–POA program for years FY 2009 through FY 2011 on the following Web site: *http://www.rti.org/reports/cms/*. As codes 999.32 and 999.33 became effective October 1, 2011 (FY 2012), results of the FY 2012 data analysis are not currently available.

After consideration of the public comments we received, we are finalizing our proposal to add diagnosis codes 999.32 (Bloodstream infection due to central venous catheter) and 999.33 (Local infection due to central venous catheter) to the Vascular Catheter-Associated Infection HAC category for discharges occurring on or after October 1, 2012.

b. New Candidate HAC Condition: Surgical Site Infection (SSI) Following Cardiac Implantable Electronic Device (CIED) Procedures

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27894 through 27896), we discussed our rationale for proposing a new condition, Surgical Site Infection (SSI) Following Cardiac Implantable Electronic Device (CIED) Procedures, for selection for FY 2013 as a HAC under section 1886(d)(4)(D) of the Act. As described in more detail in section II.F.1. of this preamble, each HAC must be: (1) High cost, high volume, or both; (2) assigned to a higher paying MS–DRG when present as a secondary diagnosis (that is, conditions under the MS–DRG system that are CCs or MCCs); and (3) could reasonably have been prevented through the application of evidence-based guidelines. We also discuss other considerations relating to the selection of a HAC, including any administrative or operational issues associated with a proposed condition. For example, the condition may only be able to be identified by multiple codes, thereby requiring the development of special GROUPER logic to also exclude similar or related ICD–9–CM codes from being classified as a CC or an MCC. Similarly, a condition acquired during a hospital stay may arise from another condition that the patient had prior to

admission, making it difficult to determine whether the condition was reasonably preventable. In the proposed rule, we invited public comment on the degree to which these conditions fulfill these statutory requirements, as well as clinical, coding, and prevention issues on our proposal to add SSI Following CIED Procedures as a condition subject to the HAC payment provision for discharges occurring on or after October 1, 2012.

CIED therapy reduces morbidity and mortality in selected patients with cardiac rhythm disturbances.[1] More than 500,000 CIEDs are implanted each year in the United States and 70 percent of CIED recipients are age 65 or older.[2] However, this benefit with regard to the treatment of cardiac rhythm disturbances is somewhat reduced by complications following device placement, including infections. Patients can present with early or late infections because of CIED placement.[3] Two-thirds of these infections are caused by Staphylococcus aureus and coagulase-negative Staphylococcus species. Treatment of these infections usually entails surgical explantation of the device, sometimes under general anesthesia and a prolonged course of intravenous antibiotics, along with external electrical support in a monitored intensive care setting. The rate of CIED infection is increasing faster than the rate of CIED implantation,[4] and there are published data on the mortality and cost associated with CIED infection or the relationship of these outcomes to different CIED types.

There is not a unique code that identifies SSI Following CIED Procedures. However, the condition can be identified as a subset of discharges with ICD–9–CM diagnosis code 996.61 (Infection and inflammatory reaction due to cardiac device, implant and graft) or 998.59 (Other postoperative infection). Our clinical advisors believe that diagnosis code 996.61 or 998.59, in combination with the associated procedure codes below, can accurately identify SSI Following CIED Procedures. The procedure codes are:

- 00.50 (Implantation of cardiac resynchronization pacemaker without mention of defibrillation, total system [CRT–P]);
- 00.51 (Implantation of cardiac resynchronization defibrillator, total system [CRT–D]);
- 00.52 (Implantation or replacement of transvenous lead [electrode] into left ventricular coronary venous system);
- 00.53 (Implantation or replacement of cardiac resynchronization pacemaker pulse generator only [CRT–P]);
- 00.54 (Implantation or replacement of cardiac resynchronization defibrillator pulse generator device only [CRT–D]);
- 37.80 (Insertion of permanent pacemaker, initial or replacement, type of device not specified);
- 37.81 (Initial insertion of single-chamber device, not specified as rate responsive);
- 37.82 (Initial insertion of single-chamber device, rate responsive);
- 37.83 (Initial insertion of dual-chamber device);
- 37.85 (Replacement of any type pacemaker device with single-chamber device, not specified as rate responsive);
- 37.86 (Replacement of any type of pacemaker device with single-chamber device, rate responsive);
- 37.87 (Replacement of any type pacemaker device with dual-chamber device);
- 37.94 (Implantation or replacement of automatic cardioverter/defibrillator, total system [AICD]);
- 37.96 (Implantation of automatic cardioverter/defibrillator pulse generator only);
- 37.98 (Replacement of automatic cardioverter/defibrillator pulse generator only);
- 37.74 (Insertion or replacement of epicardial lead [electrode] into epicardium);
- 37.75 (Revision of lead [electrode]);
- 37.76 (Replacement of transvenous atrial and/or ventricular lead(s) [electrode]);
- 37.77 (Removal of lead(s) [electrode] without replacement);
- 37.79 (Revision or relocation of cardiac device pocket); and
- 37.89 (Revision or removal of pacemaker device).

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27894 through 27896), we proposed to identify SSI Following CIED Procedures with diagnosis code 996.61 or 998.59 in combination with one or more of the above associated procedure codes. We believe the condition meets the three criteria for inclusion on the HAC list, as discussed in greater detail below.

First, the condition is one that is high cost and high volume. We reviewed Medicare claims data in the FY 2011 MedPAR file. For FY 2011, we found that there were 859 inpatient discharges coded with SSI Following CIED Procedures as specified by diagnosis code 996.61 or 998.59 when reported with one or more of the above cited associated procedure codes submitted through Medicare claims. The cases had an average cost of $51,795 for the entire hospital stay. We found that there were 583 inpatient discharges coded with SSI Following CIED Procedures as specified by diagnosis code 996.61 or 998.59 when reported with one or more of the above cited associated procedure codes submitted through Medicare claims reported as POA. These POA cases had an average cost of $41,999. We also found that there were 276 inpatient discharges coded with SSI Following CIED Procedures as specified by diagnosis code 996.61 or 998.59 when reported with one or more of the above cited associated procedure codes submitted through Medicare claims reported as NPOA. These NPOA cases had an average cost of $72,485. We note that these data are consistent with other data presented for current HACs. Therefore, we believe this condition is high cost and high volume.

In addition, we reviewed the literature regarding this condition. Infection associated with CIED procedures resulted in a substantial incremental increase in admission mortality and long-term mortality and varies with the type of CIED. For the purposes of the proposal, we considered CIED procedures in the aggregate. Several large studies showed CIED infection associated with an approximately 5 percent to 8 percent inhospital mortality as well as a 17.5 percent to 35.1 percent one year mortality.[5] Additionally, there is a significant cost impact for patients who

suffer infections after CIED implantation. A recent large analysis of 2007 data on over 200,000 Medicare beneficiaries demonstrated the mean hospital cost of CIED infections ranges from $28,676 to $53,349, compared with a mean hospital cost ranging from $12,468 to $36,851 for beneficiaries without infection.[6] This additional information supports our conclusion from our analysis of data in the MedPAR file that this condition is high cost.

Second, the condition of SSI Following CIED Procedures, as specified in our proposal, is a CC under the MS–DRG system. We did not identify any additional administrative or operational difficulties associated with proposing this condition as a HAC.

Third, because there are widely recognized guidelines for the prevention of SSI Following CIED Procedures, we believe the condition is reasonably preventable through application of evidence-based guidelines. A large randomized controlled trial demonstrated that prophylactic preoperative antibiotics reduced CIED infection by 81 percent in patients who received them.[7] Well-accepted guidelines for the prevention and prophylaxis of CIED infection now exist supporting the use of prophylactic antibiotics.

In the proposed rule, we invited public comment on whether SSI Following CIED Procedures meets the requirements set forth under section 1886(d)(4)(D) of the Act, as well as other coding and prevention issues associated with our proposal to add this condition as a proposed condition subject to the HAC payment provision for FY 2013 (for discharges occurring on or after October 1, 2012). We indicated that we were particularly interested in receiving comments on the degree to which SSI Following CIED Procedures is reasonably preventable through the application of evidence-based guidelines.

Comment: The majority of commenters supported SSI Following CIED Procedures as a new addition to the HAC/POA condition list, citing its clinical relevance to the Medicare beneficiary population and concerns about the increasing incidence of these infections in conjunction with increased morbidity and mortality, and the associated costs with these infections. One commenter, a State program, indicated that it uses these codes in a statewide HAC payment incentive program.

Response: We appreciate the commenters' support.

Comment: Some commenters raised concerns that the inclusion of SSI Following CIED Procedures as a HAC candidate does not meet the statutory conditions of section 1886(d)(4)(D) of the Act because ''CMS points out that there were only 859 cases of SSI Following CIED Procedures during FY 2011. This constitutes only 0.25 percent of all CIED cases.'' These commenters asserted that the HAC candidate condition does not meet the high-volume criterion and, therefore, should not be included as a HAC.

Response: We appreciate the commenters' concern regarding whether this candidate condition meets the standards of the statutory criteria. We note that we consider all cases where HAC codes are on the claim as a secondary diagnosis, regardless of their POA indicator, in evaluating conditions based on cost and volume and also use external data sources when available. With regard to cost, the proposed rule included data analyses that showed that the average cost per case of SSI Following CIED Procedures is $51,795 and also included literature that describes the increase in the mean cost of admissions with CIED infection to those CIED placements without infection. Therefore, we reiterate our belief that this condition meets the high-cost criterion. As discussed previously, section 1886(d)(4)(D) of the Act specifies that a condition on the HAC list may be high-volume or high-cost or both. It does not require the condition to be both, and a condition that is only high-cost would meet this statutory criterion. Therefore, we believe that the statutory criterion has been met.

In the proposed rule, we characterized this condition as ''high-cost and high-volume'' and described an analysis that showed 859 cases. While 859 cases may seem like a small number of cases as the commenters pointed out, we note that, in past rules, we have had similar numbers for HACs, such as in FY 2008, where we stated that there were ''764 cases reported of Medicare patients who had an object left in during surgery reported as a secondary diagnosis'' (72 FR 24720). Therefore, a volume of 859 cases is not as high as the volume for some other HACs and is higher than the volume for some HACs.

Comment: Some commenters were opposed to the SSI Following CIED Procedures becoming a HAC because they believed that this HAC selection ''will result in hospitals dedicating time and effort to avoiding this extremely low-incidence adverse event (when resources could have been devoted to more highly prevalent safety concerns).''

Response: We appreciate and understand the concern of the commenters. We note that SSIs are an established HAC category and that a similar condition has been identified by public commenters in prior rulemaking. In the FY 2008 IPPS final rule with comment period (72 FR 47213), SSIs were identified as a broad category for consideration. However, at the time, we determined that coding of SSI with only ICD–9–CM code 998.59 (Other postoperative infection) did not meet the statutory criteria for being subject to the provision because it does not uniquely identify SSIs. We stated that we would explore ways to identify SSIs and would reevaluate the condition in FY 2009. In response to public comment in the FY 2008 final rule with comment period, we finalized one SSI, mediastinitis after coronary artery bypass graft (CABG) surgery, and continued to ask for public input so that further specific SSIs could be identified.

In FY 2009, we expanded our selection of the SSI for elective procedures as HACs. In the FY 2009 IPPS final rule (73 FR 48477 through 48479), we discussed how, in response to commenters' suggestions, we selected certain orthopedic procedures in the HAC SSI category using ICD–9–CM diagnosis code 996.67 (Infection and inflammatory reaction due to other orthopedic device and implant graft) or 998.59 (Other postoperative infection) and selected 81.XX orthopedic ICD–9–CM procedure codes. Another SSI condition that was proposed and finalized during FY 2009 based on public comment was ''Surgical Site Infection Following Bariatric Surgery for Obesity.'' The ICD–9–CM codes that are used to describe ''Surgical Site Infection Following Bariatric Surgery for Obesity'' are: 278.01 (Morbid Obesity) and 998.59 (Other postoperative infection), and procedure code 44.38 (Laparoscopic gastroenterostomy) or 44.39 (Other gastroenterostomy), or 44.95 (Laparoscopic gastri restrictive procedure).

As discussed in that same final rule for FY 2009 (73 FR 48478 through 48479), a commenter recommended adding Surgical Site Infection following Implantation of Cardiac Devices as a HAC. The commenter provided the

[6] Sohail, M. R., C. A. Henrikson, *et al.* (2011). ''Mortality and cost associated with cardiovascular implantable electronic device infections.'' *Arch Intern Med* 171(20): 1821–1828.

[7] de Oliveira, J. C., M. Martinelli, *et al.* (2009). ''Efficacy of Antibiotic Prophylaxis Before the Implantation of Pacemakers and Cardioverter-Defibrillators: Results of a Large, Prospective, Randomized, Double-Blinded, Placebo-Controlled Trial.'' *Circ Arrhythm Electrophysiol,* 2(1): 29–34.

following information regarding this recommended HAC:

- A recent estimate that approximately 300,000 pacemaker implants had been performed in 2007.
- A reference stating that the estimated rate of infection following cardiac device implantation is 4 percent and that the cost to treat each pacemaker infection is approximately $25,000.
- Evidence-based guidelines for preventing these infections.

Our response in that FY 2009 final rule was that ''surgical site infection following certain cardiac device procedures is a strong candidate HAC.'' We stated the condition is high-cost, high-volume, triggers a higher-paying MS–DRG, and may be considered reasonably preventable through the application of evidence-based guidelines. We further explained that we did not propose this specific condition in the FY 2009 IPPS proposed rule; however, we expect to propose surgical site infection following certain cardiac device procedures, as well as surgical site infection following other types of device procedures, as future candidates. We also stated that we looked forward to working with stakeholders to identify additional procedures, such as device procedures, in which SSIs could be considered reasonably preventable through the application of evidence-based guidelines. We continue to agree with public commenters from FY 2009 that SSI Following Implantation of Cardiac Device Procedures is a strong candidate and made this specific proposal for FY 2013 for that reason.

In light of the public comments we received, and given our prior establishment of a broad HAC category for SSIs in relation to HACs and historical discussion of SSI following certain cardiac device procedures as a strong candidate, in this final rule, we are modifying our proposal so that, rather than this procedure being a new HAC category, we are finalizing SSI Following CIED Procedures as a new subcategory under SSIs (for example, HAC 9D Surgical Site Infection Following Cardiac Implantation).

Comment: Some commenters opposed the use of administrative/claims data to identify HAIs in the HAC/POA Program and noted that the proposed rule stated that there is no unique code that identifies SSI Following CIED procedures, and thus CMS proposed to use a combination of codes to capture these data. The commenters believed the use of claims data for the determination of HAIs/HACs has limited value in improving patient care because claims data do not provide precise identification of HAIs, nor do they provide information in a timely manner to provide effective treatment.

Response: We appreciate the commenters' concern that administrative data may not provide the most precise identification of HAIs and their comments about the codes used to identify the conditions proposed for addition to the HAC list. However, we point out that the statute establishes this policy as a payment policy, which is implemented on a per claim basis by adjusting the MS–DRG assignment. The statute further requires that the conditions on the HAC list must be identifiable through ICD–9–CM codes. The conditions identified on the HAC list and the corresponding codes or combinations of codes used to make a payment adjustment are not intended to provide information in a timely manner to provide treatment to any particular individual. The statute establishes a payment adjustment that can encourage hospitals to make improvements with regard to a limited number of conditions that, if they did not occur, could have otherwise resulted in an increased payment for a reasonably avoidable complication.

Comment: One commenter did not believe that punitive payment mechanisms coupled with the lack of risk adjustment for the conditions on the HACs list is the most appropriate or effective method to reduce complications. Commenters also asserted that CMS is expanding the HAC program ''without fully understanding the impact of appropriate risk adjustment.''

Response: We appreciate the commenters' response, but disagree with their assumptions. We received similar comments regarding the addition of two new codes to another existing HAC category. We note that our response is similar. The HAC/POA Program is part of an array of tools used by the Medicare program to promote increased quality and efficiency of care. These tools include quality measurement, as well as payment adjustments. Because of their importance, HACs have been included in multiple tools used by Medicare to measure quality of services provided and performance, and to determine payment adjustments. Under the IPPS, hospitals are encouraged to treat patients efficiently because they receive the same DRG payment for stays that vary in length and in the services provided, which gives hospitals an incentive to avoid unnecessary costs in the delivery of care. In some cases, such as when a nonselected CC/MCC appears on a claim, conditions acquired in the hospital do not generate higher payments than the hospital would otherwise receive for cases without these conditions. To this extent, the IPPS encourages hospitals to avoid complications.

With regard to risk adjustment, risk adjustment is not a requirement under section 1886(d)(4)(D) of the Act for inclusion of a condition on the HAC list for payment adjustment. We believe the commenters may be confusing the HAC payment adjustment policy with quality measurement policies, where risk adjustment is sometimes used. We believe meeting the statutory criteria as specified encourages hospitals to promote measures to protect all patients from reasonably preventable HACs.

Comment: One commenter stated: ''It is inappropriate for CMS to deny payment for HAC related complications without taking into consideration whether a patient did, in fact, receive optimal evidence-based care given that the rates of many of the HACs cannot reach zero.''

Response: We appreciate the commenter's response. We believe that, although it may be difficult to reduce the incidence of conditions on the HAC list to zero, the incidence of conditions can be significantly reduced in cases where evidence-based guidelines for the prevention of the condition exist and are used. Additionally, we point out that payment is not denied, but could be made at a lower paying MS–DRG rate. If any nonselected CC/MCC appears on the claim when a HAC is not present on admission, the claim will be paid at the higher MS–DRG rate, so the hospital would not receive a lower payment. Finally, in accordance with 42 CFR 412.60(d), hospitals may appeal the DRG assignment on a claim within 60 days of the initial notice of the DRG assignment. This may be of interest to the public, as the commenter expressed concern about those cases where a HAC occurs and a lower paying MS–DRG assignment is made.

After consideration of the public comments we received, in this final rule, we are modifying our proposal to add SSI Following CIED Procedures as a HAC condition. Our final policy makes SSI following CIED Procedures a sub-HAC condition within the SSI HAC category subject to the HAC payment provision for discharges occurring on or after October 1, 2012.

c. New Candidate HAC Condition: Iatrogenic Pneumothorax With Venous Catheterization

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27896 through

27897), we discussed our rationale for proposing a new condition, Iatrogenic Pneumothorax with Venous Catheterization, for selection as a HAC for FY 2013 under section 1886(d)(4)(D) of the Act. We previously proposed Iatrogenic Pneumothorax more generally as a HAC in the FY 2009 IPPS rulemaking (73 FR 48485).

In the FY 2009 IPPS final rule (73 FR 48485), we considered Iatrogenic Pneumothorax as a condition but did not finalize it due to commenters' concerns about the preventability of the condition when following the evidence-based guidelines. Most commenters opposed the selection of Iatrogenic Pneumothorax as a HAC and indicated that the evidence-based guidelines often acknowledge that Iatrogenic Pneumothorax is a known relatively common risk for certain procedures. Further, with regard to evidence-based guidelines, many commenters opposed designation of this condition as a HAC due to a lack of consensus within the medical community regarding its preventability.[8] Some commenters offered suggestions to exclude certain procedures or situations, including central line placement, thoracotomy, and the use of a ventilator, if Iatrogenic Pneumothorax were to be selected as a HAC. In that rule, we noted that we would continue to review the development of evidence-based guidelines for the prevention of Iatrogenic Pneumothorax if evidence warranted and consider Iatrogenic Pneumothorax as a HAC in the future. We refer readers to that final rule for a more detailed discussion (73 FR 48485). To address concerns raised by commenters in FY 2009, we reviewed changes in the standard of care and evidence-based guidelines to identify specific situations where Iatrogenic Pneumothorax would be considered reasonably preventable and identified venous catheterization as one such instance.

Pneumothorax is defined as the presence of air or gas in the pleural cavity, which is the space between the covering of the tissue of the lung and parietal pleura, or the part of the pleura that lines the chest wall. The presence of air in this space partially or completely collapses the lung and is life threatening. Air can enter the intrapleural space through a passage through the chest wall. Iatrogenic Pneumothorax is a type of traumatic pneumothorax that results from incursion into the pleural space secondary to diagnostic or therapeutic medical intervention, such as needle placement for central line catheter guidance.

There is no unique code that identifies Iatrogenic Pneumothorax with Venous Catheterization. However, Iatrogenic Pneumothorax with Venous Catheterization can be identified as a subset of discharges with ICD–9–CM diagnosis code 512.1 (Iatrogenic pneumothorax). Our clinical advisors believe that diagnosis code 512.1, in combination with the associated procedure code 38.93 (Venous catheterization NEC), can accurately identify Iatrogenic Pneumothorax with Venous Catheterization. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27896 through 27897), we proposed to identify Iatrogenic Pneumothorax with Venous Catheterization reported in combination with diagnosis code 512.1 (Iatrogenic pneumothorax) and procedure code 38.93 (Venous catheterization NEC). We recognize that, in quality measurement such as with the Agency for Healthcare Research and Quality (AHRQ) Patient Safety Indicator (PSI) Number 6 (Iatrogenic Pneumothorax Rate), exclusion criteria are used to increase the accuracy of identifying these cases. We believe that, by limiting our proposal to include Iatrogenic Pneumothorax as a HAC only in the context of venous catheterization, we have improved our ability to accurately identify these cases. While we did not propose exclusion criteria, we welcomed public comment in this regard. In addition, we believe this more narrowly tailored condition meets the three criteria for inclusion on the HAC list, as discussed in greater detail below.

First, the condition is one that is high cost and high volume. We reviewed Medicare claims data in the FY 2011 MedPAR file. We found that there were 4,467 inpatient discharge cases coded for Iatrogenic Pneumothorax with Venous Catheterization as specified by diagnosis code 512.1 reported with procedure code 38.93. The cases had an average cost of $39,128 for the entire hospital stay. We found that there were 612 inpatient discharge cases coded for Iatrogenic Pneumothorax with Venous Catheterization as specified by diagnosis code 512.1 reported with procedure code 38.93 submitted through Medicare claims reported as POA. These POA cases had an average cost of $26,693. We also found that there were 3,855 inpatient discharge cases coded for Iatrogenic Pneumothorax with Venous Catheterization as specified by diagnosis code 512.1 reported with procedure code 38.93 submitted through Medicare claims reported as NPOA. These NPOA cases had an average cost of $41,102. We note that these data are consistent with other data presented for current HACs. Therefore, we believe this condition is high cost and high volume.

In addition, we reviewed the literature regarding this condition. The cannulation of veins (that is, insertion of a catheter) with central venous catheterization is an important aspect of patient care for the administration of fluids and medications and for monitoring purposes. Eight percent of hospitalized patients receive a central venous catheter, and more than 5 million central venous catheters are inserted in the United States each year. Indwelling catheters have several known complications and side effects associated with their use, such as infections or vessel damage. Additionally, there are risks associated with the placement of central venous catheters including the risk of pneumothorax for central catheters placed in the upper area of the patient's neck or chest when placed in the internal jugular or subclavian veins. Mechanical complications associated with Iatrogenic Pneumothorax are reported to occur in 5 to 19 percent of patients.[9]

Second, the condition of Iatrogenic Pneumothorax with Venous Catheterization as specified in our proposal is a CC under the MS–DRGs.

Third, there are widely recognized guidelines that address the prevention of Iatrogenic Pneumothorax with Venous Catheterization, and we believe that Iatrogenic Pneumothorax in the context of venous catheterization is reasonably preventable through application of these evidence-based guidelines.

In terms of guidelines, the AHRQ, in a 2001 report ''Making Health Care Safer: A Critical Analysis of Patient Safety Practices'' (AHRQ Publication No. 01–EO58) recommended the use of ultrasound for the placement of all central venous catheters as one of its 11 practices aimed at improving patient care. Current standard placement techniques for these venous catheters rely on the knowledge of anatomic landmarks and other indicators to guide the initial cannulation of the vein. The increase in the number of small, advanced, and portable 2D ultrasound devices has inspired the use of these newer ultrasound devices in central venous line placement, as now direct visualization of the target vessel can be

achieved, making it easier to avoid these complications. Recommendations for the use of ultrasound as an adjunct to central venous line placement now exist and are based on supportive literature Category A (Randomized controlled trials report statistically significant ($P >$ .01) differences between clinical interventions for a specified clinical outcome) with a Level 1 weight of scientific evidence (multiple randomized controlled trials with the aggregated findings supported by meta-analysis).[10] Several studies have shown a decrease in the mechanical complication rate with the use of ultrasound during line placement.[11] Guidelines for performing ultrasound guided vascular cannulation have been recently published.[12]

We believe new evidence-based guidelines provide substantial clinical guidance for reasonable prevention when this condition occurs in the context of venous catheterization. In the proposed rule, we invited public comment on whether Iatrogenic Pneumothorax with Venous Catheterization meets the requirements set forth under section 1886(d)(4)(D) of the Act, as well as other coding and prevention issues associated with our proposal to add this proposed condition, as a condition subject to the HAC payment provision for discharges occurring on or after October 1, 2012. We stated that we were particularly interested in public comment on how limiting the condition to situations in which it occurs in conjunction with venous catheterization influences preventability, and whether additional limits should be considered in the context of venous catheterization.

Comment: Some commenters supported CMS' proposal to include Iatrogenic Pneumothorax with Venous Catheterization as a candidate condition for the HAC list. Some commenters noted that this proposal aligns with and encourages use of ''widely recognized'' guidelines based in research evidence, including AHRQ's 2001 published report, ''Making Healthcare Safer: A Critical Analysis of Patient Safety Practices'' (AHRQ Publication No. 01–E058), that shows iatrogenic pneumothorax can be a reasonably preventable complication when performing the venous catheterization using an ultrasound. One commenter stated, ''Recent studies have highlighted the cost savings and increased quality of care that ultrasound guided catheterization can provide * * * [and that] fewer complications from needle placement result in improved patient outcomes and greater clinician efficiency.''Another commenter listed additional guidelines, such as the 2002 guidance from CDC regarding the use of ultrasound and the prevention of intravascular catheter-related complications, the 2002 guidance from the National Institute for Health and Clinical Excellence (NICE) on the use of ultrasound for placing central venous catheters, the 2001 (revised in 2008) guidance from the American College of Emergency Physicians which represents the first specialty specific comprehensive guidelines for the use of ultrasound in emergency medicine, and the 2012 practice guideline from the American Society of Anesthesiologists (ASA) Taskforce on Central Venous Access for central venous access defined as placement of a catheter such that the catheter is inserted into a venous great vessel.

Another commenter noted that ''Since 2001, controlled trials have been published evaluating ultrasound guided central venous catheterization in various types of patient populations * * * and found significantly higher success rates and reduced complication rates in all studies.''

Response: We agree with commenters' input and appreciate the commenters' support.

Comment: One commenter encouraged CMS to add exclusion criteria ''to prevent reporting errors'' of the Iatrogenic Pneumothorax with Venous Catheterization HAC. Another commenter recommended that CMS add the following exclusion codes to distinguish iatrogenic and spontaneous pneumothorax; pneumothorax and air leaks: ICD–9–CM codes 512.2 (Postoperative air leak), 512.81 (Primary Spontaneous Pneumothorax), 512.82 (Secondary spontaneous pneumothorax), 512.83 Chronic pneumothorax), 512.84 (Other air leak), and 512.89 (Other Pneumothorax). One of the commenters noted that Iatrogenic Pneumothorax does not have an ICD–9–CM code.

Response: We thank the commenters for their response. At this time, we continue to believe that, by limiting our proposal to include Iatrogenic Pneumothorax as a HAC only in the context of venous catheterization, we have improved our ability to accurately identify these cases and that no further exclusion criteria are needed. We believe that the commenter may have misunderstood our proposed policy in offering the specific suggestions for exclusion codes. First, the commenter is mistaken about there not being a code for Iatrogenic Pneumothorax in ICD–9–CM. The condition is indexed clearly to diagnosis code 512.1 (Iatrogenic pneumothorax). Also, as specified, this HAC would not include the codes for spontaneous pneumothorax because it is not a complication as a result of a medical intervention and, therefore, is not iatrogenic. ICD–9–CM diagnosis code 512.1 is specific enough to capture those complications that have been caused through medical intervention in the context of venous catheterization.

Comment: Some commenters opposed the addition of the Iatrogenic Pneumothorax with Venous Catheterization condition ''because it puts hospitals at risk of being penalized twice for the same event.'' Commenters pointed out that CMS proposed to add a patient safety composite measure that includes Iatrogenic Pneumothorax with Venous Catheterization to the Hospital VBP Program. In the commenters' view, this penalizes hospitals twice for the same event. The commenters noted that they supported reducing iatrogenic pneumothorax as a patient safety goal for CMS, and urged CMS to ''select only one program in which to measure hospitals' performance on IPs with venous catheterization.'' In addition, the commenters stated that ''CMS has continued to add additional components to the HAC list without fully understanding the impact of appropriate risk adjustment.''

Response: We received similar public comments regarding our proposal to include SSI Following CIED Procedures in the existing HAC category, and, similarly, we appreciate the commenters' response but disagree with their assumptions. As we responded above with regard to the SSI Following CIED Procedures condition, the HAC/POA program is part of an array of tools used by the Medicare program to promote increased quality and efficiency of care. These tools include quality measurement, as well as payment adjustments. Because of their importance, HACs have been included in multiple tools used by the Medicare program to measure quality of services

[12] Troianos, C. A., G. S. Hartman, *et al.* (2012). ''Guidelines for Performing Ultrasound Guided Vascular Cannulation: Recommendations of the American Society of Echocardiography and the Society of Cardiovascular Anesthesiologists.'' *Anesthesia and Analgesia,* 114(1): 46–72.

provided and performance, and to determine payment adjustments. Under the IPPS, hospitals are encouraged to treat patients efficiently because they receive the same DRG payment for stays that vary in length and in the services provided, which gives hospitals an incentive to avoid unnecessary costs in the delivery of care. In some cases, such as when a nonselected CC/MCC appears on a claim, conditions acquired in the hospital do not generate higher payments than the hospital would otherwise receive for cases without these conditions. To this extent, the IPPS encourages hospitals to avoid complications and would not generally ''penalize hospitals twice.''

With regard to risk adjustment, risk adjustment is not a requirement under section 1886(d)(4)(D) of the Act for inclusion of a condition on the HAC list for payment adjustment. We believe the commenters may be confusing the HAC payment adjustment policy with quality measurement policies, where risk adjustment is sometimes used. We believe meeting the statutory criteria as specified encourages hospitals to promote measures to protect all patients from reasonably preventable hospital-acquired conditions.

Comment: Some commenters opposed the inclusion of Iatrogenic Pneumothorax with Venous Catheterization as a HAC candidate condition because they did not believe that this proposed HAC condition is high-volume.

Response: We received similar comments with regard to our proposal to include SSI Following CIED Procedures as a HAC candidate condition. We similarly point out that our proposal characterized this condition as ''high-cost and high-volume'' and described analysis that showed 4,467 cases and an average cost of $39,128. Furthermore, as discussed previously, section 1886(d)(4)(D) of the Act specifies that a condition on the HAC list may be high-volume or high-cost or both. It does not require the condition to be both and a condition that was only high-cost would still meet this statutory criterion.

Comment: Other commenters ''recommended that CMS work with CDC and other quality organizations to identify more robust measures for HAC[s] prior to implementing these two proposed conditions, as their inclusion is not currently endorsed by national quality organizations.''

Response: In establishing the HAC payment policy under section 1886(d)(4)(D) of the Act, our experts have worked closely with the public health and infectious disease professionals from across the Department of Health and Human Services to identify the candidate preventable HACs. New HAC proposals are made in consultation with the CDC to ensure the clinical soundness of the proposal.

Comment: A few commenters stated that ''For many conditions on the HAC list, occurrence rates cannot be reduced to zero or near zero even when the evidence-based guidelines are followed.'' In addition, one commenter stated ''We believe that effective preventive measures make Iatrogenic Pneumothorax reducible but not 100 percent preventable. However, the same report states that these prevention strategies may reduce the incidence but not necessarily eliminate it. CMS should recognize the reality that a target rate of zero (''never event'') is perhaps not attainable with this condition at this time.''

Response: We appreciate the commenters' response. We believe that, although it may be difficult to reduce the incidence of conditions on the HAC list to zero, the incidence of conditions can be significantly reduced in cases where evidence-based guidelines for the prevention of the condition exist and are used. For Iatrogenic Pneumothorax with Venous Catheterization, the use of the improved newly published evidence-based guidelines has shown the complication rate can be markedly reduced in the placement of the venous catheter into the internal jugular vein.

Comment: A few commenters expressed that the inclusion of the Iatrogenic Pneumothorax with Venous Catheterization condition may have unintended and deleterious consequences, which may lead providers toward using alternative sites for central line placement that are less prone to pneumothorax, but carry increased risk of mechanical and infectious complications. They indicated that alternative sites could be the internal jugular or femoral veins. Because of these consequences, these commenters did not support the addition of Iatrogenic Pneumothorax with Venous Catheterization to the HAC list.

Response: We believe the commenters may have misunderstood our proposal. The new HAC condition will apply to a population of patients who have iatrogenic pneumothorax as a complication of central venous placement of a catheter in the internal jugular vein. We do not believe hospitals will be led to consider alternative, suboptimal sites for central venous access because of this new addition to the HAC list.

Comment: Some commenters expressed concerns regarding the use of ultrasound in academic medical centers and Level 1 Trauma Centers for venous catheter placement versus the use of ultrasound for venous catheter placement in small community hospitals. They stated that ''there is little to no data on how often ultrasound guidance is used in small community medical centers.'' Furthermore, they stated that ''ultrasound guidance is less commonly used in procedures involving central venous access via the subclavian vein, and is often impossible to use in trauma cases.''

Response: We believe that, in applying evidence-based guidelines, hospitals will have appropriately trained hospital personnel. Also, we point out that the lesser paying MS–DRG is not assigned when additional nonselected CC/MCCs appear on a claim, and that trauma cases may likely involve additional nonselected CC/MCCs.

As we indicated in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27897), with the exception of the condition of Iatrogenic Pneumothorax with Venous Catheterization, at this time, we do not believe that additional analysis exists that would require us to change our previous determinations regarding the previously considered candidate HACs in the FY 2008 IPPS final rule with comment period (72 FR 47200 through 47218), the FY 2009 IPPS final rule (73 FR 48471 through 48491), the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43782 through 43785), and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51510 through 51511). We refer readers to these rules for a detailed discussion that supports our determination regarding each of the previously considered candidate HACs and continue to encourage public dialogue about refinements to the HAC list.

After consideration of the public comments we received, we are finalizing our proposal to add Iatrogenic Pneumothorax with Venous Catheterization with the codes specified above as a condition subject to the HAC payment provision for discharges occurring on or after October 1, 2012.

6. RTI Program Evaluation Summary

On September 30, 2009, a contract was awarded to Research Triangle Institute, International (RTI) to evaluate the impact of the Hospital-Acquired Condition-Present on Admission (HAC–POA) provisions on the changes in the incidence of selected conditions, effects on Medicare payments, impacts on coding accuracy, unintended consequences, and infection and event

rates. This is an intra-agency project with funding and technical support coming from CMS, the Office of Public Health and Science (OPHS), AHRQ, and CDC. The evaluation will also examine the implementation of the program and evaluate additional conditions for future selection.

RTI's evaluation of the HAC–POA provisions is divided into several parts. The evaluation includes conditions that are currently treated as HACs and also previously considered candidate conditions. We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50085 through 50101) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51512 through 51522) for a fuller description of this evaluation and findings to date regarding analysis of FY 2009 and FY 2010 data, respectively. Summary and detailed data were made publicly available on the CMS Web site at: *http://www.cms.gov/HospitalAcqCond/01_Overview.asp* and the RTI Web site at: *http://www.rti.org/reports/cms/*.

RTI's analysis of the FY 2011 MedPAR data file for the HAC–POA program evaluation is included as follows in this FY 2013 IPPS/LTCH PPS final rule. These summary and detailed data are available on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Hospital-Acquired_Conditions.html* and the RTI Web site at: *http://www.rti.org/reports/cms/*.

a. RTI Analysis of FY 2011 POA Indicator Reporting Across Medicare Discharges

To better understand the impact of HACs on the Medicare program, it is necessary to first examine the incidence of POA indicator reporting across all eligible Medicare discharges. As mentioned previously, only IPPS hospitals are required to submit POA indicator data for all diagnosis codes on Medicare claims. Therefore, all non-IPPS hospitals were excluded, as well as providers in waiver States (Maryland) and territories other than Puerto Rico.

Using MedPAR claims data from October 2010 through September 2011, RTI found a total of approximately 89.3 million secondary diagnoses across approximately 8.94 million discharges. As shown in Chart A below, the majority of all secondary diagnoses (77.57 percent) were reported with a POA indicator of ''Y,'' meaning the condition was POA.

CHART A—POA CODE DISTRIBUTION ACROSS ALL SECONDARY DIAGNOSES

		Number	Percentage
Total Discharges in Final File		8,941,507	.....
Total Number of Secondary Diagnoses Across Total Discharges		89,252,194	100.00
POA	Indicator Description	.....	.....
Y	Condition present on admission	69,231,189	77.57
W	Status cannot be clinically determined	21,796	0.02
N	Condition not present on admission	5,748,769	6.44
U	Documentation not adequate to determine if condition was present on admission	207,258	0.23
1	Exempted ICD–9–CM code	14,043,182	15.73

Source: RTI Analysis of MedPAR IPPS Claims, October 2010 through September 2011.

b. RTI Analysis of FY 2011 POA Indicator Reporting of Current HACs

Following the initial analysis of POA indicator reporting for all secondary diagnoses, RTI evaluated POA indicator reporting for specific HAC-associated secondary diagnoses. The term ''HAC-associated secondary diagnosis'' refers to those diagnoses that are on the selected HAC list and were reported as a secondary diagnosis. Chart B below shows a summary of the HAC categories with the frequency in which each HAC was reported as a secondary diagnosis and the corresponding POA indicators assigned on the claims. It is important to note that, because more than one HAC-associated diagnosis code can be reported per discharge (that is, on a single claim), the frequency of HAC-associated diagnosis codes may be more than the actual number of discharges that have a HAC-associated diagnosis code reported as a secondary diagnosis. Below we discuss the frequency of each HAC-associated diagnosis code and the POA indicators assigned to those claims.

RTI analyzed the frequency of each reported HAC-associated secondary diagnosis (across all 8.94 million discharges) and the POA indicator assigned to the claim. Chart B below shows that the most frequently reported conditions were in the Falls and Trauma HAC category, with a total of 181,157 HAC-associated diagnosis codes being reported for that HAC category. Of these 181,157 diagnoses, 4,738 reported a POA indicator of ''N'' for not POA and 175,831 diagnoses reported a POA indicator of ''Y'' for POA. The lowest frequency appears in the Blood Incompatibility HAC category with only 22 HAC-associated secondary diagnosis codes reported.

CHART B—POA STATUS OF CURRENT HACS: OCTOBER 2010 THROUGH SEPTEMBER 2011

Selected HAC	Frequency as a secondary diagnosis	Not present on admission				Present on admission			
		POA = N		POA = U		POA = Y		POA = W	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
1. Foreign Object Retained After Surgery (CC)	606	283	46.7	1	0.2	321	53.0	1	0.2
2. Air Embolism (MCC)	45	34	75.6	0	0.0	11	24.4	0	0.0
3. Blood Incompatibility (CC)	22	10	45.5	1	4.5	11	50.0	0	0.0
4. Pressure Ulcer Stages III & IV (MCC)	102,172	1,742	1.7	75	0.1	100,328	98.2	27	0.0

CHART B—POA STATUS OF CURRENT HACS: OCTOBER 2010 THROUGH SEPTEMBER 2011—Continued

Selected HAC	Frequency as a secondary diagnosis	Not present on admission				Present on admission			
		POA = N		POA = U		POA = Y		POA = W	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
5. Falls and Trauma (MCC & CC)	181,157	4,738	2.6	510	0.3	175,831	97.1	78	0.0
6. Catheter-Associated UTI (CC)	16,807	3,906	23.2	32	0.2	12,835	76.4	34	0.2
7. Vascular Catheter-Associated Infection (CC)	11,324	5,910	52.2	25	0.2	5,366	47.4	23	0.2
8. Poor Glycemic Control (MCC)	15,360	612	4.0	7	0.0	14,734	95.9	7	0.0
9A. Surgical Site Infection Mediastinitis CABG (CC)	58	50	86.2	0	0.0	8	13.8	0	0.0
9B. Surgical Site Infection Following Certain Orthopedic Procedures (CC)	356	247	69.4	0	0.0	109	30.6	0	0.0
9C. Surgical Site Infection Following Bariatric Surgery for Obesity (CC)	25	24	96.0	0	0.0	1	4.0	0	0.0
10. Pulmonary Embolism & DVT Orthopedic (MCC)	3,368	2,715	80.6	20	0.6	611	18.1	22	0.7
Total *	331,300	20,271	6.1	671	0.2	310,166	93.6	192	0.1

* More than one HAC-associated diagnosis code can be reported per discharge; therefore, frequency of HAC-associated diagnosis codes may be more than the actual number of discharges that have a HAC-associated diagnosis code reported as a secondary diagnosis.

In the FY 2009 IPPS final rule (73 FR 48486 through 48487), we adopted as final our proposal to: (1) pay the CC/MCC MS–DRGs for those HACs coded with ''Y'' and ''W'' indicators; and (2) not pay the CC/MCC MS–DRGs for those HACs coded with ''N'' and ''U'' indicators. We also discussed the comments we received urging CMS to strongly consider changing the policy and to pay for those HACs assigned a POA indicator of ''U'' (documentation is insufficient to determine if the condition was present at the time of admission). We stated we would monitor the extent to which and under what circumstances the ''U'' POA reporting option is used. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule, we also discussed and responded to comments regarding HACs coded with the ''U'' indicator (74 FR 43784 and 43785). As shown in Chart B above, RTI's analysis provides data on a total of 671 HAC-associated secondary diagnoses reported with a POA indicator of ''U.'' Of those diagnoses, 510 (0.3 percent) were assigned to the Falls and Trauma HAC category.

We continue to believe that better documentation will result in more accurate public health data. We did not propose to change our policy under which CMS does not pay at the higher CC/MCC amount when a selected HAC diagnosis code is reported with a POA indicator of ''U.''

We encourage readers to further review the RTI detailed report which demonstrates the frequency of each individual HAC-associated diagnosis code within the HAC categories. For example, in the Foreign Object Retained After Surgery HAC category, there are two unique ICD–9–CM diagnosis codes to identify that condition: Code 998.4 (Foreign body accidentally left during a procedure) and code 998.7 (Acute reaction to foreign substance accidentally left during a procedure). In the detailed RTI report, readers can view that code 998.4 was reported 591 times and code 998.7 was reported 15 times, across all MS–DRGs, for a total of 606 times. The RTI detailed report is available at the following Web site: *http://www.rti.org/reports/cms/*.

c. RTI Analysis of FY 2011 Frequency of Discharges and POA Indicator Reporting for Current HACs

RTI further analyzed the effect of the HAC provision by studying the frequency in which a HAC-associated diagnosis was reported as a secondary diagnosis with a POA indicator of ''N'' or ''U'' and, of that number, how many resulted in MS–DRG reassignment. In Chart C below, Column A shows the number of discharges for each HAC category where the HAC-associated diagnosis was reported as a secondary diagnosis. For example, there were 45 discharges that reported Air Embolism as a secondary diagnosis. Column C shows the number of discharges for each HAC reported with a POA indicator of ''N'' or ''U.'' Continuing with the example of Air Embolism, the chart shows that, of the 45 reported discharges, 34 discharges (75.56 percent) had a POA indicator of ''N'' or ''U'' and were identified as a HAC discharge. There were a total of 34 discharges to which the HAC policy applied and that could, therefore, have had an MS–DRG reassignment. Column E shows the number of discharges where an actual MS–DRG reassignment occurred. As shown in Column E, the number of discharges with an Air Embolism that resulted in actual MS–DRG reassignments was 14 (41.18 percent of the 34 discharges with a POA indicator of ''N'' or ''U''). Thus, while there were 34 discharges (75.56 percent of the original 45) with an Air Embolism reported with a POA indicator of ''N'' or ''U'' identified as a HAC discharge that could have caused MS–DRG reassignment, the end result was 14 (41.18 percent) actual MS–DRG reassignments. There are a number of reasons why a selected HAC reported with a POA indicator of ''N'' or ''U'' will not result in MS–DRG reassignment. These reasons were illustrated with the diagram in section II.F.1. of the preamble of this final rule and will be discussed in further detail in section II.F.3.e. of this preamble.

Chart C below also shows that, of the 287,993 discharges with a HAC-associated diagnosis as a secondary diagnosis, 3,006 discharges ultimately resulted in MS–DRG reassignment. As will be discussed below, there were 15

claims that resulted in MS–DRG reassignment where 2 HACs were reported on the same admission. The four HAC categories that had the most discharges resulting in MS–DRG reassignment were: (1) Falls and Trauma; (2) Pulmonary Embolism and DVT Orthopedic (Orthopedic PE/DVT); (3) Pressure Ulcer Stages III & IV; and (4) Catheter-Associated Urinary Tract Infection (CAUTI). Codes falling under the Falls and Trauma HAC category were the most frequently reported secondary diagnoses with 143,920 discharges. Of these 143,920 discharges, 4,555 (3.16 percent) were coded as not POA and identified as HAC discharges. This category also contained the greatest number of discharges that resulted in an MS–DRG reassignment. Of the 4,555 discharges within this HAC category that were not POA, 1,241 (27.24 percent) resulted in an MS–DRG reassignment.

Of the 287,993 total discharges reporting HAC-associated diagnoses as a secondary diagnosis, 3,044 discharges were coded with a secondary diagnosis of Orthopedic PE/DVT. Of these 3,044 discharges, 2,473 (81.24 percent) were coded as not POA and identified as HAC discharges. This category contained the second greatest number of discharges resulting in an MS–DRG reassignment. Of the 2,473 discharges in this HAC category that were not POA, 1,082 discharges (43.75 percent) resulted in an MS–DRG reassignment.

The Pressure Ulcer Stages III & IV category had the second most frequently coded secondary diagnoses, with 96,646 discharges. Of these discharges, 1,770 (1.83 percent) were coded as not POA and identified as HAC discharges. This category contained the third greatest number of discharges resulting in an MS–DRG reassignment. Of the 1,770 discharges in this HAC category that were not POA, 286 discharges (16.16 percent) resulted in an MS–DRG reassignment.

The Catheter-Associated UTI category had the third most frequently coded secondary diagnoses, with 16,807 discharges. Of these discharges, 3,918 (23.31 percent) were coded as not POA and identified as HAC discharges. This category contained the fourth greatest number of discharges resulting in an MS–DRG reassignment. Of the 3,918 discharges in this HAC category that were not POA, 160 discharges (4.08 percent) resulted in an MS–DRG reassignment.

The remaining 6 HAC categories only had 237 discharges that ultimately resulted in MS–DRG reassignment. We note that, even in cases where a large number of HAC-associated secondary diagnoses were coded as not POA, this finding did not necessarily translate into a large number of discharges that resulted in MS–DRG reassignment. For example, only 20 of the 5,921 Vascular Catheter-Associated Infection secondary diagnoses that were coded as not POA and identified as HAC discharges resulted in an MS–DRG reassignment.

There were a total of 431 discharges with a HAC-associated secondary diagnosis reporting a POA indicator of ''N'' or ''U'' that were excluded from acting as a HAC discharge (subject to MS–DRG reassignment) due to the CC Exclusion List logic within the GROUPER. The CC Exclusion List identifies secondary diagnosis codes designated as a CC or an MCC that are disregarded by the GROUPER logic when reported with certain principal diagnoses. For example, a claim with a principal diagnosis code of 250.83 (Diabetes with other specified manifestations, type 1 [juvenile type], uncontrolled) and a secondary diagnosis code of 250.13 (Diabetes with ketoacidosis, type 1, [juvenile type], uncontrolled) with a POA indicator of ''N'' would result in the HAC-associated secondary diagnosis code 250.13 being ignored as a CC. According to the CC Exclusion List, code 250.13 is excluded from acting as a CC when code 250.83 is the principal diagnosis. As a result, the HAC logic would not be applicable to that case. For a detailed discussion on the CC Exclusion List, we refer readers to section II.G.9. of this preamble.

Discharges where the HAC logic was not applicable due to the CC Exclusion List occurred among the following 5 HAC categories: Pressure Ulcer Stages III and IV (30 cases), Falls and Trauma (303 cases), Catheter-Associated UTI (20 cases), Vascular Catheter-Associated Infection (14 cases), and Manifestations of Poor Glycemic Control (64 cases). Further information regarding the specific number of cases that were excluded for each HAC-associated secondary diagnosis code within each of the above mentioned HAC categories is also available. We refer readers to the RTI detailed report at the following Web site: *http://www.rti.org/reports/cms/*.

In summary, Chart C below demonstrates that there were a total of 287,993 discharges with a reported HAC-associated secondary diagnosis. Of the total 287,993 discharges, 19,839 (6.54 percent) discharges were HACs reported with a POA indicator of ''N'' or ''U'' that were identified as a HAC discharge. Of these 19,839 discharges, the number of discharges resulting in MS–DRG reassignments was 3,006 (15.96 percent).

CHART C—DISCHARGE FREQUENCIES OF CURRENT CMS HACS OCTOBER 2010 THROUGH SEPTEMBER 2011

Selected HAC category	Discharges with this condition as secondary diagnosis		Discharges Identified as a HAC		Discharges that change MS–DRG due to HAC	
	Number (column A)	Percent [2] (column B)	Number (column C)	Percent [3] (column D)	Number (column E)	Percent [4] (column F)

5. Falls & Trauma: Unduplicated Total	143,920	1.61	4,555	3.16	1,241	27.24
6. Catheter-Associated UTI	16,807	0.19	3,918	23.31	160	4.08
7. Vascular Catheter-Associated Infection	11,324	0.13	5,921	52.29	20	0.34

CHART C—DISCHARGE FREQUENCIES OF CURRENT CMS HACS OCTOBER 2010 THROUGH SEPTEMBER 2011—Continued

Selected HAC category	Discharges with this condition as secondary diagnosis		Discharges Identified as a HAC		Discharges that change MS–DRG due to HAC	
	Number (column A)	Percent [2] (column B)	Number (column C)	Percent [3] (column D)	Number (column E)	Percent [4] (column F)
8. Poor Glycemic Control	15,145	0.17	555	3.66	152	27.39
9a. SSI Mediastinitis CABG	58	0.07	50	86.21	5	10.00
9b. SSI Orthopedic	351	0.31	244	69.52	6	2.44
9c. SSI Bariatric	25	0.19	24	96.00	2	8.33
10. Pulmonary Embolism & DVT Orthopedic	3,044	0.76	2,473	81.24	1,082	43.75
Total [1]	287,993	3.22	19,839	6.54	3,006	15.96

[1] Discharges can appear in more than one row. The total figure is not adjusted for the 207 discharges with more than one HAC that appear as secondary diagnoses (15 of these resulted in MS–DRG reassignment).
[2] Percent computed relative to total discharges ''at risk'' for this HAC. For HACs 1–8, this is 8,941,507. For HAC 9a, this is 77,744. For HAC 9b, this is 112,951. For HAC 9c, this is 13,404. For HAC 10, this is 401,246.
[3] Percent computed relative to discharges with condition as a secondary diagnosis.
[4] Percent computed relative to discharges with this HAC (Column C).
Source: RTI Analysis of MedPAR IPPS Claims, October 2010 through September 2011.

A small number of discharges had multiple HAC categories reported during the same stay. In reviewing the 8.94 million claims, RTI found 207 cases in which at least two different HAC categories were reported on the same discharge. Chart D below summarizes these cases. The Vascular Catheter-Associated Infection HAC category had the highest number of discharges involving another HAC category with 126 total discharges. Of these 126 discharges, 47 involved a code from the Pressure Ulcer Stages III & IV HAC category and 62 discharges involved a code from the Catheter-Associated UTI HAC category.

Some of these cases with multiple HACs reported had both HAC codes ignored in the MS–DRG assignment. Of these 207 claims, 15 did not receive higher payments based on the presence of these reported HACs and we describe these claims below in section II.F.3.f.(2) of this preamble. Depending on the MS–DRG to which the cases were originally assigned, ignoring the HAC codes would have led to a MS–DRG reassignment if there were no other MCCs or CCs reported, if the MS–DRG was subdivided into severity levels, and if the case were not already in the lowest severity level prior to ignoring the HAC codes.

CHART D—CLAIMS WITH MORE THAN ONE HAC SECONDARY DIAGNOSIS OCTOBER 2010 THROUGH SEPTEMBER 2011

HAC	1. Foreign object retained after surgery (CC)	4. Pressure ulcer Stages III & IV (MCC)	5. Falls and trauma (MCC & CC)	6. Catheter-associated UTI (CC)	7. Vascular catheter-associated infection (CC)	8. Poor glycemic control (MCC)	Total
3. Blood Incompatibility (CC)	.....	1	.....	.....	.....	.....	1
5. Falls and Trauma (MCC & CC)	.....	8	.....	.....	.....	.....	8
6. Catheter-Associated UTI (CC)	1	17	8	.....	.....	.....	26
7. Vascular Catheter-Associated Infection (CC)	2	47	15	62	.....	.....	126
8. Poor Glycemic Control (MCC)	1	2	1	4	5	.....	13
9A. Surgical Site Infection Mediastinities CABG (CC)	.....	1	1	.....	3	.....	5
9B. Surgical Site Infection Following Certain Orthopedic Procedures (CC)	.....	1	.....	3	2	.....	6
10. Pulmonary Embolism & DVT Orthopedic (MCC)	.....	.....	10	7	.....	1	18
Total Discharges with 2 HACs *	4	77	35	76	10	1	203

*In total, there were 207 discharges with more than one HAC secondary diagnosis. However, there were 4 discharges involving 3 HAC secondary diagnoses. These discharges included the following HAC secondary diagnoses:
Discharge 1: Pressure Ulcer Stages III & IV (MCC & CC), Catheter-Associated Infection (CC), and Vascular Catheter-Associated Infection (CC);
Discharge 2: Pressure Ulcer Stages III & IV (MCC & CC), Catheter-Associated Infection (CC), and Vascular Catheter Associated Infection (CC);
Discharge 3: Pressure Ulcer Stages III & IV (MCC & CC), Catheter-Associated Infection (CC), and Vascular Catheter Associated Infection (CC);
Discharge 4: Catheter-Associated Infection (CC), Vascular Catheter Associated Infection (CC), and Poor Glycemic Control (MCC).

d. RTI Analysis of Circumstances When Application of HAC Provisions Would Not Result in MS–DRG Reassignment for Current HACs

As discussed in section II.F.1. and illustrated in the diagram in section II.F.1. of this preamble, there are instances when the MS–DRG assignment does not change even when a HAC-associated secondary diagnosis has a POA indicator of either ''N'' or ''U.'' In analyzing our claims data, RTI identified four main reasons why an MS–DRG assignment would not change despite the presence of a HAC. Those four reasons are described below and are shown in Chart E below. Column A shows the frequency of discharges that included a HAC-associated secondary diagnosis. Column B shows the frequency of discharges where the HAC-associated secondary diagnosis was coded as not POA and identified as a HAC discharge. Column C shows the frequency of discharges in which the HAC-associated secondary diagnosis coded as not POA resulted in a change in MS–DRG. Columns D, E, F, and G show the frequency of discharges in which the HAC-associated secondary diagnosis coded as not POA did not result in a change in MS–DRG assignment. Columns D, E, F, and G are explained in more detail below.

(1) Other MCCs/CCs Prevent Reassignment

Column D (Other MCC/CCs that Prevent Reassignment) in Chart E below indicates the number of cases reporting a HAC-associated secondary diagnosis code that did not have an MS–DRG reassignment because of the presence of other secondary diagnoses on the MCC or CC list. A claim that is coded with a HAC-associated secondary diagnosis and a POA status of either ''N'' or ''U'' may have other secondary diagnoses that are classified as an MCC or a CC. In such cases, the presence of these other MCC and CC diagnoses will still lead to the assignment of a higher severity level, despite the fact that the GROUPER software is disregarding the ICD–9–CM code that identifies the selected HAC in making the MS–DRG assignment for that claim. For example, there were 175 cases in which the ICD–9–CM codes for the Foreign Object Retained After Surgery HAC category were present, but the presence of other secondary diagnoses that were MCCs or CCs resulted in no change to the MS–DRG assignment. Chart E shows that a total of 12,335 cases did not have a change in the MS–DRG assignment because of the presence of other reported MCCs and CCs.

(2) Two Severity Levels Where HAC Does Not Impact MS–DRG Assignment

Column E (Number of MS–DRGs with Two Severity Levels Where HAC Does Not Impact MS–DRG Assignment) shows the frequency with which discharges with a HAC as a secondary diagnosis coded as not POA did not result in an MS–DRG change because the MS–DRG is subdivided solely by the presence or absence of an MCC. A claim with a HAC and a POA indicator of either ''N'' or ''U'' may be assigned to an MS–DRG that is subdivided solely by the presence or absence of an MCC. In such cases, removing a HAC ICD–9–CM CC code will not lead to further changes in the MS–DRG assignment. Examples of these MS–DRG subdivisions are shown in the footnotes to the chart and include the following examples:

- MS–DRGs 100 and 101 (Seizures with or without MCC, respectively); and
- MS–DRGs 102 and 103 (Headaches with or without MCC, respectively).

The codes that fall under the HAC category of Foreign Object Retained After Surgery are CCs. If this case were assigned to an MS–DRG with an MCC subdivision such as MS–DRGs 100 and 101, the presence of the HAC code would not affect the MS–DRG severity level assignment. In other words, if the Foreign Object Retained After Surgery code was the only secondary diagnosis reported, the case would be assigned to MS–DRG 101. If the POA indicator was ''N,'' the HAC Foreign Object Retained After Surgery code would be ignored in the MS–DRG assignment logic. Despite the fact that the code was ignored, the case would still be assigned to the same lower severity level MS–DRG. Therefore, there would be no impact on the MS–DRG assignment.

Column E in Chart E below shows that there were 1,922 cases where the HAC code was ''N'' or ''U'' and the MS–DRG assignment did not change because the case was already assigned to the lowest severity level.

(3) No Severity Levels

Column F (Number of MS–DRGs with No Severity Levels) shows the frequency with which discharges with a HAC as a secondary diagnosis coded as not POA did not result in an MS–DRG change because the MS–DRG is not subdivided by severity levels. A claim with a HAC and a POA of ''N'' or ''U'' may be assigned to an MS–DRG with no severity levels. For instance, MS–DRG 311 (Angina Pectoris) has no severity level subdivisions; this MS–DRG is not split based on the presence of an MCC or a CC. If a patient assigned to this MS–DRG develops a secondary diagnosis such as a Stage III pressure ulcer after admission, the condition would be considered to be a HAC. The code for the Stage III pressure ulcer would be ignored in the MS–DRG assignment because the condition developed after the admission (the POA indicator was ''N''). Despite the fact that the ICD–9–CM code for the HAC Stage III pressure ulcer was ignored, the MS–DRG assignment would not change. The case would still be assigned to MS–DRG 311. Chart E below shows that 2,570 cases reporting a HAC-associated secondary diagnosis did not undergo a change in the MS–DRG assignment based on the fact that the case was assigned to an MS–DRG that had no severity subdivisions (that is, the MS–DRG is not subdivided based on the presence or absence of an MCC or a CC, rendering the presence of the HAC irrelevant for payment purposes).

(4) MS–DRG Logic

Column G (MS–DRG Logic Issues) shows the frequency with which a HAC as a secondary diagnosis coded as not POA did not result in an MS–DRG change because of MS–DRG assignment logic. There were six discharges where the HAC criteria were met and the HAC logic was applied, however, due to the structure of the MS–DRG logic, these cases did not result in MS–DRG reassignment. These cases may appear similar to those discharges where the MS–DRG is subdivided into two severity levels by the presence or absence of an MCC and did not result in MS–DRG reassignment; however, these discharges differ slightly in that the MS–DRG logic also considers specific procedures that were reported on the claim. In other words, for certain MS–DRGs, a procedure may be considered the equivalent of an MCC or CC. The presence of the procedure code dictates the MS–DRG assignment despite the presence of the HAC-associated secondary diagnosis code with a POA indicator of ''N'' or ''U.''

For example, a claim with a principal diagnosis code of 724.02 (Spinal stenosis, lumbar region, without neurogenic claudication) with a HAC-associated secondary diagnosis code of 996.64 (Infection and inflammatory reaction due to indwelling urinary catheter) and diagnosis code 599.0 (Urinary tract infection, site not specified), having POA indicators of ''Y,'' ''N,'' and ''N,'' respectively, and procedure code 84.80 (Insertion or replacement of interspinous process device(s)) results in an assignment to MS–DRG 490 (Back and Neck Procedures Except Spinal Fusion with CC/MCC or Disc Device/

Neurostimulator). In this case, the disc device (code 84.80) is what dictated the MS–DRG assignment and the presence of the HAC-associated secondary diagnosis code, 996.64, did not affect the MS–DRG assigned. Other examples of MS–DRGs that are subdivided in this same manner are as follows:

- MS–DRG 029 (Spinal procedures with CC or Spinal Neurostimulators);
- MS–DRG 129 (Major Head & Neck Procedures with CC/MCC or Major Device); and
- MS–DRG 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents).

Column G in the chart below shows that three of the six cases that did not result in MS–DRG reassignment due to the MS–DRG logic were in the Catheter-Associated UTI HAC category, two cases were in the Falls and Trauma HAC Category, and one case was in the Vascular Catheter-Associated Infection HAC Category.

In conclusion, a total of 16,833 cases (12,335 + 1,922 +2,570 + 6) did not have a change in MS–DRG assignment, regardless of the presence of a HAC. The reasons described above explain why only 3,006 cases had a change in MS–DRG assignment despite the fact that there were 19,839 HAC cases with a POA of ''N'' or ''U.''

CHART E—REASONS HAC DID NOT CHANGE MS–DRG ASSIGNMENT

[October 2010 through September 2011]

Selected HAC category	Number of discharges with this condition as secondary diagnosis	Number of discharges identified as a HAC	Number of HAC discharges that change MS–DRG due to HAC	HAC discharges that do not change MS–DRG			
				Number of other MCCs/CCs that prevent reassignment	Number of MS–DRGs with two severity levels where HAC does not impact MS–DRG Assignment*	Number of MS–DRGs with No Severity Levels	Other MS–DRG logic issues **
	(Column A)	(Column B)	(Column C)	(Column D)	(Column E)	(Column F)	(Column G)
1. Foreign Object Retained After Surgery—CC	606	284	37	175	56	16	0
2. Air Embolism—MCC	45	34	14	17	0	3	0
3. Blood Incompatibility—CC	22	11	1	7	1	2	0
4. Pressure Ulcer Stages III & IV—MCC	96,646	1,770	286	991	0	493	0
5. Falls and Trauma—MCC & CC	143,920	4,555	1,241	2,449	488	375	2
6. Catheter-Associated UTI-CC	16,807	3,918	160	2,952	424	379	3
7. Vascular Catheter-Associated Infection—CC	11,324	5,921	20	4,551	158	1,191	1
8. Poor Glycemic Control—MCC & CC	15,145	555	152	358	0	45	0
9A. Surgical Site Infection, Mediastinitis, Following Coronary Artery Bypass Graft (CABG)—MCC	58	50	5	28	0	17	0
9B. Surgical Site Infection Following Certain Orthopedic Procedures—CC	351	244	6	155	67	16	0
9C. Surgical Site Infection Following Bariatric Surgery for Obesity—CC	25	24	2	19	0	3	0
10. Pulmonary Embolism & DVT Orthopedic—MCC & CC	3,044	2,473	1,082	633	728	30	0
Total[1]	287,993	19,839	3,006	12,335	1,922	2,570	6

[1] Discharges can appear in more than one row. The total figure is not adjusted for the 207 discharges with more than one HAC that appear as secondary diagnoses (15 of these resulted in MS–DRG reassignment).

*Examples where an HAC classified as a CC would not impact the DRG assignment if it were removed. The MS–DRG is subdivided by the presence or absence of an MCC. A CC would not impact this DRG assignment.

MS–DRGs 100 and 101 (Seizures with or without MCC, respectively).

MS–DRGs 102 and 103 (Headaches with or without MCC, respectively).

**Cases where HAC did not change MS–DRG assignment because of the MS–DRG logic.

MS–DRG 029 (Spinal Procedures with CC or Spinal Neurostimulators).

MS–DRG 129 (Major Head & Neck Procedures with CC/MCC or Major Device).

Source: RTI Analysis of MedPAR IPPS Claims, October 2010 through September 2011.

e. RTI Analysis of Coding Changes for HAC–Associated Secondary Diagnoses for Current HACs

In addition to studying claims from October 2010 through September 2011 (FY 2011), RTI evaluated claims data from 4 years prior to determine if there were significant changes in the number of discharges with a HAC being reported as a secondary diagnosis. RTI examined claims from FY 2007 through FY 2010 and compared these data to the FY 2011 data.

We refer readers to the RTI detailed report for all the conditions in each fiscal year (FY 2007 through FY 2011) as described above at the following Web site: *http://www.rti.org/reports/cms/*.

f. RTI Analysis of Estimated Net Savings for Current HACs

RTI determined estimates of the net savings generated by the HAC payment policy based on MedPAR claims from October 2010 through September 2011.

(1) Net Savings Estimation Methodology

The payment impact of a HAC is the difference between the IPPS payment amount under the initially assigned MS–DRG and the amount under the reassigned MS–DRG. The amount for the reassigned MS–DRG appears on the MedPAR files. To construct this, RTI modeled the IPPS payments for each MS–DRG following the same approach that we use to model the impact of IPPS annual rule changes. Specifically, RTI replicated the payment computations carried out in the IPPS PRICER program using payment factors for IPPS providers as identified in various CMS downloaded files. The files used are as follows:

- Version 28 of the Medicare Severity GROUPER software (applicable to discharges between October 1, 2010 and September 30, 2011). IPPS MedPAR claims were run through this file to obtain needed HAC–POA output variables.
- The FY 2011 MS–DRG payment weight file. This file includes the weights, geometric mean length of stay (GLOS), and the postacute transfer payment indicators.
- CMS standardized operating and capital rates. Tables 1A through 1C, as downloaded from the Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download-Items/CMS1255464.html*, include the full update and reduced update amounts, as well as the information needed to compute the blended amount for providers located in Puerto Rico.
- The IPPS impact files for FY 2011, also as downloaded from the Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download-Items/CMS1255464.html*. This file includes the wage index and geographic adjustment factors in effect at the start of FY 2011, plus the provider type variable to identify providers qualifying for alternative hospital-specific amounts and their respective hospital-specific rates.
- The IPPS impact files for FY 2012, as downloaded from the Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Acute-Inpatient-Files-for-Download-Items/CMS1255464.html*. This file is created for a subsequent payment year, but the file includes IME and DSH percent adjustments that were in effect as of March 2011. For providers that did not appear in the FY 2012 file, we defaulted to the IME and DSH rates from the FY 2011 file.
- CMS historical provider-specific files (PSF). This includes the indicator to identify providers subject to the full or reduced standardized rates and the applicable operating and capital CCRs. A SAS version was downloaded from the Web site at: *http://www.cms.hhs.gov/ProspMedicareFeeSvcPmtGen/04_psf_SAS.asp*.

There were three providers with discharges in the final HAC analysis file that did not appear in either of the impact files. For these providers, we identified the geographic CBSA from the historical PSF and assigned the wage index using values from Tables 4A and 4C as downloaded from the Web site at: *http://www.cms.hhs.gov/AcuteInpatientPPS/IPPS2009/List.asp*. These three providers were not eligible for IME or DSH adjustments.

The steps for estimating the HAC payment impact are as follows:

Step 1: Re-run the Medicare Severity GROUPER on all records in the analysis file. This is needed to obtain information on actual HAC-related MS–DRG reassignments in the file, and to identify the CCs and MCCs that contribute to each MS–DRG assignment.

Step 2: Model the base payment and outlier amounts associated with the initial MS–DRG (including all secondary diagnoses in the file) using the computations laid out in the CMS file ''Outlier Example FY 2007 new.xls,'' as downloaded from the Web site at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html?redirect=/04_outlier/ASP#TopOfPage*, and modified to accommodate FY 2011 factors. RTI's first round of computations treated all claims as though paid under standard IPPS rules without adjusting for short-stay transfers or HSP amounts.

Step 3: Model the base payment and outlier amounts associated with the final MS–DRG (excluding the HAC-related secondary diagnoses) using the computations laid out in the CMS file ''Outlier Example FY 2007 new.xls,'' as downloaded from the Web site at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Payment/AcuteInpatientPPS/index.html?redirect=/04_outlier.asp#TopOfPage* and modified to accommodate FY 2011 factors. RTI's first round of computations treated all claims as though paid under standard IPPS rules without adjusting for short-stay transfers or hospital-specific amounts.

Step 4: Compute MS–DRG base savings as the difference between the nonoutlier payments for the initial and final MS–DRGs. Compute outlier amounts as the difference in outlier amounts due under the initial and final reassigned MS–DRG. Compute net savings due to HAC reassignment as the sum of base savings plus outlier amounts.

Step 5: Adjust the model to incorporate short-stay transfer payment adjustments.

Step 6: Adjust the model to incorporate hospital-specific payments for qualifying rural providers receiving the hospital-specific payment rates.

It is important to mention that using the methods described above, the MS–DRG and outlier payment amounts that are modeled for the final assigned MS–DRG do not always match the DRG price and outlier amounts that appear in the MedPAR record. There are several reasons for this. Some discrepancies are caused by using single wage index, IME and DSH factors for the full period covered by the discharges, when in practice these payment factors can be adjusted for individual providers during the course of the fiscal year. In addition, RTI's approach disregards any Part A coinsurance amounts owed by individual beneficiaries with greater than sixty covered days in a spell of illness. Ten percent of all FY 2011 HAC

discharges showed at least some Part A coinsurance amount due from the beneficiary, although less than 2 percent of reassigned discharges (43 cases in the analysis file) showed Part A coinsurance amounts due. Any Part A coinsurance payments would reduce the actual savings incurred by the Medicare program.

There are also a number of less common special IPPS payment situations that are not factored into RTI's modeling. These could include new technology add-on payments, payments for blood clotting factors, reductions for replacement medical devices, adjustments to the capital rate for new providers, and adjustments to the capital rate for certain classes of providers who are subject to a minimum payment level relative to capital cost.

(2) Net Savings Estimate

Chart F below summarizes the estimated net savings of current HACs based on MedPAR claims from October 2010 through September 2011, based on the methodology described above. Column A shows the number of discharges where an MS–DRG reassignment for each HAC category occurred. For example, there were 14 discharges with an Air Embolism that resulted in an actual MS–DRG reassignment. Column B shows the total net savings caused by MS–DRG reassignments for each HAC category. Continuing with the example of Air Embolism, the chart shows that the 14 discharges with an MS–DRG reassignment resulted in a total net savings of $124,620. Column C shows the net savings per discharge for each HAC category. For the Air Embolism HAC category, the net savings per discharge is $8,901.

CHART F—ESTIMATED NET SAVINGS OF CURRENT HACS

[October 2010 Through September 2011]

Selected HAC	Number of discharges that change MS–DRG due to HAC (Column A)	Net savings (in dollars) (Column B)	Net savings per discharge (in dollars) (Column C)
1. Foreign Object Retained After Surgery	37	$167,818	$4,536
2. Air Embolism	14	124,620	8,901
3. Blood Incompatibility	1	7,115	0
4. Pressure Ulcer Stages III & IV	286	1,846,449	6,456
5. Falls and Trauma:			
a. Fracture	996	6,232,020	6,257
b. Dislocation	2	9,075	4,538
c. Intracranial Injury	258	1,222,290	4,738
d. Crushing Injury	0	0	0
e. Burn	3	4,583	1,528
f. Other injuries	0	0	0
Less: Discharges with multiple Falls & Trauma	−18	−105,430	−5,857
5. Falls & Trauma: Unduplicated Total	1,241	7,362,538	5,933
6. Catheter-Associated UTI	160	491,053	3,069
7. Vascular Catheter-Associated Infection	20	92,100	4,605
8. Poor Glycemic Control	152	1,002,378	6,595
9a. SSI Mediastinitis CABG	5	60,438	12,088
9b. SSI Orthopedic	6	41,503	6,917
9c. SSI Bariatric	2	3,312	0
10. Pulmonary Embolism & DVT Orthopedic	1,082	8,313,098	7,683
Total [1]	3,006	19,512,422	6,491
Less: Discharges with Multiple HACs [2]	−15	−136,645	−9,110
Unduplicated Total	2,991	19,375,777	6,478

[1] Discharges can have more than one Falls and Trauma subcategory HAC and therefore appear in more than one row.
[2] Total net savings is adjusted by $136,645 for 15 claims that have multiple HACs.
Source: RTI Analysis of MedPAR IPPS Claims, October 2010 through September 2011.

As shown in Chart F above, the total net savings calculated for October 2010 through September 2011 was roughly $19.4 million. The three HACs with the largest number of discharges resulting in MS–DRG reassignment, Falls and Trauma, Orthopedic PE/DVT, and Pressure Ulcer Stages III & IV, generated $17.5 million of net savings for the fiscal year. Estimated net savings for FY 2011 associated with the Falls and Trauma category were $7.4 million. Estimated net savings associated with Orthopedic PE/DVT for the fiscal year were $8.3 million and for Pressure Ulcer Stages III & IV were $1.85 million.

The mean net savings per discharge calculated for October 2010 through September 2011 was roughly $6,478. The HAC category of SSI, Mediastinitis, Following Coronary Artery Bypass Graft (CABG) had the highest net savings per discharge, but represented a small proportion of total net savings because the number of discharges that resulted in MS–DRG reassignment for this HAC was low. The HAC categories of Blood Incompatibility, where only one discharge resulted in MS–DRG reassignment, and SSI Following Bariatric Surgery for Obesity, where only two discharges resulted in MS–DRG reassignment had the lowest net savings per discharge. We refer readers to the RTI detailed report available at the following Web site: *http://www.rti.org/reports/cms/*.

As we discuss in section II.F.1. of this preamble, implementation of this policy is part of an array of Medicare VBP tools that we are using to promote increased quality and efficiency of care. We point

out that a decrease over time in the number of discharges where these conditions are not POA is a desired consequence. We recognize that estimated net savings would likely decline as the number of such discharges decline. However, we believe that the sentinel effect resulting from CMS identifying these conditions is critical. It is our intention to continue to monitor trends associated with the frequency of these HACs and the estimated net payment impact through RTI's program evaluation and possibly beyond.

As mentioned previously, a small number of cases analyzed by RTI for FY 2011 had multiple HACs during the same stay. In reviewing our 8.94 million claims, RTI found 207 cases where at least two HACs were reported on the same admission as noted in section II.F.3.g.(2) of this preamble. Of these 207 claims, 15 resulted in MS–DRG reassignment. Chart G below summarizes these cases. There were 15 cases that had two HACs not POA that resulted in an MS–DRG reassignment. Of these, seven discharges involved Orthopedic PE/DVT, while four discharges involved the Pressure Ulcer Stages III & IV and Falls and Trauma HAC categories.

CHART G—CLAIMS WITH MORE THAN ONE HAC SECONDARY DIAGNOSIS WHERE MS–DRG REASSIGNMENT OCCURRED

[October 2010 Through September 2011]

Selected HAC	4. Pressure ulcer stages III & IV—MCC	5. Falls and trauma—MCC & CC	10. Pulmonary embolism & DVT orthopedic (MCC)	Total
5. Falls and Trauma—MCC & CC	1	.....	3	4
6. Catheter-Associated Urinary Tract Infection (UTI)—CC	2	3	3	8
7. Vascular Catheter-Associated Infection—CC	1	1	.....	2
8. Poor Glycemic Control (MCC)	.....	.....	1	1
Total	4	4	7	15

g. Previously Considered Candidate HACs—RTI Analysis of Frequency of Discharges and POA Indicator Reporting

RTI evaluated the frequency of conditions previously considered, but not adopted as HACs in prior rulemaking, that were reported as secondary diagnoses (across all 8.94 million discharges) as well as the POA indicator assignments for these conditions. Chart H below indicates that the three previously considered candidate conditions most frequently reported as a secondary diagnosis were: (1) Clostridium Difficile-Associated Disease (CDAD), which demonstrated the highest frequency, with a total of 90,347 secondary diagnoses codes being reported for that condition, of which 30,176 reported a POA indicator of ''N''; (2) Methicillin Resistant Staphylococcus aureus, with a total of 83,976 secondary diagnosis codes being reported for that condition, with 3,498 of those reporting a POA indicator of ''N''; and (3) Iatrogenic Pneumothorax, with a total of 20,309 secondary diagnoses codes being reported for that condition, with 17,828 of those reporting a POA indicator of ''N.'' As these three conditions had the most significant impact for reporting a POA indicator of ''N,'' it is reasonable to believe that these same three conditions would have the greatest number of potential MS–DRG reassignments. The frequency of discharges for the previously considered HACs that could lead to potential changes in MS–DRG assignment is discussed in the next section. We take this opportunity to remind readers that, because more than one previously considered HAC diagnosis code can be reported per discharge (on a single claim), the frequency of these diagnosis codes may be more than the actual number of *discharges* with a previously considered candidate condition reported as a secondary diagnosis.

CHART H—POA STATUS OF PREVIOUSLY CONSIDERED ''CANDIDATE'' HAC CONDITIONS—OCTOBER 2010 THROUGH SEPTEMBER 2011

Previously considered HAC condition	Frequency as a secondary diagnosis	Not present on admission				Present on admission			
		POA = N		POA = U		POA = Y		POA = W	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
1. Clostridium Difficile-Associated Disease (CDAD)	90,347	30,176	33.40	354	0.39	59,700	66.08	117	0.13
2. Delirium	752	246	32.71	2	0.27	504	67.02	0	0.00
3. Legionnaire's Disease	520	29	5.58	3	0.58	488	93.85	0	0.00
4. Staphylococcus aureus Septicemia	18,844	4,043	21.46	37	0.20	14,736	78.20	28	0.15
5. Methicillin-Resistant Staphylococcus aureus	83,976	3,498	4.17	173	0.21	80,280	95.60	25	0.03
6. Iatrogenic Pneumothorax	20,309	17,828	87.78	5	0.02	1,476	7.27	0	0.00
7. Ventilator-Associated Pneumonia	4,715	3,634	77.07	4	0.08	1,074	22.78	3	0.06

In Chart I below, Column A shows the number of discharges for each previously considered candidate HAC category when the condition was reported as a secondary diagnosis. For example, there were 90,347 discharges

that reported CDAD as a secondary diagnosis. Previously considered candidate HACs reported with a POA indicator of ''N'' or ''U'' may cause MS–DRG reassignment (which would result in reduced payment to the facility). Column C shows the discharges for each previously considered candidate HAC reported with a POA indicator of ''N'' or ''U.'' Continuing with the example of CDAD, Chart I shows that, of the 90,347 discharges, 30,530 discharges (33.79 percent) had a POA indicator of ''N'' or ''U.'' Therefore, there were a total of 30,530 discharges that could potentially have had an MS–DRG reassignment. Column E shows the number of discharges where an actual MS–DRG reassignment could have occurred; the number of discharges with CDAD that could have resulted in actual MS–DRG reassignments is 784 (2.57 percent). Thus, while there were 30,530 discharges with CDAD reported with a POA indicator of ''N'' or ''U'' that could potentially have had an MS–DRG reassignment, the result was 784 (2.57 percent) potential MS–DRG reassignments. As discussed above, there are a number of reasons why a condition reported with a POA indicator of ''N'' or ''U'' would not result in an MS–DRG reassignment.

In summary, Chart I below demonstrates there were a total of 219,397 discharges with a previously considered candidate HAC reported as a secondary diagnosis. Of those, 60,025 discharges were reported with a POA indicator of ''N'' or ''U.'' The total number of discharges that could have resulted in MS–DRG reassignments is 3,544.

CHART I—PREVIOUSLY CONSIDERED ''CANDIDATE'' HAC DISCHARGE FREQUENCIES—OCTOBER 2010 THROUGH SEPTEMBER 2011

Previously considered HAC condition	Discharges with this condition as secondary diagnosis [2]		Discharges with this condition not present on admission (POA = ''N'' or ''U'') [3]		Cases that could change MS–DRG due to previously considered candidate HAC [4]	
	Number (Column A)	Percent (Column B)	Number (Column C)	Percent (Column D)	Number (Column E)	Percent (Column F)
1. Clostridium Difficile-Associated Disease (CDAD)	90,347	1.01	30,530	33.79	784	2.57
2. Delirium	752	0.01	248	32.98	18	7.26
3. Legionnaire's Disease	520	0.01	32	6.15	3	9.38
4. Staphylococcus aureus Septicemia	18,806	0.21	4,073	21.66	84	2.06
5. Methicillin-Resistant Staphylococcus aureus (MRSA)	83,948	0.94	3,671	4.37	1	0.03
6. Iatrogenic Pneumothorax	20,309	0.23	17,833	87.81	2,652	14.87
7. Ventilator-Associated Pneumonia	4,715	0.05	3,638	77.16	2	0.05
Total [1]	219,397	2.45	60,025	27.36	3,544	5.90

[1] Discharges can appear in more than one row.
[2] Percent computed relative to total cases ''at risk,'' which is 8,941,507 for all candidate conditions.
[3] Percent computed relative to discharges with condition as a secondary diagnosis.
[4] Percent computed relative to discharges with condition as a secondary diagnosis and identified as a previously considered HAC (that is, coded as not present on admission).

h. Current and Previously Considered Candidate HACs—RTI Report on Evidence-Based Guidelines

The RTI program evaluation includes a report that provides references for all evidence-based guidelines available for each of the selected and previously considered candidate HACs that provide recommendations for the prevention of the corresponding conditions. Guidelines were primarily identified using the AHRQ National Guidelines Clearing House (NGCH) and the CDC, along with relevant professional societies. Guidelines published in the United States were used, if available. In the absence of U.S. guidelines for a specific condition, international guidelines were included.

Evidence-based guidelines that included specific recommendations for the prevention of the condition were identified for each of the 10 selected conditions. In addition, evidence-based guidelines were also found for the previously considered candidate conditions.

RTI prepared a final report to summarize its findings regarding evidence-based guidelines, which can be found on the Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Hospital-Acquired_Conditions.html.*

i. Proposals Regarding Current HACs and Previously Considered Candidate HACs

We believe that the RTI analysis summarized above does not provide additional information that would require us to change our previous determinations regarding current HACs. We refer readers to section II.F.6. of the FY 2008 IPPS final rule with comment period (72 FR 47202 through 47218) and to section II.F.7. of the FY 2009 IPPS final rule (73 FR 48474 through 48491) for detailed discussion supporting our determination regarding each of these conditions.

In the FY 2013 IPPS/LTCH PPS proposed rule, we discussed our rationale for proposing two new conditions, Surgical Site Infection (SSI) Following Cardiac Implantable Electronic Device (CIED) procedures (77 FR 27894 through 27896), and Iatrogenic Pneumothorax with Venous Catheterization (77 FR 27896 through 27897) for selection as HACs under section 1886(d)(4)(D) of the Act. (We previously proposed Iatrogenic Pneumothorax more generally as a HAC in the FY 2009 IPPS rulemaking (73 FR 48485).) We also discussed a proposal to revise the Vascular Catheter-Associated Infection HAC category with the addition of two new diagnosis codes 999.32 (Bloodstream infection due to central venous catheter), and 999.33 (Local infection due to central venous catheter) (77 FR 27894). Accordingly, we are finalizing those proposals as discussed in section II.F.5. of this preamble.

In addition to the evaluation of HAC and POA MedPAR claims data, RTI has conducted analyses on readmissions due to HACs and the incremental costs of HACs to the health care system, a study of spillover effects and

unintended consequences, as well as an analysis on the accuracy of coding of HACs and POA indicators. Reports on these analyses are publicly available on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Hospital-Acquired_Conditions.html.*

Comment: Commenters encouraged CMS to more carefully evaluate this program and its potential for unintended consequences, and to explore how information learned from POA coding could be used to better understand and prevent HACs before it considers the inclusion of any additional categories of HACs.

Response: We appreciate the commenters' response. We routinely, either internally or through our contractors, review the significant aspects of the HAC/POA Program.

G. Changes to Specific MS–DRG Classifications

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27898), we invited public comment on each of the MS–DRG classification proposed changes described below, as well as our proposals to maintain certain existing MS–DRG classifications, which are also discussed below. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data. In other cases, we proposed to maintain the existing MS–DRG classification based on our analysis of claims data.

CMS encourages input from our stakeholders concerning the annual IPPS updates when that input is made available to us by December of the year prior to the next annual proposed rule update. For example, to be considered for any updates or changes in FY 2013, comments and suggestions should have been submitted by early December 2011. The comments that were submitted in a timely manner are discussed below in this section.

Below we summarize the public comments we received on the FY 2013 proposed rule, if any, present our responses, and state our final policies.

1. Pre-Major Diagnostic Categories (Pre-MDCs)

a. Ventricular Assist Devices (VADs)

A ventricular assist device (VAD) is a mechanical circulatory device or pump that is used to partially or completely support heart function and blood flow in patients with a damaged or weakened heart. The device takes blood from the ventricles of the heart and helps pump the blood to the rest of the body.

Some VADs are intended for short-term use, often for patients who are recovering from heart attacks or heart surgery, while other VADs are intended for long-term use (months to years and, in some cases, for life). VADs are not the same device as artificial hearts, which are designed to completely take over cardiac function and generally require the removal of the patient's native heart.

VADs are designed to assist the ventricles, either the right (RVAD) or the left (LVAD), and, in some cases, both ventricles at once (BiVAD). The type of VAD used depends on the patient's underlying heart disease and the pulmonary arterial resistance that determines the load on the right ventricle. LVADs are the most commonly used, but when pulmonary arterial resistance is high, right ventricular assistance becomes necessary and an RVAD may be inserted. Long-term VADs are normally used to help maintain a patient's quality of life while he or she awaits a heart transplant. This process is known as a ''bridge to transplant.'' However, sometimes the insertion of an LVAD becomes the final treatment for the patient, which is known as ''destination therapy.'' In this case, the VAD is a permanent implant, and no heart transplantation occurs. In a smaller number of cases, the implantation of a VAD, combined with pharmaceutical therapy, has enabled the native heart to recover sufficiently to allow the VAD to be explanted, a ''bridge to recovery.''

CMS has issued a national coverage determination (NCD) entitled ''Artificial Hearts and Related Devices'' under Section 20.9 of the Medicare Coverage Manual (Pub. No. 100–3). This NCD, which describes CMS' requirements for coverage of medical services provided to Medicare beneficiaries for the insertion of VADs, can be found at the CMS Web site at: *https://www.cms.gov/medicare-coverage-database/details/ncd-details.aspx?NCDId=246&ncdver=5&NCAId=211&ver=20&NcaName=Artificial+Hearts&bc=ACAAAAAAIAAA&*. We refer readers to this Web page for the complete viewing of the NCD for the insertion of VADs.

The assignment of procedure codes used to describe the insertion of VADs has been discussed repeatedly in IPPS rulemaking, for the CMS–DRGs (in effect prior to FY 2008) and more recently for the MS–DRGs (FY 2008 to present). We refer readers to the FY 2003 IPPS final rule (67 FR 49989) for a complete discussion of the assignment of these procedure codes up to that date. In addition, the topic was discussed in FY 2005; we refer readers to the FY 2005 IPPS final rule (69 FR 48927 through 48930) for a complete discussion regarding the assignment of these procedure codes for FY 2005. Specifically, for FY 2005, we moved ICD–9–CM procedure code 37.66 (Insertion of implantable heart assist system) from CMS–DRG 525 (Other Heart Assist System Implant) to CMS–DRG 103 (Heart Transplant). When we adopted the MS–DRG classification system in FY 2008, former CMS–DRG 103 remained in the Pre-MDC section but was renamed and subdivided into MS–DRG 001 (Heart Transplant or Implant of Heart Assist System with MCC) and MS–DRG 002 (Heart Transplant or Implant of Heart Assist System without MCC).

For FY 2013, we received a request to restructure MS–DRGs 001 and 002 by removing all of the procedure codes that describe the insertion of a device, leaving only procedure codes 33.6 (Combined heart-lung transplantation) and 37.51 (Heart transplantation) in the heart transplant DRGs. The requestor further asked that the remaining device codes be assigned to newly created MS–DRGs. The requestor believed that, within the existing MS–DRG grouping, CMS is underpaying for services to patients who have a VAD implanted and overpaying for services to patients who have heart transplantations. The requestor believed that the recommended restructuring ''would allow defined grouping of cases with the higher level of resource [sic] required reflected in payment.''

In the FY 2013 IPPS/LTCH PPS proposed rule, we indicated that we had reviewed data in the September 2011 update of the FY 2011 MedPAR file and found that the average length of stay for heart transplantations and VAD implantation cases are very similar (35.1 days for heart transplantations and 36.63 days for VAD implantations). We also found that the average cost for VAD implantation cases alone is higher than the average cost of heart transplantation cases. The table below includes our findings.

MS–DRG	Number of cases	Average length of stay	Average cost
MS–DRG 001—All Cases	1,235	36.97	$164,846

MS–DRG	Number of cases	Average length of stay	Average cost
MS–DRG 001—Cases with Heart Transplant without VAD	384	35.1	123,472
MS–DRG 001—Cases with VAD Insertion Alone	811	36.85	181,915
MS–DRG 002—All Cases	313	19.66	89,818
MS–DRG 002—Cases with Heart Transplant without VAD	172	15.1	58,890
MS–DRG 002—Cases with VAD Insertion Alone	140	25.31	128,069

We believe that this higher average cost could be attributable to the cost of the device itself. There are very few VADs approved by FDA; therefore, we believe this small group of manufacturers is able to set their own charges in the market. We pointed out that the IPPS is not designed to pay solely for the cost of devices. The MS–DRG classification system (and more importantly, the IPPS) is not based solely on the cost of devices.

Rather, the MS–DRG system is a patient classification system that provides an average means of relating the type of patients a hospital treats (that is, case-mix) to the costs incurred by the hospital. We have previously stated that, ''Central to the success of the Medicare inpatient hospital prospective payment system is that DRGs have remained a clinical description of why the patient required hospitalization. We believe it would be undesirable to transform DRGs into detailed descriptions of the technology and processes used by the hospital to treat the patient. If such a transformation were to happen, the DRGs would become largely a repackaging of fee-for-service without the management and communication benefits. The separation of the clinical and payment weight methodologies allows a stable clinical methodology to be maintained, while the payment weights evolve in response to changing practice patterns. The packaging of all services associated with the care of a particular type of patient into a single payment amount provides the incentive for efficiency inherent in a DRG-based prospective payment system. Substantial disaggregation of the DRGs into smaller units of payment, or a substantial number of cases receiving extra payments, would undermine the incentives and communication value in the DRG system.'' (66 FR 46904)

The results of our review of the claims data for MS–DRGs 001 and 002 are summarized in the following table.

Code	Description of code(s)	Number of cases
MS–DRG 001 (Heart Transplant or Implant of Heart Assist System with MCC)		
All codes		1,235
33.6 or 37.51	Combined heart-lung transplantation or Heart transplantation	384
33.6 or 37.51 with 37.66	Combined heart-lung transplantation or Heart transplantation with Insertion of implantable heart assist system (VAD).	11
37.52	Implantation of total internal biventricular heart replacement system (Artificial heart)	2
37.66	Insertion of implantable heart assist system (VAD)	811
37.60 with 37.64	Implantation or insertion of biventricular external heart assist system + Removal of external heart assist system(s) or device(s).	1
37.63 with 37.64	Repair of heart assist system + Removal of external heart assist system(s) or device(s)	0
37.64 with 37.65	Removal of external heart assist system(s) or device(s) + plant of single ventricular (extracorporeal) external heart assist system.	22
	Multiple VADs without heart transplant	22
MS–DRG 002 (Heart Transplant or Implant of Heart Assist System without MCC)		
All codes		313
33.6 or 37.51	Combined heart-lung transplantation or Heart transplantation	172
33.6 or 37.51 with 37.66	Combined heart-lung transplantation or Heart transplantation with Insertion of implantable heart assist system (VAD).	0
37.52	Implantation of total internal biventricular heart replacement system (Artificial heart)	0
37.66	Insertion of implantable heart assist system (VAD)	140
37.60 with 37.64	Implantation or insertion of biventricular external heart assist system plus Removal of external heart assist system(s) or device(s).	0
37.63 with 37.64	Repair of heart assist system + Removal of external heart assist system(s) or device(s)	0
37.64 with 37.65	Removal of external heart assist system(s) or device(s) + plant of single ventricular (extracorporeal) external heart assist system.	1
	Multiple VADs without heart transplant	4

In the proposed rule, we stated that we believe that the IPPS should accurately recognize differences in utilization for clinically distinct procedures. However, we also reiterated the language in the FY 2009 IPPS final rule that the payments under a prospective payment system are predicated on averages (73 FR 48443). We believe that to create a new MS–DRG specific to VAD implantation would require basing that MS–DRG almost exclusively on the presence of procedure code 37.66, representing a single procedure and currently one manufacturer with FDA approval. Currently, other manufacturers are reported to be in clinical trials with their VADs. We indicated that this approach negates our longstanding method of grouping like procedures and diminishes the concept of averaging. Further, we are concerned that ignoring the structure of the MS–DRG system solely for the purpose of increasing payment for one device would set an unwarranted precedent for defining all

of the other MS–DRGs in the system (73 FR 48497 and 48498).

The commenter requested that we create two new MS–DRGs for the VADs and that the requested MS–DRGs be divided based on the presence or absence of an MCC. We pointed out that the final rule establishing the MS–DRGs sets forth five criteria, all five of which are required to be met in order to warrant creation of a CC or an MCC subgroup within a base MS–DRG. The criteria can be found in the FY 2008 IPPS final rule with comment period (72 FR 47169). The original criteria were based on average charges; we now use average costs (FY 2007 IPPS final rule (71 FR 47882)). To reiterate, these criteria are as follows:

- A reduction in variance of costs of at least 3 percent.
- At least 5 percent of the patients in the MS–DRG fall within the CC or MCC subgroup.
- At least 500 cases are in the CC or MCC subgroup.
- There is at least a 20-percent difference in average costs between subgroups.
- There is a $2,000 difference in average cost between subgroups.

As procedure code 37.66 predominates in our claims data for VAD implantations, as we did in the proposed rule, we are including the following table to demonstrate the cost difference between MS–DRG 001 and MS–DRG 002.

MS–DRG	Number of cases	Average cost
001—Cases with procedure code 37.66	811	$181,915
002—Cases with procedure code 37.66	140	128,069

As stated in the FY 2008 IPPS final rule with comment period, all five criteria must be met in order to subdivide an MS–DRG into MCC and non-MCC severity levels. In this instance, the number of cases in MS–DRG 002 containing procedure code 37.66 is 140, not the minimum number of 500 cases as established by the MS–DRG severity criteria. Therefore, even if we were to create a new MS–DRG for VAD implantation, unless we further divided the MS–DRG based on the presence of an MCC, we would substantially overpay approximately 15 percent of total VAD cases. However, we could not create multiple MS–DRGs for VAD implantation without ignoring our rules for subdividing MS–DRGs.

For these reasons, for FY 2013, we did not propose to make any changes to the structure of MS–DRGs 001 and 002. We invited public comment on our proposal.

Comment: Several commenters stated that they had no objections to CMS' proposal to maintain the current structure of MS–DRG 001 and MS–DRG 002 and not create separate MS–DRGs for VAD and heart transplants. The commenters stated that this proposal seems reasonable given the data and information provided.

One commenter stated that MS–DRG weights should reflect the overall costs of all of the services involved in an admission and that it would be inappropriate to bifurcate these MS–DRGs solely due to the cost of a single device, especially when that device is currently distributed by a single manufacturer. The commenter agreed with our proposal to maintain the existing structure of MS–DRGs 001 and 002, but urged CMS to continue to monitor the composition and costs of these MS–DRGs moving forward, especially as new VAD devices are approved for implantation.

Response: We appreciate the commenters' support for our proposal to maintain the existing structure of MS–DRG 001 and MS–DRG 002 for FY 2013. We will continue to monitor the composition and costs of these MS–DRGs as new VAD devices are approved for implantation.

Comment: One commenter stated that keeping the existing MS–DRG 001 and MS–DRG 002 structure may ultimately be a deterrent for appropriate provision of care to Medicare beneficiaries because of the discrepancy of cost between cardiac transplantation and implantation of VADs. The commenter stated that the cost of the VAD implantation is commonly more than $50,000 greater than the cost of a cardiac transplantation. The commenter stated that providing two MS–DRGs for heart transplants and two for VAD implantations will assure access to the best available technology.

Response: We acknowledge the commenter's concern about the potential for problems with future beneficiary access to VAD implantations and heart transplants. There are currently a limited number of FDA-approved VADs on the market. We will continue to monitor these MS–DRGs as additional VADs come onto the market and technologies change. We believe that creating separate MS–DRGs for VAD implantations and heart transplants could lead to significant reductions in the payment for heart transplants. Considering the limited number of FDA-approved VADs and the negative impact that creating separate MS–DRGs for VAD implantations and heart transplants would have on heart transplant cases, we do not believe the creation of separate MS–DRGs for VAD implantations and heart transplants is appropriate at this time.

After consideration of the public comments we received, we are finalizing our proposal to make no changes to MS–DRG 001 and MS–DRG 002 for FY 2013.

b. Allogeneic Bone Marrow Transplant

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50101), we deleted MS–DRG 009 (Bone Marrow Transplant) and created two new MS–DRGs: MS–DRG 014 (Allogeneic Bone Marrow Transplant) and MS–DRG 015 (Autologous Bone Marrow Transplant). We created MS–DRGs 014 and 015 because of differences in costs associated with the procedures in these two MS–DRGs. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51525 through 51526), we further subdivided MS–DRG 015 into two severity levels, by deleting MS–DRG 015 and creating MS–DRG 016 (Autologous Bone Marrow Transplant with CC/MCC); and MS–DRG 017 (Autologous Bone Marrow Transplant without CC/MCC). We created MS–DRGs 014 and 015 as these groups meet all five criteria for subdivision by severity level that we established in the FY 2008 IPPS final rule with comment period (72 FR 47169). As we discussed in the FY 2012 IPPS/LTCH PPS final rule, MS–DRG 014 did not meet the criteria for subdivision by severity level.

During the comment period for the FY 2012 IPPS/LTCH PPS proposed rule, we received a public comment regarding related and unrelated allogeneic bone marrow transplants (which are captured in MS–DRG 014) that had not been the subject of a proposal in that proposed rule. This issue was referred to briefly in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557), but we did not address the issue because we considered

the comment to be out of the scope of provisions of the proposed rule. However, we addressed this issue in the FY 2013 proposed rule. The commenter recommended that MS–DRG 014 be subdivided into two MS–DRGs based on related and unrelated transplant donor source.

Allogeneic bone marrow transplantation utilizes the blood stem cells in bone marrow, umbilical cord blood, or peripheral blood from a donor that is either biologically related (sibling or other biologically close family member) or biologically unrelated (not a biologically close family member of the recipient) in the treatment of certain cancers and bone marrow diseases. Allogeneic transplant recipients must have a tissue type that matches the donor. According to the commenter, a related donor will typically be managed by the transplant facility from human leukocyte antigen (HLA) molecular typing through mobilization and collection, while an unrelated donor requires the use of donor registry for searching and collection process. According to the commenter, the unrelated donor setting adds significant costs to the transplant that would not be incurred in the related transplant setting.

Currently, there are three ICD–9–CM procedure codes that identify the transplant donor source:

- 00.91 (Transplant from live related donor)
- 00.92 (Transplant from live non-related donor)
- 00.93 (Transplant from cadaver)

In our analysis of data in the FY 2011 MedPAR file, we found 467 cases assigned to MS–DRG 014 with average costs of approximately $64,403 and an average length of stay of approximately 24.8 days. There were 125 cases that reported procedure code 00.91 on the claim as the related transplant donor source with average costs of approximately $55,969 and an average length of stay of approximately 24.1 days. In our analysis of the unrelated donor source, we included the cases reported with the transplant from a cadaver donor source (code 00.93) with the transplant from a live nonrelated donor source (code 00.92). There were 213 cases that reported either code 00.92 or 00.93 as the transplant donor source with average costs of approximately $64,837 and an average length of stay of approximately 23 days. There were 129 cases that did not report a transplant donor source with average costs of approximately $71,859 and an average length of stay of approximately 28.5 days. The following table illustrates our findings:

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 014—All cases	467	24.8	$64,403
MS–DRG 014—Live related donor (code 00.91)	125	24.1	55,969
MS–DRG 014—Live nonrelated donor (code 00.92) or cadaver (code 00.93)	213	23	64,837
MS–DRG 014—No donor source	129	28.5	71,859

As we noted in the proposed rule, one quarter of the cases (129 out of 467 cases) that did not report a transplant donor source code had the highest average costs of approximately $71,859, compared to $55,969 for live related donors and $64,837 for live nonrelated or cadaver donors and $64,403 for the overall average cost of cases within MS–DRG 014. The cases without a transplant donor source code also had a longer length of stay (28.5 days) than the live-related donor cases (24.1 days), the live nonrelated or cadaver cases (23 days), and the overall cases (24.8 days) assigned to MS–DRG 014.

Based on these findings, we stated that we believe that it would not be advisable to include cases without a transplant donor source code with the live nonrelated or cadaver donor cases, as we believe it would encourage providers not to report the transplant donor source code. All possible options must be included in any MS–DRG reconfiguration. Therefore, cases with no reported transplant donor source code must be included in the updated logic because this is the group with the highest average costs. Our clinical advisors reviewed this issue and do not support splitting MS–DRG 014 into two MS–DRGs because a quarter of the cases did not provide a transplant donor source. Therefore, we concluded that the cases reported with a transplant donor source code are appropriately assigned to MS–DRG 014 and that MS–DRG does not warrant further subdivision. Without more complete information on donor source, we did not propose that MS–DRG 014 be subdivided in the proposed rule. We invited public comment on our proposal not to subdivide MS–DRG 014 into two MS–DRGs based on related and unrelated donor source.

Comment: Several commenters stated that they had no objections to CMS' proposal to maintain the current structure of MS–DRG 014. The commenters stated that the proposal seems reasonable based on the data and information provided. One commenter supported the subdivision to distinguish between related and unrelated allogeneic bone marrow transplants. However, the commenter stated that if CMS continues to believe that there is not sufficient data to support a split, CMS should require data collection of search and procurement costs. The commenter suggested that CMS establish a specific revenue code or line item on the hospital cost report to require hospitals to document the search and procurement costs in order to receive payment.

Response: We agree with the commenters that stated that, based on data and our analysis, we should not subdivide MS–DRG 014 without more complete information on the donor source. As stated previously, one quarter of the cases (129 out of 467 cases) did not report a transplant donor source code. We believe that we have sufficient methods of reporting donor source on the claim by reporting ICD–9–CM code 00.91, 00.92, or 00.93 and associated costs.

