suggesting that in the 60-day notice, the Department incorrectly calculated the burden estimates associated with the instrument “Chemical-terrorism Vulnerability Information Tracking Log.” The commenter assumed that the number of responses per respondent for this instrument was one. In fact, the Department estimated in the current Information Collection, which expires on March 31, 2013, that each respondent will on average respond 12 times. This assumption was carried over into the burden estimates used by the Department in the 60-day notice but not made explicit. The total annual burden for this instrument is calculated as follows [0.0833 hours (five minutes) × 30,000 respondents × 12 responses per respondent], which equals 29,988 hours. The rounded estimate is 30,000 hours. The Department did not revise the burden estimates for this instrument. Therefore, for this instrument and the other instruments in this 30-day notice the Department will continue to rely on the analysis and resulting burden estimates in the 60-day notice.
