transmitters (including batteries) and wastewater. All of these wastes would be handled in accordance with the Protocol on Environmental Protection to the Antarctic Treaty and would be disposed of properly.

Now the applicant proposes a modification to his permit to allow for deploying up to 10 cameras to monitor the penguin colonies. The cameras would be deployed for the duration of the permit, including the intervening winter seasons. The cameras would allow for year-round time lapse photographic monitoring and research. The cameras are powered by 12 lithium ion AA batteries and would be mounted on aluminum poles; the poles would be anchored at ground level in a simple rock-basket enclosed in wire mesh. Additionally, the applicant plans to deploy up to two (2) custom made time-lapse systems developed by the Australian Antarctic Division. These systems are solar powered 35mm Canon digital SLRs, housed in modified Pelican cases and mounted on sturdy tripods with ground-level rock anchors. The surface anchors for both systems are designed to minimize disturbance on shallow soils near penguin colonies.

Each system would be maintained, repositioned, replaced, and/or removed, from the field, as necessary, to continue providing high-quality images of penguin colonies for periods up to 12 months. Cameras would be completely removed from the area upon permit expiration unless a renewal for their continued use is granted.

Successful deployment of the cameras would allow research on the penguin colonies to continue in the absence of researchers at the campsite.