After consideration of the public comments we received, we are not making any changes to MS–DRG 014 for FY 2013.

2. MDC 4 (Diseases and Disorders of the Ear, Nose, Mouth and Throat): Influenza With Pneumonia

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557), we discussed a public comment that we considered out of the scope of the FY 2012 proposed rule. Therefore, we did not address the issues in the final rule. The commenter requested that we consider reassigning cases with a combined diagnosis of influenza with pneumonia from a set of simple pneumonia MS–DRGs to a set of MS–DRGs that captures a more severe type of pneumonia. The specific request involves cases now assigned to MS–DRGs 193 (Simple Pneumonia and Pleurisy with MCC), 194 (Simple Pneumonia and Pleurisy with CC), and 195 (Simple Pneumonia and Pleurisy without MCC/CC) being moved to MS–DRGs 177 (Respiratory Infections and

Inflammations with MCC), 178 (Respiratory Infections and Inflammations with CC), and 179 (Respiratory Infections and Inflammations without MCC/CC).

For the FY 2013 proposed rule, we examined data in the FY 2011 MedPAR file on cases that reported diagnosis code 487.0 (Influenza with pneumonia) as the principal diagnosis with an additional secondary diagnosis code for one of the following types of pneumonia:

- 482.0 (Pneumonia due to Klebsiella pneumoniae)
- 482.1 (Pneumonia due to Pseudomonas)
- 482.40 (Pneumonia due to Staphylococcus, unspecified)
- 482.41 (Methicillin susceptible pneumonia due to Staphylococcus aureus)
- 482.42 (Methicillin resistant pneumonia due to Staphylococcus aureus)
- 482.49 (Other Staphylococcus pneumonia)
- 482.81 (Pneumonia due to anaerobes)
- 482.82 (Pneumonia due to Escherichia coli [E. coli])
- 482.83 (Pneumonia due to other gram-negative bacteria)
- 482.84 (Pneumonia due to Legionnaires' disease)
- 482.89 (Pneumonia due to other specified bacteria)

Currently, when one of the pneumonia codes listed above is reported as a principal diagnosis, the case is assigned to MS–DRG 177, 178, or 179. However, when the patient has been diagnosed with one of these types of pneumonia and also has influenza, the ICD–9–CM coding book directs the coder to report diagnosis code 487.0 as the principal diagnosis and to assign an additional secondary code to describe the specific type of pneumonia. This reporting results in cases with diagnoses of both influenza and specific types of pneumonia being assigned to MS–DRG 193, 194, or 195 (Simple Pneumonia and Pleurisy with MCC, with CC, or without CC/MCC, respectively), instead of MS–DRG 177, 178, or 179. The commenter requested that we reassign cases reporting code 487.0 as the principal diagnosis with one of the specific pneumonia codes listed above as a secondary diagnosis to MS–DRGs 177, 178, and 179.

We analyzed data from the MedPAR file on cases with patients with pneumonia and found the following:

MS–DRG	Number of cases	Average length of stay	Average cost
MS–DRG 177—All cases	69,128	8.20	$13,002
MS–DRG 178—All cases	59,559	6.40	9,193
MS–DRG 179—All cases	14,108	4.65	6,365
MS–DRG 193—All cases	125,892	6.28	9,589
MS–DRG 193—Cases with principal diagnosis code 487.0 and with a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	57	9.3	15,867
MS–DRG 193—Cases with principal diagnosis code 487.0 and without a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	1,320	6.93	10,416
MS–DRG 194—All cases	191,030	4.73	6,524
MS–DRG 194—Cases with principal diagnosis code 487.0 and with a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	59	6.9	9,752
MS–DRG 194—Principal diagnosis code 487.0 and without a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	2,088	5.16	6,871
MS–DRG 195—All cases	80,253	3.53	4,660
MS–DRG 195—Cases with a principal diagnosis code 487.0 and a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	12	4.8	5,842
MS–DRG 195—Cases with principal diagnosis code 487.0 and without a secondary diagnosis code of 482.0, 482.1, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, or 482.89	1,065	3.78	4,580

The data showed that cases reporting a principal diagnosis code 487.0 with one of the pneumonia codes listed above as a secondary diagnosis have significantly higher average costs ($15,867 in MS–DRG 193, $9,752 in MS–DRG 194, and $5,842 in MS–DRG 195) than those cases reported without one of the pneumonia codes listed above as a secondary diagnosis ($10,416 in MS–DRG 193, $6,871 in MS–DRG 194, and $4,580 in MS–DRG 195), and also the overall average costs for all cases in MS–DRGs 193, 194, and 195 ($9,589, $6,524, and $4,660, respectively). The influenza and pneumonia cases had average costs that more closely align with the average costs of cases currently assigned to MS–DRGs 177, 178, and 179 ($13,002, $9,193, and $6,365, respectively).

As a result of our analysis, the data support the commenter's request that we reassign cases reporting a principal diagnosis code 487.0 and an additional secondary diagnosis code for one of the pneumonia codes listed above, from MS–DRGs 193, 194, and 195 to MS–DRGs 177, 178, and 179. Our clinical advisors also support reassigning these cases to MS–DRGs 177, 178, and 179. Therefore, for FY 2013, we proposed to reassign cases with a principal diagnosis code 487.0 and an additional secondary diagnosis code of one of the following pneumonia codes listed as a secondary diagnosis codes from MS–DRGs 193, 194, and 195 to MS–DRGs 177, 178, and 179: 482.0; 482.1; 482.40; 482.41; 482.42; 482.49; 482.81; 482.82; 482.83; 482.84; and 482.89.

We invited public comment on our proposal for FY 2013.

Comment: Commenters supported our proposal to reassign cases with a principal diagnosis code of 487.0 with an additional secondary diagnosis code for the specified types of pneumonia from MS–DRGs 193 and 195 to MS–DRGs 177, 178, and 179. The commenters stated that these proposed reassignments better capture the more severe type of pneumonia that results in significantly higher average costs. Other commenters stated the proposed reassignments were reasonable, given the data and information provided.

Response: We appreciate the commenters' support of our proposals.

After consideration of the public comments we received, we are finalizing our proposal of reassigning cases with a principal diagnosis code of 487.0 and an additional secondary diagnosis code of one of the following pneumonia codes as a secondary diagnosis code from MS–DRGs 193, 194, and 195 to MS–DRGs 177, 178, and 179: 482.0; 482.1, 482.40, 482.41, 482.42; 482.49; 482.81; 482.82; 482.83, 482.84; and 482.89.

3. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Percutaneous Mitral Valve Repair With Implant

We received a request to reassign procedure code 35.97 (Percutaneous mitral valve repair with implant) to the following MS–DRGs:

- MS–DRG 216 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac with MCC);
- MS–DRG 217 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac with CC);
- MS–DRG 218 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac without CC/MCC);
- MS–DRG 219 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac with MCC);
- MS–DRG 220 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac with CC); and
- MS–DRG 221 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac without CC/MCC).

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51528 through 51529), we discussed reassigning procedure code 35.97 from MS–DRGs 231 and 232 (Coronary Bypass with PTCA with MCC and without MCC, respectively) and MS–DRGs 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents), 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC), 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents), 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC), 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI with MCC), and 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI without MCC). In that final rule, we stated that we did not have sufficient claims data on which to base and evaluate any proposed changes to the current MS–DRG assignment. Procedure code 35.97 was created for use beginning October 1, 2010 (FY 2011) after the concept of percutaneous valve repair was presented at the March 2010 ICD–9–CM Coordination and Maintenance Committee meeting. Procedure code 35.97 was created at that time to describe the MitraClip™ device and any other percutaneous mitral valve repair devices currently on the market. This procedure code was assigned to the following MS–DRGs: 231 and 232 (Coronary Bypass with PTCA with MCC and without MCC, respectively); 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents); 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC); 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents); 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC); 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI with MCC); and 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI without MCC).

According to the Food and Drug Administration's (FDA's) terms of the clinical trial for MitraClip™, the device is to be implanted in patients without any additional surgeries performed. Therefore, based on these terms, we stated that while the procedure code is assigned to MS–DRGs 246 through 251, the most likely MS–DRG assignments would be MS–DRGs 250 and 251, as described above. As we stated in the FY 2012 IPPS/LTCH PPS final rule, because procedure code 35.97 had only been in use since October 1, 2010, there were no claims data in the most recent update of the MedPAR file at that time to evaluate any alternative MS–DRG assignments. Therefore, we did not make any MS–DRG assignment changes for procedure code 35.97 for FY 2012.

For the FY 2013 proposed rule, we analyzed claims data from the FY 2011 MedPAR file on the procedure that describes mitral valve repair with implant and found the following:

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 216—All Cases	9,624	16.44	$61,015
MS–DRG 217—All Cases	5,655	10.24	41,324
MS–DRG 218—All Cases	995	7.43	34,587
MS–DRG 219—All Cases	15,336	12.53	50,176
MS–DRG 220—All Cases	18,455	7.53	34,150
MS–DRG 221—All Cases	4,719	5.59	29,082
MS–DRG 231—All Cases	1,170	12.17	49,728
MS–DRG 231—Cases with Procedure Code 35.97	4	13.75	35,409
MS–DRG 232—All Cases	1,010	9.16	37,820
MS–DRG 232—Cases with Procedure Code 35.97	9	13.56	46,008
MS–DRG 246—All Cases	29,299	5.20	20,725
MS–DRG 247—All Cases	109,661	2.39	13,014
MS–DRG 248—All Cases	13,562	6.35	19,785
MS–DRG 248—Cases with Procedure Code 35.97	1	32.00	110,262
MS–DRG 249—All Cases	35,100	2.86	11,806
MS–DRG 250—All Cases	8,313	7.07	19,673
MS–DRG 250—Cases with Procedure Code 35.97	39	9.77	29,753
MS–DRG 251—All Cases	31,316	2.92	12,658
MS–DRG 251—Cases with Procedure Code 35.97	98	2.69	18,651

We note that most of the cases were found in MS–DRGs 250 and 251, as we predicted in the FY 2012 IPPS/LTCH PPS final rule based on FDA's terms of the clinical trial for MitraClip™. As stated earlier, the device is to be implanted in patients without any additional surgeries performed. There were 39 cases in MS–DRG 250 with

average costs of $29,753 (which includes cases with an MCC). These average costs are significantly lower than the average costs of $61,015 for cases in MS–DRG 216, and the average costs of $50,176 for cases in MS–DRG 219 (which includes cases with an MCC). There were 98 cases in MS–DRG 251 (without MCC) with average costs of $18,651. These average costs also are lower than the average costs of comparable cases in MS–DRGs 217, 218, 220, and 221, whose average costs range from a high of $41,324 to a low of $29,082. While the average costs of mitral valve repair cases are higher than the average costs of other cases assigned to MS–DRGs 250 and 251, they are significantly less than the average costs of cardiac valve replacement cases assigned to MS–DRGs 216 through 221. Our analysis of the claims data does not support reassigning the procedure that describes percutaneous mitral valve repair with implant from MS–DRGs 250 and 251 to MS–DRGs 216 through 221. Our clinical advisors also support maintaining the current assignment of this procedure in MS–DRGs 250 and 251. Therefore, based on our findings, we did not propose to reassign procedure code 35.97 from MS–DRGs 250 and 251 to MS–DRGs 216 through 221.

We invited public comment on our proposal to maintain the current assignment of procedure code 35.97 in MS–DRGs 250 and 251 and not to reassign the procedure code to MS–DRGs 217 through 221.

Comment: Several commenters supported our proposal not to make any MS–DRG modifications for procedure code 35.97 cases, which are currently assigned to MS–DRGs 250 and 251. The commenters stated that the proposal was reasonable, given the data and information provided.

Response: We appreciate the commenters' support for our proposal for FY 2013.

Comment: A number of commenters recommended that CMS reassign code 35.97 to MS–DRGs 216, 217, and 218. The commenters stated that percutaneous mitral valve repair offers an alternative to open surgery and is used in high risk patients. The commenters believed that the current payment is too low and that their hospitals may decide not to perform these procedures if the payment is not increased. The commenters stated that MS–DRGs 216, 217, and 218 more accurately reflect the associated comorbidities and the intensity of resources required to perform percutaneous mitral valve repairs with implant. Commenters also stated that the procedure is complex and requires a complex team of surgeon, imaging specialist, anesthesiologist, and interventionalist. Given this team approach, complexity, and lengthy procedure time, the commenters stated that MS–DRGs 216, 217, and 218 were more appropriate MS–DRG assignments.

One commenter, a manufacturer of a mitral valve repair device, echoed the comments above. The manufacturer also expressed concern that CMS' claims data may not fully reflect the costs of the mitral valve repair devices. The manufacturer stated that the data analyzed may have included some mitral valve repair cases that were performed in clinical trials and reflected trial-only device prices that were much lower than the planned commercial device prices.

Response: We note that MS–DRGs 216, 217, 218 currently include the requirement that a cardiac catheterization be performed during the hospital stay. We assume that the commenters meant to include the complete range of MS–DRGs for cardiac valve and other major cardiothoracic procedures (that is, MS–DRG 219 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac with MCC), MS–DRG 220 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac with CC), and MS–DRG 221 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac without CC/MCC), in addition to MS–DRGs 216, 217, and 218). MS–DRGs 216, 217, and 218 include the provision of cardiac catheterizations, while MS–DRGs 219, 220, and 221 do not include the use of a cardiac catheterization.

The claims data do not support adding percutaneous mitral valve repairs with implant to MS–DRGs 216, 217, and 218 (those with cardiac catheterizations) or to the complete range of DRGs that includes both those with and without cardiac catheterization (MS–DRGs 216 through 221). As stated earlier, there were 39 cases in MS–DRG 250 with average costs of $29,753 (which includes an MCC). These average costs are significantly lower than the $61,015 average costs for cases in MS–DRG 216 and the $50,176 average costs for cases in MS–DRG 219, which includes an MCC. There were 98 cases in MS–DRG 251 (without MCC) with average costs of $18,651. These average costs are also lower than the average costs of comparable cases in MS–DRG 217, 218, 220, and 221 whose average costs range from a high of $41,324 to a low of $29,082. While the average costs for these cases are higher than for others in MS–DRGs 250 and 251, they are significantly less than those cardiac replacement valve cases assigned to MS–DRGs 216 through 221. Our data indicate that the average cost for this procedure, including the significant cost of the devices, is much closer to the average cost of the percutaneous procedures that comprise the remaining 99 percent of the claims in the MS–DRGs 250 and 251 than it is to the proposed MS–DRGs, where payments are twice the reported cost of this procedure.

In this case it is true that costs of the percutaneous mitral valve implantations are more than the average for MS–DRGs 250 and 251. However it is a fundamental principle of an averaged payment system that half of the procedures in a group will have above average costs. It is expected that there will be higher cost and lower cost subsets, especially when a subset has low numbers. In this case the other ninety-nine percent of the claims that make up the assigned DRG will be expected to continue to include cases with similar costs but also include many cases with below average costs. In an average payment system, the ''profit'' of low-cost cases balances the ''loss'' of the high-cost cases, and hospitals and manufacturers cannot expect to see ''profit'' on every possible subset of cases in a DRG.

Our clinical advisors state that the current MS–DRG assignment is reasonable because the operating room resource utilizations of percutaneous procedures, such as those found in MS–DRGs 250 and 251, tend to group together, and are generally less costly than open procedures, such as those found in MS–DRGs 216 through 221. Percutaneous procedures by organ system represent groupings that are reasonably clinically coherent. More significantly, our clinical advisors state that postoperative resource utilization is significantly higher for open procedures with the much greater morbidity and consequent recovery needs. Because the equipment, technique, staff, patient populations and physician specialty all tend to group by type of procedure (percutaneous versus open), separately grouping percutaneous and open procedures is more clinically consistent. Therefore, our clinical advisors recommend that we not move percutaneous mitral valve repairs with implants into MS–DRGs 216 through 221. Based on the claims data and the advice of our clinical advisors, we do not believe the findings warrant moving code 35.97 from MS–DRGs 250 and 251 to MS–DRGs 216 though 221.

After consideration of the public comments we received, we are finalizing our proposal to not make any MS–DRG modifications for procedure code 35.97 cases, which currently are assigned to MS–DRGs 250 and 251, for FY 2013.

b. Endovascular Implantation of Branching or Fenestrated Grafts in Aorta

The fenestrated (with holes) graft device is designed to treat patients with abdominal aortic aneurysms (AAA). Current treatment options for patients with AAAs include open surgical repair, endovascular repair using stent-grafts, or medical management.

Aneurysmal disease that extends proximally to the level of the renal arteries is usually indicative of more extensive aortic disease and comorbidities. As a result, many of these patients are at a higher overall risk when undergoing open surgical repair. In addition, these patients are often not suitable for endovascular treatment with currently available endografts because the length of healthy aorta is insufficient to provide an adequate seal at the proximal end. The indications for use for many of the standard endografts call for an aortic neck length greater than or equal to 15 millimeters.

Published industry reports estimate that 8 percent to 30 percent of patients with AAAs that need repair have aortic necks of less than 15 millimeters in length. One institution has reported that over half of its patients with AAAs were considered ineligible for endovascular aneurysm repair or endovascular aortic repair (EVAR) due to an inadequate length of nondiseased aorta. These patients also were predominantly contraindicated for open repair.

Prior to the development of a fenestrated graft device, the only treatment option available to a large number of these high-risk patients would have been medical management. Open surgical repair is too challenging to frail patients, as it requires supraceliac clamping of the aorta and may result in renal ischemia, mesenteric ischemia, or atheroembolization of the visceral vessels of the aorta. EVAR with a standard endograft is not a viable option either because the shortened neck precludes an adequate proximal end seal, which can lead to type I endoleaks (leaking of blood around the device into the aneurysm resulting in continued pressurization of the aneurysm). Medical management alone leaves these patients at high risk for AAA-related morbidity and mortality. These suboptimal choices led to the creation of fenestrated endografts that can seal above the renal arteries while maintaining access and uninterrupted blood flow to branch vessels of the aorta.

The fenestrated graft is currently under clinical trial in the United States. Effective April 4, 2012, the Zenith® Fenestrated AAA Endovascular Graft (Cook® Medical) received FDA approval. Another manufacturer of fenestrated grafts expects to receive FDA approval for its device within 3 years.

At the September 15, 2010 meeting of the ICD–9–CM Coordination and Maintenance Committee, the topic of fenestrated graft was presented with a request for a unique procedure code. As a result of that meeting, and additional meetings with manufacturers throughout the year, procedure code 39.78 (Endovascular implantation of branching or fenestrated graft(s) in aorta) was created for use beginning October 1, 2011 (FY 2012). This code is assigned to MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without CC/MCC, respectively).

We have received a request from a manufacturer to reassign procedure code 39.78 from MS–DRGs 252, 253, and 254 to MS–DRGs 237 and 238 (Major Cardiovascular Procedures with MCC and without MCC, respectively). The requestor stated that the assignment to MS–DRGs 252, 253, and 254 violates both of CMS' stated principles regarding assigning new codes to MS–DRGs that reflect both clinical coherence and similar consumption of resources.

From the standpoint of clinical coherence, the requestor noted that, while procedures in MS–DRGs 252, 253, and 254 are vascular procedures, the procedures do not involve the aorta. The requestor further noted that AAA repairs, both open and endovascular, are assigned to MS–DRGs 237 and 238. From the standpoint of similar consumption of resources, the requestor included anticipated device costs of $17,424 to $21,824 for a fenestrated endovascular procedure. The requestor noted that these costs only represent the device and do not include any additional resources required during the hospitalization. The requestor believed that the device costs are more similar to devices used in MS–DRGs 237 and 238.

CMS' practice is to assign new codes to MS–DRGs where similar procedures are also located. In terms of clinical coherence, CMS assigned the new code to the vascular procedure MS–DRGs (252, 253, and 254) where other noncoronary endovascular procedures for blood vessel repair also are assigned. This decision was based on our practice to group similar procedures together, in this case repairs to blood vessels, especially for new codes when CMS has no data history.

With regard to resource consumption, we point out that procedure code 39.78 was created for use effective with discharges on or after October 1, 2011. Our review of data in the MedPAR file shows no utilization of this code because it is too new. That is, we have no claims data that would either prove or disprove the requestor's supposition that procedure code 39.78 is not adequately paid under MS–DRGs 252, 253, and 254. As discussed elsewhere in this preamble, the MS–DRG system is not a device classification system. Therefore, because there are very few companies currently marketing their fenestrated graft devices, we are concerned that these companies are able to set their own charges in the market.

In addition, the requestor opined that ''an argument could possibly be made that the increased device costs and longer procedural times for [procedure code] 39.78 suggest assignment into MS–DRG 237 alone would be appropriate,'' although the requestor further stated that, without a significant volume of actual claims data, it might be more reasonable [for CMS] to take a conservative approach and assign these procedures to either MS–DRG 237 or MS–DRG 238. We note that MS–DRGs 237 and 238 are paired MS–DRGs, with both MS–DRGs containing the same procedure codes, but which have been subdivided based on the formula for the presence or absence of comorbid or complicating conditions. It is not an inherent part of the GROUPER logic to assign a code to only one DRG in a set of paired or triplicate MS–DRGs.

Because there is no data history for procedure code 39.78 that would justify a reassignment based on either clinical coherence or resource consumption, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27903 and 27904), we did not propose to make a change to the MS–DRG assignment of procedure code 39.78 for FY 2013. We stated our belief that procedure code 39.78 has been appropriately placed within the MS–DRG structure. We also stated that we would continue to evaluate the clinical coherence and resource consumption costs that impact this code and the current MS–DRG assignment. We invited public comment on our proposal.

Comment: Many commenters agreed or did not have any specific objections regarding our proposal to not reassign procedure code 39.78 from MS–DRGs 252, 253, and 254 to MS–DRGs 237 and 238 for FY 2013 based on the information we provided.

Response: We appreciate the commenters' support for our proposal for FY 2013.

Comment: Numerous commenters representing various professional organizations and device manufacturers disagreed with our proposal to maintain the current MS–DRG structure for procedure code 39.78. The commenters urged CMS to reevaluate the proposal and reassign procedure code 39.78 to MS–DRGs 237 and 238 for FY 2013.

The commenters stated that the proposed MS–DRG assignment for procedure code 39.78 is not clinically correct. Specifically, the commenters stated that the association of a fenestrated graft procedure to peripheral arterial endovascular interventions is not representative of the complexities involved in performing the fenestrated graft surgery, nor does it adequately depict a hospital's utilization of resources. The commenters further noted that the implantation of fenestrated grafts is more similar, from a clinical and resource consumption perspective, to the other endovascular graft procedures within MS–DRGs 237 and 238 than it is to the vascular procedures assigned to MS–DRGs 252, 253, and 254.

One commenter provided detailed information outlining the specific FDA-approved indications for both the standard and fenestrated endovascular graft procedures for treatment of aneurysms to further demonstrate how clinically similar the procedures actually are. Other commenters clarified that fenestrated grafts require all the resources of a standard endovascular graft procedure *in addition to* all the resources required for placement of stents in the renal and visceral arteries to maintain perfusion. Another commenter reported that the devices required to perform a fenestrated graft procedure are ''(1) more complicated, more numerous, and, in aggregate, significantly more expensive than those required for the predecessor [standard] procedures; and (2) the fenestrated/branch procedure itself is more complex and time consuming, requiring significantly greater hospital operating room time and resources.'' Therefore, according to the commenters, the resources required to perform implantation of a fenestrated graft are far more extensive in comparison to the resources utilized to perform procedures assigned to MS–DRGs 252, 253, and 254.

Some commenters also believed that CMS may have misunderstood some of the aspects of the fenestrated graft procedure. The commenters indicated that if the *standard* endovascular graft procedure (for example, procedure code 39.71 (Endovascular implantation of other graft in abdominal aorta) is currently assigned to MS–DRGs 237–238 and the *fenestrated* endovascular graft procedure requires greater utilization of resources, logically procedure code 39.78 should be assigned to MS–DRGs 237 and 238.

Other commenters reiterated the benefits of fenestrated graft procedures to those patients who are not candidates for standard endovascular grafts or open surgical repair. These commenters indicated that the patients necessitating fenestrated grafts are a complex patient population. Some commenters also stated that, despite the lack of sufficient MedPAR claims data for procedure code 39.78, CMS should consider the clinical similarities between fenestrated graft procedures and the other procedures that currently group to MS–DRGs 237 and 238.

The commenters stated that, by reassigning procedure code 39.78 to MS–DRGs 237 and 238, patients would no longer be restricted access to this technology for treatment of juxtarenal/pararenal (next to or at renal arteries) aneurysms and hospitals would be more appropriately paid for the services they are providing.

Response: Although we did not propose to reassign procedure code 39.78 from MS–DRGs 252, 253, and 254 to MS–DRGs 237 and 238 for FY 2013, upon further review and consideration of the comments received, we agree with the commenters that the fenestrated grafts are more similar from a clinical and resource consumption perspective to the other endovascular graft procedures within MS–DRGs 237 and 238.

Therefore, as final policy for FY 2013, we are reassigning procedure code 39.78 from MS–DRG 252, 253, and 254 to MS–DRGs 237 and 238.

4. MDC 10 (Endocrine, Nutritional, and Metabolic Diseases and Disorders): Disorders of Porphyrin Metabolism

We received a request for the creation of a new MS–DRG to better identify cases where patients with disorders of porphyrin metabolism exist, to recognize the resource requirements in caring for these patients, to ensure appropriate payment for these cases, and to preserve patient access to necessary treatments. Porphyria is defined as a group of rare disorders (''porphyrias'') that interfere with the production of hemoglobin that is needed for red blood cells. While some of these disorders are genetic (inborn) and others can be acquired, they all result in the abnormal accumulation of hemoglobin building blocks, called porphyrins, which can be deposited in the tissues where they particularly interfere with the functioning of the nervous system and the skin.

Treatment for patients suffering from disorders of porphyrin metabolism consists of an intravenous injection of Panhematin® (hemin for injection). In 1984, this pharmaceutical agent became the first approved drug for a rare disease to be designated under the Orphan Drug Act. It is the only FDA-approved prescription treatment for acute intermittent porphyria, being approved for manifestations temporarily related to the menstrual cycle in susceptible women.

ICD–9–CM diagnosis code 277.1 (Disorders of porphyrin metabolism) describes these cases, which are currently assigned to MS–DRG 642 (Inborn and Other Disorders of Metabolism). We analyzed data from the FY 2011 MedPAR file for cases assigned to this MS–DRG. As shown in the table below, we found a total of 1,447 cases in MS–DRG 642 with an average length of stay of 4.63 days and average costs of $7,400. We then analyzed the data for cases reporting diagnosis code 277.1 as the principal diagnosis in this same MS–DRG. We found a total of 330 cases, with an average length of stay of 6.12 days and average costs of $11,476.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 642—All cases	1,447	4.63	$7,400
MS–DRG 642– Cases with principal diagnosis code 277.1	330	6.12	11,476

While the average costs for the 330 cases reporting a principal diagnosis code of 277.1 were higher than all cases in MS–DRG 642 ($11,476 versus $7,400), the volume of affected cases is small, representative of approximately

20 percent of all of the cases in MS–DRG 642. Under our existing policy (76 FR 51487 and 51488), in deciding whether to make modifications to the MS–DRGs, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different from the remaining patients in the MS–DRG. We evaluate the utilization of resources related to patient care using average costs and length of stay and rely on the judgment of our medical advisors to decide whether patients are clinically distinct or similar to other patients in the MS–DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we selected for review and the reminder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that were extreme in terms of costs or length of stay. Further, we consider the number of patients who have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases. Therefore, in the FY 2013 proposed rule, we determined that the findings do not support the creation of a new MS–DRG.

We acknowledge the importance of ensuring that patients diagnosed with a disorder of porphyrin metabolism have adequate access to care and receive the necessary treatment. Despite the fact that our data analysis did not demonstrate support for the creation of a new MS–DRG at this time, we also explored an alternative option. In reviewing the medical MS–DRGs in terms of resources and clinical coherence that are also located within MDC 10, we found three MS–DRGs that we believe are similar to MS–DRG 642. We analyzed data from the MedPAR file on cases in MS–DRGs 643, 644, and 645 (Endocrine Disorders with MCC, with CC, and without CC/MCC, respectively) to determine if the cases reporting a principal diagnosis code of 277.1 would be more appropriately reassigned from MS–DRG 642 to MS–DRGs 643, 644, and 645. Upon examination of the data, we found that the average costs of these cases were $10,835, $6,816, and $4,762, respectively, as shown in the table below.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 643—Cases with principal diagnosis code 277.1	6,562	7.11	$10,835
MS–DRG 644—Cases with principal diagnosis code 277.1	12,769	4.89	6,816
MS–DRG 645—Cases with principal diagnosis code 277.1	5,979	3.40	4,762

Based on these findings, if we were to reassign cases where disorders of porphyrin metabolism (diagnosis code 277.1) were reported as the principal diagnosis with a secondary diagnosis designated as a CC (MS–DRG 644) or with a secondary diagnosis that was not a CC/MCC (MS–DRG 645), Medicare would pay significantly less for these cases than they are now paid under MS–DRG 642. Therefore, it would not be appropriate to reassign cases reporting a principal diagnosis code of 277.1 from MS–DRG 642 to MS–DRGs 643, 644, and 645. In addition, our clinical advisors did not support this reassignment. The MS–DRG classification system on which the IPPS is based comprises a system of averages. As such, it is understood that, in any particular MS–DRG, it is not unusual for a small number of cases to demonstrate higher than average costs, nor is it unusual for a small number of cases to demonstrate lower than average costs. Upon review of the MedPAR data and the alternative option discussed, our clinical advisors agree that the current MS–DRG assignment for diagnoses of disorders of porphyrin metabolism (diagnosis code 277.1) to MS–DRG 642 is most appropriate at this time.

In the proposed rule, we acknowledged and recognized the severity of symptoms that patients diagnosed with disorders of porphyrin metabolism may experience. We also stated that we are sensitive to concerns about access to care and treatment for these patients. We further indicated that we would continue to monitor this issue and determine how to better account for the variation in resource utilization within the IPPS for these cases.

In summary, we did not propose to create a new MS–DRG or to reassign cases reporting a principal diagnosis code of 277.1 to MS–DRGs 643, 644, and 645 for FY 2013. We invited public comment on our proposal.

Comment: Several commenters agreed with our proposal to not create a new MS–DRG or to reassign cases reporting a principal diagnosis code of 277.1 from MS–DRG 642 to MS–DRGs 643, 644, and 645 for FY 2013.

Response: We appreciate the commenters' support for our proposal.

Comment: Two commenters, representing organizations dedicated to the treatment, education, and study of patients diagnosed with disorders of porphyrin metabolism, appreciated the attention that CMS devoted to this issue. However, these commenters expressed concern that CMS' proposal to not create a new MS–DRG for these cases would negatively impact beneficiary access to necessary treatments. For example, according to one of the commenters, certain facilities are unable to provide the needed Panhematin® therapy as a result of the costs incurred and the present MS–DRG assignment. The commenters believed that for beneficiaries who experience an acute porphyric attack, there are not any alternative therapies compared to the effectiveness of Panhematin®.

One of the commenters also submitted data from its own analysis indicating that not only are the average costs of porphyria cases greater than the average costs of all cases in MS–DRG 642, but also that the average costs of porphyria cases are greater than the average costs of other cases that contain the top 10 principal diagnoses (by volume of discharges) assigned to MS–DRG 642. The commenter asserted that, based on its analysis, as well as the analysis conducted and presented by CMS in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27904 through 27905), porphyria cases undoubtedly satisfy the criteria to create a new MS–DRG.

Additionally, the commenters opposed CMS' position regarding the inadequate number of cases in which to establish a new MS–DRG for porphyria cases. One of the commenters reported that, based on its own analysis, the number of porphyria cases demonstrated a significant subset of the total cases that grouped to MS–DRG 642. The other commenter acknowledged that the number of porphyria cases is small; however this commenter maintained that CMS may inadvertently be sending the message that rare diseases affecting smaller populations are not as significant as those diseases affecting larger populations by not creating a new MS–DRG for porphyria cases. The commenters urged CMS to reconsider

the proposal and create a new MS–DRG for cases with a principal diagnosis of porphyria to ensure these beneficiaries have access to treatment for this potentially life-threatening disease.

Response: We acknowledge the commenters' concerns. CMS is committed to improving the lives and quality of care for Medicare beneficiaries. We take this opportunity to note that it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that involves increased costs. The MS–DRG system is a system of averages and it is expected that across the 571 diagnostic related groups that within certain groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs.

As discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27904 through 27905), we recognize the average costs of the small number of porphyria cases are greater than all the cases in MS–DRG 642. While the commenter's analysis found that approximately 50 percent of porphyria cases were more expensive than the average cost of the other cases in this MS–DRG, it is not alarming and, in fact, is what we would expect (as the remaining percent of cases are *less* expensive than the average). The data provided by the commenter demonstrates that it is a subset of the porphyria cases that has the significantly higher cost exactly as it is a subset of the MS–DRG that has significantly higher costs. An averaged payment system depends on aggregation of similar cases with a range of costs, and these data are not unusual. In fact, it is usually possible to define subsets with higher values and subsets with lower values. We continue to follow our usual practice of identifying sufficiently large sets of claims data with a resource/cost similarity and clinical similarity and do not wish to abandon our use of diagnostic related groups in favor of smaller ''single diagnosis payments'' or even, as suggested by the commenter's data, subsets within a single diagnosis.

We disagree with the commenter that our proposal to not create a new MS–DRG for porphyria cases sends the message that rare diseases and patient access to treatment are not a significant cause for concern to the Agency in comparison to other well known and publicly recognized conditions. Although it was not included as part of the commenter's initial request for a new MS–DRG, we also explored an alternative option to reassign cases with a principal diagnosis of porphyria as was discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27904 through 27905). Furthermore, we indicated our intent to continue to monitor this issue.

As mentioned previously, we are sensitive to the commenters' concerns and access to treatment for beneficiaries who have been diagnosed with this condition. However, for the reasons summarized above, we are finalizing our proposal for FY 2013 to not create a new MS–DRG or to reassign cases with a principal diagnosis of porphyria (code 277.1) from MS–DRG 642 to MS–DRGs 643, 644, and 645.

5. Medicare Code Editor (MCE) Changes

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS–DRG.

a. MCE New Length of Stay Edit for Continuous Invasive Mechanical Ventilation for 96 Consecutive Hours or More

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27905 and 27906), we proposed to make a change to the MCE edits which included the creation of a new length of stay edit for continuous invasive mechanical ventilation for 96 consecutive hours or more.

It was brought to our attention that a number of hospitals reporting ICD–9–CM procedure code 96.72 (Continuous invasive mechanical ventilation for 96 consecutive hours or more) may be inaccurately reporting this code. As the title of the procedure code implies, a patient must have received continuous mechanical ventilation for 96 hours or more in order for this code to be assigned. This equates to a patient being hospitalized for at least a 4-day length of stay and having received continuous invasive mechanical ventilation for a minimum of 4 days. Therefore, a patient with a length of stay less than 4 days who received continuous invasive mechanical ventilation should not have procedure code 96.72 reported on the claim.

The ICD–9–CM classification system contains three procedure codes that identify and describe continuous invasive mechanical ventilation: procedure code 96.70 (Continuous invasive mechanical ventilation of unspecified duration); procedure code 96.71 (Continuous invasive mechanical ventilation for less than 96 consecutive hours); and procedure code 96.72 (Continuous invasive mechanical ventilation for 96 consecutive hours or more). To assist in the accurate assignment of these codes, guidance in the form of a ''Note'' is provided within the designated procedure section of ICD–9–CM. This ''Note'' describes the calculation of the number of hours during a hospitalization in which a patient receives continuous invasive mechanical ventilation. In addition, coding advice pertaining to appropriate code assignment for mechanical ventilation has been published in various editions of the American Hospital Association's (AHA's) *Coding Clinic for ICD–9–CM.*

For the proposed rule, we analyzed the FY 2011 MedPAR data to determine how many cases reported procedure code 96.72 with a length of stay less than 4 days. Specifically, we reviewed cases reporting procedure code 96.72 with a length of stay of 1 day, 2 days, or 3 days. We found a total of 595 cases meeting those criteria. The data analysis showed there were 89 cases reporting procedure code 96.72 with a length of stay of 1 day and average costs of $5,948, 134 cases reporting procedure code 96.72 with a length of stay of 2 days and average costs of $7,776, and 372 cases reporting procedure code 96.72 with a length of stay of 3 days and average costs of $11,613.

The data also demonstrated that the 595 cases found were distributed across a wide range of MS–DRGs, with the top two (in terms of volume) being MS–DRG 207 (Respiratory System Diagnosis with Ventilator Support 96+ Hours) and MS–DRG 870 (Septicemia or Severe Sepsis with Mechanical Ventilation 96+ hours). We note that the two MS–DRGs with the highest volume of cases reporting procedure code 96.72 and having a length of stay less than 4 days are the two MS–DRGs that specifically reference ''96+ hours'' in their titles. More importantly, a large percentage of these cases reporting procedure code 96.72 in error are being grouped to the incorrect MS–DRGs, resulting in significant overpayments. For example, of the 89 cases reporting procedure code 96.72 with a length of stay of 1 day, 31 cases were grouped to MS–DRGs 207 and 870. Of the 134 cases reporting procedure code 96.72 with a length of stay of 2 days, 54 cases were grouped to MS–DRGs 207 and 870. Lastly, of the 372 cases reporting procedure code 96.72 with a length of stay of 3 days, 160 cases were grouped to MS–DRGs 207 and 870. Therefore, the data show that a total of 245 cases (41 percent)

were grouped to MS–DRGs 207 and 870 in error, resulting in approximately $25,000 in increased payments for each case (or approximately $6 million in increased payments for all 245 cases). Based on the results of these figures for that portion of the total 595 cases found, there is an even larger dollar amount that is being overpaid to hospitals. These overpayments justify corrective actions.

However, we also noted that the presumed amount of overpayments for claims having a length of stay less than 4 days, as discussed above, is merely an estimate based on the data analysis that has been conducted at this time. We are aware that, for particular circumstances such as those patients who may require observation services, it is possible to have procedure code 96.72 reported on the claim with a length of stay less than 4 days. Although unlikely, a patient might be briefly ventilated in an extended outpatient stay following a toxic ingestion with loss of protective reflexes or following outpatient procedures with a prolonged effect of anesthesia. A subsequent conversion to an inpatient stay would cause the costs to be attributable to the stay, while the days themselves were not reported in the inpatient date span on the claim. Similar effects could occur following an observation stay for a patient on chronic home or skilled nursing facility ventilation. It is for this reason that we proposed a new edit in which claims found to have procedure code 96.72 with a length of stay less than 4 days would be returned to the provider for validation and resubmission. We indicated in the proposed rule that we would issue instructions in the form of a Change Request (CR) prior to the implementation date. We invited the public to comment on our proposal to create this edit, effective for FY 2013.

Comment: Commenters urged CMS to reconsider the proposed new edit for claims reporting procedure code 96.72 with a length of stay less than 4 days that would result in these claims being returned to the provider for validation and resubmission. Although several commenters agreed with the concept of the edit, the commenters expressed concern that the proposed process would be administratively burdensome to hospitals that may be accurately reporting the code according to established coding rules. For example, the commenters noted that coding rules allow the counting of hours a patient is on mechanical ventilation to begin from the time ventilation is initiated in the emergency room department or upon admission. The commenters also stated that for those instances where patients may require observation services, as CMS noted in the proposed rule, it is possible that procedure code 96.72 can be reported on a claim with a length of stay less than 4 days. These commenters recommended that CMS work with the Medicare administrative contractors (MACs) to develop a less burdensome process for providers to implement this edit.

Response: We appreciate and acknowledge the commenters' concerns. In developing systems requirements, we will continue to work with MACs. Recent programming enhancements now allow the use of data fields that were not previously available for claims processing. We believe that these enhancements will eliminate the concern regarding additional administrative burden to hospitals.

After consideration of the public comments received, for FY 2013, we are finalizing our proposal to make a change to the MCE edits to include the creation of a new length of stay edit for procedure code 96.72 when reported on a claim with a length of stay less than 4 days. Detailed instructions will be issued in a future Change Request (CR) prior to the implementation date.

b. Sleeve Gastrectomy Procedure for Morbid Obesity

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51539 through 51541), we discussed the issue of sleeve gastrectomy procedures for morbid obesity under the section of the rule titled ''MDC 10 (Endocrine, Nutritional, and Metabolic Diseases and Disorders)'' as well as under the section for ''Medicare Code Editor (MCE) Changes.'' We refer the reader to these sections for additional details and background information.

Effective October 1, 2011, procedure code 43.82 (Laparoscopic vertical (sleeve) gastrectomy) was created and designated as a noncoverage procedure in the Medicare Code Editor. A Decision Memo related to Bariatric Surgery for the Treatment of Morbid Obesity was issued effective June 27, 2012, which describes a change in coverage to Medicare beneficiaries for this procedure. Information related to this decision memo can be located at the following CMS Web page: *http://www.cms.gov/medicare-coverage-database/details/nca-decision-memo.aspx?NCAId=258&fromdb=true*.

As this noncovered procedure edit for procedure code 43.82 is no longer valid, we are removing it from the MCE for FY 2013. Instructions in the form of a Change Request will be issued prior to October 1, 2012. In addition, updates to the Medicare National Coverage Determinations Manual, Section 100.1, Nationally Noncovered Indications for Bariatric Surgery for Treatment of Morbid Obesity, will be revised to reflect this change in coverage.

6. Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS–DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS–DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS–DRG associated with the most resource-intensive surgical class.

Because the relative resource intensity of surgical classes can shift as a function of MS–DRG reclassification and recalibrations, for FY 2013, we reviewed the surgical hierarchy of each MDC, as we have for previous reclassifications and recalibrations, to determine if the ordering of classes coincides with the intensity of resource utilization.

A surgical class can be composed of one or more MS–DRGs. For example, in MDC 11, the surgical class ''kidney transplant'' consists of a single MS–DRG (MS–DRG 652) and the class ''major bladder procedures'' consists of three MS–DRGs (MS–DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS–DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS–DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS–DRGs 001 and 002 and surgical class B includes MS–DRGs 003, 004, and 005. Assume also that the average costs of MS–DRG 001 are higher than that of MS–DRG 003, but the average costs of MS–DRGs 004 and 005 are higher than the average costs of MS–DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS–DRG in the class by frequency (that is, by the number of cases in the MS–DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average

resource utilization to that with the lowest, with the exception of ''other O.R. procedures'' as discussed below.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS–DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the ''other O.R. procedures'' surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS–DRG or MS–DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The ''other O.R. procedures'' class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients in the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed limited changes to the MS–DRG classifications for FY 2013, as discussed in sections II.G.1. and 4. of this preamble. In our review of these proposed changes, we did not identify any needed changes to the surgical hierarchy. Therefore, in the proposed rule (77 FR 27906), we did not propose any changes to the surgical hierarchy for Pre-MDCs and MDCs for FY 2013.

Comment: Several commenters stated that our proposal to make no changes to the surgical hierarchy seems reasonable, given the data and information provided.

Response: Based on these public comments and our review of the proposal to make no revisions to the surgical hierarchy using the March 2012 update of the FY 2011 MedPAR file and the revised GROUPER software, we found that the proposal to make no revisions is still supported by the data. Therefore, in this final rule, we are making no changes to the surgical hierarchy for FY 2013.

7. Complications or Comorbidity (CC) Exclusions List

a. Background

Under the IPPS MS–DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length of stay by at least 1 day in at least 75 percent of the patients. We refer readers to section II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS–DRGs we adopted for FY 2008 (72 FR 47121 through 47152).

b. CC Exclusions List for FY 2013

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair. As we indicated above, we developed a list of diagnoses, using physician panels, to include those diagnoses that, when present as a secondary condition, would be considered a substantial complication or comorbidity. In previous years, we have made changes to the list of CCs, either by adding new CCs or deleting CCs already on the list.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another.
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another.
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another.
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another.
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC.[13]

(1) No Revisions Based on Changes to the ICD–9–CM Diagnosis Codes for FY 2013

For FY 2013, we did not propose to make any revisions to the CC Exclusions List. There were no changes made to the ICD–9–CM coding system, effective October 1, 2012, due to the partial code freeze. (We refer readers to section

[13] See the FY 1989 final rule (53 FR 38485, September 30, 1988), for the revision made for the discharges occurring in FY 1989; the FY 1990 final rule (54 FR 36552, September 1, 1989), for the FY 1990 revision; the FY 1991 final rule (55 FR 36126, September 4, 1990), for the FY 1991 revision; the FY 1992 final rule (56 FR 43209, August 30, 1991) for the FY 1992 revision; the FY 1993 final rule (57 FR 39753, September 1, 1992), for the FY 1993 revision; the FY 1994 final rule (58 FR 46278, September 1, 1993), for the FY 1994 revisions; the FY 1995 final rule (59 FR 45334, September 1, 1994), for the FY 1995 revisions; the FY 1996 final rule (60 FR 45782, September 1, 1995), for the FY 1996 revisions; the FY 1997 final rule (61 FR 46171, August 30, 1996), for the FY 1997 revisions; the FY 1998 final rule (62 FR 45966, August 29, 1997) for the FY 1998 revisions; the FY 1999 final rule (63 FR 40954, July 31, 1998), for the FY 1999 revisions; the FY 2001 final rule (65 FR 47064, August 1, 2000), for the FY 2001 revisions; the FY 2002 final rule (66 FR 39851, August 1, 2001), for the FY 2002 revisions; the FY 2003 final rule (67 FR 49998, August 1, 2002), for the FY 2003 revisions; the FY 2004 final rule (68 FR 45364, August 1, 2003), for the FY 2004 revisions; the FY 2005 final rule (69 FR 49848, August 11, 2004), for the FY 2005 revisions; the FY 2006 final rule (70 FR 47640, August 12, 2005), for the FY 2006 revisions; the FY 2007 final rule (71 FR 47870) for the FY 2007 revisions; the FY 2008 final rule (72 FR 47130) for the FY 2008 revisions, the FY 2009 final rule (73 FR 48510), the FY 2010 final rule (74 FR 43799); the FY 2011 final rule (75 FR 50114); and the FY 2012 final rule (76 FR 51542). In the FY 2000 final rule (64 FR 41490, July 30, 1999, we did not modify the CC Exclusions List because we did not make any changes to the ICD–9–CM codes for FY 2000.

II.G.9. of the preamble of this final rule for a discussion of the ICD–9–CM coding system.)

(2) Suggested Changes to the MS–DRG Severity Levels for Diagnosis Codes for FY 2013

(A) Protein-Calorie Malnutrition

We received a request that we consider changing the severity levels for the following protein-calorie malnutrition diagnosis codes:

- 263.0 (Malnutrition of moderate degree)
- 263.1 (Malnutrition of mild degree)
- 263.9 (Unspecified protein-calorie malnutrition)

It was suggested that we change the severity level for diagnosis codes 263.0 and 263.1 from a non-CC to a CC, while changing the severity level for diagnosis code 263.9 from a CC to a non-CC. We received this comment during the comment period for the FY 2012 IPPS/LTCH PPS proposed rule. We referred to this issue briefly in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557). We indicated that we considered this comment outside of the scope of the proposed rule, as we did not propose any severity level changes to these codes for FY 2012, and did not address it in the final rule. However, we addressed this issue in the FY 2013 proposed rule (77 FR 27907 through 27908) and are finalizing our policy in this final rule.

For the proposed rule, we analyzed the claims data in the FY 2011 MedPAR file for diagnosis codes 263.0, 263.1, and 263.9. We used the same approach we used in initially creating the MS–DRGs and classifying secondary diagnosis codes as non-CCs, CCs, or MCCs. A detailed discussion of the process and criteria we used in this process is described in the FY 2008 IPPS final rule with comment period (72 FR 47158 through 47161). We refer the readers to this discussion for complete information on our approach to developing the non-CC, CC, and MCC lists. Each diagnosis for which Medicare data were available was evaluated to determine its impact on resource use and to determine the most appropriate CC subclass (non-CC, CC, or MCC) assignment. In order to make this determination, the average cost for each subset of cases was compared to the expected cost for cases in that subset. The following format was used to evaluate each diagnosis:

Code	Diagnosis	Cnt1	C1	Cnt2	C2	Cnt3	C3

Count (Cnt) is the number of patients in each subset. C1, C2, and C3 are a measure of the impact on resource use of patients in each of the subsets. The C1, C2, and C3 values are a measure of the ratio of average costs for patients with these conditions to the expected average cost across all cases. The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC but none that is an MCC. The C3 value reflects a patient with at least one other secondary diagnosis that is an MCC. A value close to 1.0 in the C1 field suggests that the diagnosis code produces the same expected value as a non-CC. A value close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or non-CC. For additional details on this analysis, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47158 through 47161).

The following chart shows the analysis for each of the protein-calorie malnutrition diagnosis codes:

Code	Diagnosis description	CC Level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
263.0	Malnutrition of moderate degree	Non-CC	6,040	2.14	21,383	2.61	21,635	3.20
263.1	Malnutrition of mild degree	Non-CC	4,139	2.22	11,598	2.50	8,921	3.13
263.9	Unspecified protein-calorie malnutrition	CC	2,737	2.16	165,825	2.54	178,044	3.34

We ran the following data as described in the FY 2008 IPPS final rule with comment period (72 FR 47158 through 47161). The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC but none that is a MCC. The C3 value reflects a patient with at least one other secondary diagnosis that is an MCC.

The chart above shows that the C1 findings ranged from a low of 2.14 to a high of 2.22. As stated earlier, a C1 value close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. The C1 findings suggest that these codes are more like a CC than a non-CC. The C2 findings ranged from 2.50 to 2.61. A value close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or non-CC. The C2 findings of 2.50 for diagnosis code 263.1 and 2.54 for diagnosis code 263.9 suggest these codes are more similar to a CC than a non-CC, while the finding of 2.61 for diagnosis code 263.0 is borderline more similar to an MCC than a CC or non-CC when there is at least one other secondary diagnosis code that is a CC but none that is an MCC.

CC conditions typically have a C1 value over 1.75, a C2 value under 2.5, and a C3 value under 3.2. MCC conditions typically have a C1 value over 2.4, a C2 value over 2.8, and a C3 value over 3.3. We concluded that diagnosis code 263.0 is more similar to a CC than an MCC.

Therefore, the C1 and C2 findings support changing diagnosis codes 263.0 and 263.1 from a non-CC to a CC and maintaining code 263.9 as a CC. Our clinical advisors reviewed this issue and are in support of these findings that these conditions are more appropriately classified as CCs. Based on the data and clinical analysis, we proposed for FY 2013 to change diagnosis codes 263.0 and 263.1 from a non-CC to a CC. We did not propose any change to the severity level for diagnosis code 263.9. We invited public comment on our proposals.

Comment: Several commenters supported our proposal to change the severity level for codes 263.0 and 263.1

from a non-CC to a CC and to maintain the severity level of code 263.9 as a CC. Several commenters stated that the proposal seems reasonable, given the data and information provided. Some commenters expressed appreciation for CMS' recognition of the increased costs of care associated with these conditions and support efforts to more accurately reflect its impact.

Response: We appreciate the support of the commenters.

After consideration of the public comments we received, we are finalizing our proposal to change diagnosis codes 263.0 and 263.1 from a non-CC to a CC and to maintain the severity level of a CC for diagnosis code 263.9 for FY 2013.

(B) Antineoplastic Chemotherapy Induced Anemia

We received a request from a commenter that the severity level for diagnosis code 285.3 (Antineoplastic chemotherapy induced anemia) be changed from a non-CC to a CC. We received this comment during the comment period for the FY 2012 IPPS/LTCH PPS proposed rule. We referred to this issue briefly in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557). In that rule, we indicated that we considered this comment outside of the scope of the proposed rule because we did not propose any severity level changes to diagnosis code 285.3 for FY 2012; therefore, we did not address the issue in the final rule. However, we addressed this issue in the FY 2013 proposed rule and are finalizing our policy in this final rule. For the proposed rule, we examined claims data in the FY 2011 MedPAR file for diagnosis code 285.3 according to the approach that we used in FY 2008 as described above. The following table illustrates our findings:

Code	Diagnosis description	CC Level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
285.3	Antineoplastic chemotherapy induced anemia.	Non-CC	1,937	1.36	11,858	2.21	6,036	3.11

As discussed above, a value close to 1.0 in the C1 field suggests that the diagnosis code produces the same expected value as a non-CC. A value of close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. The C1 finding for diagnosis code 285.3 of 1.36 supports the current severity level of a non-CC. The C2 finding of 2.21 for diagnosis code 285.3 suggests that this code is more similar to a CC than a non-CC but not as significant as an MCC when there is at least one other secondary diagnosis code that is a CC. CC conditions typically have a C1 value over 1.75, a C2 value under 2.5, and a C3 value under 3.2.

Therefore, the C1 and C2 findings do not support changing the severity level for diagnosis code 285.3 to a CC. In addition, our clinical advisors reviewed this issue and support the decision not to change the severity level for diagnosis code 285.3 because the anemia is inherent in the treatment of cancer and does not qualify as a CC. As a result of our data analysis as well as the advice of our clinical advisors, we did not propose any change to the severity level for diagnosis code 285.3 for FY 2013. We invited public comment on our proposal.

Comment: Several commenters stated that our proposal to maintain the severity level of a non-CC for code 285.3 seems reasonable, given the data and information provided.

Response: We appreciate the support of the commenters for our proposal.

After consideration of the public comments we received, we are finalizing our proposal to not change the severity level for diagnosis code 285.3 for FY 2013.

(C) Cardiomyopathy and Congestive Heart Failure, Unspecified

We received a comment that recommended changes to the severity levels for the cardiomyopathy and congestive heart failure, unspecified codes. The commenter recommended that cardiomyopathy codes, which are currently classified as CCs, be changed to non-CCs and diagnosis code 428.0 (Congestive heart failure, unspecified) be changed from a non-CC to a CC. According to the commenter, these recommended changes would better represent the resources utilized in caring for this population and reduce the administrative burden in clarifying these diagnoses with providers. We received this comment during the comment period for the FY 2012 IPPS/LTCH PPS proposed rule. We referred to this issue briefly in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557). We indicated that we considered this comment outside of the scope of the proposed rule because we did not propose any severity level changes to these codes for FY 2012; therefore, we did not address it in the final rule. However, we addressed this issue in the FY 2013 proposed rule and are finalizing our policy in this final rule.

The commenter did not provide a list of the cardiomyopathy codes. We identified the following codes for analysis of the claims data in the FY 2011 MedPAR file:

- 425.4 (Other primary cardiomyopathies)
- 425.5 (Alcoholic cardiomyopathy)
- 425.7 (Nutritional and metabolic cardiomyopathy)
- 425.8 (Cardiomyopathy in other diseases classified elsewhere)
- 425.9 (Secondary cardiomyopathy, unspecified)
- 428.0 (Congestive heart failure, unspecified)

We did not include diagnosis codes 425.11 (Hypertrophic obstructive cardiomyopathy) and 425.18 (Other hypertrophic cardiomyopathy) for our analysis because these two codes were created in FY 2012 and the data are not yet available. We examined claims data according to the approach that we used in FY 2008 as described above. The following table illustrates our findings:

Code	Diagnosis description	CC Level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
425.4	Other primary cardiomyopathies	CC	39,489	1.47	243,719	2.18	139,689	3.20
425.5	Alcoholic cardiomyopathy	CC	438	1.68	2,643	2.19	1,670	3.26
425.7	Nutritional and metabolic cardiomyopathy.	CC	60	1.18	869	2.17	799	3.14
425.8	Cardiomyopathy in other diseases classified elsewhere.	CC	940	1.19	5,967	2.15	5,171	3.14

Code	Diagnosis description	CC Level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
425.9	Secondary cardiomyopathy, unspecified.	CC	356	1.56	2,078	2.07	1.372	3.22
428.0	Congestive heart failure, unspecified	Non-CC	304,963	1.40	634,241	2.16	748,649	3.06

The table above shows that the C1 findings for the cardiomyopathy codes ranged from a low of 1.18 to a high of 1.68. A value close to 1.0 in the C1 field suggests that the diagnosis code produces the same expected value as a non-CC. A value of close to 2.0 suggests the condition is more like a CC than a non-CC but not as significant in resource usage as an MCC. The C1 findings suggest that the majority of these cardiomyopathy codes are more similar to a non-CC than a CC. The C2 findings ranged from a low of 2.07 to a high of 2.19. These findings suggest that these cardiomyopathy codes are more similar to a CC.

The C1 finding for diagnosis code 428.0 of 1.40 suggests that the condition is more similar to a non-CC than a CC. The C2 finding for diagnosis code 428.0 of 2.16 suggests that the secondary diagnosis is more similar to a CC than a non-CC.

The data are mixed between the C1 and C2 findings for the cardiomyopathy codes and do not consistently support a change in the severity level. Our clinical advisors reviewed these issues and are not in support of proposing any changes to the severity levels for these codes. Our clinical advisors stated that the diagnosis of cardiomyopathy (diagnosis codes 425.4 through 425.9) is generally severe, with significant impact on the patient requiring additional monitoring resources and cognitive effort, and is appropriately classified as a CC.

The data are mixed between the C1 and C2 findings for the congestive heart failure, unspecified, diagnosis code 428.0. Our clinical advisors reviewed these issues and are not in support of proposing any changes to the severity level of code 428.0. They indicated that diagnosis code 428.0 is very nonspecific and does not identify the severity of the heart failure, and concluded that the current classification for code 428.0 as a non-CC is appropriate. As a result of our data analysis and clinical advisors' review of these issues, we did not propose any changes to the severity level for the cardiomyopathy and congestive heart failure, unspecified codes for FY 2013. We invited public comment on our proposal.

Comment: Several commenters stated that our proposal to make no changes to the severity level for cardiomyopathy and congestive heart failure, unspecified codes seems reasonable, given the data and information provided.

Response: We appreciate the support of the commenters for our proposal.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current severity level for cardiomyopathy and congestive heart failure, unspecified codes for FY 2013.

(D) Chronic Total Occlusion of Artery of the Extremities

We received a request to change the severity level designation for diagnosis code 440.4 (Chronic total occlusion of artery of the extremities) to a CC. Currently, the diagnosis code is classified as a non-CC. Chronic total occlusion of artery of the extremities forms when plaque accumulates in an artery over an extended period of time, resulting in total cessation of blood flow. We analyzed claims data in the FY 2011 MedPAR file for this diagnosis code according to the approach that we used in FY 2008 as described above. The following table illustrates our findings:

Code	Diagnosis description	CC Level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
440.4	Chronic total occlusion of artery of the extremities.	Non-CC	8,439	1.38	8,057	2.70	5,366	3.23

The C1 finding of 1.38 for diagnosis code 440.4 supports the current designation of this diagnosis code as a non-CC. However, the C2 findings of 2.70 suggests that this code is similar to a CC or perhaps an MCC, as this value is near to 3.0, which suggests that this condition is similar to an MCC. However, we would expect a higher C1 value such as 2.4 for this condition to qualify as an MCC.

The C1 and C2 findings support changing diagnosis code 440.4 from a non-CC to a CC. Our clinical advisors reviewed this issue and are in support of changing the severity level because this condition behaves as a CC. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to change the severity level for diagnosis code 440.4 from a non-CC to a CC for FY 2013. We invited public comment on our proposal.

Comment: Several commenters supported our proposed change to the severity level from a non-CC to a CC for code 440.4. Several commenters stated that the proposal seems reasonable, given the data and information provided.

One commenter stated that crossing a stenotic occlusive lesion typically requires manipulation of the guidewire with a single catheter that remains in the vessel lumen. In contrast, crossing a chronic total occlusion typically requires multiple wires and catheters whereby the wire leaves the vessel lumen, dissects through the subintimal plane around the occlusive lesion, and then must be manipulated back into the true outflow lumen. According to the commenter, the additional time, intensity of work, and resources necessary to perform an endovascular revascularization of a chronic total occlusion justify the proposed increase in severity level.

Response: We appreciate the support of the commenters for our proposal.

After consideration of the public comments we received, we are finalizing our proposal to change the severity level for diagnosis code 440.4 from a non-CC to a CC for FY 2013.

(E) Acute Kidney Failure With Other Specific Pathological Lesion in Kidney

We received a request to consider changing the severity level for diagnosis code 584.8 (Acute kidney failure with other specified pathological lesion in kidney). This diagnosis code's severity level is currently classified as an MCC. We examined claims data for this code in the FY 2011 MedPAR file according to the approach described above. The following table illustrates those findings.

Code	Diagnosis description	Severity level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
584.8	Acute kidney failure with other specified pathological lesion in kidney.	MCC	12	0.98	13	1.89	1,350	3.17

As discussed above, a C1 value close to 1.0 in the C1 field suggests that the diagnosis code produces the same expected value as a diagnosis code that has been classified as a non-CC. A value close to 2.0 in the C1 field suggests that the condition is more similar to a CC severity level than a non-CC severity level, but not as significant in resource usage as an MCC severity level. In this case, the C1 value finding for diagnosis code 584.8 of 0.98 suggests that this diagnosis code is more similar to a non-CC than an MCC. A C2 value close to 3.0 suggests that the condition is more similar to an MCC than a CC or a non-CC. A C2 value close to 2.0 suggests that the condition is more similar to a CC than a non-CC. The C2 value finding for diagnosis code 584.8 of 1.89 supports classifying the severity level of this diagnosis code as a CC. Therefore, the C1 and C2 value findings support changing the severity level of diagnosis code 584.8 from an MCC to a lower severity level, that is, a CC. Our clinical advisors reviewed this issue and stated that this condition behaves as a CC. Therefore, they supported changing the severity level of this diagnosis code to a CC. Based on the clinical analysis and consistent with supporting claims data, we believe that the severity level of diagnosis code 584.8 should be changed from an MCC to a CC. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to change the severity level of diagnosis code 584.8 from an MCC to a CC for FY 2013. We invited public comment on our proposal.

Comment: Commenters stated CMS' proposed change to the severity level of diagnosis code 584.8 from an MCC to a CC was reasonable, given the data and information provided.

Response: We appreciate the support of the commenters for our proposal.

Comment: One commenter opposed the proposal to change the severity level of diagnosis code 584.8 from an MCC to a CC. The commenter stated that this downgrade penalizes hospitals willing to take on sicker patients because additional care is required to treat patients with this condition. The commenter stated that this change would also hurt hospitals whose clinical documentation staff, in conjunction with providers, perform the additional work of identifying the underlying cause of the kidney failure.

Response: Information from our claims data does not support the commenter's statement that these are sicker patients who should be classified at the MCC severity level. As discussed above, our claims data suggests that code 584.8 is more appropriately classified as a CC. The C1 finding of 0.98 suggests that this code is more like a non-CC than an MCC. The C2 finding of 1.89 supports classifying this code as either a non-CC or CC. Therefore, the C1 and C2 findings support changing code 584.8 from an MCC to a lower severity level. Our clinical advisors reviewed this issue and support changing the severity level of this code to a CC. Our clinical analysis and consistent claims data support changing code 584.8 from an MCC to CC.

We disagree with the commenter's statement that this severity level change would hurt hospitals whose clinical documentation staff, in conjunction with providers, perform the additional work of identifying the underlying cause of the kidney failure. CMS supports improved documentation practices by providers, which leads to better patient care. Providers should consistently work on improved clinical documentation for all patients, not just those who have a secondary diagnosis on the MCC list. We do not agree that changing the severity level of procedure code 584.8 hurts hospitals who attempt to improve the clinical document in their medical records.

After consideration of the public comments we received, we are finalizing our proposal to change the severity level of diagnosis code 584.8 from an MCC to a CC.

(F) Pressure Ulcer, Unstageable

We received a request to consider changing the severity level for diagnosis code 707.25 (Pressure ulcer, unstageable) from its current classification as a non-CC to an MCC. This issue was referred to as an out-of-scope public comment in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51557), but was not addressed in that rule.

For the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27910), we analyzed claims data for diagnosis code 707.25 from the FY 2011 MedPAR file according to the process and approach described above. The following table illustrates our findings:

Code	Diagnosis description	CC level	Cnt 1	Cnt 1 Impact	Cnt 2	Cnt 2 Impact	Cnt 3	Cnt 3 Impact
707.25	Pressure ulcer, unstageable	Non-CC	1,839	1.87	7,161	2.46	13,285	3.08

As discussed above, a C1 value close to 2.0 suggests the condition is more similar to a CC than a non-CC severity level but not as significant in resource usage as an MCC. The C1 value finding of 1.87 for diagnosis code 707.25, which is near but not that close to a 2.0, suggests that this code is more similar to a CC than an MCC. A C2 value of close to 3.0 suggests the condition is more similar to an MCC than a CC or non-CC. The C2 value finding for diagnosis code 707.25 is 2.46, which is not close to 3.0 and, therefore, the data do not support classifying this as an MCC. The C1 and C2 findings are more supportive of a classification as a CC than an MCC. There is another problem with this request to change diagnosis code 707.25 from a non-CC to an MCC. Currently, only stages III and IV pressure ulcers are MCCs. This unstageable code captures a pressure ulcer whose stage has not been determined. It would be inappropriate to assume that a pressure ulcer reported with diagnosis code 707.25 might be a stage III or IV pressure ulcer. Our claims data C1 and C2 findings do not support the fact that this code acts as an MCC. As mentioned earlier, the claims data are more supportive of a classification as a CC than an MCC. We asked our clinical advisors to review this issue. Our clinical advisors agree that the data findings and their own clinical evaluation support not changing the severity level of this diagnosis code to a CC or an MCC. Our clinical advisors

recommend that unstageable pressure ulcers should continue to be classified as a non-CC because the stage is not clearly designated as a stage III or IV. Unstageable codes do not delineate what the stage of the ulcer might be. As a result of our data analysis as well as the advice of our clinical advisors, we believe that unstageable pressure ulcers should continue to be classified as a non-CC. Therefore, we proposed that diagnosis code 707.25 remain a non-CC for FY 2013.

We invited public comment on our proposal not to change the severity level for diagnosis code 707.25 for FY 2013.

Comment: Several commenters supported our proposal not to change the severity level for diagnosis code 707.25. The commenters stated the proposal seems reasonable, given the data and information provided.

Response: We appreciate the support of the commenters.

Comment: One commenter questioned whether a ''not examined ulcer'' would be classified the same as unstageable. The commenter stated that an ulcer should not be classified as unstageable simply because it was not examined.

Response: If a pressure ulcer is documented in the medical record and the stage is unspecified, code 707.20 (Pressure ulcer, unspecified stage) would be assigned.

Comment: Some commenters did not support our proposal. The commenters pointed out that the National Pressure Ulcer Advisory Panel defines unstageable pressure ulcers as at least a stage III pressure ulcer and suggested that the resource expenditures associated with treating this condition would meet the definition of an MCC. Another commenter recommended that the severity level for code 707.25 be changed to a CC.

Response: Based on the data and our analysis presented above, we concluded that diagnosis code 707.25 did not warrant a change to the severity level. Our clinical advisors recommend that unstageable pressure ulcers should continue to be classified as a non-CC because the stage is not clearly designated as a stage III or IV. Without knowing the stage of the ulcer, an assumption should not be made.

After consideration of the public comments we received, we are finalizing our proposal to not change the severity level for code 707.25 for FY 2013.

For FY 2013, we proposed changes to Table 6G (Additions to the CC Exclusion List). As we discussed earlier, we are finalizing our proposed changes to the severity level for diagnosis codes 263.0, 263.1, and 440.4 from a non-CC to a CC. There are no proposed and finalized changes to Table 6H (Deletions to the CC Exclusion List). These tables, which contain codes that are effective for discharges occurring on or after October 1, 2012, are not being published in the Addendum to this final rule because of the length of the two tables. Instead, we are making them available through the Internet on the CMS Web site at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Each of these principal diagnoses for which there is a CC exclusion is shown in Tables 6G and 6H with an asterisk, and the conditions that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis.

A complete updated MCC, CC, and Non-CC Exclusions List is available through the Internet on the CMS Web site at: *http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html*. Beginning with discharges on or after October 1, 2011, the indented diagnoses were not recognized by the GROUPER as valid CCs for the asterisked principal diagnosis.

To assist readers in identifying the changes to the MCC and CC lists that occur as a result of our review of severity levels for several ICD–9–CM diagnosis codes, we are providing the following summaries of those MCC and CC changes for FY 2013. There are no new, revised, or deleted diagnosis codes for FY 2013. Therefore, there are no Tables 6A, 6C, and 6E published for FY 2013.

Summary of Additions to the MS–DRG MCC List—Table 6I.1

There are no additions to the MS–DRG MCC List.

SUMMARY OF DELETIONS FROM THE MS–DRG MCC LIST—TABLE 6I.2

Code	Description
584.8	Acute kidney failure with other specified pathological lesion in kidney.

SUMMARY OF ADDITIONS TO THE MS–DRG CC LIST—TABLE 6J.1

Code	Description
263.0	Malnutrition of moderate degree.
263.1	Malnutrition of mild degree.
440.4	Chronic total occlusion of artery of the extremities.
584.8	Acute kidney failure with other specified pathological lesion in kidney.

Summary of Deletions From the MS–DRG CC List—Table 6J.2

There are no deletions from the MS–DRG CC list.

Alternatively, the complete documentation of the GROUPER logic, including the current CC Exclusions List, is available from 3M/Health Information Systems (HIS), which, under contract with CMS, is responsible for updating and maintaining the GROUPER program. The current MS–DRG Definitions Manual, Version 29.0, is available on a CD for $225.00. Version 30.0 of this manual, which will include the final FY 2013 MS–DRG changes, will be available on a CD for $225.00. These manuals may be obtained by writing 3M/HIS at the following address: 100 Barnes Road, Wallingford, CT 06492; or by calling (203) 949–0303, or by obtaining an order form at the Web site: *http://www.3MHIS.com*. Please specify the revision or revisions requested.

8. Review of Procedure Codes in MS DRGs 981 Through 983; 984 Through 986; and 987 Through 989

Each year, we review cases assigned to former CMS DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), CMS DRG 476 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis), and CMS DRG 477 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis) to determine whether it would be appropriate to

change the procedures assigned among these CMS DRGs. Under the MS–DRGs that we adopted for FY 2008, CMS DRG 468 was split three ways and became MS–DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). CMS DRG 476 became MS–DRGs 984, 985, and 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). CMS DRG 477 became MS–DRGs 987, 988, and 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively).

MS–DRGs 981 through 983, 984 through 986, and 987 through 989 (formerly CMS DRGs 468, 476, and 477, respectively) are reserved for those cases in which none of the O.R. procedures performed are related to the principal diagnosis. These MS–DRGs are intended to capture atypical cases, that is, those cases not occurring with sufficient frequency to represent a distinct, recognizable clinical group. MS–DRGs 984 through 986 (previously CMS DRG 476) are assigned to those discharges in which one or more of the following prostatic procedures are performed and are unrelated to the principal diagnosis:

- 60.0, Incision of prostate
- 60.12, Open biopsy of prostate
- 60.15, Biopsy of periprostatic tissue
- 60.18, Other diagnostic procedures on prostate and periprostatic tissue
- 60.21, Transurethral prostatectomy
- 60.29, Other transurethral prostatectomy
- 60.61, Local excision of lesion of prostate
- 60.69, Prostatectomy, not elsewhere classified
- 60.81, Incision of periprostatic tissue
- 60.82, Excision of periprostatic tissue
- 60.93, Repair of prostate
- 60.94, Control of (postoperative) hemorrhage of prostate
- 60.95, Transurethral balloon dilation of the prostatic urethra
- 60.96, Transurethral destruction of prostate tissue by microwave thermotherapy
- 60.97, Other transurethral destruction of prostate tissue by other thermotherapy
- 60.99, Other operations on prostate

All remaining O.R. procedures are assigned to MS–DRGs 981 through 983 and 987 through 989, with MS–DRGs 987 through 989 assigned to those discharges in which the only procedures performed are nonextensive procedures that are unrelated to the principal diagnosis.[14]

Our review of MedPAR claims data showed that there were no cases that merited movement or should logically be assigned to any of the other MDCs. Therefore, for FY 2013, we did not propose to change the procedures assigned among these MS–DRGs.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not making any changes to the procedures assigned to MS–DRGs 981 through 983, MS–DRGs 984 through 986, and MS–DRGs 987 through 989 for FY 2013.

a. Moving Procedure Codes From MS–DRGs 981 Through 983 or MS–DRGs 987 Through 989 into MDCs

We annually conduct a review of procedures producing assignment to MS–DRGs 981 through 983 (Extensive O.R. procedure unrelated to principal diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987 through 989 (Nonextensive O.R. procedure unrelated to principal diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move procedure codes out of these MS–DRGs into one of the surgical MS–DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS–DRGs for the MDC in which the diagnosis falls. As noted above, there were no cases that merited movement or that should logically be assigned to any of the other MDCs. Therefore, for FY 2013, we did not propose to remove any procedures from MS–DRGs 981 through 983 or MS–DRGs 987 through 989 into one of the surgical MS–DRGs for the MDC into which the principal diagnosis is assigned.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not making any changes to the procedures assigned to MS–DRGs 981 through 983 or MS–DRGs 987 through 989 for FY 2013.

b. Reassignment of Procedures Among MS–DRGs 981 Through 983, 984 Through 986, and 987 Through 989

We also annually review the list of ICD–9–CM procedures that, when in combination with their principal diagnosis code, result in assignment to MS–DRGs 981 through 983, 984 through 986 (Prostatic O.R. procedure unrelated to principal diagnosis with MCC, with CC, or without CC/MCC, respectively), and 987 through 989, to ascertain whether any of those procedures should be reassigned from one of these three MS–DRGs to another of the three MS–DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS–DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

There were no cases representing shifts in treatment practice or reporting practice that would make the resulting MS–DRG assignment illogical, or that merited movement so that cases should logically be assigned to any of the other MDCs. Therefore, for FY 2013, we did not propose to move any procedure codes among these MS–DRGs.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not moving any procedures assigned to MS–DRGs 981 through 983, MS–DRGs 984 through 986, and MS–DRGs 987 through 989 for FY 2013.

[14] The original list of the ICD–9–CM procedure codes for the procedures we consider nonextensive procedures, if performed with an unrelated principal diagnosis, was published in Table 6C in section IV. of the Addendum to the FY 1989 final rule (53 FR 38591). As part of the FY 1991 final rule (55 FR 36135), the FY 1992 final rule (56 FR 43212), the FY 1993 final rule (57 FR 23625), the FY 1994 final rule (58 FR 46279), the FY 1995 final rule (59 FR 45336), the FY 1996 final rule (60 FR 45783), the FY 1997 final rule (61 FR 46173), and the FY 1998 final rule (62 FR 45981), we moved several other procedures from DRG 468 to DRG 477, and some procedures from DRG 477 to DRG 468. No procedures were moved in FY 1999, as noted in the final rule (63 FR 40962); in FY 2000 (64 FR 41496); in FY 2001 (65 FR 47064); or in FY 2002 (66 FR 39852). In the FY 2003 final rule (67 FR 49999) we did not move any procedures from DRG 477. However, we did move procedure codes from DRG 468 and placed them in more clinically coherent DRGs. In the FY 2004 final rule (68 FR 45365), we moved several procedures from DRG 468 to DRGs 476 and 477 because the procedures are nonextensive. In the FY 2005 final rule (69 FR 48950), we moved one procedure from DRG 468 to 477. In addition, we added several existing procedures to DRGs 476 and 477. In the FY 2006 (70 FR 47317), we moved one procedure from DRG 468 and assigned it to DRG 477. In FY 2007, we moved one procedure from DRG 468 and assigned it to DRGs 479, 553, and 554. In FYs 2008, 2009, FY 2010, FY 2011, and FY 2012, no procedures were moved, as noted in the FY 2008 final rule with comment period (72 FR 46241); the FY 2009 final rule (73 FR 48513); the FY 2010 final rule (74 FR 43796); the FY 2011 final rule (75 FR 50122); and the FY 2012 final rule (76 FR 51549).

c. Adding Diagnosis or Procedure Codes to MDCs

Based on the review of cases in the MDCs as described above in sections II.G.1. through 4. of this preamble, we did not propose to add any diagnosis or procedure codes to MDCs for FY 2013. We did not receive any public comments on our proposal. Therefore, as we proposed, we are not adding any diagnosis or procedure codes to MDCs for FY 2013.

9. Changes to the ICD–9–CM Coding System, Including Discussion of the Replacement of the ICD–9–CM Coding System With the ICD–10–CM and ICD–10–PCS Systems in FY 2014

a. ICD–9–CM Coding System

The ICD–9–CM is a coding system currently used for the reporting of diagnoses and procedures performed on a patient. In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS), the Centers for Disease Control and Prevention, and CMS, charged with maintaining and updating the ICD–9–CM system. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the ICD–9–CM to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The Official Version of the ICD–9–CM contains the list of valid diagnosis and procedure codes. (The Official Version of the ICD–9–CM is available from the Government Printing Office on CD–ROM for $29.00 by calling (202) 512–1800.) Complete information on ordering the CD–ROM is also available at: *http://www.cms.hhs.gov/ICD9ProviderDiagnosticCodes/05CDROM.asp#TopOfPage*. The Official Version of the ICD–9–CM is no longer available in printed manual form from the Federal Government; it is only available on CD–ROM. Users who need a paper version are referred to one of the many products available from publishing houses.

The NCHS has lead responsibility for the ICD–9–CM diagnosis codes included in the *Tabular List* and *Alphabetic Index for Diseases,* while CMS has lead responsibility for the ICD–9–CM procedure codes included in the *Tabular List* and *Alphabetic Index for Procedures.*

The Committee encourages participation in the above process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2013 at a public meeting held on September 14, 2011 and finalized the coding changes after consideration of comments received at the meetings and in writing by November 18, 2011.

The Committee held its 2012 meeting on March 5, 2012. New codes for which there was consensus of public support and for which complete tabular and indexing changes were made by May 2012 are included in the October 1, 2012 update to ICD–9–CM. Code revisions that were discussed at the March 5, 2012 Committee meeting but that could not be finalized in time to include them in the tables listed in section VI. of the Addendum to the proposed rule are included in Table 6B which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site, and are marked with an asterisk (*).

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27912), we stated that, for FY 2013, there were no changes to the ICD–9–CM coding system due to the partial code freeze or for new technology. However, at the March 5, 2012 meeting there was a request for a code for a new technology. As discussed below, only codes for new technologies or new diagnoses are being considered during the partial code freeze. After discussions at the meeting and public comment received after the meeting, it was decided that there will be one new procedure code effective October 1, 2012: new code 00.95 (Injection or infusion of glucarpidase).

Therefore, there are no new, revised, or deleted diagnosis codes and no revised or deleted procedure codes that are usually announced in Tables 6A (New Diagnosis Codes), 6C (Invalid Diagnosis Codes), 6D (Invalid Procedure Codes), 6E (Revised Diagnosis Code Titles), and 6F (Revised Procedure Codes). The new procedure code is listed in Table 6B (New Procedure Codes) for this final rule, which is available via the Internet on the CMS Web site.

Copies of the minutes of the procedure codes discussions at the Committee's September 14, 2011 meeting and March 5, 2012 meeting can be obtained from the CMS Web site at: *http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/03_meetings.asp*. The minutes of the diagnosis codes discussions at the September 14, 2011 meeting and March 5, 2012 meeting are found at: *http://www.cdc.gov/nchs/icd.htm*. These Web sites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD–9–CM Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by Email to: *dfp4@cdc.gov*.

Questions and comments concerning the procedure codes should be addressed to: Patricia E. Brooks, Co-Chairperson, ICD–9–CM Coordination and Maintenance Committee, CMS, Center for Medicare Management, Hospital and Ambulatory Policy Group, Division of Acute Care, C4–08–06, 7500 Security Boulevard, Baltimore, MD 21244–1850. Comments may be sent by Email to: *patricia.brooks2@cms.hhs.gov*.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108–173 included a requirement for updating ICD–9–CM codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the ''Secretary shall provide

for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) * * * until the fiscal year that begins after such date.'' This requirement improves the recognition of new technologies under the IPPS system by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD–9–CM Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the ICD–9–CM Coordination and Maintenance Committee meeting if the request is received at least 2 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS Web site. The public decides whether or not to attend the meeting based on the topics listed on the agenda. Final decisions on code title revisions are currently made by March 1 so that these titles can be included in the IPPS proposed rule. A complete addendum describing details of all changes to ICD–9–CM, both tabular and index, is published on the CMS and NCHS Web sites in May of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4–5, 2005 ICD–9–CM Coordination and Maintenance Committee minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this new April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–9–CM Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requester at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting summary report are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. There were no requests approved for an expedited April 1, 2012 implementation of an ICD–9–CM code at the September 14, 2011 Committee meeting. Therefore, there were no new ICD–9–CM codes implemented on April 1, 2012.

Current addendum and code title information is published on the CMS Web site at: *http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/01overview.asp#TopofPage*. Information on ICD–9–CM diagnosis codes, along with the Official ICD–9–CM Coding Guidelines, can be found on the Web site at: *http://www.cdc.gov/nchs/icd9.htm*. Information on new, revised, and deleted ICD–9–CM codes is also provided to the AHA for publication in the *Coding Clinic for ICD–9–CM.* AHA also distributes information to publishers and software vendors.

CMS also sends copies of all ICD–9–CM coding changes to its Medicare contractors for use in updating their systems and providing education to providers.

These same means of disseminating information on new, revised, and deleted ICD–9–CM codes will be used to notify providers, publishers, software vendors, contractors, and others of any changes to the ICD–9–CM codes that are implemented in April. The code titles are adopted as part of the ICD–9–CM Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules. We will continue to publish the October code updates in this manner within the IPPS proposed and final rules. For codes that are implemented in April, we will assign the new procedure code to the same MS–DRG in which its predecessor code was assigned so there will be no MS–DRG impact as far as MS–DRG assignment. Any midyear coding updates will be available through the Web sites indicated above and through the *Coding Clinic for ICD–9–CM.* Publishers and software vendors currently obtain code changes through these sources in order to update their code books and software systems. We will strive to have the April 1 updates available through these Web sites 5 months prior to implementation (that is, early November of the previous year), as is the case for the October 1 updates.

b. Code Freeze

The International Classification of Diseases, 10th Revision (ICD–10) coding system applicable to hospital inpatient services is to be implemented on October 1, 2013, as described in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Administrative Simplification: Modifications to Medical Data Code Set Standards to Adopt ICD–10–CM and ICD–10–PCS final rule (74 FR 3328 through 3362, January 16, 2009). However, the Secretary of Health and Human Services issued a proposed rule that would delay, from October 1, 2013, to October 1, 2014, the compliance date for the International Classification of Diseases, 10th Edition diagnosis and procedure codes (ICD–10). The proposed rule, CMS–0040–P, went on display at the Office of the Federal Register on April 9, 2012, and was published in the **Federal Register** on April 17, 2012 (77 FR 22950) and is available for viewing at: *http://www.gpo.gov/fdsys/browse/collection.action?collectionCode=FR.*

The ICD–10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD–10–PCS) for inpatient hospital procedure coding, as well as the Official ICD–10–CM and ICM–10–PCS Guidelines for Coding and Reporting. In the January 16, 2009 ICD–10–CM and ICD–10–PCS final rule (74 FR 3328 through 3362), there was a discussion of the need for a partial or total freeze in the annual updates to both ICD–9–CM and ICD–10–CM and ICD–10–PCS codes. The public comment addressed in that final rule stated that the annual code set updates should cease l year prior to the implementation of ICD–10. The commenters stated that this freeze of code updates would allow for instructional and/or coding software programs to be designed and purchased early, without concern that an upgrade would take place immediately before the compliance date, necessitating additional updates and purchases.

HHS responded to comments in the ICD–10 final rule that the ICD–9–CM Coordination and Maintenance Committee has jurisdiction over any action impacting the ICD–9–CM and ICD–10 code sets. Therefore, HHS indicated that the issue of consideration of a moratorium on updates to the ICD–9–CM, ICD–10–CM, and ICD–10–PCS code sets in anticipation of the adoption of ICD–10–CM and ICD–10–PCS would be addressed through the Committee at a future public meeting.

The code freeze was discussed at multiple meetings of the ICD–9–CM Coordination and Maintenance Committee and public comment was actively solicited. The Committee evaluated all comments from participants attending the Committee meetings as well as written comments that were received. There was an announcement at the September 15–16, 2010 and September 14, 2011 ICD–9–CM Coordination and Maintenance Committee meetings that a partial freeze of both ICD–9–CM and ICD–10 codes will be implemented as follows:

- The last regular annual update to both ICD–9–CM and ICD–10 code sets was made on October 1, 2011.
- On October 1, 2012, there will be only limited code updates to both ICD–9–CM and ICD–10 code sets to capture new technology and new diseases.
- On October 1, 2013, there were to be only limited code updates to ICD–10 code sets to capture new technology and diagnoses as required by section 503(a) of Public Law 108–173. There were to be no updates to ICD–9–CM on October 1, 2013, as the system would no longer be a HIPAA standard and, therefore, no longer be used for reporting. With the proposed ICD–10 implementation delay, there will be only limited code updates to both ICD–9–CM and ICD–10 to capture new technology and new diagnoses on October 1, 2013.
- On October 1, 2014, regular updates to ICD–10 were to begin. As stated earlier, HHS has issued a proposed rule that would delay the compliance date of ICD–10 from October 1, 2013, to October 1, 2014. If this delay is implemented as proposed, there would be only limited ICD–10 code updates for new technologies and new diseases on October 1, 2014. There would be no updates to ICD–9–CM on October 1, 2014, as the system would no longer be a HIPAA standard and, therefore, no longer be used for reporting. Full ICD–10 updates would begin on October 1, 2015, one year after the implementation of ICD–10.

The ICD–9–CM Coordination and Maintenance Committee announced that it would continue to meet twice a year during the freeze. At these meetings, the public will be encouraged to comment on whether or not requests for new diagnosis and procedure codes should be created based on the need to capture new technology and new diseases. Any code requests that do not meet the criteria will be evaluated for implementation within ICD–10 on or after October 1, 2014, once the partial freeze is ended.

Complete information on the partial code freeze and discussions of the issues at the Committee meetings can be found on the ICD–9–CM Coordination and Maintenance Committee Web site at: *http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/03.asp#TopOfPage.* A summary of the September 14, 2011 Committee meeting, along with both written and audio transcripts of this meeting, are posted on the ''Download'' section of this Web page.

Comment: Several commenters expressed concern about the delay in the implementation of ICD–10. Some commenters supported a delay, while others opposed any delay.

Response: Proposals on ICD–10 implementation are being addressed through a separate rulemaking as we have indicated above. These comments will be addressed as part of that separate rulemaking.

c. Processing of 25 Diagnosis Codes and 25 Procedure Codes on Hospital Inpatient Claims

CMS is currently processing all 25 diagnosis codes and 25 procedure codes submitted on electronic hospital inpatient claims. Prior to January 1, 2011, hospitals could submit up to 25 diagnoses and 25 procedures; however, CMS' system limitations allowed for the processing of only the first 9 diagnosis codes and 6 procedure codes. We discussed this change in processing claims in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50127), in the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25843), in a correction notice issued in the **Federal Register** on June 14, 2011 (76 FR 24633), and in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51553). As discussed in these prior rules, CMS undertook an expansion of our internal system capability so that we are able to process up to 25 diagnoses and 25 procedures on hospital inpatient claims as part of the HIPAA ASC X12 Technical Reports Type 3, Version 005010 (Version 5010) standards system update. We recognize the value of the additional information provided by this coded data for multiple uses such as for payment, quality measures, outcome analysis, and other important uses. We will continue to process up to 25 diagnosis codes and 25 procedure codes when received on the 5010 format.

d. ICD–10 MS–DRGs

In response to the FY 2011 IPPS/LTCH PPS proposed rule, we received comments on the creation of the ICD–10 version of the MS–DRGs, which will be implemented at the same time as ICD–10 (75 FR 50127 and 50128). As we stated earlier, the Secretary of Health and Human Services has issued a proposed rule that would delay the compliance date of ICD–10 from October 1, 2013 to October 1, 2014. While we did not propose an ICD–10 version of the MS–DRGs in the FY 2011 IPPS/LTCH PPS proposed rule, we noted that we have been actively involved in converting our current MS–DRGs from ICD–9–CM codes to ICD–10 codes and sharing this information through the ICD–9–CM Coordination and Maintenance Committee. We undertook this early conversion project to assist other payers and providers in understanding how to go about their own conversion projects. We posted ICD–10 MS–DRGs based on Version 26.0 (FY 2009) of the MS–DRGs. We also posted a paper that describes how CMS went about completing this project and suggestions for others to follow. All of this information can be found on the

CMS Web site at: *http://www.cms.gov/ICD10/17_ICD10_MS_DRG_Conversion_Project.asp*. We have continued to keep the public updated on our maintenance efforts for ICD–10–CM and ICD–10–PCS coding systems as well as the General Equivalence Mappings that assist in conversion through the ICD–9–CM Coordination and Maintenance Committee. Information on these committee meetings can be found at: *http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html*.

During FY 2011, we developed and posted Version 28.0 of the ICD–10 MS–DRGs based on the FY 2011 MS–DRGs (Version 28.0) that we finalized in the FY 2011 IPPS/LTCH PPS final rule on the CMS Web site. This ICD–10 MS–DRGs Version 28.0 also included the CC Exclusion List and the ICD–10 version of the hospital-acquired conditions (HACs), which was not posted with Version 26.0. We also discussed this update at the September 15–16, 2010 and the March 9–10, 2011 meetings of the ICD–9–CM Coordination and Maintenance Committee. The minutes of these two meetings are posted on the CMS Web site at: *http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html*.

We reviewed comments on the ICD–10 MS–DRGs Version 28.0 and made updates as a result of these comments. We called the updated version the ICD–10 MS–DRGs Version 28 R1. We posted a Definitions Manual of ICD–10 MS–DRGs Version 28 R1 on our ICD–10 MS–DRG Conversion Project Web site at: *http://www.cms.gov/ICD10/17_ICD10_MS_DRG_Conversion_Project.asp*. To make the review of Version 28 R1 updates easier for the public, we also made available pilot software on a CD ROM that could be ordered through the National Technical Information Service (NTIS). A link to the NTIS ordering page was provided on the CMS ICD–10 MS–DRG Web page. We stated that we believed that, by providing the ICD–10 MS–DRG Version 28 R1 Pilot Software (distributed on CD ROM), the public would be able to more easily review and provide feedback on updates to the ICD–10 MS–DRGs. We discussed the updated ICD–10 MS–DRGs Version 28 R1 at the September 14, 2011 ICD–9–CM Coordination and Maintenance Committee meeting. We encouraged the public to continue to review and provide comments on the ICD–10 MS–DRGs so that CMS could continue to update the system.

In FY 2012, we prepared the ICD–10 MS–DRGs Version 29.0, based on the FY 2012 MS–DRGs (Version 29.0) that we finalized in the FY 2012 IPPS/LTCH PPS final rule. We posted a Definitions Manual of ICD–10 MS–DRGs Version 29.0 on our ICD–10 MS–DRGs Web site. We also prepared a document that describes changes made from Version 28.0 to Version 29.0 to facilitate a review. The ICD–10 MS–DRGs Version 29.0 was discussed at the ICD–9–CM Coordination and Maintenance Committee meeting on March 5, 2012. Information was provided on the types of updates made. Once again the public was encouraged to review and comment on the most recent update to the ICD–10 MS–DRGs.

We provided information on a study conducted on the impact on converting MS–DRGs to ICD–10. Information on this study is summarized in a paper entitled ''Impact of the Transition to ICD–10 on Medicare Inpatient Hospital Payments.'' This paper is posted on the CMS ICD–10 MS–DRG conversion Web site at: *http://www.cms.gov/ICD10/17_ICD10_MS_DRG_Conversion_Project.asp*. The paper describes CMS' approach to the conversion of the MS–DRGs from ICD–9–CM codes to ICD–10 codes. The study was undertaken using the ICD–9–CM MS–DRGs Version 27.0 (FY 2010) and converted to the ICD–10 MS–DRGs Version 27.0. The study estimated the impact on aggregate payment to hospitals and the distribution of payments across hospitals. The paper was distributed and discussed at the September 15, 2010 ICD–9–CM Coordination and Maintenance Committee. The impact of the conversion from ICD–9–CM to ICD–10 on Medicare MS–DRG hospital payments was estimated using 2009 Medicare data. The study found a hospital payment increase of 0.05 percent using the ICD–10 MS–DRGs Version 27.0. For detailed information on this study, we refer readers to the complete report which is posted on the CMS Web site at: *http://www.cms.gov/ICD10/17_ICD10_MS_DRG_Conversion_Project.asp*.

CMS provided an overview of this hospital payment impact study at the March 5, 2012 ICD–9–CM Coordination and Maintenance Committee meeting. This presentation followed presentations on the creation of ICD–10 MS–DRGs Version 29.0. A summary report of this meeting can be found on the CMS Web site at: *http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html*. At this March 2012 meeting, CMS announced that it would produce an update on this impact study based on an updated version of the ICD–10 MS–DRGs. This update will provide additional information to the public as CMS is evaluating refinements made to the ICD–10 MS–DRGs based on public comments.

We will continue to work with the public to explain how we are approaching the conversion of MS–DRGs to ICD–10 and will post drafts of updates as they are developed for public review. The final version of the ICD–10 MS–DRGs will be implemented at the same time as ICD–10 and will be subject to notice and comment rulemaking. In the meantime, we will provide extensive and detailed information on this activity through the ICD–9–CM Coordination and Maintenance Committee.

10. Public Comments on Issues Not Addressed in the Proposed Rule

We received a number of public comments regarding MS–DRG issues that were outside of the scope of the proposals included in the FY 2013 IPPS/LTCH PPS proposed rule. We have summarized these public comments below. However, because these public comments were outside of the scope of the proposed rule, we are not addressing them in this final rule. As stated in section II.G. of this preamble, we encourage individuals with comments about MS–DRG classifications to submit these comments no later than December of each year so they can be considered for possible inclusion in the annual proposed rule and, if included, may be subjected to public review and comment. We will consider these comments for possible proposals in future rulemaking as part of our annual review process.

Some commenters requested that CMS create a new MS–DRG for total ankle replacement procedures. One commenter requested that CMS eliminate the severity levels for heart and liver transplants and implement one MS–DRG for heart transplants and one MS–DRG for liver transplants.

One commenter requested that CMS conduct an analysis of diagnosis code V45.88 (Status post administration of tPA (rt-PA) in a different facility within the last 24 hours prior to admission to current facility) to determine whether new data warrant any change in the MS–DRG structure for these cases.

One commenter recommended that bronchial valve procedures reported with ICD–9–CM procedure codes 33.71 (Endoscopic insertion or replacement of bronchial valve(s), single lobe) and 33.73 (Endoscopic insertion or replacement of bronchial valve(s), multiple lobes), that are assigned to medical MS–DRGs 190 and 192 (Chronic Obstructive Pulmonary Disease with MCC, with CC, or without MCC/CC, respectively) be assigned instead to

surgical MS–DRGs 163 and 165 (Major Chest Procedures with MCC, with CC, or without MCC/CC, respectively).

H. Recalibration of MS–DRG Weights

1. Data Sources for Developing the Weights

In developing the FY 2013 system of weights, we used two data sources: claims data and cost report data. As in previous years, the claims data source is the MedPAR file. This file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2011 MedPAR data used in this final rule include discharges occurring on October 1, 2010, through September 30, 2011, based on bills received by CMS through March 31, 2012, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which are under a waiver from the IPPS under section 1814(b)(3) of the Act). The FY 2011 MedPAR file used in calculating the relative weights includes data for approximately 10,804,695 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR ''GHO Paid'' indicator field on the claim record is equal to ''1'' or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR ''Indirect Medical Education (IME)'' payment field, indicating that the claim was an ''IME only'' claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 31, 2012 update of the FY 2011 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called ''claim type.'' Claim type ''60'' indicates that the claim was an inpatient claim paid as fee-for-service. Claim types ''61,'' ''62,'' ''63,'' and ''64'' relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2013 also excludes claims with claim type values not equal to ''60.'' The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. Normally, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year (that is, for the calculation of the FY 2013 MS–DRG relative weights, we use data from the FY 2010 HCRIS, which are data from cost reports that began on or after October 1, 2009 and before October 1, 2010). However, during the development of this final rule, as was the case with the proposed rule, we have found that those cost reports in the FY 2010 HCRIS dataset with fiscal year begin dates that are on or after May 1, 2010, and before October 1, 2010, are not accessible. This is because cost reports with fiscal year begin dates of May 1, 2010, through September 30, 2010, were filed on the new cost report Form 2552–10, and cost reports filed on Form 2552–10 are not currently accessible in the HCRIS. However, because data from cost reports filed on Form 2552–10 are not currently available, to ensure that the FY 2013 MS–DRG relative weights are calculated with a dataset that is as comprehensive and accurate as possible, as we proposed, we are calculating the final FY 2013 MS–DRG relative weights with data from FY 2010 cost reports for providers with fiscal year begin dates of on or after October 1, 2009 and before May 1, 2010, and backfilling with data from FY 2009 cost reports for those providers that have fiscal year begin dates on or after May 1, 2010 through September 30, 2010. We used cost report data from the March 31, 2012 update of the HCRIS for FY 2009 and FY 2010 in calculating the FY 2013 cost-based relative weights.

2. Methodology for Calculation of the Relative Weights

The methodology we used to calculate the FY 2013 MS–DRG cost-based relative weights based on claims data in the FY 2011 MedPAR file and data from the FY 2009 and FY 2010 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the proposed FY 2013 MS–DRG classifications discussed in sections II.B. and G. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS–DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2010 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS–DRG and before eliminating statistical outliers.
- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than $10.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, special equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood charges, and anesthesia charges were also deleted.
- At least 96.2 percent of the providers in the MedPAR file had charges for 10 of the 15 cost centers. Claims for providers that did not have charges greater than zero for at least 10 of the 15 cost centers were deleted.
- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS–DRG.
- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to ''Y'' for ''Yes'' for all claims that otherwise have an ''N'' (No) or a ''U'' (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a ''Y'' indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS–DRG). If the particular condition is *not* present on admission (that is, an ''N'' indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS–DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of

encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Thus, if the higher charges of these HAC claims are grouped into lower severity MS–DRGs prior to the relative weight-setting process, the relative weights of these particular MS–DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS–DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to ''Y'' only for relative weight-setting purposes for all claims that otherwise have an ''N'' or a ''U'' in the POA field. This resetting ''forced'' the more costly HAC claims into the higher severity MS–DRGs as appropriate, and the relative weights calculated for each MS–DRG more closely reflect the true costs of those cases.

Once the MedPAR data were trimmed and the statistical outliers were removed, the charges for each of the 15 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS–DRG for each of the 15 cost groups so that each MS–DRG had 15 standardized charge totals. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2009 and FY 2010 cost report data.

The 15 cost centers that we used in the relative weight calculation are shown in the following table. The table shows the lines on the cost report and the corresponding revenue codes that we used to create the 15 national cost center CCRs.

BILLING CODE 4120–01–P

Cost Center Group Name (15 total)	MedPAR Charge Field	Revenue Codes contained in MedPAR Charge Field		Cost Report Line Description	Cost from HCRIS (Worksheet C, Part 1, Column 5 and line number) Form CMS-2552-96	Charges from HCRIS (Worksheet C, Part 1, Column 6 & 7 and line number) Form CMS-2552-96	Medicare Charges from HCRIS (Worksheet D-4, Column & line number) Form CMS-2552-96	Cost from HCRIS (Worksheet C, Part 1, Column 5 and line number) Form CMS-2552-10	Charges from HCRIS (Worksheet C, Part 1, Column 6 & 7 and line number) Form CMS-2552-10	Medicare Charges from HCRIS (Worksheet D-3, Column & line number) Form CMS-2552-10

3. Development of National Average CCRs

We developed the national average CCRs as follows:

Using the FY 2009 and FY 2010 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. We then created CCRs for each provider for each cost center (see prior table for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. We then took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D–4 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D–4. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS–DRG in each of the 15 cost centers by the corresponding national average CCR, we summed the 15 ''costs'' across each MS–DRG to produce a total standardized cost for the MS–DRG. The average standardized cost for each MS–DRG was then computed as the total standardized cost for the MS–DRG divided by the transfer-adjusted case count for the MS–DRG. The average cost for each MS–DRG was then divided by the national average standardized cost per case to determine the relative weight.

The FY 2013 cost-based relative weights were then normalized by an adjustment factor of 1.5916044904 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

The 15 national average CCRs for FY 2013 are as follows:

Group	CCR
Routine Days	0.514
Intensive Days	0.442
Drugs	0.199
Supplies & Equipment	0.335
Therapy Services	0.370
Laboratory	0.143
Operating Room	0.238
Cardiology	0.145
Radiology	0.136
Emergency Room	0.226
Blood and Blood Products	0.389
Other Services	0.397
Labor & Delivery	0.450
Inhalation Therapy	0.189
Anesthesia	0.109

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS–DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27930), we proposed to use that same case threshold in recalibrating the MS–DRG weights for FY 2013. Using data from the FY 2011 MedPAR file, there were 8 MS–DRGs that contain fewer than 10 cases. Under the MS–DRGs, we have fewer low-volume DRGs than under the CMS DRGs because we no longer have separate DRGs for patients aged 0 to 17 years. With the exception of newborns, we previously separated some DRGs based on whether the patient was age 0 to 17 years or age 17 years and older. Other than the age split, cases grouping to these DRGs are identical. The DRGs for patients aged 0 to 17 years generally have very low volumes because children are typically ineligible for Medicare. In the past, we have found that the low volume of cases for the pediatric DRGs could lead to significant year-to-year instability in their relative weights. Although we have always encouraged non-Medicare payers to develop weights applicable to their own patient populations, we have received frequent complaints from providers about the use of the Medicare relative weights in the pediatric population. We believe that eliminating this age split in the MS–DRGs will provide more stable payment for pediatric cases by determining their payment using adult cases that are much higher in total volume. Newborns are unique and require separate MS–DRGs that are not mirrored in the adult population. Therefore, it remains necessary to retain separate MS–DRGs for newborns. All of the low-volume MS–DRGs listed below are for newborns. In FY 2013, because we do not have sufficient MedPAR data to set accurate and stable cost weights for these low-volume MS–DRGs, we proposed to compute weights for the low-volume MS–DRGs by adjusting their FY 2012 weights by the percentage change in the average weight of the cases in other MS–DRGs. The crosswalk table is shown below:

Low-Volume MS–DRG	MS–DRG Title	Crosswalk to MS–DRG
768	Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C.	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
789	Neonates, Died or Transferred to Another Acute Care Facility.	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate.	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
791	Prematurity with Major Problems	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
792	Prematurity without Major Problems	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
793	Full-Term Neonate with Major Problems.	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
794	Neonate with Other Significant Problems.	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).
795	Normal Newborn	FY 2012 FR weight (adjusted by percent change in average weight of the cases in other MS–DRGs).

We did not receive any public comments on this section. In this final rule, we are adopting the national average CCRs as proposed without modification, with the MS–DRG weights recalibrated based on these CCRs.

