have not tried tobacco but are most at risk of initiation.

3. **Youth Rural Smokeless Copy Testing:** The study will be designed to obtain insights into potential effectiveness and unintended consequences of advertisements designed to target general market youth ages 12–15 who reside in rural areas, with a focus on males at risk of smokeless tobacco initiation.

In each study, each study participant will view a maximum of two rough cut tobacco prevention advertisements. After reviewing the advertisements, each participant will respond to questions traditionally used in formative testing of advertisements to assess his or her receptivity to the advertisements. Study data will be used to refine rough-cut television advertisements prior to campaign launch. The study data will be collected from participants of an Internet panel.

FDA’s burden estimate is based on prior experience with Internet panel studies similar to the Agency’s plan presented in this document. To obtain the target number of completed surveys (“completes”) for the Youth Experimenter Copy Testing, 3,600 youth respondents and their parent or legal guardian will be contacted through a screening and consent process. The estimated burden per response for the screening and consent is 5 minutes (0.083 hours) per respondent, for a total of 300 hours. An estimated 1,200 youth respondents will then complete the copy test survey. The estimated burden per response is 10 minutes (0.17 hours) for the Youth Experimenter Copy Testing survey, for a total of 200 hours.

To obtain the target number of completes for the Youth Non-Trier Copy Testing, 1,800 youth respondents and their parent or legal guardian will be contacted through a screening and consent process. The estimated burden per response for screening and consent is 5 minutes (0.083 hours) per respondent, for a total of 150 hours. An estimated 600 youth respondents will then complete the copy test survey. The estimated burden per response is 10 minutes (0.17 hours) for the Youth Rural Smokeless Copy Testing survey, for a total of 100 hours.

The target number of completed copy testing surveys for all respondents is 2,400. The total estimated burden is 1,000 hours.