4. Bundled Payments for Care Improvement (BPCI) Initiative

a. Background

Section 3021 of the Affordable Care Act, codified at section 1115A of the Act, authorizes CMS to test innovative payment and service delivery models with the goal of reducing Medicare program expenditures while preserving or enhancing the quality of care furnished to individuals. Because initiatives established under this authority could result in IPPS hospitals receiving a payment different than what they otherwise would receive under the IPPS, we believe it is important to identify how these initiatives are addressed in the context of MS–DRG recalibration and ratesetting, budget neutrality, and the impact analysis in the Addendum of this final rule, as we did in the proposed rule.

Under the Bundled Payments for Care Improvement (BPCI) initiative, CMS would link payments for multiple services that patients receive during an episode of care. CMS is working in partnership with providers to develop and test models of bundling payments through the BPCI initiative. On August 23, 2011, CMS invited providers to apply to help develop and test four different models of bundling payments. For additional information, we refer readers to the CMS Web site at: *http://www.innovations.cms.gov/initiatives/Bundled-Payments/index.html*. We are providing below a brief overview of payments under each model. However, the BPCI initiative Request for Application and related information on the CMS Web site at *http://www.innovations.cms.gov/initiatives/Bundled-Payments/index.html/* provide more details of this initiative.

As described below and also in the Addendum to the proposed rule and this final rule, we generally proposed to include, and for this final rule are including, data from hospitals participating in the BPCI initiative and to treat these hospitals without regard to their participation in the BPCI initiative for the purposes of IPPS ratesetting.

We did not receive any public comments about our proposals. Therefore, as discussed in greater detail below, we are finalizing the treatment of hospitals participating in the BPCI initiative as proposed. For hospitals participating in Models 1, 2, and 4, we are finalizing treating these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative).

Model 1

In Model 1, the episode of care is defined as the inpatient hospital services for the acute care hospital stay only. Applicants for this model were asked to propose discount percentages for various periods of the 3-year program, which would be applied to the IPPS operating MS–DRG payment for each participating hospital's MS–DRGs over the lifetime of the initiative. That is, for hospitals participating in Model 1, Medicare would continue to pay participating acute care hospitals under the IPPS. However, these payments to participating acute care hospitals would be at a reduced payment amount that reflects the applicable discount percentage for cases in all MS–DRGs for the specific period of the program. We note that an adjustment would be made such that payments for IME, DSH, and outliers would be calculated based on the nondiscounted MS–DRG operating IPPS payment amount and then paid, if applicable, in addition to the discounted MS–DRG operating IPPS payment. The minimum discount percentage that awardees are expected to offer would be phased in over time, with the discount percentage updated as frequently as every 6 months.

Model 2

In Model 2, the episode of care is defined as the inpatient acute care hospital stay for specific clinical conditions and a specified period of time following discharge (with a minimum episode length of at least 30 days following hospital discharge). The payment bundle for Model 2 would encompass all Medicare Part A payments for designated MS–DRGs, Part B professional services paid under the Medicare Physician Fee Schedule (MPFS) during the hospital stay, and related professional services furnished after discharge during the episode, ''related readmissions'' (as defined under the BPCI initiative), care by a postacute care provider such as an HHA, IRF, SNF, LTCH, and other related services furnished during the episode (that is, all Medicare Part A and Part B with the exception of hospice care). Applicants, which may be a Medicare supplier or provider, groups of such entities, or other organizations that bring together providers and suppliers to test the model, were asked to propose specific MS–DRG(s) for the clinical condition(s) to be tested in Model 2. Furthermore, the applicants were asked to propose the target price on an MS–DRG basis for the episode that includes a single rate of discount off of the expected Medicare payment (including hospital, postacute care, Medicare Part B professional services, and other services, as applicable) for all Model 2 beneficiaries discharged from the inpatient hospital stay with the specified MS–DRG(s). We note that, when proposing the target price, applicants were instructed to include IPPS outlier payments in their calculation; however, IPPS IME and DSH payments should be excluded from the target price. In Model 2, payments would be made at the usual fee-for-service payment rates to the participating providers through the regular claims processing system, after which the aggregate Medicare payment for the episode would be reconciled against the target price. If aggregate Medicare expenditures are less than the target price, the awardee would be paid the difference as a reconciliation payment. Conversely, if aggregate Medicare expenditures exceed the target price, CMS would recoup that amount from the awardee.

Model 3

In Model 3, the episode of care begins at initiation of postacute services at one of four postacute care providers (HHAs, IRFs, SNFs, and LTCHs) within 30 days after discharge from any acute care hospital for specific clinical conditions. As with the other three models, applicants may be one or more Medicare providers or supplier or other organization(s) bringing those entities together to test the model. Applicants were asked to propose an episode length that would extend to at least 30 days following initiation of care at an HHA, IRF, SNF, or LTCH. The payment bundle for Model 3 would encompass care by a postacute care provider, and other related services furnished during the episode, including Medicare Part B professional services paid under the MPFS, and inpatient hospital readmissions (as defined under the BPCI initiative). In contrast to Model 2, the payment bundle for Model 3 does not include services provided in the initial acute care hospital stay. We note that, while the episode is initiated at one of the four postacute care providers rather than at an acute care hospital, applicants were asked to specify the clinical condition(s) to be tested in Model 3 by proposing relevant MS–

DRG(s). Therefore, applicable to all Model 3 beneficiaries discharged from any inpatient acute care hospital stay with the specified MS–DRG(s), applicants were to propose a target price on an MS–DRG basis for the episode that includes a single rate of discount off of the expected Medicare payment, which includes care by a postacute care provider, related Medicare Part B professional services paid under the MPFS, inpatient hospital readmissions, and other related services furnished during the episode. In Model 3, payments would be made at the usual fee-for-service payment rates to the participating providers through the regular claims processing process, after which the aggregate Medicare payment for the episode would be reconciled against the target price. Like Model 2, if aggregate Medicare expenditures are less than the target price, the awardee would be paid the difference as a reconciliation payment. Conversely, if aggregate Medicare expenditures exceed the target price, CMS would recoup that amount from the awardee. We note that Model 3 does address payment for related hospital readmissions.

Model 4

In Model 4, the episode of care is defined as the acute care hospital stay and includes all ''related readmissions'' (as defined under the BPCI initiative). The payment bundle for Model 4 would encompass Medicare inpatient hospital services, Medicare Part B professional services paid under the MPFS furnished during the initial hospitalization, as well as hospital services and Medicare Part B professional services during any related readmissions. Applicants were asked to propose specific MS–DRG(s) for the clinical condition(s) to be tested in Model 4. Applicants for this model were asked to propose a target price for the episode that includes a single rate of discount off of expected Medicare payment (including both Medicare Part A hospital services and Part B professional services) for all beneficiaries discharged from the inpatient hospital stay with the specified MS–DRG(s).

In contrast to Models 2 and 3, where usual Medicare fee-for-service payments are made to all providers and reconciliation of Medicare spending against the target price for the episode is conducted retrospectively, under Model 4, hospitals would receive a prospectively established bundled payment for specified MS–DRGs. This payment would include both the MS–DRG payment for the hospital and a fixed payment amount for the Medicare Part B professional services anticipated to be furnished during the episode. That is, separate payment for providers' professional services furnished during the inpatient hospital stay would not be made. Participating Model 4 hospitals receiving payment would take responsibility for distributing payment to providers that would otherwise be paid separately. We note that IPPS IME and DSH payments to Model 4 hospitals would be calculated based on the nondiscounted base MS–DRG operating IPPS payment that would have been made in the absence of the model. Other applicable payment adjustors would also be calculated based on the base MS–DRG operating IPPS payment amount that would otherwise have applied to the case, as opposed to the prospectively established amount paid through this initiative, which would be higher as it includes payment for Part B services as well as the base MS–DRG payment. Under Model 4, no separate IPPS outlier payments would be made.

b. Treatment of Data From Hospitals Participating in the BPCI Initiative

As discussed above, acute care hospitals had the opportunity to apply and participate in the BPCI payment models described above. As we discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27932), for Model 1 and Model 2, participating acute care hospitals would continue to receive an IPPS payment under section 1886(d) of the Act (subject to a predetermined discount for hospitals participating in Model 1). For Model 2, participating hospitals may also receive a reconciliation payment under the BPCI initiative (based on their predetermined target price). Under Model 3, services provided in the initial acute care hospital stay are not included; however, the model does address payment for possible hospital readmissions. Under Model 1, hospitals participate for all MS–DRGs, while, under Model 2, hospitals participate for only pre-selected MS–DRGs. We believe it is appropriate to include all applicable data from these subsection(d) hospitals in our IPPS payment modeling and ratesetting calculations because these hospitals are still receiving IPPS payments under section 1886(d) of the Act (in addition to, with respect to Model 2 hospitals, any reconciliation payment the hospital may receive under the BPCI initiative). Moreover, even if these hospitals were not receiving IPPS payments under section 1886(d) of the Act (and were participating in Models 1 and 2), the Secretary has the authority to make appropriate adjustments for payment amounts under section 1886(d)(5)(I)(i) of the Act to include all applicable data from these subsection(d) hospitals in our IPPS ratesetting calculations. We believe it is appropriate to use the Secretary's authority under section 1886(d)(5)(I)(i) of the Act to include all IPPS, short-term, acute care hospitals within the IPPS ratesetting calculations because excluding these hospitals would diminish the number of providers used to determine the IPPS rates, which could cause fluctuations in the IPPS rates and could produce instability to the IPPS rates. Therefore, because we believe it is appropriate to include all claims from hospitals participating within Models 1 and 2 within the IPPS ratesetting calculations, using the Secretary's authority under section 1886(d)(5)(I)(i) of the Act, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27932), we proposed to include all applicable data from ''subsection (d)'' hospitals participating in Models 1 and 2 under the BPCI initiative in our IPPS payment modeling and ratesetting calculations (which includes recalibration of the MS–DRG weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis). In essence, we proposed to continue to treat these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within these two bundled payment models (that is, we would treat these hospitals as if they are not participating in Model 1 or Model 2 under the BPCI initiative). We did not receive any public comments on our proposal. Therefore, we are finalizing treating these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within these two bundled payment models (that is, we would treat these hospitals as if they are not participating in Model 1 or Model 2 under the BPCI initiative), as we proposed.

In contrast to BPCI Models 1 and 2 (wherein participating IPPS hospitals would receive an IPPS payment under section 1886(d) of the Act, and, in the case of Model 2, may also receive a reconciliation payment under the BPCI initiative), IPPS hospitals participating in Model 4 would receive a predetermined bundled payment for Medicare Part A and Part B services for a pre-specified MS–DRG ''episode'' (and any ''related readmissions'' as defined under the BPCI initiative). These bundled payments are for certain pre-

specified MS–DRG(s) episodes (not all cases) and would be made in accordance with the terms of the model, as authorized by section 1115A of the Act (these IPPS hospitals would also receive ''regular'' IPPS payments under section 1886(d) of the Act for those MS–DRGs not included in the bundling model). Similar to Models 1 and 2, we believe it is appropriate to keep all applicable data from these ''subsection (d)'' hospitals in our IPPS payment modeling and ratesetting calculations because the majority of Medicare payments these hospitals would receive would be IPPS payments under section 1886(d) of the Act (that is, payments for cases in MS–DRGs that are not included in the bundled payment model). Moreover, although these hospitals are not receiving payments under 1886(d) of the Act for the cases included in the prospective bundled payment under Model 4, the Secretary has the authority to make appropriate adjustments for payment amounts at section 1886(d)(5)(I)(i) of the Act to include all applicable data from these subsection (d) hospitals in our IPPS ratesetting calculations. We believe it is appropriate to use the Secretary's authority under section 1886(d)(5)(I)(i) of the Act to include all IPPS, short-term, acute care hospitals and their claims within the IPPS ratesetting calculations because excluding these hospitals would diminish the number of providers used to determine the IPPS rates, which could cause fluctuations in the IPPS rates and could produce instability to the IPPS rates. Therefore, because we believe it is appropriate to include all claims from hospitals participating within Models 1 and 2 within the IPPS ratesetting calculations and use the Secretary's authority under section 1886(d)(5)(I)(i) of the Act to include those hospitals and claims, we also believe it is appropriate to include all applicable data from subsection (d) hospitals participating in Model 4 in our IPPS payment modeling and ratesetting calculations (which includes recalibration of the MS–DRG weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) and proposed to do so in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27932 through 27933). In essence, we proposed to continue to treat these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within this bundled payment model (that is, we would treat these hospitals as if they are not participating in Model 4 under the BPCI initiative). We did not receive any public comments on our proposal. Therefore, we are finalizing treating these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within these two bundled payment models (that is, we would treat these hospitals as if they are not participating in Model 4 under the BPCI initiative), as we proposed.

We note that Model 3 only addresses payments for related readmissions and postacute care services (rather than IPPS payments). Therefore, we believed it was not necessary to propose to address the treatment of any data for participating hospitals in Model 3. We continue to believe it is not necessary to address the treatment of any data for participating hospitals in Model 3. We did not receive any public comments on our decision not to propose to address the treatment of any data for participating hospitals in Model 3.

Because we did not receive any public comments, we are finalizing the treatment of hospitals participating in the BPCI initiative as proposed. For hospitals participating in Models 1, 2, and 4, we are finalizing treating these hospitals the same as prior fiscal years for purposes of the FY 2013 (and subsequent years) IPPS payment modeling and ratesetting process without regard to a hospital's participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative).

I. Add-On Payments for New Services and Technologies

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as ''new technologies'') under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, ''based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate.'' We note that beginning with discharges occurring in FY 2008, CMS transitioned from CMS–DRGs to MS–DRGs.

The regulations at 42 CFR 412.87 implement these provisions and specify three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. The regulations at 42 CFR 412.88 also implement these provisions and describe the additional payment for the new medical service or technology. Below, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For a complete discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574).

Under the first criterion, as reflected in 42 CFR 412.87(b)(2), a specific medical service or technology will be considered ''new'' for purposes of new medical service or technology add-on payments until such time as Medicare data are available to fully reflect the cost of the technology in the MS–DRG weights through recalibration. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a technology receives a new FDA approval, it may not necessarily be considered ''new'' for purposes of new technology add-on payments if it is ''substantially similar'' to a technology that was approved by FDA and has been on the market for more than 2 to 3 years. In the FY 2006 IPPS final rule (70 FR 47351) and FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 and 43814), we explained our policy regarding substantial similarity in detail.

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to the discharge involving the new medical services or technologies must be assessed for adequacy. Under the cost criterion, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective

payment rate, we evaluate whether the charges for cases involving the new technology exceed certain threshold amounts. Table 10 that was released with the FY 2012 IPPS/LTCH PPS final rule contains the final thresholds that we used to evaluate applications for new technology add-on payments for FY 2013 in this final rule. We refer readers to the Web site *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FR2012/list.asp#TopOfPage* for a complete viewing of Table 10 from the FY 2012 IPPS/LTCH PPS final rule.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR Parts 160 and 164 applies to claims information that providers submit with applications for new technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for complete information on this issue.

Under the third criterion, § 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents ''an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.'' For example, a new technology represents a substantial clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits, or reduces recovery time compared to the technologies previously available. We refer readers to the September 7, 2001 final rule for a complete discussion of this criterion (66 FR 46902).

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology (if the estimated costs for the case including the new technology exceed Medicare's payment); or (2) 50 percent of the difference between the full DRG payment and the hospital's estimated cost for the case. Unless the discharge qualifies for an outlier payment, the additional Medicare payment for new medical services and technologies is limited to the full MS–DRG payment plus 50 percent of the estimated costs of the new technology.

Section 503(d)(2) of Public Law 108–173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108–173, add-on payments for new medical services or technologies for FY 2005 and later years have not been subjected to budget neutrality.

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulations at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We also amended § 412.87(c) to specify that all applicants for new technology add-on payments must have FDA approval or clearance for their new medical service or technology by July 1 of each year prior to the beginning of the fiscal year that the application is being considered.

The Council on Technology and Innovation (CTI) at CMS oversees the agency's cross-cutting priority on coordinating coverage, coding and payment processes for Medicare with respect to new technologies and procedures, including new drug therapies, as well as promoting the exchange of information on new technologies between CMS and other entities. The CTI, composed of senior CMS staff and clinicians, was established under section 942(a) of Public Law 108–173. The Council is co-chaired by the Director of the Center of Clinical Standards and Quality (CCSQ) and the Director of the Center for Medicare (CM), who is also designated as the CTI's Executive Coordinator.

The specific processes for coverage, coding, and payment are implemented by CM, CCSQ, and the local claims-payment contractors (in the case of local coverage and payment decisions). The CTI supplements, rather than replaces, these processes by working to assure that all of these activities reflect the agency-wide priority to promote high-quality, innovative care. At the same time, the CTI also works to streamline, accelerate, and improve coordination of these processes to ensure that they remain up to date as new issues arise. To achieve its goals, the CTI works to streamline and create a more transparent coding and payment process, improve the quality of medical decisions, and speed patient access to effective new treatments. It is also dedicated to supporting better decisions by patients and doctors in using Medicare-covered services through the promotion of better evidence development, which is critical for improving the quality of care for Medicare beneficiaries.

To improve the understanding of CMS' processes for coverage, coding, and payment and how to access them, the CTI has developed an ''Innovator's Guide'' to these processes. The intent is to consolidate this information, much of which is already available in a variety of CMS documents and in various places on the CMS Web site, in a user-friendly format. This guide was published in August 2008 and is available on the CMS Web site at: *http://www.cms.gov/CouncilonTechInnov/Downloads/InnovatorsGuide5_10_10.pdf*.

As we indicated in the FY 2009 IPPS final rule (73 FR 48554), we invite any potential applicants, such as product developers or manufacturers of new medical technologies, to contact the agency early in the process of product development if they have questions or concerns about the evidence that would be needed later in the development process for the agency's coverage and/or payment decisions for Medicare.

The CTI aims to provide useful information on its activities and initiatives to stakeholders, including Medicare beneficiaries, advocates, medical product manufacturers, providers, and health policy experts. Stakeholders with further questions about Medicare's coverage, coding, and payment processes, or who want further guidance about how they can navigate these processes, can contact the CTI at *CTI@cms.hhs.gov*.

We note that applicants for add-on payments for new medical services or technologies for FY 2014 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along

with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html*. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2014, the Web site also will post the tracking forms completed by each applicant.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement or advancement. The process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries;
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending;
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement; and
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2013 prior to publication of the FY 2013 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on November 18, 2011 (76 FR 71571 through 71572), and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on February 14, 2012. In the announcement notice for the meeting, we stated that the opinions and alternatives provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for each of the FY 2013 new medical service and technology add-on payment applications before the publication of the FY 2013 proposed rule.

Approximately 70 individuals registered to attend the town hall meeting in person, while additional individuals listened over an open telephone line. Four of the five FY 2013 applicants presented information on its technology, including a discussion of data reflecting the substantial clinical improvement aspect of the technology. We considered each applicant's presentation made at the town hall meeting, as well as written comments submitted on the applications that were received by the due date of March 6, 2012, in our evaluation of the new technology add-on payment applications for FY 2013 in the proposed rule.

In response to the published notice and the new technology town hall meeting, commenters submitted and presented public comments that were unrelated to the substantial clinical improvement criterion in regard to the new technology applications for FY 2013. We also received public comments on the proposed rule relating to topics such as marginal cost factors for new technology add-on payments, and the use of external data in determining the cost threshold and mapping new technologies to the appropriate MS–DRG. Because we did not request public comments nor propose to make any changes to any of the issues above, we are not summarizing these public comments nor responding to them in this final rule.

3. FY 2013 Status of Technology Approved for FY 2012 Add-On Payments: Auto Laser Interstitial Thermal Therapy (AutoLITT™) System

Monteris Medical submitted an application for new technology add-on payments for FY 2011 for the AutoLITT™. AutoLITT™ is a minimally invasive, MRI-guided laser tipped catheter designed to destroy malignant brain tumors with interstitial thermal energy causing immediate coagulation and necrosis of diseased tissue. The technology can be identified by ICD–9–CM procedure codes 17.61 (Laser interstitial thermal therapy [LITT] of lesion or tissue of brain under guidance), and 17.62 (Laser interstitial thermal therapy [LITT] of lesion or tissue of head and neck under guidance), which became effective on October 1, 2009.

The AutoLITT™ received a 510K FDA clearance in May 2009. The AutoLITT™ is indicated for use to necrotize or coagulate soft tissue through interstitial irradiation or thermal therapy in medicine and surgery in the discipline of neurosurgery with 1064 nm lasers. The AutoLITT™ may be used in patients with glioblastoma multiforme brain tumors. The applicant stated in its application and through supplemental information that, due to required updates, the technology was actually introduced to the market in December 2009. The applicant explained that it was necessary to reduce the thermal damage lines from three to one and complete International Electrotechnical Commission/Underwriter Laboratory testing, which led to the introduction of the technology to the market in December 2009, although the technology was approved by FDA in May 2009. The applicant also stated through supplementary information to its application that the first sale of the product took place on March 19, 2010. However, because the product was already available for use in December 2009, it appears that the newness date would begin in December 2009. In the FY 2011 IPPS/LTCH PPS proposed rule, we welcomed public comments on this issue.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology payments for the AutoLITT™ and consideration of the public comments we received in response to the FY 2011 IPPS/RY 2011 LTCH PPS proposed rule, including the additional analysis of clinical data and supporting information submitted by the applicant, we approved the AutoLITT™ for new technology add-on payments for FY 2011. Consistent with the applicant's clinical trial, the add-on payment is intended only for use of the device in cases of glioblastoma multiforme. Therefore, we limited the new technology add-on payment to cases involving the AutoLITT™ in MS–DRGs 025 (Craniotomy and Endovascular Intracranial Procedures with MCC), 026 (Craniotomy and Endovascular Intracranial Procedures with CC), and 027 (Craniotomy and Endovascular Intracranial Procedures without CC or MCC). Cases involving the AutoLITT™ that are eligible for the new technology add-on payment are identified by assignment to MS–DRGs 025, 026, and 027 with a procedure code

of 17.61 (Laser interstitial thermotherapy of lesion or tissue of brain under guidance) in combination with a principal diagnosis code that begins with a prefix of 191 (Malignant neoplasm of brain). We note that using the procedure and diagnosis codes above and restricting the add-on payment to cases that map to MS–DRGs 025, 026, and 027 is consistent with information provided by the applicant, which demonstrated that cases of the AutoLITT™ would only map to MS–DRGs 025, 026, and 027. Procedure code 17.62 (Laser interstitial thermotherapy of lesion or tissue of head and neck under guidance) does not map to MS–DRGs 025, 026, or 027 under the GROUPER software and, therefore, is ineligible for new technology add-on payment.

The average cost of the AutoLITT™ is reported as $10,600 per case. Under § 412.88(a)(2) of the regulations, new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum add-on payment for a case involving the AutoLITT™ is $5,300.

The new technology add-on payment regulations provide that ''a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD–9–CM code assigned to the new service or technology'' (42 CFR 412.87(b)(2)). Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend add-on payments for an additional year only if the 3-year anniversary date of the product's entry on the market occurs in the latter half of the fiscal year (70 FR 47362). In the proposed rule, with regard to the newness criterion for the AutoLITT™, we stated that we consider the beginning of the newness period for the device to commence from the market release date of December 2009. Therefore, for FY 2013, as of December 2012, the AutoLITT™ will have been on the market for 3 years, and would therefore no longer be considered ''new'' as of December 2012 nor be considered eligible for new technology add-on payments in FY 2013. However, we received information from the applicant that the market release date of the AutoLITT™ occurred after April 2010 (which occurs in the latter half of the fiscal year) and, therefore, it appears that the AutoLITT™ would still be considered ''new'' for FY 2013 and would still be eligible for new technology add-on payments in FY 2013. We note that we received this information in close proximity to the publication of the proposed rule and anticipated receiving further information on the delayed market release date from the applicant and welcomed public comment as well.

Comment: The applicant submitted a public comment to demonstrate that the AutoLITT™ was first available on May 11, 2010, which would make the AutoLITT™ eligible for new technology add-on payments in FY 2013 (because the 3-year anniversary date of AutoLITT™ would take place in the latter half of the fiscal year). The manufacturer explained that some of the sterile disposable products were not released from quarantine until May 11, 2010, which prevented the AutoLITT™ from being used prior to May 11, 2010. Therefore, the manufacturer asserted that the first time the AutoLITT™ was available on the market was May 11, 2010.

Response: We appreciate the manufacturer providing this information and we agree that the AutoLITT™ is considered new as of May 11, 2010, instead of December 2009. As stated above, in general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product's entry on the market occurs in the latter half of the fiscal year (70 FR 47362). Because the 3-year anniversary date of the AutoLITT™ entry on the market occurs in the latter half of the fiscal year, we still consider the AutoLITT™ to be new for FY 2013. Therefore, we are continuing to make new technology add-on payments for the AutoLITT™ in FY 2013. We discuss the coding and payment policies for the AutoLITT™ earlier in this section.

Comment: Several public commenters recommended extending new technology add-on payments for the AutoLITT™ in FY 2013.

Response: As stated above, we still consider the AutoLITT™ to be new for FY 2013, and will continue to make new technology add-on payments for the AutoLITT™ in FY 2013.

4. FY 2013 Applications for New Technology Add-On Payments

We received six applications for new technology add-on payments for FY 2013. However, two applicants withdrew their applications prior to the publication of the proposed rule.

a. Glucarpidase (Trade Brand Voraxaze®)

BTG International, Inc. (BTG) submitted an application for new technology add-on payments for Glucarpidase (trade brand Voraxaze®) for FY 2013. In the proposed rule, we summarized this application, and stated that Glucarpidase is used in the treatment of patients who have been diagnosed with toxic methotrexate (MTX) concentrations as a result of renal impairment. The administration of Glucarpidase causes a rapid and sustained reduction of toxic MTX concentrations.

Methotrexate (MTX) is a widely used anticancer agent. The administration of high-dose methotrexate (HDMTX) is an important component of the treatment provided to patients who have been diagnosed with various types of cancer. According to the applicant, HDMTX, in particular, is specifically used in the treatment of patients who have been diagnosed with osteosarcoma, acute lymphoblastic leukemia, non-Hodgkin's lymphoma, or primary CNS lymphoma. The applicant further stated that the administration of HDMTX can cause renal dysfunction. Renal dysfunction impairs the elimination of MTX, which in turn causes the levels of MTX to rise to the point of life-threatening toxicity.

The applicant maintains that there are not any currently FDA-approved pharmaceutical treatment options available to rapidly decrease MTX levels in patients who have been diagnosed with toxic MTX concentrations as a result of renal impairment. The applicant asserts that extracorporeal treatment options that are routinely employed to rapidly treat this condition, such as hemodialysis, hemodiafiltration, high-flux hemodialysis, charcoal hemoperfusion or hemofiltration, peritoneal dialysis, exchange transfusion, or plasma exchange, are invasive, may add excess morbidity to the treatment regimen, and have proven to have limited effects.[15] High flux hemodialysis is the most effective method of extracorporeal MTX removal, but this method requires 5 to 6 days of daily treatment (4 to 6 hours per session).[16] The risks associated with repeated hemodialysis procedures such as anemia, infection, and increased mortality, especially in neutropenic or thrombocytopenic patients, are significant and cause rebounds in MTX levels. The applicant maintains that other treatment options, such as the

[15] Widemann *et al.,* [Cancer, 2004, and Vilay *et al.,*], Pharmacotherapy, Vol. 30, January, 2010).

[16] Wall *et al.,* American Journal of Kidney Diseases, Vol. 28, No. 6, 1996.

administration of leucovorin, hydration, and urinary alkalinization, also are commonly used to reduce harmful levels of MTX. However, these treatment options do not reduce toxic MTX concentrations in all patient populations.[17]

Voraxaze® was approved by the FDA on January 17, 2012. Beginning in 1993, certain patients could obtain expanded access for treatment use to Voraxaze® as an investigational drug. Since 2007, the applicant has been authorized to recover the costs of making Voraxaze® available through its expanded access program. We describe expanded access for treatment use of investigational drugs and authorization to recover certain costs of investigational drugs in more detail below. Voraxaze® was available on the market in the United States as a commercial product to the larger population as of April 30, 2012.

With regard to newness, in the proposed rule we expressed concern that Voraxaze® may no longer be considered ''new.'' Specifically, section 1886(d)(5)(K)(ii)(II) of the Act requires that we provide for the collection of cost data for a new medical service or technology for a period of at least 2 years and no more than 3 years ''beginning on the date on which an inpatient hospital code is issued with respect to the service or technology''. In addition, the regulations at § 412.87(b)(2) state that ''A medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD–9–CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion of this section.'' As we have indicated in the past, we generally believe that the newness period begins on the date that FDA approval is granted. The FDA approval date is typically the date when new technologies are available on the market and as a result begin to be reflected within the MS–DRGs cost data.

As noted above, Voraxaze® was approved by the FDA in January 2012. However, starting in 1993, certain patients were able to obtain access to Voraxaze® as an investigational drug through an expanded access program, and the applicant has been authorized to recover certain costs of making Voraxaze® available through its expanded access program since 2007. We discuss below in more detail whether the cost of Voraxaze® is already reflected within the MS–DRG relative weights.

To determine the date of newness for Voraxaze®, as we stated in the proposed rule, we believe it is appropriate to compare investigational drugs provided under the expanded access program to devices eligible for the Humanitarian Use Device (HUD) Program because these programs contain similarities for the purpose of evaluating the newness criterion.

In prior final rules, we have evaluated and approved technologies with a Humanitarian Device Exemption (HDE) approval. In the FY 2010 IPPS/LTCH PPS final rule, we approved new technology add-on payments for the Spiration® IBV®, which received a HDE approval from the FDA on October 24, 2008, and had its first Institutional Review Board (IRB) approval on March 12, 2009 (74 FR 43754, 43819). Therefore, technologies with an HDE approval may be eligible for new technology add-on payments. In other words, we have concluded that HDE approval constitutes an FDA approval in the context of the newness criterion and would begin the newness period, subject to market availability.

There are separate processes and standards for providing expanded access to investigational drugs for treatment use and for the HUD Program. The term ''expanded access'' refers to the use of investigational drugs, or approved drugs where availability is limited by a risk evaluation or mitigation strategy, when the primary purpose is to diagnose, monitor, or treat a patient's disease or condition. When the requirements in (FDA's regulations at) 21 CFR Part 312, Subpart I are met, a patient or group of patients with a serious or immediately life-threatening disease or condition, and no comparable or satisfactory alternative therapy, may obtain expanded access to an investigational drug. When patients obtain expanded access to an unapproved investigational drug, the safety and effectiveness of the drug have not been fully established, and the drug does not have formal FDA approval under a New Drug Application (NDA) or Biologics Licensing Application (BLA) for commercial marketing. Manufacturers may continue conducting clinical trials in parallel to the expanded access program in order to pursue formal market approval from the FDA under an NDA or BLA for commercial marketing. The FDA's Office of Orphan Products Development administers the Humanitarian Use Device (HUD) Program. A HUD is a device that is intended to benefit patients by treating or diagnosing a disease or condition that affects fewer than 4,000 individuals in the United States per year. To obtain approval for a HUD, a HDE application is submitted to FDA. A HDE application is similar in both form and content to a Premarket Approval (PMA) application, but is exempt from the effectiveness requirements of a PMA. A HDE application must, however, contain sufficient information for FDA to determine that the device does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit to health outweighs the risk of injury or illness from its use, taking into account the probable risks and benefits of currently available devices or alternative forms of treatment. An approved HDE authorizes marketing of the HUD, however, an HDE approval requires that the device only be used in facilities that have established a local IRB to supervise clinical testing of devices, and that an IRB approve the use of the device to treat or diagnose the specific disease. Although HUDs can be marketed, they are subject to a general prohibition on profit; that is, they may not, except in narrow circumstances, be sold for an amount that exceeds the cost of research and development, fabrication and distribution.

Expanded access to investigational drugs and the HUD Program have similarities and differences that are relevant to the newness criterion as we stated in the proposed rule. Both have limits on who is eligible to receive a drug or use a device. In addition, to satisfy the requirements for expanded access in FDA's regulations, and for a HDE to meet the standard for approval, a sponsor is not required to demonstrate effectiveness of the product at the same level as for approval of a PMA, NDA, or BLA. Expanded access to investigational drugs and the HUD Program differ in many ways, including that the HUD Program is for devices, and the expanded access programs provide access to drugs. In addition, under the HUD Program, the device is granted FDA approval for limited use. However, while FDA authorizes expanded access to an investigational drug, FDA does not approve the investigational drug when it authorizes expanded access.

This second difference is key to our interpretation of our policy to recognize a HDE approval as an FDA approval. We believe that the availability of a drug through the expanded access program

[17] Pinedo *et al,* Cancer Research, 36, 4418–4424 December, 1976.

would not constitute FDA approval in the context of the newness criterion because unapproved, investigational drugs made available to certain patients through the expanded access program do not receive FDA approval prior to enrollment in the program and cannot be marketed. In other words, we believe that for the purposes of evaluating whether a new technology meets the newness criterion, it may be appropriate not to consider the date when Voraxaze® became available to certain patients through the applicant's expanded access program as the date of market availability.

We note that cost recovery for investigational drugs is of concern with regard to the newness criterion. Although a sponsor (for example, a drug manufacturer) may not commercially distribute an investigational drug, in certain circumstances, a sponsor of a clinical trial or an expanded access program may receive authorization from FDA to charge for certain costs associated with making an investigational drug available. The applicant has been authorized to recover certain costs by making Voraxaze® available since 2007. As we stated earlier, once CMS has recalibrated the DRGs based on available data to reflect the costs of an otherwise new technology, that technology will no longer be considered ''new''' for the purposes of the new technology add-on payments. It is possible that a hospital may have submitted a claim to Medicare for the cost of Voraxaze® provided through the applicant's expanded access program. Therefore, it is also possible that the costs associated with this technology may already be reflected in some limited fashion in the data used to determine the MS–DRG relative weights. While these are possibilities, we have not in the past been confronted with a situation where an applicant has indicated that hospitals have sought cost recovery for their technology when the technology was available through the expanded access program. We also have not been confronted with a situation where an applicant has indicated that cost recovery was sought for technologies (that were not available via an expanded access program) during clinical trials. We note that our data do not distinguish charges for drugs by FDA approval status, and, therefore, we do not exclude from the relative weight calculation costs (as derived from charges) associated with investigational drugs if they are included by hospitals on a claim. Therefore, cost data for non-FDA approved technologies (that is, still involved in clinical trials) may be present in the relative weights on a very limited basis prior to FDA approval, regardless of whether a technology received new technology add-on payments.

We invited public comment regarding the issue of whether a drug is considered ''new'' for the purposes of new technology add-on payments starting with its availability in the expanded access program, and how that may differ from devices being considered ''new'' starting from the date the device received FDA approval under a HDE (subject to market availability or availability to Medicare beneficiaries) and specifically requested comment on these considerations in the context of Voraxaze®. We also invited public comment on whether the costs of Voraxaze®, or more generally, any unapproved investigational drug for which cost recovery is authorized are already included in data used to determine relative weights, and how that influences the start of a newness period, if at all. In addition, we invited public comment regarding the market availability of Voraxaze® between its FDA approval date of January 17, 2012, and the market availability date according to the applicant of April 2012 and the reasons for the delay in availability.

Comment: Several public commenters responded with opinions regarding whether Voraxaze® should be considered new for the purposes of new technology add-on payments. One commenter stated that Voraxaze® was available on a ''very limited basis'' since 1993, and recommended that it be considered ''new'' for the purpose of new technology add-on payments. The commenter also stated that because the manufacturer was only covering its costs under the expanded access program, existing charge data do not adequately reflect the ''true price'' of the technology. The commenter further noted that the frequency with which the technology is used is low, and that the associated relative weights are ''likely artificially low.''

The applicant submitted information through the submittal of a public comment documenting that Voraxaze® was approved by the FDA in January 2012 and that marketing of Voraxaze did not begin until April 2012. The applicant added that the FDA's Office of Prescription Drug Promotion (OPDP) considers a product new from the point of initial marketing and promotion, stating that, ''OPDP generally considers that 'new' is an accurate description of the marketing phase for six months from the time a product is initially marketed and this should be distinguished from the time a product is cleared by FDA for marketing.'' The applicant concluded that the FDA recognizes a time delay between approval and commercial availability as standard in the pharmaceutical industry.

In addition, the applicant provided supplemental information that demonstrated that Voraxaze was not available on the market until April 30, 2012. This documentation included specific information regarding training, manufacturing/packaging and trade/distribution activities that needed to take place prior to April 30, 2012. Once these activities were completed, the applicant stated that it discontinued the treatment of IND/cost recovery program for Voraxaze® on April 29, 2012, and that market availability of Voraxaze® began on April 30, 2012.

The applicant also noted that one of the reasons it did not initiate commercialization activities prior to the FDA approval date of January 30, 2012 was because the company was awaiting final FDA labeling approval (that is, prescribing information) for Voraxaze®, which was delivered to BTG on the day of approval, which was January 17, 2012. The applicant believed it would not have been prudent for BTG to initiate commercialization activities before receiving the final labeling approval because it would have required expensive and time-consuming rework.

One commenter stated that Voraxaze® meets the newness criteria. The commenter explained that the FDA approval date is reasonable to use for determination of newness. The commenter stated that prior to FDA approval, Voraxaze® was only available through a laborious expanded access process that many oncology centers did not have in place. Thus, it was truly only available at many centers for the first time as of April 30, 2012.

Another commenter stated that it believed that Voraxaze® does not meet the newness criterion but did not provide additional information.

Response: Generally, our policy is to begin the newness period on the date of FDA approval/clearance or, if later, the date of market availability for the technology. Availability under the expanded access program neither represents the date of FDA approval (in this case, January 2012) nor the date of market availability (April 30, 2012). Therefore, we consider Voraxaze® to be ''new'' as of April 30, 2012, its date of market availability.

We note, as discussed in section II.G.7. of the preamble to this final rule, we are creating a new ICD–9–CM procedure code 00.95 (Injection or

infusion of glucarpidase) to identify this new technology. This new code is effective October 1, 2012.

With respect to the cost criterion, as we described in the proposed rule, the applicant researched the 2009 Standard Analytic Inpatient File (SAF) for cases with a principal or secondary diagnosis of osteosarcoma (ICD–9–CM code series 170.xx), acute lymphoblastic leukemia (ICD–9–CM code series 204.0x), non-Hodgkin's lymphoma (ICD–9–CM code series 200.xx and 202.xx), or primary CNS lymphoma (ICD–9–CM code series 200.5x) with a corresponding ICD–9–CM procedure code for chemotherapy (99.25) that may be eligible for Voraxaze®, based on the product's approved indications. The applicant's search yielded potentially eligible cases within 249 MS–DRGs, of which 56 MS–DRGs captured 12 or more cases.

Using this universe of cases (249 MS–DRGs), the applicant added the additional costs of Voraxaze® to the case-weighted average standardized charge per case. Although the applicant submitted data related to the estimated cost of Voraxaze®, the applicant noted that the cost of the technology was proprietary information. According to the applicant, it did not convert the costs to charges for this analysis because of the technology's high cost. The applicant maintains that an average adult receiving treatment for one of the diagnoses above would require a minimum of four vials of Voraxaze®.

The applicant used the following multiple analysis of different subsets of MS–DRGs to compare the average case-weighted standardized charge per case to the average case-weighted threshold to determine that Voraxaze® met the cost criteria:

- The applicant found 12,324 eligible cases within 249 MS–DRGs, and determined a case-weighted average standardized charge per case of $87,582 (which includes the cost of Voraxaze®) and a case-weighted threshold of $39,216. The applicant maintains that Voraxaze® meets the cost criterion because the case-weighted average standardized charge per case exceeds the case-weighted threshold.
- The applicant excluded those MS–DRGs that had fewer than 11 cases, which resulted in 12,134 eligible cases within 56 MS–DRGs. The applicant determined a case-weighted average standardized charge per case of $84,039 (which includes the cost of Voraxaze®) and a case-weighted threshold of $37,195. The applicant maintains that Voraxaze® meets the cost criterion because the case-weighted average standardized charge per case exceeds the case-weighted threshold.
- The applicant analyzed the 20 MS–DRGs that contained the highest number of cases and, based on the 11,534 cases they stated they found, determined a case-weighted average standardized charge per case of $80,400 (which includes the cost of Voraxaze®) and a case-weighted threshold of $34,990. The applicant maintains that Voraxaze® meets the cost criterion because the case-weighted average standardized charge per case exceeds the case-weighted threshold.

We invited public comment on whether or not Voraxaze® meets the cost criterion. Specifically, we welcomed public comment on the methodologies used in the applicant's analysis, including (1) the methods used to identify the eligible cases used in the cost analysis of this technology, especially if there are cases that should be excluded from the analysis because of clinical reasons, and if there are other ways to identify cases for which this technology may be appropriate, and (2) the appropriateness of not converting the costs to charges for the purposes of this analysis and what would be an accurate and appropriate CCR for this technology.

Comment: The applicant submitted a public comment stating that it believed that Voraxaze® meets the cost criterion because the commercial costs of Voraxaze® are not reflected in the MS–DRG relative weights. The applicant added that Voraxaze® was available via expanded access since 2007 and hospitals were not allowed to submit for reimbursement of Voraxaze® because it was an investigational drug. Even if hospitals attempted to submit for reimbursement, the applicant noted that the Voraxaze® cost recovery price is substantially lower than its commercial price of $22,500 (effective April 30, 2012) and any existing data prior to April 30, 2012 used to determine MS–DRG relative weights would not capture such a price difference and would largely underestimate the cost of Voraxaze®. Other commenters stated that Voraxaze® clearly meets the cost criterion. The commenters explained that they believed the situations where Voraxaze® is indicated for use were rare, and in those situations they believed that the cost of care for the affected patient rises substantially.

Response: We appreciate the commenters' input. We agree that Voraxaze® meets the cost criterion.

With regard to substantial clinical improvement, the applicant maintains that Voraxaze® is a clinical improvement compared to current treatment options because it is less time intensive, allows certain patient populations to avoid risks associated with current treatment options, and has characteristics that allows it to reduce MTX concentrations more effectively. As noted above, the applicant maintains that current treatment options for renal impairment as a result of toxic MTX concentrations are limited to extracorporeal methods that are time-intensive and could subject patients in certain populations to harm from the associated risks. The applicant states that the administration of Voraxaze® to patients who have been diagnosed with HDMTX-induced renal dysfunction metabolizes circulating MTX to the inactive metabolite DAMPA. The applicant asserts that this characteristic action of the technology represents a substantial clinical improvement over current treatment options available to patients who have toxic MTX concentrations in a more effective, and rapid way, and provides protection to eligible patient populations against potential harm associated with current treatment options.

In addition, the applicant provided the results from a study of 23 patients diagnosed with MTX-induced renal dysfunction treated with Voraxaze®. During this study, the applicant reported that the administration of Voraxaze® lowered toxic MTX concentrations in patients within 15 minutes after the administration by more than 98 percent. Because the administration of Voraxaze® could metabolize both leucovorin and its active metabolite, 5-mTHF, these patients were also administered Leucovorin, a drug used to enhance the treatment for patients with high levels of MTX. The applicant noted that the combination of Voraxaze® and Leucovorin rescue was well tolerated by the 23 patients studied, and MTX-related toxicities were reduced from severe to mild to moderate. The range of age of these 23 patients was 19 to 94 years old with 18 of the 23 patients being 50 years or older.[18] The applicant asserted that the types of health conditions treated with HDMTX, such as acute lymphoblastic leukemia, osteosarcoma, central nervous system (CNS) lymphoma, and leptomeningeal cancer, tend to occur within the Medicare population and cites research that states ''HD–MTX-induced renal failure with persistence of toxic blood MTX levels is a rare but life threatening complication that occurs more frequently in adults, particularly those with advanced age and CNS

[18] Green and Chamberlan, Cancer Chemotherapy and Pharmacology Volume 63, November 4, 2009.

lymphoma.'' [19] When these malignancies arise which require treatment with HDMTX, HDMTX–induced renal failure with persistent toxic MTX levels is a complication that occurs more frequently in adults. The applicant asserted that the administration of Voraxaze® has been shown to be well-tolerated by older adult patients, while achieving similar reduction rates in younger patient populations who have been diagnosed with toxic MTX concentrations and treated with Voraxaze®.[20] The applicant also provided additional published peer-reviewed articles[21,22,23,24,25,26] relevant to their application to support their assertion that they meet the substantial clinical improvement criteria.

We invited public comment on whether or not Voraxaze® meets the criterion of representing a substantial clinical improvement for Medicare beneficiaries.

Comment: The applicant submitted public comments that stated, ''Voraxaze® meets the substantial clinical benefit criterion because the FDA accepted, reviewed, and approved the biologic licenses application (BLA) for Voraxaze® on an accelerated timeline. The FDA initiates an expedited review when a high unmet need exists and when an applicant has a product that may qualify as a substantial clinical improvement.''

Several other public comments also stated that Voraxaze® meets the substantial clinical improvement criteria. One of the commenters, a pediatric oncologist, asserted that prior to Glucarpidase, there were no reliably effective interventions for patients suffering from high dose MTX induced renal dysfunction, a life threatening medical emergency. The commenter further noted that numerous interventions historically employed were generally invasive (that is, charcoal hemoperfusion), had variable but limited impact, and were not readily available at most treatment centers. The commenter concluded that Glucarpidase is a highly effective pharmacologic rescue that can be readily delivered to patients at high risk of or experiencing a life threatening complication of cancer therapy, that there is no other comparable pharmacologic intervention available, and that Glucarpidase is superior to less reliable, invasive measures. Another commenter stated that when Voraxaze® is used in a timely fashion, it can improve severe MTX-induced toxicity, prevent the need for dialysis and other invasive procedures, and can be lifesaving. The commenter believed that Voraxaze® is a unique medication, which can treat a rare and life-threatening complication of methotrexate therapy which has no alternative mediation. The commenter believed that alternative supportive care to Voraxaze®, including hospitalization and dialysis, is exceptionally expensive.

Another commenter who also supported new technology add-on payments for the Voraxaze® believed that Voraxaze® is a drug that can provide life-saving reversal of toxic levels of methotrexate. The commenter further stated that patients with toxic levels of methotrexate are hospitalized and receive the drug during an inpatient admission. However, due to its high cost, the commenter explained that many hospitals are reluctant to stock Voraxaze® in the pharmacy or use it at all due to the lack of reimbursement available when used as an inpatient medication. The commenter continued by stating that the alternative is to provide Leucovorin rescue and vigorous hydration, which often is effective and significantly cheaper. However, the commenter noted that this approach results in prolonged hospital stays, which have their own costs (to the system at large) and expose the patient to potential iatrogenic complications. If a new technology add-on payment is available, the commenter believed that Voraxaze® would become the standard of care for methotrexate toxicity and enable a more rapid discharge of the patient from the inpatient setting. Another commenter stated that it believed ''certain new biologic agents that prevent toxicity but have high drug acquisition costs are underused because of financial disincentives,'' and cited this technology as an example. The commenter noted that this technology ''can reduce the need for dialysis, reduce morbidity and decrease the length of hospital stay,'' and cited this background as an oncologist for support.

Response: After reviewing the totality of the evidence and the public comments we received, we agree that Voraxaze® represents a substantial clinical improvement for Medicare beneficiaries. It appears that Voraxaze® is less time intensive and allows select patient populations to avoid risks associated with current treatment options. Also, Voraxaze® is able to treat patients who have toxic MTX concentrations in a more effective and rapid way than existing treatment options in certain situations, and provides protection to eligible patient populations against potential harm associated with current treatment options. Specifically, the applicant provided the results from a study of 23 patients diagnosed with MTX-induced renal dysfunction treated with Voraxaze®. Based on the clinical trial data, the administration of Voraxaze® lowered toxic MTX concentrations in patients within 15 minutes after the administration by more than 98 percent. Therefore, we believe that Voraxaze® represents a substantial clinical improvement for Medicare beneficiaries. However, we remain interested in seeing clinical endpoints that show that reduction in methotrexate levels leads to improved renal function.

Voraxaze® has met all three criteria for new technology add-on payments and is eligible for new technology add-on payments in FY 2013. Cases of Voraxaze® will be identified with ICD–9–CM procedure code 00.95 (Injection or infusion of glucarpidase). The cost of Voraxaze® is $22,500 per vial. The applicant stated that an average of four vials is used per Medicare beneficiary. Therefore, the average cost per case for Voraxaze® is $90,000 ($22,500 × 4). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for Voraxaze® is $45,000 per case.

b. DIFICID™ (Fidaxomicin) Tablets

Optimer Pharmaceuticals, Inc. submitted an application for new technology add-on payments for FY 2013 for the use of DIFICID™ (Fidaxomicin) tablets. In the proposed rule, we summarized this application and stated that the applicant asserts that Fidaxomicin is a major clinical advancement in the options available to

treat *Clostridium difficile*-associated diarrhea (CDAD).

Clostridium difficile (*C. Diff.*) is a bacterium that can cause infection with symptoms that range from diarrhea to life-threatening inflammation of the colon, and is also commonly referred to as CDAD. The symptoms associated with CDAD can be treated by stopping administration of an antibiotic because often antibiotics can alter the native intestinal microflora and thus trigger CDAD. For mild cases of CDAD, this step may be sufficient to relieve the associated symptoms. However, many patients who have been diagnosed with more severe cases of CDAD require further treatment. Further treatment options include prescribing antibiotics such as Metronidazole or Vancomycin, prescribing probiotics administered in conjunction with antibiotics, and performing surgery using a fecal transplant to restore healthy intestinal bacteria by placing donor stool in the colon. According to the applicant, about one-fourth of the patients diagnosed with CDAD experience a recurrence of these associated symptoms.

As indicated on the labeling submitted to the FDA, the applicant noted that Fidaxomicin is taken twice a day as a daily dosage (200 mg tablet twice daily = 400 mg per day) as an oral antibiotic. The applicant asserts that Fidaxomicin provides potent bactericidal activity against *C. Diff.,* and moderate bactericidal activity against certain other gram-positive organisms, such as enterococcus and staphylococcus. Unlike other antibiotics used to treat CDAD, the applicant noted that the effects of Fidaxomicin preserve bacteroides organisms in the fecal flora. These are markers of normal anaerobic microflora. The applicant asserts that this helps prevent pathogen introduction or persistence, which potentially inhibits the re-emergence of *C. Diff.,* and reduces the likelihood of overgrowths as a result of vancomycin-resistant Enterococcus (VRE). Because of this narrow spectrum of activity, the applicant asserts that Fidaxomicin does not alter this native intestinal microflora.[27]

With regard to the newness criterion, Fidaxomicin was approved by the FDA on May 27, 2011, for the treatment of CDAD in adult patients, 18 years of age and older. Fidaxomicin was commercially available on the market within 7 weeks after the FDA's approval was granted. Currently, there are not any ICD–9–CM diagnosis or procedure codes that exist to uniquely identify the use of Fidaxomicin, or any oral drug, as a procedure. Optimer submitted a request to the ICD–9–CM Coordination and Maintenance Committee for a new ICD–9–CM procedure code, which was discussed at the committee's meeting on March 5, 2012. For further information regarding the code proposal, we refer readers to the CMS Web site at: *http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM–C-and-M–Meeting-Materials.html.*

In the proposed rule, we stated that we believe that under our current new technology add-on payment policy, eligibility for consideration for new technology add-on payments is limited to new technologies associated with procedures described by ICD–9–CM codes. In the FY 2002 IPPS final rule, we established the framework for our current policy (66 FR 46907 through 46915). The discussion of technologies in that rule focuses on those technologies identifiable by ICD–9–CM codes. We also discuss in response to comments the feasibility and appropriateness of HCPCS codes and V-codes. Similar to ICD–9–CM codes, HCPCS codes are also a procedure-based system and identify procedures. We noted in that rule that V-codes would not be appropriate to use for identification of new technology because they are not a substitute for procedure coding. Volume 3 of ICD–9–CM contains codes that describe inpatient procedures (65 FR 50325). In other words, we have not considered drugs that are only taken orally to be eligible for consideration for new technology add-on payments, because there is no procedure associated with these drugs and, therefore, no ICD–9–CM code(s).

As we stated in the proposed rule, this interpretation is also consistent with other Medicare payment policies. For example, when drugs taken orally are given as part of an outpatient encounter, they would likely be considered self-administered drugs under the Hospital Outpatient Prospective Payment System (OPPS). If a Medicare beneficiary who has outpatient status were to be provided a self-administered drug by a hospital or wholly-owned or wholly-operated entity of that hospital and that beneficiary were subsequently admitted to that hospital for a related reason within three days, the hospital may not include these self-administered drugs on the inpatient bill (under the 3-day payment window policy), because self-administered drugs are not covered under the OPPS. However, they would be required to include nondiagnostic services related to admission and all other diagnostic services on the inpatient bill (under the 3-day payment window).

We invited public comment on our interpretation of our policy regarding drugs that are only self-administered for consideration for new technology add-on payments. Further, we invited public comment on whether or not Fidaxomicin meets the newness criterion.

Comment: A number of public commenters, including the applicant, stated that the technology meets the newness criterion. Specifically, commenters discussed: (1) The ICD–9–CM coding for this technology, (2) the statutory authority for the policy in relation to the coding of oral therapies, (3) CMS' current policy and practices regarding coding, (4) CMS' practices with regard to establishing new codes to implement payment policies, (5) the use of V-codes in the ICD–9–CM system for oral drugs, and (6) the non-ICD–9–CM options for coding this technology for the new technology add-on payments. We summarize each issue, in turn, in the following comments and responses below.

Response: We appreciate the commenters' supporting rationale for how this technology meets the newness criterion under the new technology add-on payment policy. We respond to each of the six points, in turn, below. We note that, as a result of our analysis of the public comments we received, in our responses below, we, in this final rule, revised our policy to allow the use of National Drug Codes (NDCs) to identify oral medications that have no inpatient procedure for the purposes of new technology add-on payments. This change will be effective for payments for discharges occurring on or after October 1, 2012. We note that this does not preclude CMS from using additional ICD–9–CM procedure or diagnosis codes to identify cases for this new technology in conjunction with NDCs. In particular, for this technology, we established a methodology to identify cases for new technology add-on payments by using the NDC for the drug (52015–0080–01) and ICD–9–CM diagnosis code 008.45, Intestinal infection due to Clostridium difficile. Furthermore, we establish that the beginning of the newness period for this technology is its FDA approval date of May 27, 2011.

Comment: The applicant submitted a public comment asserting that it believed that an ICD–9–CM procedure

[27] Koo, Garey *et al.* Future novel therapeutic agents for Clostridium difficile infection. Expert Opin Investig Drugs., 2010;19(7):825–836.

Tannock, Munro *et al.,* A new macrocyclic antibiotic, fidaxomicin (OPT–80), causes less alteration to the bowel microbiota of Clostridium difficile-infected patients than does vancomycin. Microbiology. 2010 Nov;156(Pt 11):3354–9.

code would be the ''best option'' and noted that this should be limited to the ''sole purpose of tracking use of the product'' for new technology add-on payments. The applicant indicated that it did not believe this created a precedent for inpatient procedure coding.

Response: With regard to use of an ICD–9–CM procedure code for this technology, subsequent to and as recommended by CMS at the March 12, 2012 ICD–9–CM Coordination and Maintenance (C&M) Committee meeting, no new ICD–9–CM procedure code for the administration of this technology was created. Public comments received during and subsequent to the public meetings opposed the establishment and addition of codes for self-administered drugs. The commenters stated that this type of service has never been included in ICD–9–CM procedure codes. Other commenters believed that such an addition to the ICD–9–CM system would be setting a major new precedent. Hospitals currently code and report procedures and more invasive services such as surgeries, infusion of drugs, and specialized procedures such as cardiac catheterizations. Hospitals do not code nor report self-administered drugs. While we appreciate the commenters' belief that a new ICD–9–CM procedure code should be created and that this code could be limited to new technological procedures and would thus not create a precedent for inpatient procedure codes, we disagree for the reasons stated above and described in more detail below. While the ICD–9–CM procedure coding system has been used to create codes for categories of service not previously coded for the purpose of new technology add-on payments, these new codes have been limited to inpatient procedures associated with their respective technologies. The commenters cited, as an example, the creation of procedure code 00.11, Infusion of drotrecogin alfa (activated) [Xigris], as an example of where CMS has ''created unique new ICD–9–CM codes in categories of service that did not previously exist.'' We note that infusions of drugs have been part of the ICD–9–CM inpatient procedure coding system since it was created in 1979. Infusion of drugs requires specialized health care personnel to administer the infusion procedure. Patients taking self-administered drugs do not require the use of hospital or health care personnel to perform a procedure. Since the inception of the ICD–9–CM coding system, drugs given to a patient through use of an infusion have been considered procedures described by ICD–9–CM codes. The identification of a patient taking a self-administered drug has never been described by ICD–9–CM codes because it was not deemed to be a hospital procedure. This technology is an orally administered drug and, as noted by the applicant in its public comment, ''must be administered orally to effectively treat CDAD''. Orally-administered drugs require no inpatient procedure to administer. Therefore, we believe it would be inappropriate to establish an ICD–9–CM procedure code for their administration, even for the purpose of new technology add-on payments.

Comment: One commenter asserted that the statutory authority exists for new technology add-on payments for oral therapies with no inpatient procedure (that is, infusion). The commenter reiterated our statement in the proposed rule that, ''we believe that under our current new technology add-on payment policy, eligibility * * * is limited to new technologies associated with procedure codes described by ICD–9–CM codes'' (77 FR 27939). Similarly, another commenter stated that, ''CMS asked whether DIFICID™ could qualify under the statute and regulations for new technology because it is an oral therapy.'' Both commenters stated that the proposed rule ''does not assert that there is any corresponding statutory or regulatory bar to granting a [new technology add-on payment] to an oral therapy, and indeed there is none.'' Another commenter stated that, while self-administered drugs are not covered by Part B, they are covered by Part A. Another commenter stated that, ''the fact that DIFICID™ must be administered orally to effectively treat [clostridium dificile associated disease] should not preclude it from being considered under the [new technology add-on] policy.'' Commenters pointed out that the statute ''require[s] that the agency 'shall' establish a mechanism to recognize costs of new medical services or technologies * * * which 'shall' provide for additional payment when such services are used.'' Another commenter further stated that it believed that ''the Congressional intent was explicit'' and stated that the statute ''allow[s] '*any code* such as ICD–9–CM and its subsequent revision' (emphasis added [in the public comment]).'' Another commenter stated that, ''the FY2002 [final rule on the new technology add-on payment] exemplifies CMS' authority and flexibility to use codes broadly for [the new technology add-on payment], if needed.'' Another commenter recognized that the statute explicitly points out the use of ICD–9–CM codes, but reminded the agency that they believed that ''the regulation permits administrative flexibility.'' Additionally, the commenter described the application form, and noted that, ''this policy document includes 5 specific questions not necessarily reflected directly in statute or regulation.'' Of the five items pointed out by the commenter, four refer to FDA approval, and one to ICD–9–CM procedure coding.

Response: With regard to the question of whether or not statutory authority exists to allow new technology add-on payments for oral medications without inpatient procedures (that is, infusion), we note that, as the commenters pointed out, in the proposed rule, we did not assert that such statutory authority did not exist. We believe that under our current new technology add-on payment policy, eligibility for new technology add-on payments is limited to new technologies associated with procedure codes described by ICD–9–CM codes (77 FR 27939). We believe that the statute could be interpreted in a manner that does not preclude new technology add-on payments for oral medications that have no inpatient procedure (that is, infusion) insofar as such an oral medication meets the other aspects of the newness criterion in addition to meeting the cost and substantial clinical improvement criteria. We interpret our current policy as limiting new technology add-on payments to technologies associated with inpatient procedures, as described in the FY 2002 final rule on CMS' new technology add-on payment policy (66 FR 46915). We note that this technology is the first application we have received for a technology that is an oral medication where no inpatient procedure is associated. In light of public comments we received, we are revising our policy to allow for the use of an alternative code set to identify oral medications where no inpatient procedure is associated for the purposes of new technology add-on payments. We are establishing the use of NDCs as the alternative code set for this purpose and describe our rationale for this particular code set in response to comments below. This change will be effective for payments for discharges occurring on or after October 1, 2012. We note that this does not preclude CMS from using additional ICD–9–CM procedure or diagnosis codes to identify cases for this new technology in conjunction with this alternative code set. We also agree with the comment that these oral medications for which no inpatient procedure is

associated may be considered self-administered drugs under Part B and are not payable under the outpatient prospective payment system (OPPS). We remind hospitals that, although hospitals are required to bundle related therapeutic services within the 3 days prior to and on the day of inpatient admission on the inpatient claim, hospitals may not include services that are not payable under the OPPS within the 3 days prior to and on the day of inpatient admission as part of the inpatient claim (42 CFR 412.2(c)(5)).

Comment: Commenters reviewed our current policy and practice with regard to identification of new technologies for new technology add-on payments. They reiterated statements from the FY 2002 final rule on CMS' new technology add-on payment policy, while one commenter pointed out that, ''CMS considered several coding options to track new procedures and technologies * * * and discussed use of ICD–9–CM V-codes, HCPCS Level II codes, and G codes to classify new technologies.'' Another commenter stated that CMS has in the past created ICD–9–CM codes for new technology add-on payments, and cited as an example the creation of procedure code 00.11, Infusion of drotrecogin alfa (activated) [Xigris], as an example of where CMS has ''created unique new ICD–9 codes in categories of service that did not previously exist.''

Response: With regard to our current policy and practice on the use of code sets to identify new technologies for new technology add-on payments, we appreciate the commenters' input. As we stated in response to other public comments, we interpret our current policy as limiting new technology add-on payments to technologies associated with inpatient procedures, as described in the FY 2002 final rule on the new technology add-on payment policy. We note that this technology is the first application we have received for a technology that is an oral medication with no inpatient procedure. Also, as we stated in response to other comments, we point out that the example the commenters cite, procedure code 00.11, Infusion of drotrecogin alfa (activated) [Xigris], is for an infusion and that infusion can be an inpatient procedure.

Comment: Commenters reviewed our practice with regard to establishing new codes to implement Medicare policies. Specifically, they mentioned the creation of a claim modifier to reflect the use of surgical devices that CMS created to ''implement claims processing of a new policy'' and also the creation of policy claim codes MX (wrong surgery on patient), MY (wrong surgery on body part), and MZ (surgery on wrong patient) to identify claims to implement a national coverage decision regarding certain never events. They asserted that CMS is able to establish new codes to implement policies.

Response: With regard to the examples of CMS' practices of establishing new codes to implement Medicare policies, we appreciate the commenters' responses. We agree that from time to time CMS will implement, as needed, new codes and processes to implement Medicare policies, including payment and coverage policies. The examples provided by the commenters do not specifically address the new technology add-on payment policy, instead, they address other Medicare payment policies and national coverage decisions.

Comment: One commenter pointed out that V-codes currently exist for oral drugs. Specifically, the commenter cited code V58.66 for long term (current) use of aspirin and code V58.68 for long-term (current) use of bisphosphonates. The commenter also pointed out that three codes in subcategory V07.5 for the use of agents affecting estrogen receptors and estrogen levels have inclusion notes for multiple medications, some of which are oral.

Response: With regard to the existence of V-codes for oral drugs, we agree with the commenters that V-codes exist that capture the long term use of certain drugs, including those that may be orally administered. V-codes are used to capture additional information about factors influencing health status and contact with health services. The codes for long-term (current) drug use were created to assist in following patients who use certain drugs over a long period of time. The codes do not necessarily indicate that a patient received the specific drug during the current health care encounter. The patient may be taking the drug based on a prescription received during a prior health care encounter and did not receive it during the current encounter.

However, we have not adopted the use of V-codes for use in the new technology add-on payment policy. Currently, the new technology add-on payment policy is based on the use of ICD–9–CM procedure codes, which indicate that a procedure or service is provided during the hospital stay. The long-term (current) drug use V-codes described do not provide this information. As indicated earlier, the V-codes indicate the patient has been on certain drugs on a long-term basis, and do not necessarily indicate that the patient received the drug during the current health care encounter. We continue to believe that V-codes are not appropriate for new technology add-on payments because we do not believe the nature of these codes appropriately identifies new technologies; they indicate that some circumstance or problem is present which influences the person's health status, but is not in itself a current illness or injury. Common V-codes are status codes, history codes, aftercare codes, and follow-up codes. In addition, V-codes do not identify items related to current resource use for an inpatient stay. For the most part, V-codes do not impact the DRG, and they are not taken into consideration when forming DRG assignment and, thus, are not used in setting relative weights for the IPPS. However, we note that we continue to explore the usefulness of these and other alternatives, such as those available in ICD–10, for coding and identifying technologies for the purposes of new technology add-on payments.

Comment: One commenter described non-ICD–9–CM alternatives for coding this technology for the purposes of the new technology add-on payment policy. One option described by the commenter was the use of a value code and condition code to identify this technology. The commenter pointed out that a value code, value code 77, currently exists to identify when a new technology add-on payment is being claimed. The commenter noted that value codes are used with condition codes, and suggested that an option could be for CMS to submit a request to the National Uniform Billing Committee (NUBC) for a ''unique Condition Code to describe DIFICID™ administration.'' A second option described by the commenters was to use a national drug code (NDC) on the claim to identify the technology for the purposes of new technology add-on payments. The commenter described two ways to implement such an option, one where the NDC would be used in isolation (as product information in Box 80 of the UB–04 claims form) and one where it would be used in combination with ICD–9 diagnosis code 008.45, Intestinal infection due to Clostridium difficile (where the NDC would be reported on the UB–04 in Box 43 and the diagnosis code reported on the UB–04 in Box 65). The commenter pointed out that using the NDC in isolation may require hospitals to ''make changes to their billing systems'' and that using the NDC in combination with a diagnosis code may require hospitals to ''make substantial reprogramming to their systems.'' Because of the possibility that hospitals may need to make changes,

the commenter stated that they believed that other options would be preferable and that an ICD–9–CM code is the ''best option.''

Response: With regard to the non-ICD–9–CM options for identifying this technology and new technologies for new technology add-on payments, we appreciate the commenters' suggestions. The commenters first discussed a value code or condition code option for identifying new technologies. We agree that currently value code 77 is used to identify claims for new technology add-on payments. Commenters suggested that CMS could request a condition code from the NUBC to be used in conjunction with this value code to identify this new technology. While we appreciate the commenters' suggestion, we believe that this unnecessarily subjects eligibility for new technology add-on payments to a non-CMS claims identifier field. Furthermore, we note that even on an expedited basis, it is not likely that the NUBC process would necessarily result in the timely creation of a condition code to identify this technology. Therefore, we disagree with the commenters that this is a feasible option for coding and identifying technologies for the purposes of new technology add-on payments. Commenters then discussed two ways to use the NDC to identify this technology. We agree that NDCs can be used to identify drugs and that, in the instance where no inpatient procedures are associated with a drug, the NDC could be used to identify an oral drug for new technology add-on payments. While commenters stated that they believed this may require hospitals to change their ''billing practices'' or ''make substantial reprogramming to their systems,'' we believe that these changes, insofar as they might be needed, would not represent a large burden for hospitals. We note that currently the NDC code is used on outpatient claims for the ESRD–PPS to identify oral equivalent ESRD drugs. We further note that the hospital would be required to report the NDC code for the purposes of new technology add-on payments so that it could receive a new technology add-on payment which, by definition, is an increase relative to the payment they would have received in the absence of such an add-on payment. Specifically, the commenter discussed using the NDC in Box 43 in conjunction with the diagnosis code 008.45 (Intestinal infection due to Clostridium difficile) or using the NDC as product information in Box 80. We agree with the applicant and the other commenters that it is important to identify cases for new technology add-on payments using the diagnosis code 008.45. Because the NDC can specifically identify this technology, and other technologies that are oral drugs where no inpatient procedure is associated, we believe it can be used to identify these technologies for purposes of new technology add-on payments. We continue to believe our current policy to recognize new technologies associated with inpatient procedures through ICD–9–CM coding is appropriate and, in response to public comments we received, are expanding our policy prospectively for discharges occurring on or after October 1, 2012, to recognize oral medications where no inpatient procedure can be associated through the coding of NDCs. In the case of this application, we agree with the commenter that the NDC code of 52015–0080–01 can be used in conjunction with diagnosis code 008.45 to identify the use of this technology, and establish that the use of both codes will identify this technology for the purposes of new technology add-on payments. We discuss our broader policy change to allow NDCs as an alternative code set to identify oral drugs where no inpatient procedure is associated in response to other comments.

With regard to the cost criterion, Optimer researched the FY 2010 MedPAR file for cases that would be eligible for treatment with Fidaxomicin to determine if it would qualify for the cost criterion for new technology add-on payments. Based on its analysis, the applicant identified cases in which a patient had been diagnosed with CDAD by searching the MedPAR file for claims that included ICD–9–CM diagnosis code 008.45 (Intestinal infection due to Clostridium difficile) as a principal diagnosis or secondary diagnosis. Optimer provided three examples of how the results of the analyses of different MS–DRGs demonstrate that it meets the cost criterion.

Under the first analysis, the applicant researched the FY 2010 MedPAR file for cases that included ICD–9–CM diagnosis code 008.45 as a principal or secondary diagnosis across all MS–DRGs. The applicant found 162,310 cases within 536 MS–DRGs, and determined a case-weighted average standardized charge per case (excluding charges for the cost of Fidaxomicin) of $50,136. Using a factor of 6.5 percent to inflate the charges to 2012 rates based on the Medical Consumer Price Index (CPI), the applicant determined a case weighted standardized charge per case that equals $53,394. The applicant then added the charges related to the technology to the inflated charges. Finally, the applicant determined a final case-weighted average standardized charge per case of $58,994, which exceeds the case-weighted threshold of $43,673. Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this first analysis, the applicant maintains that Fidaxomicin meets the cost criterion for new technology add-on payments.

Under the second analysis, the applicant researched the FY 2010 MedPAR file for cases that included ICD–9–CM diagnosis code 008.45 only as a principal diagnosis, which mapped to MS–DRGs 371 (Major Gastrointestinal Disorders and Peritoneal Infections with MCC), 372 (Major Gastrointestinal Disorders and Peritoneal Infections with CC), and 373 (Major Gastrointestinal Disorders and Peritoneal Infections without CC/MCC). The applicant found 55,410 cases, and determined a case-weighted average standardized charge per case (excluding charges for the cost of Fidaxomicin) of $28,007. Using a factor of 6.5 percent to inflate the charges to 2012 rates based on the Medical CPI, the applicant determined a case-weighted standardized charge per case that equals $29,828. The applicant then added the charges related to the drug to the inflated charges. The applicant then determined a final case-weighted average standardized charge per case of $35,428, which exceeds the case-weighted threshold of $34,730. Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this second analysis, the applicant maintains that Fidaxomicin meets the cost criterion for new technology add-on payments.

Under the third analysis, the applicant again researched the FY 2010 MedPAR file for cases that included ICD–9–CM diagnosis code 008.45 as a principal or secondary diagnosis across all MS–DRGs. The applicant then narrowed the results of the analysis to include only the top 37 MS–DRGs (in volume of cases), which accounted for 75 percent of all cases. The applicant's methodology resulted in 121,748 cases, and the applicant determined a case-weighted average standardized charge per case (excluding charges for the cost of Fidaxomicin) of $45,523. Using a factor of 6.5 percent to inflate the charges to 2012 rates based on the Medical CPI, the applicant determined a case-weighted standardized charge per case that equals $48,482. The applicant then added the charges related to the drug to the inflated charges. The applicant then determined a final case-

weighted average standardized charge per case of $54,082, which exceeds the case-weighted threshold of $42,452. Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this third analysis, the applicant maintains that Fidaxomicin meets the cost criterion for new technology add-on payments.

In the three analyses discussed above, the applicant submitted data related to the estimated cost and charge of the drug (using a charge markup). However, the applicant has not released the cost of the technology, asserting that it is proprietary information. The applicant converted the cost of the technology to a charge using a charge markup (a factor of 6.5 percent based on the Medical CPI) that represented a 10-day dosage.

In the proposed rule, we expressed concern that these analyses do not take into account situations in which patients would be prescribed Fidaxomicin later in the duration of their inpatient stay, and may finish the course of Fidaxomicin sometime after being discharged from the hospital. In addition, as discussed above, if Fidaxomicin is prescribed and self-administered during the 3-day period prior to admission to an IPPS hospital for a related encounter, we do not believe that this service is payable under the OPPS, and we do not believe that charges associated with it can be included on the inpatient claim submitted to Medicare because of the 3-day payment window policy. Therefore, in the proposed rule, we noted that it may not be appropriate to include in the applicant's calculations the full charges related to Fidaxomicin and the corresponding proprietary charges for the 10-day dose. In addition, in the proposed rule, we stated that we believed that it is necessary for the applicant to adjust its estimates to remove from the MedPAR file's claims for the charges that describe other types of treatment options such as Vancomycin, since use of these treatments would preclude use of Fidaxomicin. Furthermore, to identify the cases that may be eligible for the technology's use, the applicant researched and analyzed claims that included ICD–9–CM diagnosis code 008.45 as the principal diagnosis or as the principal or secondary diagnosis. We are concerned that this baseline for eligible cases may not represent the appropriate universe of cases, such as if all MS–DRGs were considered or if a subset of MS–DRGs were considered.

We invited public comment on whether or not Fidaxomicin meets the cost criterion. In addition, we invited public comment on the methodologies used by the applicant in its analyses, in particular the assumptions made about the dosage in developing the cost analysis. We were also interested in comments about the applicant's selection of claims with an ICD–9–CM diagnosis code 008.45 as the principal diagnosis or secondary diagnosis, and whether those cases accurately represented the Medicare population that may benefit from the technology's use.

Comment: The applicant submitted public comments responding to our concerns from the proposed rule. Our first concern was that these analyses did not take into account situations in which patients would be prescribed Fidaxomicin later in the duration of their inpatient stay and may finish the course of Fidaxomicin sometime after being discharged from the hospital. The applicant responded by providing a sample of claims of patients that received DIFICID ™ during their inpatient stay to determine the amount of days that DIFICID ™ is used within the inpatient setting. The applicant collected 116 inpatient stays across 26 unique MS–DRGs for patients who received DIFICID ™ during their stay of which, 71 of the claims were Medicare fee-for-services (FFS) cases which mapped to 22 unique MS–DRGs. Regarding these data (from all 116 cases) the applicant noted the following: the average length of stay for all DIFICID ™ (Fidaxomicin) cases is 13.9 days; on average, patients started DIFICID ™ (Fidaxomicin) on day 6.7 of their stay; and on average, patients received DIFICID ™ for 6.2 days of their stay. Using the subset of 71 Medicare claims also demonstrated that patients received DIFICID ™ on average of 6.2 days of their stay.

Using the 116 cases from the sample, the applicant computed a case-weighted average standardized charge per case of $92,684, which exceeds the case-weighted threshold of $45,388. The applicant also conducted a similar analysis using the Medicare subset of 71 Medicare cases. The applicant computed a case-weighted average standardized charge per case of $100,146, which exceeds the case-weighted threshold of $44,980. Because the case-weighted average standardized charge per case for both scenarios exceeds the case-weighted threshold amount (in both scenarios), the applicant maintains that Fidaxomicin meets the cost criterion for new technology add-on payments.

Our second concern was with regard to the 3-day payment window. If Fidaxomicin is prescribed and self-administered during the 3-day period prior to admission to an IPPS hospital for a related encounter, as we noted in the proposed rule, we do not believe that this service is payable under the OPPS, and we do not believe that charges associated with it can be included on the inpatient claim submitted to Medicare because of the 3-day payment window policy. Therefore, it may not be appropriate to include in the applicant's calculations the full charges related to Fidaxomicin and the corresponding proprietary charges for the 10-day dose. The applicant noted that all cases from the sample data show that treatment was initiated well after admission to the inpatient setting. Even for those patients who presented at admission with a clostridium difficile infection (CDI) diagnosis, DIFICID ™ (Fidaxomicin) began an average of 4.6 days after the patient was admitted. The applicant believed that these data address CMS' concern over the potential for outpatient administration of DIFICID ™ (Fidaxomicin) prior to inpatient admission. The applicant asserted that to date, utilization patterns of DIFICID ™ (Fidaxomicin) show that the drug is used primarily in the inpatient setting and that outpatient use prior to admission is very limited.

Our third concern was that the applicant's analyses may not represent the appropriate universe of cases, such as if all MS–DRGs were considered or if a subset of MS–DRGs were considered. The applicant reiterated that it submitted three different types of MedPAR analysis, one of which captured all cases where C. Difficile infection (CDI) occurred. The applicant added that the first MedPAR analysis contained no restrictions on its search for cases of CDI and as such should represent the complete universe of patients who may be eligible for DIFICID ™. The applicant further stated that its data sample of 116 inpatient claims contains the actual MS–DRGs and standardized charges of patients who received DIFICID ™ which meets the cost criteria.

The applicant noted that the sample data (of 116 claims) does not represent the full universe of eligible DIFICID ™ (Fidaxomicin) patients for the following reasons: First, because DIFICID ™ was new, the applicant asserted that hospitals may not have been aware of the full benefit of the drug. Second, the applicant asserted that hospitals may have believed they were not adequately compensated for the cost of DIFICID ™ within the existing MS–DRG payment and, therefore, may not have considered DIFICID ™ for treatment except in cases where the patient's costs were

significantly higher than average and additional outlier payments were anticipated. The applicant concluded that it believed that its original analysis of the FY 2010 MedPAR data with all patients diagnosed with CDI during their inpatient stay represents the full universe of potential DIFICID ™ cases, and is the most appropriate case scenario for purposes of calculating DIFICID ™'s (Fidaxomicin's) qualifications for the new technology add-on payment cost criterion.

We were also concerned that it is necessary for the applicant to adjust its estimates to remove from the MedPAR file's claims the charges that describe other types of treatment options such as Vancomycin because use of these treatments would preclude use of Fidaxomicin. The applicant replied in its comment that it performed a cost criterion estimate with DIFICID ™ removed from the inflation-adjusted weighted average standardized charge. The applicant explored additional data analyses to separate Vancomycin charges from the total MedPAR charges. However, the applicant asserted that no approach was viable due to (1) Lack of distinct coding to identify inpatient cases in which Vancomycin was administered, (2) lack of data on Vancomycin dosing per case, and (3) lack of data on the appropriate hospital mark-up applied to Vancomycin costs. Therefore, the applicant stated that it believed, in the absence of data to estimate Vancomycin charges included in the MedPAR CDI cases, one methodology to approximate this was by, removing the inflated adjusted charges for DIFICID ™ from the case-weighted average standardized charge per case of the first scenario. The applicant also noted that, although it determined an average use of DIFICID ™ for 6.2 days within the inpatient setting based on the sample of 116 claims, it recommended that CMS consider 6.5 days of inpatient administration of DIFICID ™. The applicant justified this increase based on its belief that hospitals and physicians will use it more. In particular, the applicant believed that the increased adoption of DIFICID ™ would lead to earlier prescription of DIFICID ™ by physicians for primary CDAD treatment in the inpatient setting as opposed to a secondary treatment. Using this methodology (of removing inflated adjusted charges for DIFICID ™ and assuming utilization of DIFICID ™ for 6.5 days within the inpatient setting), the applicant revised its calculation for the first analysis (which included all cases of C. Diff) and determined a case-weighted average standardized charge per case of $55,214, which exceeds the case-weighted threshold of $43,673. Because the case-weighted average standardized charge per case exceeds the case-weighted threshold amount, the applicant maintains that Fidaxomicin meets the cost criterion for new technology add-on payments.

Response: We appreciate the applicant's response to our concerns and believe that the sample of claims the applicant submitted substantiates the average use of DIFICID ™ within the inpatient setting. We agree with the applicant that the appropriate universe of cases is the first MedPAR analysis which contained no restrictions on its search for cases of CDI and as such should represent the complete universe of patients who may be eligible for DIFICID ™. However, at this time we believe it is appropriate to use an estimate of 6.2 days of inpatient administration of DIFICID ™ from the sample of claims rather than the 6.5 days that the applicant recommended. The estimate of 6.2 days is based on actual data while the extra 0.3 days (for a total of 6.5 days) is based on projected assumptions by the applicant. Therefore, we are revising the applicant's analysis described above of the first MedPAR analysis by substituting 6.2 days instead of 6.5 days for the administration of DIFICID ™ within the inpatient setting. We also appreciate the applicant's discussion of the difficulties associated in the removing of charges associated with Vancomycin, which represents one potential treatment option this technology could replace. We do not disagree with the applicant's suggestion to remove inflated adjusted charges for DIFICID ™ as an alternative. Using this methodology (of removing inflated adjusted charges for DIFICID ™ and assuming utilization of DIFICID ™ for 6.2 days within the inpatient setting), we determined a case weighted average standardized charge per case of $55,130, which still exceeds the case-weighted threshold of $43,673. Because the case-weighted average standardized charge per case exceeds the case-weighted threshold amount, we believe the applicant has met the cost criterion.

With regard to the substantial clinical improvement criterion, in the proposed rule, we stated that the applicant maintained that Fidaxomicin represents a substantial clinical improvement to the treatment options currently available. According to the applicant, Fidaxomicin represents the first major clinical advancement in the treatment options available to address CDAD in more than 25 years, and it is one of only two agents indicated by the FDA to treat this condition. The applicant noted that reports from its clinical trials show that a higher proportion of patients achieve positive clinical response to treatment with Fidaxomicin as opposed to treatment with Vancomycin. The applicant reported that these patients did not experience recurrences of associated symptoms for at least 25 days after the end of treatment. The applicant asserted that Fidaxomicin has longer acting antimicrobial activity and inhibits spore formation in *C. difficile* in vitro. The applicant stated that *C. difficile* cells produce spores when exposed to air; therefore, transmission of infection occurs even when the cells themselves are killed.

The applicant reported on two randomized, double-blinded trials.[28] [29] A non-inferiority design was utilized to demonstrate the efficacy of administering Fidaxomicin (200 mg twice daily for 10 days) compared to administering Vancomycin (125 mg four times daily for 10 days) to adult patients diagnosed with CDAD. The demographic profile and baseline CDAD characteristics of the subjects enrolled in both trials were similar. These patients had a median age of 64 years, were mainly white (90 percent), female (58 percent), and inpatients (63 percent).

The applicant reported that the primary efficacy endpoint (for both trials) was the clinical response rate at the end of therapy, based upon improvement in diarrhea or other symptoms such that, in the investigator's judgment, further CDAD treatment was not needed. An additional efficacy endpoint was a sustained clinical response 25 days after the end of treatment. Sustained response was only evaluated for patients who were clinical successes at the end of treatment. Sustained response was defined as clinical response at the end of treatment, and survival without proven or suspected reoccurrence of a diagnosis of CDAD beyond 25 days after

[28] Pivotal trial 101.1.C.003: Thomas J. Louie, M.D., Mark A. Miller, M.D., Kathleen M. Mullane, D.O., Karl Weiss, M.D., Arnold Lentnek, M.D., Yoav Golan, M.D., Sherwood Gorbach, M.D., Pamela Sears, Ph.D., and Youe-Kong Shue, Ph.D. for the OPT–80–003 Clinical Study Group. *Fidaxomicin versus Vancomycin for Clostridium difficile Infection. N Engl J Med* 2011; 364:422–431February 3, 2011. *Attached reference: 12_LouieNEJM2011.pdf*

[29] Crook D, Weiss K, Comely O, Miller M, Esposito R, Gorbach 8. Randomized Clinical Trial (RCT) in *Clostridium difficile* Infection (CDI) Confirms Equivalent Cure Rate and Lower Recurrence Rate of Fidaxomicin (FDX) versus Vancomycin (VCN). 20th European Congress of Clinical Microbiology and Infectious Diseases; April 10–13, 2010; Vienna, Austria.

the end of treatment. The results for clinical response at the end of treatment in both trials, which the applicant submitted in the table below, indicate that the effects of administering Fidaxomicin is noninferior to the effects of administering Vancomycin based on the 95 percent confidence interval (CI) lower limit being greater than the non-inferiority margin of −10 percent.

The applicant stated that the results for sustained clinical response at the end of the follow-up period, also shown in the table below, indicate that the effects of administering Fidaxomicin is superior to the effects of administering Vancomycin on this endpoint. Because clinical success at the end of treatment and mortality rates were similar across treatment arms (approximately 6 percent in each group), the applicant determined that the differences in sustained clinical response were due to lower rates of proven or suspected reoccurrence of diagnoses of CDAD in patients during the follow-up period. In addition, the applicant asserts that the effects of administering Fidaxomicin has minimal impact on normal gut flora due to its limited specificity, and could be associated with a lower risk of acquisition of VRE if used as a treatment option instead of administering Vancomycin.

CLINICAL RESPONSE RATES AT END-OF-THERAPY AND SUSTAINED RESPONSE AT 25 DAYS POST-THERAPY

	Clinical response at end of treatment			Sustained response at follow-up		
	FIDAXOMICIN % (N)	Vancomycin % (N)	Difference (95% CI)	FIDAXOMICIN % (N)	Vancomycin % (N)	Difference (95% CI)
Trial 1	88% (N=289)	86% (N=307)	2.6% (−2.9%, 8.0%)	70% (N=289)	57% (N=307)	12.7% (4.4%, 20.9%)
Trial 2	88% (N=253)	87% (N=256)	1.0% (−4.8%, 6.8%)	72% (N=253)	57% (N=256)	14.6% (5.8%, 23.3%)

Based on the analysis described above, the applicant asserts Fidaxomicin meets the substantial clinical improvement criterion as a treatment option with the potential to decrease hospitalizations and physician office visits, as well as to improve the quality of life for patients who have been diagnosed with CDAD.

We expressed concern in the proposed rule that this technology may not offer a substantial clinical improvement compared to other effective treatment alternatives already available in the treatment of patients who have been diagnosed with CDAD. In addition, although the applicant maintains that there is no evidence of significant clinical resistance developing with the use of this drug, in the proposed rule, we expressed concern about the long-term possibility that patients may develop resistance to this drug since the applicant provided no data to substantiate its claim. We invited public comment on whether or not Fidaxomicin meets the substantial clinical improvement criterion based on the analysis and results presented by the applicant.

Comment: Regarding our concern that the technology may not offer a substantial clinical improvement, the applicant noted that ''DIFICID ™ is the only agent proven to provide a superior sustained clinical response versus Vancomycin—meaning a higher proportion of patients achieve clinical response and remain free of potentially devastating recurrences through 25 days after the end of treatment * * * Recurrences are a unique challenge in the management of CDAD in large part due to the ability of C. difficile to form spores.'' The applicant also noted that its technology prevents sporulation while other existing medications do not. In addition, the applicant discussed oral administration as being ''advantageous in treating CDAD''.

Regarding our concern about the long-term possibility that patients may develop resistance to this drug, the applicant responded with several pieces of information. First, the applicant cited advice from ''antimicrobial stewardship programs, such as those recommended by the CDC 'Get Smart' program (*http://www.cdc.gov/getsmart/*) and SHEA/IDSA policy (*http://www.idsociety.org/StewardshipPolicy/*),'' which the applicant noted, ''advise utilizing the most narrow spectrum agent to treat an infection to help decrease the likelihood of resistant development.'' The applicant believed Fidaxomicin ''uniquely fits in this profile as, unlike broad spectrum antibacterial drugs, it is targeted specifically against C. difficile with minimal impact on other bacteria, including the normal flora found in the gastrointestinal tract.'' Second, the applicant further stated that, ''The potential for resistance to antibacterial agents increases when bacteria are exposed to suboptimal drug concentrations at the site of infection. However, DIFICID ™ has minimal absorption from the intestines and fecal concentrations that are >1000 times that required to kill C. difficile.'' Third, the applicant also noted that, ''In laboratory testing, DIFICID ™ exhibited no crossresistance with other classes of antibacterial drugs.'' and ''The low potential for patients to develop resistance to DIFICID ™ was also demonstrated in two pivotal phase 3 clinical trials.'' Fourth, the applicant noted that, ''resistance to treating agents is not an issue with this disease, as it has not been reported with the other two commonly used agents, Metronidazole and Vancomycin.'' Further, the applicant stated that, ''Despite Metronidazole and Vancomycin being utilized to treat C. difficile infection (CDI) and C. difficile-associated diarrhea (CDAD) for over 25 years, resistance has not been reported for either agent.'' Fifth, the applicant refers to the SHEA/IDSA guidelines noting that these ''specifically state that considering the high fecal concentrations achieved with oral Vancomycin, emergence of resistance is likely not a concern.'' The applicant then concluded that, ''Fidaxomicin is similar in this regard given its extremely high fecal concentrations.'' and that, ''This indicates that the potential for resistance is extremely low when treating CDAD.''

Response: We appreciate the applicant's response to our concerns from the proposed rule. We considered this information in our decision below on whether DIFICID™ meets the substantial clinical improvement criterion.

Comment: Several public commenters stated that Fidaxomicin meets the substantial clinical improvement criterion. One commenter noted, ''In the past year, DIFICID™ clinically has been invaluable in treating some of these more difficult cases. The drug has been well tolerated, and we have seen fewer patients with recurrence after therapy with DIFICID™ * * * DIFICID™ is revolutionary because it offers a significant advancement that we have not seen in previous CDI therapies: targeted therapy and reduced

recurrences.'' Another commenter expressed support for the literature, research, and data pertaining to the use of DIFICID™ on its patients with C. difficile infections. The commenter added that it has had the opportunity to use DIFICID™ on a few occasions thus far and has had very good outcomes, especially regarding the rapid improvement in symptoms.

Response: We appreciate the commenters' input. After reviewing the totality of the evidence and the public comments we received, we agree with the commenters that DIFICID™ (Fidaxomicin) represents a substantial clinical improvement over existing technologies. We believe that DIFICID™ represents a treatment option with the potential to decrease hospitalizations and physician office visits, and reduce the recurrence of CDAD, as well as to improve the quality of life for patients who have been diagnosed with CDAD.

Therefore, DIFICID™ (Fidaxomicin) has met all three criteria for the new technology add-on payment policy and is eligible for new technology add-on payments in FY 2013. Cases of DIFICID™ (Fidaxomicin) will be identified with ICD–9–CM diagnosis code 008.45 in combination with NDC code 52015–0080–01. Providers must code the NDC on the 837i Health Care Claim Institutional form (in combination with ICD–9–CM diagnosis code 008.45) in order to receive the new technology add-on payment. Further guidance will be issued after this final rule with how to code the NDC code on the 837i form. According to the applicant, the cost of DIFICID™ (Fidaxomicin) is $2,800 for a 10-day dosage. The average cost per day for DIFICID™ is $280 ($2,800/10). As discussed above, cases of DIFICID™ (Fidaxomicin) within the inpatient setting typically incur an average dosage of 6.2 days, which results in an average cost per case for DIFICID™ of $1,736 ($280 × 6.2). We note, as stated above in our discussion of the cost criteria, we are not using an average dosage of 6.5 days for DIFICID™ because we prefer to rely on statistical data from the sample of 116 claims that received DIFICID™ rather than information based on multiple assumptions. However, the applicant is welcome to submit additional data for FY 2014 that demonstrate changes to the average dosage of 6.2 days (within the inpatient setting). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum new technology add-on payment for FY 2013 for DIFICID™ (Fidaxomicin) is $868.

c. Zilver® PTX® Drug Eluting Stent

Cook® Medical submitted an application for new technology add-on payments for the Zilver® PTX® Drug Eluting Stent (Zilver® PTX®) for FY 2013. In the proposed rule, we summarized this application. The Zilver® PTX® is intended for use in the treatment of peripheral artery disease (PAD) of the above–the-knee femoropopliteal arteries (superficial femoral arteries). According to the applicant, the stent is percutaneously inserted into the artery(s), usually by accessing the common femoral artery in the groin. The applicant states that an introducer catheter is inserted over the wire guide and into the target vessel where the lesion will first be treated with an angioplasty balloon to prepare the vessel for stenting. The applicant indicates that the stent is self-expanding, made of nitinol (nickel titanium), and is coated with the drug Paclitaxel. Paclitaxel is a drug approved for use as an anticancer agent and for use with coronary stents to reduce the risk of renarrowing of the coronary arteries after stenting procedures.

The applicant maintains that there are currently no FDA approved drug-eluting stents used for superficial femoral arteries. At the time of the proposed rule, the applicant expected to receive FDA approval for the stent in the second quarter of 2012. However, at the time of this final rule, the technology has still not received FDA approval. The technology is currently described by ICD–9–CM procedure code 00.60 (Insertion of drug-eluting stent(s) of the superficial femoral artery). We invited public comment regarding how the Zilver® PTX® meets the newness criterion.

Comment: The applicant stated that it received a letter from the FDA indicating that the FDA's Center for Devices and Radiological Health considers the device to be ''approvable.'' The applicant added that it expects formal FDA approval before September 2012. With FDA approval imminent and expected before the implementation date of October 1, 2012, the applicant requested that the ''approvable'' letter from the FDA's Center for Devices and Radiological Health be allowed to serve as a proxy for FDA approval.

Response: In accordance with § 412.87(c) of the regulations, we require that all applicants for new technology add-on payments must have FDA approval or clearance for their new medical service or technology by July 1 of each year prior to the beginning of the fiscal year that the application is being considered. Because the Zilver® PTX® is not approved by the FDA as of such date, we cannot consider this application for new technology add-on payments for FY 2013. Therefore, the Zilver® PTX® does not meet the newness criteria.

With regard to the cost criterion, the applicant believes that cases of superficial femoral arteries typically map to MS–DRGs 252 (Other Vascular Procedures with MCC), 253 (Other Vascular Procedures with CC), and 254 (Other Vascular Procedures without CC/MCC). The applicant searched the FY 2009 MedPAR file for cases with a procedure code of 39.90 (Insertion of non-drug-eluting peripheral vessel stents) in combination with a diagnosis code of 440.20 (Atherosclerosis of the extremities, unspecified), 440.21 (Atherosclerosis of the extremities, with intermittent claudication), 440.22 (Atherosclerosis of the extremities with rest pain), 440.23 (Atherosclerosis of the extremities with ulceration), and 440.24 (Atherosclerosis of the extremities with gangrene). The applicant found 7,144 cases (or 24.4 percent of all cases) in MS–DRG 252; 9,146 cases (or 31.2 percent of all cases) in MS–DRG 253; and 13,012 cases (or 44.4 percent of all cases) in MS–DRG 254. The average charge per case was $78,765 for MS–DRG 252, $63,758 for MS–DRG 253, and $47,586 for MS–DRG 254, equating to a case-weighted average charge per case of $60,236.

The case-weighted average charge per case above does not include charges related to the Zilver® PTX®; therefore, it is first necessary to remove the amount of charges related to the nondrug-eluting peripheral vessel stents and replace them with charges related to the Zilver® PTX®. The applicant used two methodologies to remove the charges of the nondrug-eluting peripheral vessel stents and replace them with charges related to the Zilver® PTX®. Although the applicant submitted data related to the estimated cost of the nondrug-eluting peripheral vessel stents and the Zilver® PTX®, the applicant noted that the cost of these devices was proprietary information.

Under the first methodology, the applicant determined the amount of stents per case based on the following ICD–9–CM codes on each claim: 00.45 (Insertion of one vascular stent), 00.46 (Insertion of two vascular stents), 00.47 (Insertion of three vascular stents) and 00.48 (Insertion of four or more vascular stents). If a claim had a code of 00.48, the applicant assumed a maximum of four stents per case. The applicant multiplied the amount of stents used

per case by the average market price for nondrug-eluting peripheral vessel stents and then converted the cost of the stents used per case to a charge by dividing the results by the national average CCR of 0.329 for supplies and equipment (76 FR 51571). The applicant removed the appropriate amount of charges per case and then standardized the charges per case. Because the applicant used FY 2009 MedPAR data, it was necessary to inflate the charges from FY 2009 to FY 2012. Using data from the U.S. Department of Labor Bureau of Labor Statistics Consumer Price Index, the applicant inflated the average standardized charge per case with an inflation factor of 6 percent. To determine the amount of Zilver® PTX® stents per case, instead of using the amount of stents used per case based on the ICD–9–CM codes above, the applicant used an average of 1.9 stents per case based on the Zilver® PTX® Global Registry Clinical Study.[30] The applicant believed that it is appropriate to use data from the clinical study (to determine the average amount of stents used per case) rather than the actual data from the claims because the length of a nondrug-eluting peripheral vessel stent typically ranges from 80 mm to 120 mm, while the length of the Zilver® PTX® is 80 mm (which could cause a variance in the actual amount of stents used per case when using the Zilver® PTX®). Similar to above, the applicant multiplied the average of 1.9 stents used per case by the future market price for the Zilver® PTX® and then converted the cost of the stents used per claim to a charge by dividing the results by the national average CCR of 0.329 for supplies and equipment. The applicant then added the amount of charges related to the Zilver® PTX® to the inflated average standardized charge per case and determined a final case-weighted average standardized charge per case of $60,014. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 252, 253, and 254 was $52,293 (all calculations above were performed using unrounded numbers). Because the case-weighted average standardized charge per case for the applicable MS–DRGs exceed the case-weighted threshold amount, the applicant maintains that the Zilver® PTX® meets the cost criterion.

The second methodology was similar to the first methodology described above, but the applicant used hospital-specific CCRs from the FY 2009 IPPS impact file to convert the cost of the nondrug-eluting peripheral vessel stents and the cost of the Zilver® PTX® to charges. In summary, the applicant determined the amount of nondrug-eluting peripheral vessel stents used per case based on the ICD–9–CM codes on each claim (as discussed above). The applicant multiplied the amount of stents used per case by the average market price for nondrug-eluting peripheral vessel stents and then converted the cost of the stents used per case to a charge by dividing by the hospital-specific CCR (from the FY 2009 IPPS impact file). The applicant removed the appropriate amount of charges per case and then standardized the charges per case. Similar to the step described above, because the applicant used FY 2009 MedPAR data, it was necessary to inflate the charges from FY 2009 to FY 2012. Using data from the Bureau of Labor Statistics Consumer Price Index, the applicant inflated the average standardized charge per case with an inflation factor of 6 percent. To determine the amount of Zilver® PTX® stents per case, instead of using the amount of stents used per case based on the ICD–9–CM codes above, the applicant used an average of 1.9 stents per case based on the Zilver® PTX® Global Registry Clinical Study (because of the reason stated in the first methodology). The applicant then multiplied the average of 1.9 stents used per case by the future market price for the Zilver® PTX® and then converted the cost of the stents used per claim to a charge by dividing the results by the hospital-specific CCR (from the FY 2009 IPPS impact file). The applicant then added the amount of charges related to the Zilver® PTX® to the inflated average standardized charge per case and determined a final case-weighted average standardized charge per case of $60,339. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 252, 253, and 254 was $52,293 (all calculations above were performed using unrounded numbers). Because the case-weighted average standardized charge per case for the applicable MS–DRGs exceed the case-weighted threshold amount, the applicant maintains that the Zilver® PTX® would meet the cost criterion.

We invited public comment on whether or not the Zilver® PTX® meets the cost criterion. Additionally, we invited public comment on the methodologies used by the applicant in its analysis, including its assumptions regarding the types of cases in which this technology could potentially be used, the number of stents required for each case, and the CCRs used in the cost calculation.

Comment: We received several public comments regarding whether the Zilver® PTX® meets the cost criterion.

Response: Because the Zilver® PTX® has not yet received FDA approval, and therefore, does not meet the newness criterion, as discussed above, it is not eligible for the IPPS new technology add-on payments for FY 2013. Therefore, we are not summarizing the details of these comments nor responding to them in this final rule.

In an effort to demonstrate that the technology meets the substantial clinical improvement criterion, the applicant shared several findings from the clinical trial data. The applicant stated that current treatment options for patients who have been diagnosed with PAD includes angioplasty, bare metal stenting, bypass graft and endarterectomy. The applicant asserts that the Zilver® PTX® meets the substantial clinical improvement because it decreases the recurrence of symptoms arising from restenotic SFA lesions, the rate of subsequent diagnostic or therapeutic interventions required to address restenotic lesions, and the number of future hospitalizations.

The applicant cited a 480-patient, multicenter, multinational randomized controlled trial that compared the Zilver® PTX® to balloon angioplasty; an additional component of the study allowed a direct comparison of the Zilver® PTX® to a bare (uncoated) metal Zilver® stent. The primary safety endpoint of the randomized controlled study was ''Event-Free Survival'' (EFS), defined as ''freedom from the major adverse events of death, target lesion revascularization, target limb ischemia requiring surgical intervention or surgical repair of the target vessel, and freedom of worsening systems as described by the Rutherford classification by 2 classes or to class 5 or 6.'' The primary effectiveness endpoint was primary patency (defined as a less than 50 percent re-narrowing).

The applicant noted that the Zilver® PTX® had an EFS of 90.4 percent compared to balloon angioplasty, which had an EFS of 83.9 percent, demonstrating that the Zilver® PTX® is as safe or safer than balloon angioplasty. In addition, the applicant noted that the Zilver® PTX® demonstrated a 50-percent reduction in restenosis rates compared to angioplasty and a 20-

[30] Dake, M.D., Ansel, G.M., Jaff, M.R., Ohki, T., Saxon, R.R., Smouse, H.B., Zeller, T., Roubin, G.S., Burket, M.W., Khatib, Y., Snyder, S.A., Ragheb, A.O., White, J.K., Machan, L.S.(2011), Paclitaxel-eluting stents show superiority to balloon angioplasty and bare metal stents in femoropopliteal disease: twelve-month zilver PTX randomized study results. Circulation Cardiovascular Interventions, published online September 27, 2011, 495–504.

percent reduction compared to bare metal stents. The 12-month patency rate for the Zilver® PTX® was 83.1 percent, which compared favorably to the balloon angioplasty patency rate of 32.8 percent. In the provisional stenting arm of the study, which allowed a direct comparison of the Zilver® PTX® and a bare metal stent, the Zilver® PTX® primary patency exceeded the bare metal stent patency by nearly 20 percent (89.9 percent versus 73.0 percent [1]). The applicant stated that these differences are significant, as they result in a substantial clinical improvement compared to angioplasty and bare metal stenting, with patients being spared a recurrence of their leg pain and the need to be admitted to the hospital for repeat procedures on these treated lesions.

The applicant also cited a prospective, multicenter, multinational, 787-patient single arm study on the Zilver® PTX® that demonstrated similar safety and effectiveness results consistent with those from the pivotal randomized controlled study above. The applicant cited an EFS for the Zilver® PTX® of 89.0 percent and an 86.2 percent primary patency rate. The applicant stated that these results confirm the safety and effectiveness of the Zilver® PTX®, and compare favorably to current results for angioplasty and bare metal stenting. The applicant added that these results also demonstrate a 67 to 81 percent relative reduction in Target Lesion Revascularization (the need to retreat an already treated lesion that has restenosed, resulting in a recurrence of symptoms) rates compared to recently published results of contemporary bare metal stents.[31]

We invited public comment regarding whether the Zilver® PTX® meets the substantial clinical improvement criterion.

Comment: Several commenters commented on whether the Zilver® PTX® meets the substantial clinical improvement criterion.

Response: Because the Zilver® PTX® has not yet received FDA approval, and therefore, does not meet the newness criterion, as discussed above, it is not eligible for IPPS new technology add-on payments for FY 2013. Therefore, we are not summarizing the details of these public comments or responding to them in this final rule d. Zenith® Fenestrated Abdominal Aortic Aneurysm (AAA) Endovascular Graft.

Cook® Medical submitted an application for new technology add-on payments for the Zenith® Fenestrated Abdominal Aortic Aneurysm (AAA) Endovascular Graft (Zenith® F. Graft) for FY 2013. In the proposed rule, we summarized this application. The applicant stated that the current treatment for patients who have had an AAA is an endovascular graft. The applicant explained that the Zenith® F. Graft is an implantable device designed to treat patients who have an AAA and who are anatomically unsuitable for treatment with currently approved AAA endovascular grafts because of the length of the infrarenal aortic neck. The applicant noted that, currently, an AAA is treated through an open surgical repair or medical management for those patients not eligible for currently approved AAA endovascular grafts.

The applicant stated that the Zenith® F. Graft is custom-made for each patient. It is a modular system consisting of three components: a two-part main body graft and one iliac leg. The two-part main body of the graft consists of a proximal tubular graft and a distal bifurcated graft body. The proximal body graft contains precisely located holes (fenestrations) and/or cut-outs from the proximal margin (scallops) of the polyester graft material along with a bare proximal stent with barbs to provide fixation. The iliac leg component, which couples with the main bifurcated body, completes the basic fenestrated endograft.

With respect to newness, the applicant stated that FDA approval for the use of the Zenith® F. Graft was granted on April 4, 2012. The technology is described by ICD–9–CM procedure code 39.78 (Endovascular implantation of branching or fenestrated graft(s) in aorta), which became effective October 1, 2011. While procedure code 39.78 maps to MS–DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without MCC/CC, respectively), the applicant believes that MS–DRGs 237 and 238 (Major Cardiovascular Procedures with MCC and without MCC, respectively) would be a more appropriate assignment for procedure code 39.78. We note that in section III.G.3.b. of this preamble, we discuss our final policy which reassigns procedure code 39.78 from MS–DRG 252, 253, and 254 to MS–DRGs 237 and 238. We invited public comment regarding whether the Zenith® F. Graft meets the newness criterion for new technology add-on payment.

We did not receive any public comments regarding whether the Zenith® F. Graft meets the newness criterion. However, because the Zenith® F. Graft was approved by the FDA on April 4, 2012, we believe the Zenith® F. Graft meets the newness criterion as of that date.

With regard to the cost criterion, the applicant used clinical trial data and three separate analyses of FY 2010 MedPAR data to demonstrate that the Zenith® F. Graft meets the cost criteria. We note that in the proposed rule the applicant believed that it met the cost criteria since it demonstrated that the case weighted average charge per case exceeded the threshold for MS–DRGs 252–254 since at that time procedure code 39.78 was assigned to MS–DRG 252–254. However, as mentioned above, in this final rule we have reassigned procedure code 39.78 from MS–DRG 252–254 to MS–DRGs 237–238. Therefore, for this final rule, in order for the applicant to meet the cost criteria, it must demonstrate that the case weighted average standardized charge per case exceeds the thresholds for MS–DRGs 237–238.

The applicant submitted clinical trial data [32] which was based on 173 claims (all Medicare patients except one patient). The applicant found that, of the 173 cases, 35 cases (or 20.2 percent of all cases) mapped to MS–DRG 252, 86 cases (or 49.7 percent of all cases) mapped to MS–DRG 253, and 52 cases (or 30.1 percent of all cases) mapped to MS–DRG 254, equating to a case-weighted average charge per case of $87,733.

The applicant noted that the investigational devices (the bare metal renal stents that are used in the procedure and the Zenith® F. Graft) were sold to the trial sites at reduced prices. Therefore, the average charge per case cited above contains reduced charges for the investigational devices rather than commercial charges. As a result, the applicant believes it is necessary to remove the reduced charges for the investigational devices and replace them with commercial charges, in order to determine the cost of the investigational devices for each of the three analyses. Although the applicant submitted data related to the estimated cost of the investigational devices, the applicant noted that the cost of these devices was proprietary information.

To remove the reduced charges for the investigational devices, the applicant searched the clinical trial claims data

[31] Dake, M. D., Scheinert, D., Tepe, G., Tessarek, J., Fanelli, F., Bosiers, M., *et al.* (2011). Nitinol stents with polymer-free paclitaxel coating for lesions in the superficial femoral and popliteal arteries above the knee: Twelve-month safety and effectiveness results from the zilver PTX single-arm clinical study. *Journal of Endovascular Therapy, 18*(5), 613–623.

[32] Evaluation of the Safety and Effectiveness of the Zenith(R) Fenestrated AAA Endovascular Graft, Zenith Fenestrated AAA Endovascular Graft Pivotal Study, Clinicaltrials.gov: identifier NCT00875563 and a Physician Sponsored IDE.

and removed those charges with a revenue code of 0624 (investigational device exempt). Because the claims data for the clinical trial ranged from 2002 to 2010, it was necessary to inflate the charges. Using data from the U.S. Department of Labor Bureau of Labor Statistics (BLS) Consumer Price Index, the applicant applied an inflation factor to the claim charges ranging from 3 percent to 27 percent, depending on the year of the claim. After inflating the charges, the applicant then added the commercial charges of the investigational devices to the inflated charge per case. To determine the amount of commercial charges related to the investigational devices, the applicant divided the cost of the investigational devices by the hospital-specific CCR from the FY 2012 IPPS Final Rule Impact File. After adding the charges of the investigational devices to the inflated charges, the applicant then standardized the charges on each claim. As a result, the applicant determined a final case-weighted average standardized charge per case of $122,821. In the proposed rule, the applicant used the FY 2013 Table 10 thresholds for MS–DRGs 252, 253, and 254 and determined a case-weighted threshold of $53,869 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for MS–DRGs 252, 253, and 254 exceeds the case-weighted threshold amount, the applicant maintained that the Zenith® F. Graft met the cost criterion for new technology add-on payments. As noted above, for this final rule the applicant must demonstrate that it meets the cost criteria for MS–DRGs 237 and 238. The thresholds for MS–DRGs 237 and 238 are $101,728 and $69,591, respectively. If the applicant compared the final case-weighted average standardized charge per case of $122,821 (under MS–DRGs 252, 253, and 254) to the highest threshold for MS–DRGs 237 and 238 ($101,728), it would still exceed the threshold in excess of $20,000. Therefore, under this analysis the applicant would meet the cost criterion since the final case-weighted average standardized charge per case would exceed the threshold under MS–DRGs 237 and 238.

We note that, in addition to the analysis above, the applicant conducted a similar cost analysis using drug eluting renal stents instead of bare metal renal stents. The applicant noted that the price of drug eluting renal stents exceeds the price of bare metal renal stents by approximately $2,200 per stent. Therefore, the applicant asserted that if the price of drug eluting renal stents is more expensive than bare metal renal stents and the Zenith® F. Graft meets the cost criteria with bare metal renal stents, the Zenith® F. Graft also meets the cost criteria when the applicant uses drug eluting renal stents in its analysis.

As mentioned above, the applicant conducted three separate analyses using FY 2010 MedPAR data to identify cases eligible for the Zenith® F. Graft to demonstrate that it meets the cost criterion. Because procedure code 39.78 was effective October 1, 2011, the applicant noted that it was unable to conduct a MedPAR data analysis with claims that contained a procedure code of 39.78. Therefore, in order to identify cases eligible for the Zenith® F. Graft prior to October 1, 2011, the applicant searched the MedPAR file for the following three scenarios. The first analysis searched the FY 2010 MedPAR file for cases with procedure code 39.71 (Endovascular implantation of graft in abdominal aorta) in combination with a diagnosis code of 441.4 (Abdominal aneurysm without mention of rupture). Procedure code 39.71 maps to MS–DRGs 237 and 238. The applicant found 1,679 cases (or 9.1 percent of all cases) in MS–DRG 237 and 16,793 cases (or 90.9 percent of all cases) in MS–DRG 238. The average charge per case was $122,252 for MS–DRG 237 and $76,883 for MS–DRG 238, equating to a case-weighted average charge per case of $81,006.

The applicant noted that these MedPAR claims data included charges for the existing stent graft but did not include charges for the Zenith® F. Graft. Therefore, the applicant stated that it was first necessary to remove the amount of charges related to the existing stent graft and replace them with charges for the Zenith® F. Graft. Although the applicant submitted data related to the estimated cost of the existing stent graft and the Zenith® F. Graft, the applicant noted that the cost of these devices was proprietary information.

To determine the amount of charges for the existing stent graft, the applicant divided the costs for the existing stent graft by the national average CCR of 0.329 for supplies and equipment (76 FR 51571). The applicant removed the appropriate amount of charges per case from the average charge per case. Because the applicant used FY 2010 MedPAR data, it was necessary to inflate the charges from FY 2010 to FY 2012. Using data from the BLS' Consumer Price Index, the applicant inflated the case-weighted average standardized charge per case with an inflation factor of 4 percent. The applicant then determined the amount of charges for the Zenith® F. Graft by dividing the costs of the Zenith® F. Graft by the national average CCR of 0.329 for supplies. The applicant then added the amount of charges related to the Zenith® F. Graft to the inflated charges and then standardized the charges. The applicant determined a final case-weighted average standardized charge per case of $80,509. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 237 and 238 was $72,512 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount under this first analysis, the applicant maintains that the Zenith® F. Graft meets the cost criterion for new technology add-on payment.

For its second analysis, the applicant searched the FY 2010 MedPAR file for cases with procedure code 38.44 (Resection of vessel with replacement, aorta) in combination with a diagnosis code of 441.4. Similar to the first analysis, the applicant conducted this analysis using MS–DRGs 237 and 238 because procedure code 38.44 maps to MS–DRGs 237 and 238. The applicant found 1,310 cases (or 37.9 percent of all cases) in MS–DRG 237 and 2,145 cases (or 62.1 percent of all cases) in MS–DRG 238. The average charge per case was $110,708 for MS–DRG 237 and $64,095 for MS–DRG 238, equating to a case-weighted average charge per case of $81,769.

The next steps of the applicant's second analysis were similar to the steps in the first analysis. The applicant noted that the MedPAR claims data included charges for the vascular graft for open procedures but did not include charges for the Zenith® F. Graft. Therefore, the applicant indicated that it was first necessary to remove the amount of charges related to the vascular graft for open procedures and replace them with charges for the Zenith® F. Graft. Although the applicant submitted data related to the estimated cost of the vascular graft for open procedures and the Zenith® F. Graft, the applicant noted that the cost of these devices was proprietary information.

To determine the amount of charges for the vascular graft for open procedures, the applicant divided the costs for the vascular graft for open procedures by the national average CCR of 0.329 for supplies and equipment (76 FR 51571). The applicant removed the appropriate amount of charges per case

from the average charge per case. Similar to the first analysis, the applicant inflated the case-weighted average charge per case with an inflation factor of 4 percent (based on data from the BLS' Consumer Price Index). The applicant then determined the amount of charges for the Zenith® F. Graft by dividing the costs of the Zenith® F. Graft by the national average CCR of 0.329 for supplies. The applicant then added the amount of charges related to the Zenith® F. Graft to the inflated charges and then standardized the charges. The applicant determined a final case-weighted average standardized charge per case of $118,774. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 237 and 238 was $81,776 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this second analysis, the applicant maintains that the Zenith® F. Graft meets the cost criterion for new technology add-on payments. In the proposed rule, we noted that while the applicant removed charges for the vascular graft for open procedures, we were concerned that the applicant did not remove charges for other services such as extra operating room time and other possible charges that would be incurred during an open procedure but would possibly not be incurred during cases when the Zenith® F. Graft is implanted.

Comment: In response to our concerns, the applicant took the following steps to demonstrate that the Zenith® F. Graft meets the cost criterion under the second analysis. The applicant first determined the average hospital length of stay (LOS), ICU time and OR time for open AAA repairs versus fenestrated AAA repairs. The applicant researched several peer reviewed studies that contain data for OR time, LOS and ICU time for open procedures. Based on these studies, the applicant calculated a weighted average for each of these measures. The weighted average was a LOS of 9.53 days, 4.07 ICU days, and 261 minutes of OR time.

The applicant used clinical trial data to determine the average OR time, LOS, and ICU time for AAA fenestrated procedures. Based on Cook's clinical trial data,[33] the applicant determined an average LOS of 3.5 days and ICU time of 0.5 days for AAA fenestrated procedures. To determine the amount of OR minutes, the applicant used literature from eight studies including the Cook clinical trial data and determined a weighted average of 235 OR minutes. The applicant noted that the reported hospital LOS and ICU length of stay for fenestrated procedures from outside the United States is significantly longer than those experienced in the study in the United States. Because the applicant believed that the standard of care related to length of hospital stay and ICU stay from European experience are dissimilar to practices within the United States, it only used data from the Cook clinical trial rather than other clinical trial data (which included data from Europe) to determine the average for ICU days and LOS.

The applicant then calculated the percentage savings or rate of savings for the OR time, LOS and ICU time with the following formula: (open procedure minutes or days—fenestrated minutes or days)/open procedure minutes or days. This resulted in savings of 9.96 percent for OR minutes, 87.71 percent for ICU days, and 63.27 percent for LOS days. The applicant then applied the savings at a claim level by applying the rate of savings to the service charge categories from the MedPAR data (rate of savings * open device service charge category). Savings of 9.96 percent for OR time was applied to Service Category 12 (which contains OR charges for revenue centers 36X, 71X and 72X), savings of 87.71 percent for ICU days was applied to Accommodation Charge Category 4 (which includes total ICU charges), and savings of 63.27 percent for LOS was applied to Accommodation Charge Category 1 (which includes standard room charges). To determine the case-weighted average standardized charge per case, the applicant deducted the reduced charges (savings) from the case-weighted average charge per case ($81,769), which resulted in a revised case-weighted average charge per case of $66,206. The applicant then inflated the revised case-weighted average charge per case by 4 percent (based on data from the BLS' Consumer Price Index), which resulted in an inflated case weighted average charge per case of $68,854. Next, the applicant determined the amount of charges for the Zenith® F. Graft by dividing the costs of the Zenith® F. Graft by the national average CCR of 0.329 for supplies. The applicant then added the amount of charges related to the Zenith® F. Graft to the inflated charges and then standardized the charges. The applicant determined a final case-weighted average standardized charge per case of $106,731. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 237 and 238 was $81,776 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this revised second analysis, the applicant maintains that the Zenith®F. Graft Meets the Cost Criterion for New Technology Add-On Payments.

Response: We appreciate the applicant's response and submittal of this supplemental analysis, which addresses our concerns from the proposed rule.

The third analysis was a combination of the first and second analyses discussed above. The applicant searched the FY 2010 MedPAR file for cases with a procedure code of 38.44 or 39.71 in combination with a diagnosis code of 441.4. Similar to the first and second analyses, the applicant conducted this analysis using MS–DRGs 237 and 238 because both procedure codes map to MS–DRGs 237 and 238. The applicant found 2,981 cases (or 13.6 percent of all cases) in MS–DRG 237 and 18,928 cases (or 86.4 percent of all cases) in MS–DRG 238. The applicant removed those cases that had both procedure codes 38.44 and 39.71 on the claim. The average charge per case was $116,826 for MS–DRG 237 and $75,298 for MS–DRG 238, equating to a case-weighted average charge per case of $80,948.

The applicant noted that the MedPAR claims data included charges for the existing stent graft or vascular graft for open procedures but did not include charges for the Zenith® F. Graft. Therefore, the applicant stated that it was first necessary to remove the amount of charges related to the existing stent graft or vascular graft for open procedures and replace them with charges for the Zenith® F. Graft. Similar to the first and second analyses, to determine the amount of charges for the existing stent graft or vascular graft for open procedures, the applicant divided the costs for these devices by the national average CCR of 0.329 for supplies and equipment (76 FR 51571). The applicant removed the appropriate amount of charges per case from the average charge per case. The applicant inflated the case-weighted average standardized charge per case with an inflation factor of 4 percent (based on data from the BLS' Consumer Price Index). The applicant then determined the amount of charges for the Zenith® F.

[33] Unpublished results, Evaluation of the Safety and Effectiveness of the Zenith(R) Fenestrated AAA Endovascular Graft, Zenith Fenestrated AAA Endovascular Graft Pivotal Study, Clinicaltrials.gov identifier NCT00875563.

Graft by dividing the costs of the Zenith® F. Graft by the national average CCR of 0.329 for supplies. The applicant then added the amount of charges related to the Zenith® F. Graft to the inflated charges and then standardized the charges. As a result, the applicant determined a final case-weighted average standardized charge per case of $86,081. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 237 and 238 was $73,964 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount, the applicant maintains that the Zenith® F. Graft meets the cost criterion for new technology add-on payment.

In the proposed rule, similar to our concerns with the second analysis, we were concerned that for this third analysis the applicant did not remove charges for other services such as extra operating room time and other possible charges that would be incurred during an open procedure, but would possibly not be incurred during cases when the Zenith® F. Graft is implanted.

Comment: The applicant applied the same analysis above and deducted the reduced charges (savings) for OR time, LOS, and ICU days from the case-weighted average charge per case ($80,948), which resulted in a revised case-weighted average charge per case of $39,756. The applicant then inflated the revised case-weighted average charge per case by 4 percent (based on data from the BLS' Consumer Price Index), which resulted in an inflated case-weighted average charge per case of $41,346. The applicant then determined the amount of charges for the Zenith® F. Graft by dividing the costs of the Zenith® F. Graft by the national average CCR of 0.329 for supplies. The applicant then added the amount of charges related to the Zenith® F. Graft to the inflated charges and then standardized the charges. The applicant determined a final case-weighted average standardized charge per case of $82,497. Using the FY 2013 Table 10 thresholds, the case-weighted threshold for MS–DRGs 237 and 238 was $73,964 (all calculations above were performed using unrounded numbers). Because the final case-weighted average standardized charge per case for the applicable MS–DRGs exceeds the case-weighted threshold amount in this revised second analysis, the applicant maintains that the Zenith® F. Graft meets the cost criterion for new technology add-on payments.

Response: We thank the commenter for submitting this supplemental analysis which addresses our concerns from the proposed rule.

We appreciate the multiple analyses of the FY 2010 MedPAR data provided by the applicant and as stated above we believe the commenter has addressed our concerns from the proposed rule. Therefore, we believe that the Zenith® F. Graft meets the cost criterion for new technology add-on payments.

The applicant maintains that the technology also meets the substantial clinical improvement criterion. The applicant first explained that current treatment for those patients who are not eligible for standard endovascular AAA devices is an open repair. The applicant referenced data from a published series [34] that demonstrated an open repair can lead to a high risk of morbidity and increased mortality. The applicant added that an open procedure requires suprarenal aortic cross-clamping.[35] The applicant also noted that there is a high risk of blood loss during an open procedure and the debranching of vessels increases the level of surgical risk. The applicant further noted that 30 to 40 percent of patients who have an infrarenal AAA cannot be treated with current commercial devices because of anatomical reasons (for example, insufficient neck length to achieve graft adequate seal).[36] The applicant added that use of standard endografts in patients with neck lengths less than 10 mm can result in a fourfold increase in an endoleak.[37]

The applicant also stated that the intended use of the Zenith® F. Graft differs from standard AAA endovascular grafts in that the fenestrated device provides physicians the ability to treat patients who have infrarenal aortic neck lengths as short as 4 mm, where standard endovascular AAA devices require an infrarenal aortic neck length of at least 10 to 15 mm. Therefore, the applicant believes that the Zenith® F. Graft offers an additional AAA repair option to those patients who have limited surgical treatment options (for example, if short infrarenal neck lengths make the patients at too high a risk to be candidates for open surgical repair).

The applicant also stated, for patients who have AAAs and short infrarenal neck lengths, the Zenith® F. Graft offers a less invasive treatment option than open surgical repair. The applicant referred to several sources of literature to support the following endpoints for fenestrated endovascular aortic repair (EVAR) versus open repair of the juxtarenal AAA relative to open repair of the juxtarenal AAA: reduced peri-operative mortality (2.4 percent (range: 0 to 5.7 percent)) [38,39,40,41,42,43,44,45,46] reported for fenestrated EVAR repairs versus 2.9 percent (range 0 to 7.4 percent) [47,48] reported for open repair of juxtarenal AAA); reduced morbidity by reducing renal failure requiring permanent dialysis (1.9 percent (pooled average) for fenestrated EVAR repairs versus 3.4 percent reported for open repair of juxtarenal AAA); shorter hospital stay and less operative blood loss to open repair. The applicant maintains that fenestrated EVAR repair results in an average length of stay of 3.5 days, compared to 14.2 days for open repair of juxtarenal AAA, and blood loss

of 537 ml, compared to 2586 ml for open repair of juxtarenal AAA.

In the proposed rule, we noted that the information provided by the applicant to evaluate substantial clinical improvement compares this technology to open surgical repair. We expressed concern that the applicant did not present publicly available information comparing the technology to medical management, which the applicant mentions as another method for treating patients anatomically unsuited for currently approved AAA endovascular grafts. In these comparisons, we were also concerned that information regarding the longevity of the Zenith® F. Graft as well as long-term complications and secondary interventions or reinterventions has not been presented. In terms of the data presented by the applicant, we were concerned that these clinical study data were nonrandomized, did not differentiate between patients by infrarenal neck length and/or suitability for other endovascular grafts, and were of noninferiority. We invited public comment on whether or not the Zenith® F. Graft meets the substantial clinical improvement criterion.

Comment: The applicant responded to our concerns from the proposed rule by submitting a public comment with supplemental information. With respect to the concern that the applicant did not compare the technology to medical management which the applicant listed as a treatment option (in addition to an open procedure), the applicant cited the FDA indications of the device and noted that while the application referred to medical management it was not intended to suggest that medical management was a reasonable alternative treatment option for AAAs at heightened risk of rupture. Therefore, the applicant assumed that medical management had already been maximized in the patients' treatment regimen and that some type of surgical intervention was necessary to treat the aneurysm and prevent rupture. Additionally, the applicant further explained that in its application, prior to the Zenith® F. Graft, surgery was considered the most appropriate option for patients who have a suitably large aneurysm. However, certain patient factors may prevent surgical intervention including anatomical limitations that prevent the use of current endovascular stents or the patient's attendant comorbidities may alter the risk/benefit equation so that surgery is not a viable option. As a result, the applicant stated that medical management represented the default treatment and at risk of aneurysm rupture but is still considered inferior to a definitive surgical intervention. The applicant concluded that it is for these patients that the Zenith® F. Graft was developed.

The applicant also cited clinical data that demonstrated little improvement has been achieved in the survival rates of patients who do not undergo a surgical intervention for their aneurysm (because the aneurysm may rupture) in contrast to the published series on fenestrated repair, which has indicated low 30-day mortality rates. Therefore, the applicant believed that surgical intervention with the Zenith® F. Graft is considered a suitable treatment for a patient population (where a surgical intervention was not an option prior to the Zenith® F. Graft) when considering the potential risk and benefit of the procedure.

The applicant also responded to the concern that there is a lack of data on long term complications and secondary interventions or re-interventions. The commenter noted that *Mastracci et al* presented at the 2012 Society of Vascular Surgery annual meeting on the durability of branched and fenestrated endografts reported that 650 patients underwent endovascular aortic repair with branched or fenestrated devices at the Cleveland Clinic. Approximately one-third of these patients underwent a fenestrated AAA repair; the balance were branched thoracoabdominal and thoracic aortic aneurysm repairs. Through 9 years of follow-up (with a mean of 3 years), secondary procedures were performed for 0.6 percent of celiac, 4 percent of SMA, 6 percent of right renal, and 5 percent of left renal arteries. The average time to reintervention was 237 days and the 30 days, 1 year and 5 year freedom from any intervention was 98 percent, 94 percent, and 84 percent, respectively. Death resulted from branch stent complications in only two patients (related to SMA thrombosis). *Mastracci et al* concluded that branches, following branched or fenestrated aortic repair, appear to be durable, and are rarely the cause of patient death; the absence of long-term data on the branch patency in open repair precludes comparison, yet the lower morbidity and mortality risk coupled with longer-term durability data will further alter the balance of repair options. The applicant noted that this conclusion is consistent with the applicant's conclusion.

Finally, in response to the concern that the studies conducted were non randomized, did not differentiate between patients by infrarenal neck length and/or suitability for other endovascular grafts and were of non inferiority, the commenter responded that a randomized test was not conducted because it was anticipated that the clinical trial conducted for FDA registration would primarily enroll high risk patients in whom open surgical repair would present an unacceptably high risk of operative mortality. The applicant stated that this precluded a randomized study design. With regard to the concern about not considering other endovascular graft options, the applicant explained that the shortest FDA-approved neck length indication of an available standard AAA graft is >10 mm (IFU—Medtronic Endurant Endovascular Graft). The Zenith® F. Graft is designed to treat neck lengths of ≥4 mm, and there is no other endovascular graft available in the USA indicated to treat such short neck lengths. The applicant also clarified that the study of non-inferiority was for the IDE clinical study performed for FDA approval. One of the study's goals was to show non-inferiority in 6-month treatment success, comparing matched patients treated with a standard Zenith AAA Endovascular Graft (used to treat AAAs anatomically suited for treatment) with patients treated with a standard endovascular device. The purpose was to demonstrate that the Zenith® F. Graft could offer a treatment option to patients with a juxtarenal AAA that was not worse than the well-established treatment success experienced with a standard AAA endovascular graft when used to treat patients anatomically suited for a standard device (*not* when using a standard AAA graft to treat a short-necked, juxtarenal aneurysm). The applicant concluded that for this device, this intended patient population, and this comparator a non-inferiority design is a valid study design demonstrating non-inferiority to the high standard of success experienced in standard AAA endovascular repair and provides compelling evidence of Zenith® F. Graft's effectiveness.

Response: We appreciate the applicant's response in regard to our concerns presented in the proposed rule. We agree that the Zenith® F. Graft represents a substantial clinical improvement over existing technologies because it offers a treatment option to a patient population that would otherwise require an open procedure or a treatment option to those patients who are ineligible for an open procedure. The Zenith® F. Graft offers a less invasive treatment option compared to an open procedure which results in reduced mortality, reduced morbidity, shorter hospital stays and less operative blood loss.

Comment: Other commenters were concerned that the Zenith® F. Graft may

not meet the substantial clinical criterion because of the concerns expressed by CMS in the proposed rule.

Response: As discussed above, the applicant has responded to our concerns and we agree that the Zenith® F. Graft meets the substantial clinical improvement criterion.

Based on the discussion above, the Zenith® F. Graft meets all of the new technology add-on payment policy criteria. Therefore, we are approving the Zenith® F. Graft for new technology add-on payments in FY 2013. Cases involving the Zenith® F. Graft that are eligible for new technology add-on payments will be identified by ICD–9–CM procedure code 39.78. In the application, the applicant provided a breakdown of the costs of the Zenith® F. Graft. The total cost of the Zenith® F. Graft utilizing bare metal (renal) alignment stents was $17,264. Of the $17,264 in costs for the Zenith® F. Graft, $921 are for components that are used in a standard Zenith AAA Endovascular Graft procedure. Because the costs for these components are already reflected within the MS–DRGs (and are no longer ''new''), we do not believe it is appropriate to include these costs in our determination of the maximum cost to determine the add-on payment for the Zenith® F. Graft. Therefore, the total maximum cost for the Zenith® F. Graft is $16,343 ($17,264 − $921). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum add-on payment for a case involving the Zenith® F. Graft is $8,171.50.

III. Changes to the Hospital Wage Index for Acute Care Hospitals

A. Background

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals, the Secretary must adjust the standardized amounts ''for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level.'' In accordance with the broad discretion conferred under the Act, we currently define hospital labor market areas based on the delineations of statistical areas established by the Office of Management and Budget (OMB). A discussion of the FY 2013 hospital wage index based on the statistical areas, including OMB's revised definitions of Metropolitan Areas, appears under section III.B. of this preamble.

Beginning October 1, 1993, section 1886(d)(3)(E) of the Act requires that we update the wage index annually. Furthermore, this section of the Act provides that the Secretary base the update on a survey of wages and wage-related costs of short-term, acute care hospitals. The survey must exclude the wages and wage-related costs incurred in furnishing skilled nursing services. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. The adjustment for FY 2013 is discussed in section II.B. of the Addendum to this final rule.

As discussed below in section III.H. of this preamble, we also take into account the geographic reclassification of hospitals in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act when calculating IPPS payment amounts. Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amounts so as to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. The budget neutrality adjustment for FY 2013 is discussed in section II.A.4.b. of the Addendum to this final rule.

Section 1886(d)(3)(E) of the Act also provides for the collection of data every 3 years on the occupational mix of employees for short-term, acute care hospitals participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index. A discussion of the occupational mix adjustment that we are applying beginning October 1, 2012 (the FY 2013 wage index) appears under section III.F. of this preamble.

In response to concerns frequently expressed by providers and other relevant parties that the current wage index system does not effectively reflect the true variation in labor costs for a large cross-section of hospitals, two studies were undertaken by the Department. First, section 3137(b) of the Affordable Care Act required the Secretary to submit to Congress a report that includes a plan to comprehensively reform the Medicare wage index applied under section 1886(d) of the Act. In developing the plan, the Secretary was directed to take into consideration the goals for reforming the wage index that were set forth by the Medicare Payment Advisory Commission (MedPAC) in its June 2007 report entitled ''Report to Congress: Promoting Greater Efficiency in Medicare'' and to ''consult with relevant affected parties.'' Second, the Secretary commissioned the Institute of Medicine (IOM) to ''evaluate hospital and physician geographic payment adjustments, the validity of the adjustment factors, measures and methodologies used in those factors, and sources of data used in those factors.'' Reports on both of these studies recently have been released. We refer readers to section IX.B. of this preamble for summaries of the studies, their findings, and recommendations on reforming the wage index system.

B. Core-Based Statistical Areas for the Hospital Wage Index

The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. In accordance with the broad discretion under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we define hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by OMB and announced in December 2003 (69 FR 49027). For a discussion of OMB's delineations of CBSAs and our implementation of the CBSA definitions, we refer readers to the preamble of the FY 2005 IPPS final rule (69 FR 49026 through 49032). We also discussed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51582) that, in 2013, OMB plans to announce new area delineations based on new standards adopted in 2010 (75 FR 37246) and the 2010 Census of Population and Housing data. For the FY 2013 wage index, to be effective October 1, 2012 and before the availability of OMB's new area delineations, we proposed to use the same labor market areas that we used for the FY 2012 wage index (76 FR 51581).

We did not receive any public comments on the use of labor market areas for the FY 2013 wage index. Therefore, we are finalizing, for FY 2013, the use of the same labor market areas that we used for the FY 2012 wage index.

C. Worksheet S–3 Wage Data for the FY 2013 Proposed Wage Index

The FY 2013 wage index values are based on the data collected from the Medicare cost reports submitted by hospitals for cost reporting periods beginning in FY 2009 (the FY 2012 wage indices were based on data from cost reporting periods beginning during FY 2008).

1. Included Categories of Costs

The FY 2013 wage index includes the following categories of data associated with costs paid under the IPPS (as well as outpatient costs):

- Salaries and hours from short-term, acute care hospitals (including paid lunch hours and hours associated with military leave and jury duty)
- Home office costs and hours
- Certain contract labor costs and hours (which includes direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services, and certain contract indirect patient care services (as discussed in the FY 2008 final rule with comment period (72 FR 47315))
- Wage-related costs, including pension costs (based on policies adopted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51586 through 51590) and other deferred compensation costs.

2. Excluded Categories of Costs

Consistent with the wage index methodology for FY 2012, the wage index for FY 2013 also excludes the direct and overhead salaries and hours for services not subject to IPPS payment, such as SNF services, home health services, costs related to GME (teaching physicians and residents) and certified registered nurse anesthetists (CRNAs), and other subprovider components that are not paid under the IPPS. The FY 2013 wage index also excludes the salaries, hours, and wage-related costs of hospital-based rural health clinics (RHCs), and Federally qualified health centers (FQHCs) because Medicare pays for these costs outside of the IPPS (68 FR 45395). In addition, salaries, hours, and wage-related costs of CAHs are excluded from the wage index, for the reasons explained in the FY 2004 IPPS final rule (68 FR 45397).

3. Use of Wage Index Data by Providers Other Than Acute Care Hospitals Under the IPPS

Data collected for the IPPS wage index are also currently used to calculate wage indices applicable to other providers, such as SNFs, home health agencies (HHAs), and hospices. In addition, they are used for prospective payments to IRFs, IPFs, and LTCHs, and for hospital outpatient services. We note that, in the IPPS rules, we do not address comments pertaining to the wage indices for non-IPPS providers, other than for LTCHs. Such comments should be made in response to separate proposed rules for those providers.

D. Verification of Worksheet S–3 Wage Data

The wage data for the FY 2013 wage index were obtained from Worksheet S–3, Parts II and III of the Medicare cost report for cost reporting periods beginning on or after October 1, 2008, and before October 1, 2009. For wage index purposes, we refer to cost reports during this period as the ''FY 2009 cost report,'' the ''FY 2009 wage data,'' or the ''FY 2009 data.'' Instructions for completing Worksheet S–3, Parts II and III are in the Provider Reimbursement Manual (PRM), Part II, Sections 3605.2 and 3605.3. The data file used to construct the wage index includes FY 2009 data submitted to us as of June 27, 2012. As in past years, we performed an extensive review of the wage data, mostly through the use of edits designed to identify aberrant data.

We asked our fiscal intermediaries/MACs to revise or verify data elements that result in specific edit failures. For the FY 2013 proposed wage index, we identified and excluded 32 providers with data that were too aberrant to include in the proposed wage index, although we stated that if data elements for some of these providers are corrected, we intended to include some of these providers in the FY 2013 final wage index. We have received corrected data for 8 providers, and therefore, we are including the data for these 8 providers in the FY 2013 final wage index. However, we also have determined that the data for 14 additional providers are too aberrant to include in the FY 2013 final wage index. Thus, in total we are excluding the data of 38 providers from the FY 2013 final wage index.

In constructing the FY 2013 proposed wage index, we included the wage data for facilities that were IPPS hospitals in FY 2009, inclusive of those facilities that have since terminated their participation in the program as hospitals, as long as those data did not fail any of our edits for reasonableness. We believe that including the wage data for these hospitals is, in general, appropriate to reflect the economic conditions in the various labor market areas during the relevant past period and to ensure that the current wage index represents the labor market area's current wages as compared to the national average of wages. However, we excluded the wage data for CAHs as discussed in the FY 2004 IPPS final rule (68 FR 45397). For the proposed rule, we removed 7 hospitals that converted to CAH status between February 15, 2011, the cut-off date for CAH exclusion from the FY 2012 wage index, and February 14, 2012, the cut-off date for CAH exclusion from the FY 2013 wage index. However, after the issuance of the proposed rule, we have learned that one provider which we believed was a CAH actually is an IPPS hospital with valid wage data for FY 2013. Therefore, we have added that provider's wage data for purposes of the FY 2013 final wage index. Accordingly, for this final rule, we removed the data of only 6 (not 7) hospitals that have converted to CAH status between February 15, 2011 and February 14, 2012. After removing hospitals with aberrant data and hospitals that converted to CAH status, the FY 2013 final wage index is calculated based on 3,447 hospitals.

For the FY 2013 final wage index, we allotted the wages and hours data for a multicampus hospital among the different labor market areas where its campuses are located in the same manner we allotted such hospitals' data in the FY 2012 wage index (76 FR 51591). Table 2 containing the FY 2013 wage index associated with this final rule (available on the CMS Web site) includes separate wage data for the campuses of four multicampus hospitals.

E. Method for Computing the FY 2013 Unadjusted Wage Index

The method used to compute the FY 2013 wage index without an occupational mix adjustment follows the same methodology that we used to compute the FY 2012 final wage index without an occupational mix adjustment (76 FR 51591 through 51593).

As discussed in that final rule, in ''Step 5,'' for each hospital, we adjust the total salaries plus wage-related costs to a common period to determine total adjusted salaries plus wage-related costs. To make the wage adjustment, we estimate the percentage change in the employment cost index (ECI) for compensation for each 30-day increment from October 14, 2008, through April 15, 2010, for private industry hospital workers from the BLS' *Compensation and Working Conditions.* We have consistently used the ECI as the data source for our wages and salaries and other price proxies in the IPPS market basket, and as we proposed, we are not making any changes to the usage for FY 2013. The factors used to adjust the hospital's data were based on the midpoint of the cost reporting period, as indicated below.

MIDPOINT OF COST REPORTING PERIOD

After	Before	Adjustment factor
10/14/2008	11/15/2008	1.03003
11/14/2008	12/15/2008	1.02786
12/14/2008	01/15/2009	1.02582
01/14/2009	02/15/2009	1.02386
02/14/2009	03/15/2009	1.02199
03/14/2009	04/15/2009	1.02014
04/14/2009	05/15/2009	1.01826
05/14/2009	06/15/2009	1.01635
06/14/2009	07/15/2009	1.01446
07/14/2009	08/15/2009	1.01263
08/14/2009	09/15/2009	1.01086
09/14/2009	10/15/2009	1.00910
10/14/2009	11/15/2009	1.00728
11/14/2009	12/15/2009	1.00539
12/14/2009	01/15/2010	1.00352
01/14/2010	02/15/2010	1.00172
02/14/2010	03/15/2010	1.00000
03/14/2010	04/15/2010	0.99830

For example, the midpoint of a cost reporting period beginning January 1, 2009, and ending December 31, 2009, is June 30, 2009. An adjustment factor of 1.01446 would be applied to the wages of a hospital with such a cost reporting period.

Using the data as described above and in the FY 2012 IPPS/LTCH PPS final rule, the FY 2013 national average hourly wage (unadjusted for occupational mix) is $37.4855. The Puerto Rico overall average hourly wage (unadjusted for occupational mix) is $15.8643.

F. Occupational Mix Adjustment to the FY 2013 Wage Index

As stated earlier, section 1886(d)(3)(E) of the Act provides for the collection of data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index, for application beginning October 1, 2004 (the FY 2005 wage index). The purpose of the occupational mix adjustment is to control for the effect of hospitals' employment choices on the wage index. For example, hospitals may choose to employ different combinations of registered nurses, licensed practical nurses, nursing aides, and medical assistants for the purpose of providing nursing care to their patients. The varying labor costs associated with these choices reflect hospital management decisions rather than geographic differences in the costs of labor.

1. Development of Data for the FY 2013 Occupational Mix Adjustment Based on the 2010 Occupational Mix Survey

As provided for under section 1886(d)(3)(E) of the Act, we collect data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program.

As discussed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51582 through 51586), the FY 2013 wage index is based on data collected on the new 2010 Medicare Wage Index Occupational Mix Survey (Form CMS–10079 (2010)). The survey is available on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html?redirect=/AcuteInpatientPPS/WIFN/list.asp* and through the fiscal intermediaries/MACs. Hospitals were required to submit their completed 2010 surveys to their fiscal intermediaries/MACs by July 1, 2011. The preliminary, unaudited 2010 survey data will be released in early October 2012, along with the FY 2010 Worksheet S–3 wage data, for the FY 2014 wage index review and correction process.

2. Calculation of the Occupational Mix Adjustment for FY 2013

For FY 2013, we calculated the occupational mix adjustment factor using the same methodology that we used for the FY 2012 wage index (76 FR 51582 through 51586). As a result of applying this methodology, the FY 2013 occupational mix adjusted national average hourly wage is $37.4608. The FY 2013 occupational mix adjusted Puerto Rico-specific average hourly wage is $15.9019.

Because the occupational mix adjustment is required by statute, all hospitals that are subject to payments under the IPPS, or any hospital that would be subject to the IPPS if not granted a waiver, must complete the occupational mix survey, unless the hospital has no associated cost report wage data that are included in the FY 2013 wage index. For the FY 2010 survey, the response rate was 91.7 percent. In the FY 2013 wage index established in this final rule, we applied proxy data for noncompliant hospitals, new hospitals, or hospitals that submitted erroneous or aberrant data in the same manner that we applied proxy data for such hospitals in the FY 2012 wage index occupational mix adjustment (76 FR 51586).

In the FY 2011 IPPS/LTCH PPS proposed rule and final rule (75 FR 23943 and 75 FR 50167, respectively), we stated that, in order to gain a better understanding of why some hospitals are not submitting the occupational mix data, we will require hospitals that do not submit occupational mix data to provide an explanation for not complying. This requirement was effective beginning with the new 2010 occupational mix survey. We instructed fiscal intermediaries/MACs to begin gathering this information as part of the FY 2013 wage index desk review process. We will review these data for future analysis and consideration of potential penalties for noncompliant hospitals.

G. Analysis and Implementation of the Occupational Mix Adjustment and the FY 2013 Occupational Mix Adjusted Wage Index

1. Analysis of the Occupational Mix Adjustment and the Occupational Mix Adjusted Wage Index

As discussed in section III.F. of this preamble, for FY 2013, we apply the occupational mix adjustment to 100 percent of the FY 2013 wage index. We calculated the final occupational mix adjustment using data from the 2010 occupational mix survey data, using the methodology described in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51582 through 51586).

Using the occupational mix survey data and applying the occupational mix adjustment to 100 percent of the FY 2013 wage index results in a national average hourly wage of $37.4608 and a Puerto-Rico specific average hourly wage of $15.9019. After excluding data of hospitals that either submitted aberrant data that failed critical edits, or that do not have FY 2009 Worksheet S–3, Parts II and III, cost report data for use in calculating the FY 2013 wage index, we calculated the FY 2013 wage index using the occupational mix survey data from 3,192 hospitals. Using the Worksheet S–3, Parts II and III, cost report data of 3,447 hospitals and occupational mix survey data from 3,192 hospitals represents a 92.6 percent survey response rate. The FY 2013 national average hourly wages for each occupational mix nursing subcategory as calculated in Step 2 of the occupational mix calculation are as follows:

Occupational mix nursing subcategory	Average hourly wage
National RN	37.435806262
National LPN and Surgical Technician	21.779745192
National Nurse Aide, Orderly, and Attendant	15.334363984
National Medical Assistant	17.232523608

Occupational mix nursing subcategory	Average hourly wage
National Nurse Category	31.852574284

The national average hourly wage for the entire nurse category as computed in Step 5 of the occupational mix calculation is $31.852574284. Hospitals with a nurse category average hourly wage (as calculated in Step 4) of greater than the national nurse category average hourly wage receive an occupational mix adjustment factor (as calculated in Step 6) of less than 1.0. Hospitals with a nurse category average hourly wage (as calculated in Step 4) of less than the national nurse category average hourly wage receive an occupational mix adjustment factor (as calculated in Step 6) of greater than 1.0.

Based on the 2010 occupational mix survey data, we determined (in Step 7 of the occupational mix calculation) that the national percentage of hospital employees in the nurse category is 43.47 percent, and the national percentage of hospital employees in the all other occupations category is 56.53 percent. At the CBSA level, the percentage of hospital employees in the nurse category ranged from a low of 21.9 percent in one CBSA, to a high of 62.0 percent in another CBSA.

We also compared the FY 2013 wage data adjusted for occupational mix from the 2010 survey to the FY 2013 wage data adjusted for occupational mix from the 2007–2008 survey. This analysis illustrates the effect on area wage indices of using the 2010 survey data compared to the 2007–2008 survey data; that is, it shows whether hospitals' wage indices are increasing or decreasing under the current survey data as compared to the prior survey data. Our analysis shows that the FY 2013 wage index values for 189 (48.3 percent) urban areas and 14 (29.2 percent) rural areas will increase. Fifty three (13.6 percent) urban areas will increase by 1 percent or more, and no urban areas will increase by 5 percent or more. Three (6.3 percent) rural areas will increase by 1 percent or more, and no rural areas will increase by 5 percent or more. However, the wage index values for 199 (50.9 percent) urban areas and 34 (70.8 percent) rural areas will decrease using the 2010 data. Sixty-three (16.1 percent) urban areas will decrease by 1 percent or more, and no urban areas will decrease by 5 percent or more. Three (6.3 percent) rural areas will decrease by 1 percent or more, and no rural areas will decrease by 5 percent or more. The largest positive impacts using the 2010 data compared to the 2007–2008 data are 4.34 percent for an urban area and 3.20 percent for a rural area. The largest negative impacts are 4.91 percent for an urban area and 2.26 percent for a rural area. Three urban areas and no rural areas will be unaffected. These results indicate that the wage indices of more CBSAs overall (53.1 percent) will be decreasing due to application of the 2010 occupational mix survey data as compared to the 2007–2008 survey data to the wage index. Further, a larger percentage of urban areas (48.3 percent) will benefit from the 2010 occupational mix survey as compared to the 2007–2008 survey than will rural areas (29.2 percent).

We compared the FY 2013 occupational mix adjusted wage indices for each CBSA to the unadjusted wage indices for each CBSA. As a result of applying the occupational mix adjustment to the wage data, the wage index values for 206 (52.7 percent) urban areas and 34 (70.8 percent) rural areas will increase. One hundred fifteen (29.4 percent) urban areas will increase by 1 percent or more, and 3 (0.77 percent) urban areas will increase by 5 percent or more. Fourteen (29.2 percent) rural areas will increase by 1 percent or more, and no rural areas will increase by 5 percent or more. However, the wage index values for 185 (47.3 percent) urban areas and 14 (29.2 percent) rural areas will decrease. Eighty-one (20.7 percent) urban areas will decrease by 1 percent or more, and one urban area will decrease by 5 percent or more (0.26 percent). Seven (14.6 percent) rural areas will decrease by 1 percent or more, and no rural areas will decrease by 5 percent or more. The largest positive impacts are 6.68 percent for an urban area and 2.62 percent for a rural area. The largest negative impacts are 5.26 percent for an urban area and 3.14 percent for a rural area. No urban or rural areas are unaffected. These results indicate that a larger percentage of rural areas (70.8 percent) will benefit from the occupational mix adjustment than do urban areas (52.7 percent). While these results are more positive overall for rural areas than under the previous occupational mix adjustment that used survey data from 2007–2008, almost one-third (29.2 percent) of rural CBSAs will still experience a decrease in their wage indices as a result of the occupational mix adjustment.

2. Application of the Rural, Imputed, and Frontier Floors

a. Rural Floor

Section 4410 of Public Law 105–33 provides that, for discharges on or after October 1, 1997, the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. This provision is referred to as the ''rural floor.'' Section 3141 of Public Law 111–148 also requires that a national budget neutrality adjustment be applied in implementing the rural floor. In the FY 2013 proposed wage index, we estimated that 393 hospitals would receive an increase in their FY 2013 proposed wage index due to the application of the rural floor. In the FY 2013 final wage index associated with this final rule and available on the CMS Web site, 454 hospitals are receiving an increase in their FY 2013 wage index due to the application of the rural floor.

Comment: We did not make any proposals in the FY 2013 proposed rule pertaining to the rural floor. However, several commenters opposed the application of the national budget neutrality adjustment for the rural floor. The commenters noted our discussion of the impacts of the policy in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 28170 through 28172) and, in particular, the table in the Addendum at 77 FR 28171 shows Massachusetts would receive significant extra IPPS payments alone for FY 2013, due, in part, to this policy. The commenters opined that the national rural floor budget neutrality policy ''unfairly skews Medicare payments, reducing payments to thousands of hospitals across the nation while benefitting a few dozen hospitals in one State.'' The commenters requested that CMS reassess the national rural floor budget neutrality provision and recommended that CMS reverse the provision.

Response: As discussed above, the national rural floor budget neutrality adjustment for the IPPS is required by section 3141 of Public Law 111–148.

b. Imputed Floor and Alternative, Temporary Methodology for Computing the Imputed Floor

In the FY 2005 IPPS final rule (69 FR 49109), we adopted the ''imputed floor'' policy as a temporary 3-year regulatory measure to address concerns from hospitals in all-urban States that have argued that they are disadvantaged by the absence of rural hospitals to set a wage index floor for those States. Since its initial implementation, we have extended the imputed floor policy three times, the last of which was adopted in the FY 2012 IPPS/LTCH PPS final rule and is set to expire on September 30, 2013 (we refer readers to the discussion in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593)). There are currently two all-urban States, New Jersey and Rhode Island, that have a range of wage

indices assigned to hospitals in the State, including through reclassification or redesignation (we refer readers to discussions of geographic reclassifications and redesignations in section III.H. of this preamble). However, as we explain below, the current method for computing the imputed floor benefits only New Jersey, and not Rhode Island.

The current methodology for computing the imputed floor is specified in our regulations at 42 CFR 412.64(h)(4). In computing the imputed floor for an all-urban State, we calculate the ratio of the lowest-to-highest CBSA wage index for each all-urban State (that is, New Jersey and Rhode Island) as well as the average of the ratios of lowest-to-highest CBSA wage indices of those all-urban States. We compare the State's own ratio to the average ratio for all-urban States and whichever is higher is multiplied by the highest CBSA wage index value in the State—the product of which establishes the imputed floor for the State. Rhode Island has only one CBSA (Providence-New Bedford-Fall River, RI–MA); therefore, Rhode Island's own ratio equals 1.0, and its imputed floor is equal to its original CBSA wage index value. Conversely, New Jersey has 10 CBSAs. Because the average ratio of New Jersey and Rhode Island is higher than New Jersey's own ratio, the current methodology provides a benefit for New Jersey, but not for Rhode Island.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27950), for the FY 2013 wage index, the final year of the extension of the imputed floor policy under § 412.64(h)(4), we proposed an alternative, temporary methodology for computing the imputed floor wage index to address the concern that the current imputed floor methodology guarantees a benefit for one all-urban State with multiple wage indices but cannot benefit the other. We proposed that this proposed alternative methodology for calculating the imputed floor would be established using data from the application of the rural floor policy for FY 2013. We proposed that we would first determine the average percentage difference between the post-reclassified, pre-floor area wage index and the post-reclassified, rural floor wage index (without rural floor budget neutrality applied) for all CBSAs receiving the rural floor. (Table 4D associated with the proposed rule and available on the CMS Web site included the CBSAs receiving a State's rural floor wage index.) The lowest post-reclassified wage index assigned to a hospital in an all-urban State having a range of such values would then be increased by this factor, the result of which would establish the State's alternative imputed floor. We proposed to amend § 412.64(h)(4) to add new paragraphs (v)(A) and (B) to incorporate this proposed alternative methodology, and to make conforming references.

In addition, for the FY 2013 wage index, we did not propose any changes to the current imputed floor methodology at § 412.64(h)(4) and, therefore, no changes to the New Jersey imputed floor computation for FY 2013. Instead, for FY 2013, we proposed a second, alternative methodology that would be used in cases where an all-urban State has a range of wage indices assigned to its hospitals, but the State cannot benefit from the methodology in existing § 412.64(h)(4). We stated that we intended to further evaluate the need, applicability, and methodology for the imputed floor before the September 30, 2013 expiration of the imputed floor policy and address these issues in the FY 2014 proposed rule.

Comment: A few commenters addressed our proposal for an alternative, temporary methodology for calculating the imputed floor. Some of the commenters supported the proposal. One commenter also urged CMS to adopt the alternative methodology for 3 consecutive fiscal years rather than the proposed 1-year period. Another commenter, a State hospital association, urged CMS to make the imputed floor a permanent policy in the FY 2013 final rule. Two State hospital associations opposed the proposal. One association agreed with the rationale that CMS had previously provided in the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25878 through 25879) for not proposing to extend the imputed floor policy. The association urged CMS to allow the imputed floor policy to expire and not to finalize the proposed alternative methodology that would allow additional hospitals to benefit from the imputed floor. Another association suggested that CMS should provide additional information and consider the effects on all States, not just the benefits that may apply to one or two specific States. Additionally, the national hospital association stated that it would be premature for it to comment on the proposal at this time due to its ongoing analysis of wage index reform.

Response: As discussed above and in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed the alternative methodology for only the one remaining year of the imputed floor policy, which expires on September 30, 2013. We made no proposal for extending the general imputed floor policy beyond FY 2013; therefore, we do not agree with the suggestion to adopt a final policy that would extend the alternative, temporary policy for 3 years, beyond FY 2013. As proposed, we are adopting as final for the FY 2013 wage index the alternative, temporary methodology for computing the imputed floor wage index, as well as the proposal to amend § 412.64(h)(4) to add new paragraphs (v)(A) and (B) to incorporate the alternative methodology. In addition, as we stated above, we plan to further evaluate the need, applicability, and methodology for the imputed floor policy and will address these issues in the FY 2014 proposed rule.

The wage index and impact tables associated with this FY 2013 final rule that are available on the CMS Web site include the application of the imputed floor policy at § 412.64(h)(4) and a national budget neutrality adjustment for the imputed floor. There are 29 providers in New Jersey that will receive an increase in their FY 2013 wage index due to the imputed floor policy. The wage index and impact tables for this final rule also reflect the application of the second alternative methodology for computing the imputed floor, which will benefit four hospitals in Rhode Island.

c. Frontier Floor

Section 10324 of Public Law 111–148 requires that hospitals in frontier States cannot be assigned a wage index of less than 1.0000 (we refer readers to a discussion of the implementation of this provision in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160). Four States in the FY 2013 wage index are receiving the frontier State wage index: Montana, North Dakota, South Dakota, and Wyoming; 45 providers in these States are receiving the frontier floor value of 1.0000 in the FY 2013 wage index associated with this final rule. Although Nevada is also, by definition, a frontier State and was assigned a frontier floor value of 1.0000 for FY 2012, its FY 2013 rural floor value of 1.0256 is greater than the frontier floor value (that is, 1.0000) and, therefore, is the State's minimum wage index for FY 2013.

We did not receive any public comments on the frontier floor policy.

The areas affected by the rural, imputed, and frontier floor policies for the FY 2013 wage index are identified in Table 4D associated with this final rule and available on the CMS Web site.

3. FY 2013 Wage Index Tables

The wage index values for FY 2013 (except those for hospitals receiving wage index adjustments under section 1886(d)(13) of the Act), included in

Tables 4A, 4B, 4C, and 4F, available on the CMS Web site, include the occupational mix adjustment, geographic reclassification or redesignation as discussed in section III.H. of this preamble, and the application of the rural, imputed, and frontier State floors as discussed in section III.G.2. of this preamble.

Tables 3A and 3B, available on the CMS Web site, list the 3-year average hourly wage for each labor market area before the redesignation or reclassification of hospitals based on FYs 2007, 2008, and 2009 cost reporting periods. Table 3A lists these data for urban areas, and Table 3B lists these data for rural areas. In addition, Table 2, which is available on the CMS Web site, includes the adjusted average hourly wage for each hospital from the FY 2007 and FY 2008 cost reporting periods, as well as the FY 2009 period used to calculate the FY 2013 wage index. The 3-year averages are calculated by dividing the sum of the dollars (adjusted to a common reporting period using the method described previously) across all 3 years, by the sum of the hours. If a hospital is missing data for any of the previous years, its average hourly wage for the 3-year period is calculated based on the data available during that period. The average hourly wages in Tables 2, 3A, and 3B, which are available on the CMS Web site, include the occupational mix adjustment. The wage index values in Tables 4A, 4B, 4C, and 4D also include the national rural and imputed floor budget neutrality adjustment. The wage index values in Table 2 also include the out-migration adjustment for eligible hospitals.

H. Revisions to the Wage Index Based on Hospital Redesignations and Reclassifications

1. General Policies and Effects of Reclassification and Redesignation

Under section 1886(d)(10) of the Act, the MGCRB considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. Hospitals must apply to the MGCRB to reclassify 13 months prior to the start of the fiscal year for which reclassification is sought (generally by September 1). Generally, hospitals must be proximate to the labor market area to which they are seeking reclassification and must demonstrate characteristics similar to hospitals located in that area. The MGCRB issues its decisions by the end of February for reclassifications that become effective for the following fiscal year (beginning October 1). The regulations applicable to reclassifications by the MGCRB are located in 42 CFR 412.230 through 412.280. (We refer readers to a discussion of the proximity requirements in the FY 2002 IPPS final rule (66 FR 39874 and 39875).) The general policies for reclassifications and redesignations that we proposed, and are adopting, for FY 2013, and the policies for the effects of hospitals' reclassifications and redesignations on the wage index, are the same as those discussed in the FY 2012 IPPS/LTCH PPS final rule for the FY 2012 final wage index (76 FR 51595 and 51596). Also, in the FY 2012 IPPS/LTCH PPS final rule, we discussed the effects on the wage index of urban hospitals reclassifying to rural areas under 42 CFR 412.103. Hospitals that are geographically located in States without any rural areas are ineligible to apply for rural reclassification pursuant to 42 CFR 412.103.

2. FY 2013 MGCRB Reclassifications

a. FY 2013 Reclassification Requirements and Approvals

Under section 1886(d)(10) of the Act, the MGCRB considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. The specific procedures and rules that apply to the geographic reclassification process are outlined in regulations under 42 CFR 412.230 through 412.280.

At the time this final rule was constructed, the MGCRB had completed its review of FY 2013 reclassification requests. Based on such reviews, there were 193 hospitals approved for wage index reclassifications by the MGCRB for FY 2013. Because MGCRB wage index reclassifications are effective for 3 years, for FY 2013, hospitals reclassified during FY 2011 or FY 2012 are eligible to continue to be reclassified to a particular labor market area based on such prior reclassifications. There were 265 hospitals approved for wage index reclassifications in FY 2011, and 205 hospitals approved for wage index reclassifications in FY 2012. Of all the hospitals approved for reclassification for FY 2011, FY 2012, and FY 2013, based upon the review at the time of this final rule, 663 hospitals are in a reclassification status for FY 2013.

Under 42 CFR 412.273, hospitals that have been reclassified by the MGCRB are permitted to withdraw their applications within 45 days of the publication of a proposed rule. For information about withdrawing, terminating, or canceling a previous withdrawal or termination of a 3-year reclassification for wage index purposes, we refer readers to 42 CFR 412.273, as well as the FY 2002 IPPS final rule (66 FR 39887) and the FY 2003 IPPS final rule (67 FR 50065). Additional discussion on withdrawals and terminations, and clarifications regarding reinstating reclassifications and ''fallback'' reclassifications, were included in the FY 2008 IPPS final rule (72 FR 47333).

Changes to the wage index that result from withdrawals of requests for reclassification, terminations, wage index corrections, appeals, and the Administrator's review process for FY 2013 are incorporated into the wage index values published in this FY 2013 IPPS/LTCH PPS final rule. These changes affect not only the wage index value for specific geographic areas, but also the wage index value redesignated/reclassified hospitals receive; that is, whether they receive the wage index that includes the data for both the hospitals already in the area and the redesignated/reclassified hospitals. Further, the wage index value for the area from which the hospitals are redesignated/reclassified may be affected.

b. Applications for Reclassifications for FY 2014

Applications for FY 2014 reclassifications are due to the MGCRB by September 4, 2012 (the first working day of September 2012). We note that this is also the deadline for canceling a previous wage index reclassification withdrawal or termination under 42 CFR 412.273(d). Applications and other information about MGCRB reclassifications may be obtained, beginning in mid-July 2012, via the Internet on the CMS Web site at: *http://www.cms.gov/Regulations-and-Guidance/Review-Boards/MGCRB/index.html?redirect=/MGCRB/02_instructions_and_applications.asp*, or by calling the MGCRB at (410) 786–1174. The mailing address of the MGCRB is: 2520 Lord Baltimore Drive, Suite L, Baltimore, MD 21244–2670.

3. Redesignations of Hospitals under Section 1886(d)(8)(B) of the Act

Section 1886(d)(8)(B) of the Act requires us to treat a hospital located in a rural county adjacent to one or more urban areas as being located in the MSA if certain criteria are met. Effective beginning FY 2005, we use OMB's 2000 CBSA standards and the Census 2000 data to identify counties in which hospitals qualify under section 1886(d)(8)(B) of the Act to receive the wage index of the urban area. Hospitals located in these counties have been known as ''Lugar'' hospitals and the counties themselves are often referred to

as ''Lugar'' counties. The FY 2013 chart with the listing of the rural counties containing the hospitals designated as urban under section 1886(d)(8)(B) of the Act is available via the Internet on the CMS Web site.

4. Reclassifications Under Section 1886(d)(8)(B) of the Act

As in the past, hospitals redesignated under section 1886(d)(8)(B) of the Act are also eligible to be reclassified to a different area by the MGCRB. Affected hospitals were permitted to compare the reclassified wage index for the labor market area in Table 4C associated with the proposed rule (which was available on the CMS Web site) into which they would be reclassified by the MGCRB to the wage index for the area to which they are redesignated under section 1886(d)(8)(B) of the Act. Hospitals could have withdrawn from an MGCRB reclassification within 45 days of the publication of the FY 2013 proposed rule. (We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51598 through 51599) for the procedural rules and requirements for a hospital that is redesignated under section 1886(d)(8)(B) of the Act and seeking reclassification under the MGCRB, as well as our policy of measuring the urban area, exclusive of the Lugar County, for purposes of meeting proximity requirements.) We treat New England deemed counties in a manner consistent with how we treat Lugar counties. (We refer readers to FY 2008 IPPS final rule with comment period (72 FR 47337) for a discussion of this policy.)

5. Reclassifications Under Section 508 of Pub. L. 108–173

Section 508 of Public Law 108–173 allowed certain qualifying hospitals to receive wage index reclassifications and assignments that they otherwise would not have been eligible to receive under the law. Although section 508 originally was scheduled to expire after a 3-year period, Congress extended the provision several times, as well as certain special exceptions that would have otherwise expired. For a discussion of the original section 508 provision and its various extensions, we refer readers to the FY 2012 notice, CMS–1442–N, which went on public display at the Office of the Federal Register on April 19, 2012, and was published in the **Federal Register** on April 20, 2012 (77 FR 23722). The most recent extension of the provision was included in section 302 of the Temporary Payroll Tax Cut Continuation Act of 2011 (Pub. L. 112–78), as amended by section 3001 of the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96), which extended certain section 508 reclassifications and special exception wage indices for a 6-month period during FY 2012, from October 1, 2011 through March 31, 2012. Section 508 reclassifications and certain special exceptions have not been extended for FY 2013. Therefore, the FY 2013 wage index associated with this final rule does not reflect any section 508 reclassifications or special exception wage indices.

6. Waiving Lugar Redesignation for the Out-Migration Adjustment

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51599 through 51600), we adopted the policy that, beginning with FY 2012, an eligible hospital that waives its Lugar status in order to receive the out-migration adjustment has effectively waived its deemed urban status and, thus, is rural for all purposes under the IPPS, including being considered rural for the DSH payment adjustment, effective for the fiscal year in which the hospital receives the out-migration adjustment. (We refer readers to a discussion of DSH payment adjustment under section IV.G. of this preamble.)

In addition, we adopted a minor procedural change that would allow a Lugar hospital that qualifies for and accepts the out-migration adjustment (through written notification to CMS within the requisite number of days from the publication of the proposed rule [49]) to automatically waive its urban status for the 3-year period for which its out-migration adjustment is effective. That is, such a Lugar hospital would no longer be required during the second and third years of eligibility for the out-migration adjustment to advise us annually that it prefers to continue being treated as rural and receive the adjustment. Thus, under the procedural change, a Lugar hospital that requests to waive its urban status in order to receive the rural wage index in addition to the out-migration adjustment would be deemed to have accepted the out-migration adjustment and agrees to be treated as rural for the duration of its 3-year eligibility period, unless, prior to its second or third year of eligibility, the hospital explicitly notifies CMS in writing, within the required period (generally 45 days from the publication of the proposed rule), that it instead elects to return to its deemed urban status and no longer wishes to accept the out-migration adjustment.

[49] Hospitals generally have 45 days from publication of the proposed rule to request an out-migration adjustment in lieu of the section 1886(d)(8) deemed urban status.

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51599 through 51600) for a detailed discussion of the policy and process for waiving Lugar status for the out-migration adjustment.

7. Cancellation of Acquired Rural Status Due to MDH Expiration

As we discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50286 and 50287) and in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51683 through 51684), section 3124 of the Affordable Care Act extended the MDH program from the end of FY 2011 (for discharges occurring before October 1, 2011) to the end of FY 2012 (for discharges occurring before October 1, 2012). Accordingly, beginning with FY 2013, there will no longer be an MDH designation, and those hospitals that were formerly MDHs will be paid based solely on the Federal rate.

Comment: Several commenters requested CMS to permit hospitals to revisit any geographic reclassification decisions that would impact their ability to qualify for MDH status in the event that the Congress extends the MDH program. In particular, in anticipation of the September 30, 2012 expiration of the MDH program, the commenters stated that some urban hospitals that became rural under section 1886(d)(8)(E) of the Act in order to qualify for MDH status had canceled their rural status so that they could instead receive their urban area wage index or reclassify for a higher wage index under section 1886(d)(10) of the Act for FY 2013. The commenters further stated that if the MDH program is extended, such hospital would no longer be qualified for MDH status because the hospital is no longer a rural provider.

Response: Although we understand the commenters' concerns, we believe it would be imprudent for CMS in this FY 2013 final rule to revise existing Medicare regulations and procedural rules around actions that the Congress may take in the future. If legislation is passed to continue the MDH program, CMS will develop policies and procedures to implement the specific provisions of such legislation.

I. FY 2013 Wage Index Adjustment Based on Commuting Patterns of Hospital Employees

In accordance with the broad discretion granted to the Secretary under section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, beginning with FY 2005, we established a process to make adjustments to the hospital wage index

based on commuting patterns of hospital employees (the ''out-migration'' adjustment). The process, outlined in the FY 2005 IPPS final rule (69 FR 49061), provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different county (or counties) with a higher wage index. The FY 2013 out-migration adjustment is based on the same policies, procedures, and computation that were used for the FY 2012 out-migration adjustment (we refer readers to a full discussion of the adjustment, including rules on deeming hospitals reclassified under section 1886(d)(8) or section 1886(d)(10) to have waived the out-migration adjustment, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51601 through 51602)). Table 4J, available via the Internet on the CMS Web site, lists the out-migration adjustments for the FY 2013 wage index.

We did not receive any public comments on our proposals for the out-migration adjustment for FY 2013.

J. Process for Requests for Wage Index Data Corrections

The preliminary, unaudited Worksheet S–3 wage data and occupational mix survey data files for the proposed FY 2013 wage index were made available on October 4, 2011, through the Internet on the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html?redirect=/AcuteInpatientPPS/WIFN/list.asp.*

In the interest of meeting the data needs of the public, beginning with the proposed FY 2009 wage index, we post an additional public use file on our Web site that reflects the actual data that are used in computing the proposed wage index. The release of this new file does not alter the current wage index process or schedule. We notify the hospital community of the availability of these data as we do with the current public use wage data files through our Hospital Open Door forum. We encourage hospitals to sign up for automatic notifications of information about hospital issues and the scheduling of the Hospital Open Door forums at the CMS Web site at: *http://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/index.html*.

In a memorandum dated September 29, 2011, we instructed all fiscal intermediaries/MACs to inform the IPPS hospitals they service of the availability of the wage index data files and the process and timeframe for requesting revisions (including the specific deadlines listed below). We also instructed the fiscal intermediaries/MACs to advise hospitals that these data were also made available directly through their representative hospital organizations.

If a hospital wished to request a change to its data as shown in the October 4, 2011 wage and occupational mix data files, the hospital was to submit corrections along with complete, detailed supporting documentation to its fiscal intermediary/MAC by December 5, 2011. Hospitals were notified of this deadline and of all other deadlines and requirements, including the requirement to review and verify their data as posted on the preliminary wage index data files on the Internet, through the September 29, 2011 memorandum referenced above.

In the September 29, 2011 memorandum, we also specified that a hospital requesting revisions to its occupational mix survey data was to copy its record(s) from the CY 2010 occupational mix preliminary files posted to the CMS Web site in October, highlight the revised cells on its spreadsheet, and submit its spreadsheet(s) and complete documentation to its fiscal intermediary/MAC no later than December 5, 2011.

The fiscal intermediaries/MACs notified the hospitals by mid-February 2012 of any changes to the wage index data as a result of the desk reviews and the resolution of the hospitals' early-December revision requests. The fiscal intermediaries/MACs also submitted the revised data to CMS by mid-February 2012. CMS published the proposed wage index public use files that included hospitals' revised wage index data on February 21, 2012. Hospitals had until March 5, 2012, to submit requests to the fiscal intermediaries/MACs for reconsideration of adjustments made by the fiscal intermediaries/MACs as a result of the desk review, and to correct errors due to CMS' or the fiscal intermediary's (or, if applicable, the MAC's) mishandling of the wage index data. Hospitals also were required to submit sufficient documentation to support their requests.

After reviewing requested changes submitted by hospitals, fiscal intermediaries/MACs were required to transmit any additional revisions resulting from the hospitals' reconsideration requests by April 11, 2012. The deadline for a hospital to request CMS intervention in cases where the hospital disagreed with the fiscal intermediary's (or, if applicable, the MAC's) policy interpretations was April 18, 2012.

Hospitals were given the opportunity to examine Table 2, which was listed in section VI. of the Addendum to the proposed rule and available on the CMS Web site at: *http://www.cms.gov*. Table 2 contained each hospital's adjusted average hourly wage used to construct the wage index values for the past 3 years, including the FY 2009 data used to construct the proposed FY 2013 wage index. We noted that the hospital average hourly wages shown in Table 2 only reflected changes made to a hospital's data that were transmitted to CMS by March 2, 2012.

We released the final wage index data public use files in early May 2012 on the Internet at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html?redirect=/AcuteInpatientPPS/WIFN/list.asp*. The May 2012 public use files were made available solely for the limited purpose of identifying any potential errors made by CMS or the fiscal intermediary/MAC in the entry of the final wage index data that resulted from the correction process described above (revisions submitted to CMS by the fiscal intermediaries/MACs by April 11, 2012). If, after reviewing the May 2012 final public use files, a hospital believed that its wage or occupational mix data were incorrect due to a fiscal intermediary/MAC or CMS error in the entry or tabulation of the final data, the hospital had to send a letter to both its fiscal intermediary/MAC and CMS that outlined why the hospital believed an error existed and provided all supporting information, including relevant dates (for example, when it first became aware of the error). CMS and the fiscal intermediaries (or, if applicable, the MACs) had to receive these requests no later than June 4, 2012.

Each request also had to be sent to the fiscal intermediary/MAC. The fiscal intermediary/MAC reviewed requests upon receipt and contacted CMS immediately to discuss any findings.

After the release of the May 2012 wage index data files, changes to the wage and occupational mix data were only made in those very limited situations involving an error by the fiscal intermediary/MAC or CMS that the hospital could not have known about before its review of the final wage index data files. Specifically, neither the fiscal intermediary/MAC nor CMS approved the following types of requests:

- Requests for wage index data corrections that were submitted too late to be included in the data transmitted to

CMS by fiscal intermediaries or the MACs on or before April 11, 2012.

• Requests for correction of errors that were not, but could have been, identified during the hospital's review of the February 21, 2012 wage index public use files.

• Requests to revisit factual determinations or policy interpretations made by the fiscal intermediary or the MAC or CMS during the wage index data correction process.

Verified corrections to the wage index data received timely by CMS and the fiscal intermediaries or the MACs (that is, by June 4, 2012) were incorporated into the final wage index in this FY 2013 IPPS/LTCH PPS final rule, which will be effective October 1, 2012.

We created the processes described above to resolve all substantive wage index data correction disputes before we finalize the wage and occupational mix data for the FY 2013 payment rates. Accordingly, hospitals that did not meet the procedural deadlines set forth above will not be afforded a later opportunity to submit wage index data corrections or to dispute the fiscal intermediary's (or, if applicable, the MAC's) decision with respect to requested changes. Specifically, our policy is that hospitals that do not meet the procedural deadlines set forth above will not be permitted to challenge later, before the Provider Reimbursement Review Board, the failure of CMS to make a requested data revision. (See *W. A. Foote Memorial Hospital* v. *Shalala,* No. 99–CV–75202–DT (E.D. Mich. 2001) and *Palisades General Hospital* v. *Thompson,* No. 99–1230 (D.D.C. 2003).) We refer readers also to the FY 2000 IPPS final rule (64 FR 41513) for a discussion of the parameters for appeals to the PRRB for wage index data corrections.

Again, we believe the wage index data correction process described above provides hospitals with sufficient opportunity to bring errors in their wage and occupational mix data to the fiscal intermediary's (or, if applicable, the MAC's) attention. Moreover, because hospitals have access to the final wage index data by early May 2012, they have the opportunity to detect any data entry or tabulation errors made by the fiscal intermediary or the MAC or CMS before the development and publication of the final FY 2013 wage index by August 2012, and the implementation of the FY 2013 wage index on October 1, 2012. If hospitals availed themselves of the opportunities afforded to provide and make corrections to the wage and occupational mix data, the wage index implemented on October 1 should be accurate. Nevertheless, in the event that errors are identified by hospitals and brought to our attention after June 4, 2012, we retain the right to make midyear changes to the wage index under very limited circumstances.

Specifically, in accordance with 42 CFR 412.64(k)(1) of our existing regulations, we make midyear corrections to the wage index for an area only if a hospital can show that: (1) the fiscal intermediary or the MAC or CMS made an error in tabulating its data; and (2) the requesting hospital could not have known about the error or did not have an opportunity to correct the error, before the beginning of the fiscal year. For purposes of this provision, ''before the beginning of the fiscal year'' means by the June 4 deadline for making corrections to the wage data for the following fiscal year's wage index. This provision is not available to a hospital seeking to revise another hospital's data that may be affecting the requesting hospital's wage index for the labor market area. As indicated earlier, because CMS makes the wage index data available to hospitals on the CMS Web site prior to publishing both the proposed and final IPPS rules, and the fiscal intermediaries or the MACs notify hospitals directly of any wage index data changes after completing their desk reviews, we do not expect that midyear corrections will be necessary. However, under our current policy, if the correction of a data error changes the wage index value for an area, the revised wage index value will be effective prospectively from the date the correction is made.

In the FY 2006 IPPS final rule (70 FR 47385), we revised 42 CFR 412.64(k)(2) to specify that, effective on October 1, 2005, that is, beginning with the FY 2006 wage index, a change to the wage index can be made retroactive to the beginning of the Federal fiscal year only when: (1) The fiscal intermediary (or, if applicable, the MAC) or CMS made an error in tabulating data used for the wage index calculation; (2) the hospital knew about the error and requested that the fiscal intermediary (or, if applicable, the MAC) and CMS correct the error using the established process and within the established schedule for requesting corrections to the wage index data, before the beginning of the fiscal year for the applicable IPPS update (that is, by the June 4, 2012 deadline for the FY 2013 wage index); and (3) CMS agreed that the fiscal intermediary (or, if applicable, the MAC) or CMS made an error in tabulating the hospital's wage index data and the wage index should be corrected.

In those circumstances where a hospital requested a correction to its wage index data before CMS calculated the final wage index (that is, by the June 4, 2012 deadline), and CMS acknowledges that the error in the hospital's wage index data was caused by CMS' or the fiscal intermediary's (or, if applicable, the MAC's) mishandling of the data, we believe that the hospital should not be penalized by our delay in publishing or implementing the correction. As with our current policy, we indicated that the provision is not available to a hospital seeking to revise another hospital's data. In addition, the provision cannot be used to correct prior years' wage index data; and it can only be used for the current Federal fiscal year. In situations where our policies would allow midyear corrections other than those specified in 42 CFR 412.64(k)(2)(ii), we continue to believe that it is appropriate to make prospective-only corrections to the wage index.

We note that, as with prospective changes to the wage index, the final retroactive correction will be made irrespective of whether the change increases or decreases a hospital's payment rate. In addition, we note that the policy of retroactive adjustment will still apply in those instances where a judicial decision reverses a CMS denial of a hospital's wage index data revision request.

K. Labor-Related Share for the FY 2013 Wage Index

Section 1886(d)(3)(E) of the Act directs the Secretary to adjust the proportion of the national prospective payment system base payment rates that are attributable to wages and wage-related costs by a factor that reflects the relative differences in labor costs among geographic areas. It also directs the Secretary to estimate from time to time the proportion of hospital costs that are labor-related: ''The Secretary shall adjust the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates * * *.'' We refer to the portion of hospital costs attributable to wages and wage-related costs as the labor-related share. The labor-related share of the prospective payment rate is adjusted by an index of relative labor costs, which is referred to as the wage index.

Section 403 of Public Law 108–173 amended section 1886(d)(3)(E) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless this ''would result in lower payments to a hospital than would otherwise be made.'' However, this provision of Public Law 108–173 did

not change the legal requirement that the Secretary estimate ''from time to time'' the proportion of hospitals' costs that are ''attributable to wages and wage-related costs.'' Thus, hospitals receive payment based on either a 62-percent labor-related share, or the labor-related share estimated from time to time by the Secretary, depending on which labor-related share resulted in a higher payment.

In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43850 through 43856), we rebased and revised the hospital market basket for operating costs. We established a FY 2006-based IPPS hospital market basket to replace the FY 2002-based IPPS hospital market basket, effective October 1, 2009. In that final rule, we presented our analysis and conclusions regarding the frequency and methodology for updating the labor-related share for FY 2010. We also recalculated a labor-related share of 68.8 percent, using the FY 2006-based IPPS market basket, for discharges occurring on or after October 1, 2009. In addition, we implemented this revised and rebased labor-related share in a budget neutral manner, but consistent with section 1886(d)(3)(E) of the Act, we did not take into account the additional payments that would be made as a result of hospitals with a wage index less than or equal to 1.0 being paid using a labor-related share lower than the labor-related share of hospitals with a wage index greater than 1.0.

The labor-related share is used to determine the proportion of the national IPPS base payment rate to which the area wage index is applied. In this FY 2013 final rule, as we proposed, we are not making any further changes to the national average proportion of operating costs that are attributable to wages and salaries, fringe benefits, contract labor, the labor-related portion of professional fees, administrative and business support services, and all other labor-related services (previously referred to in the FY 2002-based IPPS market basket as labor-intensive).

We did not receive any public comments on the application of the labor-related share to the wage index for FY 2013. Therefore, for FY 2013, we are continuing to use a labor-related share of 68.8 percent for discharges occurring on or after October 1, 2012. Tables 1A and 1B, which are published in section VI. of the Addendum to this final rule and available via the Internet, reflect this labor-related share. We note that section 403 of Public Law 108–173 amended sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless this employment ''would result in lower payments to a hospital than would otherwise be made.'' Therefore, for all IPPS hospitals whose wage indices are less than 1.0000, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount. For all IPPS hospitals whose wage indices are greater than 1.0000, we are applying the wage index to a labor-related share of 68.8 percent of the national standardized amount.

For Puerto Rico hospitals, the national labor-related share is 62 percent because the national wage index for all Puerto Rico hospitals is less than 1.0. As we proposed in the FY 2013 proposed rule, we are continuing to use a labor-related share for the Puerto Rico-specific standardized amounts of 62.1 percent for discharges occurring on or after October 1, 2012. This Puerto Rico labor-related share of 62.1 percent was also adopted in the FY 2010 IPPS/LTCH PPS final rule (74 FR 43857) at the time the FY 2006-based hospital market basket was established, effective October 1, 2009. Consistent with our methodology for determining the national labor-related share, we added the Puerto Rico-specific relative weights for wages and salaries, fringe benefits, contract labor, the labor-related portion of professional fees, administrative and business support services, and all other labor-related services (previously referred to in the FY 2002-based IPPS market basket as labor-intensive) to determine the labor-related share. Puerto Rico hospitals are paid based on 75 percent of the national standardized amounts and 25 percent of the Puerto Rico-specific standardized amounts. The labor-related share of a hospital's Puerto Rico-specific rate will be either the Puerto Rico-specific labor-related share of 62.1 percent or 62 percent, depending on which results in higher payments to the hospital. If the hospital has a Puerto Rico-specific wage index of greater than 1.0, we will set the hospital's rates using a labor-related share of 62.1 percent for the 25 percent portion of the hospital's payment determined by the Puerto Rico standardized amounts because this amount will result in higher payments. Conversely, a hospital with a Puerto Rico-specific wage index of less than 1.0 will be paid using the Puerto Rico-specific labor-related share of 62 percent of the Puerto Rico-specific rates because the lower labor-related share will result in higher payments. The Puerto Rico labor-related share of 62.1 percent for FY 2013 is reflected in Table 1C, which is published in section VI. of the Addendum to this final rule and available via the Internet.

IV. Other Decisions and Changes to the IPPS for Operating Costs and Graduate Medical Education (GME) Costs

A. Hospital Readmissions Reduction Program

1. Statutory Basis for the Hospital Readmissions Reduction Program

Section 3025 of the Affordable Care Act, as amended by section 10309 of the Affordable Care Act, added a new subsection (q) to section 1886 of the Act. Section 1886(q) of the Act establishes the ''Hospital Readmissions Reduction Program,'' effective for discharges from an ''applicable hospital'' beginning on or after October 1, 2012, under which payments to those applicable hospitals may be reduced to account for certain excess readmissions.

Section 1886(q)(1) of the Act sets forth the methodology by which payments to ''applicable hospitals'' will be adjusted to account for excess readmissions. Pursuant to section 1886(q)(1) of the Act, payments for discharges from an ''applicable hospital'' will be an amount equal to the product of the ''base operating DRG payment amount'' and the adjustment factor for the hospital for the fiscal year. That is, ''base operating DRG payments'' are reduced by an adjustment factor that accounts for excess readmissions. Section 1886(q)(2) of the Act defines the base operating DRG payment amount as ''the payment amount that would otherwise be made under subsection (d) (determined without regard to subsection (o) [the Hospital VBP Program]) for a discharge if this subsection did not apply; reduced by * * * any portion of such payment amount that is attributable to payments under paragraphs (5)(A), (5)(B), (5)(F), and (12) of subsection (d).'' Paragraphs (5)(A), (5)(B), (5)(F), and (12) of subsection (d) refer to outlier payments, IME payments, DSH payments, and payments for low-volume hospitals, respectively.

Furthermore, section 1886(q)(2)(B) of the Act specifies special rules for defining ''the payment amount that would otherwise be made under subsection (d)'' for certain hospitals. Specifically, section 1886(q)(2)(B) of the Act states that ''[i]n the case of a Medicare-dependent, small rural hospital (with respect to discharges occurring during fiscal years 2012 and 2013) or a sole community hospital * * * the payment amount that would otherwise be made under subsection (d) shall be determined without regard to subparagraphs (I) and (L) of subsection (b)(3) and subparagraphs (D) and (G) of subsection (d)(5).'' We are finalizing policies to implement the statutory

provisions related to the definition of ''base operating DRG payment amount'' in this FY 2013 IPPS/LTCH PPS final rule.

Section 1886(q)(3)(A) of the Act defines the ''adjustment factor'' for an applicable hospital for a fiscal year as equal to the greater of ''(i) the ratio described in subparagraph (B) for the hospital for the applicable period (as defined in paragraph (5)(D)) for such fiscal year; or (ii) the floor adjustment factor specified in subparagraph (C).'' Section 1886(q)(3)(B) of the Act, in turn, describes the ratio used to calculate the adjustment factor. It states that the ratio is ''equal to 1 minus the ratio of—(i) the aggregate payments for excess readmissions * * *; and (ii) the aggregate payments for all discharges * * *.'' Section 1886(q)(3)(C) of the Act describes the floor adjustment factor, which is set at 0.99 for FY 2013, 0.98 for FY 2014, and 0.97 for FY 2015 and subsequent fiscal years.

Section 1886(q)(4) of the Act sets forth the definitions of ''aggregate payments for excess readmissions'' and ''aggregate payments for all discharges'' for an applicable hospital for the applicable period. The term ''aggregate payments for excess readmissions'' is defined in section 1886(q)(4)(A) of the Act as ''the sum, for applicable conditions * * * of the product, for each applicable condition, of (i) the base operating DRG payment amount for such hospital for such applicable period for such condition; (ii) the number of admissions for such condition for such hospital for such applicable period; and (iii) the ''Excess Readmission Ratio * * * for such hospital for such applicable period minus 1.'' The ''excess readmission ratio'' is a hospital-specific ratio based on each applicable condition. Specifically, section 1886(q)(4)(C) of the Act defines the excess readmission ratio as the ratio of ''risk-adjusted readmissions based on actual readmissions'' for an applicable hospital for each applicable condition, to the ''risk-adjusted expected readmissions'' for the applicable hospital for the applicable condition.

Section 1886(q)(5) of the Act provides definitions of ''applicable condition,'' ''expansion of applicable conditions,'' ''applicable hospital,'' ''applicable period,'' and ''readmission.'' The term ''applicable condition,'' this is addressed in detail in section IV.C.3.a. of the FY 2012 IPPS/LTCH PPS final rule (76 FR 51665 through 51666), is defined as a ''condition or procedure selected by the Secretary among conditions and procedures for which: (i) readmissions * * * represent conditions or procedures that are high volume or high expenditures * * * and (ii) measures of such readmissions * * * have been endorsed by the entity with a contract under section 1890(a) * * * and such endorsed measures have exclusions for readmissions that are unrelated to the prior discharge (such as a planned readmission or transfer to another applicable hospital).'' Section 1886(q)(5)(B) of the Act also requires the Secretary, beginning in FY 2015, ''to the extent practicable, [to] expand the applicable conditions beyond the 3 conditions for which measures have been endorsed * * * to the additional 4 conditions that have been identified by the Medicare Payment Advisory Commission in its report to Congress in June 2007 and to other conditions and procedures as determined appropriate by the Secretary.''

Section 1886(q)(5)(C) of the Act defines ''applicable hospital,'' that is, a hospital subject to the Hospital Readmissions Reduction Program, as a ''subsection (d) hospital or a hospital that is paid under section 1814(b)(3) [of the Act], as the case may be.'' The term ''applicable period,'' as defined under section 1886(q)(5)(D) of the Act, ''means, with respect to a fiscal year, such period as the Secretary shall specify.'' As explained in the FY 2012 IPPS/LTCH PPS final rule, the ''applicable period'' is the period from which data are collected in order to calculate various ratios and adjustments under the Hospital Readmissions Reduction Program.

Section 1886(q)(6) of the Act sets forth the public reporting requirements for hospital-specific readmission rates. Section 1886(q)(7) of the Act limits administrative and judicial review of certain determinations made pursuant to section 1886(q) of the Act. Finally, section 1886(q)(8) of the Act requires the Secretary to collect data on readmission rates for all hospital inpatients for ''specified hospitals'' in order to calculate the hospital-specific readmission rates for all hospital inpatients and to publicly report these readmission rates.

2. Overview

As we stated in the FY 2012 IPPS/LTCH PPS final rule, we intend to implement the requirements of the Hospital Readmissions Reduction Program in the FY 2012, FY 2013, and future IPPS/LTCH PPS rulemaking cycles.

As explained above, the payment adjustment factor set forth in section 1886(q) of the Act does not apply to discharges until FY 2013. Therefore, we elected to implement the Hospital Readmissions Reduction Program over a 2-year period, beginning in FY 2012. In the FY 2012 IPPS/LTCH PPS final rule, we addressed the issues of the selection of readmission measures and the calculation of the excess readmission ratio, which will be used, in part, to calculate the readmission adjustment factor. Specifically, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51660 through 51676), we addressed portions of section 1886(q) of the Act related to the following provisions:

- Selection of applicable conditions;
- Definition of ''readmission;''
- Measures for the applicable conditions chosen for readmission;
- Methodology for calculating the excess readmission ratio; and
- Definition of ''applicable period.''

With respect to the topics of ''measures for readmission'' for the applicable conditions, and ''methodology for calculating the excess readmission ratio,'' we specifically addressed the following:

- Index hospitalizations;
- Risk adjustment;
- Risk standardized readmission rate;
- Data sources; and
- Exclusion of certain readmissions.

We are providing below a summary of the provisions of section 1886(q) of the Act that were finalized in the FY 2012 IPPS/LTCH PPS final rule.

Applicable conditions: In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51665 through 51666), we finalized the applicable conditions for the FY 2013 Hospital Readmissions Reduction Program as heart failure (HF), acute myocardial infarction (AMI), and pneumonia (PN). Section 1886(q)(5)(A) of the Act requires that the ''applicable conditions'' be conditions or procedures for which readmissions are ''high volume or high expenditure'' and that ''measures of such readmissions'' have been endorsed by the entity with a contract under section 1890(a) of the Act (currently National Quality Forum (NQF)) and such endorsed measures have exclusions for readmissions that are unrelated to the prior discharge. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27956), we proposed to codify this definition of ''applicable conditions'' in the regulations we proposed at 42 CFR 412.152.

Comment: One commenter stated that the Hospital Readmissions Reduction Program measures were not reviewed by the Measure Application Partnership (MAP) in 2011. The commenter urged CMS to coordinate MAP review of the Hospital Readmissions Reduction Program and related measures.

Response: We thank the commenter for the suggestion. The three measures

to be used in the Hospital Readmissions Reduction Program were finalized in the FY 2012 IPPS/LTCH Final Rule posted at the Office of the Federal Register on August 1, 2011, which pre-dated the requirement and establishment of the pre-rulemaking process as described under section 3014(b) of the Affordable Care Act, which amended section 1890A of the Act. This provision of the Affordable Care Act requires the Secretary to submit measures to a multi-stakeholder group, currently the Measure Application Partnership (MAP) for pre-rulemaking review. CMS established this pre-rulemaking process in December 2011. Because the statutory language at section 1886(q)(1) of the Act, as amended by section 3025 of the Affordable Care Act, refers to FY 2013 ''and subsequent Fiscal Years'' but authorizes expansion of the conditions (and hence measures) to be used in the program beginning with FY 2015, we believe the statute implies that the measures adopted for use in FY 2013 would also be used in FY 2014. In the future, if we consider proposing any new measures for future expansion of the Hospital Readmissions Reduction Program beyond these three measures, which we have the authority to do beginning with in FY 2015, we plan to submit them to the MAP for pre-rulemaking review.

Comment: Several commenters expressed concerns that the Hospital Readmissions Reduction Program may induce unintended consequences of overcrowding hospital emergency departments, as hospitals may believe they are compelled to avoid readmitting patients.

Response: We recognize that performance-based payment penalty or incentive programs may have the potential for unintended consequences. We are committed to monitoring the measures and assessing unintended consequences over time, such as the inappropriate shifting of care, increased patient morbidity and mortality, and other negative unintended consequences for patients.

After consideration of the public comments we received, we are finalizing our proposal to codify the definition of ''applicable condition'' at 42 CFR 412.152 without modification.

In the FY 2012 IPPS/LTCH PPS final rule, we discussed how each of the finalized ''applicable conditions'' for FY 2013 meets these statutory requirements. We noted that section 1886(q)(5)(B) of the Act allows for the Secretary to expand the conditions for the Hospital Readmissions Reduction Program starting in FY 2015.

Comment: Several commenters addressed the expansion of conditions to be included in the program. Some commenters urged that CMS not include the hospital-wide readmission measure, currently proposed for the Hospital IQR program, in future HRRP program expansion. Commenters believed it would result in double counting of AMI, HF, and PN patients, and that condition-specific measures were more actionable and understandable for hospitals subject to this provision. Other commenters encouraged CMS to include the following conditions in future program expansions: Atrial fibrillation (as one of other vascular conditions); chronic obstructive pulmonary disease; coronary artery bypass grafting; and percutaneous transluminal angioplasty. One commenter suggested that CMS delay the expansion of the program until such time as hospitals gain familiarity with the first three conditions used in the program.

Response: We thank the commenters for these suggestions and will take them into consideration when we address the expansion of the applicable conditions in future rulemaking.

Readmission: In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51666), we finalized a definition of ''readmission'' as occurring when a patient is discharged from an applicable hospital and then admitted to the same or another acute care hospital, that is, another applicable hospital, within a specified time period (30 days) from the date of discharge from the initial index hospitalization. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27956), we proposed to codify this definition of ''readmission'' under the regulations we proposed at 42 CFR 412.152. As we also discussed in the FY 2012 IPPS/LTCH PPS final rule, only one readmission during the 30 days following the discharge from the initial hospitalization will count as a readmission for purposes of calculating the ratios set forth in section 1886(q)(3) of the Act. For any given patient, none of the subsequent readmissions he or she experiences within 30 days after discharge would be counted as a new ''index'' admission (that is, an admission evaluated for a subsequent readmission).

Comment: Several commenters did not believe that the readmissions measures adequately measures quality. Commenters noted that it is difficult to determine which readmissions are preventable, and questioned whether reducing readmissions is a desirable outcome because increased mortality could lead to decreased readmission rates. One commenter cited research that higher readmission rates occur in communities with more physicians and hospital beds and in areas with high poverty and large minority or older populations to demonstrate that it is unclear whether readmissions always reflect poor quality.

Response: We believe that risk-standardized readmission rates provide an important quality indicator to hospitals, CMS, patients, policymakers, and insurers. Readmission of patients who were recently discharged after hospitalization with AMI, HF, or pneumonia represents an important, expensive, and often avoidable adverse outcome. The risk of readmission can be avoided by improving the quality and type of care provided to these patients. There is ample evidence [50,51,52] that hospitals can reduce their readmission rates through such efforts as ensuring patients are clinically ready at discharge, reducing risk of infection, reconciling medications, improving communication with community providers participating in transitions of care, educating patients adequately upon discharge, and assuring patients understand follow-up care upon discharge. These interventions are aligned with efforts to improve mortality and are not at odds with the goal of survival. Moreover, the results of public reporting of the measures indicate that hospitals can do well on both mortality and readmission rates.

Comment: One commenter recommended a 7-day to 15-day readmission timeframe instead of 30 days, stating that a 30-day measure may be appropriate for assessing a community's ability to work together to provide the best care and services for patients, but may attribute more responsibility to the hospital than might otherwise be warranted.

Response: In the FY 2012 IPPS/LTCH PPS final rule, we finalized 30 days as the time period specified from the date of discharge for the purpose of defining readmission for the Hospital Readmissions Reduction Program. The 30-day time period meets the requirement set forth in section 1886(q)(5)(E) of the Act that the time period specified by the Secretary for

defining a readmission be consistent with the time period specified for the endorsed measures. Furthermore, the timeframe of 30 days is a clinically meaningful period for hospitals to collaborate with their communities in an effort to reduce readmissions.

Comment: One commenter expressed specific concerns that the list of planned readmissions in the AMI measure does not account for all planned readmissions. Specifically, the commenter recommended the inclusion of AMI codes with ''0'' in the fifth digit, indicating ''episode of care unspecified.'' The commenter noted that if the episode of care is unspecified, it could be outside the 30-day readmission timeframe. The commenter added that under the ICD–9–CM guidelines, the ICD–9–CM codes 410.XX for AMI are used for ''acute'' condition for up to 8 weeks duration.

Response: We thank the commenter for the suggestion. However, the AMI ICD–9–CM codes described by the commenter are used to identify index hospitalizations, not readmissions. The measures only identify the index admissions based on the use of the principal discharge diagnosis, which should represent the reason the patient was admitted to the hospital. Therefore, despite the use of the word ''unspecified,'' in most cases the AMI will have been the primary reason for admission and appropriately included as an index case.

Comment: One commenter stated the 30-day timeframe may be appropriate for assessing a community's ability to collaborate and provide the best care and services for discharged patients, but 30 days is too long a timeframe to fairly assess the attribution of the hospital's direct care of a patient.

Response: The 30-day time period that we finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51666) meets the requirement set forth in section 1886(q)(5)(E) of the Act that the time period specified by the Secretary for defining a readmission be consistent with the time period specified for the endorsed measures. We disagree with the commenter that a much shorter timeframe is fairer, and believe that the timeframe of 30 days is a clinically meaningful period for hospitals to collaborate with their communities in an effort to reduce readmissions. This approach would ensure patients are clinically ready at discharge, reducing risk of infection, reconciling medications, improving communication with community providers participating in transitions of care, educating patients adequately upon discharge, and assuring patients understand follow-up care upon discharge.

Comment: One commenter requested clarification whether transfers from short-term acute care hospitals to LTCHs are excluded from the definition of readmissions.

Response: As defined in section 1886(q)(5)(E) of the Act, and finalized in the FY 2012 IPPS/LTCH PPS final rule, only readmissions to a subsection (d) hospital or a hospital that is paid under section 1814(b)(3) [of the Act] will be counted as readmissions. Readmissions to LTCHs will not be counted as readmissions.

After consideration of the public comments we received, we are finalizing our proposal to codify the definition of ''readmission'' at 42 CFR 412.152 without modification.

Measures for applicable conditions: As finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51666 and 51667), we will use three NQF-endorsed, hospital risk-standardized readmission measures for FY 2013, which are currently in the Hospital IQR Program: Acute Myocardial Infarction 30-day Risk Standardized Readmission Measure (NQF #0505); Heart Failure 30-day Risk Standardized Readmission Measure (NQF #0330); and Pneumonia 30-day Risk Standardized Readmission Measure (NQF #0506). The measures, as endorsed by the NQF, include the 30-day time window, risk-adjustment methodology, and exclusions for certain readmissions.

As finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51673), we will use the risk-standardized readmission ratio of the NQF-endorsed readmission measures as the excess readmission ratio. The ratio is a measure of relative performance. If a hospital performs better than an average hospital that admitted similar patients (that is, patients with the same risk factors for readmission such as age and comorbidities), the ratio will be less than 1.0. If a hospital performs worse than average, the ratio will be greater than 1.0.

Measure methodology: In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51668 through 51669), we finalized the methodology of the measures and are summarizing it briefly below.

Index hospitalizations included in the measure calculation: We finalized the definition of ''index hospitalization'' consistent with the NQF-endorsed definition. The measures define an index hospitalization as a hospitalization evaluated in the measure for a possible readmission within 30 days after discharge (that is, a hospitalization included in the measure calculation). The measures exclude as index hospitalizations patients who died during the first admission, patients who have not spent at least 30 days post-discharge enrolled in Medicare fee-for-service (FFS), patients who are discharged against medical advice, and patients who are under the age of 65.

Comment: Several commenters suggested exclusions from the index hospitalizations included in the measures, which included exclusions for patients under ''extreme circumstances'' such as transplants, end-stage renal disease, burn, trauma, psychosis and substance abuse.

Response: We appreciate the concern expressed by the commenters that patients of these ''extreme circumstances'' clinically could be sicker and more likely to be readmitted. The measures address clinical differences in hospitals' case-mix through risk adjustment rather than through excluding patients from the measure as suggested by the commenter. The goal in developing outcomes measures is to create a clinically cohesive cohort that includes as many patients as possible admitted with the given condition. Greatly expanding our list of exclusions would result in a measure that was less useful and meaningful, because it would reflect the care of fewer patients. In addition, we believe that by excluding patients with significant comorbidities, the measure would not assess of the quality of care for those patients. To fairly profile hospitals' performance, it is critical to place hospitals on a level playing field and account for their differences in the patients that present for care. This is accomplished through adequate risk-adjustment for patients' clinical presentation rather than exclusion of patients.

Risk adjustment: The three measures, as endorsed by the NQF and finalized in the FY 2012 IPPS/LTCH PPS final rule, adjust for key factors that are clinically relevant and have strong relationships with the outcome (for example, patient demographic factors, patient coexisting medical conditions, and indicators of patient frailty). Under the current NQF-endorsed methodology, these covariates are obtained from Medicare claims extending 12 months prior to, and including, the index admission. This risk-adjustment approach adjusts for differences in the clinical status of the patient at the time of the index admission as well as for demographic variables. A complete list of the variables used for risk adjustment and the clinical and statistical process for selecting the variables for each NQF-endorsed measure, as proposed, is

available at the Web site: *http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1219069855841*.

Comment: Several commenters suggested that the readmission measures include adjustments for socioeconomic status and other factors that are either outside the hospitals' immediate control or that may adversely affect certain types of hospitals more than others. Suggestions for variables to include in either the patient level or the hospital-level model included: patient race, ethnicity, language, income, lifestyle, health literacy, dual-eligible status (that is, eligibility for both Medicare and Medicaid), insurance status, functional status, cognitive impairment, post-discharge care support structure, and access to primary care. Two commenters suggested stratification of the hospital calculations by the percentage of dual-eligible patients. Other commenters suggested accounting for societal factors such as housing stability, food scarcity, and chronic unemployment.

Response: We have continued to consider and evaluate stakeholder concerns regarding the influence of patient socioeconomic status on readmission rates. In our analyses (*http://cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/HospitalChartBook2011.pdf*), we consistently find that hospitals that care for large proportions of patients of low socioeconomic status are capable of performing well on readmission measures. Many safety-net providers and teaching hospitals do as well or better on the measures than hospitals without substantial numbers of patients of low socioeconomic status. The measures include rigorous risk-adjustment for differences in patient illness, and this likely incorporates some of the patient differences due to socioeconomic status (to the extent that patients of low socioeconomic status present to the hospital with greater level of disease). The risk adjustment for clinical factors likely captures much of the variation due to socioeconomic status, thus leading to more modest impact of socioeconomic status on hospital readmissions than stakeholders expect. We note that the goal of risk adjustment is to account for factors that are inherent to the patient at the time of admission, such as severity of disease, so as to put hospitals on a level playing field. The measures should not be risk-adjusted to account for differences in practice patterns that lead to lower or higher risk for patients to be readmitted. The measures aim to reveal differences related to the patterns of care. Furthermore, the statutory language in section 1886(q)(5)(A)(ii)(I) of the Act requires that the measures included in the Hospital Readmissions Reduction Program be consistent with measures that are NQF-endorsed. A change in the risk-adjustment methodology of the measures as they are currently endorsed by the NQF would take time and necessitate additional rulemaking to adopt such measures. The measures also do not adjust for socioeconomic status because the association between socioeconomic status and health outcomes can be due, in part, to differences in the quality of health care received by groups of patients with varying socioeconomic status. The measures do not adjust for socioeconomic status, or other patient factors such as race, both because we do not want to hold hospitals to different standards for the outcomes of their patients of low socioeconomic status (which would definitely occur if calculations were stratified by percent dual-eligible patients as suggested by two of the commenters), and because our analyses demonstrate that patient socioeconomic status does not determine hospital performance on the readmission measures. Finally, we do not want to mask potential disparities or minimize incentives to improve the outcomes of disadvantaged populations. This approach is also consistent with the guidance from the NQF, which states that risk models should not obscure disparities by adjusting for factors associated with inequality in case (such as race or socioeconomic status) as well as with the methodology finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51660 through 51676). However, we are committed to tracking this issue and will continue to evaluate disparities in care and the impact of the Hospital Readmissions Reduction Program on providers of vulnerable populations, including teaching and safety-net hospitals.

Comment: Two commenters supported CMS' decisions not to risk-adjust for socioeconomic status and urged CMS to resist making any changes to the Hospital Readmissions Reduction Program based on socioeconomic status, because the same care protocols that work with a different population may also work with patients of lower socioeconomic circumstances. One commenter appreciated the justification for the continued exclusion of patient-level socioeconomic status covariates—that doing so would impose different performance expectations based on the income distribution of patients and would also result in overfitting the risk adjustment models, in that it would result in an overly complex and possibly multicollinear model that yields inaccurate predictions.

Response: We thank the commenters for their support of our approach to risk-adjustment.

Comment: One commenter believed that the risk adjustment variables used to calculate readmission rates are not transparent to hospitals and urged CMS to ensure they are publicly and easily accessible.

Response: The risk adjustment variables that will be used to calculate readmission rates can be found in the readmission measure methodology reports found on the Web site at: *http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1219069855841*. Some of the patient risk factors are grouped using the CMS Condition Categories (CC) classification. A crosswalk of CCs to ICD–9–CM codes is available at: *http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1219069856694*.

Comment: One commenter stated that the comorbidities included in the risk-adjustment variables may not all be consistently coded at the present time.

Response: We have validated the 30-day readmission measures with models that use medical record-abstracted data for risk adjustment. This validation supported the use of the administrative claims data on comorbidities and demonstrated that the estimates of hospitals' risk-standardized readmission rates (RSRRs) based on administrative data are very similar to the rates estimated by models based on medical record data. This high level of agreement in the results based on the two different approaches supports the use of the administrative claims-based models for public reporting. Our approach to gathering risk factors for patients also mitigates the potential limitations of claims data. Because not every diagnosis is coded at every visit, we use inpatient, outpatient, and physician claims data for the 12 months prior to admission, and secondary diagnosis codes during the index admission, for risk adjustment.

Data sources: The finalized measures use Medicare inpatient claims data for Medicare FFS patients 65 years and older to identify index hospitalizations and readmissions. For risk adjustment, the measures use Part A and Part B claims for the 12 months prior to the index hospitalization as well as index hospitalization claims.

Exclusion of certain readmissions: The NQF-endorsed measures of readmissions finalized in the FY 2012 IPPS/LTCH PPS final rule include exclusions of readmissions consistent with the statutory requirement that all measures exclude certain readmissions that are unrelated to the prior discharge, such as transfers to other acute care facilities and planned readmissions.

Comment: Some commenters urged CMS to identify and exclude planned readmissions for the AMI, HF, and PN readmission measures. The commenters stated that failure to do so may encourage providers to delay necessary follow-up procedures. Two commenters urged CMS to explore common reasons for planned readmissions, bring them to the NQF for review for continued endorsement for the AMI, HF, and PN measures, and use these planned readmissions for the measures in subsequent rulemaking. A few commenters recommended that CMS also consider implementing codes that hospitals can use to designate when a readmission is planned so that these cases can be excluded from the readmission measure, and recommended using the NUBC Committee's proposed discharge status codes to identify planned readmissions.

Response: Our contractor engaged multiple clinical experts to develop a list of planned readmissions which was made part of a hospital-wide readmission measure that recently obtained NQF endorsement. During the development of this hospital-wide readmission measure, there was a 2-week informal public comment period in order to receive feedback on the measure and its planned readmission algorithm. The list of planned readmissions also underwent a 2-week informal public comment period when the hospital-wide readmission measure was evaluated at the NQF.

We maintain the measures annually and submit the updates to NQF for review. In response to stakeholder input, we intend to update the condition-specific measures to permit more planned readmissions for the condition-specific measures, which would not be counted as readmissions. Any NQF-approved changes to the measures will then be proposed for the Hospital Readmissions Reduction Program through future rulemaking. We are aware of the NUBC's intention to propose discharge status code on claims to identify planned readmissions. We would analyze its reliability, validity, and usability for identifying planned readmissions prior to considering the adoption of such a code for use in the readmission measures in the future.

Comment: Some commenters suggested that CMS exclude readmissions that occur for reasons such as transplants and device implantation, trauma, psychoses, substance use, end-stage renal disease, maternity and neonatal readmissions, rehabilitation, sepsis, natural disease or treatment progression, acute decompensated heart failure, the result of nonhospital community factors, and disaster relief.

Response: We thank the commenters for these suggestions. Many of these suggestions are among the planned readmission updates we intend to submit for the AMI, HF and PN measures as part of annual maintenance review by NQF. We perform measure maintenance reviews which include consideration of public comments, exploration and identification of any other exclusions for the measures; in this case, other types of readmissions, that would be excluded from the measures as planned readmissions would be considered during the maintenance review. If we determine certain readmissions should be excluded from the measures, we will revise the measures, present them to NQF for endorsement, and update the Hospital Readmissions Reduction Program in future rulemaking.

Comment: Several commenters urged CMS to differentiate between related and unrelated readmissions. One suggestion to define ''related readmissions'' as any readmission for which the patient's primary diagnosis falls within the same MS–DRG or as the diagnosis for the initial admission, or to use the AHRQ CCs as a way to group diagnoses and procedure codes into clinically meaningful groups.

Response: We do not seek to differentiate between related and unrelated readmissions, or to identify preventable readmissions or ''necessary'' readmissions for several reasons. First, from the patient perspective, an unplanned readmission for any reason is likely to be an undesirable outcome of care after an acute hospitalization. Second, readmissions not directly related to the index condition may still be a result of the care received during the index hospitalization. For example, a patient hospitalized for heart failure who develops a hospital-acquired infection may ultimately be readmitted for sepsis. It would be inappropriate to treat this readmission as unrelated to the care the patient received during the index hospitalization. Furthermore, the range of potentially avoidable readmissions also includes those not directly related to the initial hospitalization, such as those resulting from poor communication at discharge or inadequate follow-up. As such, creating a comprehensive list of potential complications related to the index hospitalization would be arbitrary, incomplete, and, ultimately, impossible to implement. The measures are not meant to suggest that the appropriate readmission rate is zero, but rather to identify hospitals that have a higher rate of readmissions than would be expected given their case mix.

Minimum number of discharges for applicable conditions: Section 1886(q)(4)(C)(ii) of the Act allows the Secretary discretion to determine the minimum number of discharges for the applicable condition. We finalized a policy in the FY 2012 IPPS/LTCH PPS final rule that the minimum number of discharges for applicable conditions is 25 for each condition for the FY 2013 Hospital Readmissions Reduction Program.

Comment: Several commenters urged CMS to raise the minimum case threshold to qualify for the Hospital Readmissions Reduction Program to improve the reliability of the measures.

Response: We determined the 25-case threshold for public reporting based on a reliability statistic that is calculated from the intercluster correlation, a parameter of the model. We are maintaining the minimum 25-case threshold that we adopted through rulemaking last year.

Applicable period: Under section 1886(q)(5)(D) of the Act, the Secretary has the authority to specify the applicable period with respect to a fiscal year. In the FY 2012 IPPS/LTCH PPS final rule, we finalized our policy to use 3 years of claims data to calculate the proposed readmission measures. Specifically, we finalized the policy to use claims data from July 1, 2008, to June 30, 2011, to calculate the excess readmission ratios and to calculate the FY 2013 Hospital Readmissions Reduction Program payment adjustment. As we discussed in section IV.A.3.d. of the preamble of the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27957), the excess readmission ratios used to model our proposed methodology to calculate the Hospital Readmissions Reduction Program payment adjustment were based on the 3-year time period of July 1, 2007 to June 30, 2010. However, we indicated that, for the final rule, we intended to use excess readmission ratios based on the applicable period of July 1, 2008 to June 30, 2011, as finalized in the FY 2012 IPPS/LTCH PPS final rule. In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to codify the definition of ''applicable period'' at 42 CFR 412.152

as the 3-year period from which data are collected in order to calculate excess readmission ratios and adjustments for the fiscal year.

Comment: Several commenters urged CMS to consider a shorter timeframe for measuring performance for readmissions such as a 1-year or 2-year period. The commenters believed that hospitals should not be assessed on readmissions that occurred during 2008, long before the policy addressing this provision was passed in the Affordable Care Act.

Response: In the FY 2012 IPPS/LTCH PPS final rule, we finalized 3 years as the applicable period for the FY 2013 payment adjustment. We use a 3-year period of index admissions to increase the number of cases per hospital used for measure calculation, which improves the precision of each hospital's readmission estimate. Although this approach utilizes older data, it also identifies more variation in hospital performance and still allows for improvement from one year of reporting to the next. We are maintaining the 3-year period as previously adopted.

Comment: One commenter stated that, although data from across a 3-year period helps to identify significant improvements over time, there is a huge lag in the end of the 3-year period and the commencements of penalties (approximately 15 months).

Response: We decided to use the current timeframe because it balances the needs for the most recent claims and for sufficient time to process the claims data and calculate the measures to meet the program implementation timeline. We will continue to explore the feasibility of using more up-to-date data sources.

After consideration of the public comments we received, we are finalizing our proposal to codify our definition of ''applicable period'' under the regulations at 42 CFR 412.152 without modification.

Excess Readmission Ratio Calculation: In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51673 through 51676), we finalized the excess readmission ratio pursuant to section 1886(q)(4)(C) of the Act. We established the excess readmission ratio as the risk-adjusted readmission ratio from the NQF-endorsed measures. The ratio is calculated using hierarchical logistic regression. The method adjusts for variation across hospitals in how sick their patients are when admitted to the hospital (and therefore variation in hospital patients' readmission risk) as well as the variation in the number of patients that a hospital treats to reveal difference in quality. The method produces an adjusted actual (or ''predicted'') number in the numerator and an ''expected'' number in the denominator. The expected calculation is similar to that for logistic regression—it is the sum of all patients' expected probabilities of readmission, given their risk factors and the risk of readmission at an average hospital.

For each hospital, the numerator of the ratio used in the NQF-endorsed methodology (actual adjusted readmissions) is calculated by estimating the probability of readmission for each patient at that hospital and summing up over all the hospital's patients to get the actual adjusted number of readmissions for that hospital. Mathematically, the numerator equation can be expressed as:

Numerator: Adjusted Actual Readmissions

Step 1:

Calculate each patient's predicted probability of readmission = $\frac{1}{1 + e^{-Z_a}}$

Z_a = hospital-specific effect + $X\beta$

intercept + risk-adjustment coefficients

Step 2:

To get the numerator result, add all patients' predicted probabilities of readmission

The denominator of the risk-standardized ratio (excess readmission ratio) under this NQF-endorsed methodology sums the probability of readmission for each patient at an average hospital. This can be expressed mathematically as:

Denominator: Expected Readmissions

Step 1:

Calculate each patient's expected probability of readmission $= \frac{1}{1 + e^{-Ze}}$

$Z_e = X\beta$

intercept + risk-adjustment coefficients

Step 2:

To get the denominator result, add all patients' expected probabilities of readmission

Thus, the ratio compares the total adjusted actual readmissions at the hospital to the number that would be expected if the hospital's patients were treated at an average hospital with similar patients. Hospitals with more adjusted actual readmissions than expected readmissions will have a risk-standardized ratio (excess readmission ratio) greater than one. In summary, in the FY 2012 IPPS/LTCH PPS final rule, we defined the ''excess readmission ratio'' as the risk-standardized readmission ratio of the NQF-endorsed readmission measures. More in-depth detail surrounding the methodology of excess readmission ratio calculation can be accessed on the Web site at: *http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1219069855841*.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27958), we proposed to codify the definition of ''excess readmission ratio'' under the regulations we proposed at 42 CFR 412.152 as a hospital-specific ratio for each applicable condition for an applicable period, which is the ratio (but not less than 1.0) of (1) risk-adjusted readmissions based on actual readmissions for an applicable hospital for each applicable condition to (2) the risk-adjusted expected readmissions for the applicable hospital for the applicable condition.

Comment: Two commenters indicated that almost no hospitals are statistically significantly different from the U.S. average because the hierarchical logistic regression model shrinks the coefficients of small hospitals towards the mean. One commenter expressed concern that the methodology relies excessively on the ability of the model to correct for hospital-specific characteristics and may be at odds with the observed rate. Another commenter suggested that alternatives to the current method could include looking at more conditions over several years which would increase the sample size, reduce random variation, and reduce the need to shrink estimates toward the national mean.

Response: The modeling of the readmission rates takes into account hospitals' case-mix as well as the sample size of the hospital. For both of these reasons, the risk-standardized rate may appropriately differ from the observed rates. These differences are important in leveling the playing field for hospitals and accounting for uncertainty in small volume estimates. The hierarchical logistic regression model that we use to calculate the 30-day measures allows the inclusion of hospitals with relatively few observations but takes into account the uncertainty associated with sample size.

Comment: One commenter believed that the statute requires that CMS calculate an Observed-to-Expected (O/E) ratio for each readmission condition by hospital and to use that ratio to determine the payment penalty. The commenter requested that CMS revise its methodology so that it calculates hospital-specific observed and expected readmission rates and reports them on *Hospital Compare.*

Response: We disagree with the commenter's assessment that the statute requires that we use an observed to expected ratio. Rather, the statute at section 1886(q)(4)(C) of the Act defines the excess readmission ratio as the ratio of ''the risk adjusted readmissions based on actual readmissions,'' and ''the risk adjusted expected readmissions'' as ''determined consistent with a readmission methodology that has been endorsed'' by an entity with a contract under section 1890(a) of the Act (currently the NQF). The readmission measures that we are using for the Hospital Readmissions Reduction Program have numerators and denominators consistent with these definitions. The measures have been endorsed by the NQF, and we finalized use of these NQF-endorsed readmission measures in the FY 2012 IPPS LTCH PPS final rule.

Comment: One commenter asked for clarification on the calculation of the readmission rates for multiple readmissions, particularly where one or more readmissions might be unrelated to the index admission.

Response: As finalized in the FY 2012 IPPS/LTCH PPS final rule, the readmissions measures are designed to measure whether a patient experienced at least one readmission within 30 days of an initial (or ''index'') discharge as a single binary (yes/no) event, rather than counting the number of readmissions experienced within 30 days of discharge as a separate readmissions. For any given patient, only one readmission during the 30 days following the discharge from the initial hospitalization will count as a readmission for purposes of calculating the ratios set forth in section 1886(q) of the Act. For any given patient, none of the subsequent readmissions he or she experiences within 30 days after discharge would be counted as a new ''index'' admission within the same measure (that is, an admission evaluated in the measure for a subsequent readmission). Any eligible admission after the 30-day time period will be considered a new index admission. For

example, if a patient's index admission was for heart failure and the patient was readmitted with a primary diagnosis of pneumonia, that hospitalization could count as both a readmission for the health failure measure and an index admission for the pneumonia measure.

We do not seek to differentiate between related and unrelated readmissions, or to identify preventable readmissions or ''necessary'' readmissions for several reasons. First, from the patient perspective, a readmission for any reason is likely to be an undesirable outcome of care after an acute hospitalization. Second, readmissions not directly related to the index condition may still be a result of the care received during the index hospitalization.

After consideration of the public comments we received, we are finalizing our proposal to codify the definition of ''excess readmission ratio'' under the regulations at 42 CFR 412.152 without modification.

3. FY 2013 Proposed and Final Policies for the Hospital Readmissions Reduction Program

a. Overview

In this final rule, we are addressing the provisions in section 1886(q) of the Act that are related to the Hospital Readmissions Reduction Program payment adjustment, as well as any other provisions in section 1886(q) of the Act that were not addressed in the FY 2012 IPPS/LTCH PPS final rule that are effective for discharges beginning on or after October 1, 2012. Specifically, in this final rule (as we did in the FY 2013 IPPS/LTCH PPS proposed rule), we are addressing section 1886(q) of the Act related to the following provisions:

- Base operating DRG payment amount, including policies for SCHs and MDHs and hospitals paid under section 1814(b) of the Act;
- Adjustment factor (both the ratio and floor adjustment factor);
- Aggregate payments for excess readmissions and aggregate payments for all discharges;
- Applicable hospital;
- Limitations on review;
- Reporting of hospital-specific information, including the process for hospitals to review and submit corrections.

b. Base Operating DRG Payment Amount, Including Special Rules for SCHs and MDHs and Hospitals Paid Under Section 1814 of the Act

(1) Definition of Base Operating DRG Payment Amount (§ 412.152)

Under the Hospital Readmissions Reduction Program at section 1886(q) of the Act, payments for discharges from an ''applicable hospital'' will be an amount equal to the product of the ''base operating DRG payment amount'' and an ''adjustment factor'' that accounts for excess readmissions for the hospital for the fiscal year, for discharges beginning on or after October 1, 2012. Specifically, section 1886(q)(1) of the Act requires the Secretary to base payments for a discharge on an amount equal to the product of ''the base operating DRG payment amount'' and ''the adjustment factor'' for the hospital in a given fiscal year. The ''base operating DRG payment amount'' is defined under section 1886(q)(2) of the Act as ''the payment amount that would otherwise be made under subsection (d) (determined without regard to subsection (o) [the Hospital VBP Program]) for a discharge if this subsection did not apply; reduced by * * * any portion of such payment amount that is attributable to payments under paragraphs (5)(A), (5)(B), (5)(F), and (12) of subsection (d).'' Paragraphs (5)(A), (5)(B), (5)(F), and (12) of subsection (d) of section 1886 of the Act refer to outlier payments, indirect medical education (IME) payments, disproportionate share (DSH) payments, and low-volume hospital payments, respectively.

In general, ''the payment amount that would otherwise be made under subsection (d) * * * for a discharge'' (that is, the discharge payment amount made under section 1886(d) of the Act) determined without consideration of the adjustments to payments made under the Hospital VBP Program (section 1886(o) of the Act) or under the Hospital Readmissions Reduction Program (section 1886(q) of the Act) is the applicable average standardized amount adjusted for resource utilization by the applicable MS–DRG relative weight and adjusted for differences in geographic costs by the applicable area wage index (and by the applicable cost-of-living adjustment (COLA) for hospitals located in Alaska and Hawaii), which is often referred to as the ''wage-adjusted DRG operating payment.'' This payment amount may then be further adjusted if the hospital qualifies for an IME adjustment (under section 1886(d)(5)(B) of the Act), a DSH payment adjustment (under section 1886(d)(5)(F) of the Act), and/or a low-volume payment adjustment (under section 1886(d)(12) of the Act), or if the discharge qualifies for an outlier payment (under section 1886(d)(5)(A) of the Act). Furthermore, certain discharges may qualify for an additional payment for new medical services or technologies under section 1886(d)(5)(K) of the Act (often referred to as a ''new technology add-on payment'').

Consistent with section 1886(q)(2) of the Act, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27959), under the regulations we proposed at 42 CFR 412.152, we proposed to define the ''base operating DRG payment amount'' under the Hospital Readmissions Reduction Program as the wage-adjusted DRG operating payment plus any applicable new technology add-on payments. As required by the statute, we stated that the proposed definition of ''base operating DRG payment amount'' does not include adjustments or add-on payments for IME, DSH, outliers and low-volume hospitals provided for under sections 1886(d)(5)(B), (d)(5)(F), (d)(5)(A), and (d)(12) of the Act, respectively. Section 1886(q)(2) of the Act does not exclude new technology payments made under section 1886(d)(5)(K) of the Act in the definition of ''base operating DRG payment amount''; therefore, any payments made under section 1886(d)(5)(K) of the Act are included in the definition of ''base operating DRG payment amount.'' In addition, under the regulations we proposed at 42 CFR 412.152, we proposed to define ''wage-adjusted DRG operating payment'' as the applicable average standardized amount adjusted for resource utilization by the applicable MS–DRG relative weight and adjusted for differences in geographic costs by the applicable area wage index (and by the applicable COLA for hospitals located in Alaska and Hawaii). We proposed that, under § 412.154(b)(1), to account for excess readmissions, an applicable hospital's base operating DRG payment amount would be adjusted for each discharge occurring during the fiscal year. The payment adjustment for each discharge is determined by subtracting the product of the base operating DRG payment amount for such discharge and the hospital's readmission payment adjustment factor for the fiscal year from the base operating DRG payment amount for such discharge.

Under this proposal, consistent with section 1886(q)(2)(B)(i) of the Act and proposed § 412.154(b)(2), for SCHs that receive payments based on their hospital-specific payment rate, we also proposed to exclude the difference between the hospital's applicable hospital-specific payment rate and the Federal payment rate from the definition of ''base operating DRG payment amount.'' We noted that, under the Hospital Readmissions Reduction Program at section 1886(q) of the Act, the proposed definition of ''base

operating DRG payment amount'' would be used to calculate both the ''aggregate payments for excess readmissions'' and ''aggregate payments for all discharges'' under sections 1886(q)(4)(A) and (B) of the Act, which would then be used to determine the readmission adjustment factor that accounts for excess readmissions under section 1886(q)(3) of the Act (as discussed in greater detail in section IV.A.3.c. of the preamble of the proposed rule and this final rule), and would also be used to determine which payment amounts will be adjusted to account for excess readmissions. (We note that, as discussed in section IV.G. of the preamble of the proposed rule and this final rule, under current law, the MDH program expires at the end of FY 2012 (that is, the MDH program is currently only applicable to discharges occurring before October 1, 2012). Therefore, due to the expiration of the MDH program beginning with FY 2013, we did not include MDHs in the discussion of our proposals regarding the base operating DRG payment amount in the proposed rule.)

Comment: Commenters supported the proposed definition of the base operating DRG payment amount. Commenters also supported our proposal to exclude IME, DSH, outliers, low-volume adjustment, and additional payments made due to status as an SCH from the definition of the base operating DRG payment amount.

Commenters both supported and opposed our proposed inclusion of new technology payments in the definition of the base operating DRG payment amount. Commenters recommended that CMS exclude the new technology payment from the definition of ''base operating DRG payment amount'' because, like payment adjustments for IME and DSH, it is extrinsic to the base rate. In addition, without any known association between the use of new technology and the quality and efficiency of care provided by a hospital, one commenter did not believe there was justification to incorporate the use of new technology into the structure of a quality program. Some commenters asserted that the inclusion of the new technology payments in the base DRG operating payment definition for the determination of payment reduction adjustments conflicts with the primary principle of identifying and ensuring adequate payment for new medical services and technologies for a brief 2- to 3-year period and should not be altered by our other required initiatives.

Response: We believe the statute is specific with regards to the definition of base operating DRG payment amount at section 1886(q)(2) of the Act, which explicitly specifies that any additional payments for IME, DSH, outliers, and low-volume hospitals provided for under sections 1886(d)(5)(B), (d)(5)(F), (d)(5)(A), and (d)(12) of the Act, respectively, are to be excluded. Section 1886(q)(2) of the Act does not specify an exclusion for new technology payments made under section 1886(d)(5)(K) of the Act, and therefore, we do not believe we have the flexibility to exclude new technology payments in the definition of base operating DRG payment amount under the Hospital Readmissions Reduction Program. We are finalizing our definition of ''base operating DRG payment,'' as proposed, without modification.

Comment: One commenter stated that cases that receive transfer adjustments when determining their payment should be accounted for in the proposed definition of base operating DRG payment amount. The commenter specified that the base operating DRG payment amount should also include any payment reductions for patients covered under the transfer policy as it applies to both post-acute and short-stay acute hospitals.

Response: We are clarifying that the base operating DRG payment amount accounts for any applicable transfer adjustment for cases that are paid under as either an acute care transfer or post-acute care transfer. In other words, if a case is paid as a transfer in accordance with our transfer payment policy at 42 CFR 412.4(f), resulting in a reduced IPPS payment, the reduced transfer-adjusted payment amount is also reflected in the base operating DRG payment amount. For the FY 2013 IPPS/LTCH PPS proposed rule, the data used to model the proposed readmission payment adjustment factors actually reflected transfer adjusted base operating DRG payment amounts, where applicable. As discussed earlier, the ''base operating DRG payment amount'' would be used to calculate both the ''aggregate payments for excess readmissions'' and ''aggregate payments for all discharges'' under sections 1886(q)(4)(A) and (q)(4)(B) of the Act, which would then be used to determine the readmissions payment adjustment, and would also be used to determine which payment amounts will be adjusted to account for excess readmissions. We are finalizing that the definition of ''base operating DRG payment amount'' includes any applicable payment adjustments for transfer cases under 42 CFR 412.4(f). In addition, in this final rule, we are revising the definition of ''wage-adjusted DRG operating payment'' in the regulations we proposed at 42 CFR 412.152 to specify that any applicable payment adjustment for transfers under § 412.4(f) is included. Accordingly, we are finalizing the definition of ''wage adjusted DRG operating payment'' as the applicable average standardized amount adjusted for resource utilization by the applicable MS–DRG relative weight and adjusted for differences in geographic costs by the applicable area wage index (and by the applicable COLA for hospitals located in Alaska and Hawaii). This amount includes an applicable payment adjustment for transfers under § 412.4(f).

Comment: Commenters recommended that the proposed definition of base operating DRG payment should be refined to account for the special payment status of MDHs that are paid under the hospital-specific rate should the MDH payment status be extended under legislation. In addition, commenters suggested that CMS make a proposal to exclude the difference between the hospital's applicable hospital-specific payment rate and the Federal payment rate from its definition of ''base operating DRG amount'' for MDHs, similar to our proposal made for SCHs, which can also be paid under the hospital-specific payment rate.

Response: As stated earlier, under current law, the MDH program expires at the end of FY 2012 (that is, the MDH program is currently only applicable to discharges occurring before October 1, 2012). MDHs are paid the sum of the Federal payment amount plus 75 percent of the amount by which their hospital-specific rate exceeds the Federal payment amount. As discussed later in this section, we had proposed to exclude hospital-specific payments from the definition of base operating DRG payments in the calculation of a hospital's readmission payment adjustment factor. Specifically, we stated that because we are using historical data to determine the base operating DRG payments to calculate the adjustment factor, we proposed to model their base operating DRG payment amount as they would have been paid under the Federal standardized amount, rather than using the information on the claim (which may represent a payment either made under the hospital-specific rate or the Federal rate) so that their payments are consistent with our proposed definition of ''base operating DRG payment.''

For MDHs, the payment difference between the payment made under the hospital-specific rate and the payment made under the Federal rate is not included in the base operating DRG payment amount to determine the

readmissions adjustment factor; that is, it is neither included in the numerator of the aggregate dollars for excess readmissions nor in the denominator of the aggregate dollars for all discharges.

Furthermore, we are clarifying that the difference between the applicable hospital-specific payment rate and the Federal payment rate for both SCHs and for MDHs, should the MDH provision be extended beyond FY 2012, is excluded from base operating DRG payment amount for these hospitals. This means that, for an SCH or an MDH, the readmissions payment adjustment under Hospital Readmissions Reduction Program for each discharge will be calculated by multiplying the SCH's or MDH's readmission payment adjustment factor by the base-operating DRG payment amount that is exclusive of the amount by which the hospital-specific rate payment exceeds the Federal payment rate, where applicable. The resulting payment adjustment will then be subtracted from the hospital's payment for the discharge, regardless of whether the hospital is paid based on the Federal rate or its hospital-specific rate.

After consideration of the public comments we received, we are finalizing the proposed definition of ''base operating DRG payment amount'' at 42 CFR 412.152, noting that it includes any applicable payment adjustments for transfer cases under 42 CFR 412.4(f). In addition, we are revising the definition of ''wage-adjusted DRG operating payment'' in the regulations we proposed at 42 CFR 412.152 to specify that any applicable payment adjustment for transfers under § 412.4(f) is included.

(2) Special Rules for Certain Hospitals: Hospitals Paid Under Section 1814(b)(3) of the Act (§ 412.154(d))

Although the definition of ''applicable hospital'' under section 1886(q)(5)(C) of the Act also includes hospitals paid under section 1814(b)(3) of the Act (that is, certain Maryland hospitals), section 1886(q)(2)(B)(ii) of the Act allows the Secretary to exempt such hospitals from the Hospital Readmissions Reduction Program, provided that the State submits an annual report to the Secretary describing how a similar program to reduce hospital readmissions in that State achieves or surpasses the measured results in terms of health outcomes and cost savings established by Congress for the program as applied to ''subsection (d) hospitals.'' Accordingly, a program established by the State of Maryland that could serve to exempt the State from the Hospital Readmissions Reduction Program would focus on those ''applicable'' Maryland hospitals operating under the ''waiver'' provided by section 1814(b)(3) of the Act, that is, those hospitals that would otherwise have been paid by Medicare under the IPPS, absent the provision.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27960), we proposed to establish criteria for evaluation of an annual report to CMS to determine whether Maryland should be exempted from the program each year. Accordingly, we proposed to evaluate a report submitted by the State of Maryland documenting how its program (described below) meets those criteria. Based on the information in the report, we proposed to determine whether or not Maryland's readmission program met our criteria to be exempt from the Hospital Readmissions Reduction Program for FY 2013. We noted that our proposed criteria to evaluate Maryland's program is for FY 2013, the first year of the program, and our evaluation criteria may change through notice-and-comment rulemaking as the Hospital Readmissions Reduction Program evolves. We proposed to codify this requirement at § 412.154(d) of the regulations.

Based on preliminary discussions with the State, we understand that, effective July 1, 2011, Maryland has established the Admission-Readmission Revenue (ARR) Program. The State has described its program as a voluntary program for acute care hospitals, of which 30 out of the 46 acute care hospitals in the State are currently enrolled. Under the program, the State pays hospitals under a case-mix adjusted bundled payment per episode of care, where the episode of care is defined as the initial admission and any subsequent readmissions to the same hospital or linked hospital system that occur within 30 days of the original discharge. According to the State, an initial admission with no readmissions provides the hospital with the same weight as an initial admission with multiple readmissions. Therefore, hospitals receive a financial reward for decreased readmissions (as determined through the case mix adjusted, episode of care weights). Unlike the Hospital Readmissions Reduction Program under section 1886(q) of the Act, which is currently based on measures for three conditions (HF, AMI, and PN) for the Medicare FFS population and only adjusts the IPPS operating payments, Maryland's program applies to all conditions for all patients. In addition, while the Hospital Readmissions Reduction Program considers a readmission to be a subsequent admission to either the original acute care hospital from where the patient was initially discharged or an admission to another acute care hospital, currently Maryland only tracks readmissions to the same acute care hospital (or linked hospital system) from which the patient was originally discharged. The State had noted that, under its ARR program, the readmission rates for the hospitals participating in the ARR program for the first quarter of its fiscal year compared to the first quarter of its previous fiscal year decreased from 9.86 percent to 8.96 percent.

In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to evaluate Maryland's ARR program based on whether the State could demonstrate that cost savings under its program achieved or exceeded the savings to the Medicare program due to the Hospital Readmissions Reduction Program under section 1886(q) of the Act. We also proposed to evaluate whether Maryland's program could demonstrate similar results in reducing unnecessary readmissions among hospitals in the State, as described in more detail below. With specific regard to Maryland's demonstration of cost savings, we proposed to evaluate whether Maryland's ARR program could demonstrate savings to the Medicare program that are at least similar to those expected under the Hospital Readmissions Reduction Program. As discussed in this proposed rule, we estimated that, under the Hospital Readmissions Reduction Program, for FY 2013, Medicare IPPS operating payments would decrease by approximately $300 million (or 0.3 percent) of total Medicare IPPS operating payments. Maryland has indicated that it believes it can achieve comparable savings because it intends to reduce the rate update factor for all hospitals by 0.3 percent, regardless of a hospital's performance on readmissions.

In addition, we indicated in the proposed rule that we plan to propose, in future rulemaking, to evaluate whether Maryland's ARR program can meet or exceed health outcomes that we expect to improve under the Hospital Readmissions Reduction Program. Because the Hospital Readmissions Reduction Program is not effective until October 1, 2012, we indicated that we do not yet have measured health outcomes against which we can evaluate Maryland's ARR program. However, we intend to have outcomes data in the future with which to evaluate Maryland's ARR program. We anticipate that, under the Hospital Readmissions Reduction Program, hospitals will experience a reduction in unnecessary

readmissions. Therefore, in future rulemaking, we intend to propose to evaluate whether Maryland's ARR program can demonstrate similar decreases in potential preventable readmissions among hospitals in the State. Furthermore, in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed that the State's annual report and request for exemption from the Hospital Readmissions Reduction Program must be resubmitted and reconsidered annually in accordance with the statute and as proposed at § 412.154(d)(2).

Based on preliminary information provided by Maryland, the State believes that its program can meet our evaluation criteria and demonstrate that its program achieves or surpasses the measured results in terms of health outcomes and cost savings. We indicated in the proposed rule that we are reviewing whether the Maryland's ARR program, which currently cannot monitor readmissions to other hospitals and provide a financial reward for hospitals that reduce within-hospital readmissions, but provides for an across-the-board 0.3 percent reduction to the annual rate update to account for comparable savings to the Hospital Readmissions Reduction Program, meets the criteria to exempt Maryland hospitals from the Hospital Readmissions Reduction Program. We welcomed public comments on whether the Maryland ARR program meets the requirements for exemption from the Hospital Readmissions Reduction Program set forth in section 1886(q)(2)(B)(ii) of the Act.

Comment: Commenters requested that Maryland hospitals be exempt from the Hospital Readmissions Reduction Program. Commenters contended that Maryland's readmissions program meets the criteria for Maryland hospitals to be waived from the Hospital Readmissions Reduction Program. One commenter stated that Maryland has already demonstrated successful reductions in readmissions as a result of the Admission-Readmission Revenue (ARR) and Total Patient Revenue (TPR) programs. The commenter described the TPR program as a global budget payment program, designed to reduce overall volumes and, thus, reduce readmissions. ARR hospitals have seen a 7.1 percent reduction in Medicare readmissions since the inception of the program; TPR hospitals have experienced a 6.4 percent decline in readmissions from FY 2009 to FY 2011. The commenter sought more information on how CMS plans to measure Maryland's performance relative to the nation prior to implementation in order to ensure that Maryland's hospitals are prepared to meet our expectations, and can make the appropriate adjustments in advance of submitting an exemption request.

Commenters acknowledged that the ARR program provides a financial incentive for hospitals to reduce readmissions and improve the quality of care and that the ARR program established a 30-day episode of care payment instead of a payment per admission, so a hospital that reduces readmissions keeps the same revenue and increases profits by reducing costs. However, one commenter suggested that savings are generated by reducing inter-hospital readmissions and outpatient visits. The commenter stated that the TPR program generates savings by restricting revenues and, therefore, providing an incentive for hospitals to reduce volumes. The commenter stated that this mechanism allows participating hospitals to focus on patient care and improved outcomes, rather than generating volume. Furthermore, the commenter pointed out that Maryland's Health Services Cost Review Commission reduced hospitals' FY 2013 rate update by 0.58 percentage points to guarantee readmissions savings.

Finally, the State of Maryland also commented that, in future years, it will work with us to demonstrate cost savings and improved outcomes, over a multiyear period.

Response: We appreciate the commenters' requests to exempt Maryland from the Hospital Readmissions Reduction Program for FY 2013. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27959), we proposed to establish an annual process by which to evaluate Maryland's readmission program to determine whether the State's program meets or exceeds measured results in terms of health outcomes and cost savings as compared to the Hospital Readmissions Reduction Program. For FY 2013, we indicated that the Hospital Readmissions Reduction Program would result in an estimated savings of $300 million (−0.3 percent), and we proposed to evaluate whether Maryland's program could have comparable savings. As commenters acknowledged, Maryland's readmissions program provides a financial incentive, not penalty, to hospitals that reduce their readmissions. Furthermore, commenters acknowledged that the State has guaranteed savings by reducing the FY 2013 rate by 0.58 percent. We understand that this is a uniform rate reduction for all hospitals, regardless of an individual hospital's performance on readmissions. We understand that the acute care hospitals in Maryland are included either in the ARR program or the TPR program, which provides incentives for hospitals to reduce readmissions.

With respect to health outcomes, we proposed that since this is the first year of the Hospital Readmissions Reduction Program, we do not have a measured health outcomes by which to evaluate Maryland against. Thus, for the first year, we would not evaluate Maryland's program with respect to health outcomes. In the future, we intend to have national outcomes data to evaluate Maryland's program, and we will work with the State to measure those outcomes. Similarly, after considering the commenters' comments, we believe it would be premature to evaluate Maryland's readmissions program on cost savings, as it is the first year of the Hospital Readmissions Reduction Program, and Maryland's ARR Program just completed its first year. As such, we are finalizing to not evaluate Maryland's ARR Program on measureable health outcomes and cost savings for the first year. For FY 2013, we are exempting hospitals paid under section 1814(b)(3) of the Act from the Hospital Readmissions Reduction Program under our authority under section 1886(q)(2)(B)(ii) of the Act. We are finalizing, as proposed, our plan to evaluate whether Maryland's readmissions program can demonstrate similar decreases in potential preventable readmissions and similar cost savings on an annual basis. However, that evaluation will not begin until FY 2014. We intend to work with Maryland next year as the State develops its readmissions programs to be able to measure health outcomes and to have demonstrable savings. We are finalizing, as proposed, our requirement that the State's annual report and request for exemption from the Hospital Readmissions Reduction Program be resubmitted and reconsidered annually in accordance with the statute, as finalized at § 412.154(d)(2).

Comment: Commenters sought clarification as to whether an exemption for Maryland hospitals from the payment requirements under the Hospital Readmissions Reduction Program would apply to all section 1814(b) hospitals in Maryland or all of Maryland's acute care hospitals. The commenters requested that the waiver be applied to all Maryland acute care hospitals.

Response: Section 1886(q)(2)(B)(ii) of the Act allows the Secretary to exempt hospitals paid under the ''waiver'' provided by section 1814(b)(3) of the

Act, that is, those hospitals that would otherwise have been paid by Medicare under the IPPS, absent the provision. Accordingly, we are finalizing that, for FY 2013, all acute care hospitals in Maryland, which are the hospitals that are paid under the waiver at section 1814(b)(3) of the Act, that otherwise would have been paid under the IPPS, are exempt from the Hospital Readmissions Reduction Program.

Comment: One commenter asked for a definition of base operating DRG payment for Maryland hospitals, considering that Maryland hospitals paid under section 1814(b)(3) of the Act are paid at 94 percent of their charges.

Response: In the FY 2013 IPPS/LTCH PPS proposed rule, we did not make a proposal regarding the definition of base operating DRG payment amount with regard to Maryland hospitals. Because we are finalizing our proposal to exempt Maryland hospitals from the Hospital Readmissions Reduction Program for FY 2013, we intend to revisit the definition of base operating DRG payment amount for Maryland hospitals in future rulemaking.

Comment: Commenters asked that there be a combined exemption request for Maryland hospitals for the Hospital Readmissions Reduction Program, the HAC program, and the Hospital VBP Programs in order to be more efficient and to reduce the administrative burden at the State and Federal level.

Response: The Hospital Readmissions Reduction Program and the Hospital VBP Program, effective in FY 2013, are separate hospital payment programs with different purposes and policy goals. For example, the Hospital Readmissions Reduction Program reduces payments to hospitals for excess readmissions, while the Hospital VBP Program redistributes reductions made to the base operating DRG payment amount, based on certain performance measures. Because of the varying nature of these two programs, at this time, we do not believe it is appropriate for the State to submit one exemption request to determine whether certain Maryland hospitals should be waived from the requirements under both the Hospital Readmissions Reduction Program and the Hospital VBP Program. Because the HAC Program, established under section 1886(p) of the Act, is not effective until FY 2015, we believe it is premature to consider the process by which the State can request an exemption from the requirements of this Program.

For the purposes of modeling the impacts of our proposal, we modeled under the assumption that Maryland hospitals will not have Hospital Readmissions Reduction Program adjustment factors applied to them. Although the adjustment factors do not apply to these hospitals under our models, Maryland hospitals have excess readmission ratios, consistent with the definition of excess readmission ratio. Any readmission to a Maryland hospital from a subsection (d) hospital in another State is still considered a readmission for purposes of the original hospital in another State. This is consistent with the definition of readmissions in section 1886(q)(5)(E) of the Act, which includes admissions to the same or another ''applicable hospital.'' As discussed above, we interpret the definition of ''applicable hospital'' under section 1886(q)(5)(C) of the Act to include both subsection (d) hospitals and hospitals paid under section 1814(b)(3) of the Act that would, absent the provisions of section 1814(b)(3) of the Act, be paid under subsection (d).

Although we are exempting Maryland hospitals from the Hospital Readmissions Reduction Program, Maryland hospitals are still considered an ''applicable hospital.'' As such, we are finalizing, as proposed, that we are calculating excess readmission ratios for Maryland hospitals, consistent with the definition of excess readmission ratio. In addition, any readmission to a Maryland hospital from a subsection (d) hospital in another State is still considered a readmission for purposes of the original hospital in another State, and we are finalizing, as proposed, to include data from Maryland hospitals in the calculation of the excess readmission ratios for all applicable hospitals.

c. Adjustment Factor (Both the Ratio and Floor Adjustment Factor) (§ 412.154(c))

Section 1886(q)(3)(A) of the Act defines the ''adjustment factor'' for an applicable hospital for a fiscal year as equal to the greater of ''(i) the ratio described in subparagraph (B) for the hospital for the applicable period (as defined in paragraph (5)(D)) for such fiscal year; or (ii) the floor adjustment factor specified in subparagraph (C).'' Section 1886(q)(3)(B) of the Act in turn describes the ratio used to calculate the adjustment factor. Specifically, it states that the ratio is ''equal to 1 minus the ratio of—(i) the aggregate payments for excess readmissions * * *; and (ii) the aggregate payments for all discharges * * *.'' In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27960), we proposed to codify the calculation of this ratio at § 412.154(c)(1) of the regulations. Section 1886(q)(3)(C) of the Act specifies the floor adjustment factor, which is set at 0.99 for FY 2013, 0.98 for FY 2014, and 0.97 for FY 2015 and subsequent fiscal years. We proposed to codify the floor adjustment factor at § 412.154(c)(2) of the regulations.

For FY 2013, under proposed § 412.154(c), we proposed that an applicable hospital would receive an adjustment factor that is either the greater of the ratio described in section IV.A.3.d. of the preamble of the proposed rule or a floor adjustment factor of 0.99. We proposed that the ratio would be rounded to the fourth decimal place, consistent with the calculation of other IPPS payment adjustments such as the wage index, DSH adjustment, and the IME adjustment. In other words, a hospital included in this program can have an adjustment factor that is between 1.0 and 0.9900 for FY 2013. Consistent with section 1886(q)(3) of the Act, under proposed § 412.154(c), we proposed that, for FY 2013, the hospital will receive an adjustment factor under the Hospital Readmissions Reduction Program that is the greater of the ratio or the floor of 0.99. Consistent with this proposal, under the regulations we proposed at 42 CFR 412.152, we proposed to define the ''floor adjustment factor'' as the value that the readmissions adjustment factor cannot be less than for a given fiscal year. As noted above, the floor adjustment factor is set at 0.99 for FY 2013, 0.98 for FY 2014, and 0.97 for FY 2015 and subsequent fiscal years.

Comment: Commenters supported our proposed calculation of the adjustment factor as 1 minus the ratio of the hospital's aggregate payments for excess readmissions for applicable conditions to the hospital's aggregate payments for all discharges for applicable conditions. Commenters also supported our proposal to determine a hospital's actual payment adjustment factor as the higher of its calculated factor or 0.99, resulting in a maximum reduction of 1 percent of base operating DRG payments for FY 2013.

Response: We thank the commenters for their support of these proposals.

In this final rule, we are finalizing our proposal to establish an applicable hospital's adjustment factor as the higher of a ratio or the floor adjustment factor of 0.99 for FY 2013. We are finalizing, as proposed, that the ratio will be rounded to the fourth decimal place. We also are finalizing our proposal to codify these policies in regulation at § 412.154(c) without modification.

d. Aggregate Payments for Excess Readmissions and Aggregate Payments for All Discharges (§ 412.152)

As discussed earlier, section 1886(q)(3)(B) of the Act specifies the ratio used to calculate the adjustment factor under the Hospital Readmissions Reduction Program. It states that the ratio is ''equal to 1 minus the ratio of—(i) the aggregate payments for excess readmissions * * *; and (ii) the aggregate payments for all discharges * * *.'' In the FY 2013 IPPS LTCH PPS proposed rule (77 FR 27961), we set forth proposals to define aggregate payments for excess readmissions and aggregate payments for all discharges, as well as a methodology for calculating the numerator of the ratio (aggregate payments for excess readmissions) and the denominator of the ratio (aggregate payments for all discharges).

Section 1886(q)(4) of the Act sets forth the definitions of ''aggregate payments for excess readmissions'' and ''aggregate payments for all discharges'' for an applicable hospital for the applicable period. The term ''aggregate payments for excess readmissions'' is defined in section 1886(q)(4)(A) of the Act as ''for a hospital for an applicable period, the sum, for applicable conditions * * * of the product, for each applicable condition, of (i) the base operating DRG payment amount for such hospital for such applicable period for such condition; (ii) the number of admissions for such condition for such hospital for such applicable period; and (iii) the 'Excess Readmission Ratio' * * * for such hospital for such applicable period minus 1.'' We proposed to include this definition of ''aggregate payments for excess readmissions'' under the regulations we proposed at 42 CFR 412.152.

We did not receive any public comments on the proposed definition of ''aggregate payments for excess readmissions'' and are finalizing our definition as proposed under the regulations at 42 CFR 412.152 without modification.

The ''excess readmission ratio'' is a hospital-specific ratio calculated for each applicable condition. Specifically, section 1886(q)(4)(C) of the Act defines the excess readmission ratio as the ratio of ''risk-adjusted readmissions based on actual readmissions'' for an applicable hospital for each applicable condition, to the ''risk-adjusted expected readmissions'' for the applicable hospital for the applicable condition. The methodology for the calculation of the excess readmission ratio was finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51673). ''Aggregate payments for excess readmissions'' is the numerator of the ratio used to calculate the adjustment factor under the Hospital Readmissions Reduction Program.

The term ''aggregate payments for all discharges'' is defined at section 1886(q)(4)(B) of the Act as ''for a hospital for an applicable period, the sum of the base operating DRG payment amounts for all discharges for all conditions from such hospital for such applicable period.'' ''Aggregate payments for all discharges'' is the denominator of the ratio used to calculate the adjustment factor under the Hospital Readmissions Reduction Program. In the proposed rule, we proposed to include this definition of ''aggregate payments for all discharges'' under the regulations we proposed at § 412.152.

We did not receive any public comments on the proposed definition of ''aggregate payments for all discharges'' and are finalizing our definition as proposed under the regulations at 42 CFR 412.152 without modification.

As discussed above, when calculating the numerator (aggregate payments for excess readmissions), we determined the base operating DRG payments for the applicable period. ''Aggregate payments for excess readmissions'' (the numerator) is defined as ''the sum, for applicable conditions * * * of the product, for each applicable condition, of (i) the base operating DRG payment amount for such hospital for such applicable period for such condition; (ii) the number of admissions for such condition for such hospital for such applicable period; and (iii) the 'Excess Readmission Ratio' * * * for such hospital for such applicable period minus 1.''

We discussed above our proposed definition of ''base operating DRG payment amount.'' When determining the base operating DRG payment amount for an individual hospital for such applicable period for such condition, we proposed to use Medicare inpatient claims from the MedPAR file with discharge dates that are within the same applicable period that was finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51671) to calculate the excess readmission ratio. We proposed to use MedPAR claims data as our data source for determining aggregate payments for excess readmissions and aggregate payments for all discharges, as this data source is consistent with the claims data source used in IPPS rulemaking to determine IPPS rates. For FY 2013, we proposed to use data from MedPAR claims with discharge dates that are on or after July 1, 2008, and no later than June 30, 2011, the applicable period finalized in the FY 2012 IPPS/LTCH PPS final rule. We proposed to use the update of the MedPAR file for each Federal fiscal year, which is updated 6 months after the end of each Federal fiscal year within the applicable period, as our data source (that is, the March updates of the respective Federal fiscal year MedPAR files for the final rules, as described in greater detail below). These are the same MedPAR files that are used in the annual IPPS rulemaking for each Federal fiscal year.

In the FY 2013 IPPS/LTCH PPS proposed rule, for FY 2013, we proposed to use the March 2009 update of the FY 2008 MedPAR file to identify claims within FY 2008 with discharges dates that are on or after July 1, 2008, the March 2010 update of the FY 2009 MedPAR file to identify claims within FY 2009, the March 2011 update of the FY 2010 MedPAR file to identify claims within FY 2010, and the December 2011 update of the FY 2011 MedPAR file to identify claims within FY 2011 with discharge dates no later than June 30, 2011. For the FY 2013 IPPS/LTCH PPS final rule, we proposed to use the March 2012 update of the FY 2011 MedPAR file to identify claims within FY 2011, as these would be the most recently available FY 2011 claims data used for FY 2013 rulemaking. These MedPAR data files are used each year in other areas of the IPPS, including calculating the IPPS relative weights, budget neutrality factors, outlier thresholds, and the standardized amount. Accordingly, we believe it is appropriate to use these same data files for the purpose of calculating the readmission adjustment factors. The FY 2008 through FY 2011 MedPAR data files can be purchased from CMS. Use of these files will allow the public to verify the readmission adjustment factors. Interested individuals may order these files through the Web site at: *http://www.cms.hhs.gov/LimitedDataSets/* by clicking on the MedPAR Limited Data Set (LDS)-Hospital (National). This Web page describes the files and provides directions and further detailed instructions for how to order the data sets. Persons placing an order must send the following: a Letter of Request, the LDS Data Use Agreement and Research Protocol (refer to the Web site for further instructions), the LDS Form, and a check for $3,655 to:

Mailing address if using the U.S. Postal Service: Centers for Medicare and Medicaid Services, RDDC Account, Accounting Division, P.O. Box 7520, Baltimore, MD 21207–0520.

Mailing address if using express mail: Centers for Medicare and Medicaid Services, OFM/Division of Accounting-RDDC, Mailstop C#–07–11, 7500 Security Boulevard, Baltimore, MD 21244–1850.

In the proposed rule, we proposed to determine aggregate payments for excess readmissions and aggregate payments for all discharges using data from MedPAR claims with discharge dates that are on or after July 1, 2008, and no later than June 30, 2011, which is the applicable period finalized in the FY 2012 IPPS/LTCH PPS final rule. However, we noted in the proposed rule, that for the purposes of modeling, we used excess readmission ratios based on an older performance period of July 1, 2007 to June 30, 2010. As we stated in the proposed rule, for this final rule, we are using both the excess readmission ratios and MedPAR claims data to calculate aggregate payments for excess readmissions and aggregate payments for all discharges based on the applicable period finalized in the FY 2012 IPPS/LTCH PPS final rule (July 1, 2008 to June 30, 2011).

Comment: Commenters supported the use of MedPAR claims data to determine base operating DRG payment amounts. However, several commenters opposed CMS' proposal to use 3 years of data from the period July 1, 2008 through June 30, 2011, for calculating hospital readmissions adjustment factors for FY 2013. The commenters stated that using older data did not reflect current practices of a hospital, and recommended that CMS use a 1-year period from July 1, 2010 to June 30, 2011, to accurately reflect a hospital's performance on readmissions.

Response: We appreciate the commenters' support for using the MedPAR data to determine base operating DRG payment amounts to calculate the readmission payment adjustment factors.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27961), we proposed to calculate the readmission payment adjustment factor using the same applicable period that is used to calculate the excess readmission ratios, as finalized in the FY 2012 IPPS/LTCH PPS final rule. The statute references ''applicable period'' in both the calculation of the readmissions measures and the readmission payment adjustment factor, such that it requires that the same time period be used for both the calculation of the measures and the adjustment factor. As finalized in the FY 2012 IPPS/LTCH PPS final rule, we use 3 years of data to calculate the readmissions measures (that is, for FY 2013, we are using discharge data from July 1, 2008 through June 30, 2011), and therefore, we are using data from the same time period to calculate the aggregate payments for excess readmissions and aggregate payments for all discharges. Using 3 years of claims data increases precision for the calculation of excess readmission ratios and the calculation of the readmissions payment adjustment factors.

In this final rule, we are finalizing our proposal to use MedPAR data from July 1, 2008 through June 30, 2011, and we are finalizing our proposal to use the March 2009 update of the FY 2008 MedPAR file to identify claims within FY 2008 with discharges dates that are on or after July 1, 2008, the March 2010 update of the FY 2009 MedPAR file to identify claims within FY 2009, the March 2011 update of the FY 2010 MedPAR file to identify claims within FY 2010, and the March 2012 update of the FY 2011 MedPAR file to identify claims within FY 2011 with discharge dates no later than June 30, 2011.

Comment: One commenter asked CMS to ensure that outlier payments are correctly excluded from the base operating DRG amount using the MedPAR data source.

Response: We have ensured that we are correctly excluding outlier payments in the calculation of the base operating DRG amount using our MedPAR data source.

In order to identify the admissions for each condition for an individual hospital for calculating the aggregate payments for excess readmissions, we proposed to identify each applicable condition using the same ICD–9–CM codes used to identify applicable conditions to calculate the excess readmission ratios. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51669), in our discussion of the methodology of the readmissions measures, we stated that we identify eligible hospitalizations and readmissions of Medicare patients discharged from an applicable hospital having a principal diagnosis for the measured condition in an applicable period. The discharge diagnoses for each applicable condition are based on a list of specific ICD–9–CM codes for that condition. These codes are listed in the *2010 Measures Maintenance Technical Report: Acute Myocardial Infarction, Heart Failure, and Pneumonia 30-Day Risk-Standardized Readmission Measures.* They also are posted on the Web site at: *http://www.QualityNet.org*> Hospital-Inpatient > Readmission Measures >methodologies.

In order to identify the applicable conditions to calculate the aggregate payments for excess readmissions, we proposed to identify the claim as an applicable condition if the ICD–9–CM code for that condition is listed as the principal diagnosis on the claim, consistent with the methodology to identify conditions to calculate the excess readmission ratio. Furthermore, we proposed to only identify Medicare FFS claims that meet the criteria (that is, claims paid for under Part C, Medicare Advantage, would not be included in this calculation), consistent with the methodology to calculate excess readmission ratios based on readmissions for Medicare FFS patients. The tables below list the ICD–9–CM codes we proposed to use to identify each applicable condition to calculate the aggregate payments for excess readmissions under this proposal. These ICD–9–CM codes will also be used to identify the applicable conditions to calculate the excess readmission ratios, consistent with our policy finalized in the FY 2012 IPPS/LTCH PPS final rule.

ICD–9–CM CODES TO IDENTIFY PNEUMONIA CASES

ICD–9–CM Code	Description of code
480.0	Pneumonia due to adenovirus.
480.1	Pneumonia due to respiratory syncytial virus.
480.2	Pneumonia due to parainfluenza virus.
480.3	Pneumonia due to SARS-associated coronavirus.
480.8	Viral pneumonia: pneumonia due to other virus not elsewhere classified.
480.9	Viral pneumonia unspecified.
481	Pneumococcal pneumonia [streptococcus pneumoniae pneumonia].
482.0	Pneumonia due to klebsiella pneumoniae.
482.1	Pneumonia due to pseudomonas.
482.2	Pneumonia due to hemophilus influenzae [h. influenzae].
482.30 ..	Pneumonia due to streptococcus unspecified.
482.31 ..	Pneumonia due to streptococcus group a.
482.32 ..	Pneumonia due to streptococcus group b.
482.39 ..	Pneumonia due to other streptococcus.
482.40 ..	Pneumonia due to staphylococcus unspecified.
482.41 ..	Pneumonia due to staphylococcus aureus.
482.42 ..	Methicillin Resistant Pneumonia due to Staphylococcus Aureus.
482.49 ..	Other staphylococcus pneumonia.
482.81 ..	Pneumonia due to anaerobes.
482.82 ..	Pneumonia due to escherichia coli [e.coli].
482.83 ..	Pneumonia due to other gram-negative bacteria.

ICD–9–CM CODES TO IDENTIFY PNEUMONIA CASES—Continued

ICD–9–CM Code	Description of code
482.84 ..	Pneumonia due to legionnaires' disease.
482.89 ..	Pneumonia due to other specified bacteria.
482.9	Bacterial pneumonia unspecified.
483.0	Pneumonia due to mycoplasma pneumoniae.
483.1	Pneumonia due to chlamydia.
483.8	Pneumonia due to other specified organism.
485	Bronchopneumonia organism unspecified.
486	Pneumonia organism unspecified.
487.0	Influenza with pneumonia.
488.11 ..	Influenza due to identified novel H1N1 influenza virus with pneumonia.

ICD–9–CM CODES TO IDENTIFY HEART FAILURE CASES

ICD–9–CM Code	Code description
402.01 ..	Hypertensive heart disease, malignant, with heart failure.
402.11 ..	Hypertensive heart disease, benign, with heart failure.
402.91 ..	Hypertensive heart disease, unspecified, with heart failure.
404.01 ..	Hypertensive heart and chronic kidney disease, malignant, with heart failure and with chronic kidney disease stage I through stage IV, or unspecified.
404.03 ..	Hypertensive heart and chronic kidney disease, malignant, with heart failure and with chronic kidney disease stage V or end stage renal disease.
404.11 ..	Hypertensive heart and chronic kidney disease, benign, with heart failure and with chronic kidney disease stage I through stage IV, or unspecified.
404.13 ..	Hypertensive heart and chronic kidney disease, benign, with heart failure and with chronic kidney disease stage I through stage IV, or unspecified failure and chronic kidney disease stage V or end stage renal disease.
404.91 ..	Hypertensive heart and chronic kidney disease, unspecified, with heart failure and chronic kidney disease stage V or end stage renal disease heart failure and with chronic kidney disease stage I through stage IV, or unspecified.
404.93 ..	Hypertensive heart and chronic kidney disease, unspecified, with heart failure and chronic kidney disease stage V or end stage renal disease.

ICD–9–CM CODES TO IDENTIFY HEART FAILURE CASES—Continued

ICD–9–CM Code	Code description
428.xx ..	Heart Failure.

ICD–9–CM CODES TO IDENTIFY ACUTE MYOCARDIAL INFARCTION CASES

ICD–9–CM Code	Description of code
410.00 ..	AMI (anterolateral wall)—episode of care unspecified.
410.01 ..	AMI (anterolateral wall)—initial episode of care.
410.10 ..	AMI (other anterior wall)—episode of care unspecified.
410.11 ..	AMI (other anterior wall)—initial episode of care.
410.20 ..	AMI (inferolateral wall)—episode of care unspecified.
410.21 ..	AMI (inferolateral wall)—initial episode of care.
410.30 ..	AMI (inferoposterior wall)—episode of care unspecified.
410.31 ..	AMI (inferoposterior wall)—initial episode of care.
410.40 ..	AMI (other inferior wall)—episode of care unspecified.
410.41 ..	AMI (other inferior wall)—initial episode of care.
410.50 ..	AMI (other lateral wall)—episode of care unspecified.
410.51 ..	AMI (other lateral wall)—initial episode of care.
410.60 ..	AMI (true posterior wall)—episode of care unspecified.
410.61 ..	AMI (true posterior wall)—initial episode of care.
410.70 ..	AMI (subendocardial)—episode of care unspecified.
410.71 ..	AMI (subendocardial)—initial episode of care.
410.80 ..	AMI (other specified site)—episode of care unspecified.
410.81 ..	AMI (other specified site)—initial episode of care.
410.90 ..	AMI (unspecified site)—episode of care unspecified.
410.91 ..	AMI (unspecified site)—initial episode of care.

Comment: Several commenters requested that, in the calculation of aggregate payments for excess readmissions, CMS remove admissions for the applicable conditions that were not considered admissions for the purposes of the calculation of the excess readmission ratio. Specifically, commenters requested that CMS remove admissions for (1) Index admissions for beneficiaries who die in the hospital; (2) admissions for beneficiaries who were transferred to another acute care hospital; (3) admissions for beneficiaries who were discharged against medical advice; (4) admissions for beneficiaries without at least 30 days post-discharge enrollment in Medicare Part A fee-for-service; and (5) multiple admissions within 30 days of a prior index admission. Commenters argued that these trims are made for the readmissions measures, and accordingly, they should also be made when determining which admissions are included in the calculation of aggregate payments for excess readmissions. One commenter recognized that not all of these trims can be identified in our proposed data source, MedPAR, so the commenter requested that CMS estimate an ''additional exclusions factor'' for the exclusions that we cannot account for based on data from the Measures Maintenance Technical Report, which lists the percentage of admissions that are removed by exclusion. The commenter suggested that the ''additional exclusions factor'' for each exclusion that cannot be accounted for in our proposed data source be removed for every hospital. By not excluding these admissions, the commenters believed that CMS is erroneously inflating the calculation of aggregate payments for excess readmissions.

Response: In our proposal to calculate the excess payments for readmissions, we proposed to identify admissions for each condition for an individual hospital for calculating the aggregate payments for readmissions by using the same ICD–9–CM codes used to identify the applicable conditions to calculate the excess readmissions ratios. We proposed to identify the claim as an applicable condition if the ICD–9–CM code for that condition is listed as the principal diagnosis on the claim, consistent with the calculation of the excess readmission ratios. Similarly, we proposed to limit our admissions to Medicare FFS claims, consistent with the methodology to calculate the excess readmission ratios.

As finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51669), the readmissions conditions of AMI, HF, and PN account for certain exclusions of admissions from being considered as an index admission. The NQF-endorsed readmission measures exclude from the group of index admission: (1) Hospitalizations for patients with an in-hospital death; (2) hospitalizations for patients without at least 30 days post discharge enrollment in Medicare FFS; (3) hospitalizations for patients discharged against medical advice; (4) transfers; and (5) multiple admissions within 30 days of a prior index admission. In addition, for AMI, same day discharges are excluded as an index

admission. Furthermore, we limit admissions to include Medicare Part A FFS enrollees who are 65 years or older.

We agree with the commenters that the index admissions that are not considered admissions for the purpose of the readmissions measures, thus excluded from the calculation of the excess readmission ratio, should also not be considered admissions for the purposes of determining a hospital's aggregate payments for excess readmissions. Accordingly, we are modifying our methodology to identify the admissions included in the calculation of ''aggregate payments for excess readmissions.'' For this final rule, using our MedPAR data source, we will identify admissions for the purposes of calculating aggregate payments for excess readmissions as follows:

- We will exclude admissions that are identified as an applicable condition based on the ICD–9–CM code listed as the primary diagnosis, but where the patient had died, as identified by the discharge status code on the MedPAR claim.
- We will exclude admissions identified as an applicable condition based on the ICD–9–CM code listed as the primary diagnosis, but where the patient was transferred to another applicable hospital, as identified by the discharge status code on the MedPAR claim.
- We will eliminate admissions identified as an applicable condition based on the ICD–9–CM code listed as the primary diagnosis, but where the patient was discharged against medical advice as identified by the discharge status code on the MedPAR claim.
- We will exclude admissions identified as an applicable condition based on the ICD–9–CM code listed as the primary diagnosis for patients who are under the age of 65, as identified on the MedPAR claim.
- For conditions identified as AMI, we will exclude claims that are same day discharges, as identified by the admission date and discharge date on the MedPAR claim.

As the commenters acknowledged, the MedPAR proposed data set that we are using to calculate the aggregate payments for excess readmissions cannot identify all of the exclusions included in the readmissions measures. Specifically, at this time, we cannot identify directly multiple admissions within 30 days of a prior index admission and patients without at least 30 days post discharge enrollment in Medicare FFS in the MedPAR data. However, the suggestion that we develop an ''additional exclusions factor'' to apply to the calculation of the readmissions payment adjustment factor is not within the statutory authority under section 1886(q) of the Act. We do not believe we have the authority to calculate an ''additional exclusions factor,'' which would be in lieu of the exclusion of admissions from the calculation of the aggregate payments for excess readmissions, and then uniformly applied that amount to all applicable hospitals. We believe that with the exclusions to the data for the scenarios discussed earlier, we will have accounted for nearly all of the admissions excluded in the calculation of the excess readmission ratios. We intend to work towards modifying our systems to identify these claims for the two additional scenarios, and we will propose in future rulemaking to what extent we can include those exclusions from the calculation of the aggregate payments for excess readmissions.

For FY 2013, we are finalizing a methodology to calculate aggregate payments for excess readmissions, using MedPAR claims from July 1, 2008 to June 30, 2011, to identify applicable conditions based on same ICD–9CM codes used to identify the conditions for the readmissions measures and to apply the exclusions for the types of admissions discussed above, which are currently identifiable on the claim in MedPAR.

Comment: One commenter stated that a claim that the Recovery Audit Contractor (RAC) determines should have been provided in the outpatient setting and subsequently is denied as an inpatient should not be included in the calculation of a hospital's readmissions adjustment. The commenter sought clarification on whether the Common Working File (CWF) has been updated for RAC denials. The commenter stated that if a claim was subsequently denied for inpatient status, it should be removed from inpatient claims data set used for calculation of a hospital's readmission adjustment.

Response: In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to use the MedPAR claims data as our data source to calculate the excess payments for readmissions and payments for all discharges. Specifically, we proposed to use MedPAR data for discharges from July 1, 2008 through June 30, 2011, and we proposed to use the March 2009 update of the FY 2008 MedPAR file to identify claims within FY 2008 with discharges dates that are on or after July 1, 2008, the March 2010 update of the FY 2009 MedPAR file to identify claims within FY 2009, the March 2011 update of the FY 2010 MedPAR file to identify claims within FY 2010, and the March 2012 update of the FY 2011 MedPAR file to identify claims within FY 2011. We proposed to use these MedPAR updates, as it is consistent with the inpatient claims data set used in IPPS ratesetting.

The RACs have up to 3 years to review claims to determine whether a claim was inappropriately billed as inpatient when it should have been an outpatient claim. If a claim is denied as an inpatient stay, the claim is adjusted through the standard Medicare claims processing systems, going through the CWF and MedPAR. However, given the timing of the RAC audits and the updates of the MedPAR used to calculate the readmissions payment adjustments, it is not certain that all denied claims will be reflected in MedPAR at the time of our analysis. To the extent that those RAC determinations are made within the timeframe of the updates of MedPAR, those denied inpatient claims will not be included in the MedPAR or in the calculation of the readmissions payment adjustment. We believe that using the updates of the MedPAR used in annual IPPS rate setting allows for us to use a complete inpatient claims data set and allows for transparency for the public to obtain this dataset to replicate our calculations.

In this final rule, we are finalizing our proposal to use MedPAR to calculate the readmissions payment adjustment factors without modification.

Section 1886(q)(2) of the Act defines the base operating DRG payment amount as ''the payment amount that would otherwise be made under subsection (d) (determined without regard to subsection (o) [the Hospital VBP Program]) for a discharge if this subsection did not apply; reduced by * * * any portion of such payment amount that is attributable to payments under paragraphs (5)(A), (5)(B), (5)(F), and (12) of subsection (d).'' Paragraphs (d)(5)(A), (d)(5)(B), (d)(5)(F), and (d)(12) of section 1886 refer to outlier payments, IME payments, DSH payments, and payments for low-volume hospitals, respectively.

As discussed earlier in section IV.A.3.b.(1) of the preamble of the proposed rule, we proposed to define ''base operating DRG payment amount'' under the Hospital Readmissions Reduction Program as the wage-adjusted DRG operating payment plus any new technology add-on payments. Thus, in order to calculate the base operating DRG payment amount for such condition for such hospital, we proposed to identify the base operating DRG payment amount for such conditions based on the payment

amounts in the MedPAR files on the claims identified to meet those conditions based on their ICD–9–CM code.

As discussed in section IV.A.3.b. of the preamble of the proposed rule, applicable hospitals in the Hospital Readmissions Reduction Program include SCHs and current MDHs (whose status is set to expire at the end of FY 2012), as these hospitals meet the definition of subsection (d) hospitals. SCHs are paid in the interim (prior to cost report settlement) on a claim-by-claim basis at the amount that is the higher of the payment based on the hospital-specific rate or the IPPS Federal rate based on the standardized amount. At cost report settlement, the fiscal intermediary or MAC determines whether the hospital would receive higher IPPS payments in the aggregate using the hospital-specific rate (on all claims) or the Federal rate (on all claims). MDHs are paid the sum of the Federal payment amount plus 75 percent of the amount by which their hospital-specific rate exceeds the Federal payment amount. Although MDH status is set to expire at the end of FY 2012, because we are using historical data to determine the base operating DRG payments to calculate adjustment factor, the payments reflected on claims for current MDHs may be based on the hospital-specific rate. For SCHs and current MDHs, we proposed to model their base operating DRG payment amount as they would have been paid under the Federal standardized amount, rather than using the information on the claim (which may represent a payment either made under the hospital-specific rate or the Federal rate) so that their payments are consistent with our proposed definition of base operating DRG payment. As such, the payment difference between the payment made under the hospital-specific rate and the payment made under the Federal rate is not included in the base operating DRG amount to determine the readmission adjustment factor; that is, it is neither included in the numerator of the aggregate dollars for excess readmissions nor in the denominator of the aggregate dollars for all discharges.

We did not receive public comments on our proposal for current MDHs and SCHs to model the ''base operating DRG payments'' as they would have been paid under the Federal standardized amount, rather than using the information on the claim in MedPAR (which may represent a payment either made under the hospital-specific rate or the Federal rate) to calculate their ''aggregate payments for excess readmissions, so that their payments are consistent with our definition of base operating DRG payment.

As discussed earlier, we proposed to use data from the MedPAR files that contain claims from the 3-year applicable period of July 1, 2008, to June 30, 2011, for FY 2013 to calculate aggregate payments for excess readmissions (the numerator of the ratio). To calculate aggregate payments for excess readmissions, we proposed to calculate the base operating DRG payment amounts for all the claims in the 3-year applicable period that list each applicable condition as the principal diagnosis (as described above). Once we have calculated the base operating DRG payment amounts for all the claims that list each condition as the principal diagnosis, we proposed to sum the base operating DRG payment amounts by each condition, resulting in three summed amounts, one amount for each of the three applicable conditions. We then proposed to multiply each amount for each condition by their respective excess readmission ratio minus 1. The methodology for the calculation of the excess readmission ratio was finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51673). We proposed that the excess readmission ratios for each condition used to calculate the numerator of this ratio are excess readmission ratios that had gone through the proposed review and correction process described in the FY 2013 IPPS/LTCH PPS proposed rule. Each product in this computation represents the payment for excess readmissions for that condition. We proposed to then sum the resulting products, which represent a hospital's proposed ''aggregate payments for excess readmissions'' (the numerator of the ratio).

If a hospital has an excess readmission ratio that is greater than 1 for a condition, that hospital has performed, with respect to readmissions for that applicable condition, worse than the average hospital with similar patients. As such, it will have aggregate payments for excess readmissions. If a hospital has an excess readmission ratio that is less than (or equal) to one, that hospital has performed better (or on average), with respect to readmissions for that applicable condition, than an average hospital with similar patients. As such, that hospital would not be considered to have ''aggregate payments'' for excess readmissions, and its payments would not be reduced under section 1886(q) of the Act. As described in section 1886(q)(4)(C) of the Act, and finalized in the FY 2012 IPPS/LTCH PPS final rule, the excess readmission ratio used cannot be less than 1 because the hospital will not have aggregate payments for excess readmissions and will not be subject to a readmission payment adjustment, as the hospital will have performed equal to or better than average. Because this calculation is performed separately for the three conditions, a hospital's excess readmission ratio must be less than or equal to 1 on each measure to avoid aggregate payments for excess readmissions.

Section 1886(q)(4)(B) of the Act defines ''aggregate payments for all discharges'' (the denominator of the ratio) as ''for a hospital for an applicable period, the sum of the base operating DRG payment amounts for all discharges for all conditions from such hospital for such applicable period.'' In the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to use the same MedPAR files to calculate the denominator as we proposed to use to calculate the numerator, for the 3-year applicable period of July 1, 2008 to June 30, 2011, for FY 2013. We proposed to calculate base operating DRG payments in the same manner as we calculate base operating DRG payments for the numerator. We proposed to sum the base operating DRG payment amounts for all Medicare FFS claims for such hospital during the 3-year applicable period. We also proposed that we would model base operating DRG payment amount for SCHs and current MDHs as they would have been paid under the Federal standardized amount, rather than using the information on the claim (as described above).

We did not receive any public comments regarding our proposed calculation of ''aggregate payments for all discharges'' and we are finalizing it as proposed without modification.

We proposed that the ratio described in section 1886(q)(3)(B) of the Act is 1 minus the ratio of the numerator and denominator described above. In addition, we proposed that the readmission adjustment for an applicable hospital is the higher of this ratio under section 1886(q)(3)(B) of the Act or the floor of 0.99 for FY 2013. Consistent with this proposal, under the regulations we proposed at 42 CFR 412.152, we proposed to define ''readmissions adjustment factor'' as equal to the greater of: (i) 1 minus the ratio of the aggregate payments for excess readmissions to aggregate payments for all discharges or (ii) the floor adjustment factor.

For the proposed rule, for the purpose of modeling the proposed aggregate payments for excess readmissions and the proposed readmissions adjustment

factors, we used excess readmission ratios for the applicable hospitals from the 3-year period of July 1, 2007 to June 30, 2010, because the underlying data from this period had already been available to the public on the *Hospital Compare* Web site (as of July 2011). The data from the 3-year applicable period for FY 2013 of July 1, 2008 to June 30, 2011, had not been through the review and correct process required by section 1886(q)(6) of the Act (as discussed below). As we stated in the proposed rule, for this final rule, we are using excess readmission ratios based on discharges for the finalized applicable period of July 1, 2008 to June 30, 2011, to calculate the aggregate payments for excess readmissions and, ultimately, to calculate the readmission adjustment factors. Applicable hospitals had the opportunity to review and correct these data before they were made public under our proposal set forth below regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act.

Formulas to Calculate the Readmission Adjustment Factor

Aggregate payments for excess readmissions = [sum of base operating DRG payments for AMI x (Excess Readmission Ratio for AMI-1)] + [sum of base operating DRG payments for HF x (Excess Readmission Ratio for HF-1)] +[sum of base operating DRG payments for PN x (Excess Readmission Ratio for PN-1)].

Aggregate payments for all discharges = sum of base operating DRG payments for all discharges.

Ratio = 1-(Aggregate payments for excess readmissions/Aggregate payments for all discharges).

Readmissions Adjustment Factor for FY 2013 is the higher of the ratio or 0.99.

*Based on claims data from July 1, 2008 to June 30, 2011 for FY 2013.

Comment: Several commenters supported our methodology to calculate the readmissions payment adjustment factor. Commenters supported calculating the adjustment factor as 1 minus the ratio of the hospital's aggregate payments for excess readmissions for applicable conditions to the hospital's aggregate payments for all discharges for applicable conditions. Commenters supported determining the hospital's aggregate payments for all discharges for applicable conditions based on our proposed definition of the base operating DRG payment amount, and commenters supported our proposal to determine the hospital's aggregate payments for excess readmissions by multiplying the hospital's aggregate payments for all discharges for an applicable condition by 1, minus the hospital's excess readmissions ratio.

Some commenters stated that it is unclear why the proposed numerator of the readmission payment adjustment factor, or the calculation of the excess payments for readmissions, is based on total admissions for each condition, when the purpose of the Hospital Readmissions Reduction Program is to reduce only preventable readmissions. Commenters stated that our proposed methodology to calculate the readmission payment adjustment factor should amend the legislative language in the formula for calculating the readmissions adjustment factor. The formula as proposed stipulated that the amount of aggregate payments due to excess readmission is calculated by multiplying the number of admissions for the condition times the average base DRG payment for the condition and the ''excess readmission ratio.'' The excess readmissions ratio is defined as the ratio of the number of actual readmissions as compared to the number of expected readmissions for the clinical condition. However, commenters contended that the formula should specify that the calculation should be based on the number of expected readmissions in each condition, not the total number of admissions. They urged that we replace the words ''number of admissions'' with ''number of expected readmissions'' so that the formula for the aggregate payments for excess readmissions calculates the number of expected readmissions for each condition and not the total number of admissions.

One commenter believed that the proposed formula produces penalties that are higher than Medicare payments for excess readmissions, although the full impact is mitigated because of the proposed maximum penalty for FY 2013 of 1 percent of base operating DRG payments. The commenter believed that our proposed methodology to calculate the readmissions payment adjustment factors conforms to the statute. However, the commenter suggested long-term changes to the formula to be more proportionate to the cost of readmissions, such as examining the issue of shrinking excess readmission computations towards the national mean and appropriate changes to account for excess payments for readmissions.

Commenters believe that our proposed methodology to calculate the readmissions payment adjustment overestimates the excess payments for readmissions resulting in an excessive readmission payment adjustment and is not consistent with Congressional intent. Commenters believed our proposed readmissions payment adjustments are excessive as evident by the Congressional Budget Office (CBO) score for the provision at $100 million while our estimates of the Hospital Readmissions Reduction Program published in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 28172) was approximately $300 million.

Response: We believe that the statute is prescriptive with respect to the calculation of ''aggregate payments for excess readmissions'' where the statute

specifies that the ''aggregate payments for excess readmissions'' is the sum for each condition of the product of ''the operating DRG payment amount for such hospital for such applicable period for such condition'' and ''the number of admissions for such condition'' and ''the excess readmission ratio'' minus one. We believe that section 1886(q)(4)(A) of the Act requires us to include all admissions for a condition in the calculation of ''aggregate payments for excess readmissions.''

Our estimate of $300 million in savings associated with the Hospital Readmissions Reduction Program published in the FY 2013 IPPS/LTCH PPS proposed rule was based on different data that were not available to the CBO at the time of the CBO estimate. Furthermore, we potentially used different assumptions in our methodology to estimate the savings of this Hospital Readmissions Reduction Program as compared to CBO. Our proposed readmission payment adjustment factors were calculated using excess readmission ratios based on hospitals' readmissions performance from July 1, 2007 to June 30, 2010, which was not available at the time of the CBO estimate. In addition, our calculation for ''aggregate payments for excess readmissions'' and ''aggregate payments for all discharges'' were based on MedPAR claims data from July 1, 2007 to June 30, 2010, which was also not available at the time of the CBO estimate. Finally, we applied the proposed readmission payment adjustment factor to our estimated FY 2013 IPPS base operating DRG payments to determine the savings associated with the Hospital Readmissions Reduction Program and our FY 2013 IPPS base operating DRG payments were likely based on different assumptions than the CBO's estimate published in 2010. Therefore, it is difficult to assess the precise differences between our estimate of this provision and the CBO's estimate. Nonetheless, we believe that we are implementing the provision as required by law.

Comment: Several commenters requested that CMS make additional adjustments to the calculation of the readmissions payment adjustment factor to account for differences in the readmissions payment adjustment factors for hospitals that treat a high proportion of patients of low socioeconomic status. Commenters made a number of suggestions as to how to modify the readmissions payment adjustment factors. One commenter suggested that CMS and Congress could apply a uniform percentage reduction to all hospitals' expected readmission rates, which the commenter believed would be a budget neutral change. The commenter urged CMS and Congress to intervene somehow to correct an inequity affecting the nation's most vulnerable hospitals and Medicare beneficiaries.

Another commenter suggested that CMS offer a one-time opportunity to waive the payment reduction for safety net and other hospitals that serve a higher-than-average proportion of patients of low socioeconomic status and are found to be at risk of experiencing a payment reduction. In return, the commenter suggested that these hospitals would be required to submit a comprehensive and aggressive preventable readmission rate improvement plan that centers on collaboratively engaging with the patients, their families, consumer organizations and community supports, to address the various factors that are causing preventable readmissions in their local community. The commenter stated that this approach should have a time limit (for example, 6 months) on how long the hospital would have for submitting and implementing the plan and another well-defined (for example 6 months) timeframe for monitoring and reporting results to CMS.

Some commenters requested that CMS postpone implementation of the Hospital Readmissions Reduction Program until it has made adjustments to the measures to account for socioeconomic status. One commenter requested postponing the application of the readmissions payment reduction to safety net hospitals that serve a vulnerable population while these hospitals develop programs to reduce readmissions.

Commenters suggested that CMS make an adjustment to the readmission payment adjustment factors to account for a hospital's proportion of dual-eligible patients. Commenters contended that dual-eligible status is a better predictor of readmission rates because it reflects Medicare beneficiaries, which is what the readmissions measures are based on.

In addition, commenters suggested that CMS make a hospital-level adjustment based on DSH. Commenters asserted that because the number of hospitals that will receive the maximum penalty in the first year jumps sharply between the sixth and seventh deciles for hospital's DSH Patient Percentage, the commenters suggested that any hospital-level adjustment based on DSH be applied to the top four deciles.

Response: We thank the commenters for their suggestions on modifying the readmission payment adjustment to account for differences in the socioeconomic status of patients treated by hospitals. As stated earlier, we continue to believe that we need to examine the relationship of patient socioeconomic status and readmissions as it applies to the readmissions measures. As we have stated earlier, the readmissions measures, as endorsed by the NQF, do not include risk adjustments for socioeconomic status. Currently, the NQF does not support risk adjustments based on socioeconomic status, as the NQF believes it can create different standards of quality for hospitals that treat a higher proportion of patients with low socioeconomic status. Risk adjusting the readmissions measures for socioeconomic status can obscure differences in the quality of health care. Similarly, applying an adjustment to the readmissions payment adjustment factors can also create different standards of quality for hospitals based on the socioeconomic status of the patients treated. Applying an adjustment to the readmissions payment adjustment factors at this point to account for socioeconomic status rather than determining whether a risk adjustment for socioeconomic status would be appropriate for the readmissions measures could appear as circumventing the NQF's position on the application of a risk adjustment for socioeconomic status on the readmissions measures. We note that, to the extent that dual eligible patients or patients of low socioeconomic status have higher readmission rates because they are sicker or have more comorbidities, we already account for comorbidities in the risk adjustment for the excess readmission ratios. Since, we believe that all hospitals should be working towards the goal of reducing readmissions, on an ongoing basis, regardless of their patient population, we believe that we do not need to postpone the implementation of the readmission payment adjustments in order to provide additional time to hospitals to implement readmission reduction programs. While we are not incorporating any special adjustments for SES in the readmissions reduction program at this time, we remain concerned about the impact of this provision on hospitals that serve a high proportion of low income patients. We will continue to monitor the issue of the relationship of a patient's socioeconomic status and a hospital's readmission performance, and how it affects payments to hospitals.

Comment: One commenter recommended that CMS apply the

readmissions adjustment in a manner that norms the calculation of the adjustment factor on the risk-adjusted readmission rate that is achieved by at least 25 percent of hospitals rather than on the average readmission rate.

Response: The excess readmission ratio, finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51673), measures a hospital's performance on readmissions for a specified condition relative to the national average. The methodology to calculate the excess readmission ratio is endorsed by the NQF, as required at section 1886(q)(5)(C) of the Act. We did not propose any changes to the methodology to calculate the excess readmission ratio. Accordingly, we are not modifying the methodology to calculate the excess readmission ratio to compare a hospital's performance on readmissions relative to the 25th percentile of national performance, as opposed to the average.

Comment: One commenter questioned the statistical difference in the excess readmission ratio for a hospital that has an excess readmission ratio slightly above 1 and thus, subject to the payment penalty, versus a hospital that has an excess readmission ratio slightly below 1, and not subject to the penalty. The commenter asked that CMS consider the equitability of this policy approach and recommended the remunerative framework account for the confidence intervals surrounding the estimated Risk Standardized Readmission Rates and Ratios in determining future penalties for excess readmissions. The commenters believed that omitting a control for statistical significance exposes a large number of hospitals to financial penalties based on random variation. They recommended that CMS account for the confidence intervals surrounding the estimated Risk Standardized Readmission Rates and Ratios in determining future penalties for excess readmissions.

Response: We thank the commenter for raising the issue of statistical reliability of the excess readmission ratio and for recommending the use of confidence intervals in determining whether or not to use a hospital's excess readmission ratio in the calculation of a hospital's readmission payment adjustment factor. We finalized our methodology of the calculation of the excess readmission ratio in the FY 2012 IPPS/LTCH PPS final rule, which results in the use of the point estimate as a hospital's excess readmission ratio.

We will consider the role, if any, of confidence intervals in determining a hospital's excess readmission ratio. We recognize that because the excess readmission ratio is a statistical measure, there may be some degree of variation. However, there are other Medicare programs, not limited to the Hospital Readmissions Reduction Program, that use statistical measures as part of their program, so any consideration to confidence intervals made with respect to the Hospital Readmissions Reduction Program may have implications for other programs. We will evaluate this concern and address it in a future rulemaking, if needed.

Comment: Several commenters suggested that CMS take into consideration a hospital's improvement on readmissions in the calculation of the readmissions payment adjustment factor. One commenter noted that because measurement is based on 3 years' worth of data, it will be difficult for low performing hospitals to move out of being penalized, and the Hospital Readmissions Reduction Program does not reward for improvement as the Hospital VBP Program does, but only measures achievement. The commenter noted that this could result in low performing hospitals being unable to ever get out of the penalty phase.

Response: We appreciate the concerns raised by the commenters. The Hospital Readmissions Reduction Program is structured to apply a payment reduction to hospitals with excess readmissions, as measured by having worse performance on readmissions for certain conditions compared to the average hospital. The readmission payment adjustment under section 1886(q)(1) of the Act does not allow for us to provide a reward for quality improvement, which is allowed under section 1886(p) of the Act for the Hospital VBP Program. We believe that hospitals do have the opportunity to not be subject to a reduction to payments due to excess readmissions if they can perform better than the average hospital in the future. We update the data annually with the most recently available 3 years of data, and we use 3 years of data in order to have sufficient data to reliably measure a hospital's performance.

Comment: Commenters sought clarification on how the readmissions payment adjustment factors would be applied to a hospital's base operating DRG payment amount. Commenters asked whether the readmissions payment adjustment factors would be applied on a per claim basis or at cost report settlement. Commenters asked how the IME, DSH, and outlier payments would not be affected by the readmissions payment adjustment factor when the IME, DSH and outlier payments are adjustments currently determined from the base operating DRG payment amount, and the readmissions payment adjustment factor reduces the base operating DRG payment amount. Commenters asked if there would be changes to the cost report and to the PS&R to account for the implementation of the payment adjustment for excess readmissions. In addition, commenters noted that the effective date of the Hospital Readmissions Reduction Program is October 1, 2012, which straddles the cost reporting period for many hospitals, and asked for clarification on how that would be accounted for with respect to the Medicare hospital cost report.

Commenters also stated that the statutory intent of the readmissions payment adjustment factor is that the factor should not be applied to payments for all admissions, but rather to payments for initial admissions with at least one readmission. Commenters requested clarification whether the readmissions payment adjustment factors will apply to only Medicare discharges for AMI, PN or HF; or whether the readmissions payment adjustment factor will apply to all discharges. The commenters believed that the readmissions payment adjustment factor should only be applicable to the specific populations included in the program rather than the entire Medicare population.

Response: We are clarifying that, for FY 2013, a hospital's payments will be reduced by the amount of the product of the readmissions payment adjustment factor and the base operating DRG payment amount (as defined as the wage-adjusted DRG payment amount), on a per-claim basis for all Medicare FFS discharges occurring on or after October 1, 2012. In other words, the payment amount the hospital would otherwise receive in FY 2013 in absence of the Hospital Readmission Reduction Program will be reduced by the an amount for excess readmissions (determined as the product of the readmissions payment adjustment factor and the base operating DRG payment amount). Section 1886(q)(1) of the Act specifies that ''the Secretary shall make payments * * * in an amount equal to the product of (A) the base operating DRG payment amount for the discharge; and (B) the adjustment factor * * *.'' Therefore, it requires us to apply the readmissions payment adjustment factor to all discharges, not just discharges for initial admissions with a readmission or admissions for the applicable conditions. We note that the readmissions payment adjustment factor is inversely proportional to the

aggregate payments for all discharges (in the formula determining the excess readmissions ratio) so the adjustment factor appropriately reflects the relation between payments for excess readmissions and aggregate payments for all discharges.

In addition, we intend to modify the Medicare hospital cost report and the corresponding cost reporting instructions, effective for FY 2013, to account for the reductions to payments under the Hospital Readmission Reduction Program required by section 1886(q) of the Act (that is, the payment adjustment for excess readmissions). The current calculation of the additional payments for IME, DSH, outliers, and low-volume hospitals will remain unchanged consistent with the statutory requirement that payments for outliers, IME, DSH, and low-volume adjustments are not affected by the adjustments made under the Hospital Readmissions Reduction Program.

Currently, the cost report includes the base operating DRG payment for the cost reporting period and we use that line to determine add-on payments including payments for indirect medical education and disproportionate share hospital payments. This line will remain unchanged and will continue to be used to determine IPPS add-on payments, consistent with our policy that add-on payments for outliers, IME, DSH, and low-volume adjustments are not affected by the adjustments made under the Hospital Readmissions Reduction Program. We intend to modify the Medicare hospital cost report to include lines for base operating DRG payments by Federal fiscal year. For example, we will have a line that represents base operating DRG payments prior to October 1, 2012 and a line that represents base operating DRG payments after October 1, 2012. In addition, we intend to modify the Medicare hospital cost report with lines for the readmissions payment adjustment factor by Federal fiscal year and lines with the readmissions payment amount by Federal fiscal year that would be deducted from a hospital's Medicare payments. The readmissions payment amounts would be determined by applying the readmission payment adjustment factor to the base operating DRG payment amount by Federal fiscal year. We intend to modify the cost reporting instructions to account for these new calculations. In addition, for FY 2013, we will ensure that the cost reporting instructions account for the readmissions adjustment to only be made to base operating DRG payments for discharges on or after October 1, 2012. We intend to modify the PS&R to account for these changes as well.

Comment: One commenter sought clarification as to whether the Hospital Readmissions Reduction Program is intended to replace the existing readmission review at Internet Only Manual (IOM) 100–04, Chapter 3, Section 40.2.5, or if both policies will exist together.

Response: The Hospital Readmissions Reduction Program is not intended to replace the existing readmission review under IOM 100–04, Chapter 3, Section 40.2.5. IOM 100–04, Chapter 3, Section 40.2.5 of the Inpatient Claims Processing Manual provides guidance on appropriate billing practices for repeat admissions. In accordance with the manual, ''a patient who requires follow-up care or elective surgery may be discharged and readmitted or may be placed on a leave of absence. Hospitals may place a patient on a leave of absence when readmission is expected * * * and providers may not use the leave of absence billing procedure when the second admission is unexpected.'' If a hospital uses the leave of absence billing code, two inpatient stay claims for the original admission and the repeat admissions are bundled as one inpatient claim with one DRG payment. These claims can be reviewed by a fiscal intermediary or MAC and referred to the QIOs. This is a separate billing procedure from the Hospital Readmissions Reduction Program and will continue to exist.

During the FY 2012 IPPS rulemaking cycle, we received public comments expressing concern that hospitals that treat a larger proportion of patients of lower socioeconomic circumstances may have higher readmission rates and could be unfairly penalized under the Hospital Readmissions Reduction Program. The table below shows, based on the excess readmission ratios and the proposed methodology to calculate the readmissions adjustment factor discussed in the proposed rule, the estimated distribution of the readmission adjustment factors among hospitals ranked by their DSH patient percentage (DPP). The DPP is used as a proxy for low-income patients and is the sum of the hospital's Medicare fraction and Medicaid fraction. The Medicare fraction is computed by dividing the number of a hospital's inpatient days that are furnished to patients who were entitled to both Medicare Part A and Supplemental Security Income (SSI) benefits by the hospital's total number of patient days furnished to patients entitled to benefits under Medicare Part A. The Medicaid fraction is computed by dividing the hospital's number of inpatient days furnished to patients who, for such days, were eligible for Medicaid, but were not entitled to benefits under Medicare Part A, by the hospital's total number of inpatient days. The DPP is used to determine a hospital's Medicare DSH payment adjustment. Thus, hospitals with higher percentages of Medicare patients entitled to SSI and higher percentages of Medicaid patients have higher DPPs. In the table, the hospitals are ranked by their estimated DPP and categorized into deciles. The table shows the number of hospitals within each decile that are subject to no proposed readmission payment adjustment, the −1 percent floor readmission payment adjustment, and a readmission payment adjustment that is less than the −1 percent floor. We invited public comment on this analysis.

DISTRIBUTION OF HOSPITALS READMISSION ADJUSTMENT FACTOR BY DSH PATIENT PERCENTAGE (DPP)

Decile	Number of hospitals	Payment adjustment of less than −1 percent	−1 percent floor adjustment	No readmission adjustment factor
Lowest DPP	339	156	38	145
Second	339	164	57	118
Third	339	168	44	127
Fourth	339	170	48	121
Fifth	339	182	42	115
Sixth	339	171	43	125
Seventh	339	187	44	108
Eighth	339	182	43	114
Ninth	339	179	58	102

DISTRIBUTION OF HOSPITALS READMISSION ADJUSTMENT FACTOR BY DSH PATIENT PERCENTAGE (DPP)—Continued

Decile	Number of hospitals	Payment adjustment of less than −1 percent	−1 percent floor adjustment	No readmission adjustment factor
Highest DPP	342	185	61	96
Total	3,393	1,744	478	1,171

In addition, we examined the estimated distribution of the proposed readmissions adjustment factor based on the excess readmission ratios in this proposed rule (determined using the 2007–2010 data discussed above). The table below shows the number and percentage of hospitals ranked by the percent reduction received under the Hospital Readmissions Reduction Program. The table shows that about 71 percent of hospitals would receive either no adjustment or a readmission adjustment factor that would reduce their base operating DRG payments by less than 0.5 percent.

DISTRIBUTION OF READMISSION ADJUSTMENT FACTORS

Percent reduction	Number of hospitals	Percent of hospitals
No Adjustment	1,171	34.5
Up to −.09 Percent	347	10.2
−0.1 Percent to −0.19 Percent	280	8.3
−0.20 Percent to −0.29 Percent	228	6.7
−0.30 Percent to −0.39 Percent	196	5.8
−0.40 Percent to −0.49 Percent	180	5.3
−0.50 Percent to −0.59 Percent	129	3.8
−0.60 Percent to −0.69 Percent	118	3.5
−0.70 Percent to −0.79 Percent	110	3.2
−0.80 Percent to −0.89 Percent	77	2.3
−0.90 Percent to −0.99 Percent	76	2.2
−1.0 Percent	481	14.2
Total	3,393	100.0

Comment: Several commenters addressed the Medicare DSH analysis that was presented in the proposed rule. Several commenters could not replicate the DSH analysis and produce the same results presented in the proposed rule. Some commenters presented different results where they found that high DSH hospitals are, in fact, subject to higher readmission penalties. In addition, several commenters contended that DSH was not a good proxy to determine socioeconomic status. Commenters indicated that it is not uncommon for hospitals in areas with relatively affluent Medicare beneficiaries to qualify for DSH reimbursement due to the high volume of labor and delivery services provided to non-resident aliens. One commenter asked why CMS did not present a comparison table of the impacts to the DSH hospitals (approximately 1,882 hospitals) instead of the entire hospital population.

Commenters indicated that hospitals with high disproportionate share patient percentages have higher excess readmission ratios. Commenters presented other analyses showing that hospitals with high DSH have higher readmission penalties. Commenters provided analyses where the results indicate that high DSH hospitals (defined as hospitals in the top 25th percentile for the DSH percentage) and hospitals located in large urban areas (defined as those Metropolitan Statistical Areas with more than one million population) are much more likely to receive a readmission penalty under the CMS proposal. The commenter found that high DSH hospitals located in large urban areas are 1.9954 times more likely to be penalized for heart attack than other hospitals, 2.5849 times more likely for heart failure, and 2.1915 times more likely for pneumonia.

Response: In the proposed rule, we used the proposed readmissions payment adjustment factors and the DSH disproportionate patient percentage (DPP) reported in the FY 2012 IPPS/LTCH PPS final rule Impact file, as it was the most recently available data at the time of our analysis. We note that, for hospitals that have a missing DPP, we assigned them a DPP of zero. We believe that may have been one potential source for differences in the results.

We understand that there are several ways to measure socioeconomic status of a hospital's patient population and as we continue to monitor the issue of the relationship of a patient's socioeconomic status and a hospital's readmission performance, and how it affects payments to hospitals, we also can explore different measures of socioeconomic status, such as dual-eligible status. To the extent differences in readmission rates among hospitals treating a significant number of patients with low socioeconomic status are determined to inappropriately affect their readmission payment adjustment, we can work with NQF to explore options for improving the readmissions measures to promote high quality care, as appropriate.

We understand that there have been different conclusions drawn from review of these data, and we will continue to work with MedPAC and other stakeholders to complete a more sophisticated analysis.

Comment: One commenter suggested that CMS provide a level of statistical significance for our DSH analysis, as well as correlation factors between hospitals' actual DSH patient percentage

(as opposed their national decile) and the likeliness of receiving a readmissions adjustment, the magnitude of a readmissions adjustment, and the likeliness of reaching the maximum readmissions penalty.

Response: At this time, we are unable to produce a rigorous analysis showing the relationship of a hospital's actual DSH patient percentage and their likeliness of receiving a readmissions adjustment, the magnitude of a readmissions adjustment, and the likeliness of receiving the maximum adjustment of −1.0 percent. However, we will research these issues in the upcoming year and, if significant, we will present our findings in future rulemaking.

e. Applicable Hospitals

An ''applicable hospital,'' is defined at section 1886(q)(5)(C) of the Act as (1) ''a subsection (d) hospital or (2) a hospital that is paid under section 1814(b)(3).'' Specifically, hospitals subject to the Hospital Readmissions Reduction Program are hospitals paid under the IPPS and hospitals paid under the authority of section 1814(b)(3) of the Act. We are interpreting this reference to section 1814(b)(3) of the Act to mean those Maryland hospitals that are paid under section 1814(b)(3) of the Act and that, absent the ''waiver'' specified by section 1814(b)(3) of the Act, would have been paid under the IPPS. A subsection (d) hospital is defined in section 1886(d)(1)(B) of the Act, in part, as a ''hospital located in one of the fifty States or the District of Columbia.'' The term subsection (d) hospital does not include hospitals located in the Territories or hospitals located in Puerto Rico. Section 1886(d)(9)(A) of the Act separately defines a ''subsection (d) Puerto Rico hospital'' as a hospital that is located in Puerto Rico and that ''would be a subsection (d) hospital * * * if it were located in one of the 50 States.'' Therefore, Puerto Rico hospitals are not considered applicable hospitals under the Hospital Readmissions Reduction Program. An Indian Health Services hospital enrolled as a Medicare provider meets the definition of a subsection (d) hospital and, therefore, is considered an applicable hospital under the Hospital Readmissions Reduction Program, even if it is not paid under the IPPS. In addition, hospitals that are SCHs and current MDHs, although they may be paid under a hospital-specific rate instead of under the Federal rate under the IPPS, are subsection (d) hospitals and, therefore, are included in the definition of an applicable hospital under the Hospital Readmissions Reduction Program.

A subsection (d) hospital as defined in section 1886(d)(1)(B) of the Act does not include hospitals and hospital units excluded from the IPPS, such as LTCHs, cancer hospitals, children's hospitals, IRFs, and IPFs, and, therefore, these hospitals are not considered ''applicable hospitals.'' CAHs are not ''applicable hospitals'' because they do not meet the definition of a ''subsection (d) hospital,'' as they are separately defined under section 1886(mm) of the Act and are paid under a reasonable cost methodology under section 1814(l) of the Act. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27966), consistent with the statute, we proposed to define ''applicable hospital'' under the regulations at 42 CFR 412.152 to include both (1) subsection (d) hospitals, that is, hospitals paid under the IPPS and (2) hospitals in Maryland that are paid under section 1814(b)(3) of the Act and that, absent the ''waiver'' specified by section 1814(b)(3) of the Act, would have been paid under the IPPS.

The term ''applicable hospital'' is also referenced in the definition of readmission in section 1886(q)(5)(E) of the Act, which defines ''readmission'' as ''in the case of an individual who is discharged from an applicable hospital, the admission of the individual to the same or another applicable hospital within a time period specified by the Secretary from the date of such discharge.'' In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51666), we finalized the definition of readmission as ''occurring when a patient is discharged from the applicable hospital and then is admitted to the same or another acute care hospital within a specified time period from the time of discharge from the index hospitalization.'' Furthermore, we finalized the time period specified for these readmission measures as 30 days. With our proposal to define an applicable hospital as a subsection (d) hospital or certain Maryland hospitals described above, we also proposed to refine the definition of readmission to only include admissions and readmissions occurring from an applicable hospital (that is, a subsection (d) hospital or certain Maryland hospitals) to the same or another applicable hospital (again, a subsection (d) hospital or certain Maryland hospitals) (proposed § 412.152). Accordingly, excess readmission ratios calculated for the purpose of the Hospital Readmissions Reduction Program would include only admissions and readmissions to ''applicable hospitals.''

We note that because the Hospital Readmissions Reduction Program only includes admissions and readmissions to ''applicable hospitals'' to calculate the excess readmission ratios used under section 1886(q) of the Act, these excess readmission ratios will differ from the readmission rates reported on *Hospital Compare* for the purpose of the Hospital IQR Program. The excess readmission ratios for the purpose of the Hospital IQR Program were determined based on admissions and readmissions to all hospitals, not just hospitals specified in sections 1886(d) and 1814(b)(3) of the Act. Therefore, as discussed above, the excess readmission ratios used in the proposed rule used a subset of the claims used to calculate the readmission rates reported on *Hospital Compare* for the purpose of the Hospital IQR Program and are limited to admissions and readmissions to ''applicable hospitals'' and are based on the period of June 30, 2007 to July 1, 2010. In the proposed rule, we used these excess readmission ratios, as they were based on the most recent data available and would allow the public to replicate our methodology to understand how the readmission adjustment factor is calculated. We believe that the differences between these proposed excess readmission ratios and those excess readmission ratios currently published on *Hospital Compare* under the Hospital IQR Program are minimal, and it was helpful for hospitals to see the impact of our proposed methodology to calculate the readmission adjustment using excess readmission ratios calculated under our methodology finalized in the FY 2012 IPPS/LTCH PPS final rule. As we stated in the proposed rule, for this final rule, we are using excess readmission ratios based on the applicable period of June 30, 2008 to July 1, 2011, as finalized in the FY 2012 IPPS/LTCH PPS final rule, and hospitals have had the opportunity to review and correct their data related to their excess readmission ratios prior to the publication of those excess readmission ratios.

We specifically invited public comment on our readmissions proposal, including our proposed definition of base operating DRG payment, our proposed methodology to calculate the readmission adjustment factor, the minimum number of cases, and our proposed definition of applicable hospital.

Comment: Commenters urged CMS to align the Hospital Readmissions Reduction Program with the clinical quality measure requirements of the Hospital IQR Program.

Response: As discussed above, the excess readmission ratios for the purpose of the Hospital IQR Program were determined based on admissions and readmissions to all hospitals, not just hospitals specified in sections 1886(d) and 1814(b)(3) of the Act. Therefore, the excess readmission ratios used in the final rule use a subset of the claims used to calculate the readmission rates reported on *Hospital Compare* for the purpose of the Hospital IQR Program and would be limited to admissions and readmissions to ''applicable hospitals.'' We have aligned the methodology for readmission measures in the Hospital IQR Program and the Hospital Readmissions Reduction Program as much as is allowed by statutory requirements.

Comment: Some commenters supported our proposal to include subsection (d) hospitals and Maryland hospitals in our definition of ''applicable hospital'' for the Hospital Readmissions Reduction Program. One commenter asked CMS to waive the requirements of the Hospital Readmissions Reduction Program for hospitals that participate in an accountable care organization (ACO) under the Medicare Shared Savings Program or the Pioneer ACO Model. The commenter argued that hospitals that participate in ACOs are already subject to incentives to reduce hospital readmissions, are already measured for their performance on all conditions for readmissions; therefore, to include these hospitals in the Hospital Readmissions Reduction Program is redundant. The commenter argued that CMS has the authority to waive Title XVIII requirements, including the requirements of the Hospital Readmission Reduction Program, for these hospitals under the waivers provided under sections 1115A(d)(1) and 1899(f) of the Act.

Response: We appreciate the suggestion submitted by the commenters to exempt hospitals from the Hospital Readmissions Reduction Program if they already participate in an ACO under the Medicare Shared Savings Program or the Pioneer ACO Model. We agree that ACOs are encouraged to improve quality of care and reduce the rate of growth in expenditures. We also agree that avoidable readmissions is an area in which we believe an ACO's coordination of care and accountability can have a significant impact in improving patient care. To that end, we finalized an all-condition readmission quality measure in the Medicare Shared Savings Program Final Rule. This measure is also used to assess quality of care furnished by ACOs participating in the Pioneer ACO Model. However, the waivers under sections 3021 and 3022 of the Affordable Care Act permit us to waive provisions of Title XVIII only to the extent that such a waiver may be ''necessary'' in order to carry out those sections. In this case, because the incentives of the Hospital Readmissions Reduction Program and the Medicare ACO initiatives are aligned, we see no need to waive the requirements of the Hospital Readmissions Reduction Program in order to carry out either the Medicare Shared Savings Program or to test the Pioneer ACO Model.

Indeed, because the incentives of the two programs are aligned, we believe that hospitals successful in reducing avoidable readmissions could be important allies for ACOs who share similar goals. Because it is unlikely that the beneficiaries assigned to ACO will use only a single inpatient facility, ACOs will need to work effectively with all local hospitals that their Medicare FFS beneficiaries choose to use.

Finally, as we gain experience with the Shared Savings Program and other new payment incentives in the Medicare FFS program, we will monitor their interactions with the Hospital Readmissions Reduction Program and continue our efforts to align measures and incentives to achieve the best outcomes for our patients and the program.

Comment: One commenter requested clarification regarding how hospitals participating in the Rural Hospital Community Demonstration Program will be impacted by the Hospital Readmissions Reduction Program.

Response: As described, the applicable hospital is defined as a subsection (d) hospital or certain Maryland hospitals. Hospitals participating in the Rural Hospital Community Demonstration Program are subsection (d) hospitals and, thus, will be included in the Hospital Readmissions Reduction Program. Accordingly, we have calculated excess readmission ratios and readmissions payment adjustment factor for hospitals in the Rural Hospital Community Demonstration Program. If hospitals in the Rural Hospital Community Demonstration Program are subject to a readmissions payment reduction, the reduction will be applied to their base operating DRG amount as if they were paid under the IPPS. At cost report settlement, the readmissions payment amount subtracted from the hospital's base operating DRG amount will be reduced from the payments received under the demonstration.

We are finalizing as proposed our definition of applicable hospitals under the regulations at 42 CFR 412.152 to include both (1) subsection (d) hospitals, that is, hospitals paid under the IPPS and (2) hospitals in Maryland that are paid under section 1814(b)(3) of the Act and that, absent the ''waiver'' specified by section 1814(b)(3) of the Act, would have been paid under the IPPS. Furthermore, we note that the Hospital Readmissions Reduction Program only includes admissions and readmissions to ''applicable hospitals'' to calculate the excess readmission ratios used under section 1886(q) of the Act.

4. Limitations on Review (§ 412.154(e))

Section 1886(q)(7) of the Act provides that there will be no administrative or judicial review under section 1869 of the Act, under section 1878 of the Act, or otherwise for any of the following:

- The determination of base operating DRG payment amounts.
- The methodology for determining the adjustment factor, including the excess readmissions ratio, aggregate payments for excess readmissions, and aggregate payments for all discharges, and applicable periods and applicable conditions.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR27966), we proposed to include under proposed § 412.154(e) that the provisions listed above will not be subject to administrative or judicial review, consistent with section 1886(q)(7) of the Act. We note that section 1886(q)(6) of the Act requires that the Secretary ''make information available to the public regarding readmissions rates of each subsection (d) hospital under the [Hospital Readmissions Reduction Program]'' and also requires the Secretary to ''ensure that a subsection (d) hospital has the opportunity to review and submit corrections for, the information to be made public.'' Our proposal for reporting hospital-specific information, including a hospital's opportunity to review and submit corrections, consistent with section 1886(q)(7) of the Act, is discussed below.

We did not receive any public comments on our proposals regarding the Limitations for Review; therefore, we are finalizing our proposals without modification, including the regulatory text at § 412.154(e).

5. Reporting Hospital-Specific Information, Including Opportunity To Review and Submit Corrections (§ 412.154(f))

Section 1886(q)(6)(A) of the Act requires the Secretary to ''make information available to the public regarding readmissions rates of each subsection (d) hospital under the [Hospital Readmissions Reduction Program]''. Section 1886(q)(6)(B) of the Act also requires the Secretary to ''ensure that a subsection (d) hospital has the opportunity to review, and submit corrections for, the information to be made public with respect to the hospital.'' In addition, section 1886(q)(6)(C) of the Act requires the Secretary to post the hospital-specific readmission information for each subsection (d) hospital on the *Hospital Compare* Web site in an easily understood format.

As we stated in the proposed rule, for purposes of the Hospital Readmissions Reduction Program for FY 2013, we will calculate excess readmission ratios for each of the three conditions, AMI, HF, and PN, using the previously finalized 3-year applicable period for the FY 2013 payment determination that spans from July 1, 2008 through June 30, 2011 (76 FR 51671), data sources, and the minimum number of discharges previously finalized in the FY 2012 IPPS/LTCH PPS final rule for each applicable hospital (76 FR 51671 through 51672). We stated that we intended to make these excess readmission ratios available to the public, consistent with the requirements of section 1886(q)(6)(B) of the Act, as part of the FY 2013 rulemaking process, in addition to posting this information on the *Hospital Compare* Web site in a subsequent release.

In the FY 2012 IPPS/LTCH PPS final rule, we indicated that we would provide hospitals an opportunity to review and submit corrections using a process similar to what is currently used for posting results on *Hospital Compare*. We currently provide hospitals with the data elements necessary to verify the accuracy of their readmission rates for the Hospital IQR Program prior to posting their rates on *Hospital Compare*. Because we believe it is important to provide hospitals with relevant information available to hospitals for assessing payment impacts for purposes of the Hospital Readmissions Reduction Program, as we stated in the proposed rule, we plan to make the excess readmission ratios used for the Hospital Readmissions Reduction Program adjustment factor calculation available during the rulemaking cycle. As a result, the timeline and details of this process must accommodate the rulemaking timeline in addition to posting on *Hospital Compare*. In the proposed rule, we set forth the following details regarding the process for hospitals to review and submit corrections to their excess readmission ratios prior to making this information available to the public in rulemaking and on *Hospital Compare*.

For FY 2013, we proposed to deliver confidential reports and accompanying confidential discharge-level information to applicable hospitals as defined in section IV.A.2. of this preamble, which contain their excess readmission ratios for the three applicable conditions by June 20, 2012. These reports will be delivered in hospitals' secure *QualityNet* accounts. The information in the confidential reports and accompanying confidential discharge-level information would be calculated using the claims information we had available approximately 90 days after the last discharge date in the applicable period, which is when we would create the data extract for the calculations (we discuss this practice in more detail later).

The discharge-level information accompanying the excess readmission ratios would include the risk-factors for the discharges that factor into the calculation of the excess readmission ratio, as well as information about the readmissions associated with these discharges (such as dates, provider numbers, and diagnosis upon readmission). Our intent in providing this information is twofold: (1) to facilitate hospitals' verification of the excess readmission ratio calculations we provide during the review and correction period based upon the information CMS had available at the time our data extract was created; and (2) to facilitate hospitals' quality improvement efforts with respect to readmissions.

We proposed to provide hospitals with a period of 30 days to review and submit corrections for their excess readmission ratios for the Hospital Readmissions Reduction Program. This 30-day period would begin the day hospitals' confidential reports and accompanying discharge-level information are posted to their *QualityNet* accounts. Based on previous experience with public reporting of measures under the Hospital IQR program, including the 30-day risk standardized readmission rates, we believe this 30-day period would allow enough time for hospitals to review their data and notify CMS of calculation errors, and for CMS to incorporate appropriate corrections to the excess readmission ratio calculations prior to the publication of the final rule, at which time the excess readmission ratios would be made available to the public in a table to be cited in the final rule and available via the Internet on the CMS Web site. During the review and correction period, hospitals should notify CMS of suspected errors in their excess readmission ratio calculations using the technical assistance contact information provided in their confidential reports. In order to meet the timelines for this program, we delivered these confidential reports and discharge-level data files to hospitals for the review and correction period on June 20, 2012.

The review and correction process we proposed for the excess readmission ratios above would not allow hospitals to submit additional corrections related to the underlying claims data we used to calculate the ratios, or allow hospitals to add new claims to the data extract we used to calculate the ratios. This is because it is necessary to take a static ''snapshot'' of the claims in order to perform the calculations. For purposes of this program, we would calculate the excess readmission ratios using a static snapshot (data extract) taken at the conclusion of the 90 day period following the last date of discharge used in the applicable period. We recognize that under our current timely claims filing policy, hospitals have up to 1 year from the date of discharge to submit a claim to CMS. However, in using claims data to calculate measures for this program, we proposed to create data extracts using claims in CMS' Common Working File (CWF) 90 days after the last discharge date in the applicable period which we will use for the calculations. For example, if the last discharge date in the applicable period for a measure is June 30, 2011, we would create the data extract on September 30, 2011 (90 days later), and use that data to calculate the ratios for that applicable period. Hospitals would then receive the excess readmission ratio calculations in their confidential reports and accompanying discharge-level information and they would have an opportunity to review and submit corrections for the calculations. As we stated above, hospitals would not be able to submit corrections to the underlying data that were extracted on September 30, 2011, and would also not be able to add claims to the data set. Therefore, we would consider hospitals' claims data to be complete for purposes of calculating the excess readmission ratios for the Hospital Readmissions

Reduction Program at the conclusion of the 90-day period following the last date of discharge used in the applicable period.

We considered a number of factors in determining that a 90-day ''run-out'' period is appropriate for purposes of calculating claims based measures. First, we seek to provide timely quality data to hospitals for the purpose of quality improvement and to the public for the purpose of transparency. Next, we seek to make payment adjustments to hospitals based on their performance on measures as close in time to the performance period as possible. Finally, with respect to claims-based measures, we seek to have as complete a data set as possible, recognizing that hospitals have up to one year from the date of discharge to submit a claim under CMS' timely claims filing policy.

After the data extract is created, it takes several months to incorporate other data needed for the calculations (particularly in the case of risk-adjusted, and/or episode-based measures). We then need to generate and check the calculations, as well as program, populate, and deliver the confidential reports and accompanying data to be delivered to hospitals. We also are aware that hospitals would prefer to receive the calculations to be used for the Hospital Readmissions Reduction Program as soon as possible. Because several months lead time is necessary after acquiring the data to generate these claims-based calculations, if we were to delay our data extraction point to 12 months after the last date of the last discharge in the applicable period, we would not be able to deliver the calculations to hospitals sooner than 18 to 24 months after the last discharge date. We believe this would create an unacceptably long delay both for hospitals and for CMS to deliver timely calculations to hospitals for quality improvement and transparency, and ultimately timely readmission adjustment factors for purposes of this program. Therefore, we proposed to extract the data needed to calculate the excess readmission ratios for this program 90 days after the last date of discharge for the applicable period so that we can balance the need to provide timely program information to hospitals with the need to calculate the claims-based measures using as complete a data set as possible.

During the 30-day review and correction process for the excess readmission ratios, if a subsection (d) hospital suspects that such discrepancies exist in the CMS application of the measures' methodology, it should notify CMS during the review and correction period using the technical support contacts provided in the hospital's confidential report. We would investigate the validity of each submitted correction and notify hospitals of the results. If we confirm that we made an error in creating the data extract or in calculating the excess readmission ratios, we would strive to correct the calculations, issue new confidential reports to subsection (d) hospitals, and then publicly report the corrected excess readmission ratios through the rulemaking process, and subsequently on *Hospital Compare.* However, if the errors take more time than anticipated to correct, not allowing for publication of the corrected ratios in the final rule, we would notify hospitals in the final rule that corrected ratios will be made available after the final rule through delivery of confidential reports followed by a second 30-day review and correction period, subsequent publication, and posting on *Hospital Compare.* In addition, we proposed that any corrections to a hospital's excess readmission ratios would then be used to recalculate a hospital's ratio under section 1886(q)(4)(B) of the Act in order to determine the hospital's adjustment factor in accordance with section 1886(q)(3) of the Act.

We believe that this proposed process would fulfill the statutory requirements at section 1886(q)(6)(A), section 1886(q)(6)(B), and section 1886(q)(6)(C) of the Act. We further believe that the proposed process would allow hospitals to review and correct their excess readmission ratios. We note that, under the proposed process, hospitals would retain the ability to submit new claims and corrections to submitted claims for payment purposes in line with CMS' timely claims filing policies. However, we emphasize that the administrative claims data used to calculate the excess readmission ratios reflect the state of the claims at the time of extraction from CMS' Common Working File. Under the proposed process, a hospital's opportunity to submit corrections to the calculation of the excess readmission ratios ends at the conclusion of the review and correction period. We welcomed public comments on the proposed review and corrections process for the Hospital Readmissions Reduction Program.

Comment: One commenter disagreed with the use of the Common Working File (CWF) to calculate the readmission measures, stating that it does not contain final-action claims for all of the discharges eligible to be used to calculate excess readmission ratios.

Response: The excess readmission ratios are calculated using only the final action claims (that is, we do not include canceled/edited claims) from the CWF available as of September 30, which are published in the Inpatient Standard Analytic File (SAF). Calculations include claims processed by CMS as of the following dates: June 26, 2009 for July 1, 2007 through June 30, 2008 claims; June 25, 2010 for July 1, 2008 through June 30, 2009 claims; June 24, 2011 for July 1, 2009 through June 30, 2010 claims; and September 30, 2011 for July l, 2010 through June 30, 2011 claims. Claims and corrections processed after these dates are not reflected in the calculations. Thus data between 2008 and 2010 include more than 6 months of run-out period, and 2011 data contain a 3-month run-out period to allow as many corrected and final-action claims to be incorporated. These are the most recent final action data that can be used to meet the timeline of the program need. We encourage hospitals to submit claim corrections as early as possible and to ensure the quality of the data they submitted for reimbursements. If CMS waits for final-action claims for all eligible discharges to be included in the data, then the excess readmission ratios will be based on old data, which will limit its usefulness for hospitals to review and improve their care delivery processes. Therefore, we have encouraged hospitals to submit claim corrections as early as possible and to ensure the quality of the data they submitted for reimbursements. We will continue to research and seek public comments on alternative data sources that might provide measure results that are as accurate and are more timely than the CWF. The CWF will be used for the calculation of excess readmission ratios for the Hospital Readmissions Reduction Program as finalized in the FY 2012 IPPS/LTCH final rule (76 FR 51671 through 51672).

Comment: One commenter appreciated the release of additional hospital specific data and ''excess readmission rates'' data prior to the implementation of the program, as well as the readmission information and patient's risk factors.

Response: We thank the commenter for the recognition and we are committed to foster transparency, provide accurate data to hospitals for quality improvement, and, ultimately, timely calculate readmission adjustment factors for base operating DRG payments.

Comment: One commenter thanked CMS for the 30-day review and correction period while one commenter

requested the review and correction period be extended to 60 days.

Response: We appreciate the commenter's support of the 30-day review period. We note that, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51672 through 51673), we adopt the same preview and correction process and timeframe used for subsection (d) hospitals for the rates calculated for the Hospital Readmissions Reduction Program. That is, we provide hospitals with an opportunity to preview their readmission rates for 30 days prior to posting on the Hospital Compare webs site. This process meets the statutory requirement in section 1886(q)(6)(B) of the Act which requires the Secretary to ensure that a subsection (d) hospital has the opportunity to review and submit corrections before the information to be made public with respect to the hospital * * * prior to such information being made public.

Aside from the statutory requirements, we also considered hospital experience with the measure and data production timeline in proposing the 30-day preview period. In terms of hospital experience with the measures, while the Hospital Readmissions Reduction Program is new, subsection (d) hospitals are already familiar with the three 30-day risk-standardized readmission measures that the Program uses to determine payment adjustment. In particular, these three measures were first publicly reported by the former Reporting of Hospital Quality Data for Annual Payment Update (RHQDAPU) program (currently known as the Hospital IQR Program), back in 2009. The measure results have been reported annually since then and have recently been updated in July 2012. To help hospitals understand the methodology for these measures and the calculation and interpretation of measure results, we have made publicly available the latest version of the methodology reports, a Frequently-Asked-Question list, a mock hospital-specific report, and a mock discharge-level data file for these measures on the *QualityNet* Web site. The measures methodology for the Hospital Readmissions Reduction Program is the same as that for the Hospital IQR Program. Because hospitals are working with measures in which they have prior experience from the Hospital IQR Program, we believe that a 30-day preview period is sufficient for hospitals to review and correct their excess readmission ratios.

In terms of data production timeline, due to the complexity of these measures and the need for bootstrapping in measure calculations, a significant amount of programming resources is needed. It took several months to complete the production and extensive quality assurance procedures for the results for more than 3,500 hospitals. As a result, we will not be able to begin the preview period earlier than late June. Also, we will not be able to extend the preview period to more than 30 days. This is because if hospitals find data problems that we determine to be attributable to our calculation or programming errors, we will need adequate time between mid-July and the end of September to: (1) Recalculate the excess readmission ratios; (2) regenerate and redisseminate corrected results to hospitals in time for payment adjustment in early October (the beginning of the subsequent fiscal year); and (3) publicly report the excess readmission ratios on the *Hospital Compare* Web site in mid-October to meet the statutory reporting requirements under section 1886(q)(6) of the Act. Based on the above reasons, we cannot change the review and correction timeframe to 60 days.

Comment: One commenter requested that, for self-validation purposes, CMS provide each hospital with a downloadable database containing all of the claims data used to calculate the hospital's readmission rates. One commenter recommended that CMS provide hospitals with additional claim information documenting the first physician/licensed independent practitioner visit post index discharge and prior to readmit (days from discharge to first visit). The commenter stated that the first follow-up provider information is critical to decreasing readmissions. Another commenter was concerned that limited access to the claims data will impair hospitals' ability to self-validate our results.

Response: We considered several factors in deciding the amount of information that CMS provides to hospitals for the review and correction process. These factors are: Confidentiality of information, our resources, and feasibility for hospital providers to process the data.

For the purposes of the Hospital Readmissions Reduction Program data, we have decided to provide as much of the claims-based information that is pertinent to the calculation of the excess readmission ratio so that hospitals can verify the accuracy of these calculations and engage in outreach and coordination with readmitting hospitals. Providing the entire raw claims history for index admissions and for subsequent services after discharge would provide more information than would be necessary in hospitals' effort to review their excess readmission ratios. To protect sensitive patient information, and to avoid burden and confusion to hospitals, we are careful not to include data elements that are not relevant for the review and correction process.

Furthermore, providing all subsection (d) and Maryland hospitals with all the claims data will require a large amount of resources, infrastructure changes and exert significant financial burden on these hospitals and on taxpayers. We have already provided supplemental discharge-level data to hospital providers to review qualified individual readmissions, including primary diagnosis at index and readmission stays, where the patient was readmitted, dates of index and readmission stays, and individual risk factors, and instructions for replicating their excess readmission ratios.

Additionally, we have also set up a Help Desk for hospitals to inquire about their results. This Help Desk has access to all the claims data used for the calculation of the hospitals' excess readmission ratios, and is highly experienced in assisting hospitals with the results of the 30-day risk-standardized readmission measures. Therefore, we believe that the proposed review correction policies are adequate. We are working to identify new methods to provide hospitals with accurate and timely data to improve their care delivery processes to reduce readmission rates. We encourage hospitals and other healthcare providers to provide us with recommendations for this effort.

After consideration of the public comments received, for the review and correction process, we are finalizing the policies of providing applicable hospitals with: (1) a period of 30 days to review and submit corrections for their excess readmission ratios for the Hospital Readmissions Reduction Program; and (2) confidential reports and accompanying confidential discharge-level information (this includes the excess readmission ratios, the risk-factors for the discharges that factor into the calculation of the excess readmission ratio, as well as information about the readmissions associated with these discharges).

B. Sole Community Hospitals (SCHs) (§ 412.92)

1. Background

Section 1886(d)(5)(D)(iii) of the Act defines a sole community hospital (SCH) generally as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as isolated location,

weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of inpatient hospital services reasonably available to Medicare beneficiaries. The regulations at 42 CFR 412.92 set forth the criteria that a hospital must meet to be classified as a SCH. For more information on SCHs, we refer readers to the FY 2009 IPPS/LTCH PPS final rule (74 FR 43894 through 463897).

2. Reporting Requirement and Clarification for Duration of Classification for Hospitals Incorrectly Classified as Sole Community Hospitals (§ 412.92(b)(3)(iv))

The regulations at § 412.92(b)(2) and (b)(3) address the effective dates of a classification as an SCH and the duration of this classification. Currently, a hospital's SCH classification status remains in effect without the need for reapproval unless there is a change in the circumstances under which the classification was approved. Section 412.92(b)(3) requires a hospital to notify the fiscal intermediary or Medicare administrative contractor (MAC) within 30 days of a change that could affect its classification as an SCH. Specifically, the regulations require an SCH to notify its fiscal intermediary or MAC if any of the following changes specified in §§ 412.92(b)(3)(ii)(A) through (b)(3)(ii)(E) occur:

- The opening of a new hospital in its service area.
- The opening of a new road between itself and a like provider within 35 miles.
- An increase in the number of beds to more than 50, if the hospital qualifies as an SCH under § 412.92(a)(1)(ii).
- Its geographic classification changes.
- Any changes to the driving conditions that result in a decrease in the amount of travel time between itself and a like provider if the hospital qualifies as an SCH under § 412.92(a)(3).

As discussed in the FY 2007 IPPS final rule (71 FR 48060), in the context of CMS becoming aware of several hospitals that had been paid based on SCH status, even after the original circumstances of the classification changed, CMS determined that an SCH's classification status would generally end 30 days after CMS notifies the SCH that it no longer meets the requirements to be classified as an SCH. However, if a hospital does not report when any one of the changes listed above occurs, CMS will cancel the hospital's SCH classification effective with the date that the hospital no longer met the criteria for SCH classification, subject to the reopening rules at 42 CFR 405.1885 (§ 412.92(b)(3)(i)).

For any change that is not listed under § § 412.92(b)(3)(ii)(A) through (b)(3)(ii)(E) that affects an SCH's classification status, CMS requires a hospital to report that change to the fiscal intermediary or MAC if it ''becomes aware'' of the change. If a hospital does not report a change, other than those listed under §§ 412.92(b)(3)(ii)(A) through (b)(3)(ii)(E), and it becomes known to CMS that the hospital had knowledge of that change, CMS will cancel the hospital's SCH classification effective with the date the hospital became aware of the event. Specifically, § 412.92(b)(3)(iii) states that ''a sole community hospital must report to the fiscal intermediary if it *becomes aware of any change* that would affect its classification as a sole community hospital beyond the events listed in paragraph (b)(3)(ii) of this section within 30 days of the event. If CMS determines that a sole community hospital has failed to comply with this requirement, CMS will cancel the hospital's classification as a sole community hospital effective with the date the hospital *became aware of the event* that resulted in the sole community hospital no longer meeting the criteria for such classification, consistent with the provisions of § 405.1885 of this chapter.'' (Emphasis added.)

The existing language at § 412.92(b)(3)(iii) only refers to a hospital becoming aware of a ''change,'' because it deals specifically with a situation where a hospital was appropriately classified as an SCH because it had previously met the requirements to become an SCH. We believe that this requirement was not intended to preclude situations where a hospital was incorrectly classified as an SCH. However, the regulations did not explicitly address the situation where a hospital never met the requirements to be classified as an SCH, but was incorrectly classified as an SCH. Therefore, we believe it would be prudent to explicitly address this situation in the regulations.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27968 and 27969), we proposed to add a new paragraph (b)(3)(iv) to § 412.92 to clarify our current authority that if CMS determines that the hospital was incorrectly classified as an SCH, SCH status could be cancelled retroactively, consistent with the provisions at § 405.1885. We proposed that any factor or information, not only a change or an event that could have affected a hospital's initial SCH classification must be reported by the SCH to its fiscal intermediary or MAC.

Our proposed regulation stated explicitly our current authority that if a determination is subsequently made that, in fact, a hospital did not ever qualify as an SCH, the withdrawal of SCH status could be made retroactively to revoke payments associated with the incorrect SCH classification for the entire time period, consistent with the reopening rules at § 405.1885.

Comment: Many commenters contended that a hospital should not be accountable for any errors it made inadvertently and is unaware of or for any errors made by CMS or the Medicare contractor. Commenters requested confirmation and clarification regarding a number of issues, such as: (1) The circumstances under which the reporting obligation is triggered; (2) the timeframe involved in making a report to CMS; and (3) what factor or information must be reported.

Response: We realize that a hospital could have been incorrectly classified as an SCH based on an inadvertent error by the hospital, CMS, or the contractor. However, an error is not adequate justification to maintain a hospital's SCH status and to provide higher payments under the Medicare program. However, in light of the public comments, we are modifying our proposed change in this final rule so that, effective October 1, 2012, if a hospital reports any factor or information that could have affected its initial classification as an SCH, and CMS determines that, based on the additional information, the hospital should not have qualified for SCH status, we will only revoke SCH status prospectively, effective 30 days from CMS' date of determination. We note that this reopening limitation does not apply to situations where there was fraud involved. If a hospital knowingly misled CMS or deliberately submitted incorrect information in its initial classification, different procedures would apply. These procedures would include recouping incorrect payments associated with the fraudulently awarded SCH classification.

This policy, as revised in this final rule, will allow a hospital that reports to CMS any factor or information that could have affected its initial classification as an SCH to have its SCH classification removed prospectively only. A hospital is only required to report to CMS any available information that would have affected its initial classification as an SCH under the regulations that were effective at that time. We are not requiring hospitals to

continuously monitor subsequent year data from other hospitals such as changes in patient origin data. However, information that could have affected its classification as an SCH at the time of its *initial* SCH determination is required to be reported to CMS.

For example, if hospital A is classified as an SCH and the distance between itself and hospital B is such that it may have been classified as an SCH in error, hospital A would be required to report this to CMS. If the hospital reports this issue to CMS, and CMS determines in fact that the distance between hospital A and hospital B would have precluded hospital A from being classified as an SCH using the qualification criteria that were in place at the time of its initial classification, we would remove the hospital's SCH status effective 30 days from the date that CMS determines that Hospital A should not have qualified for SCH status. However, if hospital A does not report to CMS that hospital B's proximity to hospital A may have been overlooked in its initial classification as an SCH, and CMS finds that hospital A should never have qualified as an SCH, CMS has the discretion to recoup the overpayments associated with erroneous SCH status, in accordance with cost reporting reopening rules at § 405.1885, that is, for cost reporting periods that are within the 3-year reopening period. We believe this distinction between the effective date for hospitals that do and do not notify CMS of the possible error will encourage self-reporting of possible errors. In cases where hospitals fail to report, CMS would have the discretion to reopen back to the earliest date possible in accordance with § 405.1885. Such discretion would be available to rectify situations where hospitals were paid as SCHs even though they never initially met the classification standards for such status, and never reported the error to CMS.

Accordingly, if a hospital suspects that it should not have qualified as an SCH at the time of its initial classification and the hospitals comes to CMS and requests that CMS determine whether it meets all of the requirements for SCH status, if CMS confirms that suspicion and the hospital in fact should never have been approved as an SCH, CMS will remove SCH status effective 30 days from CMS' date of determination.

We note that this policy, as revised, is in addition to the requirements already in place in the regulations at §§ 412.92(b)(3)(i) through (b)(3)(iii) that require a hospital to notify CMS (that is, the fiscal intermediary or MAC servicing the hospital) of any changes that would affect its SCH status.

Comment: Several commenters were concerned that our proposal could potentially revoke SCH status from a hospital's initial classification as an SCH, which could potentially span a few decades. One commenter suggested that CMS establish a ''look back'' period on which hospitals can rely and that CMS not reopen a prior SCH classification more than 3 years after the initial determination simply because there is an open cost report due to an appeal or delayed payment. Many commenters objected to the retroactive cancellation of SCH classification claiming that this would be punitive.

Response: We understand and appreciate the need to establish a limit to how far back CMS may rescind SCH status. Our proposal clearly stated that the withdrawal of SCH status could be made retroactively, consistent with the provisions at § 405.1885, meaning that we may withdraw SCH status for cost reporting periods that are within the 3-year reopening period only. Therefore, if a hospital was incorrectly approved as an SCH and the effective date of the original classification is still within the 3-year cost report reopening period, we could withdraw SCH status for all those periods in which it was paid incorrectly as an SCH starting with its initial date of classification. However, if the effective date of the original classification as an SCH was not within the 3-year cost report reopening period, we could only withdraw SCH status and any payments associated with that SCH status for those cost reporting periods subject to the reopening period. This is consistent with our reopening rules, and applies to any open cost report, regardless of the reason the report is still in an open cost reporting period. We note that our ordinary reopening rules do not distinguish the period available for reopening based on why a cost report may still be open. Finally, as stated above, CMS would have the discretion to reopen to the earliest date possible, consistent with § 405.1885.

Comment: Some commenters contended that the proposal undermines CMS' longstanding principle favoring prospective policy and that a hospital would never have total certainty that it qualifies as an SCH.

Response: While we appreciate the commenters' concerns, we also believe that overpaying hospitals based on an erroneous classification that should never have been awarded undermines a payment system, and could even encourage attempts at misclassification. Our reopening rules have always provided authority to revoke overpayments associated with an erroneous SCH classification retroactively and in accordance with the cost report reopening rules. Our clarification in the regulation is merely codifying this already existing authority. We are simply making explicit what is already implicit in our authority and is not introducing a change in policy.

Comment: Several commenters asserted that CMS' proposed regulation is unfair in that it would impose an unfair and burdensome obligation to continuously monitor data that may not be within a hospital's control. Other commenters suggested that CMS modify the proposed regulation to make it more consistent with the regulations at §§ 412.92(b)(3)(ii) and (b)(3)(iii) which describe the way CMS handles the cancellation of SCH for a hospital where there was a change in circumstances under which the classification was approved.

Response: We are not requiring hospitals to continuously monitor data nor are we requiring hospitals to report data that may not be within their control. A hospital would only be required to report any factor or information that would have affected its initial classification. We note that this policy is in addition to the requirements already in place in the regulations at §§ 412.92(b)(3)(i) through (b)(3)(iii) that require a hospital to notify CMS (that is, the hospital's fiscal intermediary or MAC) of any changes that would affect its SCH status. The information in question is data that are germane to the information on which the SCH classification was based. The factors and information that a hospital must report are a limited universe of data that was used during the hospital's initial classification.

The modifications that we have made to the proposed regulation in this final rule would make the final regulation consistent with our existing regulations at §§ 412.92(b)(3)(i) and (b)(3)(ii) where CMS cancels SCH classification in accordance with our reopening rules when the SCH fails to disclose a change in circumstance.

Comment: Several commenters requested classification as to (1) whether the proposed regulation would apply to hospitals that were classified as SCHs before the implementation of IPPS; and (2) which standards and criteria would be used by CMS to determine whether or not the hospital qualified as an SCH in its initial classification.

Response: We note that there are a few types of SCHs that have been classified as such under different sets of requirements:

(1) *A hospital that was granted SCH status and was granted an exemption*

from cost limits pre-IPPS. Our regulations at § 412.92(b)(5) state that a hospital that has been granted an exemption from the hospital cost limits before October 1, 1983, or whose request for the exemption was received by the appropriate intermediary before October 1, 1983, and was subsequently approved, is automatically classified as an SCH. In the September 1, 1983 final rule (48 FR 39780), we stated that a hospital would be classified as an SCH for purposes of the IPPS if the hospital has an approved exemption from hospital cost limits as an SCH prior to October 1, 1983, and that the hospital would retain SCH status unless there was a change in the circumstances affecting this classification under the cost limits.

(2) *A hospital that was classified as an SCH before the change in the law under section 6003(e)(3) of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239).* In the August 18, 2006 final rule (71 FR 48061), we discussed that changes in criteria for being eligible for SCH status that were made by section 6003(e)(3) of Public Law 101–239. The law changed SCH criteria by reducing the number of miles between providers from 50 to 35 and by requiring the Secretary to establish a criterion that takes into consideration the travel time between two providers. Section 6003(e)(3) of Public Law 101–239 exempted hospitals that already had SCH status from meeting either of these requirements. In other words, any hospital that was correctly an SCH in 1989 is protected under this grandfathering provision from the new mileage criterion and whether or not it meets the new criterion for classification concerning travel time at § 412.92(a)(3). However, we noted that this grandfathering provision is limited to these two circumstances. Hospitals with SCH designations in effect prior to 1989 can lose SCH status if they fail to meet any of the other eligibility criteria.

(3) *A hospital that was designated as an EACH prior to October 1, 1997.* Under the regulations at § 412.109, a hospital designated as an EACH is paid as an SCH as long as the hospital continues to comply with the terms, conditions, and limitations that were applicable at the time of designation.

These hospitals are grandfathered in and are protected against later changes to SCH criteria or new interpretations of those criteria. Accordingly, these grandfathered SCHs would maintain their SCH status as long as they continue to meet the criteria under which they classified for payments as SCHs.

In this final rule, we also are clarifying that we would apply the standards and regulations that were in effect at the time the hospital was initially classified as an SCH. That is, when CMS determines that a hospital never met the requirements to be classified as an SCH, we are referring to the requirements that were in place during the hospital's initial classification as an SCH. However, we note that the criteria for SCH classification have not been modified since we made changes to implement section 6003(e)(3) of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239). Since that time, we have issued minimal reinterpretations in the actual criteria for classification. Therefore, we are confirming that we would not apply SCH criteria, standards, or interpretations that were not effective at the time of initial SCH classification to any hospital.

Comment: Some commenters argued that the proposed regulation change is irreconcilable with our existing regulation which states that a hospital retains SCH status unless there is a change in the circumstances under which the classification was approved.

Response: The commenters' argument is based on an incorrect assumption about the applicability of the existing regulations. That is, the existing regulations only address situations where a hospital was correctly classified as an SCH. The regulations were silent on hospitals that were initially classified incorrectly. If a hospital was classified as an SCH in error, clearly it would not take a ''change in circumstances'' to revoke SCH status.

After consideration of the public comments we received, we are finalizing our proposed codification of our current authority to recoup any overpayments associated with incorrect SCH classification, consistent with cost report reopening rules at § 405.1885. We also are making one modification to specify that, effective October 1, 2012, if a hospital subsequently reports any factors or information to CMS that could have affected its initial classification as an SCH and CMS determines that, based on the additional information, the hospital should not have qualified for SCH status, CMS will cancel SCH status effective 30 days from CMS' date of determination.

As stated above, we also note that reopening limitation does not apply to situations where there was fraud involved. If a hospital knowingly misled CMS or deliberately submitted incorrect information in its initial classification, CMS will recoup incorrectly paid amounts from the date of the hospital's initial SCH classification.

3. Change to Effective Date of Classification for MDHs Applying for SCH Status Upon the Expiration of the MDH Program (§ 412.92(b)(2)(v))

Under existing regulations at § 412.92(b)(2), an SCH's status is generally effective 30 days after CMS's written notification of approval. It has come to our attention that there may be a number of hospitals currently classified as MDHs, under § 412.108 of the regulations, that intend to apply for classification as SCHs, under § 412.92 of the regulations, upon the expiration of the MDH program provision on September 30, 2012. Those hospitals may be reluctant to apply for SCH classification status well before the expiration of their MDH status because they would prefer to maintain their MDH status for as long as possible. Conversely, if those hospitals were to wait to apply for SCH classification status after expiration of their MDH status, they could experience a financial hardship if there were a delay in the approval for SCH classification status. In order to facilitate a seamless transition for hospitals that are currently classified as MDHs and that will qualify as SCHs, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27969), we proposed to add an exception to the effective dates of SCH classification by adding a new paragraph (v) under § 412.92(b)(2). We proposed that for any MDH that applies for SCH classification status at least 30 days prior to the expiration of the MDH program provision and requests that SCH classification status be effective with the expiration of the MDH program provision, and the MDH is approved for SCH classification status, the effective date of the hospital's classification as an SCH would be the day following the expiration date of the MDH program provision (that is, October 1, 2012). For example, Hospital A is an MDH that would like to maintain its MDH status for as long as possible and be classified as an SCH only after its MDH status expires. In order to seamlessly transition from MDH status to SCH status, Hospital A must apply for SCH status by August 31, 2012, and must request that, if approved, SCH classification status be effective with the expiration of the MDH program provision. If CMS determines that Hospital A qualifies for SCH status, the effective date of its SCH classification will be October 1, 2012.

Comment: Commenters supported the proposal to provide for a seamless transition for MDHs than can qualify as SCHs, in anticipation of the expiration

of the MDH program. Commenters also requested that CMS provide hospitals with the ability to, in turn, rescind their new SCH status retroactively and reinstate their MDH status in a seamless manner if a retroactive extension to the MDH program is made.

Response: We appreciate the commenters' support. The commenters' request that CMS make provisions for hospitals to transition from SCH status back to MDH status depends on legislation being passed for the MDH program. We typically do not create policy around actions that Congress may take in the future. However, if legislation is passed to continue the MDH program, we will develop policy to implement the specific provisions of such legislation.

After consideration of the public comments received, we are finalizing our proposed change to the effective date of SCH status for MDHs losing their MDH status with the expiration of the MDH program. In order for an MDH to receive SCH status effective October 1, 2012, it must apply for SCH status at least 30 days before the end of the MDH program; that is, the MDH must apply for SCH status by August 31, 2012. The MDH also must request that, if approved as an SCH, the SCH status be effective with the expiration of the MDH program provision; that is, MDH must request that the SCH status, if approved, be effective October 1, 2012, immediately after its MDH status expires with the expiration of the MDH program at the end of FY 2012, on September 30, 2012.

C. Rural Referral Centers (RRCs): Annual Update to Case-Mix Index (CMI) and Discharge Criteria (§ 412.96)

Under the authority of section 1886(d)(5)(C)(i) of the Act, the regulations at § 412.96 set forth the criteria that a hospital must meet in order to qualify under the IPPS as a rural referral center (RRC). RRCs receive some special treatment under both the DSH payment adjustment and the criteria for geographic reclassification.

Section 402 of Public Law 108–173 raised the DSH payment adjustment for RRCs such that they are not subject to the 12-percent cap on DSH payments that is applicable to other rural hospitals. RRCs are also not subject to the proximity criteria when applying for geographic reclassification. In addition, they do not have to meet the requirement that a hospital's average hourly wage must exceed, by a certain percentage, the average hourly wage of the labor market area where the hospital is located.

Section 4202(b) of Public Law 105–33 states, in part, ''[a]ny hospital classified as an RRC by the Secretary * * * for fiscal year 1991 shall be classified as such an RRC for fiscal year 1998 and each subsequent year.'' In the August 29, 1997 IPPS final rule with comment period (62 FR 45999), CMS reinstated RRC status for all hospitals that lost the status due to triennial review or MGCRB reclassification. However, CMS did not reinstate the status of hospitals that lost RRC status because they were now urban for all purposes because of the OMB designation of their geographic area as urban. Subsequently, in the August 1, 2000 IPPS final rule (65 FR 47089), we indicated that we were revisiting that decision. Specifically, we stated that we would permit hospitals that previously qualified as an RRC and lost their status due to OMB redesignation of the county in which they are located from rural to urban, to be reinstated as an RRC. Otherwise, a hospital seeking RRC status must satisfy all of the other applicable criteria. We use the definitions of ''urban'' and ''rural'' specified in Subpart D of 42 CFR Part 412. One of the criteria under which a hospital may qualify as an RRC is to have 275 or more beds available for use (§ 412.96(b)(1)(ii)). A rural hospital that does not meet the bed size requirement can qualify as an RRC if the hospital meets two mandatory prerequisites (a minimum CMI and a minimum number of discharges), and at least one of three optional criteria (relating to specialty composition of medical staff, source of inpatients, or referral volume). (We refer readers to § 412.96(c)(1) through (c)(5) and the September 30, 1988 **Federal Register** (53 FR 38513).) With respect to the two mandatory prerequisites, a hospital may be classified as an RRC if—

- The hospital's CMI is at least equal to the lower of the median CMI for urban hospitals in its census region, excluding hospitals with approved teaching programs, or the median CMI for all urban hospitals nationally; and
- The hospital's number of discharges is at least 5,000 per year, or, if fewer, the median number of discharges for urban hospitals in the census region in which the hospital is located. (The number of discharges criterion for an osteopathic hospital is at least 3,000 discharges per year, as specified in section 1886(d)(5)(C)(i) of the Act.)

1. Case-Mix Index (CMI)

Section 412.96(c)(1) provides that CMS establish updated national and regional CMI values in each year's annual notice of prospective payment rates for purposes of determining RRC status. The methodology we used to determine the national and regional CMI values is set forth in the regulations at § 412.96(c)(1)(ii). The national median CMI value for FY 2013 includes data from all urban hospitals nationwide, and the regional values for FY 2013 are the median CMI values of urban hospitals within each census region, excluding those hospitals with approved teaching programs (that is, those hospitals that train residents in an approved GME program as provided in § 413.75). These values are based on discharges occurring during FY 2011 (October 1, 2010 through September 30, 2011), and include bills posted to CMS' records through March 2012.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27969), we proposed that, in addition to meeting other criteria, if rural hospitals with fewer than 275 beds are to qualify for initial RRC status for cost reporting periods beginning on or after October 1, 2012, they must have a CMI value for FY 2011 that is at least—

- 1.5378; or
- The median CMI value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in § 413.75) calculated by CMS for the census region in which the hospital is located. (We refer readers to the table set forth in the FY 2013 IPPS/LTCH PPS proposed rule at 77 FR 27970.)

The final CMI criteria for FY 2013 are based on the latest available data (FY 2011 bills received through March 2012). In addition to meeting other criteria,, if rural hospitals with fewer than 275 beds are to qualify for initial RRC status for cost reporting periods beginning on or after October 1, 2012, they must have a CMI value for FY 2011 that is at least—

- 1.5378; or
- The median CMI value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in § 413.75) calculated by CMS for the census region in which the hospital is located.

The final median CMI values by region are set forth in the following table:

Region	Case-mix index value
1. New England (CT, ME, MA, NH, RI, VT)	1.3146
2. Middle Atlantic (PA, NJ, NY)	1.3744
3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	1.4640
4. East North Central (IL, IN, MI, OH, WI)	1.4533
5. East South Central (AL, KY, MS, TN)	1.4045
6. West North Central (IA, KS, MN, MO, NE, ND, SD)	1.4899
7. West South Central (AR, LA, OK, TX)	1.5855
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	1.6461
9. Pacific (AK, CA, HI, OR, WA)	1.5298

A hospital seeking to qualify as an RRC should obtain its hospital-specific CMI value (not transfer-adjusted) from its fiscal intermediary or MAC. Data are available on the Provider Statistical and Reimbursement (PS&R) System. In keeping with our policy on discharges, the CMI values are computed based on all Medicare patient discharges subject to the IPPS MS-DRG-based payment.

2. Discharges

Section 412.96(c)(2)(i) provides that CMS set forth the national and regional numbers of discharges in each year's annual notice of prospective payment rates for purposes of determining RRC status. As specified in section 1886(d)(5)(C)(ii) of the Act, the national standard is set at 5,000 discharges. We would normally update the regional standards based on discharges for urban hospitals' cost reporting periods that began during FY 2010 (that is, October 1, 2009 through September 30, 2010), which would normally be the latest cost report data available at the time of the development of this final rule. However, due to a transition in our data system, in lieu of a full year of FY 2010 cost report data, we needed to use a combination of FY 2009 and FY 2010 cost report data in order to create a full fiscal year of cost report data for this analysis. Due to CMS' transition to a new cost reporting form effective for cost reporting periods beginning on or after May 1, 2010, cost reports with fiscal year begin dates of May 1, 2010 through September 30, 2010 were not accessible on our system for analysis at the time of the development of this final rule. Therefore, in order to have a complete fiscal year of cost report data, we utilized FY 2009 cost report data for providers with fiscal years beginning on or after May 1, 2010 and by September 30, 2010, in addition to the FY 2010 cost report data for providers with fiscal years beginning on or after October 1, 2009 and before May 1, 2010.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27970), we proposed that, in addition to meeting other criteria, a hospital, if it is to qualify for initial RRC status for cost reporting periods beginning on or after October 1, 2012, must have, as the number of discharges for its cost reporting period that began during FY 2010 (based on a combination of FY 2009 and FY 2010 cost report data as explained in the preceding paragraph), at least—

- 5,000 (3,000 for an osteopathic hospital); or
- The median number of discharges for urban hospitals in the census region in which the hospital is located. (We refer readers to the table set forth in the FY 2013 IPPS/LTCH PPS proposed rule at 77 FR 27970.)

Based on the latest discharge data available at this time (that is, based on a combination of FY 2009 and FY 2010 cost report data as explained earlier in this section), the final median number of discharges for urban hospitals by census region are set forth in the following table:

Region	Number of discharges
1. New England (CT, ME, MA, NH, RI, VT)	8,159
2. Middle Atlantic (PA, NJ, NY)	11,448
3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV)	11,755
4. East North Central (IL, IN, MI, OH, WI)	8,749
5. East South Central (AL, KY, MS, TN)	7,234
6. West North Central (IA, KS, MN, MO, NE, ND, SD)	8,129
7. West South Central (AR, LA, OK, TX)	6,232
8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)	9,336
9. Pacific (AK, CA, HI, OR, WA)	8,745

We note that the median number of discharges for hospitals in each census region is greater than the national standard of 5,000 discharges. Therefore, 5,000 discharges is the minimum criterion for all hospitals under this final rule.

We reiterate that, if an osteopathic hospital is to qualify for RRC status for cost reporting periods beginning on or after October 1, 2012, the hospital would be required to have at least 3,000 discharges for its cost reporting period that began during FY 2010 (based on a combination of FY 2009 and FY 2010 cost report data as explained earlier in this section).

D. Payment Adjustment for Low-Volume Hospitals (§ 412.101)

1. Expiration of the Affordable Care Act Provisions for FYs 2011 and 2012

For FYs 2011 and 2012, the Affordable Care Act expanded the definition of low-volume hospital and modified the methodology for determining the payment adjustment for hospitals meeting that definition. Beginning with FY 2013, the low-volume hospital qualifying criteria and payment adjustment will revert to the statutory requirements that were in effect prior to the amendments made by the Affordable Care Act. We discuss the payment policies for FY 2013 in section IV.D.4. of this preamble.

2. Background

Section 1886(d)(12) of the Act, as added by section 406(a) of Public Law 108–173, provides for a payment adjustment to account for the higher

costs per discharge for low-volume hospitals under the IPPS, effective beginning FY 2005. The additional payment adjustment to a low-volume hospital provided for under section 1886(d)(12) of the Act is ''in addition to any payment calculated under this section.'' Therefore, the additional payment adjustment is based on the per discharge amount paid to the qualifying hospital under section 1886 of the Act. In other words, the low-volume payment amount is based on total per discharge payments made under section 1886 of the Act, including capital, DSH, IME, and outliers. For SCHs and MDHs, the low-volume payment amount is based on either the Federal rate or the hospital-specific rate, whichever results in a greater operating IPPS payment.

Section 1886(d)(12)(C)(i) of the Act defined a low-volume hospital as ''a subsection (d) hospital (as defined in paragraph (1)(B)) that the Secretary determines is located more than 25 road miles from another subsection (d) hospital and has less than 800 discharges during the fiscal year.'' Section 1886(d)(12)(C)(ii) of the Act further stipulates that the term ''discharge'' means ''an inpatient acute care discharge of an individual regardless of whether the individual is entitled to benefits under Part A.'' Therefore, the term ''discharge'' refers to total discharges, regardless of payer (that is, not only Medicare discharges). Furthermore, under section 406(a) of Public Law 108–173, which initially added subparagraph (12) to section 1886(d) of the Act, the provision requires the Secretary to determine an applicable percentage increase for these low-volume hospitals based on the ''empirical relationship'' between ''the standardized cost-per-case for such hospitals and the total number of discharges of such hospitals and the amount of the additional incremental costs (if any) that are associated with such number of discharges.'' The statute thus mandates that the Secretary develop an empirically justifiable adjustment based on the relationship between costs and discharges for these low-volume hospitals. Section 1886(d)(12)(B)(iii) of the Act limits the applicable percentage increase adjustment to no more than 25 percent.

Based on an analysis we conducted for the FY 2005 IPPS final rule (69 FR 49099 through 49102), a 25-percent low-volume adjustment to all qualifying hospitals with less than 200 discharges was found to be most consistent with the statutory requirement to provide relief to low-volume hospitals where there is empirical evidence that higher incremental costs are associated with low numbers of total discharges. In the FY 2006 IPPS final rule (70 FR 47432 through 47434), we stated that multivariate analyses supported the existing low-volume adjustment implemented in FY 2005. Therefore, the low-volume adjustment of an additional 25 percent continues to be provided for qualifying hospitals with less than 200 discharges.

3. Affordable Care Act Provisions for FYs 2011 and 2012

Sections 3125 and 10314 of the Affordable Care Act amended section 1886(d)(12) of the Act, modifying the definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals, effective only for discharges occurring during FYs 2011 and 2012. Beginning with FY 2013, the preexisting low-volume hospital qualifying criteria and payment adjustment, as implemented in FY 2005, will resume.

Sections 3125(3) and 10314(1) of the Affordable Care Act amended the qualifying criteria for low-volume hospitals under section 1886(d)(12)(C)(i) of the Act to make it easier for hospitals to qualify for the low-volume adjustment. Specifically, the provision specifies that, for FYs 2011 and 2012, a hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 1,600 discharges of individuals entitled to, or enrolled for, benefits under Part A during the fiscal year. In addition, section 1886(d)(12)(D) of the Act, as added by section 3125(4) and amended by section 10314 of the Affordable Care Act, provides that the payment adjustment (the applicable percentage increase) is to be determined ''using a continuous linear sliding scale ranging from 25 percent for low-volume hospitals with 200 or fewer discharges of individuals entitled to, or enrolled for, benefits under Part A in the fiscal year to 0 percent for low-volume hospitals with greater than 1,600 discharges of such individuals in the fiscal year.''

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50238 through 50275 and 50414), we revised our regulations at 42 CFR 412.101 to reflect the changes to the qualifying criteria and the payment adjustment for low-volume hospitals according to the provisions of the Affordable Care Act. In addition to changing the regulations to conform them to the Affordable Care Act changes, we also defined, at § 412.101(a), the term ''road miles'' to mean ''miles'' as defined at § 412.92(c)(i). The definition of ''road miles'' continues to apply even after the Affordable Care Act provisions expire at the end of FY 2012. We also clarified the existing regulations to indicate that a hospital must continue to qualify as a low-volume hospital in order to receive the payment adjustment in that year; that is, it is not based on a one-time qualification. Furthermore, in that same final rule, we discussed the process for requesting and obtaining the low-volume hospital payment adjustment (75 FR 50240).

4. Payment Adjustment for FY 2013 and Subsequent Fiscal Years

As we discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27971 through 27973), in accordance with section 1886(d)(12) of the Act, beginning with FY 2013, the low-volume hospital definition and payment adjustment methodology will revert back to the statutory requirements that were in effect prior to the amendments made by the Affordable Care Act. Therefore, as specified under the existing regulations at § 412.101, effective for FY 2013 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year. As discussed above, the statute specifies that a low-volume hospital must have less than 800 discharges during the fiscal year, but also requires that the applicable percentage increase for qualifying low-volume hospitals be based on the ''empirical relationship'' between ''the standardized cost-per-case for such hospitals and the total number of discharges of such hospitals and the amount of the additional incremental costs (if any) that are associated with such number of discharges.'' Based on an analysis we conducted for the FY 2005 IPPS final rule (69 FR 49099 through 49102), a 25-percent low-volume adjustment to all qualifying hospitals with less than 200 discharges was found to be most consistent with the statutory requirements set forth in section 1886(d)(12)(B) of the Act to provide relief for low-volume hospitals where there is empirical evidence that higher incremental costs are associated with low numbers of total discharges. (Under the policy we established in that same final rule, hospitals with between 200 and 799 discharges do not receive a low-volume hospital adjustment.)

As described above, for FYs 2005 through 2010 and FY 2013 and subsequent years, the discharge

determination is made based on the hospital's number of total discharges, that is, Medicare and non-Medicare discharges. The hospital's most recently submitted cost report is used to determine if the hospital meets the discharge criterion to receive the low-volume payment adjustment in the current year (§ 412.101(b)(2)(i)). We use cost report data to determine if a hospital meets the discharge criterion because this is the best available data source that includes information on both Medicare and non-Medicare discharges. We note that, for FYs 2011 and 2012, CMS used the most recently available MedPAR data to determine the hospital's Medicare discharges because only Medicare discharges were used to determine if a hospital met the discharge criterion for those years.

For FY 2013 and subsequent fiscal years, in addition to a discharge criterion, the eligibility for the low-volume payment adjustment is also dependent upon the hospital meeting the mileage criterion specified at § 412.101(b)(2)(i). Specifically, to meet the mileage criterion to qualify for the low-volume payment adjustment for FY 2013 and subsequent fiscal years, a hospital must be located more than 25 road miles from the nearest ''subsection (d) hospital.'' As mentioned above, we define, at § 412.101(a), the term ''road miles'' to mean ''miles'' as defined at § 412.92(c)(i) (75 FR 50238 through 50275 and 50414).

As discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50238 through 50275 and 50414), we discussed the process for requesting and obtaining the low-volume hospital payment adjustment. In order to qualify for the low-volume hospital payment adjustment, a hospital must provide to its fiscal intermediary or MAC sufficient evidence to document that it meets the discharge and distance requirements. The fiscal intermediary or MAC will determine, based on the most recent data available, if the hospital qualifies as a low-volume hospital, so that the hospital will know in advance whether or not it will receive a payment adjustment. The fiscal intermediary or MAC and CMS may review available data, in addition to the data the hospital submits with its request for low-volume hospital status, in order to determine whether or not the hospital meets the qualifying criteria.

In order to receive a low-volume hospital payment adjustment under § 412.101, a hospital must notify and provide documentation to its fiscal intermediary or MAC that it meets the mileage criterion. The use of a Web-based mapping tool, such as MapQuest, as part of documenting that the hospital meets the mileage criterion for low-volume hospitals, is acceptable. The fiscal intermediary or MAC will determine if the information submitted by the hospital, such as the name and street address of the nearest hospitals, location on a map, and distance (in road miles, as defined in the regulations at § 412.101(a)) from the hospital requesting low-volume hospital status, is sufficient to document that it meets the mileage criterion. If not, the fiscal intermediary or MAC will follow up with the hospital to obtain additional necessary information to determine whether or not the hospital meets the low-volume mileage criterion. In addition, the fiscal intermediary or MAC will refer to the hospital's most recently submitted cost report to determine whether or not the hospital meets the discharge criterion. A hospital should refer to its most recently submitted cost report for total discharges (Medicare and non-Medicare) in order to decide whether or not to apply for low-volume hospital status for a particular fiscal year. As noted previously, a hospital must continue to meet the qualifying criteria at § 412.101(b)(2)(i) as a low-volume hospital (that is, the discharge criterion and the mileage criterion) in order to receive the payment adjustment in that year; that is, low-volume hospital status is not based on a ''one-time'' qualification.

In order to be a low-volume hospital in FY 2013 and subsequent fiscal years, in accordance with our previously established procedure, a hospital must make its request for low-volume hospital status in writing to its fiscal intermediary or MAC by September 1 immediately preceding the start of the Federal fiscal year for which the hospital is applying for low-volume hospital status in order for the 25 percent low-volume add-on payment adjustment to be applied to payments for its discharges for the fiscal year beginning on or after October 1 immediately following the request (that is, the start of the Federal fiscal year). For a hospital whose request for low-volume hospital status is received after September 1, if the fiscal intermediary or MAC determines the hospital meets the criteria to qualify as a low-volume hospital, the fiscal intermediary or MAC will apply the 25 percent low-volume add-on payment adjustment to determine payment for the hospital's discharges for the fiscal year, effective prospectively within 30 days of the date of the fiscal intermediary's or MAC's low-volume status determination.

Specifically, for FY 2013, a hospital must make its request for low-volume hospital status in writing to its fiscal intermediary or MAC by September 1, 2012, in order for the 25-percent low-volume add-on payment adjustment to be applied to payments for its discharges beginning on or after October 1, 2012 (through September 30, 2013). If a hospital's request for low-volume hospital status for FY 2013 is received after September 1, 2012, and if the fiscal intermediary or MAC determines the hospital meets the criteria to qualify as a low-volume hospital, the fiscal intermediary or MAC will apply the 25 percent low-volume add-on payment adjustment to determine the payment for the hospital's FY 2013 discharges, effective prospectively within 30 days of the date of the fiscal intermediary's or MAC's low-volume status determination. For additional information on our established application process for the low-volume hospital payment adjustment, we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50274 through 50275), Transmittal 2060 (Change Request 7134; October 1, 2010), and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51680).

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50238 through 50275 and 50414), in addition to implementing the Affordable Care Act provisions affecting low-volume hospitals for FYs 2011 and 2012, we also implemented changes to the regulations at 42 CFR 412.101 to conform them to the statutory requirements to require that, beginning with FY 2013, the low-volume hospital qualifying criteria and payment adjustment methodology will return to that which was in effect prior to the amendments made by the Affordable Care Act (that is, the low-volume hospital payment policy in effect for FYs 2005 through 2010). Therefore, no further revisions to the policy or to the regulations at § 412.101 are required to conform them to the statutory requirement that the low-volume hospital policy in effect prior to the Affordable Care Act returns for FY 2013 and subsequent years.

Comment: A few commenters expressed concern about the financial impact of the expiration of the temporary expansion of the low-volume hospital payment adjustment provided for by the Affordable Care Act. Some commenters encouraged CMS to promote legislative action that would continue the Affordable Care Act's modification of the low-volume hospital payment adjustment. Other commenters urged CMS to mitigate the impact of the expiration of the 2-year enhancement of the low-volume hospital payment

adjustment provided for by the Affordable Care Act by using the existing statutory authority to make the low-volume adjustment to qualifying hospitals that have up to less than 800 total discharges rather than only to qualifying hospitals that have less than 200 total discharges. The commenters provided no data analysis in support of their comments to expand the low-volume hospital adjustment to qualifying hospitals that have up to less than 800 total discharges.

Response: To implement the original low-volume hospital provision, and as mandated by statute, we developed an empirically justified adjustment based on the relationship between costs and total discharges of hospitals with less than 800 total (Medicare and non-Medicare) discharges. Specifically, we performed several regression analyses to evaluate the relationship between hospitals' costs per case and discharges, and found that an adjustment for hospitals with less than 200 total discharges is most consistent with the statutory requirement to provide for additional payments to low-volume hospitals where there is empirical evidence that higher incremental costs are associated with lower numbers of discharges (69 FR 49101 through 49102). Based on these analyses, we established a low-volume hospital policy where qualifying hospitals with less than 200 total discharges receive a payment adjustment of an additional 25 percent. (Section 1886(d)(12)(B)(iii) of the Act limits the applicable percentage increase adjustment to no more than 25 percent.) We may, in the future, reevaluate the low-volume hospital adjustment policy, that is, the definition of a low-volume hospital and the payment adjustment. However, because we did not make any proposals regarding the low-volume hospital payment adjustment for FY 2013, we are not making any changes to the low-volume hospital payment adjustment policy in this final rule. As discussed above, the low-volume hospital definition and payment adjustment methodology will revert back to the policy established under statutory requirements that were in effect prior to the amendments made by the Affordable Care Act, which is currently implemented in the existing regulations at § 412.101.

E. Indirect Medical Education (IME) Payment Adjustment (§ 412.105)

1. IME Adjustment Factor for FY 2013

Under the IPPS, an additional payment amount is made to hospitals that have residents in an approved graduate medical education (GME) program in order to reflect the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals. The payment amount is determined by use of a statutorily specified adjustment factor. The regulations regarding the calculation of this additional payment, known as the IME adjustment, are located at § 412.105. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51680) for a full discussion of the IME adjustment and IME adjustment factor. Section 1886(d)(5)(B) of the Act states that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. Accordingly, for discharges occurring during FY 2013, the formula multiplier is 1.35. We estimate that application of this formula multiplier for the FY 2013 IME adjustment will result in an increase in IPPS payment of 5.5 percent for every approximately 10-percent increase in the hospital's resident-to-bed ratio.

Comment: One commenter supported the continuation of the IME adjustment factor because IME payments are an important part of guaranteeing a strong general surgery workforce in which there is currently a growing shortage. Another commenter stated that it supported the Nation's teaching hospitals and, therefore, supported continuation of the IME adjustment factor. A third commenter stated that, because of its commitment to GME, academic medicine, and residency training in cardiothoracic surgery, it supported the continuation of the IME adjustment factor. The commenter stated that IME payments are an important part of guaranteeing a strong cardiothoracic surgery workforce ''* * * which is currently experiencing a growing shortage as cited in the report *Shortage of Cardiothoracic Surgeons is Likely by 2020,* published in the journal Circulation, July 27, 2009.''

Response: We appreciate the commenters' support. We note that the IME formula multiplier is set by Congress.

We are finalizing our proposal that the IME formula multiplier for FY 2013 be set at 1.35, which we estimate will result in an increase in IPPS payments of 5.5 percent for every approximately 10-percent increase in the hospital's resident-to-bed ratio.

2. Timely Filing Requirements under Fee-for-Service Medicare

a. IME and Direct GME

The Balanced Budget Act of 1997 (Pub. L. 105–33) amended sections 1886(d) and 1886(h) of the Act by adding paragraphs (d)(11) and (h)(3)(D), respectively, to establish payment provisions for IME and direct GME costs to hospitals providing services to Medicare+Choice (now Medicare Advantage) enrollees. Sections 1886(d)(11) and 1886(h)(3)(D) of the Act specify that the Secretary shall provide for an ''additional payment amount'' for services furnished to individuals who are enrolled in a Medicare Advantage plan under Medicare Part C. To implement sections 1886(d)(11) and 1886(h)(3)(D) of the Act, we issued two final rules in the **Federal Register** that specifically addressed IME and direct GME payments to teaching hospitals for services provided to Medicare Advantage enrollees (the FY 1997 IPPS final rule (62 FR 46003) and the FY 1998 IPPS final rule (63 FR 26341)). Subsequent to the FY 1998 IPPS final rule, we (then HCFA) issued a Program Memorandum (PM), A–98–21, in July 1998, which outlined fiscal intermediary and standard system changes needed to process requests for IME and direct GME supplemental payments for services provided to Medicare Advantage enrollees. The PM explained that hospitals must submit their Medicare claims to the fiscal intermediary in UB–92 format in order for the standard system to process the claims so that hospitals may be paid the supplemental IME and direct GME payments for services provided to Medicare Advantage enrollees. It was always our intent that the claims filing requirements under 42 CFR Part 424, including the time limits at 42 CFR 424.44, fully applied to these claims submissions.

Existing § 424.44 of the regulations contains the time limits for filing all Medicare claims. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27973), we again included a clarification that the regulations governing time limits for filing claims at § 424.44 apply to claims submitted for IME and direct GME payments associated with services provided to Medicare Advantage enrollees. The process that was established by PM A–98–21 is within the same framework of the preexisting methodology for submitting claims under Medicare Part A. Therefore, because IME and direct GME payments for services provided to Medicare Advantage enrollees are also made under Medicare Part A, the same timely filing requirements that apply to other Part A claims for payments also apply to claims for IME and direct GME payments for services provided to Managed Advantage enrollees. We also clarified once again in the proposed rule

that when hospitals submit claims for services provided to Medicare Advantage enrollees for additional IME and direct GME payments, the hospitals must comply with the regulations governing time limits for filing claims at § 424.44.

b. Nursing and Allied Health Education

Section 541 of the Balanced Budget Refinement Act (BBRA) of 1999 (Pub. L. 106–113) further amended section 1886 of the Act by adding subsection (l) to provide for additional payments to hospitals that operate nursing or allied health education programs and incur costs associated with services provided to Medicare+Choice (now Medicare Advantage) enrollees. Section 512 of the Benefits Improvement and Protection Act (BIPA) (Pub. L. 106–554) changed the formula for determining the additional payment amount paid to hospitals that operate nursing or allied health education programs and incur costs for services provided to Medicare+Choice (now Medicare Advantage) enrollees. We issued several PMs (Transmittals A–00–86 on November 22, 2000, and A–03–043 on May 23, 2003) to implement section 541 of the BBRA and section 512 of the BIPA. We also issued related Transmittal A–03–007 on February 3, 2003, and Transmittal A–03–045 on May 30, 2003, to instruct hospitals that operate a nursing or allied health education program and that qualify for additional payment related to services provided to Medicare Advantage enrollees to also submit those claims for processing as no-pay bills in the UB–92 format. These transmittals also instructed hospitals that are not paid under the IPPS, hospitals with rehabilitation and psychiatric units, and hospitals that operate approved nursing or allied health education programs (but may not have approved GME residency programs) to submit claims for services provided to Medicare Advantage enrollees to their fiscal intermediary in UB–92 format with specific condition codes present. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27973), we clarified that the regulations governing the time limits for filing claims at § 424.44 also apply to claims submitted for nursing or allied health education program payments for services provided to Medicare Advantage enrollees.

c. Disproportionate Share Hospital (DSH) Payments

On July 20, 2007, we issued Change Request 5647 instructing applicable hospitals to submit no pay bills for their Medicare Advantage patients for FY 2007 forward in order for these days to be captured in the DSH calculation. Because we issued this request in the middle of FY 2007, we extended the deadline for submission of FY 2007 and FY 2008 no pay Medicare Advantage bills to August 31, 2010.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27973), we proposed to adopt a policy that hospitals that are required to submit no pay bills for services furnished on a prepaid capitation basis by a Medicare Advantage organization, or through cost settlement with either a health maintenance organization (HMO), a competitive medical plan (CMP), a health care prepayment plan (HCPP), or a demonstration, for the purpose of calculating the DSH patient percentage (DPP) must also do so within the time limits for filing claims specified at § 424.44. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50282), we changed our methodology for calculating the SSI fraction of the DSH adjustment, in part, by using claims information that is updated 15 months after the close of each Federal fiscal year. We believed that allowing for a 15-month run-out period would more closely align the timing of the match process with the requirements for the timely submission of claims. As we stated in that final rule, hospitals may not have an incentive to submit no pay bills in as timely a manner as they would for fee-for-service claims. In order to ensure that no pay claims are properly incorporated into the DSH calculation, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27973), we proposed to extend our rules regarding the timely submission of claims to no pay bills submitted for the purposes of calculating the DPP.

We proposed to revise the regulations at § 424.30 to (1) clarify our existing policy that hospitals must file timely claims in order to receive supplemental IME, direct GME, and/or nursing or allied health education payments for Medicare Advantage enrollees and (2) propose that hospitals that are required to submit no pay bills for the purpose of calculating the DPP must also follow the time limits for filing claims.

d. Summary of Public Comments, Our Responses, and Final Policies

Comment: Two commenters stated that, although it is more time consuming to submit no pay bills, it is reasonable to apply the same timely filing requirements to no pay bills for supplemental direct GME, IME, nursing and allied health education, and DSH payments that are applied to other Medicare Part A claims.

Response: We appreciate the commenters' support.

Comment: Several commenters specifically addressed the clarification concerning the timely filing requirements that need to be met to receive supplemental IME and direct GME payments for Medicare Advantage enrollees. The commenters asked that CMS recognize that there are nuances related to shadow billing and that ''inherent complexities'' can delay the processing of these claims. The commenters requested CMS to include in the final rule ''* * * an estimate of the administrative and cost burdens to hospitals that result from the requirement to file a second shadow bill for each Medicare managed care discharge.'' The commenters also urged CMS to recognize that the policy related to GME payments is a new rule rather than a clarification of existing policy.

Response: We do not agree with the commenters that the clarification related to the timely filing requirements for supplemental direct GME and IME payments is a new rule as opposed to a clarification. As noted earlier in this preamble and in the proposed rule (77 FR 27973), to implement sections 1886(d)(11) and 1886(h)(3)(D) of the Act, which provide for an ''additional payment amount'' for services furnished to individuals who are enrolled in a Medicare Advantage plan under Medicare Part C, we issued two final rules in the **Federal Register** that specifically addressed IME and direct GME payments to teaching hospitals for services provided to Medicare Advantage enrollees (the FY 1997 IPPS final rule (62 FR 46003) and the FY 1998 IPPS final rule (63 FR 26341)). In addition, in July 1998, we (then HCFA) issued a Program Memorandum (PM), A–98–21, which outlined fiscal intermediary and standard system changes needed to process requests for IME and direct GME supplemental payments for services provided to Medicare Advantage enrollees. The PM explained that hospitals must submit their Medicare claims to the fiscal intermediary in UB–92 format in order for the standard system to process the claims so that hospitals may be paid the supplemental IME and direct GME payments for services provided to Medicare Advantage enrollees. All claims submitted in UB–92 format are subject to the timely filing regulations at § 424.44. Therefore, in accordance with PM A–98–21, UB–92 claims submitted on behalf of Medicare Advantage enrollees have always been subject to the timely filing regulations at § 424.44. In this final rule, as we did in the proposed rule, we are clarifying that in

order for a hospital to receive supplemental direct GME, IME, and/or nursing and allied health payments for Medicare Advantage enrollees, it must follow the regulations governing time limits for filing claims at § 424.44.

In response to the commenters who requested an estimate of the administrative and cost burden associated with the submission of a no pay bill for Medicare Advantage enrollees, the requirement for hospitals to follow the timely filing requirements in order to receive supplemental direct GME, IME, and/or nursing and allied health education payments for Medicare Advantage enrollees is a clarification and not a new policy proposal. Because we are clarifying this requirement rather than implementing a new requirement, we have concluded that there is no new cost or administrative burden associated with this requirement.

Comment: One commenter asserted that the policy of treating the submission of Part C claims for purposes of calculating direct GME and IME payments as subject to the Part A regulations regarding timely filing constituted a substantive rule, rather than an interpretive rule. As a result, the commenter stated that CMS could not have imposed this requirement without first undertaking rulemaking, and, thus, it was inappropriate for CMS to attempt to clarify this policy in the FY 2013 IPPS/LTCH PPS proposed rule. The commenter noted that this argument had also been raised in *Loma Linda* v. *Sebelius* (D.D.C. (2010)).

Response: We disagree. As a preliminary matter, we note that this issue was not addressed directly in the court's decision in *Loma Linda* v. *Sebelius* because the case was decided on other grounds. Furthermore, as discussed in more detail above, IME and direct GME payments for services provided to Medicare Advantage enrollees are made under Medicare Part A. It has always been CMS' intent that the claims filing requirements under 42 CFR part 424, including the time limits at 42 CFR 424.44, apply to those claims. Thus, we continue to believe it was appropriate for CMS to characterize the discussion in the proposed rule as a clarification of an existing policy, rather than as a new proposal.

After consideration of the public comments we received, in this final rule, we are restating our clarifications that when hospitals submit claims for services provided to Medicare Advantage enrollees for additional IME and direct GME payments, and for claims for nursing or allied health education program payments, the hospital must comply with the regulations governing time limits for filing claims at § 424.44. In addition, we are finalizing our proposal that hospitals that are required to submit no pay bills for the purpose of calculating the DPP must also follow the time limits for filing claims, and the proposed amendments to the regulations at § 424.30 to incorporate these requirements. Further, in this final rule, we are making minor technical revisions to the regulations at § 424.30 in order to further clarify the claims submission requirements.

3. Other Related Policy Changes

In sections IV.F. and IV.I. of the preamble of the FY 2013 IPPS/LTCH PPS proposed rule, we present other proposed policy changes relating to determining labor and delivery bed counts for purposes of the DSH payment adjustment and relating to determining FTE resident caps for direct GME and IME payment purposes that would have an effect on the IME payment adjustment. We refer readers to these same two sections of the preamble of this final rule where we address any public comments received and present the final policies.

F. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) and Indirect Medical Education (IME) (§§ 412.105 and 412.106)

1. Background

For the most recent background discussion regarding the Medicare payment adjustment for subsection (d) hospitals that serve a significantly disproportionate number of low-income patients, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51681).

As we did in the FY 2012 IPPS/LTCH PPS final rule, we are combining, under section IV.F.2. of this preamble, our discussion of FY 2013 proposed and final changes to the policies for counting beds in relation to the calculations for the IME adjustment at § 412.105(b) and the DSH payment adjustment at § 412.106(a)(1)(i) because the underlying concepts are similar, and we believe they should generally be interpreted in a consistent manner for both purposes.

2. Policy Change Relating to Treatment of Labor and Delivery Beds in the Calculation of the Medicare DSH Payment Adjustment and the IME Payment Adjustment

a. Background

Medicare's policy with respect to the treatment of labor and delivery services in the calculation of the Medicare DSH payment adjustment has undergone a number of changes over the years. (We refer readers to the background discussion regarding these policy changes in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43899 through 43901)). The most recent change in policy was adopted in the FY 2010 IPPS/RY 2010 LTCH PPS final rule. Prior to FY 2010, our policy was to exclude from the count of inpatient days, for purposes of the Medicare DSH calculation, labor and delivery patient days associated with beds used for ancillary labor and delivery services when the patient did not occupy a routine bed prior to occupying an ancillary labor and delivery bed. This policy applied whether the hospital maintained separate labor and delivery rooms and postpartum rooms, or whether it maintained ''maternity suites'' in which labor, delivery, and postpartum services all occurred in the same bed. However, in the latter case, patient days were counted proportionally based on the proportion of (routine/ancillary) services furnished. (We refer readers to the example provided in the FY 2004 IPPS final rule (68 FR 45420) that describes how routine and ancillary days are allocated under this policy.)

In the FY 2010 IPPS/RY 2010 LTCH PPS final rule, we revised our regulations to include in the disproportionate patient percentage (DPP) of the Medicare DSH payment adjustment all patient days associated with patients occupying labor and delivery beds once the patient has been admitted to the hospital as an inpatient, regardless of whether the patient days are associated with patients who occupied a routine bed prior to occupying an ancillary labor and delivery bed. Our rationale for adopting this change was that the costs associated with labor and delivery patient days are generally payable under the IPPS. Although we adopted this change with respect to labor and delivery *patient* days, we did not make a similar change to our policy for counting hospital beds.

b. Policy Change

As we stated in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51682), our policy for counting hospital beds is to include bed days available for IPPS-level acute care hospital services. In the FY 2004 IPPS final rule (68 FR 45417), we stated that beds in a particular unit would be considered available for IPPS-level acute care hospital services if the services furnished in that unit were generally payable under the IPPS. Moreover, as stated above, our policy for counting patient days with respect to

the Medicare DSH payment adjustment is to include patient days in units that provide services that are generally payable under the IPPS. Under our current policy, the services furnished to a labor and delivery patient are considered to be generally payable under the IPPS (74 FR 43900).

We recognize that, under our current policy, while the services furnished to a labor and delivery patient are considered to be generally payable under the IPPS, under § 412.105(b)(4), the bed where the services are furnished is not considered to be available for IPPS-level acute care hospital services.

As we discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27974 through 27975), upon further examination of our existing policies, we believe that if a patient day is counted because the services furnished are generally payable under the IPPS, the bed in which the services were furnished should also be considered to be available for IPPS-level acute care hospital services. Accordingly, we believe it is appropriate to extend our current approach of including labor and delivery patient days in the DPP of the Medicare DSH payment adjustment to our rules for counting hospital beds for purposes of both the IME payment adjustment and the Medicare DSH payment adjustment. Specifically, because we have described labor and delivery patient days as being generally payable under the IPPS (74 FR 43900), we believe that the bed in which such services are furnished should also be considered to be available for IPPS-level acute care hospital services, and should be included in the count of beds available for IPPS-level acute care hospital services. The rules for counting hospital beds for purposes of the IME payment adjustment are codified in the IME regulations at § 412.105(b), which are cross-referenced in § 412.106(a)(1)(i) for purposes of determining the DSH payment adjustment.

In light of the similar policy rationales for determining patient days in the calculation of the Medicare DSH payment adjustment, and for determining bed days for both the Medicare DSH payment adjustment and the IME payment adjustment, we proposed to include labor and delivery bed days in the count of available beds used in the IME and DSH calculations. Moreover, we stated that our proposal to treat labor and delivery patient days and bed days the same is consistent with our approach with respect to the observation, swing-bed, and hospice days, which are excluded from both the patient day count and the available bed count. Accordingly, we proposed to revise the regulations at § 412.105(b)(4) to remove from the list of currently excluded beds those beds associated with ''ancillary labor/delivery services.'' We proposed that this regulation change would be effective for cost reporting periods beginning on or after October 1, 2012.

As we noted in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43900), our policy for counting labor and delivery patient days does not allow for the inclusion of days of labor and delivery patients who are not admitted to the hospital as inpatients. For example, if a woman presents at a hospital for labor and delivery services, but is determined by medical staff to be in false labor and is sent home without ever being admitted to the hospital as an inpatient, any days associated with such services furnished by the hospital would not be included in the DPP for purposes of the calculation of the Medicare DSH payment adjustment. For the same reason, days on which labor and delivery beds are used for such services also would be excluded from the count of available bed days.

Comment: A number of commenters stated that the current discrepancy in the treatment of labor and delivery for purposes of the patient day count and the bed day count is appropriate because labor and delivery services are typically not paid for by the Medicare program. The commenters further stated that, to the extent Medicare does pay for labor and delivery services, the Medicare program only pays for 1 percent of all births in the United States, as opposed to Medicaid, which, according to the National Bureau of Economic Research, pays for 41 percent of all births in the country. The commenters also stated that the low volume of Medicare labor and delivery patients justifies excluding labor and delivery beds from a hospital's bed count for purposes of determining a hospital's qualification for status as an MDH.

Response: As we stated in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43900), we believe that the costs associated with services provided in a labor and delivery room are generally payable under the IPPS. The volume of labor and delivery services paid under the Medicare program, regardless of whether it is as low as asserted by the commenters, does not alter the fact that patients receiving these services are inpatients who are receiving an IPPS-level of care, whether or not paid under the Medicare program. A policy to exclude beds from a hospital's number of available beds based on the volume of services paid for by Medicare would create unpredictability with respect to the DSH and IME payment adjustments and could impose an undue burden on the agency and hospitals to monitor the volume of individual services to determine appropriate exclusions.

Comment: Commenters pointed to CMS' current policy with respect to nursery days. Specifically, the commenters noted that, under CMS' current policy, patient stays in a newborn nursery unit are included in the patient day count for purposes of the DSH calculation but are excluded from the DSH and IME bed counts. The commenters believed that this distinction is appropriate and, therefore, believed it would be appropriate for CMS to take a similar approach with respect to labor and delivery days.

Response: As we stated above, we believe inconsistencies between the patient day policies and the bed count policies are generally an inappropriate approach for implementing the DSH and IME payment adjustments. We appreciate the commenters' pointing out the potential inconsistency with respect to the treatment of newborn nursery units. We will review our current approach to newborn nursery units and will consider addressing this issue in future rulemaking.

Comment: Commenters expressed concern that the Medicare hospital cost report and the cost reporting instructions would need to be amended to implement the policy proposal. Specifically, the commenters noted that the current definition of a labor and delivery bed on the cost report is inconsistent with CMS' policy proposal. The commenters also stated that the current hospital cost report does not allow for hospitals to report excluded labor and delivery bed days such as an outpatient bed day in a labor and delivery room.

Response: We appreciate the commenters' information regarding the need for changes to the Medicare hospital cost report and the cost reporting instructions. We plan to amend the cost reporting instructions to reflect our finalized change in policy and to allow for the proper reporting of labor and delivery bed days.

Comment: A number of commenters requested additional clarity regarding beds that would be included in the bed count. Specifically, the commenters asked if ''maternity suites'' in which labor, delivery, and postpartum services all occur in the same bed would be counted and if so whether the bed count would be split in the same manner that costs are split for apportionment purposes. The commenters also expressed confusion regarding hospitals

that maintain separate labor and delivery rooms and postpartum rooms. The commenters stated that, in these situations, providers are concerned that including the ancillary beds would result in a ''double counting'' of beds. Additionally, the commenters asked CMS to specifically identify whether certain beds, such as triage labor and delivery beds used for preadmission evaluation and assessment, are to be included in the bed count. In addition to expressing confusion about CMS' proposal, the commenters stated that they believed labor and delivery beds should not be counted if they are not licensed as routine beds.

Response: As stated above, our policy is to include in the bed count the bed days available for IPPS-level acute care services, or more specifically, the bed days of a particular unit if the services furnished in that unit are generally payable under the IPPS. We do not consider whether a bed is licensed under State law as a routine or ancillary bed, but rather whether the unit in which the bed is located is providing services generally payable under the IPPS. To the extent that the beds in a particular unit, whether maternity suite beds or ancillary labor and delivery beds, are furnishing services that are generally payable under the IPPS, such beds should be included in the bed count under our proposal. Furthermore, as stated in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27974 through 27975), the bed days of a patient not admitted as an inpatient are not included in a hospital's bed count. Because our proposal is intended to align our patient day and bed day policies, we also refer readers to our discussion in the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43899 through 43901) for further information regarding our policy on counting labor and delivery patient days.

We also do not share the commenters' concern regarding the ''double counting'' of bed days for the IME and DSH payment adjustments. Under our existing policies, we include all beds in a unit that is providing services that are generally payable under the IPPS because we believe such beds to be *available* for IPPS-level acute care hospital services. Therefore, unoccupied ancillary labor and delivery beds would still be included in a hospital's bed count under our proposal because they are available for IPPS-level acute care hospital services.

Comment: Commenters noted that currently the Medicare hospital cost report does not allow for labor and delivery patient days to be counted in the direct GME patient load. The commenters believed that, because these patient days are considered inpatient days, they should be considered a patient day for purposes of allocating costs for direct GME.

Response: We thank the commenters for bringing this issue to the agency's attention. We will undertake a further review to determine if it is necessary to make any changes to the way patient days are reported on the cost report, and whether those patient days should be included or excluded from the calculation of the Medicare patient load.

Comment: One commenter requested that CMS begin implementation of the Affordable Care Act amendments to the DSH payment adjustment provisions of the Act through this rulemaking.

Response: We believe that this comment is outside of the scope of the FY 2013 proposed rule. The statutory changes made by the Affordable Care Act relating to the DSH payment adjustment do not go into effect in FY 2013 and were not addressed in the FY 2013 proposed rule.

Comment: Commenters expressed concern about the impact of our proposal on the calculation of transitional corridor payments under the OPPS for SCHs. The commenters noted that the outpatient hold harmless payments are derived by comparing Medicare payments to adjusted Medicare costs. Because these payments and costs do not reflect costs associated with labor and delivery beds, the commenters stated that they believe these costs should not count toward determining whether a hospital qualifies for hold harmless payments under the OPPS.

Response: We agree with the commenters that the revision to the regulations at § 412.105(b)(4) to remove from the list of currently excluded beds those beds associated with ''ancillary labor/delivery services'' could impact the qualification of certain hospitals for hold harmless payments under the OPPS, Under section 3002 of the Middle Class Tax Relief and Job Creation Act of 2012 (Pub. L. 112–96), temporary outpatient hold harmless payments to small rural hospitals, small SCHs, and small Essential Access Community Hospitals (EACHs) are extended through the end of CY 2012. Under the hold harmless provisions at § 419.70(d), hospitals that have 100 or fewer beds, as defined in § 412.105(b), may result in bed counts for hospitals currently eligible for OPPS hold harmless payments going above the 100-bed limit. However, we do not agree with the commenters that labor and delivery beds should be excluded from the bed count under § 412.105(b) as it applies to the qualification for OPPS hold harmless payments. Rather, we believe that it is appropriate to continue to determine hospital size with regard to OPPS hold harmless eligibility based on the hospital's bed count as determined under § 412.105(b)(4).

After consideration of the public comments we received, we are adopting our proposed policy without modification. In summary, we are revising the regulations at § 412.105(b)(4) to remove from the list of currently excluded beds those beds associated with ''ancillary labor/delivery services.''

G. Expiration of the Medicare-Dependent, Small Rural Hospital (MDH) Program (§ 412.108)

Under current law, separate special payment protections are provided to a Medicare-dependent, small rural hospital (MDH) under the IPPS through the end of FY 2012. (For additional information on the MDH program and the payment methodology, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51683 through 51684.) The provisions for MDHs at section 1886(d)(5) of the Act expire at the end of FY 2012 (that is, with discharges occurring on September 30, 2012). As we discussed in the FY 2012 IPPS/LTCH PPS final rule, section 3124 of the Affordable Care Act extended the MDH program from the end of FY 2011 (that is, for discharges occurring before October 1, 2011) to the end of FY 2012 (that is, for discharges occurring before October 1, 2012). Under prior law, as specified in section 5003(a) of Public Law 109–171 (DRA 2005), the MDH program was to be in effect through the end of FY 2011 only. Section 3124(a) of the Affordable Care Act amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to extend the MDH program and payment methodology from the end of FY 2011 to the end of FY 2012, by striking ''October 1, 2011'' and inserting ''October 1, 2012''. Section 3124(b) of the Affordable Care Act also made conforming amendments to sections 1886(b)(3)(D) and 1886(b)(3)(D)(iv) of the Act. Section 3124(b)(2) of the Affordable Care Act also amended section 13501(e)(2) of OBRA 1993 to extend the provision permitting hospitals to decline reclassification through FY 2012. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50287 and 50414), we amended the regulations at § 412.108(a)(1) and (c)(2)(iii) to reflect the statutory extension of the MDH program through FY 2012. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51683 through 51684), we did not make

any additional changes to the MDH regulatory text for FY 2012.

Because the MDH program is not authorized by statute beyond FY 2012, beginning in FY 2013, all hospitals that previously qualified for MDH status will no longer have MDH status and will be paid based on the Federal rate. (We note that, in section IV.B.3. of this preamble, we are finalizing our proposal to revise our SCH policies to allow MDHs to apply for SCH status and be paid as such under certain proposed conditions, following expiration of the MDH program.) For the FY 2013 impact of the expiration of the MDH program at the end of FY 2012, we refer readers to section I.G.2.j. of Appendix A to this final rule.

Comment: Several commenters expressed concern with the expiration of the MDH program, citing serious detrimental effects that would result to patients, hospitals, and communities. The commenters strongly encouraged the continuation of the MDH program.

Response: The MDH program, which provides special treatment of and payment to small, rural, Medicare-dependent hospitals, was authorized by statute. In order for the MDH program to continue, or in order to reinstate it once it expires, legislation is required. CMS does not have the authority, without statutory provision, to continue the MDH program.

H. Changes in the Inpatient Hospital Update

1. FY 2013 Inpatient Hospital Update

In accordance with section 1886(b)(3)(B)(i) of the Act, each year we update the national standardized amount for inpatient operating costs by a factor called the ''applicable percentage increase.'' Prior to enactment of the Affordable Care Act, section 1886(b)(3)(B)(i)(XX) of the Act set the applicable percentage increase equal to the rate-of-increase in the hospital market basket for subsection (d) hospitals (hereafter referred to as ''IPPS hospitals'') in all areas, subject to the hospital submitting quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act. For hospitals that did not provide these data, the update was equal to the market basket percentage increase less an additional 2.0 percentage points. The update for the hospital-specific rates for SCHs is set by section 1886(b)(3)(B)(iv) of the Act as discussed further below.

Section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, sets the applicable percentage increase under the IPPS for FY 2013 as equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas (which is currently based on a forecast of the FY 2006-based IPPS market basket), subject to a reduction of 2.0 percentage points if the hospital fails to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.1 percentage point. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2013 adjustment of 0.1 percentage point may result in the applicable percentage increase being less than zero.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27975 and 27976), we stated that, in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51689 through 51692), we finalized our methodology for calculating and applying the MFP adjustment. We also stated in the proposed rule that, for FY 2013, we were not proposing to make any change in our methodology for calculating and applying the MFP adjustment. Similar to the market basket increase, we are using the most recent data available for this final rule to compute the MFP adjustment. Using the methodology that we finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51690), in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27975), based on IHS Global Insight, Inc.'s (IGI's) first quarter 2012 forecast of multifactor productivity (MFP), we proposed an MFP adjustment (the 10-year moving average of MFP for the period ending FY 2013) of 0.8 percent.

Consistent with current law, and based on IGI's first quarter 2012 forecast of the FY 2013 market basket increase, we proposed an applicable percentage increase to the FY 2013 operating standardized amount of 2.1 percent (that is, the FY 2013 estimate of the market basket rate-of-increase of 3.0 percent less an adjustment of 0.8 percentage points for economy-wide productivity (the MFP adjustment) and less 0.1 percentage point) for hospitals in all areas, provided the hospital submits quality data in accordance with our rules. For hospitals that do not submit quality data, we proposed an applicable percentage increase to the operating standardized amount of 0.1 percent (that is, the FY 2013 estimate of the market basket rate-of-increase of 3.0 percent, less 2.0 percentage points for failure to submit quality data, less an adjustment of 0.8 percentage points for economy-wide productivity, and less an additional adjustment of 0.1 percentage point). In the proposed rule, we stated that if more recent data are subsequently available (for example, a more recent estimate of the market basket and MFP adjustment), we would use such data, if appropriate, to determine the FY 2013 market basket update and MFP adjustment in the final rule.

We did not receive any public comments on these proposals to implement the applicable percentage increase. For this final rule, using the most recent data available, consistent with current law, and based on IGI's second quarter 2012 forecast of the FY 2013 market basket increase, we are finalizing an applicable percentage increase to the FY 2013 operating standardized amount of 1.8 percent (that is, the FY 2013 estimate of the market basket rate-of-increase of 2.6 percent less an adjustment of 0.7 percentage point for economy-wide productivity (that is, the MFP adjustment) and less 0.1 percentage point) for hospitals in all areas, provided the hospital submits quality data under rules established in accordance with section 1886(b)(3)(B)(viii) of the Act in accordance with our rules. For hospitals that do not submit these quality data, we are finalizing an applicable percentage increase to the operating standardized amount of −0.2 percent (that is, the FY 2013 estimate of the market basket rate-of-increase of 2.6 percent, less 2.0 percentage points for failure to submit quality data, less an adjustment of 0.7 percentage point for the MFP adjustment, and less an additional adjustment of 0.1 percentage point).

In the proposed rule, we proposed to revise the existing regulations at 42 CFR 412.64(d)(1)(iv) to reflect the current law for the FY 2013 update. Specifically, in accordance with section 1886(b)(3)(B) of the Act, we proposed to revise paragraph (d)(1)(iv) to reflect the applicable percentage increase to the FY 2013 operating standardized amount as the percentage increase in the market basket index, subject to a reduction of 2.0 percentage points if the hospital fails to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act, and then subject to a multifactor productivity adjustment and, lastly, subject to the additional reduction of 0.1 percentage

point. We did not receive any public comments on this proposal. Therefore, in this final rule, we are adopting as final, without modification, the proposed changes to § 412.64(d)(1)(iv) to reflect current law.

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase to the hospital-specific rates for SCHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates for SCHs is also subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27976), we proposed an update to the hospital-specific rates applicable to SCHs of 2.1 percent for hospitals that submit quality data or 0.1 percent for hospitals that fail to submit quality data. For FY 2013, the regulations in §§ 412.73(c)(16), 412.75(d), 412.77(e) and 412.78(e) already contain provisions that set the update factor for SCHs equal to the update factor applied to the national standardized amount for all IPPS hospitals. Therefore, we did not propose to make further changes to these four regulatory provisions to reflect the FY 2013 update factor for the hospital-specific rates of SCHs. We did not receive any public comments on this proposal. Therefore, for this final rule, we are finalizing an update to the hospital-specific rates applicable to SCHs of 1.8 percent for hospitals that submit quality data or −0.2 percent for hospitals that fail to submit quality data. As we noted above, for the proposed rule, we used the first quarter 2012 forecast of the FY 2006-based IPPS market basket with historical data through fourth quarter 2011. For this final rule, we used the most recent data available, which was the second quarter 2012 forecast of the FY 2006-based IPPS market basket with historical data through first quarter 2012. Similarly, for the proposed rule, we used IGI's first quarter 2012 forecast of MFP. For this final rule, we used the most recent data available, which was IGI's second quarter 2012 forecast of MFP.

We note that, as discussed in section IV.G. of this preamble, section 3124 of the Affordable Care Act extended the MDH program from the end of FY 2011 (that is, for discharges occurring before October 1, 2011) to the end of FY 2012 (that is, for discharges occurring before October 1, 2012). Under prior law, the MDH program was to be in effect through the end of FY 2011 only. Absent additional legislation further extending the MDH program, the MDH program will expire for discharges beginning in FY 2013. Accordingly, we are not including MDHs in our update to the hospital-specific rates for FY 2013.

2. FY 2013 Puerto Rico Hospital Update

Puerto Rico hospitals are paid a blended rate for their inpatient operating costs based on 75 percent of the national standardized amount and 25 percent of the Puerto Rico-specific standardized amount. Section 1886(d)(9)(C)(i) of the Act is the basis for determining the applicable percentage increase applied to the Puerto Rico-specific standardized amount. Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(i) of the Act, which states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for fiscal year 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject to the IPPS). Accordingly, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27976), we proposed an applicable percentage increase to the Puerto Rico-specific operating standardized amount of 2.1 percent for FY 2013. The regulations at § 412.211(c) already set the update factor for the Puerto Rico-specific operating standardized amount equal to the update factor applied to the national standardized amount for all IPPS hospitals. Therefore, it is not necessary for us to make changes to the existing regulatory text.

We did not receive any public comments on this proposal. Therefore, for this final rule, we are finalizing an applicable percentage increase to the Puerto Rico-specific operating standardized amount of 1.8 percent for FY 2013. As we noted above, for the proposed rule, we used the first quarter 2012 forecast of the FY 2006-based IPPS market basket with historical data through fourth quarter 2011. For this final rule, we used the most recent data available, which was the second quarter 2012 forecast of the FY 2006-based IPPS market basket with historical data through first quarter 2012. Similarly, for the proposed rule, we used IGI's first quarter 2012 forecast of MFP. For this final rule, we used the most recent data available, which was IGI's second quarter 2012 forecast of MFP.

I. Payment for Graduate Medical Education (GME) and Indirect Medical Education (IME) Costs (§§ 412.105, 413.75 through 413.83)

1. Background

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Pub. L. 99–272) and as currently implemented in the regulations at 42 CFR 413.75 through 413.83, establishes a methodology for determining payments to hospitals for the direct costs of approved graduate medical education (GME) programs. Section 1886(h)(2) of the Act sets forth a methodology for the determination of a hospital-specific base-period per resident amount (PRA) that is calculated by dividing a hospital's allowable direct costs of GME in a base period by its number of full-time equivalent (FTE) residents in the base period. The base period is, for most hospitals, the hospital's cost reporting period beginning in FY 1984 (that is, October 1, 1983 through September 30, 1984). The base year PRA is updated annually for inflation. In general, Medicare direct GME payments are calculated by multiplying the hospital's updated PRA by the weighted number of FTE residents working in all areas of the hospital complex (and at nonprovider sites, when applicable), and the hospital's Medicare share of total inpatient days.

Section 1886(d)(5)(B) of the Act provides for a payment adjustment known as the indirect medical education (IME) adjustment under the hospital inpatient prospective payment system (IPPS) for hospitals that have residents in an approved GME program, in order to account for the higher indirect patient care costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment are located at 42 CFR 412.105. The hospital's IME adjustment applied to the DRG payments is calculated based on the ratio of the hospital's number of FTE residents training in either the inpatient or outpatient departments of the IPPS hospital to the number of inpatient hospital beds.

The calculation of both direct GME and IME payments is affected by the number of FTE residents that a hospital is allowed to count. Generally, the greater the number of FTE residents a hospital counts, the greater the amount of Medicare direct GME and IME payments the hospital will receive. In an attempt to end the implicit incentive for hospitals to increase the number of FTE residents, Congress, through the Balanced Budget Act of 1997 (Pub. L. 105–33), established a limit on the number of allopathic and osteopathic residents that a hospital may include in its FTE resident count for direct GME and IME payment purposes. Under section 1886(h)(4)(F) of the Act, for cost reporting periods beginning on or after October 1, 1997, a hospital's unweighted FTE count of residents for purposes of direct GME may not exceed the hospital's unweighted FTE count for direct GME in its most recent cost reporting period ending on or before December 31, 1996. Under section 1886(d)(5)(B)(v) of the Act, a similar limit based on the FTE count for IME during that cost reporting period is applied effective for discharges occurring on or after October 1, 1997. Dental and podiatric residents are not included in this statutorily mandated cap.

The Affordable Care Act made a number of statutory changes relating to the determination of a hospital's FTE resident count for direct GME and IME payment purposes and the manner in which FTE resident limits are calculated and applied to hospitals under certain circumstances. Section 5503 of the Affordable Care Act added a new section 1886(h)(8) to the Act to provide for the reduction in FTE resident caps for direct GME under Medicare for certain hospitals training fewer residents than their caps, and to authorize the ''redistribution'' of the estimated number of excess FTE resident slots to other qualified hospitals. In addition, section 5503 amended section 1886(d)(5)(B)(v) of the Act to require the application of the section 1886(h)(8) of the Act provisions ''in the same manner'' to the IME FTE resident caps. The regulations implementing section 5503 of the Affordable Care Act were included in the November 24, 2010 final rule with comment period (75 FR 72263).

2. Teaching Hospitals: Change in New Program Growth From 3 Years to 5 Years

Section 1886(h)(4)(H)(i) of the Act requires CMS to establish rules for calculating the direct GME caps of teaching hospitals training residents in new programs established on or after January 1, 1995. Under section 1886(d)(5)(B)(viii) of the Act, these rules also apply to the establishment of a hospital's IME cap. CMS implemented these statutory requirements in the August 29, 1997 **Federal Register** (62 FR 46005) and in the May 12, 1998 **Federal Register** (63 FR 26333). Generally, under existing regulations at 42 CFR 413.79(e)(1) and 42 CFR 412.105(f)(1)(vii), if a hospital did not train any allopathic or osteopathic residents in its most recent cost reporting period ending on or before December 31, 1996, and it begins to participate in training residents in a new residency program (allopathic or osteopathic) on or after January 1, 1995, the hospital's unweighted FTE resident cap (which would otherwise be zero) may be adjusted based on the sum of the product of the highest number of FTE residents in any program year during the third year of the first new program, for each new residency training programs established during that 3-year period, and the minimum accredited length for each type of program. The number of FTE resident cap slots that a teaching hospital receives for each new program may not exceed the number of accredited slots that are available for each new program. Once a hospital's FTE resident cap is established, no subsequent cap adjustments may be made for new programs unless the teaching hospital is a rural hospital. A rural hospital's FTE resident caps may be adjusted for participation in subsequent new residency training programs. As a reminder, a hospital that did not train any allopathic or osteopathic residents in its most recent cost reporting period ending on or before December 31, 1996, may only receive a permanent FTE resident cap adjustment for training residents in a truly ''new'' residency training program; no permanent cap adjustment would be given for training residents associated with an existing program. That is, if a hospital that did not train any allopathic or osteopathic residents in its most recent cost reporting period ending on or before December 31, 1996, serves as a training site for residents in a program that exists or existed previously at another teaching hospital that remains open, that ''new'' teaching hospital does not receive a ''new program'' cap adjustment because it is not participating in training residents in a truly ''new'' program. However, it is possible for that hospital to receive a temporary cap adjustment if it enters into a Medicare GME affiliation agreement with the existing teaching hospital as specified at 42 CFR 413.79(f) and 412.105(f)(1)(vi). (For a detailed discussion of the distinctions between a new residency program and an existing residency program, we refer readers to the August 27, 2009 final rule (74 FR 43908).)

As stated previously, the existing regulations provide for a 3-year period in which a teaching hospital can ''grow'' its programs, for the purpose of establishing its FTE resident caps. This 3-year period, which we will refer to as the ''3-year window'' for ease of reference, starts when the teaching hospital first begins to train residents in its first new program, typically on July 1, and it ends when the third program year of that first new program ends. For example, assume residents begin training in a new program for the first time on July 1, 2012. The 3-year window begins on July 1, 2012, and ends on June 30, 2015, the end of the third program year of that (first) new program. At this point in time, regardless of the actual accredited length of the new program, or the number of new programs started, the teaching hospital's FTE resident caps are established permanently and are effective beginning with the fourth program year from the date the first new program started (using the same example, this would be July 1, 2015). We note that there are several ''types'' of hospitals that can receive a permanent cap adjustment for training FTE residents in a new program. A hospital that has never before trained any residents and begins training FTE residents in its first new program can receive a permanent cap adjustment. A hospital that previously trained FTE residents in an existing program(s) and begins training FTE residents in its first new program can receive a permanent cap adjustment. A rural hospital can always receive a permanent cap adjustment for each new program it begins. That is, a rural hospital enters a cap-building period for each new residency training program it begins, not just for its first new residency training program. Because all of these hospitals could qualify to receive a permanent cap adjustment for training FTE residents in a new residency training program, we refer to these hospitals as ''qualifying'' hospitals throughout the remainder of this preamble.

Prior to issuance of the proposed rule, the provider community expressed concerns that 3 years do not provide for a sufficient amount of time for a hospital to ''grow'' its new residency programs and to establish FTE resident caps that are properly reflective of the number of FTE residents that it will

actually train, once the programs are fully grown. Providers explained that 3 years is an insufficient amount of time primarily because a period of 3 years is not compatible with program accreditation requirements, particularly in instances where the qualifying teaching hospital wishes to start more than one new program. For example, we understand that a qualifying teaching hospital may not begin all of its new programs at the same time because of accreditation prerequisites; rather, a qualifying teaching hospital must wait until the first program is in place for a specified amount of time before it can begin training residents in a second or third program. This potential delay means that a qualifying teaching hospital may not be able to sufficiently ''grow'' all of its new programs by the end of the ''3-year window.'' We understand, for example, that the Accreditation Council for Graduate Medical Education (ACGME) requires that, for a hospital to sponsor an anesthesiology program, the hospital must sponsor or be affiliated with at least one internal medicine program and one general surgery program. Furthermore, we understand that the ACGME can require new residency training programs to pass through an ''initial'' accreditation period of up to 3 years until they can be granted ''continued'' accreditation. During this initial accreditation period, a hospital is not allowed to add any additional positions to its new program. Therefore, even if a hospital has plans to expand its new training program beyond the number of positions for which it is initially accredited, it may not be possible for the hospital to actually do so until this initial period has expired. Lastly, we were made aware that providers may want to stagger the start dates for their residency training programs if they plan on training residents in several programs because they may want to gain some experience in residency training before they begin all of their new programs.

Given the concerns about teaching hospitals having insufficient time to ''grow'' their new residency training programs and to establish an appropriately reflective permanent FTE resident cap within a 3-year window, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27978), we proposed that a teaching hospital will have 5 years, or a ''5-year window,'' in which to establish and grow new programs. At the end of the fifth program year of the first new program in which the teaching hospital participates, the teaching hospital's FTE resident caps would be determined, and set permanently, effective with the beginning of the sixth program year. We proposed that this change would apply to teaching hospitals that begin training residents in new programs for the first time on or after October 1, 2012. Although we understand that many residency training programs begin July 1 of the calendar year, consistent with the proposed effective date of the FY 2013 IPPS provisions in the proposed rule, we proposed an effective date for this change of October 1, 2012. We proposed to amend the regulations at § 413.79(e)(1) to state that if a teaching hospital participates in training residents in a new program for the first time on or after October 1, 2012, the teaching hospital's FTE resident cap may be adjusted based on the product of the highest number of FTE residents training in any program year during the fifth year of the first program's existence for all new residency training program(s) and the number of years in which residents are expected to complete the program based on the minimum accredited length for each type of program. We proposed that this policy would apply to the establishment of a hospital's cap for both direct GME and IME payment purposes. The IME regulations at § 412.105(f)(1)(vii) refer to the direct GME regulations at § 413.79(e)(1) through (e)(4) for the rules for the establishment of a new teaching hospital's cap. As is required under existing regulations, the number of cap slots associated with each new program cannot exceed the number of accredited slots available to the hospital for that new program.

We note that we did not propose to make any changes to regulations governing treatment of the rolling average and the intern and resident-to-bed (IRB) ratio for new programs. That is, new program FTE residents will continue to be exempt from the rolling average and the cap on the IRB ratio for the minimum accredited length for the specific type of residency training program. These exceptions are discussed in the regulations at §§ 412.105(a)(1)(i) through (a)(1)(ii) and 413.79(d)(5). The current cost report instructions for Form CMS–2552–10, Worksheet E–4, Line 6 (current year unweighted allopathic and osteopathic FTE count) instruct hospitals to contact their Medicare contractor for instructions on how to complete that line if the hospital has a new program for which the period of years is less than or greater than 3 years. Similarly, in the case of the proposed policy where the exemption from the rolling average for a new program could expire prior to the hospital's cap being set in the sixth year of the first new program, we stated that we would encourage hospitals to contact CMS if they have questions on the method of reporting FTE resident counts for FTE residents in new programs that are subject to the rolling average but not subject to the cap.

We also proposed to revise the regulations at § 413.79(e)(1)(i) that discuss the methodology used to calculate a qualifying teaching hospital's cap adjustment for a new residency training program if residents training in the new program are rotating to more than one hospital during the 5-year window. We proposed to revise the regulations to specify that, in calculating the cap adjustment for each new program started within the 5-year window, we would look at the highest total number of FTE residents training in any program year during the fifth academic year of the first new program's existence at all participating hospitals to which these residents rotate and multiply that highest FTE resident count by the number of years in which residents are expected to complete the program, based on the minimum accredited length of the specific program. Furthermore, we proposed that, for each new program started within the 5-year window, we would take that product and multiply it by each hospital's ratio of the number of FTE residents in that new program training over the course of the 5-year period at each hospital to the total number FTE residents training in that new program at all participating hospitals over the course of the 5 years. We believed it was appropriate to propose to apportion the overall FTE cap among the hospitals participating in training residents in the new program based on the percentage of FTE residents each hospital trained over the course of the entire 5-year period, rather than the percentage of FTE residents each hospital trained only during the fifth academic year, because the trend of training over the entire 5 years may reflect more completely the patterns in the training in years subsequent to the fifth academic year. Otherwise, a hospital's FTE cap adjustment, which is permanent, may reflect too heavily the share of training time solely in the fifth academic year, which may or may not be beneficial to the hospital. We noted that a hospital's cap adjustment could differ, depending on whether we look only at the fifth academic year of the first new program or look at every available year (up to 5 years) for which training occurred to calculate each

hospital's share of the aggregate cap for a specific program.

In addition, we proposed to revise the existing regulation text at § 413.79(e)(1)(i) to include the phrase ''the number of years in which residents are expected to complete the program based on the minimum accredited length for the type of program.'' This proposed language is consistent with our past, current, and proposed policy. We also noted that § 413.79(e)(1) applies in instances where the residents in the new program train only at one hospital; § 413.79(e)(1)(i) applies when residents in the new program train at more than one hospital, regardless of whether each of those hospitals are hospitals that qualify for a permanent cap adjustment or existing teaching hospitals with previously established caps. The example below illustrates the methodology we proposed to use to calculate a qualifying teaching hospital's cap if we changed the cap-building period from 3 years to 5 years. In this example, as explained above, we proposed that we would calculate the cap based on what is occurring at the qualifying teaching hospital(s) during the fifth academic year of the qualifying teaching hospital's first new program (or the fifth academic year of the rural teaching hospital's new residency training program). The provider community has requested that the cap-building period be increased from 3 years to 5 years. Therefore, we proposed that we would only look at the training that is occurring during the fifth academic year of the first new program to calculate the aggregate cap adjustment. However, we proposed that we would look at the FTE residents training at the hospital(s) during all 5 years to determine how we would distribute the aggregate cap adjustment among the participating hospitals. We included the following example in the proposed rule:

Example: Hospital A is a hospital that becomes a new teaching hospital by training residents in a new family medicine program in academic year 1. Within its 5-year window, it also begins a new surgery program in academic year 4 of the first new program, the family medicine program. The family medicine program is accredited for 15 positions, 5 positions per year (the minimum accredited length of a family medicine program is 3 years). The surgery program is accredited for 20 positions, 4 positions per year (the minimum accredited length of a surgery program is 5 years). Residents in both the family medicine program and the surgery program also rotate to Hospital B. Hospital B is an existing teaching hospital (nonrural) with a cap that is already established; therefore, it will not receive any cap adjustments for training FTE residents in the new family medicine program or the new surgery program. However, because both of these programs are approved programs and FTE residents are training at Hospital B for part of the time, Hospital B can receive payment for the FTE residents training in the family medicine program and the surgery program at its hospital if it has room under its caps.

First, we would determine the cap adjustment that Hospital A will receive for training FTE residents in the family medicine program. The following table includes the allowable FTE resident counts in the family medicine program at both Hospital A and Hospital B during the 5-year window. These numbers are FTE resident counts because they reflect the share of training time spent at Hospital A and Hospital B, and also assume for this example that we have excluded some nonallowable time, such as the time residents spend training in didactic activities in a medical school lecture hall.

HOSPITAL A

Year 1	Year 2	Year 3	Year 4	Year 5
0.75 PGY 1	2.60 PGY 1	4.00 PGY 1	4.10 PGY 1	4.20 PGY 1
0.00 PGY 2	2.80 PGY 2	3.40 PGY 2	3.40 PGY 2	3.70 PGY 2
0.00 PGY 3	0.00 PGY 3	2.40 PGY 3	2.80 PGY 3	2.80 PGY 3
Total 0.75	Total 5.40	Total 9.80	Total 10.30	Total 10.70

Hospital A's 5 year total = 36.95.

HOSPITAL B

Year 1	Year 2	Year 3	Year 4	Year 5
3.75 PGY 1	2.20 PGY 1	0.90 PGY 1	0.80 PGY 1	0.60 PGY 1
0.00 PGY 2	2.00 PGY 2	1.50 PGY 2	1.50 PGY 2	1.20 PGY 2
0.00 PGY 3	0.00 PGY 3	2.40 PGY 3	2.00 PGY 3	2.00 PGY 3
Total 3.75	Total 4.20	Total 4.80	Total 4.30	Total 3.80

Hospital B's 5 year total = 20.85.

Total Hospital A and Hospital B over 5 years = 36.95 + 20.85 = 57.80 FTEs.

To calculate the cap adjustment for Hospital A with respect to the family medicine program, we need to take the highest number of FTE residents training in any program year in this program (that is, FTE residents training at both Hospital A and Hospital B) in the fifth year of the first new program's existence (which is the family medicine program). If we add the PGY 1s, the PGY 2s, and the PGY 3s at both hospitals, in year 5, we see that we would use the total number of PGY 2s to calculate the FTE cap adjustment for the family medicine program, because the total number of PGY 2s at both hospitals is 4.90 FTEs (3.70 + 1.20), whereas the total number of PGY 1s and PGY 3s is only 4.80. We multiply 4.90 by the minimum accredited length of the family medicine program to get the total possible cap adjustment for the family medicine program ($4.90 \times 3 = 14.70$). The cap adjustment that Hospital A receives for the family medicine program will be some number less than 14.70 based on the ratio of the number of FTEs in the new program training over the course of the 5-year period at Hospital A to the total number FTE

residents training at both hospitals over the course of the 5-year period.

To determine this ratio, note that Hospital A's total FTE residents in the new family medicine program over the course of 5 years is the numerator, 36.95. The total FTE residents at Hospitals A and B in the new family medicine program over the course of 5 years is the denominator, 57.80 (that is, 36.95 + 20.85). The ratio of training that occurred at Hospital A is 36.95/57.80 = 0.64. Therefore, Hospital A's cap for its share of the family medicine program is 0.64 × 14.70, or 9.41. (If Hospital B had been eligible to receive a cap adjustment, its ratio of the cap would have been 0.36, that is, (20.85/57.80), and its share would have been 5.30 (0.36 × 14.70). If we add 9.41 to 5.30, we get 14.71 (we note that 14.71 is ''approximately'' equal to 14.70, the total cap determined for the entire family medicine program, with a slight difference due to rounding). Thus, we have ensured that, in assigning a cap of 9.41 to Hospital A on behalf of its family medicine program, the total allowable and accredited number of slots has not been exceeded).

Now we will determine the cap adjustment that Hospital A will receive for training FTE residents in the new surgery program that began in year 4 of the first new program. The following tables include the allowable FTE resident counts in the surgery program at Hospital A and Hospital B, respectively, during the hospital's 5-year window. Again, assume we have excluded nonallowable time, such as time residents spent training in didactic activities in a medical school lecture hall.

HOSPITAL A

Year 1	Year 2	Year 3	Year 4	Year 5
0.00 PGY 1	0.00 PGY 1	0.00 PGY 1	4.10 PGY 1	4.20 PGY 1
0.00 PGY 2	0.00 PGY 2	0.00 PGY 2	0.00 PGY 2	2.70 PGY 2
0.00 PGY 3	0.00 PGY 3	0.00 PGY 3	0.00 PGY 3	0.00 PGY 3
0.00 PGY 4	0.00 PGY 4	0.00 PGY 4	0.00 PGY 4	0.00 PGY 4
0.00 PGY 5	0.00 PGY 5	0.00 PGY 5	0.00 PGY 5	0.00 PGY 5
Total 0.00	Total 0.00	Total 0.00	Total 4.10	Total 6.90

Hospital A's 5 year total = 11.00.

HOSPITAL B

Year 1	Year 2	Year 3	Year 4	Year 5
0.00 PGY 1	0.00 PGY 1	0.00 PGY 1	1.70 PGY 1	0.60 PGY 1
0.00 PGY 2	0.00 PGY 2	0.00 PGY 2	0.00 PGY 2	1.50 PGY 2
0.00 PGY 3	0.00 PGY 3	0.00 PGY 3	0.00 PGY 3	0.00 PGY 3
0.00 PGY 4	0.00 PGY 4	0.00 PGY 4	0.00 PGY 4	0.00 PGY 4
0.00 PGY 5	0.00 PGY 5	0.00 PGY 5	0.00 PGY 5	0.00 PGY 5
Total 0.00	Total 0.00	Total 0.00	Total 1.70	Total 2.10

Hospital B's 5 year total = 3.80.

Total Hospital A and Hospital B over 5 years = 11.00 + 3.80 = 14.80 FTEs.

To calculate the cap adjustment for Hospital A with respect to the surgery program, we need to take the highest number of FTE residents training in this program (that is, FTE residents training at both Hospital A and Hospital B) in the fifth year of the first new program's existence (which is the family medicine program). Because the surgery program only started in Year 4 of the family medicine program, there are only PGY 1s and PGY 2s training at both Hospitals A and B in year 5; thus, we consider the surgery PGY 1s and PGY 2s in year 5 of the family medicine program. If we add the PGY 1s and the PGY 2s at both hospitals in year 5, we see that we would use the total number of PGY 1s to calculate the FTE cap adjustment for the surgery program, because the total number of PGY 1s is 4.80 FTEs (4.20 + 0.60), whereas the total number of PGY 2s is only 4.20. However, because the regulations do not permit a hospital to count more FTE residents in each program year than what the program is approved for (in this example, 4 FTE residents for each program year), we must multiply 4.0 by the minimum accredited length of the surgery program to get the total possible cap adjustment for the surgery program (4.0 × 5 = 20). That is, because the surgery program is only accredited for 20 positions, the overall FTE resident cap associated with the surgery program that is to be apportioned between Hospital A and Hospital B is limited to a maximum of 20. The cap adjustment that Hospital A receives for the surgery program will be some number less than 20 and is based on the ratio of the number of FTE residents in the new program training over the course of the 2-year period at Hospital A to the total number FTEs training at both hospitals over the course of the 2-year period.

To determine this ratio, note that Hospital A's total FTE residents in the new surgery program over the course of 2 years is the numerator, 11.00. The total number of FTE residents at Hospitals A and B in the new surgery program over the course of 5 years is the denominator, 14.80 (that is, 11.00 + 3.80). The ratio of training that occurred at Hospital A is 11.00/14.80 = 0.74. Hospital A's cap for its share of the surgery program is 0.74 × 20 = 14.80. (If Hospital B had been eligible to receive a cap adjustment, its share of the cap would have been 5.20 ((3.80/14.80) × 20) = 5.20. Thus, we have ensured that, in assigning a cap of 14.80 to Hospital A on behalf of its surgery program, the total allowable and accredited number of slots has not been exceeded).

Adding together the cap adjustment Hospital A receives for the new family medicine program and the cap adjustment it receives for the new surgery program, Hospital A's total permanent cap is 24.21 (9.41 + 14.80 = 24.21).

In summary, we proposed to revise the regulations at § 413.79(e)(1) for the purposes of direct GME and, by reference, § 412.105(f)(1)(vii) for purposes of IME to state that if a hospital begins training residents in a new program for the first time on or after October 1, 2012, that hospital's caps may be adjusted based on the product of the highest number of FTE residents training in any program year during the fifth academic year of the first program's existence for all new residency training programs and the number of years in which residents are expected to complete the program based on the minimum accredited length for the type of program. The cap would be applied beginning with the sixth academic year of the first new program. We also proposed conforming changes throughout paragraph (e)(1) of § 413.79 to correspond with the proposed change to increase the length of the cap-building period from 3 to 5 years. In addition, we proposed to change the regulation text at § 413.79(e)(1)(i) to reflect a methodology to calculate a qualifying teaching hospital's cap adjustment if the residents in the new training program are training at more than one hospital. We proposed that these changes would be effective for a hospital that begins training residents for the first time on or after October 1, 2012. Lastly, we proposed to make a clarification to the existing regulation text at § 413.79(e)(1)(i) to insert the missing phrase ''and the number of years in which residents are expected to complete the program based on the minimum accredited length for the type of program.'' This change is consistent with our past, current, and proposed policy.

Comment: Commenters supported extending the cap-building period for a new teaching hospital from 3 years to 5 years. Commenters stated that the proposal provided an accurate characterization of challenges that a hospital may face with trying to establish a cap within a 3 year period. Commenters stated that extending the cap-building period from 3 years to 5 years would permit new teaching hospitals to meet accreditation requirements and grow programs in order to help address the country's physician shortage and provide greater flexibility in the timeline for starting new programs. Another commenter stated that the extension from 3 to 5 years is generally an improvement and provides teaching hospitals with time to reach a steady number of FTE residents and allows the hospital to find residents that may be a better fit for a specific residency training program. The commenters stated they believe that 5 years is likely a sufficient period of time because many new programs will fill their higher PGY levels by accepting transfer residents from other programs rather than just filling up only the PGY1 level.

Several commenters supported extending the cap-building period from 3 to 5 years because creating a new teaching hospital involves collaboration among several different participants, for example medical schools and nonteaching hospitals, and also requires interactions with regulatory bodies and accrediting agencies. The commenters stated that, in addition to a 3-year window being a challenge due to the number and variety of participants involved in establishing a new teaching hospital, 3 years is based on ''* * * an unreasonable and aggressive expectation that an organization can establish its desired complement of training programs nearly simultaneously in such a period while ensuring a high-quality educational experience for residents and fellows and a seamless transition from a nonteaching to a teaching service care model for Medicare beneficiaries.'' The commenters stated it is not appropriate to limit hospitals' access to GME payments based on factors that the hospitals cannot control, such as ACGME and National Resident Matching Program requirements and timelines. Another commenter stated that a cap-building period of 5 years will permit four community hospitals that are considering building GME programs in Northeast Georgia to grow their programs more fully and with greater flexibility. One commenter stated that extending the cap-building period to 5 years will aid it in its collaboration with a school of medicine to support their efforts of training residents in areas across Indiana where no residency training programs previously existed. Another commenter stated the proposed change from 3 years to 5 years will promote the establishment of needed residency programs by establishing caps that reflect the number of FTE residents that a hospital will be able to train once the programs have matured and will give new teaching hospitals more time to make the necessary initial investment of resources. The commenter stated that expanding residency training programs will help address the physician shortage in Arizona that is expected to grow as a result of an aging population and increased insurance coverage under the Affordable Care Act. One commenter stated that it supported a 5-year window because it will aid in developing new emergency medicine residencies, extending emergency medical residencies from 3 years to 4 years, and meeting the needs of other specialty residency training programs that want to expand their programs to the maximum number of accredited positions. Another commenter supported the expansion from a 3-year window to a 5-year window and encouraged CMS to revisit this policy in several years to confirm that 5 years is an adequate amount of time for the cap-building process.

One commenter stated it understood that, due to accreditation rules, it is very difficult for a new teaching hospital to start several residency training programs within the current 3-year window. The commenter stated that it understood that if a new teaching hospital tries to start a second program during its 3-year window, it is almost impossible to start that second program before the third year of the hospital's 3-year window. The commenter noted that it understood the ACGME has a reasonable expectation that new teaching hospitals need to gain experience training residents and have a strong educational infrastructure in place before they start to train residents in specialty residency training programs. The commenter stated that if a new teaching hospital is only really provided with one year to start a second residency training program, the hospital is forced to be aggressive in filling a full cohort of first-year residents, which may be neither in the hospital's nor the residents' best interest. The commenter stated that extending the cap-building period from 3 years to 5 years will allow teaching hospitals to build residency training programs ''* * * that will best serve the patients in their community and provide a strong educational infrastructure for their residents.''

Response: We appreciate the commenters' support of our proposal to expand the cap-building period from 3 years to 5 years. Therefore, we are finalizing our proposal to provide qualifying teaching hospitals with a 5-year window to grow their cap. The 5-year window will begin once the qualifying teaching hospital first starts training residents in its first new program and the cap will apply beginning with the sixth program year of the first new program. In response to the commenters who stated that a 5-year window is a sufficient period of time for building a hospital's cap because new programs may accept transfer residents from other programs rather than filling only PGY1 slots, we remind hospitals that filling a program with transfer residents from other hospitals' existing

residency training programs may jeopardize the program's status as ''new.'' As we explained in the August 27, 2009 **Federal Register** (74 FR 43908), one of the factors CMS considers in determining whether a residency training program can be considered a new program for Medicare GME payment purposes is whether residents entering a program are new residents or residents transferring from an existing program(s).

Comment: Although commenters supported extending the cap-building period from 3 years to 5 years, many did not support making the policy effective for new teaching hospitals that first begin to train residents in their first new program on or after October 1, 2012. Commenters requested that the extension of the cap-building period from 3 to 5 years apply to new teaching hospitals that are currently within their 3-year window, new teaching hospitals that started training residents for the first time in a new program on or after July 1, 2010, or at the very least apply effective July 1, 2012. Commenters stated that new teaching hospitals that are currently within the 3-year window are facing the same challenges that CMS described in the proposed rule and deserve to benefit from a 5-year window. Commenters stated that CMS would be able to apply the 5-year window without any additional administrative burden on its part. One commenter requested that, because a new teaching hospital that begins training residents July 2010 would begin the third year of its cap-building period July 1, 2012 and would not have its caps set until July 1, 2013, CMS amend its proposed regulation text to apply the 5-year window to a hospital that first begins training residents in a new program for the first time on or after July 1, 2010. The commenter stated that, if CMS does not agree to apply the 5-year window to hospitals that are still within their 3-year window on October 1, 2012, CMS at least apply the 5-year window to new teaching hospitals that had not been training residents as of the publication of the proposed rule, that is, effective July 1, 2012. The commenter stated that this application would be prospective and would result in an even smaller cost than applying the 5-year window to all hospitals that are still within their 3-year window for establishing a cap. One commenter stated that making the 5-year window effective for hospitals that are still within their 3-year window as of October 1, 2012, would allow it to continue to develop its fellowships in geriatrics and palliative care and expand its internal medicine program, and that without the possibility of this additional payment, it may not be able to support these programs which would increase the community's access to primary care and support the future physician workforce. Another commenter stated that it is just about to start the third year of its new residency program and there is nothing precluding CMS from applying the 5-year window to hospitals that are currently growing their caps. The commenter stated that, given the likely upcoming physician shortage, there is a public health benefit to applying the 5-year window as broadly as possible.

Another commenter stated that the proposal to expand the cap-building period is long overdue especially due to the fact that in the last decade residency training has been expanded to address physician shortage and complement new medical schools. The commenter stated that two of its member hospitals have recently or currently are establishing new programs and will be negatively affected by the 3-year window. Therefore, the commenter requested the 5-year window be applied to all hospitals currently growing their caps as of October 1, 2012.

One commenter requested that CMS provide for an exception for hospitals that may have had a cap based on very few residency rotations but want to be able to train more residents because of a new medical school or an expansion of an existing medical school. The commenter stated that it has been a leader in Wisconsin in developing a report that addresses the potential physician shortage and in establishing a task force to address the need to train new physicians. The commenter stated that one of its State's medical schools may be able to expand into at least one new area in the State and that hospitals that want to grow their residency training programs as a result of this expansion should be provided with special consideration and an exemption from their caps.

Another commenter stated that it is beginning a family medicine and internal medicine program and if it were to have a 5-year window it would be able to expand the number of primary care residents that it trains. The commenter requested that the 5-year window apply retroactively to any hospital that has not yet established a cap.

Response: We disagree with the commenters who suggested applying the 5-year window to hospitals that are still within their 3-year window effective October 1, 2012, or to hospitals that begin training in July 2012. We believe it is appropriate that the policies included in this final rule will be effective with the start date of the next fiscal year, in this case, October 1, 2012. Therefore, we are finalizing the policy to extend the cap-building period from 3 years to 5 years, effective for hospitals that first begin to train residents in their first new program on or after October 1, 2012.

Comment: Some commenters supported CMS' proposed methodology for calculating a new teaching hospital's cap adjustment if residents in the new program are training at more than one hospital (proposed § 413.79(e)(1)(i)). However, some commenters also expressed concern regarding the proposed methodology to consider all 5 years of the cap-building period for purposes of determining a participating hospital's cap adjustment. Commenters stated that considering all 5 years prevents nonteaching hospitals from training residents in the new program if it wants to establish its own programs in the future. The commenters stated that, under the proposed methodology, a new teaching hospital could ''lose'' cap slots if it rotated residents in a new program at any time during the 5-year window to another hospital, even if by the last year of the 5-year window, it would be able to offer all of the rotations at its facility. Commenters stated that if a methodology for allocating cap slots among participating hospitals is adopted, it should only consider the training that is occurring during the fifth year after training starts.

One commenter stated that it is in the process of developing residency training programs and is seeking a Trauma designation. The commenter stated that until it receives its Trauma designation, it plans to send its Emergency Medicine residents to other facilities for the program's Trauma rotation. The commenter stated that due to these outside rotations, its cap will be reduced and it will not be able to receive a cap adjustment for those FTE residents it would have the capacity to train later on.

Commenters stated that while they believe the proposed calculation of the total cap is appropriate, the proposed apportionment of FTE residents among participating hospitals may result in inappropriate cap determinations if the programs were in existence for less than their minimum accredited length by the fifth year of the cap-building period. One commenter stated ''* * * the result of utilizing a limited data set and extrapolating those resident counts to represent the anticipated resident rotation activity for the entire program may result in an apportionment of

resident FTEs that is misaligned and varies markedly from the actual experience of the training program.'' Commenters stated that while existing teaching hospitals may participate in Medicare GME affiliation agreements to temporarily adjust their caps, new teaching hospitals are not permitted to temporarily lend some of their cap through an affiliation agreement and, therefore, it is not feasible for a new teaching hospital to use a Medicare GME affiliation agreement to alleviate the effects of an inappropriate cap determination. Commenters therefore requested that if the new program has been in existence for less than its minimum accredited length by the fifth year of the cap building period, participating hospitals should be permitted to collaborate and submit an attestation certifying a preferred way of dividing the cap slots. The commenters stated that the total cap adjustment should be calculated as proposed; however the individual cap determinations should be adjusted as follows:

- For any program that has operated for a period of time less than the number of years equal to the minimum accredited program length as of Year 5 (the cap adjustment year), if consensus is reached among all of the hospitals participating in the development of the new program that the apportionment as determined by the CMS formula does not appropriately reflect the anticipated deployment of residents across the full program and accordingly advantages or disadvantages one or more of the new teaching hospitals, the hospitals may collectively recommend, certify, and submit to CMS an alternative apportionment for the resident FTE counts that are associated with that particular program and that will be assigned to the hospitals.
- For any program that has operated for a period of time equal to or greater than the minimum accredited program length by Year 5, the hospitals will not have an opportunity to recommend an alternative apportionment of resident FTEs for cap adjustment purposes.

Several commenters recommended changing the regulation text at 42 CFR 413.79(e)(1)(i) by replacing the phrase ''an entire program year (or years)'' with ''portions of a program year (or years)'' because it more accurately describes the proposed methodology for determining an individual hospital's cap adjustment.

Response: We appreciate the commenters' support of the methodology we proposed to use to calculate a qualifying teaching hospital's total cap adjustment for a new program. We disagree with commenters who stated that it is inappropriate to consider all 5 years of the cap-building period in determining a specific qualifying teaching hospital's cap adjustment for a new program. There may be some merit to the commenters' suggestions that it may take several years until a program is fully operational so by the end of the 5-year window a hospital may be able to have all the rotations occur at its facility. However, we believe that considering all 5 years of the cap-building period in calculating a qualifying teaching hospital's cap adjustment is appropriate, as it provides a more complete picture of the actual rotations that will be part of the approved residency training program as opposed to just taking into account what is happening in the new program during the final year of the cap building period, which may not accurately reflect the hospitals' plans for dividing rotations among participating hospitals which may fluctuate from year to year. We do not believe it would be appropriate to allow participating hospitals to submit alternative methodologies for dividing the total cap adjustment if they do not agree with the cap calculations that have been determined by CMS. The policy used to apportion a total cap adjustment among participating hospitals must be a single national policy. Permitting hospitals to develop and apply their own methodologies may lead to disparate treatment among qualifying teaching hospitals. Furthermore, requiring Medicare contractors to apply specific individual policies for determining a hospital's cap adjustment, as opposed to applying one national policy, would prove to be administratively difficult and could significantly delay the determination of a hospital's cap.

After considering the public comments we received on the proposed methodology to be used in determining individual cap adjustments for qualifying teaching hospitals that participate in training residents in a new program, we are finalizing our methodology as proposed. That is, in order to determine a qualifying teaching hospital's cap adjustment for a new program(s), we will take the sum of the products of three factors (limited to the number of accredited slots for each program): (1) The highest total number of FTE residents trained in any program year, during the fifth year of the first new program's existence at all of the hospitals to which the residents in that program rotate; (2) the number of years in which residents are expected to complete the program, based on the minimum accredited length for each type of program; and (3) the ratio of the number of FTE residents in the new program that trained at the hospital over the entire 5-year period to the total number of FTE residents that trained at all hospitals over the entire 5-year period.

Because we are finalizing the methodology as proposed, we refer readers to the examples provided in the proposed rule and also included earlier in this preamble for further guidance. We agree with the commenters who suggested that we replace the phrase ''an entire program year (or years)'' at 42 CFR 413.79(e)(1)(i) with the phrase ''portions of a program year (or years)'' and, therefore, are amending this regulation text to include this change. We also are amending the regulation text at 42 CFR 413.79(e)(1)(i) to more clearly describe that an individual hospital's cap adjustment for a new program that rotates residents to more than one hospital is based on the product of three factors, which are described earlier in this paragraph. Furthermore, in this final rule, we are making minor revisions to the regulation text at 42 CFR 413.79(e)(2) through (e)(4) for purposes of maintaining consistency throughout 42 CFR 413.79(e).

Comment: Several commenters referred to a statement reiterated in the proposed rule (77 FR 27977) that a new teaching hospital can only receive a cap adjustment for training residents in a truly ''new'' program and to the August 27, 2009 final rule (74 FR 43908) in which CMS discussed the requirements that a residency training program must meet in order to be considered a new program. The commenters requested that CMS clarify the definition of a new residency training program so that hospitals can use the 5-year window for building their caps. Commenters stated that because of CMS' ''ambiguous criteria'' used to define a new program, hospitals hoping to start brand new programs have not been able to get a clear opinion from CMS or legal counsel as to whether a program is, in fact, new. Commenters stated that this lack of clarity leads to financial risks for a hospital and does not provide any incentives for hospitals to participate in residency training. Commenters stated that hospitals are concerned that if they hire a program director with significant experience to meet ACGME requirements, their program will not be considered new. Commenters requested that CMS develop a bright line policy regarding the definition of a new program and suggested that CMS consider a program to be new if all PGY 1 residents are new and 90 percent of

residents in later PGY years are new. Commenters requested CMS clarify that prior experience and status of the program director and teaching physicians are not relevant in determining whether a program is considered new.

Several commenters referred to CMS' existing policy that when a nonteaching hospital starts training residents in a new program, it enters a cap-building period and receives a PRA. Commenters stated that such a policy hinders the development of GME training at small hospitals in rural and underserved areas because the result of a resident rotation of short duration is a low PRA and small cap which will prevent the hospitals from establishing their own viable residency training programs later on. Commenters stated that assigning a cap and PRA to a nonteaching hospital that does not have a rotation of long duration does not permit these small nonteaching hospitals to determine whether residency training would be a viable option for them. Commenters requested that CMS consider one or more of the following proposals:

- A teaching hospital should be allowed to rotate residents for a period equal to or less than 3 months (or a maximum percentage of training time) per resident per year without triggering the cap or PRA in a nonteaching hospital.
- A new teaching hospital should be allowed to rotate residents in high-need specialties (for example, primary care, general surgery) without triggering a cap or PRA in a nonteaching hospital.
- Small rural hospitals and hospitals located in remote or underserved areas should be allowed to rotate residents to non-teaching hospitals without triggering caps or PRAs in those institutions.

One commenter offered a fourth recommendation to be used if CMS continues with its current policy of assigning a PRA and cap to nonteaching hospitals that train residents in a new program for a rotation of short duration. The commenter stated that if a hospital has not had residents rotating to its site for a reasonable period of time (the commenter suggested 3 or 5 years), the hospital's cap should expire and the hospital should be considered a nonteaching hospital.

Response: We do not consider these comments to be within the scope of the provisions of the FY 2013 IPPS/LTCH PPS proposed rule. In terms of the comment regarding the definition of a new residency training program, we did not propose to redefine the requirements that a program must meet in order to be considered a new program. The discussion cited was part of the background discussion of existing policies. These public comments may be considered for future rulemaking. In terms of the commenters' concerns regarding nonteaching hospitals that receive a cap adjustment and PRA for participating in training residents in a new program even if the rotation to the nonteaching hospital is of short duration, perhaps these concerns could be potential topics for future rulemaking because they have ramifications that go beyond the establishment of a cap for a new program, for example, for establishing the PRA of a ''new'' teaching hospital training residents in an existing program. Some commenters seemed to suggest that if an existing teaching hospital sends residents to a nonteaching hospital for a rotation of very short duration, the existing teaching hospital should be able to count the residency training time at the nonteaching hospital. We remind readers that a hospital cannot count the residency training time that is occurring at another hospital. Therefore, it would not be possible for one hospital to count rotations occurring at other hospitals even if the rotations are of a short duration.

Comment: One commenter asked ''when CMS refers to the accredited length for the 'type' of program, is CMS referring to a specific program with a specific accreditation time period, or the average accredited time for a type of specialty, such as primary care?'' The commenter recommended ''* * * that the minimum length of time for each training program is based on the accreditation for a specific program, rather than on the average training time for a general type of program.'' Another commenter requested that CMS clarify the following language included in the proposed rule (77 FR 27979): ''However, because both of these programs are approved programs and FTE residents are training at Hospital B for part of the time, Hospital B can count the FTE residents training in the family medicine program and the surgery program at its facility if it has room under its caps to do so.'' The commenters stated they believed hospitals should count FTE residents regardless of whether the hospital has room under its caps. The commenters requested CMS ''* * * clarify whether or not a hospital should report all allowable resident FTEs when a hospital does not have room under its caps * * *''.

Response: When we refer to the accredited length of a ''type'' of program in the proposed rule and in this final rule, we are referring to the minimum accredited length for a specific specialty program, that is, the number of years of residency training that a resident must complete in order to be board certified in that specialty. For example the minimum accredited length for family medicine is 3 years and the minimum accredited length for surgery is 5 years.

In response to the commenter's request that CMS clarify whether a hospital should report all allowable FTE residents when a hospital does not have room under its caps, if an existing teaching hospital with an already established cap participates in training residents in a new program, unless it is a rural hospital, it cannot receive a permanent cap adjustment for training residents in the new program. If the new program is an approved program and the existing teaching hospital is training below its caps, the existing teaching hospital can count and receive payment for the residents training in the new program at its facility up to its caps. The commenter is correct that if the existing teaching hospital is training residents in an approved program(s) it should report those FTE residents on its cost report regardless of whether or not it is training over its caps. However, the existing teaching hospital would only be able to receive Medicare payment for training residents in the new program up to its cap limit.

Comment: One commenter requested that CMS provide new teaching hospitals with additional flexibility to grow GME programs and provide additional investments in GME that will be required to grow and improve the geriatrics workforce. One commenter also requested that CMS provide GME funding for second year pharmacy residency programs. One commenter expressed concern that the policy of assigning a cap and PRA after a short rotation to a formerly nonteaching hospital may be a policy that is applied to teaching hospital centers, which it believed would have a negative effect on the creation of new teaching health centers.

Response: We consider these public comments to be outside the scope of the proposed rule and, therefore, we are not addressing them in this final rule.

In summary, we are finalizing our proposal to increase the cap-building period from 3 years to 5 years. We also are finalizing the proposed methodology used to calculate a cap adjustment for an individual hospital if a new program rotates residents to more than one hospital (or hospitals). The methodology is based on the sum of the products of the following three factors: (1) The highest total number of FTE residents trained in any program year, during the

fifth year of the first new program's existence at all of the hospitals to which the residents in that program rotate; (2) the number of years in which residents are expected to complete the program, based on the minimum accredited length for each type of program; and (3) the ratio of the number of FTE residents in the new program that trained at the hospital over the entire 5-year period to the total number of FTE residents that trained at all hospitals over the entire 5-year period. In addition, we are making minor revisions to the regulation text at 42 CFR 413.79(e)(2) through (e)(4) for purposes of maintaining consistency throughout 42 CFR 413.79(e).

3. Policies and Clarification Related to 5-Year Period Following Implementation of Reductions and Increases to Hospitals' FTE Resident Caps for GME Payment Purposes Under Section 5503 of the Affordable Care Act

As previously discussed, in an attempt to end the implicit incentive for hospitals to increase the number of FTE residents, Congress instituted a cap on the number of allopathic and osteopathic residents a hospital is allowed to count for direct GME and IME purposes. Some hospitals have trained a number of allopathic and osteopathic residents in excess of their FTE resident caps, while other hospitals are training a number of allopathic and osteopathic residents at some level below their FTE resident caps. Section 5503 of the Affordable Care Act added a new section 1886(h)(8) to the Act to provide for reductions in the statutory FTE resident caps for direct GME payment purposes under Medicare for certain hospitals that are training allopathic and osteopathic residents at a level below their FTE resident caps, and to authorize a ''redistribution'' to certain hospitals of the estimated number of FTE resident slots resulting from the reductions. Section 5503 of the Affordable Care Act also amended section 1886(d)(5)(B)(v) of the Act to require application of the provisions of section 1886(h)(8) of the Act ''in the same manner'' to the FTE resident caps for IME payment purposes.

Section 1886(h)(8)(A)(i) of the Act provides that, effective for portions of cost reporting periods occurring on or after July 1, 2011, a hospital's FTE resident cap will be reduced by 65 percent of the difference between the hospital's ''otherwise applicable resident limit'' and its ''reference resident level,'' if its ''reference resident level'' is less than its ''otherwise applicable resident limit'' (as defined at section 1886(h)(8)(H) of the Act). (We refer readers to the November 24, 2010 final rule with comment period (75 FR 72155 through 72161) for a discussion of these terms.) Section 1886(h)(8)(A)(ii) of the Act and the November 24, 2010 final rule with comment period (75 FR 72147) describe which hospitals are exempt from a cap reduction under section 5503 of the Affordable Care Act, including rural hospitals with fewer than 250 acute care inpatient beds.

Under section 1886(h)(8)(B) of the Act, the Secretary is authorized to increase the FTE resident caps for certain categories of hospitals for portions of cost reporting periods occurring on or after July 1, 2011, in the aggregate, by a number that does not exceed the estimated overall reduction in FTE resident caps for all hospitals under section 1886(h)(8)(A) of the Act. In determining which hospitals will receive an increase in their FTE resident caps, sections 1886(h)(8)(C) through 1886(h)(8)(E) of the Act direct us to do all of the following:

- Take into account the demonstrated likelihood of the hospital filling the additional positions within the first three cost reporting periods beginning on or after July 1, 2011.
- Take into account whether the hospital has an accredited rural training track program.
- Distribute 70 percent of the resident slots to hospitals located in States with resident-to-population ratios in the lowest quartile.
- Distribute 30 percent of the resident slots to hospitals located in a State, a territory of the United States, or the District of Columbia that are among the top 10 States, territories, or the District in terms of the ratio of the total population living in an area designated as a health professional shortage area (HPSA), as of March 23, 2010, to the total population, and/or to hospitals located in rural areas.

A comprehensive description of the rules implementing the cap slot redistribution under section 1886(h)(8) of the Act can be found in the November 24, 2010 final rule with comment period (75 FR 72168). Section 1886(h)(8)(B)(ii) of the Act, as added by section 5503(a)(4) of the Affordable Care Act, specifies that a hospital that receives an increase in its cap shall ensure, during the 5-year period beginning on the date of such increase (July 1, 2011), that certain requirements, referred to as the primary care average and the 75-percent threshold, are met in order to retain those slots. Otherwise, section 1886(h)(8)(B)(iii)(I) of the Act authorizes the Secretary to reduce the FTE resident caps of the hospital by the same number of FTE residents by which the hospital's FTE resident caps were increased if the hospital fails to meet either requirement; and section 1886(h)(8)(B)(iii)(II) of the Act authorizes the Secretary to redistribute those positions.

Specifically, section 1886(h)(8)(B)(ii) of the Act states, ''* * * a hospital that receives an increase in the otherwise applicable resident limit under this subparagraph shall ensure, during the 5-year period beginning on the date of such increase, that—

(I) The number of full-time equivalent primary care residents, as defined in paragraph (5)(H) (as determined by the Secretary), excluding any additional positions under subclause (II), is not less than the average number of fulltime equivalent primary care residents (as so determined) during the 3 most recent cost reporting periods ending prior to the date of enactment of this paragraph; and

(II) Not less than 75 percent of the positions attributable to such increase are in a primary care or general surgery residency (as determined by the Secretary).

The Secretary may determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period.''

In a case where the Secretary determines that a hospital did not meet the requirements in a cost reporting year during the 5-year time period, section 1886(h)(8)(B)(iii) of the Act states that ''* * * the Secretary shall—

(I) Reduce the otherwise applicable resident limit of the hospital by the amount by which such limit was increased under this paragraph; and

(II) Provide for the distribution of positions attributable to such reduction in accordance with the requirements of this paragraph.''

In the November 24, 2010 final rule with comment period (75 FR 72195 through 72203), we stated that the ''5-year period beginning on the date of such increase'' is July 1, 2011 through June 30, 2016, and we provided a detailed discussion of what the two requirements under sections 1886(h)(8)(B)(ii)(I) and 1886(h)(8)(B)(ii)(II) of the Act entail. In that final rule, we noted that section 1886(h)(8)(B)(ii) of the Act allows the Secretary to ''determine whether a hospital has met the requirements * * * during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period,'' and section 1886(h)(8)(B)(iii) of the Act instructs the Secretary to

''reduce the otherwise applicable resident limit of the hospital by the amount by which such limit was increased * * *.'' We also explained that we believe the Secretary has the discretion to consider a hospital's performance over more than one year or to review each year during the 5 years independently in determining whether or not a hospital is in compliance with the primary care average and the 75-percent threshold, as required (75 FR 72196 and 72197 and 72200 and 72201). We emphasized that it is within CMS' and the Medicare contractors' authority to adjust a hospital's IME and direct GME payments as early as it is feasible within a cost report's submission and review cycle, and that we need not wait until final settlement to do so. We further stated in the November 24, 2010 final rule with comment period implementing section 5503 that ''We also understand that we should consider that hospitals might not immediately fill all the slots they receive, particularly because they are only required to demonstrate the likelihood of filling the slots within the first three cost reporting periods beginning on or after July 1, 2011'' (75 FR 72197). However, we gave an example that indicated that, of the section 5503 FTE slots that the hospital does begin to use, 75 percent of those slots must be in primary care or general surgery.

Since we awarded the section 5503 slots pursuant to section 1886(h)(8) of the Act, and prior to issuance of the proposed rule, we have received questions from hospitals asking if and how CMS would enforce the primary care average and the 75-percent threshold requirements under sections 1886(h)(8)(B)(ii)(I) and 1886(h)(8)(B)(ii)(II) of the Act if a hospital does not use any of its section 5503 slots until year 4 or year 5 of the 5-year period, or if a hospital does not use any of the section 5503 slots until after expiration of the 5-year period. We have informed hospitals that the 75-percent threshold requirement applies once the hospital starts using any of the section 5503 slots, and the 3-year primary care average requirement applies immediately on July 1, 2011, regardless of whether or not the hospital begins to use its additional section 5503 slots in year 1 of the 5-year period. This is because the 3-year primary care average test applies to the hospital's pre-section 5503 resident complement as well, and not exclusively to the additional FTE residents associated with slots awarded under section 5503.

In determining which hospitals applying for slots under section 5503 will receive slots, section 1886(h)(8)(C)(i) of the Act specifies that the Secretary shall take into account the demonstrated likelihood of the hospital filling the slots within the first three cost reporting periods beginning on or after July 1, 2011. Hospitals included evidence supporting the demonstrated likelihood stipulation in their applications and we took that into consideration in awarding slots under section 5503. We believe that it is inappropriate and in direct conflict with a base consideration in the awarding of slots under section 5503 for hospitals to refrain from using their section 5503 slots until after the initial 3 years after the slots have been awarded in an attempt to circumvent the primary care average or the 75-percent threshold requirements, or both.

As stated in the November 14, 2010 final rule, CMS reserves the right to assess as many times as necessary in the 5-year period whether a hospital is meeting the required criteria. The agency also may remove the slots awarded to a hospital at any point during the 5-year period (75 FR 72196 and 72197 and 72200 and 72201). Because a statutorily directed criterion for consideration in awarding slots under section 5503 included the requirement that hospitals applying for slots demonstrate the likelihood of filling the slots within the first three cost reporting periods beginning on or after July 1, 2011, and we relied on that information in awarding slots, we stated in the proposed rule that we believe it is reasonable to expect that hospitals that received slots under section 5503 should begin to use their slots within the first three 12-month cost reporting periods beginning on or after July 1, 2011, of the 5-year period in order to give full effect to the requirements under section 1886(h)(8)(B)(ii) of the Act. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27982), we proposed that a hospital must fill *at least half* of its section 5503 slots, IME and direct GME respectively, in at least one of the following timeframes, or lose its section 5503 slots: (A) In its first 12-month cost reporting period of the 5-year period; and/or (B) in its second 12-month cost reporting period of the 5-year period; and/or (C) in its third 12-month cost reporting period of the 5-year period. For example, Hospital A and Hospital B both have June 30 fiscal year ends (FYEs), and they received 10 slots under section 5503. In its FYE June 30, 2012, Hospital A filled 8 slots. In its FYE June 30, 2013, Hospital A filled 0 slots. In its FYE June 30, 2014, Hospital A filled 5 slots. However, Hospital B, in its FYEs June 30, 2012, 2013, and 2014, only filled 3 slots respectively in each of the 3 years. Hospital A would have complied with our proposed requirement, because it filled at least half of its section 5503 slots in either its first, and/or second, and/or its third 12-month cost reporting period during the 5-year period. Hospital B would not have complied with our proposed requirement because in neither its first, second, nor third 12-month cost reporting period had it filled at least 5 (half of 10) slots.

We proposed to interpret that a hospital's failure to use slots awarded under section 5503 in a timely manner to also be a failure to meet the 75-percent threshold. We believe that we have the authority to interpret section 1886(h)(8)(B)(ii) of the Act in such a manner and to propose this requirement because section 1886(h)(8)(B)(ii) of the Act allows the Secretary to ''* * * determine whether a hospital has met the requirements under this clause during such 5-year period in such manner and at such time as the Secretary determines appropriate, including at the end of such 5-year period.'' We reiterated that the 75-percent threshold applies in the instance where a hospital uses *less than half, or any amount,* of its slots prior to its third 12-month cost reporting period during the 5-year period (75 FR 72197). In other words, the 75-percent threshold applies throughout the 5-year period, as long as the hospital is using some amount of its section 5503 slots in the respective cost reporting period. If a hospital is using some of its section 5503 slots in a cost reporting period, the 75-percent threshold would be enforced; if a hospital is not using any of its section 5503 slots in a cost reporting period, the 75-percent threshold would not be enforced. However, as stated earlier, we proposed that a hospital must use its section 5503 slots no later than the hospital's third 12-month cost reporting period (and that at least half of its section 5503 slots must be used in either the first, or second, or third 12-month cost reporting period).

We noted in the proposed rule that we did not specify that a hospital must use at least half of its section 5503 slots in its third 12-month cost reporting period of the 5-year period in the November 24, 2010 final rule with comment period because the possibility that a hospital might not begin to use its section 5503 slots for several years only came to our attention after July 1, 2011, in response to questions raised by hospitals. Furthermore, given the demand for these slots (we ran out of slots during the redistribution process and were unable to award any slots to hospitals in

qualifying, but lower ranking, States), and that the slots were slated to be distributed in States where there was an acute need for additional residents (that is, as sections 1886(h)(8)(D) and 1886(h)(8)(E) of the Act specify, to States with resident-to-population ratios in the lowest quartile, and to States that are among the top 10 in terms of the HPSA population to total population ratios), we did not expect that hospitals that received section 5503 slots would not be able to make almost immediate use of the slots. Consequently, in the proposed rule, we stated that given the presumed huge need for these slots in the States where Congress directed that they be awarded, we believe it is appropriate to use our authority to reasonably ensure that those slots awarded are used in compliance with section 5503 (hence, the proposals in the proposed rule), and, if not, are able to be redistributed to other hospitals in need of slots as Congress intended.

Section 1886(h)(8)(B)(iii) of the Act states that if the Secretary determines that a hospital does not meet either the primary care average or the 75-percent threshold, ''the Secretary shall (I) reduce the otherwise applicable resident limit of the hospital by the amount by which such limit was increased under this paragraph; and (II) provide for the distribution of positions attributable to such reduction in accordance with the requirements of this paragraph.'' Accordingly, we indicated in the proposed rule that we were exercising the broad authority that the Secretary is given to determine whether the requirements at section 1886(h)(8)(B)(ii) of the Act are met by proposing that if a hospital fails to fill *at least half* of its section 5503 slots, IME and direct GME respectively, in its first 12-month cost reporting period of the 5-year period, *and/or* in its second 12-month cost reporting period, *and/or* in its third 12-month cost reporting period of the 5-year period, this would mean failure to meet the 75-percent threshold. In the case of such failure, we indicated that CMS would instruct the Medicare contractor after audit to permanently remove *all* of the hospital's section 5503 slots from the earliest cost reporting period that is subject to reopening and in which it would be determined that the hospital did not meet the requirements (in accordance with existing § 413.79(n)(2)(iii), which was proposed to be redesignated as § 413.79(n)(2)(iv) in the proposed rule), even if the hospital had used at least half of its section 5503 slots in its fourth or subsequent cost reporting year of the 5-year period. Thus, as part of the Medicare contractors' reviews of the hospitals that received section 5503 slots, we proposed that the Medicare contractors would determine whether a hospital filled at least half of its section 5503 slots in its first 12-month cost reporting period of the 5-year period, *and/or* in its second 12-month cost reporting period, *and/or* in its third 12-month cost reporting period of the 5-year period. We stated in the proposed rule that we believe it is appropriate to remove the slots from a hospital that has not filled at least half of its slots in any 12-month cost reporting year prior to and including the third 12-month cost reporting period so that these slots may be redistributed to other hospitals that may have greater success in filling the slots and that are located in States that are described in sections 1886(h)(8)(D) and 1886(h)(8)(E) of the Act.

We noted in the proposed rule that, as explained in the November 24, 2010 final rule with comment period (75 FR 72197), the start and end of each year of the 5-year period depend on the fiscal year begin date of each hospital's cost reporting periods. Hospitals with fiscal year begin dates of July 1 will have five 12-month cost reporting periods starting on July 1, 2011, and ending on June 30, 2016, while hospitals with fiscal year begin dates of other than July 1 will have a partial cost reporting period that includes July 1, 2011, four 12-month cost reporting periods, and another partial cost reporting period that includes June 30, 2016 (75 FR 72197). We proposed that, for example, if Hospital A has a June 30 fiscal year end, its third 12-month cost reporting period of the 5-year period would be July 1, 2013, to June 30, 2014, and Hospital A must fill *at least half* of its section 5503 slots, IME and direct GME respectively, in its first 12-month cost reporting period of the 5-year period, *and/or* in its second 12-month cost reporting period, *and/or* in its third 12-month cost reporting period of the 5-year period. If Hospital B has a September 30 fiscal year end, its cost reporting periods occurring during July 1, 2011 through June 30, 2016 are as follows:

Year 1—July 1, 2011—September 30, 2011

Year 2—October 1, 2011—September 30, 2012

Year 3—October 1, 2012—September 30, 2013

Year 4—October 1, 2013—September 30, 2014

Year 5—October 1, 2014—September 30, 2015

Year 6—October 1, 2015—June 30, 2016

Hospital B's third 12-month cost reporting period would be October 1, 2013, to September 30, 2014, and Hospital B must fill *at least half* of its section 5503 slots, IME and direct GME, respectively, in its first 12-month cost reporting period of the 5-year period, *and/or* in its second 12-month cost reporting period, *and/or* in its third 12-month cost reporting period of the 5-year period. As explained in the November 24, 2010 final rule with comment period (75 FR 72197), if hospitals have other than a June 30 fiscal year end, for their cost reports that include July 1, 2011 and June 30, 2016 respectively, we consider whether the hospital meets the primary care average and the 75-percent threshold requirements based on an annualized FTE count. Also, if during the period of July 1, 2011 through June 30, 2016, hospitals, for whatever reason, actually have less than 12-month cost reports, we would consider on a case-by-case basis which cost reports we would evaluate for purposes of meeting the proposed requirement of filling at least half of the section 5503 slots in its first, second, and/or third cost reporting period. As under existing policy, if the hospital does begin to fill its section 5503 slots but fails to meet the 75-percent threshold, the Medicare contractor would also remove the section 5503 slots, effective with the earliest year that the 75-percent threshold is not met.

Lastly, considering again that hospitals that received section 5503 slots had to demonstrate the likelihood of filling the slots within the first three cost reporting periods beginning on or after July 1, 2011, we proposed to require that hospitals that received section 5503 slots must fill *all* of the slots they received in their final cost reporting period beginning during the timeframe of July 1, 2011 through June 30, 2016 (IME and direct GME respectively), or lose *all* of their section 5503 slots after June 30, 2016. As stated above and in the proposed rule, we consider it to be appropriate to remove the slots from a hospital that has not filled at least half of its slots in any 12-month cost reporting period prior to and including the third 12-month cost reporting period, so that these slots may be redistributed to other hospitals that otherwise qualified to receive slots, but did not receive them because the available slots were granted to higher ranking hospitals. We also stated that we were interested in commenters' recommendations regarding alternative approaches to encouraging compliance with the 3-year primary care average requirement and the 75-percent threshold.

In summary, we proposed that a hospital must fill *at least half* of its section 5503 slots, IME and direct GME respectively, in at least one of the following timeframes or lose its section 5503 slots: (A) In its first 12-month cost reporting period of the 5-year period; and/or (B) in its second 12-month cost reporting period of the 5-year period; and/or (C) in its third 12-month cost reporting period of the 5-year period. We proposed to enforce the 75-percent threshold test once the hospital begins to use its section 5503 slots, which we proposed must be no later than the hospital's third 12-month cost reporting period (and that at least half of its section 5503 slots must be used in either the first, or second, or third 12-month cost reporting period). In addition, we proposed that a hospital does not meet the 75-percent threshold if it fails to fill *at least half* of its section 5503 slots, IME and direct GME, respectively, in one or a combination of the first three 12-month cost reporting period of the 5-year period, and upon that basis, CMS would instruct the Medicare contractor, after audit, to permanently remove *all* of the hospital's section 5503 slots from the earliest cost reporting period that is subject to reopening and in which it would be determined that the hospital did not meet the requirements (in accordance with existing § 413.79(n)(2)(iii), which was proposed to be redesignated as § 413.79(n)(2)(iv) in the proposed rule), even if the hospital had used at least half of its section 5503 slots in its fourth or subsequent cost reporting year of the 5-year period. Thus, as part of the Medicare contractors' reviews of the hospitals that received section 5503 slots, we proposed that the Medicare contractors would determine whether a hospital filled at least half of its section 5503 slots in its first 12-month cost reporting period of the 5-year period, *and/or* in its second 12-month cost reporting period, *and/or* in its third 12-month cost reporting period of the 5-year period. Lastly, we proposed to require that a hospital that received section 5503 slots must fill *all* of the slots it received in their final cost reporting period beginning during the timeframe of July 1, 2011 through June 30, 2016 (IME and direct GME respectively), or lose *all* of its section 5503 slots after June 30, 2016.

We proposed that these requirements would be effective for a hospital's third 12-month cost reporting period occurring during the 5-year period of July 1, 2011 through June 30, 2016. For example, for hospitals with a June 30 fiscal year end, this would be July 1, 2013 through June 30, 2014. For hospitals with a September 30 fiscal year end, this would be October 1, 2013 through September 30, 2014. For hospitals with a December 31 fiscal year end, this would be January 1, 2014 through December 31, 2014. We proposed to make appropriate changes to the regulations text at § 413.79(n)(2) to incorporate our proposals. The IME regulations regarding section 5503 slots that are at existing § 412.105(f)(1)(iv)(C)(*2*) reference the direct GME regulations text at § 413.79(n) and would not require amendments.

Comment: Many commenters opposed CMS' proposal to require hospitals to use at least half of their section 5503 slots in either the first, second, or third 12-month cost reporting period of the 5-year period, and to use all of their slots by the fifth year. One commenter stated that the proposal ''over-reaches'' and the penalty for failure to meet the timeline for filling the section 5503 slots is ''too harsh,'' unjustly penalizing hospitals. Commenters explained how, given the date when CMS announced the section 5503 awards (August 2011, which they believed was already too late to recruit resident for the July 1, 2011 academic year), and the complexity and length of the process for receiving accreditation and hiring staff for a new program, a 3-year timeframe for filling at least half of the slots is impossible for hospitals to meet. Some commenters gave examples of a hospital that is using its section 5503 to start a new program, but because of time constraints in accrediting and growing the program, by the 5th year, the hospital would still only have less than 75 percent of the slots filled. They stated that, under CMS' proposal, this hospital would lose all 10 of its section 5503 slots.

Some commenters expressed concern about the proposed timeline for filling slots as it relates to longer residencies such as general surgery, a 5-year program. These commenters requested that CMS revise the proposal to require that 80 percent, rather than 100 percent, of the slots are filled by the fifth year. Other commenters recommended that CMS remove the requirement that half the slots be filled by the third year, and instead either require that half the slots be filled by the fifth year, or that hospitals prove that they *began* to start or expand programs before the end of the fifth year, and that they received accreditation for the full number of slots they were awarded.

Another commenter suggested that, if the hospitals can provide appropriate documentation from the National Residency Match Program (NRMP) or other appropriate match programs that, based on their recruitment numbers, they have recruited for all the slots allocated, then that hospital should be considered as meeting the 5-year requirement. Alternatively, one commenter recommended that if CMS insists on an ''interim check'' of the progress of slot-filling, instead of using years 1, 2, and 3 of the 5-year evaluation period, CMS should use years 2, 3, and 4. The commenter argued that leaving out the first year ''seems fair and appropriate,'' considering that the public would not have known about CMS' clarification until well into the first year and well after the point in time during which residents for the following academic year are selected.

Other commenters suggested that any hospital that received an increase for a new program should demonstrate that the program is *starting* within the first three cost reporting periods, as outlined in the final regulations published in the November 24, 2010 final rule with comment period (75 FR 72168). The same commenters also stated that any hospital that received an increase for a new program should submit to CMS a 5-year plan on how it plans to fill its slots. The commenters stated that this should be done in a similar manner as for hospitals that participated in the New York Demonstration, the Utah Demonstration, or a Voluntary Residency Reduction Program (VRRP) (as outlined in the final regulations published in the November 24, 2010 final rule with comment period (75 FR 72168)). Commenters argued that, because of the tremendous investment required to start a new program, it is highly unlikely that a hospital would abandon that effort ''both for financial and reputational reasons.''

Two commenters stated that the ACGME accreditation process for new programs is more complex than for expansion of existing programs. The commenters asked that CMS acknowledge the effort and time required to start a new program, and CMS ''should continue to make a distinction between expansions of existing programs and the establishment of new programs in the requirements for the use of the redistributed GME slots.'' The commenters noted that CMS made this distinction between starting new programs and expanding existing programs under Demonstrated Likelihood Criterion 1 in the November 24, 2010 final rule with comment period (75 FR 72168), where CMS added the option of submitting ''documentation demonstrating that it has made a commitment to start a new program. One example of such a commitment

would be for the hospital to provide the minutes from the meeting at which the hospital's GME committee gave approval for the hospital to proceed with the process of applying to the accrediting agency for approval to start a new program. We are not adding a similar option under Demonstrated Likelihood Criterion 2 because we understand that the process for requesting approval to expand an existing program is not as time-consuming and labor-intensive as the process for requesting approval for a brand new program.''

Commenters asked that if CMS does finalize a penalty for hospitals that fail to use all of their slots, CMS only remove the slots that the hospital did *not* fill by year 5, and if any removal of slots occurs, it should only be prospective (that is, starting with the year *after* failure to meet the 75-percent test). Commenters argued that it is ''draconian'' for CMS to remove all or any of a hospital's awarded slots, if, for example, in the fifth year, the hospital has not filled a fraction of the slots.

One commenter argued that there is no statutory requirement to use ''all'' the awarded section 5503 slots. The commenter stated that the only statutory requirements are to make certain that the hospital trains primary care residents at or above its primary care average and, also, that 75 percent of the positions attributable to the additional slots are in primary care or general surgery training. The commenter asserted that this statutory requirement does not suggest a need for use of all slots or any particular need to analyze the use of slots, if any, for any slots not used for primary care or general surgery. The commenter argued that Congress did not place any other requirements on the use of the slots and clearly is allowing for 25 percent of the slots used to be for nonprimary care training. The commenter gave an example where if the primary care average is 12.2 and the hospital was awarded 10 section 5503 slots, the commenter believes that, in year 5, to determine compliance with the statutory 75-percent requirement and primary care average, the only analysis should be whether the hospital, in year 5, is training at least 12.2 residents in primary care and also at least an additional 7.5 FTEs in primary care or general surgery. The commenter believed that it should not matter what, if anything, the hospital might be doing with the other 2.5 FTEs of the 10 awarded section 5503 slots. The commenter added that it would be difficult to determine use of all awarded slots without knowing precisely what figure in year 5 will be compared to what figure from another year or years.

Commenters also requested that CMS permit hospitals to choose to start the 5-year evaluation period *either* to be July 1, 2011, or July 1, 2012. Commenters stated that although section 5503 is effective July 1, 2011, the section 5503 awards were not announced until after the start of the July 1, 2011 academic year, and therefore, unless a hospital had already recruited residents to positions during the 2010 match program, there is no way for any hospital to actually have used any of the section 5503 awarded positions for the period of July 1, 2011 through June 30, 2012.

Response: We have considered all the public comments we received and we are convinced that, with respect to starting a brand new program, it is possible that even if a hospital began in earnest the process of seeking accreditation for and starting a new program right after the section 5503 slots were awarded in August 2011, half of the slots may not be filled by the third 12-month cost reporting period of the 5-year evaluation period. Nevertheless, we emphasize that our proposal that hospitals must fill at least half of their slots in years 1, 2, or 3 was based on the *statutory* directive that, in distributing the slots, CMS should take into account the demonstrated likelihood of the hospital filling the additional slots within the *first three cost reporting periods beginning on or after* July 1, 2011. Arguably, our proposal was *less* restrictive than this directive, in that hospitals would have to fill only *half* of their slots, and not all of the slots, and do so in either the first, second, or third *12-month cost reporting period* of the 5-year evaluation period. However, in this final rule, based on consideration of the public comments we received, we are finalizing a policy that differs from what we proposed.

As we explain further below, we will be modifying the hospital cost report to require hospitals to report the number of FTE residents that they have added because of their section 5503 slots. The hospitals must specify on the cost report, of the additional FTEs added because of section 5503, the number that are in a new program(s), if any, and the new program specialty(ies), and the number that are expansions to an existing program(s), if any, and the expanded program's or programs' specialty(ies). This information will assist the Medicare contractor in determining how many slots are being used and the purpose for which they are being used, at least for cost reports that have not yet been filed in the 5-year evaluation period. We received many comments convincing us of the complexity and devotion of time and resources associated with starting a new program, but commenters did not do the same regarding the process for expanding existing programs. In fact, after noting that the ACGME process for starting a new program is more complex than for expanding an existing program, two commenters also pointed out that, consequently, CMS has already distinguished between new programs and program expansions with regard to the type of documentation required in the section 5503 application process (that is, the documentation requirements for applications seeking slots to start a new program were somewhat less stringent than the documentation requirements for expanding existing programs (75 FR 72168)). Those commenters asked that CMS continue to distinguish between new programs and program expansions, presumably by being less stringent with regard to the requirements imposed when slots must be filled for new programs. These comments highlighting the differences in the level of difficulty between starting a new program and expanding an existing program, and the general lack of comments voicing concern over our proposals with regard to expanding existing programs, confirm our belief that it is much easier for a hospital to expand an existing program than to start a new one. Therefore, in this final rule, we are continuing to distinguish between new programs and expansions of existing programs, and with regard to expansions of existing programs, we believe that a hospital should be able to achieve its expansions *fully* by its fourth 12-month cost reporting period. With regard to establishing new programs, we understand that a new program may not yet be fully grown by its final (full or partial) cost report. As we explain further below, we are finalizing a policy wherein the Medicare contractor would remove from the final cost report the section 5503 slots that are unused in a hospital's final (full or partial) cost report in the 5-year evaluation period. We are concerned that hospitals may seek to suddenly expand existing primary care or general surgery programs in the final (full or partial) cost report as a means of holding on to their section 5503 slots, only to reverse those expansions after June 30, 2016, and use the section 5503 slots for some other purpose inconsistent with the policy goals of section 5503. We believe it is reasonable and fair to choose the

fourth 12-month cost report as the year in which a hospital must have achieved its full program expansion(s) because this is one year *more* than the statutory requirement at section 1886(h)(8)(C)(i) of the Act that the Secretary shall take into account the demonstrated likelihood that a hospital would fill the slots within the first 3 cost reporting periods beginning on or after July 1, 2011. We hope that this final policy encourages hospitals to achieve the full expansion by their fourth 12-month cost report, and to maintain that full expansion in the final cost report. We believe that, in this manner, the hospital would be demonstrating at least 2 years of commitment to the expanded program(s), and as a result, the hospital may be less likely to reverse the expansion after June 30, 2016.

Accordingly, we are finalizing a policy wherein if a hospital uses any section 5503 slots for program expansions, the Medicare contractor will review those slots used for program expansions and, in determining the number of applicable unused slots to remove, compare the number of FTEs associated with program expansion in the fourth 12-month cost reporting period to that in the final cost report (full or partial). If the final cost report indicates a number of FTEs associated with program expansion that is more than the number of FTEs associated with program expansion in the fourth 12-month cost reporting period, the Medicare contractor would ignore the additional expansion in the final cost report in calculating the applicable unused slots because, as noted above, we believe the full expansion should have been achieved in the fourth 12-month cost reporting period. Effective for portions of cost reports on or after July 1, 2016, we would remove those additional expanded FTEs (thereby reducing the section 5503 award) that are over and above the FTEs associated with program expansion in the fourth 12-month cost reporting period. If the number of FTEs associated with program expansion in the final cost report is *equal to or less than* the number of FTEs associated with program expansion in the fourth 12-month cost reporting period, the hospital's section 5503 award would be reduced by removing any FTE slots that are unused in the final (full or partial) cost report, effective for portions of cost reports on or after July 1, 2016.

For example, assume Hospital X was awarded 20 slots under section 5503. In its fourth 12-month cost reporting period, it has added 16 FTEs, 10 of which are associated with a new family medicine program, and 6 are associated with an expanded surgery program. In its final cost report, Hospital X has expanded its internal medicine program by 3 FTEs, and it continues to train the 6 surgery residents and the 10 family medicine residents added in its fourth cost reporting period. One slot of the 20 section 5503 slots remains unused in the final cost report. Because we believe all program expansions should have occurred no later than the fourth 12-month cost reporting period, effective July 1, 2016, the Medicare contractor would remove the three (internal medicine) FTE slots. In addition, effective July 1, 2016, the Medicare contractor would remove the one unused FTE slot. Therefore, effective July 1, 2016, Hospital X's section 5503 cap would be 16, not 20.

Alternatively, Hospital Y was awarded 20 slots under section 5503. In its fourth 12-month cost reporting period, it has added 16 FTEs, 10 of which are associated with a new family medicine program, and 6 are associated with an expanded surgery program. In its final cost report, Hospital Y continues to train the 6 surgery residents and add 1 family medicine resident, so Hospital Y is training 11 family medicine residents. Hospital Y has maintained the same level of program expansions in its final cost report as in its fourth 12-month cost report (that is, 6 surgery residents). Three slots of the 20 section 5503 slots are unused in the final cost report. Therefore, the Medicare contractor would only remove the 3 FTE unused slots effective for portions of cost reporting periods on or after July 1, 2016. Hospital Y's section 5503 cap would be 17, not 20, effective for portions of cost reporting periods on or after July 1, 2016.

We are revising the proposed regulations text to conform to the final policy regarding reduction of the section 5503 cap awards effective for portions of cost reports on or after July 1, 2016, due to unused slots. Specifically, we are revising the regulations text at § 413.79(n)(2)(ii) to state that if a hospital received a section 5503 cap award, and does not use all of the award in its final (12-month or partial) cost report of the 5-year period beginning July 1, 2011, and ending June 30, 2016, the Medicare contractor will remove the applicable unused slots, and the hospital's section 5503 award will be reduced for portions of cost reporting periods on or after July 1, 2016. The number of applicable unused slots is equal to the difference between the number of slots awarded and the number of slots used. In determining the applicable slots used, the following amounts are added, as relevant:

(1) If a hospital uses the section 5503 slots to expand an existing program(s), the used slots are equal to the lesser of the number of slots used for an expansion(s) in the fourth 12-month cost report or the final cost report.

(2) If a hospital uses the section 5503 slots to start a new program(s), the used slots are equal to the number of slots used for a new program(s) in the final cost report.

(3) The portion, if any, of the section 5503 slots used for cap relief, subject to the 75 percent test and the 3-year primary care average requirement.

Because we are directing the contractors to only remove the applicable unused slots awarded under section 5503, effective for portions of cost reporting periods on or after July 1, 2016, it is important to define what we mean by ''used'' versus ''unused'' slots. As one commenter argued in great detail, there is no statutory requirement to use ''all'' the awarded section 5503 slots. The only statutory requirements are to make certain that the hospital trains primary care residents at or above its primary care average and, also, that 75 percent of the positions attributable to the additional slots are in primary care or general surgery training. The commenter asserted that it should not matter what, if anything, the hospital might be doing with the other 25 percent of its section 5503 slots. The commenter argued that Congress did not place any other requirements on the use of the slots and clearly is allowing for 25 percent of the slots used to be for non-primary care training.

We believe that the intent of section 5503 was to provide Medicare-funded slots to hospitals in States that had documented shortages of physicians, in primary care or otherwise, and, therefore, the slots are intended to pay for *additional* FTE residents that the hospitals in those States were previously *not* training. That is, the section 5503 slots were not intended to cover existing residency positions (that is, cap relief), but to be used to create new residency positions either through starting new programs or expanding existing programs. In fact, hospitals were precluded from applying for section 5503 slots for cap relief, and no place was provided on the section 5503 application form to even apply for cap relief (75 FR 72171, 72173 and 72174). Furthermore, in light of the 75-percent requirement, the intent of section 5503 is that a sizeable majority of the additional resident slots are to be filled with new primary care or general surgery residents. Arguably, it is

acceptable if 25 percent of the remaining 5503 slots are used for additional nonprimary care programs, considering that the States that were awarded the slots have shortages of *multiple kinds* of physicians, not just primary care and general surgery. Nevertheless, it appears that, based on the language in the November 24, 2010 final rule with comment period implementing section 5503 (75 FR 72198), hospitals may use 25 percent of their section 5503 slots for cap relief.

While we believe that it is not desirable to use any amount of section 5503 slots for cap relief, we are not instructing the contractor to automatically disallow the portion of slots used for cap relief if the 3-year primary care average and the 75-percent tests are met. However, it is important for hospitals to understand that application of any amount of section 5503 slots toward cap relief constitutes a definite ''use'' of those section 5503 slots; therefore, section 5503 slots utilized for cap relief count with respect to the determination of whether 75 percent of a hospital's section 5503 slots are being used for training additional primary care or general surgery residents, and whether the total primary care FTE count equals at least the 3-year primary care average number. We emphasize that we are not instituting a new policy in this final rule with regard to using slots for cap relief. As stated above, it appears that, based on language in the November 24, 2010 final rule with comment period implementing section 5503, using 25 percent of the slots for cap relief is permissible (75 FR 72198). This existing policy would apply to cost reports that hospitals have already filed after July 1, 2011 (the effective date of section 5503), and certainly applies to cost reports that have not yet been filed. For example, assume Hospital A has a cap of 100 FTEs, and is training 110 residents. Hospital A has a fiscal year end of December 31 and was awarded a total of 20 slots under section 5503. On July 1, 2011, Hospital A did add one more primary care resident, which equates to .5 FTE on the December 31, 2011 cost report. Also, on its December 31, 2011 cost report (Form CMS–2552–10, line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4), Hospital A reported ''10'' section 5503 slots as its cap increase (that is, half of the 20 section 5503 slots applicable to July 1, 2011 through December 31, 2011), and it reported 110.5 unweighted FTEs as its current year allowable allopathic and osteopathic FTE count (Form CMS–2552–10, line 10 on Worksheet E, Part A and line 6 Worksheet E–4). In effect, Hospital A ''used'' all of its section 5503 slots, which meant that the 9.5 FTEs by which Hospital A previously exceeded its cap of 100 are now covered by 10 of the section 5503 slots, generating payment on the December 31, 2011 cost report for an additional 9.5 preexisting FTEs (for purposes of simplicity, we have disregarded the effects of the rolling average calculation). However, Hospital A has only added 0.5 of an additional slot in primary care, while 9.5 of the other section 5503 slots are used for cap relief. In this example, the 75-percent test is not met. Thus, in accordance with the regulations at § 413.79(n)(2)(iv), all 20 of Hospital A's section 5503 slots would be removed.

Consider the difference in reporting with Hospital B. Hospital B also has a cap of 100 FTEs and is training 110 residents. Hospital B has a fiscal year end of December 31 and was awarded a total of 20 slots under section 5503. On July 1, 2011, Hospital B did add one more primary care resident, which equates to .5 FTE on the December 31, 2011 cost report. On its December 31, 2011 cost report (CMS Form 2552–10, line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4), Hospital B reported ''0.66'' section 5503 slots as its cap increase. By reporting 0.66 FTEs, the hospital would be reporting 0.5 of its section 5503 cap associated with the 0.5 additional primary care FTE, plus 25 percent more for cap relief (that is, 0.5 is 75 percent of 0.66, and 0.16 is 25 percent of 0.66). Hospital B's adjusted cap for FYE 12/31/11 is 100 + 0.66 = 100.66. Hospital B reported 110.5 unweighted FTEs as its current year allowable allopathic and osteopathic FTE count (CMS Form 2552–10, line 10 on Worksheet E, Part A and line 6 on Worksheet E–4). Hospital B would be paid for 100.66 FTEs on its December 31, 2011 cost report (disregarding the rolling average). Hospital B has permissibly ''used'' 75 percent of its section 5503 slots for an additional primary care resident and 25 percent for other purposes, such as cap relief.

These examples demonstrate how cap relief constitutes ''use'' of section 5503 slots, and also show that in the 5-year evaluation period, a hospital should *not automatically* report (that is, use) *all* of its section 5503 cap increase (on Form CMS–2552–10, line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4), but should only report (that is, use) a portion that at least is equal to the additional primary care/general surgery FTEs added, with no more than an additional 25 percent allowed to be reported for other purposes. (We plan to update the cost report instructions to reflect this directive.) We reiterate that a hospital is responsible for meeting the 75-percent test based on *whatever amount of section 5503 cap increase it reports on its cost report* (Form CMS–2552–10, line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4) during each year of the 5-year evaluation period. If use of slots for cap relief results in the hospital using less than 75 percent of the slots in a year for primary care and/or general surgery residents, the hospital risks losing all of section 5503 slots from the earliest cost reporting period that is reopenable in which it would be determined that the hospital did not meet the requirements in accordance with § 413.79(n)(2)(iv). For example, in year 5 (that is the final cost report), a hospital that was awarded 10 slots is training 6 new primary care/general surgery residents in a new program. That means in order to meet the 75-percent test in year 5, the most that can be used for cap relief or non-primary care is 2 FTEs (2 is 25 percent of 8), and an amount of 8 may be reported on Form CMS–2552–10, line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4, and the remaining 2 FTEs would be removed by the contractor effective for portions of cost reporting periods on or after July 1, 2016. If this hospital had reported all 10 of its section 5503 slots on line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4 in year 5, while actually only adding 6 primary care/general surgery residents in the new program, this hospital would fail the 75 percent test. Under the regulations at § 413.79(n)(2)(iv), this hospital would lose all 10 of its section 5503 cap slots, from the earliest cost reporting period that is reopenable in which it would be determined that the hospital did not meet the requirements.

In order for the Medicare contractors to determine whether a hospital is complying with the 75-percent test and the 3-year primary care average requirement, hospitals would have to provide their contractors with information as part of the cost report (possibly on Worksheet S–2, Part I of the CMS Form 2552–10), the following for IME and direct GME separately:

(1) The baseline FTE count, which is used for determining whether FTEs are added in cost reports in the 5-year evaluation period. The baseline FTE count is the total unweighted allopathic and osteopathic FTE count from the hospital's 12-month cost report that immediately precedes the cost report that includes July 1, 2011. (That is, the baseline cost report for June 30 providers would be July 1, 2010 through June 30, 2011; for December 31

providers, this would be January 1, 2010 through December 31, 2010; for September 30 providers, this would be October 1, 2009 through September 30, 2010). (On the CMS Form 2552–96, the baseline FTE count is on line 3.08 of Worksheet E, Part A, and on line 3.05 of Worksheet E–3, Part IV. On the CMS Form 2552–10, the baseline FTE count is on line 10 of Worksheet E, Part, and on line 6 of Worksheet E–4).

(2) The number of additional FTEs above the baseline FTE count that were added in the current cost reporting period, because of the section 5503 award. (These FTEs are part of the current year FTE count, and would be included on CMS Form 2552–10, line 10 of Worksheet E, Part A, and line 6 of Worksheet E–4).

(3) Of the additional FTEs in item 2, specify each new program specialty, if any, and the number of FTE residents for each new program.

(4) Of the additional FTEs in item 2, specify each expanded program specialty, if any, and the number of FTE residents for each program expansion.

(5) The amount of the section 5503 award that is being used for cap relief, if any.

(6) The current year's total unweighted primary care FTE count (excluding obstetrics and gynecology). (The 3-year primary care average from the 3 most recent cost reports ending prior to March 23, 2010, must already be reported on Worksheet S–2, Part I, line 61).

In order to determine compliance with the 75-percent test and the 3-year primary care average, the Medicare contractor would first determine the number of ''used'' slots. That is, the Medicare contractor would compare the amount on the hospital's section 5503 award letter to the section 5503 cap line on the Medicare cost report (line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4). Then, the Medicare contractor would determine if the hospital reported the full amount of its section 5503 cap increase on the section 5503 cap line of the cost report, or a partial cap increase. The amount of the section 5503 cap increase that is reported on the section 5503 cap line (line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4) is the amount of the ''used'' slots, and it influences the additional number of FTE residents that would be paid for in the current cost report. Therefore, while the sum of items 2 and 5 above should equal the cap increase amount reported on the section 5503 cap line, 75 percent of that cap increase amount reported on the section 5503 cap line must be used for additional primary care or general surgery FTEs added to the baseline number of FTEs.

If no residents were added on the current year line 10 or line 6 (item 2 above), but the hospital reported some or all of its section 5503 cap increase on line 8.01 of Worksheet E, Part A or line 4.01 of Worksheet E–4, the section 5503 cap increase is being used for cap relief. The 75-percent test would not be met, and all of the section 5503 cap slots would be removed in accordance with § 413.79(n)(2)(iv). If no section 5503 cap increase is reported on the section 5503 cap line (line 8.01 of Worksheet E, Part A or line 4.01 of Worksheet E–4), the contractor would still determine if the primary care average requirement is met in the current year. Failure to comply with either the 75 percent or 3-year primary care average test means permanent removal of all section 5503 slots from the earliest applicable cost reporting period under the regulations at § 413.79(n)(2)(iv).

With regard to the Medicare contractor's review of a hospital's final (full or partial) cost report, if the Medicare contractor determines that the hospital complied with the 75-percent test and the 3-year primary care average requirement, the Medicare contractor would assess the number of applicable unused slots, in accordance with the revised regulations text at § 413.79(n)(2)(ii). Any amount of ''unused'' section 5503 award, that is, the portion above 25 percent of the total award that is not being used for nonprimary care ''growth'' or for cap relief, would be removed permanently by the contractor for portions of cost reporting periods on or after July 1, 2016. For example, in year 5 (that is, the final cost report), a hospital that was awarded 10 slots is training 6 new primary care/general surgery residents in a new program. That means the most that can be used for cap relief or nonprimary care is 2 FTEs (2 is 25 percent of 8), and an amount of 8 may be reported on line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4, and the remaining 2 FTEs would be removed for portions of cost reporting periods on or after July 1, 2016 by the contractor. (That is, effective for portions of cost reporting periods on or after July 1, 2016, the hospital's section 5503 award would be permanently reduced by 2 FTEs). If this hospital had reported all 10 of its section 5503 slots on line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4 in year 5, while actually only adding 6 primary care/general surgery residents in the new program, this hospital would fail the 75 percent test. Under the regulations at § 413.79(n)(2)(iv), this hospital would lose all 10 of its section 5503 cap slots, effective with the earliest cost reporting period that is reopenable in which it would be determined that the hospital did not meet the requirements.

With regard to the commenters who stated that any hospital that received an increase for a new program should submit to CMS a 5-year plan on how it plans to fill its slots, we believe that is superfluous. Hospitals that received section 5503 slots were already required to demonstrate in their initial application a commitment to fill the slots within the first three cost reporting periods of receiving the slots. Therefore, it would not be helpful to require hospitals to submit additional plans for CMS to review. We also do not see the need to allow hospitals to choose the start of their 5-year evaluation period to be either July 1, 2011 or July 1, 2012. If the 5-year evaluation period begins July 1, 2012, that would extend the 5-year period beyond June 30, 2016, and we stated in the November 24, 2010 final rule with comment period that the 5-year probationary period ends on June 30, 2016 (75 FR 72200). Because we believe we have modified and significantly relaxed our requirements for hospitals with regard to the timeframe for filling section 5503 slots, we do not believe it is necessary to further prolong the 5-year evaluation period beyond June 30, 2016.

Comment: One commenter did not understand CMS' use of ''and/or'' to describe the requirement that a hospital must fill at least half of its slots in its first 12-month cost reporting period of the 5-year period, and/or in its second 12-month cost reporting period of the 5-year period, and/or in its third 12-month cost reporting period of the 5-year period. The commenter believed it would be clearer to state that a hospital must fill ''at least half of its section 5503 slots in at least one of the following timeframes * * * its second 12-month cost reporting period of the 5-year period, or its third 12-month cost reporting period of the 5-year period; or its fourth 12-month cost reporting period of the 5-year period.'' Another commenter asked that CMS clarify its language regarding use of all the slots in the fifth year, noting that the proposed preamble states that hospitals would be required to ''fill all of the slots they received *in* their final cost reporting period beginning during the timeframe of July 1, 2011 through June 30, 2016'' (emphasis added by the commenter), while the proposed regulations at 42 CFR 413.79(n)(2)(ii) state that the hospital ''must fill all of the slots it received *by* its final cost reporting

period beginning during the timeframe of July 1, 2011 through June 30, 2016'' (emphasis added by the commenter). The commenter asked that CMS not measure a hospital's compliance with a rate of usage of section 5503 slots based on a single year, noting that a hospital might fill all of its slots in the fourth year, but for reasons beyond its control, may lose one of the residents in the fifth year, putting the hospital at risk to lose all of its slots. Yet another commenter noted that CMS has not indicated how it would measure compliance with the requirement that ''all'' awarded slots be filled in the fifth year of the evaluation period. The commenter suggested that CMS establish a baseline and indicate whether it is a single year FTE count or an average FTE count of more than one year.

Response: We regret the confusion we caused by using ''and/or'' to describe the requirement that a hospital must fill at least half of its slots in its first 12-month cost reporting period of the 5-year period, and/or in its second 12-month cost reporting period of the 5-year period, and/or in its third 12-month cost reporting period of the 5-year period. In any case, because we are not finalizing that proposal, this language is irrelevant and will not be included in the final regulations text. Regarding the language in the proposed preamble that states that hospitals would be required to ''fill all of the slots they received *in* their final cost reporting period'' (emphasis added by the commenter), while the proposed regulations at 42 CFR 413.79(n)(2)(ii) state that the hospital ''must fill all of the slots it received *by* its final cost reporting period'' (emphasis added by the commenter), we believe that ''in'' and ''by'' may be used interchangeably. The point is that Medicare counts and pays for FTEs, not resident positions, as reported on the Medicare cost report. We have stated what we mean by the 5-year evaluation period, and described that depending on a hospital's fiscal year end, some hospitals will have five 12-month cost reporting periods (if they have a June 30 FYE), while other hospitals would have first a partial cost report, then four 12-month cost reports, and then finally a partial cost report, so as not to go beyond June 30, 2016, which is 5 years from the effective date of July 1, 2011 (75 FR 72197 and 77 FR 27983). We also have stated that, for hospitals with other than a June 30 FYE, in order to measure compliance with the 75-percent test and the 3-year primary care average requirement, an annualized FTE count in the first and final partial cost reports would be employed (75 FR 72197). Thus, the annualized FTE count and the annualized FTE resident cap increase *in that final full or partial cost reporting period* will be used to determine compliance with the tests and to determine the amount of slots that are ''unused.'' Finally, as we stated in response to the previous comment, in this final rule, unlike in the proposed rule, we are not requiring that ''all'' awarded slots be filled in the fifth year. Rather, we have revised the regulation text at § 413.79(n)(2)(ii) to describe when slots would be removed, in the event that not ''all'' of them are filled (that is, used) by the fifth year. Furthermore, in the previous response, we also have defined a base year, or baseline number of FTEs, for the purpose of determining ''growth'' of additional FTE slots added in accordance with section 5503. However, we are not necessarily measuring a hospital's compliance with a rate of usage of section 5503 slots based on a single year or an average of years. As stated in the November 24, 2010 final rule (75 FR 72200 and 72201), CMS could consider an average of a hospital's performance over more than 1 year, rather than only always reviewing each year during the 5 years independently. Regardless of when the Medicare contractor audits a hospital to determine if it is meeting the criteria within the 5-year period, a hospital should not view this policy as an encouragement to have an ''off'' year where the requirements need not be met.

Comment: One commenter asked how CMS would determine if a hospital filled half of its section 5503 slots. For example, if a hospital was awarded 10 slots, would CMS or a MAC seek to confirm that the hospital is training 3.75 FTEs above its primary care average, because 3.75 is 75 percent of 5, which is half of the 10 awarded slots? The commenter believed such an approach makes sense, ''as it provides for a clear, straightforward comparison of primary care/general surgery training in a particular year to the known, established 3-year primary care average.'' The commenter stated that because up to 25 percent of the awarded slots can, at any time, be used for any type of non-primary care residency training, it would be very difficult to demonstrate use of all 5 slots (that is, half the awarded 10), when 1.25 FTEs could be used for any purpose and there would be no clear reference point to determine that nonprimary care training is also increased by a specific amount (given that there is no nonprimary care historical reference—or not one that has been clearly identified for this purpose).

Response: The commenter's question was asked in the context of the proposed policy, which proposed to require hospitals to fill at least half of their section 5503 slots in at least one of the first three 12-month cost reporting periods of the 5-year evaluation period. In this final rule, we are finalizing a policy wherein, regardless of whether a hospital is starting new programs, expanding programs, or doing a combination of both, the Medicare contractor will remove the portion of the section 5503 award that is unused in the final cost report. (However, as explained earlier, in the case of slots used to expand an existing program, if the number of slots associated with a program expansion in the final cost report is greater than the number of slots associated with a program expansion in the fourth 12-month cost report, the Medicare contractor would remove those additional expanded FTEs that are over the FTEs associated with program expansion in the fourth 12-month cost reporting period.) We agree that, of the applicable section 5503 cap increase reported on a hospital's cost report in the 5-year evaluation period, 25 percent of the cap increase amount may be used for any purpose. We also have defined a base year, or baseline number of FTEs, for the purpose of determining ''growth'' of additional FTE slots added in accordance with section 5503. The baseline for determining whether FTEs are added in each cost report in the 5-year evaluation period is the total unweighted allopathic and osteopathic FTE count from the hospital's 12-month cost report that immediately precedes the cost report that includes July 1, 2011 (that is, the baseline cost report for June 30 providers would be July 1, 2010 through June 30, 2011; for December 31 providers, this would be January 1, 2010 through December 31, 2010; for September 30 providers, this would be October 1, 2009 through September 30, 2010). (On the CMS Form 2552–96, the baseline number is the number on line 3.08 of Worksheet E, Part A, and on line 3.05 of Worksheet E–3, Part IV. On the CMS Form 2552–10, the baseline number is the number on line 10 of Worksheet E, Part, and on line 6 of Worksheet E–4). We believe this base year provides a clear reference point for determining whether both primary care/general surgery or nonprimary care training has increased during the 5-year evaluation period.

Comment: A few commenters supported the proposal to require hospitals to use at least half of their section 5503 slots in either the first, second, or third 12-month cost reporting

period of the 5-year period, and to use all of their slots by the fifth year, stating that the proposed standards appear reasonable and consistent with statutory intent. One commenter stated that the proposals ''drive earlier implementation of new positions and strengthen requirements that institutions fulfill the obligation of the statute regarding primary care and general surgery positions.'' With regard to the proposed requirement that Medicare contractors determine whether a hospital filled at least half of its section 5503 slots in any of the first three cost reporting periods, the commenter asked that CMS add to this a requirement consistent with Evaluation Criterion 3 of the section 5503 application form, which was targeted to primary care programs with a ''demonstrated focus'' on residents who pursue careers in primary care. Hospitals that received points under Evaluation Criterion Three had to ''demonstrate'' that residents graduating from their programs actually do practice in primary care, and do not enroll in nonprimary care subspecialty programs or work as something other than a primary care practitioner. CMS stated that a threshold of greater than 50 percent of graduates would be acceptable as a basis to demonstrate that a program produces physicians who pursue careers in primary care. The commenter stated that, given that Medicare contractors will be able to identify which positions are filled with primary care positions after the third year, CMS should utilize the 50-percent threshold and require Medicare contractors to identify the number of graduates who remain in primary care practice in the fifth year after medical school (2 years after primary care residency completion), and remove slots from institutions that do not graduate over 50 percent who remain in primary care. The commenter believed that this can be accomplished by counting those residents who are not in residency or fellowship training in their fifth year, in relation to those who are continuing training.

One commenter that supported the proposal is a hospital that consistently trains residents in excess of its caps and that is not located in a State with a resident-to-population ratio in the lowest quartile or in an area designated as a health professional shortage area (HPSA), and therefore was not eligible to receive slots from redistribution under section 5503. The commenter stated that if hospitals are not using the caps they received, the slots should become available to hospitals that will use them. The commenter asserted that there is no guarantee that physicians trained in rural, low resident to population ratio areas or HPSAs will stay in those areas. Therefore, the commenter encouraged CMS to develop a methodology with appropriate criteria to redistribute slots not used under section 5503 to those hospitals that have consistently trained residents over their cap.

Response: We appreciate the commenters' support for our proposals. However, we have considered the comments in their totality and are persuaded by those comments that opposed our proposed policies, and, therefore, we are modifying our proposed policy in this final rule accordingly. Moreover, we do not believe it would be appropriate to adopt the commenter's suggestion of removing slots from hospitals that do not graduate over 50 percent of residents who train in primary care. We also note that distribution of slots under section 5503 was statutorily directed to only certain States.

Comment: One commenter noted that, as part of the Medicare contractors' reviews of the hospitals that received section 5503 slots, CMS proposed that the Medicare contractors would determine whether a hospital filled at least half of its section 5503 slots in its first 12-month period, its second 12-month period, and/or its third 12-month period. The commenter stated that, for any new requirements finalized in the final rule, CMS should provide specific desk review and/or audit steps for the contractors to follow. With regard to the hospitals, the commenter noted that there is no reporting requirement or mechanism for a hospital to report the manner in which it fills its section 5503 FTE cap slots, making it difficult for a Medicare contractor to determine whether such a hospital is meeting its requirements. On the Medicare cost report, a hospital reports its FTE residents in total, with no distinction as to whether the FTE residents were added as a result of the addition of the section 5503 FTE cap slots. The commenter recommended that CMS require hospitals that received Section 5503 slots to report how they filled the slots as a separate data submission. Because these hospitals received the benefit of additional FTE cap slots, the commenter believed it is not unreasonable to require them to report how they meet the requirements accompanying this benefit. If the hospital is required to report section 5503 information to the Medicare contractor, the commenter stated that it is possible that the review could be part of the desk review process. However, if the hospital is not required to submit information specific to its section 5503 requirements, the commenter believed that the contractor might have to review this information on audit.

Response: We will provide additional instructions for the Medicare contractors to follow in the desk review and audit process. As stated in response to the comments above, we also are modifying the cost report for hospitals to provide specific information regarding how they are using the section 5503 slots. As with other provisions, hospitals are required to supply information and documentation to the Medicare contractor upon request.

Comment: One commenter noticed that CMS reiterated in the proposed rule (77 FR 27982) the policy finalized in the November 24, 2010 final rule with comment period (75 FR 72196 and 72197, and 72200 and 72201), that CMS has the right to audit at any time during the 5-year period and remove reallocated slots. The commenter expressed concern that this policy ''undercuts'' the procedures for assuring that slots are filled. The commenter argued that if CMS audits and removes slots in Year 1, 2, or 4, and the hospital had not yet filled half or all of the slots, but would meet the requirement in Year 3 or Year 5, CMS ''has subverted its own rule.'' The commenter pointed out that CMS already has the authority to investigate civil or criminal fraud or abuse; therefore, the commenter recommended that CMS clarify the circumstances under which it could conduct such audits and ''not subject providers to undefined second-guessing.''

Response: Although this comment was made in the context of the proposal which we have revised significantly in this final rule, this comment prompts us to provide more clarification for those who may be unclear about the rules that are applicable during the 5-year evaluation period between July 1, 2011 and June 30, 2016. The commenter argued that, if CMS audits and removes slots in Year 1, 2, or 4, and the hospital had not yet filled half or all of the slots, but would meet the requirement in Year 3 or Year 5, CMS ''has subverted its own rule.'' It appears that the commenter is saying that by auditing and perhaps removing slots for failing to meet the 75 percent test or the 3-year primary care average requirement in years prior to Year 3 or Year 5, CMS is not even giving a hospital a chance to meet CMS' proposed rules. However, section 1886(h)(8)(B)(ii) of the Act states that a hospital that receives section 5503 slots ''shall ensure, *during the 5-year period beginning on the date of such increase''*

(emphasis added) that it meets those two requirements. Therefore, whether or not a hospital meets CMS' proposed (or even modified final) rules regarding by when and how many of the awarded slots must be filled is irrelevant if, at *any* point during the 5-year evaluation period, the hospital fails to meet the 75 percent test or the 3-year primary care average requirement. As we stated in response to a previous comment, regardless of when the Medicare contractor audits a hospital to determine if it is meeting the criteria every year within the 5-year period, a hospital should not view this policy as an encouragement to have an ''off'' year where the requirements need not be met. Thus, a contractor could remove all of the slots awarded to the hospital in any year of the 5-year evaluation period because either the 75 percent test or the 3-year primary care average was not met, even if the hospital *does* fill half of its section 5503 slots by its third 12-month cost report, or fills all of its slots by its final cost reporting period (based on the proposed policy). Therefore, we disagree with the commenter that we are ''subverting'' our own rules by reserving the right to have the Medicare contractors assess as many times as necessary during the 5-year period that the hospital is meeting the statutory criteria.

Comment: One commenter asked that CMS clarify whether the analysis of whether a hospital meets the primary care average and the 75 percent test will be conducted separately for IME and direct GME respectively.

Response: The primary care average and the 75-percent test are conducted separately with respect to IME and direct GME, and many hospitals received different award amounts for IME and direct GME.

In summary, we are finalizing a policy under section 5503 and we are revising the regulations text at § 413.79(n)(2)(ii) to state that if a hospital received a section 5503 cap award, and does not use all of the award in its final (12-month or partial) cost report of the 5-year period beginning July 1, 2011 and ending June 30, 2016, the Medicare contractor will remove the applicable unused slots, and the hospital's section 5503 award will be reduced for portions of cost reporting periods on or after July 1, 2016. The number of applicable unused slots is equal to the difference between the number of slots awarded and the number of slots used. In determining the applicable slots used, the following amounts are added, as relevant:

(1) If a hospital uses the section 5503 slots to expand an existing program(s), the used slots are equal to the lesser of the number of slots used for an expansion(s) in the fourth 12-month cost report or the final cost report.

(2) If a hospital uses the section 5503 slots to start a new program(s), the used slots are equal to the number of slots used for a new program(s) in the final cost report.

(3) The portion, if any, of the section 5503 slots used for cap relief, subject to the 75 percent test and the 3-year primary care average requirement.

We also clarify that cap relief constitutes ''use'' of section 5503 slots, and we instruct that, in the 5-year evaluation period, a hospital should *not automatically* report (that is, use) *all* of its section 5503 cap increase (on Form CMS–1–2552–10, line 8.01 of Worksheet E, Part A, and on line 4.01 of Worksheet E–4), but should only report (that is, use) a portion that at least is equal to the additional primary care/general surgery FTEs added, with no more than an additional 25 percent allowed to be reported for other purposes. We reiterate that a hospital is responsible for meeting the 75-percent test based on *whatever amount of section 5503 cap increase it reports on its cost report* (on Form CMS–2552–10, line 8.01 of Worksheet E, Part A, and line 4.01 of Worksheet E–4) during each year of the 5-year evaluation period. We also reiterate that the 3-year primary care average requirement applies immediately on July 1, 2011, regardless of when a hospital begins to use its additional section 5503 slots in the 5-year period. This is because the 3-year primary care average test applies to the hospital's pre-section 5503 resident complement as well, and not exclusively to the additional FTE residents associated with slots awarded under section 5503.

4. Preservation of Resident Cap Positions From Closed Hospitals (Section 5506 of the Affordable Care Act)

a. Background

Under existing regulations at § 413.79(h) for direct GME and § 412.105(f)(1)(ix) for IME, a hospital that is training FTE residents at or in excess of its FTE resident caps and takes in residents displaced by the closure of another teaching hospital may receive a temporary increase to its FTE residents caps so that it may receive direct GME and IME payment associated with those displaced FTE residents. However, those temporary FTE resident caps are associated with those specific displaced FTE residents, and the temporary caps expire as those displaced residents complete their training program. Thus, in the past, if a teaching hospital closed, its direct GME and IME FTE resident cap slots would be ''lost,'' because those cap slots are associated with a specific hospital's Medicare provider agreement, which would be retired upon the hospital's closure. Section 5506 of the Affordable Care Act addressed that situation by amending section 1886(h)(4)(H) of the Act to add a new clause (vi) that instructs the Secretary to establish a process by regulation under which, in the event a teaching hospital closes, the Secretary will permanently increase the FTE resident caps for hospitals that meet certain criteria up to the number of the closed hospital's FTE resident caps. The Secretary is directed to ensure that the total number of FTE resident cap slots distributed shall be equal to the amount of slots in the closed hospital's direct GME and IME FTE resident caps, respectively. Under existing regulations at § 489.52 and § 413.79(h), ''closure of a hospital'' means the hospital terminates its Medicare provider agreement. As finalized in the November 24, 2010 final rule with comment period (75 FR 72213), we also specified that the FTE resident cap slots of the hospital that closed no longer exist as part of any other hospital's permanent FTE resident cap.

Section 1886(h)(4)(H)(vi)(II) of the Act, as added by section 5506(a) of the Affordable Care Act, specifies that the Secretary shall distribute the FTE cap increases in the following priority order, ''with preference given within each category to hospitals that are members of the same affiliated group'' (as defined by the Secretary) as the closed hospital:

- First, to hospitals located in the same core-based statistical area (CBSA) as, or in a CBSA contiguous to, the hospital that closed.
- Second, to hospitals located in the same State as the closed hospital.
- Third, to hospitals located in the same region of the country as the hospital that closed.
- Fourth, only if the slots are not able to be fully distributed under the third priority group, to qualifying hospitals in accordance with the criteria established under section 5503 (''Distribution of Additional Residency Positions'') of the Affordable Care Act.

For a detailed discussion on these ranking categories, we refer readers to the November 24, 2010 final rule with comment period (75 FR 72214 and 72215). In the November 24, 2010 final rule with comment period (75 FR 72212 through 72240), we also finalized the following Ranking Criteria:

▪ *Ranking Criterion One.* The applying hospital is requesting the

increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, possibly the same program director, and possibly the same (or many of the same) teaching staff).

- *Ranking Criterion Two.* The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital *received* slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.
- *Ranking Criterion Three.* The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).
- *Ranking Criterion Four.* The applying hospital does not fit into Ranking Criterion One, Two, or Three, and will use additional slots to establish a new or expand an existing geriatrics residency program.
- *Ranking Criterion Five.* Applying hospital does not meet Ranking Criterion One, Two, or Three, is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.
- *Ranking Criterion Six.* Applying hospital does not meet Ranking Criterion One, Two, or Three, is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.
- *Ranking Criterion Seven.* Applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.

In determining which hospitals should receive the slots associated with the closed hospital, in addition to considering the ranking categories and criteria listed above, section 1886(h)(4)(H)(vi) of the Act, as added by section 5506(a) of the Affordable Care Act, states that the Secretary may only award slots to an applying hospital ''if the Secretary determines that the hospital has demonstrated a likelihood of filling the positions made available under this clause within 3 years.'' ''Within 3 years'' means within the 3 academic years immediately following the application deadline to receive slots after a particular hospital closes (75 FR 72224). For example, where the application deadline is April 1, 2011, the immediately following academic year is July 1, 2011; therefore, hospitals must demonstrate the likelihood of filling their slots by June 30, 2014.

Finally, section 5506(d) of the Affordable Care Act specifies that ''the Secretary shall give consideration to the effect of the amendments made by this section on any temporary adjustment to a hospital's FTE cap under § 413.79(h) * * * (as in effect on the date of enactment of this Act) in order to ensure that there is no duplication of FTE slots * * *.'' In distributing slots permanently under section 5506, we need to be cognizant of the number of FTE residents for whom a temporary FTE cap adjustment was provided under existing regulations at § 413.79(h), and when those residents will complete their training, at which point the temporary slot associated with those displaced residents would be available for permanent redistribution.

b. Change in Amount of Time Provided for Submitting Applications Under Section 5506 of the Affordable Care Act

In the August 3, 2010 proposed rule (75 FR 46422), we proposed to establish an application process for hospitals to apply to CMS to receive an increase in FTE caps based on slots from closed hospitals. Section 5506 of the Affordable Care Act did not specify an application deadline for hospitals to request an increase to their caps when a hospital closes. With respect to the first application process, which applied to all teaching hospital closures between March 23, 2008, and August 3, 2010, we established an application deadline of April 1, 2011. For future teaching hospital closures, we finalized a policy whereby we would inform the public through an appropriate medium that increases to hospitals' FTE resident caps are available for distribution due to the closure of a teaching hospital, and the application deadline would be 4 months following the issuance of that notice to the public (75 FR 72215).

Prior to issuance of the FY 2013 IPPS/LTCH PPS proposed rule, some representatives of the provider community had commented that providing hospitals with 4 months following the announcement of a teaching hospital closure to apply for slots under section 5506 is longer than necessary. They asserted that such a long application period unnecessarily delays CMS' review of applications and the resulting distribution of resident cap slots from closed hospitals to the applicants. The provider representatives suggested that perhaps a 2-month application window is sufficient and is more practical.

As we discussed in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27985), we have considered the suggestion of the provider representatives, and after our initial experience in implementing section 5506 of the Affordable Care Act, we agree that 4 months may be more time than is needed for hospitals to properly prepare and submit section 5506 applications to CMS. Accordingly, we proposed to set the application deadline for future section 5506 applications to be 60 days following CMS' public notice of a hospital's closure and the availability of resident cap slots increases. We stated that we believe that reducing the application submission timeframe from 4 months to 60 days will shorten the entire process for awarding FTE resident cap slots from closed hospitals considerably.

Comment: Many commenters supported CMS' proposal for a 60-day application period as a reasonable timeframe and commended CMS' efforts to expedite the process of awarding section 5506 FTE resident cap slots. One commenter did not support the shortened application period because the commenter believed it may lead to less thoughtful decision-making and it could have a disproportionately adverse effect on smaller hospitals with fewer resources at their disposal when applying for additional FTE resident cap slots.

Another commenter supported the 60-day application period but suggested that CMS use the IPPS final rule as a medium to issue the public notice of a hospital's closure. The commenter believed that CMS' issuance of the

public notice as part of the IPPS final rule instead of issuing a separate public notice would ease an applicant hospital's administrative burden in that the hospital would have advance knowledge of the forthcoming public notice and could plan accordingly.

Response: We appreciate the commenters' support for our proposal, and at the same time, we also understand the commenter's concerns regarding a shortened application period. As noted above, we initially implemented a 4 month application period because we believed that 4 months provided adequate time for hospitals to gather the appropriate documentation and prepare a section 5506 application (75 FR 72215). In light of the public comments received on our proposed policy to reduce the length of the application period to 60 days, and our understanding of the efforts required to prepare a section 5506 application, we believe an appropriate compromise is to provide for a 90-day application period for future section 5506 applications. Therefore, we are finalizing a section 5506 application deadline of 90 days following CMS' public notice of a hospital's closure and the availability of resident cap slots increases.

With respect to the comment suggesting that we include public notice of hospital closures in the IPPS final rule, we believe this could unnecessarily delay the section 5506 award process. We prefer to have the flexibility to issue public notices of hospital closures at other times during the year and not limit the notices to the IPPS final rule, and we believe it is in hospitals' best interests to maintain such flexibility.

In summary, after consideration of the public comments we received, we are finalizing a section 5506 application period of 90 days following CMS' public notice of a hospital's closure and the availability of resident cap slots increases.

c. Change to the Ranking Criteria under Section 5506

In the November 24, 2010 final rule with comment period (75 FR 72223), we finalized the Ranking Criteria within each of the three first statutory priority categories (that is, same or contiguous CBSAs, same State, and same region) to be used to rank applications. For each application, we assigned slots based on Ranking Criteria, with Ranking Criterion One being the highest ranking and Ranking Criterion Seven being the lowest. For a complete list of the Ranking Criteria, we refer readers to section IV.I.4.a. of this preamble, which discusses the background for preservation of resident cap positions from closed hospitals under section 5506 of the Affordable Care Act. For a detailed discussion of the ranking categories, we refer readers to the November 24, 2010 final rule with comment period (75 FR 72212 through 72240).

After reviewing applications from the first section 5506 application process (those applications that were due to CMS on April 1, 2011), we observed that the overwhelming majority of applications fell under Ranking Criterion Seven, that is, the applying hospital seeks the slots for purposes that do not fit into any of Ranking Criterion One through Ranking Criterion Six. These applications included applications from hospitals that applied for FTE cap slots for *both* primary care and/or general surgery and for nonprimary care specialties as well as applications for general cap relief. (A request for slots only for primary care and/or general surgery programs would qualify under either Ranking Criterion Five or Ranking Criterion Six.) The sheer number of applications we received under Ranking Criterion Seven indicated a need to further prioritize among the applicants that would previously have qualified under Ranking Criterion Seven. Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27985), we proposed to replace current Ranking Criterion Seven with the two separate proposed Ranking Criteria listed below. We noted that we were not proposing to make any changes to Ranking Criteria One through Six. We proposed the following two criteria to replace existing Ranking Criterion Seven:

- *Proposed Ranking Criterion Seven:* The program does not meet Ranking Criterion One through Six, and the slots for which the hospital is applying are for a primary care or a general surgery program, but the hospital is also applying for slots under Ranking Criterion Eight.
- *Proposed Ranking Criterion Eight:* Applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.

The proposal to modify Ranking Criterion Seven is consistent with current Medicare policy goals to increase residency training in primary care and general surgery, because we proposed to give a higher ranking to those applications from hospitals applying for primary care and general surgery FTE cap slots, as well as nonprimary care programs. Under the current Ranking Criteria, when a hospital applies for additional FTE cap slots for primary care and/or general surgery as well as nonprimary care programs, we do not distinguish between the primary care/general surgery and nonprimary care applications. Therefore, because the hospital would be applying for nonprimary program(s), all the hospital's applications would fall under proposed Ranking Criterion Seven. Under our proposal, although the hospital's application that requests FTE cap slots for primary care/general surgery would qualify for proposed Ranking Criterion Seven, the application for nonprimary care/general surgery would be classified as proposed Ranking Criterion Eight.

Following is an example of how Ranking Criteria Seven and Eight would be assigned:

Hospital A applies for slots from closed Hospital B. Hospital A is seeking to expand its internal medicine and dermatology programs. Under the current ranking system, both of Hospital A's applications would receive consideration under Ranking Criterion Seven. That is, the internal medicine application is ranked equally with the dermatology application even though internal medicine is a primary care specialty. Under the proposed change to the Ranking Criteria, Hospital A's internal medicine program would receive consideration under proposed Ranking Criterion Seven while the dermatology program would receive consideration under proposed Ranking Criterion Eight.

Comment: One commenter objected to CMS' policy of giving higher ranking to hospitals that apply for FTE cap slots for primary care or general surgery programs only than to hospitals that apply for FTE cap slots for primary care or general surgery as well as for other nonprimary care or nongeneral surgery programs. The commenter suggested that CMS rank all applications for primary care or general surgery programs equally, regardless of the existence or nonexistence of other nonprimary care or nongeneral surgery applications. Another commenter urged CMS not to advance the creation of primary care or general surgery programs at the expense of other essential yet nonprimary care or nongeneral surgery specialties such as psychiatry.

Response: We disagree with the first commenter. We do not believe that a hospital that applies for slots under section 5506 for the purpose of starting or expanding only programs in primary care and general surgery should be ranked equally with a hospital that applies for the purpose of starting or

expanding primary care and/or general surgery programs, and other nonprimary care programs as well. We continue to believe that our Ranking Criteria, which give a higher ranking to hospitals that apply only for primary care or general surgery programs, are consistent with the expressed goals of sections 5503 and 5506 of the Affordable Care Act, and are in keeping with the important policy objective of promoting the growth in the number of primary care and general surgery residents, and reducing the shortage of primary care physicians and general surgeons. Thus far, Congress has not identified other specialties for special treatment. However, we note that under Ranking Criteria One, Two, and Three, hospitals can use slots awarded under section 5506 for nonprimary care programs because these Ranking Criteria do not consider or specify a program type, and instead give priority to hospitals that continue to maintain the level and type of training that were occurring prior to the hospital closure.

After consideration of the public comments we received, we are finalizing our proposed changes to the Ranking Criteria with some modification. As proposed, we are replacing current Ranking Criterion Seven with the two separate Ranking Criteria listed below. We also are modifying our proposed language for Ranking Criterion Seven in order to highlight and clarify how Ranking Criterion Seven differs from Ranking Criterion Five and Ranking Criterion Six. A program may only qualify for Ranking Criterion Five or Six if the applying hospital will use *all* of its additional slots to establish or expand primary care or general surgery programs. Therefore, a hospital that submits several applications that include requests for additional FTE slots for purposes other than solely to establish or expand primary care or general surgery programs may not apply under Ranking Criterion Five or Six for additional FTE slots for its primary care or general surgery programs. Rather, a hospital that is applying both for the purpose of establishing or expanding primary care or general surgery programs, *and* for the purpose of establishing or expanding nonprimary care or nongeneral surgery programs and/or for cap relief must submit an application requesting additional FTE slots under Ranking Criterion Seven for its primary care or general surgery programs. The hospital's requests for additional FTE slots to establish or expand a nonprimary care or nongeneral surgery program and/or for additional FTE slots for cap relief would properly be made under Ranking Criterion Eight. In summary, we are finalizing Ranking Criterion Seven as follows:

- *Ranking Criterion Seven:* The applying hospital will use additional slots to establish or expand a primary care or general surgery program, but the program does not meet Ranking Criterion Five or Six because the hospital is also separately applying under Ranking Criterion Eight for slots to establish or expand a nonprimary care or non-general surgery program and/or for cap relief.

In light of the modifications we are making in this final rule to the proposed Ranking Criterion Seven, we also believe it is appropriate to modify the language of proposed Ranking Criterion Eight to specify the types of applications that would properly be made under this Ranking Criterion. In the proposed rule, we proposed to replace the existing Ranking Criterion Seven with a new Ranking Criteria Seven, and create a new Ranking Criterion Eight for situations where an ''applying hospital seeks the slots for purposes that do not fit into any of the above ranking criteria.'' We are modifying this proposed language and finalizing Ranking Criterion Eight as follows:

- *Ranking Criterion Eight:* The applying hospital will use the additional slots to establish or expand a nonprimary care or nongeneral surgery program or for cap relief.

We note that we did not propose, nor are we making, any changes to Ranking Criteria One through Six.

d. Effective Dates of Slots Awarded Under Section 5506

As stated previously, section 5506(d) of the Affordable Care Act instructs the Secretary, in pertinent part, '' * * * to ensure that there is no duplication of FTE slots * * * .'' Accordingly, in distributing slots permanently under section 5506, we need to be cognizant of the number of FTE residents for whom a temporary FTE cap adjustment was provided under existing regulations at § 413.79(h), when those residents will complete their training, and at which point the temporary slots associated with those displaced residents would be available for permanent redistribution. With that in mind, in the first distribution of section 5506 cap slots from hospitals that closed between March 23, 2008, and August 3, 2010, we used the following several effective dates based on the ranking criterion under which a hospital applied:

- Date of hospital closure. This effective date could have applied to Ranking Criterion Two. It also could have applied to Ranking Criteria One and Three if there were no temporary cap adjustments given for any displaced FTE residents.
- Cost reporting period following date of hospital closure. This effective date could have been used for awarding slots to hospitals that were training displaced FTE residents and qualified for Ranking Criterion One or Ranking Criterion Three because they were taking over an entire program or part of a program from a closed hospital and had received a temporary cap adjustment to train those displaced residents under 42 CFR 413.79(h).
- July 1 effective date. This effective date, which could have been retroactive, could have been used for awarding slots to hospitals that qualified under Ranking Criteria Four through Seven where there were temporary cap adjustments made for displaced FTE residents that completed training in a program on a specific June 30.
- Date of award announcement (January 30, 2012). This effective date could have applied to hospitals that qualified under Ranking Criteria Four through Seven either where there were no temporary cap increases under 42 CFR 413.79(h), or where there were temporary cap increases but those slots associated with the temporary cap increases were already accounted for. That is, displaced FTE residents graduated prior to a specific July 1, and, therefore, the cap slots associated with these FTE residents had already been permanently assigned that specific July 1, but the closed hospital still had remaining cap slots available for permanent assignment.

We stated in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27986) that, based on comments we have received from hospitals that were involved in the initial phase of section 5506 implementation (hospitals that applied for cap slots from hospitals that closed between March 23, 2008 and August 3, 2010), we believe we need to clarify certain existing policies and propose a change to the effective dates associated with several ranking criteria.

First, we clarified in the proposed rule the effective date of slots awarded under section 5506 with respect to Ranking Criterion Two. Ranking Criterion Two applies to hospitals that participated in a Medicare GME affiliation agreement with the closed hospital (but not one that was entered into more than 5 years prior to the hospital's closure), received slots from the closed hospital as part of the affiliation agreement, and will use any additional awarded slots to continue to train at least the same number of FTE

resident slots it trained as part of the affiliation agreement. For hospitals that qualify for additional slots under Ranking Criterion Two, we award the 5506 slots effective on a permanent basis with the date of the hospital's closure. However, for hospitals that qualify under Ranking Criteria One and Three and are already receiving temporary cap adjustments for displaced FTE residents under 42 CFR 413.79(h), we award the 5506 slots effective on a permanent basis with the cost reporting period following the date of the hospital's closure. Because these hospitals are already receiving temporary cap adjustments for their portion of their cost reporting period following the closure, for administrative ease, slots became permanent due to the section 5506 award effective with the cost reporting period following the date of the hospital's closure. However, this policy, applicable to hospitals that qualify under Ranking Criterion One or Three, is not appropriate for hospitals that qualify under Ranking Criterion Two and that participated in a Medicare GME affiliation agreement with the closed hospital and received cap slots from the closed hospital as part of that affiliation agreement. This policy is not appropriate because, in this case, there were no displaced FTE residents from the Medicare GME affiliation agreement and, therefore, the hospital did not receive a temporary cap adjustment. For example, if Hospital A received slots from Hospital B as part of an affiliation agreement so that FTE residents could train at Hospital A and Hospital B closes, Hospital A lost the cap adjustment it received from Hospital B as part of the affiliation agreement as of the date of the hospital's closure, and a temporary cap adjustment under 42 CFR 413.79(h) is not available to Hospital A. In this case, no FTE residents are displaced.

In the proposed rule and in this final rule, we are clarifying that, for hospitals qualifying under Ranking Criterion Two that are awarded cap slots from the closed hospital, the award is effective with the date of the hospital's closure. This effective date allows a hospital applying under Ranking Criterion Two to receive funding for training the additional FTE residents it was training as part of the Medicare GME affiliation agreement with the closed hospital immediately after the closure, without having to wait until the following cost reporting period to receive that cap adjustment. We note that, under existing regulations at 42 CFR 413.79(d), additional FTEs that a hospital receives under the terms of a Medicare GME affiliation agreement are subject to the 3-year rolling average. Therefore, hospitals that receive permanent assignment of FTE resident cap slots under Ranking Criterion Two do not receive an exemption from the rolling average. With regard to the IME intern and resident-to-bed (IRB) ratio, the existing regulations at 42 CFR 412.105(a)(1)(i) indicate that the numerator of the prior year IRB ratio may be adjusted to reflect FTEs added under a Medicare GME affiliation agreement. The affiliation agreement would terminate when the hospital closes. Thus, on the cost report of the hospital that receives slots under Ranking Criterion Two, the prior year numerator of the IRB ratio would only be adjusted to reflect the *portion* of the affiliated FTEs that the hospital received *prior* to the other hospital's closure and the termination of the affiliation agreement.

As we did in the proposed rule, we also are clarifying that when there are *no* temporary cap adjustments for displaced FTE residents from hospitals that closed, and an applying hospital qualifies under Ranking Criterion One or Ranking Criterion Three, the FTE resident cap slots are awarded effective with the date of the hospital's closure. This was indicated in the November 24, 2010 final rule with comment period (75 FR 72225), but we understand, based on comments received after the initial phase of section 5506 slot awards, that this policy was not clearly understood. These slots are also immediately included in applying the rolling average and IRB ratio cap.

We proposed to change the effective date of an award of additional FTE caps for hospitals that qualify under Ranking Criterion Four through proposed Ranking Criterion Eight where temporary caps were given for displaced FTE residents (we refer readers to section IV.I.4.b. of this preamble for a discussion of proposed Ranking Criteria Seven and Eight). As a general matter, hospitals that apply under Ranking Criterion Four through proposed Ranking Criterion Eight are applying either to establish or expand a program or to seek cap relief. In the proposed rule, we stated that we do not believe that, when a hospital receives additional cap slots to establish or expand a residency training program, we need to award the cap slots retroactively to a previous July 1 effective date. Rather, the awarded cap slots are to be used on a prospective basis to allow hospitals to expand current programs or establish new ones. We understand that if a hospital is applying for cap relief under proposed Ranking Criterion Eight (previously Ranking Criterion Seven), the hospital would want its cap slots awarded retroactively to the date of the hospital's closure or the July 1 after a specific displaced resident has graduated if that date is prior to the date of the award announcement. However, we stated in the proposed rule that we do not believe such a policy is consistent with the spirit of the BBA caps. Furthermore, the purpose of section 5506 is for hospitals to receive slots from the closed hospital to facilitate the continuity of the closed hospital's programs and to promote stability in the number of physicians in a community.

The proposed Ranking Criterion Eight of section 5506 does not serve to encourage the continuity of the closed hospital's programs; it merely provides Medicare funding for a certain amount of slots in excess of the BBA caps. Accordingly, we indicated in the proposed rule that we believe that hospitals applying for cap relief under proposed Ranking Criterion Eight should only receive their permanent cap slots effective on a prospective basis. Therefore, while under the initial section 5506 application process, it was possible for an applying hospital that qualified under Ranking Criteria Four through Seven to receive slots retroactive to the July 1 after a specific displaced FTE resident's graduation date, we proposed that, for hospitals that qualify under Ranking Criteria Four through Eight for cap slots from a closed hospital even where there were temporary caps given for displaced FTE residents, the applying hospitals would receive the permanent FTE cap slots effective no earlier than the date of the award announcement. That is, if an applying hospital that qualified under Ranking Criterion Four through proposed Ranking Criterion Eight receives cap slots associated with a displaced FTE resident and that resident graduated prior to the date of the award announcement, the earliest the applying hospital could receive the permanent cap adjustment would be the date of the award announcement. If a hospital qualified under Ranking Criterion Four through proposed Ranking Criterion Eight, and the only available cap slots are temporarily being used to train displaced FTE residents that are expected to graduate *after* the date of the award, the applying hospital will receive the permanent slots effective the July 1 *after* those displaced FTE residents complete their training. For example, if a hospital closed January 1, 2012, and the section 5506 slot awards were announced May 1, 2013, but

residents displaced from the closed hospital did not complete their training until June 30, 2013, the applying hospital will receive section 5506 slots for those displaced residents effective July 1, 2013, following the completion of training of those displaced residents. We did not propose to change the effective date of section 5506 awards for applying hospitals that qualify under Ranking Criterion Four through proposed Ranking Criterion Eight where there were no temporary caps given for displaced residents; as described in the November 24, 2010 final rule with comment period (75 FR 72227), those applying hospitals will continue to receive their section 5506 cap slots effective with the date of the award announcement.

In the proposed rule, we discussed another option to consider for the effective date of Ranking Criteria Four through proposed Ranking Criterion Seven, which are Ranking Criteria associated with either starting a program or expanding a program, would be to award the slots in accordance with when the hospital actually needs the slots, as asserted in the hospital's section 5506 application. (The proposed effective date for proposed Ranking Criterion Eight would still be no earlier than the date of the award announcement.) For example, assume a hospital applies under Ranking Criterion Five to expand an internal medicine program by nine positions. As described in its section 5506 application, the hospital plans that expansion to occur beginning on July 1, 2012, and at that time, the hospital would add three residents, on July 1, 2013, the hospital would add another three residents, and on July 1, 2014, the hospital would add the last three internal medicine residents. Therefore, the effective date of three slots could be July 1, 2012, the effective date of three additional slots would be July 1, 2013, and the effective date of the last three slots would be July 1, 2014. We stated that we were interested in receiving public comments on this policy alternative. We still proposed that the effective date for proposed Ranking Criterion Eight would be no earlier than date of the award.

Comment: A number of commenters addressed our clarifications and proposals of the effective dates for all of the Ranking Criteria. Commenters agreed that cap slots received under Ranking Criterion Two should be effective with the date of the hospital closure. One commenter stated that because the receiving hospital had already been using the cap slots from the closed hospital as part of a Medicare GME affiliation agreement, there is no reason the slots should be awarded any later than the date of the hospital closure. The commenter added that it supported making slots received under Ranking Criterion Two effective with the date of the hospital closure because there are no temporary cap adjustments and exemptions from the rolling average applied to these cap slots.

Other commenters believed cap slots from closed hospitals should be awarded on an ''as-needed'' basis. They stated that, therefore, it is appropriate that the cap slots received under Ranking Criterion Two be awarded when the hospital closes because the receiving hospital would need the additional cap slots as of the date of the hospital's closure.

Response: We agree with the commenters that cap slots received under Ranking Criterion Two should be effective with the date of the hospital closure because the receiving hospital had already been using the cap slots from the closed hospital as part of a Medicare GME affiliation agreement, and there are no temporary cap adjustments and exemptions from the rolling average applied to these cap slots. Therefore, we are finalizing our clarification that, if a hospital is awarded cap slots under Ranking Criterion Two, those cap slots are effective with the date of the hospital closure.

Comment: Some commenters specifically addressed our clarifications and proposals for the effective dates of Ranking Criteria Four through proposed Eight. One commenter did ''not believe that it is appropriate for CMS to institute a 'one size fits all' policy to determine the effective dates for all awards,'' and that the awards should be ''driven by the reasons for which the slots are being awarded.'' The commenter believed that making all awards for program establishment or expansion under Ranking Criteria Four through Eight prospectively *could* be appropriate if it was done in a manner consistent with a reasonable policy regarding the application of the temporary cap adjustments that hospitals have received for taking in displaced residents and it is done in a manner that does not ''over manage'' the distribution of the slots by doling them out on a slot by slot basis. Another commenter encouraged CMS to award section 5506 slots under all ranking criteria prospectively.

Other commenters recommended that the effective date for section 5506 direct GME and IME positions be the date when the slots are needed by the awardee hospital. The commenters believed that assigning effective dates based on this principle would avoid confusion and some of the problems hospitals encountered under CMS' current system for assigning effective dates. Commenters suggested that, for hospitals that begin new programs (that is, apply for slots under Ranking Criterion Four, Five, or Six), section 5506 slots should become effective on the date the hospital's new program begins. The commenters recommended that, for administrative simplicity, the effective date should be the same for all awarded positions (that is, all slots become effective the date the new program begins). For a hospital that starts and is awarded slots for a new program that happens to begin in the time period between the date it submits an application to CMS and the date CMS announces the slot award, the commenters recommended that the effective date be retroactive to the date the hospital actually started the new program. (The commenters noted that this issue is relevant particularly given the large time lags between section 5506 slot application deadlines and award announcements.)

Response: We agree with the commenters that the effective dates of the various Ranking Criteria should be driven by the reasons for which they are awarded, and by when they are needed. However, while we do not want to over-complicate or ''over-manage'' the awarding of the slots, as one commenter cautioned against, we do believe that a certain amount of discretion and control should be maintained in the timing of the effective dates. Some commenters stated that section 5506 slots should become effective on the date the hospital's new program begins, and that for administrative simplicity, the effective date should be the same for all awarded positions (that is, all slots become effective the date the new program begins). However, these commenters did not address the fact that Ranking Criteria Four through the new Eight are also for expansions of existing programs. (The new Ranking Criterion Eight could be used for hospitals applying for slots to start or expand nonprimary care programs, and/or for cap relief.) The timing of program expansions, which may not always require separate approval from the accrediting body if the hospital is training below its accredited number of positions, may be more challenging to pinpoint. Nevertheless, we believe that slots awarded under Ranking Criteria Four through Seven (and Eight if the slots are for starting or expanding a nonprimary care program) should be

effective only with the date that they are actually needed, or, if applicable, only delayed sufficiently until displaced residents have graduated, freeing up those slots for use under Ranking Criteria Four through Eight.

Accordingly, consistent with some commenters' suggestion and our assessment that slots awarded under Ranking Criteria Four through Seven (and Ranking Criterion Eight if the slots are for starting or expanding a nonprimary care program) should be effective only when they are actually needed, we are finalizing a policy as follows:

For hospitals awarded slots under these Ranking Criteria, in the hospital's award letter, CMS will specify the program for which slots are being awarded, whether those slots are for a new program, or for an expansion of a program, the number of FTE slots awarded for that program, and the Ranking Criterion under which those slots are awarded. The award letter will not specify an effective date, although it may indicate that the slots can be used *no earlier* than a certain date in the instance where displaced residents need to graduate in order to free up slots. Rather, the slots would be ''pending'' with the Medicare contractor, and the hospital would have to contact its Medicare contractor and submit documentation proving that it needs a certain number of its slots awarded under Ranking Criteria Four through Seven (or Ranking Criterion Eight, as applicable, for nonprimary care programs) as of a certain date, because the hospital has filled that number of positions in the National Resident Match Program (Match) (or other applicable recruitment process) as of that date, over the number of positions that it had trained in that program in the prior academic year.

For example, for a subsequent section 5506 application process, a hospital's award letter would state that it is awarded four slots to expand a pediatrics program under Ranking Criterion Six. The hospital would not be able to report a cap increase of *any* of the four FTEs on the section 5506 line of its Medicare cost report unless it receives permission from its Medicare contractor to do so. Assume that in March 2014, the awardee hospital documents to the Medicare contractor that in the March 2014 Match, it actually *filled* (*not* just placed) two more positions than it had trained in that program for the academic year beginning July 1, 2013. In this manner, because two additional slots are actually filled as compared to the preceding July 1, the hospital shows the Medicare contractor that effective July 1, 2014, it indeed will need two of the section 5506 FTEs that it was awarded under Ranking Criterion Six. The Medicare contractor could then release two of the four slots awarded for the purpose of expanding a pediatrics program effective July 1, 2014, and the hospital could report two FTEs (or some prorated amount if the hospital's FYE is other than June 30) on the section 5506 line of its Medicare cost report that includes July 1, 2014. The hospital shall not report the full cap increase of four on the section 5506 line of the cost report until it similarly proves that it has actually filled the remaining two positions. The documentation process would be the same if a hospital is awarded slots for starting a new program under Ranking Criteria Four through Seven (or Ranking Criterion Eight, as applicable, for nonprimary care programs). That is, the hospital would have to prove that it actually has filled slots in the Match (or applicable process) associated with the new program for the upcoming academic year before the Medicare contractor would release the appropriate number of slots for that academic year.

Comment: Regarding cap slots received under section 5506 for cap relief (previously Ranking Criterion Seven, now Ranking Criterion Eight in this final rule), commenters stated that those cap slots should be awarded effective with the date of the hospital closure. Commenters stated that following the principle that cap slots should be assigned to receiving hospitals on an ''as-needed'' basis, if a hospital applied for cap relief, it would need those cap slots at the time of the hospital closure. One commenter disagreed with the proposal to assign cap slots for cap relief at the earliest with the date of the award announcement. The commenter stated that any teaching hospital that applied for cap relief should be awarded cap slots at the earliest point they are available. The commenter stated that ''there is no justifiable policy reason to withhold a cap increase if the closed hospital's slots are available to be awarded and the hospital receiving the award, with all due respect to CMS, never claimed in its application that it was going to do anything different on a prospective basis (for example, expand a program) to justify its need for the slots.'' The commenter stated it did not understand CMS' statement that retroactive application of cap slots received for cap relief is not consistent with the caps. The commenter stated that the intent of section 5506 is to redistribute a closed teaching hospital's cap to other teaching hospitals, many of them in the same community, and that these teaching hospitals' caps are what prevent them from receiving additional Medicare funding to support their operations as academic centers. The commenter stated that for CMS to delay awarding cap slots that they were instructed to award without a policy justification, would be ''extremely unfortunate.'' The commenter requested that CMS withdraw its proposal related to the awarding of slots for cap relief and that the effective date for these cap slots be the date they become available.

Response: We disagree with the commenter who stated there is no justifiable policy reason that cap slots awarded for cap relief cannot be applied retroactively. When a teaching hospital closes, this occurrence may cause a disruption and loss of a GME infrastructure and a source of physicians to a community that can be a daunting task to rebuild and replace. The purpose of section 5506 is to attempt to preempt such disruption and loss by encouraging other hospitals in the area to continue the training programs of the closed hospital, not merely to use the section 5506 slots for an applicant hospital's own financial benefit to cover its unfunded slots. Consistent with the purpose of section 5506, we developed Ranking Criteria to give preference to those hospitals that take over a closed hospital's entire program or part of a program, and to hospitals that participated in a Medicare GME affiliation agreement with the closed hospital. These hospitals have had a direct relationship with the closed hospital and are helping to maintain the residency training program(s) of that closed hospital, thereby also minimizing the disruption and loss to the community at large. Therefore, because we do not believe that there is a justifiable policy reason to award slots for cap relief retroactively, we are finalizing a policy that cap slots received under Ranking Criterion Eight, specifically for cap relief, are effective the later of the date of the award announcement, or a July 1 *after* displaced FTE residents complete their training if the cap slots awarded were associated with temporary adjustments made for displaced FTE residents.

Comment: One commenter stated that if, for purposes of the Medicare cost report, hospitals that receive cap slots under Ranking Criterion Two are treated differently from hospitals that receive cap slots under other Ranking Criteria, Medicare contractors must be notified of any such distinction. The commenter stated that the distinction would affect

application of the 3-year rolling average and the IRB ratio cap. The commenter also stated that Medicare cost report instructions should be revised to reflect the difference between Ranking Criterion Two and other Ranking Criteria.

Response: In this final rule, as we explained in response to comments above, because we are no longer employing a policy where temporary cap increases would be replaced by permanent cap increases on the cost report, and the 3-year rolling average and the IRB ratio cap exemption would no longer be suspended as a consequence of receipt of permanent slots, we believe the cost reporting effect of receipt of section 5506 slots is the same, regardless of the Ranking Criteria under which the slots are awarded. That is, on the applicable cost report that an FTE cap increase is effective, whether retroactive or prospective, the hospital will be able to count more residents under the increased FTE resident cap in that cost report. Consequently, more FTE residents would be drawn into the rolling average for IME and direct GME, and more FTE residents would be subject to the IRB ratio cap for IME purposes. Therefore, we do not believe there is any distinction regarding the effect of reporting section 5506 slots about which we need to notify Medicare contractors or hospitals. However, we note that, as is the case with the first two rounds of section 5506 slot awards, a hospital may receive a number of slots with various effective dates. Therefore, it is important that a hospital *not* report its full section 5506 cap increase on the section 5506 cap increase line (Form CMS–2552–10, Worksheet E, Part A, line 8.02 for IME, and Worksheet E–4, line 4.02 for direct GME) on its cost report all at once, but, rather, only report the portions of the section 5506 awards as they become effective.

In summary, we are finalizing our clarification that section 5506 slots awarded under Ranking Criterion Two are effective the date of the hospital closure. In response to public comments, we are finalizing a policy that the effective date for Ranking Criteria Four through Seven is the later of when a hospital can demonstrate to the Medicare contractor that the slots associated with a new program or expanded program are actually filled and, therefore, are needed as of a particular date (usually July 1, possibly retroactive), or the July 1 *after* displaced residents complete their training. Regarding Ranking Criterion 8, if slots are for starting or expanding a nonprimary care program, the effective date is the same as that for Ranking Criteria Four through Seven. If the slots are for cap relief, the effective date is the date of the CMS award announcement, or the July 1 *after* displaced residents complete their training, whichever date is later.

Thus far, we have discussed our proposed clarifications regarding when various effective dates have been used (that is, the date of closure, or the cost reporting period following the date of the closure, or a July 1 date), and our proposal to change the effective date of Ranking Criteria Four through proposed (now finalized) Ranking Criterion Eight when temporary cap adjustments for displaced residents were given (to be no earlier than the date of the award announcement). However, due to concerns expressed by recipients of slots under the first round of section 5506, particularly regarding the interaction with the rolling average as the retroactive section 5506 slots become effective, in the proposed rule, we solicited public comments on alternative approaches to implementing section 5506. While bearing in mind that section 5506(d) of the Affordable Care Act instructs the Secretary ''* * * to ensure that there is no duplication of FTE slots * * *,'' we stated that we would be interested in public comments regarding whether to either make the effective dates prospective for all section 5506 slots awarded under all ranking criteria, or, in certain instances such as when slots are awarded under Ranking Criteria One or Three, make the effective dates of the section 5506 slots seamless with the expiration of applicable temporary cap adjustments under § 413.79(h). We also solicited public comments on whether the regulatory temporary cap adjustment for residents displaced from closed hospitals under § 413.79(h) is still necessary and appropriate, now that there is a provision in the statute that addresses permanent reassignment of slots from closed teaching hospitals. Alternatively, we stated that we would be interested in comments regarding whether the regulatory temporary cap adjustment for displaced residents under § 413.79(h) should be preserved, but the exemption from the rolling average for those displaced FTE residents should be eliminated. We indicated that these options should be considered by commenters not only in the context of section 5506 slots that have already been assigned, but also in the context of future teaching hospital closures, and how previously awarded section 5506 slots that have not as yet been filled might interact with eligibility for temporary cap adjustments for additional displaced residents in the future.

Comment: Commenters supported the concept of making the effective dates of the section 5506 awards under Ranking Criteria One and Three seamless with the expiration of applicable temporary cap adjustments (that is, at the time when a displaced resident graduates). The commenters stated that this would allow the temporary cap adjustment and the exemption from the rolling average and IRB ratio cap to apply for the duration of time that the displaced residents are in training.

Response: We appreciate the commenters' support. To accommodate seamless awards under Ranking Criteria One and Three, we are modifying the CMS Application Form (formerly, the Evaluation Form) to instruct a hospital applying under Ranking Criteria One and Three to list the names and graduation dates of specific displaced residents whom the hospital believes it has seamlessly replaced or will be seamlessly replacing with new PGY1 residents upon graduation of the displaced residents. Similarly, in the award letters, we will specify whether slots are being awarded under Ranking Criterion One or Three, the amount of FTEs awarded, and the names and graduation dates of specific displaced residents of whom we believe the hospital has proven that it has or will be seamlessly replacing. The effective date of these slots will be the day after the applicable graduation date(s).

Comment: One commenter requested clarification on the ''seamless'' requirement for Ranking Criterion One and Ranking Criterion Three. The commenter stated that under Ranking Criterion One and Ranking Criterion Three, a hospital applying for additional cap slots must demonstrate that it will continue to train FTE residents in the same program as the closed hospital without any lapse in training. The commenter stated, for example, that if a hospital applied to take over part of a closed hospital's program under Ranking Criterion Three, which means it is also training some of the FTE residents that were displaced from that closed hospital's program, the applying hospital must be able to demonstrate that once those displaced FTE residents graduate on June 30, it will immediately fill those positions with new FTE residents the next day on July 1. The commenter stated that if a teaching hospital closes even just a couple of months after the start of the academic year (July 1), it is very difficult for a hospital applying under Ranking Criterion One or Ranking Criterion Three to fill a slot vacated by a

displaced FTE resident(s) who is graduating June 30 of that academic year by July 1 of the following academic year. The commenter stated that recruitment for most residency training programs is organized in accordance with the National Resident Matching Program schedule. This schedule generally requires that the Match quotas for specialty programs must be submitted by January 31 and that the Match quotas for subspecialty programs be submitted even earlier than the January deadline for specialty programs. Therefore, if a hospital took in a displaced FTE resident who was scheduled to graduate the upcoming June 30, it would likely be impossible for the hospital to fill that slot vacated by the displaced FTE resident immediately with the following July 1. The commenter stated it understands CMS' goal of requiring hospitals that apply under Ranking Criterion One or Ranking Criterion Three to seamlessly fill slots vacated by displaced FTE residents. However, the commenter requested that CMS clarify its policy to state that for those hospitals that apply under Ranking Criterion One and Ranking Criterion Three, in situations where FTE residents will graduate the next June 30, the applying hospital is required to demonstrate that it will fill the slots vacated by the displaced FTE residents by July 1 of the second academic year following the hospital closure.

Response: We acknowledge that the timeline used by the National Resident Match Program or other resident match services can make it difficult, if not impossible, to seamlessly fill the slots of a displaced resident graduating on June 30 in the instance where a teaching hospital closes (or its programs close) after the date (for example, January 31) that positions must be placed in the Match for the upcoming academic year beginning July 1. However, we are not convinced that the same challenge exists even in instances where a hospital closes, or the programs close, at any point after ''just a couple of months'' following the start of an academic year, as the commenter asserted. With regard to allopathic and osteopathic programs, because the deadline for submitting the Match quota is approximately the end of January, we believe December 31 of the same academic year is a reasonable date to use for the purpose of determining the feasibility of seamlessly replacing displaced residents who are scheduled to graduate on the upcoming June 30. Therefore, we are stating in this final rule that, in the instance where a teaching hospital closed after December 31 of an academic year, in order for a hospital to qualify under Ranking Criterion One or Ranking Criterion Three for cap slots associated with displaced FTE residents that will graduate June 30 of the academic year in which the applying hospital took in the displaced FTE residents, the applying hospital must be able to demonstrate that it will fill slots vacated by displaced FTE residents by July 1 of the second academic year following the hospital closure. For example, if a hospital closes January 1, 2013, an applying hospital must be able to demonstrate that it will fill any positions vacated by displaced FTE residents who will graduate June 30, 2013, by July 1, 2014. However, in the instance where a teaching hospital closed before December 31 of an academic year, in order for a hospital to qualify under Ranking Criterion One or Ranking Criterion Three for cap slots associated with displaced FTE residents that will graduate June 30 of the academic year in which the applying hospital took in the displaced FTE residents, the applying hospital must be able to demonstrate that it will ''seamlessly'' fill slots vacated by displaced FTE residents by July 1; that is, the day immediately after the June 30 that the displaced FTE residents graduate.

Comment: Commenters stated that even though section 5506 exists to permanently redistribute slots from a closed teaching hospital, the temporary cap adjustments for displaced residents in the regulations at § 413.79(h) must continue to exist. The commenters argued that the temporary cap adjustment for displaced residents policy in regulations at § 413.79(h) and section 5506 are two provisions that serve different purposes and should be viewed independently; section 5506 should not be viewed as a replacement for the temporary cap adjustment. The commenters stated that the temporary cap adjustment addresses an immediate crisis situation, protecting displaced residents and providing immediate payment to hospitals taking in the displaced residents, while section 5506 is intended to address a long-term situation, and the entire process can easily take up to 2 years to complete. Commenters pointed out that a hospital that takes in displaced residents and applies for section 5506 slots has no guarantee that it will be awarded permanent slots under the section 5506 program, and ''given this lack of certainty, the mere possibility of being awarded section 5506 slots is simply not enough of an incentive for the hospital to take on displaced residents.'' One commenter stated that CMS should exercise ''extreme caution before assuming that section 5506 can be or should be viewed as a replacement for the temporary cap adjustment policy in any meaningful way.''

Commenters also asserted that if the temporary cap adjustment was removed from the regulations, the pool of potential hospitals willing to absorb the displaced residents would likely shrink. The commenters stated that, for a variety of practical and personal reasons, displaced residents are not always able to (and some may not desire to) continue their residency training in the same geographic location as the closed hospital, and hospitals that are not located in the same state as the closed hospital would not be in a position to receive slots permanently under section 5506. One commenter noted that significant financial barriers still exist for many hospitals despite Medicare's payment policies, because the temporary cap adjustment policy only accounts for the Medicare share of teaching hospital costs, and not others, such as Medicaid, which generally does not have a policy like Medicare's to address displaced residents.

Commenters also opposed the concept raised in the proposed rule of maintaining the temporary cap adjustment but of eliminating the exemption from the 3-year rolling average. Commenters argued that teaching hospitals should not have to face a short-term loss of funding due to the immediate application of the 3-year rolling average (and IRB ratio cap) when taking in displaced residents. One commenter added that, although CMS did not directly ask for comments on the exemption from the IRB ratio cap, this exemption is also an important piece of the temporary cap adjustment policy and should be preserved.

Response: After considering the public comments received, we agree that the temporary cap adjustment policy in the regulations at § 413.79(h) and the permanent cap adjustments provided by section 5506 serve both different and necessary roles. We particularly agree that elimination of the temporary cap adjustment may influence the willingness of hospitals in states or geographic areas outside the state or geographic vicinity of the closed hospital to take in displaced residents. Therefore, we are not making any changes to the regulations at § 413.79(h), and are preserving the attending exemptions from the 3-year rolling average and the IRB ratio cap for the duration of a displaced resident's

training in the program from which he/she was displaced.

In summary, we are finalizing the policy that the effective dates of the section 5506 slots awarded under Ranking Criteria One and Three are seamless with the expiration of applicable temporary cap adjustments (that is, at the time when a displaced resident graduates). To accommodate seamless awards under Ranking Criteria One and Three, we are modifying the CMS Application Form (formerly, the Evaluation Form) to instruct a hospital applying under Ranking Criteria One and Three to list the names and graduation dates of specific displaced residents whom the hospital believes it has seamlessly replaced or will be seamlessly replacing with new PGY1 residents upon graduation of the displaced residents. We also are stating in this final rule that in the instance where a teaching hospital closed after December 31 of an academic year, in order for a hospital to qualify under Ranking Criterion One or Ranking Criterion Three for cap slots associated with displaced FTE residents that will graduate June 30 of the academic year in which the applying hospital took in the displaced FTE residents, the applying hospital must be able to demonstrate that it will fill slots vacated by displaced FTE residents by July 1 of the second academic year following the hospital closure. Lastly, in this final rule, we are not making any changes to the regulations at § 413.79(h), and we are preserving the attending exemptions from the 3-year rolling average and the IRB ratio cap for the duration of a displaced resident's training in the program from which he/she was displaced.

Following is a chart of the Ranking Criteria and the effective dates we are finalizing:

Ranking criterion	Effective date
One: *The applying hospital is requesting the increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program(s) exactly as it had been operated by the hospital that closed (that is, same residents, possibly the same program director, and possibly the same (or many of the same) teaching staff).*	The day after the graduation date(s) of actual displaced resident(s).
Two: *The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.*	Date of the hospital closure.
Three: *The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).*	The day after the graduation date(s) of actual displaced resident(s).
Four: *The program does not meet Ranking Criteria 1, 2, or 3, and the applying hospital will use additional slots to establish a new or expand an existing geriatrics residency program.*	The later of when hospital can demonstrate to the Medicare contractor that the slots associated with a new program or program expansion are actually filled, and therefore, are needed as of a particular date (usually July 1, possibly retroactive), or the July 1 *after* displaced residents complete their training.
Five: *The program does not meet Ranking Criteria 1 through 4, the applying hospital is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*	
Six: *The program does not meet Ranking Criteria 1 through 5, and the applying hospital is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*	
Seven: *The applying hospital will use additional slots to establish or expand a primary care or general surgery program, but the program does not meet Ranking Criterion 5 or 6 because the hospital is also separately applying under Ranking Criterion 8 for slots to establish or expand a nonprimary care or non-general surgery program and/or for cap relief.*	
Eight: *The program does not meet Ranking Criteria 1 through 7, and the applying hospital will use additional slots to establish or expand a nonprimary care or a non-general surgery program or for cap relief.*	If slots are for starting or expanding a nonprimary care program, the effective date is same as that for Ranking Criteria Four through Seven. If slots are for cap relief, the effective date is the effective date of CMS' award announcement, or the July 1 *after* displaced residents complete their training, whichever is later.

e. Clarification of Relationship Between Ranking Criteria One, Two, and Three

In the November 24, 2010 final rule with comment period, as part of the response to a comment we received requesting that the order of Ranking Criterion One (regarding an applicant hospital that assumes an entire program from a closed hospital) and Ranking Criterion Two (regarding an applicant hospital that received slots under the terms of a Medicare GME affiliation agreement from a closed hospital) be switched, we stated: ''Furthermore, the commenter need not be concerned that hospitals that would fit into Ranking Criterion Two would be at a disadvantage and deprived of their fair share of slots to hospitals that would fit under Ranking Criterion One. In fact, Ranking Criteria One and Two are *not* competing with each other, and hospitals fitting into each category would get their 'fair' share of slots. For example, assume a hospital with an FTE resident cap of 100 closes. Hospital A assumes the entire programs in which 80 FTE residents were training when the hospital closed. Hospital B had been receiving 20 FTE slots from the closed hospital under the terms of a Medicare GME affiliation agreement. Hospital A applies for 80 slots under Ranking Criterion One and, all other things being equal, is awarded 80 slots. Hospital A could apply for more than 80 slots, *but it could only receive consideration under Ranking Criterion One for a maximum of 80 slots.* Therefore, 20 slots would remain for Hospital B to apply for and receive under Ranking Criterion Two. Accordingly, we do not believe it is necessary to reorder Ranking Criteria One and Two'' (75 FR 72218).

Prior to the issuance of the proposed rule, we had been made aware that it may *not* always be true that Ranking Criteria One, Two, and even Three are not competing with each other. For example, in the case where the closed hospital was training residents in excess of its FTE resident caps, it is possible for hospitals to apply under Ranking Criteria One, Two, and/or Three for more slots than are available. However, under the policy expressed in the response quoted above from the November 24, 2010 final rule with comment period, because a hospital that takes over an entire program from the closed hospital is ranked under Ranking Criterion One, and a hospital that received slots from a Medicare GME affiliation agreement from the closed hospital is ranked under Ranking Criterion Two, all the slots could be assigned to the hospital under Ranking Criterion One, leaving no slots for hospitals ranked under Ranking Criterion Two or Three. (We note that in the first round of section 5506 awards associated with hospitals that closed between March 23, 2008, and August 3, 2010, this turned out *not* to be a concern because even in the case where a closed hospital was training residents in excess of its FTE caps at the time of closure, there were no applicants for the slots that simultaneously qualified under Ranking Criteria One, Two, and/or Three). For example, a hospital that closed has an FTE resident cap of 10, but when it closed, it was training 15 FTEs in an internal medicine program. Hospital A assumes at least 90 percent of the internal medicine program; that is, the ''entire'' program (a hospital that takes on 90 percent of the residents training in a particular program at the closed hospital within 5 years prior to the hospital's closure or at the time of the hospital's closure would be deemed to have assumed an ''entire'' program (75 FR 72218)). Ninety percent of the internal medicine program is 13.5 FTEs. Because Hospital A took over the ''entire'' internal medicine program, it applies for slots under Ranking Criterion One. Hospital B applies under Ranking Criterion Three because it assumes the other 10 percent of the program, or 1.5 FTEs. However, because the closed hospital's FTE resident cap was limited to 10, it would seem that all 10 slots would be assigned to Hospital A under Ranking Criterion One, leaving no slots for Hospital B under Ranking Criterion Three. Conversely, if Ranking Criteria One and Three were ranked as equals, the 10 slots could be prorated so that both Hospital A and Hospital B each receive a ''fair'' share.

Another example might be one in which a closed hospital that was training residents in excess of its FTE resident cap of 10 ''lent'' 2 of those 10 cap slots to Hospital C under the terms of a Medicare GME affiliation agreement. Although under the terms of the Medicare GME affiliation agreement, the hospital's FTE resident cap was reduced from 10 to 8, the hospital actually trained 9 FTEs, and continued to do so until it closed. Hospital D then assumes the 9 FTEs, or the entirety of the program that remained at the closed hospital when it closed. Again, one policy approach would be to rank the ranking criteria in descending order, and assign all 10 slots to Hospital D since Hospital D qualifies under Ranking Criterion One. Alternatively, another policy approach would be to treat Ranking Criteria One and Two as equals, and then a prorata share of the 10 slots could be given each to Hospital C and Hospital D.

After consideration of these scenarios, we stated in the proposed rule that we believe that in the case where the closed hospital was training residents in excess of its FTE resident caps, prorating among hospitals that qualify under Ranking Criteria One, Two, and Three is not warranted. This is because we believe that a hospital that assumes an entire program from the closed hospital should be ranked highest, as it has taken the boldest step to ensuring the continuity of the closed hospital's program. As we explained first in the August 3, 2010 proposed rule (75 FR 46423) and again in the November 24, 2010 final rule with comment period (75 FR 72218), ''We note that we are proposing this ranking criterion regarding affiliated hospitals as second, after the first ranking criterion regarding applying hospitals that assume an entire program or programs from the closed hospital because, even though section 5506 of the Affordable Care Act directs the Secretary to give preference to members of the same affiliated group, we believe that a hospital that assumes the responsibility for an entire program or programs demonstrates a commitment to maintain the programs to an even greater degree than does a hospital that was affiliated with the hospital that closed and may only be maintaining a portion of the residency program or programs.'' Similarly, we believe that because section 5506 of the Affordable Care Act does give preference to members of the same affiliated group as the closed hospital, hospitals qualifying for Ranking Criterion Two should receive slots first before hospitals qualifying for slots under Ranking Criterion Three. While we would encourage a hospital to assume a part of a closed hospital's program if it does not have the capacity to assume the entire program, such a hospital would be ranked under Ranking Criterion Three, still receiving preference before all hospitals that did not necessarily have any relationship with the closed hospital and that qualify under Ranking Criteria Four and below. As we stated in the November 24, 2010 final rule with comment period (75 FR 72226), ''we would still assign the slots to hospitals qualifying under Ranking Criteria One, Two, and Three in descending order.'' Therefore, in the instance where a closed hospital is training residents in excess of its FTE resident caps when it closes, we are clarifying that we would not prorate a closed hospital's FTE resident caps among applicant hospitals that qualify

under Ranking Criteria One, Two, and Three.

We did not receive any public comments on this clarification regarding the relationship between Ranking Criteria One, Two, and Three. Therefore, we are finalizing the clarification.

f. Modifications to the Section 5506 CMS Evaluation Form

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27989), we proposed to make numerous changes to the Section 5506 CMS Evaluation Form. Most of the changes were not substantive, but were intended to clarify the requirements on the form, and therefore, we did not list them each individually. In the proposed rule, we indicated that there were several proposed changes that were more substantive, and we enumerated those. First, we proposed to change the name of the CMS Evaluation Form to the CMS Application Form. We believe this is a more appropriate name, as it is the form used by hospitals to apply for slots under section 5506. Second, we identified several instances on the proposed CMS Application Form where we proposed to prompt the applicant to specify whether the application is for a particular program, or for general cap relief, or for slots associated with a Medicare GME affiliation agreement with the closed hospital (which we did not do on the preceding form). Third, we proposed to clarify the titles of the Demonstrated Likelihood Criteria (DLC). Specifically, the proposed title for Demonstrated Likelihood Criterion 1 is ''Establishing a New Residency Program'', the proposed title for Demonstrated Likelihood Criterion 2 is ''Taking Over All or Part of an Existing Residency Program from the Closed Hospital, or Expanding an Existing Residency Program,'' the proposed title for Demonstrated Likelihood Criterion 3 is ''Receiving Slots for General Cap Relief,'' and the proposed title for Demonstrated Likelihood Criterion 4 is ''Receiving Slots by Virtue of Medicare GME Affiliated Group Agreement with Closed Hospital.'' Fourth, we proposed to add a category under Demonstrated Likelihood Criterion 2 stating that if the hospital currently has unfilled positions in a residency program that have previously been approved by the ACGME, AOA, or the ABMS, and the hospital is now seeking to fill those positions, the hospital must attach documentation clearly showing its current number of approved positions, and its current number of filled positions (as proof of the unfilled positions). Fifth, we proposed to change the wording in Ranking Criteria Four, Five, and Six, respectively, from ''The applying hospital does not meet Ranking Criteria 1, 2, or 3'' to ''The program does not meet Ranking Criterion 1, 2, or 3'' because the latter is more accurate. That is, it is possible for a hospital to qualify under Ranking Criterion 1, 2, or 3 for a particular program, and also to apply for slots separately under Ranking Criterion 4, 5, or 6 for a different program. Sixth, we proposed to add a new Ranking Criterion 7: *The program does not meet Ranking Criteria 1 through 6, and the slots for which the hospital is applying are for a primary care or a general surgery program, but the hospital is also applying for slots under Ranking Criterion Eight.* We also proposed to renumber what had been the previous Ranking Criterion Seven to be the proposed Ranking Criterion Eight. Lastly, in the proposed rule, we included the proposed revised CMS Section 5506 Application Form:

Comment: One commenter supported the proposed changes to the CMS Evaluation Form and believed that its use will improve the application and review process for section 5506 awards.

Response: We appreciate the commenter's support, and we are finalizing our proposed changes with some modifications. In response to public comments on Ranking Criteria One and Three, we are making additional changes to the CMS Evaluation Form (finalized as the CMS Application Form) under Ranking Criteria One and Three where hospitals applying under those Ranking Criteria must list the names and graduation dates of specific displaced residents whom, upon their graduation, the hospital seamlessly replaces (or intends to seamlessly replace) with new residents.

Following is the finalized revised CMS Section 5506 Application Form:

CMS Application Form

As Part of the Application for the Increase in a Hospital's FTE Cap(s) under Section 5506 of the Affordable Care Act: Preservation of FTE Cap Slots from Teaching Hospitals that Close

Directions: Please fill out the information below for each residency program for which the applicant hospital intends to use the increase in its FTE cap(s). If the hospital is applying for general FTE cap relief (an increase in the hospital's FTE cap(s) in recognition of already training residents in excess of the hospital's cap(s)), that application must be submitted separately from an individual program request. If the hospital is applying for slots associated with a Medicare GME affiliation agreement with a hospital that closed, that application must also be submitted separately from an individual program request.

NAME OF HOSPITAL:

_____

MEDICARE PROVIDER NUMBER (CCN):

_____

NAME OF MEDICARE CONTRACTOR:

_____

CORE-BASED STATISTICAL AREA (CBSA in which the hospital is physically located—write the 5 digit code here):

_____

COUNTY NAME (in which the hospital is physically located):

_____

Complete the following, as applicable:

1. Name Of Specialty Training Program:

_____

2. General FTE Cap Relief:

_____

3. Medicare GME Affiliated Group:

_____

(Check one):

☐ Allopathic Program

☐ Osteopathic Program

NUMBER OF FTE SLOTS REQUESTED FOR SPECIFIC PROGRAM (OR HOSPITAL OVERALL IF SEEKING GENERAL CAP RELIEF OR SLOTS ASSOCIATED WITH A MEDICARE GME AFFILIATED GROUP) AT YOUR HOSPITAL:

Direct GME:_____ **IME:**_____

Section A: Demonstrated Likelihood Criteria (DLC) of Filling the FTE Slots

The applicant hospital must provide documentation to demonstrate the likelihood of filling requested slots under section 5506 within the 3 academic years immediately following the application deadline to receive slots after a particular hospital closes. *Please indicate the specific use for which you are requesting an increase in your hospital's FTE cap(s). If you are requesting an increase in the hospital's FTE cap(s) for a combination of DLC1, DLC2, or DLC3, you must complete a separate CMS Application Form for each DLC and specify the distinct criterion from the list below within each Form.*

Demonstrated Likelihood Criterion 1: Establishing a New Residency Program

The hospital does not have sufficient room under its direct GME FTE cap or IME FTE cap, or both, and will establish a new residency program in the specialty. **(The hospital must check at least one of the following.)**

☐ Application for approval of the new residency program has been submitted to the ACGME, AOA or the ABMS **(The hospital must attach a copy.)**

☐ The hospital has submitted an institutional review document or program information form concerning the new program in an application for approval of the new program. **(The hospital must attach a copy.)**

☐ The hospital has received written correspondence from the ACGME, AOA or ABMS acknowledging receipt of the application for the new program, or other types of communication from the accrediting bodies concerning the new program approval process (such as notification of site visit). **(The hospital must attach a copy.)**

☐ The hospital has other documentation demonstrating that it has made a commitment to start a new program **(The hospital must attach a copy.).**

Demonstrated Likelihood Criterion 2: Taking Over All or Part of an Existing Residency Program from the Closed Hospital, or Expanding an Existing Residency Program

The hospital does not have sufficient room under its direct GME FTE cap or IME FTE cap, or both, and a) has permanently taken over the closed hospital's entire residency program, or b) is permanently expanding its own previously established and approved residency program resulting from taking over *part* of a residency program from the closed hospital, or c) is permanently expanding its own existing residency program. **(The hospital must check at least one of the following.)**

Hospitals applying for slots under option a) which correlates to Ranking Criterion 1 or b) which correlates to Ranking Criterion 3 must list the names and graduation dates of specific displaced residents who, upon their graduation, have been or will be seamlessly replaced by new residents. This list may be added as an attachment to this application.

☐ Application for approval to take over the closed hospital's residency program has been submitted to the ACGME, AOA, or the ABMS, or approval has been received from the ACGME, AOA, or the ABMS. **(The hospital must attach a copy.)**

☐ Application for approval of an expansion of the number of approved positions in its residency program resulting from taking over *part* of a residency program from the closed hospital has been submitted to the ACGME, AOA or the ABMS, or approval has been received from the ACGME, AOA, or the ABMS. **(The hospital must attach a copy.)**

☐ Application for approval of an expansion of the number of approved positions in its residency program has been submitted to the ACGME, AOA or the ABMS, or approval has been received from the ACGME, AOA, or the ABMS. **(The hospital must attach a copy.)**

☐ The hospital currently has unfilled positions in its residency program that have previously been approved by the ACGME, AOA, or the ABMS, and is now seeking to fill those positions. **(The hospital must attach documentation clearly showing its current number of approved positions, and its current number of filled positions).**

☐ The hospital has submitted an institutional review document or program information form concerning the program in an application for approval of an expansion to the program **(The hospital must attach a copy).**

Demonstrated Likelihood Criterion 3: Receiving Slots for General Cap Relief

☐ The hospital does not have sufficient room under its direct GME FTE cap or IME cap, or both, and is seeking an increase in its FTE cap(s) for general cap relief for residents that it is already training.

Demonstrated Likelihood Criterion 4: Receiving Slots by Virtue of Medicare GME Affiliated Group Agreement with Closed Hospital

☐ The hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital *received* slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, the applying hospital was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital *received* slots from the closed hospital under the terms of that affiliation agreement. **(Copies of EACH of the following must be attached.)**

■ Copies of the recent Medicare GME affiliation agreement of which the applying hospital and the closed hospital were a member of before the hospital closed.

■ Copies of the most recent accreditation letters for all of the hospital's training programs in which the hospital had a shared rotational arrangement (as defined at § 413.75(b)) with the closed hospital.

Section B. Level Priority Category

(Place an ''X'' in the appropriate box that is applicable to the level priority category that describes the applicant hospital.)

☐ First, to hospitals located in the same core-based statistical area (CBSA) as, or in a CBSA contiguous to, the hospital that closed.

☐ Second, to hospitals located in the same State as the closed hospital.

☐ Third, to hospitals located in the same region as the hospital that closed.

☐ Fourth, if the slots have not yet been fully distributed, to qualifying hospitals in accordance with the criteria established under section 5503, ''Distribution of Additional Residency Positions''

Section C. Ranking Criteria

(Place an ''X'' in the box for each criterion that is appropriate for the applicant hospital and for the program for which the increase in the FTE cap is requested.)

☐ Ranking Criterion One. *The applying hospital is requesting the increase in its FTE resident cap(s) because it is assuming (or assumed) an entire program (or programs) from the hospital that closed, and the applying hospital is continuing to operate the program (s) exactly as it had been operated by the hospital that closed (that is, same residents, possibly the same program director, and possibly the same (or many of the same) teaching staff).*

☐ Ranking Criterion Two. *The applying hospital was listed as a participant of a Medicare GME affiliated group on the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed, and under the terms of that Medicare GME affiliation agreement, the applying hospital*

received slots from the hospital that closed, and the applying hospital will use the additional slots to continue to train at least the number of FTE residents it had trained under the terms of the Medicare GME affiliation agreement. If the most recent Medicare GME affiliation agreement of which the closed hospital was a member before the hospital closed was with a hospital that itself has closed or is closing, preference would be given to an applying hospital that was listed as a participant in the next most recent Medicare GME affiliation agreement (but not one which was entered into more than 5 years prior to the hospital's closure) of which the first closed hospital was a member before the hospital closed, and that applying hospital received slots from the closed hospital under the terms of that affiliation agreement.

☐ Ranking Criterion Three. *The applying hospital took in residents displaced by the closure of the hospital, but is not assuming an entire program or programs, and will use the additional slots to continue training residents in the same programs as the displaced residents, even after those displaced residents complete their training (that is, the applying hospital is permanently expanding its own existing programs).*

☐ Ranking Criterion Four. *The program does not meet Ranking Criteria 1, 2, or 3, and the applying hospital will use additional slots to establish a new or expand an existing geriatrics residency program.*

☐ Ranking Criterion Five: *The program does not meet Ranking Criteria 1 through 4, the applying hospital is located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

☐ Ranking Criterion Six: *The program does not meet Ranking Criteria 1 through 5, and the applying hospital is not located in a HPSA, and will use all the additional slots to establish or expand a primary care or general surgery residency program.*

☐ Ranking Criterion Seven: *The applying hospital will use additional slots to establish or expand a primary care or general surgery program, but the program does not meet Ranking Criterion 5 or 6 because the hospital is also separately applying under Ranking Criterion 8 for slots to establish or expand a nonprimary care or non-general surgery program and/or for cap relief.*

☐ Ranking Criterion Eight: *The program does not meet Ranking Criteria 1 through 7, and the applying hospital will use additional slots to establish or expand a nonprimary care or a non-general surgery program or for cap relief.*

Application Process and CMS Central Office and Regional Office Mailing Addresses for Receiving Increases in FTE Resident Caps

In order for hospitals to be considered for increases in their FTE resident caps, each qualifying hospital must submit a timely application. The following information must be submitted on applications to receive an increase in FTE resident caps:

- The name and Medicare provider number, and Medicare contractor (to which the hospital submits its cost report) of the hospital.
- The total number of requested FTE resident slots for direct GME or IME, or both.
- A completed copy of the CMS Application Form for each residency program for which the hospital intends to use the requested increase in FTE residents.
- Source documentation to support the assertions made by the hospital on the CMS Application Form.
- FTE resident counts for direct GME and IME and FTE resident caps for direct GME and IME reported by the hospital in the most recent as-filed cost report. (If the CMS Form 2552–96 is applicable, include copies of Worksheets E, Part A, E–3, Part IV, and if a hospital received an increase to its FTE cap(s) under section 422 of the MMA, a copy of E–3, Part VI. If the CMS Form 2552–10 is applicable, include copies of Worksheets E, Part A, and E–4).
- An attestation, signed and dated by an officer or administrator of the hospital who signs the hospital's Medicare cost report, of the following information:

''I hereby certify that I understand that misrepresentation or falsification of any information contained in this application may be punishable by criminal, civil, and administrative action, fine and/or imprisonment under federal law. Furthermore, I understand that if services identified in this application were provided or procured through payment directly or indirectly of a kickback or were otherwise illegal, criminal, civil, and administrative action, fines and/or imprisonment may result. I also certify that, to the best of my knowledge and belief, it is a true, correct, and complete application prepared from the books and records of the hospital in accordance with applicable instructions, except as noted. I further certify that I am familiar with the laws and regulations regarding Medicare payment to hospitals for the training of interns and residents.''

5. Notice of Closure of Teaching Hospitals and Opportunity To Apply for Available Slots

a. Background

Section 5506 of the Affordable Care Act authorizes the Secretary to redistribute residency cap slots after a hospital that trained residents in an approved medical residency program(s) closes. Specifically, section 5506 amended the Act by adding a subsection (vi) to section 1886(h)(4)(H) and modifying the language at section 1886(d)(5)(B)(v) to instruct the Secretary to establish a process to increase the FTE resident caps for other hospitals based upon the FTE resident caps in teaching hospitals that closed ''on or after a date that is 2 years before the date of enactment'' (that is March 23, 2008). In the CY 2011 OPPS/ASC final rule with comment period issued on November 24, 2010 (75 FR 72212), we established regulations and an application process for qualifying hospitals to apply to CMS to receive direct GME and IME FTE resident cap slots from a hospital that closed. The procedures we established apply both to teaching hospitals that closed after March 23, 2008, and on or before August 3, 2010, and to teaching hospitals that closed after August 3, 2010. For teaching hospitals that closed on or after March 23, 2008, and on or before August 3, 2010, we established an application deadline of April 1, 2011, for a hospital to request cap slots from a closed hospital(s). We also stated in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72215) that hospitals that close at any point after August 3, 2010, will fall into additional categories of applications, for which we would provide a separate notice with a future application deadline.

b. Notice of Closure of Teaching Hospitals

We have learned of the closure of several teaching hospitals that occurred after August 3, 2010. This notice serves to notify the public of the closure of teaching hospitals, and to initiate another round of the section 5506 application and selection process. (We note that the first round applied to closed teaching hospitals listed at 76 FR 13294 (March 11, 2011), with an application deadline of April l, 2011; and the second round applied to one closed teaching hospital as discussed at 76 FR 55917 (September 9, 2011), with an application deadline of December 1, 2011.) The following closed teaching

hospitals are part of a new application process under section 5506:

Provider No.	Provider name	City and state	CBSA Code	Terminating date	IME cap (including ± MMA Sec. 422[1] and ACA Sec. 5503[2] adjustments)	Direct GME cap (including ± MMA Sec. 422[1] and ACA Sec. 5503[2] adjustments)
120010	Hawaii Medical Center East.	Honolulu, HI	26180	January 5, 2012	15.73	16.12
140301	Oak Forest Hospital	Oak Forest, IL	16974	August 31, 2011	0	4.40 − section 422 decrease 2.37 = 2.03[3]
360101	Huron Hospital	East Cleveland, OH ..	17460	October 3, 2011	50.06	50.85 +.17 section 422 increase − .10 section 422 reduction = 50.92[4]

[1] Section 422 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA), Public Law 108–173, redistributed unused residency slots effective July 1, 2005.

[2] Section 5503 of the Affordable Care Act (ACA), Public Law 111–148, redistributed unused residency slots effective July 1, 2011.

[3] Oak Forest Hospital's 1996 direct GME FTE cap is 4.40. Under section 422 of the MMA, the hospital received a decrease of 2.37 to its direct GME FTE cap: 4.40 − 2.37 = 2.03.

[4] Huron Hospital's 1996 direct GME FTE cap is 50.85. Under section 422 of the MMA, the hospital received an increase of 0.17 to its direct GME FTE cap and a decrease of 0.10 to its direct GME FTE cap: 50.85 + 0.17 − 0.10 = 50.92.

c. Application Process for Available Resident Slots

Under section IV.I.4. of the preamble of this final rule, in response to comments, we are finalizing a policy that provides an application period of 90 days following notification to the public of a hospital closure. Therefore, hospitals wishing to apply for and receive slots from the above hospitals' FTE resident caps must submit applications directly to the CMS Central Office no later than October 29, 2012. Unlike in the first 2 rounds of section 5506, under this round, hospitals need not submit applications to their respective CMS Regional Office. The mailing address for the CMS Central Office is included on the application form. Applications must be received, not postmarked, by the October 29, 2012 deadline date.

In the CY 2011 OPPS/ASC final rule with comment period, we did not establish a deadline by when CMS would issue the final determinations to hospitals that receive slots under section 5506 of the Affordable Care Act. However, we will review all applications received by the October 29, 2012 deadline and notify applicants of our determinations as soon as possible.

We refer readers to the CMS Web site at: *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/dgme.html* to download a copy of the application form (CMS Section 5506 Application Form) that hospitals are to use to apply for slots under section 5506. We also refer readers to this same Web site to access a copy of the CY 2011 OPPS/ASC final rule with comment period and a list of additional section 5506 guidelines for an explanation of the policy and procedures for applying for slots, and the redistribution of the slots under sections 1886(h)(4)(H)(vi) and 1886(d)(5)(B)(v) of the Act. We note that in section IV.I.4. of the preamble of this final rule, we are finalizing additional policies regarding the section 5506 application process and an updated and revised CMS Section 5506 Application Form as well.

J. Changes to the Reporting Requirements for Pension Costs for Medicare Cost-Finding Purposes

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51693 through 51697), we finalized our policy for reporting costs of qualified defined benefit pension plans for Medicare cost-finding purposes. Specifically, beginning with cost reporting periods on or after October 1, 2011, a provider's pension cost for cost-finding purposes equals the cash basis contribution deposits plus any carry forward contributions, subject to a limitation. Providers with current contributions and carry forward contributions in excess of the limit may request approval of excess contributions, which will be reviewed on a case-by-case basis. Some or all of the excess contributions will be approved, as applicable, if it is determined that all or a portion of the excess contribution(s) are reasonable and necessary. To the extent that approval is granted, that portion of the excess is allowable as current period pension costs. We refer readers to the FY 2012 IPPS/LTCH PPS final rule for full details on this policy.

In addition to finalizing this new policy in the FY 2012 IPPS/LTCH PPS final rule, we stated that we intended to make future amendments to conform existing regulations to this final policy (76 FR 51693). The existing regulations at 42 CFR 413.24 and 413.100 specify that pension costs of qualified defined benefit plans are reported on an accrual basis of accounting method. Sections 413.24 and 413.100 provide that revenue is reported in the period in which it is earned, regardless of when it is collected and expenses are reported in the period in which they are incurred, regardless of when it is paid. For Medicare payment purposes, the costs are generally allowable in the year in which the costs are accrued and claimed, subject to specific exceptions. Furthermore, for accrued costs to be recognized for Medicare payment in the year of the accrual, the requirements must be met with respect to the liquidation of related liabilities. Therefore, to conform these two existing regulations to the final policy we adopted in the FY 2012 IPPS/LTCH PPS final rule with regard to pension costs for Medicare cost-finding purposes, in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27991), we proposed to amend the general cost reporting rules under §§ 413.24 and 413.100 to note the exception for recognizing actual pension contributions funded during the cost reporting period on a cash basis. We also indicated that we plan to revise section 2305.2 of the Provider Reimbursement Manual to reflect this policy change.

We did not receive any public comments on our proposal. We are

finalizing our proposed amendments to the general cost reporting rules under §§ 413.24 and 413.100, without modification, to note the exception for recognizing actual pension contributions funded during the cost reporting period on a cash basis.

K. Rural Community Hospital Demonstration Program

1. Background

Section 410A(a) of Public Law 108–173 required the Secretary to establish a demonstration program to test the feasibility and advisability of establishing ''rural community hospitals'' to furnish covered inpatient hospital services to Medicare beneficiaries. The demonstration pays rural community hospitals under a reasonable cost-based methodology for Medicare payment purposes for covered inpatient hospital services furnished to Medicare beneficiaries. A rural community hospital, as defined in section 410A(f)(1), is a hospital that—

- Is located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or is treated as being located in a rural area under section 1886(d)(8)(E) of the Act;
- Has fewer than 51 beds (excluding beds in a distinct part psychiatric or rehabilitation unit) as reported in its most recent cost report;
- Provides 24-hour emergency care services; and
- Is not designated or eligible for designation as a CAH under section 1820 of the Act.

Section 410A(a)(4) of Public Law 108–173 specified that the Secretary was to select for participation no more than 15 rural community hospitals in rural areas of States that the Secretary identified as having low population densities. Using 2002 data from the U.S. Census Bureau, we identified the 10 States with the lowest population density in which rural community hospitals were to be located in order to participate in the demonstration: Alaska, Idaho, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota, Utah, and Wyoming. (Source: U.S. Census Bureau, Statistical Abstract of the United States: 2003).

CMS originally solicited applicants for the demonstration in May 2004; 13 hospitals began participation with cost report years beginning on or after October 1, 2004. In 2005, 4 of these 13 hospitals withdrew from the program and converted to CAH status. This left nine hospitals participating at that time. In 2008, we announced a solicitation for up to six additional hospitals to participate in the demonstration program. Four additional hospitals were selected to participate under this solicitation. These four additional hospitals began under the demonstration payment methodology with the hospital's first cost reporting period starting on or after July 1, 2008. At that time, 13 hospitals were participating in the demonstration.

Five hospitals (3 of the hospitals were among the 13 hospitals that were original participants in the demonstration program and 2 of the hospitals were among the 4 hospitals that began the demonstration program in 2008) withdrew from the demonstration program during CYs 2009 and 2010. (Three of these hospitals indicated that they would be paid more for Medicare inpatient services under the rebasing option allowed under the SCH methodology provided for under section 122 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275). One hospital restructured to become a CAH, and one hospital closed.) In CY 2011, one hospital that was among the original set of hospitals that participated in the demonstration withdrew from the demonstration. These actions left 7 of the originally participating hospitals (that is, hospitals that were selected to participate in either 2004 or 2008), participating in the demonstration program as of June 1, 2011.

Sections 3123 and 10313 of the Affordable Care Act (Pub. L. 111–148) amended section 410A of Public Law 108–173, which established the rural community hospital demonstration program. Sections 3123 and 10313 of the Affordable Care Act changed the rural community hospital demonstration program in several ways. First, it required the Secretary to conduct the demonstration program for an additional 5-year period that begins on the date immediately following the last day of the initial 5-year period. Further, the Affordable Care Act requires, in the case of a rural community hospital that is participating in the demonstration program as of the last day of the initial 5-year period, the Secretary to provide for the continued participation of such rural hospital in the demonstration program during the 5-year extension, unless the hospital makes an election, in such form and manner as the Secretary may specify, to discontinue participation (section 410A(g)(4)(A) of Public Law 108–173, as added by section 3123(a) of the Affordable Care Act and further amended by section 10313 of such Act). In addition, the Affordable Care Act provides that, during the 5-year extension period, the Secretary shall expand the number of States with low population densities determined by the Secretary to 20 (section 410A(g)(2) of Public Law 108–173, as added by section 3123(a) and amended by section 10313 of the Affordable Care Act). Further, the Secretary is required to use the same criteria and data that the Secretary used to determine the States under section 410A(a)(2) of Public Law 108–173 for purposes of the initial 5-year period. The Affordable Care Act also allows not more than 30 rural community hospitals in such States to participate in the demonstration program during the 5-year extension period (section 410A(g)(3) of Public Law 108–173, as added by section 3123(a) of the Affordable Care Act and as further amended by section 10313 of such Act).

We published a solicitation for applications for additional participants in the rural community hospital demonstration program in the **Federal Register** on August 30, 2010 (75 FR 52960). Applications were due on October 14, 2010. The 20 States with the lowest population density that are eligible for the demonstration program are: Alaska, Arizona, Arkansas, Colorado, Idaho, Iowa, Kansas, Maine, Minnesota, Mississippi, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, and Wyoming (Source: U.S. Census Bureau, Statistical Abstract of the United States: 2003). We approved 19 new hospitals for participation in the demonstration program. We determined that each of these new hospitals would begin participating in the demonstration with its first cost reporting period beginning on or after April 1, 2011. These hospitals were notified of this start date in the award letter that was sent to them dated February 24, 2011

Three of these 19 hospitals declined participation prior to the start of the cost report periods for which they would have begun the demonstration. In addition to the 7 hospitals that were selected in either 2004 or 2008 and that are still participating, the new selection led to a total of 23 hospitals in the demonstration as of April 2011.

In addition, section 410A(c)(2) of Public Law 108–173 required that, ''[i]n conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.'' This requirement is commonly referred to as ''budget neutrality.'' Generally, when we implement a demonstration program on a budget neutral basis, the

demonstration program is budget neutral in its own terms; in other words, the aggregate payments to the participating hospitals do not exceed the amount that would be paid to those same hospitals in the absence of the demonstration program. Typically, this form of budget neutrality is viable when, by changing payments or aligning incentives to improve overall efficiency, or both, a demonstration program may reduce the use of some services or eliminate the need for others, resulting in reduced expenditures for the demonstration program's participants. These reduced expenditures offset increased payments elsewhere under the demonstration program, thus ensuring that the demonstration program as a whole is budget neutral or yields savings. However, the small scale of this demonstration program, in conjunction with the payment methodology, makes it extremely unlikely that this demonstration program could be viable under the usual form of budget neutrality. Specifically, cost-based payments to participating small rural hospitals are likely to increase Medicare outlays without producing any offsetting reduction in Medicare expenditures elsewhere. Therefore, a rural community hospital's participation in this demonstration program is unlikely to yield benefits to the participant if budget neutrality were to be implemented by reducing other payments for these same hospitals.

In the past eight IPPS final regulations, spanning the period for which the demonstration program has been implemented, we have adjusted the national inpatient PPS rates by an amount sufficient to account for the added costs of this demonstration program, thus applying budget neutrality across the payment system as a whole rather than merely across the participants in the demonstration program. As we discussed in the FYs 2005 through 2012 IPPS final rules (69 FR 49183; 70 FR 47462; 71 FR 48100; 72 FR 47392; 73 FR 48670; 74 FR 43922, 75 FR 50343, and 76 FR 51698, respectively), we believe that the language of the statutory budget neutrality requirements permits the agency to implement the budget neutrality provision in this manner. In light of the statute's budget neutrality requirement, in the FY 2013 IPPS/LTCH proposed rule (77 FR 27991 through 27995) we proposed a methodology to calculate a budget neutrality adjustment factor to the FY 2013 national IPPS rate. In this final rule, we are adopting the proposed methodology for calculating the budget neutrality adjustment to the FY 2013 national IPPS rates and finalizing the budget neutrality adjustment factor to be made to the FY 2103 national IPPS rate.

In general terms, in each of these previous years, we used available cost reports for the participating hospitals to derive an estimate of the additional costs attributable for the demonstration. We used finalized, or settled, cost reports, as available, and ''as submitted'' cost reports for hospitals for which finalized cost reports were not available. Annual market basket percentage increase amounts provided by the CMS Office of the Actuary reflecting the growth in the prices of inputs for inpatient hospitals were applied to these cost amounts. An annual update factor provided by the CMS Office of the Actuary reflecting growth in the volume of inpatient operating services was also applied. For the budget neutrality calculations in the IPPS final rules for FYs 2005 through 2011, the annual volume adjustment applied was 2 percent; for the IPPS final rule for FY 2012, it was 3 percent. For a detailed discussion of our budget neutrality offset calculations, we refer readers to the IPPS final rule applicable to the fiscal year involved.

In general, for FYs 2005 through 2009, we based the budget neutrality offset estimate on the estimated cost of the demonstration in an earlier given year. For these periods, we derived that estimated cost by subtracting the estimated amount that would otherwise be paid without the demonstration in an earlier given year from the estimated amount for the same year that would be paid under the demonstration under the reasonable cost-based methodology authorized by section 410A of Public Law 108–173. The reasonable cost-based methodology authorized by section 410A of Public Law 108–173, as amended, is hereafter referred to as the ''reasonable cost methodology'' (We ascertained the estimated amount that would be paid in an earlier given year under the reasonable cost methodology and the estimated amount that would otherwise be paid without the demonstration in an earlier given year from ''as submitted'' cost reports that were submitted by the hospitals prior to the inception of the demonstration.) We then updated the estimated cost described above to the current year by multiplying it by the market basket percentage increases applicable to the years involved and the applicable annual volume adjustments. For the FY 2010, RY2010 IPPS/LTCH PPS final rule, data from finalized cost reports reflecting the participating hospitals' experience under the demonstration were available. Specifically, the finalized cost reports for the first 2 years of the demonstration, that is, cost reports for cost reporting years beginning in FYs 2005 and 2006 (CYs 2004, 2005, and 2006) were available. These data showed that the actual costs of the demonstration for these years exceeded the amounts originally estimated in the respective final rules for the budget neutrality adjustment. In the FY 2010 IPPS/LTCH PPS final rule, we included in the budget neutrality offset amount an amount in addition to the estimate of the demonstration costs in that fiscal year. This additional amount was based on the amount that the costs of the demonstration for FYs 2005 and 2006 exceeded the budget neutrality offset amounts finalized in the IPPS rules applicable for those years.

As in the FY 2010 IPPS/LTCH PPS final rule, we have continued to propose a methodology for calculating the budget neutrality offset amount to account for both the estimated demonstration costs in the upcoming fiscal year and an amount by which the actual demonstration costs corresponding to an earlier year (which would be determined once we have finalized cost reports for that year) exceeded the budget neutrality offset amount finalized in the corresponding year's IPPS final rule. However, we note that because of a delay affecting the settlement process for cost reports for IPPS hospitals occurring on a larger scale than merely for the demonstration, we have been unable to finalize this component of the budget neutrality offset amount accounting for the amount by which the actual demonstration costs in a given year exceeded the budget neutrality offset amount finalized in the corresponding year's IPPS final rule for cost reports of demonstration hospitals dating to those beginning in FY 2007. (For only a small fraction of the hospitals that have participated in the demonstration from FY 2007 to FY 2010 have cost reports been finalized in any year, making the overall calculation of this component of the budget neutrality impossible at this time for any given year.)

2. Budget Neutrality Offset Amount for FY 2013

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27993 and 27994), we revisited the issue of which cost reports to propose to use for calculating the FY 2013 budget neutrality offset amount. Although we used finalized cost reports where available for the FYs 2010, 2011, and 2012 IPPS/LTCH PPS final rules, for FY 2013, we proposed to

use the ''as submitted'' cost report for each hospital participating in the demonstration for the cost report period ending in CY 2010 in estimating the costs of the demonstration. In the proposed rule, we stated that we believe a way to streamline our methodology for calculating the budget neutrality offset amount would be to use cost reports all with the same status (that is, only ''as submitted'' cost reports as opposed to a mix of ''as submitted'' and ''settled'' cost reports) from the same time period for all hospitals participating in the demonstration (as opposed to cost reports of varying statuses from varying years for the various hospitals as has been done previously). Therefore, because ''as submitted'' cost reports ending in CY 2010 are the most recent complete set of cost reports for all demonstration hospitals, we proposed to use these cost reports for our budget neutrality offset estimate. Further, because ''as submitted'' cost reports ending in CY 2010 are recent available cost reports, we stated that we believe they would be an accurate predictor of the costs of the demonstration in FY 2013 because they give us a recent picture of the participating hospitals' costs.

In revisiting the issue of which datasets to propose to use in the budget neutrality offset amount calculation, we also revisited the methodology for calculating the budget neutrality offset amount. In the proposed rule, we proposed changes to that methodology in an effort to further improve and refine it. We noted that the proposed methodology varied, in part, from that finalized in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51698 through 51707). Specifically, in proposing refinements to the methodology, our objective was to simplify the calculation so that it included as few steps as possible. In addition, we proposed to incorporate different update factors (the market basket percentage increase and the applicable percentage increase, as applicable, to several years of data as opposed to solely using the market basket percentage increase) for the calculation of the budget neutrality offset amount. As explained in greater detail below, we stated that we believed this approach would maximize the precision of our calculation because it would more closely replicate payments made with and without the demonstration.

We noted that, although we were proposing changes to certain aspects of the budget neutrality offset amount calculation, several core components of the methodology would remain unchanged. For example, we were continuing to propose to include in the budget neutrality offset amount the estimate of the demonstration costs for the upcoming fiscal year and the amount by which the actual demonstration costs corresponding to an earlier year (which would be determined once we have finalized cost reports for that year) exceeded the budget neutrality offset amount finalized in the corresponding year's IPPS final rule).

The proposed methodology for calculating the estimated FY 2013 demonstration cost for the 23 currently participating hospitals was as follows:

Step 1: For each of the 23 participating hospitals, we proposed to identify the general reasonable cost amount calculated under the reasonable cost methodology for covered inpatient hospital services (as indicated on the ''as submitted'' cost report for the hospital's cost reporting period ending in CY 2010) in FY 2010. The general reasonable cost amount calculated under the reasonable cost methodology for any applicable year was thereafter referred to as the ''reasonable cost amount.''

Because section 410A of Public Law 108–173 stipulates swing-bed services are to be included among the covered inpatient hospital services for which the demonstration payment methodology applies, we also proposed to include the cost of these services, as reported on the cost reports for the hospitals that provide swing-bed services, within the general total estimated FY 2010 reasonable cost amount for covered inpatient hospitals services under the demonstration. As indicated above, we proposed to use ''as submitted'' cost reports for the hospital's cost reporting period ending in CY 2010 for this calculation.

We proposed to sum the two above-referenced amounts to calculate the general total estimated FY 2010 reasonable cost amount for covered inpatient hospital services for all 23 hospitals.

We proposed to multiply this sum (that is, the general total estimated FY 2010 reasonable cost amount for covered inpatient hospital services for all 23 hospitals) by the FYs 2011 through 2013 IPPS market basket percentage increases, which were formulated by the CMS Office of the Actuary. We also proposed to then multiply the product of the general total estimated FY 2010 reasonable cost amount for all 23 hospitals and the market basket percentage increases applicable to the years involved by a 3-percent annual volume adjustment for the years 2011 through 2013—the result would be the general total estimated FY 2013 reasonable cost amount for covered inpatient hospital services for all 23 hospitals.

We proposed to apply the IPPS market basket percentage increases applicable for FYs 2011 through 2013 to the FY 2010 reasonable cost amount described above to model the estimated FY 2013 reasonable cost amount under the demonstration. We proposed to use the IPPS market basket percentage increases because we believe that these update factors appropriately indicate the trend of increase in inpatient hospital operating costs under the reasonable cost methodology for the years involved. The 3-percent annual volume adjustment was stipulated last year by the CMS Office of the Actuary and was proposed because it is intended to accurately reflect the tendency of hospitals' inpatient caseloads to increase. We acknowledged the possibility that inpatient caseloads for small hospitals may fluctuate, and proposed to incorporate into the estimate of demonstration costs a factor to allow for a potential increase in inpatient hospital services.

Step 2: For each of the 23 hospitals, we proposed to identify the general estimated amount that would otherwise be paid in FY 2010 under applicable Medicare payment methodologies for covered inpatient hospital services (as indicated on the ''as submitted'' cost report for cost reporting periods ending in CY 2010) if the demonstration was not implemented. Similarly, as in Step 1, for the hospitals that provide swing-bed services, we proposed to identify the estimated amount that generally would otherwise be paid for these services (as indicated on the ''as submitted'' cost report for cost reporting periods ending in CY 2010) and include it in the total FY 2010 general estimated amount that would otherwise be paid for covered inpatient hospital services without the demonstration. We proposed to sum these two amounts in order to calculate the estimated FY 2010 total payments that generally would otherwise be paid for covered inpatient hospital services for all 23 hospitals without the demonstration.

We proposed to multiply the above amount (that is, the estimated FY 2010 total payments that generally would otherwise be paid for covered inpatient hospital services for all 23 hospitals without the demonstration) by the FYs 2011 through 2013 IPPS applicable percentage increases and a 3 percent annual volume adjustment for FYs 2011 through 2013, the result would be the general total estimated FY 2013 costs that would be paid without the

demonstration for covered inpatient hospital services for the 23 participating hospitals. In the proposed rule, we indicated that this methodology differs from Step 1, in which we proposed to apply the market basket percentage increases to the sum of the hospitals' general total FY 2010 estimated reasonable cost amount for covered inpatient hospital services. We believe that the IPPS applicable percentage increases are appropriate factors to update the estimated amounts that generally would otherwise be paid without the demonstration. This is because IPPS payments would constitute the majority of payments that would otherwise be made without the demonstration and the applicable percentage increase is the factor used under the IPPS to update the inpatient hospital payment rates. Hospitals participating in the demonstration would be participating under the IPPS payment methodology if they were not in the demonstration. We note that such use of the applicable percentage increase would represent a shift from formulations in previous years of the budget neutrality offset amount. In the FY 2013 proposed rule, as well as in this FY 2013 final rule, we are trying to increase the precision of the different projections for estimating the reasonable cost amounts and the estimated payments that would otherwise be paid without the demonstration.

Step 3: We proposed to subtract the amount derived in Step 2 (representing the sum of estimated amounts that generally would otherwise be paid to the 23 hospitals for covered inpatient hospital services for FY 2013 if the demonstration was not implemented) from the amount derived in Step 1 (representing the sum of the estimated reasonable cost amount that generally would be paid under the demonstration to all 23 hospitals for covered inpatient hospital services for FY 2013). We proposed that the resulting difference would be the amount for which an adjustment to the national IPPS rates would be calculated. In the proposed rule, we indicated the resulting difference was $35,077,708. For the FY 2013 IPPS/LTCH PPS proposed rule, this amount was the estimated amount for which an adjustment to the national IPPS rates was calculated. We further indicated this estimated amount was based on the specific assumptions indentified regarding the data sources that were used, that is, ''as submitted'' recently available cost reports.

We also noted that if updated data become available prior to the FY 2013 final rule, we propose to use them to the extent appropriate to estimate costs of the demonstration program in FY 2013. Therefore, we indicated that the estimated budget neutrality offset amount may change in the final rule.

Similar to previous years, we proposed that if settled cost reports for all of the demonstration hospitals that participated in the applicable fiscal year (FY 2007, 2008, 2009, or 2010) were available prior to the FY 2013 IPPS/LTCH PPS final rule, we would include in the budget neutrality offset amount any additional amounts by which the final settled costs of the demonstration for the year (FY 2007, 2008, 2009, or 2010) exceeded the budget neutrality offset amount applicable to such year as finalized in the respective year's IPPS final rule. (The final settled costs of the demonstration for a year would be calculated by subtracting the total amount that would otherwise be paid under the applicable Medicare payment system without the demonstration for the year from the amount paid to those hospitals under the reasonable-cost methodology for such year.)

For this FY 2013 final rule, we are adopting without modification our proposal to use the ''as submitted'' cost report for each hospital participating in the demonstration for the cost report period ending in CY 2010 in estimating the costs of the demonstration in FY 2010. We are finalizing this proposal because we continue to believe this approach enables us to streamline our methodology for calculating the budget neutrality offset amount as explained in detail above. In addition, this set of cost reports remains the most recent set of complete cost reports that have been accepted by the MACs. Therefore, we believe they are an accurate predictor of costs of the demonstration in FY 2013 because they give us a recent picture of the participating hospitals' costs.

For this final rule, we also are adopting as final, without modification, Steps 1 and 2 of the proposed methodology as set forth above for the reasons explained above and in section IV.K. of the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27994 and 27995). We note that, with respect to Step 1 of the methodology, the IPPS market basket percentage increase that is applicable to FY 2013 (and identified by the CMS Office of the Actuary) appears in section IV.H. of this preamble. We note that, with respect to Step 2 of the methodology, the IPPS applicable percentage increase that is applicable to FY 2013 is set forth in section IV.H. of the preamble to this FY 2013 final rule.

With respect to Step 3, for the reasons set forth above and in section IV.K. of the preamble of the proposed rule (77 FR 27994 and 27995) and this final rule, we are finalizing our proposal, without modification, to subtract the amount derived in Step 2 (representing the sum of estimated amounts that generally would otherwise be paid to the 23 hospitals for covered inpatient hospital services for FY 2013 if the demonstration was not implemented) from the amount derived in Step 1 (representing the sum of the estimated reasonable cost amount that generally would be paid under the demonstration to all 23 hospitals for covered inpatient hospital services for FY 2013). The resulting difference is the amount for which an adjustment to the national IPPS rates is calculated. For this final rule, the resulting difference for which an adjustment to the national IPPS rates is made is $34,288,129. This amount is based on the specific assumptions identified regarding the data sources that are used, that is, ''as submitted'' recently available cost reports. We note that we proposed that if settled cost reports for all of the demonstration hospitals that participated in the applicable fiscal year (FY 2007, 2008, 2009, or 2010) were available prior to the FY 2013 IPPS/LTCH PPS final rule, we would include in the budget neutrality offset amount any additional amounts by which the final settled costs of the demonstration for the year (FY 2007, 2008, 2009, or 2010) exceeded the budget neutrality offset amount applicable to such year as finalized in the respective year's IPPS final rule. However, finalized cost reports for the hospitals participating in the demonstration are not yet available for these years at the time of development of this FY 2013 IPPS/LTCH PPS final rule. Therefore, we are not finalizing this component of the proposed methodology. We are expecting settled cost reports for all of the demonstration hospitals that participated in the applicable fiscal year (FYs 2007, 2008, 2009, and 2010) to be available prior to the FY 2014 IPPS/LTCH PPS proposed rule. Thus, we expect to be in a position to propose to include in the budget neutrality offset amount for FY 2014 any additional amounts by which the final settled costs of the demonstration for the year (FY 2007, 2008, 2009, or 2010) exceeded the budget neutrality offset amount applicable to such year as finalized in the respective year's IPPS final rule.

Comment: One commenter requested clarification regarding how hospitals participating in the Rural Community Hospital Demonstration will be impacted by the Hospital Readmissions Reduction Program.

Response: As described above, the applicable hospital is defined as a

subsection (d) hospital or certain Maryland hospitals. Hospitals participating in the Rural Community Hospital Demonstration are subsection (d) hospitals and, thus, will be included in the Hospital Readmissions Reduction. Accordingly, we have calculated excess readmission ratios and readmissions payment adjustment factors for hospitals in the Demonstration. If hospitals in the Demonstration are subject to a readmissions payment reduction, the reduction will be applied to their base operating DRG amount as if they were paid under the IPPS. At cost report settlement, the readmissions payment amount reduced from the hospital's base operating DRG amount will be reduced from the payments received under the Demonstration.

L. Hospital Routine Services Furnished Under Arrangements

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51711 through 51714), we included a provision that limits the circumstances under which a hospital may furnish services to Medicare beneficiaries ''under arrangement.'' Under the revised policy, therapeutic and diagnostic services are the only services that may be furnished under arrangements outside of the hospital to Medicare beneficiaries. ''Routine services'' (that is, bed, board, and nursing and other related services) must be furnished by the hospital. Under this revised policy, routine services furnished to Medicare beneficiaries as inpatients in the hospital are considered services furnished by the hospital. If these services are furnished outside of the hospital, the services are considered to be furnished ''under arrangement.''

As we stated in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27995), we have become aware that a number of affected hospitals need additional time to restructure existing arrangements and establish necessary operational protocols to comply with the requirement that therapeutic and diagnostic services are the only services that may be furnished outside of the hospital to Medicare beneficiaries ''under arrangement,'' and that ''routine services'' must be furnished by the hospital. While we still believe that our policy is consistent with the statutory language, we also believe that because a number of hospitals are actively pursuing compliance (often building construction or restructuring is involved), it is appropriate to postpone the effective date of this requirement to give hospitals additional time to comply with the provision.

Therefore, in the FY 2013 IPPS/LTCH PPS proposed rule, we proposed to change the implementation date of this requirement to be effective for cost reporting periods beginning on or after October 1, 2013. We stated that we expect that, during FY 2013, hospitals will complete the work needed to ensure compliance with the new requirement. Beginning with a hospital's FY 2014 cost reporting period, we expect that all hospitals would be in full compliance with the revised policy for services furnished under arrangement. We indicated that we would continue to work with affected hospitals to communicate the requirement established by this provision, and to provide continued guidance regarding compliance with the provision.

Comment: Several commenters submitted comments that were mostly similar to those received last year when we proposed this policy. All commenters believed that another one year delay in the effective date of the revised policy was insufficient and that the policy should be rescinded. The primary objections from all commenters were that the policy is not required by statute or regulations, the policy runs counter to efforts promoting efficiency in delivering health care, and the costs that will be incurred by certain providers to comply with the new policy are unnecessary and burdensome.

Response: We continue to believe that the proposed policy is correct and consistent with the statute. As explained in more detail in our response to comments in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51712), we believe that when section 1862(a)(14) of the Act and section 1861(b) of the Act are read in conjunction with each other, it becomes clear that the language limits the services that may be furnished outside of the hospital under arrangement to only diagnostic and therapeutic services, consistent with our revised policy. It is only paragraph (3) of the definition of ''inpatient hospital services'' at section 1861(b) of the Act, referencing diagnostic or therapeutic items or services, that includes the language, ''furnished by the hospital or by others under arrangements.''

As we indicated in our response to similar public comments in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51713 through 51714), we do not agree that the positive objectives of interfacility cooperation and collaboration in promoting efficiency in the delivery of health care are applicable to the existing arrangements that our revised policy is intended to address. We do not believe that the objective of efficiency in health care delivery would include moving inpatients of one hospital to another hospital, without being discharged from the first and admitted to the second, in order to provide routine services that are not available at the first hospital.

We do not disagree that there may be additional costs incurred by some providers because of building construction or restructuring in order to comply with the proposed policy. However, to our knowledge, this involves very few providers, and to allow particular service arrangements that we find contrary to statute and regulations to continue because changing the arrangement would mean additional cost to a few providers is not an appropriate rationale to rescind this policy. Furthermore, while complying with the revised policy may necessitate expending additional funds for some of the commenters, those commenters are generally receiving higher Medicare payments as PPS-excluded providers by providing the routine services under arrangement, meaning such arrangements may inappropriately increase Medicare payments to those providers. In most cases that have come to our attention, the services are being provided at another hospital that is co-located with the hospital that is IPPS-excluded. If the hospitals are finding construction or restructuring costs too onerous, the hospital may want to consider becoming a unit of the IPPS hospital which would obviate the need for obtaining any services under arrangements from another hospital and may allow them to avoid the costs that they find burdensome.

Comment: Three of the PPS-excluded cancer hospitals, as well as the alliance representing the 11 PPS-excluded cancer hospitals, submitted comments more specific to their own situations. These commenters stated that CMS' proposed policy upset a longstanding care delivery model that was created at the direction of CMS, that CMS had given its express approval for the type of arrangements that it is now trying to disallow, and that CMS had ''required'' one of the hospitals to operate under this type of arrangement.

Response: CMS was involved, 15 to 20 years ago, at various times and to varying degrees, with three of the PPS-excluded cancer hospitals that wanted to ensure that they would retain their PPS-excluded status as they changed their physical and operational structures, to become hospitals-within-hospitals (HwH). Because two different payment systems are involved for the co-located hospitals, IPPS and reasonable cost subject to a limit, at the

time, we focused on preventing possible abuse of this arrangement. Some CMS requirements articulated at that time may appear to be contrary to our revised policy on services furnished under arrangements. However we have discretion to change our policy, and we believe this change is appropriate for the reasons described throughout this section and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51711 through 51714).

We believe the care delivery models that were carefully crafted years ago to protect against abuse of the payment systems and retain the separate identity of the HwHs have devolved over time to the point where the host hospital and PPS-excluded HwH are nearly indistinguishable from each other. Patients are moved from one hospital's bed to the other hospital's bed, and then back, not because of a particular service being provided, but because of bed availability or other reason unrelated to services. Patient care is administered by both entities or by the host hospital under contract. The PPS-excluded hospital has almost become a virtual hospital. Such arrangements do not merit special treatment under Medicare regulations. Moreover, as explained in more detail in a previous response in this section and in response to comments in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51711 through 51714), our revised policy is consistent with the statute and reduces the opportunity for gaming. To the extent the PPS-excluded cancer hospital and the subsection (d) hospital with which it is co-located wish to retain their separate classifications, compliance with these requirements remains necessary and appropriate. To the extent that PPS excluded cancer hospitals are finding construction or restructuring costs too onerous, the hospitals may want to consider becoming one provider with the subsection (d) IPPS hospital.

Comment: The cancer hospitals and the cancer hospital alliance reiterated comments they made on last year's proposed rule (FY 2012 IPPS/LTCH PPS final rule (76 FR 51713 through 51714) that CMS' proposed policy is more expensive to the Medicare program because it would result in more hospital discharges—the cancer hospital would have to discharge patients that need ICU services, the patient would then be admitted to the co-located hospital for the ICU services, discharged from the co-located hospital once ICU services are no longer needed, and then readmitted back to the cancer hospital. The commenters believed that this would be more costly, in the aggregate, to the Medicare program.

Response: We do not know that our revised policy will be more costly to the Medicare program, because although Medicare would be paying the IPPS hospital under the IPPS for the ICU services, it would not be paying the cancer hospital for those services based on reasonable cost. As explained in the FY 2012 IPPS/LTCH PPS final rule, some hospitals were furnishing certain routine services, including ICU services, under arrangement. For example, under certain arrangements, if an inpatient of an IPPS-excluded hospital (''hospital A'') required ICU services, and the IPPS-excluded hospital could not provide these services, the patient was moved to an IPPS hospital (''hospital B'') that could furnish these ICU services. In these situations, the patient was not transferred to hospital B but was moved from an inpatient bed of hospital A to an inpatient bed of hospital B. However, the IPPS-excluded hospital treated these services as being provided under arrangement and included the cost of those services on its cost report. Because the two hospitals in the example above are under two different payment systems, we believe this behavior could lead to inappropriate and excessive Medicare payment. This is because the IPPS-excluded hospital, hospital A, is paid on a reasonable cost basis. This payment could be greater than if the hospital that provided the service were paid under the IPPS for the same patient.

Comment: The cancer hospitals and the cancer hospital alliance also expressed concern that if patients needing ICU services had to be discharged and admitted as described above, it could inflate the readmission rates.

Response: We do not believe that a hospital's readmission rates under the Hospital Readmissions Reduction Program would be affected by this policy for several reasons. Cancer hospitals are not included in the Program so admissions and readmissions to cancer hospitals are not included in an IPPS hospital's readmission rate. Furthermore, transfers to other providers are not included in the calculations of excess readmissions. Each of the measures used in the Hospital Readmissions Reduction Program has exclusions for transfers to other hospitals. Finally, currently, we are only measuring readmissions for heart attack, heart failure, and pneumonia.

Comment: Commenters requested that CMS adopt a grandfathering provision to allow hospitals that have been furnishing routine services under arrangements outside of the hospital to continue furnishing these services in this manner. Cancer hospitals requested that, if the policy is not rescinded, a grandfathering provision be implemented that allows existing arrangements to continue, or provides an exception for cancer hospitals.

Response: We do not believe it is appropriate to adopt a grandfathering provision. We are concerned that, without this policy change, Medicare will continue to pay inappropriately for these services. That is, payment to IPPS hospitals should be based on the DRG payment amount, and payment to excluded hospitals should not be based in part on the costs of routine services that the hospital has not furnished directly to its patients.

After consideration of the public comments and for the reasons set forth above, we are finalizing our proposal to change the effective date of the revised policy. Therefore, effective for cost reporting periods beginning on or after October 1, 2013, routine services provided in the hospital to its inpatients are considered as being provided by the hospital. However, if services are provided outside the hospital, the services are considered as being provided under arrangement. Only therapeutic and diagnostic items and services may be furnished under arrangement outside of the hospital.

M. Technical Change

In an interim final rule that appeared in the November 27, 2007 **Federal Register** (72 FR 66895 through 66897), we made changes to the regulations governing the application of the emergency Medicare GME affiliation agreement rules in order to address the needs of hospitals located in the section 1135 emergency area in the aftermath of Hurricane Katrina and Rita. In that rule, we changed the length of emergency affiliation agreements from 3 years to 5 years under 42 CFR 413.79(f)(7) (then § 413.79(f)(6)); that is, we specified that the emergency Medicare GME affiliation agreement must terminate no later than the conclusion of 4 academic years following the academic year during which the section 1135 emergency period began. However, we inadvertently did not make a conforming change to 42 CFR 413.79(f)(7)(i)(B). In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27995), we proposed to change the regulatory text specified § 413.79(f)(7)(i)(B) to make it consistent with the regulatory text under § 413.79(f)(7).

We did not receive any public changes on the proposed technical changes. Therefore, in this final rule, we

are adopting the proposed changes as final.

V. Changes to the IPPS for Capital-Related Costs

A. Overview

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient acute hospital services ''in accordance with a prospective payment system established by the Secretary.'' Under the statute, the Secretary has broad authority in establishing and implementing the IPPS for acute care hospital inpatient capital-related costs. The IPPS for capital-related costs was initially implemented in the Federal fiscal year (FY) 1992 IPPS final rule (56 FR 43358), in which we established a 10-year transition period to change the payment methodology for Medicare hospital inpatient capital-related costs from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

FY 2001 was the last year of the 10-year transition period established to phase in the IPPS for hospital inpatient capital-related costs. For cost reporting periods beginning in FY 2002, capital IPPS payments are based solely on the Federal rate for almost all acute care hospitals (other than hospitals receiving certain exception payments and certain new hospitals). (We refer readers to the FY 2002 IPPS final rule (66 FR 39910 through 39914) for additional information on the methodology used to determine capital IPPS payments to hospitals both during and after the transition period.)

The basic methodology for determining capital prospective payments using the Federal rate is set forth in § 412.312 of the regulations. For the purpose of calculating capital payments for each discharge, the standard Federal rate is adjusted as follows:
