five new measures. The proposed new measures include one new outcome measure evaluating transfusions in the ESRD population, one measure on pediatric peritoneal dialysis adequacy,

one measure on pain assessment, one measure on clinical depression screening, and one measure on healthcare personnel influenza vaccination (see Table 28).

TABLE 28—NEW MEASURES PROPOSED FOR THE PY 2018 ESRD QIP

NQF#	Measure title
N/A	Pediatric Peritoneal Dialysis Adequacy, a clinical measure.
0258	Percentage of pediatric peritoneal dialysis patient-months with spKt/V greater than or equal to 1.8 (dialytic + residual). In-Center Hemodialysis Consumer Assessment of Providers and Systems Survey, ¹ a clinical measure.
N/A	Proportion of responses to rating items grouped into three composite measures and three global ratings. Standardized Transfusion Ratio, a clinical measure.
N/A ²	Risk-adjusted standardized transfusion ratio for dialysis facility patients. Pain Assessment and Follow-Up, a reporting measure.
N/A ³	Percentage of adult patients with documentation of pain assessment through discussion with the patient including the use of a standardized tool(s) on each visit and documentation of a follow-up place when pain is present. Depression Screening and Follow-Up, a reporting measure.
N/A ⁴	Percentage of adult patients screened for clinical depression using a standardized tool and follow-up plan is documented. NHSN Healthcare Personnel Influenza Vaccination, a reporting measure.

¹ The proposed dimensions of the ICH CAHPS survey for use in the PY 2018 ESRD QIP are: Nephrologists' Communication and Caring, Quality of Dialysis Center Care and Operations, Providing Information to Patients, Overall Rating of the Nephrologists, Overall Rating of the Dialysis Center Staff, and Overall Rating of the Dialysis Facility.

² We note that the NQF has previously endorsed a pain measure (NQF #0420) upon which this measure is based.

³ We note that the NQF has previously endorsed a depression measure (NQF #0418) upon which this measure is based.

⁴ We note that the NQF has previously endorsed a vaccination measure (NQF #0431) upon which this measure is based.

a. Proposed Standardized Transfusion Ratio (STrR) Clinical Measure Background

We are concerned that the inclusion of erythropoiesis-stimulating agents (ESAs) in the ESRD PPS and the removal of the Hemoglobin Less than 10 g/dL clinical measure from the ESRD QIP measure set could result in the underutilization of ESAs to manage anemia in ESRD patients, with the result that these patients have lower achieved hemoglobin levels and more frequently need red-blood-cell transfusions.

In addition, patients with ESRD who are eligible to receive a kidney transplant and are transfused risk becoming sensitized to the donor pool, thereby making it less likely that a transplant will be successful. Blood transfusions also carry a small risk of transmitting blood-borne infections to the patient, and the patient could additionally develop a transfusion reaction. Furthermore, using infusion centers or hospitals to transfuse patients is expensive, inconvenient, and could compromise future vascular access.

Overview of Measure

The Standardized Transfusion Ratio (STrR) for all adult Medicare ESRD patients is a ratio of the number of observed eligible blood transfusion events occurring in patients dialyzing at a facility to the number of eligible transfusions that would be expected from a predictive model that accounts for patient characteristics within each

facility. Eligible transfusions are those that do not have any claims pertaining to the comorbidities identified for exclusion in the 12 months immediately prior to the transfusion date.

We plan to submit the STrR measure to NQF for review at the next available call for measures. Section 1881(h)(2)(B)(i) of the Act requires that, unless the exception set forth in section 1881(h)(2)(B)(ii) of the Act applies, the measures specified for the ESRD QIP under section 1881(h)(2)(A)(iv) of the Act must have been endorsed by the entity with a contract under section 1890(a) of the Act (which is currently NQF). Under the exception set forth in section 1881(h)(2)(B)(ii) of the Act, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed, so long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

We have given due consideration to endorsed measures, as well as those adopted by a consensus organization, and we are proposing this measure under the authority of 1881(h)(2)(B)(ii) of the Act. NQF has not endorsed and a consensus organization has not adopted a measure on transfusions. Because the proposed STrR measure has the potential to decrease transfusions resulting from underutilization of

anemia medications, we believe it is appropriate to adopt the STrR in the PY 2018 ESRD QIP. We considered proposing to adopt the measure for the PY 2017, but we recognized that this is a new measure, and wanted to give facilities more time to familiarize themselves with it. The Measure Application Partnership, in its February 1, 2013 Pre-Rulemaking Report, supported the direction of the measure, stating that it “addresses an important concept, but the establishment of guidelines for hemoglobin range is needed.” We have received public comments and input from a TEP that we convened on a prototype STrR measure, and finalized development of the proposed STrR measure in September 2013. The resulting measure specifications did not include hemoglobin thresholds, as no input from the TEP or public comments supported moving forward with thresholds included in the measure. We therefore believe these efforts meet the requirements for further development of the STrR prior to implementation in the ESRD QIP.

In the process of preparing to submit the measure for NQF review, we conducted analyses on the reliability of the STrR measure. The full analysis is available at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html. The STrR is not a simple average; instead, we estimate the IUR using a bootstrap approach, which uses a resampling

scheme to estimate the within facility variation that cannot be directly estimated by ANOVA. A small IUR (near 0) reveals that most of the variation of the measures between facilities is driven by “random noise,” indicating the measure would not be a reliable characterization of the differences among facilities, whereas a large IUR (near 1) indicates that most of the variation between facilities is due to the real difference between facilities. We have determined that the average IUR for the STrR measure is 0.54, meaning that about half of the variation in the measure can be attributed to between-facility differences, and about half to within-facility variation. This value of IUR indicates a moderate degree of reliability and is consistent with the reliability of other outcome measures in CMS quality reporting and VBP programs. We therefore believe that facilities can be reliably scored on the proposed STrR measure.

Data Sources

Data for the measure come from various CMS-maintained data sources for ESRD patients including Program Medical Management and Information System (PMMIS/REMIS), Medicare claims, the CROWNWeb database, the CMS Annual Facility Survey (Form CMS-2744), Medicare dialysis and hospital payment records, the CMS Medical Evidence Form (Form CMS-2728), transplant data from the OPTN, the Death Notification Form (Form CMS-2746), the Nursing Home Minimum Dataset, and the Social Security Death Master File. These data sources include all Medicare patients. Information on transfusions is obtained from Medicare Inpatient and Outpatient Claims SAFs.

Outcome

The outcome of interest for the STrR is blood transfusion events (defined as the transfer of one or more units of blood or blood products into the recipient’s blood stream) among Medicare ESRD patients dialyzing at the facility during the inclusion time periods.

Cohort

The cohort for the STrR includes all adult Medicare ESRD dialysis patients who have been documented as having had ESRD for at least 90 days.

Inclusion and Exclusion Criteria

Patients will not be included in the STrR during the first 90 days of ESRD dialysis treatment. Starting with day 91 after onset of ESRD, a patient is attributed to a facility once he or she has been receiving dialysis there for 60 days. When a patient transfers from one facility to another, we are proposing that the patient would continue to be attributed to the original facility for 60 days from the date of the transfer. Starting on day 61, the patient would be attributed to the transferee facility. Patients would be excluded from the measure for three days prior to the date they receive a transplant to avoid including transfusions associated with the transplant hospitalization.

We are also proposing to require that patients reach a certain level of Medicare-paid dialysis bills to be included in the STrR, or that patients have Medicare-paid inpatient claims during the period. This requirement is intended to assure completeness of transfusion information for all patients included in the measure calculation by excluding non-Medicare patients and patients for whom Medicare is a secondary payer, because they are not expected to have complete information on transfusion available in the claims data. For each patient, a month is included as a month at risk for transfusion if that month in the period is considered “eligible.” A month is considered eligible if it is within two months of a month in which a patient has \$900 of Medicare-paid claims or at least one Medicare-paid inpatient claim. The \$900 amount represents approximately the tenth percentile of monthly dialysis claims per patient.

In addition, a transfusion event is eligible for inclusion in the STrR measure if the patient did not present with certain comorbid conditions during the 12 month period immediately prior to the date of the transfusion event. We are proposing to exclude these transfusion events

because the identified comorbid conditions are associated with a higher risk of transfusion and require different anemia management practices that the measure is not intended to address. Specifically, we are proposing that a transfusion event will be excluded from the measure if the patient, during the 12 month look back period, had a Medicare claim for: hemolytic and aplastic anemia; solid organ cancer (breast, prostate, lung, digestive tract and others); lymphoma; carcinoma in situ; coagulation disorders; multiple myeloma; myelodysplastic syndrome and myelofibrosis; leukemia; head and neck cancer; other cancers (connective tissue, skin, and others); metastatic cancer; or sickle cell anemia. The specific diagnoses used to identify each of these conditions are listed in the proposed measure specifications, which are available at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

Risk Adjustment

The denominator of the STrR uses expected transfusions calculated from a Cox model that is extended to handle repeated events. For computational purposes, the proposed STrR measure adopts a model with piecewise-constant baseline rates. A stage 1 model is fitted to the national data with piecewise-constant baseline rates across facilities. Transfusion rates are adjusted for: patient age; diabetes as a cause of ESRD; duration of ESRD; nursing home status; BMI at incidence; comorbidity index at incidence; and calendar year. This model allows baseline transfusion rates to vary between facilities, and applies the regression coefficients for the risk-adjustment model to each facility identically. This approach is robust to possible differences between facilities in the patient mix being treated. The second stage uses the risk-adjustment factor from the first stage as an offset. The stage 2 model then calculates the national baseline transfusion rate.

The STrR measure includes the following risk adjustors, which are obtained from the following data sources:

Risk adjustor	Data source
Age	REMIS database.
Diabetes as cause of ESRD	CMS Form 2728.
BMI at incidence of ESRD	CMS Form 2728.
Comorbidity index	CMS Form 2728.
Nursing home status	Nursing Home Minimum Dataset.
Duration of ESRD	CMS Form 2728.

More details on the risk-adjustment calculations, and the rationale for selecting these risk adjusters and not others, can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

As indicated in the table above, the proposed STrR measure risk adjusts predominantly on the basis of patient characteristics collected on CMS Form 2728, and we believe that this risk-adjustment methodology is reliable and valid.

NQF evaluates measures on the basis of four criteria: importance, scientific acceptability, feasibility, and usability. The validity and reliability of a measure's risk-adjustment calculations fall under the "scientific acceptability" criterion, and Measure Evaluation Criterion 2b4 specifies NQF's preferred approach for risk adjusting outcome measures (http://www.qualityforum.org/docs/measure_evaluation_criteria.aspx#scientific). This criterion states that patient comorbidities should only be included in risk-adjustment calculations if they are (1) present at the start of care and (2) not indicative of disparities or deficiencies in the quality of care provided. As indicated in the "Inclusion and Exclusion Criteria" subsection above, the proposed STrR clinical measure includes Medicare patients who have been documented as having had ESRD for at least 90 days and are not excluded for other reasons. Accordingly, we believe that NQF Measure Evaluation Criterion 2b4 supports risk-adjusting the proposed STrR measure on the basis of incident patient comorbidity data collected on CMS Form 2728, because these comorbidities are likely present at the start of care. Moreover, comorbidities that develop after the 90th day of chronic dialysis treatment, and are statistically associated with transfusions, can be reflective of the quality of care provided by the facility. Therefore, we do not believe that NQF Measure Evaluation Criterion 2b4 supports risk adjusting the proposed STrR measure on the basis of updated comorbidity data, because doing so may mask disparities or deficiencies in the quality of care provided, thereby obscuring assessments of facility performance. For these reasons, we believe that the risk-adjustment methodology for the proposed STrR measure is consistent with NQF guidelines for measure developers. Testing that we have undertaken has confirmed the validity and reliability of the proposed STrR measure using these data. We anticipate submitting the

measure to the NQF for endorsement in CY 2015.

Full documentation of the STrR risk-adjustment methodology is available at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

Calculating the STrR Measure

The STrR measure is calculated as the ratio of the number of observed transfusions to the number of expected transfusions. The ratio is greater than one for facilities that have more transfusions than would be expected for an average facility with similar cases, and less than one if the facility has fewer transfusions than would be expected for an average facility with similar cases. This ratio is calculated in terms of patient-years at risk. "Patient-year at risk" means that the denominator of the rate calculation is obtained by adding exposure times of all patients until a censoring event (that is, death, transplant, or end of the time period) because each patient's time at risk varies based on these censoring events. Time at risk is the time period in which each patient is eligible to have the transfusion event occur for the purposes of the measure calculation, exclusive of all days that have claims pertaining to the exclusionary comorbidities identified within the previous 12 months.

The predicted value from stage 1 of the model and the baseline rate from stage 2 of the model, as described above, are then used to calculate the expected number of transfusion events for each patient over the period during which the patient is seen to be at risk for a transfusion event.

The STrR is a point estimate—the best estimate of a facility's transfusion rate based on the facility's case mix. For more detailed information on the calculation methodology, please refer to our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

We seek comments on this proposal to adopt the proposed STrR clinical measure.

b. Proposal To Adopt the Pediatric Peritoneal Dialysis Adequacy Clinical Measure and Add the Proposed Measure to the Dialysis Adequacy Measure Topic

Section 1881(h)(2)(A)(i) states that the ESRD QIP must evaluate facilities based on measures of dialysis adequacy. Beginning with the PY 2018 ESRD QIP, we propose to add a new measure of pediatric peritoneal dialysis adequacy to the Dialysis Adequacy measure topic. If

this proposal is finalized, then the modified Dialysis Adequacy measure topic would include four clinical measures on dialysis adequacy—(1) Adult Hemodialysis Adequacy; (2) Adult Peritoneal Dialysis Adequacy; and (3) Pediatric Hemodialysis Adequacy; and (4) Pediatric Peritoneal Dialysis Adequacy.

Approximately 900 pediatric patients in the United States receive peritoneal dialysis.⁵ Although recent studies suggest improvement in mortality rates among pediatric patients receiving maintenance dialysis over time, mortality in this patient population remains high.⁶ Despite a lack of long-term outcome studies on pediatric peritoneal dialysis patients, outcome studies performed in the adult ESRD population have shown an association between the dose of peritoneal dialysis and clinical outcomes,⁷ which could suggest that improved quality of dialysis care in the fragile pediatric patient population may further improve survival in those patients.

Section 1881(h)(2)(A)(iv) gives the Secretary authority to adopt measures for the ESRD QIP that cover a wide variety of topics. Section 1881(h)(2)(B)(ii) of the Act states that "In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of Act [in this case NQF], the Secretary may specify a measure that is not so endorsed so long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary." We have given due consideration to endorsed measures, as well as those adopted by a consensus organization. Because no NQF-endorsed measures or measures adopted by a consensus organization on

pediatric peritoneal dialysis adequacy currently exist, we are proposing to adopt the Pediatric Peritoneal Dialysis Adequacy clinical measure under the authority of section 1881(h)(2)(B)(ii) of the Act.

The Measure Application Partnership expressed conditional support for measure XCBMM, “Pediatric Peritoneal Dialysis Adequacy: Achievement of Target Kt/V” in its January 2014 Pre-Rulemaking Report, noting it would “consider this measure for inclusion in the program once it has been reviewed for endorsement.” However, we believe the measure is ready for adoption in the ESRD QIP because it has been fully tested for reliability and has received consensus support from the TEP that was tasked with developing it. We intend to submit this measure to the NQF for endorsement in late 2014 or early 2015.

For PY 2018 and future payment years, we propose to adopt the Pediatric Peritoneal Dialysis Adequacy clinical measure, which assesses the percentage of eligible pediatric peritoneal dialysis patient-months in which a Kt/V of greater than or equal to 1.8 was achieved during the performance period. Qualifying patient-months are defined as months in which a peritoneal dialysis patient is under the age of 18 and has been receiving peritoneal dialysis treatment for 90 days or longer. Performance on this measure will be expressed as a proportion of patient-months meeting the measure threshold of 1.8, and the measure will be scored based on Kt/V data entered on Medicare 72x claims. The measure is a complement to the existing Kt/V dialysis adequacy measures previously adopted in the ESRD QIP. Technical specifications for the proposed pediatric peritoneal dialysis adequacy clinical measure can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

We seek comments on this proposal to adopt the Pediatric Peritoneal Dialysis Adequacy measure.

c. Proposed ICH CAHPS Clinical Measure

Section 1881(h)(2)(A)(ii) of the Act states that the Secretary shall specify, to the extent feasible, measures of patient satisfaction. Patients with ESRD are an extremely vulnerable population: They are completely reliant on ESRD providers for life-saving care, and they are often reluctant to express concerns about the care they receive from an array of staff, both professional and non-professional. Patient-centered

experience is an important measure of the quality of patient care, and it is a component of the 2013 NQS, which emphasizes patient-centered care by rating patient experience as a means for empowering patients and improving the quality of their care.

Following a rigorous process, the ICH CAHPS Survey was developed to capture the experience of in-center hemodialysis patients. The NQF endorsed and the Measures Application Partnership supported this quality measure (NQF #0258: CAHPS In-Center Hemodialysis Survey). The ICH CAHPS Survey captures the experience of in-center hemodialysis patients on three dimensions: “nephrologists’ communication and caring;” “quality of dialysis center care and operations;” and “providing information to patients.” Three global ratings are also part of the standardized ICH CAHPS Survey: Rating of the nephrologist; rating of the staff; and rating of the facility.

We believe that this measure enables patients to rate their experience of in-center dialysis treatment without fear of retribution. Public reporting of results from the ICH CAHPS survey, once enough data are available, will satisfy requests to provide consumers (patients and family members alike) with desired information on viewpoints from patients. In addition, collecting and reporting ICH CAHPS survey results assists facilities with their internal quality improvement efforts and external benchmarking with other facilities, and it provides CMS with information that can be used to monitor the experience of patients with ESRD.

Starting with the PY 2014 program, we have taken steps to develop the baseline data necessary to propose and implement NQF #0258 as a clinical measure in PY 2018. In the PY 2014 and PY 2015 programs, we adopted a reporting measure related to the ICH CAHPS survey, which required that facilities attest they had administered the survey according to the specifications set by the Agency for Healthcare Research and Quality (AHRQ). In the CY 2014 ESRD PPS final rule, we: (1) Expanded the ICH CAHPS reporting measure to require facilities to submit (via CMS-approved vendors) their survey results to CMS; (2) increased the patient minimum for the measure from 11 to 30 survey-eligible patients; (3) required that facilities (via CMS-approved vendors) administer the survey according to specifications set by CMS; and (4) required facilities (via CMS-approved vendors) to administer the survey twice during each performance period, and to report both

sets of survey results by the date specified on <http://ichcahps.org>, starting in PY 2017 (78 FR 72193 through 72196).

By CY 2016 (the proposed performance period for the PY 2018 ESRD QIP), we will have worked with dialysis facilities for four years to help them become familiar with the ICH CAHPS survey. By that time, we believe that facilities will be sufficiently versed in the survey administration process to be reliably evaluated on the NQF-endorsed ICH CAHPS measure (NQF #0258). Because facilities (and CMS-approved vendors) will be familiar enough with the ICH CAHPS survey instrument to be reliably scored on the basis of their survey results, we believe it is reasonable to expand the ICH CAHPS reporting measure into a clinical measure for the PY 2018 ESRD QIP.

For these reasons, and because a clinical measure would have a greater impact on clinical practice by holding facilities accountable for their actual performance, we propose to replace the ICH CAHPS reporting measure that we adopted in the CY 2014 ESRD PPS Final Rule with a new clinical measure for PY 2018 and future payment years. This proposed ICH CAHPS clinical measure is NQF #0258: CAHPS In-Center Hemodialysis Survey. We are not proposing to change the semiannual survey administration and reporting requirements. The proposed scoring methodology for the ICH CAHPS clinical measure is discussed below in section III.G.4.c. Technical specifications for the ICH CAHPS clinical measure can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

We seek comments on this proposal.

d. Proposed Screening for Clinical Depression and Follow-Up Reporting Measure

Depression is the most common psychological disorder in patients with ESRD. Depression causes suffering, a decrease in quality of life, and impairment in social and occupational functions; it is also associated with increased health care costs. Current estimates put the depression prevalence rate as high as 20 percent to 25 percent in patients with ESRD.⁸ Studies have also shown that depression and anxiety are the most common comorbid

⁸ Kimmel PL, Cuckor D, Cohen SD, Peterson RA. Depression in end-stage renal disease patients: a critical review. *Advances in Chronic Kidney Disease*. 2007;14(4):328–34.

illnesses in patients with ESRD.⁹ Moreover, depressive affect and decreased perception of social support have been associated with higher rates of mortality in the ESRD population, and some studies suggest that this association is as strong as that between medical risk factors and mortality.¹⁰ Nevertheless, depression and anxiety remain under-recognized and under-treated, despite the availability of reliable screening instruments.¹¹ Therefore, a measure that assesses whether facilities screen patients for depression, and develop follow-up plans when appropriate, offers an opportunity to improve the health of patients with ESRD.

We are proposing to adopt a depression measure that is based on an NQF-endorsed measure (NQF #0418: Screening for Clinical Depression). NQF #0418 assesses the percentage of patients screened for clinical depression using an age-appropriate standardized tool and documentation of a follow-up plan where necessary. The Measures Application Partnership supported the use of NQF #0418 in the ESRD QIP in its January 2014 Pre-Rulemaking Report, because the measure “addresses a National Quality Strategy [NQS] aim not adequately addressed in the program measure set” and promotes person- and family-centered care. We are proposing to adopt a reporting measure based on this NQF-endorsed measure so that we can collect data that we can use in the future to calculate both achievement and improvement scores, should we propose to adopt the clinical version of this measure in future rulemaking. Although we recognize that we recently adopted the NHSN Bloodstream Infection clinical measure despite a lack of baseline data to calculate achievement and improvement scores, we believe that measure warranted special treatment in light of the fact that it addresses patient safety. Because the

proposed screening for clinical depression measure addresses quality of life and patient well-being, and not patient safety, we think it is appropriate to adopt it as a reporting measure until such time that we can collect the baseline data needed to score it as a clinical measure.

Section 1881(h)(2)(B)(ii) of the Act states that “In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) [in this case NQF], the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.” Because we have given due consideration to endorsed measures as well as those adopted by a consensus organization and determined it is not practical or feasible to adopt NQF #0418 as a clinical measure in the ESRD QIP at this time, we are proposing to adopt the Screening for Clinical Depression and Follow-Up Plan reporting measure under the authority of section 1881(h)(2)(B)(ii) of the Act.

For PY 2018 and future payment years, we propose that facilities must report one of the following conditions in CROWNWeb, at least once per performance period, for each qualifying patient (defined below):

1. Screening for clinical depression is documented as being positive, and a follow-up plan is documented.

2. Screening for clinical depression documented as positive, and a follow-up plan not documented, and the facility possess documentation stating the patient is not eligible.

3. Screening for clinical depression documented as positive, the facility possesses no documentation of a follow-up plan, and no reason is given.

4. Screening for clinical depression is documented as negative, and a follow-up plan is not required.

5. Screening for clinical depression not documented, but the facility possesses documentation stating the patient is not eligible.

6. Clinical depression screening not documented, and no reason is given.

For this proposed measure, qualifying patients are defined as patients 12 years or older who have been treated at the facility for 90 days or longer. This proposed measure will collect the same data described in NQF #0418, but we are proposing to score facilities based on whether they successfully report the data, and not the measure results. More specifically, facilities will be scored on

whether they report one of the above conditions for each qualifying patient once before February 1 of the year directly following the performance period. Technical specifications for the Screening for Clinical Depression and Follow-Up reporting measure can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_Technical_Specifications.html.

We seek comments on these proposals.

e. Proposed Pain Assessment and Follow-Up Reporting Measure

Pain is one of the most common symptoms in patients with ESRD.¹² Studies have shown that pain is a significant problem for more than 50 percent of patients with ESRD, and up to 82 percent of those patients report moderate to severe chronic pain.¹³ Pain is commonly associated with quality of life in early- and late-stage chronic kidney disease patients, but it is not effectively managed in the ESRD patient population and chronic pain often goes untreated.¹⁴ Observational studies suggest that under-managed pain has the potential to induce or exacerbate comorbid conditions in ESRD, which may in turn adversely affect dialysis treatment.¹⁵ Patients with ESRD frequently experience pain that has a debilitating impact on their daily lives, and research has shown a lack of effective pain management strategies currently in place in dialysis facilities.¹⁶ Therefore, a measure that assesses whether facilities regularly assess their patients' pain, and develop follow-up plans as necessary, offers the possibility

of improving the health and well-being of patients with ESRD.

We are proposing to adopt a pain measure that is based on an NQF-endorsed measure (NQF #0420: Pain Assessment and Follow-Up). NQF #0420 assesses the percentage of patients with documentation of a pain assessment using a standardized tool, and documentation of a follow-up plan when pain is present. The Measures Application Partnership supported the use of NQF #0420 in the ESRD QIP in its January 2014 Pre-Rulemaking Report, because the measure “addresses a National Quality Strategy [NQS] aim not adequately addressed in the program measure set” and promotes person- and family-centered care. We are proposing to adopt a reporting measure based on this NQF-endorsed measure so that we can collect data that we can use in the future to calculate both achievement and improvement scores, should we propose to adopt the clinical version of this measure in future rulemaking. Although we recognize that we recently adopted the NHSN Bloodstream Infection clinical measure despite a lack of baseline data to calculate achievement and improvement scores, we believe that measure warranted special treatment in light of the fact that it addresses patient safety. Because the proposed screening for pain measure addresses quality of life and patient well-being, and not patient safety, we think it is appropriate to adopt it as a reporting measure until such time that we can collect the baseline data needed to score it as a clinical measure.

Section 1881(h)(2)(B)(ii) of the Act states that “In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act [in this case NQF], the Secretary may specify a measure that is not so endorsed so long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.” Because we have given due consideration to endorsed measures, as well as those adopted by a consensus organization, and determined it is not practical or feasible to adopt those measures in the ESRD QIP, we are proposing to adopt the Pain Assessment and Follow-Up reporting measure under the authority of section 1881(h)(2)(B)(ii) of the Act.

For PY 2018 and future payment years, we propose that facilities must report one of the following conditions in CROWNWeb, once every six months per

performance period, for each qualifying patient (defined below):

1. Pain assessment using a standardized tool is documented as positive, and a follow-up plan is documented.
2. Pain assessment documented as positive, a follow-up plan is not documented, and the facility possesses documentation that the patient is not eligible.
3. Pain assessment documented as positive using a standardized tool, a follow-up plan is not documented, and no reason is given.
4. Pain assessment using a standardized tool is documented as negative, and no follow-up plan required.
5. No documentation of pain assessment, and the facility possesses documentation the patient is not eligible for a pain assessment using a standardized tool.
6. No documentation of pain assessment, and no reason is given.

For this measure, a qualifying patient is defined as a patient aged 18 years or older who has been treated at the facility for 90 days or longer. This proposed measure will collect the same data described in NQF #0420, but we are proposing a few modifications to the NQF-endorsed version. First, we are proposing that facilities must report data for each patient once every six months, whereas NQF #0420 requires facilities to report the data based on each visit. We are proposing this modification because we agree with public comments reflected on the Measures Application Partnership’s January 2014 Pre-Rulemaking Report, which stated that conducting a pain assessment every time a patient receives dialysis would be unduly burdensome for facilities. Second, we are proposing that conditions covering the first six months of the performance period must be reported in CROWNWeb before August 1 of the performance period, and that conditions covering the second six months of the performance period must be reported in CROWNWeb before February 1 of the year directly following the performance period. We believe this reporting schedule will ensure regular monitoring and follow-up of patients’ pain without imposing an undue burden on facilities. Third, we are proposing to score facilities based on whether they successfully report the data, and not based on the measure results. Technical specifications for the Pain Assessment and Follow-Up reporting measure can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

We seek comments on this proposal.

f. Proposed NHSN Healthcare Personnel Influenza Vaccination Reporting Measure

Infection is the second most common cause of death in patients with ESRD, following cardiovascular causes,¹⁷ and influenza accounts for significant morbidity and mortality in patients receiving hemodialysis.¹⁸ Healthcare personnel (HCP) can acquire influenza from patients and transmit influenza to patients and other HCP; decreasing transmission of influenza from HCP to persons at high risk likely reduces influenza-related deaths among persons at high risk for complications from influenza, including patients with ESRD.¹⁹ Vaccination is an effective preventive measure against influenza that can prevent many illnesses, deaths, and losses in productivity.²⁰ In addition, HCP are considered high priorities for vaccine use. Achieving and sustaining high influenza vaccination coverage among HCP is intended to help protect HCP and their patients, and to reduce disease burden and healthcare costs. Results of studies in post-acute care settings similar to the ESRD facility setting indicate that higher vaccination coverage among HCP is associated with lower all-cause mortality.²¹ We therefore propose to adopt an NHSN HCP Influenza Vaccination reporting measure for PY 2018 and future payment years.

We are proposing to use a measure that is based on an NQF-endorsed measure (NQF #0431: Influenza Vaccination Coverage Among Healthcare Personnel) of the percentage of qualifying HCP who (a) received an influenza vaccination; (b) were determined to have a medical

contraindication; (c) declined influenza vaccination; or (d) were of an unknown vaccination status. A “qualifying HCP” is defined as an employee, licensed independent practitioner, or adult student/trainee/volunteer who works in a facility for at least one day between October 1 and March 31. The Measures Application Partnership supported the use of NQF #0431 in the ESRD QIP in its January 2014 Pre-Rulemaking Report because the measure is NQF-endorsed for use in the dialysis facility care setting. We are proposing to adopt a reporting measure based on this NQF-endorsed measure so that we can collect data that we can use in the future to calculate both achievement and improvement scores, should we propose to adopt the clinical version of this measure in future rulemaking. Although we recognize that we recently adopted the NHSN Bloodstream Infection clinical measure despite a lack of baseline data to calculate achievement and improvement scores, we believe that measure warranted special treatment in light of the fact that it addresses patient safety. Because the proposed NHSN HCP Influenza Vaccination reporting measure addresses population health, and not patient safety, we think it is appropriate to adopt it as a reporting measure until such time that we can collect the

baseline data needed to score it as a clinical measure.

Section 1881(h)(2)(B)(ii) of the Act states that “In the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) [in this case, NQF], the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.” Because we have given due consideration to endorsed measures as well as those adopted by a consensus organization, and determined it is not practical or feasible to adopt this measure in the ESRD QIP, we are proposing to adopt the NHSN Healthcare Personnel Influenza Vaccination reporting measure under the authority of section 1881(h)(2)(B)(ii) of the Act.

For PY 2018 and future payment years, we propose that facilities must submit, on an annual basis, an HCP Influenza Vaccination Summary Form to CDC’s NHSN system, according to the specifications available in the NHSN Healthcare Personnel Safety Component Protocol (<http://www.cdc.gov/nhsn/PDFs/HPS-manual/vaccination/HPS-flu-vaccine-protocol.pdf>). This proposed

measure differs from NQF #0431 in that we are proposing to collect the same data but will score facilities on the basis of whether they submit this data, rather than on the percentage of HCP vaccinated. We propose that the deadline for reporting this information to NHSN be May 15th of each year. This date is consistent with the reporting deadline established by CMS for other provider types reporting HCP vaccination data to NHSN. Because the flu season typically spans from October to April, NHSN protocols submitted by May 15 would document vaccinations received during the preceding flu season. For example, NHSN HCP Influenza Vaccination Summary Forms submitted by May 15, 2016, would contain data from October 1, 2015 to March 31, 2016, and would be used for the PY 2018 ESRD QIP; NHSN protocols submitted by May 15, 2017, would contain data from October 1, 2016 to March 31, 2017, and would be used for the PY 2019 ESRD QIP, and so on. Technical specifications for this measure can be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html.

We request comments on this proposal.

Figure 2: Summary of Proposed PY 2018 Measures

★ New measure for PY 2018	
Clinical Measures	
	1. Vascular Access Type Measure Topic – AVF
	2. Vascular Access Type Measure Topic – Catheter ≥ 90 days
	3. Kt/V Dialysis Adequacy Measure Topic – Adult Hemodialysis
	4. Kt/V Dialysis Adequacy Measure Topic – Adult Peritoneal Dialysis
	5. Kt/V Dialysis Adequacy Measure Topic – Pediatric Hemodialysis
★	6. Kt/V Dialysis Adequacy Measure Topic – Pediatric Peritoneal Dialysis
	7. Hypercalcemia
	8. NHSN Bloodstream Infection in Hemodialysis Outpatients
	9. Standardized Readmission Ratio
★	10. Standardized Transfusion Ratio
★	11. ICH CAHPS Patient Experience of Care Survey
Reporting Measures	
	1. Mineral Metabolism
	2. Anemia Management
★	3. Clinical Depression Screening and Follow-Up
★	4. Pain Assessment and Follow-Up
★	5. NHSN Healthcare Personnel Influenza Vaccination

2. Proposed Performance Period for the PY 2018 ESRD QIP

Section 1881(h)(4)(D) of the Act requires the Secretary to establish the performance period with respect to a year, and that the performance period occur prior to the beginning of such year. In accordance with our proposal to adopt CY 2015 as the performance period for the PY 2017 ESRD QIP, as well as our policy goal to collect 12 months of data on each measure when feasible, we are proposing to adopt CY 2016 as the performance period for the PY 2018 ESRD QIP. With respect to the NHSN Healthcare Personnel Influenza Vaccination Reporting measure, we are proposing that the performance period will be from October 1, 2015 through March 31, 2016, which is consistent with the length of the 2015–2016 influenza season.

We seek comments on these proposals.

3. Proposed Performance Standards, Achievement Thresholds, and Benchmarks for the PY 2018 ESRD QIP

a. Proposed Performance Standards, Achievement Thresholds, and Benchmarks for the Clinical Measures in the PY 2018 ESRD QIP

For the same reasons stated in the CY 2013 ESRD PPS final rule (77 FR 67500 through 76502), we are proposing for PY

2018 to set the performance standards, achievement thresholds, and benchmarks based on the 50th, 15th, and 90th percentile, respectively, of national performance in CY 2014 for all the clinical measures except for the proposed ICH CAHPS clinical measure. As finalized in the CY 2014 ESRD PPS Final Rule (78 FR 72213), facilities are not required to administer the ICH CAHPS survey (via a CMS-approved third-party vendor) on a semiannual basis until CY 2015, the proposed performance period for the PY 2017 ESRD QIP. We believe that ICH CAHPS data collected during CY 2014 will not be reliable enough to use for the purposes of establishing performance standards, achievement thresholds, and benchmarks, because facilities are only required to administer the survey once in CY 2014. Therefore, we propose to set the performance standards, achievement thresholds, and benchmarks based on the 50th, 15th, and 90th percentile, respectively, of national performance in CY 2015 for the proposed ICH CAHPS clinical measure.

We seek comments on these proposals.

b. Estimated Performance Standards, Achievement Thresholds, and Benchmarks for the Clinical Measures Proposed for the PY 2018 ESRD QIP

At this time, we do not have the necessary data to assign numerical values to the proposed performance standards for the clinical measures, because we do not yet have data from CY 2014 or the first portion of CY 2015. We will publish values for the clinical measures, using data from CY 2014 and the first portion of CY 2015, in the CY 2016 ESRD PPS Final Rule.

c. Proposed Performance Standards for the PY 2018 Reporting Measures

In the CY 2014 ESRD PPS Final Rule, we finalized performance standards for the Anemia Management and Mineral Metabolism reporting measures (78 FR 72213). We are not proposing any changes to this policy beyond the proposal to modify the reporting requirements for the Mineral Metabolism reporting measure, which appears above in Section III.G.1.

For the Screening for Clinical Depression and Follow-Up reporting measure, we propose to set the performance standard as successfully reporting one of the above-listed clinical depression and follow-up screening conditions for each qualifying patient in CROWNWeb before the February 1st

directly following the performance period.

For the Pain Assessment and Follow-Up reporting measure, we propose to set the performance standard as successfully reporting one of the above-listed pain assessment and follow-up conditions for each qualifying patient in CROWNWeb twice annually: once before August 1st for the first 6 months of the performance period, and once before the February 1st directly following the performance period for the last six months of the performance period.

For the NHSN Healthcare Provider Influenza Vaccination reporting measure, we propose to set the performance standard as successfully submitting the HCP Influenza Vaccination Summary Form to CDC's NHSN system by May 15, 2017.

We seek comments on these proposals.

4. Proposal for Scoring the PY 2018 ESRD QIP Measures

a. Scoring Facility Performance on Clinical Measures Based on Achievement

In the CY 2014 ESRD PPS Final Rule, we finalized a policy for scoring performance on clinical measures based on achievement (78 FR 72215). In determining a facility's achievement score for each measure under the PY 2018 ESRD QIP, we propose to continue using this methodology for all clinical measures except the ICH CAHPS clinical measure. Under this methodology, facilities receive points along an achievement range based on their performance during the proposed performance period for each measure, which we define as a scale between the achievement threshold and the benchmark.

b. Scoring Facility Performance on Clinical Measures Based on Improvement

In the CY 2014 ESRD PPS Final Rule, we finalized a policy for scoring performance on clinical measures based on improvement (78 FR 72215 through 72216). In determining a facility's improvement score for each measure under the PY 2018 ESRD QIP, we propose to continue using this methodology for all clinical measures except the ICH CAHPS clinical measure. Under this methodology, facilities receive points along an improvement range, defined as a scale running between the improvement threshold and the benchmark. We propose to define the improvement threshold as the facility's performance on the measure

during CY 2015. The facility's improvement score would be calculated by comparing its performance on the measure during CY 2016 (the proposed performance period) to its performance rate on the measure during CY 2015.

c. Proposal for Scoring the ICH CAHPS Clinical Measure

For PY 2018 and future payment years, we propose the following scoring methodology for the ICH CAHPS clinical measure. We propose to score the measure on the basis of three composite measures and three global ratings.

Composite Measures:

- Nephrologists' Communication and Caring;
 - Quality of Dialysis Center Care and Operations; and
 - Providing Information to Patients.
- Global Ratings:
- Overall rating of the nephrologists (Question 8)
 - Overall rating of the dialysis center staff (Question 32)
 - Overall rating of the dialysis facility (Question 35)

The composite measures are groupings of questions that measure the same dimension of healthcare. (Groupings of questions and composite measures can be found at https://ichcahps.org/Portals/0/ICH_Composites_English.pdf.) Global ratings questions employ a scale of 0 to 10, worst to best; each of the questions within a composite measure use either "Yes" or "No" responses, or response categories ranging from "Never" to "Always," to assess the patient's experience of care at a facility. Facility performance on each composite measure will be determined by the percent of patients who choose "top-box" responses (i.e., most positive or "Always") to the ICH CAHPS survey questions in each domain. Examples of questions and top-box responses are displayed below:

Q11: In the last 3 months, how often did the dialysis center staff explain things in a way that was easy for you to understand?

Top-box response: "Always"

Q19: The dialysis center staff can connect you to the dialysis machine through a graft, fistula, or catheter. Do you know how to take care of your graft, fistula or catheter?

Top-box response: "Yes"

We propose that a facility will receive an achievement score and an improvement score for each of the composite measures and global ratings in the ICH CAHPS survey instrument. For purposes of calculating achievement scores for the ICH CAHPS clinical measure, we propose to base the score on where a facility's performance rate falls relative to the achievement

threshold and the benchmark for that measure. We propose that facilities will earn between 0 to 10 points for achievement based on where its performance for the measure falls relative to the achievement threshold. If a facility's performance rate during the performance period is:

- Equal to or greater than the benchmark, then the facility would receive 10 points for achievement;
- Less than the achievement threshold, then the facility would receive 0 points for achievement; or
- Equal to or greater than the achievement threshold, but below the benchmark, then the following formula would be used to derive the achievement score: $[9 * ((\text{Facility's performance period rate} - \text{achievement threshold}) / (\text{benchmark} - \text{achievement threshold})) + .5]$, with all scores rounded to the nearest integer, with half rounded up.

For the purposes of calculating improvement scores for the ICH CAHPS clinical measure, we propose that the improvement threshold will be defined as facility performance in CY 2015, and further propose to base the score on where a facility's performance rate falls relative to the improvement threshold and the benchmark for that measure. We propose that a facility can earn between 0 to 9 points based on how much its performance on the measure during the performance period improves from its performance on the measure during the baseline period. If a facility's performance rate during the performance period is:

- Less than the improvement threshold, then the facility would receive 0 points for improvement; or
- Equal to or greater than the improvement threshold, but below the benchmark, then the following formula would be used to derive the improvement score: $[10 * ((\text{Facility performance period rate} - \text{Improvement threshold}) / (\text{Benchmark} - \text{Improvement threshold})) - .5]$, with all scores rounded to the nearest integer, with half rounded up.

We further propose that a facility's ICH CAHPS score will be based on the higher of the facility's achievement or improvement score for each of the composite measures and global ratings. Additionally, we propose that achievement and/or improvement scores on the three composite measures and the three global ratings will be averaged together to yield an overall score on the ICH CAHPS clinical measure.

The timing and frequency of administering the ICH CAHPS survey is critical to obtaining reliable results. For

example, if a facility did not conduct two semiannual surveys during a given performance period, then patient experiences during the 6-month period(s) covered by the missed survey(s) would not be captured. Additionally, if facilities (via CMS-approved vendors) do not report their ICH CAHPS survey results to CMS, then these results cannot be taken into account when establishing national performance standards for the measure, thereby diminishing the measure's reliability. Because timely survey administration and data reporting is critical to reliably scoring ICH CAHPS as a clinical measure in the ESRD QIP, we propose that a facility will receive a score of 0 on the measure if it does not meet the survey administration and reporting requirements finalized in the CY 2014 ESRD PPS Final Rule (78 FR 72193 through 72196).

We seek comments on these proposals to score the ICH CAHPS clinical measure.

d. Proposals for Calculating Facility Performance on Reporting Measures

In the CY 2014 ESRD PPS Final Rule, we finalized policies for scoring performance on the Anemia Management and Mineral Metabolism reporting measures in the ESRD QIP (78 FR 72216). We are not proposing any changes to these policies beyond the proposals that were made beginning with the PY 2017 program, which appear in section III.F.7 above.

With respect to the Screening for Clinical Depression and Follow-up, Pain Assessment and Follow-Up, and NHSN Healthcare Provider Influenza Vaccination reporting measures, we propose that facilities will receive a score of 10 on the measures if they meet the proposed performance standards for the measures, and a score of 0 on the measure if they do not. We are proposing to score these reporting measures differently than the Anemia Management and Mineral Metabolism reporting measures because they require annual or semiannual reporting, and therefore scoring based on monthly reporting rates is not feasible.

We seek comments on these proposals.

5. Proposed Minimum Data for Scoring Measures for the PY 2018 ESRD QIP

With the following exceptions discussed below, we are not proposing to change the minimum data policies for the PY 2018 ESRD QIP from that proposed above for the PY 2017 ESRD QIP. We are also proposing that the 30 survey-eligible patient minimum during the eligibility period and 30 survey

complete minimum during the performance period that we proposed to adopt for the ICH CAHPS reporting measure will also apply to the ICH CAHPS clinical measure. We have determined that the ICH CAHPS survey is satisfactorily reliable when a facility obtains a total of at least 30 completed surveys during the performance period. Therefore, even if a facility meets the 30 survey-eligible patient minimum during the eligibility period and the survey administration and reporting requirements, if the facility is only able to obtain 29 or fewer survey completes during the performance period, the facility will not be eligible to receive a score on the ICH CAHPS clinical measure.

We further propose the facilities with fewer than 10 patient-years at risk will not be eligible to receive a score on the proposed STTr clinical measure. We considered adopting the 11-patient minimum requirement that we use for the other clinical measures. We decided, however, to base facilities' eligibility for the measure in terms of the number of patient-years at risk, because facility performance rates are based on the number of patient-years at risk, not the number of patients. Additionally, we decided to set the minimum data requirements at 10 patient-years at risk because, based on national average event rates, this is the time required to achieve an average of 5 transfusion events. The 5 expected transfusion events requirement translates to a standard deviation of approximately 0.45 if the facility has rates exactly corresponding to the national average. In addition, 10 patient-years at risk is the threshold used in the Dialysis Facility Compare program, and we believe that public-reporting and VBP programs for ESRD should adopt consistent measure specifications where feasible.

For the proposed STTr measure, we propose to apply the small-facility adjuster to facilities with 21 or fewer patient-years at risk. We decided to base the threshold for applying the small-facility adjuster on the number of patient-years at risk, because facility performance rates are based on the number of patient-years at risk, not the number of patients. We are proposing to set the threshold at 21 patient-years at risk, because we determined that this was the minimum number of patient-years at risk needed to achieve an IUR of 0.4 (that is, moderate reliability) for the proposed STTr measure. Because the small-facility adjuster gives facilities the benefit of the doubt when measure scores can be unduly influenced by a few outlier patients, we believe that

setting the threshold at 21 qualifying patient-years at risk will not unduly penalize facilities that treat small numbers of patients on the proposed STTr clinical measure.

With these exceptions, we are not proposing to change the policy, finalized most recently in the CY 2014 ESRD PPS Final Rule (78 FR 72220 through 72221), that facilities must have at least 11 qualifying patients for the entire performance period in order to be scored on a clinical measure.

We currently have a policy, most recently finalized in the CY 2014 ESRD PPS final rule (78 FR 72197 through 72198 and 72220 through 72221), to score facilities on reporting measures only if they have a minimum number of qualifying patients during the performance period. As discussed in Section III.F.7 above, we are proposing to modify the case minimum requirements for the Anemia Management and Mineral Metabolism reporting measures beginning with the PY 2017 ESRD QIP. We are not proposing any additional changes in the patient minimum requirements for the Anemia Management and Mineral Metabolism reporting measures in the PY 2018 program.

For the Screening for Clinical Depression and Follow-Up and the Pain Assessment and Follow-Up reporting measures, we propose a case minimum of one qualifying patient. We believe this patient minimum requirement will enable us to gather a sufficient amount of data to calculate future performance standards, benchmarks, and achievement thresholds, should we propose to adopt clinical versions of these measures in the future.

As discussed in Section III.G.2.f, we are not proposing that a facility will have to meet a patient minimum in order to receive a score on the NHSN Healthcare Provider Influenza Vaccination reporting measure. We believe it is standard practice for all HCP to receive influenza vaccinations and, as discussed above, HCP vaccination is likely to reduce influenza-related deaths and complications among the ESRD population. Accordingly, we are proposing that all facilities, regardless of patient population size, will be scored on the influenza vaccination measure.

Under our current policy, we begin counting the number of months for which a facility is open on the first day of the month after the facility's CCN open date. Only facilities with a CCN open date before July 1, 2016, are eligible to be scored on the Anemia Management and Mineral Metabolism reporting measures in the PY 2018

program. We are proposing to apply this finalized policy to the proposed Screening for Depression and Follow-Up and the Pain Assessment and Follow-Up reporting measures. We further propose that facilities with a CCN open date after January 1, 2016, will not be eligible to receive a score on the NHSN Healthcare Personnel Influenza Vaccination reporting measure in the PY 2018 program. Due to the time it takes for facilities to register with NHSN and become familiar with the NHSN Healthcare Personnel Safety Component Protocol, we do not believe it is reasonable to expect facilities with CCN open dates after January 1, 2016, to submit an HCP Influenza Vaccination Summary Form to CDC's NHSN system before the May 15, 2016, deadline.

As finalized in the CY 2014 ESRD PPS Final Rule (78 FR 72220), facilities are

generally eligible to receive a score on the clinical measures if their CCN open date occurs before the end of the performance period. However, facilities with a CCN open date after January 1 of the performance period are not eligible to receive a score on the NHSN Bloodstream Infection clinical measure, due to the need to collect 12 months of data to accurately score the measure. We are now proposing that facilities with a CCN open date after January 1, 2016, will also not be eligible to receive a score on the ICH CAHPS clinical measure in the PY 2018 program. Due to the additional time needed to arrange to contract with CMS-approved third-party vendors, and for vendors to administer the survey twice and report the results to CMS, we do not believe facilities with CCN open dates after January 1, 2016, can reasonably be expected to meet the requirements

associated with the proposed ICH CAHPS clinical measure for that performance period.

As discussed in the Section III.G.7 below, we are continuing our policy that a facility will not receive a TPS unless it receives a score on at least one clinical measure and at least one reporting measure. We note that finalizing the above proposals would result in facilities not being eligible for a payment reduction for the PY 2018 ESRD QIP if they have a CCN open date on or after July 1, 2016.

We seek comments on these proposals.

Table 29 displays the proposed patient minimum requirements for each of the measures, as well as the proposed CCN open dates after which a facility will not be eligible to receive a score on a reporting measure.

TABLE 29—PROPOSED MINIMUM DATA REQUIREMENTS FOR THE PY 2018 ESRD QIP

Measure	Minimum data requirements	CCN Open date	Small facility adjuster
Adult Hemodialysis Adequacy (Clinical).	11 qualifying patients	N/A	11–25 patients.
Adult Peritoneal Dialysis Adequacy (Clinical).	11 qualifying patients	N/A	11–25 patients.
Pediatric Hemodialysis Adequacy (Clinical).	11 qualifying patients	N/A	11–25 patients.
Pediatric Peritoneal Dialysis Adequacy (Clinical).	11 qualifying patients	N/A	11–25 patients.
Vascular Access Type: Catheter (Clinical).	11 qualifying patients	N/A	11–25 patients.
Vascular Access Type: Fistula (Clinical).	11 qualifying patients	N/A	11–25 patients.
Hypercalcemia (Clinical)	11 qualifying patients	N/A	11–25 patients.
NHSN Bloodstream Infection (Clinical).	11 qualifying patients	Before January 1, 2016	11–25 patients.
SRR (Clinical)	11 index discharges	N/A	11–41 index discharges.
STrR (Clinical)	10 patient-years at risk	N/A	10–21 patient-years at risk.
ICH CAHPS (Clinical)	Facilities with 30 or more survey-eligible patients during the calendar year preceding the performance period must submit survey results. Facilities will not receive a score if they do not obtain a total of at least 30 completed surveys during the performance period.	Before January 1, 2016	N/A.
Anemia Management (Reporting).	Facilities with 11 or more qualifying patients must report data for all patients. Facilities with between 2 and 11 qualifying patients must report data on all but 1 qualifying patient. Facilities with 1 qualifying patient must report for that patient.	Before July 1, 2016	N/A.
Mineral Metabolism (Reporting).	Facilities with 11 or more qualifying patients must report data for all patients. Facilities with between 2 and 11 qualifying patients must report data on all but 1 qualifying patient. Facilities with 1 qualifying patient must report for that patient.	Before July 1, 2016	N/A.
Depression Screening and Follow-Up (Reporting).	One qualifying patient	Before July 1, 2016	N/A.
Pain Assessment and Follow-Up (Reporting).	One qualifying patient.	Before July 1, 2016	N/A.
NHSN HCP Influenza Vaccination (Reporting).	N/A	Before January 1, 2016	N/A.

6. Proposal for Calculating the Clinical Measure Domain Score

As the ESRD QIP evolves and we continue to adopt new clinical measures that track the goals of the NQS, we do not believe that the current scoring methodology provides the program with enough flexibility to strengthen incentives for quality improvement in areas where quality gaps continue to exist. Therefore, under the authority of Section 1881(h)(3)(A)(i) of the Act, we are proposing to revise the scoring methodology beginning with the PY 2018 ESRD QIP so that we assign measure scores on the basis of two domains: a Clinical Measure Domain and a Reporting Measure Domain.

First, we propose to establish a Clinical Measure Domain, which we define as an aggregated metric of facility performance on the clinical measures and measure topics in the ESRD QIP. Under this proposed approach, we would score individual clinical measures and measure topics using the methodology we finalize for that measure or measure topic. Clinical measures and measure topics would then be grouped into subdomains within the Clinical Measure Domain, according to quality categories. Within these subdomains, measure scores would be multiplied by a weighting coefficient, weighted measure scores would be summed together to determine

subdomain scores, and then subdomain scores would be summed together to determine a facility’s Clinical Measure Domain score. This scoring methodology provides more flexibility to focus on quality improvement efforts, because it makes it possible to group measures according to quality categories and to weight each category according to opportunities for quality improvement.

We further propose to divide the clinical measure domain into three subdomains for the purposes of calculating the Clinical Measure Domain score:

- Safety
- Patient and Family Engagement/Care Coordination
- Clinical Care

We took several considerations into account when selecting these particular subdomains. First, safety, patient engagement, care coordination, and clinical care are all NQS goals for which the ESRD QIP has proposed and/or finalized measures. We are attempting to align all CMS quality improvement efforts with the NQS because its patient-centered approach prioritizes measures across our quality reporting and pay-for-performance programs to ensure that the measurement approaches in these programs, as a whole, can make meaningful improvements in the quality of care furnished in a variety of settings.

We also believe that adopting an NQS-based subdomain structure for the clinical measures in the ESRD QIP is responsive to stakeholder requests that we align our measurement approaches across HHS programs.

Second, we are proposing to combine the NQS goals of Care Coordination and Patient- and Caregiver-Centered Experience of Care into one subdomain because we believe the two goals complement each other. “Care Coordination” refers to the NQS goal of promoting effective communication and coordination of care. “Patient- and Caregiver-Centered Experience of Care” refers to the NQS goal of ensuring that each patient and family is engaged as a partner in care. In order to engage patients and families as partners, we believe that effective communication and coordination of care must coexist, and that patient and family engagement cannot occur independently of effective communication and care coordination. We therefore believe that it is appropriate to combine measures of care coordination with those of patient and family engagement for the purposes of calculating a facility’s clinical measure domain score.

For PY 2018 and future payment years, we propose to include the following measures in the following subdomains of the proposed clinical measure domain (see Table 30):

TABLE 30—PROPOSED SUBDOMAINS IN THE CLINICAL MEASURE DOMAIN

Subdomain	Measures and measure topics
Safety Subdomain	NHSN Bloodstream Infection measure.
Patient and Family Engagement/Care Coordination Subdomain	ICH CAHPS measure. SRR measure. STrR measure.
Clinical Care Subdomain	Dialysis Adequacy measure topic. Vascular Access Type measure topic. Hypercalcemia measure.

We seek comments on these proposals to adopt a Clinical Measure Domain that includes three subdomains (safety, patient and family engagement/care coordination, and clinical care) for the purpose of calculating a facility’s clinical measure domain score for PY 2018.

In deciding how to weight the proposed subdomains that comprise the clinical measure domain score, we took the following considerations into account: (1) the number of measures and measure topics in a proposed subdomain; (2) how much experience facilities have had with the measures and measure topics in a proposed subdomain; and (3) how well the measures align with CMS’s highest

priorities for quality improvement for patients with ESRD. Because the proposed Clinical Care subdomain contains the largest number of measures, and facilities have the most experience with the measures in this subdomain, we are proposing to weight the Clinical Care subdomain significantly higher than the other subdomains. Facilities have more experience with the NHSN Bloodstream Infection measure in the proposed Safety subdomain than they do with the SRR measure in the proposed Patient and Family Engagement/Care Coordination subdomain, but we are proposing to include a larger number of measures in the Patient and Family

Engagement/Care Coordination subdomain. We are proposing to give the Patient and Family Engagement/Care Coordination subdomain slightly more weight than the Safety subdomain, because it includes two measures, whereas only one measure appears in the proposed Safety subdomain. In future rulemaking, we will consider revising these weights based on facility experience with the measures contained within these proposed subdomains.

For these reasons, we propose the following weights for the three subdomains in the clinical measure domain score for PY 2018:

Subdomain	Weight in the clinical measure domain score (%)
Safety	20
Patient and Family Engagement/Care Coordination	30
Clinical Care	50

infections in patients with ESRD is one of our highest priorities for quality improvement, so we believe it is appropriate to weight the NHSN Bloodstream Infection clinical measure at 20 percent of a facility's Clinical Measure Domain Score. Because facilities have substantially more experience with the ICH CAHPS clinical measure, as compared with the SRR clinical measure, we are proposing to give the proposed ICH CAHPS measure twice as much weight as the proposed SRR measure. Additionally, we note that improving patients' experience of care is as high a priority for CMS quality improvement efforts as improving patient safety, so we believe it is appropriate to assign the ICH CAHPS clinical measure the same weight as the NHSN Bloodstream Infection clinical measure. We are proposing to give the Dialysis Adequacy and Vascular Access

Type measure topics the most weight in the Clinical Care subdomain because facilities have substantially more experience with these measure topics, as compared to the other measures in the Clinical Care subdomain. We are proposing to assign equal weights to the STrR and Hypercalcemia measures because PY 2018 would be the first program year in which facilities are measured on the STrR measure, and because the clinical significance of the Hypercalcemia measure is diminished in the absence of other information about mineral metabolism (for example, a patient's phosphorus and plasma parathyroid hormone levels), which would provide a more comprehensive assessment of mineral metabolism (78 FR 72217). For these reasons, we propose to use the following weighting system for calculating a facility's Clinical Measure domain score:

We seek comments on this proposal.

In deciding how to weight measures and measure topics within a proposed subdomain, we took into account the same considerations we considered when deciding how to weight the proposed subdomains. Because the NHSN Bloodstream Infection clinical measure is the only measure in the proposed Safety subdomain, we are proposing to assign the entire subdomain weight to that measure. We additionally note that improving patient safety and reducing bloodstream

Measures/measure topics by subdomain

Measures/measure topics by subdomain	Measure weight in the clinical measure domain score (%)
Safety Subdomain	20
NHSN Bloodstream Infection measure	20
Patient and Family Engagement/Care Coordination Subdomain	30
ICH CAHPS measure	20
SRR measure	10
Clinical Care Subdomain	50
STrR measure	7
Dialysis Adequacy measure topic	18
Vascular Access Type measure topic	18
Hypercalcemia measure	7

We seek comments on this proposal for weighting individual measures within the Clinical Measure Domain.

7. Proposal for Calculating the Reporting Measure Domain Score, the Reporting Measure Adjuster, and the TPS for the PY 2018 ESRD QIP

Starting with the PY 2014 program, the ESRD QIP has used a scoring methodology in which the clinical measures receive substantially more weight than the reporting measures in the TPS, and the weighting coefficients for the two types of measures total 100 percent of the TPS. We continue to believe it is appropriate to incorporate reporting measure scores in the TPS calculations because "reporting is an important component in quality improvement" (76 FR 70274); we also continue to believe that clinical measures should carry substantially more weight than reporting measures because clinical measures "score providers/facilities based upon actual outcomes" (76 FR 70275). These

statements reflect the fact that clinical and reporting measures serve different functions in the ESRD QIP. Clinical measures provide a direct assessment of the quality of care a facility provides, relative to either the facility's past performance or standards of care nationwide. Reporting measures create an incentive for facilities to monitor significant indicators of health and illness, and they help facilities become familiar with CMS data systems. In addition, they allow the ESRD QIP to collect the robust clinical data needed to establish performance standards for clinical measures.

As we continue to add reporting measures to the ESRD QIP measure set, it becomes increasingly challenging to not weight them so heavily that they dilute the significance of the clinical measures, while still ensuring that we do not weight the reporting measures so lightly that facilities are not incentivized to meet the reporting measure requirements.

Although we considered the possibility of abandoning the use of reporting measures, we determined that this is not feasible because doing so would make it impossible to calculate performance standards for many clinical measures that promise to promote high-quality care. We also considered the possibility of weighting the reporting measures such that each reporting measure comprised a smaller percentage of the TPS. We believe, however, that doing so would result in the reporting measures not carrying enough weight to provide facilities with an incentive to meet the reporting requirements, particularly if additional reporting measures were added to the program. For example, if 5 reporting measures were adopted in the ESRD QIP, and the reporting measures collectively were weighted at 5 percent of a facility's TPS (in order to preserve the significance of the clinical measures), then each reporting measure would only comprise 1 percent of a facility's TPS. Under such conditions, we believe that facilities

may choose not to meet the reporting measure requirements, because not doing so would have a negligible impact on their overall TPS. If enough facilities reached this determination, then we would not be able to establish reliable baselines, should we propose to adopt clinical measure versions of the reporting measures. For these reasons, we are proposing the following scoring methodology for determining the impact of reporting measure scores on a facility's payment reductions.

For PY 2018 and future payment years, we propose to establish a new

Reporting Measure Domain. We further propose that a facility's reporting measure domain score will be the sum of all the reporting measure scores that the facility receives. We strive to expand reporting measures into clinical measures in the ESRD QIP as quickly as measure development and administrative processes permit. Therefore, unlike the case with clinical measures in the Clinical Domain Score, we do not intend to continue to use any particular reporting measure in the ESRD QIP for an indefinite period of time. For this reason, we believe that it

would be unnecessarily opaque and confusing to group reporting measures into subdomains, as we are proposing for the clinical measures in the Clinical Measure Domain.

Additionally, we propose to establish a Reporting Measure Adjuster (RMA), which will provide the ESRD QIP with an index of facility performance on reporting measures within the Reporting Measure Domain. We propose to use the following general formula to determine a facility's RMA, based on its reporting measure domain score:

$$\left(\frac{\text{(available Reporting Measure points)} - \text{(Reporting Measure Domain score)}}{\text{(Reporting Measure Domain score)}} \right) \times \text{(coefficient } C)$$

This formula is constructed such that a high RMA is indicative of low performance on the reporting measures, and a low RMA is indicative of high performance. A facility's Reporting Measure Domain score (that is, the sum of its scores on the reporting measures) is subtracted from the total number of points a facility could earn on the reporting measures for which it was

eligible. This result is then multiplied by "C," which is a coefficient used to translate reporting measure points into TPS points. As C increases, so too does the TPS "value" of a reporting measure point. For example, if C is set to 2, then 1 reporting measure point is worth 2 TPS points. If C is set to 0.5, then 1 reporting measure point is worth one-half of a TPS point. The value of C is

in not tied to the number of reporting measures in the ESRD QIP; rather, it represents how much value we place on the reporting measures' contribution to the quality goals of the ESRD QIP. We will use the rulemaking process to set the value for C for each program year.

For the PY 2018 ESRD QIP, we propose to use the following formula to determine a facility's RMA:

$$\left(\text{(eligible Reporting Measure points)} - \text{(Reporting Measure Domain score)} \right) \times 5/6$$

We set coefficient C at five-sixths for the PY 2018 program because each reporting measure point in the PY 2016 program, and the proposed PY 2017 program, is equivalent to five-sixths of a TPS point (that is, 30 points for three reporting measures comprised 25 TPS points). We believe it is important to maintain as much consistency as possible in the transition to the proposed scoring methodology. Therefore, we are proposing that the "value" of a reporting measure point in the TPS, as finalized in the PY 2016 program and proposed for the PY 2017 program, will remain constant in PY 2018.

For the reasons described above, we continue to believe that the clinical measures are considerably more important than the reporting measures in the ESRD QIP. We therefore believe that a facility's TPS should be predominantly determined by its Clinical Measure Domain score, and that a facility's TPS should be downwardly

adjusted in the case of noncompliance with the reporting measure requirements. The RMA, as described above, is constructed such that a high RMA value indicates low reporting measure scores and a low RMA value indicate high reporting measure scores. As a result, a facility's TPS would be entirely determined by its Clinical Measure Domain score if it receives full credit on the reporting measures; the TPS would be slightly decreased if the facility received high (but not perfect) scores on the reporting measures; and the TPS would be significantly decreased if it performed poorly on the reporting measures. For these reasons, we propose to calculate a facility's TPS by subtracting the facility's RMA from its Clinical Measure Domain score. Additionally, we propose to continue our policy to require a facility to be eligible for a score on at least one reporting and one clinical measure in order to receive a TPS (78 FR 72217).

In an effort to estimate the impact of this proposed change for the ESRD QIP's scoring methodology, we conducted an analysis of how the proposed scoring methodology affected payment reduction distributions, based on data from CY 2012 and CY 2013. This analysis compared the scoring methodology proposed in this section and the previous section to the scoring methodology finalized for the PY 2016 program. In order to ensure that the analysis reliably estimated the impact on facilities' payment reductions, the proposed scoring methodology and the methodology finalized for the PY 2016 program were each applied to the PY 2016 measure set. The full analysis is available at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/ESRDQIP/061_TechnicalSpecifications.html. The results of this analysis are presented below in Table 31.

TABLE 31—EXPECTED IMPACT OF PROPOSED SCORING METHODOLOGY ON THE DISTRIBUTION OF PAYMENT REDUCTIONS, USING MEASURES AND MEASURE WEIGHTS FINALIZED FOR THE PY 2016 ESRD QIP AND DATA FROM CY 2012 AND CY 2013

Payment reduction (%)	Finalized scoring methodology for PY 2016, applied to measures and measure weights finalized in the PY 2016 program		Proposed scoring methodology for PY 2018, applied to measures and measure weights finalized in the PY 2016 program	
	Number of facilities	Percent	Number of facilities	Percent
0	4,828	79.4	4,606	75.7
0.5	884	14.5	739	12.2
1.0	242	4.0	306	5.0
1.5	69	1.1	108	1.8
2.0	59	1.0	323	5.3

As illustrated in Table 31, we expect that 4.3 percent more facilities (222 overall) would receive a payment reduction under the proposed methodology for PY 2018, as compared with the scoring methodology that we will use for the PY 2016 program. We therefore believe that adopting the scoring methodology proposed in this section and the previous section will not appreciably change the distribution of facility payment reductions, as is our intention.

We seek comments on these proposals for calculating a facility’s reporting measure domain score, to calculate the RMA, and to determine the TPS.

Although we believe advantages are afforded by adopting the scoring

methodology proposed in this section and the previous section, we also recognize that there may be advantages associated with maintaining consistency with previous years’ scoring methodology. Accordingly, as an alternative to the scoring methodology proposed in this section and the previous section, we are also seeking public comments on whether we should continue to use the same methodology we currently use to weight measures in the ESRD QIP and calculate a facility’s TPS, with the exception that the clinical and reporting measures would be weighted at 90 percent and 10 percent, respectively, of a facility’s TPS.

8. Example of the Proposed PY 2018 ESRD QIP Scoring Methodology

In this section, we provide an example to illustrate the proposed scoring methodology for PY 2018 and future payment years. Figures 3–7 illustrate how to calculate the clinical measure domain score, the reporting measure domain score, the RMA, and the TPS. Note that for this example, Facility A, a hypothetical facility, has performed very well. Figure 1 illustrates the general methodology used to calculate domain scores for the clinical measure domain, as well as the example calculations for Facility A.

Figure 3

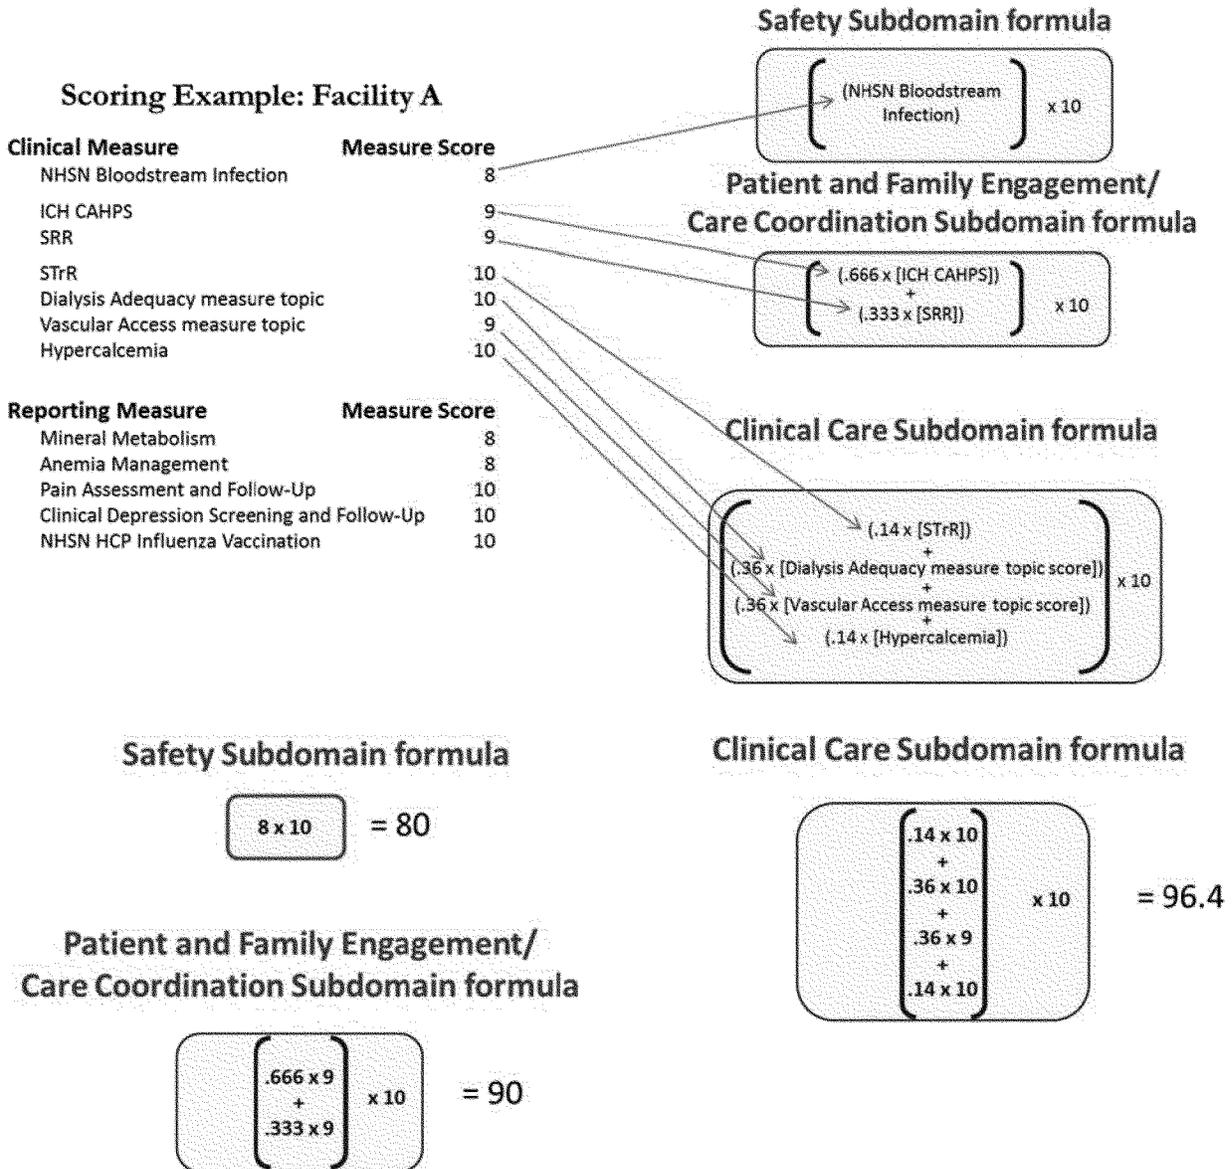

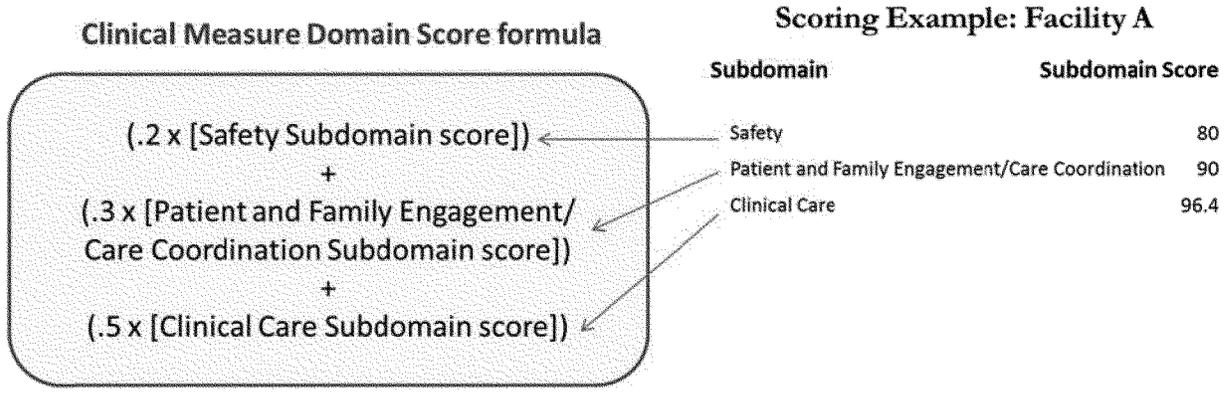

Figure 2 illustrates the general methodology for weighting subdomains in the clinical measure domain, as well

as the example calculations for Facility A's clinical measure domain score.

Figure 4

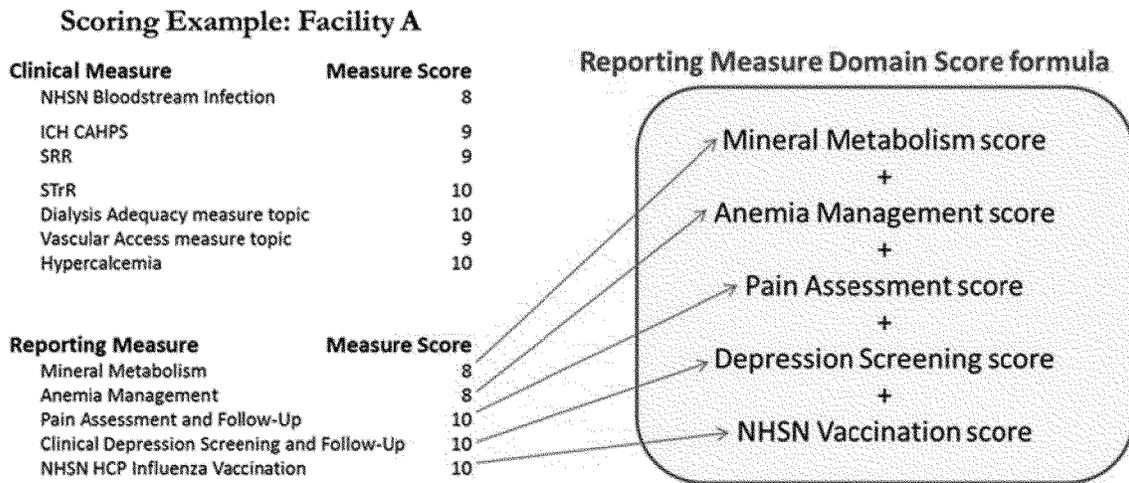

Clinical Measure Domain Score example for Facility A

$$16 + 27 + 48.2 = 91.2$$

Figure 3 illustrates the general methodology for calculating a facility's reporting measure domain score, as well

as the example calculations for Facility A.

Figure 5

Reporting Measure Domain Score example for Facility A

$$8 + 8 + 10 + 10 + 10 = 46$$

Figure 4 illustrates the general methodology for calculating a facility's

RMA, as well as the example calculations for Facility A.

Figure 6**Reporting Measure Adjuster formula**

$$\left[(\text{eligible Reporting Measure points}) - (\text{Reporting Measure Domain score}) \right] \times 5/6$$

Reporting Measure Adjuster example for Facility A

$$(50 - 46) \times (5/6) = 3.3$$

Figure 5 illustrates the general methodology for calculating a facility's

TPS, as well as the example calculations for Facility A.

Figure 7**TPS formula**

$$(\text{Clinical Measure Domain Score}) - (\text{Reporting Measure Adjuster})$$

TPS example for Facility A

$$91.2 - 3.3 = 87.9, \text{ rounded to } \mathbf{88}$$

9. Proposed Payment Reductions for the PY 2018 ESRD QIP

Section 1881(h)(3)(A)(ii) of the Act requires the Secretary to ensure that the application of the scoring methodology results in an appropriate distribution of payment reductions across facilities, such that facilities achieving the lowest TPSs receive the largest payment reductions. For the same reasons described in Section III.F.8 above, we propose that a facility would not receive a payment reduction for PY 2018 if it achieves a minimum TPS that is equal to or greater than the total of the points it would have received if:

- It performed at the performance standard for each clinical measure;
- It received the number of points for each reporting measure that corresponds

to the 50th percentile of facility performance on each of the PY 2016 reporting measures.

The PY 2016 program is the most recent year for which we will have calculated final measure scores before the beginning of the proposed performance period for PY 2018 (i.e., CY 2016). Because we have not yet calculated final measure scores, we are unable to determine the 50th percentile of facility performance on the PY 2016 reporting measures. We will publish that value in the CY 2016 ESRD PPS final rule once we have calculated final measure scores for the PY 2016 program.

We seek comments on this proposal. Section 1881(h)(3)(A)(ii) of the Act requires that facilities achieving the

lowest TPSs receive the largest payment reductions. In the CY 2014 ESRD PPS Final Rule (78 FR 72223 through 72224), we finalized a payment reduction scale for PY 2016 and future payment years: For every 10 points a facility falls below the minimum TPS, the facility would receive an additional 0.5 percent reduction on its ESRD PPS payments for PY 2016 and future payment years, with a maximum reduction of 2.0 percent. We are not proposing any changes to this policy at this point.

Because we are not yet able to calculate the performance standards for each of the clinical measures, we are also not able to calculate a proposed minimum TPS at this time. We will publish the minimum TPS, based on data from CY 2014 and the first part of

CY 2015, in the CY 2016 ESRD PPS Final Rule.

We seek comments on this proposal.

H. Future Considerations for Stratifying ESRD QIP Measures for Dual-Eligible Beneficiaries

CMS recognizes that individuals with both Medicare and Medicaid (also known as “dual-eligible beneficiaries”), comprise a relatively large proportion of Medicare enrollees with ESRD. Because ESRD programs have a long history of performance measurement linked with public reporting, and because there are a large number of dual-eligible beneficiaries receiving ESRD care, we are considering stratifying ESRD QIP measures for Medicare-Medicaid enrollees.

Measure reporting under the ESRD QIP does not currently allow us to separately review results for dual-eligible beneficiaries or compare those results with results achieved by other patients with ESRD, so it is not currently known if their experiences are better, worse, or the same as other patients. Even the basic demographics of dual-eligible beneficiaries receiving ESRD care are not well understood. After discussion of the pros and cons that included input from the ESRD provider community, the Measures Application Partnership’s dual-eligible workgroup recommended that CMS take the first step in exploring the feasibility of requiring facilities to separately report ESRD QIP measures for Medicare-Medicaid enrollees by analyzing the composition of the dual-eligible beneficiary population receiving ESRD care and determining potential ways in which stratified reporting may further quality improvement efforts. Furthermore, the Measures Application Partnership recommended, in the

context of measure development, that CMS explore whether other risk factors unique to the dual-eligible population receiving ESRD care would present significant hurdles to measure stratification along these lines. We are therefore seeking comments on whether it would be feasible to stratify ESRD QIP measures based on whether the beneficiary is a dual eligible. We are interested in whether stakeholders recommend stratification and, if so, for what specific measures stakeholders would find stratification most compelling.

We are particularly interested in public comments on whether Medicare-Medicaid stratified quality measures under the ESRD QIP should be reported publicly, and how we should factor those measures into our scoring methodology. We seek comments on the meaningfulness of stratifying measures, and the feasibility and burden associated with reporting stratified measures.

IV. Technical Corrections for 42 Part 405

In the April 15, 2008, final rule “Conditions for Coverage for End-Stage Renal Disease Facilities,” (73 FR 20370) we revised the health and safety standards for Medicare-participating End-Stage Renal Disease (ESRD) facilities. This rule made the first comprehensive revisions to the ESRD Conditions for Coverage (CfCs) since they were adopted in 1976. The original ESRD CfCs at 42 CFR Part 405 Subpart U were deleted and new conditions were issued at 42 CFR Part 494. Subpart U now only addresses certain requirements for ESRD networks.

As a part of these revisions, we intended to delete most of the terms and definitions set out in Part 405 Subpart

U, and create new definitions in Part 494. This is discussed in the 2008 final rule and in the corresponding proposed rule (70 FR 6184), and is laid out in the final rule crosswalk (comparing the old CfCs with the new ones) at 73 FR 20451.

While we intended to delete most of the definitions at Part 405 Subpart U, we inadvertently omitted the regulations text that would have made those changes. Subpart U, at § 405.2102, still has 32 definitions, most of them unnecessary and several of them obsolete. This creates confusion for ESRD stakeholders, patients, and suppliers.

We propose to make a technical correction that deletes the outdated terms and definitions at § 405.2102. Specifically, we propose to delete these terms and definitions: agreement, arrangement, dialysis, end-stage renal disease (ESRD), ESRD facility, renal dialysis center, renal dialysis facility, self-dialysis unit, special purpose renal dialysis facility, ESRD service, dialysis service, inpatient dialysis, outpatient dialysis, staff-assisted dialysis, self-dialysis, home dialysis, self-dialysis and home dialysis training, furnishes directly, furnishes on the premises, medical care criteria, medical care norms, medical care standards, medical care evaluation study (MCE), qualified personnel, chief executive officer, dietitian, medical record practitioner, nurse responsible for nursing service, physician-director, and social worker. We also propose to delete the term and definition for “ESRD network organization,” as it is duplicated within § 405.2102 as “network organization.” We would retain the terms and definitions for “network, ESRD,” and “network organization.” These changes are also outlined in Table 32 below.”

V. Methodology for Adjusting DMEPOS Payment Amounts Using Information From Competitive Bidding Programs

A. Background

1. Payment Basis for Certain DMEPOS

Section 1834(a) of the Act governs payment for durable medical equipment (DME) covered under Part B and under Part A for a home health agency and provides for the implementation of a fee schedule payment methodology for DME furnished on or after January 1, 1989. Sections 1834(a)(2) through (a)(7) of the Act set forth separate payment categories of DME and describe how the fee schedule for each of the following categories is established:

- Inexpensive or other routinely purchased items,
- Items requiring frequent and substantial servicing,
- Customized items,
- Oxygen and oxygen equipment,
- Other covered items (other than DME), and
- Other items of DME (capped rental items).

Section 1834(h) of the Act governs payment for prosthetic devices, prosthetics, and orthotics (P&O) and sets forth fee schedule payment rules for P&O. Effective for items furnished on or after January 1, 2002, payment is also made on a national fee schedule basis for parenteral and enteral nutrition (PEN) in accordance with the authority under section 1842(s) of the Act. The term “enteral nutrition” will be used throughout this document to describe enteral nutrients supplies and equipment covered as prosthetic devices in accordance with section 1861(s)(8) of the Act and paid for on a fee schedule basis and enteral nutrients under DMEPOS Competitive Bidding Program (CBP), as authorized under section 1847(a)(2)(B) of the Act. Section

1842(o)(1)(D) of the Act mandates that payment for infusion drugs furnished through a covered item of DME on or after January 1, 2004, is equal to 95 percent of the average wholesale price for such drug in effect on October 1, 2003.

For DMEPOS items subject to payment under 1834 of the Act (not subject to the CBP), the Medicare’s allowed payment amount is equal to the lesser of the actual charge for the item or the fee schedule amount for the item. The fee schedule amounts are based on average payments made under the previous payment methodology of reasonable charges, which utilized supplier charges for furnishing items and services in local areas throughout the nation to establish the Medicare allowed payment amounts for the items and services. The reasonable charge data used is from a specific period of time that varies slightly by payment class (for example, July 1986 through June 1987 for inexpensive DME). The fee schedule amounts for most items are updated on an annual basis by covered item update factors provided in the statute for DME under section 1834(a)(14) of the Act, for P&O under section 1834(h)(4)(A) of the Act, and for enteral nutrition under section 1842(s)(1)(B) of the Act.

The rules pertaining to the calculation of reasonable charges are located at 42 CFR Part 405, Subpart E of our regulations. Under this general methodology, several factors were taken into consideration in determining the reasonable charge for an item. Each supplier’s “customary charge” for an item, or the 50th percentile of charges for an item over a 12-month period, was one factor used in determining the reasonable charge. The “prevailing charge” in a local area, or the 75th percentile of suppliers’ customary charges for the item in the locality, was

also used in determining the reasonable charge. For PEN items and services only, the “lowest charge level (LCL)” was also taken into consideration and was based on the 25th percentile of all charges for an item. For the purpose of calculating prevailing charges, a “locality” is defined at 42 CFR 405.505 and “may be a State (including the District of Columbia, a territory, or a Commonwealth), a political or economic subdivision of a state, or a group of states.” The regulation further specifies that the locality “should include a cross section of the population with respect to economic and other characteristics.” For PEN items and services only, the entire nation was used as the locality for the purpose of calculating the LCL and prevailing charges.

Effective for items furnished on or after October 1, 1985, an additional factor, the inflation-indexed charge (IIC) as cited at 42 CFR 405.509, was added to the factors taken into consideration in determining the reasonable charge for an item. The IIC is equal to the lowest of the customary charge, prevailing charge, LCL (if applicable), and IIC from the previous year updated by an inflation adjustment factor. To summarize, the reasonable charges for each item that were used to calculate the fee schedule amounts are equal to the lower of:

- the supplier’s actual charge on the claim;
- the supplier’s customary charge for the item;
- the prevailing charge in the locality for the item;
- the LCL in the locality for the item, if applicable; or
- the IIC.

Under the reasonable charge payment methodology, it is assumed that suppliers took all of their costs of

furnishing various items and services in various localities throughout the nation into account in setting the prices they charge for covered items and services.

We implemented the fee schedule payment methodologies for PENs at 42 CFR Part 414, Subparts C, and for DME prosthetic devices, prosthetics, orthotics, and surgical dressings at 42 CFR Part 414, Subpart D of our regulations. In accordance with section 1834(a)(10) of the Act, the Secretary may adjust DMEPOS fee schedule amounts in situations where it is determined that the amounts are not inherently reasonable. This “inherent reasonableness” authority for adjusting fee schedule payment amounts is governed by paragraphs (8) and (9) of section 1842(b) of the Act and implemented at 42 CFR Part 405, Subpart E of our regulations. Finally, in the case of DMEPOS furnished on or after January 1, 2011, under section 1834(a)(1)(F)(ii) of the Act, the Secretary may (in beginning January 1, 2016, must) use information on the payment determined under the CBP in accordance with section 1847 of the Act to adjust the fee schedule payment amounts for DME that are not in a competitive bidding area (CBA), and the inherent reasonableness authority does not apply. Adjustment of fee schedule amounts based on CBP payment information (and the limitation on using inherent reasonableness) is also authorized under section 1834(h)(1)(H)(ii) of the Act for certain orthotics and section 1842(s)(3)(B) of the Act for enteral nutrition in non-competitive bid areas.

2. Fee Schedule Payment Methodologies

Section 4062(b) of the Omnibus Budget Reconciliation Act of 1987 (OBRA 87), Public Law 100–203, added section 1834(a) of the Act and mandated the implementation of local fee schedule amounts in 1989 for DME and P&O based on the average of reasonable charges for items and services furnished in carrier service areas throughout the United States. The carriers were (now Medicare administrative contractors) responsible for processing claims for Part B items and services in accordance with section 1842(a) of the Act. The carrier service areas used in establishing the fee schedule amounts could not exceed an entire state. A few states were made up of two carrier service areas and the State of New York had three carrier service areas. A carrier service area is not to be confused with a locality established for the purpose of calculating reasonable charges as described above. For example, although claims for items furnished in the State

of Texas were processed by a single carrier, for reasonable charge calculation purposes, Texas was divided into more than 50 different localities. In 1993, the local fee schedule amounts for states with more than one carrier service areas were transitioned to statewide fee schedule amounts. The reasonable charge data used to calculate the statewide fee schedule amounts therefore reflected the average payment made under the supplier charge based reasonable charge payment methodology for items and services furnished throughout the state, including both rural and urban areas of the state.

Section 4062(b) of OBRA 87 mandated that local fee schedule amounts for both DME and P&O be transitioned to regional fee schedule amounts as part of a multi-year phase in ending in 1993. Section 4152(b) of the Omnibus Budget Reconciliation Act of 1990 (OBRA 90), Public Law 101–508, eliminated the regional fee schedule transition for DME and amended section 1834(a) of the Act to mandate that the local (statewide) fee schedule amounts be limited by a national ceiling (upper) limit, based on the median of the statewide fee schedule amounts, and a national floor (lower limit), based on 85 percent of the median of the statewide fee schedule amounts. The fee schedule ceiling and floor limits for DME were phased in from 1991 through 1993. The conversion to regional fee schedule amounts therefore never took place for DME and instead the statewide fee schedule amounts were limited so that they could not vary by more than 15 percent from the national ceiling to the national floor. The fee schedule amounts for areas outside the contiguous United States are not subject to the national ceiling and floor limits. The transition to regional fee schedule amounts was retained for P&O, although OBRA 90 changed the phase in schedule so that the regional fee schedule amounts were not fully phased in until January 1, 1994, rather than January 1, 1993. As explained in more detail below, the regional fee schedule methodology allows for regional geographic variation in fee schedule payment amounts and a wider range in fees across the nation than the fee schedule methodology used for DME which caps the local, statewide fee schedule amounts at the national median. That being said, we have not seen any problems associated with access to either P&O or DME in rural areas or any areas of the country since payments have been made based on these fee schedule methodologies. This

has been the case even though the average reasonable charges used to compute the statewide fee schedule amounts include a comingling of reasonable charge data for items and services furnished in both urban and rural areas. In addition, we have not seen any problems with access to PEN in rural areas or any areas of the country since payments have been made based on national fee schedule amounts.

3. Regional Fee Schedule Payment Methodology for P&O

The regional fee schedules for P&O are mandated by section 1834(h)(2)(B) of the Act. The regional fee schedule amounts only apply to areas within the contiguous United States. The regional fee schedule amounts are calculated based on the weighted average (weighted by total Part B claims volume) of statewide fee schedule amounts for states in each of the ten CMS Regional Office boundaries identified below. The statewide fee schedule amounts are based on average reasonable charges (statewide fees) for items furnished from July 1, 1986 through June 30, 1987.

The ten CMS Regional Office boundaries are:

- Boston (Region One), including the six states of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont;
- New York (Region Two), including the two states of New Jersey and New York;
- Philadelphia (Region Three), including the five states of Delaware, Maryland, Pennsylvania, Virginia, West Virginia and the District of Columbia;
- Atlanta (Region Four), including the eight states of Alabama, North Carolina, South Carolina, Florida, Georgia, Kentucky, Mississippi, and Tennessee;
- Chicago (Region Five), including the six states of Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin;
- Dallas (Region Six), including the five states of Arkansas, Louisiana, New Mexico, Oklahoma and Texas;
- Kansas City (Region Seven), including the four states of Iowa, Kansas, Missouri and Nebraska;
- Denver (Region Eight), including the six states of Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming;
- San Francisco (Region Nine), including the three states of Arizona, California and Nevada; and
- Seattle (Region Ten), including the three states of Idaho, Oregon and Washington.

As an example, the regional fee schedule amounts for Region Nine are based on the weighted average of the

statewide fees for Arizona, California, and Nevada. Since California accounts for the largest volume of Part B claims in the region, the California statewide fees are weighted more heavily in determining the regional fee schedule amounts than the statewide fees for Arizona or Nevada. Once all of the regional fee schedule amounts are established, the regional fee schedule amounts are further limited by a national ceiling equal to 120 percent of the average of the regional fee schedule amounts for all the states and a national floor equal to 90 percent of the average of the regional fee schedule amounts for all the states.

The national ceiling and floor limits for DME and P&O set national parameters on how much the statewide or regional fee schedule amounts can vary. For DME, the upper payment limit or ceiling is based on the national median of the statewide fees, essentially bringing half of the state fees down to the national median. The lower limit or floor is based on 85 percent of the national median and brings those state fees below the floor amount up to the floor amount. In contrast, the national ceiling and floor parameters for P&O are based on 120 percent and 90 percent, respectively, of the average of the various regional fee schedule amounts. Differences in reasonable charge based fees in various geographic regions of the country are maintained within the parameters of the national ceilings and floors for P&O.

4. DMEPOS Competitive Bidding Programs Payment Rules

Section 1847(a) of the Act, as amended by section 302(b)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173), requires the Secretary to establish and implement CBPs in CBAs throughout the United States for contract award purposes for the furnishing of certain competitively priced DMEPOS items and services. The programs mandated by section 1847(a) of the Act are collectively referred to as the "Medicare DMEPOS Competitive Bidding Program." Section 1847(a)(2) of the Act provides that the items and services to which competitive bidding applies are:

- Off-the-shelf (OTS) orthotics for which payment would otherwise be made under section 1834(h) of the Act;
- Enteral nutrients, equipment and supplies described in section 1842(s)(2)(D) of the Act; and
- Certain DME and medical supplies, which are covered items (as defined in section 1834(a)(13) of the Act) for which

payment would otherwise be made under section 1834(a) of the Act.

The DME and medical supplies category includes items used in infusion and drugs (other than inhalation drugs) and supplies used in conjunction with DME, but excludes class III devices under the Federal Food, Drug, and Cosmetics Act and Group 3 or higher complex rehabilitative power wheelchairs and related accessories when furnished with such wheelchairs. Sections 1847(a) and (b) of the Act specify certain requirements and conditions for implementation of the Medicare DMEPOS CBP.

On July 15, 2008, the Medicare Improvements for Patients and Providers Act (MIPPA) was enacted. Section 154 of the MIPPA amended section 1847 of the Act to make certain limited changes to the Medicare DMEPOS CBP, including a revised timeframe for phasing in the programs.

On March 23, 2010, the Affordable Care Act was enacted. Section 6410(a) of the Affordable Care Act amended section 1847(a)(1) of the Act, mandating the phase in of 21 additional Metropolitan Statistical Areas (MSAs).

Section 1847(a) of the Act requires that the DMEPOS CBP be phased in so that competition under the programs occurs in 9 of the largest Metropolitan Statistical Areas (MSAs) in 2009, 91 additional large MSAs in 2011, and additional areas after 2011 (or, in the case of national mail order for items and services, after 2010). Section 1847(a)(1)(D)(ii) of the Act provides discretion to subdivide MSAs and through notice and comment rulemaking we subdivided the New York-Northern New Jersey-Long Island, NY-NJ-PA; Los Angeles-Long Beach-Santa Ana, CA; and Chicago-Naperville-Joliet, IL-IN-WI MSAs. The final rule was published in the **Federal Register** on November 29, 2010 (75 FR 73454) and divided the New York-Northern New Jersey-Long Island, NY-NJ-PA MSA into six CBAs. In addition, the Los Angeles-Long Beach-Santa Ana, CA MSA was divided into two CBAs and the Chicago-Naperville-Joliet, IL-IN-WI MSA was divided into four CBAs (75 FR 73460). Altogether this created a total of 100 CBAs for the competitions occurring in the 91 MSAs in 2011, or a total of 109 CBAs for the competitions occurring in 100 MSAs in 2009 and 2011.

Finally, section 1847(a)(1)(D)(iii) of the Act specifies that competitions occurring before 2015 for items and services other than national mail order, may not include rural areas or MSAs with a population of less than 250,000.

In addition to the national mail order program for diabetic supplies, the product categories (PCs) that have been phased in thus far in 100 Round 2 CBAs and 9 Round 1 CBAs include the following:

Round 2 CBAs (Contract Period July 1, 2013, Thru June 30, 2016)

- Oxygen, oxygen equipment, and supplies
- Standard (Power and Manual) wheelchairs, scooters, and related accessories
- Enteral nutrients, equipment, and supplies
- Continuous Positive Airway Pressure (CPAP) devices and Respiratory Assist Devices (RADs) and related supplies and accessories
- Hospital beds and related accessories
- Walkers and related accessories
- Negative Pressure Wound Therapy pumps and related supplies and accessories
- Support surfaces (Group 2 mattresses and overlays)

Round 1 CBAs (Contract Period January 1, 2014, Thru December 31, 2016)

- Respiratory Equipment and Related Supplies and Accessories
 - includes oxygen, oxygen equipment, and supplies; CPAP devices and RADs and related supplies and accessories; and standard nebulizers
- Standard Mobility Equipment and Related Accessories
 - includes walkers, standard power and manual wheelchairs, scooters, and related accessories
- General Home Equipment and Related Supplies and Accessories
 - includes hospital beds and related accessories, group 1 and 2 support surfaces, transcutaneous electrical nerve stimulation (TENS) devices, commode chairs, patient lifts, and seat lifts
- Enteral Nutrients, Equipment and Supplies
- Negative Pressure Wound Therapy Pumps and Related Supplies and Accessories
- External Infusion Pumps and Supplies

In addition, contracts and SPAs were in effect in the 9 Round 1 CBAs from January, 1 2011 thru December 31, 2013, for the items listed below which are not included in current Round 1 or 2 PCs:

- Complex Rehabilitative Power Wheelchairs and Related Accessories (Group 2)
- Adjustable Wheelchair Seat Cushions

5. Adjusting Payment Amounts Using Information From the DMEPOS Competitive Bidding Program

Section 1834(a)(1)(F)(ii) of the Act provides authority for using information from the DMEPOS CBPs to adjust the DME payment amounts for covered items furnished on or after January 1, 2011, in areas where competitive bidding is not implemented for the items. Similar authority exists at section 1834(h)(1)(H)(ii) of the Act for OTS orthotics, and at section 1842(s)(3)(B) of the Act for enteral nutrition. Section 1834(a)(1)(F) also requires adjustments to the payment amounts for all DME items subject to competitive bidding furnished in areas where CBPs have not been implemented on or after January 1, 2016.

For items furnished on or after January 1, 2016, section 1834(a)(1)(F)(iii) requires us to continue to make such adjustments to DME payment amounts where CBPs have not been implemented, as additional covered items are phased in or information is updated as contracts are recompeted.

Section 1834(a)(1)(G) of the Act requires that the methodology used to adjust payment amounts for DME and OTS orthotics using information from the CBPs be promulgated through notice and comment rulemaking, which is the purpose of this proposed rule. Section 1834(a)(1)(G) of the Act also requires that we consider the “costs of items and services in areas in which such provisions [sections 1834(a)(1)(F)(ii) and 1834(h)(1)(H)(ii)] would be applied compared to the payment rates for such items and services in competitive acquisition [competitive bidding] areas.” We are proposing to apply the same methodology for making adjustments to the payment amounts for enteral nutrition as authorized by section 1842(s)(3)(B) of the Act.

6. Diversity of Costs

As mentioned above, under section 1834(a)(1)(G) of the Act we must consider the costs of furnishing items and services in areas where prices will be adjusted compared to the payment rates for the items and services furnished in CBAs. We believe that the methodology for using the single payment amounts (SPAs) as a basis for adjusting payment rates in other areas needs to ensure that adjusted payment amounts in an area are adequate to cover the unique costs of furnishing the items and services in those areas.

The SPAs are based on the median of successful bids for furnishing items and services in MSAs, which are mainly

urban areas, from suppliers with costs and characteristics that may or may not be similar to suppliers in other areas. In addition, under the DMEPOS CBP, many low population density areas within MSAs were excluded from the CBAs as authorized by statute, making the geographic bidding areas smaller and more densely populated than they would have been if the initial MSA boundaries had been retained for bidding purposes.

Regarding the size of suppliers submitting the bids used to generate the SPAs compared to the size of suppliers in areas where price adjustments based on the SPAs would occur, it is important to note that small suppliers are given special considerations under the CBP and that a majority of contracts are offered to small suppliers. Section 1847(b)(6)(D) of the Act requires that, in developing procedures relating to bidding and the awarding of contracts, CMS “take appropriate steps to ensure that small suppliers of items and services have an opportunity to be considered for participation in the program.” We have established a number of provisions to ensure that small suppliers are given an opportunity to participate in the DMEPOS CBP. For example, under 42 CFR 414.414(g)(1)(i), we have established a 30 percent target for small supplier participation; thereby, ensuring efforts are made to award at least 30 percent of contracts to small suppliers. Also, CMS worked in coordination with the Small Business Administration (SBA) to develop an appropriate definition of a “small supplier” for this program. Under 42 CFR 414.402, a small supplier is one that generates gross revenues of \$3.5 million or less in annual receipts, including Medicare and non-Medicare revenue. Under 42 CFR 414.418, small suppliers may join together in “networks” in order to submit bids that meet the various program requirements. For contracts taking effect on July 1, 2013 in Round 2, in 100 CBAs throughout the country, 63 percent of all contract suppliers are small suppliers, with only 10 percent of contract suppliers being new to the areas. In addition, for contracts taking effect on January 1, 2014 in the Round 1 Recompete, in the 9 initial CBAs, 58 percent of all contract suppliers are small suppliers, with only 3 percent of contract suppliers being new to the areas. Therefore, the majority of bids used in establishing the SPAs come from small suppliers with a history of furnishing the items in the CBAs.

Prior to awarding contracts, each supplier is carefully screened to ensure that it is accredited under applicable

Medicare quality standards and meets rigid financial standards, specific Medicare supplier enrollment requirements, and applicable state licensing standards. Each bid is screened to ensure that it is a bona fide bid, and those that fail are excluded from the competition. Approximately 94 percent of bids screened as part of the Round 2 and Round 1 Recompete competitions were determined to be bona fide. The invoices and purchase orders submitted by bidding suppliers to support their bids reflected prices already paid by the supplier (that is, prior to becoming a contract supplier) and for the most part did not reflect large volume purchasing discounts. Once non-bona fide bids are excluded, suppliers are ranked in order based on bid amounts, and the median of bids from the number of suppliers determined to be necessary to meet projected demand are used to establish the SPAs. The projected demand for items and services in a CBA is intentionally overstated for the purpose of ensuring that contracts are awarded to more than a sufficient number of suppliers to serve the beneficiaries in the area. The establishment of the demand level is explained in detail in the competitive bidding final rule (Medicare Program; Competitive Acquisition for Certain DMEPOS and Other issue) published April 10, 2007 (72 FR 18039). Thus, the SPAs are higher than they would otherwise be if demand was not overstated because the high demand generally results in an increase in the number of contract suppliers which in most cases increases the median bid amount. CMS also conducts its review of supplier capacity and expansion plans during the bid evaluation process. If a supplier is new to an area, new to a PC, or submits estimated capacity that represents substantial growth over current levels, CMS may conduct a more detailed evaluation of that supplier’s expansion plan to verify the supplier’s ability to provide items and services in the CBA on day one of the contract period. If a bidder’s financial data and expansion plan do not support the supplier’s estimated capacity, CMS will adjust the capacity to the supplier’s historic level, which would be zero for a new supplier. CMS uses the estimated capacity information and the bid amounts to determine the array of winning suppliers in a CBA.

Under Round 2 and the Round 1 Recompete competitions, 92 percent of suppliers accepted contract offers at the SPAs set through the competitions. In addition, CMS reviewed all contract

suppliers based on financial standards when evaluating their bids. This process includes review of tax records, credit reports, and other financial data, which leads to the calculation of a score, similar to processes used by lenders when evaluating the viability of a company. All contract suppliers met the financial standards established for the program.

From January 1, 2011, when the initial Round 1 contracts and SPAs took effect, to present, we have seen no indication that beneficiaries have been denied access to necessary items and services subject to the programs in CBAs as a result of the SPAs. In addition, we have been closely monitoring inquiries as well as real time claims and health outcomes data and have seen no negative impacts on access to items and services under the program. Therefore, the SPAs appear to be sufficient to cover the costs of the suppliers furnishing items in the 109 CBAs.

In previous legislation, which we will discuss below, the Congress mandated

that the costs of furnishing DME in different geographic regions of the country be studied. Section 135 of the Social Security Act Amendments of 1994, Public Law 103-432, required an examination of the geographic variations in DME supplier costs in order to determine whether the fee schedules are reasonably adjusted to account for any geographic differences. Jing Xing Health and Safety Resources, Inc. provided assistance to the Health Care Financing Administration, now CMS, in conducting this study. The project entitled "Durable Medical Equipment Supplier Product and Service Cost Study", was completed under Contract Number HCFA 500-95-0044 and submitted to the agency in June 1996. As part of the study, a Federal Advisory Panel was convened, a formal meeting with representatives of the DME industry was held, and a literature review was conducted. The general consensus among industry representatives and government agencies that participated in the study

was that there is no conclusive evidence that urban and rural costs differed significantly or that the costs of furnishing DME items and services were higher in urban areas versus rural areas or vice versa.

The 109 CBAs where competitive bidding has been phased in include a wide range of different size urban areas with surrounding counties, and suppliers take the costs of furnishing items and services in these different areas into account when submitting bids under the programs. They include one CBA (Honolulu, HI) that is not within the contiguous United States and CBAs that range in population size from approximately 300 thousand to 10 million (See Table 33). There are 7 CBAs with a population of less than 500,000, 42 CBAs with a population of more than 500,000, but less than 1 million, 27 CBAs with a population of more than 1 million, but less than 2 million, 19 CBAs with a population of 2 to 4 million, and 14 CBAs with a population of over 4 million.

7. Advanced Notice of Proposed Rulemaking

CMS issued an Advance Notice of Proposed Rulemaking (ANPRM): Medicare Program; Methodology for Adjusting Payment Amounts for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) using Information From Competitive Bidding Programs. The ANPRM was published in the **Federal Register** on February 26, 2014 (79 FR 10754) and solicited comments on several aspects to consider in developing the proposed methodology to adjust DMEPOS fee schedule amounts or other payment amounts in non-competitive areas based on DMEPOS competitive bidding payment information. Specific questions related to this topic were presented in the notice, including:

- Do the costs of furnishing various DMEPOS items and services vary based on the geographic area in which they are furnished?

- Do the costs of furnishing various DMEPOS items and services vary based on the size of the market served in terms of population and/or distance covered or other logistical or demographic reasons?

- Should an interim or different methodology be used to adjust payment amounts for items that have not yet been included in all CBPs (for example, items such as TENS devices that have only been phased into the nine Round 1 areas thus far)?

The comment period for the ANPRM ended on March 28, 2014, and CMS received approximately 185 comments from suppliers, manufacturers, professional, state and national trade associations, physicians, physical therapists, beneficiaries and their caregivers, and one state government office.

Commenters generally agreed that costs do vary by geographic region and that costs in rural and non-contiguous areas are higher than costs in urban areas. However, few commenters offered specific proposals or suggestions for addressing these costs differences and the suggestions that were provided were vague (for example, use the 75th percentile of SPAs rather than the national median SPA). Several commenters stated that the costs of furnishing DMEPOS items and services in different regions of the country do vary. One commenter representing many suppliers said that there exists no reliable cost data. Another commenter representing many manufacturers and suppliers listed several key variables or factors that influence the cost of

furnishing items and services in different areas that should be considered, but the commenter did not provide information on how valid and reliable information related to these factors could be obtained. This commenter stated that information of all bids submitted under the programs should also be considered and not just the bids of winning suppliers. Some commenters expressed concern that the SPAs assume a significant increase in volume to offset lower payment amounts. Some commenters suggested that the price adjustments be phased in rather than making full, one-time adjustments.

B. Proposed Provisions

We propose establishing three methodologies for adjusting DMEPOS fee schedule amounts in areas where CBPs have not been established for these items and services based on SPAs established in accordance with the payment rules at § 414.408. Use of SPAs that may be established in accordance with the special payment rules proposed in section V to adjust DMEPOS fee schedule amounts in areas where CBPs have not been established for these items and services would be addressed in future notice and comment rulemaking. One proposed methodology is described in subsection 1 below and would utilize regional adjustments limited by national parameters for items bid in more than 10 CBAs throughout the country. A second proposed methodology is described in subsection 2 below and would be used for lower volume items or other items that were bid in no more than 10 CBAs for various reasons. A third proposed methodology is described in subsection 5 and would be used for mail order items furnished in the Northern Mariana Islands. We are also proposing rules that would apply to all of these proposed methodologies.

1. Proposed Regional Adjustments Limited by National Parameters

CBPs are currently in place in 100 of the largest MSAs in the country for items and services that make up over 80 percent of the total allowed charges for items subject to the DMEPOS CBP. SPAs are currently used in 109 CBAs that include areas in every state throughout the country except for Alaska, Maine, Montana, North Dakota, South Dakota, Vermont, and Wyoming. The number of CBAs, as listed in Table 33 that are fully or partially located within a given state range from one to twelve. The Honolulu CBA was phased in under Round 2 of the program. Suppliers submitting bids for furnishing items and services in these areas have received extensive

education that they should factor all costs of furnishing items and services in an area as well as overhead and profit into their bids.

For items and services that are subject to competitive bidding and have been included in more than 10 CBAs throughout the country, we propose to adjust the fee schedule payment amounts for these items and services using a methodology that is modeled closely after the regional fee schedule payment methodology in effect for P&O to allow for variations in payment based on bids for furnishing items and services in different parts of the country. Under the proposed methodology, adjusted fee schedule amounts for areas within the contiguous United States would be determined based on regional SPAs or RSPAs limited by a national floor and ceiling. The RSPA would be established using the average of the SPAs for an item from all CBAs that are fully or partially located in the region. The adjusted payment amount for the item would be equal to its RSPA but not less than 90 percent and not more than 110 percent of the national average, which is the average of the RSPAs weighted by the number of states in the region.

We believe modeling the proposed methodology on the regional fee schedule payment methodology for P&O is appropriate because the regional fee schedule payment methodology for P&O allows for variations in Medicare fee schedule amounts based on supplier charges for furnishing items and services in different regions of the country. The regional fee schedule payment methodology for P&O adjusts the Medicare allowed payments for entire regions of the country, including low population density or rural areas, based primarily on supplier information for furnishing items and services in urban areas. The regional fee schedule payment methodology for P&O has been fully phased in since 1994 in the contiguous United States and has not resulted in any barriers to access since then in any specific region of the country in which it has been applied. The DME and P&O fee schedule amounts are based in a part on statewide average reasonable charges calculated using supplier charges for furnishing items and services in localities throughout each state. Supplier charges for furnishing items in rural areas of the state are combined with charges for furnishing items in urban areas of the state, which represents the bulk of the charges since the vast majority of beneficiaries in each state reside in urban areas rather than rural areas. Although the fee schedule

payments are based heavily on charges for furnishing items and services in urban areas, this has not affected access to items and services in rural areas that are paid based on these fee schedule amounts.

We considered modeling the proposed methodology on the fee schedule payment methodology for DME which establishes an upper limit on all fee schedule amounts based on the median of the state fee schedule amounts; however, this methodology does not allow for regional variations in fee schedule amounts, allows for 0 percent variations in state fee schedule amounts above the national median amount, and only allows for up to 15 percent variation in state fee schedule amounts below the national median amount. The statewide average reasonable charges for DME are updated by an annual covered item update factor and are then limited by a national ceiling and floor based on the median of the statewide amounts and 85 percent of the median of the statewide amounts. The DME fee schedule methodology allows for no variation in payment whatsoever above the national median statewide amount. The maximum variation in fee schedule amounts that is allowed is 15 percent below the national median statewide amount. By contrast, the regional fee schedule methodology for P&O allows for regional variation in fee schedule payment amounts by as much as 10 percent below the national average amount and 20 percent above the national average amount. Similarly, the fee schedules for enteral nutrition are based on national average reasonable charges, and therefore, do not allow for any regional variation in fee schedule

amounts. We believe that the model whereby regional fee schedule amounts for P&O are based on supplier charges for furnishing items and services within each region should be adopted when using SPAs to adjust fee schedule payment amounts in a way that reflects bidding in different regions of the country. The regional adjusted amounts are based on supplier bids for furnishing items and services within each region, as explained below.

a. Regional Payment Adjustments

Rather than adjusting state, regional, or national fee schedule amounts or infusion drug payment amounts based on all bids for an item in all CBAs across the country or based on all bids for an item in all CBAs within each state, we propose to adjust the payment amounts based on the average of bids for an item in CBAs that are fully or partially located in different regions of the country. In the first step of the proposed methodology we propose to calculate RSPAs or the average of the SPAs for an item and service in different regions of the country. In keeping with the example established by the P&O regional fee schedule payment methodology, this would allow variation in payment amounts for different regions of the country. For the purpose of establishing the boundaries for the regions, we propose using 8 regions developed for economic analysis purposes by the Bureau of Economic Analysis (BEA) within the Department of Commerce. These regions are proposed based on research and analysis conducted by the BEA indicating that the states in each region share economic ties. Further information can be obtained at [https://](https://www.bea.gov/regional/definitions/nextpage.cfm?key=Regions)

www.bea.gov/regional/definitions/nextpage.cfm?key=Regions.

The information provided at this link states that:

BEA Regions are a set of Geographic Areas that are aggregations of the states. The following eight regions are defined: Far West, Great Lakes, Mideast, New England, Plains, Rocky Mountain, Southeast, and Southwest. The regional classifications, which were developed in the mid-1950s, are based on the homogeneity of the states in terms of economic characteristics, such as the industrial composition of the labor force, and in terms of demographic, social, and cultural characteristics. For a brief description of the regional classification of states used by BEA, see U.S. Department of Commerce, Census Bureau, Geographic Areas Reference Manual, Washington, DC, U.S. Government Printing Office, November 1994, pp. 6–18;6–19.

Therefore, we propose to revise the definition of *region* in § 414.202 to mean a region developed for economic analysis purposes by the Bureau of Economic Analysis (BEA) within the Department of Commerce for the purpose of calculating regional single payment amounts (RSPAs); the definition of region for the purposes of the P&O regional fee schedule would also continue to apply for those items and services not adjusted based on prices in competitively bid areas. According to the BEA, the regional classifications are based on the homogeneity of the states in terms of economic characteristics, such as the industrial composition of the labor force, and in terms of demographic, social, and cultural characteristics. The contiguous areas of the United States that fall under the 8 BEA regions under our proposal are listed in Table 34 below. Further information can be obtained at <http://www.bea.gov/>.

TABLE 34—BUREAU OF ECONOMIC ANALYSIS REGIONS

Region	Name	States/Areas (count)
1	New England	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont (6).
2	Mideast	Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania (6).
3	Great Lakes	Illinois, Indiana, Michigan, Ohio, and Wisconsin (5).
4	Plains	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota (7).
5	Southeast	Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia (12).
6	Southwest	Arizona, New Mexico, Oklahoma, and Texas (4).
7	Rocky Mountain	Colorado, Idaho, Montana, Utah, and Wyoming (5).
8	Far West	California, Nevada, Oregon, and Washington (4).

We are soliciting public comments on whether different regional boundaries (e.g. CMS regions or Census Divisions) should be considered that would better reflect potential regional differences in the costs of furnishing items and services subject to the DMEPOS CBP. In addition to the CMS regions listed in

section A.3 above, other established regional boundaries include those defined by the United States Census Bureau in the Department of Commerce for the purpose of reporting and analyzing census data. The Census Bureau uses 4 regions that are further

divided into 9 divisions. The Census divisions are as follows:

- New England (Division 1); including the 6 states Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

- Middle Atlantic (Division 2); including the 3 states New Jersey, New York and Pennsylvania.
- East North Central (Division 3); including the 5 states Illinois, Indiana, Michigan, Ohio and Wisconsin.
- West North Central (Division 4); including the 7 states Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota and South Dakota.

- South Atlantic (Division 5); including the 9 states Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia and West Virginia.
- East South Central (Division 6); including the 4 states Alabama, Kentucky, Mississippi and Tennessee.
- West South Central (Division 7); including the 4 states Arkansas, Louisiana, Oklahoma, and Texas.

- Mountain (Division 8); including the 8 states Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah and Wyoming.
 - Pacific (Division 9); including the 5 states Alaska, California, Hawaii, Oregon and Washington.
- Table 35 below lists the states and number of CBAs located in each of the CMS regions, BEA regions, and census divisions.

TABLE 35—STATES AND NUMBER OF CURRENT CBAs PER CMS REGION, BEA REGION, AND CENSUS DIVISION

10 CMS Regions			9 Census Divisions			8 BEA Regions		
Region	States	CBAs	Division	States	CBAs	Region	States	CBAs
Boston	CT, ME, MA, NH, RI, VT.	7	New England	CT, ME, MA, NH, RI, VT.	7	New England	CT, ME, MA, NH, RI, VT.	7
New York	NJ, NY	13	Middle Atlantic	NJ, NY, PA	15	Mideast	DE, DC, MD, NJ, NY, PA.	17
Phila	DE, DC, MD, PA, VA, WV.	9						
Atlanta	AL, FL, GA, KY, MS, NC, SC, TN.	28	South Atlantic	DE, DC, FL, GA, MD, NC, SC, VA, WV.	30	Southeast	AL, AR, FL, GA, KY, LA, MS, NC, SC, TN, VA, WV.	34
			East South Central	AL, KY, MS, TN	7			
Chicago	IL, IN, MI, MN, OH, WI.	19	East North Central	IN, IL, MI, OH, WI.	19	Great Lakes	IL, IN, MI, OH, WI.	19
Dallas	AR, LA, NM, OK, TX.	14	West South Central	AR, LA, OK, TX	13	Southwest	AZ, NM, OK, TX	11
Kansas City	IA, KS, MO, NE	4	West North Central	IA, KS, MN, MO, NE, ND, SD.	5	Plains	IA, KS, MN, MO, NE, ND, SD.	5
Denver	CO, MT, ND, SD, UT, WY.	3	Mountain	AZ, CO, ID, NM, MT, UT, NV, WY.	8	Rocky Mountain	CO, ID, MT, UT, WY.	4
San Fran	AZ, CA, NV	16	Pacific	CA, OR, WA	15	Far West	CA, NV, OR, WA	16
Seattle	ID, OR, WA	3						

The regional fee schedule amounts for P&O are based on the average of the statewide fees for P&O, weighted by total Part B claims for paid claims with dates of service from July 1, 1991, thru June 30, 1992, which results in fees for states with a greater volume of Part B claims having more influence on the regional fee schedule amounts than states with a smaller volume of Part B claims. We believe this aspect of the regional fee schedule payment methodology for P&O tends to favor more heavily populated states. The statewide fees for larger, more urban states where the most Medicare claims are processed, for example, Massachusetts for Region 1, play a larger role in determining the regional price than the statewide fees for smaller, more rural states in the region, for example, Vermont. Table 36 below shows the relative weights applied to the statewide fees used in calculating the regional P&O fees for the CMS Boston Region or Region 1.

TABLE 36—P&O REGIONAL FEE WEIGHTS—CMS REGION 1 (BOSTON) (WEIGHTED BY TOTAL PAID CLAIMS FOR DATES OF SERVICE FROM JULY 1, 1991, THRU JUNE 30, 1992)

State	Total part B claims	Percent of total for Region
MA	11,710,121	48%
CT	6,288,638	26%
RI	2,251,892	9%
ME	2,012,385	8%
NH	1,571,936	6%
VT	759,242	3%
Region	24,594,214

As can be seen in this table, the regional P&O fees for the Boston Region are weighted heavily in favor of the statewide fees and average reasonable charges from 1986/87 for the more heavily populated urban states of Massachusetts and Connecticut with a greater utilization of Part B items and services, whereas the fees for more rural

States like Vermont and Maine have a very minor impact in determining the regional fees. In contrast, we are proposing that the RSPAs be calculated based on a simple average of the SPAs for CBAs in each region, without weighting in favor of larger, more heavily populated CBAs. Using the New England BEA Region that is comprised of the same 6 states that make up the CMS Boston Region as an example, the proposed RSPA for this region would be based on the average of the SPAs for the following 7 CBAs, with estimated 2012 population in parentheses:

- Boston-Cambridge-Quincy, MA-NH (4,640,802)
- Providence-New Bedford-Fall River, RI-MA (1,601,374)
- Hartford-West Hartford-East Hartford, CT (1,214,400)
- Bridgeport-Stamford-Norwalk, CT (933,835)
- Worcester, MA (923,762)
- New Haven-Milford, CT (862,813)
- Springfield, MA (625,718)

Therefore, rather than weighting the average of the SPAs in favor of more

heavily populated CBAs, we propose that the RSPA be based on the simple average of the SPAs for the CBAs in the region, with the SPA for the much smaller Springfield, MA CBA and the SPA for the much larger Boston-Cambridge-Quincy, MA-NH Springfield, MA CBA contributing equally toward calculation of the RSPA. We believe this approach would result in adjustments that factor in the regional costs associated with furnishing items and services in the New England region of the country, while not giving undue weight to the costs of furnishing items and services in larger markets.

b. National Parameters

As explained above, the regional fee schedule amounts for P&O are limited by a national ceiling equal to 120 percent of the average of the regional fee schedule amounts for all the states and a national floor equal to 90 percent of the average of the regional fee schedule amounts for all the states. This limits the range in the regional fee schedule amounts from highest to lowest to no more than 30 percent, 20 percent above the national average and 10 percent below the national average. By contrast, the fee schedule payment methodology for DME only allows for a variation in statewide fees of 15 percent below the median of statewide fees for all the states. The national limits to the fee schedule amounts for P&O and DME have not resulted in a barrier to access to items and services in any part of the country. We believe this reflects the fact that the costs of furnishing DMEPOS items and services do not vary significantly from one part of the country to another and that national limits on regional prices is warranted. We therefore propose to limit the variation in the RSPAs using a national ceiling and floor in order to prevent unnecessarily high or low regional amounts that vary significantly from the national average prices for the items and services. The national ceiling and floor limits would be based on 110 percent and 90 percent, respectively, of the average of the RSPAs applicable to each of the 48 contiguous states and the District of Columbia (that is, the average of RSPAs is weighted by the number of contiguous states including the District of Columbia per region). We propose that any RSPA above the national ceiling would be brought down to the ceiling and any RSPA below the national floor would be brought up to the floor. We propose that the national ceiling would exceed the average of the RSPAs by the same percentage that the national floor would be under the average of the RSPAs. This allows for a

maximum variation of 20 percent from the lowest RSPA to the highest RSPA. We believe that a variation in payment amounts both above and below the national average price should be allowed, and we believe that allowing for the same degree of variation (10 percent) above and below the national average price is more equitable and less arbitrary than allowing a higher degree of variation (20 percent) above the national average price than below (10 percent), as in the case of the national ceiling and floor for the P&O fee schedule, or allowing for only 15 percent variation below the national average price, as in the case of the national ceiling and floor for the DME fee schedule.

c. Rural and Frontier State Adjustments

Under the DMEPOS CBP, the statute prohibits competitions before 2015 in new CBAs that are rural areas or MSAs with a population of less than 250,000. Even if competitions were to begin in these areas in 2015, it is very unlikely that the SPAs from these areas would be computed and finalized by January 1, 2016. Therefore, we propose that the proposed RSPAs initially be based solely on information from existing programs implemented in 100 MSAs, which are generally comprised of more densely populated, urban areas than areas outside MSAs. We therefore believe that the initial RSPAs would not directly account for unique costs that may be associated with furnishing DMEPOS in states that have few MSAs and are predominantly rural or cover large geographic areas and are sparsely populated. However, in keeping with the discussion above, we do not believe that the cost of furnishing DMEPOS in these areas should deviate significantly from the national average price established based on supplier bids for furnishing items and services in different areas throughout the country.

As explained above, the DMEPOS fee schedule amounts are based primarily on supplier charges for furnishing items and services in urban areas and this has not resulted in problems associated with access to these items and services in rural areas or large, sparsely populated areas. Nonetheless, for the purpose of ensuring access to necessary items and services in states that are more rural or sparsely populated than others, we propose that the adjusted fee schedule amounts for states that are more rural than urban and defined as “rural states” or states where a majority of the counties are sparsely populated and defined as “frontier states” would be no lower than the national ceiling amount discussed in section b above.

We propose in § 414.202 that a *rural state* be defined as a state where more than 50 percent of the population lives in rural areas within the state as determined through census data, since a majority of the general population of the state lives in rural areas, it is likely that a majority of DMEPOS items and services are furnished in rural settings in the state. This is in contrast to other states where the majority of the general population of the state lives in urban areas, making it more likely that a majority of DMEPOS items and services are furnished in urban settings or in MSAs. We believe that for states where a majority of the general population lives in rural areas, adjustments to the fee schedule amounts should be based on the national ceiling amount if the RSPA is lower than the national ceiling amount. This higher level of payment would provide more assurance that access to items and services in states within a region that are more rural than urban is preserved in the event that costs of furnishing DMEPOS items and services in rural areas is higher than the costs of furnishing DMEPOS items and services in urban areas.

We propose in § 414.202 that a *frontier state*, would be defined as a state where at least 50 percent of counties in the state have a population density of 6 people or less per square mile. In such states, the majority of counties where DMEPOS items and services may be needed are very sparsely populated and suppliers may therefore have to drive considerably longer distances in furnishing these items and services as opposed to other states where the beneficiaries live closer to one another. The designation of states as frontier states or frontier areas is currently used under Medicare Part A to make adjustments to the wage index for hospitals in these remote areas in order to ensure access to services in these areas. The definition of frontier state that is proposed above for the purpose of implementing section 1834(a)(1)(F) and (G) of the Act is consistent with the current definition in section 1886(d)(3)(E)(iii)(II) and (III) of the Act and 42 CFR 412.64(m) of the regulations related to implementation of the hospital wage index adjustments and prospective payment system for hospitals under Part A. We believe that states designated as frontier states have a significant amount of area that is sparsely populated and are more likely to be geographically removed from (that is, a considerable driving distance from) areas where population is more concentrated. However, we solicit

comments on alternative definitions of frontier states.

Based on the 2010 Census data, states designated as rural would include Vermont, Maine, West Virginia, and Mississippi. Other than one CBA that is fully located in Mississippi, one CBA that is partially located in Mississippi, and two CBAs that are partially located in West Virginia, the RSPAs would not include SPAs that reflect the costs of furnishing items and services in these states based on where the CBAs are currently located. Current frontier states include North Dakota, South Dakota, Montana, and Wyoming, and the RSPAs would not include SPAs that reflect the costs of furnishing items and services in any of these states based on where the CBAs are currently located. We propose that the designation of rural and frontier states could change as the U.S. Census information changes. We propose that when a state that is not designated as a rural state or frontier becomes a rural state or frontier state based on new, updated information from the U.S. Census Bureau, that adjustments to the fee schedule amounts in accordance with the proposed provision of this section would take effect as soon as such changes can be implemented. Likewise, we propose that at any time a state that is designated as a rural state or frontier no longer meets the proposed definition in this section for rural state or frontier state based on new, updated information from the U.S. Census Bureau, that adjustments to the fee schedule amounts in accordance with the proposed provision of this section would take effect as soon as such changes can be implemented. We propose that the changes to the state designation would occur based on the decennial Census. The decennial Census uses total population of the state to determine whether the state is predominately rural or frontier. The U.S. Census Bureau also uses current population estimates every 1, 3, and 5 years through the American Community Survey but only samples a small percentage of the population every year, not the total population. Therefore, we propose that the designation of a rural or frontier state occur approximately every 10 years when the total population data is available. For the current proposed fee schedule adjustments, we propose to use the 2010 Census Data. The next update would reflect the 2020 Census Data and any changes in the designation of a rural or frontier state and corresponding fee schedule changes would be implemented after the 2020 Census Data becomes available. For this and

subsequent updates, we propose to include a listing of the qualifying rural and frontier States in program guidance that is issued quarterly and to provide at least 6 months advance notice of any adjustments.

Some of the comments received on the ANPRM indicated that the costs of furnishing DMEPOS items and services in rural areas is significantly higher than the costs of furnishing DMEPOS items and services in urban areas. Other commenters suggested that the adjustments to the payment amounts based on information from CBPs be phased in to give suppliers time to adjust to the new payment levels. Although we believe that the costs of furnishing items and services in rural areas are different than the costs of furnishing items and services in urban areas, there is no evidence to support a statement that the difference in costs is significant. However, in order to proceed cautiously on this matter in the interest of ensuring access to covered DMEPOS items and services, we are proposing to phase in the price adjustments, as explained below, so that we can monitor the impact of the adjustments as they are gradually phased in.

In summary, we propose that adjustments to payment amounts for areas within different regions of the contiguous United States would be based on the un-weighted average of SPAs from CBAs that are fully or partially located within these regions. The regional amounts would be limited by a national ceiling and floor and the adjusted payment amounts for all states designated as rural or frontier states would be equal to the national ceiling. In addition, we are soliciting public comments on whether payment in rural areas of states that are not designated as rural or frontier states should be set differently.

d. Areas Outside the Contiguous United States

Given the unique costs of furnishing DMEPOS items and services in remote, isolated areas outside the contiguous United States such as Alaska, Guam, Hawaii, Puerto Rico, the United States Virgin Islands and other areas, we propose that any SPAs from programs in these areas be excluded from the calculation of the RSPAs in section a. In addition, we propose that the adjustments to the fee schedule amounts for areas outside the contiguous United States would not be based on the RSPAs. Rather, we propose that the adjustments to the fee schedule amounts for these areas be based on the higher of the average of SPAs for CBAs in areas

outside the contiguous United States (for example, Honolulu) or the national ceiling limit applied to the payment adjustments for areas within the contiguous United States. We believe that, to the extent that SPAs from non-contiguous areas are available, these amounts should be used in making adjustments to the payment amounts for other areas outside the contiguous United States since the challenges and costs of furnishing DMEPOS items and services in all remote, isolated areas is similar. We also believe that the payment adjustments for these areas, like those for the proposed rural and frontier states, should not be lower than the national ceiling established for items and services furnished in the contiguous United States. Areas outside the contiguous United States generally have higher shipping fees and other costs. We believe the SPAs in Honolulu and other areas outside the contiguous United States reflect these costs and could be used to adjust the fee schedule amounts for these areas without limiting access to DMEPOS items and services. However, in the event that the national ceiling limit described in section b above is greater than the average of the SPAs for CBPs in areas outside the contiguous United States, we propose that the higher national ceiling amount be used in adjusting the fee schedule amounts for areas outside the contiguous United States in order to better ensure access to DMEPOS items and services.

We are soliciting comments on these proposals.

2. Methodology for Items and Services Included in Limited Number of Competitive Bidding Programs

In some cases, there may not be a sufficient number of CBAs and SPAs available for use in computing RSPAs, and therefore, a different methodology for implementing section 1834(a)(1)(F)(ii) of the Act would be necessary. For items and services that are subject to competitive bidding and have been included in CBP in no more than 10 CBAs, we propose that payment amounts for these items in all non-competitive bidding areas be adjusted based on 110 percent of the average of the SPAs for the areas where CBPs are implemented. Using a straight average of the SPAs rather than a weighted average of the SPAs gives SPAs for the various CBAs equal weight regardless of the size of the CBA. We believe this avoids giving undo weight to SPAs for more heavily populated areas. We are proposing the additional 10 percent adjustment to the average of the SPAs to account for unique costs such as

delivering items in remote, isolated locations, but would make this a uniform adjustment for program simplification purposes. This issue is discussed in more detail below.

Under the DMEPOS CBP, there may be items and services for which implementation of CBPs could generate significant savings for the beneficiary and/or program, but which are furnished infrequently in most MSAs. In some cases, such items and services could be combined with other items and services under larger PCs or included in mail order competitions, to the extent that these are feasible options. For example, combining infrequently used traction equipment and frequently used hospital beds in the same product for bidding purposes would ensure that any beneficiary that needs traction equipment in the CBA would have access to the item from the suppliers also contracted to furnish hospital beds in the area. This would make it feasible to include traction equipment in numerous MSAs throughout the country and would allow use of the RSPA methodology described above. However, if a PC was established just for traction equipment for bidding purposes, the volume of items furnished in certain MSAs may not be sufficient to generate viable competitions under the program because there may be a limited number of suppliers interested in competing to furnish the items in local areas. Nonetheless, if significant savings for the beneficiary and/or program are possible for the equipment, we are mandated to phase the items in under the DMEPOS CBP.

In addition, for lower volume items within large PCs, such as wheelchair accessories, we propose to include these items in a limited number of local competitions rather than in all CBAs to reduce the burden for suppliers submitting bids under the programs as a whole. In these cases, for the purposes of implementing section 1834(a)(1)(G) of the Act, we propose that payment amounts for these items in all areas where CBPs are not implemented be adjusted based on 110 percent of the average of the SPAs for the areas where CBPs are implemented. We are proposing the additional 10 percent adjustment to the national average price to account for unique costs in certain areas of the country such as delivering items in remote, isolated locations. For example, the PC for standard mobility in the 9Round 1 CBAs includes 25 HCPCS codes for low volume wheelchair accessories that are not included in the PC for standard wheelchairs, scooters, and related accessories in the 100 Round 2 CBAs. We propose that

payment amounts for these items in areas where CBPs are not implemented be adjusted based on 110 percent of the average of the SPAs for the 9Round 1 areas where CBPs are implemented. Alternatively, we could include these low volume items in all PCs in all 109 CBAs and suppliers would need to develop bid amounts and enter bids for these 25 codes for low volume items such as toe loop holders, shock absorbers and IV hangers. Including these 25 Healthcare Common Procedure Coding System (HCPCS) codes for low volume wheelchair accessories in the PCs under the 9 Round 1 CBAs means that suppliers submitting bids for wheelchairs have 25 bid amounts to develop and enter per CBA for these items, or a total of 225 bid amounts to develop and enter for these low volume items if bidding for wheelchairs in all 9 Round 1 CBAs. In contrast, including these codes in the PCs under all 109 CBAs means that suppliers submitting bids for wheelchairs have 2,725 bid amounts to develop and enter for these low volume items, if bidding for wheelchairs in all 109 CBAs. We believe that adjusting fee schedule amounts based on SPAs from 10 or fewer CBAs achieve the savings mandated by the statute for these items while greatly reducing the burden on suppliers and the program in holding competitions for these items in all 109 CBAs across the country.

Finally, if contracts and SPAs for low volume items included in a limited number of CBAs expire and the items are not included in future CBPs, we propose to use the information from the past competitions to adjust the payment amounts for these items nationally based on 110 percent of the average of the SPAs for the areas where CBPs were implemented. Even though the SPAs may no longer be in effect, we believe it is reasonable to use the information to reduce excessive payment amounts for items and services as long as the SPAs did not result in a negative impact on access to quality items and services while they were in effect and as long as the amounts are adjusted to account for increases in costs over time. For example, 4 codes for adjustable wheelchair seat cushions were included in the Round 1 Rebid, with SPAs that were approximately 25 percent below the fee schedule amounts being in effect in 9 CBAs from January 2011 thru December 2013. These items were not bid in future rounds due to the low volume of use relative to other wheelchair seat cushions. During the course of the 3-year contract period when the SPAs were in effect in the 9

areas, there were no reports of access problems and there were no negative health outcomes as a result of including these items under CBPs. For the future, savings for these items could be achieved by including them in future competitions or by using the previous SPAs, updated by an economic update factor to account for increases in costs. If the decision is made not to include these items in future competitions, we believe savings can and should still be obtained based on information from the previous competitions.

We are soliciting comments on these proposals.

3. Adjusted Payment Amounts for Accessories Used With Different Types of Base Equipment

There may be situations where the same accessory or supply identified by a HCPCS code is used with different types of base equipment, and the item (HCPCS code) is included in one or more PCs under competitive bidding for use with some, but not all of the different types of base equipment it is used with. For these situations, we propose to use the weighted average of the SPAs from CBPs and PCs where the item is included for use in adjusting the payment amounts for the item (HCPCS code). We believe that it would be unnecessarily burdensome to have different fee schedule amounts for the same item (HCPCS code) when it is used with similar, but different types of base equipment. We believe that the costs of furnishing the accessory or supply should not vary significantly based on the type of base equipment it is used with.

Therefore, we seek public comments on addressing situations where an accessory or supply identified by a HCPCS code is included in one or more PCs under competitive bidding for use with more than one type of base equipment. In these situations, we propose to calculate the SPA for each CBA by weighting the SPAs from each PC in that CBA by national allowed services. This would result in the calculation of a single SPA for the item for each CBA. The single SPA per code per CBA would then be used in applying the payment adjustment methodologies proposed above. For example, HCPCS code Exxx1 describes a tray used on a wheelchair. Exxx1 was included in a PC for manual wheelchairs in all CBAs and in a separate, second PC for power wheelchairs in all CBAs. SPAs for Exxx1 under the manual wheelchair PC are different than the SPAs for Exxx1 under the power wheelchair PC.

Under the proposal, national allowed services would be used to compute a weighted average of the SPAs for Exxx1 in each of the CBAs. So, rather than having 2 different SPAs for the same code in the same CBA, we would have 1 SPA for the code for the CBA. If the item is included in only one PC, we propose to use the SPAs for the item from that PC in applying the payment adjustment methodologies proposed above.

We are soliciting comments on these proposals.

4. Adjustments to Single Payment Amounts That Result From Unbalanced Bidding

Within the HCPCS there are instances where there are multiple codes for an item that are distinguished by the addition of a hierarchal feature(s). For example, one code may describe an enteral nutrition infusion pump with an alarm and another code may describe a less sophisticated pump without an alarm. Under competitive bidding, the code with the higher utilization would receive a higher weight and the bid for this item would have a greater impact on the composite bid and competitiveness of the supplier's overall bid for the PC within the CBP than the bid for the less frequently used alternative. This can result in unbalanced bidding where the bids and SPAs for the item without the additional features is higher than the bids and SPAs for the item with the additional features due to the fact that the item with the features is utilized more than the item without the features and therefore receives a higher weight. We believe that it is not inherently reasonable for payment amounts for equipment with fewer features or functionality to be higher than payment amounts for equipment with additional features or functionality.

For example, HCPCS code B9000 describes an enteral nutrition infusion pump without alarm, whereas code B9002 describes an enteral nutrition infusion pump with alarm. Both codes have identical fee schedule amounts. Based on paid claims data, only 176 Medicare beneficiaries received the pump without the alarm in 2012, whereas 52,531 Medicare beneficiaries received the pump with the alarm in 2012. Both pumps are included in the PC for enteral nutrients, supplies, and equipment. As a result of the significantly higher utilization of code B9002, this code received a much higher item weight under the CBP than code B9000, and, as a result, a supplier could submit a much higher bid for B9000 than for B9002 with virtually no impact

on their composite bid. Under Round 2, unbalanced bidding resulted in SPAs for code B9000 without the alarm being 6 percent higher on average than the SPAs for code B9002 with alarm. Unbalanced bidding also occurred under Round 2 in the case of standard power wheelchairs, with SPAs for infrequently used Group 1, standard weight power wheelchairs (codes K0815 and K0816) being 16 percent higher on average than the SPAs for the much more frequently used Group 2 versions (codes K0822 and K0823). Based on paid claims data, only 474 Medicare beneficiaries received Group 1 power wheelchairs described by codes K0815 and K0816 in 2012, whereas 196,968 Medicare beneficiaries received higher performing Group 2 power wheelchairs described by codes K0822 and K0823 in 2012. The long term solution for avoiding cases of unbalanced bidding is to eliminate duplicate codes in the HCPCS. For the purpose of implementing section 1834(a)(1)(G) of the Act, and in making adjustments to payment amounts under sections 1834(a)(1)(F)(ii), 1834(h)(1)(H)(ii), and 1842(s)(3)(B) of the Act, we propose that the payment amounts for infrequently used codes that describe items and services with fewer features than codes with more features be adjusted so that they are no higher than the payment amounts for the more frequently used codes with more features. For example, the adjusted fee schedule amounts for code B9000 would be set so that they are no higher than the adjusted fee schedule amounts for code B9002. We believe that without this provision, unbalanced bidding could result in fee schedule amounts for items that essentially represent lower levels of service being higher than fee schedule amounts for items representing higher levels of service, based on bids being higher for infrequently used items with lower weights and less features than bids for frequently used items with higher weights and more features. This could result in beneficiaries receiving the item with fewer features and functionality simply because the supplier has a financial incentive to furnish that item. This is especially important in light of the fact that use of the inherent reasonableness authority provided by section 1842(b)(8) and (9) of the Act cannot be used to further adjust payment amounts that are adjusted based on the mandate of section 1834(a)(1)(F)(ii) and the authority provided by sections 1834(h)(1)(H)(ii) and 1842(s)(3)(B) of the Act.

We seek public comments on this issue and our proposed provision to address this issue.

5. National Mail Order Program—Northern Mariana Islands

While Section 1847(a)(1)(A) of the Act provides that CPBs be established throughout the United States, the definition of United States at section 210(i) of the Act does not include the Northern Mariana Islands. We therefore previously determined that the Northern Mariana Islands are not considered an area eligible for inclusion under a national mail order CBP. For the purpose of implementing the requirements of section 1834(a)(1)(F)(ii) of the Act, we are proposing that the payment amounts established under a national mail order CBP would be used to adjust the fee schedule amounts for mail order items furnished to beneficiaries in the Northern Mariana Islands. We propose that the adjusted fee schedule amounts would be equal to 100 percent of the amounts established under the national mail order CBP.

We are soliciting comments on these proposals.

6. Updating Adjusted Payment Amounts

In accordance with section 1834(a)(1)(F)(iii) of the Act, the adjusted payment amounts for DME must be updated as additional items are phased in or information is updated. We propose to add regulation text indicating that we would revise the adjusted payment amounts for DME, enteral nutrients, supplies, and equipment, and OTS orthotics each time a SPA is updated following one or more new competitions, which may occur at the end of a contract period, as additional items are phased in, or as new programs in new areas are phased in. This is required by section 1834(a)(1)(F)(iii) for DME. Since we believe it is reasonable to assume that updated information from CBPs would better reflect current costs for furnishing items and services, we are proposing regulations to require similar updates for enteral nutrients, supplies, and equipment, and OTS orthotics.

As we indicated above, if the only SPAs available for an item are those that were established under CBP that are no longer in effect, we propose to use these SPAs to adjust payment amounts using the methodologies described above and we propose to do so following application of inflation adjustment factors. We propose that the inflation adjustment factor would be based on the percentage change in the Consumer Price Index for all Urban Consumers (CPI-U) from the mid-point of the last

year the SPAs were in effect to the month ending 6 months prior to the date the initial payment adjustments would go into effect. The adjusted payment amounts would continue to be updated every 12 months using the percentage change in the CPI-U for the 12-month period ending 6 months prior to the date the updated payment adjustments would go into effect. Use of the CPI-U as the update factor is consistent with how pricing amounts for DMEPOS have been updated since October 1, 1985, when the CPI-U was used in calculating the IIC for use in calculating reasonable charges. The CPI-U was used in updating reasonable charge data for use in calculating the initial fee schedule amounts and is used in determining the covered item update factors at sections 1834(a)(14), 1834(h)(4)(A), 1834(i)(1)(B), 1842(s)(1)(B) of the Act. If CBPs are subsequently established for the item, we propose that the SPAs established under these programs would be used in applying the payment adjustment methodologies described above.

If finalized, the payment amounts that would be adjusted in accordance with sections 1834(a)(1)(F)(ii) and (iii) of the Act for DME, section 1834(h)(2)(H)(ii) of the Act for orthotics, and section 1842(s)(2)(B) of the Act for enteral nutrients, supplies, and equipment shall be used to limit bids submitted under future competitions of the DMEPOS CBP in accordance with regulations at § 414.414(f). Section 1847(b)(2)(A)(iii) prohibits the awarding of contracts

under a CBP unless we are sure that total payments made to contract suppliers in the CBA are less than the payment amounts that would otherwise be made. In order to assure savings under a CBP, the fee schedule amount that would otherwise be paid is used to limit the amount a supplier may submit as their bid for furnishing the item in the CBA. If finalized, the payment amounts that would be adjusted in accordance with sections 1834(a)(1)(F)(ii) and (iii) of the Act for DME, section 1834(h)(2)(H)(ii) of the Act for orthotics, and section 1842(s)(2)(B) of the Act for enteral nutrients, supplies, and equipment would be the payment amounts that would otherwise be made if payments for the items and services were not made through implementation of a CBP. Therefore, the adjusted fee schedule amounts would become the new bid limits.

We are soliciting comments on these proposals.

7. Summary of Proposed Methodologies

To summarize, under the proposed methodology in subsection 1 above which applies to items and services included in more than 10 CBAs, adjusted fee schedule amounts would be determined based on RSPAs limited by a national floor and ceiling. The RSPA would be established using the average of the SPAs for an item from all CBAs that are fully or partially located in the region. The payment amount for the item, with limited exceptions for areas

outside the contiguous United States, would be equal to its RSPA but not less than 90 percent and not more than 110 percent of the national average, which is the average of the RSPAs weighted by the number of states in the region. The proposed methodology is modeled closely after the regional fee schedule payment methodology in effect today for P&O. For the purpose of establishing the regional boundaries, we propose to use 8 regions developed by the Bureau of Economic Analysis (BEA) within the Department of Commerce: New England, Mideast, Great Lakes, Plains, Southeast, Southwest, Rocky Mountain, and Far West. For rural and frontier states, we propose that the payment amount would be 110 percent of the national average. For areas outside the contiguous United States, the payment amount would be the greater of the average of the SPAs in the non-contiguous areas or 110 percent of the national average. As described in subsection 2 above, we propose a different methodology for low volume items with a limited number of SPAs. In addition, we propose to apply update factors to SPAs no longer in effect to adjust fee schedule amounts if no other data is available. Finally, we propose that adjustments would be made to account for SPAs for lower levels of service that are higher than SPAs for higher levels of service.

A summary of the proposed methodologies is provided in Table 37 below.

TABLE 37—SUMMARY OF PROPOSED METHODOLOGIES FOR ADJUSTING PAYMENT IN NON-BID AREAS

Proposed methodology	Calculations
1) Adjustments for Items Included in More than 10 CBAs*	
Regional Adjustments Limited by National Parameters for Items Furnished Within the Contiguous United States.	Adjusted payment equal to the RSPA (calculated using the un-weighted average of SPAs from CBAs that are fully or partially located with a BEA region) limited by a national floor and ceiling. The national ceiling and floor would be set at 110 percent and 90 percent, respectively, of the national weighted RSPA average (average of the RSPAs applicable to each of the 48 contiguous states and DC).
Adjustments for Rural and Frontier States ..	Adjusted payment for designated States based on 110 percent of the national weighted RSPA average.
Adjustments for Items Furnished Outside the Contiguous United States.	Adjusted payment for non-contiguous areas (e.g., Alaska, Guam, Hawaii) based on the higher of the average of SPAs for CBAs in areas outside the contiguous U.S. or 110 percent of the national weighted RSPA average applied to adjustments within the contiguous U.S.
2) Adjustments for Lower Volume or Other Items Included in 10 or Fewer CBAs*.	Adjusted payment based on 110 percent of the un-weighted average of the SPAs for the areas where CBPs are implemented for contiguous and non-contiguous areas of the United States.
3) Adjustments for Items Where the Only Available SPA is from a CBP No Longer in Effect.	Payment based on adjusted payment determined under 1) or 2) above and adjusted on an annual basis based on the CPI-U update factors from the mid-point of the last year the SPAs were in effect to the month ending 6 months prior to the date the initial payment adjustments would go into effect.
4) Adjustments for Accessories Used with Different Types of Base Equipment	
Adjustments for Accessories Included in One CBP Product Category.	SPAs for the item from that one Product Category would be used in determining the adjusted payment amounts under methodologies 1) or 2).
Adjustments for Accessories Included in One or More CBP Product Category.	A weighted average of the SPAs for the item in each CBA where the item is included in more than one Product Category would be used to determine the adjusted payment amounts under methodologies 1) or 2).

TABLE 37—SUMMARY OF PROPOSED METHODOLOGIES FOR ADJUSTING PAYMENT IN NON-BID AREAS—Continued

Proposed methodology	Calculations
5) Payment Adjustments to Northern Mariana Islands Using the National Mail Order SPAs.	Fee schedule amounts adjusted to equal the SPAs under the national mail order CBP.

* Note: We are also proposing to adjust the SPAs for a lower level of service item to not exceed the SPAs of a higher level of service item prior to applying the methodologies in 1) and 2) above in instances where the SPA for the lower level of service item exceeds the higher level of service item.

VI. Proposed Payment Methodologies and Payment Rules for Durable Medical Equipment and Enteral Nutrition Furnished Under the Competitive Bidding Program

A. Background

The payment rules for DME have changed significantly over the years since 1965, resulting in the replacement of the original monthly rental payment methodology with lump sum purchase and capped rental payment rules, as well as separate payment for repairs, maintenance and servicing, and replacement of expensive accessories for beneficiary-owned equipment. In our experience, these payment rules have been burdensome to administer and have added program costs associated with expensive wheelchair repairs and payment for loaner equipment, and have significantly increased costs associated with frequent replacement of expensive accessories at regular intervals for items such as CPAP devices. We estimate that separate payments for CPAP accessories have increased annual expenditures by approximately \$200 million. In some cases, the costs associated with maintaining DME owned by beneficiaries equals or exceeds any savings that might be generated from capping rental payments. In the case of repairs, suppliers are not mandated to service the equipment they furnish once title transfers to the beneficiary—any supplier can provide these services. This could create a hardship for the beneficiary since they must find a supplier willing to repair the equipment and their separate coinsurance payments could be substantial if the repair services are extensive. According to § 414.408(h)(3) of our regulations, payment on a capped rental basis also results in the restart of periods of continuous use for capped rental items, and according to § 414.408(i)(2) of our regulations, an extension in the rental cap periods for oxygen equipment when a beneficiary transitions from a non-contract supplier to a contract supplier at the start of a new CBP. These issues were discussed in the February 26, 2014, ANPRM noted above (79 FR 10758). It is not clear, however, the extent to which the capped rental

requirement, combined with separate payments for supplies, accessories, repairs, and program administration, overall results in net savings or net costs to the Medicare program, particularly if we examine the effects of the policy on specific DME items and services.

Under the Social Security Amendments of 1965 (Pub. L. 89–97) enacted on July 30, 1965, Medicare Part B covered only rental of DME items. The Social Security Amendments of 1967 (Pub. L. 90–248), approved January 2, 1968, revised the statute to provide authority for making payment for DME on a purchase basis as well as on a rental basis. On May 12, 1972, the Government Accountability Office (GAO) issued a report to the Congress entitled “Need for Legislation to Authorize More Economical Ways of Providing Durable Medical Equipment under Medicare” (B–164031(4), May 12, 1972) that led to Social Security Amendment (section 245) in 1972. Section 245 of the Social Security Amendments of 1972 (Pub. L. 92–603) enacted on October 30, 1972, modified the payment provisions for specific equipment items to LCL of reasonable charges to contain the costs of DME. This law allowed the Department of Health and Human Services (HHS) to experiment with reimbursement approaches and implement any purchase approach found to be feasible and economical in order to avoid prolonged rental payments for expensive DME. Furthermore, section 16 of the Medicare-Medicaid Anti-Fraud and Abuse Amendments (Pub. L. 95–142), enacted on October 25, 1977, amended section 1833(f) of the Act to read as follows:

In the case of durable medical equipment to be furnished an individual as described in section 1861(s)(6), the Secretary shall determine, on the basis of such medical and other evidence as he finds appropriate (including certification by the attending physician with respect to expected duration of need), whether the expected duration of the medical need for the equipment warrants a presumption that purchase of the equipment would be less costly or more practical than rental. If the Secretary determines that such a presumption does exist, he shall require that the equipment be purchased, on a lease-purchase basis or

otherwise, and shall make payment in accordance with the lease-purchase agreement (or in a lump sum amount if the equipment is purchased other than on a lease-purchase basis); except that the Secretary may authorize the rental of the equipment notwithstanding such determination if he determines that the purchase of the equipment would be inconsistent with the purposes of this title or would create an undue financial hardship on the individual who will use it.

This law required HHS to make lease-purchase decisions on a case-by-case basis based on whether purchase would be less costly or more practical than rental and reimburse on the basis of a lump-sum purchase or a lease/purchase arrangement. To implement the change in the law, HHS issued final regulations (45 FR 44287) on July 1, 1980. This regulation provided that the purpose of the lease purchase payment arrangement for new and used DME was to reduce program costs caused by long and costly rentals of the equipment and reduce beneficiary expenses for annual deductibles and coinsurance for unnecessarily long rentals. However, the regulations were not implemented until 1985 because of uncertainty as to whether they would result in program savings. During the same time period, amidst growing concerns by the agency about prolonged and excessive rentals, Williams College under a grant administered by HCFA (now CMS) issued a report entitled “Determinants of Current and Future Expenditures on Durable Medical Equipment by Medicare and its Program Beneficiaries” on April 1983. This report estimated the excess rentals at about 14 percent of rental payments. Following this report, a GAO report titled “Procedures for avoiding excess rental payments for durable medical equipment should be modified” issued on July 30, 1985, showed that excess rentals represented about 54 percent of the amounts allowed for lower cost items (\$120 or less) and 34 percent for higher cost items. In the GAO report, excess rental payments represented the difference between total Medicare rental payments for an item of equipment and Medicare reimbursement for the item if it had been purchased. GAO data showed substantially fewer short-term rentals

than Williams' data (22 percent versus 64 percent for episodes lasting 1 or 2 months) and substantially more long-term rentals (33 percent versus 8 percent for episodes lasting more than 12 months).

GAO concluded that savings would result for reimbursing low-cost items on a purchase basis because about two-thirds of the rented items in its study costing \$100 or less would have been cheaper to buy. GAO also found that sufficient data was not available to reliably predict when purchasing a high cost item would be less costly than renting it. The report indicated that purchase price was reached by about month 7, with additional monthly rental payments beyond month 7 resulting in excess rental payments cost thereafter. Because of the uncertainty with respect to the high-cost items, GAO recommended alternative reimbursement approaches such as adjustment of the rental rate and requirements that suppliers accept whatever percentage is adopted.

The report further discussed HHS and supplier comments on the GAO report draft. HHS also commented that the cap proposal did not address the issues associated with ownership of DME after the maximum amount of the cap had been reached. The supplier comments included recommendations from National Association of Medical Equipment Suppliers (NAMES) proposal for considering alternative methods that limited rental payments after a specified number of months such as 24 months for non-oxygen-related DME items (wheelchairs and hospital beds). At the end of the 2-year period, any item still being rented would be subject to a monthly maintenance fee in lieu of rental based on 30 percent of the latest allowable rental charge. Title to the items would remain with the supplier, and the item would be returned when no longer needed.

Section 4062 of the Omnibus Budget Reconciliation (OBRA) Act of 1987 (Pub. L. 100–203), was enacted on December 22, 1987. This legislation added section 1834(a) to the Act, which mandated payment categories and rules for DME that dictated whether payment would be made on a rental and/or purchase basis for items in each category. These changes were intended to align payment rates and achieve savings in the Medicare program. The new payment categories mandated by section 1834(a) of the Act were promulgated via regulation at § 414.210. Sections 1834(a)(2) through (a)(5) and 1834(a)(7) of the Act set forth separate payment categories of DME and describe how the fee schedule for each of the

following categories is established: Inexpensive or other routinely purchased items; Items requiring frequent and substantial servicing; Customized items; Oxygen and oxygen equipment; and Other items of DME or capped rental items.

Section 13543 of the Omnibus Budget Reconciliation Act (OBRA) of 1993 (Pub. L. 103–66), was enacted on August 10, 1993, and amended section 1834(a) to reclassify nebulizers, CPAP devices, aspirators or suction pumps, and intermittent assist or respiratory assist devices from the category of items requiring frequent and substantial servicing to the capped rental payment category. It also mandated separate payment for accessories used in conjunction with these items. Section 4315 of the Balanced Budget Act of 1997 (Pub. L. 105–33), enacted on August 5, 1997, added section 1842(s) to the Act, to authorize a fee schedule for PEN, which was promulgated via regulations at § 414.100 (66 FR 45173, August 28, 2001). In 42 CFR Part 414, Subpart C of the regulations, govern payment on a fee schedule basis for PEN nutrients, equipment and supplies. Payment for PEN items and services is made in a lump sum for nutrients and supplies that are purchased and on a monthly basis for equipment that is rented.

Section 1847 of the Act establishes the Medicare DMEPOS Competitive Bidding Program (CBP) (“Competitive Bidding Program”). Under the CBP, Medicare sets payment amounts for selected DMEPOS items and services furnished to beneficiaries in CBAs based on bids submitted by qualified suppliers and accepted by Medicare. For competitively bid items, these new payment amounts, referred to as “single payment amounts,” replace the fee schedule payment amounts. Section 1847(b)(5) of the Act provides that Medicare payment for competitively bid items and services is made on an assignment-related basis equal to 80 percent of the applicable SPA amount, less any unmet Part B deductible.

Payment errors and increased costs can occur as a result of paying separately for equipment, repairs, accessories, and routine maintenance and servicing associated with beneficiary ownership of DME after the 13-month capped rental period or initial lump sum purchase, which have increased the risk for improper payments. The findings published in the August 2010 OIG report (OEI–07–08–00550) titled “A review of claims for capped rental durable medical equipment” reveal that from 2006 to 2008, Medicare erroneously paid separately for these services. Medicare

paid \$2.2 million for routine maintenance and servicing of capped rental DME; from 2006 to 2008, Medicare erroneously allowed nearly \$4.4 million for repairs for beneficiary-owned capped rental DME that failed to meet payment requirements; and in 2007, Medicare allowed nearly \$27 million for repair claims of beneficiary-owned capped rental DME that failed to meet payment requirements.

Based upon our experience, the ownership of equipment by beneficiary after lump sum purchase or after the end of 13 months capped rental period leads to complicated administrative procedures. The program must keep track of separate payment, coverage, medical necessity, and other rules for a number of related codes for replacement supplies and accessories used with the base equipment as well as labor and parts associated with repairing patient-owned equipment. In addition, claims processing systems must count rental months and contractors must identify when legitimate breaks in continuous use occur and can result in the start of new capped rental periods. This leads to costly and complicated claims processing systems edits for processing millions of claims for these items and services. Payment on a purchase or capped rental basis results in the need to process and pay separately for numerous items that are not DME but are related to furnishing DME such as repair of equipment or replacement of supplies and accessories used with patient-owned equipment necessary for the effective use of DME.

B. Proposed Provisions

We believe that we have general authority under section 1847(a) and (b) of the Act to establish payment rules for DME and enteral nutrition equipment that are different than the rules established under section 1834(a) of the Act for DME, section 1842(s) for enteral nutrients, supplies, and equipment, and, section 6112(b) of Omnibus Budget Reconciliation (OBRA) Act of 1989 (Pub. L. 101–239) for enteral pumps. We believe that lump sum purchase and capping rentals for certain DME and enteral nutrition may no longer be necessary to achieve savings under the program when competitive bidding can be used to establish a reasonable monthly payment. We also believe that payment on a continuous rental basis—that is, ongoing monthly payments not subject to a cap—could help to ensure that medically necessary DME and enteral nutrition equipment is kept in good working order for the entire duration of medial need and would make it easier for beneficiaries to change

from one supplier to another since the new supplier would not be faced with a finite number of rental payments. Currently, there is no requirement that a supplier take responsibility for repairing equipment once it is owned by a beneficiary, which may cause difficulties for the beneficiary to find a supplier to undertake such services. We believe that continuous rental payment would eliminate such issues because the supplier of the rented equipment would always be responsible for keeping the equipment in good working order. We do not believe that continuous monthly rental payments for DME and enteral nutrition would negatively impact access to items and services and could potentially be implemented in a manner that does not increase program expenditures since suppliers would be paid based on bids for furnishing the same general items and services they would otherwise provide. In addition, since Medicare payment for rental of DME and enteral nutrition equipment include payment for maintenance and servicing of the rented equipment, the suppliers would be directly responsible for meeting the monthly needs of the beneficiary in terms of keeping the rented equipment in good working order.

As indicated in section IV above, CMS issued an ANPRM: Medicare Program; Methodology for Adjusting Payment Amounts for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) using Information From Competitive Bidding Programs on February 26, 2014 (79 FR 10754). As part of this ANPRM, comments were solicited on whether payment on a bundled, continuous rental basis for DME and enteral nutrition should be adopted under the DMEPOS CBP. Some commenters were concerned that services such as replacement of CPAP masks and equipment repairs would not be provided if they were not paid for separately. Some commenters supported bundling payments for oxygen and enteral nutrition. Some commenters suggested that the bundling methodology be tested first before it is utilized on a wide scale basis. Thirteen commenters that included beneficiaries, beneficiary advocacy organizations, occupational therapists, and physical therapists raised concerns that access to items such as highly configured wheelchairs and speech generated devices might be disrupted under a continuous monthly bundled rental payment that includes equipment rental, replacement accessories and repairs. They felt that payment on a rental basis would result in patients

losing access to these devices when they entered institutions such as hospitals and skilled nursing facilities where separate payment for DME is prohibited by section 1861(n) of the Act.

For items that continue to be paid for on a lump sum purchase basis or a capped rental basis where ownership of equipment transfers to the beneficiary following the capped rental period, we solicited comments on whether the supplier of the equipment should be responsible for repairing the equipment following transfer of title. Some commenters were opposed to the idea of making contract suppliers of purchased equipment responsible for ongoing repairs of equipment following transfer of title to the beneficiary. They stated that it would be a significant burden on suppliers to provide ongoing maintenance of equipment they furnished on a purchase basis, especially if the beneficiary moved out of the area.

After carefully considering comments received in response to the ANPRM, we are proposing to update the regulations to include proposed special payment rules described below that would be utilized in paying claims for certain DME or enteral nutrition under a limited number of CBPs. As explained in more detail in the sections that follow below, we propose to revise the regulation by adding a new section at 42 CFR 414.409 with special payment rules to replace specific payment rules at § 414.408 for these items and services in these CBPs. We also propose to revise § 414.412 regarding submission of bids for furnishing items and services paid in accordance with these special payment rules. We seek comments on these proposals.

We propose to phase-in the special payment rules described in sections 1 and 2 below in a limited number of areas for a limited number of items initially to determine whether it is in the best interest of the Medicare program and its beneficiaries to phase these rules in on a larger scale based on evaluation of the rules' effects on Medicare program costs, and quality of/ access to care. In order to monitor the impact of phasing in the special payment rules in no more than 12 CBAs, we propose that, at a minimum, we would utilize evaluation criteria that are consistent with the current evaluation criteria for monitoring the impact of the CBP on utilizers of items and services in CBAs. To evaluate the quality of care for beneficiaries affected by the special payment rules, we propose that, at a minimum, we would utilize health status outcomes based criteria that would measure specific indicators such

as mortality, morbidity, hospitalizations, emergency room and other applicable indicators unique to each product category. To evaluate beneficiary access to necessary items and services we propose that, at a minimum, we would monitor utilization trends for each product category and track beneficiary complaints related to access issues. To evaluate the cost of the program, we propose that, at a minimum, we would analyze the claims data for allowed services and allowed cost for each product category and the associated accessories, supplies and repair cost in the 12 CBAs and the comparator CBAs. We propose to analyze the effect of the proposed payment rules on beneficiary cost sharing.

We propose that in any competition where these rules are applied, suppliers and beneficiaries would receive advance notice about the rules at the time the competitions that utilize the rules are announced. The combined, total number of CBAs where the proposed rules in either section 1 or 2 would apply would be limited to twelve. In other words, it would not be twelve CBAs for the rules in section 1 and an additional twelve CBAs for the rules in section 2, but 12 CBAs total. In addition, we propose that the PCs listed below would be phased in to include one or more of the CBAs that would number no more than twelve total. In addition, if a determination is made to phase-in these rules on a larger scale in additional areas and for additional items based on program evaluation results regarding cost, quality, and access, the process for phasing in the rules and the criteria for determining when the rules would be applied would be addressed in future notice and comment rulemaking. This rulemaking would also address how the methodology for using these SPAs to adjust fee schedule amounts would need to be revised.

The Affordable Care Act (Patient Protection and Affordable Care Act of 2010, Pub. L. 111–148 (March 23, 2010), Sec. 3021) establishes the Center for Medicare and Medicaid Innovations (CMMI) which is authorized to test models to reduce Medicare and Medicaid expenditures while preserving or improving quality for beneficiaries of those two programs. The provision includes appropriations of \$10 billion for fiscal years 2011 through 2019. We solicit comments on the option for testing the above special payment rules for DME and enteral nutrition using the CMMI demonstration authority in no more than 12 CBAs that would allow us to test and evaluate the special payment rules on a wider scale and determine

whether the special payment rules reduce Medicare expenditure while preserving or improving the quality for Medicare beneficiaries. Regardless of the authority used to phase in or test these special payment rules, we would undertake rigorous evaluation to determine the rules' effects on program costs, quality, and access.

We seek comments on the specific proposals below.

1. Payment on a Continuous Rental Basis for Select Items

We propose to revise the regulation at 42 CFR 414.409 to allow for payment on a continuous monthly rental basis under future competitions in no more than 12 CBAs for one or more of the following categories of items and services: enteral nutrition, oxygen and oxygen equipment, standard manual wheelchairs, standard power wheelchairs, CPAP and respiratory assist devices, and hospital beds. We believe that 12 CBAs represents a limited number of CBAs yet would allow testing in different regions of the country. We propose that the SPAs established under the special payment rules would be based on bids submitted and accepted for furnishing rented DME and enteral nutrition on a monthly basis. We propose that the SPAs would represent a monthly payment for each month that rented DME or enteral nutrition is medically necessary. The SPA for the monthly rental of DME would include payment for each item and service associated with the rental equipment including the ongoing maintenance and servicing of the rental equipment, and replacement of supplies and accessories that are necessary for the effective use of the equipment. In the case of enteral nutrition, we propose that the monthly SPA would include payment for all nutrients, supplies and equipment. Suppliers would be responsible for furnishing all items and services in the applicable CBA needed each month based on the physician's order. For example, in addition to furnishing the CPAP device, the supplier would be responsible for furnishing the accessories used with the device such as masks, tubing, headgear, humidifiers, etc., as well as all maintenance and servicing of the equipment. For wheelchairs, the supplier would be responsible for furnishing the type of wheelchair and all options and accessories used with the wheelchair that are needed by the patient, as well as all maintenance and servicing of the equipment. For hospital beds, the supplier would be responsible for furnishing the type of hospital bed and

all accessories used with the hospital bed (for example, mattresses, side rails, trapeze bars, etc.) needed by the patient, as well as all maintenance and servicing of the equipment. As discussed in more detail below, phasing in these rules would help us determine the impact on Medicare expenditures as well as beneficiary access to items and services and other possible costs and benefits.

We seek comments on this proposal.

a. Enteral Nutrition

We propose to implement future competitions for enteral nutrition in no more than 12 CBAs, where payment would be based on bids submitted for furnishing all enteral nutrients, supplies, and equipment needed on a monthly basis. We propose that the suppliers would submit a single bid for each CBA for furnishing all items and services related to furnishing such enteral nutrients, supplies, and equipment in the applicable CBA needed by a beneficiary on a monthly basis. We are soliciting comments on whether alternatives to submitting a single bid for enteral nutrition should be considered, such as having separate categories based on mode of delivery (syringe fed, pump fed, or gravity fed) or separate categories based on the type of nutrients delivered. We selected the category of enteral nutrition because we believe that payment on a separate, piecemeal basis for daily supplies, calories of nutrients furnished, and monthly rental of equipment the pumps is unnecessary and overly complex. For example, for a pump-fed patient, the beneficiary must choose whether they wish to rent the pump or purchase the pump. If the beneficiary chooses to rent the pump, the supplier is required to continue furnishing the pump until the capped rental period is over, but then is allowed to bill for maintenance and servicing of the pump once every 6 month, but only if maintenance and servicing is needed and furnished. The supplier must also submit claims for daily supply kits as well as feeding tubes furnished in addition to billing for every 100 calories of enteral nutrient furnished. Finally, the supplier must bill for the pole used to hold the pump; however, the monthly rental payments for the pole are not subject to the cap on rentals that the statute specifically requires for the pump and this is confusing. In addition, issues have been raised regarding replacement parts and supplies for beneficiary-owned enteral nutrition infusion pumps when the manufacturer elects to discontinue the brand and model of pump owned by the beneficiary. Neither the beneficiary nor the supplier is able to obtain supplies

that the manufacturer no longer sells and the Medicare rules would generally not allow for the purchase of a new pump since this would be duplicate equipment. We seek comments on this proposal.

b. Oxygen and Oxygen Equipment

We propose to implement future competitions for oxygen and oxygen equipment in no more than 12 CBAs, where payment would be based on bids submitted for furnishing all oxygen and oxygen equipment needed on a monthly basis. We propose that the suppliers would submit a single bid for each CBA for furnishing all items and services needed on a monthly basis, including all rented equipment and related accessories such as regulators, flowmeters, nasal cannulas, masks, tubing, humidifier bottles, tank stands and carts, and transtracheal catheters, as well as all maintenance and servicing of the equipment and delivery of oxygen contents. We selected the category of oxygen and oxygen equipment because we believe the rental cap for oxygen equipment generates very little savings under CBPs. A small percentage of beneficiaries, approximately 25 percent based on our review of Medicare claims, reach the 36-month cap, which is extended by as much as 9 months at the start of a CBP, and the SPAs for oxygen contents furnished after the cap are roughly the same as the SPAs for furnishing oxygen and oxygen equipment during the 36-month rental cap period. In addition, recent issues related to suppliers abandoning beneficiaries after the rental cap has resulted in the need to pay for lost oxygen and oxygen equipment, eliminating any savings the rental cap might have achieved. Although section 1834(a)(5)(F)(ii)(I) of the Act mandates that the supplier receiving payment for the 36th month of continuous use must continue to furnish the oxygen and oxygen equipment for any period of medical need for the duration of the reasonable useful lifetime of the equipment, certain suppliers have failed to continue providing oxygen and oxygen equipment despite this requirement.

Section 414.226 provides that for oxygen and oxygen equipment, Medicare payments are modality neutral, with the exception that the portable oxygen equipment add-on payment for oxygen generating portable equipment (OGPE) is higher than the add-on payment for liquid and gaseous portable oxygen equipment. The Medicare monthly payment for oxygen and oxygen equipment includes payment for stationary equipment

(concentrators, liquid, or gaseous stationary equipment) as well as payment for oxygen contents (stationary and portable). The add-on payment is only for the portable oxygen equipment and does not include payment for the portable oxygen contents. This fact is often confused and the portable oxygen add-on payment is erroneously viewed as a payment for portable oxygen contents as well as portable oxygen equipment. In a majority of cases, beneficiaries receive both stationary oxygen and oxygen equipment and portable oxygen and oxygen equipment, so having a separate add-on payment for portable oxygen equipment only seems unnecessary. Under our proposal, for oxygen and oxygen equipment payment under the select CBPs, we propose to eliminate the 36-month cap on equipment payments and eliminate separate add-on payments for portable equipment and separate payment for oxygen contents. Under our proposal, the contract suppliers would continue to be responsible for furnishing equipment consistent with the requirements in § 414.420.

We seek comments on this proposal.

c. Standard Manual Wheelchairs

We propose to implement future competitions for standard manual wheelchairs in no more than 12 CBAs, where payment would be based on bids submitted for furnishing standard manual wheelchairs and all accessories used in conjunction with the wheelchairs on a monthly basis. We propose that the suppliers would submit a single bid for each HCPCS code describing the wheelchair for each CBA for furnishing the wheelchair and all accessories and services needed on a monthly basis. We are soliciting on this proposal as well as comments on whether all standard manual wheelchairs should be described under one HCPCS code in order to simplify bidding and claims processing procedures. The current HCPCS codes for standard manual wheelchairs include standard, hemi (low seat), lightweight, high strength lightweight, heavy duty, and extra heavy duty wheelchairs described by codes K0001 thru K0004, K0006, and K0007 in the HCPCS. In view of comments to the ANPRM expressing concern regarding beneficiary impact of bundled arrangements for users of highly configured manual wheelchairs, we are requesting comment on what safeguards and monitoring approaches we should use to ensure that access to these items is not disrupted for individuals transitioning between settings and/or

residing in remote areas. We seek comments on this proposal.

d. Standard Power Wheelchairs

We propose to implement future competitions for standard power wheelchairs in no more than 12 CBAs, where payment would be based on bids submitted for furnishing standard power wheelchairs and all accessories used in conjunction with the wheelchairs on a monthly basis. We propose that the suppliers would submit a single bid for each HCPCS code describing the wheelchair for each CBA for furnishing the wheelchair and all accessories (including batteries) and services needed on a monthly basis. We are soliciting comments on whether all standard power wheelchairs should be described under one HCPCS code in order to simplify bidding and claims processing procedures. The current HCPCS codes for standard power wheelchairs include all group 1 and group 2 power wheelchairs that cannot accommodate rehabilitative accessories and features described by codes K0813 thru K0829 in the HCPCS. In view of comments to the ANPRM expressing concern regarding beneficiary impact of bundled arrangements for users of highly configured manual wheelchairs, we are requesting comment on what safeguards and monitoring approaches we should use to ensure that access to these items is not disrupted for individuals transitioning between settings and/or residing in remote areas.

We selected the categories of standard manual and power wheelchairs because we believe that payment on a separate, piecemeal basis for hundreds of various wheelchair options and accessories is unnecessary and overly complex. In addition, issues have been raised regarding access to repair of beneficiary-owned wheelchairs following the 13-month capped rental period. For example, there are hundreds of codes for various wheelchair accessories and separate payment for each of these items in addition to the payment for the wheelchair. The separate billing, processing and payment of these claims would not be necessary given that the supplier can factor the costs of accessories into their bid for furnishing the rented equipment. In addition, the beneficiary's needs may change such that the beneficiary needs a different type of accessory from the one that was initially furnished by the supplier.

Under the current rules, the accessory may not be covered if it is similar to the one that was already paid for by Medicare. If payments for all types of accessories are included in an ongoing, monthly rental amount for the

wheelchair, the beneficiary can receive other accessories included in the program, provided such accessories are medically necessary.

We seek comments on this proposal.

e. CPAP and Respiratory Assist Devices

We propose to implement future competitions for CPAP and respiratory assist devices in no more than 12 CBAs, where payment would be based on bids submitted for furnishing the CPAP or respiratory assist device and supplies, accessories, and services needed on a monthly basis. We propose that the suppliers would submit a single bid for each device for each CBA for furnishing all items and services needed on a monthly basis. We are soliciting comments on our proposal as well as whether all CPAP and respiratory assist devices should be described under one HCPCS code in order to simplify bidding and claims processing procedures. We selected the category of CPAP and respiratory assist devices because we believe the cost of paying separately for the expensive accessories used with these devices may exceed the amount of savings achieved from capping the rental payments for the equipment. We seek comments on this proposal.

f. Hospital Beds

We propose to implement future competitions for hospital beds in no more than 12 CBAs, where payment would be based on bids submitted for furnishing hospital beds and all accessories used in conjunction with the hospital beds on a monthly basis. We propose that the suppliers would submit a single bid for each HCPCS code describing the hospital bed for each CBA for furnishing the hospital bed and all accessories and services needed on a monthly basis. We are soliciting comments on whether all hospital beds should be described under one HCPCS code in order to simplify bidding and claims processing procedures. We selected the category of hospital beds to allow us to determine the impact of the continuous monthly rental payment rule under CBP on beneficiary access, utilization rate and cost for an item that currently does not have beneficiary access issues or issues related to excessive cost for repair and accessories. We seek comments on this proposal.

g. Transition Rules

We propose to revise the regulation at 42 CFR 414.409 to include supplier transition rules for enteral nutrition, oxygen and oxygen equipment, standard manual wheelchairs, standard power wheelchairs, CPAP and respiratory

assist devices, and hospital beds that would be paid in accordance with the rules proposed in this section. We also propose to revise the regulation at 42 CFR 414.408 to provide a cross reference to proposed § 414.409. We propose that changes in suppliers from a non-contract supplier to a contract supplier at the beginning of the CBP where the proposed payment rules would apply would simply result in the contract supplier taking on responsibility for meeting all of the beneficiary's monthly needs while receiving payment for each month of service. We developed these proposed rules based on that fact that for capped rented DME and oxygen and oxygen equipment, since rental caps would not apply under the proposed rules, there would be no need to restart or extend capped rental periods when a beneficiary transitions from a non-contract supplier to a contract supplier. We propose that supply arrangements for oxygen and oxygen equipment, and rental agreements for standard manual wheelchairs, standard power wheelchairs, CPAP devices, respiratory assist devices, and hospital beds entered into before the start of a CBP and application of the payment rules proposed in this section would be allowed to continue so long as the supplier agrees to furnish all necessary supplies and accessories used in conjunction with the rented equipment and needed on a monthly basis. We propose that non-contract suppliers in these cases would have the option to continue rental agreements; however, we propose that as part of the process of allowing the rental agreements to continue, the grandfathered supplier would be paid based on the payment rules proposed in this section and based on the SPAs established under the CBPs incorporating the proposed rules.

We solicit comments on this proposed process.

We propose that in the event that a beneficiary relocates from a CBA where the rules proposed in this section apply to an area where rental cap rules apply, that a new period of continuous use would begin for the capped rental item, enteral nutrition equipment, or oxygen equipment as long as the item is determined to be medically necessary. We believe these rules that would result in a new period of continuous use are necessary to safeguard beneficiary access to covered items and services and plan to closely monitor the impact these rules have on beneficiary cost sharing before phasing in these rules in more than a limited number of CBAs.

We seek comments on these proposals.

h. Beneficiary-Owned Equipment

We propose that separate payment for all repairs, maintenance and servicing, and replacement of supplies and accessories for beneficiary-owned DME or enteral nutrition equipment would cease in the CBAs where the payment rules proposed under this section are in effect. We propose that if the beneficiary has a medical need for the equipment, the contract supplier would be responsible for furnishing new equipment and servicing that equipment. This option would ensure that beneficiaries continue to receive medically necessary equipment, including the supplies, accessories, maintenance and servicing that may be needed for such equipment. Please note that this would not apply to items which are not paid on a bundled, continuous rental basis. We propose to revise the regulations at § 414.409 to specify that any beneficiary who owns DME or enteral nutrition equipment and continues to have a medical need for the items should these rules take effect in a CBA where they reside, would have the option to obtain new equipment, if medically necessary, and related servicing from a contract supplier. We are requesting comment as to whether a transitional process should be considered when claims are selected for review to determine whether they are reasonable and necessary and other safeguards are required to ensure timely delivery of the replacement DME so that individuals' mobility and ability to live independently is not adversely impacted by delays. While this could potentially increase beneficiary cost sharing, it would eliminate issues associated with repair of beneficiary-owned equipment. We plan to closely monitor the impact of this proposed provision, should it be finalized.

We seek comments on this proposal, including issues related to the ability of low income beneficiaries to afford additional cost sharing, and how best to monitor beneficiary impact within the 12 CBAs in which these new rules would be phased in.

2. Responsibility for Repair of Beneficiary-Owned Power Wheelchairs Furnished Under CBPs

We propose to revise the regulation at 42 CFR 414.409 to add a new payment rule that would apply to future competitions for standard power wheelchairs in no more than 12 CBAs where payment is made on a capped rental basis and not on the basis of the rules proposed under § 1 above. In these CBPs, we propose that contract suppliers for power wheelchairs would

be responsible for all necessary repairs and maintenance and servicing of any power wheelchairs they furnish during the contract period under the CBP, including repairs and maintenance and servicing of power wheelchairs after they have transferred title to the equipment to the beneficiary. We propose that this responsibility would end when the reasonable useful lifetime established for the power wheelchair expires, medical necessity for the power wheelchair ends, the contract period ends, or the beneficiary relocates outside the CBA. We propose that the contract supplier would not receive separate payment for these services and would factor the costs of these services into their bids. We believe that based on existing maintenance and servicing requirements, suppliers could project the cost of continuing to repair and service equipment of various ages once title to the equipment has transferred to the beneficiary. As indicated above, under existing rules, the supplier that transfers title to the equipment to the beneficiary after the 13 month period of continuous use is not held responsible for repairing the equipment they furnish after the beneficiary takes over ownership of the equipment. Therefore, we believe the propose rule would safeguard the beneficiary and better ensure that the beneficiary continues to have equipment in good working order to meet their needs. We propose that the contract supplier would not be responsible for repairing power wheelchairs they did not furnish. We propose that services to repair beneficiary-owned equipment furnished prior to the start of the contract period would be paid in accordance with the standard payment rules at § 414.210(e).

We seek comments on this proposal.

3. Phasing in the Proposed Payment Rules in CBAs

We propose that the CBAs where the proposed rules in §§ 1 or 2 above would be applied would be for MSAs with a general population of at least 250,000 and a Medicare Part B enrollment population of at least 20,000 that are not already included in Round 1 or 2. Based on 2012 population estimates from the Census Bureau and 2011 Medicare enrollment data, there are approximately 80 MSAs that would satisfy this criteria. Selecting MSAs not already included in Round 1 or 2 would allow competitions and rules associated with these competitions to begin after the final rule would take effect in areas that are comparable to existing CBAs. We propose that the boundaries of the CBAs would be established in accordance with the rules set forth at

§§ 414.406 and 414.410. We propose that additional CBPs for the items identified in §§ 1 and 2 above be established in “comparator” CBAs concurrent with CBPs where the proposed rules would be applied. Payment for items and services in the comparator CBAs would be made in accordance with the existing payment rules in § 414.408. We propose that these additional comparator CBAs and CBPs be established to facilitate our analysis of the effect of the payment rules proposed in sections 1 and 2 above compared to the effect of the existing payment rules in § 414.408. We propose that for each CBP where either the rules in section 1 or 2 above are implemented, a comparator CBA and CBP would be established. We propose that the comparator CBAs be selected so that they are located in the same state as the CBA where the special payment rules would apply and are similar to the CBAs in which the proposed payment rules would be implemented based on a combination of factors that could include geographic location (region of the country), general population, beneficiary population, patient mix, and utilization of items. We are proposing to establish the comparator CBAs and CBPs to enable us to review the impact of the proposed payment rules on expenditures, quality, and access to items and services in order to determine whether to pursue future rulemaking to expand the proposed payment rules to additional areas and or items.

We seek comments on this proposal.

4. Submitting Bids for Items Paid on a Continuous Rental Basis

In accordance with section 1847(b)(2)(A)(iii) of the Act, before contracts can be awarded, a determination must be made that the total amounts to be paid to contract suppliers under a CBP are expected to be less than the total amounts that would otherwise be paid. In accordance with § 414.414(f) of the regulations, under the DMEPOS CBP, bids amounts for an item or service are limited to the fee schedule amount that would otherwise be paid for the item or service. We propose that in order to apply the proposed rental payment rules, we would establish the bid limits for enteral nutrition, oxygen and oxygen equipment, standard manual wheelchairs, standard power wheelchairs, and hospital beds that would be paid in accordance with the proposed payment rules in sections 1 and 2 above based on average monthly expenditures per beneficiary in an area for the items and services related to furnishing the DME. For example, the

bid limit for the continuous monthly rental of a standard manual wheelchair in a CBA would be based on the total payment amounts per month in the area for the wheelchair, repair, maintenance and servicing of the wheelchair, and accessories used with the wheelchair, divided by the unduplicated number of beneficiaries receiving these items and services. We propose to revise § 414.412 to specify that the supplier’s bid for furnishing enteral nutrition, oxygen and oxygen equipment, standard manual wheelchairs, standard power wheelchairs, and hospital beds on a continuous monthly rental basis could not be higher than the average monthly payment made in the area for the items and services prior to the start of the competition. In the case of CPAP devices and respiratory assist devices, these items were paid on a bundled, continuous rental fee schedule basis from 1989 thru 1993, based on the rules mandated by section 4062(b) of OBRA 87, prior to the change by section 13543 of OBRA 93 that moved them from the payment class for items requiring frequent and substantial servicing to the payment class for capped rental items. Payment on a bundled, continuous rental fee schedule basis was mandated by OBRA 87 from 1989 thru 1993. The fee schedule for 1993 is the most current fee schedule where payment was based on a bundled, continuous rental basis. We propose to revise § 414.412 to specify that the supplier’s bid for furnishing CPAP devices and respiratory assist devices on a continuous monthly rental basis could not be higher than the 1993 fee schedule amounts for these items, increased by the covered item update factors provided for these items in section 1834(a)(14) of the Act. We seek comments on this proposal.

We seek public comments on phasing in the proposed rules described in section 1 through 4 above.

VII. Scope of Hearing Aid Coverage Exclusion

A. Background

Section 1862(a)(7) of the Act states notwithstanding any other provision of title XVIII, no payment may be made under part A or part B for any expenses incurred for items or services “where such expenses are for . . . hearing aids or examinations therefor. . . .” This policy is codified in the regulation at 42 CFR 411.15(d), which specifically states that hearing aids or examination for the purpose of prescribing, fitting, or changing hearing aids are excluded from Medicare coverage. At the time of passage of the Social Security

Amendments of 1965 (Pub. L. 97, 89th Congress), which added the Medicare coverage exclusion for hearing aids at section 1862(a)(7) of the Act, all hearing aids utilized functional air and/or bone conduction pathways to facilitate hearing.

In general, to be covered by Medicare, an item or service must fall within one or more benefit categories contained within Part A or Part B, and must not be otherwise excluded from coverage. With regard to section 1862(a)(7) of the Act, we consider that a hearing aid provides assistance or “aid” to hearing that already exists via a functioning ear. Cochlear implants were the first hearing device that was not considered a hearing aid and met the benefit category of a prosthetic device. Prosthetic devices are a Medicare benefit category defined at section 1861(s)(8) of the Act which, in part, states a “prosthetic devices (other than dental) which replace all or part of an internal body organ.” A cochlear implant is considered a prosthetic device primarily because it replaces the function of the cochlea. A cochlear implant device differs from a hearing aid in that it is an electronic instrument, part of which is implanted surgically to directly stimulate auditory nerve fibers, and part of which is worn or carried by the individual to capture, analyze and code sound. Both cochlear devices and brain stem implants, which function in a similar manner, create the perception of sound rather than aid hearing that already exists. We interpret the statute as excluding devices that provide aid to extant hearing (or hearing aids) rather than devices that create the perception of sound and hearing, given that devices with technology that utilize either air or bone conduction via mechanical stimulation to aid extant hearing were primarily utilized when the statute was written. Moreover, we believe that prosthetic hearing devices are not “hearing aids” given that such devices do more than “aid” in hearing and instead replace the function of an internal body organ (i.e., a part of the ear).

Historically, CMS has periodically addressed the scope of the Medicare hearing aid coverage exclusion through program instructions and national coverage policies or determinations. We briefly discuss the relevant changes that have occurred over time with regard to Medicare coverage and payment of hearing devices.

Cochlear implants were the first device covered for Medicare payment for adult beneficiaries in October 1986, when no other hearing device was being covered under Medicare, and such

coverage was supported by the Office of Health Technology Assessment's "Public Health Service Assessment of Cochlear Implant Devices for the Profoundly Hearing Impaired", dated June 30, 1986 found at https://archive.org/stream/cochlearimplantd00feig/cochlearimplantd00feig_djvu.txt. Medicare coverage was restricted to cochlear implants that treated patients with post lingual, profound, bilateral, sensorineural deafness who are stimuable and who lack the unaided residual auditory ability to detect sound.

Effective January 1, 2003, we clarified that the hearing aid exclusion broadly applied to all hearing aids that utilized functional air and/or bone conduction pathways to facilitate hearing (see section 15903, Hearing Aid Exclusion, Medicare Carriers Manual, Part 3—Claims Process (HCFA-Pub. 14-3), which was later moved to section 100, Hearing Aids and Cochlear Implants, of Chapter 16, of the Medicare Benefit Policy Manual, CMS-Pub. 100-02). Any device that does not produce at its output an electrical signal that directly stimulates the auditory nerve is a hearing aid for purposes of coverage under Medicare. Devices that produce air conduction sound into the external auditory canal, devices that produce sound by mechanically vibrating bone, or devices that produce sound by vibrating the cochlear fluid through stimulation of the round window are considered hearing aids and excluded from Medicare coverage.

Effective April 4, 2005, Medicare's national coverage policy for cochlear implants was modified through the NCD process (see section 65-14 of the Medicare Coverage Issues Manual (HCFA-Pub. 6), which was later moved to section 50.3, Cochlear Implantation, of Chapter 1, Part 1 of the Medicare National Coverage Determinations Manual (CMS-Pub. 100-03)). Our findings under the NCD, in part, state that "CMS has determined that cochlear implants fall within the benefit category of prosthetic devices under section 1861(s)(8) of the Social Security Act." Medicare is a defined benefit program. An item or device must not be statutorily excluded and fall within a benefit category as a prerequisite to Medicare coverage. We believe that prosthetic hearing devices are not "hearing aids" given that such devices do more than "aid" in hearing and instead replace the function of an internal body organ (i.e., a part of the ear). Additional changes, regarding coverage criteria, have been made to NCD 50.3 over time, however, the NCD

decision regarding benefit category and Medicare coverage for cochlear implantation has remained consistent. The NCD states that a cochlear implant device is an electronic instrument, part of which is implanted surgically to stimulate auditory nerve fibers, and part of which is worn or carried by the individual to capture, analyze, and code sound. Cochlear implant devices are available in single-channel and multi-channel models. The purpose of implanting the device is to provide awareness and identification of sounds and to facilitate communication for persons who are moderately to profoundly hearing impaired.

The regulations at 42 CFR 419.66 were revised to add new requirements, effective January 1, 2006, for transitional pass-through payments for medical devices. The auditory osseointegrated device, referred to as a bone anchored hearing aid (BAHA), was determined to be a new device category according to the new requirements for transitional pass-through payment. Medicare coverage was also expanded to cover auditory osseointegrated and auditory brainstem devices as prosthetic devices. Currently, section 100 of Chapter 16 of the Medicare Benefit Policy Manual (CMS Pub. 100-02) reads as follows:

Hearing aids are amplifying devices that compensate for impaired hearing. Hearing aids include air conduction devices that provide acoustic energy to the cochlea via stimulation of the tympanic membrane with amplified sound. They also include bone conduction devices that provide mechanical energy to the cochlea via stimulation of the scalp with amplified mechanical vibration or by direct contact with the tympanic membrane or middle ear ossicles.

Certain devices that produce perception of sound by replacing the function of the middle ear, cochlea, or auditory nerve are payable by Medicare as prosthetic devices. These devices are indicated only when hearing aids are medically inappropriate or cannot be utilized due to congenital malformations, chronic disease, severe sensorineural hearing loss or surgery.

The following are considered prosthetic devices:

- Cochlear implants and auditory brainstem implants, that is, devices that replace the function of cochlear structures or auditory nerve and provide electrical energy to auditory nerve fibers and other neural tissue via implanted electrode arrays.
- Osseointegrated implants, that is, devices implanted in the skull that replace the function of the middle ear and provide mechanical energy to the cochlea via a mechanical transducer.

B. Current Issues

We have received several benefit category determination requests in recent years for the consideration of non-implanted, bone conduction

hearing aid devices for single-sided deafness, as prosthetic devices under the Medicare benefit. We have received similar requests for several other types of implanted and non-implanted devices as well. In response to these requests, we have re-examined the scope of the statutory hearing aid exclusion. Currently, we consider all air or bone conduction hearing devices, whether external, internal, or implanted, including, but not limited to, middle ear implants, osseointegrated devices, dental anchored bone conduction devices, and other types of external or non-invasive devices that mechanically stimulate the cochlea, as hearing aids. All of these devices provide traditional "aid" to hearing and are excluded in accordance with section 1862(a)(7) of the Act. In order for an item to be covered by Medicare, it must fall into a Medicare benefit category and not be statutorily excluded. Not only are these devices statutorily excluded they do not fall in a benefit category. Specifically, they do not meet the statutory definition of a prosthetic device found at section 1861(s)(8) of the Act which, in part, states a "prosthetic devices (other than dental) which replace all or part of an internal body organ." They do not replace the function of an internal body organ and thus are not considered prosthetic devices under Medicare payment policy. In regard to BAHA, it is a bone conduction hearing aid device that is osseointegrated. There are currently only two hearing devices that are not statutorily excluded and are a covered Medicare item that fall into the prosthetic benefit category; namely, the cochlear implant and the auditory brainstem device. These two devices meet the definition of a prosthetic device in that they replace the function of the inner ear consistent with the definition of prosthetic devices described in section 1861(s)(8) of the Act.

C. Proposed Provisions

After further considering the statutory Medicare hearing aid exclusion under section 1862(a)(7) of the Act, and re-examining the different types of external and implanted devices, we propose to interpret the term "hearing aid" to include all types of air or bone conduction hearing aid devices, whether external, internal, or implanted, including, but not limited to, middle ear implants, osseointegrated devices, dental anchored bone conduction devices, and other types of external or non-invasive devices that mechanically stimulate the cochlea. We believe, based on our understanding of

how such devices function, that such devices are hearing aids that are not otherwise covered as prosthetic devices, in that they do not replace all or part of an internal body organ. Therefore, we propose to modify the regulation at § 411.15(d)(1) to specify that the hearing aid exclusion encompasses all types of air conduction and bone conduction hearing aids (external, internal, or implanted). Osseointegrated devices such as the BAHA are bone conduction hearing aids that mechanically stimulate the cochlea; therefore, we believe that the hearing aid exclusion applies to these devices and propose that Medicare should not cover these devices, consistent with our interpretation of section 1862(a)(7) of the Act. In addition, an NCD was issued for cochlear implant devices with the result that this determination and recent requests to expand coverage of hearing devices raises serious questions about the intent and scope of the Medicare coverage exclusion for hearing aids. It is for these reasons that we are addressing the hearing aid coverage exclusion in notice and comment rulemaking, and believe that the BAHA device qualifies as a hearing aid because it functions like other bone conduction hearing aids that are subject to the Medicare statutory coverage exclusion for hearing aids.

We continue to believe that the hearing aid exclusion does not apply to brain stem implants and cochlear implants because these devices directly stimulate the auditory nerve, replacing the function of the inner ear rather than aiding the conduction of sound as hearing aids do. Therefore, we are not proposing any changes to our current policy about brain stem implants and cochlear implants and how such implants fall outside of the hearing aid statutory exclusion (that is, such devices would fall outside the Medicare coverage exclusion for hearing aids and remain covered subject to the Medicare NCD 50.3 found at https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/ncd103c1_Part1.pdf). We propose, however, to modify § 411.15(d)(2) to specifically note that such devices do not fall within the hearing aid exclusion.

We seek public comment on this proposal.

VIII. Definition of Minimal Self-Adjustment of Orthotics Under Competitive Bidding

A. Background

Section 1847 (a)(1)(A) of the Act mandates the implementation of CBPs throughout the United States for

awarding contracts for furnishing competitively priced items and services, including OTS orthotics described in section 1847(a)(2)(C) of the Act (leg, arm, back or neck braces described in section 1861(s)(9) of the Act for which payment would otherwise be made under section 1834(h)) which require minimal self-adjustment for appropriate use and do not require expertise in trimming, bending, molding, assembling, or customizing to fit the individual. The regulation at 42 CFR 414.402 currently defines “minimal self-adjustment” as “an adjustment that the beneficiary, caretaker for the beneficiary, or supplier of the device can perform and does not require the services of a certified orthotist (that is, an individual who is certified by either the American Board for Certification in Orthotics and Prosthetics, Inc., or the Board for Orthotist/Prosthetist Certification) or an individual who has specialized training.” This current definition was proposed in the 71 FR 25669 (May 1, 2006) Notice for Proposed Rulemaking (NPRM) but did not include the term “individual with specialized training.” The definition was finalized in the 72 FR 18022 (April 10, 2007) Final Rule with the term “individual with specialized training” added after receiving comments that disagreed with the May 2006 definition and pointed out that occupational therapists, physical therapists, and physicians are licensed and trained to provide orthotics.

B. Current Issues

Since adoption of the minimal self-adjustment definition there has been some concerns raised by industry and other stakeholders regarding who is considered an individual with specialized training. We have had many inquiries and comments that this term is too ambiguous and left open for interpretation. In order to identify OTS orthotics for the purpose of implementing CBPs for these items and services in accordance with the statute, we need a clearer distinction between OTS orthotics and those that require more than minimal self-adjustment and expertise in custom fitting. In doing so, we believe it is essential to identify the credentials and training a supplier needs to have in order to be considered a supplier with expertise in custom fitting; therefore, we believe the term “individual with specialized training” must be clarified. We believe these professionals must have specialized training equivalent to a certified orthotist for the provision of custom fitted orthotic devices such that these professionals satisfy requirements

concerning higher education, continuing education requirements, licensing, and certification/registration requirements so that they meet a minimum professional skill level in order to ensure the highest standard of care and safety for Medicare beneficiaries.

This would also help to prevent any supplier without expertise in custom fitting orthotics from potentially circumventing the competitive bidding process by furnishing custom fitting they are not qualified to provide in the event that they are not awarded a contract for furnishing OTS orthotics in their service area as the custom fitted devices are not statutorily included in the CBP.

In addition, for claims processing and payment system purposes under the CBP, we need to identify OTS orthotics, which we accomplish with codes in the HCPCS. The HCPCS codes are used on claims to identify the items and services furnished to the beneficiary, that is, to identify orthotics that are furnished OTS and subject to the CBP and to identify orthotics that have been custom fitted by suppliers with expertise. On February 9, 2012, CMS issued initial guidance identifying specific HCPCS codes considered OTS orthotics and provided a 60-day comment period posted at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/DMEPOSFeeSched/OTS_Orthotics.html. We received 185 comments. There was no general consistency between the various commenters on which specific HCPCS codes the commenters believed were appropriately deemed OTS. Many commenters expressed their support for the proposed list while others made numerous useful recommendations to improve the OTS list. We considered each comment and performed a thorough review of the individual HCPCS codes and devices included in the codes to assess appropriate orthotic categorization. Through this process we identified HCPCS codes that described items that we believe are never furnished OTS, HCPCS codes that described items that are always furnished OTS, and HCPCS codes that described items that may or may not be furnished OTS, depending on whether more than minimal fitting and adjustment of a particular device by an expert is necessary for a particular patient. In order to address this issue we decided to create HCPCS codes for items that may or may not be custom fitted, depending on individual patient's needs, into separate codes that described the item when it has been furnished OTS and when it has been custom fitted. The new HCPCS codes

were published and became effective January 1, 2014 and are published at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/DMEPOSFeeSched/OTS_Orthotics.html.

C. Proposed Provisions

Prefabricated orthotics are either furnished OTS or with custom fitting and are identified in the HCPCS. As noted above, with regard to minimal self-adjustment, § 414.402 in part identifies an individual with expertise in fitting as a certified orthotist or an individual with specialized training. Recently a DME Medicare Administrative Contractor (MAC) Web site Article entitled “Correct Coding—Definitions used for Off-the-Shelf versus Custom Fitted Prefabricated Orthotics (Braces)—Revised,” was published March 27, 2014, and included: A physician, a treating practitioner, an occupational therapist, or physical therapist in compliance with all applicable Federal and State licensure and regulatory requirements. The DME MAC published this article following the change in 2014 HCPCS codes for OTS and custom fitted orthotics as an education tool for Medicare enrolled DMEPOS suppliers. We believe physicians, treating practitioners, occupational therapists, and physical therapists are considered “individuals with specialized training” that possess training equivalent to a certified orthotist for the provision of custom fitted orthotic devices through their individual degree programs and continuing education requirements. In addition, physicians, treating practitioners, occupational therapists, and physical therapists possess equivalent or higher educational degrees, continuing education requirements, licensing, and certification and/or registration requirements. We believe these professionals meet a minimum professional skill level in order to ensure the highest standard of care and safety for Medicare beneficiaries. Each of these professionals has undergone medical training in various courses such as kinesiology and anatomy. For example, through coursework the named medical professionals gain a clinical understanding of the human body, proper alignment, normal range of motion, agonist and antagonist relationship, and biomechanics necessary to modify a custom fitted orthotic device properly.

Clinical providers such as assistants, fitters, and manufacturer representatives that work under the supervision of the individual with specialized training must do so as required under their

governing body Code of Ethics and supervision standards as well as state licensure requirements. These individuals are not considered to have specialized training for the purposes of providing custom fitting; therefore, orthotics adjusted by these individuals but not by individuals with specialized training would still be considered OTS.

The current regulation of orthotic provision in the U.S. is inconsistent between individual States. There are currently 17 States that require licensure in P&O. In States that do require licensure for the provision of orthotics, individual states do not all recognize certified orthotic fitters and do not provide licensure for this level of provider. This inconsistency also prompts us to provide clarification on the individuals who are recognized as having specialized training for the purposes of determining what constitutes minimal self-adjustment of OTS orthotics.

We propose to update the definition of minimal self-adjustment in § 414.402 to codify an individual with specialized training includes: a physician defined in section 1861(r) of the Act, a treating practitioner defined at section 1861(aa)(5) (physician assistant, nurse practitioner, or clinical nurse specialist), an occupational therapist defined at 42 CFR 484.4, or physical therapist defined at 42 CFR 484.4, who is in compliance with all applicable Federal and State licensure and regulatory requirements for reasons discussed above. We seek comments on this proposal.

IX. Revision To Change of Ownership Rules To Allow Contract Suppliers To Sell Specific Lines of Business

A. Background

Section 1847(a) of the Act, as amended by section 302(b)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), requires the Secretary to establish and implement CBPs in CBAs throughout the United States for contract award purposes for the furnishing of certain competitively priced DMEPOS items and services. The programs mandated by section 1847(a) of the Act are collectively referred to as the “Medicare DMEPOS Competitive Bidding Program.” The 2007 DMEPOS competitive bidding final rule (Medicare Program; Competitive Acquisition for Certain DMEPOS and Other Issues published in the **Federal Register** on April 10, 2007 (71 FR 17992)), required CBPs for certain Medicare Part B covered items of DMEPOS throughout the United States. The CBP, which was

phased in over several years, utilizes bids submitted by qualified suppliers to establish applicable payment amounts under Medicare Part B for certain DMEPOS items for beneficiaries receiving services in designated CBAs.

CMS awards contracts to those suppliers who meet all of the competitive bidding requirements and whose composite bid amounts fall at or below the pivotal bid (the bid at which the capacity provided by qualified suppliers meets the demand for the item). These qualified suppliers will be offered a competitive bidding contract for that PC, provided there are a sufficient number of qualified suppliers (there must be at a minimum of 2) to serve the area. Contracts are awarded to multiple suppliers for each PC in each CBA and will be re-competed at least once every 3 years.

CMS specifies the duration of the contracts awarded to each contract supplier in the Request for Bid Instructions. We also conduct extensive bidder education where we inform bidders of the requirements and obligations of contract suppliers. Each winning supplier is awarded a single contract that includes all winning bids for all applicable CBAs and PCs. A competitive bidding contract cannot be subdivided. For example, if a contract supplier breaches its contract, the entire contract is subject to termination. In the Physician Fee Schedule final rule published on November 29, 2010, we stated that “once a supplier’s contract is terminated for a particular round due to breach of contract under the DMEPOS CBP, the contract supplier is no longer a DMEPOS contract supplier for any DMEPOS CBP PC for which it was awarded under that contract. This termination applies to all areas and PCs because there is only one contract that encompasses all CBAs and PCs for which the supplier was awarded a contract.” (75 FR 73578)

A competitive bidding contract cannot be sold. However, CMS may permit the transfer of a contract to an entity that merges with or acquires a competitive bidding contract supplier if the new owner assumes all rights, obligations, and liabilities of the competitive bidding contract pursuant to regulations at 42 CFR 414.422(d).

For the transfer of a contract to be considered, the CHOW must include the assumption of the entire contract, including all CBAs and PCs awarded under the contract.

B. Proposed Provisions

We propose to revise § 414.422(d) to permit transfer of part of a competitive bidding contract under specific

circumstances. We believe requiring a transfer of the entire contract to a successor entity in all circumstances may be overly restrictive, and may be preventing routine merger and acquisition activity. To maintain integrity of the bidding process we award one contract that includes all the CBA/PCs combinations for which the supplier qualifies for and accepts as a contract supplier. This proposed rule would establish an exception to the prohibition against transferring part of a contract by allowing a contract supplier to sell a distinct company (for example, an affiliate, subsidiary, sole proprietor, corporation, or partnership) which furnishes one or more specific PCs or serves one or more specific CBAs and transfer the portion of the contract initially serviced by the distinct company, including the PC(s), CBA(s), and location(s), to a qualified successor entity who meets all competitive bidding requirements (i.e., financial standards, licensing, and accreditation). The proposed exception would not apply to existing contracts but would apply to contracts issued in all future rounds of the program, starting with the Round 2 Recompete. As required in § 414.422(d) we are also requiring a contract supplier that wants to sell a distinct company which furnishes one or more specific PCs or serves one or more specific CBAs to notify CMS 60 days before the anticipated date of a change of ownership. If documentation is required to determine if a successor entity is qualified that documentation must be submitted within 30 days of anticipated change of ownership, pursuant to § 414.422(d)(2)(ii). We propose that CMS would then modify the contract of the original contract supplier by removing the affected PC(s), CBA(s) and locations from the original contract. For CMS to approve the transfer, we propose that several conditions would have to be met. First, we propose that every CBA, PC, and location of the company being sold must be transferred to the new owner. Second, we propose that all CBAs and PC's in the original contract that are not explicitly transferred by CMS must remain unchanged in that original contract for the duration of the contract period unless transferred by CMS pursuant to a subsequent CHOW. Third, we propose that all requirements in 42 CFR 414.422(d)(2) must be met. Fourth, we propose that the sale of the company must include all of the company's assets associated with the CBA and/or PC(s). Finally, we propose that CMS must determine that transferring part of the original contract will not result in

disruption of service or harm to beneficiaries. No transfer will be permitted for purposes of this program if we determine that the new supplier does not meet the competitive bidding requirements (such as financial requirements) and does not possess all applicable licenses and accreditation for the product(s). In order for the transfer to occur, the contract supplier and successor entity must enter into a novation agreement with CMS and the successor entity must accept all rights, responsibilities and liabilities under the competitive bidding contract. Part of a novation agreement requires successor entity to "seamlessly continue to service beneficiaries." We believe that these proposed conditions are necessary for proper administration of the program, to ensure that payments are made correctly and also to ensure continued contract accountability and viability along with continuity of service and access to beneficiaries. We specifically invite comments on whether more or different conditions would be appropriate.

In addition, we are proposing to update the current CHOW regulation, § 414.422(d) to clarify the language to make it easier to comprehend. The proposed changes reformat the regulation so that the requirements applicable to successor entities and new entities are listed separately. These proposed changes to the regulation are technical, and not substantive in nature. CMS seeks comments on all changes proposed for § 414.422.

X. Proposed Changes to the Appeals Process for Termination of Competitive Bidding Contract

We propose to modify the DMEPOS CBP's appeals process for termination of competitive bidding contracts under § 414.423. First, we propose to modify the effective date of termination in the termination notice CMS sends to a contract supplier found to be in breach of contract. Currently, the regulation at 42 CFR 414.423(b)(2)(vi) indicates that the effective date of termination is 45 days from the date of the notification letter unless a timely hearing request "has been" filed or corrective action plan "has been" submitted within 30 days of the effective date of the notification letter (emphasis added). We propose to change these references to provide additional clarification. This change would emphasize that the contract will automatically be terminated if the supplier does not time file a hearing request or submit corrective action plan. This proposed change is also being addressed at 42 CFR 414.423(l). We propose deleting the lead-in sentence, as it does not properly

lead into the first paragraph. Additionally, we propose inserting language from the lead-in sentence in the second paragraph to indicate that the contract supplier, "whose contract has been terminated," must notify beneficiaries of the termination of their contract. Second, we propose to modify the deadline by which a supplier whose competitive bidding contract is being terminated must notify affected beneficiaries that it is no longer a contract supplier. Current regulations at 42 CFR 414.423(l)(2)(i) require a contract supplier to provide this notice within 15 days of receipt of a final notice of termination. We propose to change the beneficiary notification deadline to no later than 15 days prior to the effective date of termination. This proposed change is intended to provide beneficiaries with the protection of advanced notice prior to a contract supplier being terminated from the CBP so they have sufficient time to plan/coordinate their current and future DMEPOS needs.

XI. Technical Change Related To Submitting Bids for Infusion Drugs Under the DMEPOS Competitive Bidding Program

The standard payment rules for drugs administered through infusion pumps covered as DME are located at section 1842(o)(1)(D) of the Act, and mandate that payment for infusion drugs furnished through a covered item of DME on or after January 1, 2004, is equal to 95 percent of the average wholesale price for such drug in effect on October 1, 2003. The regulations implementing section 1842(o)(1)(D) of the Act are located at 42 CFR 414.707(a), under Subpart I of Part 414. Section 1847(a)(2)(A) of the Act mandates the establishment of CBPs for covered items defined in section 1834(a)(13), for which payment would otherwise be made under section 1834(a), including items used in infusion and drugs (other than inhalation drugs) and supplies used in conjunction with DME. Section 1847(b)(2)(A)(iii) of the Act prohibits the awarding of contracts under a CBP unless the total amounts to be paid to contract suppliers are expected to be less than would otherwise be paid. The regulations implementing section 1847(b)(2)(A)(iii) of the Act with respect to items paid on a fee schedule basis under Subparts C and D of Part 414 are located at 42 CFR 414.412(b)(2), and specify that "the bids submitted for each item in a PC cannot exceed the payment amount that would otherwise apply to the item under Subpart C or Subpart D of this part." In addition, the regulations regarding the conditions for awarding

contracts under the DMEPOS CBP at 42 CFR 414.414(f) state that “a contract is not awarded under this subpart unless CMS determines that the amounts to be paid to contract suppliers for an item under a CBP are expected to be less than the amounts that would otherwise be paid for the same item under subpart C or subpart D.” The regulations implementing of section 1847(b)(2)(A)(iii) of the Act did not address payments for drugs under subpart I, which was an oversight. We therefore propose to revise §§ 414.412(b)(2) and 414.414(f) to include a reference to drugs paid under subpart I in addition to items paid under subparts C or D. We propose to revise § 414.412(b)(2) to specify that the bid amounts submitted for each drug in a PC cannot exceed the payment limits that would otherwise apply to the drug under subpart I of part 414. This concerns certain infusion drugs with payment limits equal to 95 percent of the average wholesale price for the drug in effect on October 1, 2003, in accordance with § 414.707(a)(3). See <http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&SID=7065f17b411e37b3788b6e7fcec21f89&rgn=div8&view=text&node=42:3.0.1.1.1.9.1.3&idno=42>. We propose to revise § 414.414(f) to specify that a contract is not awarded under this subpart unless CMS determines that the amounts to be paid to contract suppliers for infusion drugs provided with respect to external infusion pumps under a CBP are expected to be less than the amounts that would otherwise be paid to suppliers for the same drug under subpart I of part 414. We seek comments on this proposal.

XII. Accelerating Health Information Exchange

HHS believes all patients, their families, and their healthcare providers should have consistent and timely access to their health information in a standardized format that can be securely exchanged between the patient, providers, and others involved in the patient's care. (HHS August 2013 Statement, “Principles and Strategies for Accelerating Health Information Exchange”). The Department is committed to accelerating health information exchange (HIE) through the use of electronic health records (EHRs) and other types of health information technology (HIT) across the broader care continuum through a number of initiatives including: (1) Alignment of incentives and payment adjustments to encourage provider adoption and optimization of HIT and HIE services through Medicare and Medicaid payment policies, (2) adoption of

common standards and certification requirements for interoperable HIT, (3) support for privacy and security of patient information across all HIE-focused initiatives, and (4) governance of health information networks. These initiatives are designed to encourage HIE among health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for the EHR Incentive programs, and are designed to improve care delivery and coordination across the entire care continuum. For example, the Transition of Care Measure #2 in Stage 2 of the Medicare and Medicaid EHR Incentive Programs requires HIE to share summary records for at least 10 percent of care transitions. In addition, to increase flexibility in ONC's regulatory certification structure and expand HIT certification, ONC has proposed a voluntary 2015 Edition EHR Certification rule to more easily accommodate HIT certification for technology used by all health care settings to facilitate greater HIE across the entire care continuum.

We believe that HIE and the use of certified EHRs can effectively and efficiently help ESRD facilities and nephrologists improve internal care delivery practices, support management of patient care across the continuum, and support the reporting of electronically specified clinical quality measures (eCQMs). More information on the 2015 Edition EHR certification rule can be found at: <http://healthit.gov/policy-researchers-implementers/standards-and-certification-regulations>.

XIII. Collection of Information Requirements

A. Legislative Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection requirement should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.

- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

B. Requirements in Regulation Text

In section II.F of this proposed rule, we are proposing changes to regulatory text for the ESRD PPS in CY 2015. However, the changes that are being proposed do not impose any new information collection requirements.

C. Additional Information Collection Requirements

This proposed rule does not impose any new information collection requirements in the regulation text, as specified above. However, this proposed rule does make reference to several associated information collections that are not discussed in the regulation text contained in this document. The following is a discussion of these information collections.

1. ESRD QIP

The information collection requirements associated with the ESRD QIP are currently approved under OMB control number 0938–0386.

a. Data Validation Requirements for the PY 2017 ESRD QIP

Section III.F.9 in this proposed rule outlines our data validation proposals for PY 2017. Specifically, we propose to randomly sample records from 300 facilities as part of our continuing pilot data-validation program. Each sampled facility would be required to produce approximately 10 records, and the sampled facilities will be reimbursed by our validation contractor for the costs associated with copying and mailing the requested records. The burden associated with these validation requirements is the time and effort necessary to submit the requested records to a CMS contractor. We estimate that it will take each facility approximately 2.5 hours to comply with this requirement. If 300 facilities are asked to submit records, we estimate that the total combined annual burden for these facilities will be 750 hours (300 facilities × 2.5 hours). According to the Bureau of Labor Statistics, the mean hourly wage of a registered nurse is \$33.13/hour. Since we anticipate that nurses (or administrative staff who would be paid at a lower hourly wage) would submit this data, we estimate that the aggregate cost of the CROWNWeb data validation would be \$24,847.50 (750 hours × \$33.13/hour) total or \$82.83 (\$24,847.50/300 facilities) per facility in the sample.

Under the proposed feasibility study for validating data reported to the NHSN Dialysis Event Module, we propose to randomly select nine facilities to provide CMS with a quarterly list of all positive blood cultures drawn from their patients during the quarter, including any positive blood cultures collected on the day of, or the day following, a facility patient's admission to a hospital. A CMS contractor will review the lists to determine if dialysis events for the patients in question were accurately reported to the NHSN Dialysis Event Module. If we determine that additional medical records are needed to validate dialysis events, facilities will be required to provide those records within 60 days of a request for this information. We estimate that the burden associated with this feasibility study will be the time and effort necessary for each selected facility to compile and submit to CMS a quarterly list of positive blood cultures drawn from its patients. We estimate that it will take each participating facility approximately two hours per quarter to comply with this submission. If nine facilities are asked to provide lists, we estimate the quarterly burden for these facilities would be 72 hours per year (9 facilities \times 2 hours/quarter \times 4 quarters/year). Again, we estimate the mean hourly wage of a registered nurse to be \$33.13/hour, and we anticipate nurses (or administrative staff who would be paid at a lower hourly wage) would be responsible for preparing and submitting the list. Because we anticipate nurses (or administrative staff who would be paid at a lower hourly rate) would compile and submit these data, we estimate that the aggregate annual cost of the feasibility study to validate NHSN data would be \$2,385.36 (72 hours \times \$33.13/hour) total or \$265.04 per facility (\$2,385.36/9 facilities).

b. Proposed NHSN Healthcare Personnel Influenza Vaccination Reporting Measure for PY 2018

We are proposing to include, beginning with the PY 2018 ESRD QIP, a measure requiring facilities to report healthcare personnel influenza vaccination data to NHSN. The NHSN is a secure, Internet-based surveillance system which is maintained and managed by CDC. Many dialysis facilities already submit NHSN Bloodstream Infection clinical measure data to NHSN. Specifically, we are proposing to require facilities to submit on an annual basis an HCP Influenza Vaccination Summary Form to NHSN, according to the specifications available in the NHSN Healthcare Personnel

Safety Component Protocol. We estimate the burden associated with this measure to be the time and effort necessary for facilities to complete and submit the HCP Influenza Vaccination Summary Form on an annual basis. We estimate that approximately 5,996 facilities will treat ESRD patients in PY 2018. We estimate it will take each facility approximately 75 minutes to collect and submit the data necessary to complete the Healthcare Personnel Influenza Vaccination Summary Form on an annual basis. Therefore, the estimated total annual burden associated with reporting this measure in PY 2018 is 7,495 hours [(75/60) hours \times 5,996 facilities]. Again, we estimate the mean hourly wage of a registered nurse to be \$33.13, and we anticipate nurses (or administrative staff who would be paid at a lower hourly wage) would be responsible for this reporting. In total, we believe the cost for all ESRD facilities to comply with the reporting requirements associated with the NHSN Healthcare Personnel Influenza Vaccination reporting measure would be approximately \$248,309 (7,495 hours \times \$33.13/hour) total, or \$41.37 (\$248,309/5,996 facilities) per facility.

XIV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

XV. Economic Analyses

A. Regulatory Impact Analysis

1. Introduction

We examined the impacts of this proposed rule as required by Executive Order 12866 (September 30, 1993, Regulatory Planning and Review) and Executive Order 13563 on Improving Regulation and Regulatory Review (January 11, 2011). Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits of reducing costs, harmonizing rules, and promoting flexibility. This rule has been

designated economically significant under section 3(f)(1) of Executive Order 12866. Accordingly, the rule has been reviewed by the Office of Management and Budget. We have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the proposed rule. We solicit comments on the regulatory impact analysis provided.

2. Statement of Need

This rule proposes a number of routine updates for renal dialysis services in CY 2015 and proposes several policy changes to the ESRD PPS. The routine updates include proposed updates to the wage index values, the wage index budget-neutrality adjustment factor, and the outlier payment threshold amounts. The proposed policy changes to the ESRD PPS include the revisions to the ESRD market basket, changes in the CBSA delineations, changes to the labor-related share, clarifications in the low-volume payment adjustment, and additions and corrections to the ICD-10 codes that will be used for the comorbidity payment adjustment when compliance with ICD-10 is required beginning October 1, 2015. In addition, this rule implements sections 1881(b)(14)(F)(i) and (I), as amended by section 217 (b)(1) and (2) of PAMA, under which the drug utilization adjustment transition is eliminated and a 0.0 percent update to the ESRD PPS base rate is imposed in its place. This rule also implements the delay in payment for oral-only drugs used for the treatment of ESRD under the ESRD PPS until January 1, 2024 as required by section 217(a) of PAMA. Failure to publish this proposed rule would result in ESRD facilities not receiving appropriate payments in CY 2015.

This rule proposes to implement requirements for the ESRD QIP by proposing to adopt measure sets for the PYs 2017 and 2018 programs, as directed by section 1881(h) of the Act. Failure to propose requirements for the PY 2017 ESRD QIP would prevent continuation of the ESRD QIP beyond PY 2016. In addition, proposing requirements for the PY 2018 ESRD QIP provides facilities with more time to review and fully understand new measures before their implementation in the ESRD QIP.

This proposed rule proposes to establish a methodology for adjusting DMEPOS payment amounts using information from the Medicare DMEPOS CBP. The proposed rule would also phase in special payment rules for certain DME and enteral nutrition in a limited number of areas

under the Medicare DMEPOS CBP. This proposed rule also proposes to clarify the Medicare hearing aid coverage exclusion under section 1862(a)(7). In addition, this proposed rule would modify the definition of minimal self-adjustment at § 414.402 to indicate what specialized training is needed by suppliers to provide custom fitting services if they are not certified orthotists. Finally, if finalized, this proposed rule would provide clarification of the CHOW under the Medicare DMEPOS CBP.

3. Overall Impact

We estimate that the proposed revisions to the ESRD PPS will result in an increase of approximately \$30 million in payments to ESRD facilities in CY 2015, which includes the amount associated with updates to outlier threshold amounts, updates to the wage index, changes in CBSA delineations, and the labor-related share.

For PY 2017, we estimate that the proposed requirements related to the ESRD QIP will cost approximately \$27 thousand total, and the payment reductions will result in a total impact of approximately \$16 million across all facilities. For PY 2018, we estimate that the proposed requirements related to the ESRD QIP will cost approximately \$248 thousand total, and the payment reductions will result in a total impact of approximately \$6.4 million across all facilities, resulting in a total impact from the proposed ESRD QIP of approximately \$6.6 million.

We estimate that the proposed methodology for adjusting DMEPOS payment amounts using information from DMEPOS CBPs would save over \$7 billion over FY 2016–2020. The savings would be primarily achieved from the reduced payment amounts for items and services.

We estimate the special payment rules would not have a negative impact on beneficiaries and suppliers, or on the Medicare program. Contract suppliers

are responsible for furnishing items and services needed by the beneficiary, and the cost to suppliers for furnishing these items and services generally would not change based on whether or not the equipment and related items and services are paid for separately under a capped rental payment method. Because the supplier's bids would reflect the cost of furnishing items in accordance with the new payment rules, we expect the overall savings generally would be the same as they are under the current payment rules. Furthermore, as indicated above, the special payment rules would be phased in under a limited number of areas first to determine impact on the program, beneficiaries, and suppliers, including their effects on cost, quality, and access before expanding to other areas after notice and comment rulemaking, if supported by evaluation results. We believe that the special payment rules would give beneficiaries more choice and flexibility in changing suppliers. We estimate the proposed clarification of the statutory Medicare hearing aid coverage exclusion leading to withdrawal of coverage for bone anchored hearing aid (BAHA) devices would not have a significant fiscal impact on the Medicare program because the Medicare program expenditure for BAHA paid under Medicare during the period CY2005 through CY 2013 was less than 9,000,000 per year. This proposed regulation would provide guidance as to coverage of DME with regard to the statutory exclusion. The proposed rule proposes to specify that cochlear implants and brain stem implants are not hearing aids subject to the statutory exclusion and therefore, proposes no change to the current Medicare coverage status for these items.

We estimate that the proposed clarification of the definition of minimal self-adjustment would have no significant impact on program expenditures or access to orthotics. This

proposed clarification would impact suppliers furnishing custom fitted orthotics that do not have the expertise necessary to make more than minimal adjustments to an orthotic that a beneficiary or caregiver could be trained to make. The impact on these few suppliers will vary according to the caseload of custom fitted orthotics provided by an individual supplier. However, we believe the majority of custom fitted devices are currently being furnished by an individual with expertise.

We estimate clarifying the CHOW under the Medicare DMEPOS CBP would have no significant impact to DMEPOS suppliers.

B. Detailed Economic Analysis

1. CY 2015 End-Stage Renal Disease Prospective Payment System

a. Effects on ESRD Facilities

To understand the impact of the changes affecting payments to different categories of ESRD facilities, it is necessary to compare estimated payments in CY 2014 to estimated payments in CY 2015. To estimate the impact among various types of ESRD facilities, it is imperative that the estimates of payments in CY 2014 and CY 2015 contain similar inputs. Therefore, we simulated payments only for those ESRD facilities for which we are able to calculate both current payments and new payments.

For this proposed rule, we used the December 2013 update of CY 2013 National Claims History file as a basis for Medicare dialysis treatments and payments under the ESRD PPS. We updated the 2013 claims to 2014 and 2015 using various updates. The updates to the ESRD PPS base rate are described in section II.B of this proposed rule. Table 38 shows the impact of the estimated CY 2015 ESRD payments compared to estimated payments to ESRD facilities in CY 2014.

TABLE 38—IMPACT OF PROPOSED CHANGES IN PAYMENTS TO ESRD FACILITIES OR CY 2015 PROPOSED RULE

Facility type	Number of facilities	Number of treatments (in millions)	Effect of 2015 changes in outlier policy %	Effect of 2015 changes in wage indexes, CBSA designations and labor-related share %	Effect of 2015 changes in payment rate update %	Effect of total 2015 changes %

¹ Includes hospital-based ESRD facilities not reported to have large dialysis organization or regional chain ownership.

² Includes ESRD facilities located in Guam, American Samoa, and the Northern Mariana Islands.

³ Of the 1,086 ESRD facilities with less than 4,000 treatments, approximately 422 would be expected to qualify for the low-volume adjustment in 2015. This estimate is based on actual claims for 2013 plus the number of hospital-based facilities that may newly qualify with a change in policy. The low-volume adjustment is mandated by Congress, and is not applied to pediatric patients. The impact to these low-volume facilities is a 0.4 percent decrease in payments.

Note: Totals do not necessarily equal the sum of rounded parts, as percentages are multiplicative, not additive.

Column A of the impact table indicates the number of ESRD facilities for each impact category and column B indicates the number of dialysis treatments (in millions). The overall effect of the proposed changes to the outlier payment policy described in section II.B.4 of this proposed rule is shown in column C. For CY 2015, the impact on all ESRD facilities as a result of the changes to the outlier payment policy will be a 0.3 percent increase in estimated payments. The estimated impact of the changes to outlier payment policy ranges from a 0.0 percent to a 0.3 percent increase. Nearly all ESRD facilities are anticipated to experience a positive effect in their estimated CY 2015 payments as a result of the proposed outlier policy changes.

Column D shows the effect of the wage index, new CBSA delineations,

and labor-related share on ESRD facilities and reflects the CY 2015 wage index values for the ESRD PPS payments. Facilities located in the census region of Puerto Rico and the Virgin Islands would receive a 3.9 percent decrease in estimated payments in CY 2015. Since most of the facilities in this category are located in Puerto Rico, the decrease is primarily due to the change in the labor-related share. The other categories of types of facilities in the impact table show changes in estimated payments ranging from a 3.9 percent decrease to a 1.5 percent increase due to the update of the wage indexes, CBSA delineations and labor-related share.

Column E shows the effect of the ESRD PPS payment rate update of 0.0 percent as required by section

1881(b)(14)(F) and (I) as amended by section 217 of PAMA.

Column F reflects the overall impact (that is, the effects of the proposed outlier policy changes, the proposed wage index, the proposed CBSA delineations, the proposed labor-related share, and the effect of the payment rate update. We expect that overall ESRD facilities will experience a 0.3 percent increase in estimated payments in 2015. ESRD facilities in Puerto Rico and the Virgin Islands are expected to receive a 3.6 percent decrease in their estimated payments in CY 2015. This larger decrease is primarily due to the negative impact of the change in the labor-related share. The other categories of types of facilities in the impact table show impacts ranging from a decrease of 0.9 percent to increase of 1.7 percent in their 2015 estimated payments.

b. Effects on Other Providers

Under the ESRD PPS, ESRD facilities are paid directly for the renal dialysis bundle and other provider types such as laboratories, DME suppliers, and pharmacies, may no longer bill Medicare directly for renal dialysis services. Rather, effective January 1, 2011, such other providers can only furnish renal dialysis services under arrangements with ESRD facilities and must seek payment from ESRD facilities rather than Medicare. Under the ESRD PPS, Medicare pays ESRD facilities one payment for renal dialysis services, which may have been separately paid to suppliers by Medicare prior to the implementation of the ESRD PPS. Therefore, in CY 2015, we estimate that the proposed ESRD PPS will have zero impact on these other providers.

c. Effects on the Medicare Program

We estimate that Medicare spending (total Medicare program payments) for ESRD facilities in CY 2015 will be approximately \$9.1 billion. This estimate takes into account a projected increase in fee-for-service Medicare dialysis beneficiary enrollment of 3.2 percent in CY 2015.

d. Effects on Medicare Beneficiaries

Under the ESRD PPS, beneficiaries are responsible for paying 20 percent of the

ESRD PPS payment amount. As a result of the projected 0.3 percent overall increase in the proposed ESRD PPS payment amounts in CY 2015, we estimate that there will be an increase in beneficiary co-insurance payments of 0.3 percent in CY 2015, which translates to approximately \$10 million.

e. Alternatives Considered

For this proposed rule, we proposed to implement a 50/50 blended wage index for CY 2015 that would apply to all ESRD facilities. Specifically, the proposal would transition all ESRD facilities experiencing an impact, or not, due to the implementation of the new CBSA delineations. We considered proposing to implement the new CBSA delineations without a transition; however we decided to mitigate the impact this change would have on ESRD facilities that may experience a decrease in payments due to the change.

In addition, for CY 2015 we proposed to implement a revised 50.673 percent labor-related share using a 2-year transition. This proposal would transition all ESRD facilities from the current labor-related share of 41.737 percent to the revised labor-related share of 50.673 percent. We considered proposing to implement the labor-related share without a transition; however we decided to mitigate the impact this change would have on ESRD

facilities that may experience a decrease in payments due to the change.

2. End-Stage Renal Disease Quality Incentive Program

a. Effects of the PY 2017 ESRD QIP

The ESRD QIP provisions are intended to prevent possible reductions in the quality of ESRD dialysis facility services provided to beneficiaries as a result of payment changes under the ESRD PPS. The methodology that we are proposing to use to determine a facility's TPS for PY 2017 is described in section III.F.5 of this proposed rule. Any reductions in ESRD PPS payments as a result of a facility's performance under the PY 2017 ESRD QIP would affect the facility's reimbursement rates in CY 2017.

We estimate that, of the total number of dialysis facilities (including those not receiving a TPS), approximately 20 percent or 1,227 of the facilities would likely receive a payment reduction in PY 2017. Facilities that do not receive a TPS are not eligible for a payment reduction.

In conducting our impact assessment, we have assumed that there will be an initial count of 5,996 dialysis facilities paid under the ESRD PPS. Table 39 shows the overall estimated distribution of payment reductions resulting from the PY 2017 ESRD QIP.

TABLE 39—ESTIMATED DISTRIBUTION OF PY 2017 ESRD QIP PAYMENT REDUCTIONS

Payment reduction (percent)	Number of facilities	Percent of facilities
0.0	4,484	78.5
0.5	887	15.5
1.0	264	4.6
1.5	58	1.0
2.0	18	0.3

Note: This table excludes 285 facilities that we estimate will not receive a payment reduction because they will not report enough data to receive a Total Performance Score.

To estimate whether or not a facility would receive a payment reduction in PY 2017, we scored each facility on

achievement and improvement on several measures we have previously finalized and for which there were

available data from CROWNWeb and Medicare claims. Measures used for the simulation are shown in Table 40.

TABLE 40—DATA USED TO ESTIMATE PY 2017 ESRD QIP PAYMENT REDUCTIONS

Measure	Period of time used to calculate achievement thresholds, performance standards, benchmarks, and improvement thresholds	Performance period
Vascular Access Type:		
% Fistula	Jan 2012—Dec 2012	Jan 2013—Dec 2013.
% Catheter	Jan 2012—Dec 2012	Jan 2013—Dec 2013.
Kt/V:		
Adult HD	Jan 2012—Dec 2012	Jan 2013—Dec 2013.
Adult PD	Jan 2012—Dec 2012	Jan 2013—Dec 2013.
Pediatric HD	Jan 2012—Dec 2012	Jan 2013—Dec 2013.
Hypocalcemia	May 2012—Dec 2012	Jan 2013—Dec 2013.

TABLE 40—DATA USED TO ESTIMATE PY 2017 ESRD QIP PAYMENT REDUCTIONS—Continued

Measure	Period of time used to calculate achievement thresholds, performance standards, benchmarks, and improvement thresholds	Performance period
SRR	Jan 2011—Dec 2011	Jan 2012—Dec 2012.

Clinical measure topic areas with less than 11 cases for a facility were not included in that facility’s Total Performance Score. Each facility’s Total Performance Score was compared to the estimated minimum Total Performance Score and the payment reduction table found in section III.F.8 of this proposed rule. Facility reporting measure scores were estimated using available data from CY 2013. Facilities were required to have a score on at least one clinical and one reporting measure in order to receive a Total Performance Score.

To estimate the total payment reductions in PY 2017 for each facility resulting from this proposed rule, we multiplied the total Medicare payments to the facility during the one year period between January 2013 and December

2013 by the facility’s estimated payment reduction percentage expected under the ESRD QIP, yielding a total payment reduction amount for each facility: (Total ESRD payment in January 2013 through December 2013 times the estimated payment reduction percentage). For PY 2017, the total payment reduction for the 1,227 facilities estimated to receive a reduction is approximately \$11.9 million (\$11,873,127). Further, we estimate that the total costs associated with the collection of information requirements for PY 2017 described in section VIII.1.a of this proposed rule would be approximately \$27 thousand for all ESRD facilities. As a result, we estimate that ESRD facilities will experience an aggregate impact of

approximately \$11.9 million (\$27,232 + \$11,873,127 = \$11,900,359) in PY 2017, as a result of the PY 2017 ESRD QIP.

Table 41 below shows the estimated impact of the finalized ESRD QIP payment reductions to all ESRD facilities for PY 2017. The table estimates the distribution of ESRD facilities by facility size (both among facilities considered to be small entities and by number of treatments per facility), geography (both urban/rural and by region), and by facility type (hospital based/freestanding facilities). Given that the time periods used for these calculations will differ from those we are proposing to use for the PY 2017 ESRD QIP, the actual impact of the PY 2017 ESRD QIP may vary significantly from the values provided here.

TABLE 41—IMPACT OF PROPOSED QIP PAYMENT REDUCTIONS TO ESRD FACILITIES IN PY 2017

	Number of facilities	Number of treatments 2013 (in millions)	Number of facilities with QIP score	Number of facilities expected to receive a payment reduction	Payment reduction (percent change in total ESRD payments)

Less than 4,000 treatments	1,086	2.7	928	211	-0.17
4,000–9,999 treatments	2,226	10.5	2,174	423	-0.12
Over 10,000 treatments	2,523	25.7	2,514	557	-0.14
Unknown	161	0.3	95	36	-0.38

¹ Small Entities include hospital-based and satellite facilities and non-chain facilities based on DFC self-reported status.

² Includes Puerto Rico and Virgin Islands.

³ Based on claims and CROWNWeb data through December 2013.

b. Effects of the PY 2018 ESRD QIP

The methodology that we are proposing to use to determine a facility’s TPS for the PY 2018 ESRD QIP is described in sections III.F.6 and III.F.7 of this proposed rule. Any reductions in ESRD PPS payments as a result of a facility’s performance under the PY 2018 ESRD QIP would apply to ESRD PPS payments made to the facility in CY 2018.

We estimate that, of the total number of dialysis facilities (including those not receiving a TPS), approximately 16 percent or 919 of the facilities would likely receive a payment reduction in PY 2018. Facilities that do not receive a TPS are not eligible for a payment reduction.

In conducting our impact assessment, we have assumed that there will be

5,996 dialysis facilities paid through the PPS. Table 42 shows the overall estimated distribution of payment reductions resulting from the PY 2018 ESRD QIP.

TABLE 42—ESTIMATED DISTRIBUTION OF PY 2018 ESRD QIP PAYMENT REDUCTIONS

Payment reduction (percent)	Number of facilities	Percent of facilities (percent)
0.0	4,989	84.4
0.5	729	12.3
1.0	132	2.2
1.5	35	0.6
2.0	23	0.4

Note: This table excludes 88 facilities that we estimate will not receive a payment reduction because they will not report enough data to receive a Total Performance Score.

To estimate whether or not a facility would receive a payment reduction in PY 2018, we scored each facility on achievement and improvement on several measures we have previously finalized and for which there were available data from CROWNWeb and Medicare claims. Measures used for the simulation are shown in Table 43.

TABLE 43—DATA USED TO ESTIMATE PY 2018 ESRD QIP PAYMENT REDUCTIONS

Measure	Period of time used to calculate achievement thresholds, performance standards, benchmarks, and improvement thresholds	Performance period
Vascular Access Type:		
% Fistula	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
% Catheter	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
Kt/V:		
Adult HD	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
Adult PD	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
Pediatric HD	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
Pediatric PD	Jan 2012–Dec 2012	Jan 2013–Dec 2013.
Hypercalcemia	May 2012–Dec 2012	Jan 2013–Dec 2013.
SRR	Jan 2011–Dec 2011	Jan 2012–Dec 2012.
STR	Jan 2011–Dec 2011	Jan 2012–Dec 2012

Clinical measure topic areas with less than 11 cases for a facility were not included in that facility’s Total Performance Score. Each facility’s Total Performance Score was compared to an estimated minimum Total Performance Score and an estimated payment reduction table that were consistent with the proposals outlined in Section III.G.9 of this proposed rule. Facility reporting measure scores were estimated

using available data from CY 2013. Facilities were required to have a score on at least one clinical and one reporting measure in order to receive a Total Performance Score.

To estimate the total payment reductions in PY 2018 for each facility resulting from this proposed rule, we multiplied the total Medicare payments to the facility during the one year period between January 2013 and December 2013 by the facility’s estimated payment

reduction percentage expected under the ESRD QIP, yielding a total payment reduction amount for each facility: (Total ESRD payment in January 2013 through December 2013 times the estimated payment reduction percentage). For PY 2018, the total payment reduction for all of the 919 facilities expected to receive a reduction is approximately \$7 million (\$6,958,521). Further, we estimate that

the total costs associated with the collection of information requirements for PY 2018 described in Section VIII.1.b of this proposed rule would be approximately \$248 thousand for all ESRD facilities. As a result, we estimate that ESRD facilities will experience an aggregate impact of approximately \$7.2 million (\$248,309 + \$6,958,521 =

\$7,206,830) in PY 2018, as a result of the PY 2018 ESRD QIP.

Table 44 below shows the estimated impact of the finalized ESRD QIP payment reductions to all ESRD facilities for PY 2018. The table details the distribution of ESRD facilities by facility size (both among facilities considered to be small entities and by number of treatments per facility),

geography (both urban/rural and by region), and by facility type (hospital based/freestanding facilities). Given that the time periods used for these calculations will differ from those we propose to use for the PY 2018 ESRD QIP, the actual impact of the PY 2018 ESRD QIP may vary significantly from the values provided here.

TABLE 44—IMPACT OF PROPOSED QIP PAYMENT REDUCTIONS TO ESRD FACILITIES FOR PY 2018

¹ Small Entities include hospital-based and satellite facilities and non-chain facilities based on DFC self-reported status.

² Includes Puerto Rico and Virgin Islands.

³ Based on claims and CROWNWeb data through December 2013.

3. DMEPOS Provisions

a. Effects of the Proposed Methodology for Adjusting DMEPOS Payment Amounts Using Information From Competitive Bidding Programs

We estimate that the proposed methodology for adjusting DMEPOS

payment amounts using information from DMEPOS CBPs would save over \$7 billion over FY 2016 through 2020. The savings would be primarily achieved from price reductions for items.

Therefore, most of the economic impact is expected from the reduced prices. We

estimate that approximately half of the DMEPOS items and services furnished to Medicare beneficiaries are furnished to beneficiaries residing outside existing CBAs. (See Table 45.)

TABLE 45—IMPACT OF PRICING ITEMS IN NON-COMPETITIVE AREAS USING COMPETITIVE BIDDING PRICING

FY	Impact on the federal government in dollars (to the nearer ten million)	Impact on beneficiary cost sharing in dollars (to the nearer ten million)
2016	- 880	- 270
2017	- 1,430	- 470
2018	- 1,520	- 510
2019	- 1,630	- 540
2020	- 1,750	- 580

Although these transfers create incentives that very likely cause changes in the way society uses its resources, we lack data with which to estimate the resulting social costs or benefits.

b. Effects of the Proposed Special Payment Methodologies and Payment Rules for Durable Medical Equipment and Enteral Nutrition Furnished Under the Competitive Bidding Program

We believe that the proposed special payment rules would not have a significant impact on beneficiaries and suppliers. Contract suppliers are responsible for furnishing items and services needed by the beneficiary, and the cost to suppliers for furnishing these items and services does not change based on whether or not the equipment and related items and services are paid for separately under a capped rental payment method. Because the supplier's bids would reflect the cost of furnishing items in accordance with the new payment rules, we expect the overall savings would be generally the same as they are under the current payment rules. Furthermore, as indicated above, we are proposing that the alternative payment rules would be phased in under a limited number of areas first to determine impact on the program, beneficiaries, and suppliers. If supported by evaluation results, a decision to expand the proposed special payment rules to other areas would be addressed in future rulemaking.

c. Effects of the Proposed Clarification of the Scope of the Medicare Hearing Aid Coverage Exclusion

This proposed rule proposes to clarify the scope of the Medicare coverage exclusion for hearing aids and proposes to no longer cover BAHAs. However, if finalized, this proposed rule would have no significant fiscal impact on the Medicare program, because Medicare program expenditures for BAHAs

during the period CY2005 through CY 2013 have been insignificant. This proposed clarification would provide clear guidance about coverage of DME with regard to the statutory hearing aid exclusion. The proposed regulation, if finalized, would explicitly except cochlear implants and brain stem implants from the hearing aid exclusion, and therefore, Medicare coverage for these devices would continue.

We estimate that the proposed clarification of the scope of the Medicare hearing coverage exclusion would save Medicare approximately \$80 million dollars over five years beginning in January 1, 2015 through September 30, 2019. The savings would be primarily achieved from removing coverage of the BAHA device. (See Table 46.)

TABLE 46—CLARIFICATION OF THE STATUTORY MEDICARE HEARING AID COVERAGE EXCLUSION

FY	Impact to the Federal Government (rounded to the nearer \$10 millions)
2015	- 10
2016	- 10
2017	- 20
2018	- 20
2019	- 20

d. Effects of the Proposed Definition of Minimal Self-Adjustment of Orthotics Under Competitive Bidding

The proposed rule would modify the definition of minimal self-adjustment to indicate that it means an adjustment that the beneficiary, caretaker for the beneficiary, or supplier of the device can perform and does not require the services of a certified orthotist (that is, an individual certified by either the American Board for Certification in Orthotics and Prosthetics, Inc., or the Board for Orthotist/Prosthetist Certification) or a physician as defined

in section 1861(r) of the Act, a treating practitioner means a physician assistant, nurse practitioner, or clinical nurse specialist as defined in section 1861(aa)(5) of the Act, an occupational therapist as defined in 42 CFR 484.4, or physical therapist as defined in 42 CFR 484.4 in compliance with all applicable Federal and State licensure and regulatory requirements. We estimate that the proposed clarification of the definition of minimal self-adjustment would have no significant impact on program expenditures or access to orthotics. This proposed clarification would impact suppliers furnishing custom fitted orthotics that do not have the expertise necessary to make more than minimal adjustments to an orthotic that a beneficiary or caregiver could be trained to make.

e. Effects of the Proposed Revision to Change of Ownership Rules To Allow Contract Suppliers To Sell Specific Lines of Business

This rule would clarify the change of ownership rules so as to not interfere with the normal course of business for DME suppliers. This rule would establish an exception under the CHOW rules to allow transfer of part of a competitive bidding contract when a contract supplier sells a distinct line of business to a qualified successor entity under certain specific circumstances. This clarification would impact businesses in a positive way by allowing them to conduct everyday transactions without interference from our rules and regulations.

C. Accounting Statement

As required by OMB Circular A-4 (available at http://www.whitehouse.gov/omb/circulars_a004_a-4), in Table 47 below, we have prepared an accounting statement showing the classification of the transfers and costs associated with the various provisions of this proposed rule.

TABLE 47—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS AND COSTS/SAVINGS

Category		Transfers			
ESRD PPS for CY 2015					
Annualized Monetized Transfers		\$ 30 million.			
From Whom to Whom		Federal government to ESRD providers.			
Increased Beneficiary Co-insurance Payments		\$10 million.			
From Whom to Whom		Beneficiaries to ESRD providers.			
ESRD QIP for PY 2017					
Annualized Monetized Transfers		– \$11.9 million.			
From Whom to Whom		Federal government to ESRD providers.			
Category		Costs			
Annualized Monetized ESRD Provider Costs		\$27 thousand.			
ESRD QIP for PY 2018					
Annualized Monetized Transfers		– \$7 million.			
From Whom to Whom		Federal government to ESRD providers.			
Annualized Monetized ESRD Provider Costs		\$248 thousand.			
Pricing Items in Non-competitive Areas Using Competitive Bidding Pricing					
Category		Transfer			
Annualized monetized transfer on beneficiary cost sharing	Estimates	Year dollar	Discount rate (percent)	Period covered	
	– \$464.5 million	2014	7	2016–2020	
	– \$469.9 million	2014	3	2016–2020	
From Whom to Whom	Beneficiaries to Medicare providers.				
Category		Transfers			
Annualized monetized transfer payments	Estimates	Year dollar	Discount rate (percent)	Period covered	
	– \$1,415.4 million	2014	7	2016–2020	
	– \$1,430.5 million	2014	3	2016–2020	
From Whom to Whom	Federal government to Medicare providers.				
Clarification of the Statutory Medicare Hearing Aid Coverage Exclusion					
Category		Transfers			
Annualized monetized transfer payments	Estimates	Year dollar	Discount rate (percent)	Period covered	
	– \$15.6 million	2014	7	2015–2019	
	– \$15.8 million	2014	3	2015–2019	
From Whom to Whom	Federal government to Medicare providers.				

XVI. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (September 19, 1980, Pub. L. 96–354) (RFA) requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Approximately 16 percent of ESRD

dialysis facilities are considered small entities according to the Small Business Administration’s (SBA) size standards, which classifies small businesses as those dialysis facilities having total revenues of less than \$35.5 million in any 1 year. Individuals and States are not included in the definitions of a small entity. For more information on SBA’s size standards, see the Small Business Administration’s Web site at <http://www.sba.gov/content/small-business-size-standards> (Kidney

Dialysis Centers are listed as 621492 with a size standard of \$35.5 million). We do not believe ESRD facilities are operated by small government entities such as counties or towns with populations of 50,000 or less, and therefore, they are not enumerated or included in this estimated RFA analysis. Individuals and States are not included in the definition of a small entity. For purposes of the RFA, we estimate that approximately 16 percent of ESRD facilities are small entities as that term is used in the RFA (which includes

small businesses, nonprofit organizations, and small governmental jurisdictions). This amount is based on the number of ESRD facilities shown in the ownership category in Table 38. Using the definitions in this ownership category, we consider the 582 facilities that are independent and the 393 facilities that are shown as hospital-based to be small entities. The ESRD facilities that are owned and operated by LDOs and regional chains would have total revenues of more than \$35.5 million in any year when the total revenues for all locations are combined for each business (individual LDO or regional chain), and are not, therefore, included as small entities.

For the ESRD PPS updates proposed in this rule, a hospital-based ESRD facility (as defined by ownership type) is estimated to receive a 0.4 percent increase in payments for CY 2015. An independent facility (as defined by ownership type) is also estimated to receive a 0.4 percent increase in payments for CY 2015.

We estimate that of the 1,217 ESRD facilities expected to receive a payment reduction in the PY 2017 ESRD QIP, 275 of those facilities would be ESRD small entity facilities. We present these findings in Table 39 ("Estimated Distribution of PY 2017 ESRD QIP Payment Reductions") and Table 41 ("Impact of Proposed QIP Payment Reductions to ESRD Facilities for PY 2017") above. We estimate that the payment reductions will average approximately \$9,353 per facility across the 1,217 facilities receiving a payment reduction, and \$8,698 for each small entity facility. Using our estimates of facility performance, we also estimated the impact of payment reductions on ESRD small entity facilities by comparing the total payment reductions for the 275 small entity facilities with the aggregate ESRD payments to all small facilities. We estimate that there are a total of 885 small facilities, and that the aggregate ESRD PPS payments to these facilities would decrease 0.23 percent in PY 2017.

We estimate that of the 1,320 ESRD facilities expected to receive a payment reduction in the PY 2018 ESRD QIP, 282 are ESRD small entity facilities. We present these findings in Table 39 ("Estimated Distribution of PY 2018 ESRD QIP Payment Reductions") and Table 41 ("Impact of Proposed QIP Payment Reductions to ESRD Facilities for PY 2018") above. We estimate that the payment reductions will average approximately \$7,119 per facility across the 895 facilities receiving a payment reduction, and \$6,294 for each small entity facility. Using our estimates of

facility performance, we also estimated the impact of payment reductions on ESRD small entity facilities by comparing the total estimated payment reductions for 209 small entity facilities with the aggregate ESRD payments to all small entity facilities. We estimate that there are a total of 975 small entity facilities, and that the aggregate ESRD PPS payments to these facilities would decrease 0.16 percent in PY 2018.

We expect that the proposed methodology for adjusting DMEPOS payment amounts using information from DMEPOS CBPs would have a significant impact on a substantial number of small suppliers. Although suppliers furnishing items and services outside CBAs do not have to compete and be awarded contracts in order to continue furnishing these items and services, the payment amounts for these items and services would be reduced using the methodology established as a result of the proposed rule. The statute requires that the methodology for adjusting payment amounts take into consideration the costs of furnishing items and services in areas where the adjustments will occur and these considerations are discussed in the preamble (refer to section IV(A)(5) of the preamble). The proposed methodology for making payment adjustments would allow for adjustments based on bids in different geographic regions to reflect regional variation in costs of furnishing items and services and the national floor for adjustments in states with unique costs. We believe that suppliers would be able to continue furnishing items and services to beneficiaries in areas outside the CBAs after the reductions in the payment amounts are applied without a significant change in the rate at which they accept assignment of Medicare claims for these items and services. Because section 1834(a)(1)(F)(ii) of the Act mandates that payment amounts for DME subject to competitive bidding be adjusted in areas where CBPs are not implemented, the only alternative we can consider other than paying based on adjusted fee schedule amounts is to implement CBPs in all areas. However, this approach would have an even greater impact on small suppliers.

We expect the proposed special payment rules for DME and enteral nutrition would not have a significant impact on small suppliers. We believe that these rules would benefit affected suppliers since payment for rental of DME and enteral nutrition infusion pumps would no longer be capped and suppliers would retain ownership to the equipment.

We expect that the proposal to modify the definition of minimal self-

adjustment of orthotics would not have a significant impact on small suppliers. According to the Medicare Pricing, Data Analysis and Coding (PDAC) Contractor from FY 2010 through FY 2013 there were approximately 6,000 DMEPOS suppliers with a provider transaction access number (PTAN) registered with the National Supplier Clearinghouse to supply orthotics. In addition, there are a limited number of applicable HCPCS codes (approximately 77) that require a skilled individual's expertise. We believe that the majority of businesses providing orthotics already employ a "skilled individual." However, for those few businesses that do not already have a skilled individual providing custom fitted orthotics they could comply with the proposed changes to the definition and requirements by hiring a skilled individual. For example, according to the Bureau of Labor Statistics Occupational Employment Statistics May 2013 the median pay for a certified orthotist was \$30.27 an hour. The impact will vary according to the caseload of custom fitted orthotics provided by an individual supplier.

We expect that although the proposal which clarifies the scope of the Medicare statutory exclusion for hearing aids would withdraw the coverage for BAHAs, it would not have a significant impact on small suppliers since the volume of allowed services for bone anchored hearing aids covered by Medicare is very small (less than 2,000 nationwide) and would not account for a large percentage of any individual supplier's total revenue.

We expect that the proposed revisions to CHOW rules to allow contract suppliers to sell specific lines of business provision would have a positive impact on suppliers and no significant negative impact on small suppliers.

Therefore, the Secretary has determined that this proposed rule would have a significant economic impact on a substantial number of small entities. We solicit comment on the RFA analysis provided.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. Any such regulatory impact analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. We do not believe this proposed rule will have a significant impact on operations of a substantial number of

small rural hospitals because most dialysis facilities are freestanding. While there are 145 rural hospital-based dialysis facilities, we do not know how many of them are based at hospitals with fewer than 100 beds. However, overall, the 145 rural hospital-based dialysis facilities will experience an estimated 0.1 percent decrease in payments. As a result, this proposed rule is not estimated to have a significant impact on small rural hospitals. Therefore, the Secretary has determined that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

XVII. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year \$100 million in 1995 dollars, updated annually for inflation. In 2013, that threshold is approximately \$141 million. This proposed rule does not include any mandates that would impose spending costs on State, local, or Tribal governments in the aggregate, or by the private sector, of \$141 million.

XVIII. Federalism Analysis

Executive Order 13132 on Federalism (August 4, 1999) establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have reviewed this proposed rule under the threshold criteria of Executive Order 13132, Federalism, and have determined that it will not have substantial direct effects on the rights, roles, and responsibilities of States, local or Tribal governments.

XXI. Congressional Review Act

This proposed rule is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 et seq.) and has been transmitted to the Congress and the Comptroller General for review.

In accordance with the provisions of Executive Order 12866, this proposed rule was reviewed by the Office of Management and Budget.

XX. Files Available to the Public via the Internet

The Addenda for the annual ESRD PPS proposed and final rulemakings

will no longer appear in the **Federal Register**. Instead, the Addenda will be available only through the Internet and is posted on the CMS Web site at <http://www.cms.gov/ESRDPayment/PAY/list.asp>. In addition to the Addenda, limited data set (LDS) files are available for purchase at <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/EndStageRenalDiseaseSystemFile.html>. Readers who experience any problems accessing the Addenda or LDS files should contact Stephanie Frilling at (410) 786–4507.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays

42 CFR Part 411

Kidney diseases, Medicare, Physician Referral, and Reporting and recordkeeping requirements

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, and Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as follows:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority for part 405 continues to read as follows:

Authority: Secs. 205(a), 1102, 1861, 1862(a), 1869, 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 405(a), 1302, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

§ 405.2102 [Amended]

■ 2. Section 405.2102 is amended by removing all the definitions, with the exception of two definitions, “Network, ESRD”, and “Network organization”.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 3. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn).

■ 4. Section 411.15 is amended by revising paragraph (d) to read as follows:

§ 411.15 Particular services excluded from coverage.

* * * * *

(d) *Hearing aids* or examinations for the purpose of prescribing, fitting, or changing hearing aids.

(1) *Scope*. The scope of the hearing aid exclusion encompasses all types of air conduction and bone conduction hearing aids (external, internal, or implanted).

(2) *Devices not subject to the hearing aid exclusion*. Cochlear implants and auditory brainstem implants that replace the function of cochlear structures or auditory nerve and provide electrical energy to auditory nerve fibers and other neural tissue via implanted electrode arrays. These devices produce the perception of sound and do not meet the definition of hearing aid.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 5. The authority citation for part 413 is revised to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883 and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332), sec. 3201 of Pub. L. 112–96 (126 Stat. 156), sec. 632 of Pub. L. 112–240 (126 Stat. 2354), and sec. 217 of Pub. L. 113–93.

§ 413.174 [Amended]

■ 6. In § 413.174, paragraph (f)(6) is amended by removing “January 1, 2016” and by adding in its place “January 1, 2024.”

■ 7. Section 413.232 is amended revising paragraphs (b) introductory text and (f) and adding paragraph (h) to read as follows:

§ 413.232 Low-volume adjustment.

* * * * *

(b) Definition of low-volume facility. A low-volume facility is an ESRD facility that, as determined based on the documentation submitted pursuant to paragraph (h) of this section:

* * * * *

(f) Except as provided in paragraph (g) of this section, to receive the low-volume adjustment an ESRD facility must provide an attestation statement, by November 1st of each year preceding the payment year, to its Medicare Administrative Contractor that the facility meets all the criteria established in this section. For calendar year 2012, the attestation must be provided by January 3, 2012. For calendar year 2015, the attestation must be provided by December 31, 2014.

* * * * *

(h) To receive the low-volume adjustment, an ESRD facility must include in their attestation provided pursuant to paragraph (f) of this section a statement that the ESRD facility meets the definition of a low-volume facility in paragraph (b) of this section. To determine eligibility for the low-volume adjustment, the Medicare Administrative Contractor (MAC) on behalf of CMS relies upon as filed or final settled 12-consecutive month cost reports for the 3 cost reporting years preceding the payment year to verify the number of treatments, except that:

(1) In the case of a hospital-based ESRD facility as defined in § 413.174(c), the MAC relies upon the attestation submitted pursuant to paragraph (f) of this section and may consider other supporting data in addition to the total treatments reported in each of the 12-consecutive month cost reports for the 3 cost reporting years preceding the payment year to verify the number of treatments that were furnished by the individual hospital-based ESRD facility seeking the adjustment; and

(2) In the case of an ESRD facility that has undergone a change of ownership that does not result in a new Provider Transaction Access Number for the ESRD facility, the MAC relies upon the attestation and when the change of ownership results in two non-standard cost reporting periods (less than or greater than 12-consecutive months), does one or both of the following for the 3 cost reporting years preceding the payment year to verify the number of treatments:

(i) Combines the two non-standard cost reporting periods of less than 12 months to equal a full 12-consecutive month period; and/or

(ii) Combines the two non-standard cost reporting periods that in combination may exceed 12-consecutive

months and prorates the data to equal a full 12-consecutive month period.

§ 413.237 [Amended]

■ 8. In § 413.237, paragraph (a)(1)(iv) is amended by removing “January 1, 2016” and adding in its place “January 1, 2024.”

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 9. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

■ 10. Section 414.105 is added to read as follows:

§ 414.105 Application of Competitive Bidding Information and Limitation of Inherent Reasonableness Authority

(a) For enteral nutrients, equipment and supplies furnished on or after January 1, 2011, the fee schedule amounts may be adjusted based on information on the payment determined as part of implementation of the programs under subpart F using the methodologies set forth at § 414.210(g).

(b) In the case of such adjustments, the rules at § 405.502(g) and (h) of this chapter shall not be applied.

Subpart D—Payment for Durable Medical Equipment and Prosthetic and Orthotic Devices

■ 11. The heading for subpart D is revised to read as set forth above.

■ 12. Section 414.202 is amended by:

■ A. Adding the definition of “Frontier state”.

■ B. Revising the definition of “Region”.

■ C. Adding the definition of “Rural State”.

The additions and revision read as follows:

§ 414.202 Definitions.

* * * * *

Frontier state means a state where at least 50 percent of counties in the state have a population density of 6 people or less per square mile.

* * * * *

Region means, for the purpose of implementing § 414.210(g), geographic areas defined by the Bureau of Economic Analysis in the United States Department of Commerce for economic analysis purposes, and, for the purpose of implementing § 414.228, those contractor service areas administered by CMS regional offices.

Rural State means a state where more than 50 percent of the population is rural as determined through census data.

■ 13. Section 414.210 is amended by revising paragraph (a) and adding paragraph (g) to read as follows:

§ 414.210 General payment rules.

(a) General rule. For items furnished on or after January 1, 1989, except as provided in paragraphs (c), (d), and (g) of this section, Medicare pays for durable medical equipment, prosthetics and orthotics, including a separate payment for maintenance and servicing of the items as described in paragraph (e) of this section, on the basis of 80 percent of the lesser of—

(1) The actual charge for the item;

(2) The fee schedule amount for the item, as determined in accordance with the provisions of §§ 414.220 through 414.232

* * * * *

(g) Application of Competitive Bidding Information and Limitation of Inherent Reasonableness Authority. For items furnished on or after January 1, 2011, the fee schedule amounts may be adjusted based on information on the payment determined as part of implementation of the programs under subpart F, of this part, excluding information on the payment determined in accordance with the special payment rules at § 414.409. In the case of such adjustments, the rules at § 405.502(g) and (h) of this chapter shall not be applied

(1) Payment adjustments for areas within the contiguous United States using information from competitive bidding programs. For an item or service subject to the programs under subpart F, that payment amount for such item or services for areas within the contiguous United States shall be established as follows:

(i) CMS determines a regional price for each state in the contiguous United States and the District of Columbia equal to the un-weighted average of the single payment amount for an item or service established in accordance with § 414.416 for competitive bidding areas that are fully or partially located in the same region where the state or District of Columbia is located.

(ii) CMS determines a national average price equal to the average of the regional prices determined under paragraph (g)(1)(i) of this section.

(iii) A regional price determined under paragraph (g)(1)(i) of this section cannot be greater than 110 percent of the national average price determined under paragraph (g)(1)(ii) of this section nor less than 90 percent of the national average price determined under paragraph (g)(1)(ii) of this section. In addition, a regional price determined under paragraph (g)(1)(i) of this section

for a state designated as a rural or frontier state cannot be less than 110 percent of the national average price determined under paragraph (g)(1)(ii) of this section.

(2) *Payment adjustments for areas outside the contiguous United States using information from competitive bidding programs.* For an item or service subject to the programs under subpart F, the fee schedule amounts for areas outside the contiguous United States are adjusted based on the greater of—

(i) The average of the single payment amounts for the item or service for CBAs outside the contiguous United States.

(ii) 110 percent of the national average price for the item or service determined under paragraph (g)(1)(ii) of this section.

(3) *Payment adjustments for items and services included in no more than ten competitive bidding programs.*

Notwithstanding paragraph (g)(1) of this section, for an item or service that is included in ten or fewer competitive bidding programs as defined at § 414.402, the fee schedule amounts applied for all areas within and outside the contiguous United States are adjusted based on 110 percent of the unweighted average of the single payment amounts for the item or service.

(4) *Payment adjustments using data on items and services included in competitive bidding programs no longer in effect.* In the case where adjustments to fee schedule amounts are made using any of the methodologies described, if the adjustments are based solely on single payment amounts from competitive bidding programs that are no longer in effect, the adjusted fee schedule amounts shall be increased on an annual basis using the percentage change in the Consumer Price Index for all Urban Consumers (CPI-U) from the mid-point of the last year the single payment amounts were in effect to the month ending 6 months prior to the date the initial payment adjustments would go into effect. Following the initial adjustment to the fee schedule amounts, the adjusted fee schedule amounts would continue to be updated every 12 months using the percentage change in the CPI-U for the 12-month period ending 6 months prior to the date the updated payment adjustments would go into effect.

(5) *Adjusted payment amounts for accessories used with different types of base equipment.* In situations where a HCPCS code that describes an item used with different types of base equipment is included in more than one product category in a CBA under competitive bidding, a weighted average of the single payment amounts for the code is computed for each CBA, weighted based

on national allowed services for the code when used with different equipment. The weighted average single payment amount per code per CBA would then be used in applying the payment adjustment methodologies proposed in this section.

(6) *Payment adjustments consistent with items and services furnished.* In the case where payment amounts are established under subpart F of this part for an item or service that are greater than the payment amounts established under subpart F of this part for a higher level item or service (i.e., one with additional features or functionality), the payment amounts for the lower level of service are adjusted so that they are no greater than the payment amounts for the higher level of service before making payment adjustments using any of the methodologies above.

(7) *Payment adjustments for mail order items furnished in the Northern Mariana Islands.* The fee schedule amounts for mail order items furnished to beneficiaries in the Northern Mariana Islands are adjusted so that they are equal to 100 percent of the single payment amounts established under a national mail order competitive bidding program.

(8) *Updating adjusted fee schedule amounts.* The adjusted fee schedule amounts are revised each time a single payment amount for an item or service is updated following one or more new competitions and as other items are added to programs established under subpart F of this part.

■ 14. Section 414.402 is amended by revising the definition of “Minimal self-adjustment” to read as follows:

§ 414.402 Definitions.

* * * * *

Minimal self-adjustment means an adjustment the beneficiary, caretaker for the beneficiary, or supplier of the device can perform and does not require the services of a certified orthotist (that is, an individual certified by either the American Board for Certification in Orthotics and Prosthetics, Inc., or the Board for Orthotist/Prosthetist Certification), or a physician as defined in 1861(r) of the Act, a treating practitioner which means a physician assistant, nurse practitioner, or clinical nurse specialist as defined in section 1861(aa)(5) of the Act, an occupational therapist as defined in § 484.4 of this chapter, or physical therapist as defined in § 484.4 of this chapter who are in compliance with all applicable Federal and State licensure and regulatory requirements.

* * * * *

■ 15. Section 414.408 is amended by adding paragraph (l) to read as follows:

§ 414.408 Payment rules.

* * * * *

(l) *Exceptions for certain items and services paid in accordance with special payment rules.* The payment rules in paragraphs (f) thru (i), (j)(2), (j)(3), (j)(7), and (k) of this section do not apply to items and services paid in accordance with the special payment rules at § 414.409.

■ 16. Section 414.409 is added to read as follows:

§ 414.409 Special payment rules.

(a) *Payment on a bundled, continuous rental basis.* (1) In no more than 12 CBAs, in conjunction with competitions that begin on or after January 1, 2015, payment is made on a bundled, continuous monthly rental basis for enteral nutrients, supplies and equipment, oxygen and oxygen equipment, standard manual wheelchairs, standard power wheelchairs, CPAP and respiratory assist devices, and hospital beds. The CBAs and competitions where these payment rules apply are announced in advance of each competition, with the payment rules in this section used in lieu of the payment rules at § 414.408(f) thru (i), (j)(2), (j)(3), (j)(7), and (k). The single payment amounts are established based on bids submitted and accepted for furnishing rented DME and enteral nutrition on a monthly basis for each month of medical need during the contract period monthly single payment amount would include payment for all nutrients, supplies and equipment.

(2) Payment is made on a continuous monthly rental basis for DME. The single payment amount for the monthly rental of DME includes payment for the rented equipment, maintenance and servicing of the rented equipment, and replacement of supplies and accessories necessary for the effective use of the rented equipment. Separate payment for replacement of equipment, repair or maintenance and servicing of equipment, or for replacement of accessories and supplies necessary for the effective use of equipment is not allowed under any circumstances.

(3) Payment is made on a monthly basis for enteral nutrition. The single payment amount includes payment for all nutrients, supplies and equipment. Separate payment for replacement of equipment, repair or maintenance and servicing of equipment, or for replacement of accessories and supplies necessary for the effective use of equipment is not allowed under any circumstances.

(b) *Payment for grandfathered DME items paid on a bundled, continuous rental basis.* Payment to a supplier that elects to be a grandfathered supplier of DME furnished in CBPs where these special payment rules apply is made in accordance with § 414.408(a)(1).

(c) *Supplier transitions for DME and enteral nutrition paid on a bundled, continuous rental basis.* Changes from a non-contract supplier to a contract supplier at the beginning of a CBP where payment is made on a bundled, continuous monthly rental basis results in the contract supplier taking on responsibility for meeting all of the monthly needs for furnishing the covered DME or enteral nutrition. In the event that a beneficiary relocates from a CBA where these special payment rules apply to an area where rental cap rules apply, a new period of continuous use begins for the capped rental item, enteral nutrition equipment, or oxygen equipment as long as the item is determined to be medically necessary.

(d) *Responsibility for repair and maintenance and servicing of power wheelchairs.* In no more than 12 CBAs where payment for power wheelchairs is made on a capped rental basis, for power wheelchairs furnished in conjunction with competitions that begin on or after January 1, 2015, contract suppliers that furnish power wheelchairs under contracts awarded based on these competitions shall continue to repair power wheelchairs they furnish following transfer of title to the equipment to the beneficiary. The responsibility of the contract supplier to repair, maintain and service beneficiary-owned power wheelchairs does not apply to power wheelchairs that the contract supplier did not furnish to the beneficiary. For power wheelchairs that the contract supplier furnishes during the contract period, the responsibility of the contract supplier to repair, maintain and service the power wheelchair once it is owned by the beneficiary continues until the reasonable useful lifetime of the equipment expires, coverage for the power wheelchair ends, or the beneficiary relocates outside the CBA where the item was furnished. The contract supplier may not charge the beneficiary or the program for any necessary repairs or maintenance and servicing of a beneficiary-owned power wheelchair it furnished during the contract period.

■ 17. Section 414.412 is amended by revising paragraph (b)(2) and adding paragraphs (b)(3) through (5) to read as follows:

§ 414.412 Submission of bids under a competitive bidding program.

* * * * *

(b) * * *

(2) The bids submitted for each item or drug in a product category cannot exceed the payment amount that would otherwise apply to the item under Subpart C, Subpart D, or Subpart I of this part.

(3) The bids submitted for enteral nutrition, oxygen and oxygen equipment, standard manual wheelchairs, and hospital beds paid in accordance with the special payment rules at § 414.409(a) cannot exceed the average monthly payment for the bundle of items and services that would otherwise apply to the item under subpart C or subpart D of this part.

(4) The bids submitted for continuous positive airway pressure (CPAP) devices and respiratory assist devices paid in accordance with the special payment rules at § 414.409(a) cannot exceed the 1993 fee schedule amounts for these items, increased by the covered item update factors provided for these items in section 1834(a)(14) of the Act.

(5) Suppliers shall take into consideration the special payment rules at § 414.409(d) when submitting bids for furnishing power wheelchairs under competitions where these rules apply.

* * * * *

■ 18. Section 414.414 is amended by revising paragraph (f) to read as follows:

§ 414.414 Conditions for awarding contracts.

* * * * *

(f) *Expected savings.* A contract is not awarded under this subpart unless CMS determines that the amounts to be paid to contract suppliers for an item or drug under a competitive bidding program are expected to be less than the amounts that would otherwise be paid for the same item under subpart C or subpart D or the same drug under subpart I based on 95 percent of the average wholesale price in effect on October 1, 2003.

* * * * *

■ 19. Section 414.422 is amended by revising paragraph (d) to read as follows:

§ 414.422 Terms of contracts.

* * * * *

(d) *Change of ownership.* (1) A contract supplier must notify CMS if it is negotiating a change in ownership no later than 60 days before the anticipated date of the change.

(2) CMS may transfer a contract to an entity that merges with, or acquires, a contract supplier if the entity meets the following requirements:

(i) A successor entity—
(A) Meets all requirements applicable to contract suppliers for the applicable competitive bidding program;

(B) Submits to CMS the documentation described under § 414.414(b) through (d) if documentation has not previously been submitted by the successor entity or if the documentation is no longer sufficient for CMS to make a financial determination. A successor entity is not required to duplicate previously submitted information if the previously submitted information is not need to make a financial determination. This documentation must be submitted no later than 30 days prior to the anticipated effective date of the change of ownership; and
(C) Submits to CMS, at least 30 days before the anticipated effective date of the change of ownership, a signed novation agreement acceptable to CMS stating that it will assume all obligations under the contract; or

(ii) A new entity—
(A) Meets the requirements of (d)(2)(i)(A) and (B) of this section; and
(B) Contract supplier submits to CMS, at least 30 days before the anticipated effective date of the change of ownership, its final draft of a novation agreement as described in paragraph (d)(2)(iii) of this section for CMS review. The new entity submits to CMS, within 30 days after the effective date of the change of ownership, an executed novation agreement acceptable to CMS.

(3) Except as specified in paragraph (d)(4) of this section, CMS transfers the entire contract, including all product categories and competitive bidding areas, to a new entity.
(4) For contracts issued in the Round 2 Recompete and subsequent rounds in the case of a CHOW where a contract supplier sells a distinct company, (e.g., an affiliate, subsidiary, sole proprietor, corporation, or partnership) that furnishes a specific product category or services a specific CBA, CMS may transfer the portion of the contract performed by that company to a successor, if the following conditions are met:
(i) Every CBA, product category, and location of the company being sold must be transferred to the new qualified owner who meets all competitive bidding requirements; i.e. financial, accreditation and licensure;

(iii) All CBAs and product categories in the original contract that are not explicitly transferred by CMS remain unchanged in that original contract for the duration of the contract period unless transferred by CMS pursuant to a subsequent CHOW;

(ii) Every CBA, product category, and location of the company being sold must be transferred to the new qualified owner who meets all competitive bidding requirements; i.e. financial, accreditation and licensure;

(iii) All CBAs and product categories in the original contract that are not explicitly transferred by CMS remain unchanged in that original contract for the duration of the contract period unless transferred by CMS pursuant to a subsequent CHOW;

(iv) All requirements of paragraph (d)(2) of this section are met; and

(v) The sale of the distinct company includes all of the contract supplier's assets associated with the CBA and/or product category(s); and

(vi) CMS determines that transfer of part of the original contract will not result in disruption of service or harm to beneficiaries.

* * * * *

■ 20. Section 414.423 is amended by revising paragraphs (b)(1)(vi), (l)(2) introductory text, and (l)(2)(i) to read as follows:

§ 414.423 Appeals Process for Termination of Competitive Bidding Contract.

* * * * *

(b) * * *

(1) * * *

(vi) The effective date of termination is 45 days from the date of the notification letter unless a timely hearing request is filed or a corrective action plan (CAP) is submitted within 30 days of the date on the notification letter.

* * * * *

(l) * * *

(2) A contract supplier whose contract has been terminated must notify all beneficiaries who are receiving rented competitive bid items or competitive bid items received on a recurring basis, of the termination of their contract.

(i) The notice to the beneficiary from the supplier whose contract is terminated must be provided no later

than 15 days prior to the effective date of termination.

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, Clinical Laboratory Fee Schedule, Access to Identifiable Data for the Center for Medicare and Medicaid Innovation Models & Other Revisions to Part B for CY 2015
AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses changes to the physician fee schedule, and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. See the Table of Contents for a listing of the specific issues addressed in this proposed rule.

DATES: *Comment date:* To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 2, 2014.

ADDRESSES: In commenting, please refer to file code CMS-1612-P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to www.regulations.gov. Follow the instructions for “submitting a comment.”

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1612-P, P.O. Box 8013, Baltimore, MD 21244-8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1612-P, Mail

Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786-7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

FOR FURTHER INFORMATION CONTACT: Gail Addis, (410) 786-4552, for issues related to the refinement panel or for any physician payment issues not identified below.

Chava Sheffield, (410) 786-2298, for issues related to practice expense methodology, impacts, the sustainable growth rate, conscious sedation, or conversion factors.

Kathy Kersell, (410) 786-2033, for issues related to direct practice expense inputs.

Jessica Bruton, (410) 786-5991, for issues related to potentially misvalued services or work RVUs.

Craig Dobyski, (410) 786-4584, for issues related to geographic practice cost indices or malpractice RVUs.

Ken Marsalek, (410) 786-4502, for issues related to telehealth services.

Pam West, (410) 786-2302, for issues related to conditions for therapists in private practice.

Marianne Myers, (410) 786-5962, for issues related to ambulance extender provisions.

Amy Gruber, (410) 786-1542, for issues related to changes in geographic area designations for ambulance payment.

Anne Tayloe-Hauswald, (410) 786-4546, for issues related to clinical lab fee schedule.

Corinne Axelrod, (410) 786-5620, for issues related to Rural Health Clinics or Federally Qualified Health Centers.

Renee Mentnech, (410) 786-6692, for issues related to access to identifiable data for the Centers for Medicare & Medicaid models.

Marie Casey, (410) 786-7861, for issues related to local determination process for clinical diagnostic laboratory tests.

Frederick Grabau, (410) 786-0206, for issues related to private contracting/opt-out.

David Walczak, (410) 786-4475, for issues related to payment policy for substitute physician billing arrangements (locum tenens).

Melissa Heesters, (410) 786-0618, for issues related to reports of payments or other transfers of value to covered recipients.

Rashaan Byers, (410) 786-2305, for issues related to physician compare.

Christine Estella, (410) 786-0485, for issues related to the physician quality reporting system.

Alexandra Mugge (410) 786-4457, for issues related to EHR incentive program.

Patrice Holtz, (410) 786-5663, for issues related to comprehensive primary care initiative.

Terri Postma, (410) 786-4169, for issues related to Medicare Shared Savings Program.

Kimberly Spalding Bush, (410) 786-3232, for issues related to value-based modifier and improvements to physician feedback.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard,

Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1-800-743-3951.

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary and Background

A. Executive Summary

1. Purpose

This major proposed rule would revise payment policies under the Medicare Physician Fee Schedule (PFS) and make other policy changes related to Medicare Part B payment. These changes would be applicable to services furnished in CY 2015.

2. Summary of the Major Provisions

The Social Security Act (the Act) requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The Act requires that RVUs be established for three categories of resources: work, practice expense (PE); and malpractice (MP) expense; and, that we establish by regulation each year's payment amounts for all physicians' services, incorporating geographic adjustments to

reflect the variations in the costs of furnishing services in different geographic areas. In this major proposed rule, we propose RVUs for CY 2015 for the PFS, and other Medicare Part B payment policies, to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. In addition, this proposed rule includes discussions and proposals regarding:

- Misvalued PFS Codes.
- Telehealth Services.
- Chronic Care Management Services.
- Establishing Values for New, Revised, and Misvalued Codes.
- Updating the Ambulance Fee Schedule regulations.
- Changes to Core-Based Statistical Areas for Ambulance Payment.
- Updating the—
 - ++ Physician Compare Web site.
 - ++ Physician Quality Reporting System.
 - ++ Medicare Shared Savings Program.
 - ++ Electronic Health Record (EHR) Incentive Program.
- Value-Based Payment Modifier and the Physician Feedback Program.

3. Summary of Costs and Benefits

The Act requires that annual adjustments to PFS RVUs not cause annual estimated expenditures to differ by more than \$20 million from what they would have been had the adjustments not been made. If adjustments to RVUs would cause expenditures to change by more than \$20 million, we must make adjustments to preserve budget neutrality. These adjustments can affect the distribution of Medicare expenditures across specialties. In addition, several proposed changes would affect the specialty distribution of Medicare expenditures. When considering the combined impact of work, PE, and MP RVU changes, the projected payment impacts are small for most specialties; however, the impact would be larger for a few specialties. The most significant impacts are for radiation therapy centers and radiation oncology for which there would be decreases of 8 and 4 percent, respectively. These reductions primarily stem from a proposal discussed in section II.A. to consider an equipment item as indirect rather than direct practice expense. Payment for chronic care management (CCM) services is projected to have a positive effect on family practice, internal medicine, and geriatrics. This proposed rule includes new proposed MP RVUs based upon CY 2015 five-year review of MP RVUs. For most specialties, the proposed revisions

for the five-year review of MP RVUs would result in minor overall changes in RVUs, with only ophthalmology (-2 percent) having a projected change of at least 2 percent.

B. Background

Since January 1, 1992, Medicare has paid for physicians' services under section 1848 of the Act, "Payment for Physicians' Services." The system relies on national relative values that are established for work, PE, and MP, which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the RVUs into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101-239, enacted on December 19, 1989) (OBRA '89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101-508, enacted on November 5, 1990) (OBRA '90). The final rule published on November 25, 1991 (56 FR 59502) set forth the first fee schedule used for payment for physicians' services.

We note that throughout this proposed rule, unless otherwise noted, the term "practitioner" is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for services furnished to Medicare beneficiaries.

1. Development of the Relative Values

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians' services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations

received from the American Medical Association/Specialty Society Relative Value Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103-432, enacted on October 31, 1994), amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians' service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105-33, enacted on August 5, 1997) (BBA) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians' service in a final rule, published on November 2, 1998 (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: The Clinical Practice Expert Panel (CPEP) data and the AMA's Socioeconomic Monitoring System (SMS) data. (These data sources are described in greater detail in the CY 2012 final rule with comment period (76 FR 73033).)

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician's office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some costs are borne by the facility. Medicare's payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those facility resources is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106-113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA amended section 1848(c) of the Act to require that

we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' malpractice insurance premium data from all the states, the District of Columbia, and Puerto Rico. For more information on MP RVUs, see section II.C. of this proposed rule.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed five-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

With regard to MP RVUs, we completed five-year reviews of MP that were effective in CY 2005 and CY 2010. This proposed rule includes a proposal for a five-year review for CY 2015.

In addition to the five-year reviews, beginning for CY 2009, CMS and the RUC have identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, which requires the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VI.C.1. of this proposed rule, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs would cause expenditures for the year to change by more than \$20 million, we make

adjustments to ensure that expenditures do not increase or decrease by more than \$20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each physician's service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of physician work, PE, and MP in an area compared to the national average costs for each component. (See section II.D of this proposed rule for more information about GPCIs.)

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS's Office of the Actuary (OACT). The CF for a given year is calculated using (a) the productivity-adjusted increase in the Medicare Economic Index (MEI) and (b) the Update Adjustment Factor (UAF), which is calculated by taking into account the Medicare Sustainable Growth Rate (SGR), an annual growth rate intended to control growth in aggregate Medicare expenditures for physicians' services, and the allowed and actual expenditures for physicians' services. The formula for calculating the Medicare fee schedule payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}.$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia conversion factor, in a manner to assure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate conversion factor for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

4. Most Recent Changes to the Fee Schedule

The CY 2014 PFS final rule with comment period (78 FR 74230) implemented changes to the PFS and other Medicare Part B payment policies. It also finalized many of the CY 2013 interim final RVUs and established interim final RVUs for new and revised codes for CY 2014 to ensure that our payment system is updated to reflect changes in medical practice, coding changes, and the relative values of services. It also implemented section 635 of the American Taxpayer Relief Act of 2012 (Pub. L. 112–240, enacted on January 2, 2013) (ATRA), which revised the equipment utilization rate assumption for advanced imaging services furnished on or after January 1, 2014.

Also, in the CY 2014 PFS final rule with comment period, we announced the following for CY 2014: the total PFS update of –20.1 percent; the initial estimate for the SGR of –16.7 percent; and a CF of \$27.2006. These figures were calculated based on the statutory provisions in effect on November 27, 2013, when the CY 2014 PFS final rule with comment period was issued.

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67, enacted on December 26, 2013) established a 0.5 percent update to the PFS CF through March 31, 2014 and the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93, enacted on April 1, 2014) (PAMA) extended this 0.5 percent update through December 31, 2014. As a result, the CF for CY 2014 that was published in the CY 2014 final rule with comment period (78 FR 74230) was revised to \$35.8228 for services furnished on or after January 1, 2014 and on or before December 31, 2014. The PAMA provides for a 0.0 percent update to the PFS for services furnished on or after January 1, 2015 and on or before March 31, 2015.

The Pathway for SGR Reform Act extended through March 31, 2014 several provisions of Medicare law that would have otherwise expired on December 31, 2013. The PAMA extended these same provisions further through March 31, 2015. A list of these provisions follows.

- The 1.0 floor on the work geographic practice cost index
- The exceptions process for outpatient therapy caps
- The manual medical review process for therapy services
- The application of the therapy caps and related provisions to services furnished in HOPDs

In addition, section 220 of the PAMA included several provisions affecting the valuation process for services under the PFS. Section 220(a) of the PAMA amended section 1848(c)(2) of the Act to add a new subparagraph (M). The new subparagraph (M) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of practice expense inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS. This information may be collected or obtained through surveys of physicians or other suppliers, providers of services, manufacturers and vendors; surgical logs, billing systems, or other practice or facility records; EHRs; and any other mechanism determined appropriate by the Secretary. If we use this information, we are required to disclose the source and use of the information in rulemaking, and to make available aggregated information that does not disclose individual eligible professionals, group practices, or information obtained pursuant to a nondisclosure agreement. Beginning with fiscal year 2014, the Secretary may compensate eligible professionals for submission of data.

Section 220(c) of the PAMA amended section 1848(c)(2)(K)(ii) of the Act to expand the categories of services that the Secretary is directed to examine for the purpose of identifying potentially misvalued codes. The nine new categories are as follows:

- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
 - Codes for which there may be a change in the typical site of service since the code was last valued.
 - Codes for which there is a significant difference in payment for the same service between different sites of service.
 - Codes for which there may be anomalies in relative values within a family of codes.
 - Codes for services where there may be efficiencies when a service is

furnished at the same time as other services.

- Codes with high intra-service work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.

(See section II.B.2 of this final rule with comment period for more information about misvalued codes.)

Section 220(i) of the PAMA also requires the Secretary to make publicly available the information we considered when establishing the multiple procedure payment reduction (MPPR) policy for the professional component of advanced imaging procedures. The policy reduces the amount paid for the professional component when two advanced imaging procedures are furnished in the same session. The policy was effective for individual physicians on January 1, 2012 and for physicians in the same group practice on January 1, 2013.

In addition, section 220 of the PAMA includes other provisions regarding valuation of services under the PFS that take effect in future years. Section 220(d) of the PAMA establishes an annual target from CY 2017 through CY 2020 for reductions in PFS expenditures resulting from adjustments to relative values of misvalued services. The target is calculated as 0.5 percent of the estimated amount of expenditures under the fee schedule for the year. If the net reduction in expenditures for the year is equal to or greater than the target for the year, the funds shall be redistributed in a budget-neutral manner within the PFS. The amount by which such reduced expenditures exceed the target for the year shall be treated as a reduction in expenditures for the subsequent year, for purposes of determining whether the target has or has not been met. The legislation includes an exemption from budget neutrality if the target is not met. Other provisions of section 220 of the PAMA include a 2-year phase-in for reductions in RVUs of at least 20 percent for potentially misvalued codes that do not involve coding changes and certain adjustments to the fee schedule areas in California. These provisions will be addressed as we implement them in future rulemaking.

On March 5, 2014, we submitted to MedPAC an estimate of the SGR and CF applicable to Medicare payments for physicians' services for CY 2015, as required by section 1848(d)(1)(E) of the Act. The actual values used to compute physician payments for CY 2015 will be based on later data and are scheduled to be published by November 1, 2014, as part of the CY 2015 PFS final rule with comment period.

C. Health Information Technology

The Department of Health and Human Services (HHS) believes all patients, their families, and their health care providers should have consistent and timely access to their health information in a standardized format that can be securely exchanged between the patient, providers, and others involved in the patient's care. (HHS August 2013 Statement, "Principles and Strategies for Accelerating Health Information Exchange," see http://www.healthit.gov/sites/default/files/acceleratinghieprinciples_strategy.pdf) HHS is committed to accelerating health information exchange (HIE) through the use of electronic health records (EHRs) and other types of health information technology (HIT) across the broader care continuum through a number of initiatives including: (1) Alignment of incentives and payment adjustments to encourage provider adoption and optimization of HIT and HIE services through Medicare and Medicaid payment policies; (2) adoption of common standards and certification requirements for interoperable HIT; (3) support for privacy and security of patient information across all HIE-focused initiatives; and (4) governance of health information networks. These initiatives are designed to encourage HIE among health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for the EHR Incentive Programs, and are designed to improve care delivery and coordination across the entire care continuum. For example, the Transition of Care Measure #2 in Stage 2 of the Medicare and Medicaid EHR Incentive Programs requires HIE to share summary records for more than 10 percent of care transitions. In addition, to increase flexibility in ONC's HIT Certification Program and expand HIT certification, ONC has issued a proposed rule concerning a voluntary 2015 Edition of EHR certification criteria, which would more easily accommodate the certification of HIT used in all health care settings where health care providers are not typically eligible for incentive payments under the EHR Incentive Programs, to facilitate greater HIE across the entire care continuum. We believe that HIE and the use of certified EHRs can effectively and efficiently help providers improve internal care delivery practices, support management of patient care across the continuum, and support the reporting of electronically specified clinical quality measures (eCQMs). More information on the Voluntary 2015 Edition EHR

Certification Criteria proposed rule is available at <http://healthit.gov/policy-researchers-implementers/standards-and-certification-regulations>.

II. Provisions of the Proposed Rule for PFS

A. Resource-Based Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physician's service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units under the PFS and Proposed Changes to the Practice Expense Methodology proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the practice expense per hour (PE/HR) by specialty that was obtained from the AMA's Socioeconomic Monitoring Surveys (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and nonphysician practitioners (NPPs) paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS),

representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the MEI to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We continue previous crosswalks for specialties that did not participate in the PPIS. However, beginning in CY 2010 we changed the PE/HR crosswalk for portable x-ray suppliers from radiology to IDTF, a more appropriate crosswalk because these specialties are more similar to each other with respect to work time.

For registered dietician services, the resource-based PE RVUs have been calculated in accordance with the final policy that crosswalks the specialty to the "All Physicians" PE/HR data, as adopted in the CY 2010 PFS final rule with comment period (74 FR 61752) and discussed in more detail in the CY 2011 PFS final rule with comment period (75 FR 73183).

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, equipment, and supplies) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE

database. For example, if one service has a direct cost sum of \$400 from our PE database and another service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

Section II.A.2.b. of this proposed rule describes the current data sources for specialty-specific indirect costs used in our PE calculations. We allocated the indirect costs to the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the physician work RVUs. We also incorporated the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. In other words, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represented 25 percent of total costs for the specialties that furnished the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVUs of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had work RVUs of 4.00 and the clinical labor portion of the direct PE RVUs was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00,

the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Next, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

d. Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a hospital or other facility setting, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. Because in calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service in a facility, the facility PE RVUs are generally lower than the nonfacility PE RVUs. Medicare makes a separate payment to the facility for its costs of furnishing a service.

e. Services With Technical Components (TCs) and Professional Components (PCs)

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a "global" service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global under the bottom-up methodology.)

f. PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746).

(1) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(2) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service. Apply a scaling adjustment to the direct inputs.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. This is the product of the current aggregate PE (direct and indirect) RVUs, the CF, and the average direct PE percentage from the survey data used for calculating the PE/HR by specialty.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregated direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling factor to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs, as long as the same CF is used in Step 2 and Step 5. Different CFs will result in different direct PE scaling factors, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling factors offset one another.

(3) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE

RVUs; the clinical PE RVUs; and the work RVUs. For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs will be allocated using the work RVUs, and for the TC service, indirect PEs will be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes in the examples in Table 1, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the current aggregate pool of PE RVUs by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted

indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(4) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 6 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the results of Step 18 to the current pool of PE RVUs. This final BN adjustment is required to redistribute RVUs from step 18 to all PE RVUs in the PFS, and because certain specialties are excluded from the PE RVU calculation for ratesetting purposes, but we note that all specialties are included for purposes of calculating the final BN adjustment. (See "Specialties excluded from ratesetting calculation" later in this section.)

(5) Setup File Information

• *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthetist.
57	Individual certified prosthetist-orthotist.
58	Medical supply company with registered pharmacist.
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (e.g., drug and department stores).
88	Unknown supplier/provider specialty.
89	Certified clinical nurse specialist.
96	Optician.
97	Physician assistant.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
B2	Pedorthic personnel.
B3	Medical supply company with pedorthic personnel.

• *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services, but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the manner in which the modifiers are applied.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES

Modifier	Description	Volume adjustment	Time adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion.
AS	Assistant at Surgery—Physician Assistant.	14% (85% * 16%)	Intraoperative portion.
50 or LT and RT	Bilateral Surgery	150%	150% of work time.
51	Multiple Procedure	50%	Intraoperative portion.

TABLE 2—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES—Continued

Modifier	Description	Volume adjustment	Time adjustment
52	Reduced Services	50%	50%.
53	Discontinued Procedure	50%	50%.
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims.	Preoperative + Intraoperative portion.
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims.	Postoperative portion.
62	Co-surgeons	62.5%	50%.
66	Team Surgeons	33%	33%.

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since the average allowed charge is used when simulating RVUs, and therefore, includes all adjustments. A time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where time units are duplicative.

• *Work RVUs:* The setup file contains the work RVUs from this proposed rule with comment period.

(6) Equipment Cost Per Minute

The equipment cost per minute is calculated as:

$$(1/(\text{minutes per year} * \text{usage})) * \text{price} * ((\text{interest rate}/(1-(1/((1 + \text{interest rate}) - \text{life of equipment})))) + \text{maintenance})$$

rate) – life of equipment)))) + maintenance)
 Where:
 minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
 usage = variable, see discussion below.
 price = price of the particular piece of equipment.
 life of equipment = useful life of the particular piece of equipment.
 maintenance = factor for maintenance; 0.05.
 interest rate = variable, see discussion below.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by Section 1848(b)(4)(C) of the Act.

Maintenance: This factor for maintenance was proposed and finalized during rulemaking for CY 1998 PFS (62 FR 33164). Several stakeholders have suggested that this maintenance factor assumption should be variable. We solicit comment regarding reliable data on maintenance costs that vary for particular equipment items.

Per-use Equipment Costs: Several stakeholders have also suggested that our PE methodology should incorporate

usage fees and other per-use equipment costs as direct costs. We also solicit comment on adjusting our cost formula to include equipment costs that do not vary based on the equipment time.

Interest Rate: In the CY 2013 final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation. The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The interest rates are listed in Table 3. (See 77 FR 68902 for a thorough discussion of this issue.)

TABLE 3—SBA MAXIMUM INTEREST RATES

Price	Useful life	Interest rate (percent)
<\$25K	<7 Years	7.50
\$25K to \$50K	<7 Years	6.50
>\$50K	<7 Years	5.50
<\$25K	7+ Years	8.00
\$25K to \$50K	7+ Years	7.00
>\$50K	7+ Years	6.00

* The direct adj = [current pe rvus * CF * avg dir pct]/[sum direct inputs] = [step2]/[step3].
 ** The indirect adj = [current pe rvus * avg ind pct]/[sum of ind allocators] = [step9]/[step10].
Note: The use of any particular conversion factor (CF) in this table to illustrate the PE calculation has no effect on the resulting RVUs.

3. Changes to Direct PE Inputs for Specific Services

In this section, we discuss other CY 2015 proposals and revisions related to direct PE inputs for specific services. The proposed direct PE inputs are included in the proposed rule CY 2015 direct PE input database, which is available on the CMS Web site under downloads for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

a. RUC Recommendation for Monitoring Time Following Moderate Sedation

We received a recommendation from the RUC regarding appropriate clinical labor minutes for post-procedure moderate sedation monitoring and post-procedure monitoring. The RUC recommended 15 minutes of RN time for one hour of monitoring following moderate sedation and 15 minutes of RN time per hour for post-procedure monitoring (unrelated to moderate sedation). For 17 procedures listed in Table 5, the recommended clinical labor

minutes differed from the clinical labor minutes in the direct PE database. We propose to accept, without refinement, the RUC recommendation to adjust these clinical labor minutes as indicated in Table 5 as “Change to Clinical Labor Time.” The CY 2015 direct PE database reflects these proposed changes and is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at <http://www.cms.gov/PhysicianFeeSched/>.

TABLE 5—CODES WITH PROPOSED CHANGES TO POST-PROCEDURE CLINICAL LABOR MONITORING TIME

CPT code	Current monitoring time (min)	RUC recommended total post-procedure monitoring time (min)	Change to clinical labor time (min)
32553	30	60	30
35471	21	60	39
35475	60	30	–30
35476	60	30	–30

31634	25	15	–10
31645	10	15	5
31646	10	15	5

b. RUC Recommendation for Standard Moderate Sedation Package

We received a RUC recommendation to modify PE inputs included in the standard moderate sedation package. Specifically, the RUC indicated that several specialty societies have pointed to the need for a stretcher during procedures for which moderate sedation is inherent in the procedure. Although the RUC did not recommend that we make changes to PE inputs for codes at

this time, the RUC indicated that its future recommendations would include the stretcher as a direct input for procedures including moderate sedation.

The RUC recommended three scenarios that future recommendations would use to allocate the equipment time for the stretcher based on the procedure time and whether the stretcher would be available for other patients to use during a portion of the

procedure. Although we appreciate the RUC’s attention to the differences in the time required for the stretcher based on the time for the procedure, we believe that one of the purposes of standard PE input packages is to reduce the complexity associated with assigning appropriate PE inputs to individual procedures while, at the same time, maintaining relativity between procedures. Since we generally allocate inexpensive equipment items to the

entire service period when they are likely to be unavailable for another use during the full service period, we believe it is preferable to treat the stretcher consistently across these services. Therefore, we propose to modify the standard moderate sedation input package to include a stretcher for the same length of time as the other equipment items in the moderate sedation package. The proposed revised moderate sedation input package would be applied to relevant codes as we review them through future notice and comment rulemaking. It would be useful to hear stakeholders' views and the reasoning behind them on this issue, especially from those who think that the stretcher, as expressed through the allocation of equipment minutes, should be allocated with more granularity than the equipment costs that are allocated to other similar items.

c. RUC Recommendation for Migration From Film to Digital Practice Expense Inputs

The RUC has provided a recommendation regarding the PE inputs for digital imaging services. Specifically, the RUC recommended that we remove a list of supply and equipment items associated with film technology since these items are no longer a typical resource input; these items are detailed in Table 6. The RUC also recommended that the Picture Archiving and Communication System (PACS) equipment be included for these imaging services since these items are now typically used in furnishing imaging services. We received a description of the PACS system as part of the recommendation, which included both items that appear to be direct PE items and items for which indirect PE RVUs are allocated in the PE methodology. As we have previously indicated, items that are not clinical labor, medical supplies, or medical equipment, or are not individually allocable to a particular patient for a particular procedure, are not categorized as direct costs in the PE methodology. Since we did not receive any invoices for the PACS system, we are unable to determine the appropriate pricing to use for the inputs. We propose to accept the RUC recommendation to remove the film supply and equipment items, and to allocate minutes for a desktop computer (ED021) as a proxy for the PACS workstation as a direct expense. Specifically, for the 31 services that already contain ED021, we propose to retain the time that is currently included in the direct PE input database. For the remaining services that are valued in the nonfacility setting,

we propose to allocate the full clinical labor intraservice time to ED021, except when there is no clinical labor, in which case we propose to allocate the intraservice work time to ED021. For services valued only in the facility setting, we propose to allocate the post-service clinical labor time to ED021, since the film supply and/or equipment inputs were previously associated with the post-service period.

TABLE 6—RUC-RECOMMENDED SUPPLY AND EQUIPMENT ITEMS PROPOSED TO BE REMOVED FOR DIGITAL IMAGING SERVICES

CMS code	Description
SK013	computer media, dvd.
SK014	computer media, floppy disk 1.44mb.
SK015	computer media, optical disk 128mb.
SK016	computer media, optical disk 2.6gb.
SK022	film, 8inx10in (ultrasound, MRI).
SK025	film, dry, radiographic, 8in x 10in.
SK028	film, fluoroscopic 14 x 17.
SK033	film, x-ray 10in x 12in.
SK034	film, x-ray 14in x 17in.
SK035	film, x-ray 14in x 36in.
SK037	film, x-ray 8in x 10in.
SK038	film, x-ray 8in x 10in (X-omat, Radiomat).
SK086	video tape, VHS.
SK089	x-ray developer solution.
SK090	x-ray digitalization separator sheet.
SK091	x-ray envelope.
SK092	x-ray fixer solution.
SK093	x-ray ID card (flashcard).
SK094	x-ray marking pencil.
SK098	film, x-ray, laser print.
SM009	cleaner, x-ray cassette-screen.
ED014	computer workstation, 3D reconstruction CT-MR.
ED016	computer workstation, MRA post processing.
ED023	film processor, PET imaging.
ED024	film processor, dry, laser.
ED025	film processor, wet.
ED027	film processor, x-omat (M6B).
ER018	densitometer, film.
ER029	film alternator (motorized film viewbox).
ER067	x-ray view box, 4 panel.

We note that the RUC exempted certain procedures from its recommendation because (a) the dominant specialty indicated that digital technology is not yet typical or (b) the procedure only contained a single input associated with film technology, and it was determined that the sharing of images, but not actual imaging, may be involved in the service. However, we do not believe that the most appropriate approach in establishing relative values for services that involve imaging is to exempt

services from the transition from film to digital PE inputs based on information reported by individual specialties. Although we understand that the migration from film technology to digital technology may progress at different paces for particular specialties, we do not have information to suggest that the migration is not occurring for all procedures that require the storage of images. Just as it was appropriate to use film inputs as a proxy for some services for which digital inputs were typical pending these proposed changes in the direct PE input database, we believe it is appropriate to use digital inputs as a proxy for the services that may still use film, pending their migration to digital technology. In addition, since the RUC conducted its collection of information from the specialties over several years, we believe the migration process from film to digital inputs has likely continued over the time period during which the information was gathered, and that the digital PE inputs will reflect typical use of technology for most if not all of these services before the proposed change to digital inputs would take effect beginning January 1, 2015. We also believe that for the sake of relativity, we should remove the equipment and supply inputs noted below from all procedures in the direct PE database, including those listed in Table 7. We seek comment on whether the computer workstation, which we propose to use as a proxy for the PACS workstation, is the appropriate input for the services listed in Table 7, or whether an alternative input is a more appropriate reflection of direct PE costs.

TABLE 7—CODES CONTAINING FILM INPUTS BUT EXCLUDED FROM THE RUC RECOMMENDATION

Finally, we note that the RUC recommendation also indicated that given the labor-intensive nature of reviewing all clinical labor tasks associated with film technology, these times would be addressed as these codes are reviewed. We agree with the RUC that reviewing and adjusting the times for each code would be difficult and labor-intensive since the direct PE input database does not allow for a comprehensive adjustment of the clinical labor time based on changes in particular clinical labor tasks. To make broad adjustments such as this across codes, the PE database would need to contain the time associated with individual clinical labor tasks rather than reflecting only the sum of times for the pre-service period, service period, and post-service period, as it does now. We recognize this situation presents a challenge in implementing RUC recommendations such as this one, and makes it difficult to understand the basis of both the RUC's recommended clinical labor times and our refinements of those recommendations. Therefore, we are considering revising the direct

PE input database to include task-level clinical labor time information for every code in the database. As an example, we refer readers to the supporting data files for the direct PE inputs, which include public use files that display clinical labor times as allocated to each individual clinical labor task for a sample of procedures. We are displaying this information as we attempt to increase the transparency of the direct PE database. We hope that this modification could enable us to more accurately allocate equipment minutes to clinical labor tasks in a more consistent and efficient manner. Given the number of procedures and the volume of information involved, we are seeking comments on the feasibility of this approach. We note that we are not proposing to make any changes to PE inputs for CY 2015 based on this proposed modification to the design of the direct PE input database.

The CY 2015 direct PE database reflects these proposed changes and is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at <http://www.cms.gov/PhysicianFeeSched/>.

d. Inputs for Digital Mammography Services

Mammography services are currently reported by and paid for using both CPT codes and G-codes. To meet the requirements of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA), we established the G-codes for CY 2002 to pay for mammography services using new digital technologies (G0202 screening mammography digital; G0204 diagnostic mammography digital; G0206 diagnostic mammography digital). We continued to pay for mammography billed using the CPT codes when the services were furnished with film technology (77055 mammogram one breast; 77056 mammogram both breasts; 77057 mammogram screening). As we discussed previously in this section, the RUC has recommended that all imaging codes, including mammography, be valued using digital rather than film inputs because film is no longer typical. A review of Medicare claims data shows that the mammography CPT codes are billed extremely infrequently, and that the G-codes are billed for the vast majority of mammography claims, confirming what the RUC has indicated regarding the use of digital technology. It appears that the typical mammography service is furnished using digital technology. As such, we do not believe there is a reason to continue the separate use of the CPT codes and the G-codes for mammography services

since both sets of codes would have the same values when priced based upon the typical digital technology. Accordingly, we are proposing to delete the mammography G-codes beginning for CY 2015 and to pay all mammography using the CPT codes.

Although we believe that the CPT codes should now be used to report all mammography services, we have concerns about whether the current values for the CPT codes accurately reflect the resource inputs associated with furnishing the services. Because the CPT codes have not been recently reviewed and significant technological changes have occurred during this time, we do not believe it would be appropriate to retain the current values for the CPT codes. Therefore, we are proposing to value the CPT codes using the RVUs previously established for the G-codes. We believe these values would be most appropriate since they were established to reflect the use of digital technology, which is now typical.

As discussed in section II.B.3.b.(4) of this proposed rule, we are proposing these CPT codes as potentially misvalued and requesting that the RUC and other interested stakeholders review these services in terms of appropriate work RVUs, work time assumptions and direct PE inputs.

e. Radiation Treatment Vault

In previous rulemaking (77 FR 68922; 78 FR 74346), we indicated that we included the radiation treatment vault as a direct PE input for several recently reviewed radiation treatment codes for the sake of consistency with its previous inclusion as a direct PE input for some other radiation treatment services, but that we intended to review the radiation treatment vault input and address whether or not it should be included in the direct PE input database for all services in future rulemaking. Specifically, we questioned whether it was consistent with the principles underlying the PE methodology to include the radiation treatment vault as a direct cost given that it appears to be more similar to building infrastructure costs than to medical equipment costs. Moreover, it is difficult to distinguish the cost of the vault from the cost of the building. In response to this action, we received comments and invoices from stakeholders who indicated that the vault should be classified as a direct cost. However, upon review of the information received, we believe that the specific structural components required to house the linear accelerator are similar in concept to components required to house other medical equipment such as expensive imaging

equipment. In general, the electrical, plumbing, and other building specifications are often unique to the intended functionality of a given building, including costs that are attributable to the specific medical equipment housed in the building, but do not represent direct medical equipment costs in our established PE methodology. Therefore we believe that the special building requirements indicated for the radiation treatment vault to house a linear accelerator do not represent a direct cost in our PE methodology, and that the vault construction is instead accounted for in the indirect PE methodology, just as the building and infrastructure costs are treated for other PFS services including those with infrastructure costs based on equipment needs. Therefore, we propose to remove the radiation treatment vault as a direct PE input from the radiation treatment procedures listed in Table 8, because we believe that the vault is not, itself, medical equipment, and therefore, is accounted for in the indirect PE methodology.

f. Clinical Labor Input Errors

Subsequent to the publication of the CY 2014 PFS final rule with comment period, it came to our attention that, due to a clerical error, the clinical labor type for CPT code 77293 (Respiratory Motion Management Simulation (list separately in addition to code for primary procedure)) was entered as L052A (Audiologist) instead of L152A (Medical Physicist), which has a higher cost per minute. We are proposing a correction to the clinical labor type for this service.

In conducting a routine data review of the database, we also discovered that, due to a clerical error, the RN time allocated to CPT codes 33620 (Apply r&l pulm art bands), 33621 (Transthor cath for stent), and 33622 (Redo compl cardiac anomaly) was entered in the

nonfacility setting, rather than in the facility setting where the code is valued. When a service is not valued in a particular setting, any inputs included in that setting are not included in the calculation of the PE RVUs for that service. Therefore, we are proposing to move the RN time allocated to these procedures to the facility setting. The PE RVUs listed in Addendum B reflect these technical corrections.

g. Work Time

Subsequent to the publication of the CY PFS 2014 final rule with comment period, several inconsistencies in the work time file came to our attention. First, for some services, the total work time, which is used in our PE methodology, did not equal the sum of the component parts (pre-service, intra-service, post-service, and times associated with global period visits). The times in the CY 2015 work time file reflect our proposed corrected values for total work time. Second, for a subset of services, the values in the pre-positioning time, pre-evaluation time, and pre-scrub-dress-wait time, were inadvertently transposed. We note that this error had no impact on calculation of the total times, but has been corrected in the CY 2015 work time file. Third, minor discrepancies for a series of interim final codes were identified between the work time file and the way we addressed these codes in the preamble text. Therefore, we have made adjustments to the work time file to reflect the decisions indicated in the preamble text. The work time file is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at <http://www.cms.gov/PhysicianFeeSched/>. Note that for comparison purposes, the CY 2014 work time file is located at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices-Items/CMS-1600-FC.html>.

h. Updates to Price for Existing Direct Inputs.

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking beginning with the CY 2012 PFS proposed rule. During 2013, we received a request to update the price of SD216 (catheter, balloon, esophageal or rectal (graded distention test)) from \$217 to \$237.50. We also received a request to update the price of SL196 (kit, HER-2/neu DNA Probe) from \$105 to \$144.50. We received invoices that documented

updated pricing for each of these supply items. We propose to increase the price associated with these supply items.

We continue to believe it is important to maintain a periodic and transparent process to update the price of items to reflect typical market prices in our ratesetting methodology, and we continue to study the best way to improve our current process. We remind stakeholders that we have previously stated our difficulty in obtaining accurate pricing information. We have also made clear that the goal of the current transparent process is to offer the opportunity for the community to both request supply price updates by providing us copies of paid invoices, and to object to proposed changes in price inputs for particular items by providing additional information about prices available to the practitioner community. We remind stakeholders that PFS payment rates are developed within a budget neutral, relative value system, and any increases in price inputs for particular supply items result in corresponding decreases to the relative values of all other direct PE inputs.

We note that we continue to have difficulty determining the best way to use the invoices that we receive. In all cases, we attempt to use the price that appears most representative, but it can be difficult to ascertain whether the prices on particular invoices are typical. For example, in some cases, we receive multiple invoices, but are only able to use one of them because the other invoices include additional items and do not separately identify the price of the item in question. In other cases, we receive multiple invoices at one price, which suggests that this price is likely a typical one. In other cases, we receive invoices for items already in the direct PE database that are based on a recent invoice. In these cases, it is not clear whether the new, usually higher priced, invoice reflects a more accurate price than the current price, but we need to determine whether to substitute the new price for the existing price, maintain the existing price, or average the two prices. We continue to seek stakeholder input on the best approach to using the small sample of invoices that are provided to us through this process.

We also received a RUC recommendation to update the prices associated with two supply items. Specifically, the RUC recommended that we increase the price of SA042 (pack, cleaning and disinfecting, endoscope) from \$15.52 to \$17.06 to reflect the addition of supply item SJ009 (basin, irrigation) to the pack, and increase the price of SA019 (kit, IV

starter) from \$1.37 to \$1.60 to reflect the addition of supply item SA044 (underpad 2 ft. x 3 ft. (Chux)) to the kit. We are proposing to update the prices for both of these items based on these recommendations. The CY 2015 direct PE database reflects these proposed changes and is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at

<http://www.cms.gov/PhysicianFeeSched/>.

i. New Standard Supply Package for Contrast Imaging

The RUC recommended creating a new direct PE input standard supply package “Imaging w/contrast, standard package” for contrast enhanced imaging, with a price of \$6.82. This price reflects the combined prices of the medical

supplies included in the package; these items are listed in Table 9. We propose to accept this recommendation, but seek comment on whether all of the items included in the package are used in the typical case. The CY 2015 direct PE database reflects this proposed change and is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at <http://www.cms.gov/PhysicianFeeSched/>.

TABLE 9—STANDARD CONTRAST IMAGING SUPPLY PACKAGE

Medical supply description	CMS supply code	Unit	Quantity	Price
Imaging w/Contrast—Standard Package				
Kit, IV starter	SA019	Kit	1	\$1.368
Gloves, non-sterile	SB022	Pair	1	0.084
Angiocatheter 14g–24g	SC001	Item	1	1.505
Heparin lock	SC012	Item	1	0.917
IV tubing (extension)	SC019	Foot	*3	1.590
Needle, 18–27g	SC029	Item	1	0.089
Syringe 20ml	SC053	Item	1	0.558
Sodium chloride 0.9% inj. bacteriostatic (30ml uou).	SH068	Item	1	0.700
Swab-pad, alcohol	SJ053	Item	1	0.013
TOTAL				6.824

* The price for SC019 (IV tubing, (extension)) is \$0.53 per foot.

j. Direct PE Inputs for Stereotactic Radiosurgery (SRS) Services (CPT Codes 77372 and 77373)

In the CY 2014 PFS final rule with comment period (78 FR 74245), we summarized comments received about whether CPT codes 77372 and 77373 would accurately reflect the resources used in furnishing the typical SRS delivery if there were no coding distinction between robotic and non-robotic delivery methods. Until now, SRS services furnished using robotic methods were billed using contractor-priced G-codes G0339 (Image-guided robotic linear accelerator based stereotactic radiosurgery, complete course of therapy in one session or first session of fractionated treatment), and G0340 (Image-guided robotic linear accelerator-based stereotactic radiosurgery, delivery including collimator changes and custom plugging, fractionated treatment, all lesions, per session, second through fifth sessions, maximum five sessions per course of treatment). We indicated that we would consider these codes in future rulemaking.

Most commenters suggested that the CPT codes accurately described both services, and the RUC stated that the direct PE inputs for the CPT codes accurately accounted for the resource costs of the described services. One commenter objected to the deletion of the G-codes but did not include any

information to suggest that the CPT codes did not describe the services or that the direct PE inputs for the CPT codes were inaccurate. Based on a review of the comments received, we have no indication that the direct PE inputs included in the CPT codes do not reflect the typical resource inputs involved in furnishing an SRS service. Therefore, we propose to recognize only the CPT codes for payment of SRS services, and to delete the G-codes used to report robotic delivery of SRS.

k. Inclusion of Capnograph for Pediatric Polysomnography Services

We are proposing to include equipment item EQ358, Sleep capnograph, polysomnography (pediatric), for CPT codes 95782 (Polysomnography; younger than 6 years, sleep staging with 4 or more additional parameters of sleep, attended by a technologist) and 95783 (Polysomnography; younger than 6 years, sleep staging with 4 or more additional parameters of sleep, with initiation of continuous positive airway pressure therapy or bi-level ventilation, attended by a technologist). We understand that capnography is a required element of sleep studies for patients younger than 6 years, and propose to allocate this equipment item to 95782 for 602 minutes, and 95783 for 647 minutes. Based on the invoice we

received for this equipment item, we propose to price EQ358 at \$4,534.23.

l. Nonfacility Direct PE Inputs for Intravascular Ultrasound

A stakeholder requested that we establish nonfacility PE RVUs for CPT code 37250 (Intravascular ultrasound (non-coronary vessel) during diagnostic evaluation and/or therapeutic intervention; each additional vessel (List separately in addition to code for primary procedure)) and 37251 (Intravascular ultrasound (non-coronary vessel) during diagnostic evaluation and/or therapeutic intervention; each additional vessel (List separately in addition to code for primary procedure)). We seek comment regarding whether it is appropriate to have nonfacility PE RVUs for this code and if so what inputs should be assigned to this code.

4. Using OPPS and ASC Rates in Developing PE RVUs

Accurate and reliable pricing information for both individual items and indirect PEs is critical to establish accurate PE RVUs for PFS services. As we have addressed in previous rulemaking, we have serious concerns regarding the accuracy of some of the information we use in developing PE RVUs. In particular, we have several longstanding concerns regarding the accuracy of direct PE inputs, including

both items and procedure time assumptions, and prices of individual supplies and equipment (78 FR 74248–74250). In addition to the concerns regarding the inputs used in valuing particular procedures, we also note that the allocation of indirect PE is based on information collected several years ago (as described above) and will likely need to be updated in the coming years. To mitigate the impact of some of these potentially problematic data used in developing values for individual services, in CY 2014 rulemaking we proposed to limit the nonfacility PE RVUs for individual codes so that the total nonfacility PFS payment amount would not exceed the total combined amount that Medicare would pay for the same code in the facility setting. In developing the proposal, we sought a reliable means for Medicare to set upper payment limits for office-based procedures and believed OPPS and ASC payment rates would provide an appropriate comparison because these rates are based on relatively more reliable cost information in settings with cost structures that generally would be expected to be higher than in the office setting.

We received many comments regarding our proposal, the vast majority of which urged us to withdraw the proposal. Some commenters questioned the validity of our assumption that facilities' costs for providing all services are necessarily higher than the costs of physician offices or other nonfacility settings. Other commenters expressed serious concerns with the asymmetrical comparisons between PFS payment amounts and OPPS/ASC payment amounts. Finally, many commenters suggested revisions to technical aspects of our proposed policy.

In considering all the comments, however, we were persuaded that the comparison of OPPS (or ASC) payment amounts to PFS payment amounts for particular procedures is not the most appropriate or effective approach to ensuring that that PFS payment rates are based on accurate cost assumptions. Commenters noted several flaws with the approach. First, unlike PFS payments, OPPS and ASC payments for individual services are grouped into rates that reflect the costs of a range of services. Second, commenters suggested that since the ASC rates reflect the OPPS relative weights to determine payment rates under the ASC payment system, and are not based on cost information collected from ASCs, the ASC rates should not be used in the proposed policy. For these and other reasons raised by commenters, we are not proposing a similar policy for the

CY 2015 PFS. If we consider using OPPS or ASC payment rates in developing PFS PE RVUs in future rulemaking, we would consider all of the comments received regarding the technical application of the previous proposal.

After thorough consideration of the comments regarding the CY 2014 proposal, we continue to believe that there are a various possibilities for leveraging the use of available hospital cost data in the PE RVU methodology to ensure that the relative costs for PFS services are developed using data that is auditable and comprehensively and regularly updated. Although some commenters questioned the premise that the hospital cost data are more accurate than the information used to establish PE RVUs, we continue to believe that the routinely updated, auditable resource cost information submitted contemporaneously by a wide array of providers across the country is a valid reflection of "relative" resources and could be useful to supplement the resource cost information developed under our current methodology based upon a typical case that are developed with information from a small number of representative practitioners for a small percentage of codes in any particular year.

Section 220(a) of the PAMA added a new subparagraph (M) under section 1848(c)(2) of the Act that gives us authority to collect information on resources used to furnish services from eligible professionals (including physicians, non-physician practitioners, PTs, OTs, SLPs and qualified audiologists), and other sources. It also authorizes us to pay eligible professionals for submitting solicited information. We will be exploring ways of collecting better and updated resource data from physician practices, including those that are provider-based, and other non-facility entities paid through the PFS. We believe such efforts will be challenging given the wide variety of practices, and that any effort will likely impose some burden on eligible professionals paid through the PFS regardless of the scope and manner of data collection. Currently, through one of the validation contracts discussed in section II.B. of this proposed rule, we have been gathering time data directly from physician practices. Through this project, we have learned much about the challenges for both CMS and the eligible professionals of collecting data directly from practices. Our experience has also shown that is difficult to obtain invoices for supply and equipment items that we can use in pricing direct PE inputs.

Many specialty societies also have noted the challenges in obtaining recent invoices for medical supplies and equipment (78 FR 74249). Further, PE calculations also rely heavily on information from the Physician Practice Expense Information Survey (PPIS) survey, which, as discussed earlier, was conducted in 2007 and 2008. When we implemented the results of the survey, many in the community expressed serious concerns over the accuracy of this or other PE surveys as a way of gathering data on PE inputs from the diversity of providers paid under the PFS.

Section 220 of the PAMA also provides authority to use alternative approaches to establish practice expense relative values, including the use of data from other suppliers and providers of services. We are exploring the best approaches for exercising this authority, including with respect to use of hospital outpatient cost data. We understand that many stakeholders will have concerns regarding the possibility of using hospital outpatient cost data in developing PFS PE RVUs, and we want to be sure we are aware of these prior to considering or developing any future proposal relying on those data. Therefore, we are seeking comment on the possible uses of the Medicare hospital outpatient cost data (not the APC payment amount) in potential revisions of the PFS PE methodology. This could be as a means to validate or, perhaps, in setting the relative resource cost assumptions within the PFS PE methodology. We note that the resulting PFS payment amounts would not necessarily conform to OPPS payment amounts since OPPS payments are grouped into APCs, while PFS payments would continue to be valued individually and would remain subject to the relativity inherent in establishing PE RVUs, budget neutrality adjustments, and PFS updates. We are particularly interested in comments that compare such possibilities to other broad-based, auditable, mechanisms for data collection, including any we might consider under the authority provided under section 220(a) of the PAMA. We urge commenters to consider a wide range of options for gathering and using the data, including using the data to validate or set resource assumptions for only a subset of PFS services, or as a base amount to be adjusted by code or specialty-level recommended adjustments, or other potential uses.

In addition to soliciting comments as noted above, we continue to seek a better understanding regarding the growing trend toward hospital acquisition of physician offices and

subsequent treatment of those locations as off-campus provider-based outpatient departments affects payments under PFS and beneficiary cost-sharing. MedPAC continues to question the appropriateness of increased Medicare payment and beneficiary cost-sharing when physician offices become hospital outpatient departments, and to recommend that Medicare pay selected hospital outpatient services at PFS rates (MedPAC March 2012 and June 2013 *Report to Congress*). We also remain concerned about the validity of the resource data as more physician practices become provider-based. Our survey data reflects the PE costs for particular PFS specialties, including a proportion of practices that may have become provider-based since the survey was conducted. Additionally, as the proportion of provider-based offices varies among physician specialties, so does the relative accuracy of the PE survey data. Our current PE methodology primarily distinguishes between the resources involved in furnishing services in two sites of service: The non-facility setting and the facility setting. In principle, when services are furnished in the non-facility setting, the costs associated with furnishing services include all direct and indirect PEs associated with the work and the PE of the service. In contrast, when services are furnished in the facility setting, some costs that would be PEs in the office setting are incurred by the facility. Medicare makes a separate payment to the facility to account for some portion of these costs, and we adjust PEs accordingly under the PFS. As more physician practices become hospital-based, it is difficult to know which PE costs typically are actually incurred by the physician, which are incurred by the hospital, and whether our bifurcated site-of service differential adequately accounts for the typical resource costs given these relationships. We also have addressed this issue as it relates to accurate valuation of visits within the post-operative period of 10- and 90-day global codes in section II.B.4 of this proposed rule.

To understand how this trend is affecting Medicare, including the accuracy of payments made through the PFS, we need to develop data to assess the extent to which this shift toward hospital-based physician practices is occurring. To that end, during CY 2014 rulemaking we sought comment regarding the best method for collecting information that would allow us to analyze the frequency, type, and payment for services furnished in off-

campus provider-based hospital departments (73 FR 43302). We received many thoughtful comments. However, the commenters did not present a consensus opinion regarding the options we presented in last year's rule. Based on our analysis of the comments, we believe the most efficient and equitable means of gathering this important information across two different payment systems would be to create a HCPCS modifier to be reported with every code for physician and hospital services furnished in an off-campus provider-based department of a hospital. The modifier would be reported on both the CMS-1500 claim form for physicians' services and the UB-04 (CMS form 1450) for hospital outpatient claims. (We note that the requirements for a determination that a facility or an organization has provider-based status are specified in § 413.65 and we define a hospital campus to be the physical area immediately adjacent to the provider's main buildings, other areas and structures that are not strictly contiguous to the main buildings but are located within 250 yards of the main buildings, and any other areas determined on an individual case basis, by the CMS regional office.)

Therefore, we are proposing to collect this information on the type and frequency of services furnished in off-campus provider-based departments in accordance with our authority under section 1834(c)(2)(M) of the Act (as added by section 220(a) of the PAMA) beginning January 1, 2015. The collection of this information would allow us to begin to assess the accuracy of the PE data, including both the service-level direct PE inputs and the specialty-level indirect PE information that we currently use to value PFS services. Furthermore, this information would be critical in order to develop proposed improvements to our PE data or methodology that would appropriately account for the different resource costs among traditional office, facility, and off-campus provider-based settings. We are seeking additional comment on whether a code modifier is the best mechanism for collecting this service-level information.

B. Potentially Misvalued Services Under the Physician Fee Schedule

1. Valuing Services Under the PFS

Section 1848(c) of the Act requires the Secretary to determine relative values for physicians' services based on three components: Work; PE; and MP. Section 1848(c)(1)(A) of the Act defines the work component to include "the portion of the resources used in furnishing the

service that reflects work time and intensity in furnishing the service." In addition, section 1848(c)(2)(C)(i) of the Act specifies that "the Secretary shall determine a number of work relative value units (RVUs) for the service based on the relative resources incorporating physician time and intensity required in furnishing the service."

Section 1848(c)(1)(B) of the Act defines the PE component as "the portion of the resources used in furnishing the service that reflects the general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising practice expenses." Section 1848(c)(2)(C)(ii) of the Act requires that PE RVUs be determined based upon the relative PE resources involved in furnishing the service. (See section II.A. of this proposed rule for more detail on the PE component.)

Section 1848(c)(1)(C) of the Act defines the MP component as "the portion of the resources used in furnishing the service that reflects malpractice expenses in furnishing the service." Section 1848(c)(2)(C)(iii) of the Act specifies that MP expense RVUs shall be determined based on the relative MP expense resources involved in furnishing the service. (See section II.C. of this proposed rule for more detail on the MP component.)

2. Identifying, Reviewing, and Validating the RVUs of Potentially Misvalued Services

a. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section I.B. of this proposed rule, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), MedPAC, and others. For many years, the RUC has provided us with recommendations on the appropriate

relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by the law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Physician Quality Reporting Initiative (PQRI) databases. In addition to considering the most recently available data, we also assess the results of physician surveys and specialty recommendations submitted to us by the RUC. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available in addition to taking into account the results of consultations with organizations representing physicians. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress, MedPAC discussed the importance of appropriately valuing physicians' services, noting that "misvalued services can distort the price signals for physicians' services as well as for other health care services that physicians order, such as hospital services." In that same report MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, "When a new service is added to the PFS, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it." We believe services can also become overvalued when PE declines. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE rises.

As MedPAC noted in its March 2009 Report to Congress, in the intervening years since MedPAC made the initial recommendations, "CMS and the RUC have taken several steps to improve the review process." Also, since that time Congress added section 1848(c)(2)(K)(ii) to the Act, which augments our efforts. It directs the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following seven categories:

- Codes and families of codes for which there has been the fastest growth;
- Codes and families of codes that have experienced substantial changes in PEs;
- Codes that are recently established for new technologies or services;
- Multiple codes that are frequently billed in conjunction with furnishing a single service;
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment;
- Codes which have not been subject to review since the implementation of the RBRVS (the so-called 'Harvard-valued codes'); and
- Other codes determined to be appropriate by the Secretary.

Section 220(c) of the PAMA further expanded the categories of codes that the Secretary is directed to examine by adding nine additional categories. These are:

- Codes that account for the majority of spending under the PFS;
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time;
- Codes for which there may be a change in the typical site of service since the code was last valued;
- Codes for which there is a significant difference in payment for the same service between different sites of service;
- Codes for which there may be anomalies in relative values within a family of codes;
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services;
- Codes with high intra-service work per unit of time;
- Codes with high PE RVUs; and
- Codes with high cost supplies.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary

determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

b. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we plan to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well.

Since CY 2009, as a part of the annual potentially misvalued code review and the five-year review process, we have reviewed over 1,250 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the CY 2012 final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time (76 FR 73055 through 73958), and established a process for the annual

public nomination of potentially misvalued services.

In the CY 2013 final rule with comment period, we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called "Harvard-valued codes"). In CY 2009, we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes (73 FR 38589). In the Fourth Five-Year Review, we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 (76 FR 32410). In the CY 2013 final rule with comment period, we identified Harvard-valued services with annual allowed charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work and have listed work time).

In the CY 2014 final rule with comment period, we finalized for review a list of potentially misvalued services that included ultrasound guidance codes that had longer procedure times than the typical procedure with which the code is billed to Medicare. We also finalized our proposal to replace missing post-operative hospital evaluation and management (E/M) visit information and work time for approximately 100 global surgery codes. In CY 2014, we also considered a proposal to limit Medicare PFS payments for services furnished in a nonfacility setting when the PFS payment would exceed the combined Medicare payment under the PFS to the practitioner and facility payment made to either the ASC or hospital outpatient. Based upon extensive public comment we did not finalize this proposal. We address our current consideration of the potential use of OPDS data in establishing RVUs for PFS services in section II.A. of this proposed rule.

c. Validating RVUs of Potentially Misvalued Codes

Section 1848(c)(2)(L) of the Act requires the Secretary to establish a formal process to validate RVUs under the PFS. The Act specifies that the validation process may include validation of work elements (such as time, mental effort and professional

judgment, technical skill and physical effort, and stress due to risk) involved with furnishing a service and may include validation of the pre-, post-, and intra-service components of work. The Secretary is directed, as part of the validation, to validate a sampling of the work RVUs of codes identified through any of the 16 categories of potentially misvalued codes specified in section 1848(c)(2)(K)(ii) of the Act. Furthermore, the Secretary may conduct the validation using methods similar to those used to review potentially misvalued codes, including conducting surveys, other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the validation of RVUs of services.

In the CY 2011 PFS proposed rule (75 FR 40068) and CY 2012 PFS proposed rule (76 FR 42790), we solicited public comments on possible approaches, methodologies, and data sources that we should consider for a validation process. A summary of the comments along with our responses are included in the CY 2011 PFS final rule with comment period (75 FR 73217) and the CY 2012 PFS final rule with comment period (73054 through 73055).

Since that time, we have contracted with two outside entities to develop validation models for RVUs. Given the central role of time in establishing work RVUs and the concerns that have been raised about the current time values used in rate setting, we contracted with the Urban Institute to collect time data from several practices for services selected by the contractor in consultation with CMS. These data will be used to develop time estimates for PFS services. The Urban Institute will use a variety of approaches to develop objective time estimates, depending on the type of service. Objective time estimates will be compared to the current time values used in the fee schedule. The project team will then convene groups of physicians from a range of specialties to review the new time data and their potential implications for work and the ratio of work to time. In its efforts to collect primary data on the time involved in PFS services, the Urban Institute has encountered numerous challenges. An interim report, *Development of a Model for the Valuation of Work Relative Value Units*, discusses the challenges encountered in collecting objective time data and offers some thoughts on how these can be overcome. This interim report is on the CMS Web site at [http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/RVUs-](http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/RVUs-Validation-Urban-Interim-Report.pdf)

Validation-Urban-Interim-Report.pdf. Collection of time data under this project has just begun. A final report will be available once the project is complete.

The second contract is with the RAND Corporation, which is using available data to build a validation model to predict work RVUs and the individual components of work RVUs, time, and intensity. The model design was informed by the statistical methodologies and approach used to develop the initial work RVUs and to identify potentially misvalued procedures under current CMS and RUC processes. RAND will use a representative set of CMS-provided codes to test the model. RAND consulted with a technical expert panel on model design issues and the test results. We anticipate a report from this project by the end of the year and will make the report available on the CMS Web site.

Descriptions of both projects are available on the CMS Web site at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/RVUs-Validation-Model.pdf>.

3. CY 2015 Identification and Review of Potentially Misvalued Services

a. Public Nomination of Potentially Misvalued Codes

In the CY 2012 PFS final rule with comment period, we finalized a process for the public to nominate potentially misvalued codes (76 FR 73058). The public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation during the 60-day public comment period following the release of the annual PFS final rule with comment period. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in the peer reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: technique; knowledge and technology; patient population; site-of-service; length of hospital stay; and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous

valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.

- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, Department of Veteran Affairs (VA) National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS) National Database, and the Physician Quality Reporting System (PQRS) databases).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate whether we are proposing each nominated code as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

During the comment period on the CY 2014 final rule with comment period, we received nominations and supporting documentation for two codes to be considered as potentially misvalued codes. We evaluated the supporting documentation for each nominated code to ascertain whether the submitted information demonstrated that the code should be proposed as potentially misvalued.

CPT code 41530 (submucosal ablation of the tongue base, radiofrequency, 1 or more sites, per session) was nominated for review as a potentially misvalued code. The nominator stated that CPT code 41530 is misvalued because there have been changes in the PE items used in furnishing the service. The nominator specifically requested that the SD109 probe (probe, radiofrequency, 3 array (StarBurstSDE)) be replaced with a more typically used probe, which costs less, and that a replacement be used for equipment code EQ214 (radiofrequency generator) to reflect a more appropriate input based on current invoices. We are proposing this code as a potentially misvalued code.

CPT code 99174 (instrument-based ocular screening (eg, photoscreening,

automated-refraction), bilateral) was also nominated for review as a potentially misvalued code. The nominator asserted that CPT code 99174 is misvalued because of outdated capital equipment inputs and the removal of supply code SK110 (fee, image analysis) from the code's direct PE inputs. (The latter change was proposed and finalized during CY 2014 notice and comment rulemaking). In establishing our public nomination process, we specified that the we would only consider nominations of active codes that are covered by Medicare at the time of the nomination stating, "We also are limiting the review of RVUs to codes that are active, covered by Medicare, and for which the RVUs are used for payment purposes under the PFS so that resources are not expended on the review of codes with RVUs that have no financial impact on the PFS." (76 FR 73059). CPT code 99174 is non-covered on the PFS and therefore does not meet the criteria for review as a potentially misvalued code. Accordingly, we are not proposing CPT code 99174 as a potentially misvalued code.

b. Potentially Misvalued Codes

(1) Review of High Expenditure Services Across Specialties With Medicare Allowed Charges of \$10,000,000 or More

We are proposing the approximately 65 codes listed in Table 10 as potentially misvalued codes as a prioritized subset of codes of the newly established statutory category, "codes that account for the majority of spending under the physician fee schedule." As we identify potentially misvalued codes, we prioritize codes that are important to the Medicare program and its beneficiaries, and codes that account for a high level of Medicare expenditures meet this criterion. However, through our usual identification potentially misvalued codes it is possible to miss certain services that are important to a segment of Medicare practitioners and beneficiaries because the specialty that typically furnishes the service does not have high volume relative to the overall PFS utilization. To capture such services in developing this list, we looked at high expenditure services by specialty using a similar approach to the one we used in CY 2012. We believe it is appropriate to repeat this type of analysis periodically.

To develop the CY 2015 proposed list in this category, we began by identifying the top 20 codes by specialty in terms of allowed charges. For this analysis, we used the same specialties as used for the

impact analysis in section VI. of this proposed rule. We excluded codes from our proposed potentially misvalued list that we have reviewed since CY 2009, with fewer than \$10 million in allowed charges, and that describe anesthesia or E/M services. We excluded E/M services from the list of proposed potentially misvalued codes for the same reasons that we excluded them in the CY 2012 analysis, which we explained in the CY 2012 final rule with comment period (76 FR 73062 through 73065).

We believe that a review of the codes in Table 10 is warranted to assess changes in physician work and to update direct PE inputs since these codes have not been reviewed since CY 2009 or earlier. Furthermore, since these codes have significant impact on PFS payment at the specialty level, a review of the relativity of the codes is essential to ensure that the work and PE RVUs are appropriately relative within the specialty and across specialties, as discussed previously. For these reasons, we are proposing the codes listed in Table 10 as potentially misvalued.

(2) Epidural Injection and Fluoroscopic Guidance—CPT Codes 62310, 62311, 62318, 62319, 77001, 77002 and 77003

For CY 2014, we established interim final values for four epidural injection procedures, CPT codes 62310 (Injection(s), of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, includes contrast for localization when performed, epidural or subarachnoid; lumbar or sacral (caudal)), 62311 (Injection(s), of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, including needle or catheter placement, includes contrast for localization when performed, epidural or subarachnoid; lumbar or sacral (caudal)), 62318 (Injection(s), including indwelling catheter placement, continuous infusion or intermittent bolus, of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, includes contrast for localization when performed, epidural or subarachnoid; cervical or thoracic) and 62319 (Injection(s), including indwelling catheter placement, continuous infusion or

intermittent bolus, of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid, steroid, other solution), not including neurolytic substances, includes contrast for localization when performed, epidural or subarachnoid; lumbar or sacral (caudal)). These interim final values resulted in CY 2014 payment reductions from the CY 2013 rates for all four procedures.

In the CY 2014 final rule with comment period (78 FR 74340), we described in detail our interim valuation of these codes. We indicated we established interim final work RVUs for these codes below those recommended by the RUC because we did not believe that the RUC-recommended work RVUs accounted for the substantial decrease in time it takes to furnish these services since the last time they were valued as reflected in the RUC survey data for these four codes. Since the RUC provided no indication that the intensity of the procedures had changed, we believed that the work RVUs should reflect the reduction in time. We also established interim final direct PE inputs for these four codes based on the RUC-recommended inputs without any refinement. These recommendations included the removal of the radiographic-fluoroscopy room for 62310, 62311, and 62318 and a portable C-arm for 62319.

We received thousands of comments objecting to the CY 2014 interim final values for these codes, many citing concerns with patient access and with the potential for the payment reductions under the PFS to inappropriately incentivize the use of the hospital setting or to encourage the use of other injections. Some suggested these payment rates might affect the rate of opioid use. Although most comments did not address the accuracy of the relative value inputs used in determining PFS payment rates, those that did most often objected to our valuations of the work RVUs and recommended that we instead accept the RUC recommendations. Several commenters objected to our rationale for setting the interim final work RVUs lower than the RUC-recommended values primarily based upon the reduction in time. Commenters gave two primary reasons why this reduction was inappropriate. Some pointed out that a reduction in work based upon a reduction in time presumes that the existing time is correct. These commenters asserted that the existing times were not correct for these codes. For example, the RUC noted that the CY 2013 survey times were from the original 1999 survey and were an outlier

when compared to the previously reported code's original Harvard-valued total time of 42 minutes. One commenter noted that CMS indicates that in setting work values, the agency considers time, mental effort, professional judgment, technical skill, physical effort and stress due to risk; but in this case, rather than following our process, we only considered time. Others also said that we did not take into account the intensity, complexity, or risk of performing epidural injections. Commenters disagreed with the use of the lowest RUC survey value as the basis for the work valuation. One commenter said that we failed to explain adequately why our work RVUs were below those recommended by the RUC. One recommended that we assign values more similar to those used for paravertebral injections.

Two commenters stated that critical PE inputs, including an epidural needle, loss or resistance syringe and spinal needle, were missing from the valuation. One commenter indicated that a radiographic-fluoroscopic room should be included for CPT codes 62310, 62311 and 62318; and a mobile C-Arm should be included for CPT code 62319. Another commenter requested the decreases in the PE RVUs be phased in over a period of years.

Several commenters objected to the use of the interim final process for valuing these codes, citing the lack of opportunity for public comment and the lack of time to adequately prepare before the cuts to reimbursement took effect. Some suggested a delay in implementation.

Lastly, several commenters requested refinement panel review of these codes.

After analyzing the comments and considering valuation of these codes, we believe that we need to reassess our valuation of these codes and require additional information in order to do so. Our data show that these epidural codes are frequently billed with imaging guidance. For example, CPT code 62310 was billed with CPT code 77003 (Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural or subarachnoid)) 79 percent of the time in the nonfacility setting in CY 2013. CPT code 62319, which is the epidural injection code that is least frequently billed with CPT code 77003 in the nonfacility setting, was still billed with this guidance code 40 percent of the time. These codes were also frequently billed with image guidance in the facility setting. CPT codes 62310 and 62311 were billed with CPT code 77003, 79 percent and 74 percent of the time,

respectively in CY 2013. However, in the facility setting CPT codes 62318 and 62319 were much less frequently billed with CPT code 77003, only 3 percent and 11 percent, respectively. In addition, these four epidural injection codes are sometimes billed with other fluoroscopic or imaging guidance codes. Based on the frequency with which these codes are reported with fluoroscopic guidance codes, it appears that fluoroscopic guidance is both typically used and typically reported separately in conjunction with the epidural injection services.

As we considered the concerns raised regarding the CY 2014 payment changes for the epidural injection procedures, we looked at the values for other injection procedures. Other injection procedures, including some recommended by commenters for use as a reference in valuing these epidural injection codes, include the work and PEs of image guidance in the injection code. For example, transforaminal injections, CPT codes 64479 (Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, single level), 64480 (Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (List separately in addition to code for primary procedure)), 64483 (Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, single level) and 64484 (Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (List separately in addition to code for primary procedure)) include the image guidance in the injection code. Similarly, the paravertebral injections, CPT code 64490 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level), 64491 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)), 64492 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; third and any

additional level(s) (List separately in addition to code for primary procedure)), 64493 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level), 64494 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; second level (List separately in addition to code for the primary procedure)) and 64495 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; third and any additional level(s) (List separately in addition to code for primary procedure)) each include the image guidance bundled in the injection CPT code.

Based upon our analysis of the Medicare claims data and comments received on the CY 2014 final rule with comment period, it appears that these codes are typically furnished with imaging guidance. Thus, we believe it would be appropriate for the injection and imaging guidance codes to be bundled and the inputs for image guidance to be included in the valuation of the epidural injection codes as it is for transforaminal and paravertebral codes. We do not believe the epidural injection codes can be appropriately valued without considering the typical use of image guidance. We also believe this will help assure relativity with other injection codes that include the image guidance. To determine how to appropriately value resources for the combined codes, we believe more information is needed. Accordingly, we propose to include CPT codes 62310, 62311, 62318 and 62319 on the potentially misvalued code list so that we can obtain information to support their valuation with the image guidance included. In the meantime, we are proposing to revert to the CY 2013 input values for CPT codes 62310, 62311, 62318 and 62319 for CY 2015. Specifically, we will use the CY 2013 work RVUs, work times, and direct PE inputs to establish payment rates for CY 2015. The work, PE, and MP RVUs for these codes are listed in Addendum B and the time values for all CY 2015 codes are listed in the file “CY 2015 PFS Work Time,” available on the CMS Web site under downloads for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/>

PhysicianFeeSched/PFS-Federal-Regulation-Notices.html. The direct PE inputs are displayed the file “CY 2015 PFS Direct PE Inputs,” available on the CMS Web site under downloads for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Because it is clear that the proposed PE inputs for the epidural injection codes include items that are specifically related to image guidance, such as the radiographic fluoroscopic room, we believe separate reporting of the image guidance codes would overestimate the resources used in furnishing the two services together. To avoid this situation, we are also proposing to prohibit the billing of image guidance codes in conjunction with these four epidural injection codes. We believe our two-tiered proposal to utilize CY 2013 input values for this code family, while prohibiting the separate billing of imaging guidance codes in conjunction with epidural injection, would best ensure that appropriate reimbursement continues to be made while we gather additional information and consider the best way to value these services.

With regard to comments about the time for responding to the interim values, we would refer to section II.F of this proposed rule, which discusses a proposal to make changes in the process used for establishing revised values for codes such as these.

With regard to the request for refinement, we are denying this request as the comments do not demonstrate that the requirements for refinement were met. Moreover, since we are proposing different values for these codes for CY 2015 (using CY 2013 inputs) there would be no purpose for refinement as the public comment period for this proposed rule will provide the opportunity for the public to share any relevant information on our proposed values.

(3) Neurostimulator Implantation—CPT Codes 64553 and 64555

A stakeholder raised questions regarding whether CPT codes 64553 (Percutaneous implantation of neurostimulator electrode array; cranial nerve) and 64555 (Percutaneous implantation of neurostimulator electrode array; peripheral nerve (excludes sacral nerve)) included the appropriate direct PE inputs when furnished in the nonfacility setting. It appears that these inputs have not been evaluated recently and, therefore, we are nominating these codes as potentially misvalued for the purpose of

ascertaining whether or not there are nonfacility direct PE inputs that are not included in the direct PE inputs that are typical supply costs for these services.

(4) Mammography—CPT Codes 77055, 77056, and 77057, and HCPCS Codes G0202, G0204, and G0206

Medicare currently pays for mammography services through both CPT codes, (77055 (mammography; unilateral), 77056 (mammography; bilateral) and 77057 (screening mammography, bilateral (2-view film study of each breast)) and HCPCS G-codes, (G0202 (screening mammography, producing direct digital image, bilateral, all views), G0204 (diagnostic mammography, producing direct digital image, bilateral, all views), and G0206 (diagnostic mammography, producing direct digital image, unilateral, all views)). The CPT codes were designed to be used for mammography regardless of whether film or digital technology is used. However, for Medicare purposes, the HCPCS G-codes were created to be used for digital technology in response to special payment rules for digital mammography included in the Medicare Benefit Improvements and Protection Act of 2000.

As discussed in section II.A., the RUC recommended that CMS update the direct PE inputs for all imaging codes to reflect the migration from film-to-digital storage technologies since digital storage is now the typically used in imaging.

Our data confirms that the overwhelming majority of all mammography is digital. As a result, we are proposing that the CPT codes 77055, 77056 and 77057 be used for reporting mammography to Medicare regardless of whether film or digital technology is used, and to delete the HCPCS G-codes G0202, G0204, and G0206. We are proposing, for CY 2015, to value the CPT codes using the values established for the digital mammography G-codes since digital technology is now the typical service. (See section II.A. of this proposed rule for more discussion of this proposal.) In addition, since the G-codes values that we propose to use for the CPT codes for CY 2015 have not been reviewed since they were created in CY 2002, we are proposing to include CPT codes 77055, 77056, and 77057 on the list of potentially misvalued codes.

(5) Abdominal Aortic Aneurysm Ultrasound Screening—G0389

When Medicare began paying for abdominal aortic aneurysm (AAA) ultrasound screening in CY 2007, we created HCPCS code G0389 (Ultrasound, B-scan and/or real time with image

documentation; for abdominal aortic aneurysm (AAA) screening), and set the RVUs at the same level as CPT code 76775 (Ultrasound, retroperitoneal (e.g., renal, aorta, nodes), B-scan and/or real time with image documentation; limited). We noted in the CY 2007 final rule with comment period that CPT code 76775 was used to report the service when furnished as a diagnostic test and that we believed the service reflected by G0389 used equivalent resources and work intensity to those contained in CPT code 76775 (71 FR 69664 through 69665).

In the CY 2014 proposed rule, based on a RUC recommendation, we proposed to replace the ultrasound room included as a direct PE input for CPT code 76775 with a portable ultrasound unit. Since all the RVUs (including the PE RVUs) for G0389 were crosswalked from CPT code 76775, the proposed PE RVUs for G0389 in the CY 2014 proposed rule were reduced significantly as a result of this change to the direct PE inputs for 76775. However, we did not discuss the applicability of this change to G0389 in the proposed rule's preamble and did not receive any comments on G0389 in response to the proposed rule. We finalized the change to CPT code 76775 in the CY 2014 final rule with comment period and the corresponding PE RVUs for G0389 were also reduced.

Subsequent to the publication of the CY 2014 final rule, a stakeholder suggested that the reduction in the RVUs for G0389 did not accurately reflect the resources involved in furnishing the service and asked that CMS consider using an alternative crosswalk. Specifically, the stakeholder stated that the type of equipment typically used in furnishing G0389 is different than that used for CPT code 76775, the time involved in furnishing G0389 is greater than that of CPT code 76775, and the specialty that typically furnishes G0389 is different than the one that typically furnishes CPT code 76775. The stakeholder suggested an alternative crosswalk of CPT code 76705 (Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)).

After considering the issue, we are proposing G0389 as a potentially misvalued code and seeking recommendations regarding the appropriate inputs that should be used to develop RVUs for this code. We have not reviewed the inputs used to develop RVUs for this code since it was established in CY 2007 and the RVUs were directly crosswalked from 76705. Based on the issues raised by stakeholders, we believe that we should

value this code through our standard methodologies, including the full PE RVU methodology. In order to do so, we are proposing to include this code on our list of proposed potentially misvalued codes and seek input from the public and other stakeholders, including the RUC, regarding the appropriate work RVU, time, and direct PE inputs that reflect the typical resources involved in furnishing the service.

Until we receive the information needed to revalue this service, we are proposing to maintain the work RVU for this code and revert to the same PE RVUs we used for CY 2013, adjusted for budget neutrality. We are proposing MP RVUs based on the five-year review update process as described in section II.C of this proposed rule. We believe this valuation will ameliorate the effect of the CY 2014 reduction in G0389 that resulted from reflection of the change in RVUs for the crosswalked code while we assess the valuation of this code through our usual methodologies. The proposed PE RVUs are contained in Addendum B available on the CMS Web site under downloads for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

(6) Prostate Biopsy Codes—HCPCS Codes G0416, G0417, G0418, and G0419

For CY 2014, we modified the code descriptors of G0416 through G0419 so that these codes could be used for any method of prostate needle biopsy services, rather than only for prostate saturation biopsies. The CY 2014 descriptions are:

- G0416 (Surgical pathology, gross and microscopic examination for prostate needle biopsies, any method; 10–20 specimens).
- G0417 (Surgical pathology, gross and microscopic examination for prostate needle biopsies, any method; 21–40 specimens).
- G0418 (Surgical pathology, gross and microscopic examination for prostate needle biopsies, any method; 41–60 specimens).
- G0419 (Surgical pathology, gross and microscopic examination for prostate needle biopsies, any method; greater than 60 specimens).

Subsequently, we have discussed prostate biopsies with stakeholders, and reviewed medical literature and Medicare claims data in considering how best to code and value prostate biopsy pathology services. In considering these discussions and our review, we have become aware that the

current coding structure may be confusing, especially since the number of specimens associated with prostate biopsies is relatively homogenous. For example, G0416 (10–20 specimens) represents the overwhelming majority of all Medicare claims submitted for the four G-codes. Therefore, in the interest of both establishing straightforward coding and maintaining accurate payment, we believe it would be appropriate to use only one code to report prostate biopsy pathology services. Therefore, we propose to revise the descriptor for G0416 to define the service regardless of the number of specimens, and to delete codes G0417, G0418, and G0419. We propose to revise G0416 for use to report all prostate biopsy pathology services, regardless of the number of specimens, because we believe this will eliminate the possible confusion caused by the coding while maintaining payment accuracy.

Based on our review of medical literature and examination of Medicare claims data, we believe that the typical number of specimens evaluated for prostate biopsies is between 10 and 12. Since G0416 is the code that currently is valued and used for between 10 and 12 specimens, we are proposing to use the existing values for G0416 for CY 2015.

In addition, we are proposing G0416 as a potentially misvalued code for CY 2015. We seek public comment on the appropriate work RVUs, work time, and direct PE inputs.

(7) Obesity Behavioral Group Counseling—GXXX2 and GXXX3

Under section 1861(ddd) of the Act, we added coverage for a new preventive benefit, Intensive Behavioral Therapy for Obesity, effective November 29, 2011, and created HCPCS code G0447 (Face-to-face behavioral counseling for obesity, 15 minutes) for reporting and payment of individual behavioral counseling for obesity. Coverage requirements specific to this service are delineated in the Medicare National Coverage Determinations Manual, Pub. 100–03, Chapter 1, Section 210, available at http://www.cms.gov/manuals/downloads/ncd103c1_Part4.pdf.

It has been brought to our attention that behavioral counseling for obesity is sometimes furnished in group sessions, and questions were raised about whether group sessions could be billed using HCPCS code G0447. To improve payment accuracy, we are creating two new HCPCS codes for the reporting and payment of group behavioral counseling for obesity. Specifically, we are creating GXXX2 (Face-to-face behavioral

counseling for obesity, group (2–4), 30 minutes) and GXXX3 (Face-to-face behavioral counseling for obesity, group (5–10), 30 minutes). The coverage requirements for these services would remain in place, as described in the National Coverage Determination for Intensive Behavioral Therapy for Obesity cited in this section of the proposed rule. The practitioner furnishing these services would report the relevant group code for each beneficiary participating in a group therapy session.

We believe that the face-to-face behavioral counseling for obesity services described by GXXX2 and GXXX3 would require similar per minute work and intensity as HCPCS code G0447, which is a 15-minute code with a work RVU of 0.45. Therefore, to develop proposed work RVUs for HCPCS codes GXXX2 and GXXX3 we scaled the work RVU of HCPCS code G0447 to reflect the differences in the codes in terms of the time period covered by the code and the typical number of beneficiaries per session. Adjusting the work RVU for the longer time of the group codes results in a work RVU of 0.90 for a 30-minute session. Since the services described by GXXX2 and GXXX3 will be billed per beneficiary receiving the service, the work RVUs and work time that we are proposing for these codes are based upon the typical number of beneficiaries per session, 4 and 9, respectively. Accordingly, we are proposing a work RVU of 0.23 with a work time of 8 minutes for GXXX2 and a work RVU of 0.10 with a work time of 3 minutes for GXXX3.

Using the same logic, we are proposing to use the direct PE inputs for GXXX2 and GXXX3 currently included for G0447, prorated to account for the differences in time and number of beneficiaries described by the new codes. The proposed direct PE inputs for these codes are included in the CY 2015 proposed direct PE input database, available on the CMS Web site under the downloads for the CY 2015 PFS proposed rule at <http://www.cms.gov/PhysicianFeeSched/>. We are also proposing to crosswalk the malpractice risk factor from HCPCS code G0447 to both HCPCS codes GXXX2 and GXXX3, as we believe the same specialty mix will furnish these services. We request public comment on these proposed values for HCPCS codes GXXX2 and GXXX3.

4. Improving the Valuation and Coding of the Global Package

a. Overview

Since the inception of the PFS, we have valued and paid for certain services, such as surgery, as part of global packages that include the procedure and the services typically provided in the periods immediately before and after the procedure (56 FR 59502). For each of these codes (usually referred to as global surgery codes), we establish a single PFS payment that includes payment for particular services that we assume to be typically furnished during the established global period.

There are three primary categories of global packages that are labeled based on the number of post-operative days included in the global period: 0-day; 10-day; and 90-day. The 0-day global codes include the surgical procedure and the pre-operative and post-operative physicians' services on the day of the procedure, including visits related to the service. The 10-day global codes include these services and, in addition, visits related to the procedure during the 10 days following the procedure. The 90-day global codes include the same services as the 0-day global codes plus the pre-operative services furnished one day prior to the procedure and post-operative services during the 90 days immediately following the day of the procedure.

Section 40.1 of the Claims Processing Manual (Pub. 100–04, Chapter 12 Physician/Nonphysician Practitioners) defines the global surgical package to include the following services when furnished during the global period:

- Preoperative Visits—Preoperative visits after the decision is made to operate beginning with the day before the day of surgery for major procedures and the day of surgery for minor procedures;
- Intra-operative Services—Intra-operative services that are normally a usual and necessary part of a surgical procedure;
- Complications Following Surgery—All additional medical or surgical services required of the surgeon during the postoperative period of the surgery because of complications that do not require additional trips to the operating room;
- Postoperative Visits—Follow-up visits during the postoperative period of the surgery that are related to recovery from the surgery;
- Postsurgical Pain Management—By the surgeon;
- Supplies—Except for those identified as exclusions; and

- **Miscellaneous Services**—Items such as dressing changes; local incisional care; removal of operative pack; removal of cutaneous sutures and staples, lines, wires, tubes, drains, casts, and splints; insertion, irrigation and removal of urinary catheters, routine peripheral intravenous lines, nasogastric and rectal tubes; and changes and removal of tracheostomy tubes.

b. Concerns With the 10- and 90-Day Global Packages

CMS supports bundled payments as a mechanism to incentivize high-quality, efficient care. Although on the surface, the PFS global codes appear to function as bundled payments similar to those Medicare uses to make single payments for multiple services to hospitals under the inpatient and outpatient prospective payment systems, the practical reality is that these global codes function significantly differently than other bundled payments. First, the global surgical codes were established several decades ago when surgical follow-up care was far more homogenous than today. Today, there is more diversity in the kind of procedures covered by global periods, the settings in which the procedures and the follow-up care are furnished, the health care delivery system and business arrangements used by Medicare practitioners, and the care needs of Medicare beneficiaries. Despite these changes, the basic structures of the global surgery packages are the same as the packages that existed prior to the creation of the resource-based relative value system in 1992. Another significant difference between this and other typical models of bundled payments is that the payment rates for the global surgery packages are not updated regularly based on any reporting of the actual costs of patient care. For example, the hospital inpatient and outpatient prospective payment systems (the IPPS and OPFS, respectively) derive payment rates from hospital cost and charge data reported through annual Medicare hospital cost reports and the most recent year of claims data available for an inpatient stay or primary outpatient service. Because payment rates are based on consistently updated data, over time, payment rates adjust to reflect the average resource costs of current practice. Similarly, many of the new demonstration and innovation models track costs and make adjustments to payments. Another significant difference is that payment for the PFS global packages relies on valuing the combined services together. This means that there are no separate PFS values established for the procedures or the

follow-up care, making it difficult to estimate the costs of the individual global code component services.

These unique characteristics have contributed to the significant and numerous concerns that have been raised regarding the accuracy of payment for global codes—especially those that include 10- and 90-day post-operative periods. In the following paragraphs, we address a series of concerns regarding these codes, including: the fundamental difficulties in establishing appropriate relative values for these packages, the potential inaccuracies in the current information used to price these services, the limitations on appropriate pricing in the future, the potential for these packages to create unwarranted payment differentials among specialties, the possibility that the current codes are incompatible with current medical practice, and the potential for these codes to present obstacles to the adoption of new payment models.

Independently, concerns such as these could be seen as issues that arise when developing many different payment mechanisms, for example: making fee-for-service payment rates, making single payments for multiple services, or paying practitioners for episodes of care over a period of time. However, in the case of the post-operative portion of the 10- and 90-day global codes, we believe these multi-layered concerns create substantial barriers to accurate valuation of these services relative to other PFS services.

(1) Fundamental Limitations in the Appropriate Valuation of the Global Packages With Post-Operative Days

In general, we face many challenges in valuing PFS services as accurately as possible. However, the unique nature of global surgery packages with 10- and 90-day post-operative periods presents additional challenges distinct from those presented in valuing other PFS services. Our valuation methodology for PFS services generally relies on assumptions regarding the resources involved in furnishing the “typical case” for each individual service unlike other payment systems that rely on actual data on the costs of furnishing services. Consistent with this valuation methodology, the RVUs for a global code should reflect the typical number and level of E/M services furnished in connection with the procedure. However, it is much easier to maintain relativity among the services that are valued on this basis when each of the services is described by codes of similar unit sizes. In other words, because codes with long post-operative periods

include such a large number of services, any variations between the “typical” resource costs used to value the service and the actual resource costs associated with particular services are multiplied. The effects of this problem can be two-fold, skewing the accuracy of both the RVUs for individual global codes and the Medicare payment made to individual practitioners. The RVUs of the individual global service codes are skewed whenever there is any inaccuracy in the assumption of the typical number or kind of services in the post-operative periods. This inaccuracy has a greater impact than inaccuracies in assumptions for other PFS services because it affects a greater number of service units over a period of time than for individually priced services.

Furthermore, in contrast to prospective payment systems, such inaccuracies under the PFS are not corrected over time through an annual ratesetting process that makes year-to-year adjustments based on data on actual costs. For example, if a 90-day global code is valued based on an assumption that ten post-operative visits is typical, but practitioners reporting the code typically only furnish six visits, then the resource assumptions are overestimated by the value of the four visits multiplied by the number of the times the procedure code is reported. In contrast, when our assumptions are incorrect about the typical resources involved in furnishing a PFS code that describes a single service, any inaccuracy in the RVUs is limited to the difference between the resource costs assumed for the typical service and the actual resource costs in furnishing one individual service. Such a variation between the assumptions used in calculating payment rates and the actual resource costs could be corrected if the payments for packaged services were updated regularly using data on actual services furnished. Although such a mechanism is common in other bundled payment systems, there is no such mechanism under the PFS. To make adjustments to the RVUs to account for inaccurate assumptions under the current PFS methodology, the global surgery code would need to be identified as potentially misvalued, survey data would have to reflect an accurate account of the number and level of typical post-operative visits, and we (with or without a corresponding recommendation from the RUC or others) would have to implement a change in RVUs based on the change in the number and level of visits to reflect the typical service.

These amplified inaccuracies may also occur whenever Medicare pays an individual practitioner reporting a 10- or 90-day global code. Practitioners may furnish a wide range of post-operative services to individual Medicare beneficiaries, depending on individual patient needs, changes in medical practice, and dynamic business models. Due to the way the 10- and 90-day global codes are constructed, the number and level of services included for purposes of calculating the payment for these services may vary greatly from the number and level of services that are actually furnished in any particular case. In contrast, the variation between the “typical” and the actual resource cost for the practitioner reporting an individually valued PFS services is constrained because the practitioner is only reporting and being paid for a specific service furnished on a particular date.

For most PFS services, any difference between the “typical” case on which RVUs are based and the actual case for a particular service is limited to the variation between the resources assumed to be involved in furnishing the typical case and the actual resources involved in furnishing the single specific service. When the global surgical package includes more or a higher level of E/M services than are actually furnished in the typical post-operative period, the Medicare payment is based on an overestimate of the quantity or kind of services furnished, not merely an overestimation of the resources involved in furnishing an individual service. The converse is true if the RVUs for the global surgical package are based on fewer or a lower level of services than are typically furnished for a particular code.

(2) Questions Regarding Accuracy of Current Assumptions

In previous rulemaking (77 FR 68911 through 68913), we acknowledged evidence suggesting that the values included in the post-operative period for global codes may not reflect the typical number and level of post-operative E/M visits actually furnished.

In 2005, the OIG examined whether global surgical packages are appropriately valued. In its report on eye and ocular surgeries, “National Review of Evaluation and Management Services Included in Eye and Ocular Adnexa Global Surgery Fees for Calendar Year 2005” (A-05-07-00077), the OIG reviewed a sample of 300 eye and ocular surgeries, and counted the actual number of face-to-face services recorded in the patients’ medical records to establish whether and, if so,

how many post-operative E/M services were furnished by the surgeons. For about two-thirds of the claims sampled by the OIG, surgeons provided fewer E/M services in the post-operative period than were included in the global surgical package payment for each procedure. A small percentage of the surgeons furnished more E/M services than were included in the global surgical package payment. The OIG identified the number of face-to-face services recorded in the medical record, but did not review the medical necessity of the surgeries or the related E/M services. The OIG concluded that the RVUs for these global surgical packages are too high because they include a higher number of E/M services than typically are furnished within the global period for the reviewed procedures.

Following that report, the OIG continued to investigate E/M services furnished during global surgical periods. In May 2012, the OIG published a report entitled “Musculoskeletal Global Surgery Fees Often Did Not Reflect the Number of Evaluation and Management Services Provided” (A-05-09-00053). For this investigation, the OIG sampled 300 musculoskeletal global surgeries and again found that, for the majority of sampled surgeries, physicians furnished fewer E/M services than were included as part of the global period payment for that service. Once again, a small percentage of surgeons furnished more E/M services than were included in the global surgical package payment. The OIG concluded that the RVUs for these global surgical packages are too high because they include a higher number of E/M services than typically are furnished within the global period for the reviewed procedures.

In both reports, the OIG recommended that we adjust the number of E/M services identified with the studied global surgical payments to reflect the number of E/M services that are actually being furnished. However, since it is not necessary under our current global surgery payment policy for a surgeon to report the individual E/M services actually furnished during the global surgical period, we do not have objective data upon which to assess whether the RVUs for global period surgical services reflect the typical number or level of E/M services that are furnished. In the CY 2013 PFS proposed rule (77 FR 44738), we previously sought public comments on collecting these data. As summarized in the CY 2013 PFS final rule (77 FR 68913) we did not discover a consensus among stakeholders regarding either the most appropriate means to gather the

data, or the need for, or the appropriateness of using such data in valuing these services. In response to our comment solicitation, some commenters urged us to accept the RUC survey data as accurate in spite of the OIG reports and other concerns that have been expressed regarding whether the visits included in the global periods reflected the typical case. Others suggested that we should conduct new surveys using the RUC approach or that we should mine hospital data to identify the typical number of visits furnished. Some comments suggested eliminating the 10- and 90-day global codes.

(3) Limitations on Appropriate Future Valuations of 10- and 90-day Global Codes

Historically, our attempts to adjust RVUs for global services based on changes in the typical resource costs (especially with regard to site of service assumptions or changes to the number of post-surgery visits) have been difficult and controversial. At least in part, this is because the relationship between the work RVUs for the 10- and 90-day global codes (which includes the work RVU associated with the procedure itself) and the number of included post-operative visits in the existing values is not always clear. Some services with global periods have been valued by adding the work RVU of the surgical procedure and all pre- and post-operative E/M services included in the global period. However, in other cases, as many stakeholders have noted, the total work RVUs for surgical procedures and post-operative visits in global periods are estimated as a single value without any explicit correlation to the time and intensity values for the individual service components. Although we would welcome more objective information to improve our determination of the “typical” case, we believe that even if we engaged in the collection of better data on the number and level of E/M services typically furnished during the global periods for global surgery services, the valuation of individual codes with post-operative periods would not be straightforward. Furthermore, we believe it would be important to frequently update the data on the number and level of visits furnished during the post-operative periods in order to account for any changes in the patient population, medical practice, or business arrangements. Although such information would be available for developing payment rates for bundled services through other Medicare payment systems, practitioners paid through the PFS do not report such data.

(4) Unwarranted Payment Disparities

Subsequent to our last comment solicitation regarding the valuation of the post-operative periods (77 FR 68911 through 68913), some stakeholders have raised concerns that global surgery packages contribute to unwarranted payment disparities between practitioners who do and do not furnish these services. These stakeholders have addressed several ways the 10- and 90-day global packages may contribute to unwarranted payment disparities.

The stakeholders noted that, through the global surgery packages, Medicare pays practitioners who furnish E/M services during post-surgery periods regardless of whether the services are actually furnished, while practitioners who do not furnish global procedures with post-operative visits are only paid for E/M services that are actually furnished. In some cases, it is possible that the practitioner furnishing the global surgery procedure may not furnish any post-operative visits. Although we have policies to address the situation when post-operative care is transferred from one practitioner to another, the beneficiary might simply choose to seek care from another practitioner without a formal transfer of care. The other practitioner would then bill Medicare separately for E/M services for which payment was included in the global payment to the original practitioner. Those services would not have been separately billable if furnished by the original practitioner.

These circumstances can lead to unwarranted payment differences, allowing some practitioners to receive payment for fewer services than reflected in the Medicare payment. Practitioners who do not furnish global surgery services bill and are paid only for each individual service furnished. When global surgery values are based on inaccurate assumptions about the typical services furnished in the post-operative periods, these payment disparities can contribute to differences in aggregate RVUs across specialties. Since the RVUs are intended to reflect differences in the relative resource costs involved in furnishing a service, any disparity between assumed and actual costs results not only in paying some practitioners for some services that are not furnished, it also skews relativity between specialties.

Stakeholders have also pointed out that payment disparities can arise because E/M services reflected in global periods generally include higher PE values than the same services when billed separately. The difference in PE values between separately billed visits

and those included in global packages result primarily from two factors that are both inherent in the PFS pricing methodology.

First, there is a different mix of PE inputs (clinical labor/supplies/equipment) included in the direct PE inputs for a global period E/M service and a separately billed E/M service. For example, the clinical labor inputs for separately reportable E/M codes includes a staff blend listed as “RN/LPN/MTA” (L037D) and priced at \$0.37 per minute. Instead of this input, some codes with post-operative visits include the staff type “RN” (L051A) priced at a higher rate of \$0.51 per minute. For these codes, the higher resource cost may accurately reflect the typical resource costs associated with those particular visits. However, the different direct PE inputs may drive unwarranted payment disparities among specialties who report global surgery codes with post-operative periods and those that do not. The only way to correct these potential discrepancies under the current system, which result from the specialty-based differences in resource costs, would be to include standard direct PE inputs for these services regardless of whether or not the standard inputs are typical for the specialties furnishing the services.

Second, the indirect PE allocated to the E/M visits included in global surgery codes is higher than that allocated to separately furnished E/M visits. This occurs because the range of specialties furnishing a particular global service is generally not as broad as range of specialties that report separate individual E/M services. Since the specialty mix for a service is a key factor in determining the allocation of indirect PE to each code, a higher amount of indirect PE can be allocated to the E/M services that are valued as part of the global surgery codes than to the individual E/M codes. Practitioners who use E/M codes to report visits separately are paid based on PE RVUs that reflect the amount of indirect PE allocated across a wide range of specialties, which has the tendency to lower the amount of indirect PE. For practitioners who are paid for visits primarily through post-operative periods, indirect PE is generally allocated with greater specificity. Two significant steps would be required to alleviate the impact of this disparity. First, we would have to identify the exact mathematical relationship between the work RVU and the number and level of post-operative visits for each global code; and second, we would have to propose a significant alteration of the PE methodology in order to allocate indirect PE that does

not correlate to the specialties reporting the code in the Medicare claims data.

Furthermore, stakeholders have pointed out that the PE RVUs for codes with 10- or 90-day post-operative periods reflect the assumption that all outpatient visits occur in the higher-paid non-facility office setting, when many of these visits are likely to be furnished in provider-based departments, which would be paid at the lower, PFS facility rate if they were billable separately. As we note elsewhere in this proposed rule, we do not have data on the volume of physicians’ services furnished in provider-based departments, but public information suggests that it is not insignificant and that it is growing. When these services are paid as part of a global package, there is no adjustment made based on the site of service. Therefore, even though the PFS payment for services furnished in post-operative global periods might include clinical labor, disposable supply, and medical equipment costs (and additional indirect PE allocation) that are incurred by the facility and not the practitioner reporting the service, the RVUs for global codes reflect all of these costs associated with the visits.

(5) Incompatibility of Current Packages With Current Practice and Unreliability of RVUs for Use in New Payment Models

In addition to these issues, the 10- and 90-day global periods reflect a long-established but no longer exclusive model of post-operative care that assumes the same practitioner who furnishes the procedure typically furnishes the follow-up visits related to that procedure. In many cases, we believe that models of post-operative care are increasingly heterogeneous, particularly given the overall shift of patient care to larger practices or team-based environments.

We believe that RVUs used to establish PFS payments are likely to serve as critical building blocks to developing, testing, and implementing a number of new payment models, including those that focus on bundled payments to practitioners or payments for episodes of care. Therefore, we believe it is critical for us to ensure that the PFS RVUs accurately reflect the resource costs for individual PFS services instead of reflecting potentially skewed assumptions regarding the number of services furnished over a long period of time in the “typical” case. To the extent that the 10- and 90-day global periods reflect inaccurate assumptions regarding resource costs associated with individual PFS services,

we believe they are likely to be obstacles to a wide range of potential improvements to PFS payments, including the potential incorporation of payment bundling designed to foster efficiency and quality care for Medicare beneficiaries.

c. Proposed Transition of 10- and 90-Day Global Packages Into 0-Day Global Packages

Although we have marginally addressed some of the concerns noted above with global packages in previous rulemaking, we do not believe that we have made significant progress in addressing the fundamental issues with the 10- and 90-day post-operative global packages. In the context of the misvalued code initiative, we believe it is critical for the RVUs used to develop PFS payment rates reflect the most accurate resource costs associated with PFS services. Based on the issues discussed above, we do not believe we can effectively address the issues inherent in establishing values for the 10- and 90-day global packages under our existing methodologies and with available data. As such, we do not believe that maintaining the post-operative 10- and 90-day global periods is compatible with our continued interest in using more objective data in the valuation of PFS services and accurately valuing services relative to each other. Because the typical number and level of post-operative visits during global periods may vary greatly across Medicare practitioners and beneficiaries, we believe that continued valuation and payment of these face-to-face services as a multi-day package may skew relativity and create unwarranted payment disparities within PFS payment. We also believe that the resource based valuation of individual physicians' services will continue to serve as a critical foundation for Medicare payment to physicians, whether through the current PFS or in any number of new payment models. Therefore, we believe it is critical that the RVUs under the PFS be based as closely and accurately as possible on the actual resources involved in furnishing the typical occurrence of specific services.

To address the issues discussed above, we are proposing to retain global bundles for surgical services, but to refine bundles by transitioning over several years all 10- and 90-day global codes to 0-day global codes. Medically reasonable and necessary visits would be billed separately during the pre- and post-operative periods outside of the day of the surgical procedure. We propose to make this transition for

current 10-day global codes in CY 2017 and for the current 90-day global codes in CY 2018, pending the availability of data on which to base updated values for the global codes.

We believe that transitioning all 10- and 90-day global codes to 0-day global codes would:

- Increase the accuracy of PFS payment by setting payment rates for individual services based more closely upon the typical resources used in furnishing the procedures;
- Avoid potentially duplicative or unwarranted payments when a beneficiary receives post-operative care from a different practitioner during the global period;
- Eliminate disparities between the payment for E/M services in global periods and those furnished individually;
- Maintain the same-day packaging of pre- and post-operative physicians' services in the 0-day global; and
- Facilitate availability of more accurate data for new payment models and quality research.

As we transition these codes, we would need to establish RVUs that reflect the change in the global period for all the codes currently valued as 10- and 90-day global surgery services. We seek assistance from stakeholders on various aspects of this task. Prior to implementing these changes, we intend to gather objective data on the number of E/M and other services furnished during the current post-operative periods and use those data to inform both the valuation of particular services and the overall budget neutrality adjustments required to implement this proposal. We seek comment on the most efficient means of acquiring accurate data regarding the number of visits and other services actually being furnished by the practitioner during the current post-operative periods. For all the reasons stated above, we do not believe that survey data reflecting assumptions of the "typical case" meets the standards required to measure the resource costs of the wide range of services furnished during the post-operative periods. We acknowledge that collecting information on these services through claims submission may be the best approach, and we would propose such a collection through future rulemaking. However, we are also interested in alternatives. For example, we seek information on the extent to which individual practitioners or practices may currently maintain their own data on services furnished during the post-operative period, and how we might collect and objectively evaluate that data.

We also seek comment on the best means to ensure that allowing separate payment of E/M visits during post-operative periods does not incentivize otherwise unnecessary office visits during post-operative periods. If we adopt this proposal, we intend to monitor any changes in the utilization of E/M visits following its implementation but we are also seeking comment on potential payment policies that will mitigate such a change in behavior.

In developing this proposal, we considered several alternatives to the transformation of all global codes to 0-day global codes. First, we again considered the possibility of gathering data and using the data to revalue the 10- and 90- day global codes. While this option would have maintained the status quo in terms of reporting services, it would have required much of the same effort as this proposal without alleviating many of the problems associated with the 10- and 90-day global periods. For example, collecting accurate data would allow for more accurate estimates of the number and kind of visits included in the post-operative periods at the time of the survey. However, this alternative approach would only mitigate part of the potential for unwarranted payment disparities. For example, the values for the visits in the global codes would continue to include different amounts of PE RVUs than separately reportable visits and would continue to provide incentives to some practitioners to minimize patient visits. Additionally, it would not address the changes in practice patterns that we believe have been occurring whereby the physician furnishing the procedure is not necessarily the same physician conducting the post-procedure follow up.

This alternative option would also rest extensively on the effectiveness of using the new data to revalue the codes accurately. Given the unclear relationship between the assigned work RVUs and the post-operative visits across all of these services, incorporating objective data on the number of visits to adjust work RVUs would still necessitate extensive review of individual codes or families of codes by CMS and stakeholders, including the RUC. We believe the investment of resources for such an effort would be better made to solve a broader range of problems.

We also considered other possibilities, such as altering our PE methodology to ensure that the PE inputs and indirect PE for visits in the global period were valued the same as

separately reportable E/M codes or requiring reporting of the visits for all 10- and 90-day global services while maintaining the 10- and 90-day global period payment rates. However, we believe this option would require all of the same effort by practitioners, CMS, and other stakeholders without alleviating most of the problems addressed in the preceding paragraphs.

We also considered maintaining the status quo and identifying each of the 10- and 90-day global codes as potentially misvalued through our potentially misvalued code process for review as 10 and 90 day globals. Inappropriate valuations of these services has a major effect on the fee schedule due to the percentage of PFS dollars paid through 10- and 90-day global codes (3 percent and 11 percent, respectively), and thus, valuing them appropriately is critical to appropriate valuation and relativity throughout the PFS. Through the individual review approach, we could review the appropriateness of the global period and the accurate number of visits for each service. Yet revaluing all 3,000 global surgery codes through the potentially misvalued codes approach would not address many of the problems identified above. Unless such an effort was combined with changes in the PE methodology, it would only partially address the valuation and accuracy issues and would leave all the other issues unresolved. Moreover, the valuation and accuracy issues that could be addressed through this approach would rapidly be out of date as medical practice continues to change. Therefore, such an approach would be only partially effective and would impede our ability to address other potentially misvalued codes.

We seek stakeholder input on an accurate and efficient means to revalue or adjust the work RVUs for the current 10- and 90-day global codes to reflect the typical resources involved in furnishing the services including both the pre- and post-operative care on the day of the procedure. We believe that collecting data on the number and level of post-operative visits furnished by the practitioner reporting current 10- and 90-day global codes will be essential to ensuring work RVU relativity across these services. We also believe that

these data will be necessary to determine the relationship between current work RVUs and current number of post-operative visits, within categories of codes and code families. However, we believe that once we collect those data, there are a wide range of possible approaches to the revaluation of the large number of individual global services, some of which may deviate from current processes like those undertaken by the RUC. To date, the potentially misvalued code initiative has focused on several hundred, generally high-volume codes per year. This proposal requires revaluing a larger number of codes over a shorter period of time and includes many services with relatively low volume in the Medicare population. Given these circumstances, it does not seem practical to survey time and intensity information on each of these procedures. Absent any new survey data regarding the procedures themselves, we believe that data regarding the number and level of post-service office visits can be used in conjunction with other methods of valuation, such as:

- Using the current potentially misvalued code process to identify and value the relatively small number of codes that represent the majority of the volume of services that are currently reported with codes with post-operative periods, and then adjusting the aggregate RVUs to account for the number of visits and using magnitude estimation to value the remaining services in the family;
- Valuing one code within a family through the current valuation process and then using magnitude estimation to value the remaining services in the family;
- Surveying a sample of codes across all procedures to create an index that could be used to value the remaining codes.

While we believe these are plausible options for the revaluation of these services, we believe there may be others. Therefore, we seek input on the best approach to achieve this proposed transition from 10- and 90-day, to 0-day global periods, including the timing of the changes, the means for revaluation, and the most effective and least burdensome means to collect objective, representative data regarding the actual number of visits currently furnished in

the post-operative global periods. We also seek comment on whether the effective date for the transition to 0-day global periods should be staggered across families of codes or other categories. For example, while we are proposing to transition 10-day global periods in 2017 and 90-day global periods in 2018, we seek comment on whether we should consider implementing the transition more or less quickly and over one or several years. We also seek comment regarding the appropriate valuation of new, revised, or potentially misvalued 10- or 90-day global codes before implementation of this proposal.

5. Improving the Valuation of the Global Package

In the CY 2013 proposed rule, we sought comments on methods of obtaining accurate and current data on E/M services furnished as part of a global surgical package. In addition to receiving the broader comments on measuring post-operative work, we also received a comment from the RUC saying that the hospital inpatient and discharge day management services included in the global period for many surgical procedures were inadvertently removed from the time file in 2007. With its comment letter, the RUC sent us a data file with updated times for these post-operative visits for some services that displayed zero hospital inpatient or discharge day visits in the CMS time file. After extensive review, we concluded that the data were deleted from the time file due to an inadvertent error as noted by the RUC. Therefore, during CY 2014 PFS rulemaking we finalized a proposal to replace the missing postoperative hospital inpatient and discharge day visits for the more than 100 codes that were identified by the RUC.

Since then, the AMA has identified additional codes with data in the work time file that reflects a similar error. Since we believe these global surgery codes are missing postoperative hospital inpatient and discharge day visits due to an inadvertent error, we are proposing to include a corrected number of visits for the codes displayed in Table 11. This proposal would also alter the total time associated with the codes in the work time file.

TABLE 11—PROPOSED WORK TIME CHANGES IN SELECTED GLOBAL SURGICAL PACKAGE VISITS

6. Valuing Services That Include Moderate Sedation as an Inherent Part of Furnishing the Procedure

The CPT manual includes more than 300 diagnostic and therapeutic procedures, listed in Appendix G, for which CPT has determined that moderate sedation is an inherent part of furnishing the procedure and, therefore, only the single procedure code is appropriately reported when furnishing the service and the moderate sedation. The work of moderate sedation has been included in the work RVUs for these diagnostic and therapeutic procedures based upon their inclusion in Appendix G. Similarly, the direct PE inputs for these services include those inputs associated with furnishing a typical moderate sedation service. To the extent that moderate sedation is typically furnished as part of the diagnostic or therapeutic service, the inclusion of moderate sedation in the valuation of the procedure is appropriate.

It appears that practice patterns for endoscopic procedures are changing, and anesthesia is increasingly being separately reported for these procedures. For example, one study shows that while the use of a separate anesthesia professional for colonoscopies and upper endoscopies was just 13.5 percent in 2003, the rate more than doubled to 30.2 percent in 2009. An analysis of Medicare claims data shows that a similar pattern is occurring in the Medicare program. We find that, for certain types of procedures such as digestive surgical procedures, a separate anesthesia service is furnished 53 percent of the time. For some of these digestive surgical procedures, the claims analysis shows that this rate is as high as 80 percent.

Our data clearly indicate that moderate sedation is no longer typical for all of the procedures listed in CPT's Appendix G, and, in fact, the data suggest that the percent of cases in which it is used is declining. For many of these procedures in Appendix G, moderate sedation continues to be furnished. The trend away from the use of moderate sedation toward a separately billed anesthesia service is not universal. It differs by the class of procedures, sometimes at the procedure code level, and is one that continues to evolve over time. Due to the changing nature of medical practice in this area, we are considering establishing a uniform approach to valuation for all Appendix G services for which moderate sedation is no longer inherent, rather than addressing this issue at the procedure level as individual procedures are revalued.

We are seeking public comment on approaches to address the appropriate valuation of these services. Specifically, we are interested in approaches to valuing Appendix G codes that would allow Medicare to pay accurately for moderate sedation when it is furnished while avoiding potential duplicative payments when separate anesthesia is furnished and billed. To the extent that Appendix G procedure values are adjusted to no longer include moderate sedation, we request suggestions as to how moderate sedation should be reported and valued, and how to remove from existing valuations the RVUs and inputs related to moderate sedation.

We note that in the CY 2014 PFS final rule with comment period, we established values for many upper gastrointestinal procedures, 58 of which were included in Appendix G. For those interim final values, we included the inputs related to moderate sedation. In the CY 2015 PFS final rule with comment period, we will address these interim final values, and we anticipate establishing CY 2015 inputs for the lower gastrointestinal procedures, many of which are also listed in Appendix G. It is our expectation that we will not change existing policies for valuing moderate sedation as inherent in these procedures until we have the opportunity to assess and respond to the comments on this proposed rule on the overall valuation of Appendix G codes.

C. Malpractice Relative Value Units (RVUs)

1. Overview

Section 1848(c) of the Act requires that each service paid under the PFS be comprised of three components: Work; PE; and malpractice (MP) expense. As required by section 1848(c) of the Act, beginning in CY 2000, MP RVUs are resource based. Malpractice RVUs for new codes after 1991 were extrapolated from similar existing codes or as a percentage of the corresponding work RVU. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. For CY 2015, we are proposing to implement the third comprehensive review and update of MP RVUs. For details about prior updates, see the CY 2010 final rule with comment period (74 FR 33537).

2. Methodology for the Proposed Revision of Resource-Based Malpractice RVUs

a. General Discussion

The proposed MP RVUs were calculated by a CMS contractor based on updated MP premium data obtained

from state insurance rate filings. The methodology used in calculating the proposed CY 2015 review and update of resource-based MP RVUs largely parallels the process used in the CY 2010 update. The calculation requires using information on specialty-specific MP premiums linked to a specific service based upon the relative risk factors of the various specialties that furnish a particular service. Because MP premiums vary by state and specialty, the MP premium information must be weighted geographically and by specialty. Accordingly, the proposed MP RVUs are based upon three data sources: CY 2011 and CY 2012 MP premium data; CY 2013 Medicare payment and utilization data; and CY 2015 proposed work RVUs and geographic practice cost indices (GPCIs).

Similar to the previous update, we calculated the proposed MP RVUs using specialty-specific MP premium data because they represent the actual expense incurred by practitioners to obtain MP insurance. We obtained MP premium data primarily from state departments of insurance. When the state insurance departments did not provide data, we used state rate filing data from the Perr and Knight database, which derives its data from state insurance departments. We used information obtained from MP insurance rate filings with effective dates in 2011 and 2012. These were the most current data available during our data collection process.

We collected MP insurance premium data from all 50 States, the District of Columbia, and Puerto Rico. Rate filings were not available in American Samoa, Guam, or the Virgin Islands. Premiums were for \$1 million/\$3 million, mature, claims-made policies (policies covering claims made, rather than those covering services furnished, during the policy term). A \$1 million/\$3 million liability limit policy means that the most that would be paid on any claim is \$1 million and the most that the policy would pay for claims over the timeframe of the policy is \$3 million. We made adjustments to the premium data to reflect mandatory surcharges for patient compensation funds (funds to pay for any claim beyond the statutory amount, thereby limiting an individual physician's liability in cases of a large suit) in states where participation in such funds is mandatory. We attempted to collect premium data representing at least 50 percent of the medical MP premiums paid.

We included premium information for all physician and NPP specialties, and all risk classifications available in the collected rate filings. Most insurance

companies provided crosswalks from insurance service office (ISO) codes to named specialties. We matched these crosswalks to Medicare primary specialty designations (specialty codes). We also used information we obtained regarding surgical and nonsurgical classes. Some companies provided additional surgical subclasses; for example, distinguishing family practice physicians who furnish obstetric services from those who do not.

Although we collected premium data from all states and the District of Columbia, not all specialties had premium data in the rate filings from all states. Additionally, for some specialties, MP premiums were not available from the rate filings in any state. Therefore, for specialties for which there was not premium data for

at least 35 states, and specialties for which there was not distinct premium data in the rate filings, we crosswalked the specialty to a similar specialty, conceptually or by available premium data, for which we did have sufficient and reliable data. Additionally, we crosswalked three specialties—physician assistant, registered dietitian and optometry—for which we had data from at least 35 states to a similar specialty type because the available data contained such extreme variations in premium amounts that we found it to be unreliable. The range in premium amounts for registered dietitians is \$85 to \$20,813 (24,259 percent), for physician assistants is \$614 to \$35,404 (5,665 percent), and for optometry is \$189 to \$10,798 (5,614 percent). Given that the national average premium

amount for registered dietitians, physician assistants and optometry is below the national average premium amount for allergy and immunology, we crosswalked these specialties to allergy and immunology, the specialty with the lowest premiums for which we had sufficient and reliable data.

For the proposed CY 2015 MP RVU update, sufficient and reliable premium data were available for 41 specialty types, which we used to develop specialty-specific malpractice risk factors. (See Table 13 for a list of these specialties.)

For specialties with insufficient or unreliable premium data, we assigned the premium amounts of a similar specialty type. These specialties and the specialty data that we propose to use are shown in Table 12.

TABLE 12—CROSSWALK OF SPECIALTIES TO SIMILAR SPECIALTIES

Specialty code	Medicare specialty name	Crosswalk specialty code	Crosswalk specialty
09	Interventional Pain Management	05	Anesthesiology.

b. Steps for Calculating Proposed Malpractice RVUs

Calculation of the proposed MP RVUs conceptually follows the specialty-weighted approach used in the CY 2010 final rule with comment period (74 FR 61758). The specialty-weighted

approach bases the MP RVUs for a given service upon a weighted average of the risk factors of all specialties furnishing the service. This approach ensures that all specialties furnishing a given service are accounted for in the calculation of the MP RVUs. The steps for calculating

the proposed MP RVUs are described below.

Step (1): Compute a preliminary national average premium for each specialty.

Insurance rating area MP premiums for each specialty are mapped to the

county level. The specialty premium for each county is then multiplied by the total county RVUs for that specialty (from the Medicare claims data for CY 2013). The product of the MP premiums and total county RVUs is then summed across all counties for each specialty and then divided by total national RVUs for the specialty. This calculation is then divided by the average MP GPCI across all counties for each specialty to yield a normalized national average premium for each specialty. The specialty premiums are normalized for geographic variation so that the locality cost differences (as reflected by the GPICs) would not be counted twice. Without the geographic variation adjustment, the cost differences among fee schedule areas would be reflected once under the methodology used to calculate the MP RVUs and again when computing the service specific payment amount for a given fee schedule area.

Step (2): Determine which premium class(es) to use within each specialty.

Some specialties had premium rates that differed for surgery, surgery with obstetrics, and non-surgery. To account for the presence of different classes in the MP premium data and the task of mapping these premiums to procedures, we calculated distinct risk factors for surgical, surgical with obstetrics, and nonsurgical procedures. However, the availability of data by surgery and

nonsurgery varied across specialties. Consistent with the CY 2010 MP RVU update, because no single approach accurately addressed the variability in premium classes among specialties, we employed several methods for calculating average premiums by specialty. These methods are discussed below.

(a) *Substantial Data for Each Class:* For 13 out of 41 specialties, we determined that there was sufficient data for surgery and nonsurgery premiums, as well as sufficient differences in rates between classes. These specialties are listed in Table 13. Therefore, we calculated a national average surgical premium and nonsurgical premium.

(b) *Major Surgery Dominates:* For 9 surgical specialties, rate filings that included nonsurgical premiums were relatively rare. For most of these surgical specialties, the rate filings did not include an “unspecified” premium. When it did, the unspecified premium was lower than the major surgery rate. For these surgical specialties, we calculated only a surgical premium and used the premium for major surgery for all procedures furnished by this specialty.

(c) *Unspecified Dominates:* Many MP rate filings did not include surgery or nonsurgery classes for some specialties; we refer to these instances as unspecified MP rates. For 7 specialty

types (listed in Table 13), we selected the unspecified premium as the premium information to use for the specialty. For these specialties, at least 35 states (and as many as 48 states) had MP premium amounts that were not identified as surgery or nonsurgery in rate filings for the specialty.

(d) *Blend All Available:* For the remaining specialties, there was wide variation across the rate filings in terms of whether or not premium classes were reported and which categories were reported. Because there was no clear strategy for these remaining specialties, we blended the available rate information into one general premium rate. For these specialties, we developed a weighted average “blended” premium at the national level, according to the percentage of work RVUs correlated with the premium classes within each specialty. For example, the surgical premiums for a given specialty were weighted by that specialty’s work RVUs for surgical services; the nonsurgical premiums were weighted by the work RVUs for nonsurgical services and the unspecified premiums were weighted by all work RVUs for the specialty type.

The four methods for calculating premiums by specialty type are summarized in Table 13. (See Table 14: “Risk Factors by Specialty Type” for the specialty names associated with the specialty codes listed in Table 13.)

TABLE 13—PROPOSED PREMIUM CALCULATION APPROACH BY SPECIALTY TYPE

Method	Medicare specialty codes
(a) Substantial Data for Each Class (13)	01, 04, 06, 07, 08 (non-OB), 10, 13, 18, 34, 38, 39, 46, 93
(b) Major Surgery Dominates (9)	02, 14, 20, 24, 28, 33, 40, 77, 78
(c) Unspecified Dominates (7)	03, 05, 16 (non-OB), 25, 26, 36, 81
(d) Blend All Available (12)	11, 22, 29, 30, 37, 44, 48, 66, 82, 84, 90, 92

(e) *Premium Calculation for Neurosurgery:* For neurosurgery, premium data were available from 24 states; therefore, we did not have sufficient data to calculate a national average premium amount for neurosurgery. As explained above, we typically crosswalk a specialty with insufficient premium data (less than 35 states) to a similar specialty for which we have sufficient data, conceptually or by reported premiums. We considered cross-walking neurosurgery directly to the national average premium for a similar specialty that had sufficient data such as neurology or to another surgical specialty. We did not crosswalk neurosurgery directly to another surgical specialty because no other surgical specialty had similar premium values reported in the rate filings. For

instance, the surgical premium for neurosurgery is \$123,400 while the surgical premium for the next highest surgical specialty (surgical oncology) is \$59,808. We also did not crosswalk neurosurgery directly to neurology because the rate filings for neurology include substantial premium data for both surgery and non-surgery while the rate filings for neurosurgery are dominated by major surgery premiums. We do not believe that it would be appropriate to assign non-surgical premiums reported for neurology to neurosurgery.

However, the national average surgical premium amount for neurology (\$96,970) and the surgical premium amount for neurosurgery are similar. Therefore, we blended the surgical premium data for neurology and

neurosurgery instead of crosswalking directly to neurology or directly to another surgical specialty. In other words, we calculated a combined national average surgical premium for neurosurgery and neurology. The reasons as to why we are proposing to blend surgical premiums for neurology and neurosurgery, instead of crosswalking neurosurgery directly to neurology or directly to another surgical specialty, are further explained below.

- The rate filings for neurosurgery are dominated by major surgery premiums.
- The rate filings identifying nonsurgical premiums for neurosurgery are sparse.
- The rate filings for neurology include substantial premium data for both surgery and nonsurgery.

• Neurology is similar to neurosurgery both conceptually and by reported surgical premium amounts.

• Surgical premiums from the rate filings for other surgical specialties are lower than for neurosurgery and neurology.

Given that the rate filings for neurosurgery are dominated by major surgical premiums and that surgical premium amounts for neurology are similar to neurosurgery, we believe that combining the surgical premium data for neurosurgery and neurology is a better representation of the MP premium amounts paid by neurosurgeons than crosswalking neurosurgery directly to neurology or to another surgical specialty.

Step (3): Calculate a risk factor for each specialty.

The relative differences in national average premiums between specialties are expressed in our methodology as a specialty risk factor. These risk factors are an index calculated by dividing the national average premium for each specialty by the national average premium for the specialty with the lowest premiums for which we had sufficient and reliable data, allergy and immunology. For specialties with sufficient surgical and nonsurgical premium data, we calculated both a surgical and nonsurgical risk factor. For specialties with rate filings that distinguished surgical premiums with obstetrics from those without, we calculated a separate surgical with obstetrics risk factor. For all other specialties we calculated a single risk factor and applied the specialty risk

factor to both surgery and nonsurgery services.

We note that for determining the risk factor for suppliers of TC-only services, we were not able to obtain more recent premium data than what was used for the CY 2010 update. Therefore, we updated the premium data for IDTFs that we used in the CY 2010 update. These data were obtained from a survey conducted by the Radiology Business Management Association (RBMA) in 2009. We updated the RBMA survey data by the change in non-surgical premiums for all specialty types since the previous MP RVU update and calculated an updated TC specialty risk factor. We applied the updated TC specialty risk factor to suppliers of TC-only services. Table 14 shows the risk factors by specialty type.

(a) Invasive Cardiology: Consistent with the previous MP RVU update, we continued to classify invasive cardiology services (cardiac catheterizations and angioplasties) that are outside of the surgical HCPCS code range as surgery for purposes of assigning specialty-specific risk factors. We note that since the previous MP RVU update some invasive cardiology service HCPCS codes have been revised. Therefore, we modified the list of invasive cardiology services outside the surgical HCPCS code range that are to be considered surgery in order to correspond conceptually to the list of service codes used for the CY 2010 MP RVU update. We continue to believe that the malpractice risk for cardiac catheterization and angioplasty services are more similar to the risk of surgical procedures than most nonsurgical service codes. As such, we applied the higher cardiology surgical risk factor to

cardiology catheterization and angioplasty services.

For the CY 2015 MP RVU update, we examined the possibility of classifying injection procedures used in conjunction with cardiac catheterization as surgery (for purposes of assigning service specific risk factors). After careful consideration, we believe that injection procedures, when furnished in conjunction with cardiac catheterization, are more akin to the malpractice risk of surgical procedures than most non-surgical services. Therefore we applied the surgical risk factor to injection procedures used in conjunction with cardiac catheterization. Table 15 shows the invasive cardiology services and injection services furnished in conjunction with cardiac catheterization to be considered as surgery for purposes of assigning specialty-specific risk factors.

93568	Inject pulm art hrt cath.
93571	Heart flow reserve measure.
93572	Heart flow reserve measure.

Step (4): Calculate malpractice RVUs for each HCPCS code.

Resource-based MP RVUs were calculated for each HCPCS code that has work or PE RVUs. The first step was to identify the percentage of services furnished by each specialty for each respective HCPCS code. This percentage was then multiplied by each respective specialty's risk factor as calculated in Step 3. The products for all specialties

for the HCPCS code were then added together, yielding a specialty-weighted service specific risk factor reflecting the weighted malpractice costs across all specialties furnishing that procedure. The service specific risk factor was multiplied by the greater of the work RVU or PE clinical labor index for that service to reflect differences in the complexity and risk-of-service between services.

(a) *Low volume service codes:* As discussed previously in this section, service-specific MP RVUs are determined based on the weighted average risk factor(s) of the specialties that furnish the service. For rarely-billed Medicare services (that is, when CY 2013 claims data reflected allowed services of less than 100), we used only the risk factor of the dominant specialty as reflected in our claims data. Approximately 2,000 services met the criteria for "low volume." The dominant specialty for each "low volume" service was also determined from CY 2013 Medicare claims data. We continue to believe that a balanced approach between including all of the specialties in our claims data and the application of the dominant specialty for each low volume service is the most appropriate approach to the development of malpractice RVUs.

Step (5): Rescale for budget neutrality.

The statute requires that changes to fee schedule RVUs must be budget neutral. The current resource-based MP RVUs and the proposed resource-based MP RVUs were constructed using different malpractice premium data. Thus, the last step is to adjust for budget neutrality by rescaling the proposed MP RVUs so that the total proposed resource-based MP RVUs equal the total current resource-based MP RVUs.

The proposed resource-based MP RVUs are shown in Addendum B, which is available on the CMS Web site under the supporting documents section of the CY 2015 PFS rule at <http://www.cms.gov/PhysicianFeeSched/>. These values have been adjusted for budget neutrality on the basis of the most recent 2013 utilization data available. We will make a final budget neutrality adjustment in the final rule on the basis of the available 2013 utilization data at that time. We do not believe, however, that the final values will change significantly from the proposed values as a result of the final budget-neutrality adjustment.

Because of the differences in the sizes of the three fee schedule components, implementation of the resource-based MP RVU update will have much smaller payment effects than implementing updates of resource-based work RVUs

and resource-based PE RVUs. On average, work represents about 50.9 percent of payment for a service under the fee schedule, PE about 44.8 percent, and MP about 4.3 percent. Therefore, a 25 percent change in PE RVUs or work RVUs for a service would result in a change in payment of about 11 to 13 percent. In contrast, a corresponding 25 percent change in MP values for a service would yield a change in payment of only about 1 percent. Estimates of the effects on payment by specialty type can be found in section VI. of this proposed rule.

Additional information on our proposed methodology for updating the MP RVUs may be found in our contractor's report, "Report on the CY 2015 Update of the Malpractice RVUs," which is available on the CMS Web site. It is located under the supporting documents section of the CY 2015 PFS proposed rule located at <http://www.cms.gov/PhysicianFeeSched/>.

3. MP RVU Update for Anesthesia Services

Since payment for anesthesia services under the PFS is based upon a separate fee schedule, routine updates must be calculated in a different way than those for services for which payment is calculated based upon work, PE and MP RVUs. To apply certain updates to the anesthesia fee schedule, we usually develop proxy RVUs for individual anesthesia services. However, because work RVUs are integral to the MP RVU methodology and anesthesia services do not have work RVUs, the MP update process for anesthesia services is more complex than for services with work RVUs and clinical labor inputs. Notwithstanding these challenges, we believe that payment rates for anesthesia should reflect relative MP resource costs, including updates to reflect changes over time, as do other PFS payment rates. We are not proposing to include such an adjustment at this time because we believe it would be helpful to receive input from stakeholders on how we could address these challenges and develop a proposal to appropriately update the MP resource costs for anesthesia through future rulemaking. Therefore, we intend to propose an anesthesia adjustment for MP in the CY 2016 PFS proposed rule and are seeking comment in this rule about how to best do so.

An example of one possible approach would be to calculate imputed work RVUs and MP RVUs for the anesthesia fee schedule services using the work, PE, and MP shares of the anesthesia conversion factor. To reflect differences in the complexity and risk between

anesthesia fee schedule services we would then multiply the service-specific risk factor for each anesthesia fee schedule service by the imputed proxy work RVUs (both CY 2015 and Cy 2016 would be based on the same work RVUs) developed for each anesthesia service to determine updated proxy MP RVUs for the CY 2016 year. The aggregate difference between the imputed MP RVUs for CY 2015 the proxy MP RVUs for CY 2016 (both based on the same work RVUs) would be applied to the portion of the anesthesia conversion factor attributable to MP. However, we believe there may be drawbacks to this approach since it relies heavily on the proxy work and MP RVUs for individual anesthesia services. We are requesting public comments on this approach specifically, as well as comments on alternative approaches or methods for updating MP for services paid on the anesthesia fee schedule.

D. Geographic Practice Cost Indices (GPCIs)

1. Background

Section 1848(e)(1)(A) of the Act requires us to develop separate Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, PE, and MP). Although the statute requires that the PE and MP GPCIs reflect the full relative cost differences, section 1848(e)(1)(A)(iii) of the Act requires that the work GPCIs reflect only one-quarter of the relative cost differences compared to the national average. In addition, section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for services furnished in Alaska beginning January 1, 2009, and section 1848(e)(1)(I) of the Act sets a permanent 1.0 PE GPCI floor for services furnished in frontier states (as defined in section 1848(e)(1)(I) of the Act) beginning January 1, 2011. Additionally, section 1848(e)(1)(E) of the Act provided for a 1.0 floor for the work GPCIs, which was set to expire on March 31, 2014. However, section 102 of the PAMA extended application of the 1.0 floor to the work GPCI through March 31, 2015.

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(C) of the Act requires that “if more than 1 year has elapsed since the date of the last previous adjustment, the adjustment to be applied in the first year of the next adjustment shall be ½ of the adjustment

that otherwise would be made.” We completed a review and finalized updated GPCIs in the CY 2014 PFS final rule with comment period (78 FR 74390). Since the last GPCI update had been implemented over 2 years, CY 2011 and CY 2012, we phased in ½ of the latest GPCI adjustment in CY 2014. We also revised the cost share weights that correspond to all three GPCIs in the CY 2014 PFS final rule. We calculated a corresponding geographic adjustment factor (GAF) for each PFS locality. The GAFs are a weighted composite of each area’s work, PE and MP GPCIs using the national GPCI cost share weights. Although the GAFs are not used in computing the fee schedule payment for a specific service, we provide them because they are useful in comparing overall areas costs and payments. The actual effect on payment for any actual service will deviate from the GAF to the extent that the proportions of work, PE and MP RVUs for the service differ from those of the GAF.

As previously noted, section 102 of the PAMA extended the 1.0 work GPCI floor through March 31, 2015. Therefore, the CY 2015 work GPCIs and summarized GAFs have been revised to reflect the 1.0 work floor. Additionally, as required by sections 1848(e)(1)(G) and 1848(e)(1)(I) of the Act, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI floor for frontier states are permanent, and therefore, applicable in CY 2015. See Addenda D and E for the CY 2015 GPCIs and summarized GAFs.

As discussed in the CY 2014 PFS final rule with comment period (78 FR 74380) the updated GPCIs were calculated by a contractor to CMS. We used updated Bureau of Labor and Statistics Occupational Employment Statistics (BLS OES) data (2009 through 2011) as a replacement for 2006 through 2008 data for purposes of calculating the work GPCI and the employee compensation component and purchased services component of the PE GPCI. We also used updated U.S. Census Bureau American Community Survey (ACS) data (2008 through 2010) as a replacement for 2006 through 2008 data for calculating the office rent component of the PE GPCI. To calculate the MP GPCI we used updated malpractice premium data (2011 and 2012) from state departments of insurance as a replacement for 2006 through 2007 premium data. We also noted that we do not adjust the medical equipment, supplies and other miscellaneous expenses component of the PE GPCI because we continue to believe there is a national market for these items such that there is not a significant geographic variation in

relative costs. Additionally, we updated the GPCI cost share weights consistent with the modifications made to the 2006-based MEI cost share weights in the CY 2014 final rule. As discussed in the CY 2014 final rule with comment period, use of the revised GPCI cost share weights changed the weighting of the subcomponents within the PE GPCI (employee wages, office rent, purchased services, and medical equipment and supplies). For a detailed explanation of how the GPCI update was developed, see the CY 2014 final rule with comment period (78 FR 74380 through 74391).

2. Proposed Changes to the GPCI Values for the Virgin Islands Payment Locality

The current methodology for calculating locality level GPCIs relies on the acquisition of county level data (when available). Where data for a specific county are not available, we assign the data from a similar county within the same payment locality. The Virgin Islands have county level equivalents identified as districts. Specifically, the Virgin Islands are divided into 3 districts: Saint Croix; Saint Thomas; and Saint John. These districts are, in turn, subdivided into 20 sub-districts. Although the Virgin Islands are divided into these county equivalents, county level data for the Virgin Islands are not represented in the BLS OES wage data. Additionally, the ACS, which is used to calculate the rent component of the PE GPCI, is not conducted in the Virgin Islands, and we have not been able to obtain malpractice insurance premium data for the Virgin Islands payment locality. Given the absence of county level wage and rent data and the insufficient malpractice premium data by specialty type, we have historically set the three GPCI values for the Virgin Islands payment locality at 1.0.

For CY 2015, we explored using the available data from the Virgin Islands to more accurately reflect the geographic cost differences for the Virgin Islands payment locality as compared to other PFS localities. Although county level data for the Virgin Islands are not represented in the BLS OES wage data, aggregate territory level BLS OES wage data are available. We believe that using aggregate territory level data is a better reflection of the relative cost differences of operating a medical practice in the Virgin Islands payment locality as compared to other PFS localities than the current approach of assigning a value of 1.0. At our request, our contractor calculated the work GPCI, and the employee wage component and purchased services component of the PE

GPCI, for the Virgin Islands payment locality using aggregated 2009 through 2011 BLS OES data.

As discussed above, the ACS is not conducted in the Virgin Islands and we have not been able to obtain malpractice

premium data for the Virgin Islands payment locality. Therefore, we assigned a value of 1.0 for the rent index of the PE GPCI and to the MP GPCI.

Table 16 illustrates the percentage change in GPCI values and summarized

GAF for the Virgin Islands payment locality resulting from using BLS OES wage data to calculate the work GPCI and PE GPCI.

TABLE 16—IMPACT OF USING TERRITORY-LEVEL VIRGIN ISLANDS DATA ON GPCI VALUES FOR THE VIRGIN ISLANDS PAYMENT LOCALITY

GPCI/GAF	1/1/2015 through 3/31/2015 (with 1.0 work GPCI floor)			4/1/2015 through 12/31/2015 (without 1.0 work GPCI floor)		
	Existing CY 2015 GPCI values*	Proposed CY 2015 GPCI values	Percent change	Existing CY 2015 GPCI values*	Proposed CY 2015 GPCI values	Percent change
Work GPCI	1.000	1.000	0.00%	0.998	0.975	-2.30
PE GPCI	1.005	0.960	-4.48%	1.005	0.960	-4.48
MP GPCI	0.996	0.996	0.00%	0.996	0.996	0.00
GAF	1.002	0.982	-2.00%	1.001	0.969	-3.20

*CY 2015 GPCIs and GAF reflect CMS OACT BN adjustment.

Using aggregate territory-level BLS OES wage data results in a -2.3 percent decrease in the work GPCI, a -4.48 percent decrease in the PE GPCI, and a -3.2 percent decrease to the GAF for the Virgin Islands payment locality. However, with the application of the 1.0 work GPCI floor, there is no change to the work GPCI and the overall impact of using actual BLS OES wage data on the Virgin Islands payment locality is only reflected by the change in PE GPCI (-4.48 percent) resulting in a -2.00 percent decrease to the GAF. As mentioned previously in this section, since we have not been able to obtain malpractice premium data for the Virgin Islands payment locality we maintained the MP GPCI at 1.0. As such, there is no change in the MP GPCI. We propose to use aggregate BLS OES wage data to calculate the work GPCI and employee wage component of the PE GPCI for the Virgin Islands payment locality beginning for CY 2015, and for future GPCI updates. We are specifically requesting public comments on this proposal. Additional information on our proposal to calculate GPCI values for the Virgin Islands payment locality may be found in our contractor's report, "Revised Final Report on the CY 2014 Update of the Geographic Practice Cost Index for the Medicare Physician Fee Schedule," which is available on the CMS Web site. It is located under the supporting documents section of the CY 2015 PFS proposed rule located at <http://www.cms.gov/PhysicianFeeSched/>.

E. Medicare Telehealth Services

1. Billing and Payment for Telehealth Services

Generally, for Medicare payments to be made for telehealth services under the PFS several conditions must be met. Specifically, the service must be on the Medicare list of telehealth services and meet all of the following other requirements for coverage:

- The service must be furnished via an interactive telecommunications system.
- The practitioner furnishing the service must meet the telehealth requirements, as well as the usual Medicare requirements.
- The service must be furnished to an eligible telehealth individual.
- The individual receiving the services must be in an eligible originating site.

When all of these conditions are met, Medicare pays an originating site fee to the originating site and provides separate payment to the distant site practitioner for furnishing the service.

Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when furnished via a telecommunications system. We first implemented this provision, which was effective October 1, 2001, in the CY 2002 PFS final rule with comment period (66 FR 55246). We established a process in the CY 2003 PFS final rule with comment period (67 FR 79988) for annual updates to the list of Medicare telehealth services as required by section 1834(m)(4)(F)(ii) of the Act.

As specified in regulations at § 410.78(b), we generally require that a

telehealth service be furnished via an interactive telecommunications system. Under § 410.78(a)(3), an interactive telecommunications system is defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Telephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system. An interactive telecommunications system is generally required as a condition of payment; however, section 1834(m)(1) of the Act allows the use of asynchronous "store-and-forward" technology when the originating site is part of a federal telemedicine demonstration program in Alaska or Hawaii. As specified in regulations at § 410.78(a)(1), store-and-forward means the asynchronous transmission of medical information from an originating site to be reviewed at a later time by the practitioner at the distant site.

Medicare telehealth services may be furnished to an eligible telehealth individual notwithstanding the fact that the practitioner furnishing the telehealth service is not at the same location as the beneficiary. An eligible telehealth individual means an individual enrolled under Part B who receives a telehealth service furnished at an originating site.

Practitioners furnishing Medicare telehealth services are reminded that the telehealth service provision is subject to the same non-discrimination laws as other services, including the effective communication requirements for persons with disabilities of section 504 of the Rehabilitation Act and language

access for persons with limited English proficiency, as required under Title VI of the Civil Rights Act of 1964. For more information, see <http://www.hhs.gov/ocr/civilrights/resources/specialtopics/hospitalcommunication>.

Practitioners furnishing Medicare telehealth services submit claims for telehealth services to the Medicare contractors that process claims for the service area where their distant site is located. Section 1834(m)(2)(A) of the Act requires that a practitioner who furnishes a telehealth service to an eligible telehealth individual be paid an amount equal to the amount that the practitioner would have been paid if the service had been furnished without the use of a telecommunications system.

Originating sites, which are defined as “one of the specified sites where an eligible telehealth individual is located at the time the service is being furnished via a telecommunications system,” are paid under the PFS for serving as an originating site for telehealth services. The statute specifies both the types of entities that can serve as originating sites and geographic qualifications for originating sites. With regard to geographic qualifications, our regulations at § 410.78 (b)(4) limit originating sites to those located in rural health professional shortage areas (HPSAs) or in a county that is not included in a metropolitan statistical areas (MSAs). Historically, we have defined rural HPSAs to be those located outside of, MSAs. Effective January 1, 2014, we modified the regulations regarding originating sites to define rural HPSAs as those located in rural census tracts as determined by the Office of Rural Health Policy (ORHP) of the Health Resources and Services Administration (HRSA) (78 FR 74811). Defining “rural” to include geographic areas located in rural census tracts within MSAs allows for broader inclusion of sites within HPSAs as telehealth originating sites. Adopting the more precise definition of “rural” for this purpose expands access to health care services for Medicare beneficiaries located in rural areas. HRSA has developed a Web site tool to provide assistance to potential originating sites to determine their geographic status. To access this tool, see the CMS Web site at www.cms.gov/telehealth/.

An entity participating in a federal telemedicine demonstration project that has been approved by, or received funding from, the Secretary as of December 31, 2000 is eligible to be an originating site regardless of its geographic location.

Effective January 1, 2014, we also changed our policy so that geographic eligibility for an originating site would be established and maintained on an annual basis, consistent with other telehealth payment policies (78 FR 74400). Geographic eligibility for Medicare telehealth originating sites for each calendar year is now based upon the status of the area as of December 31 of the prior calendar year.

For a detailed history of telehealth payment policy, see 78 FR 74399.

2. Adding Services to the List of Medicare Telehealth Services

As noted previously, in the December 31, 2002 **Federal Register** (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services. This process provides the public with an ongoing opportunity to submit requests for adding services. We assign any qualifying request to make additions to the list of telehealth services to one of two categories. In the November 28, 2011 **Federal Register** (76 FR 73102), we finalized revisions to criteria that we use to review requests in the second category. The two categories are:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the list of telehealth services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter, a practitioner with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the proposed service; for example, the use of interactive audio and video equipment.

- *Category 2:* Services that are not similar to the current list of telehealth services. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to deliver the service produces demonstrated clinical benefit to the patient. In reviewing these requests, we look for evidence indicating that the use of a telecommunications system in furnishing the candidate telehealth service produces clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the

diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

For the list of covered telehealth services, see the CMS Web site at www.cms.gov/telehealth/. Requests to add services to the list of Medicare telehealth services must be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. For example, qualifying requests submitted before the end of CY 2014 will be considered for the CY 2016 proposed rule. Each request to add a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as a vehicle for making changes to the list of Medicare telehealth services, requestors should be advised that any information submitted is subject to public disclosure for this purpose. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to mail these requests, see the CMS Web site at www.cms.gov/telehealth/.

3. Submitted Requests to the List of Telehealth Services for CY 2015

Under our existing policy, we add services to the telehealth list on a category 1 basis when we determine that they are similar to services on the existing telehealth list with respect to the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we

stated in the CY 2012 proposed rule (76 FR 42826), we believe that the category 1 criteria not only streamline our review process for publically requested services that fall into this category, the criteria also expedite our ability to identify codes for the telehealth list that resemble those services already on this list.

a. Submitted Requests

We received several requests in CY 2013 to add various services as Medicare telehealth services effective for CY 2015. The following presents a discussion of these requests, and our proposals for additions to the CY 2015 telehealth list. Of the requests received, we find that the following services are sufficiently similar to psychiatric diagnostic procedures or office/outpatient visits currently on the telehealth list to qualify on a category one basis. Therefore, we propose to add the following services to the telehealth list on a category 1 basis for CY 2015:

- CPT codes 90845 (Psychoanalysis); 90846 (family psychotherapy (without the patient present)); and 90847 (family psychotherapy (conjoint psychotherapy) (with patient present));

- CPT codes 99354 (prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (list separately in addition to code for office or other outpatient evaluation and management service)); and, 99355 (prolonged service in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (list separately in addition to code for prolonged service)); and,

- HCPCS codes G0438 (annual wellness visit; includes a personalized prevention plan of service (pps), initial visit; and, G0439 (annual wellness visit, includes a personalized prevention plan of service (pps), subsequent visit).

We also received requests to add services to the telehealth list that do not meet our criteria for being on the Medicare telehealth list. We are not proposing to add the following procedures for the reasons noted:

- CPT codes 92250 (fundus photography with interpretation and report); 93010 (electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), 93307 (echocardiography, transthoracic, real-time with image documentation (2d), includes m-mode recording, when performed, complete, without spectral or color Doppler echocardiography); 93308 (echocardiography, transthoracic, real-time with image documentation (2d), includes m-mode recording, when

performed, follow-up or limited study); 93320 (Doppler echocardiography, pulsed wave and/or continuous wave with spectral display (list separately in addition to codes for echocardiographic imaging); complete); 93321 (Doppler echocardiography, pulsed wave and/or continuous wave with spectral display (list separately in addition to codes for echocardiographic imaging); follow-up or limited study (list separately in addition to codes for echocardiographic imaging); and 93325 (Doppler echocardiography color flow velocity mapping (list separately in addition to codes for echocardiography).

These services include a technical component (TC) and a professional component (PC). By definition the TC portion of these services needs to be furnished in the same location as the patient and thus cannot be furnished via telehealth. The PC portion of these services could be furnished without the patient being present in the same location. (Note: Sometimes an entirely different code may be used when only the PC portion of the service is being furnished and other times the same CPT code is used with a -26 modifier.) For example, the interpretation by a physician of an actual electrocardiogram or electroencephalogram tracing that has been transmitted electronically, can be furnished without the patient being present in the same location as the physician. It is not necessary to consider including the PC of these services on the telehealth list for these services to be covered when furnished remotely. Moreover, when these services are furnished remotely they do not meet the definition of Medicare telehealth services under section 1834(m) of the Act. Rather, these remote services are considered physicians' services in the same way as services that are furnished in-person without the use of telecommunications technology; they are paid under the same conditions as in-person physicians' services (with no requirements regarding permissible originating sites), and should be reported in the same way as other physicians' services (that is, without the -GT or -GQ modifiers).

- CPT codes 96103 (psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI), administered by a computer, with qualified health care professional interpretation and report); and, 96120 (neuropsychological testing (eg, Wisconsin Card Sorting Test), administered by a computer, with qualified health care professional interpretation and report). These

services involve testing by computer, can be furnished remotely without the patient being present, and are payable in the same way as other physicians' services. These remote services are not Medicare telehealth services as defined under the Act, therefore, telehealth restrictions do not apply to these services.

- CPT codes 90887 (interpretation or explanation of results of psychiatric, other medical examinations and procedures, or other accumulated data to family or other responsible persons, or advising them how to assist patient); 99090 (analysis of clinical data stored in computers (eg, ECGs, blood pressures, hematologic data); 99091 (collection and interpretation of physiologic data (eg, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time); 99358 (prolonged evaluation and management service before and/or after direct patient care; first hour); and 99359 (prolonged evaluation and management service before and/or after direct patient care; each additional 30 minutes (list separately in addition to code for prolonged service). These services are not separately payable by Medicare. It would be inappropriate to include services as telehealth services when Medicare does not otherwise make a separate payment for them.

- CPT codes 96101 (psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report); 96102 (psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, eg, MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face); 96118 (neuropsychological testing (eg, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report); and, 96119 (neuropsychological testing (eg, Halstead-Reitan Neuropsychological

Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face). These services are not similar to other services on the telehealth list, as they require close observation of how a patient responds. The requestor did not submit evidence supporting the clinical benefit of furnishing these services on a category 2 basis. As such, we are not proposing to add these services to the list of telehealth services.

- CPT codes 57452 (colposcopy of the cervix including upper/adjacent vagina; 57454 colposcopy of the cervix including upper/adjacent vagina; with biopsy(s) of the cervix and endocervical curettage); and, 57460 (colposcopy of the cervix including upper/adjacent vagina; with loop electrode biopsy(s) of the cervix). These services are not similar to other services on the telehealth service list. Therefore, it would not be appropriate to add them on a category 1 basis. The requestor did not submit evidence supporting the clinical benefit of furnishing these services on a category 2 basis. As such, we are not proposing to add these services to the list of telehealth services.

- HCPCS code M0064 (brief office visit for the sole purpose of monitoring or changing drug prescriptions used in the treatment of mental psychoneurotic and personality disorders) is being deleted for CY 2015. This code was created specifically to describe a service that is not subject to the statutory outpatient mental health limitation, which limited payment amounts for certain mental health services. Section 102 of the Medicare Improvements for Patients and Providers Act (Pub. L. 110–275, enacted on July 15, 2008) (MIPPA) required that the 62.5 percent outpatient mental health treatment limitation, in effect since the inception of the Medicare program, be reduced over four years. This limitation limits the percentage of allowed charges that the Medicare program paid for mental health treatment services, thus creating a larger share of beneficiary coinsurance for these services than other Medicare PFS services. Effective January 1, 2014, the limitation percentage is 100 percent, of which Medicare pays 80 percent and the beneficiary pays 20 percent, resulting in the same beneficiary cost sharing as other PFS services. Since the statute was amended to phase out the limitation, and the phase-out was complete effective January 1, 2014, Medicare no longer has a need to distinguish services subject to the mental health limitation from those that

are not. Accordingly, the appropriate CPT code can now be used to bill Medicare for the services that would have otherwise been reported using M0064 and M0064 will be eliminated as a telehealth service, effective January 1, 2015.

- Urgent Dermatologic Problems and Wound Care—The American Telehealth Association (ATA) cited several studies to support adding dermatology services to the telehealth list. However, the request did not include specific codes. Since we did not have specific codes to consider for this request, we cannot evaluate whether the services are appropriate for addition to the Medicare telehealth services list. We note that some of the services that the requester had in mind may be billed under the telehealth office visit codes or the telehealth consultation G-codes.

In summary, we are proposing to add the following codes to the telehealth list on a category 1 basis:

- Psychotherapy services CPT codes 90845, 90846 and 90847.
- Prolonged service office CPT codes 99354 and 99355.
- Annual wellness visit HCPCS codes G0438 and G0439.

3. Modifying § 410.78 Regarding List of Telehealth Services

As discussed in section II.E.2. of this proposed rule, under the statute, we created an annual process for considering the addition of services to the Medicare telehealth list. Under this process, we propose services to be added to the list in the proposed rule in response to public nominations or our own initiative and seek public comments on our proposals. After consideration of public comments, we finalize additions to the list in the final rule. We also amended the regulation at § 410.78(b) each year to include the description of the added services. Because the list of Medicare telehealth services has grown quite lengthy, and given the many other mechanisms by which we can make the public aware of the list of Medicare telehealth services for each year, we are proposing to revise § 410.78(b) by deleting the description of the individual services for which Medicare payment can be made when furnished via telehealth. We would continue our current policy to address requests to add to the list of telehealth services through the PFS rulemaking process so that the public would have the opportunity to comment on additions to the list. We are also proposing to revise § 410.78(f) to indicate that a list of Medicare telehealth codes and descriptors is available on the CMS Web site.

F. Valuing New, Revised and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since its inception it has also been a priority to revalue services regularly to assure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially this was accomplished primarily through the five-year review process, which resulted in revised RVUs for CY 1997, CY 2002, CY 2007, and CY 2012. Under the five-year review process, revisions in RVUs were proposed in a proposed rule and finalized in a final rule. In addition to the five-year reviews, in each year beginning with CY 2009, CMS and the RUC have identified a number of potentially misvalued codes using various identification screens, such as codes with high growth rates, codes that are frequently billed together, and high expenditure codes. Section 3134 of the Affordable Care Act codified the potentially misvalued code initiative under section 1848(c)(2)(K) of the Act.

In the CY 2012 rulemaking process, we proposed and finalized consolidation of the five-year review and the potentially misvalued code activities into an annual review of potentially misvalued codes in order to avoid redundancies in these efforts and better accomplish our goal of assuring regular assessment of code values. Under the consolidated process, we issue interim final RVUs for all revaluations and new codes in the PFS final rule with comment period, and make payment based upon those values during the calendar year covered by the final rule. (Changes in the PFS methodology that may affect valuations of a variety of codes are issued as proposals in the proposed rule). We consider and respond to any public comments on the interim final values in the final rule with comment period for the subsequent year. When consolidating these processes, we indicated that it was appropriate to establish interim values for new, revised and potentially misvalued codes because of the incongruity between the PFS rulemaking cycle and the release of codes by the AMA CPT Editorial Panel and the RUC review process. We stated that if we did not establish interim final values for revalued codes in the final rule with comment period, “a delay in implementing revised values for codes that have been identified as misvalued would perpetuate payment for the services at a rate that does not appropriately reflect the relative

resources involved in furnishing the service and would continue unwarranted distortion in the payment for other services across the PFS.” We also reiterated that if we did not establish interim final values for new and revised codes, we would either have to delay the use of new and revised codes for one year, or permit each Medicare contractor to establish its own payment rate for these codes. We stated, “We believe it would be contrary to the public interest to delay adopting values for new and revised codes for the initial year, especially since we have an opportunity to receive significant input from the medical community [through the RUC] before adopting the values, and the alternatives could produce undesirable levels of uncertainty and inconsistency in payment for a year.”

1. Current Process for Valuing New, Revised, and Potentially Misvalued Codes

Under the process finalized in the CY 2012 PFS final rule with comment period, in each year’s proposed rule, we propose specific codes and/or groups of codes that we believe may be appropriate to consider under our potentially misvalued code initiative. As part of our process for developing the list of proposed potentially misvalued codes, we consider public nominations for potentially misvalued codes under a process also established in the CY 2012 PFS final rule with comment period. If appropriate, we include such codes in our proposed potentially misvalued code list. In the proposed rule, we solicit comments on the proposed potentially misvalued codes. We then respond to comments and establish a final list of potentially misvalued codes in the final rule for that year. These potentially misvalued codes are reviewed and revalued, if appropriate, in subsequent years. In addition, the RUC regularly identifies potentially misvalued codes using screens that have previously been identified by CMS, such as codes performed together more than 75 percent of the time.

Generally, the first step in revaluing codes that have been identified as potentially misvalued is for the RUC to review these codes through its standard process, which includes active involvement of national specialty societies for the specialties that ordinarily use the codes. Frequently, the RUC’s discussion of potentially misvalued codes will lead the CPT Editorial Panel to make adjustments to the codes involved, such as bundling of codes, creation of new codes or revisions of code descriptors. The AMA

has estimated that 75 percent of all annual CPT coding changes result from the potentially misvalued code initiative.

The RUC provides CMS with recommendations for the work values and direct PE inputs for the codes we have identified as potentially misvalued codes or, in the case of a coding revision, for the new or revised codes that will replace these potentially misvalued codes. (This process is also applied to codes that the RUC identifies using code screens that we have identified, and to new or revised codes that are issued for reasons unrelated to the potentially misvalued code process). Generally, we receive the RUC recommendations concurrently for all codes in the same family as the potentially misvalued code(s). We believe it is important to evaluate and establish appropriate work and MP RVUs and direct PE inputs for an entire code family at the same time to avoid rank order anomalies and to maintain appropriate relativity among codes. We generally receive the RUC recommendations for the code or replacement code(s) within a year or two following the identification of the code as potentially misvalued.

We consider the RUC recommendations along with other information that we have, including information submitted by other stakeholders, and establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there are coding changes in the final rule with comment period for a year. There is a 60-day period for the public to comment on those interim final values after we issue the final rule. For services furnished during the calendar year following the publication of interim final rates, we pay for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we consider and respond to public comments received on the interim final values, and make any appropriate adjustments to values based on those comments. We then typically finalize the values for the codes.

As we discussed in the CY 2012 PFS final rule with comment period, we adopted this consolidated review process to combine all coding revaluations into one annual process allowing for appropriate consideration of relativity in and across code families. In addition, this process assures that we have the benefit of the RUC recommendations for all codes being valued.

2. Concerns With Current Process.

Some stakeholders who have experienced reductions in payments as the result of interim final valuations have objected to the process by which we revise or establish values for new, revised, and potentially misvalued codes. Some have stated that they did not receive notice of the possible reductions before they occurred. Generally, stakeholders are aware that we are considering changes in the payment rates for particular services either because CPT has made changes to codes or because we have identified the codes as potentially misvalued. As the RUC considers the appropriate value for a service, representatives of the specialties that use the codes are involved in the process. The RUC usually surveys physicians or other practitioners who furnish the services described by the codes regarding the time it takes to furnish the services, and representatives of the specialty(ies) also participate in the RUC meetings where recommendations for work RVUs and direct PE inputs are considered. Through this process, representatives of the affected specialties are generally aware of the RUC recommendations.

Some stakeholders have asserted that even when they are aware that the RUC has made recommendations, they have no opportunity to respond to the RUC recommendations before we consider them in adopting interim final values because the RUC actions and recommendations are not public. Some stakeholders have also said that the individuals who participate in the RUC review process are not able to share the recommendations because they have signed a confidentiality agreement. We note, however, that at least one specialty society has raised funds via its Web site to fight a “pending cut” based upon its knowledge of RUC recommendations for specific codes prior to CMS action on the recommendation. Additionally, some stakeholders have pointed out that some types of suppliers that are paid under the PFS are not permitted to participate in the RUC process at all.

We recognize that some stakeholders, including those practitioners represented by societies that are not participants in the RUC process, may not be aware of the specifics of the RUC recommendations before we consider them in establishing interim final values for new, revised, and potentially misvalued codes. We note that, as described above, before we review a service as a potentially misvalued code, we go through notice and comment rulemaking to identify it as a potentially misvalued code. Thus, the public has

notice and an opportunity to comment on whether we should review the values for a code before we finalize the code as potentially misvalued and begin the valuation process. As a result, all stakeholders should be aware that a particular code is being considered as potentially misvalued and that we may establish revised interim final values in a subsequent final rule with comment period. As noted above, there may be some codes for which we receive RUC recommendations based upon their identification by the RUC through code screens that we establish. These codes are not specifically identified by CMS through notice and comment rulemaking as potentially misvalued codes. We recognize that if stakeholders are not monitoring RUC activities or evaluating Medicare claims data, they may be unaware that these codes are being reviewed and could be revalued on an interim final basis in a final rule with comment period for a year.

In recent years, we have increased our scrutiny of the RUC recommendations and have increasingly found cause to modify the values recommended by the RUC in establishing interim final values under the PFS. Sometimes we also find it appropriate, on an interim final basis, to refine how the CPT codes are to be used for Medicare services or to create G-codes for reporting certain services to Medicare. Some stakeholders have objected to such interim final decisions because they do not learn of the CMS action until the final rule with comment period is issued. They believe they do not have an opportunity to meaningfully comment and for CMS to address their comments before the coding or valuation decision takes effect.

We received comments on the CY 2014 PFS final rule with comment period suggesting that the existing process for review and adoption of interim final values for new, revised, and misvalued codes violates section 1871(a)(2) of the Act, which prescribes the rulemaking requirements for the agency in establishing payment rates. In response to those commenters, we note that the process we use to establish interim final rates is in full accordance with the statute and we do not find this a persuasive reason to consider modifying the process that we use to establish PFS rates.

Our recent revaluation of the four epidural injection codes provides an example of the concerns that have been expressed with the existing process. In the CY 2014 PFS final rule with comment period, we established interim final values for four epidural injection codes, which resulted in payment reductions for the services when

furnished in the office setting of between 35 percent and 56 percent. (In the facility setting, the reductions range from 17 percent to 33 percent). One of these codes had been identified as a potentially misvalued code 2 years earlier. The affected specialties had been involved in the RUC process and were generally aware that the family of codes would be revalued on an interim basis in an upcoming rule. They were also aware that the RUC had made significant changes to the direct PE inputs, including removal of the radiographic-fluoroscopy room, which explains, in large part, the reduction to values in the office setting. The societies representing the affected specialty were also aware of significant reductions in the RUC-recommended "time" to furnish the procedures based on the most recent survey of practitioners who furnish the services, which resulted in reductions in both the work and PE portion of the values. Although the specialties were aware of the changes that the RUC was recommending to direct PE inputs, they were not specifically aware of how those changes would affect the values and payment rate. In addition, we decreased the work RVUs for these procedures because we found the RUC-recommended work RVUs did not adequately reflect the RUC-recommended decreases in time. This decision is consistent with our general practice when the best available information shows that the time involved in furnishing the service has gone down, and in the absence of information suggesting an increase in work intensity. Since the interim final values for these codes were issued in the CY 2014 PFS final rule with comment period, we have received numerous comments that will be useful to us as we consider finalizing values for these codes. If we had followed a process that involved proposing values for these codes in a proposed rule, we would have been able to consider the additional information contained in these comments prior to making payments for the services based upon revised values. (See section II.B.3.b.2 of this proposed rule for a discussion of proposed valuation of these epidural injection codes for CY 2015).

3. Alternatives to the Current Process

Although we continue to believe the existing process for new, revised and potentially misvalued codes is an appropriate one given the incongruity between our rulemaking schedule and the CPT and RUC schedules, given our heightened review of the RUC recommendations and the increased concerns expressed by some

stakeholders, we believe that an assessment of our process for valuing these codes is warranted. To that end, we have considered potential alternatives to address the timing and rulemaking issues associated with establishing values for new, revised and potentially misvalued codes (as well as for codes within the same families as these codes). Specifically, we have explored three alternatives to our current approach:

- Propose work and MP RVUs and direct PE inputs for all new, revised and potentially misvalued codes in a proposed rule.
- Propose changes in work and MP RVUs and direct PE inputs in the proposed rule for new, revised, and potentially misvalued codes for which we receive RUC recommendations in time; continue to establish interim final values in the final rule for other new, revised, and potentially misvalued codes.
- Increase our efforts to make available more information about the specific issues being considered in the course of developing values for new, revised and potentially misvalued codes to increase transparency, but without making changes to the existing process for establishing values.

A discussion of each of these alternatives follows.

(a) Propose work and MP RVUs and direct PE inputs for new, revised and potentially misvalued codes in the proposed rule:

Under this approach, we would evaluate the RUC recommendations for all new, revised, and potentially misvalued codes, and include proposed work and MP RVUs and direct PE inputs for the codes in the first available PFS proposed rule. We would receive and consider public comments on those proposals and establish final values in the final rule. The primary obstacle to this approach relates to the current timing of the CPT coding changes and RUC activities. Under the current calendar, all CPT coding changes and most RUC recommendations are not available to us in time to include proposed values for all codes in the proposed rule for that year.

Therefore, if we were to adopt this proposal, which would require us to propose changes in inputs before we revalue codes based upon those values, we would need a mechanism to pay for services for which the existing codes would no longer be available or for which there would be changes for a given year.

As we noted in the CY 2012 PFS final rule with comment period, the RUC recommendations are an essential

element that we consider when valuing codes. Likewise, we recognize the significant contribution that the CPT Editorial Panel makes to the success of the potentially misvalued code initiative through its consideration and adoption of coding changes. Although we have increased our scrutiny of the RUC recommendations in recent years and accepted fewer of the recommendations without making our own refinements, the CPT codes and the RUC recommendations continue to play a major role in our valuations. For many codes, the surveys conducted by specialty societies as part of the RUC process are the best data that we have regarding the time and intensity of work. The RUC determines the criteria and the methodology for those surveys. It also reviews the survey results. This process allows for development of survey data that are more reliable and comparable across specialties and services than would be possible without having the RUC at the center of the survey vetting process. In addition, the debate and discussion of the services at the RUC meetings in which CMS staff participate provides a good understanding of what the service entails and how it compares to other services in the family, and to services furnished by other specialties. The debate among the specialties is also an important part of this process. Although we increasingly consider data and information from many other sources, and we intend to expand the scope of those data and sources, the RUC recommendations remain a vital part of our valuation process.

Thus, if we were to adopt this approach, we would need to address how to make payment for the services for which new or revised codes take effect for the following year but for which we did not receive RUC recommendations in time to include proposed work values and PE inputs in the proposed rule. Because the annual coding changes are effective on January 1st of a year, we would need a mechanism for practitioners to report services and be paid appropriately during the interval between the date the code takes effect and the time that we receive RUC recommendations and complete rulemaking to establish values for the new and revised codes. One option would be to establish G-codes with identical descriptors to the predecessors of the new and revised codes and, to the fullest extent possible, carry over the existing values for those codes. This would effectively preserve the status quo for one year.

The primary advantage of this approach would be that the RVUs for all

services under the PFS would be established using a full notice and comment procedure, including consideration of the RUC recommendations, before they take effect. In addition to having the benefit of the RUC recommendations, this would provide the public the opportunity to comment on a specific proposal prior to it being implemented. This would be a far more transparent process, and would assure that we have the full benefit of stakeholder comments before establishing values.

One drawback to such a process is that the use of G-codes for a significant number of codes may create an administrative burden for CMS and for practitioners. Presumably, practitioners would need to use the G-codes to report certain services for purposes of Medicare, but would use the new or revised CPT codes to report the same services to private insurers. The number of G-codes needed each year would depend on the number of CPT code changes for which we do not receive the RUC recommendations in time to formulate a proposal to be included in the proposed rule for the year. To the extent that we receive the RUC recommendations for all new and revised codes in time to develop proposed values for inclusion in the proposed rule, there would be no need to use G-codes for this purpose.

Another drawback is that we would need to delay for at least one year the revision of values for any misvalued codes for which we do not receive RUC recommendations in time to include a proposal in the proposed rule. For a select set of codes, we would be continuing to use the RVUs for the codes for an additional year even though we know they do not reflect the most accurate resources. Since the PFS is a budget neutral system, misvalued services affect payments for all services across the fee schedule. On the other hand, if we were to take this approach, we would have the full benefit of public comments received on the proposed values for potentially misvalued services before implementing any revisions.

(b) Propose changes in work and MP RVUs and PE inputs in the proposed rule for new, revised, and potentially misvalued codes for which we receive RUC recommendations in time; continue to establish interim final values in the final rule for other new, revised, and potentially misvalued codes:

This alternative approach would allow for notice and comment rulemaking before we adopt values for some new, revised and potentially

misvalued codes (those for which we receive RUC recommendations in time to include a proposal in the proposed rule), while others would be valued on an interim final basis (those for which we do not receive the RUC recommendations in time). Under this approach, we would establish values in a year for all new, revised, and potentially misvalued codes, and there would be no need to provide for a mechanism to continue payment for outdated codes pending receipt of the RUC recommendations and completion of a rulemaking cycle. For codes for which we do not receive the RUC recommendations in time to include a proposal in the proposed rule for a year, there would be no change from the existing valuation process.

This would be a balanced approach that recognizes the benefits of a full opportunity for notice and comment rulemaking before establishing rates when timing allows, and the importance of establishing appropriate values for the current version of CPT codes and for potentially misvalued codes when the timing of the RUC recommendations does not allow for a full notice and comment procedure.

However, this alternative would go only part of the way toward addressing concerns expressed by some stakeholders. For those codes for which the RUC recommendations are not received in time for us to include a proposal in the proposed rule, Medicare payment for one year would still be based on inputs established without the benefit of full public notice and comment. Another concern with this approach is that it could lead to the valuation of codes within the same family at different times depending on when we receive RUC recommendations for each code within a family. As discussed previously, we believe it is important to value an entire code family together in order to make adjustments to account appropriately for relativity within the family and between the family and other families. If we receive RUC recommendations in time to propose values for some, but not for all, codes within a family, we would respond to comments in the final rule to establish final values for some of the codes while adopting interim final values for other codes within the same family. The differences in the treatment of codes within the same family could limit our ability to value codes within the same family with appropriate relativity. Moreover, under this alternative, the main determinant of how a code would be handled would be the timing of our receipt of the RUC recommendation for the code. Although

this approach would offer stakeholders the opportunity to comment on specific proposals in the proposed rule, the adoption of changes for a separate group of codes in the final rule could significantly change the proposed values simply due to the budget neutrality adjustments due to additional codes being valued in the final rule.

(c) Increase our efforts to make available more information about the specific issues being considered in the course of developing values for new, revised and potentially misvalued codes in order to increase transparency, but without a change to the existing process for establishing values:

The main concern with continuing our current approach is that stakeholders have expressed the desire to have adequate and timely information to permit the provision of relevant feedback to CMS for our consideration prior to establishing a payment rate for new, revised, and potentially misvalued codes. We could address some aspects of this issue by increasing the transparency of the current process. Specifically, we could make more information available on the CMS Web site before interim final values are established for codes. Examples of such information include an up-to-date list of all codes that have been identified as potentially misvalued, a list of all codes for which RUC recommendations have been received, and the RUC recommendations for all codes for which we have received them.

Although the posting of this information would significantly increase transparency for all stakeholders, it still would not allow for full notice and comment rulemaking procedures before values are established for payment purposes. Nor would it provide the public with advance information about whether or how we will make refinements to the RUC recommendations or coding decisions in the final rule with comment period. Thus, stakeholders would not have an opportunity to provide input on our potential modifications before interim final values are adopted.

4. Proposal To Modify the Process for Establishing Values for New, Revised, and Potentially Misvalued Codes

After considering the current process, including its strengths and weaknesses, and the alternatives to the current process described previously, we are proposing to modify our process to make all changes in the work and MP RVUs and the direct PE inputs for new, revised and potentially misvalued services under the PFS by proposing the changes in the proposed rule, beginning

with the PFS proposed rule for CY 2016. We propose to include proposed values for all new, revised and potentially misvalued codes for which we have complete RUC recommendations by January 15th of the preceding year. For the CY 2016 rulemaking process, we would include in the proposed rule proposed values for all services for which we have RUC recommendations by January 15, 2015.

For those codes for which we do not receive the RUC recommendations by January 15th of a year, we would delay revaluing the code for one year (or until we receive RUC recommendations for the code before January 15th of a year) and include proposed values in the following year's rule. Thus, we would include proposed values prior to using the new code (in the case of new or revised codes) or revising the value (in the case of potentially misvalued codes). Due to the complexities involved in code changes and rate setting, there could be some circumstances where, even when we receive the RUC recommendations by January 15th of a year, we are not able to propose values in that year's proposed rule. For example, we might not have recommendations for the whole family or we might need additional information to appropriately value these codes. In situations where it would not be appropriate or possible to propose values for certain new, revised, or potentially misvalued codes, we would treat them in the same way as those for which we did not receive recommendations before January 15th.

For new, revised, and potentially misvalued codes for which we do not receive RUC recommendations before January 15th of a year, we propose to adopt coding policies and payment rates that conform, to the extent possible, to the policies and rates in place for the previous year. We would adopt these conforming policies on an interim basis pending our consideration of the RUC recommendations and the completion of notice and comment rulemaking to establish values for the codes. For codes for which there is no change in the CPT code, it is a simple matter to continue the current valuation. For services for which there are CPT coding changes, it is more complicated to maintain the current payment rates until the codes can be valued through the notice and comment rulemaking process. Since the changes in CPT codes are effective on January 1st of a year, and we would not have established values for the new or revised codes (or other codes within the code family), it would not be practicable for Medicare to use those CPT codes. For codes that were revised or deleted

as part of the annual CPT coding changes, when the changes could affect the value of a code and we have not had an opportunity to consider the relevant RUC recommendations prior to the proposed rule, we propose to create G-codes to describe the predecessor codes to these codes. If CPT codes are revised in a manner that would not affect the resource inputs used to value the service, (for example, a grammatical change to CPT code descriptors,) we could use these revised codes and continue to pay at the rate developed through the use of the same resource inputs. For example, if a single CPT code was separated into two codes and we did not receive RUC recommendations for the two codes before January 15th of the year, we would assign each of those new codes an "I" status indicator (which denotes that the codes are "not valid for Medicare purposes"), and those codes could not be used for Medicare payment during the year. Instead we would create a G-code with the same description as the single predecessor CPT code and continue to use the same inputs as the predecessor CPT code for that G-code during the year.

For new codes that describe wholly new services, as opposed to new or revised codes that describe services which are already on the PFS, we would make every effort to work with the RUC to ensure that we receive recommendations in time to include proposed values in the proposed rule. However, if we do not receive timely recommendations from the RUC for such a code and we determine that it is in the public interest for Medicare to use a new code during the code's initial year, we would need to establish values for the code's initial year. As we do under our current policy, if we receive the RUC recommendations in time to consider them for the final rule, we propose to establish values for the initial year on an interim final basis subject to comment in the final rule. In the event we do not receive RUC recommendations in time to consider them for the final rule, or in other situations where it would not be appropriate to establish interim final values (for example, because of a lack of necessary information about the work or the price of the PE inputs involved), we would contractor price the code for the initial year.

We propose to modify the regulation at § 414.24 to codify the process described above.

We recognize that the use of G-codes, especially if there are many of them in a given year, may place an administrative burden on those who bill

for services under the PFS. We also recognize that, to the extent we do not receive RUC recommendations in time to include proposed values in the proposed rule, the most updated version of some CPT codes would not be used by the Medicare program for the first year. The AMA has been working to develop timeframes that would allow a much greater percentage of codes to be addressed in the proposed rule and has shared with us some plans to achieve this goal. We appreciate AMA's efforts and are hopeful that if this proposal is adopted the CPT Editorial Panel and the RUC ultimately will be able to adjust their timelines and processes so that most, if not all, of the annual coding changes and valuation recommendations can be addressed in the proposed rule prior to the effective date of the coding changes.

As discussed previously, the work of the AMA through the CPT Editorial Panel and the RUC are critical elements in the appropriate valuation of services under the PFS. We have proposed implementation of the revised CMS process for establishing values for new, revised, and potentially misvalued codes for CY 2016; but would consider alternative implementation dates to allow time for the CPT Editorial Panel and the RUC to adjust their schedules to avoid the necessity to use G-codes.

With regard to this proposal, we would be specifically interested in comments on the following topics:

- Is this proposal preferable to the present process? Is another one of the alternatives better?
- If we were to implement this proposal, is it better to move forward with the changes, or is more time needed to make the transition such that implementation should be delayed beyond CY 2016? What factors should we consider in selecting an implementation date?
- Are there alternatives other than the use of G-codes that would allow us to address the annual CPT changes through notice and comment rather than interim final rulemaking?

5. Refinement Panel

As discussed in the 1993 PFS final rule with comment period (57 FR 55938), we adopted a refinement panel process to assist us in reviewing the public comments on CPT codes with interim final work RVUs for a year and in developing final work values for the subsequent year. We decided the panel would be comprised of a multispecialty group of physicians who would review and discuss the work involved in each procedure under review, and then each panel member would individually rate

the work of the procedure. We believed establishing the panel with a multispecialty group would balance the interests of the specialty societies who commented on the work RVUs with the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services.

Following enactment of section 1848(c)(2)(K) of the Act, which required the Secretary periodically to review potentially misvalued codes and make appropriate adjustments to the RVUs, we reassessed the refinement panel process. As detailed in the CY 2011 PFS final rule with comment period (75 FR 73306), we continued using the established refinement panel process with some modifications.

As we consider changes to the processes for valuing codes, we are reassessing the role that the refinement panel process plays in the code valuation process. As we note in the discussion above, the current refinement panel process is tied to interim final values. It provides an opportunity for stakeholders to provide new clinical information that was not available at the time of the RUC valuation that might affect work RVU values that are adopted in the interim final value process. If our proposal to modify the valuation process for new, revised and potentially misvalued codes is adopted, there would no longer be interim final values except for a very few codes that describe totally new services. Thus, we are proposing to eliminate the refinement panel process. By using the proposed process for new, revised, and potentially misvalued codes, we believe that the consideration of additional clinical information and any other issues associated with the CMS proposed values could be addressed through the notice and public comment process. Similarly, prior to CY 2012 when we consolidated the five-year valuation, changes made as part of the five-year review process were addressed in the proposed rule and those codes were generally not subject to the refinement process. The notice and comment process would provide stakeholders with complete information on the basis and rationale for our proposed inputs and any relating coding policies. We also note that an increasing number of requests for refinement do not include new clinical information that was not available at the time of the RUC meeting that would justify a change in the work RVUs, in accordance with the current requirements for refinement. Thus, we do not believe the elimination of the refinement panel process would negatively affect the code

valuation process. We believe the proposed process, which includes a full notice and comment procedure before values are used for purposes of payment, offers stakeholders a better mechanism for providing any additional data for our consideration and discussing any concerns with our proposed values than the current refinement process.

G. Chronic Care Management (CCM)

As we discussed in the CY 2013 PFS final rule with comment period, we are committed to supporting primary care and we have increasingly recognized care management as one of the critical components of primary care that contributes to better health for individuals and reduced expenditure growth (77 FR 68978). Accordingly, we have prioritized the development and implementation of a series of initiatives designed to improve payment for, and encourage long-term investment in, care management services. These initiatives include the following programs and demonstrations:

- The Medicare Shared Savings Program (described in "Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations; Final Rule," which appeared in the November 2, 2011 **Federal Register** (76 FR 67802)).
- The testing of the Pioneer ACO model, designed for experienced health care organizations (described on the Center for Medicare and Medicaid Innovation's (Innovation Center's) Web site at <http://innovation.cms.gov/initiatives/Pioneer-ACO-Model/index.html>).
- The testing of the Advance Payment ACO model, designed to support organizations participating in the Medicare Shared Savings Program (described on the Innovation Center's Web site at <http://innovation.cms.gov/initiatives/Advance-Payment-ACO-Model/>).
- The Primary Care Incentive Payment (PCIP) Program (described on the CMS Web site at www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/PCIP-2011-Payments.pdf).
- The patient-centered medical home model in the Multi-payer Advanced Primary Care Practice (MAPCP) Demonstration designed to test whether the quality and coordination of health care services are improved by making advanced primary care practices more broadly available (described on the CMS Web site at www.cms.gov/Medicare/Demonstration-Projects/DemoProjectsEvalRpts/downloads/mapcpdemo_Factsheet.pdf).

- The Federally Qualified Health Center (FQHC) Advanced Primary Care Practice demonstration (described on the CMS Web site at http://www.cms.gov/Medicare/Demonstration-Projects/DemoProjectsEvalRpts/Downloads/FQHC_APCP_Demo_FAQsOct2011.pdf) and the Innovation Center's Web site at www.innovations.cms.gov/initiatives/FQHCs/index.html).

- The Comprehensive Primary Care (CPC) initiative (described on the Innovation Center's Web site at <http://innovations.cms.gov/initiatives/Comprehensive-Primary-Care-Initiative/index.html>). The CPC initiative is a multi-payer initiative fostering collaboration between public and private health care payers to strengthen primary care in certain markets across the country.

In addition, HHS leads a broad initiative focused on optimizing health and quality of life for individuals with multiple chronic conditions. HHS's Strategic Framework on Multiple Chronic Conditions outlines specific objectives and strategies for HHS and private sector partners centered on strengthening the health care and public health systems; empowering the individual to use self-care management with the assistance of a healthcare provider who can assess the patient's health literacy level; equipping care providers with tools, information, and other interventions; and supporting targeted research about individuals with multiple chronic conditions and effective interventions. Further information on this initiative is available on the HHS Web site at <http://www.hhs.gov/ash/initiatives/mcc/index.html>.

In coordination with all of these initiatives, we also have continued to explore potential refinements to the PFS that would appropriately value care management within Medicare's statutory structure for fee-for-service physician payment and quality reporting. For example, in the CY 2013 PFS final rule with comment period, we adopted a policy to pay separately for care management involving the transition of a beneficiary from care furnished by a treating physician during a hospital stay to care furnished by the beneficiary's primary physician in the community (77 FR 68978 through 68993).

In the CY 2014 PFS final rule with comment period, we finalized a policy to pay separately for care management services furnished to Medicare beneficiaries with two or more chronic conditions beginning in CY 2015 (78 FR 74414).

1. Valuation of CCM Services—GXXX1

CCM is a unique PFS service designed to pay separately for non-face-to-face care coordination services furnished to Medicare beneficiaries with two or more chronic conditions. (See 78 FR 74414 for a more complete description of the beneficiaries for whom this service may be billed.) In the CY 2014 PFS final rule with comment period, we indicated that, to recognize the additional resources required to provide CCM services to patients with multiple chronic conditions, we were creating the following code to use for reporting this service (78 FR 74422):

- *GXXX1* Chronic care management services furnished to patients with multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, that place the patient at significant risk of death, acute exacerbation/ decompensation, or functional decline; 20 minutes or more; per 30 days.

Although this service is unique in that it was created to separately pay for care management services, other codes include care management components. To value CCM, we compared it to other codes that involve care management. In doing so, we concluded that the CCM services were similar in work (time and intensity) to that of the non-face-to-face portion of transitional care management (TCM) services (CPT code 99495 (Transitional Care Management Services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within 2 business days of discharge Medical decision making of at least moderate complexity during the service period Face-to-face visit, within 14 calendar days of discharge)).

Accordingly, we used the work RVU and work time associated with the non-face-to-face portion of CPT code 99495 as a foundation to determine our proposed values for CCM services. Specifically, we are proposing a work RVU for *GXXX1* of 0.61, which is the portion of the work RVU for CPT code 99495 that remains after subtracting the work attributable to the face-to-face visit. (CPT code 99214 (office/outpatient visit est) was used to value CPT code 99495), which has a work RVU of 1.50.) Similarly, we are proposing a work time of 15 minutes for HCPCS code *GXXX1* for CY 2015 based on the time attributable to the non-face-to-face portion of CPT 99495. The work time file associated with this PFS proposed rule is available on the CMS Web site in the Downloads section for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee->

for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.

For direct PE inputs, we are proposing 20 minutes of clinical labor time. As established in the CY 2014 PFS final rule with comment period, in order to bill for this code, at least 20 minutes of CCM services must be furnished during the 30-day billing interval (78 FR 74422). Based upon input from stakeholders and the nature of care management services, we believe that many aspects of this service will be provided by clinical staff, and thus, clinical staff will be involved in the typical service for the full 20 minutes. The proposed CY 2015 direct PE input database reflects this input and is available on the CMS Web site under the supporting data files for the CY 2015 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The proposed PE RVUs included in Addendum B to this proposed rule reflect the RVUs that result from using these inputs to establish PE RVUs.

The proposed MP RVU was calculated using the weighted risk factors for the specialties that we believe will furnish this service. We believe this malpractice risk factor appropriately reflects the relative malpractice risk associated with furnishing CCM services. The MP RVU included in Addendum B of this proposed rule reflects the RVU that results from the application of this proposal.

2. CCM and TCM Services Furnished Incident to a Physician's Service Under General Physician Supervision

In the CY 2014 PFS final rule with comment period (75 FR 74425 through 74427), we discussed how the policies relating to services furnished incident to a practitioner's professional services apply to CCM services. (In this discussion, the term practitioner means both physicians and NPPs who are permitted to bill for services furnished incident to their own professional services.) Specifically, we addressed the policy for counting clinical staff time for services furnished incident to the billing practitioner's services toward the minimum amount of service time required to bill for CCM services.

We established an exception to the usual rules that apply to services furnished incident to the services of a billing practitioner. Generally, under the "incident to" rules, practitioners may bill for services furnished incident to their own services if the services meet the requirements specified in our

regulations at § 410.26. One of these requirements is that the “incident to” services must be furnished under direct supervision, which means that the supervising practitioner must be present in the office suite and be immediately available to provide assistance and direction throughout the service (but does not mean that the supervising practitioner must be present in the room where the service is furnished). We noted in last year’s PFS final rule with comment period that because one of the required elements of the CCM service is the availability to a beneficiary 24-hours-a-day, 7-days-a-week to address the patient’s chronic care needs (78 FR 74426) that we expect the beneficiary to be provided with a means to make timely contact with health care providers in the practice whenever necessary to address chronic care needs regardless of the time of day or day of the week. In those cases when the need for contact arises outside normal business hours, it is likely that the patient’s initial contact would be with clinical staff employed by the practice (for example, a nurse) and not necessarily with a practitioner. Under these circumstances, it would be unlikely that a practitioner would be available to provide direct supervision of the service.

Therefore, in the CY 2014 PFS final rule with comment period, we created an exception to the generally applicable requirement that “incident to” services must be furnished under direct supervision. Specifically, we finalized a policy to require only general, rather than direct, supervision when CCM services are furnished incident to a practitioner’s services outside of the practice’s normal business hours by clinical staff who are direct employees of the practitioner or practice. We explained that, given the potential risk to patients that the exception to direct supervision could create, we believed that it was appropriate to design the exception as narrowly as possible (78 FR 74426). The direct employment requirement was intended to balance the less stringent general supervision requirement by ensuring that there is a direct oversight relationship between the supervising practitioner and the clinical staff personnel who provide after hours services.

In this rule, we are proposing to revise the policy that we adopted in the CY 2014 PFS final rule with comment period, and to amend our regulations to codify the requirements for CCM services furnished incident to a practitioner’s services. Specifically, we are proposing to remove the requirement that, in order to count the

time spent by clinical staff providing aspects of CCM services toward the CCM time requirement, the clinical staff person must be a direct employee of the practitioner or the practitioner’s practice. (We note that the existing requirement that these services be provided by clinical staff, specifically, rather than by other auxiliary personnel is an element of the service for both CCM and TCM services, rather than a requirement imposed by the “incident to” rules themselves.) We are also proposing to remove the restriction that services provided by clinical staff under general (rather than direct) supervision may be counted only if they are provided outside of the practice’s normal business hours. Under our proposed revised policy, then, the time spent by clinical staff providing aspects of CCM services can be counted toward the CCM time requirement at any time, provided that the clinical staff are under the general supervision of a practitioner and all requirements of the “incident to” regulations at § 410.26 are met.

We are proposing to revise these aspects of the policy for several reasons. First, one of the required elements of the CCM service is the availability of a means for the beneficiary to make contact with health care practitioners in the practice to address a patient’s urgent chronic care needs (78 FR 74418 through 74419). Other elements within the scope of CCM services are similarly required to be furnished by practitioners or clinical staff. We believe that these elements of the CCM scope of service require the presence of an organizational infrastructure sufficient to adequately support CCM services, irrespective of the nature of the employment or contractual relationship between the clinical staff and the practitioner or practice. We also believe that the elements of the CCM scope of service, such as the requirement of a care plan, ensure a close relationship between a practitioner furnishing ongoing care for a beneficiary and clinical staff providing aspects of CCM services under general supervision; and that this close working relationship is sufficient to render a requirement of a direct employment relationship or direct supervision unnecessary. Under our proposal, CCM services could be furnished “incident to” under general supervision if the auxiliary personnel providing the services in conjunction with CCM services are clinical staff, and whether or not they are direct employees of the practitioner or practice billing for the service; but the clinical staff must meet the requirements for auxiliary personnel contained in

§ 410.26(a)(1). Other than the exception to permit general supervision for clinical staff, the same requirements apply to CCM services furnished incident to a practitioner’s professional services as apply to other “incident to” services. Furthermore, since last year’s final rule, we have had many consultations with physicians and others about the organizational structures and other factors that contribute to effective provision of CCM services. These consultations have convinced us that, for purposes of clinical staff providing aspects of CCM services, it does not matter whether the practitioner is directly available to supervise because the nature of the services are such that they can be, and frequently are, provided outside of normal business hours or while the physician is away from the office during normal business hours. This is because, unlike most other services to which the “incident to” rules apply, the CCM services are intrinsically non-face-to-face care coordination services.

In conjunction with this proposed revision to the requirements for CCM services provided by clinical staff incident to the services of a practitioner, we are also proposing to adopt the same requirements for equivalent purposes in relation to TCM services. As in the case of CCM, TCM explicitly includes separate payment for services that are not necessarily furnished face-to-face, such as coordination with other providers and follow-up with patients. It would also not be uncommon for auxiliary personnel to provide elements of the TCM services when the physician was not in the office. Generally, we believe that it is appropriate to treat separately billable care coordination services similarly whether in the form of CCM or TCM. We also believe that it would be appropriate to apply the same “incident to” rules that we are proposing for CCM services to TCM services. We are not proposing to extend this policy to the E/M service that is a required element of TCM. Rather, the required E/M service must still be furnished under direct supervision.

Therefore, we are proposing to revise our regulation at § 410.26, which sets out the applicable requirements for “incident to” services, to permit TCM and CCM services provided by clinical staff incident to the services of a practitioner to be furnished under the general supervision of a physician or other practitioner. As with other “incident to” services, the physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) upon whose professional service the

“incident to” service is based. We note that all other “incident to” requirements continue to apply and that documentation of services provided must be included in the medical record.

3. Scope of Services and Standards for CCM Services

In the CY 2014 final rule with comment period (78 FR 74414 through 74428), we defined the elements of the scope of service for CCM services required in order for a practitioner to bill Medicare for CCM services. In addition, we indicated that we intended to develop standards for practices that furnish CCM services to ensure that the practitioners who bill for these services have the capability to fully furnish them (78 FR 74415, 74418). At that time, we anticipated that we would propose these standards in this proposed rule. We actively sought input toward development of these standards by soliciting public comments on the CY 2014 PFS final rule with comment period, through outreach to stakeholders in meetings, by convening a Technical Expert Panel, and by collaborating with federal partners such as the Office of the Assistant Secretary for Planning and Evaluation, the Office of the Assistant Secretary for Health, the Office of the National Coordinator for Health Information Technology, and the Health Resources and Services Administration. Our goal is to recognize the trend toward practice transformation and overall improved quality of care, while preventing unwanted and unnecessary care.

As we worked to develop appropriate practice standards that would meet this goal, we consistently found that many of the standards we thought were important overlapped in significant ways with the scope of service or with the billing requirements for the CCM services that had been finalized in the CY 2014 final rule with comment period. In cases where the standards we identified were not unique to CCM requirements, we found that the standards overlapped with other Medicare requirements or other federal requirements that apply generally to health care practitioners. Based upon the feedback we had received, we sought to avoid duplicating other requirements or, worse, imposing conflicting requirements on practitioners that would furnish CCM services. Given the standards and requirements already in place for health care practitioners and that will apply to those who furnish and bill for CCM services, we have decided not to propose an additional set of standards that must be met in order for

practitioners to furnish and bill for CCM services. Instead of proposing a new set of standards applicable to only CCM services, we have decided to emphasize that certain requirements are inherent in the elements of the existing scope of service for CCM services, and clarify that these must be met in order to bill for CCM services.

In one area—that of electronic health records—we are concerned that the existing elements of the CCM service could leave some gaps in assuring that beneficiaries consistently receive care management services that offer the benefits of advanced primary care as it was envisioned when this service was created. It is clear that effective care management can be accomplished only through regular monitoring of the patient’s health status, needs, and services, and through frequent communication and exchange of information with the beneficiary and among health care practitioners treating the beneficiary. As a part of the CY 2014 PFS final rule with comment period (78 FR 43338 through 43339), we specified that the electronic health record for a patient receiving CCM services should include a full list of problems, medications and medication allergies in order to inform the care plan, care coordination, and ongoing clinical care. Furthermore, those furnishing CCM services must be able to facilitate communication of relevant patient information through electronic exchange of a summary care record with other health care providers as a part of managing health care transitions. We believe that if care is to be coordinated effectively, all communication must be timely, and it must include the information that each team member needs to know to furnish care that is congruent with a patient’s needs and preferences. In addition, those furnishing CCM services need to establish reliable flows of information from emergency departments, hospitals, and providers of post-acute care services to track their CCM patients receiving care in those settings. Reliable information flow supports care transitions, and can be used to assess the need for modifications of the care plan that will reduce the risk of readmissions, increased morbidity, or mortality.

After gathering input from stakeholders, we believe that requiring those who furnish CCM services to utilize electronic health record technology that has been certified by a certifying body authorized by the National Coordinator for Health Information Technology will ensure that practitioners have adequate capabilities

to allow members of the interdisciplinary care team to have immediate access to the most updated information informing the care plan. Furthermore, we believe that requiring those that furnish CCM services to maintain and share an electronic care plan will alleviate the development of duplicative care plans or updates and the associated errors that can occur when care plans are not systematically reconciled. To ensure that practices offering CCM services meet these needs, we are proposing a new scope of service requirement for electronic care planning capabilities and electronic health records. Specifically, we are proposing that CCM services must be furnished with the use of an electronic health record or other health IT or health information exchange platform that includes an electronic care plan that is accessible to all providers within the practice, including being accessible to those who are furnishing care outside of normal business hours, and that is available to be shared electronically with care team members outside of the practice. To ensure all practices have adequate capabilities to meet electronic health record requirements, the practitioner must utilize EHR technology certified by a certifying body authorized by the National Coordinator for Health Information Technology to an edition of the electronic health record certification criteria identified in the then-applicable version of 45 CFR part 170. At a minimum, the practice must utilize EHR technology that meets the certification criteria adopted at 45 CFR 170.314(a)(3), 170.314(a)(4), 170.314(a)(5), 170.314(a)(6), 170.314(a)(7) and 170.314(e)(2) pertaining to the capture of demographics, problem lists, medications, and other key elements related to the ultimate creation of an electronic summary care record. For example, practitioners furnishing CCM services beginning in CY 2015 would be required to utilize an electronic health record certified to at least those 2014 Edition certification criteria. Given these certification criteria, EHR technology would be certified to capture data and ultimately produce summary records according to the HL7 Consolidated Clinical Document Architecture standard (see 45 CFR 170.205(a)(3)). When any of the CCM scope of service requirements include a reference to a health or medical record, a system meeting these requirements is required.

We believe this scope of service element will ensure that practitioners have adequate capabilities to fully

furnish CCM services, allow practitioners to innovate around the systems that they use to furnish these services, and avoid overburdening small practices. We believe that allowing flexibility as to how providers capture, update, and share care plan information is important at this stage given the maturity of current electronic health record standards and other electronic tools in use in the market today for care planning.

In addition to seeking comment on this new proposed scope of service element, we are seeking comment on any changes to the scope of service or billing requirements for CCM services that may be necessary to ensure that the practitioners who bill for these services have the capability to furnish them and that we can appropriately monitor billing for these services.

To assist stakeholders in commenting, we remind you of the elements of the current scope of service for CCM services that are required in order for a practitioner to bill Medicare for CCM services as finalized in the CY 2014 final rule with comment period. We would note that additional explanation of these elements can be found at 78 FR 74414 through 74428. The CCM service includes:

- Access to care management services 24-hours-a-day, 7-days-a-week, which means providing beneficiaries with a means to make timely contact with health care providers in the practice to address the patient's urgent chronic care needs regardless of the time of day or day of the week.
- Continuity of care with a designated practitioner or member of the care team with whom the patient is able to get successive routine appointments.
- Care management for chronic conditions including systematic assessment of patient's medical, functional, and psychosocial needs; system-based approaches to ensure timely receipt of all recommended preventive care services; medication reconciliation with review of adherence and potential interactions; and oversight of patient self-management of medications.
- Creation of a patient-centered care plan document to assure that care is provided in a way that is congruent with patient choices and values. A plan of care is based on a physical, mental, cognitive, psychosocial, functional and environmental (re)assessment and an inventory of resources and supports. It is a comprehensive plan of care for all health issues.
- Management of care transitions between and among health care providers and settings, including

referrals to other clinicians, follow-up after a beneficiary visit to an emergency department, and follow-up after discharges from hospitals, skilled nursing facilities, or other health care facilities.

- Coordination with home and community based clinical service providers as appropriate to support a beneficiary's psychosocial needs and functional deficits.

- Enhanced opportunities for a beneficiary and any relevant caregiver to communicate with the practitioner regarding the beneficiary's care through, not only telephone access, but also through the use of secure messaging, internet or other asynchronous non face-to-face consultation methods.

Similarly, we remind stakeholders that in the CY 2014 final rule, we established particular billing requirements for CCM services that require the practitioner to:

- Inform the beneficiary about the availability of the CCM services from the practitioner and obtain his or her written agreement to have the services provided, including the beneficiary's authorization for the electronic communication of the patient's medical information with other treating providers as part of care coordination.
- Document in the patient's medical record that all of the CCM services were explained and offered to the patient, and note the beneficiary's decision to accept or decline these services.
- Provide the beneficiary a written or electronic copy of the care plan and document in the electronic medical record that the care plan was provided to the beneficiary.
- Inform the beneficiary of the right to stop the CCM services at any time (effective at the end of a 30-day period) and the effect of a revocation of the agreement on CCM services.
- Inform the beneficiary that only one practitioner can furnish and be paid for these services during the 30-day period.

With the addition of the electronic health record element that we are proposing, we believe that these elements of the scope of service for CCM services, when combined with other important federal health and safety regulations, provide sufficient assurance that Medicare beneficiaries receiving CCM services will receive appropriate services. However, we remain interested in receiving public feedback regarding any meaningful elements of the CCM service or beneficiary protections that may be missing from these scope of service elements and billing requirements. We encourage commenters, in recommending additional possible elements or

safeguards, to provide as much specific detail as possible regarding their recommendations and how they can be applied to the broad complement of practitioners who may furnish CCM services under the PFS.

4. Payment of CCM Services in CMS Models and Demonstrations

As discussed above, several CMS models and demonstrations address payment for care management services. The Multi-payer Advanced Primary Care Practice Demonstration and the Comprehensive Primary Care Initiative both include payments for care management services that closely overlap with the scope of service for the new chronic care management services code. In these two initiatives, primary care practices are receiving per beneficiary per month payments for care management services furnished to Medicare fee-for-service beneficiaries attributed to their practices. We propose that practitioners participating in one of these two models may not bill Medicare for CCM services furnished to any beneficiary attributed to the practice for purposes of participating in one of these initiatives, as we believe the payment for CCM services would be a duplicative payment for substantially the same services for which payment is made through the per beneficiary per month payment. However, we propose that these practitioners may bill Medicare for CCM services furnished to eligible beneficiaries who are not attributed to the practice for the purpose of the practice's participation as part of one of these initiatives. As the Innovation Center implements new models or demonstrations that include payments for care management services, or as changes take place affecting existing models or demonstrations, we will address potential overlaps with CCM and seek to implement appropriate reimbursement policies. We welcome comments on this proposal. We also solicit comments on the extent to which these services may not actually be duplicative and, if so, how our reimbursement policy could be tailored to address those situations.

H. Definition of Colorectal Cancer Screening Tests

Section 1861(pp) of the Act defines "colorectal cancer screening tests" and, under section 1861(pp)(1)(C), a "screening colonoscopy" is one of the recognized procedures. Among other things, section 1861(pp)(1)(D) of the Act authorizes the Secretary to modify the tests and procedures covered under this subsection, "with such frequency and payment limits, as the Secretary

determines appropriate,” in consultation with appropriate organizations. The current definition of “colorectal cancer screening tests” at § 410.37(a)(1) includes “screening colonoscopies.” Until recently, the prevailing standard of care for screening colonoscopies has been moderate sedation provided intravenously by the endoscopist, without resort to separately provided anesthesia.¹ Based on this standard of care, payment for moderate sedation has accordingly been bundled into the payment for the colorectal cancer screening tests, (for example, G0104, G0105). For these procedures, because moderate sedation is bundled into the payment, the same physician cannot also report a sedation code. An anesthesia service can be billed by a second physician.

However, a recent study in *The Journal of the American Medical Association* (JAMA) cited an increase in the percentage of colonoscopies and upper endoscopy procedures furnished using an anesthesia professional, from 13.5 percent in 2003 to 30.2 percent in 2009 within the Medicare population, with a similar increase in the commercially-insured population.² A 2010 study projected that the percentage of this class of procedures involving an anesthesia professional would grow to 53.4 percent by 2015.³ These studies suggest that the prevailing standard of care for endoscopies in general and screening colonoscopies in particular is undergoing a transition, and that anesthesia separately provided by an anesthesia professional is becoming the prevalent practice. After reviewing these studies, we analyzed Medicare claims data and found that the same trend was observed in screening colonoscopies for Medicare beneficiaries. We found that in 53 percent of screening colonoscopies for which Medicare claims were submitted in 2013 a separate anesthesia claim was reported.

In light of these developments, we are concerned that the mere reference to “screening colonoscopies” in the definition of “colorectal cancer screening tests” has become inadequate. Indeed, we are convinced that the

growing prevalence of separately provided anesthesia services in conjunction with screening colonoscopies reflects a change in practice patterns. Therefore, consistent with the authority delegated by section 1861(pp)(1)(D) of the Act, we believe it is appropriate to revise the definition of “colorectal cancer screening tests” to adequately reflect these new patterns. Accordingly, we are proposing to revise the definition of “colorectal cancer screening tests” at § 410.37(a)(1)(iii) to include anesthesia that is separately furnished in conjunction with screening colonoscopies.

Our proposal to revise the definition of “colorectal cancer screening tests” in this manner would further reduce our beneficiaries’ cost-sharing obligations under Part B. Screening colonoscopies have been recommended with a grade of A by the United States Preventive Services Task Force (USPSTF) and § 410.152(l)(5) provides that Medicare Part B pays 100 percent of the Medicare payment amount established under the PFS for colorectal cancer screening tests except for barium enemas (which do not have a grade A or B recommendation from the USPSTF). This regulation is based on section 4104 of the Affordable Care Act, which amended section 1833(a)(1) of the Act to require 100 percent Medicare payment of the fee schedule amount for those “preventive services” that are appropriate for the individual and are recommended with a grade of A or B by the USPSTF. Section 4104 effectively waives any Part B coinsurance that would otherwise apply under section 1833(a)(1) of the Act for certain recommended preventive services, including screening colonoscopies. For additional discussion of the impact of section 4104 of the Affordable Care Act, and our prior rulemaking based on this provision see the CY 2011 PFS final rule with comment period (75 FR 73412 through 73431). We also note that under § 410.160(b)(7) colorectal cancer screening tests are not subject to the Part B annual deductible and do not count toward meeting that deductible.

In implementing the amendments made by section 4104 of the Affordable Care Act, we did not provide at that time for waiving the Part B deductible and coinsurance for covered anesthesia services separately furnished in conjunction with screening colonoscopies. At that time, we believed that our payment for the screening colonoscopy, which included payment for moderate sedation services, reflected the typical screening colonoscopy. Under the current regulations, Medicare beneficiaries who receive anesthesia

from a different professional than the one furnishing the screening colonoscopy would be incurring costs for the coinsurance and deductible under Part B for those separate services. With the changes in the standard of care and shifting practice patterns toward increased use of anesthesia in conjunction with screening colonoscopy, beneficiaries who receive covered anesthesia services from a different professional than the one furnishing the colonoscopy would incur costs for any coinsurance and any unmet part of the deductible for this component of the service. However, our proposed revision to the definition of “colorectal cancer screening tests” would lead to Medicare paying 100 percent of the fee schedule amounts for screening colonoscopies, including any portion attributable to anesthesia services furnished by a separate practitioner in conjunction with such tests, under § 410.152(l)(5). Similarly, this revision would also mean that expenses incurred for a screening colonoscopy, and the anesthesia services furnished in conjunction with such tests, will not be subject to the Part B deductible and will not count toward meeting that deductible under § 410.160(b)(7). If adopted, we believe this proposal will encourage more beneficiaries to obtain a screening colonoscopy, which is consistent with the intent of the statutory provision to waive Medicare cost-sharing for certain recommended preventive services, and is consistent with the authority delegated to the Secretary in section 1861(pp)(1)(D) of the Act.

In light of the changing practice patterns for screening colonoscopies, continuing to require Medicare beneficiaries to bear the deductible and coinsurance expenses for separately billed anesthesia services furnished and covered by Medicare in conjunction with screening colonoscopies could become a significant barrier to these essential preventive services. As we noted when we implemented the provisions of the Affordable Care Act waiving the Part B deductible and coinsurance for these preventive services, the goal of these provisions was to eliminate financial barriers so that beneficiaries would not be deterred from receiving them (75 FR 73412). Therefore, we are exercising our authority under section 1861(pp)(1)(D) of the Act to propose a revision to the definition of colorectal cancer screening tests to encourage beneficiaries to seek these services by extending the waiver of coinsurance and deductible to anesthesia or sedation services

¹ Faulx, A.L. et al. (2005). The changing landscape of practice patterns regarding unsedated colonoscopy and propofol use: A national web survey. *Gastrointestinal Endoscopy*, 62, 9–15.

² Liu H, Waxman DA, Main R, Mattke S. Utilization of Anesthesia Services during Outpatient Endoscopies and Colonoscopies and Associated Spending in 2003–2009. (2012). *JAMA*, 307(11):1178–1184.

³ Inadomi, J.M. et al. (2010). Projected increased growth rate of anesthesia professional–delivered sedation for colonoscopy and EGD in the United States: 2009 to 2015. *Gastrointestinal Endoscopy*, 72, 580–586.

furnished in conjunction with a screening colonoscopy.

We note that, in implementing these proposed revisions to the regulations, it will be necessary to establish a modifier for use when billing the relevant anesthesia codes for services that are furnished in conjunction with a screening colonoscopy and, thus, qualify for the waiver of the Part B deductible and coinsurance. If we adopt this proposal in the final rule, we will provide appropriate and timely information on this new modifier and its proper use so that physicians will be able to bill correctly for these services when the revised regulations become effective. We also note that the valuation of colonoscopy codes, which include moderate sedation, will be subject to the same proposed review as other codes that include moderate sedation, as discussed in section II.B.6 of this proposed rule.

I. Payment of Secondary Interpretation of Images

In general, Medicare makes one payment for the professional component of an imaging service for each technical component service that is furnished. Section 100.1, Chapter 13, of the Medicare Claims Processing Manual (Pub. 100-04) explains this policy in the context of EKGs and X-rays furnished in an Emergency Room. The manual section discusses the distinction between a “review” of an X-ray or EKG for which payment is included in the payment for the emergency department E/M payment, and the “interpretation and report” of an X-ray or EKG which can be billed separately and includes a written report addressing “the findings, relevant clinical issues, and comparative data (when available).” The section makes clear that a “professional component” interpretation service should only be billed for a full interpretation and report. The manual section goes on to explain that, in general, Medicare pays for only one interpretation of an EKG or X-ray service furnished to an emergency room patient. However, Medicare can pay for a second interpretation (which is billed using modifier – 77) under “unusual circumstances (for which documentation is provided).” For instance, if an emergency room physician conducts an interpretation, identifies a questionable finding, and believes another physician’s expertise is needed, then a second claim for an interpretation can be paid when furnished, for example, by a radiologist. The second interpretation must directly contribute to the diagnosis and treatment of the individual patient

(rather than serving as a quality control measure), and the second interpretation must also be accompanied by a written report.

While a separate payment for the professional component for a radiology service is contingent upon meeting the conditions described in this section, practitioners bill Medicare and are paid for reviews of radiology images in other ways. For instance, review of a patient’s previous radiology images is included and paid as part of the review of previous documentation in conjunction with E/M services. Reviews of extensive documentation and efforts to obtain previous documentation including existing imaging studies are considerations in deciding the appropriate level of complexity for evaluation and management services.⁴

In recent years, technological advances such as the integration of picture and archiving communications systems across health systems, growth in image sharing networks and health information exchange platforms through which providers can share images, and consumer-mediated exchange of images, have greatly increased physicians’ access to existing diagnostic-quality radiology images. These advances offer new opportunities for physicians to reduce duplicative imaging, particularly with respect to high cost advanced diagnostic imaging modalities. For instance, a trauma patient transferred from a community hospital to a tertiary care center may arrive with high quality CT images sufficient to support an additional professional interpretation service. By accessing and utilizing these images to inform the diagnosis and record an interpretation in the medical record at the tertiary care facility, the provider and physicians may be able to avoid ordering substantially duplicative tests.

Questions have arisen as to whether and under what circumstances it would be appropriate for Medicare to permit payment under the PFS when physicians furnish subsequent interpretations of existing images, and whether uncertainty associated with payment for secondary interpretations inhibits physicians from seeking out, accessing, and utilizing existing images in cases where avoidance of a new study would result in savings to Medicare. We are seeking comment to assess whether there is an expanded set of circumstances under which it would be appropriate to allow more routine Medicare payment for a second

professional component for radiology services, and whether such a policy would be likely to reduce the incidence of duplicative advanced imaging studies.

Specifically we are seeking comment on the following questions:

- For which radiology services are physicians currently conducting secondary interpretations, and what, if any, institutional policies are in place to determine when existing images are utilized? To what extent are physicians seeking payment for these secondary interpretations from Medicare or other payers?
 - Should routine payment for secondary interpretations be restricted to certain high-cost advanced diagnostic imaging services, such as those defined as such under section 1834(e)(1)(B) of the Act, for example, diagnostic magnetic resonance imaging, computed tomography, and nuclear medicine (including positron emission tomography)?
 - How should the value of routine secondary interpretations be determined? Is it appropriate to apply a modifier to current codes or are new HCPCS codes for secondary interpretations necessary?
 - We believe most secondary interpretations would be likely to take place in the hospital setting. Are there other settings in which claims for secondary interpretations would be likely to reduce duplicative imaging services?
 - Is there a limited time period within which an existing image should be considered adequate to support a secondary interpretation?
 - Would allowing for more routine payment for secondary interpretations be likely to generate cost savings to Medicare by avoiding potentially duplicative imaging studies?
 - What operational steps could Medicare take to ensure that any routine payment for secondary interpretations is limited to cases where a new imaging study has been averted while minimizing undue burden on providers or Part B contractors? For instance, steps might include restricting physicians’ ability to refer multiple interpretations to another physician that is part of their network or group practice, requiring that physicians attach a physician’s order for an averted imaging study to a claim for a secondary interpretation, or requiring physicians to identify the technical component of the existing image supporting the claim.
- We seek comments on these questions, and welcome input on any additional considerations not mentioned here regarding the potential

⁴ See, for example, 1997 Documentation Guidelines for Evaluation and Management Service, p. 45.

impact of allowing payment for secondary interpretation of images under other circumstances. Upon reviewing the comments received, we will consider whether any further action is appropriate, for instance, proposing under a future rulemaking to allow for payment of subsequent interpretations of advanced diagnostic images in lieu of duplicative studies.

J. Conditions Regarding Permissible Practice Types for Therapists in Private Practice

Section 1861(p) of the Act defines outpatient therapy services to include physical therapy, occupational therapy, and speech-language pathology services furnished by qualified occupational therapists, physical therapists, and speech-language pathologists in their offices and in the homes of beneficiaries. The regulations at §§ 410.59(c), 410.60(c), and 410.62(c) set forth special provisions for services furnished by therapists in private practice, including basic qualifications necessary to qualify as a supplier of occupational therapy (OT), physical therapy (PT), and speech-language pathology (SLP), respectively. As part of these basic qualifications, the current regulatory language includes descriptions of the various practice types for therapists' private practices. Based on our recent review of these three sections of our regulations, we are concerned that the language is not as clear as it could be—especially with regard to the relevance of whether a practice is incorporated. The regulations appear to make distinctions between unincorporated and incorporated practices, and some practice types are listed twice. Accordingly, we are proposing changes to the regulatory language to remove unnecessary distinctions and redundancies within the regulations for OT, PT, and SLP. We note that these proposed changes are for clarification only, and do not reflect any proposed change in our current policy.

To consistently specify the permissible practice types (a solo practice, partnership, or group practice; or as an employee of one of these) for suppliers of outpatient therapy services in private practice (for occupational therapists, physical therapists and speech-language pathologists), we propose to replace the regulatory text at § 410.59(c)(1)(ii)(A) through (E), § 410.60(c)(1)(ii)(A) through (E), and § 410.62(c)(1)(ii)(A) through (E).

K. Payments for Physicians and Practitioners Managing Patients on Home Dialysis

In the CY 2005 PFS final rule with comment period (69 FR 66357 through 66359), we established criteria for furnishing outpatient per diem ESRD-related services in partial month scenarios. We specified that use of per diem ESRD-related services is intended to accommodate unusual circumstances when the outpatient ESRD-related services would not be paid for under the monthly capitation payment (MCP), and that use of the per diem services are limited to the circumstances listed below.

- Transient patients—Patients traveling away from home (less than full month);
- Home dialysis patients (less than full month);
- Partial month where there were one or more face-to-face visits without the comprehensive visit and either the patient was hospitalized before a complete assessment was furnished, dialysis stopped due to death, or the patient received a kidney transplant.
- Patients who have a permanent change in their MCP physician during the month.

Additionally, we provided billing guidelines for partial month scenarios in the Medicare claims processing manual, publication 100–04, chapter 8, section 140.2.1. For center-based patients, we specified that if the MCP physician or practitioner furnishes a complete assessment of the ESRD beneficiary, the MCP physician or practitioner should bill for the full MCP service that reflects the number of visits furnished during the month. However, we did not extend this policy to home dialysis (less than a full month) because the home dialysis MCP service did not include a specific frequency of required patient visits. In other words, unlike the ESRD MCP service for center-based patients, a visit was not required for the home dialysis MCP service as a condition of payment.

In the CY 2011 PFS final rule with comment period (75 FR 73295 through 73296), we changed our policy for the home dialysis MCP service to require the MCP physician or practitioner to furnish at least one face-to-face patient visit per month as a condition of payment. However, we inadvertently did not modify our billing guidelines for home dialysis (less than a full month) to be consistent with partial month scenarios for center-based dialysis patients. Stakeholders have recently brought this inconsistency to our attention. After reviewing this issue, we are proposing to allow the MCP

physician or practitioner to bill for the age appropriate home dialysis MCP service (as described by HCPCS codes 90963 through 90966) for the home dialysis (less than a full month) scenario if the MCP physician or practitioner furnishes a complete monthly assessment of the ESRD beneficiary and at least one face-to-face patient visit. For example, if a home dialysis patient was hospitalized during the month and at least one face-to-face outpatient visit and complete monthly assessment was furnished, the MCP physician or practitioner should bill for the full home dialysis MCP service. We believe that this proposed change to home dialysis (less than a full month) provides consistency with our policy for partial month scenarios pertaining to patients dialyzing in a dialysis center. If this proposal is adopted, we would modify the Medicare Claims Processing Manual to reflect the revised billing guidelines for home dialysis in the less than a full month scenario.

III. Other Provisions of the Proposed Regulations

A. Ambulance Extender Provisions

1. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the MIPPA amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008 and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13) of the Act have been extended several times. Recently, section 1104(a) of the Pathway for SGR Reform Act of 2013, enacted on December 26, 2013, as Division B (Medicare and Other Health Provisions) of Pub L. 113–67, amended section 1834(l)(13)(A) of the Act to extend the payment add-ons described above through March 31, 2014. Subsequently, section 104(a) of the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93, enacted on April 1, 2014) amended section 1834(l)(13)(A) of the Act to extend the payment add-ons again

through March 31, 2015. Thus, these payment add-ons also apply to covered ground ambulance transports furnished before April 1, 2015. We are proposing to revise § 414.610(c)(1)(ii) to conform the regulations to these statutory requirements. (For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule (78 FR 74438 through 74439)).

These statutory requirements are self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary.

2. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (Pub. L. 108-173, enacted on December 8, 2003) (MMA) added section 1834(l)(12) to the Act, which specified that in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area"; that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). This rural bonus is sometimes referred to as the "Super Rural Bonus" and the qualified rural areas (also known as "super rural" areas) are identified during the claims adjudicative process via the use of a data field included on the CMS-supplied ZIP code File.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Recently, section 1104(b) of the Pathway for SGR Reform Act of

2013, enacted on December 26, 2013, as Division B (Medicare and Other Health Provisions) of Public Law 113-67, amended section 1834(l)(12)(A) of the Act to extend this rural bonus through March 31, 2014. Subsequently, section 104(b) of the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93, enacted on April 1, 2014) amended section 1834(l)(12)(A) of the Act to extend this rural bonus again through March 31, 2015. Therefore, we are continuing to apply the 22.6 percent rural bonus described above (in the same manner as in previous years), to ground ambulance services with dates of service before April 1, 2015 where transportation originates in a qualified rural area. Accordingly, we are proposing to revise § 414.610(c)(5)(ii) to conform the regulations to these statutory requirements. (For a discussion of past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule (78 FR 74439 through 74440)).

These statutory provisions are self-implementing. Together, these statutory provisions require a 15-month extension of this rural bonus (which was previously established by the Secretary through March 31, 2015, and do not require any substantive exercise of discretion on the part of the Secretary.

B. Proposed Changes in Geographic Area Delineations for Ambulance Payment

1. Background

Under the ambulance fee schedule, the Medicare program pays for ambulance transportation services for Medicare beneficiaries when other means of transportation are contraindicated by the beneficiary's medical condition, and all other coverage requirements are met. Ambulance services are classified into different levels of ground (including water) and air ambulance services based on the medically necessary treatment provided during transport.

These services include the following levels of service:

- For Ground—
 - ++ Basic Life Support (BLS) (emergency and non-emergency)
 - ++ Advanced Life Support, Level 1 (ALS1) (emergency and non-emergency)
 - ++ Advanced Life Support, Level 2 (ALS2)
 - ++ Paramedic ALS Intercept (PI)
 - ++ Specialty Care Transport (SCT)
- For Air—
 - ++ Fixed Wing Air Ambulance (FW)
 - ++ Rotary Wing Air Ambulance (RW)

a. Statutory Coverage of Ambulance Services

Under sections 1834(l) and 1861(s)(7) of the Act, Medicare Part B (Supplemental Medical Insurance) covers and pays for ambulance services, to the extent prescribed in regulations, when the use of other methods of transportation would be contraindicated by the beneficiary's medical condition.

The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments suggest that the Congress intended that—

- The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and
- Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility.

b. Medicare Regulations for Ambulance Services

Our regulations relating to ambulance services are set forth at 42 CFR part 410, subpart B and 42 CFR part 414, subpart H. Section 410.10(i) lists ambulance services as one of the covered medical and other health services under Medicare Part B. Therefore, ambulance services are subject to basic conditions and limitations set forth at § 410.12 and to specific conditions and limitations included at § 410.40 and § 410.41. Part 414, subpart H, describes how payment is made for ambulance services covered by Medicare.

2. Provisions of the Proposed Rule

Historically, the Medicare ambulance fee schedule has used the same geographic area designations as the acute care hospital inpatient prospective payment system (IPPS) and other Medicare payment systems to take into account appropriate urban and rural differences. This promotes consistency across the Medicare program, and it provides for use of consistent geographic standards for Medicare payment purposes.

The current geographic areas used under the ambulance fee schedule are based on OMB standards published on

December 27, 2000 (65 FR 82228 through 82238) and Census 2000 data and Census Bureau population estimates for 2007 and 2008 (OMB Bulletin No. 10–02). For a discussion of OMB’s delineation of Core-Based Statistical Areas (CBSAs) and our implementation of the CBSA definitions under the ambulance fee schedule, we refer readers to the preamble of the CY 2007 Ambulance Fee Schedule proposed rule (71 FR 30358 through 30361) and the CY 2007 PFS final rule (71 FR 69712 through 69716). On February 28, 2013, OMB issued OMB Bulletin No. 13–01, which established revised delineations for Metropolitan Statistical Areas (MSAs), Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. A copy of this bulletin may be obtained at <http://www.whitehouse.gov/sites/default/files/omb/bulletins/2013/b-13-01.pdf>. According to OMB, “[t]his bulletin provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010, in the **Federal Register** (75 FR 37246–37252) and Census Bureau data.” OMB defines an MSA as a CBSA associated with at least one urbanized area that has a population of at least 50,000, and a Micropolitan Statistical Area (referred to in this discussion as a Micropolitan Area) as a CBSA associated with at least one urban cluster that has a population of at least 10,000 but less than 50,000 (75 FR 37252). Counties that do not qualify for inclusion in a CBSA are deemed “Outside CBSAs.” We note that, when referencing the new OMB geographic boundaries of statistical areas, we are using the term “delineations” consistent with OMB’s use of the term (75 FR 37249).

While the revisions OMB published on February 28, 2013 are not as sweeping as the changes made when we adopted the CBSA geographic designations for CY 2007, the February 28, 2013 OMB bulletin does contain a number of significant changes. For example, if we adopt the revised OMB delineations, there would be new CBSAs, urban counties that would become rural, rural counties that would become urban, and existing CBSAs that would be split apart. Because the bulletin was not issued until February 28, 2013, with supporting data not available until later, and because the

changes made by the bulletin and their ramifications needed to be extensively reviewed and verified, we were unable to undertake such a lengthy process before publication of the CY 2014 PFS proposed rule, and thus, did not implement the changes to the OMB delineations under the ambulance fee schedule for CY 2014. We have reviewed our findings and impacts relating to the new OMB delineations, and find no compelling reason to further delay implementation. We believe it is important for the ambulance fee schedule to use the latest labor market area delineations available as soon as reasonably possible in order to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts.

Additionally, in the FY 2015 IPPS proposed rule (79 FR 28055), we also proposed to adopt OMB’s revised delineations to identify urban areas and rural areas for purposes of the IPPS wage index. For the reasons discussed above, we believe it would be appropriate to adopt the same geographic area delineations for use under the ambulance fee schedule as are used under the IPPS and other Medicare payment systems. Thus, we are proposing to implement the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01 beginning in CY 2015 to more accurately identify urban and rural areas for ambulance fee schedule payment purposes. We believe that the updated OMB delineations more realistically reflect rural and urban populations, and that the use of such delineations under the ambulance fee schedule would result in more accurate payment. Under the ambulance fee schedule, consistent with our current definitions of urban and rural areas (§ 414.605), MSAs would continue to be recognized as urban areas, while Micropolitan and other areas outside MSAs, and rural census tracts within MSAs (as discussed below), would be recognized as rural areas.

In addition to the OMB’s statistical area delineations, the current geographic areas used in the ambulance fee schedule also are based on the most recent version of the Goldsmith Modification. Section 1834(l) of the Act requires that we use the most recent version of the Goldsmith Modification to determine rural census tracts within MSAs. These rural census tracts are considered rural areas under the ambulance fee schedule (see § 414.605). In the CY 2007 PFS final rule (71 FR 69714 through 69716), we adopted the most recent (at that time) version of the Goldsmith Modification, designated as

Rural-Urban Commuting Area (RUCA) codes. RUCA codes use urbanization, population density, and daily commuting data to categorize every census tract in the country. For a discussion about RUCA codes, we refer the reader to the CY 2007 PFS final rule (71 FR 69714 through 69716). As stated previously, on February 28, 2013, OMB issued OMB Bulletin No. 13–01, which established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. Several modifications of the RUCA codes were necessary to take into account updated commuting data and the revised OMB delineations. We refer readers to the U.S. Department of Agriculture’s Economic Research Service Web site for a detailed listing of updated RUCA codes found at <http://www.ers.usda.gov/data-products/rural-urban-commuting-area-codes.aspx>. The updated RUCA code definitions were introduced in late 2013 and are based on data from the 2010 decennial census and the 2006–10 American Community Survey. We are proposing to adopt the most recent modifications of the RUCA codes beginning in CY 2015, to recognize levels of rurality in census tracts located in every county across the nation, for purposes of payment under the ambulance fee schedule. If we adopt the most recent RUCA codes, many counties that are designated as urban at the county level based on population would have rural census tracts within them that would be recognized as rural areas through our use of RUCA codes.

The 2010 Primary RUCA codes are as follows:

- (1) Metropolitan area core: primary flow with an urbanized area (UA).
- (2) Metropolitan area high commuting: primary flow 30 percent or more to a UA.
- (3) Metropolitan area low commuting: primary flow 10 to 30 percent to a UA.
- (4) Micropolitan area core: primary flow within an Urban Cluster of 10,000 to 49,999 (large UC).
- (5) Micropolitan high commuting: primary flow 30 percent or more to a large UC.
- (6) Micropolitan low commuting: primary flow 10 to 30 percent to a large UC.
- (7) Small town core: primary flow within an Urban Cluster of 2,500 to 9,999 (small UC).
- (8) Small town high commuting: primary flow 30 percent or more to a small UC.

(9) Small town low commuting: primary flow 10 to 30 percent to a small UC.

(10) Rural areas: primary flow to a tract outside a UA or UC.

Based on this classification, and consistent with our current policy (71 FR 69715), we would continue to designate any census tracts falling at or above RUCA level 4.0 as rural areas for purposes of payment for ambulance services under the ambulance fee schedule. As discussed in the CY 2007 PFS final rule (71 FR 69715), the Office of Rural Health Policy within the Health Resources and Services Administration (HRSA) determines eligibility for its rural grant programs through the use of the RUCA code methodology. Under this methodology, HRSA designates any census tract that falls in RUCA level 4.0 or higher as a rural census tract. In addition to designating any census tracts falling at or above RUCA level 4.0 as rural areas, under the updated RUCA code definitions, HRSA has also designated as rural census tracts, those census tracts with RUCA codes 2 or 3 that are at least 400 square miles in area with a population density of no more than 35 people. We refer readers to HRSA's Web site: <ftp://ftp.hrsa.gov/ruralhealth/Eligibility2005.pdf> for additional information. Consistent with the HRSA guidelines discussed above, we are proposing, beginning in CY 2015, to designate as rural areas (1) those census tracts that fall at or above RUCA level 4.0, and (2) those census tracts that fall within RUCA levels 2 or 3 that are at least 400 square miles in area with a population density of no more than 35 people. As discussed in the CY 2007 PFS final rule (71 FR 69715), we continue to believe that HRSA's guidelines accurately identify rural census tracts throughout the country, and thus would be appropriate to apply for ambulance payment purposes. We invite comments on this proposal.

The adoption of the most current OMB delineations and the updated RUCA codes would affect whether certain areas are recognized as rural or urban. The distinction between urban and rural is important for ambulance payment purposes because urban and rural transports are paid differently. The determination of whether a transport is urban or rural is based on the point of pick-up for the transport, and thus a transport is paid differently depending

on whether the point of pick-up is in an urban or a rural area. During claims processing, geographic designation of urban, rural, or super rural is assigned to each claim for an ambulance transport based on the point of pick-up ZIP code that is indicated on the claim.

Currently, section 1834(l)(12) of the Act (as amended by section 104(b) of the PAMA) specifies that, for services furnished during the period July 1, 2004 through March 31, 2015, the payment amount for the ground ambulance base rate is increased by a "percent increase" (Super Rural Bonus) where the ambulance transport originates in a "qualified rural area," which is a rural area that we determine to be in the lowest 25th percentile of all rural populations arrayed by population density (also known as a "super rural area"). We implement this Super Rural Bonus in § 414.610(c)(5)(ii). Adoption of the revised OMB delineations and the updated RUCA codes would have no negative impact on ambulance transports in super rural areas, as none of the current super rural areas would lose their status due to the revised OMB delineations and the updated RUCA codes.

The adoption of the new OMB delineations and the updated RUCA codes would affect whether or not transports would be eligible for other rural adjustments under the ambulance fee schedule statute and regulations. For ground ambulance transports where the point of pick-up is in a rural area, the mileage rate is increased by 50 percent for each of the first 17 miles (§ 414.610(c)(5)(i)). For air ambulance services where the point of pick-up is in a rural area, the total payment (base rate and mileage rate) is increased by 50 percent (§ 414.610(c)(5)(i)). Furthermore, under section 1834(l)(13) of the Act (as amended by section 104(a) of the PAMA), for ground ambulance transports furnished through March 31, 2015, transports originating in rural areas are paid based on a rate (both base rate and mileage rate) that is 3 percent higher than otherwise is applicable. (See also § 414.610(c)(1)(ii)).

If we adopt OMB's revised delineations and the updated RUCA codes, ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be Micropolitan or otherwise outside of MSAs based on OMB's revised

delineations or in a rural census tract of an MSA based on the updated RUCA codes (but are currently within urban areas) may experience increases in payment for such transports because they may be eligible for the rural adjustment factors discussed above, while those ambulance providers and suppliers that pick up Medicare beneficiaries in areas that would be urban based on OMB's revised delineations and the updated RUCA codes (but are currently in Micropolitan Areas or otherwise outside of MSAs, or in a rural census tract of an MSA) may experience decreases in payment for such transports because they would no longer be eligible for the rural adjustment factors discussed above.

The use of the revised OMB delineations and the updated RUCA codes would mean the recognition of new urban and rural boundaries based on the population migration that occurred over a 10-year period, between 2000 and 2010. Based on the latest United States Postal Service (USPS) ZIP code file, there are a total of 42,914 ZIP codes in the U.S. The geographic designations for approximately 99.48 percent of ZIP codes would be unchanged by OMB's revised delineations and the updated RUCA codes. There are a similar number of ZIP codes that would change from rural to urban (122, or 0.28 percent) and from urban to rural (100, or 0.23 percent). In general, it is expected that ambulance providers and suppliers in 100 ZIP codes within 11 states may experience payment increases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from urban to rural. The state of Ohio would have the most ZIP codes changing from urban to rural with a total of 40, or 2.69 percent. Ambulance providers and suppliers in 122 ZIP codes within 22 states may experience payment decreases if we adopt the revised OMB delineations and the updated RUCA codes, as these areas would be redesignated from rural to urban. The state of West Virginia would have the most ZIP codes changing from rural to urban (17, or 1.82 percent), while Connecticut would have the greatest percentage of ZIP codes changing from rural to urban (15 ZIP codes, or 3.37 percent). Our findings are illustrated in Table 17.

TABLE 17—ZIP CODES ANALYSIS BASED ON OMB'S REVISED DELINEATIONS AND UPDATED RUCA CODES

State	Total ZIP codes	Total ZIP codes changed rural to urban	Percentage of total ZIP codes	Total ZIP codes changed urban to rural	Percentage of total ZIP codes	Total ZIP codes not changed	Percentage of total ZIP codes not changed

We believe that the most current OMB statistical area delineations, coupled with the updated RUCA codes, more

accurately reflect the contemporary urban and rural nature of areas across the country, and thus we believe that

use of the most current OMB delineations and RUCA codes under the ambulance fee schedule would enhance

the accuracy of ambulance fee schedule payments. We invite comments on our proposal to implement the new OMB delineations and the updated RUCA codes as discussed above beginning in CY 2015, for purposes of payment under the Medicare ambulance fee schedule.

C. Clinical Laboratory Fee Schedule

In the CY 2014 PFS final rule with comment period (78 FR 74440–74445, 74820), we finalized a process under which we would reexamine the payment amounts for test codes on the Clinical Laboratory Fee Schedule (CLFS) for possible payment revision based on technological changes beginning with the CY 2015 proposed rule, and we codified this process at § 414.511. After we finalized this process, Congress enacted the PAMA. Section 216 of the PAMA creates new section 1834A of the Act, which requires us to implement a new Medicare payment system for clinical diagnostic laboratory tests based on private payor rates. Section 216 of the PAMA also rescinds the statutory authority in section 1833(h)(2)(A)(i) of the Act for adjustments based on technological changes for tests furnished on or after April 1, 2014 (PAMA's enactment date). As a result of these provisions, we are not proposing any revisions to payment amounts for test codes on the CLFS based on technological changes and are proposing to remove § 414.511. Instead, we will establish through rulemaking the parameters for the collection of private payor rate information and other requirements to implement section 216 of the PAMA.

D. Removal of Employment Requirements for Services Furnished "Incident to" Rural Health Clinics (RHC) and Federally Qualified Health Center (FQHC) Visits

1. Background

Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) furnish physicians' services; services and supplies incident to the services of physicians; nurse practitioner (NP), physician assistant (PA), certified nurse-midwife (CNM), clinical psychologist (CP), and clinical social worker (CSW) services; and services and supplies incident to the services of NPs, PAs, CNMs, CPs, and CSWs. They may also furnish diabetes self-management training and medical nutrition therapy (DSMT/MNT), transitional care management services, and in some cases, visiting nurse services furnished by a registered professional nurse or a licensed

practical nurse. (For additional information on requirements for furnishing services in RHCs and FQHCs, see Chapter 13 of the CMS Benefit Policy Manual.)

In the May 2, 2014 final rule with comment period (79 FR 25436) entitled "Prospective Payment System for Federally Qualified Health Centers; Changes to Contracting Policies for Rural Health Clinics; and Changes to Clinical Laboratory Improvement Amendments of 1988 Enforcement Actions for Proficiency Testing Referral," we removed the regulatory requirements that NPs, PAs, CNMs, CSWs, and CPs furnishing services in a RHC must be employees of the RHC. RHCs are now allowed to contract with NPs, PAs, CNMs, CSWs, and CPs, as long as at least one NP or PA is employed by the RHC, as required under section 1861(aa)(2)(iii) of the Act.

Services furnished in RHCs and FQHCs by nurses, medical assistants, and other auxiliary personnel are considered "incident to" a RHC or FQHC visit furnished by a RHC or FQHC practitioner. The regulations at § 405.2413(a)(6), § 405.2415(a)(6), and § 405.2452(a)(6) state that services furnished incident to an RHC or FQHC visit must be furnished by an employee of the RHC or FQHC. Since there is no separate benefit under Medicare law that specifically authorizes payment to nurses, medical assistants, and other auxiliary personnel for their professional services, they cannot bill the program directly and receive payment for their services, and can only be remunerated when furnishing services to Medicare patients in an "incident to" capacity.

2. Provisions of Proposed Rule

To provide RHCs and FQHCs with as much flexibility as possible to meet their staffing needs, we are proposing to revise § 405.2413(a)(5), § 405.2415(a)(5) and § 405.2452(a)(5) and delete § 405.2413(a)(6), § 405.2415(a)(6) and § 405.2452(a)(6) to remove the requirement that services furnished incident to an RHC or FQHC visit must be furnished by an employee of the RHC or FQHC to allow nurses, medical assistants, and other auxiliary personnel to furnish incident to services under contract in RHCs and FQHCs. We believe that removing the requirements will provide RHCs and FQHCs with additional flexibility without adversely impacting the quality or continuity of care.

E. Access to Identifiable Data for the Center for Medicare and Medicaid Innovation Models

1. Background and Statutory Authority

Section 3021 of the Affordable Care Act amended the Social Security Act to include a new section 1115A, which established the Center for Medicare and Medicaid Innovation (Innovation Center). Section 1115A tasks the Innovation Center with testing innovative payment and service delivery models that could reduce program expenditures while preserving and/or enhancing the quality of care furnished to individuals under titles XVIII, XIX, and XX of the Act. The Secretary is also required to conduct an evaluation of each model tested.

Evaluations will typically include quantitative and qualitative methods to assess the impact of the model on quality of care and health care expenditures. To comply with the statutory requirement to evaluate all models conducted under section 1115A of the Act, we will conduct rigorous quantitative analyses of the impact of the model test on health care expenditures, as well as an assessment of measures of the quality of care furnished under the model test. Evaluations will also include qualitative analyses to capture the qualitative differences between model participants, and to form the context within which to interpret the quantitative findings. Through the qualitative analyses, we will assess the experiences and perceptions of model participants, providers, and individuals affected by the model.

In the evaluations we use advanced statistical methods to measure effectiveness. Our methods are intended to provide results that meet a high standard of evidence, even when randomization is not feasible. To successfully carry out evaluations of Innovation Center models, we must be able to determine specifically which individuals are receiving services from or are the subject of the intervention being tested by the entity participating in the model test. Identification of such individuals is necessary for a variety of purposes, including the construction of control groups against which model performance can be compared. In addition, to determine whether the observed impacts are due to the model being tested and not due to differences between the intervention and comparison groups, our evaluations will have to account for potential confounding factors at the individual level, which will require the ability to identify every individual associated

with the model test, control or comparison groups, and the details of the intervention at the individual level.

Evaluations will need to consider such factors as outcomes, clinical quality, adverse effects, access, utilization, patient and provider satisfaction, sustainability, potential for the model to be applied on a broader scale, and total cost of care. Individuals receiving services from or who are the subjects of the intervention will be compared to clinically, socio-demographically, and geographically similar matched individuals along various process, outcome, and patient-reported measures. Research questions in a typical evaluation will include, but are not limited to, the following:

- Clinical Quality:
 - ++ Did the model improve or have a negative impact on clinical process measures, such as adherence to evidence-based guidelines? If so, how, how much, and for which individuals?
 - ++ Did the model improve or have a negative impact on clinical outcome measures, such as mortality rates, and the incidence and prevalence of chronic conditions? If so, how, how much, and for which individuals?
 - ++ Did the model improve or have a negative impact on access to care? If so, how, how much, and for which individuals?
 - ++ Did the model improve or have a negative impact on care coordination among providers? If so, how, how much, and for which individuals?
 - ++ Did the model improve or have a negative impact on medication management? If so, how, how much, and for which individuals?
- Patient Experience:
 - ++ Did the model improve or have a negative impact on patient-provider communication? If so, how, how much, and for which individuals?
 - ++ Did the model improve or have a negative impact on patient experiences of care, quality of life, or functional status? If so, how, how much, and for which individuals?
- Utilization/Expenditures:
 - ++ Did the model result in decreased utilization of emergency department visits, hospitalizations, and readmissions? If so how, how much, and for which individuals?
 - ++ Did the model result in increased utilization of physician or pharmacy services? If so how, how much, and for which individuals?
 - ++ Did the model result in decreased total cost of care? Were changes in total costs of care driven by changes

in utilization for specific types of settings or health care services? What specific aspects of the model led to these changes? Were any savings due to improper cost-shifting to the Medicaid program?

To carry out this research we must have access to patient records not generally available to us. As such, we propose to exercise our authority in section 1115A(b)(4)(B) of the Act to establish requirements for states and other entities participating in the testing of past, present, and future models under section 1115A of the Act to collect and report information that we have determined is necessary to monitor and evaluate such models. Thus, we propose to require model participants, and providers and suppliers working under the models operated by such participants to produce such individually identifiable health information and such other information as the Secretary identifies as being necessary to conduct the statutorily mandated research described above. Such research will include the monitoring and evaluation of such models. Further, we view engagement with other payers, both public and private, as a critical driver of the success of these models. CMS programs constitute only a share of any provider's revenue. Therefore, efforts to improve quality and reduce cost are more likely to be successful if signals are aligned across payers. Section 1115A of the Act specifically allows the Secretary of Health and Human Services to consider, in selecting which models to choose for testing, "whether the model demonstrates effective linkage with other public sector or private sector payers." Multi-payer models, such as but not limited to the Comprehensive Primary Care model, will conduct quality measurement across all patients regardless of payer in order to maximize alignment and increase efficiency. Construction of multi-payer quality measures requires the ability to identify all individuals subject to the model test regardless of payer. In addition, section 1115A also permits the Secretary to consider models that allow states to test and evaluate systems of all-payer payment reform for the medical care of residents of the state, including dual eligible individuals. Under the State Innovation Model (SIM), the Innovation Center is testing the ability for state governments to accelerate transformation. The premise of the SIM initiative is to support Governor-sponsored, multi-payer models that are focused on public and private sector collaboration to transform the state's

delivery system. States have policy and regulatory authorities, as well as ongoing relationships with private payers, health plans, and providers that can accelerate delivery system reform. SIM models must impact the preponderance of care in the state and are expected to work with public and private payers to create multi-payer alignment. The evaluation of SIM will include all populations and payers involved in the state initiative, which in many cases includes private payers. The absence of identifiable data from private payers would result in considerable limitations on the level of evaluation conducted. Therefore, under this authority, we also propose to require the submission of identifiable health and utilization information for patients of private payers treated by providers/suppliers participating in the testing of a model under section 1115A of the Act when an explicit purpose of the model test is to engage private sector payers. If finalized, this regulation will provide clear legal authority for HIPAA Covered Entities to disclose any required protected health information. Identifiable data submitted by entities participating in the testing of models under section 1115A of the Act will meet CMS Acceptable Risks Safe Guards (ARS) guidelines. When data is expected to be exchanged over the internet such exchange will also meet all E-Gov requirements. In accordance with the requirements of the Privacy Act of 1974, these data will be covered under a CMS established system of records (System No. 09-70-0591), which serves as the Master system for all demonstrations, evaluations, and research studies administered by the Innovation Center. These data will be stored until the evaluation is complete and all necessary policy deliberations have been finalized.

2. Provisions of the Proposed Regulations

Wherever possible, evaluations will make use of claims, assessment, and enrollment data available through CMS' existing administrative systems. However, evaluations will generally also need to include additional data not available through existing CMS administrative systems. As such, depending on the particular project, CMS or its contractor will require the production of the minimum data necessary to carry out the statutorily mandated research work described in section E.1. of this proposed rule. Such data may include the identities of the patients served under the model, relevant clinical details about the services furnished and outcomes

achieved, and any confounding factors that might influence the evaluation results achieved through the delivery of such services. For illustrative purposes, below are examples of some of the types of information that could be required to carry out an evaluation, and for which the evaluator would need patient level identifiers.

- Utilization data not otherwise available through existing Center for Medicare & Medicaid Services (CMS) systems.
- Beneficiary, patient, participant, family, and provider experiences.
- Beneficiary, patient, participant, and provider rosters with identifiers that allow linkages across time and datasets.
- Beneficiary, patient, participant, and family socio-demographic and ethnic characteristics.
- Care management details, such as details regarding the provision of services, payments or goods to beneficiaries, patients, participants, families, or other providers.
- Beneficiary, patient, and participant functional status and assessment data.
- Beneficiary, patient, and participant health behaviors.
- Clinical data, such as, but not limited to lab values and information from EHRs.
- Beneficiary, patient, participant quality data not otherwise available through claims.
- Other data relevant to identified outcomes—for example, participant employment status, participant educational degrees pursued/achieved, and income.

We invite public comment on this proposal to mandate the production of the individually identifiable information necessary to conduct the statutorily mandated research under section 1115A of the Act.

In addition, we are proposing a new subpart K in part 403 to implement section 1115A of the Act.

F. Local Coverage Determination Process for Clinical Diagnostic Laboratory Testing

1. Background

On April 1, 2014, the PAMA was enacted and section 216 addresses Medicare payment and coverage policies for clinical diagnostic laboratory testing. In regard to coverage policies, section 216 amended the statute by adding section 1834A(g) of the Act, which establishes mandates related to issuance of local coverage policies by the Medicare Administrative Contractors (MACs) for clinical diagnostic laboratory tests. The law

states: “A Medicare administrative contractor shall only issue a coverage policy with respect to a clinical diagnostic laboratory test in accordance with the process for making a local coverage determination (as defined in section 1869(f)(2)(B)), including the appeals and review process for local coverage determinations under part 426 of title 42, Code of Federal Regulations (or successor regulations).”

Section 1869(f)(2)(B) of the Act defines a local coverage determination (LCD) as “a determination by a fiscal intermediary or a carrier under Part A or Part B, as applicable, respecting whether or not a particular item or service is covered on an intermediary-or carrier-wide basis under such parts, in accordance with section 1862(a)(1)(A) of the Act.”

Since the new law requires that the process for making local coverage determinations be used as the vehicle for local coverage policies for clinical diagnostic laboratory tests, it is important that we carefully consider the LCD process that is used today and determine if there are certain, limited aspects of the LCD process that may provide an opportunity to better fit the needs of this particular area of medicine. In addition to the current LCD process, we will examine how the LCD process was applied to a pilot project for molecular diagnostic tests as we are learning important lessons from this ongoing pilot. We believe lessons learned from this project can be applied to all clinical diagnostic laboratory testing and not just molecular diagnostic tests (which are encompassed under the PAMA requirement for local coverage policies). In this proposed process, we will review the current LCD process, as well as the pilot in support of a proposal to create, consistent with the requirements set forth under the PAMA, an expedited LCD process for clinical diagnostic laboratory testing.

The current LCD process (Table 18) requires that a draft LCD be published in the Medicare Coverage Database (MCD). This serves as a public announcement that an LCD is being developed. Once a draft LCD is published, at least 45 calendar days are provided for public comment. We note that the National Coverage Determination (NCD) process only requires a 30-day public comment period after a proposed NCD is published. This timeframe is based on the NCD statutory requirements under 1862(l) of the Act and in our experience at the national policy level, 30 days is generally adequate to allow for robust public comment.

After the draft LCD is made public, MACs are required to hold an open meeting to discuss the draft LCD with stakeholders. In addition to the open meeting, the MACs present the draft policy to the Carrier Advisory Committee (CAC). These two aspects of LCD development can be time-consuming and may involve logistical complications that extend the length of time it takes to reach a final policy. We note that unlike the national advisory committee, the Medicare Evidence Development and Coverage Advisory Committee (MEDCAC), the CAC meetings and open stakeholder meetings are scheduled to discuss many LCD policies at a time as opposed to narrowly focusing on one policy. Due to the resources required, the constant development of LCDs and scheduling considerations, MACs do not hold ad hoc meetings. Both the open stakeholder meetings and the CAC meetings are scheduled far in advance, generally at the start of the calendar year before MACs know which policies will be presented in these forums. The timing of the open stakeholder meeting, CAC meeting, and public release of the draft LCD are all factors in determining which LCDs are on the agendas. Because of these scheduling issues, some LCDs may not have to wait as long for a CAC meeting or an open stakeholder meeting while others could have lengthy delays. In contrast, at the national level, MEDCACs are not convened for every NCD and separate open meetings are also not a part of the NCD process. Based on our experience with the NCD process over the past decade, we believe that public input is now readily available through more technologically advanced mechanisms of collecting public comment. For example, the information gathered and knowledge gained from the LCD open stakeholder meetings may now be acquired more broadly through the collection of public comments via web-based applications. CMS and its contractors are receiving more input on their policies because of these technology advances, which were not as available to the public when the LCD manual was originally written approximately 25 years ago. Medical literature, clinical practice guidelines, complicated charts and graphs can now be easily submitted electronically through the public comment process. Questions or follow-up information from a specific commenter can be addressed through conference calls or email. In addition, through these processes, all public comments are available to everyone rather than to the few people who attend meetings in

person. In addition to publishing a draft LCD, MACs publish a document that provides a summary of all of the comments received and responses to those comments. This allows the public to understand the reasoning behind the final LCD and to know that all of the public comments were taken under consideration as the MAC developed the final policy. Since this information is made readily available in writing, an open meeting is no longer necessary for the public to be heard. There are more efficient methods available to the public to submit comments and additional evidence that supports or rejects the application of a draft LCD.

Somewhat different considerations apply to CACs, which are state-specific bodies representing the clinical expertise of a geographic area. CACs allow a unique opportunity for CAC members to provide practical information regarding a draft policy since they are the entities actually delivering services in the community. However, like MEDCACs, a CAC may not be needed in all instances for the creation or revision of an LCD. CAC meeting agendas can quickly fill up with draft LCDs since the CAC meetings are scheduled far in advance. We believe CACs may be a better resource and used more efficiently in the development of LCDs if the MAC is able to select which draft LCDs are presented to a CAC for discussion, as opposed to taking all LCDs to the CAC. Of note, NCDs that go before the MEDCAC are selected by the agency and it is not part of the process for every NCD.

Under the current LCD process, after the close of the comment period and the required meetings, the MAC publishes a final LCD. As stated earlier, the MAC must also respond to any comments received, via a comment/response document. A notice period of at least 45 calendar days is then required before the LCD can take effect. While it takes time for the provider community and the claims processing systems to adapt to changes in coverage, a notice period delays the date of when coverage may become effective.

In addition to evaluating the effectiveness of certain aspects of the LCD implementation process, we are also examining a pilot project that CMS launched with a single MAC, Palmetto GBA, on November 1, 2011. While the pilot discussed in this section only includes molecular diagnostic (genetic) laboratory tests, a subset of all clinical diagnostic lab tests, we believe the pilot's design and some of the lessons learned from the pilot can be applied to all clinical diagnostic laboratory tests

For background, the universe of molecular diagnostic laboratory tests is vast and the current LCD process can be lengthy for some of these innovative tests, which are technically complex. For example, multiple molecular diagnostic tests designated to diagnose the same disease may rely on different underlying technologies and, therefore, have significantly different performance characteristics. It would not be appropriate to assume that all tests for a particular condition behave the same. Because of these complexities, we have an obligation to consider the evidence at a granular level; that is, to ensure coverage of the appropriate test for the appropriate Medicare beneficiary.

The pilot project's long-term goal was to assist clinicians by determining whether the molecular diagnostic tests they order actually perform as expected and, thus, ultimately improve clinical care. This goal stemmed from concerns that some tests were being marketed directly to physicians without information regarding the test's performance. The pilot project sought to achieve this goal by identifying all of the molecular diagnostic tests that Medicare was covering in the Palmetto MAC jurisdiction. This required the ability to uniquely identify tests through test registration and assignment of an identifier. In addition, the MAC reviewed clinical statements made by the manufacturer for each molecular diagnostic test to ensure the test was delivering what was being claimed. Essentially, the pilot project facilitated claims processing, tracked utilization, and determined clinical validity, utility and coverage through technical assessments of published test data.

As part of the pilot project, Palmetto wrote a single molecular diagnostic laboratory testing LCD that outlined the framework they would follow in determining coverage of all molecular diagnostic tests in their jurisdiction. Additionally, that LCD included a list of covered molecular diagnostic tests. Moreover, Palmetto issued several articles addressing various other aspects of the LCD implementation process, including coding guidelines, billing and medical review procedures. There is much information that is not contained in the body of an LCD that is necessary for consistent and predictable claims processing and payment.

We believe a process that ensures transparency and stakeholder participation can be achieved without utilizing the current LCD process in its entirety. Some key aspects of the process should be maintained such as allowing public comment on draft LCDs and requiring MAC responses to public

comments. However, we believe other aspects could be streamlined to allow more timely decisions and a more efficient process.

2. Proposed New LCD Process for Clinical Diagnostic Laboratory Tests

After assessment of the current LCD process, the Palmetto pilot project, the requirements of the PAMA, and the vast field of clinical diagnostic laboratory tests, including molecular diagnostic tests, we are proposing a revised LCD process for all new draft clinical diagnostic laboratory test LCDs published on or after January 1, 2015. This process would carefully balance the need for an expedited process to handle the vast number of clinical diagnostic laboratory tests, including the rapidly growing universe of molecular diagnostic tests. The National Institutes of Health (NIH)-sponsored Genetic Testing Registry (GTR) currently includes 16,000 registered genetic tests for over 4,000 conditions (www.ncbi.nlm.nih.gov/gtr/). We have a responsibility to ensure that appropriate tests are covered by Medicare and that coverage is limited to tests for which the test results are used by the ordering physician in the management of the beneficiary's specific medical problem (as required in § 410.32(a)). Coverage for diagnostic laboratory tests may be achieved through various policy vehicles, including an NCD, LCD, or claim-by-claim adjudication at the local contractor level. For most molecular diagnostic tests, coverage has been determined by the MACs, through LCDs or claim-by-claim adjudication. Few such tests have been the subject of an NCD, to date. This concentration of coverage decisions at the local level, and the responsibility of the agency to allow coverage of appropriate tests provide additional reasons to provide MACs with a more streamlined LCD process.

Based on these considerations, we are proposing a new LCD process that would apply only to clinical diagnostic laboratory tests. Specifically, we are proposing to establish a process MACs must follow when developing clinical diagnostic laboratory test LCDs and encouraging MACs to collaborate on such policies across jurisdictions. We propose that the process apply to all new clinical diagnostic laboratory testing draft LCDs published on or after January 1, 2015. Consistent with Chapter 13, section 13.7.3 of the Medicare Program Integrity Manual (PIM), however, we further propose that this process will not apply to clinical diagnostic laboratory testing LCDs that are being revised for the following

reasons: to liberalize an existing LCD; being issued for a compelling reason; making a non-substantive correction; providing a clarification; making a non-discretionary coverage or diagnosis coding update; making a discretionary diagnosis coding update that does not restrict; or revising to effectuate an Administrative Law Judge’s decision on a Benefits Improvement and Protection Act (BIPA) 522 challenge.

The proposed new process would allow any person or entity to request an LCD or the MAC to initiate an LCD regarding clinical diagnostic laboratory testing. After this external request or internal initiation, the MAC would publish a draft LCD in the Medicare Coverage Database (<http://www.cms.gov/medicare-coverage-database/overview-and-quick-search.aspx>), thereby making the draft LCD publicly available. Next, a minimum of 30 calendar days for public comment would be required. We note that in the event that stakeholders and/or members of the public are not able to submit comments within the 30 calendar day window, the MAC would have discretion to extend the comment period. We would expect the draft LCDs to outline the criteria the MAC would use when determining whether a specific clinical diagnostic laboratory test or a group of tests are covered or non-covered. The MAC would review, analyze, and take under consideration all public comments on the draft LCD. For draft LCDs where the MAC

determines that a CAC meeting would contribute to the quality of the final policy, the MAC has discretion to take draft LCDs to the CAC. In the event the MAC involves the CAC in the development of an LCD, we would require that the public comment period be extended to allow for the CAC to be held before the final policy is issued. The MAC would be required to respond to all public comments in writing and post their responses on a public Web site. As a final step, the MAC would publish the final LCD in the Medicare Coverage Database no later than 45 calendar days after the close of the comment period. We believe 45 days to be an adequate time for the MAC to take all comments under consideration, prepare responses to those comments, and develop a final policy.

The final LCD would be effective immediately upon publication. This effective date would be different than under the current LCD process (which includes a notice period of at least 45 calendar days before a final LCD is effective); however, based on our experience with NCDs, which are also effective upon publication, we believe this is an efficient mechanism to make tests available to beneficiaries more quickly.

3. Reconsideration Process

The proposed process for developing clinical diagnostic laboratory testing LCDs would not change the LCD reconsideration process as outlined in

the PIM in Chapter 13. This section of the manual allows interested parties the opportunity to request reconsideration of an LCD. Under the proposed process, the MACs would continue to implement all sections of the PIM that relate to the LCD reconsideration process.

4. LCD Challenge Process

The proposed process for clinical diagnostic laboratory testing LCDs would also not change any of the current review processes available to an aggrieved party. An aggrieved party would continue to be able to challenge an LCD according to the requirements set out in 42 CFR part 426.

As discussed previously, we believe an administratively more efficient process is needed for local coverage determinations for clinical diagnostic laboratory testing. If we continue to require that MACs follow all steps in the current LCD process, we fear that LCDs will not be able to be finalized quickly enough for even a fraction of the thousands of new clinical diagnostic (particularly molecular) tests developed each year.

We believe this proposed new process for clinical diagnostic laboratory tests will allow for public dialogue, notification of stakeholders, and expedited beneficiary access to covered tests. Table 18 summarizes the differences between the current LCD process and the proposed new LCD process for the development of clinical diagnostic laboratory testing policies.

TABLE 18—COMPARISON OF CURRENT LCD PROCESS VERSUS PROPOSED LCD PROCESS FOR CLINICAL DIAGNOSTIC LABORATORY TESTS

Current LCD process	Proposed LCD process for clinical diagnostic laboratory tests
Issue Draft LCD in Medicare Coverage Database, which identifies criteria used for determining coverage under statutory “reasonable and necessary” standard.	Issue Draft LCD in Medicare Coverage Database, which identifies criteria used for determining coverage under statutory “reasonable and necessary” standard.
Public comment period of 45 calendar days	Public comment period of 30 calendar days with option to extend.
Present LCD at CAC & discussion at open stakeholder meetings	Optional CAC meeting. No requirement for open stakeholder meeting.
Publication of Comment/Response Document and final LCD (no specified time of publication after the close of the comment period).	Publication of Comment/Response Document and final LCD within 45 calendar days of the close of the draft LCD comment period.
Notice period of 45 calendar days with the final LCD effective the 46th calendar day.	Final LCD effective on the date of publication.
Interested parties may request reconsideration of an LCD	Interested parties may request reconsideration of an LCD.
An aggrieved party may further challenge an LCD	An aggrieved party may further challenge an LCD.

In summary, we believe this proposed process would meet all the requirements of the PAMA, would be open and transparent, would allow for public input, and would be administratively efficient. We are proposing this process only for clinical diagnostic laboratory testing when coverage policies are developed by a MAC through an LCD; it would not apply to the NCD process or other vehicles of coverage including

claim-by-claim adjudication. We believe the proposed process would balance stakeholders’ concerns about ensuring an open and transparent process with the ability to efficiently review clinical laboratory tests for coverage. We encourage public comment on all aspects of this proposed process.

G. Private Contracting/Opt-Out

1. Background

Effective January 1, 1998, section 1802(b) of the Act permits certain physicians and practitioners to opt-out of Medicare if certain conditions are met, and to furnish through private contracts services that would otherwise be covered by Medicare. For those physicians and practitioners who opt-

out of Medicare in accordance with section 1802(b) of the Act, the mandatory claims submission and limiting charge rules of section 1848(g) of the Act would not apply. As a result, if the conditions necessary for an effective opt-out are met, physicians and practitioners are permitted to privately contract with Medicare beneficiaries and to charge them without regard to Medicare's limiting charge rules. Regulations governing the requirements and procedures for private contracts appear at 42 CFR part 405, subpart D.

a. Opt-Out Determinations (§ 405.450)

The private contracting regulation at § 405.450 describes certain opt-out determinations made by Medicare, and the process that physicians, practitioners, and beneficiaries may use to appeal those determinations. Section 405.450(a) describes the process available for physicians or practitioners to appeal Medicare enrollment determinations related to opting out of the program, and § 405.450(b) describes the process available to challenge payment determinations related to claims for services furnished by physicians who have opted out. Both provisions refer to § 405.803, the Part B claims appeals process that was in place at the time the opt-out regulations were issued (November 2, 1998). When those regulations were issued, a process for a physician or practitioner to appeal enrollment related decisions had not been implemented in regulation. Thus, to ensure an appeals process was available to physicians and practitioners for opt-out related issues, we chose to utilize the existing claims appeals process in § 405.803 for both enrollment and claims related appeals.

In May 16, 2012 **Federal Register** (77 FR 29002), we published a final rule entitled "Medicare and Medicaid Program; Regulatory Provisions to Promote Program Efficiency, Transparency and Burden Reduction." In that final rule, we deleted the provisions relating to initial determinations, appeals, and reopenings of Medicare Part A and Part B claims, and relating to determinations and appeals regarding an individual's entitlement to benefits under Medicare Part A and Part B, which were contained in part 405, subparts G and H (including § 405.803) because these provisions were obsolete and had been replaced by the regulations at part 405, subpart I. We inadvertently neglected to revise the cross-reference in § 405.450(a) and (b) of the private contracting regulations to direct appeals of opt-out determinations through the current appeal process. However, it is important

to note that our policy regarding the appeal of opt-out determinations did not change when the appeal regulations at part 405, subpart I were finalized.

The procedures set forth in current part 498 establish the appeals procedures regarding decisions made by Medicare that affect enrollment in the program. We believe this process, and not the appeal process in part 405, subpart I, is the appropriate channel for physicians and practitioners to challenge an enrollment related opt-out decision made by Medicare. There are now two different sets of appeal regulations for initial determinations; and the appeal of enrollment related opt-out determinations is more like the types of determinations now addressed under part 498 than those under part 405, subpart I. Specifically, the appeal process under part 405, subpart I focus on reviews of determinations regarding beneficiary entitlement to Medicare and claims for benefits for particular services. The appeal process under part 498 is focused on the review of determinations regarding the participation or enrollment status of providers and suppliers. Enrollment related opt-out determinations involve only the status of particular physician or practitioners under Medicare, and do not involve beneficiary eligibility or claims for specific services. As such, the appeal process under part 498 is better suited for the review of enrollment related opt-out determinations.

However, we do not believe the enrollment appeals process established in part 498 is the appropriate mechanism for challenging payment decisions on claims for services furnished by a physician and practitioner who has opted out of the program. Appeals for such claims should continue to follow the appeals procedures now set forth in part 405 subpart I.

b. Definitions, Requirements of the Opt Out Affidavit, Effects of Opting Out of Medicare, Application to Medicare Advantage Contracts (§§ 405.400, 405.420(e), 405.425(a), and 405.455)

Section 405.400 sets forth certain definitions for purposes of the private contracting regulations. Among the defined terms is "Emergency care services" which means services furnished to an individual for treatment of an "emergency medical condition" as that term is defined in § 422.2. The cross-referenced regulation at § 422.2 included within the definition of emergency care services was deleted on June 29, 2000 (65 FR 40314) and at that time we inadvertently neglected to revise that cross-reference. The cross-

reference within the definition of emergency care services should have been amended at that time to cite the definition of "emergency services" in § 424.101.

The private contracting regulations at § 405.420(e), § 405.425(a) and § 405.455 all use the term Medicare+Choice when referring to Part C plans. However, we no longer use the term Medicare+Choice when referring to Part C plans; instead the plans are referred to as Medicare Advantage plans. When part 422 of the regulations was updated on January 28, 2005 (70 FR 4741), we inadvertently neglected to revise § 405.420(e), § 405.425(a) and § 405.455 to replace the term Medicare+Choice with Medicare Advantage plan.

2. Provisions of the Proposed Regulation

For the reasons discussed above, we propose that a determination described in § 405.450(a) (relating to the status of opt-out or private contracts) is an initial determination for purposes of § 498.3(b), and a physician or practitioner who is dissatisfied with a Medicare determination under § 405.450(a) may utilize the enrollment appeals process currently available for providers and suppliers in part 498. In addition, we propose that a determination described in § 405.450(b) (that payment cannot be made to a beneficiary for services furnished by a physician or practitioner who has opted out) is an initial determination for the purposes of § 405.924 and may be challenged through the existing claims appeals procedures in part 405 subpart I. Accordingly, we propose that the cross reference to § 405.803 in § 405.450(a) be replaced with a cross reference to § 498.3(b). We also propose that the cross reference to § 405.803 in § 405.450(b) be replaced with a cross reference to § 405.924. We also propose corresponding edits to § 498.3(b) and § 405.924 to note that the determinations under § 405.450(a) and (b), respectively, are initial determinations.

For the reasons discussed above, we also propose that the definition of Emergency care services at § 405.400 be revised to cite the definition of Emergency services in § 424.101 and that all references to Medicare+Choice in § 405.420(e), § 405.425(a) and § 405.455 be replaced with the term "Medicare Advantage."

H. Solicitation of Comments on the Payment Policy for Substitute Physician Billing Arrangements

1. Background

In accordance with section 1842(b)(6) of the Act, no payment under Medicare Part B may be made to anyone other than to the beneficiary to whom a service was furnished or to the physician or other person who furnished the service. However, there are certain limited exceptions to this general prohibition. For example, section 1842(b)(6)(D) of the Act describes an exception for substitute physician billing arrangements, which states that “payment may be made to a physician for physicians’ services (and services furnished incident to such services) furnished by a second physician to patients of the first physician if (i) the first physician is unavailable to provide the services; (ii) the services are furnished pursuant to an arrangement between the two physicians that (I) is informal and reciprocal, or (II) involves per diem or other fee-for-time compensation for such services; (iii) the services are not provided by the second physician over a continuous period of more than 60 days or are provided over a longer continuous period during all of which the first physician has been called or ordered to active duty as a member of a reserve component of the Armed Forces; and (iv) the claim form submitted to the [contractor] for such services includes the second physician’s unique identifier . . . and indicates that the claim meets the requirements of this subparagraph for payment to the first physician.” Section 1842(b)(6) of the Act is self-implementing and we have not interpreted the statutory provisions through regulations.

In practice, section 1842(b)(6)(D) of the Act generally allows for two types of substitute physician billing arrangements: (1) An informal reciprocal arrangement where doctor A substitutes for doctor B on an occasional basis and doctor B substitutes for doctor A on an occasional basis; and (2) an arrangement where the services of the substitute physician are paid for on a per diem basis or according to the amount of time worked. Substitute physicians in the second type of arrangement are sometimes referred to as “locum tenens” physicians. It is our understanding that locum tenens physicians are substitute physicians who often do not have a practice of their own, are geographically mobile, and work on an as-needed basis as independent contractors. They are utilized by physician practices,

hospitals, and health care entities enrolled in Part B as Medicare suppliers to cover for physicians who are absent for reasons such as illness, pregnancy, vacation, or continuing medical education. Also, we have heard anecdotally that locum tenens physicians are used to fill staffing needs (for example, in physician shortage areas) or, on a temporary basis, to replace physicians who have permanently left a medical group or employer.

We are concerned about the operational and program integrity issues that result from the use of substitute physicians to fill staffing needs or to replace a physician who has permanently left a medical group or employer. For example, although our Medicare enrollment rules require physicians and physician groups or organizations to notify us promptly of any enrollment changes (including reassignment changes) (see § 424.516(d)), processing delays or miscommunication between the departing physician and his or her former medical group or employer regarding which party would report the change to Medicare could result in the Provider Transaction Access Number (PTAN) that links the departed physician and his or her former medical group remaining “open” or “attached” for a period of time. During such period, both the departed physician and the departed physician’s former medical group might bill Medicare under the departed physician’s National Provider Identifier (NPI) for furnished services. This could occur where a substitute physician is providing services in place of the departed physician in the departed physician’s former medical group, while the departed physician is also providing services to beneficiaries following departure from the former group. Operationally, either or both types of claims could be rejected or denied, even though the claims filed by the departed physician were billed appropriately. Moreover, the continued use of a departed physician’s NPI to bill for services furnished to beneficiaries by a substitute physician raises program integrity issues, particularly if the departed physician is unaware of his or her former medical group or employer’s actions.

Finally, as noted above, section 1842(b)(6)(D)(iv) of the Act requires that the claim form submitted to the contractor include the substitute physician’s unique identifier. Currently, the unique identifier used to identify a physician is the physician’s NPI. Prior to the implementation of the NPI, the Unique Physician Identification Number

(UPIN) was used. Because a substitute physician’s NPI is not captured on the CMS–1500 claim form or on the appropriate electronic claim, physicians and other entities that furnish services to beneficiaries through the use of a substitute physician are required to enter a modifier on the CMS–1500 claim form or on the appropriate electronic claim indicating that the services were furnished by a substitute physician; and to keep a record of each service provided by the substitute physician, associated with the substitute physician’s UPIN or NPI; and to make this record available to the contractor upon request. (See Medicare Claims Processing Manual (Pub. 100–4), Chapter 1, Sections 30.2.10 and 30.2.11) However, having a NPI or UPIN does not necessarily mean that the substitute physician is enrolled in the Medicare program. Without being enrolled in Medicare, we do not know whether the substitute physician has the proper credentials to furnish the services being billed under section 1842(b)(6)(D) of the Act or if the substitute physician is sanctioned or excluded from Medicare. The importance of enrollment and the resulting transparency afforded the Medicare program and its beneficiaries was recognized by the Congress when it included in the Affordable Care Act a requirement that physicians and other eligible NPPs enroll in the Medicare program if they wish to order or refer certain items or services for Medicare beneficiaries. This includes those physicians and other eligible NPPs who do not and will not submit claims to a Medicare contractor for the services they furnish. We are seeking comments regarding how to achieve similar transparency in the context of substitute physician billing arrangements for the identity of the individual actually furnishing the service to a beneficiary.

2. Solicitation of Comments

To help inform our decision whether and, if so, how to address the issues discussed in section III.H.1., and whether to adopt regulations interpreting section 1842(b)(6)(D) of the Act, we are soliciting comments on the policy for substitute physician billing arrangements. We note that any regulations would be proposed in a future rulemaking with opportunity for public comment. Through this solicitation, we hope to understand better current industry practices with respect to the use of substitute physicians and the impact that policy changes limiting the use of substitute physicians might have on beneficiary access to physician services. Therefore,

we are soliciting comments on the following:

(1) How physicians and other entities are currently utilizing the services of substitute physicians and billing for such services. We are interested in specific examples, including the circumstances that give rise to the need for the substitute physician, the types of services furnished by the substitute physician, the billing for the services of the substitute physician, the length of time that the substitute physician's services are needed or used, and any other information relevant to the substitute physician billing arrangement.

(2) When a physician is "unavailable" to provide services for purposes of section 1842(b)(6)(D) of the Act. We are particularly interested in comments from physicians, medical groups and other entities that utilize the services of substitute physicians regarding when a regular physician is "unavailable."

(3) Whether we should limit substitute physician billing arrangements to those "between the two physicians" (rather than between a medical group, employer or other entity and the substitute physician) as stated in section 1842(b)(6)(D)(ii) of the Act.

(4) Whether we should permit the sequential use of multiple substitute physicians provided that each substitute physician furnishes services for the unavailable physician for no more than 60 continuous days.

(5) Whether we should have identical or different criteria for substitute physician billing arrangements under sections 1842(b)(6)(D)(ii)(I) and (II) of the Act; that is, whether we should treat reciprocal substitute physician billing arrangements differently than paid (or locum tenens) substitute physician billing arrangements.

(6) Whether substitute physicians furnishing services to Medicare beneficiaries should be required to enroll in the Medicare program.

(7) Whether entities submitting claims for services furnished by substitute physicians should include on the CMS-1500 claim form or on the appropriate electronic claim the identity of the substitute physician and, if so, whether the CMS-1500 claim form or the appropriate electronic claim should be revised to accommodate such a requirement.

(8) Whether we should place limitations on the use of the substitute physician and billing for his or her services (for example, limits on the length of time that an individual substitute physician may provide services to replace a particular departed physician; limits on the overall length of

time that substitute physicians may provide services to replace a particular departed physician; a requirement that the departing physician be a party to the substitute physician billing arrangement; or permitting the use of a substitute physician only where a demonstrated staffing need can be shown). We are also seeking comments regarding whether these limitations should be different depending on the circumstances underlying or requiring the use of the substitute physician.

(9) Whether we should limit or prohibit the use of substitute physician billing arrangements in certain programs or for certain purposes (for example, the Medicare Shared Savings Program or determining whether a physician is a member of a group practice for purposes of the physician self-referral law).

(10) The impact of substitute physician billing arrangements on CMS programs that rely on the Provider Enrollment, Chain and Ownership System (PECOS) (for example, the Medicare Shared Savings Program), enforcement of the physician self-referral law, and program integrity oversight.

(11) Additional program integrity safeguards that should be included in our substitute physician billing policy to protect against program and patient abuse. These could include, but are not limited to, qualifications for substitute physicians related to exclusion status, quality of care, or licensure and certifications.

(12) Any other issues that we should consider in determining whether to propose regulations interpreting section 1842(b)(6)(D) of the Act.

I. Reports of Payments or Other Transfers of Value to Covered Recipients

1. Background

In the February 8, 2013 **Federal Register** (78 FR 9458), we published the "Transparency Reports and Reporting of Physician Ownership or Investment Interests" final rule which implemented section 1128G to the Act, as added by section 6002 of the Affordable Care Act. Under section 1128G(a)(1) of the Act, manufacturers of covered drugs, devices, biologicals, and medical supplies (applicable manufacturers) are required to submit on an annual basis information about certain payments or other transfers of value made to physicians and teaching hospitals (collectively called covered recipients) during the course of the preceding calendar year. Section 1128G(a)(2) of the Act requires applicable manufacturers and applicable group purchasing

organizations (GPOs) to disclose any ownership or investment interests in such entities held by physicians or their immediate family members, as well as information on any payments or other transfers of value provided to such physician owners or investors. The implementing regulations are at 42 CFR Part 402, subpart A, and Part 403, subpart I. We have organized these reporting requirements under the "Open Payments (Sunshine Act)" program.

The Open Payments program creates transparency around the nature and extent of relationships that exist between drug, device, biologicals and medical supply manufacturers, and physicians and teaching hospitals (covered recipients and physician owner or investors). The implementing regulations describe procedures for applicable manufacturers and applicable GPOs to submit electronic reports detailing payments or other transfers of value and ownership or investment interests provided to covered recipients and physician owners or investors are codified at § 403.908.

Since the publication and implementation of the February 8, 2013 final rule, various stakeholders have provided feedback to CMS regarding certain aspects of these reporting requirements. Specifically, § 403.904(g)(1) excludes the reporting of payments associated with certain continuing education events, and § 403.904(c)(8) requires reporting of the marketed name for drugs and biologicals but makes reporting the marketed name of devices or medical supplies optional. We are proposing a change to § 403.904(g) to correct an unintended consequence of the current regulatory text. Additionally, at § 403.904(c)(8), we are proposing to make the reporting requirements consistent by requiring the reporting of the marketed name for drugs, devices, biologicals, or medical supplies which are associated with a payment or other transfer of value.

Additionally, at § 403.902, we propose to remove the definition of a "covered device" because we believe it is duplicative of the definition of "covered drug, device, biological or medical supply" which is codified in the same section. We also propose to require the reporting of the following distinct forms of payment: stock option; or any other ownership interests specified in § 403.904(d)(3) to collect more specific data regarding the forms of payment.

2. Continuing Education Exclusion (§ 403.904(g)(1))

In the February 8, 2013 final rule, many commenters recommended that accredited or certified continuing education payments to speakers should not be reported because there are safeguards already in place, and they are not direct payments to a covered recipient. In the final rule preamble, we noted that “industry support for accredited or certified continuing education is a unique relationship” (78 FR 9492). Section 403.904(g)(1) states that payments or other transfers of value provided as compensation for speaking at a continuing education program need not be reported if the following three conditions are met:

- The event at which the covered recipient is speaking must meet the accreditation or certification requirements and standards for continuing education for one of the following organizations: the Accreditation Council for Continuing Medical Education (ACCM); the American Academy of Family Physicians (AAFP); the American Dental Association’s Continuing Education Recognition Program (ADA CERP); the American Medical Association (AMA); or the American Osteopathic Association (AOA).
- The applicable manufacturer does not pay the covered recipient speaker directly.

- The applicable manufacturer does not select the covered recipient speaker or provide the third party (such as a continuing education vendor) with a distinct, identifiable set of individuals to be considered as speakers for the continuing education program.

Since the implementation of § 403.904(g)(1), other accrediting organizations have requested that payments made to speakers at their events also be exempted from reporting. These organizations have stated that they follow the same accreditation standards as the organizations specified in § 403.904(g)(1)(i). Other stakeholders have recommended that the exemption be removed in its entirety stating removal of the exclusion will allow for consistent reporting for compensation provided to physician speakers at all continuing education events, as well as transparency regarding compensation paid to physician speakers. Many stakeholders raised concerns that the reporting requirements are inconsistent because certain continuing education payments are reportable, while others are not. CMS’ apparent endorsement or support to organizations sponsoring continuing education events was an

unintended consequence of the final rule.

After consideration of these comments, we propose to remove the language in § 403.904(g) in its entirety, in part because it is redundant with the exclusion in § 403.904(i)(1). That provision excludes indirect payments or other transfers of value where the applicable manufacturer is “unaware” of, that is, “does not know,” the identity of the covered recipient during the reporting year or by the end of the second quarter of the following reporting year. When an applicable manufacturer or applicable GPO provides funding to a continuing education provider, but does not either select or pay the covered recipient speaker directly, or provide the continuing education provider with a distinct, identifiable set of covered recipients to be considered as speakers for the continuing education program, CMS will consider those payments to be excluded from reporting under § 403.904(i)(1). This approach is consistent with our discussion in the preamble to the final rule, in which we explained that if an applicable manufacturer conveys “full discretion” to the continuing education provider, those payments are outside the scope of the rule (78 FR 9492). In contrast, when an applicable manufacturer conditions its financial sponsorship of a continuing education event on the participation of particular covered recipients, or pays a covered recipient directly for speaking at such an event, those payments are subject to disclosure.

We considered two alternative approaches to address this issue. First, we explored expanding the list of organizations in § 403.904(g)(1)(i) by name, however, we believe that this approach might imply CMS’s endorsement of the named continuing education providers over others. Second, we considered expansion of the organizations in § 403.904(g)(1)(i) by articulating accreditation or certification standards that would allow a CME program to qualify for the exclusion. This approach is not easily implemented because it would require evaluating both the language of the standards, as well as the enforcement of the standards of any organization professing to meet the criteria. We seek comments on both alternatives presented, including commenters’ suggestions about what standards, if any, CMS should incorporate.

3. Reporting of Marketed Name (§ 403.904(c)(8))

Section 1128G(a)(1)(A)(vii) of the Act requires applicable manufacturers to

report the name of the covered drug, device, biological or medical supply associated with that payment, if the payment is related to “marketing, education, or research” of a particular covered drug, device, biological, or medical supply. Section 403.904(c)(8)(i) requires applicable manufacturers to report the marketed name for each drug or biological related to a payment or other transfer of value. At § 403.904(c)(8)(ii), we require an applicable manufacturer of devices or medical supplies to report one of the following: the marketed name; product category; or therapeutic area. In the February 8, 2013, final rule, we provided applicable manufacturers with flexibility when it was determined that the marketed name for all devices and medical supplies may not be useful for the general audience. We did not define product categories or therapeutic areas in § 403.904(c). However, since implementation of the February 8, 2013 final rule and the development of the Open Payments system, we have determined that making the reporting requirements for marketed name across drugs, biologics, devices and medical supplies will make the data fields consistent within the system, and also enhance consumer’s use of the data.

Accordingly, we propose to revise § 403.904(c)(8) to require applicable manufacturers to report the marketed name for all covered and non-covered drugs, devices, biologicals or medical supplies. We believe this would facilitate consistent reporting for the consumers and researchers using the data displayed publicly on the Open Payments. Manufacturers would still have the option to report product category or therapeutic area, in addition to reporting the market name, for devices and medical supplies.

Section 403.904(d)(3) requires the reporting of stock, stock option or any other ownership interest. We are proposing to require applicable manufacturers to report such payments as distinct categories. This will enable us to collect more specific data regarding the forms of payment made by applicable manufacturers. After issuing the February 8, 2013 final rule and the development of the Open Payments system, we determined that this specificity will increase the ease of data aggregation within the system, and also enhance consumer’s use of the data. We seek comments on the extent to which users of this data set find this disaggregation to be useful, and whether this change presents operational or other issues on the part of applicable manufacturers.

4. Summary of Proposed Changes

As noted above in this section, we propose the following changes to Part 403, subpart I:

- Deleting the definition of “covered device” at § 403.902.
- Deleting § 403.904(g) and redesignating the remaining paragraphs in that section.
- Revising § 403.904(c)(8) to require the reporting of the marketed name of the related covered and non-covered drugs, devices, biologicals, or medical supplies, unless the payment or other transfer of value is not related to a particular covered or non-covered drug, device, biological or medical supply.
- Revising § 403.904(d) to require the reporting of the reporting of stock, stock option or any other options as distinct categories.

Data collection requirements would begin January 1, 2015 according to this proposed rule for applicable manufacturers and applicable group purchasing organizations.

J. Physician Compare Web site

1. Background and Statutory Authority

Section 10331(a)(1) of the Affordable Care Act, required that, by no later than January 1, 2011, we develop a Physician Compare Internet Web site with information on physicians enrolled in the Medicare program under section 1866(j) of the Act, as well as information on other eligible professionals (EPs) who participate in the Physician Quality Reporting System (PQRS) under section 1848 of the Act.

CMS launched the first phase of Physician Compare on December 30, 2010 (<http://www.medicare.gov/physiciancompare>). In the initial phase, we posted the names of EPs that satisfactorily submitted quality data for the 2009 PQRS, as required by section 1848(m)(5)(G) of the Act.

Section 10331(a)(2) of the Affordable Care Act also required that, no later than January 1, 2013, and for reporting periods that began no earlier than January 1, 2012, we implement a plan for making publicly available through Physician Compare information on physician performance that provides comparable information on quality and patient experience measures. We met this requirement in advance of January 1, 2013, as outlined below, and plan to continue addressing elements of the plan through rulemaking.

To the extent that scientifically sound measures are developed and are available, we are required to include, to the extent practicable, the following types of measures for public reporting:

- Measures collected under the Physician Quality Reporting System (PQRS).
- An assessment of patient health outcomes and functional status of patients.
- An assessment of the continuity and coordination of care and care transitions, including episodes of care and risk-adjusted resource use.
- An assessment of efficiency.
- An assessment of patient experience and patient, caregiver, and family engagement.
- An assessment of the safety, effectiveness, and timeliness of care.
- Other information as determined appropriate by the Secretary.

As required under section 10331(b) of the Affordable Care Act, in developing and implementing the plan, we must include, to the extent practicable, the following:

- Processes to ensure that data made public are statistically valid, reliable, and accurate, including risk adjustment mechanisms used by the Secretary.
- Processes for physicians and eligible professionals whose information is being publicly reported to have a reasonable opportunity, as determined by the Secretary, to review their results before posting to Physician Compare. We have established a 30-day preview period for all measurement performance data that will allow physicians and other EPs to view their data as it will appear on the Web site in advance of publication on Physician Compare (77 FR 69166 and 78 FR 74450). Details of the preview process will be communicated directly to those with measures to preview and will also be published on the Physician Compare Initiative page (<http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/physician-compare-initiative/>) in advance of the preview period.
- Processes to ensure the data published on Physician Compare provides a robust and accurate portrayal of a physician's performance.
- Data that reflects the care provided to all patients seen by physicians, under both the Medicare program and, to the extent applicable, other payers, to the extent such information would provide a more accurate portrayal of physician performance.
- Processes to ensure appropriate attribution of care when multiple physicians and other providers are involved in the care of the patient.
- Processes to ensure timely statistical performance feedback is provided to physicians concerning the data published on Physician Compare.

- Implementation of computer and data infrastructure and systems used to support valid, reliable and accurate reporting activities.

Section 10331(d) of the Affordable Care Act requires us to consider input from multi-stakeholder groups when selecting quality measures for Physician Compare. We also continue to get input from stakeholders through a variety of means including rulemaking and different forms of stakeholder outreach (Town Hall meetings, Open Door Forums, webinars, education and outreach, Technical Expert Panels, etc.). In developing the plan for making information on physician performance publicly available through Physician Compare, section 10331(e) of the Affordable Care Act requires the Secretary, as the Secretary determines appropriate, to consider the plan to transition to value-based purchasing for physicians and other practitioners that was developed under section 131(d) of the MIPPA.

Under section 10331(f) of the Affordable Care Act, we are required to submit a report to the Congress by January 1, 2015, on Physician Compare development, and include information on the efforts and plans to collect and publish data on physician quality and efficiency and on patient experience of care in support of value-based purchasing and consumer choice. Section 10331(g) of the Affordable Care Act provides that any time before that date, we may continue to expand the information made available on Physician Compare.

We believe section 10331 of the Affordable Care Act supports our overarching goals of providing consumers with quality of care information that will help them make informed decisions about their health care, while encouraging clinicians to improve the quality of care they provide to their patients. In accordance with section 10331 of the Affordable Care Act, we plan to publicly report physician performance information on Physician Compare.

2. Public Reporting of Performance and Other Data

Since the initial launch of the Web site, we have continued to build on and improve Physician Compare. On June 27, 2013, we launched a full redesign of Physician Compare bringing significant improvements including a complete overhaul of the underlying database and a new Intelligent Search feature, addressing two of our stakeholders' primary critiques of the site—the accuracy and currency of the database and the limitations of the search

function—and considerably improving Web site functionality and usability. PECOS, as the sole source of verified Medicare professional information, is the primary source of administrative information on Physician Compare. With the redesign, however, we incorporated the use of Medicare Fee-For-Service claims information to verify the information in PECOS to help ensure only the most current and accurate information is included on the site.

Currently, Web site users can view information about approved Medicare professionals such as name, primary and secondary specialties, practice locations, group affiliations, hospital affiliations that link to the hospital's profile on Hospital Compare as available, Medicare Assignment status, education, languages spoken, and American Board of Medical Specialties (ABMS) board certification information. In addition, for group practices, users can also view group practice names, specialties, practice locations, Medicare assignment status, and affiliated professionals.

We post on the Web site the names of individual EPs who satisfactorily report under the PQRS, as well as those EPs who are successful electronic prescribers under the Medicare Electronic Prescribing (eRx) Incentive Program. Physician Compare contains a link to a downloadable database of all information on Physician Compare (<https://data.medicare.gov/data/physician-compare>), including information on this quality program participation. In addition, there is a section on each Medicare professional's profile page indicating with a green check mark the quality programs under which the EP satisfactorily or successfully reported. We propose to continue to include this information annually in the year following the year it is reported (for example, 2015 PQRS reporting will be included on the Web site in 2016).

With the Physician Compare redesign, we added a quality programs section to each group practice profile page in order to indicate which group practices are satisfactorily participating in the Group Practice Reporting Option (GPRO) under the PQRS or are successful electronic prescribers under the eRx Incentive Program. We have also included a notation and check mark for individuals that successfully participate in the Medicare EHR Incentive Program, as authorized by section 1848(o)(3)(D) of the Act. We propose to continue to include this information annually in the year following the year it is reported (for

example, 2015 data will be included on the Web site in 2016).

As we finalized in the 2014 PFS final rule with comment period (78 FR 74450), we will publicly report the names of those EPs who report the 2014 PQRS Cardiovascular Prevention measures group in support of the Million Hearts Initiative on Physician Compare in 2015 by including a check mark in the quality programs section of the profile page. We propose to also continue to include this information annually in the year following the year it is reported (for example, 2015 data will be included on Physician Compare in 2016). Finally, we will also indicate with a green check mark those individuals who have earned the 2014 PQRS Maintenance of Certification Incentive (Additional Incentive) on the Web site in 2015 (78 FR 74450).

We continue to implement our plan for a phased approach to public reporting performance information on Physician Compare. The first phase of this plan was finalized with the CY 2012 PFS final rule with comment period (76 FR 73419–73420), where we established that PQRS GPRO measures collected through the GPRO web interface for 2012 would be publicly reported on Physician Compare. The plan was expanded with the CY 2013 PFS final rule with comment period (77 FR 69166), where we established that the specific GPRO web interface measures that would be posted on Physician Compare would include the PQRS GPRO measures for Diabetes Mellitus (DM) and Coronary Artery Disease (CAD), and we noted that we would report composite measures for these measure groups in 2014, if technically feasible.⁵ The 2012 PQRS GPRO measures were publicly reported on Physician Compare in February 2014. Data reported in 2013 on the GPRO DM and GPRO CAD measures and composites collected via the GPRO web interface that meet the minimum sample size of 20 patients and prove to be statistically valid and reliable will be publicly reported on Physician Compare in late CY 2014, if technically feasible. If the minimum threshold is not met for a particular measure, or the measure is otherwise deemed not to be suitable for public reporting, the group's performance rate on that measure will not be publicly reported. We will only publish on Physician Compare those

measures that are statistically valid and reliable and therefore most likely to help consumers make informed decisions about the Medicare professionals they choose to meet their health care needs.

Measures must be based on reliable and valid data elements to be useful to consumers and thus included on Physician Compare. A reliable data element is consistently measuring the same thing regardless of when or where it is collected, while a valid data element is measuring what it is meant to measure. To address the reliability of performance scores, CMS will measure the extent to which differences in each quality measure are due to actual differences in clinician performance versus variation that arises from measurement error. Statistically, reliability depends on performance variation for a measure across clinicians ("signal"), the random variation in performance for a measure within a clinician's panel of attributed beneficiaries ("noise"), and the number of beneficiaries attributed to the clinician. High reliability for a measure suggests that comparisons of relative performance across clinicians are likely to be stable over different performance periods and that the performance of one clinician on the quality measure can confidently be distinguished from another. Potential reliability values range from zero to one, where one (highest possible reliability) means that all variation in the measure's rates is the result of variation in differences in performance, while zero (lowest possible reliability) means that all variation is a result of measurement error. Reliability testing methods included in the CMS Measures Management System Blueprint include test-retest reliability and analysis of variance (ANOVA). Reliability tests endorsed by the NQF include the beta-binomial model test.

The validity of a measure refers to the ability to record or quantify what it claims to measure. To analyze validity, CMS can investigate the extent to which each quality measure is correlated with related, previously validated, measures. CMS can assess both concurrent and predictive validity. Predictive validity is most appropriate for process measures or intermediate outcome measures, in which a cause-and-effect relationship is hypothesized between the measure in question and a validated outcome measure. Therefore, the measure in question is computed first, and the validated measure is computed using data from a later period. To examine concurrent validity, the measure in question and a previously validated

⁵ By "technically feasible" we mean that there are no operational constraints inhibiting us from moving forward on a given public reporting objective. Operational constraints include delays and/or issues related to data collection which render a set of quality data unavailable in the timeframe necessary for public reporting.

measure are computed using contemporaneous data. In this context, the previously validated measure should measure a health outcome related to the outcome of interest.

In the November 2011 Medicare Shared Savings Program final rule (76 FR 67948), we noted that because Accountable Care Organization (ACO) providers/suppliers that are EPs are considered to be a group practice for purposes of qualifying for a PQRS incentive under the Shared Savings Program, we would publicly report ACO performance on quality measures on Physician Compare in the same way as we report performance on quality measures for PQRS GPRO group practices. Public reporting of performance on these measures is presented at the ACO level only. The first sub-set of ACO measures was also published on the Web site in February 2014. ACO measures can be viewed by following the link for Accountable Care Organization (ACO) Quality Data on the homepage of the Physician Compare Web site (<http://medicare.gov/physiciancompare/aco/search.html>).

As part of our public reporting plan for Physician Compare, in the CY 2013 PFS final rule with comment period (77 FR 69166–69167), we also finalized the decision to publicly report Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG–CAHPS) data for group practices of 100 or more eligible professionals reporting data in 2013 under the GPRO and for ACOs participating in the Shared Savings Program, if technically feasible. We anticipate posting these data on Physician Compare in late 2014, if available.

We continued to expand our plan for public reporting data on Physician Compare in the CY 2014 PFS final rule with comment period (78 FR 74449). In that final rule we finalized a decision that all measures collected through the GPRO web interface for groups of two or

more EPs participating in 2014 under the PQRS GPRO and for ACOs participating in the Medicare Shared Savings Program are available for public reporting in CY 2015. As with all measures we finalized with regard to Physician Compare, these data would include measure performance rates for measures reported that meet the minimum sample size of 20 patients and prove to be statistically valid and reliable. We also finalized a 30-day preview period prior to publication of quality data on Physician Compare. This will allow group practices to view their data as it will appear on Physician Compare before it is publicly reported. We decided that we will detail the process for the 30-day preview and provide a detailed timeline and instructions for preview in advance of the start of the preview period. ACOs will be able to view their quality data that will be publicly reported on Physician Compare through the ACO Quality Reports, which will be made available to ACOs for review at least 30 days prior to the start of public reporting on Physician Compare.

We also finalized a decision to publicly report in CY 2015 on Physician Compare performance on certain measures that group practices report via registries and EHRs in 2014 for the PQRS GPRO (78 FR 74451). Specifically, we finalized making available for public reporting performance on 16 registry measures and 13 EHR measures (78 FR 74451). These measures are consistent with the measures available for public reporting via the web interface. We will indicate the mechanism by which these data were collected and only those data deemed statistically comparable, valid, and reliable would be published on the site.⁷

We also finalized publicly reporting patient experience survey-based measures from the CG–CAHPS measures for groups of 100 or more eligible professionals who participate in PQRS

GPRO, regardless of GPRO submission method, and for Shared Savings Program ACOs reporting through the GPRO web interface or other CMS-approved tool or interface (78 FR 74452). For 2014 data, we finalized publicly reporting data for the 12 summary survey measures also finalized for groups of 25 to 99 for PQRS reporting requirements (78 FR 74452). These summary survey measures would be available for public reporting 100 or more EPs participating in PQRS GPRO as well as group practices of 25 to 99 EPs when collected via any certified CAHPS vendor regardless of PQRS participation, as technically feasible. For ACOs participating in the Shared Savings Program, the patient experience measures that are included in the Patient/Caregiver Experience domain of the Quality Performance Standard under the Shared Savings Program (78 FR 74452) are available for public reporting in 2015.

For 2014, we also finalized publicly reporting 2014 PQRS measure data reported by individual EPs in late CY 2015 for individual PQRS quality measures specifically identified in the final rule with comment period, if technically feasible. Specifically, we finalized to make available for public reporting 20 individual measures collected through a registry, EHR, or claims (78 FR 74453 through 74454). These are measures that are in line with those measures reported by groups via the GPRO web interface.

Finally, in support of the HHS-wide Million Hearts Initiative, we finalized a decision to publicly report, no earlier than CY 2015, performance rates on measures in the PQRS Cardiovascular Prevention measures group at the individual EP level for data collected in 2014 for the PQRS (78 FR 74454). See Table 19 for a summary of our final policies for public reporting data on Physician Compare.

TABLE 19—SUMMARY OF PREVIOUSLY FINALIZED POLICIES FOR PUBLIC REPORTING ON PHYSICIAN COMPARE

Data collection year	Public reporting year	Reporting mechanism(s)	Quality measures and data for public reporting
2012	2013	Web Interface (WI), EHR, Registry, Claims.	Include an indicator for satisfactory reporters under PQRS and PQRS GPRO, successful e-prescribers under eRx, and participants in EHR for groups and individuals as applicable.
2012	2014	WI	5 Diabetes Mellitus (DM) and Coronary Artery Disease (CAD) measures collected via the WI for group practices with a minimum sample size of 25 patients and Shared Savings Program ACOs.

TABLE 19—SUMMARY OF PREVIOUSLY FINALIZED POLICIES FOR PUBLIC REPORTING ON PHYSICIAN COMPARE—Continued

Data collection year	Public reporting year	Reporting mechanism(s)	Quality measures and data for public reporting
2013	2014	WI, EHR, Registry, Claims	Include an indicator for satisfactory reporters under PQRS and PQRS GPRO, successful e-prescribers under eRx, and participants in EHR, as well as for EPs who earn a Maintenance of Certification (MOC) Incentive and EPs who report the PQRS Cardiovascular Prevention measures group in support of Million Hearts.
2013	Expected to be December 2014 ..	WI	Up to 6 DM and 2 CAD measures collected via the WI for groups of 25 or more EPs with a minimum sample size of 20 patients. Will include composites for DM and CAD, if feasible.
2013	Expected to be December 2014 ..	WI	5 CG—CAHPS summary measures for groups of 100 or more EPs reporting via the WI and 6 ACO CAHPS summary measures for Shared Savings Program ACOs.
2014	Expected to be 2015	WI, EHR, Registry, Claims	Include an indicator for satisfactory reporters under PQRS and PQRS GPRO, participants in EHR, as well as for EPs who earn a Maintenance of Certification (MOC) Incentive and EPs who report the PQRS Cardiovascular Prevention measures group in support of Million Hearts.
2014	Expected to be late 2015	WI, EHR, Registry	All measures reported via the GPRO WI, 13 EHR, and 16 Registry GPRO measures are also available for group practices of 2 or more EPs and Shared Savings Program ACOs with a minimum sample size of 20 patients. Include composites for DM and CAD, if feasible.
2014	Expected to be late 2015	WI, Certified Survey Vendor	Up to 12 CG—CAHPS summary measures for groups of 100 or more EPs reporting via the WI and group practices of 25 to 99 EPs reporting via a CMS-approved certified survey vendor, as well as 6 ACO CAHPS summary measures for Shared Savings Program ACOs reporting through the GPRO web interface or other CMS-approved tool or interface.
2014	Expected to be late 2015	Registry, EHR, or Claims	A sub-set of 20 PQRS measures submitted by individual EPs that align with those available for group reporting via the WI that are collected through a Registry, EHR, or claims with a minimum sample size of 20 patients.
2014	Expected to be late 2015	Registry, EHR, or Claims	Measures from the Cardiovascular Prevention measures group reported by individual EPs in support of the Million Hearts Initiative with a minimum sample size of 20 patients.

3. Proposals for Public Data Disclosure on Physician Compare in 2015 and 2016

We are continuing the expansion of public reporting on Physician Compare by proposing to make an even broader set of quality measures available for publication on the Web site. We started the phased approach with a small number of possible PQRS GPRO web interface measures for 2012, and have been steadily building on this to provide Medicare consumers with more information to help them make

informed health care decisions. As a result, we are now proposing to increase the measures available for public reporting.

We previously finalized in the CY 2014 PFS final rule with comment period (78 FR 74450) to make available for public reporting all PQRS GPRO measures collected in 2014 via the web interface. We now propose to expand public reporting of group-level measures by making all 2015 PQRS GPRO measure sets across group reporting

mechanisms—GPRO web interface, registry, and EHR—available for public reporting on Physician Compare in CY 2016 for groups of 2 or more EPs, as appropriate by reporting mechanism.⁶ Similarly, all measures reported by Shared Savings Program ACOs would be

⁶ Tables Q1–Q27 detail proposed changes to available PQRS measures. Additional information on PQRS measures can be found on the CMS.gov PQRS Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html>.

available for public reporting on Physician Compare. As with all quality measures proposed for inclusion on Physician Compare, only measures that prove to be valid, reliable, and accurate upon analysis and review at the conclusion of data collection will be included on the Web site. Also, we propose that measures must meet the public reporting criteria of a minimum sample size of 20 patients. We propose to include an indicator of which reporting mechanism was used and only measures deemed statistically comparable would be included on the site.⁷ We propose to publicly report all measures submitted and reviewed and found to be statistically valid and reliable in the Physician Compare downloadable file. However, we propose that not all of these measures necessarily would be included on the Physician Compare profile pages. Consumer testing has shown including too much information and/or measures that are not well understood by consumers on these pages can negatively impact a consumer's ability to make informed decisions. Our analysis of the measure data once collected, consumer testing, and stakeholder feedback would determine specifically which measures are published on profile pages on the Web site. Statistical analyses will ensure the measures included are statistically valid and reliable and comparable across data collection mechanisms. And, stakeholder feedback will ensure all measures meet current clinical standards. CMS will continue to reach out to stakeholders in the professional community, such as specialty societies, to ensure that the measures under consideration for public reporting remain clinically relevant and accurate. As measures are finalized significantly in advance of moment they are collected, it is possible that clinical guidelines can change rendering a measure no longer relevant. Publishing that measure can lead to consumer confusion regarding what best practices their health care professional should be subscribing to.

The primary goal of Physician Compare is to help consumers make informed health care decisions. If a consumer does not properly interpret a quality measure and thus misunderstands what the quality score represents, the consumer cannot use this information to make an informed

decision. Through concept testing, CMS will test with consumers how well they understand each measure under consideration for public reporting. If a measure is not consistently understood and/or if consumers do not understand the relevance of the measure to their health care decision making process, CMS will not include the measure on the Physician Compare profile page as inclusion will not aid informed decision making. Finally, consumer testing will help ensure the measures included on the profile pages are accurately understood and relevant to consumers, thus helping them make informed decisions. This will be done to ensure that the information included on Physician Compare is consumer friendly and consumer focused.

As is the case for all measures published on Physician Compare, group practices will be given a 30-day preview period to view their measures as they will appear on Physician Compare prior to the measures being published. As in previous years, we will detail the process for the 30-day preview and provide a detailed timeline and instructions for preview in advance of the start of the preview period. ACOs will be able to view their quality data that will be publicly reported on Physician Compare through the ACO Quality Reports, which will be made available to ACOs for review at least 30 days prior to the start of public reporting on Physician Compare.

In addition to making all 2015 PQRS GPRO measures available for public reporting, we seek comment on creating composites using 2015 data and publishing composite scores in 2016 by grouping measures based on the PQRS GPRO measure groups, if technically feasible. We will analyze the data collected in 2015 and conduct psychometric and statistical analyses, looking at how the measures best fit together and how accurately they are measuring the composite concept, to create composites for certain PQRS GPRO measure groups, including but not limited to:

- Care Coordination/Patient Safety (CARE) Measures
- Coronary Artery Disease (CAD) Disease Module
- Diabetes Mellitus (DM) Disease Module
- Preventive (PREV) Care Measures

We would analyze the component measures that make up each of these measure groups to see if a statistically viable composite can be constructed with the data reported for 2015. We have received ample feedback from stakeholders indicating such scores are

strongly desired. Composite scores, generally, have also proven to be critical for providing consumers a better way to understand quality measure data as composites provide a more concise, easy to understand picture of physician quality. Therefore, we plan to analyze the data once collected to establish the best possible composite, which would help consumers use these quality data to make informed health care decisions.

Similar to composite scores, benchmarks are also important to ensuring that the quality data published on Physician Compare are accurately interpreted and appropriately understood. A benchmark will allow consumers to more easily evaluate the information published by providing a point of comparison between groups. We continue to receive requests from all stakeholders, but especially consumers, to add this information to Physician Compare. As a result, we propose to publicly report on Physician Compare in 2016 benchmarks for 2015 PQRS GPRO data using the same methodology currently used under the Shared Savings Program. This ACO benchmark methodology was previously finalized in the November 2011 Shared Savings Program final rule (76 FR 67898), as amended in the CY 2014 PFS final rule with comment period (78 FR 74759). Details on this methodology can be found on CMS.gov at <http://cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/MSSP-QM-Benchmarks.pdf>. We propose to follow this methodology using the 2014 PQRS GPRO data, however.

As outlined for the Shared Savings Program, we propose to calculate benchmarks using data at the group practice TIN level for all EPs who have at least 20 cases in the denominator. A benchmark per this methodology is the performance rate a group practice must achieve to earn the corresponding quality points for each measure. Benchmarks would be established for each percentile, starting with the 30th percentile (corresponding to the minimum attainment level) and ending with the 90th percentile (corresponding to the maximum attainment level). A quality scoring points systems would then be determined. Quality scoring would be based on the group practice's actual level of performance on each measure. A group practice would earn quality points on a sliding scale based on level of performance: Performance below the minimum attainment level (the 30th percentile) for a measure would receive zero points for that measure; performance at or above the 90th percentile of the performance

⁷ By statistically comparable, CMS means that the quality measures are analyzed and proven to measure the same phenomena in the same way regardless of the mechanism through which they were collected.

benchmark would earn the maximum points available for the measure. The total points earned for measures in each measure group would be summed and divided by the total points available for that measure group to produce an overall measure group score of the percentage of points earned versus points available. The percentage score for each measure group would be averaged together to generate a final overall quality score for each group practice. The goal of including such benchmarks would be to help consumers see how each group practice performs on each measure, measure group, and overall in relation to other group practices.

Understanding the value consumers place on patient experience data and the commitment to reporting these data on Physician Compare, we propose publicly reporting in CY 2016 patient experience data from 2015 for all group practices of 2 or more EPs, who meet the specified sample size requirements and collect data via a CMS-specified certified CAHPS vendor. The patient experience data available are specifically the CAHPS for PQRS and CAHPS for ACO measures, which include the CG-CAHPS core measures. For group practices, we propose to publicly report for 2015 data on Physician Compare in 2016 the 12 summary survey measures previously finalized for 2014 data:

- Getting Timely Care, Appointments, and Information
- How Well Providers Communicate
- Patient's Rating of Provider
- Access to Specialists
- Health Promotion & Education
- Shared Decision Making
- Health Status/Functional Status
- Courteous and Helpful Office Staff
- Care Coordination
- Between Visit Communication
- Helping You to Take Medication as Directed
- Stewardship of Patient Resources

We propose that these 12 summary survey measures would be available for public reporting for all group practices. For ACOs participating in the Shared Savings Program, we propose that the patient experience measures that are included in the Patient/Caregiver Experience domain of the Quality Performance Standard under the Shared Savings Program in 2015 would be available for public reporting in 2016. We would review all quality measures after they are collected to ensure that only those measures deemed valid and reliable are included on the Web site.

We previously finalized in the 2014 PFS final rule with comment period (78

FR 74454) that 20 2014 PQRS measures for individual EPs collected via registry, EHR, or claims would be available for public reporting in late 2015, if technically feasible. We propose to expand on this in two ways. First, we propose to publicly report these same 20 measures for 2013 PQRS data in early 2015. Publicly reporting these 2013 individual measures will help ensure individual level measures are made available as soon as possible. Consumers are looking for measures about individual doctors and other health care professionals, and this would make these quality data available to the public sooner.

Second, we propose to make all individual EP-level PQRS measures collected via registry, EHR, or claims available for public reporting on Physician Compare for data collected in 2015 to be publicly reported in late CY 2016, if technically feasible.⁸ This will provide the opportunity for more EPs to have measures included on Physician Compare, and it will provide more information to consumers to make informed decisions about their health care. As with group-level measures, we propose to publicly report all measures submitted and reviewed and deemed valid and reliable in the Physician Compare downloadable file. However, not all of these measures necessarily would be included on the Physician Compare profile pages. Our analysis of the measure data once collected, consumer testing, and stakeholder feedback would determine specifically which measures are published on profile pages on the Web site. In this way, quality information at the individual practitioner level would be available, as has been regularly requested by Medicare consumers, but consumers will not be overwhelmed with too much information on each EPs profile page.

As noted above for group-level reporting, composite scores and benchmarks are critical in helping consumers best understand the quality measure information presented. For that reason, in addition to making all 2015 PQRS measures available for public reporting, we seek comment to create composites and publish composite scores by grouping measures based on the PQRS measure groups, if technically feasible. We will analyze the data collected in 2015 and conduct psychometric and statistical analyses to

create composites for PQRS measure groups to be published in 2016, including:

- Coronary Artery Disease (CAD) (see Table 30)
- Diabetes Mellitus (DM) (see Table 32)
- General Surgery (see Table 33)
- Oncology (see Table 38)
- Preventive Care (see Table 41)
- Rheumatoid Arthritis (RA) (see Table 42)
- Total Knee Replacement (TKR) (see Table 45)

We would analyze the component measures that make up each of these measure groups to see if a statistically viable composite can be constructed with the data reported for 2015. In addition, we propose to use the same methodology outlined above for group practices to develop benchmarks for individual practitioners. As noted for group practices, we believe that providing composite scores and benchmarks will give consumers the tools needed to most accurately interpret the quality data published on Physician Compare.

Previously, we indicated an interest in including specialty society measures on Physician Compare. We now seek comment on posting these measures on the Web site. We also seek comment on the option of linking from Physician Compare to specialty society Web sites that publish non-PQRS measures. Including specialty society measures on the site or linking to specific specialty society measures would provide the opportunity for more eligible professionals to have measures included on Physician Compare and thus help Medicare consumers make more informed choices. The quality measures developed by specialty societies that would be considered for future posting on Physician Compare are those that have been comprehensively vetted and tested, and are trusted by the physician community. These measures would provide access to available specialty specific quality measures that are often highly regarded and trusted by the stakeholder community and, most importantly, by the specialties they represent. We are working to identify possible societies to reach out to, and seek comment on the concept, as well as potential specific society measures of interest.

Finally, we propose to make available on Physician Compare, 2015 Qualified Clinical Data Registry (QCDR) measure data collected at the individual level or aggregated to a higher level of the QCDR's choosing—such as the group practice level, if technically feasible. QCDRs are able to collect both PQRS

⁸ Tables Q1–Q27 detail proposed changes to available PQRS measures. Additional information on PQRS measures can be found on the CMS.gov PQRS Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html>.

measures and non-PQRS measures.⁹ We believe that making QCDR data available on Physician Compare further supports the expansion of quality measure data available for EPs and group practices regardless of specialty therefore providing more quality data to consumers to help them make informed decisions. The QCDR would be required to declare during their self-nomination if they plan to post data on their own Web site and allow Physician Compare to link to it or if they will provide data to us for public reporting on Physician Compare. We propose that measures collected via QCDRs must also meet the

established public reporting criteria, including a 20 patient minimum sample size. As with PQRS data, we propose to publicly report all measures submitted and reviewed and deemed valid and reliable in the Physician Compare downloadable file. However, not all of these measures necessarily would be included on the Physician Compare profile pages. Our analysis of the measure data once collected, consumer testing, and stakeholder feedback would determine specifically which measures are published on profile pages on the Web site.

Table 20 summarizes the Physician Compare proposals detailed in this section. We solicit comments on all proposals. Increasing the measures available for public reporting on Physician Compare at both the individual and group level will help accomplish the Web site’s twofold purpose:

- Provide more information for consumers to encourage informed patient choice.
- Create explicit incentives for physicians to maximize performance.

TABLE 20—SUMMARY OF PROPOSED DATA FOR PUBLIC REPORTING

Data collection year	Publication year	Data type	Reporting mechanism	Proposed quality measures and data for public reporting
2013	2015	PQRS	Registry, EHR, or Claims	Twenty 2013 PQRS individual measures collected through a Registry, EHR, or claims mirroring the measures finalized for 2014 (78 FR 74454).
2015	2016	Multiple	Web Interface, EHR, Registry, Claims.	Include an indicator for satisfactory reporters under PQRS and PQRS GPRO, participants in EHR, and EPs who report the PQRS Cardiovascular Prevention measures group in support of Million Hearts.
2015	2016	PQRS GPRO & ACO GPRO.	Web Interface, EHR, & Registry.	All 2015 PQRS GPRO measures reported via the Web Interface, EHR, and Registry are available for public reporting for group practices of 2 or more EPs and all measures reported by ACOs with a minimum sample size of 20 patients.
2015	2016	CAHPS for PQRS & CAHPS for ACOs.	CMS-Specified Certified CAHPS Vendor.	2015 CAHPS for PQRS for groups of 2 or more EPs and CAHPS for ACOs for those who meet the specified sample size requirements and collect data via a CMS-specified certified CAHPS vendor.
2015	2016	PQRS	Registry, EHR, or Claims	All 2015 PQRS measures for individual EPs collected through a Registry, EHR, or claims.
2015	2016	QCDR data	QCDR	All 2015 QCDR data available for public report on Physician Compare at the individual level or aggregated to a higher level of the QCDR’s choosing.

K. Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting System

This section contains the proposed requirements for the Physician Quality Reporting System (PQRS). The PQRS, as set forth in sections 1848(a), (k), and (m) of the Act, is a quality reporting program that provides incentive payments (ending with 2014) and payment adjustments (beginning in 2015) to eligible professionals and group practices based on whether they satisfactorily report data on quality measures for covered professional services furnished during a specified reporting period or to individual eligible professionals that satisfactorily participate in a qualified clinical data registry (QCDR).

The proposed requirements will primarily focus on our proposals related to the 2017 PQRS payment adjustment, which will be based on an eligible professional’s or a group practice’s reporting of quality measures data during the 12-month calendar year reporting period occurring in 2015 (that is, January 1 through December 31, 2015). Please note that, in developing these proposals, we focused on aligning our requirements with other quality reporting programs, such as the Medicare EHR Incentive Program for Eligible Professionals, the Physician Value-Based Payment Modifier (VM), and the Medicare Shared Savings Program, where and to the extent appropriate and feasible. In previous years, we have made various strides in

our ongoing efforts to align the reporting requirements in CMS’ various quality reporting programs to reduce burden on the eligible professionals and group practices that participate in these programs. Particularly through the QCDR option, we are exploring opportunities to align with quality reporting programs that exist outside of CMS where and to the extent appropriate and feasible. We continued to focus on alignment as we developed our proposals for the 2017 PQRS payment adjustment below.

The PQRS regulation is located at 42 CFR 414.90. The program requirements for the 2007 through 2014 PQRS incentives and the 2015 and 2016 PQRS payment adjustment that were previously established, as well as

⁹ http://www.cms.gov/apps/ama/license.asp?file=PQRS/downloads/2014_PQRS

[IndClaimsRegistry_MeasureSpecs_SupportingDocs_12132013.zip](#)

information on the PQRS, including related laws and established requirements, are available at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html>. In addition, the 2012 PQRS and eRx Experience Report, which provides information about eligible professional participation in PQRS, is available for download at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2012-PQRS-and-eRx-Experience-Report.zip>.

We note that eligible professionals in critical access hospitals (CAHs) were previously not able to participate in the PQRS. Due to a change we made in the manner in which eligible professionals in CAHs are reimbursed by Medicare, it is now feasible for eligible professionals in CAHs to participate in the PQRS. Although eligible professionals in CAHs are not able to use the claims-based reporting mechanism to report PQRS quality measures data in 2014, beginning in 2015, these eligible professionals in CAHs may participate in the PQRS using ALL reporting mechanisms available, including the claims-based reporting mechanism. Finally, please note that in accordance with section 1848(a)(8) of the Act, all eligible professionals who do not meet the criteria for satisfactory reporting or satisfactory participation for the 2017 PQRS payment adjustment will be subject to the 2017 PQRS payment adjustment with no exceptions.

In addition, in the CY 2013 PFS final rule with comment period, we introduced the reporting of the Agency for Healthcare Research and Quality's (AHRQ's) Clinician & Group (CG) Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey measures, referenced at <https://cahps.ahrq.gov/Surveys-Guidance/CG/index.html>. AHRQ's CAHPS Clinician & Group Survey Version 2.0 (CG-CAHPS) includes 34 core CG-CAHPS survey questions. In addition to these 34 core questions, the CAHPS survey measures that are used in the PQRS include supplemental questions from CAHPS Patient-Centered Medical Home Survey, Core CAHPS Health Plan Survey Version 5.0, other CAHPS supplemental items, and some additional questions. Since the CAHPS survey used in the PQRS covers more than just the 34 core CG-CAHPS survey measures, we will refer to the CG-CAHPS survey measures used in the PQRS as "CAHPS for PQRS." We propose to make this revision throughout § 414.90.

1. Requirements for the PQRS Reporting Mechanisms

The PQRS includes the following reporting mechanisms: Claims; qualified registry; EHR (including direct EHR products and EHR data submission vendor products); the Group Practice Reporting Option (GPRO) web interface; certified survey vendors, for CG-CAHPS survey measures; and the QCDR. Under the existing PQRS regulation, § 414.90(h) through (k) govern which reporting mechanisms are available for use by individuals and group practices for the PQRS incentive and payment adjustment. This section III.K.1 contains our proposals to change the qualified registry, direct EHR and EHR data submission vendor products, QCDR, and GPRO web interface reporting mechanisms. Please note that we are not proposing to make changes to the claims-based reporting mechanism.

a. Proposed Changes to the Requirements for the Qualified Registry

In the CY 2013 and 2014 PFS final rules with comment period, we established certain requirements for entities to become qualified registries for the purpose of verifying that a qualified registry is prepared to submit data on PQRS quality measures for the reporting period in which the qualified registry seeks to be qualified (77 FR 69179 through 69180 and 78 FR 74456). Specifically, in the CY 2014 PFS final rule with comment period, in accordance with the satisfactory reporting criterion we finalized for individual eligible professionals or group practices reporting PQRS quality measures via qualified registry, we finalized the following requirement that a qualified registry must be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 9 measures covering at least 3 of the National Quality Strategy (NQS) domains (78 FR 74456).

As we explain in further detail in this section III.K, we are proposing that—in addition to proposing to require that an eligible professional or group practice report on at least 9 measures covering 3 NQS domains—an eligible professional or group practice who sees at least 1 Medicare patient in a face-to-face encounter, as we propose to define that term in section III.K.2.a., and wishes to meet the proposed criterion for satisfactory reporting of PQRS quality measures via a qualified registry for the 2017 PQRS payment adjustment would be required to report on at least 2 cross-cutting PQRS measures specified in Table 21. In accordance with this proposal, we are proposing to require

that, in addition to being required to be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 9 measures covering at least 3 of the NQS domains for which a qualified registry transmits data, a qualified registry would be required to be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for ALL cross-cutting measures specified in Table 21 for which the registry's participating eligible professionals are able to report. We are proposing to require that qualified registries be able to report on all cross-cutting measures specified in Table 21 for which the registry's participating eligible professionals are able to report, rather than proposing to require a minimum of 2, so that eligible professionals and group practices using qualified registries to report PQRS measures would have the flexibility in choosing which cross-cutting measures to report, and to report on as many cross-cutting measures specified in Table 21 as they are able.

Furthermore, in the CY 2013 PFS final rule, we noted that qualified registries have until the last Friday of February following the applicable reporting period (for example, February 28, 2014, for reporting periods ending in 2013) to submit quality measures data on behalf of its eligible professionals (77 FR 69182). We continue to receive stakeholder feedback, particularly from qualified registries currently participating in the PQRS, urging us to extend this submission deadline due to the time it takes for these qualified registries to collect and analyze the quality measures data received after the end of the reporting period. While, at the time, we emphasized the need to have quality measures data received by CMS no later than the last Friday of the February occurring after the end of the applicable reporting period, we believe it is now feasible to extend this deadline. Therefore, we propose to extend the deadline for qualified registries to submit quality measures data, including, but not limited to, calculations and results, to March 31 following the end of the applicable reporting period (for example, March 31, 2016, for reporting periods ending in 2015).

In addition, we seek comment on whether to propose in future rulemaking to allow more frequent submissions of data, such as quarterly or year-round submissions, rather than having only one opportunity to submit quality measures data as is our current process.

We invite public comment on these proposals.

b. Proposed Changes to the Requirements for the Direct EHR and EHR Data Submission Vendor Products That Are CEHRT

In the CY 2013 PFS final rule with comment period, we finalized requirements that although EHR vendors and their products would no longer be required to undergo the previously existing qualification process, we would only accept the data if the data are: (1) Transmitted in a CMS-approved XML format utilizing a Clinical Document Architecture (CDA) standard such as Quality Reporting Data Architecture (QRDA) level 1 (and for EHR data submission vendor products that intend to report for purposes of the proposed PQRS-Medicare EHR Incentive Program Pilot, if the aggregate data are transmitted in a CMS-approved XML format); and (2) in compliance with a CMS-specified secure method for data submission (77 FR 69183 through 69187). To further clarify, EHR vendors and their products must be able to submit data in the form and manner specified by CMS. Accordingly, direct EHRs and EHR data submission vendors must comply with CMS Implementation Guides for both the QRDA–I and QRDA–III data file formats. The Implementation Guides for 2014 are available at http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/Guide_QRDA_2014eCQM.pdf. Updated guides for 2015, when available, will be posted on the CMS EHR Incentive Program Web site at <http://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms>. These implementation guides further describe the technical requirements for data submission to ensure the data elements required for measure calculation and verification are provided. We propose to continue applying these requirements to direct EHR products and EHR data submission vendor products for 2015 and beyond. For 2015 and beyond, we also propose to have the eligible professional or group practice provide the CMS EHR Certification Number of the product used by the eligible professional or group practice for direct EHRs and EHR data submission vendors.

We believe this requirement is necessary to ensure that the eligible professionals and group practices that are using EHR technology are using a product that is certified EHR technology (CEHRT) and will allow CMS to ensure that the eligible professional or group practice's data is derived from a product that is CEHRT.

Additionally, we seek comment on whether to propose in future rulemaking to allow more frequent submissions of data, such as quarterly or year-round submissions, rather than having only one opportunity to submit quality measures data as is our current process.

We invite public comment on these proposals.

c. Proposed Changes to the Requirements for the QCDR

In the CY 2014 PFS final rule with comment period, we established certain requirements for entities to become QCDRs for the purpose of having their participating eligible professionals meet the criteria for satisfactory participation in a QCDR for purposes of the PQRS incentives and payment adjustments (78 FR 74465 through 74474).

Specifically, in accordance with the final criterion that required eligible professionals to report on at least 1 outcome measure, we required that an entity possess at least 1 outcome measure for which its participating eligible professionals may report (78 FR 74470). As we explain in further detail in section III.K. of this proposed rule, we are proposing that an eligible professional wishing to meet the proposed criterion for satisfactory participation in a QCDR for the 2017 PQRS payment adjustment report on at least 3 outcome measures (or if less than 3 outcome measures are available for reporting, report on at least 2 outcome measures and at least 1 of the following types of measures: resource use; patient experience of care; or efficiency/appropriate use). Accordingly, we are proposing to amend the requirement for the 2017 PQRS payment adjustment to require a QCDR to possess at least 3 outcome measures (or, in lieu of 3 outcome measures, at least 2 outcome measures and at least 1 of the following other types of measures—resource use, patient experience of care, or efficiency/appropriate use).

To establish the minimum number of measures (9 measures covering at least 3 NQS domains) a QCDR may report for the PQRS, we placed a limit on the number of non-PQRS measures (20) that a QCDR may submit on behalf of an eligible professional at this time (78 FR 74476). Although we believe such a limit is still necessary because the QCDR option is still new and we are still gaining familiarity with the measures available for reporting under the QCDRs, we believe it is appropriate to increase the number of non-PQRS that may be reported by QCDRs. We have received comments from entities currently undergoing the QCDR qualification process who wish to

submit data on additional measures and we believe that accepting additional quality measures data is important, as it provides a better and more complete picture of the quality of care provided by eligible professionals. Therefore, we are proposing to change this limit from 20 measures to 30. In other words, beginning with the criteria for satisfactory participation for the 2017 PQRS payment adjustment, a QCDR may submit quality measures data for a maximum of 30 non-PQRS measures. Please note that this proposed limit does not apply to measures contained in the PQRS measure set, as QCDRs can report on as many measures in the PQRS measure set as they wish.

Additionally, CMS' experience during the 2014 self-nomination process shed light on clarifications needed on what is considered a non-PQRS measure.

Therefore, to clarify the definition of non-PQRS measures, we propose the following parameters for a measure to be considered a non-PQRS measure:

- A measure that is not contained in the PQRS measure set for the applicable reporting period.

- A measure that may be in the PQRS measure set but has substantive differences in the manner it is reported by the QCDR. For example, PQRS measure 319 is reportable only via the GPRO web interface. A QCDR wishes to report this measure on behalf of its eligible professionals. However, as CMS has only extracted the data collected from this quality measure using the GPRO web interface, in which CMS utilizes a claims-based assignment and sampling methodology to inform the groups on which patients they are to report, the reporting of this measure would require changes to the way that the measure is calculated and reported to CMS via a QCDR instead of through the GPRO web interface. Therefore, due to the substantive changes needed to report this measure via a QCDR, PQRS measure 319 would be considered a non-PQRS measure. In addition, CAHPS for PQRS is currently reportable only via a CMS-certified survey vendor. However, although CAHPS for PQRS is technically contained in the PQRS measure set, we consider the changes that will need to be made to be available for reporting by individual eligible professionals (and not as a part of a group practice) significant enough as to treat CAHPS for PQRS as a non-PQRS measure for purposes of reporting CAHPS for PQRS via a QCDR.

Furthermore, under our authority to establish the requirements for an entity to be considered a QCDR under section 1848(m)(3)(E)(i) of the Act, we established certain requirements for an

entity to be considered a QCDR in the CY 2014 PFS final rule with comment period (78 FR 74467 through 74473). Under this same authority, we are proposing here to add the following requirement that an entity must meet to serve as a QCDR under the PQRS for reporting periods beginning in 2015:

- Require that the entity make available to the public the quality measures data for which its eligible professionals report.

In the CY 2014 PFS proposed rule, we proposed that, to be considered a QCDR, an entity would be required to demonstrate that it has a plan to publicly report its quality data through a mechanism where the public and registry participants can view data about individual eligible professionals, as well as view regional and national benchmarks (78 FR 43363). Due to stakeholder feedback against this proposal, as well as comments requesting more details surrounding this proposal, we did not finalize this proposed requirement in the CY 2014 PFS final rule with comment period. However, we noted that we would revisit this proposal in future years (78 FR 74471). Because of our ongoing interest in providing transparency to the public for quality measures data that is reported under the PQRS, we again propose the requirement that an entity make available to the public the quality measures data for which its eligible professionals report. To clarify this proposal, we propose that, at a minimum, the QCDR publicly report the following quality measures data information that we believe will give patients adequate information on the care provided by an eligible professional:

- The title and description of the measures that a QCDR reports for purposes of the PQRS, as well as the performance results for each measure the QCDR reports.

With respect to when the quality measures data must be publicly reported, we propose that the QCDR must have the quality measures data by April 31 of the year following the applicable reporting period (that is, April 31, 2016, for reporting periods occurring in 2015). The proposed deadline of April 31 will provide QCDRs with one month to post quality measures data and information following the March 31 deadline for the QCDRs to transmit quality measures data for purposes of the PQRS payment adjustments. We also propose that this data be available on a continuous basis and be continuously updated as the measures undergo changes in measure

title and description, as well as when new performance results are calculated.

Please note that, in making this proposal, we defer to the entity in terms of the method it will use to publicly report the quality measures data it collects for the PQRS. For example, to meet this proposed requirement, it would be sufficient for a QCDR to publicly report performance rates of eligible professionals through means such as, but not excluding, board or specialty Web sites, performance or feedback reports, or listserv dashboards or announcements. We also note that a QCDR would meet this public reporting requirement if the QCDR's measures data were posted on Physician Compare. In addition, we defer to the QCDR to determine whether to report performance results at the individual eligible professional level or aggregate the results for certain sets of eligible professionals who are in the same practice together (but we are not registered as a group practice for the purposes of PQRS reporting). We believe it is appropriate to allow a QCDR to publicly report performance results at an aggregate level for certain eligible professionals when those who are in the same practice contribute to the overall care provided to a patient.

Based on CMS experience with the qualifying entities wishing to become QCDRs for reporting periods occurring in 2014, we received feedback from many organizations who expressed concern that the entity wishing to become a QCDR may not meet the requirements of a QCDR solely on its own. Therefore, we provide the following proposals beginning in 2015 on situations where an entity may not meet the requirements of a QCDR solely on its own but, in conjunction with another entity, may be able to meet the requirements of a QCDR and therefore be eligible for qualification:

- We propose to allow that an entity that uses an external organization for purposes of data collection, calculation or transmission may meet the definition of a QCDR so long as the entity has a signed, written agreement that specifically details the relationship and responsibilities of the entity with the external organizations effective as of January 1 the year prior to the year for which the entity seeks to become a QCDR (for example, January 1, 2014, to be eligible to participate for purposes of data collected in 2015). We are adding this proposal because we received questions from entities wishing to become QCDRs who are engaged in quality improvement activities but use an external organization for purposes of quality measures data collection,

calculation, and transmission. We believe that it may be appropriate to classify the entity as a QCDR so long as the entity meets the definition of a QCDR by the date for which we require that a QCDR must be in existence (that is, January 1 the year prior to the year for which the entity seeks to become a QCDR (78 FR 74467)). Entities that have a mere verbal, non-written agreement to work together to become a QCDR by January 1 the year prior to the year for which the entity seeks to become a QCDR would not fulfill this proposed requirement.

- In addition, we propose that an entity that has broken off from a larger organization may be considered to be in existence for the purposes of QCDR qualification as of the earliest date the larger organization begins continual existence. We received questions from entities who used to be part of a larger organization but have recently become independent from the larger organization as to whether the entities would meet the requirement established in the CY 2014 PFS final rule with comment period that the entity be in existence as of January 1 the year prior to the year for which the entity seeks to become a QCDR (78 FR 74467). For example, a registry that was previously a part of a larger medical society as of January 1, 2013, could have broken off from the medical society and become an independent registry in 2014. Likewise, a member of a medical society could create a registry separate from the medical society. As such, there would be concern as to whether that entity would meet the requirement of being in existence prior to January 1, 2013, to be considered for qualification for reporting periods occurring in 2014. In these examples, for purposes of meeting the requirement that the entity be in existence as of January 1 the year prior to the year for which the entity seeks to become a QCDR, we may consider this entity as being in existence as of the date the larger medical society was in existence.

In the CY 2014 PFS final rule with comment period, in accordance with the submission deadline of quality measures data for qualified registries, we noted a deadline of the last Friday in February occurring after the end of the applicable reporting period to submit quality measures data to CMS (78 FR 74471). In accordance with our proposal to extend this deadline for qualified registries, we propose to extend the deadline for QCDRs to submit quality measures data calculations and results by March 31 following the end of the applicable reporting period (that is, March 31,

2016, for reporting periods occurring in 2015).

Additionally, we seek comment on whether to propose in future rulemaking to allow more frequent submissions of data, such as quarterly or year-round submissions, rather than having only one opportunity to submit quality measures data as is our current process.

We seek public comment on these proposed changes to the requirements for the QCDR.

d. Proposed Changes to the GPRO Web Interface

In the CY 2014 PFS final rule with comment period (78 FR 74456), we finalized our proposal to require “that group practices register to participate in the GPRO by September 30 of the year in which the reporting period occurs (that is September 30, 2014 for reporting periods occurring in 2014), as proposed.” However, we noted that, in order “to respond to the commenters concerns to provide timelier feedback on performance on CG CAHPS in the future, we anticipate proposing an earlier deadline for group practices to register to participate in the GPRO in future years” (78 FR 74456). Indeed, to provide timelier feedback on performance on CAHPS for PQRS, we propose to modify the deadline that a group practice must register to participate in the GPRO to June 30 of the year in which the reporting period occurs (that is, June 30, 2015, for reporting periods occurring in 2015). Although this proposed GPRO registration deadline would provide less time for a group practice to decide whether to participate in the GPRO, we believe the benefit of providing timelier feedback reports outweighs this concern.

Furthermore, we seek comment on whether to allow more frequent submissions of data, such as quarterly or year-round submissions, rather than having only one opportunity to submit quality measures data as is our current process.

We seek public comment on these proposals.

2. Proposed Criteria for the Satisfactory Reporting of Individual Eligible Professionals for the 2017 PQRS Payment Adjustment

Section 1848(a)(8) of the Act, as added by section 3002(b) of the Affordable Care Act, provides that for covered professional services furnished by an eligible professional during 2015 or any subsequent year, if the eligible professional does not satisfactorily report data on quality measures for covered professional services for the

quality reporting period for the year, the fee schedule amount for services furnished by such professional during the year (including the fee schedule amount for purposes of determining a payment based on such amount) shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services. For 2016 and subsequent years, the applicable percent is 98.0 percent.

a. Proposed Criterion for the Satisfactory Reporting of Individual Quality Measures via Claims and Registry for Individual Eligible Professionals for the 2017 PQRS Payment Adjustment

In the CY 2014 PFS final rule with comment period (see Table 47 at 78 FR 74479), we finalized the following criteria for satisfactory reporting for the submission of individual quality measures via claims and registry for the 2014 PQRS incentive: For the 12-month reporting period for the 2014 PQRS incentive, the eligible professional would report at least 9 measures, covering at least 3 of the NQS domains, OR, if less than 9 measures apply to the eligible professional, report 1–8 measures, AND report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted. For an eligible professional who reports fewer than 9 measures covering less than 3 NQS domains via the claims- or registry-based reporting mechanism, the eligible professional would be subject to the measure application validity (MAV) process, which would allow us to determine whether the eligible professional should have reported quality data codes for additional measures.

To be consistent with the satisfactory reporting criterion we finalized for the 2014 PQRS incentive, we are proposing to modify § 414.90(j) and propose the following criterion for individual eligible professionals reporting via claims and registry: For the 12-month reporting period for the 2017 PQRS payment adjustment, the eligible professional would report at least 9 measures, covering at least 3 of the NQS domains AND report each measure for at least 50 percent of the eligible professional’s Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, as we propose to define that term below, the eligible professional would report on at least 2 measures contained in the

proposed cross-cutting measure set specified in Table 21. If less than 9 measures apply to the eligible professional, the eligible professional would report up to 8 measure(s), AND report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted.

We note that, unlike the criterion we finalized for the 2014 PQRS incentive, we are proposing to require an eligible professional who sees at least 1 Medicare patient in a face-to-face encounter, as we propose to define that term below, during the 12-month 2017 PQRS payment adjustment reporting period to report at least 2 measures contained in the proposed cross-cutting measure set specified in Table 21. As we noted in the CY 2014 PFS proposed rule (78 FR 43359), we are dedicated to collecting data that provides us with a better picture of the overall quality of care furnished by eligible professionals, particularly for the purpose of having PQRS reporting being used to assess quality performance under the VM. We believe that requiring an eligible professional to report on at least 2 broadly applicable, cross-cutting measures will provide us with quality data on more varied aspects of an eligible professional’s practice. We also note that in its 2014 pre-rulemaking final report (available at http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx), the Measure Applications Partnership (MAP) encouraged the development of a core measure set (see page 16 of the “MAP Pre-Rulemaking Report: 2014 Recommendations on Measures for More than 20 Federal Programs”). The MAP stated “a core [measure set] would address critical improvement gaps, align payment incentives across clinician types, and reduce reporting burden.”

For what defines a “face-to-face” encounter, for purposes of proposing to require reporting of at least 2 cross-cutting measures specified in Table 21, we propose to determine whether an eligible professional had a “face-to-face” encounter by seeing whether the eligible professional billed for services under the PFS that are associated with face-to-face encounters, such as whether an eligible professional billed general office visit codes, outpatient visits, and surgical procedures. We would not include telehealth visits as face-to-face encounters for purposes of the proposals

require reporting of at least 2 cross-cutting measures specified in Table 21.

In addition, we understand that there may be instances where an eligible professional may not have at least 9 measures applicable to an eligible professional's practice. In this instance, like the criterion we finalized for the 2014 PQRS incentive (see Table 47 at 78 FR 74479), an eligible professional reporting on less than 9 measures would still be able to meet the satisfactory reporting criterion via claims and registry if the eligible professional reports on 1–8 measures, as applicable, to the eligible professional's practice. If an eligible professional reports on 1–8 measures, the eligible professional would be subject to the MAV process, which would allow us to determine whether an eligible professional should have reported quality data codes for additional measures. In addition, the MAV will also allow us to determine whether a group practice should have reported on any of the proposed cross-cutting measures specified in Table 21. The MAV process we are proposing to implement for claims and registry is the same process that was established for reporting periods occurring in 2014 for the 2014 PQRS incentive. For more information on the claims MAV process, please visit http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014_PQRS_Claims_MeasureApplicabilityValidation_12132013.zip. For more information on the registry MAV process, please visit http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014_PQRS_Registry_MeasureApplicabilityValidation_12132013.zip.

We seek public comment on our proposed satisfactory reporting criterion for individual eligible professionals reporting via claims or registry for the 2017 PQRS payment adjustment.

b. Proposed Criterion for Satisfactory Reporting of Individual Quality Measures via EHR for Individual Eligible Professionals for the 2017 PQRS Payment Adjustment

In the CY 2013 PFS final rule with comment period, we finalized the following criterion for the satisfactory reporting for individual eligible professionals reporting individual measures via a direct EHR that is CEHRT or an EHR data submission vendor that is CEHRT for the 2014 PQRS incentive: Report 9 measures covering at least 3 of the NQS domains. If an eligible professional's CEHRT does not contain patient data for at least 9

measures covering at least 3 domains, then the eligible professional must report all of the measures for which there is Medicare patient data. An eligible professional must report on at least 1 measure for which there is Medicare patient data (see Table 47 at 78 FR 74479).

To be consistent with the criterion we finalized for the 2014 PQRS incentive, as well as to continue to align with the final criterion for meeting the clinical quality measure (CQM) component of achieving meaningful use under the Medicare EHR Incentive Program, we are proposing to modify § 414.90(j) and propose the following criterion for the satisfactory reporting for individual eligible professionals to report individual measures via a direct EHR that is CEHRT or an EHR data submission vendor that is CEHRT for the 2017 PQRS payment adjustment: The eligible professional would report 9 measures covering at least 3 of the NQS domains. If an eligible professional's CEHRT does not contain patient data for at least 9 measures covering at least 3 domains, then the eligible professional would be required to report all of the measures for which there is Medicare patient data. An eligible professional would be required to report on at least 1 measure for which there is Medicare patient data.

We seek public comment on this proposal.

c. Proposed Criterion for Satisfactory Reporting of Measures Groups via Registry for Individual Eligible Professionals for the 2017 PQRS Payment Adjustment

In the CY 2013 PFS final rule with comment period, we finalized the following criterion for the satisfactory reporting for individual eligible professionals to report measures groups via registry for the 2014 PQRS incentive: For the 12-month reporting period for the 2014 PQRS incentive, report at least 1 measures group AND report each measures group for at least 20 patients, the majority (11 patients) of which must be Medicare Part B FFS patients. Measures groups containing a measure with a 0 percent performance rate will not be counted (see Table 47 at 78 FR 74479).

To be consistent with the criterion we finalized for the 2014 PQRS incentive, we are proposing to modify § 414.90(j) to indicate the following criterion for the satisfactory reporting for individual eligible professionals to report measures groups via registry for the 2017 PQRS payment adjustment: For the 12-month reporting period for the 2017 PQRS payment adjustment, the eligible

professional would report at least 1 measures group AND report each measures group for at least 20 patients, the majority (11 patients) of which would be required to be Medicare Part B FFS patients. Measures groups containing a measure with a 0 percent performance rate would not be counted.

Although we are proposing satisfactory reporting criterion for individual eligible professionals to report measures groups via registry for the 2017 PQRS payment adjustment that is consistent with criterion finalized for the 2014 PQRS incentive, please note, however, in this section III.K of this proposed rule, we are proposing to change the definition of a PQRS measures group.

We seek public comment on our proposed satisfactory reporting criterion for individual eligible professionals reporting measures groups via registry for the 2017 PQRS payment adjustment.

3. Satisfactory Participation in a QCDR by Individual Eligible Professionals

Section 601(b) of the ATRA amended section 1848(m)(3) of the Act, by redesignating subparagraph (D) as subparagraph (F) and adding new subparagraphs (D) and (E), to provide for a new standard for individual eligible professionals to satisfy the PQRS beginning in 2014, based on satisfactory participation in a QCDR.

a. Proposed Criterion for the Satisfactory Participation for Individual Eligible Professionals in a QCDR for the 2017 PQRS Payment Adjustment

Section 1848(a)(8) of the Act provides that for covered professional services furnished by an eligible professional during 2015 or any subsequent year, if the eligible professional does not satisfactorily report data on quality measures for covered professional services for the quality reporting period for the year, the fee schedule amount for services furnished by such professional during the year shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services. For 2016 and subsequent years, the applicable percent is 98.0 percent.

Section 1848(m)(3)(D) of the Act, as added by section 601(b) of the ATRA, authorizes the Secretary to treat an individual eligible professional as satisfactorily submitting data on quality measures under section 1848(m)(3)(A) of the Act if, in lieu of reporting measures under section 1848(k)(2)(C) of the Act, the eligible professional is satisfactorily participating in a QCDR for the year. "Satisfactory participation" is a new standard under the PQRS and

is a substitute for the underlying standard of “satisfactory reporting” data on covered professional services that eligible professionals must meet to avoid the PQRS payment adjustment. Currently, § 414.90(e)(2) states that individual eligible professionals must be treated as satisfactorily reporting data on quality measures if the individual eligible professional satisfactorily participates in a QCDR.

In the CY 2014 PFS final rule with comment period, although we finalized satisfactory participation criteria for the 2016 PQRS payment adjustment that are less stringent than the satisfactory participation criteria we finalized for the 2014 PQRS incentive, we noted that it was “our intention to fully move towards the reporting of 9 measures covering at least 3 domains to meet the criteria for satisfactory participation for the 2017 PQRS payment adjustment” (78 FR 74477). Specifically, we finalized the following two criteria for the satisfactory participation in a QCDR for the 2014 PQRS incentive at § 414.90(i)(3): For the 12-month 2014 reporting period, report at least 9 measures available for reporting under the QCDR covering at least 3 of the NQS domains, and report each measure for at least 50 percent of the eligible professional’s applicable patients. Of the measures reported via a QCDR, the eligible professional must report on at least 1 outcome measure.

To be consistent with the number of measures reported for the satisfactory participation criterion we finalized for the 2014 PQRS incentive, for purposes of the 2017 PQRS payment adjustment (which would be based on data reported during the 12-month period that falls in CY 2015), we propose to modify § 414.90(k) to add the following criteria for individual eligible professionals to satisfactorily participate in a QCDR for the 2017 PQRS payment adjustment: For the 12-month reporting period for the 2017 PQRS payment adjustment, the eligible professional would report at least 9 measures available for reporting under a QCDR covering at least 3 of the NQS domains, AND report each measure for at least 50 percent of the eligible professional’s patients. Of these measures, the eligible professional would report on at least 3 outcome measures, OR, if 3 outcomes measures are not available, report on at least 2 outcome measures and at least 1 of the following types of measures—resource use, patient experience of care, or efficiency/appropriate use.

Unlike the satisfactory participation criteria that were established for the 2014 PQRS incentive, we are proposing to modify § 414.90(k)(4) to require that

an eligible professional report on not only 1 but at least 3 outcome measures (or, 2 outcome measures and at least 1 resource use, patient experience of care, or efficiency/appropriate use if 3 outcomes measures are not available). We are proposing this increase because it is our goal to, when appropriate, move towards the reporting of more outcome measures. We believe the reporting of outcome measures (for example, unplanned hospital readmission after a procedure) better captures the quality of care an eligible professional provides than, for example, process measures (for example, whether a Hemoglobin A1c test was performed for diabetic patients). In establishing this proposal, we understand that a QCDR may not have 3 outcomes measures within its quality measure data set. Therefore, as an alternative to a third outcome measure, we are allowing an eligible professional to report on at least 1 resource use, patient experience of care, or efficiency/appropriate use measure in lieu of an outcome measure.

We seek public comment on these proposals.

4. Proposed Criteria for Satisfactory Reporting for Group Practices Selected to Participate in the Group Practice Reporting Option (GPRO)

In lieu of reporting measures under section 1848(k)(2)(C) of the Act, section 1848(m)(3)(C) of the Act provides the Secretary with the authority to establish and have in place a process under which eligible professionals in a group practice (as defined by the Secretary) shall be treated as satisfactorily submitting data on quality measures. Accordingly, this section III.K.4 contains our proposed satisfactory reporting criteria for group practices selected to participate in the GPRO. Please note that, for a group practice to participate in the PQRS GPRO in lieu of participating as individual eligible professionals, a group practice is required to register to participate in the PQRS GPRO. For more information on GPRO participation, please visit http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Group_Practice_Reporting_Option.html. For more information on registration, please visit <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Self-Nomination-Registration.html>.

In the CY 2014 PFS final rule with comment period, we established a deadline of September 30 of the applicable reporting period (that is, September 30, 2014, for reporting periods occurring in 2014) for a group

practice to register to participate in the GPRO (78 FR 74456). While we still seek to provide group practices with as much time as feasible to decide whether to register to participate in the PQRS as a GPRO, we weigh this priority with others, such as our desire to provide more timely feedback to participants of the PQRS, as well as other CMS quality reporting programs such as the VM. Since participation in the VM is tied to PQRS participation as discussed in section III.N. of this proposed rule, we have found that having a GPRO registration deadline so late in time would not allow us to collect information related to group practice participation in time to provide PQRS and VM participants with feedback reports earlier in time. Therefore, in an effort to provide timelier feedback, we are proposing to change the deadline by which a group practice must register to participate in the GPRO to June 30 of the applicable 12-month reporting period (that is, June 30, 2015, for reporting periods occurring in 2015). This proposed change would allow us to provide timelier feedback while still providing group practices with over 6 months to determine whether they should participate in the PQRS GPRO or, in the alternative, participate in the PQRS as individual eligible professionals. We invite public comment on this proposal.

a. Proposed Criteria for Satisfactory Reporting on PQRS Quality Measures Via the GPRO Web Interface for the 2017 PQRS Payment Adjustment

Consistent with the group practice reporting requirements under section 1848(m)(3)(C) of the Act, we propose to modify § 414.90(j) to incorporate the following criterion for the satisfactory reporting of PQRS quality measures for group practices registered to participate in the GPRO for the 12-month reporting period for the 2017 PQRS payment adjustment using the GPRO web interface for groups practices of 25–99 eligible professionals: The group practice would report on all measures included in the web interface; AND populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group’s sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then the group practice would report on 100 percent of assigned beneficiaries. In other words, we understand that, in some instances, the sampling methodology CMS provides will not be able to assign at least 248 patients on which a group practice may report,

particularly those group practices on the smaller end of the range of 25–99 eligible professionals. If the group practice is assigned less than 248 Medicare beneficiaries, then the group practice would report on 100 percent of its assigned beneficiaries. A group practice would be required to report on at least 1 measure for which there is Medicare patient data.

In addition, we propose to modify § 414.90(j) to incorporate the following criteria for the satisfactory reporting of PQRS quality measures for group practices that registered to participate in the GPRO for the 12-month reporting period for the 2017 PQRS payment adjustment using the GPRO web interface for groups practices of 100 or more eligible professionals: The group practice would report all CAHPS for PQRS survey measures via a certified survey vendor. In addition, the group practice would report on all measures included in the GPRO web interface; AND populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then the group practice would report on 100 percent of assigned beneficiaries. A group practice would be required to report on at least 1 measure for which there is Medicare patient data.

To maintain consistency in this reporting criteria, we note that this proposed criteria is similar to the criterion we finalized for the satisfactory reporting of PQRS quality measures for group practices selected to participate in the GPRO for the 12-month reporting periods for the 2013 and 2014 PQRS incentives for group practices of 100 or more eligible professionals in the CY 2013 PFS final rule with comment period (see Table 49 at 78 FR 74486). However, we are proposing to reduce the patient sample size a group practice is required to report quality measures data from 411 to 248. We examined the sample size of this reporting criterion and determined that the sample size we are proposing reduces provider reporting burden while still allowing for statistically valid and reliable performance results. For the 25–99 sized groups reporting via the web interface, we recognize the proposal to move from reporting 218 to 248 patients per sample represents a slight increase in reporting. However, based on experience with the 218 count and subsequent statistical analysis, we believe that there are increased performance reliabilities and validities gained when changing the minimum reporting requirement to 248.

We believe statistical reliability and validity is extremely important when measuring provider performance, particularly given the implications of the Physician VM and Physician Compare public reporting, discussed in section III.N and section III.J respectively. Therefore, we believe this proposed criterion improves on the criterion previously finalized.

For assignment of patients for group practices reporting via the GPRO web interface, in previous years, we have aligned with the Medicare Shared Savings Program methodology of beneficiary assignment (see 77 FR 69195). We note that, in section III.N. of this proposed rule, we are proposing to use a beneficiary attribution methodology for the VM for the claims-based quality measures and cost measures that is slightly different from the Medicare Shared Savings Program methodology, namely (1) eliminating the primary care service pre-step that is statutorily required for the Shared Savings Program and (2) including NPs, PA, and CNSs in step 1 rather than in step 2 of the attribution process. We believe that aligning with the VM's proposed method of attribution is appropriate, as the VM is directly tied to participation in the PQRS. Therefore, to achieve further alignment with the VM and for the reasons proposed in section III.N., we propose to adopt the attribution methodology changes proposed for the VM into the GPRO web interface beneficiary assignment methodology.

In addition, we note that, in the past, we have not provided guidance on those group practices that choose the GPRO web interface to report PQRS quality measures but have seen no Medicare patients for which the GPRO measures are applicable, or if they have no (i.e., 0 percent) responses for a particular module or measure. Since we are moving solely towards the implementation of PQRS payment adjustments, we seek to clarify this scenario here. If a group practice has no Medicare patients for which any of the GPRO measures are applicable, the group practice will not meet the criteria for satisfactory reporting using the GPRO web interface. Therefore, to meet the criteria for satisfactory reporting using the GPRO web interface, a group practice must be assigned and have sampled at least 1 Medicare patient for any of the applicable GPRO web interface measures (specified in Table 21). If a group practice does not typically see Medicare patients for which the GPRO web interface measures are applicable, we advise the group

practice to participate in the PQRS via another reporting mechanism.

We invite public comment on these proposals.

b. Proposed Criteria for Satisfactory Reporting on Individual PQRS Quality Measures for Group Practices Registered To Participate in the GPRO via Registry and EHR for the 2017 PQRS Payment Adjustment

For registry reporting in the GPRO, in the CY 2014 PFS final rule with comment period (see Table 49 at 78 FR 74486), we finalized the following satisfactory reporting criteria for the submission of individual quality measures via registry for group practices comprised of 2 or more eligible professionals in the GPRO for the 2014 PQRS incentive: Report at least 9 measures, covering at least 3 of the NQS domains, OR, if less than 9 measures covering at least 3 NQS domains apply to the group practice, report 1–8 measures covering 1–3 NQS domains for which there is Medicare patient data, AND report each measure for at least 50 percent of the group practice's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted. In the CY 2014 PFS final rule with comment period, we signaled that it was “our intent to ramp up the criteria for satisfactory reporting for the 2017 PQRS payment adjustment to be on par or more stringent than the criteria for satisfactory reporting for the 2014 PQRS incentive” (78 FR 74465).

Consistent with the criterion finalized for the 2014 PQRS incentive and the group practice reporting requirements under section 1848(m)(3)(C) of the Act, for those group practices that choose to report using a qualified registry, we propose here to modify § 414.90(j) to include the following satisfactory reporting criterion via qualified registry for ALL group practices who select to participate in the GPRO for the 2017 PQRS payment adjustment: The group practice would report at least 9 measures, covering at least 3 of the NQS domains. Of these measures, if a group practice sees at least 1 Medicare patient in a face-to-face encounter, the group practice would report on at least 2 measures in the cross-cutting measure set specified in Table 21. If less than 9 measures covering at least 3 NQS domains apply to the eligible professional, the group practice would report up to 8 measures covering 1–3 NQS domains for which there is Medicare patient data, AND report each measure for at least 50 percent of the eligible professional's Medicare Part B

FFS patients seen during the reporting period to which the measure applies. Measures with a 0 percent performance rate would not be counted.

As with individual reporting, we understand that there may be instances where a group practice may not have at least 9 measures applicable to a group practice's practice. In this instance, like the criterion we finalized for the 2014 PQRS incentive (see Table 49 at 78 FR 74486), a group practice reporting on less than 9 measures would still be able to meet the satisfactory reporting criterion via registry if the group practice reports on as many measures as are applicable to the group practice's practice. If a group practice reports on less than 9 measures, the group practice would be subject to the MAV process, which would allow us to determine whether a group practice should have reported quality data codes for additional measures and/or measures covering additional NQS domains. In addition, if a group practice does not report on at least 1 cross-cutting measure and the group practice has at least 1 eligible professional who sees at least 1 Medicare patient in a face-to-face encounter, the MAV will also allow us to determine whether a group practice should have reported on any of the proposed cross-cutting measures specified in Table 21. The MAV process we are proposing to implement for registry reporting is the same process that was established for reporting periods occurring in 2014 for the 2014 PQRS incentive. For more information on the registry MAV process, please visit http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014_PQRS_Registry_MeasureApplicability_Validation_12132013.zip.

For EHR reporting, consistent with the criterion finalized for the 2014 PQRS incentive that aligns with the criteria established for meeting the CQM component of meaningful use under the EHR Incentive Program and in accordance with the group practice reporting requirements under section 1848(m)(3)(C) of the Act, for those group practices that choose to report using an EHR, we propose to modify § 414.90(j) to indicate the following satisfactory reporting criterion via a direct EHR product that is CEHRT or an EHR data submission vendor that is CEHRT for ALL group practices who select to participate in the GPRO for the 2017 PQRS payment adjustment: For the 12-month reporting period for the 2017 PQRS payment adjustment, the group practice would report 9 measures covering at least 3 domains. If the group practice's CEHRT does not contain

patient data for at least 9 measures covering at least 3 domains, then the group practice must report the measures for which there is patient data. A group practice must report on at least 1 measure for which there is Medicare patient data.

We invite public comment on these proposals.

c. Proposed Criteria for Satisfactory Reporting on Individual PQRS Quality Measures for Group Practices Registered To Participate in the GPRO via a CMS-Certified Survey Vendor for the 2017 PQRS Payment Adjustment

In the CY 2014 PFS final rule with comment period, we introduced satisfactory reporting criterion for the 2014 PQRS incentive related to reporting the CG CAHPS survey measures via a CMS-certified survey vendor (see Table 49 at 78 FR 74486). Consistent with the criterion finalized for the 2014 PQRS incentive and the group practice reporting requirements under section 1848(m)(3)(C) of the Act, we are proposing the following 3 options (of which a group practice would be able to select 1 out of the 3 options) for satisfactory reporting for the 2017 PQRS payment adjustment for group practices comprised of 25 or more eligible professionals:

Proposed Option 1: If a group practice chooses to use a qualified registry, in conjunction with reporting the CAHPS for PQRS survey measures, for the 12-month reporting period for the 2017 PQRS payment adjustment, the group practice would report all CAHPS for PQRS survey measures via a certified vendor, and report at least 6 additional measures, outside of CAHPS for PQRS, covering at least 2 of the NQS domains using the qualified registry. If less than 6 measures apply to the group practice, the group practice must report all applicable measures. Of these 6 measures, if any eligible professional in the group practice sees at least 1 Medicare patient in a face-to-face encounter, the group practice would be required to report on at least 1 measure in the cross-cutting measure set specified in Table 21. We note that this proposed option to report 6 additional measures, including at least 1 cross-cutting measure if a group practice sees at least 1 Medicare patient in a face-to-face encounter, is consistent with the proposed criterion for satisfactory reporting for the 2017 PQRS payment adjustment via qualified registry. However, unlike the proposed criterion for satisfactory reporting for the 2017 PQRS payment adjustment via qualified registry without CG-CAHPS, we are only proposing the requirement to

report 1 measure in the cross-cutting measure set specified in Table 21 instead of 2 measures as the CAHPS for PQRS measures are contained in the cross-cutting measure set.

Consistent with the proposed group practice reporting option solely using a qualified registry for the 2017 PQRS payment adjustment, we understand that there may be instances where a group practice may not have at least 6 measures applicable to a group practice's practice. In this instance, a group practice reporting on less than 6 measures would still be able to meet the satisfactory reporting criterion via registry if the group practice reports on as many measures as are applicable to the group practice's practice. If a group practice reports on less than 6 individual measures using the qualified registry reporting mechanism in conjunction with a CMS-certified survey vendor to report CAHPS for PQRS, the group practice would be subject to a measure application validity process (MAV), which would allow us to determine whether a group practice should have reported quality data codes for additional measures and/or measures covering additional NQS domains.

In addition, if a group practice does not report on at least 1 cross-cutting measure and the group practice has at least 1 eligible professional who sees at least 1 Medicare patient in a face-to-face encounter, the MAV will also allow us to determine whether a group practice should have reported on any of the proposed cross-cutting measures specified in Table 21. The MAV process we are proposing to implement for registry reporting is the same process that was established for reporting periods occurring in 2014 for the 2014 PQRS incentive. For more information on the registry MAV process, please visit http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Downloads/2014_PQRS_Registry_MeasureApplicability_Validation_12132013.zip.

Proposed Option 2: If a group practice chooses to use a direct EHR product that is CEHRT or EHR data submission vendor that is CEHRT in conjunction with reporting the CAHPS for PQRS survey measures, for the 12-month reporting period for the 2017 PQRS payment adjustment, the group practice would report all CAHPS for PQRS survey measures via a certified vendor, and report at least 6 additional measures, outside of CAHPS for PQRS, covering at least 2 of the NQS domains using the direct EHR product that is CEHRT or EHR data submission vendor that is CEHRT. If less than 6 measures

apply to the group practice, the group practice must report all applicable measures. Of the additional 6 measures that must be reported in conjunction with reporting the CAHPS for PQRS survey measures, a group practice would be required to report on at least 1 measure for which there is Medicare patient data. We note that this proposed option to report 6 additional measures is consistent with the proposed criterion for satisfactory reporting for the 2017 PQRS payment adjustment via EHR without CAHPS for PQRS, since the CAHPS for PQRS survey only addresses 1 NQS domain.

Proposed Option 3: Alternatively, if a group practice chooses to use the GPRO web interface in conjunction with reporting the CAHPS for PQRS survey measures, we propose the following criterion for satisfactory reporting for the 2017 PQRS payment adjustment: For the 12-month reporting period for the 2017 PQRS payment adjustment, the group practice would report all CAHPS for PQRS survey measures via a certified vendor. In addition, the group practice would report on all measures included in the GPRO web interface; AND populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then the group practice would report on 100 percent of assigned beneficiaries. A group practice would be required to report on at least 1 measure for which there is Medicare patient data.

Furthermore, as was required for reporting periods occurring in 2014 (78 FR 74485), we propose that all group practices comprised of 100 or more eligible professionals that register to participate in the PQRS GPRO, regardless of the reporting mechanism the group practice chooses, would be required to select a CMS-certified survey vendor to administer the CAHPS for PQRS survey on their behalf. As such, for purposes of meeting the criteria for satisfactory reporting for the 2017 PQRS payment adjustment, a group practice participating in the PQRS GPRO would be required to use 1 of these 3 proposed reporting options mentioned above. We note that, for reporting periods occurring in 2014, we stated that we would administer and fund the collection of (CG-CAHPS) data for these groups (of 100 or more eligible professionals using the GPRO web interface that are required to report on CAHPS for PQRS survey measures) (78 FR 74452). We stated that we would bear the cost of administering the

CAHPS for PQRS survey measures, as we were requiring the group practices to report on CAHPS for PQRS survey measures. Unfortunately, beginning in 2015, it will no longer be feasible for CMS to continue to bear the cost of group practices of 100 or more eligible professionals to report the CAHPS for PQRS survey measures. Therefore, the group practice would be required to bear the cost of administering the CAHPS for PQRS survey measures.

However, as CAHPS for PQRS was optional for group practices comprised of 25–99 eligible professionals in 2014 (78 FR 74485) and whereas we are proposing to require reporting of CAHPS for PQRS for group practices comprised of 100 or more eligible professionals, we propose that CAHPS for PQRS would be optional for groups of 25–99 and 2–24 eligible professionals. We note that all group practices that would be required to report or voluntarily elect to report CAHPS for PQRS would need to select and pay for a CMS-certified survey vendor to administer the CAHPS for PQRS survey on their behalf.

We invite public comment on these proposals.

d. Proposed Criteria for Satisfactory Reporting on Individual PQRS Quality Measures for Group Practices Selected To Participate in the GPRO To Report the CAHPS for PQRS Survey Measures via a CMS-Certified Survey Vendor for the 2018 PQRS Payment Adjustment and Subsequent Years

We believe these patient surveys are important tools for assessing beneficiary experience of care and outcomes and, moving forward, we would like to emphasize the importance of collecting patient experience of care data through the use of CAHPS for PQRS. Therefore, based on our authority under section 1848(m)(3)(C) of the Act to determine the criteria for satisfactory reporting for group practices under section 1848(m)(3)(C) of the Act, we are proposing to require that, in conjunction with other satisfactory reporting criteria we establish in future years, beginning with the 12-month reporting period for the 2018 PQRS payment adjustment, and for subsequent years, group practices comprised of 25 or more eligible professionals that are participating in the GPRO report and pay for the collection of the CAHPS for PQRS survey measures. We understand that the cost of administering the CAHPS for PQRS survey may be significant, so we are proposing this requirement well in advance of the year in which it would be first effective in order to provide group practices with

early notice so that their practices may adjust accordingly.

We invite public comment on these proposals.

e. The Consumer Assessment of Healthcare Providers Surgical Care Survey (S-CAHPS)

In addition to CAHPS for PQRS, we received comments last year supporting the inclusion of the Consumer Assessment of Healthcare Providers Surgical Care Survey (S-CAHPS). The commenters stated that the CG-CAHPS survey would not accurately reflect the care provided by single- or multispecialty surgical or anesthesia groups. The commenters noted that S-CAHPS has been tested by the same standards as CG-CAHPS and follows the same collection mechanism as the CG-CAHPS. The S-CAHPS expands on the CG-CAHPS by focusing on aspects of surgical quality, which are important from the patient's perspective and for which the patient is the best source of information. The survey asks patients to provide feedback on surgical care, surgeons, their staff, and anesthesia care. It assesses patients' experiences with surgical care in both the inpatient and outpatient settings by asking respondents about their experience before, during and after surgery. We agree with the commenters on the importance of allowing for the administration of S-CAHPS reporting and wish to allow for reporting of S-CAHPS in the PQRS for reporting mechanisms other than the QCDR. However, at this time, due to the cost and time it would take to find vendors to collect S-CAHPS data, it is not technically feasible to implement the reporting of the S-CAHPS survey measures for the 2017 PQRS payment adjustment. We seek comments on how to allow for reporting of the S-CAHPS survey measures for the 2018 PQRS payment adjustment and beyond.

5. Statutory Requirements and Other Considerations for the Selection of PQRS Quality Measures for Meeting the Criteria for Satisfactory Reporting for 2015 and Beyond for Individual Eligible Professionals and Group Practices

CMS undergoes an annual Call for Measures that solicits new measures from the public for possible inclusion in the PQRS. During the Call for Measures, we request measures for inclusion in PQRS that meet the following statutory and non-statutory criteria.

Sections 1848(k)(2)(C) and 1848(m)(3)(C)(i) of the Act, respectively, govern the quality measures reported by individual eligible professionals and group practices under the PQRS. Under

section 1848(k)(2)(C)(i) of the Act, the PQRS quality measures shall be such measures selected by the Secretary from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) of the Act, which is currently the National Quality Forum (NQF). However, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the NQF, section 1848(k)(2)(C)(ii) of the Act authorizes the Secretary to specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary, such as the Ambulatory Quality Alliance (AQA). In light of these statutory requirements, we believe that, except in the circumstances specified in the statute, each PQRS quality measure must be endorsed by the NQF. Additionally, section 1848(k)(2)(D) of the Act requires that for each PQRS quality measure, “the Secretary shall ensure that eligible professionals have the opportunity to provide input during the development, endorsement, or selection of measures applicable to services they furnish.” The statutory requirements under section 1848(k)(2)(C) of the Act, subject to the exception noted previously, require only that the measures be selected from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) of the Act (that is, the NQF) and are silent as to how the measures that are submitted to the NQF for endorsement are developed.

The basic steps for developing measures applicable to physicians and other eligible professionals prior to submission of the measures for endorsement may be carried out by a variety of different organizations. We do not believe there need to be special restrictions on the type or make-up of the organizations carrying out this basic process of development of physician measures, such as restricting the initial development to physician-controlled organizations. Any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards for purposes of the PQRS.

In addition to section 1848(k)(2)(C) of the Act, section 1890A of the Act, which was added by section 3014(b) of the Affordable Care Act, requires that the Secretary establish a pre-rulemaking process under which certain steps occur with respect to the selection of certain

categories of quality and efficiency measures, one of which is that the entity with a contract with the Secretary under section 1890(a) of the Act (that is, the NQF) convene multi-stakeholder groups to provide input to the Secretary on the selection of such measures. These categories are described in section 1890(b)(7)(B) of the Act, and include such measures as the quality measures selected for reporting under the PQRS. In accordance with section 1890A(a)(1) of the Act, the NQF convened multi-stakeholder groups by creating the Measure Applications Partnership (MAP). Section 1890A(a)(2) of the Act requires that the Secretary must make publicly available by December 1st of each year a list of the quality and efficiency measures that the Secretary is considering for selection through rulemaking for use in the Medicare program. The NQF must provide CMS with the MAP’s input on the selection of measures by February 1st of each year. The lists of measures under consideration for selection through rulemaking in 2014 are available at <http://www.qualityforum.org/map/>.

As we noted above, section 1848(k)(2)(C)(ii) of the Act provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). We may select measures under this exception if there is a specified area or medical topic for which a feasible and practical measure has not been endorsed by the entity, as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. Under this exception, aside from NQF endorsement, we requested that stakeholders apply the following considerations when submitting measures for possible inclusion in the PQRS measure set:

- Measures that are not duplicative of another existing or proposed measure.
- Measures that are further along in development than a measure concept.
- CMS is not accepting claims-based-only reporting measures in this process.
- Measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that include the NQS domain for care coordination and communication.
- Measures that include the NQS domain for patient experience and patient-reported outcomes.

- Measures that address efficiency, cost and resource use.

a. Proposed PQRS Quality Measures

Taking into consideration the statutory and non-statutory criteria we described previously, this section contains our proposals for the inclusion or removal of measures in PQRS for 2015 and beyond. We are classifying all proposed measures against six domains based on the NQS’s six priorities, as follows:

(1) *Patient Safety*. These are measures that reflect the safe delivery of clinical services in all healthcare settings. These measures may address a structure or process that is designed to reduce risk in the delivery of healthcare or measure the occurrence of an untoward outcome such as adverse events and complications of procedures or other interventions.

(2) *Person and Caregiver-Centered Experience and Outcomes*. These are measures that reflect the potential to improve patient-centered care and the quality of care delivered to patients. They emphasize the importance of collecting patient-reported data and the ability to impact care at the individual patient level, as well as the population level. These are measures of organizational structures or processes that foster both the inclusion of persons and family members as active members of the health care team and collaborative partnerships with providers and provider organizations or can be measures of patient-reported experiences and outcomes that reflect greater involvement of patients and families in decision making, self-care, activation, and understanding of their health condition and its effective management.

(3) *Communication and Care Coordination*. These are measures that demonstrate appropriate and timely sharing of information and coordination of clinical and preventive services among health professionals in the care team and with patients, caregivers, and families to improve appropriate and timely patient and care team communication. They may also be measures that reflect outcomes of successful coordination of care.

(4) *Effective Clinical Care*. These are measures that reflect clinical care processes closely linked to outcomes based on evidence and practice guidelines or measures of patient-centered outcomes of disease states.

(5) *Community/Population Health*. These are measures that reflect the use of clinical and preventive services and achieve improvements in the health of the population served. They may be

measures of processes focused on primary prevention of disease or general screening for early detection of disease unrelated to a current or prior condition.

(6) *Efficiency and Cost Reduction.*

These are measures that reflect efforts to lower costs and to significantly improve outcomes and reduce errors. These are measures of cost, resource use and appropriate use of healthcare resources or inefficiencies in healthcare delivery.

Please note that the PQRS quality measure specifications for any given proposed PQRS individual quality measure may differ from specifications for the same quality measure used in prior years. For example, for the proposed PQRS quality measures that were selected for reporting in 2014 and beyond, please note that detailed measure specifications, including the measure's title, for the proposed individual PQRS quality measures for 2013 and beyond may have been updated or modified during the NQF endorsement process or for other reasons.

In addition, due to our desire to align measure titles with the measure titles that have been finalized for 2013, 2014, 2015, and potentially subsequent years of the EHR Incentive Program, we note that the measure titles for measures available for reporting via EHR may change. To the extent that the EHR Incentive Program updates its measure titles to include version numbers (77 FR 13744), we will use these version numbers to describe the PQRS EHR measures that will also be available for reporting for the EHR Incentive Program. We will continue to work toward complete alignment of measure specifications across programs whenever possible.

Through NQF's measure maintenance process, NQF-endorsed measures are sometimes updated to incorporate changes that we believe do not substantively change the nature of the measure. Examples of such changes could be updated diagnosis or procedure codes or changes to exclusions to the patient population or definitions. We believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. Further, we believe that non-substantive maintenance changes of this type do not trigger the same agency obligations under the Administrative Procedure Act.

In the CY 2013 PFS final rule with comment period, we finalized our proposal providing that if the NQF updates an endorsed measure that we have adopted for the PQRS in a manner

that we consider to not substantively change the nature of the measure, we would use a subregulatory process to incorporate those updates to the measure specifications that apply to the program (77 FR 69207). We believe this adequately balances our need to incorporate non-substantive NQF updates to NQF-endorsed measures in the most expeditious manner possible, while preserving the public's ability to comment on updates that so fundamentally change an endorsed measure that it is no longer the same measure that we originally adopted. We also note that the NQF process incorporates an opportunity for public comment and engagement in the measure maintenance process. We will revise the Specifications Manual and post notices to clearly identify the updates and provide links to where additional information on the updates can be found. Updates will also be available on the CMS PQRS Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html>.

CMS is not the measure steward for most of the measures available for reporting under the PQRS. We rely on outside measure stewards and developers to maintain these measures. In Table 24, we are proposing that certain measures be removed from the PQRS measure set due to the measure owner/developer indicating that it will not be able to maintain the measure. We note that this proposal is contingent upon the measure owner/developer not being able to maintain the measure. Should we learn that a certain measure owner/developer is able to maintain the measure, or that another entity is able to maintain the measure in a manner that allows the measure to be available for reporting under the PQRS for the CY 2017 PQRS payment adjustment, we propose to keep the measure available for reporting under the PQRS and therefore not finalize our proposal to remove the measure. In addition, if, after the display of this proposed rule, we discover additional measures within the current PQRS measure set that a measure owner/developer can no longer maintain, we propose to remove these measures from reporting for the PQRS beginning in 2015. We will discuss any such instances in the CY 2015 PFS final rule with comment period.

In addition, we note that we have received feedback from stakeholders, particularly first-time participants who find it difficult to understand which measures are applicable to their particular practice. In an effort to aide eligible professionals and group practices to determine what measures

best fit their practice, and in collaboration with specialty societies, we are beginning to group our final measures available for reporting according to specialty. The current listing of our measures by specialty can be found on our Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/index.html>. Please note that these groups of measures are meant to provide guidance to those eligible professionals seeking to determine what measures to report. Eligible professionals are not required to report measures according to these suggested groups of measures. In addition to group measures according to specialty, we also plan to have a measure subset for measures that specifically addresses multiple chronic conditions. As measures are adopted or revised, we will continue to update these groups to reflect the measures available under the PQRS, as well as add more specialties.

In the CY 2014 PFS final rule with comment period, we stated that "unless there are errors discovered in updated electronic measure specifications, the PQRS intends to use the most recent, updated versions of electronically specified clinical quality measures for that year" (78 FR 74489). We propose that, if we discover errors in the most recently updated electronic measure specifications for a certain measure, we would use the version of electronic measure specifications that immediately precedes the most recently updated electronic measure specifications.

Additionally, we noted that, with respect to the following e-measure CMS140v2, Breast Cancer Hormonal Therapy for Stage IC–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer (NQF 0387), a substantive error was discovered in the June 2013 version of this electronically specified clinical quality measure. Therefore, the PQRS required the use of the prior, December 2012 version of this measure, which is CMS140v1 (78 FR 74489). Please note that, consistent with other EHR measures, since a more recent and corrected version of this measure has been developed, we will require the reporting of the most recent, updated versions of the measure Breast Cancer Hormonal Therapy for Stage IC–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer (NQF 0387)—currently version CMS140v3—for the year.

b. Proposed Cross-Cutting Measure Set for 2015 and Beyond

In accordance with our proposed criteria for the satisfactory reporting of

PQRS measures for the 2017 PQRS payment adjustment via claims and registry that requires an eligible professional or group practice to report on at least 2 cross-cutting measures, we are proposing the following 18 cross-cutting measure set specified in Table 21 for 2015 and beyond. Please note that

our rationale for proposing each of these measures is found below the measure description. We have also indicated the PQRS reporting mechanism or mechanisms through which each proposed measure could be submitted. In addition to seeking comment on this proposed cross-cutting measure set

specified in Table 21, we seek comment on other measures that commenters believe should be included in this proposed cross-cutting measure set for 2015 and beyond.

BILLING CODE 4120-01-P

TABLE 21: Proposed Individual Quality Cross-Cutting Measures for the PQRS to Be Available for Satisfactory Reporting Via Claims, Registry, and EHR Beginning in 2015

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^Y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
N/A /N/A	N/A	Community /Population Health	<p>Tobacco Use and Help with Quitting Among Adolescents: Percentage of adolescents 13 to 20 years of age with a primary care visit during the measurement period for whom tobacco use status was documented and who received help quitting if identified as a tobacco user.</p> <p>Rationale: CMS is proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This is a preventive measure targeting support of adolescent populations in quitting smoking, which represents a clinical gap in the program. Several provider types are able to report this measure in a variety of outpatient settings including Pediatricians, Family Practice physicians, and Internists. This measure is also applicable for a broad patient sample further positioning this measure as cross-cutting.</p>	NCQA / NCIQM			X			X	
0028 /226	138 v2	Community /Population Health	<p>Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.</p> <p>Rationale: This measure has been identified as a cross-cutting measure as it represents a screening assessment for tobacco use that most eligible professionals may perform and is applicable to most adult patients. This measure is applicable in various outpatient settings and can be reported by most eligible professionals that see adult patients. This measure was finalized for reporting in the PQRS in the CY 2014 PFS final rule (see Table 52 at 78 FR 74498).</p>	AMA- PCPI	X		X	X	X	X	ACO MU2 Million Hearts
0038 /240	117 v2	Community /Population Health	<p>Childhood Immunization Status: Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.</p> <p>Rationale: This measure is clinically significant for all pediatric patients and is applicable to a</p>	NCQA				X			MU2

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			variety of eligible professionals that provide services to pediatric patients making it reportable by a large segment of eligible professionals. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).								
0418 /134	2v3	Community /Population Health	<p>Preventive Care and Screening: Screening for Clinical Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for clinical depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.</p> <p>Rationale: This measure represents a screening assessment for depression that most eligible professionals may perform and is applicable to most adult patients, making it broadly reportable as a cross-cutting measure. This measure is also applicable in a variety of outpatient settings, enhancing the reportability of this measure. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	CMS/QIP	X		X	X	X	X	ACO MU2
0419 /130	68v 3	Patient Safety	<p>Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.</p> <p>Rationale: This measure targets the documentation of current medications in the medical record, which is a clinical process that most eligible professionals may perform and is applicable to most adult patients. This measure is also applicable in various outpatient settings. For these reasons, this measure is identified as cross-cutting. This measure was finalized for reporting in the PQRS in the CY 2014 PFS final rule (see Table 52 at 78 FR 74498).</p>	CMS/QIP	X		X	X	X	X	ACO MU2
0421 /128	69v 2	Community /Population Health	<p>Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up: Percentage of patients aged 18 years and older with a documented BMI during the current encounter or during the previous 6 months AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 6 months of the encounter.</p> <p>Normal Parameters: Age 65 years and older BMI ≥ 23 and < 30; Age 18-64 years BMI ≥ 18.5 and < 25</p> <p>Rationale: This measure has been identified as</p>	CMS/QIP	X		X	X	X	X	ACO MU2

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			a cross-cutting measure as it represents a screening assessment for BMI that most eligible professionals may perform and is applicable to most adult patients in various outpatient settings. This measure was finalized for reporting in the PQRS in the CY 2014 PFS final rule (see Table 52 at 78 FR 74498).								
N/A /374	50v 2	Communica tion and Care Coordination	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred. Rationale: This measure represents communication between a variety of eligible professionals and promotes positive outcomes for patients. It is reportable by a broad spectrum of providers. In addition, this measure is applicable to most adult patients, further enhancing its reportability across disciplines and specialties. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).	CMS/BAH				X			MU2
0097 /046	N/A	Communica tion and Care Coordination	Medication Reconciliation: Percentage of patients aged 65 years and older discharged from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) and seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented. Rationale: This measure has been identified as a cross-cutting measure as it represents the clinical process of medication reconciliation, which most eligible professionals may perform and is applicable to most elderly patients in various inpatient/outpatient settings, making this a broadly reportable measure. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).	AMA- PCPI/ NCQA			X				
0041 /110	147 v2	Community /Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization. Rationale: This measure represents a screening assessment for influenza immunization that most eligible professionals may perform and is applicable to most adult and pediatric patients. This measure is applicable in various outpatient settings. This measure was finalized for reporting in the PQRS in the CY 2014 PFS final rule (see Table 52 at 78 FR 4498).	AMA- PCPI	X		X	X	X	X	ACO MU2

			<p>pneumococcal vaccine.</p> <p>Rationale: This measure represents a screening assessment for pneumonia vaccination that most eligible professionals may perform and is applicable to most elderly patients. This measure is also applicable in various outpatient settings, which further enhances its reportability across various disciplines and specialties. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>								
N/A /317	22v 2	Community /Population Health	<p>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patients aged 18 years and older seen during the reporting period who were screened for high blood pressure (BP) AND a recommended follow-up plan is documented based on the current blood pressure reading as indicated.</p> <p>Rationale: This measure represents a common screening assessment for high blood pressure that most eligible professionals perform and is applicable to most adult and elderly patients in a variety of inpatient/outpatient settings. As such, this measure has been identified as cross-cutting. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	CMS/QIP	X		X	X	X	X	ACO MU2 Million Hearts
0101 /318	139 v2	Patient Safety	<p>Falls: Screening for Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk at least once during the measurement period.</p> <p>Rationale: This measure represents a fall risk screening assessment that most eligible professionals may perform and is applicable to most elderly patients. This screen tool may be commonly used by providers serving this patient population in a variety of outpatient settings and as such this measure has been identified as a cross-cutting measure. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	NCQA				X	X		ACO MU2
0326 /047	N/A	Person and Caregiver- Centered Experience and Outcomes	<p>Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.</p> <p>Rationale: This measure has been identified as a cross-cutting measure as it represents the development of a care plan that most eligible professionals may perform and is applicable to most elderly patients in various inpatient/outpatient settings. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	AMA- PCPI/ NCQA	X		X			X	

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
0420 /131	N/A	Communica tion and Care Coordination	<p>Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.</p> <p>Rationale: This measure represents a screening assessment for pain and follow-up care that most eligible professionals may perform and is applicable to most adult patients seen in a variety of outpatient settings. For these reasons, this measure has been identified as a cross-cutting measure. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	CMS/QIP	X		X			X	
AQA Adopted /182	N/A	Communica tion and Care Coordination	<p>Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.</p> <p>Rationale: This measure has been identified as a cross-cutting measure as it represents a functional assessment that physical therapist/chiropractic eligible professionals may perform and is applicable to most adult patients. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	CMS/QIP	X		X				
0005 &0006 /321	N/A	Person and Caregiver Experience and Outcomes	<p>CAHPS for PQRS Clinician/Group Survey:</p> <ul style="list-style-type: none"> • Getting timely care, appointments, and information; • How well providers Communicate; • Patient's Rating of Provider; • Access to Specialists; • Health Promotion & Education; • Shared Decision Making; • Health Status/Functional Status; • Courteous and Helpful Office Staff; • Care Coordination; • Between Visit Communication; • Helping Your to Take Medication as Directed; and • Stewardship of Patient Resources <p>Rationale: This measure has been identified as an outcome-based cross-cutting measure due to it directly measuring patient satisfaction of office visits. The data collected by the survey provides information based on a group practice's performance of the patient's care. This information potentially impacts a variety of eligible professionals based on the survey data received from patients. This measure was finalized for reporting in the PQRS in the CY 2013 PFS final rule (see Table 95 at 77 FR 69215).</p>	AHRQ		X					ACO

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
0018 /236	165 v2	Effective Clinical Care	<p>Controlling High Blood Pressure: Percentage of patients 18-85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.</p> <p>Rationale: This measure has been identified as a cross-cutting measure as it represents patient care that is clinically appropriate for many eligible professionals treating adult patients. This measure is applicable to most adult patients in various outpatient settings. This measure was finalized for reporting in the PQRS in the CY 2014 PFS final rule (see Table 52 at 78 FR 4498).</p>	NCQA	X		X	X	X	X	ACO MU2 Million Hearts
N/A/ N/A	N/A	Community /Population Health	<p>Screening for Hepatitis C Virus (HCV) for Patients at High Risk: Percentage of patients with one or more of the following: a history of injection drug use, patients who received blood transfusions prior to 1992, OR patients who were born in the years 1945–1965 who received a one-time hepatitis C virus (HCV) antibody test.</p> <p>Rationale: CMS is proposing this measure based on our exception authority under I 848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section I 890(a) of the Act (that is, the NQF). This measure is complementary of Hepatitis C measures currently in the program, representing a clinical gap not currently captured by PQRS. This measure is also proposed as a cross-cutting measure because screening for Hep C is applicable for a broad patient sample and a variety of eligible professionals in various outpatient settings.</p>	AGA / AASLD / AMA- PCPI			X				

[†] Measure details including titles, descriptions and measure owner information may vary during a particular program year. This is due to the timing of measure specification preparation and the measure versions used by the various reporting options/methods. Please refer to the measure specifications that apply for each of the reporting options/methods for specific measure details.

c. Proposed New PQRS Measures Available for Reporting for 2015 and Beyond

Table 22 contains the additional measures we are proposing to include in the PQRS measure set for CY 2015 and

beyond. Please note that not all of the proposed cross-cutting measures may appear in Table 22, as some of the propose cross-cutting measures specified in Table 21 were finalized in the CY 2013 or CY 2014 PFS final rules with comment period. Please note that

our rationale for proposing each of these measures is found below the measure description. We have also indicated the PQRS reporting mechanism or mechanisms through which each proposed measure could be submitted.

TABLE 22: Proposed Individual Quality Measures and Those Included in Measures Groups for the PQRS to Be Available for Satisfactory Reporting Beginning in 2015

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description*	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
187 9 /N/ A	N/A	Patient Safety	<p>Adherence to Antipsychotic Medications for Individuals with Schizophrenia: The percentage of individuals 18 years of age or greater as of the beginning of the measurement period with schizophrenia or schizoaffective disorder who are prescribed an antipsychotic medication, with adherence to the antipsychotic medication [defined as a Proportion of Days Covered (PDC)] of at least 0.8 during the measurement period (12 consecutive months).</p> <p>Rationale: This measure satisfies 1848(k)(2)(C)(i) of the Act as this measure is NQF-endorsed. This measure represents a PQRS program gap of measures targeting a patient population with active psychosis or psychiatric disorders. This measure is also reportable by behavioral/mental health providers.</p>	CMS / FMQAI			X				
N/A /N/ A	N/A	Patient Safety	<p>Adherence to Mood Stabilizers for Individuals with Bipolar I Disorder: The measure calculates the percentage of individuals 18 years of age or greater as of the beginning of the measurement period with bipolar I disorder who are prescribed a mood stabilizer medication, with adherence to the mood stabilizer medication [defined as a Proportion of Days Covered (PDC)] of at least 0.8 during the measurement period (12 consecutive months).</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a PQRS program gap of measures targeting a patient population with active psychosis or psychiatric disorders. This measure is also reportable by behavioral/mental health providers.</p>	CMS/FMQ AI	X						
N/A /N/ A	N/A	Effective Clinical Care	<p>Adult Primary Rhegmatogenous Retinal Detachment Reoperation Rate: % of surgeries for primary rhegmatogenous retinal detachment where the retina remains attached after only one surgery.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This is an outcome measure that represents a new clinical concept for PQRS. This measure will be reportable by Ophthalmologists.</p>	AA			X				
N/A /N/ A	N/A	Effective Clinical Care	<p>Adult Primary Rhegmatogenous Retinal Detachment Surgery Success Rate: Percentage (%) of Retinal Detachment cases achieving flat</p>	American Association of Eye and			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			retinas 6 months post surgery. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This is an outcome measure that represents a new clinical concept for PQRS. This measure will be reportable by Ophthalmologists.	Ear Centers of Excellence / The Australian Council on Healthcare Standards							
N/A /N/A	N/A	Person and Caregiver-Centered Experience and Outcomes	ALS Patient Care Preferences: Percentage of patients diagnosed with ALS who were offered at least once annually assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice). Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This is a process measure that represents a new clinical concept for PQRS, filling a current clinical gap in the program for neurodegenerative disease. This measure would be reportable for eligible professionals within the scope of neurology.	AAN			X				
N/A /N/A	N/A	Effective Clinical Care	Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users: Percentage of patients regardless of age who are active injection drug users who received a hepatitis C virus (HCV) antibody test or HCV ribonucleic acid (RNA) test within the 12 month reporting period. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure addresses a clinical gap in PQRS by targeting active injection drug users. This measure is reportable by Gastroenterologists, Hepatologists, Infectious Disease providers and Primary Care providers.	AGA / AASLD / PCPI			X				
N/A /N/A	N/A	Person and Caregiver-Centered Experience and Outcomes	Average change in functional status following lumbar spine fusion surgery: Average change from pre-operative functional status assessment to 1 year (9 to 15 months) post-operative functional status using the Oswestry Disability Index (ODI version 2.1a) patient reported outcome tool. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of	MNCM			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			the Act (that is, the NQF). This outcome measure represents a clinical gap in the program and is reportable by Neurosurgery and Orthopedic Surgery providers.								
N/A /N/ A	N/A	Efficiency and Cost Reduction	Avoidance of inappropriate use of imaging for adult ED patients with traumatic low back pain: Avoidance of inappropriate use of imaging for adult ED patients with atraumatic low back pain. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a program gap and targets a provider group currently under represented in the program, imaging specialists and radiologists.	ACEP			X				
N/A /N/ A	N/A	Patient Safety	Cataract Surgery with Intra-Operative Complications (Unplanned Rupture of Posterior Capsule requiring unplanned vitrectomy): Rupture of the posterior capsule during anterior segment surgery requiring vitrectomy. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This outcome measure is reportable by Ophthalmologists and is proposed to be included within the Cataracts Measure Group, complementing the existing cataracts measures with a clinical focus not currently captured within PQRS.	AAEECE / ACHS			X			X	
N/A /N/ A	N/A	Effective Clinical Care	Cataract Surgery: Difference Between Planned and Final Refraction: Percentage of patients who achieve planned refraction within +/-1.0 D. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This outcome measure is reportable by Ophthalmologists and is proposed to be included within the Cataracts Measure Group, complementing the existing cataracts measures with a clinical focus not currently captured within PQRS.	AAEECE / ACHS			X			X	
188 5 /N/ A	N/A	Person and Caregiver- Centered Experience and Outcomes	Depression Response at Twelve Months-Progress Towards Remission: Adult patients age 18 and older with major depression or dysthymia and an initial PHQ-9 score > 9 who demonstrate a response to treatment at twelve months defined as a PHQ-9 score that is reduced by 50% or greater from the initial PHQ-9 score. This measure applies to both patients with newly	MNCM			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			<p>diagnosed and existing depression identified during the defined measurement period whose current PHQ-9 score indicates a need for treatment.</p> <p>Rationale: This measure satisfies 1848(k)(2)(C)(i) of the Act as this measure is NQF-endorsed. This measure is an outcome measure that complements existing depression measures within the program.</p>								
N/A /N/ A	N/A	Patient Safety	<p>Discontinuation of Antiviral Therapy for Inadequate Viral Response: Percentage of patients aged 18 years and older with a diagnosis of hepatitis C genotype 1 who have an inadequate response to antiviral treatment for whom antiviral treatment was discontinued.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This process measure represents a clinical complement to existing Hepatitis C measures currently included in the program.</p>	AGA / AASLD / PCPI			X				
N/A /N/ A	N/A	Person and Caregiver- Centered Experience and Outcomes	<p>Discussion and Shared Decision Making Surrounding Treatment Options: Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other clinician reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician/clinician and the patient that includes all of the following:</p> <ul style="list-style-type: none"> • Treatment choices appropriate to genotype • Risks and benefits • Evidence of effectiveness • Patient preferences toward the outcome of the treatment. <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This patient experience measure represents a clinical complement to existing Hepatitis C measures currently included in the program. This measure is proposed to be included within the Hepatitis C Measure Group.</p>	AGA / AASLD / PCPI			X		X		
N/A /N/ A	N/A	Communicati on and Care Coordination	<p>Follow-up After Hospitalization for Mental Illness: The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness diagnoses and who had an outpatient visit, an intensive outpatient encounter or partial hospitalization with a mental health practitioner. Two rates are reported:</p>	NCQA			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description ^Y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			<p>- The percentage of discharges for which the patient received follow-up within 30 days of discharge</p> <p>- The percentage of discharges for which the patient received follow-up within 7 days of discharge.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a clinical gap in the program. This measure would complement the existing mental health clinical concepts within PQRS.</p>								
N/A /N/ A	N/A	Patient Safety	<p>HRS-12: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation: Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a gap in care for patients who receive device therapy for heart arrhythmia. This outcome measure expands upon measures that are available for electrophysiologist to report within PQRS. At this time, PQRS has one other measure, PQRS #348: HRS-3: Implantable Cardioverter Defibrillator (ICD) Complications Rate, reportable within the scope of electrophysiology.</p>	HRS			X				
N/A /N/ A	N/A	Patient Safety	<p>HRS-9: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision: Infection rate following CIED device implantation, replacement, or revision.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a gap in care for patients who receive device therapy for heart arrhythmia. This outcome measure expands upon measures that are available for electrophysiologist to report within PQRS. At this time, PQRS has one other measure, PQRS #348: HRS-3: Implantable Cardioverter Defibrillator (ICD) Complications Rate, reportable within the scope of electrophysiology.</p>	HRS			X				
140 7 /N/	N/A	Community/P opulation Health	<p>Immunizations for Adolescents: The percentage of adolescents 13 years of age who had the recommended immunizations by their</p>	NCQA			X

			exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a program gap in measures for the pathology specialty.								
N/A /N/ A	N/A	Person and Caregiver- Centered Experience and Outcomes	Optimal Asthma Care- Control Component: Patients ages 5-50 (pediatrics ages 5-17) whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This patient centered outcome measure will replace PQRS #064 (Asthma: Assessment of Asthma Control-Ambulatory Care Setting) as it represents a more robust clinical outcome for asthma care.	MNCM			X				
N/A /N/ A	N/A	Effective Clinical Care	Post-procedural Optimal medical therapy Composite (percutaneous coronary intervention): Percentage of patients aged 18 years and older for whom PCI is performed who are prescribed optimal medical therapy at discharge. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a clinical gap in the program for patients with percutaneous coronary intervention (PCI). This is a new clinical concept proposed for reporting within PQRS.	ACC-AHA			X				
N/A /N/ A	N/A	Effective Clinical Care	Recurrence or amputation following endovascular infrainguinal lower extremity revascularization: Percentage of patients undergoing endovascular infrainguinal revascularization for non-limb threatening ischemia (claudication or asymptomatic) require repeat ipsilateral revascularization or any amputation within 1 year. Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure would complement the existing vascular health clinical concepts within PQRS.	SVS			X				
N/A /N/ A	N/A	Effective Clinical Care	Recurrence or amputation following open infrainguinal lower extremity revascularization: Percentage of patients undergoing open infrainguinal revascularization for non-limb threatening ischemia (claudication	SVS			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			<p>or asymptomatic) who require ipsilateral repeat revascularization or any amputation within 1 year.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure would complement the existing vascular health clinical concepts within PQRS.</p>								
N/A /N/ A	N/A	Community/P opulation Health	<p>Screening for Hepatitis C Virus (HCV) for Patients at High Risk: Percentage of patients with one or more of the following: a history of injection drug use, patients who received blood transfusions prior to 1992, OR patients who were born in the years 1945–1965 who received a one-time hepatitis C virus (HCV) antibody test.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure is complementary of Hepatitis C measures currently in the program, representing a clinical gap not currently captured.</p>	AGA / AASLD / AMA-PCPI			X				
N/A /N/ A	N/A	Effective Clinical Care	<p>Screening for Hepatocellular Carcinoma (HCC) in patients with Hepatitis C Cirrhosis: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C cirrhosis who were screened with either ultrasound, triple-contrast CT or triple-contrast MRI for hepatocellular carcinoma (HCC) at least once within the 12 month reporting period.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF). This process, screening measure represents a clinical complement to existing Hepatitis C measures currently included in the program. This measure is proposed to be included within the Hepatitis C Measure Group.</p>	AGA / AASLD / AMA-PCPI			X		X		
N/A /N/ A	N/A	Community/P opulation Health	<p>Tobacco Use and Help with Quitting Among Adolescents: Percentage of adolescents 13 to 20 years of age with a primary care visit during the measurement period for whom tobacco use status was documented and received help quitting if identified as a tobacco user.</p> <p>Rationale: We are proposing this measure based on our exception authority under section 1848(k)(2)(C)(ii) of the Act that provides an exception to the requirement that the Secretary select measures that have been endorsed by the</p>	NCQA / NCIQM			X			X	

NQF/ PQRS	CMS E-Measure ID	NQS Domain	Measure Title and Description [‡]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			entity with a contract under section 1890(a) of the Act (that is, the NQF). This measure represents a clinical gap in the program, targeting support of adolescent populations in quitting smoking. This preventive measure supports pediatric patients and is reportable by Pediatricians, Family Practice physicians, and Internists. This is also a cross cutting measure.								

[‡] Measure details including titles, descriptions and measure owner information may vary during a particular program year. This is due to the timing of measure specification preparation and the measure versions used by the various reporting options/methods. Please refer to the measure specifications that apply for each of the reporting options/methods for specific measure details.

In Table 23, we specify the measures for which we are proposing a NQS domain change for reporting under the PQRS. Please note the rationale we have for each measure for which we are proposing a NQS domain change below.

TABLE 23: Proposed NQS Domain Changes for Individual Quality Measures and Those Included in Measures Groups for the PQRS Beginning in 2015

NQF/ PQRS	CMS E-Measure ID	NQS Domain 2014	NQS Domain 2015	Measure Title and Description	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
009 7/0 46	N/ A	Patient Safety	Communi cation and Care Coordinat ion	<p>Medication Reconciliation: Percentage of patients aged 65 years and older discharged from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) and seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented</p> <p>Rationale: CMS is recategorizing this measure from the patient safety domain to the communication and care coordination domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure ensures that the key information needed to make clinical decisions is deliberately organized in a conscious effort and available to patients and providers.</p>			X				
065 0/1 37	N/ A	Effective Clinical Care	Communi cation and Care Coordinat ion	<p>Melanoma: Continuity of Care – Recall System: Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes:</p> <ul style="list-style-type: none"> • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the communication and care coordination domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure constitutes the deliberate organization of patient care activities to facilitate appropriate delivery of health care services.</p>			X				
N/ A/2 88	N/ A	Effective Clinical Care	Communi cation and Care Coordinat ion	<p>Dementia: Caregiver Education and Support: Percentage of patients, regardless of age, with a diagnosis of dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND referred to additional sources for support within a 12 month period</p> <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the communication and care coordination domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure ensures that the key information needed to make clinical decisions is deliberately organized in a conscious effort and is available to patients and their caregivers.</p>						X	
N/ A/2	N/ A	Effective Clinical	Communi cation and	Parkinson's Disease: Rehabilitative Therapy Options: All patients with a diagnosis of Parkinson's disease (or						X

				for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.							
N/ A/3 48	N/ A	Effective Clinical Care	Patient Safety	<p>HRS-3: Implantable Cardioverter-Defibrillator (ICD) Complications Rate: Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD</p> <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>			X				
N/ A/3 54	N/ A	Effective Clinical Care	Patient Safety	<p>Anastomotic Leak Intervention: Percentage of patients aged 18 years and older who required an anastomotic leak intervention following gastric bypass or colectomy surgery</p> <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>						X	
N/ A/3 55	N/ A	Effective Clinical Care	Patient Safety	<p>Unplanned Reoperation within the 30 Day Postoperative Period: Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period</p> <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>						X	
004 3 /11 1	127 v2	Effective Clinical Care	Communi- ty/Populat ion Health	<p>Pneumonia Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.</p> <p>Rationale: CMS is recategorizing this measure from the effective clinical care domain to the community/ population health domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure is a measurement of process focused on the prevention of and screening for disease.</p>	X		X	X	X	X	ACO MU2
032 1/0 82	N/ A	Communi- cation and Care Coordinat ion	Effective Clinical Care	<p>Adult Kidney Disease: Peritoneal Dialysis Adequacy: Solute: Percentage of patients aged 18 years and older with a diagnosis of End Stage Renal Disease (ESRD) receiving peritoneal dialysis who have a total Kt/V \geq 1.7 per week measured once every 4 months</p>			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain 2014	NQS Domain 2015	Measure Title and Description	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
				Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the effective clinical care domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects care that is consistent with systematically acquired evidence to determine whether an intervention, diagnostic test, or therapy produces better outcomes than alternatives.							
N/ A/1 80	N/ A	Communi- cation and Care Coordinat- ion	Effective Clinical Care	Rheumatoid Arthritis (RA): Glucocorticoid Management: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone ≥ 10 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the effective clinical care domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects care that is consistent with systematically acquired evidence to determine whether an intervention, diagnostic test, or therapy produces better outcomes than alternatives.						X	AQA
N/ A/2 80	N/ A	Communi- cation and Care Coordinat- ion	Effective Clinical Care	Dementia: Staging of Dementia: Percentage of patients, regardless of age, with a diagnosis of dementia whose severity of dementia was classified as mild, moderate or severe at least once within a 12 month period Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the effective clinical care domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects care that is consistent with systematically acquired evidence to determine whether an intervention, diagnostic test, or therapy produces better outcomes than alternatives.						X	
065 4/0 93	N/ A	Communi- cation and Care Coordinat- ion	Efficiency and Cost Reduction	Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the efficiency and cost reduction domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects the efficient use of health care services in the provision of patient care.	X		X				
N/ A/2 58	N/ A	Communi- cation and Care Coordinat- ion	Patient Safety	Rate of Open Repair of Small or Moderate Non-Ruptured Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7): Percent of patients undergoing open repair of small or moderate sized non-ruptured abdominal aortic aneurysms who do not experience a major complication (discharge to home no later than post-operative day #7)			X				

NQF/ PQRS	CMS E-Measure ID	NQS Domain 2014	NQS Domain 2015	Measure Title and Description	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
				<p>Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>							
N/A/2 59	N/A	Communication and Care Coordination	Patient Safety	<p>Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2): Percent of patients undergoing endovascular repair of small or moderate non-ruptured abdominal aortic aneurysms (AAA) that do not experience a major complication (discharged to home no later than post-operative day #2)</p> <p>Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>			X				
N/A/2 60	N/A	Communication and Care Coordination	Patient Safety	<p>Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2): Percent of asymptomatic patients undergoing CEA who are discharged to home no later than post-operative day #2</p> <p>Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects an effort to reduce risk in the delivery of health care to patients and the occurrence of a health outcome that results from the absence of appropriate structures or processed.</p>			X				
152 5/3 26	N/A	Patient Safety	Effective Clinical Care	<p>Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy: Percentage of patients aged 18 years and older with a diagnosis of nonvalvular atrial fibrillation (AF) or atrial flutter whose assessment of the specified thromboembolic risk factors indicate one or more high-risk factors or more than one moderate risk factor, as determined by CHADS2 risk stratification, who are prescribed warfarin OR another oral anticoagulant drug that is FDA approved for the prevention of thromboembolism</p> <p>Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the patient safety domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure reflects care that is consistent with systematically acquired evidence to determine whether an intervention, diagnostic test, or therapy produces better outcomes than alternatives.</p>			X

N/ A/3 21	N/ A	Communi- cation and Care Coordinat- ion	Person and Caregiver Experienc- e and Outcomes	<p>CAHPS for PQRS Clinician/Group Survey:</p> <ul style="list-style-type: none"> • Getting timely care, appointments, and information; • How well providers Communicate; • Patient’s Rating of Provider; • Access to Specialists; • Health Promotion & Education; • Shared Decision Making; • Health Status/Functional Status; • Courteous and Helpful Office Staff; • Care Coordination; • Between Visit Communication; • Helping Your to Take Medication as Directed; and • Stewardship of Patient Resources <p>Rationale: CMS is recategorizing this measure from the communication and care coordination domain to the person and caregiver experience and outcomes domain in accordance with NQS priorities which follow the General Rules for Categorizing Measures in the HHS Decision Rule for Categorizing Measures. According to the HHS guidelines for categorizing measures, this measure encompasses the inclusion of patient or family-reported experiences (outcomes) as members of the health care team in a collaborative partnerships with providers.</p>		X					ACO

‡ Measure details including titles, descriptions and measure owner information may vary during a particular program year. This is due to the timing of measure specification preparation and the measure versions used by the various reporting options/methods. Please refer to the measure specifications that apply for each of the reporting options/methods for specific measure details.

In Table 24, we specify the measures we are proposing to remove from reporting under the PQRS. Please note

that the rationale we have for each measure we are proposing to remove is

specified after the measure title and description.

TABLE 24: Measures Proposed for Removal from the Existing PQRS Measure Set Beginning in 2015

NQF/ PQRS	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
0093 /055	Effective Clinical Care	Emergency Medicine: 12-Lead Electrocardiogram (ECG) Performed for Syncope: Percentage of patients aged 60 years and older with an emergency department discharge diagnosis of syncope who had a 12-lead electrocardiogram (ECG) performed Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI /NCQA	X		X				
0232 /056	Effective Clinical Care	Emergency Medicine: Community-Acquired Bacterial Pneumonia (CAP); Vital Signs: Percentage of patients aged 18 years and older with a diagnosis of community-acquired bacterial pneumonia (CAP) with vital signs documented and reviewed Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI /NCQA	X		X				
0096 /059	Effective Clinical Care	Emergency Medicine: Community-Acquired Bacterial Pneumonia (CAP); Empiric Antibiotic: Percentage of patients aged 18 years and older with a diagnosis of community-acquired bacterial pneumonia (CAP) with an appropriate empiric antibiotic prescribed Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI /NCQA	X		X				
N/A /228	Effective Clinical Care	Heart Failure (HF): Left Ventricular Function (LVF) Testing: Percentage of patients 18 years and older with Left Ventricular Function (LVF) testing documented as being performed within the previous 12 months or LVF testing performed prior to discharge for patients who are hospitalized with a principal diagnosis of Heart Failure (HF) during the reporting period Rationale: CMS recommends removal due to this measure representing a clinical concept that does not add clinical value to PQRS. LVF testing is a basic assessment for patients with heart failure. Furthermore, the MAP strongly recommends removal of this measure as these types of process measures do not meaningfully contribute to improved outcomes based on a body of literature that demonstrates that lack of association.	CMS/QIP			X				
AQA Adopted /245	Effective Clinical Care	Chronic Wound Care: Use of Wound Surface Culture Technique in Patients with Chronic Skin Ulcers (Overuse Measure: Percentage of	AMA-PCPI /NCQA	X		X				

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		<p>patient visits for those patients aged 18 years and older with a diagnosis of chronic skin ulcer without the use of a wound surface culture technique</p> <p>Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>								
AQA Adopted /246	Effective Clinical Care	<p>Chronic Wound Care: Use of Wet to Dry Dressings in Patients with Chronic Skin Ulcers (Overuse Measure): Percentage of patient visits for those patients aged 18 years and older with a diagnosis of chronic skin ulcer without a prescription or recommendation to use wet to dry dressings</p> <p>Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	AMA-PCPI /NCQA	X		X				
N/A /266	Effective Clinical Care	<p>Epilepsy: Seizure Type(s) and Current Seizure Frequency(ies): Percentage of patient visits with a diagnosis of epilepsy who had the type(s) of seizure(s) and current seizure frequency(ies) for each seizure type documented in the medical record</p> <p>Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	AAN	X		X				
N/A295	Effective Clinical Care	<p>Hypertension: Use of Aspirin or Other Antithrombotic Therapy: Percentage of patients aged 30 through 90 years old with a diagnosis of hypertension and are eligible for aspirin or other antithrombotic therapy who were prescribed aspirin or other antithrombotic therapy.</p> <p>Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.</p>	ABIM						X	
N/A297	Effective Clinical Care	<p>Hypertension: Urine Protein Test: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who either have chronic kidney disease diagnosis documented or had a urine protein test done within 36 months.</p> <p>Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure. In addition, this is a process measure that is distal to the outcome and has not been shown to improve patient outcomes. Furthermore, MAP strongly recommends removal as these types of process measures do not meaningfully contribute to improved outcomes.</p>	ABIM						X	
N/A298	Effective Clinical Care	<p>Hypertension: Annual Serum Creatinine Test: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who had a serum creatinine test done within 12 months.</p>	ABIM						X	

NQF/ PQRS	NQS Domain	Measure Title and Description [¶]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.								
N/A299	Effective Clinical Care	Hypertension: Diabetes Mellitus Screening Test: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who had a diabetes screening test within 36 months. Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	ABIM						X	
N/A300	Effective Clinical Care	Hypertension: Blood Pressure Control: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension whose most recent blood pressure was under control (< 140/90 mmHg). Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	ABIM						X	
N/A302	Effective Clinical Care	Hypertension: Dietary and Physical Activity Modifications Appropriately Prescribed: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who received dietary and physical activity counseling at least once within 12 months. Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	ABIM						X	
0087/0014	Effective Clinical Care	Age-Related Macular Degeneration (AMD): Dilated Macular Examination: Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or hemorrhage AND the level of macular degeneration severity during one or more office visits within 12 months Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X				
0270/0020	Patient Safety	Perioperative Care: Timing of Prophylactic Parenteral Antibiotic – Ordering Physician: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for prophylactic parenteral antibiotics, who have an order for prophylactic parenteral antibiotic to be given within one hour (if fluoroquinolone or vancomycin, 2 hours), prior to the surgical incision (or start of procedure when no incision is required) Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X			X	
0268/0021	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second Generation Cephalosporin: Percentage of surgical patients	AMA-PCPI NCQA	X		X			X	

NQF/ PQRS	NQS Domain	Measure Title and Description*	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		aged 18 years and older undergoing procedures with the indications for a first OR second generation cephalosporin prophylactic antibiotic, who had an order for a first OR second generation cephalosporin for antimicrobial prophylaxis Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.								
0271/0022	Patient Safety	Perioperative Care: Discontinuation of Prophylactic Parenteral Antibiotics (Non-Cardiac Procedures): Percentage of non-cardiac surgical patients aged 18 years and older undergoing procedures with the indications for prophylactic parenteral antibiotics AND who received a prophylactic parenteral antibiotic, who have an order for discontinuation of prophylactic parenteral antibiotics within 24 hours of surgical end time Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X			X	
0239/0023	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which VTE prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low-Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X			X	
0092/0028	Effective Clinical Care	Aspirin at Arrival for Acute Myocardial Infarction (AMI): Percentage of patients, regardless of age, with an emergency department discharge diagnosis of acute myocardial infarction (AMI) who had documentation of receiving aspirin within 24 hours before emergency department arrival or during emergency department stay Rationale: CMS recommends removal due to this measure representing a clinical concept that has been substantially adopted for initial treatment of patients suffering from acute myocardial infarction when clinically indicated.	AMA-PCPI NCQA	X		X				
0269/0030	Patient Safety	Perioperative Care: Timing of Prophylactic Antibiotic—Administering Physician: Percentage of surgical patients aged 18 years and older who receive an anesthetic when undergoing procedures with the indications for prophylactic	AMA-PCPI NCQA	X		X				

NQF/ PQRS	NQS Domain	Measure Title and Description*	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		<p>parenteral antibiotics for whom administration of a prophylactic parenteral antibiotic ordered has been initiated within 1 hour (if fluoroquinolone or vancomycin, 2 hours) prior to the surgical incision (or start of procedure when no incision is required)</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>								
0240/0031	Effective Clinical Care	<p>Stroke and Stroke Rehabilitation: Venous Thromboembolism (VTE) Prophylaxis for Ischemic Stroke or Intracranial Hemorrhage: Percentage of patients aged 18 years and older with a diagnosis of ischemic stroke or intracranial hemorrhage who were administered venous thromboembolism (VTE) prophylaxis the day of or the day after hospital admission</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently included within inpatient standards of care to improve patient outcomes for those diagnosed with ischemic or intracranial stroke when clinically indicated.</p>	AMA-PCPI NCQA	X		X				
0325/0032	Effective Clinical Care	<p>Stroke and Stroke Rehabilitation: Discharged on Antithrombotic Therapy: Percentage of patients aged 18 years and older with a diagnosis of ischemic stroke or transient ischemic attack (TIA) who were prescribed antithrombotic therapy at discharge</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently included within inpatient standard of care to decrease risk of complications in patients diagnosed with ischemic or intracranial stroke when clinically indicated.</p>	AMA-PCPI NCQA	X		X				
0241/0033	Effective Clinical Care	<p>Stroke and Stroke Rehabilitation: Anticoagulant Therapy Prescribed for Atrial Fibrillation (AF) at Discharge: Percentage of patients aged 18 years and older with a diagnosis of ischemic stroke or transient ischemic attack (TIA) with documented permanent, persistent, or paroxysmal atrial fibrillation who were prescribed an anticoagulant at discharge</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently included within inpatient standard of care to decrease risk of complications in patients diagnosed with ischemic or intracranial stroke when clinically indicated.</p>	AMA-PCPI NCQA			X				
0243/0035	Effective Clinical Care	<p>Stroke and Stroke Rehabilitation: Screening for Dysphagia: Percentage of patients aged 18 years and older with a diagnosis of ischemic stroke or intracranial hemorrhage who receive any food, fluids or medication by mouth (PO) for whom a dysphagia screening was performed prior to PO intake in accordance with a dysphagia screening tool approved by the institution in which the patient is receiving care</p>	AMA-PCPI NCQA	X		X				

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently included within hospital standard of care to decrease risk of choking for patients diagnosed with ischemic or intracranial stroke when clinically indicated.								
0244/0036	Effective Clinical Care	Stroke and Stroke Rehabilitation: Rehabilitation Services Ordered: Percentage of patients aged 18 years and older with a diagnosis of ischemic stroke or intracranial hemorrhage for whom occupational, physical, or speech rehabilitation services were ordered at or prior to inpatient discharge OR documentation that no rehabilitation services are indicated at or prior to inpatient discharge Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently included within inpatient standard of care to improve quality of life for patients diagnosed with ischemic or intracranial stroke when clinically indicated.	AMA-PCPI NCQA	X		X				
0637/0045	Patient Safety	Perioperative Care: Discontinuation of Prophylactic Parenteral Antibiotics (Cardiac Procedures): Percentage of cardiac surgical patients aged 18 years and older undergoing procedures with the indications for prophylactic parenteral antibiotics AND who received a prophylactic parenteral antibiotic, who have an order for discontinuation of prophylactic parenteral antibiotics within 48 hours of surgical end time Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X				
0099/0049	Effective Clinical Care	Urinary Incontinence: Characterization of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence whose urinary incontinence was characterized at least once within 12 months Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA	X		X				
0001/0064	Effective Clinical Care	Asthma: Assessment of Asthma Control – Ambulatory Care Setting: Percentage of patients aged 5 through 64 years with a diagnosis of asthma who were evaluated at least once during the measurement period for asthma control (comprising asthma impairment and asthma risk) Rationale: CMS recommends removal due to this measure representing a clinical concept that does not add clinical value to PQRS because in order to provide effective treatment for asthma assessment of asthma control is essential.	AMA-PCPI NCQA			X			X	
0393/0083	Effective	Hepatitis C: Confirmation of Hepatitis C	AMA-PCPI			X				

NQF/ PQRS	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
	Clinical Care	<p>Viremia: Percentage of patients aged 18 years and older who are hepatitis C antibody positive seen for an initial evaluation for whom hepatitis C virus (HCV) RNA testing was ordered or previously performed</p> <p>Rationale: CMS recommends removal due to eligible professionals are consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>								
0103/0106	Effective Clinical Care	<p>Adult Major Depressive Disorder (MDD): Comprehensive Depression Evaluation: Diagnosis and Severity: Percentage of patients aged 18 years and older with a new diagnosis or recurrent episode of major depressive disorder (MDD) with evidence that they met the Diagnostic and Statistical Manual of Mental Disorders (DSM)-5 criteria for MDD AND for whom there is an assessment of depression severity during the visit in which a new diagnosis or recurrent episode was identified</p> <p>Rationale: CMS recommends removal due to this measure representing a clinically diagnostic reference that is commonly utilized in order to determine mental health disorders, therefore it does not add clinical value to PQRS.</p>	AMA-PCPI	X		X				
1666/0123	Effective Clinical Care	<p>Adult Kidney Disease: Patients On Erythropoiesis-Stimulating Agent (ESA) - Hemoglobin Level > 12.0 g/dL: Percentage of calendar months within a 12-month period during which a hemoglobin level is measured for patients aged 18 years and older with a diagnosis of advanced chronic kidney disease (CKD) (stage 4 or 5, not receiving Renal Replacement Therapy (RRT) or End Stage Renal Disease (ESRD) (who are on hemodialysis or peritoneal dialysis) who are also receiving erythropoiesis-stimulating agent (ESA) therapy AND have a hemoglobin level > 12.0 g/dL</p> <p>Rationale: CMS recommends removal due to this measure representing a medical concept of completion of a required diagnostic level in order to provide erythropoiesis-stimulating agent when clinically appropriate.</p>	AMA-PCPI	X		X		X		
0566/0140	Effective Clinical Care	<p>Age-Related Macular Degeneration (AMD): Counseling on Antioxidant Supplement: Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) or their caregiver(s) who were counseled within 12 months on the benefits and/or risks of the Age-Related Eye Disease Study (AREDS) formulation for preventing progression of AMD</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	AMA-PCPI NCQA	X		X				
0051/0142	Effective Clinical Care	<p>Osteoarthritis (OA): Assessment for Use of Anti-Inflammatory or Analgesic Over-the-</p>	AMA-PCPI	X		X				

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		<p>Counter (OTC) Medications: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with an assessment for use of anti-inflammatory or analgesic over-the-counter (OTC) medications</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that does not add clinical value to PQRS due to assessment of patients' current medications is crucial to patient safety. Furthermore, the measure steward has indicated they will no longer maintain this measure.</p>								
0508/0146	Efficiency and Cost Reduction	<p>Radiology: Inappropriate Use of "Probably Benign" Assessment Category in Mammography Screening: Percentage of final reports for screening mammograms that are classified as "probably benign"</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	AMA-PCPI NCQA	X		X				
2080/341	Efficiency and Cost Reduction	<p>Gap in HIV Medical Visits: Percentage of patients, regardless of age, with a diagnosis of HIV who did not have a medical visit in the last 6 months</p> <p>Rationale: CMS recommends removal as this measure is duplicated within PQRS with current measure HIV Medica Visit Frequency (PQRS #340)s.</p>	HRSA			X			X	
N/A/ 301	Effective Clinical Care	<p>Hypertension: Low Density Lipoprotein (LDL-C) Control: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who had most recent LDL cholesterol level under control (at goal)</p> <p>Rationale: CMS recommends removal as evidence-based guidelines have changed regarding lipid control.</p>	ABIM						X	
N/A/ 272	Effective Clinical Care	<p>Inflammatory Bowel Disease (IBD): Preventive Care: Influenza Immunization: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease for whom influenza immunization was recommended, administered or previously received during the reporting year</p> <p>Rationale: CMS recommends removal as this measure is duplicated within PQRS with current measure Preventive Care and Screening: Influenza Immunization (PQRS #110).</p>	AGA						X	
N/A/ 273	Effective Clinical Care	<p>Inflammatory Bowel Disease (IBD): Preventive Care: Pneumococcal Immunization: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease that had pneumococcal vaccination administered or previously received</p> <p>Rationale: CMS recommends removal as this measure is duplicated within PQRS with current</p>	AGA						X	

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		measure Pneumonia Vaccination Status for Older Adults (PQRS #111).								
N/A/ 269	Effective Clinical Care	<p>Inflammatory Bowel Disease (IBD): Type, Anatomic Location and Activity All Documented: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease who have documented the disease type, anatomic location and activity, at least once during the reporting period</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that does not add clinical value to PQRS because in order to provide effective treatment for IBD, documentation of type, anatomic location and activity would be essential for effective treatment of IBD.</p>	AGA						X	
N/A/ 267	Effective Clinical Care	<p>Epilepsy: Documentation of Etiology of Epilepsy or Epilepsy Syndrome: All visits for patients with a diagnosis of epilepsy who had their etiology of epilepsy or with epilepsy syndrome(s) reviewed and documented if known, or documented as unknown or cryptogenic</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	AAN	X		X				
N/A/ 261	Communicat ion and Care Coordination	<p>Referral for Otologic Evaluation for Patients with Acute or Chronic Dizziness: Percentage of patients aged birth and older referred to a physician (preferably a physician specially trained in disorders of the ear) for an otologic evaluation subsequent to an audiologic evaluation after presenting with acute or chronic dizziness</p> <p>Rationale: CMS recommends removal due to the clinical concept of medical referral being a common practice in order to provide effective treatment for patients.</p>	AQC	X		X				
0643/243	Effective Clinical Care	<p>Cardiac Rehabilitation Patient Referral from an Outpatient Setting: Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that is initiated within the inpatient setting and does not add clinical value to PQRS as an outpatient based measure.</p>	ACCF AHA			X				
AQA Adopted/2 47	Effective Clinical Care	<p>Substance Use Disorders: Counseling Regarding Psychosocial and Pharmacologic Treatment Options for Alcohol Dependence:</p>	AMA-PCPI NCQA	X		X				AQA

NQF/ PQRS	NQS Domain	Measure Title and Description ^v	Measure Steward	Claims	CSV	Registry	EHR	GPPO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		Percentage of patients aged 18 years and older with a diagnosis of current alcohol dependence who were counseled regarding psychosocial AND pharmacologic treatment options for alcohol dependence within the 12-month reporting period Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.								
AQA Adopted/2 48	Effective Clinical Care	Substance Use Disorders: Screening for Depression Among Patients with Substance Abuse or Dependence: Percentage of patients aged 18 years and older with a diagnosis of current substance abuse or dependence who were screened for depression within the 12-month reporting period Rationale: CMS recommends removal as this measure is duplicated within the Physician Quality Reporting System as a subset of an existing measure Preventive Care and Screening for Clinical Depression for Follow-up Plan (PQRS #134).	AMA-PCPI NCQA	X		X				AQA
N/A/231	Effective Clinical Care	Asthma: Tobacco Use: Screening - Ambulatory Care Setting: Percentage of patients aged 5 through 64 years with a diagnosis of asthma (or their primary caregiver) who were queried about tobacco use and exposure to second hand smoke within their home environment at least once during the one-year measurement period Rationale: CMS recommends removal as this measure is duplicated within PQRS with current measure Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (PQRS 226).	AMA-PCPI NCQA	X		X			X	
N/A/232	Effective Clinical Care	Asthma: Tobacco Use: Intervention - Ambulatory Care Setting: Percentage of patients aged 5 through 64 years with a diagnosis of asthma who were identified as tobacco users (or their primary caregiver) who received tobacco cessation intervention at least once during the one-year measurement period Rationale: CMS recommends removal as this measure is duplicated within PQRS with current measure Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (PQRS 226).	AMA-PCPI NCQA	X		X			X	
0457/233	Effective Clinical Care	Thoracic Surgery: Recording of Performance Status Prior to Lung or Esophageal Cancer Resection: Percentage of patients aged 18 years and older undergoing resection for lung or esophageal cancer for whom performance status was documented and reviewed within 2 weeks prior to surgery Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in	STS			X				

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		care.								
0458/234	Patient Safety	<p>Thoracic Surgery: Pulmonary Function Tests Before Major Anatomic Lung Resection (Pneumonectomy, Lobectomy, or Formal Segmentectomy): Percentage of thoracic surgical patients aged 18 years and older undergoing at least one pulmonary function test within 12 months prior to a major lung resection (pneumonectomy, lobectomy, or formal segmentectomy)</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	STS			X				
0074/197	Effective Clinical Care	<p>Coronary Artery Disease (CAD): Lipid Control: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who have a LDL-C result < 100 mg/dL OR patients who have a LDL-C result ≥ 100 mg/dL and have a documented plan of care to achieve LDL-C <100 mg/dL, including at a minimum the prescription of a statin</p> <p>Rationale: CMS recommends removal as evidence-based guidelines have changed regarding lipid control. This measure is also being proposed for removal from the GPRO WL.</p>	AMA-PCPI ACCF AHA			X	X	X		
0079/198	Effective Clinical Care	<p>Heart Failure: Left Ventricular Ejection Fraction (LVEF) Assessment: Percentage of patients aged 18 years and older with a diagnosis of heart failure for whom the quantitative or qualitative results of a recent or prior [any time in the past] LVEF assessment is documented within a 12 month period</p> <p>Rationale: CMS recommends removal due to this measure representing a clinical concept that does not add clinical value to PQRS. LVEF testing is basic assessment for patients with heart failure.</p>	AMA-PCPI ACCF AHA			X		X		
0115/168	Effective Clinical Care	<p>Coronary Artery Bypass Graft (CABG): Surgical Re-Exploration: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require a return to the operating room (OR) during the current hospitalization for mediastinal bleeding with or without tamponade, graft occlusion, valve dysfunction, or other cardiac reason</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.</p>	STS			X		X		
0116/169	Effective Clinical Care	<p>Coronary Artery Bypass Graft (CABG): Antiplatelet Medications at Discharge: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who were discharged on antiplatelet medication</p> <p>Rationale: CMS recommends removal due to eligible professionals consistently meeting</p>	STS			X		X		

NQF/ PQRS	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		performance on this measure with performance rates close to 100% suggesting there is no gap in care.								
0117/170	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Beta-Blockers Administered at Discharge: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who were discharged on beta-blockers Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	STS			X			X	
0118/171	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Anti-Lipid Treatment at Discharge: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who were discharged on a statin or other lipid-lowering regimen Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	STS			X			X	
0455/157	Patient Safety	Thoracic Surgery: Recording of Clinical Stage Prior to Lung Cancer or Esophageal Cancer Resection: Percentage of surgical patients aged 18 years and older undergoing resection for lung or esophageal cancer who had clinical staging provided prior to surgery Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	STS	X		X				
0404/159	Effective Clinical Care	HIV/AIDS: CD4+ Cell Count or CD4+ Percentage Performed: Percentage of patients aged 6 months and older with a diagnosis of HIV/AIDS for whom a CD4+ cell count or CD4+ cell percentage was performed at least once every 6 months Rationale: CMS recommends removal due to eligible professionals consistently meeting performance on this measure with performance rates close to 100% suggesting there is no gap in care.	AMA-PCPI NCQA			X			X	
N/A/ 257	Effective Clinical Care	Statin Therapy at Discharge after Lower Extremity Bypass (LEB): Percentage of patients aged 18 years and older undergoing infra-inguinal lower extremity bypass who are prescribed a statin medication at discharge Rationale: CMS recommends removal due to this measure representing a clinical concept that is currently accepted standard treatment for patients that receive lower extremity revascularization when clinically indicated.	SVS			X				
N/A/ 296	Effective Clinical Care	Hypertension: Complete Lipid Profile: Percentage of patients aged 18 through 90 years old with a diagnosis of hypertension who received a complete lipid profile within 60	ABIM						X	

NQF/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		months Rationale: CMS recommends removal due to measure steward indicating they will no longer maintain this measure.								
0322/148	Efficiency and Cost Reduction	Back Pain: Initial Visit: The percentage of patients aged 18 through 79 years with a diagnosis of back pain or undergoing back surgery who had back pain and function assessed during the initial visit to the clinician for the episode of back pain Rationale: CMS recommends removal due to this measure representing clinical assessments commonly utilized to provide effective treatment for patients diagnosed with back pain.	NCQA						X	
0319/149	Effective Clinical Care	Back Pain: Physical Exam: Percentage of patients aged 18 through 79 years with a diagnosis of back pain or undergoing back surgery who received a physical examination at the initial visit to the clinician for the episode of back pain Rationale: CMS recommends removal due to this measure representing clinical assessments commonly utilized to provide effective treatment for patients diagnosed with back pain.	NCQA						X	
0314/150	Effective Clinical Care	Back Pain: Advice for Normal Activities: The percentage of patients aged 18 through 79 years with a diagnosis of back pain or undergoing back surgery who received advice for normal activities at the initial visit to the clinician for the episode of back pain Rationale: CMS recommends removal due to this measure representing clinical recommendations that are commonly provided for patients diagnosed with back pain when clinically indicated.	NCQA						X	
0313/151	Effective Clinical Care	Back Pain: Advice Against Bed Rest: The percentage of patients aged 18 through 79 years with a diagnosis of back pain or undergoing back surgery who received advice against bed rest lasting four days or longer at the initial visit to the clinician for the episode of back pain Rationale: CMS recommends removal due to this measure representing clinical recommendations that are commonly provided for patients diagnosed with back pain when clinically indicated.	NCQA						X	
0091/051	Effective Clinical Care	Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation: Percentage of patients aged 18 years and older with a diagnosis of COPD who had spirometry evaluation results documented Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI			X			X	
0102/052	Effective Clinical Care	Chronic Obstructive Pulmonary Disease (COPD): Inhaled Bronchodilator Therapy: Percentage of patients aged 18 years and older	AMA-PCPI			X			X	

NQE/ PQRS	NQS Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		with a diagnosis of COPD and who have an FEV ₁ /FVC less than 60% and have symptoms who were prescribed an inhaled bronchodilator Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.								
0050/109	Person and Caregiver-Centered Experience and Outcomes	Osteoarthritis (OA): Function and Pain Assessment: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with assessment for function and pain Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI			X				
N/A/276	Effective Clinical Care	Sleep Apnea: Assessment of Sleep Symptoms: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea that includes documentation of an assessment of sleep symptoms, including presence or absence of snoring and daytime sleepiness Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI/NCQA						X	
N/A/277	Effective Clinical Care	Sleep Apnea: Severity Assessment at Initial Diagnosis: Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI/NCQA						X	
N/A/278	Effective Clinical Care	Sleep Apnea: Positive Airway Pressure Therapy Prescribed: Percentage of patients aged 18 years and older with a diagnosis of moderate or severe obstructive sleep apnea who were prescribed positive airway pressure therapy Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI/NCQA						X	
N/A/279	Effective Clinical Care	Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI/NCQA						X	
N/A/147	Communication and Care Coordination	Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy: Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician	AMA-PCPI	X		X				

NQE/ PQRS	NQS Domain	Measure Title and Description [†]	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
		documentation of correlation with existing relevant imaging studies (e.g., x-ray, MRI, CT, etc.) that were performed. Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.								
AQA Adopted/1 73	Community/ Population Health	Preventive Care and Screening: Unhealthy Alcohol Use – Screening: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method within 24 months. Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI			X			X	
N/A/335	Patient Safety	Maternity Care: Elective Delivery or Early Induction Without Medical Indication at ≥ 37 and < 39 Weeks: Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at ≥ 37 and < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication. Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI			X				
N/A/336	Communicat ion and Care Coordination	Maternity Care: Post-Partum Follow-Up and Care Coordination: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for post-partum care within 8 weeks of giving birth who received a breast feeding evaluation and education, post-partum depression screening, post-partum glucose screening for gestational diabetes patients, and family and contraceptive planning Rationale: CMS recommends removal due to the measure steward indicating they will no longer maintain this measure.	AMA-PCPI			X				

[†] Measure details including titles, descriptions and measure owner information may vary during a particular program year. This is due to the timing of measure specification preparation and the measure versions used by the various reporting options/methods. Please refer to the measure specifications that apply for each of the reporting options/methods for specific measure details.

In Table 25 below, we specify our proposals to change the way in which previously established measures in the PQRS will be reported beginning in

2015. Please note that, in Table 25, we provide our explanation as to how we are proposing to change the way the measure is reported, as well as a

corresponding rationale for this proposed change.

TABLE 25: Existing Individual Quality Measures and Those Included in Measures Groups for the PQRS for Which Measure Reporting Updates will be Effective Beginning in 2015

NQF/ PQRS	CMS E-Measure ID	National Quality Strategy Domain	Measure Title and Description ^y	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
006 7/6		Effective Clinical Care	<p>Coronary Artery Disease (CAD): Antiplatelet Therapy: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who were prescribed aspirin or clopidogrel</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	AMA- PCPI ACCF AHA			X		X	X	ACO
008 6/12	143 v2	Effective Clinical Care	<p>Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation: Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	AMA- PCPI NCQA			X	X			MU2
008 9/19	142 v2	Effective Clinical Care	<p>Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care: Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	AMA- PCPI NCQA			X	X			MU2
004 5/24		Communication and Care Coordination	<p>Osteoporosis: Communication with the Physician Managing On-going Care Post-Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a hip, spine or distal radial fracture with documentation of communication with the physician managing the patient's on-going care that a fracture occurred and that the patient was or should be tested or treated for osteoporosis</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to</p>	AMA- PCPI NCQA			X				

NQF/ PQRS	CMS E-Measure ID	National Quality Strategy Domain	Measure Title and Description*	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			move the PQRS program away from claims reporting.								
004 6/39		Effective Clinical Care	<p>Screening or Therapy for Osteoporosis for Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who have a central dual-energy X-ray absorptiometry (DXA) measurement ordered or performed at least once since age 60 or pharmacologic therapy prescribed within 12 months</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	AMA- PCPI NCQA			X		X		
004 8/40		Effective Clinical Care	<p>Osteoporosis: Management Following Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older: Percentage of patients <u>aged 50 years and older</u> with fracture of the hip, spine, or distal radius who had a central dual-energy X-ray absorptiometry (DXA) measurement ordered or performed or pharmacologic therapy prescribed</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	AMA- PCPI NCQA			X				
013 4/43		Effective Clinical Care	<p>Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who received an IMA graft</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.</p>	STS			X		X		
009 7/46		Communication and Care Coordination	<p>Medication Reconciliation: Percentage of patients aged 65 years and older <u>discharged from any inpatient facility</u> (e.g., hospital, skilled nursing facility, or rehabilitation facility) and <u>seen within 30 days following discharge</u> in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented</p> <p>Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to</p>	AMA- PCPI NCQA			X				

NQE/ PQRS	CMS E-Measure ID	National Quality Strategy Domain	Measure Title and Description*	Measure Steward	Claims	CSV	Registry	EHR	GPRO (Web Interface)*	Measures Groups	Other Quality Reporting Programs
			move the PQRS program away from claims reporting.								
010 0/50		Person and Caregiver- Centered Experience and Outcomes	Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.	AMA- PCPI NCQA			X				
009 0/54		Effective Clinical Care	Emergency Medicine: 12-Lead Electrocardiogram (ECG) Performed for Non-Traumatic Chest Pain: Percentage of patients aged 40 years and older with an emergency department discharge diagnosis of non-traumatic chest pain who had a 12-lead electrocardiogram (ECG) performed Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.	AMA- PCPI NCQA			X				
037 7/67		Effective Clinical Care	Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow: Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.	AMA- PCPI ASH			X				
037 8/68		Effective Clinical Care	Hematology: Myelodysplastic Syndrome (MDS): Documentation of Iron Stores in Patients Receiving Erythropoietin Therapy: Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) who are receiving erythropoietin therapy with documentation of iron stores within 60 days prior to initiating erythropoietin therapy Rationale: CMS proposes to remove the claims reporting option for this measure as CMS seeks to move the PQRS program away from claims reporting.	AMA- PCPI ASH			X

[‡] Measure details including titles, descriptions and measure owner information may vary during a particular program year. This is due to the timing of measure specification preparation and the measure versions used by the various reporting options/methods. Please refer to the measure specifications that apply for each of the reporting options/methods for specific measure details.

We seek comment on these proposals.

d. PQRS Measures Groups

Section 414.90(b) defines a measures group as a subset of four or more Physician Quality Reporting System measures that have a particular clinical condition or focus in common. The denominator definition and coding of the measures group identifies the condition or focus that is shared across the measures within a particular measures group.

In the CY 2014 PFS proposed rule, we proposed (78 FR 43448) to increase the number of measures that may be included in a measures group from a minimum of 4 measures to a minimum of 6. We proposed increasing the minimum number of measures that may be contained in a measures group in accordance with increasing the number of individual measures to be reported via claims and registry. However, we did not finalize this proposal, stating that, although we still plan to increase the minimum number of measures in a measures group in the future, we would work with the measure developers and owners of these measures groups to appropriately add measures to measures groups that only contain four measures within the measures group (78 FR 74730). We have worked with the measure owners and developers and are again proposing to increase the number of measures that may be included in a measures group from a minimum of 4 measures to a minimum of 6.

Specifically, we are proposing to modify section 414.90(b) to define a measures group as a subset of six or more Physician Quality Reporting System measures that have a particular clinical condition or focus in common.

In addition, we are proposing two new measures groups that will be available for reporting in the PQRS beginning in 2015:

- *The sinusitis measures group:* We are proposing a new sinusitis measures group because this measures group represents a clinical gap within the measure group reporting option. The measures in the sinusitis measures group reflect a variety of measure types, and make up a clinically coherent and meaningful set of measures.

- *The Acute Otitis Externa (AOE) measures group:* We are proposing the

addition of the AOE measures group, as it focuses on the quality of care of patients with AOE by combining existing disease-specific measures with relevant cross-cutting (generic) measures.

Furthermore, we are proposing to remove the following measures groups for reporting beginning in 2015 for the following reasons:

- *Perioperative care measures group:*

We are proposing to remove the perioperative care measures group from reporting in the PQRS beginning in 2015 because this measures group does not add value to the PQRS and eligible professionals are consistently meeting performance on this measure with performance rates close to 100 percent.

- *Back pain measures group:* We are proposing to remove the back pain measures group because the measure steward is not preparing these measures for re-endorsement by the National Quality Forum. We are also proposing to remove the measures group because it reflects clinical concepts that do not add clinical value to PQRS. Specifically, the measures in this group are entirely clinical process measures that do not meaningfully contribute to improved patient outcomes.

- *Cardiovascular prevention measures group:* We are proposing to remove the cardiovascular prevention measures group because a number of individual measures contained in this measures group are proposed to be removed from all PQRS program reporting options with the exception of EHR reporting.

- *Ischemic Vascular Disease (IVD) measures group:* We are proposing to remove the IVD measures group because a number of individual measures contained in this measures group are proposed to be removed from all PQRS program reporting options with the exception of EHR reporting.

- *Sleep Apnea measures group:* We are proposing to remove the Sleep Apnea measures group from reporting in the PQRS beginning in 2015 because, for a number of measures included in this group, the measure steward has indicated they will no longer maintain those measures. Those measures and their associated measure groups are proposed for removal from the program.

As a result, the measures group would have less than the 6 measures proposed to be required in a measures group. Please note that this proposal is contingent on the measure steward not being able to maintain ownership of certain measures. Should we learn that a measure owner/developer is able to maintain certain measures, or that another entity is able to maintain certain measures, such that the measure group maintains a sufficient number of measures for reporting under the PQRS for the CY 2017 PQRS payment adjustment, we propose to keep the measure group available for reporting under the PQRS and therefore not finalize our proposal to remove the measure group.

- *Chronic obstructive pulmonary disease (COPD) measures group:* We are proposing to remove the COPD measures group from reporting in the PQRS beginning in 2015 because, for a number of measures included in this group, the measure steward has indicated they will no longer maintain those measures. Those measures and their associated measure groups are proposed for removal from the program. As a result, the measures group would have less than the 6 measures proposed to be required in a measures group. Please note that this proposal is contingent on the measure steward not being able to maintain ownership of certain measures. Should we learn that a measure owner/developer is able to maintain certain measures, or that another entity is able to maintain certain measures, such that the measure group maintains a sufficient number of measures for reporting under the PQRS for the CY 2017 PQRS payment adjustment, we propose to keep the measure group available for reporting under the PQRS and therefore not finalize our proposal to remove the measure group.

Tables 26 through 48 specify our proposed measures groups in light of our proposal to increase the minimum number of measures in a measures group in previously established measures groups, so that each measures group contains at least 6 measures. We invite public comment on these proposals.

TABLE 26—PROPOSED ASTHMA MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0047/053	Asthma: Pharmacologic Therapy for Persistent Asthma—Ambulatory Care Setting: Percentage of patients aged 5 through 64 years with a diagnosis of persistent asthma who were prescribed long-term control medication.	AMA-PCPI/NCQA

TABLE 26—PROPOSED ASTHMA MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/ PQRS	Measure title and description	Measure developer
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/N/A	Tobacco Use and Help with Quitting Among Adolescents: Percentage of adolescents 13 to 20 years of age with a primary care visit during the measurement period for whom tobacco use status was documented and received help quitting if identified as a tobacco user.	NCQA/NCIQM
0421/128	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up: Percentage of patients aged 18 years and older with a documented BMI during the current encounter or during the previous 6 months AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 6 months of the encounter. Normal Parameters: Age 65 years and older BMI ≥ 23 and < 30; Age 18–64 years BMI ≥ 18.5 and < 25.	CMS/QIP

TABLE 27—PROPOSED ACUTE OTITIS EXTERNA (AOE) MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0653/091	Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.	AMA-PCPI
0654/093	Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy—Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	AMA-PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0420/131	Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.	CMS/QIP
0101/154	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	AMA-PCPI
0101/155	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	AMA-PCPI
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/317	Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented: Percentage of patients aged 18 years and older seen during the reporting period who were screened for high blood pressure (BP) AND a recommended follow-up plan is documented based on the current blood pressure reading as indicated.	CMS/QIP

TABLE 28—PROPOSED CATARACTS MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0565/191	Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery: Percentage of patients aged 18 years and older with a diagnosis of uncomplicated cataract who had cataract surgery and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved within 90 days following the cataract surgery.	AMA-PCPI/NCQA

TABLE 28—PROPOSED CATARACTS MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/ PQRS	Measure title and description	Measure developer
0564/192	Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures: Percentage of patients aged 18 years and older with a diagnosis of uncomplicated cataract who had cataract surgery and had any of a specified list of surgical procedures in the 30 days following cataract surgery which would indicate the occurrence of any of the following major complications: retained nuclear fragments, endophthalmitis, dislocated or wrong power IOL, retinal detachment, or wound dehiscence.	AMA-PCPI/NCQA
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/303	Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery: Percentage of patients aged 18 years and older in sample who had cataract surgery and had improvement in visual function achieved within 90 days following the cataract surgery, based on completing a pre-operative and post-operative visual function survey.	AAO
N/A/304	Cataracts: Patient Satisfaction within 90 Days Following Cataract Surgery: Percentage of patients aged 18 years and older in sample who had cataract surgery and were satisfied with their care within 90 days following the cataract surgery, based on completion of the Consumer Assessment of Healthcare Providers and Systems Surgical Care Survey.	AAO
N/A/358	Patient-Centered Surgical Risk Assessment and Communication: Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.	ACS
N/A/N/A	Cataract Surgery with Intra-Operative Complications (Unplanned Rupture of Posterior Capsule requiring unplanned vitrectomy): Rupture of the posterior capsule during anterior segment surgery requiring vitrectomy.	AAECEE/ACHS
N/A/N/A	Cataract Surgery: Difference Between Planned and Final Refraction: Percentage of patients who achieve planned refraction within + - 1,0 D.	AAECEE/ACHS

TABLE 29—PROPOSED CHRONIC KIDNEY DISEASE (CKD) MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA-PCPI/NCQA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
1668/121	Adult Kidney Disease: Laboratory Testing (Lipid Profile): Percentage of patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (stage 3, 4, or 5, not receiving Renal Replacement Therapy [RRT]) who had a fasting lipid profile performed at least once within a 12-month period.	AMA-PCPI
N/A/122	Adult Kidney Disease: Blood Pressure Management: Percentage of patient visits for those patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (stage 3, 4, or 5, not receiving Renal Replacement Therapy [RRT]) and proteinuria with a blood pressure < 130/80 mmHg OR ≥ 130/80 mmHg with a documented plan of care.	AMA-PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI

TABLE 30—PROPOSED CHRONIC OBSTRUCTIVE PULMONARY DISORDER (COPD) MEASURES GROUP FOR 2015 AND BEYOND

[Please note that we are proposing to remove this measure group contingent on the measure steward not being able to maintain certain measures contained in these measures group. If a measure steward is able to maintain ownership of these measures, we plan to keep this measures group in the PQRS measure set. This Table Q10 indicates the measures that we propose will be available in this measures group should we keep this measures group in the PQRS measure set.]

NQF/PQRS	Measure title and description	Measure developer
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA-PCPI/NCQA
0091/051	Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation: Percentage of patients aged 18 years and older with a diagnosis of COPD who had spirometry evaluation results documented.	AMA-PCPI
0102/052	Chronic Obstructive Pulmonary Disease (COPD): Inhaled Bronchodilator Therapy: Percentage of patients aged 18 years and older with a diagnosis of COPD and who have an FEV1/FVC less than 60% and have symptoms who were prescribed an inhaled bronchodilator.	AMA-PCPI
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0043/111	Pneumonia Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI

TABLE 31—PROPOSED CORONARY ARTERY BYPASS GRAFT (CABG) MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0134/043	Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who received an IMA graft.	STS
0236/044	Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery: Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.	CMS/QIP
0129/164	Coronary Artery Bypass Graft (CABG): Prolonged Intubation: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who require postoperative intubation > 24 hours.	STS
0130/165	Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who, within 30 days postoperatively, develop deep sternal wound infection involving muscle, bone, and/or mediastinum requiring operative intervention.	STS
0131/166	Coronary Artery Bypass Graft (CABG): Stroke: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who have a postoperative stroke (i.e., any confirmed neurological deficit of abrupt onset caused by a disturbance in blood supply to the brain) that did not resolve within 24 hours.	STS
0114/167	Coronary Artery Bypass Graft (CABG): Postoperative Renal Failure: Percentage of patients aged 18 years and older undergoing isolated CABG surgery (without pre-existing renal failure) who develop postoperative renal failure or require dialysis.	STS

TABLE 32—PROPOSED CORONARY ARTERY DISEASE (CAD) MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0067/006	Coronary Artery Disease (CAD): Antiplatelet Therapy: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who were prescribed aspirin or clopidogrel.	AMA-PCPI/ACCF/AHA
0070/007	Coronary Artery Disease (CAD): Beta-Blocker Therapy—Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%): Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have prior MI OR a current or LVEF < 40% who were prescribed beta-blocker therapy.	AMA-PCPI

TABLE 32—PROPOSED CORONARY ARTERY DISEASE (CAD) MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/ PQRS	Measure title and description	Measure developer
0421/128	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up: Percentage of patients aged 18 years and older with a documented BMI during the current encounter or during the previous 6 months AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 6 months of the encounter. Normal Parameters: Age 65 years and older BMI ≥ 23 and < 30 ; Age 18–64 years BMI ≥ 18.5 and < 25 .	CMS/QIP
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/242	Coronary Artery Disease (CAD): Symptom Management: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period with results of an evaluation of level of activity and an assessment of whether anginal symptoms are present or absent with appropriate management of anginal symptoms within a 12 month period.	AMA-PCPI/ACCF/ AHA

TABLE 33—PROPOSED DEMENTIA MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA-PCPI/NCQA
N/A/280	Dementia: Staging of Dementia: Percentage of patients, regardless of age, with a diagnosis of dementia whose severity of dementia was classified as mild, moderate or severe at least once within a 12 month period.	AMA-PCPI
N/A/281	Dementia: Cognitive Assessment: Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12 month period.	AMA-PCPI
N/A/282	Dementia: Functional Status Assessment: Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of functional status is performed and the results reviewed at least once within a 12 month period.	AMA-PCPI
N/A/283	Dementia: Neuropsychiatric Symptom Assessment: Percentage of patients, regardless of age, with a diagnosis of dementia and for whom an assessment of neuropsychiatric symptoms is performed and results reviewed at least once in a 12 month period.	AMA-PCPI
N/A/284	Dementia: Management of Neuropsychiatric Symptoms: Percentage of patients, regardless of age, with a diagnosis of dementia who have one or more neuropsychiatric symptoms who received or were recommended to receive an intervention for neuropsychiatric symptoms within a 12 month period.	AMA-PCPI
N/A/285	Dementia: Screening for Depressive Symptoms: Percentage of patients, regardless of age, with a diagnosis of dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND referred to additional sources for support within a 12 month period.	AMA-PCPI
N/A/286	Dementia: Counseling Regarding Safety Concerns: Percentage of patients, regardless of age, with a diagnosis of dementia or their caregiver(s) who were counseled or referred for counseling regarding safety concerns within a 12 month period.	AMA-PCPI
N/A/287	Dementia: Counseling Regarding Risks of Driving: Percentage of patients, regardless of age, with a diagnosis of dementia or their caregiver(s) who were counseled regarding the risks of driving and the alternatives to driving at least once within a 12 month period.	AMA-PCPI
N/A/288	Dementia: Caregiver Education and Support: Percentage of patients, regardless of age, with a diagnosis of dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND referred to additional sources for support within a 12 month period.	AMA-PCPI

TABLE 34—PROPOSED DIABETES MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0059/001	Diabetes: Hemoglobin A1c Poor Control: Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c $> 9.0\%$ during the measurement period.	NCQA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0055/117	Diabetes: Eye Exam: Percentage of patients 18 through 75 years of age with a diagnosis of diabetes (type 1 and type 2) who had a retinal or dilated eye exam in the measurement period or a negative retinal or dilated eye exam (negative for retinopathy) in the year prior to the measurement period.	NCQA

TABLE 34—PROPOSED DIABETES MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/PQRS	Measure title and description	Measure developer
0062/119	Diabetes: Medical Attention for Neuropathy: The percentage of patients 18–75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	NCQA
0056/163	Diabetes: Foot Exam: Percentage of patients aged 18–75 years of age with diabetes who had a foot exam during the measurement period.	NCQA
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA–PCPI

TABLE 35—PROPOSED GENERAL SURGERY MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications’ name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA–PCPI
N/A/354	Anastomotic Leak Intervention: Percentage of patients aged 18 years and older who required an anastomotic leak intervention following gastric bypass or colectomy surgery.	ACS
N/A/355	Unplanned Reoperation within the 30 Day Postoperative Period: Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period.	ACS
N/A/356	Unplanned Hospital Readmission within 30 Days of Principal Procedure: Percentage of patients aged 18 years and older who had an unplanned hospital readmission within 30 days of principal procedure.	ACS
N/A/357	Surgical Site Infection (SSI): Percentage of patients aged 18 years and older who had a surgical site infection (SSI).	ACS
N/A/358	Patient-Centered Surgical Risk Assessment and Communication: Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.	ACS

TABLE 36—PROPOSED HEART FAILURE (HF) MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0081/005	Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD): Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy either within a 12 month period when seen in the outpatient setting OR at each hospital discharge.	AMA–PCPI/ACCF/AHA
0083/008	Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD): Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12 month period when seen in the outpatient setting OR at each hospital discharge.	AMA–PCPI/ACCF/AHA
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA–PCPI/NCQA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA–PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications’ name, dosage, frequency and route of administration.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA–PCPI

TABLE 37—PROPOSED HEPATITIS C MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0395/084	Hepatitis C: Ribonucleic Acid (RNA) Testing Before Initiating Treatment: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C who started antiviral treatment within the 12 month reporting period for whom quantitative hepatitis C virus (HCV) RNA testing was performed within 12 months prior to initiation of antiviral treatment.	AMA-PCPI
0396/085	Hepatitis C: HCV Genotype Testing Prior to Treatment: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C who started antiviral treatment within the 12 month reporting period for whom hepatitis C virus (HCV) genotype testing was performed within 12 months prior to initiation of antiviral treatment.	AMA-PCPI
0398/087	Hepatitis C: Hepatitis C Virus (HCV) Ribonucleic Acid (RNA) Testing Between 4–12 Weeks After Initiation of Treatment: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C who are receiving antiviral treatment for whom quantitative hepatitis C virus (HCV) RNA testing was performed between 4–12 weeks after the initiation of antiviral treatment.	AMA-PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0399/183	Hepatitis C: Hepatitis A Vaccination in Patients with Hepatitis C Virus (HCV): Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C who have received at least one injection of hepatitis A vaccine, or who have documented immunity to hepatitis A.	AMA-PCPI
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/N/A	Screening for Hepatocellular Carcinoma (HCC) in patients with Hepatitis C Cirrhosis: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C cirrhosis who were screened with either ultrasound, triple-contrast CT or triple-contrast MRI for hepatocellular carcinoma (HCC) at least once within the 12 month reporting period.	AGA/AASLD/AMA-PCPI
N/A/N/A	Discussion and Shared Decision Making Surrounding Treatment Options: Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other clinician reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician/clinician and the patient that includes all of the following: <ul style="list-style-type: none"> • Treatment choices appropriate to genotype • Risks and benefits • Evidence of effectiveness • Patient preferences toward the outcome of the treatment 	AGA/AASLD/AMA-PCPI

TABLE 38—PROPOSED HIV/AIDS MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA-PCPI/NCQA
0418/134	Preventive Care and Screening: Screening for Clinical Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for clinical depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	CMS/QIP
0405/160	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis: Percentage of patients aged 6 weeks and older with a diagnosis of HIV/AIDS who were prescribed Pneumocystis Jiroveci Pneumonia (PCP) prophylaxis.	NCQA
0409/205	HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia, Gonorrhea, and Syphilis: Percentage of patients aged 13 years and older with a diagnosis of HIV/AIDS for whom chlamydia, gonorrhea and syphilis screenings were performed at least once since the diagnosis of HIV infection.	AMA-PCPI/NCQA
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
2082/338	HIV Viral Load Suppression: The percentage of patients, regardless of age, with a diagnosis of HIV with a HIV viral load less than 200 copies/mL at last HIV viral load test during the measurement year.	HRSA
2083/339	Prescription of HIV Antiretroviral Therapy: Percentage of patients, regardless of age, with a diagnosis of HIV prescribed antiretroviral therapy for the treatment of HIV infection during the measurement year.	HRSA
2079/340	HIV Medical Visit Frequency: Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits.	HRSA

TABLE 39—PROPOSED INFLAMMATORY BOWEL DISEASE (IBD) MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI
N/A/270	Inflammatory Bowel Disease (IBD): Preventive Care: Corticosteroid Sparing Therapy: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease who have been managed by corticosteroids greater than or equal to 10 mg/day for 60 or greater consecutive days that have been prescribed corticosteroid sparing therapy in the last reporting year.	AGA
N/A/271	Inflammatory Bowel Disease (IBD): Preventive Care: Corticosteroid Related Iatrogenic Injury—Bone Loss Assessment: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease who have received dose of corticosteroids greater than or equal to 10 mg/day for 60 or greater consecutive days and were assessed for risk of bone loss once per the reporting year.	AGA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0043/111	Pneumonia Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA
N/A/274	Inflammatory Bowel Disease (IBD): Testing for Latent Tuberculosis (TB) Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease for whom a tuberculosis (TB) screening was performed and results interpreted within 6 months prior to receiving a first course of anti-TNF (tumor necrosis factor) therapy.	AGA
N/A/275	Inflammatory Bowel Disease (IBD): Assessment of Hepatitis B Virus (HBV) Status Before Initiating Anti-TNF (Tumor Necrosis Factor) Therapy: Percentage of patients aged 18 years and older with a diagnosis of inflammatory bowel disease (IBD) who had Hepatitis B Virus (HBV) status assessed and results interpreted within 1 year prior to receiving a first course of anti-TNF (tumor necrosis factor) therapy.	AGA

TABLE 40—PROPOSED ONCOLOGY MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
0387/071	Breast Cancer: Hormonal Therapy for Stage IC—IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer: Percentage of female patients aged 18 years and older with Stage IC through IIIC, ER or PR positive breast cancer who were prescribed tamoxifen or aromatase inhibitor (AI) during the 12-month reporting period.	AMA-PCPI/ASCO/NCCN
0385/072	Colon Cancer: Chemotherapy for AJCC Stage III Colon Cancer Patients: Percentage of patients aged 18 through 80 years with AJCC Stage III colon cancer who are referred for adjuvant chemotherapy, prescribed adjuvant chemotherapy, or have previously received adjuvant chemotherapy within the 12-month reporting period.	AMA-PCPI/ASCO/NCCN
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0419/130	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	CMS/QIP
0384/143	Oncology: Medical and Radiation—Pain Intensity Quantified: Percentage of patients, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	AMA-PCPI
0383/144	Oncology: Medical and Radiation—Plan of Care for Pain: Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	AMA-PCPI
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI

TABLE 41—PROPOSED OPTIMIZING PATIENT EXPOSURE TO IONIZING RADIATION MEASURES GROUP FOR 2015 AND BEYOND

NQF/PQRS	Measure title and description	Measure developer
N/A/359	Optimizing Patient Exposure to Ionizing Radiation: Utilization of a Standardized Nomenclature for Computed Tomography (CT) Imaging Description: Percentage of computed tomography (CT) imaging reports for all patients, regardless of age, with the imaging study named according to a standardized nomenclature and the standardized nomenclature is used in institution's computer systems.	AMA-PCPI

TABLE 41—PROPOSED OPTIMIZING PATIENT EXPOSURE TO IONIZING RADIATION MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/ PQRS	Measure title and description	Measure developer
N/A/360	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies: Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study.	AMA-PCPI
N/A/361	Optimizing Patient Exposure to Ionizing Radiation: Reporting to a Radiation Dose Index Registry: Percentage of total computed tomography (CT) studies performed for all patients, regardless of age, that are reported to a radiation dose index registry AND that include at a minimum selected data elements.	AMA-PCPI
N/A/362	Optimizing Patient Exposure to Ionizing Radiation: Computed Tomography (CT) Images Available for Patient Follow-up and Comparison Purposes: Percentage of final reports for computed tomography (CT) studies performed for all patients, regardless of age, which document that Digital Imaging and Communications in Medicine (DICOM) format image data are available to non-affiliated external entities on a secure, media free, reciprocally searchable basis with patient authorization for at least a 12-month period after the study.	AMA-PCPI
N/A/363	Optimizing Patient Exposure to Ionizing Radiation: Search for Prior Computed Tomography (CT) Imaging Studies Through a Secure, Authorized, Media-Free, Shared Archive: Percentage of final reports of computed tomography (CT) studies performed for all patients, regardless of age, which document that a search for Digital Imaging and Communications in Medicine (DICOM) format images was conducted for prior patient CT imaging studies completed at non-affiliated external entities within the past 12 months and are available through a secure, authorized, media free, shared archive prior to an imaging study being performed.	AMA-PCPI
N/A/364	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines: Percentage of final reports for CT imaging studies of the thorax for patients aged 18 years and older with documented follow-up recommendations for incidentally detected pulmonary nodules (eg, follow-up CT imaging studies needed or that no follow-up is needed) based at a minimum on nodule size AND patient risk factors.	AMA-PCPI

TABLE 42—PROPOSED PARKINSON'S DISEASE MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0326/047	Care Plan: Percentage of patients aged 65 years and older who have an care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an care plan.	AMA-PCPI/NCQA
N/A/289	Parkinson's Disease: Annual Parkinson's Disease Diagnosis Review: All patients with a diagnosis of Parkinson's disease who had an annual assessment including a review of current medications (e.g., medications that can produce Parkinson-like signs or symptoms) and a review for the presence of atypical features (e.g., falls at presentation and early in the disease course, poor response to levodopa, symmetry at onset, rapid progression [to Hoehn and Yahr stage 3 in 3 years], lack of tremor or dysautonomia) at least annually.	AAN
N/A/290	Parkinson's Disease: Psychiatric Disorders or Disturbances Assessment: All patients with a diagnosis of Parkinson's disease who were assessed for psychiatric disorders or disturbances (e.g., psychosis, depression, anxiety disorder, apathy, or impulse control disorder) at least annually.	AAN
N/A/291	Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment: All patients with a diagnosis of Parkinson's disease who were assessed for cognitive impairment or dysfunction at least annually.	AAN
N/A/292	Parkinson's Disease: Querying about Sleep Disturbances: All patients with a diagnosis of Parkinson's disease (or caregivers, as appropriate) who were queried about sleep disturbances at least annually.	AAN
N/A/293	Parkinson's Disease: Rehabilitative Therapy Options: All patients with a diagnosis of Parkinson's disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (e.g., physical, occupational, or speech therapy) discussed at least annually.	AAN
N/A/294	Parkinson's Disease: Parkinson's Disease Medical and Surgical Treatment Options Reviewed: All patients with a diagnosis of Parkinson's disease (or caregiver(s), as appropriate) who had the Parkinson's disease treatment options (e.g., non-pharmacological treatment, pharmacological treatment, or surgical treatment) reviewed at least once annually.	AAN

TABLE 43—PROPOSED PREVENTIVE CARE MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0046/039	Screening or Therapy for Osteoporosis for Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who have a central dual-energy X-ray absorptiometry (DXA) measurement ordered or performed at least once since age 60 or pharmacologic therapy prescribed within 12 months.	AMA-PCPI/NCQA

TABLE 43—PROPOSED PREVENTIVE CARE MEASURES GROUP FOR 2015 AND BEYOND—Continued

NQF/ PQRS	Measure title and description	Measure developer
0098/48	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	AMA-PCPI/NCQA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
0043/111	Pneumonia Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA
N/A/112	Breast Cancer Screening: Percentage of women 50 through 74 years of age who had a mammogram to screen for breast cancer within 27 months.	NCQA
0034/113	Colorectal Cancer Screening: Percentage of patients 50 through 75 years of age who had appropriate screening for colorectal cancer.	NCQA
0421/128	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up: Percentage of patients aged 18 years and older with a documented BMI during the current encounter or during the previous 6 months AND when the BMI is outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 6 months of the encounter.	CMS/QIP
0418/134	<i>Normal Parameters:</i> Age 65 years and older BMI ≥ 23 and < 30 ; Age 18–64 years BMI ≥ 18.5 and < 25 Preventive Care and Screening: Screening for Clinical Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for clinical depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	CMS/QIP
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI

TABLE 44—PROPOSED RHEUMATOID ARTHRITIS (RA) MEASURES GROUP FOR 2015 AND BEYOND

NQF/ PQRS	Measure title and description	Measure developer
0054/108	Rheumatoid Arthritis (RA): Disease Modifying Anti-Rheumatic Drug (DMARD) Therapy: Percentage of patients aged 18 years and older who were diagnosed with RA and were prescribed, dispensed, or administered at least one ambulatory prescription for a DMARD.	NCQA
0041/110	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA-PCPI
N/A/176	Rheumatoid Arthritis (RA): Tuberculosis Screening: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 6 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD).	AMA-PCPI
N/A/177	Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease activity within 12 months.	AMA-PCPI
N/A/178	Rheumatoid Arthritis (RA): Functional Status Assessment: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.	AMA-PCPI
N/A/179	Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease prognosis at least once within 12 months.	AMA-PCPI
N/A/180	Rheumatoid Arthritis (RA): Glucocorticoid Management: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone ≥ 10 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.	AMA-PCPI
0028/226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA-PCPI

AAHKS

e. Proposals for Measures Available for Reporting in the GPRO Web Interface

We finalized the measures that are available for reporting in the GPRO Web interface for 2014 and beyond in the CY 2013 PFS final rule (77 FR 69269). However, we are proposing to remove and add measures in the GPRO Web interface measure set as reflected in Tables 47 and 48 for 2015 and beyond. Specifically, Table 47 specifies the measures we are proposing to remove for reporting from the GPRO Web interface, and Table 48 specifies the measures we are proposing to add for reporting in the GPRO Web interface. CMS is proposing to adopt Depression

Remission at Twelve Months (NQF #0710) in the 2015 GPRO Web Interface reporting option for ACOs and group practices. This measure is currently reportable in the PQRS program through the EHR reporting option only and has not been tested using claims level data or sampling methodology. Depression Remission at Twelve Months (NQF #0710) requires a look-back period and a look-forward period possibly spanning multiple calendar years. Additionally, this measure requires utilization of a PHQ-9 depression screening tool with a score greater than 9 and a diagnosis of depression/dysthymia to identify the beginning of the episode (initial patient population). Successful completion of

the quality action for this measure looks for a PHQ-9 score of less than 5 at the twelve month mark (plus or minus 30 days) from the initial onset of the episode. CMS is soliciting comments regarding this proposal, including operational concerns and the technical feasibility for implementation in the 2015 GPRO Web Interface. We note that, in addition to addressing changes in evidence-based practices, we are modifying the GPRO Web interface in an effort to align with the proposed measure changes in the Medicare Shared Savings Program specified in section III.M.

BILLING CODE 4120-01-P

TABLE 48: Proposed Measures for Removal from the Group Practice Reporting Option Web Interface Beginning in 2015 and Beyond

NQF/ PQRS	GPRO Module	NQS Domain	Measure and Title Description ^y	Measure Steward	Other Quality Reporting Programs
0097/ 46	Care Coordination/ Patient Safety	Patient Safety	<p>Medication Reconciliation: Percentage of patients aged 65 years and older discharged from any inpatient facility (e.g., hospital, skilled nursing facility, or rehabilitation facility) and seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care who had a reconciliation of the discharge medications with the current medication list in the outpatient medical record documented</p> <p>Rationale: This measure is designed to determine that medication reconciliation was done immediately following a hospital discharge whereas the medical community has indicated to us that it is better clinical practice to perform medication reconciliation at every office visit. Therefore, we propose replacing this measure with NQF #0419 Documentation of Medications in the Medical Record is designed to measure. In addition, this new replacement measure aligns with the measure used in other PQRS reporting options and MU. It is also proposed for the Medicare Shared Savings Program and proposed for a domain change to communication and care coordination to be consistent with the domain used by NQF for this measure.</p>	NCQA	
0074/ 197	Coronary Artery Disease	Effective Clinical Care	<p>Coronary Artery Disease (CAD): Lipid Control: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who have a LDL-C result < 100 mg/dL OR patients who have a LDL-C result ≥ 100 mg/dL and have a documented plan of care to achieve LDL-C < 100 mg/dL, including at a minimum the prescription of a statin</p> <p>Rationale: We propose to retire this and the two other lipid control measures listed as a result of new clinical guidelines released in 2013 by the American College of Cardiology and American Heart Association (**https://circ.ahajournals.org/content/early/2013/11/11/01.cir.0000437738.63853.7a.full.pdf ***). The new guidelines recommend treating individuals with moderate to high dose statin therapy based on cardiac risk rather than only treating high cholesterol to specific targets.</p>	AMA- PCPI/ ACCF/ AHA	

NQF/ PQRS	GPRO Module	NQS Domain	Measure and Title Description ^v	Measure Steward	Other Quality Reporting Programs
0729/ 319	Diabetes Mellitus	Effective Clinical Care	<p>Diabetes Composite: Optimal Diabetes Care: Patients ages 18 through 75 with a diagnosis of diabetes, who meet all the numerator targets of this composite measure:</p> <ul style="list-style-type: none"> • Diabetes Mellitus: High Blood Pressure Control. • Diabetes Mellitus: Low Density Lipoprotein (LDL-C) Control. • Diabetes Mellitus: Hemoglobin A1c Control (< 8%). • Diabetes Mellitus: Tobacco Non-Use <p>Rationale: We propose retiring 4 components of the 5 part diabetes composite measure as noted above. Specifically, we believe:</p> <ul style="list-style-type: none"> • The blood pressure component is somewhat duplicative of the measure Controlling High Blood Pressure (NQF #0018) and that the diabetes measure may capture a subpopulation of the broader Controlling High Blood Pressure measure. • We propose to retire the LDL component as a result of new clinical guidelines released in 2013 by the American College of Cardiology and American Heart Association (**https://circ.ahajournals.org/content/early/2013/11/11/01.cir.0000437738.63853.7a.full.pdf**). The new guidelines recommend treating individuals with moderate to high dose statin therapy based on cardiac risk rather than only treating high cholesterol to specific targets <ul style="list-style-type: none"> • The Tobacco Non-Use component of the Diabetes Mellitus composite is being proposed for removal from the 2015 GPRO Web Interface as this component is somewhat duplicative of the Tobacco Screening and Cessation Counseling measure (NQF 0028) and NQF 0028 is more broadly applicable. • The Hemoglobin A1c Control (<8%) component is being proposed for removal as there are concerns that the A1c level monitored in this measure is considered too low to comprehensively evaluate the A1c is in control for the elder, frail population. 	MNC M	
0075/ 241	Ischemic Vascular Disease	Effective Clinical Care	<p>Ischemic Vascular Disease (IVD): Complete Lipid Profile and LDL-C Control (< 100 mg/dL): Percentage of patients 18 years of age and older who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had each of the following during the measurement period: a complete lipid profile and LDL-C was adequately controlled (< 100 mg/dL)</p> <p>Rationale: We propose to retire this lipid control related measure because of the new clinical guidelines for statin treatment, as discussed for other LDL measures in this table.</p>	NCQA	MU2 Million Hearts
0068/ 204	Ischemic Vascular Disease	Effective Clinical Care	<p>Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic: Percentage of patients 18 years of age and older who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period and who had documentation of use of aspirin or another antithrombotic during the measurement period</p> <p>Rationale: CMS proposes removing this measure and replacing it with Coronary Artery Disease (CAD): Antiplatelet Therapy (NQF #0067), added to the existing CAD composite measure in GPRO Web Interface.</p>	NCQA	MU2 Million Hearts

TABLE 49: Proposed New Measures That Will Be Available for Reporting by the Group Practice Reporting Option Web Interface Beginning in 2015 and Beyond

NQF/ PQRS	GPRO Module	NQS Domain	Measure and Title Description*	Measure Steward	Other Quality Reporting Programs
0059/ 1	Diabetes Mellitus	Effective Clinical Care	<p>Diabetes: Hemoglobin A1c Poor Control: Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.</p> <p>Rationale: This is an existing measure that is being proposed as part of the new Diabetes Management composite as a more appropriate A1c component.</p>	NCQA	MU2
0067/ 6	Coronary Artery Disease	Effective Clinical Care	<p>Coronary Artery Disease (CAD): Antiplatelet Therapy: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who were prescribed aspirin or clopidogrel.</p> <p>Rationale: This is a new measure that is proposed as part of a new Coronary Artery Disease (CAD) composite due to updated clinical guidelines that affected CAD-2 (NQF 0074) Coronary Artery Disease (CAD): Lipid Control.</p>	AMA- PCPI/ ACCF/ AHA	MU2
0070/ 7	Coronary Artery Disease	Effective Clinical Care	<p>Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%): Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have prior MI OR a current or LVEF < 40% who were prescribed beta-blocker therapy</p> <p>Rationale: This is a new measure that is being proposed to create a new Coronary Artery Disease (CAD) composite due to updated clinical guidelines that affected CAD-2 (NQF 0074) Coronary Artery Disease (CAD): Lipid Control.</p>	AMA- PCPI/ ACCF/ AHA	MU2
0055/ 117	Diabetes Mellitus	Effective Clinical Care	<p>Diabetes: Eye Exam: Percentage of patients 18 through 75 years of age with a diagnosis of diabetes (type 1 and type 2) who had a retinal or dilated eye exam in the measurement period or a negative retinal or dilated eye exam (negative for retinopathy) in the year prior to the measurement period</p> <p>Rationale: This is a new measure that is being proposed to create a new Diabetes Management composite due to some components of the current MNCM composite being impacted by the updated ATP4 and JNC8 clinical guidelines. We believe eye exams are an important part of quality care for diabetic patients.</p>	NCQA	MU2
0419/ 130	Care Coordinatio n/ Patient Safety	Patient Safety	<p>Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration</p> <p>Rationale: This is a new measure being proposed to replace CARE-1 (PQRS #46) Medication Reconciliation: Reconciliation After Discharge from an Inpatient Facility as this measure was not appropriate for the GPRO Web Interface per feedback from the measure steward (NCQA). Also, we received feedback from the measures community that Medication Reconciliation should be performed at all office visits and not just those visits occurring after an inpatient discharge.</p>	CMS/QIP	MU2

NQF/ PQRS	GPRO Module	NQS Domain	Measure and Title Description*	Measure Steward	Other Quality Reporting Programs
0056/ 163	Diabetes Mellitus	Effective Clinical Care	<p>Diabetes: Foot Exam: Percentage of patients aged 18-75 years of age with diabetes who had a foot exam during the measurement period</p> <p>Rationale: This is a new measure being proposed as part of the Diabetes Management composite due to some components of the current MNCM composite being affected by the updated ATP4 and JNC8 clinical guidelines. We believe foot exams are an important part of quality care for diabetic patients.</p>	NCQA	MU2
N/A/2 42	Coronary Artery Disease	Effective Clinical Care	<p>Coronary Artery Disease (CAD): Symptom Management: Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period with results of an evaluation of level of activity and an assessment of whether anginal symptoms are present or absent with appropriate management of anginal symptoms within a 12 month period</p> <p>Rationale: This is a new measure that is being proposed to create a new Coronary Artery Disease (CAD) composite due to updated clinical guidelines that affected CAD-2 (NQF 0074) Coronary Artery Disease (CAD): Lipid Control.</p>	AMA- PCPI/ ACCF/ AHA	
0729/ 319	Diabetes Mellitus	Effective Clinical Care	<p>Diabetes Composite: Optimal Diabetes Care: Patients ages 18 through 75 with a diagnosis of diabetes, who meet all the numerator targets of this composite measure:</p> <ul style="list-style-type: none"> For patients with a diagnosis of ischemic vascular disease, daily aspirin use unless contraindicated <p>Rationale: CMS proposes to maintain this component of the Optimal Diabetes Care composite and adding it to the new CMS Diabetes Management composite, as it represents an important quality measure for patients with multiple chronic conditions, such as diabetes and IVD.</p>	MNCM	
0710/ 370		Effective Clinical Care	<p>Depression Remission at Twelve Months: Adult patients age 18 and older with major depression or dysthymia and an initial PHQ-9 score > 9 who demonstrate remission at twelve months defined as PHQ-9 score less than 5. This measure applies to both patients with newly diagnosed and existing depression whose current PHQ-9 score indicates a need for treatment.</p> <p>Rationale: This is a new measure being proposed as it reflects a clinical concept not currently addressed. While we currently have a depression screening and follow-up measure in the GPRO WI, the Depression Remission measure represents an important outcome. Depression management is particularly important due the effects on patient adherence with treatment for other chronic conditions.</p>	MNCM	MU2

BILLING CODE 4120-01-C

Please note that, if these proposals are finalized, the GPRO measure set will contain 21 measures available for reporting.

f. The Clinician Group (CG) Consumer Assessment of Healthcare Providers and Systems (CAHPS) Survey

In the CY 2014 PFS final rule with comment period, we finalized the CG-CAHPS survey available for reporting under the PQRS for 2014 and beyond (78 FR 74750 through 74751), to which we are now referring as the CAHPS for PQRS. Please note that, in the CY 2014 PFS final rule with comment period, we classified the CAHPS for PQRS survey under the care coordination and communication NQS domain. We note that this was an error on our part, as the CAHPS for PQRS survey has typically

been classified under the Person and Caregiver-Centered Experience and Outcomes domain as the CAHPS for PQRS survey assesses beneficiary experience of care and outcomes. Therefore, as we indicate in Table 21, we are proposing to reclassify the CAHPS for PQRS survey under the Person and Caregiver-Centered Experience and Outcomes domain. We invite public comment on this proposal.

6. Statutory Requirements and Other Considerations for the Selection of PQRS Quality Measures for Meeting the Criteria for Satisfactory Participation in a QCDR for 2014 and Beyond for Individual Eligible Professionals

For the measures which eligible professionals participating in a QCDR must report, section 1848(m)(3)(D) of the Act, as amended and added by

section 601(b) of the ATRA, provides that the Secretary shall treat eligible professionals as satisfactorily submitting data on quality measures if they satisfactorily participate in a QCDR. Section 1848(m)(3)(E) of the Act, as added by section 601(b) of the ATRA, provides some flexibility with regard to the types of measures applicable to satisfactory participation in a QCDR, by specifying that for measures used by a QCDR, sections 1890(b)(7) and 1890A(a) of the Act shall not apply, and measures endorsed by the entity with a contract with the Secretary under section 1890(a) of the Act may be used.

In the CY 2014 PFS final rule with comment period, we finalized requirements related to the parameters for the measures that would have to be reported to CMS by a QCDR for the purpose of its individual eligible

professionals meeting the criteria for satisfactory participation under the PQRS (78 FR 74751 through 74753). Although we are not proposing to remove any of the requirements we finalized related to these parameters, we are proposing to modify the following parameters we finalized in the CY 2014 PFS final rule with comment period related to measures that may be reported by a QCDR:

- The QCDR must have at least 1 outcome measure available for reporting, which is a measure that assesses the results of health care that are experienced by patients (that is, patients' clinical events; patients' recovery and health status; patients' experiences in the health system; and efficiency/cost).

As we are proposing that for an eligible professional to meet the criterion for satisfactory participation in a QCDR for the 2017 PQRS payment adjustment, the eligible professional must report on at least 3 outcome measures or, in lieu of 3 outcome measures, at least 2 outcome measures and 1 resource use, patient experience of care, or efficiency/appropriate use measure, we are modifying this requirement to conform to this proposed satisfactory participation criterion. Therefore, we are proposing that a QCDR must have at least 3 outcome measures available for reporting, which is a measure that assesses the results of health care that are experienced by patients (that is, patients' clinical events; patients' recovery and health status; patients' experiences in the health system; and efficiency/cost). In lieu of having 3 outcome measures available for reporting, the QCDR must have at least 2 outcome measures available for reporting and at least 1 resource use, patient experience of care, or efficiency/appropriate use measure.

We are proposing to define resource use, patient experience of care, or efficiency/appropriate use measures in the following manner:

- A resource use measure is a measure that is a comparable measure of actual dollars or standardized units of resources applied to the care given to a specific population or event, such as a specific diagnosis, procedure, or type of medical encounter.

- A patient experience of care measure is a measure of person- or family-reported experiences (outcomes) of being engaged as active members of the health care team and in collaborative partnerships with providers and provider organizations.

- An efficiency/appropriate use measure is a measure of the appropriate use of health care services (such as

diagnostics or therapeutics) based upon evidence-based guidelines of care, or for which the potential for harm exceeds the possible benefits of care.

Please note that, for purposes of meeting the criteria for satisfactory participation in a QCDR, we allow QCDRs to report on any measure provided that it meets the measure parameters we finalize. We note that we would allow and encourage the reporting of the Consumer Assessment of Healthcare Providers Surgical Care Survey (S-CAHPS) through a QCDR.

Finally, in the CY 2014 PFS final rule with comment period, we stated that a QCDR must provide to CMS descriptions and narrative specifications for the measures for which it will report to CMS by no later than March 31, 2014. In keeping with this timeframe, we propose that a QCDR must provide to CMS descriptions for the measures for which it will report to CMS for a particular year by no later than March 31 of the applicable reporting period for which the QCDR wishes to submit quality measures data. For example, if a QCDR wishes to submit quality measures data for the 2017 PQRS payment adjustment (the 12-month reporting period of which occurs in 2015), the QCDR must provide to CMS descriptions for the measures for which it will report to CMS by no later than March 31, 2015. The descriptions must include: name/title of measures, NQF # (if NQF endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions and denominator exclusions of the measure. The narrative specifications provided must be similar to the narrative specifications we provide in our measures list, available at http://www.cms.gov/apps/ama/license.asp?file=/PQRS/downloads/2014_PQRS_IndClaimsRegistry_MeasureSpecs_SupportingDocs_12132013.zip.

Related to this proposal, we propose that, 15 days following CMS approval of these measure specifications, the QCDR must publicly post the measures specifications for the measures it intends to report for the PQRS using any public format it prefers. Immediately following posting of the measures specification information, the QCDR must provide CMS with the link to where this information is posted. CMS will then post this information when it provides its list of QCDRs for the year. We believe providing this information will further aid in creating transparency of reporting.

We invite public comment on these proposals.

7. Informal Review

In the CY 2013 PFS final rule with comment period (77 FR 69289), we established that “an eligible professional electing to utilize the informal review process must request an informal review by February 28 of the year in which the payment adjustment is being applied. For example, if an eligible professional requests an informal review related to the 2015 payment adjustment, the eligible professional would be required to submit his/her request for an informal review by February 28, 2015.” As stated in the CY 2013 PFS final rule with comment period, we believed this deadline provided ample time for eligible professionals and group practices after their respective claims begin to be adjusted due to the payment adjustment. However, because PQRS data is used to establish the quality composite of the VM, we believe it is necessary to expand the informal review process to allow for some limited corrections of the PQRS data to be made. Therefore, we propose to modify the payment adjustment informal review deadline to within 30 days of the release of the feedback reports. For example, if the feedback reports for the 2016 payment adjustment (based on data collected for 2014 reporting periods) are released on August 31, 2015, an eligible professional or group practice would be required to submit a request for an informal review by September 30, 2015. We believe that by being able to notify eligible professionals and group practices of CMS' decision on the informal review request much earlier than we would have been able to do with the previous informal review request deadline we can provide a brief period for an eligible or group practice to make some limited corrections to its PQRS data. This resubmitted data could then be used to make corrections to the VM calculations, when appropriate.

The PQRS regulations at § 414.90(m)(1) currently require an eligible professional or group practice to submit an informal review request to CMS within 90 days of the release of the feedback reports. Therefore, we propose to revise § 414.90(m)(1).

Regarding the eligible professional's or group practice's ability to provide additional information to assist in the informal review process, we propose to provide the following limitations as to what information may be taken into consideration:

- CMS would only allow resubmission of data that was submitted using a third-party vendor using either

the qualified registry, EHR data submission vendor, or QCDR reporting mechanisms. Therefore, CMS would not allow resubmission of data submitted via claims, direct EHR, or the GPRO web interface reporting mechanisms. We are limiting resubmission to third-party vendors, because we believe that third-party vendors are more easily able to detect errors than direct users.

CMS would only allow resubmission of data that was already previously submitted to CMS. Submission of new data—such as new measures data not previously submitted or new data for eligible professionals for which data was not submitted during the original submission period—would not be accepted.

- For any given resubmission period, CMS would only accept data that was previously submitted for the reporting periods for which the corresponding informal review period applies. For example, the resubmission period immediately following the informal review period for the 2017 PQRS payment adjustment would only allow resubmission for data previously submitted for the 2017 PQRS payment adjustment reporting periods occurring in 2015.

As such, we are proposing to add § 414.90(m)(3) to reflect this proposal as follows: (3) If, during the informal review process, CMS finds errors in data that was submitted using a third-party vendor using either the qualified registry, EHR data submission vendor, or QCDR reporting mechanisms, CMS may allow for the resubmission of data to correct these errors. (i) CMS will not allow resubmission of data submitted via claims, direct EHR, and the GPRO web interface reporting mechanisms. (ii) CMS will only allow resubmission of data that was already previously submitted to CMS. (iii) CMS will only accept data that was previously submitted for the reporting periods for which the corresponding informal review period applies.

We invite public comment on these proposals.

L. Electronic Health Record (EHR) Incentive Program

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified EHR technology (CEHRT). Section 1848(o)(2)(B)(iii) of the Act requires that in selecting CQMs for eligible professionals (EPs) to report under the EHR Incentive Program, and in establishing the form and manner of

reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. As such, we have taken steps to establish alignments among various quality reporting and payment programs that include the submission of CQMs.

For CY 2012 and subsequent years, § 495.8(a)(2)(ii) requires an EP to successfully report the clinical quality measures selected by CMS to CMS or the states, as applicable, in the form and manner specified by CMS or the states, as applicable.

In the CY 2014 PFS final rule with comment period (78 FR 74756), we finalized our proposal to require EPs who seek to report CQMs electronically under the Medicare EHR Incentive Program to use the most recent version of the electronic specifications for the CQMs and have CEHRT that is tested and certified to the most recent version of the electronic specifications for the CQMs. We noted it is important for EPs to electronically report the most recent versions of the electronic specifications for the CQMs as updated measure versions correct minor inaccuracies found in prior measure versions. We stated that to ensure that CEHRT products can successfully transmit CQM data using the most recent version of the electronic specifications for the CQMs, it is important that the product be tested and certified to the most recent version of the electronic specifications for the CQMs.

Since finalizing this proposal, we have received feedback from stakeholders regarding the difficulty and expense of having to test and recertify CEHRT products to the most recent version of the electronic specifications for the CQMs. While we still believe EPs should test and certify their products to the most recent version of the electronic specifications for the CQMs when feasible, we understand the burdens associated with this requirement. Therefore, to eliminate this added burden, we are proposing that, beginning in CY 2015, EPs would not be required to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the CQMs. Please note that, although we are not requiring recertification, EPs must still report the most recent version of the electronic specifications for the CQMs.

In the CY 2014 PFS final rule with comment period, we established the requirement that EPs who seek to report CQMs electronically under the Medicare EHR Incentive Program must use the most recent version of the electronic specifications for the CQMs (78 FR 74756). When establishing this

requirement, we did not account for instances where errors are discovered in the updated electronic measure specifications. To account for these instances and consistent with the proposal set forth in the PQRS in section III.K, we propose that, beginning in CY 2015, if we discover errors in the most recently updated electronic measure specifications for a certain measure, we would use the version of electronic measure specifications that immediately precedes the most recently updated electronic measure specifications.

Additionally, we noted that, with respect to the following measure CMS140v2, Breast Cancer Hormonal Therapy for Stage IC–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer (NQF 0387), a substantive error was discovered in the June 2013 version of this electronically specified clinical quality measure (78 FR 74757). If an EP chooses to report this measure electronically under the EHR Incentive Program in CY 2014, the prior, December 2012 version of the measure, which is CMS140v1, must be used (78 FR 74757). Since a more recent and corrected version of this measure has been developed, we will require the reporting of the most recent, updated version of the measure Breast Cancer Hormonal Therapy for Stage IC–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer (NQF 0387), if an EP chooses to report the measure electronically in CY 2015.

In the EHR Incentive Program Stage 2 final rule, we established CQM reporting options for the Medicare EHR Incentive Program for CY 2014 and subsequent years that include one individual reporting option that aligns with the PQRS's EHR reporting option (77 FR 54058) and two group reporting options that align with the PQRS GPRO and Medicare Shared Savings Program (MSSP) and Pioneer ACOs (77 FR 54076 to 54078). In the CY 2014 PFS final rule with comment period, we finalized two additional aligned options for EPs to report CQMs for the Medicare EHR Incentive Program for CY 2014 and subsequent years with the intention of minimizing the reporting burden on EPs (78 FR 74753 through 74757). One of the aligned options finalized in the CY 2014 PFS final rule with comment period (78 FR 74754 through 74755) is a reporting option for CQMs for the Medicare EHR Incentive Program under which EPs can submit CQM information using qualified clinical data registries, according the definition and requirements for qualified clinical data registries established under the PQRS.

The second aligned option finalized in the CY 2014 PFS final rule with comment period (78 FR 74755 through 74756) is a group reporting option for CQMs for the Medicare EHR Incentive Program beginning in CY 2014 under which EPs who are part of a Comprehensive Primary Care (CPC) initiative practice site that successfully reports at least nine electronically specified CQMs across three domains for the relevant reporting period in accordance with the requirements established for the CPC initiative and using CEHRT would satisfy the CQM reporting component of meaningful use for the Medicare EHR Incentive Program. If a CPC practice site is not successful in reporting, EPs who are part of the site would still have the opportunity to report CQMs in accordance with the requirements established for the Medicare EHR Incentive Program in the Stage 2 final rule. Additionally, only those EPs who are beyond their first year of demonstrating meaningful use may use this CPC group reporting option. The CPC practice sites must submit the CQM data in the form and manner required by the CPC initiative. Therefore, whether CPC required electronic submission or attestation of CQMs, the CPC practice site must submit the CQM data in the form and manner required by the CPC initiative.

The CPC initiative, under the authority of section 3021 of the Affordable Care Act, is a multi-payer initiative fostering collaboration between public and private health care payers to strengthen primary care. Under this initiative, we will pay participating primary care practices a care management fee to support enhanced, coordinated services. Simultaneously, participating commercial, state, and other federal insurance plans are also offering enhanced support to primary care practices that provide high-quality primary care. There are approximately 483 CPC practice sites across 7 health care markets in the U.S. More details on the CPC initiative can be found at <http://innovation.cms.gov/initiatives/Comprehensive-Primary-Care-Initiative/index.html>.

Under the CPC initiative, CPC practice sites are required to report to CMS a subset of the CQMs that were selected in the EHR Incentive Program Stage 2 final rule for EPs to report under the EHR Incentive Program beginning in CY 2014 (for a list of CQMs that were selected in the EHR Incentive Program Stage 2 final rule for EPs to report under the EHR Incentive Program beginning in CY 2014, see 77 FR 54069 through

54075). We propose to retain the group reporting option for CPC practice sites as finalized in the CY 2014 PFS final rule, but to relax the requirement for the CQMs to cover three domains. Instead, we propose that, for CY 2015 only, under this group reporting option, the CPC practice site must report a minimum of nine CQMs from the CPC subset, and the nine CQMs reported must cover at least 2 domains, although we strongly encourage practice sites to report across more domains if feasible. Although the requirement to report across three domains is important because the domains are linked to the National Quality Strategy and used throughout CMS quality programs, the CPC practice sites are required to report from a limited number of CQMs that were selected for the EHR Incentive Program and are focused on a primary care population. Therefore, these CPC practice sites may not have measures to select from that cover three domains. Additionally, CPC practice sites are assessed for quality performance on measures other than electronically specified CQMs which do cover other National Quality Strategy domains. We invite public comment on this proposal.

M. Medicare Shared Savings Program

Under section 1899 of the Act, CMS has established the Medicare Shared Savings program (Shared Savings Program) to facilitate coordination and cooperation among providers to improve the quality of care for Medicare Fee-For-Service (FFS) beneficiaries and reduce the rate of growth in health care costs. Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). The final rule implementing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Shared Savings Program: Accountable Care Organizations Final Rule (76 FR 67802)).

Section 1899(b)(3)(A) of the Act requires the Secretary to determine appropriate measures to assess the quality of care furnished by ACOs, such as measures of clinical processes and outcomes; patient, and, wherever practicable, caregiver experience of care; and utilization such as rates of hospital admission for ambulatory sensitive conditions. Section 1899(b)(3)(B) of the Act requires ACOs to submit data in a form and manner specified by the Secretary on measures that the Secretary determines necessary for ACOs to report to evaluate the quality of care furnished

by ACOs. Section 1899(b)(3)(C) of the Act requires the Secretary to establish quality performance standards to assess the quality of care furnished by ACOs, and to seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for the purposes of assessing the quality of care. Additionally, section 1899(b)(3)(D) of the Act gives the Secretary authority to incorporate reporting requirements and incentive payments related to the PQRS, EHR Incentive Program and other similar initiatives under section 1848 of the Act. Finally, section 1899(d)(1)(A) of the Act states that an ACO is eligible to receive payment for shared savings, if they are generated, only after meeting the quality performance standards established by the Secretary.

In the November 2011 final rule establishing the Shared Savings Program, we established the quality performance standards that ACOs must meet to be eligible to share in savings that are generated (76 FR 67870 through 67904). Quality performance measures are submitted by ACOs through a CMS web interface, currently the group practice reporting (GPRO) web interface, calculated by CMS from internal and claims data, and collected through a patient and caregiver experience of care survey.

Consistent with the directive under section 1899(b)(3)(C) of the Act, we believe the existing Shared Savings Program regulations incorporate a built in mechanism for encouraging ACOs to improve care over the course of their 3-year agreement period, and to reward quality improvement over time. During the first year of the agreement period, ACOs can qualify for the maximum sharing rate by completely and accurately reporting all quality measures. After that, ACOs must meet certain thresholds of performance, which are currently phased in, and are rewarded for improved performance on a sliding scale in which higher levels of quality performance translate to higher rates of shared savings (or, for ACOs subject to performance-based risk that demonstrate losses, lower rates of shared losses). In this way, the quality performance standard increases over the course of the ACO's agreement period.

Additionally, we have made an effort to align quality performance measures, submission methods, and incentives under the Shared Savings Program with the PQRS. Eligible professionals participating in an ACO may qualify for the PQRS incentive payment under the Shared Savings Program or avoid the downward PQRS payment adjustment when the ACO satisfactorily reports the

ACO GPRO measures on their behalf using the GPRO web interface.

Since the November 2011 final rule establishing the Shared Savings Program was issued, we have revisited certain aspects of the quality performance standard in the annual PFS rulemaking out of a desire to ensure thoughtful alignment with the agency's other quality incentive programs that are addressed in that rule. Specifically, we have updated our rules to align with PQRS and the EHR Incentive Program, and addressed issues related to benchmarking and scoring ACO quality performance (77 FR 69301 through 69304; 78 FR 74757 through 74764). We have identified several policies related to the quality performance standard that we would like to address in this rule at this time. Specifically, we are revisiting the current quality performance standard, proposing changes to the quality measures, and seeking comment on future quality performance measures. We are also proposing to modify the timeframe between updates to the quality performance benchmarks, to establish an additional incentive to reward ACO quality improvement, and to make several technical corrections to the regulations in subpart F of Part 425.

1. Existing Quality Measures and Performance Standard

As discussed previously, section 1899(b)(3) of the Act states that the Secretary may establish quality performance standards to assess the quality of care furnished by ACOs and "seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. . . ." In the November 2011 Shared Savings Program final rule, we established a quality performance standard that consists of 33 measures. These measures are submitted by the ACO through the GPRO web interface, calculated by CMS from administrative and claims data, and collected via a patient experience of care survey based on the Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG-CAHPS) survey. Although the patient experience of care survey used for the Shared Savings Program includes the core CG-CAHPS modules, this patient experience of care survey also includes some additional modules. Therefore, we will refer to the patient experience of care survey that is used under the Shared Savings Program as CAHPS for ACOs. The measures span four domains, including patient experience of care, care coordination/patient safety, preventive health, and at-risk population. The measures collected

through the GPRO web interface are also used to determine whether eligible professionals participating in an ACO qualify for the 2013 and 2014 PQRS incentive payment or avoid the PQRS payment adjustment for 2015 and subsequent years. Eligible professionals in an ACO may qualify for the PQRS incentive payment or avoid the downward PQRS payment adjustment when the ACO satisfactorily reports all of the ACO GPRO measures on their behalf using the GPRO web interface.

In selecting the 33 measure set, we balanced a wide variety of important considerations. Given that many ACOs were expected to be newly formed organizations, in the November 2011 Shared Savings Program final rule (76 FR 67886), we concluded that ACO quality measures should focus on discrete processes and short-term measurable outcomes derived from administrative claims and limited medical record review facilitated by a CMS-provided web interface to lessen the burden of reporting. Because of the focus on Medicare FFS beneficiaries, our measure selection emphasized prevention and management of chronic diseases that have high impact on these beneficiaries such as heart disease, diabetes mellitus, and chronic obstructive pulmonary disease. We believed that the quality measures used in the Shared Savings Program should be tested, evidence-based, target conditions of high cost and high prevalence in the Medicare FFS population, reflect priorities of the National Quality Strategy, address the continuum of care to reflect the requirement that ACOs accept accountability for their patient populations, and align with existing quality programs and value-based purchasing initiatives.

At this time, we continue to believe it is most appropriate to focus on quality measures that directly assess the overall quality of care furnished to FFS beneficiaries. The set of 33 measures that we adopted in the November 2011 Shared Savings Program final rule includes measures addressing patient experience, outcomes, and evidence-based care processes. Thus far, we have not included any specific measures addressing high cost services or utilization since we believe that the potential to earn shared savings offers an important and direct incentive for ACOs to address utilization issues in a way that is most appropriate for their organization, patient population, and local healthcare environment. We note that while the quality performance standard is limited to these 33 measures, the performance of ACOs is

measured on many more metrics and ACOs are informed of their performance in these areas. For example, an assessment of an ACO's utilization of certain resources is provided to the ACO via quarterly reports that contain information such as the utilization of emergency services or the utilization of CTs and MRIs.

As we have stated previously (76 FR 67872), our principal goal in selecting quality measures for ACOs was to identify measures of success in the delivery of high-quality health care at the individual and population levels. We believe endorsed measures have been tested, validated, and clinically accepted, and therefore, selected the 33 measures with a preference for NQF-endorsed measures. However, the statute does not limit us to using endorsed measures in the Shared Savings Program. As a result we also exercised our discretion to include certain measures that we believe to be high impact but that are not currently endorsed, for example, ACO#11, Percent of PCPs Who Successfully Qualify for an EHR Incentive Program Payment.

In selecting the final set of 33 measures, we sought to include both process and outcome measures, including patient experience of care (76 FR 67873). Because ACOs are charged with improving and coordinating care and delivering high quality care, but also need time to form, acquire infrastructure and develop clinical care processes, we continue to believe it is important to have a combination of both process and outcomes measures. We note, however, that as other CMS quality reporting programs, such as PQRS, move to more outcomes-based measures and fewer process measures over time, we may also revise the quality performance standard for the Shared Savings Program to incorporate more outcomes-based measures over time.

Therefore, we viewed the 33 measures adopted in the November 2011 Shared Savings Program final rule as a starting point for ACO quality measurement. As we stated in that rule (67 FR 67891), we plan to modify the measures in future reporting cycles to reflect changes in practice and improvements in quality of care and to continue aligning with other quality reporting programs and will add and/or retire measures as appropriate through the rulemaking process. In addition, we are working with the measures community to ensure that the specifications for the measures used under the Shared Savings Program are up-to-date. We note that we must balance the timing of the release of specifications so they are as up-to-date

as possible, while also giving ACOs sufficient time to review specifications. Our intention is to issue the specifications annually, prior to the start of the reporting period for which they will apply. For example, we issued the specifications for the 2014 reporting period in late 2013, prior to the start of the 2014 reporting period.

In the November 2011 Shared Savings Program final rule (76 FR 67873), we combined care coordination and patient safety into a single domain to better align with the National Quality Strategy and to emphasize the importance of ambulatory patient safety and care coordination. We also intended to continue exploring ways to best capture ACO care coordination metrics and noted that we would consider adding new care coordination measures for future years (67 FR 67877).

2. Proposed Changes to the Quality Measures Used in Establishing Quality Performance Standards That ACOs Must Meet To Be Eligible for Shared Savings

Since the November 2011 Shared Savings Program final rule, we have continued to review the quality measures used for the Shared Savings Program to ensure that they are up to date with current clinical practice and are aligned with the GPRO web interface reporting for PQRS. Based on the reviews, we have identified a number of proposed measure additions, deletions and other revisions that we believe would be appropriate for the Shared Savings Program. Under the following proposed measure revisions, ACOs would be assessed on 37 measures annually, an increase of 4 measures. However, as explained in more detail below, we believe the measures chosen are more outcome-oriented and would ultimately reduce the reporting burden on ACOs.

The following is a description of the proposed changes that would be effective for the 2015 reporting period and would be reported by ACOs to us in early 2016. Table 50 offers an overview of the proposed changes and is provided as a reference. (We note that the deletion and insertion of certain measures affects the composite measures, and we are proposing corresponding revisions to both the diabetes and coronary artery disease composite measures.)

- *CAHPS Stewardship of Patient Resources*. This measure is one of the unscored survey measures currently collected in addition to the seven that are already part of the current set of 33 scored measures under the Shared Savings Program. Information on the unscored survey measure modules is

currently shared with the ACOs for informational purposes only. The Stewardship of Patient Resources measure asks the patient whether the care team talked with the patient about prescription medicine costs. The measure exhibited high reliability during the first two administrations of the CAHPS survey, and during testing, the beneficiaries that participated in cognitive testing said that prescription drug costs was important to them. We are proposing to add Stewardship of Patient Resources as a scored measure in the patient experience domain because we believe, based on testing, that this is an important factor for measuring a beneficiary's experience with healthcare providers. We are also proposing that the measure would be phased into pay for performance as we plan to do for other new measures, using a similar process to the phase in that was used for the measure modules in the survey that are currently used to assess ACO quality performance. We seek comment on this proposal and on any other patient experience of care measures that might be considered in future rulemaking.

- *Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM)*. We propose to add a 30-day all cause SNF readmission measure. CMS is the measure steward for this claims based measure which is under review at NQF under NQF #2510. This measure estimates the risk-standardized rate of all-cause, unplanned, hospital readmissions for patients who have been admitted to a Skilled Nursing Facility within 30 days of discharge from a prior inpatient admission to a hospital, CAH, or a psychiatric hospital. The measure is based on data for 12 months of SNF admissions. We believe this measure would help fill a gap in the current Shared Savings Program measure set and would provide a focus on an area where ACOs are targeting care redesign. ACOs and their ACO providers/suppliers often include post-acute care (PAC) settings and the addition of this measure would enhance the participation and alignment with these facilities. Even when the ACO does not include post-acute facilities formally as part of its organization, ACO providers/suppliers furnish other services that have the potential to affect PAC outcomes. Thus, this measure would emphasize the importance of coordinating the care of beneficiaries across these sites of care. Additionally, because this measure is calculated from claims, there would not be a burden on ACOs to collect this information.

- *All-Cause Unplanned Admissions for Patients with Diabetes Mellitus (DM)*,

Heart Failure (HF) and Multiple Chronic Conditions. We propose to add three new measures to the Care Coordination/Patient Safety domain. The three proposed new measures are for: all-cause unplanned Admissions for Patients with Diabetes Mellitus (DM), all-cause unplanned Admissions for Patients with Heart Failure (HF) and all-cause unplanned Admissions for Patients with Multiple Chronic Conditions. These three measures are under development through a CMS contract with Yale New Haven Health Services Corporation/Center for Outcomes Research and Evaluation (CORE) to develop quality measures specifically for ACO patients with heart failure, diabetes, and multiple chronic conditions. We believe that these measures are important to promote and assess ACO quality as it relates to chronic condition inpatient admission because they are major causes for unplanned admissions and will support the ACOs' efforts to improve care coordination for these chronic conditions. These measures are claims based, and therefore, we do not expect that they would impose any additional burden on ACOs.

- *Depression Remission at Twelve Months*. We propose to add Depression Remission at Twelve Months (NQF #0710) to the Preventive Health domain. Depression is a serious health condition for the Medicare population and can decrease patient adherence to treatment for chronic conditions. This measure would enhance our measurement of health outcomes and depression is an important health condition that we believe is appropriate to be addressed by ACOs. The measure would be submitted through the GPRO web interface, and would be aligned with PQRS. We also seek comments on the inclusion of additional behavioral health measures, such as substance abuse or mental health measures, in future rulemaking cycles.

- *Diabetes Measures for Foot Exam and Eye Exam*. Diabetes is one of the most serious, chronic health conditions for Medicare beneficiaries. It is critical that Medicare beneficiaries that have diabetes receive foot and eye exams to help prevent diabetes-related foot amputations and blindness. Both of the two new measures would be added to the Clinical Care for at Risk Population-Diabetes domain. They are endorsed by NQF (NQF #0055 and #0056). We also propose to include these two new measures as part of a new Diabetes Mellitus composite measure. These measures would also align with PQRS and the EHR Incentive Program. We believe these measures would be

appropriate additional measures for assessing quality of care furnished in ACOs to help prevent diabetes-related foot amputations and blindness.

- *Coronary Artery Disease (CAD): Symptom Management.* This new measure would be added to the Clinical Care for At Risk Population-Coronary Artery Disease domain and included in the CAD Composite Measure. The measure helps assess symptom management for CAD patients based on the percentage of adults with a diagnosis of coronary artery disease seen within a 12-month period with results of an evaluation of level of activity and an assessment of whether anginal symptoms are present or absent with appropriate management of anginal symptoms within a 12-month period. This new measure would be added to further enhance the CAD composite measure by adding an assessment of patient activity level and management of angina, which are important clinical factors for beneficiaries with CAD. The measure would align with PQRS (PQRS #0242) and the EHR Incentive Program.

- *Coronary Artery Disease (CAD): Beta Blocker Therapy—Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF<40%).* This new measure would be added to the Clinical Care for At Risk Population-Coronary Artery Disease domain and included in the CAD Composite Measure. This new measure is endorsed by NQF as NQF #0070 and would be added to further enhance the CAD composite measure. This measure reflects the number of patients with CAD who have prior myocardial infarction or LVEF <40 percent who are prescribed beta-blocker therapy and thus is designed to support improvement in outcomes for these CAD patients.

- *Coronary Artery Disease (CAD): Antiplatelet Therapy.* This new measure would be added to the Clinical Care for At Risk Population-Coronary Artery Disease domain and included in the CAD Composite Measure. The measure is defined as the percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period that were prescribed aspirin or clopidogrel. This new measure is endorsed by NQF as NQF #0067 and would be added to update the CAD composite measure to reflect updated clinical guidelines for lipid control. This new measure would replace the existing measure at ACO #30, Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic, which we are proposing to remove because it no

longer reflects current clinical guidelines.

- *Documentation of Current Medications in the Medical Record (NQF #0419).* This new measure would replace ACO #12 (NQF #0097) Medication Reconciliation measure. The current measure is designed to determine whether medication reconciliation was done immediately following a hospital discharge whereas the medical community has indicated to us that it is better clinical practice to perform medication reconciliation at every office visit, which NQF #0419 is designed to measure. In addition, this new replacement measure aligns with both PQRS and the EHR Incentive Program.

- *Percent of PCPs who Successfully Meet Meaningful Use Requirements.* Because the EHR Incentive Program begins its transition to a payment adjustment effective in 2015, we propose to modify the name and specifications for ACO #11 Percent of PCPs who Successfully Qualify for an EHR Incentive Program Payment so that it more accurately depicts successful use and adoption of EHR technology in the coming years. We note this measure would continue to be doubly weighted.

We seek comment on these proposed new measures.

Additionally, we have identified a number of the existing measures that have not kept up with clinical best practice, are redundant with other measures that make up the quality reporting standard, or that could be replaced by similar measures that are more appropriate for ACO quality reporting. We propose to no longer collect data on the following measures, and these measures would no longer be used for establishing the quality performance standards that ACOs must meet to qualify to share in savings:

- *ACO #12, Medication Reconciliation after Discharge from an Inpatient Facility:* As explained above, we would replace this measure with a new measure for documentation of current medications in the medical record since the medical community has indicated the importance of medication reconciliation at each office visit rather than only after an inpatient discharge.

- *ACO #22, Diabetes Composite measure: Hemoglobin A1c control (<8 percent).* The Hemoglobin A1c Control (<8%) component is being proposed for removal as we have concerns that the HbA1c level monitored in this measure is considered too low to comprehensively evaluate HbA1c control for the frail elderly population.

- *ACO #24, Diabetes Composite: Blood Pressure (<140/90) (NQF #0729).*

In an effort to reduce redundant and burdensome ACO reporting of quality measures, we are proposing to no longer collect data for this measure. Although we recognize that the sample patient populations for the measures are different, we believe that there is clinical overlap between ACO #24 and ACO #28, Hypertension (HTN): Blood Pressure Control (NQF #0018). We propose to retain ACO #28, rather than ACO #24, because ACO #28 represents a more comprehensive assessment of an ACO's performance in controlling its population's high blood pressure, whereas the diabetes measure assesses a subpopulation of the broader blood pressure measure.

- *ACO #25, Diabetes Composite: Tobacco Non-use (NQF #0729).* We believe this measure is somewhat duplicative of the separate measure ACO #17, Tobacco Use Assessment and Tobacco Cessation Intervention (NQF #0028) and that the diabetes measure may capture a subpopulation of the broader measure. We prefer to use NQF #0028 as a measure of tobacco use for the Shared Savings Program because this measure has been identified as a cross-cutting measure as it represents a screening assessment that most eligible professionals may perform and is applicable to most adult patients. This measure is applicable in various outpatient settings.

- *ACO #23, Diabetes Composite: Low Density Lipoprotein (<100) (NQF #0729).* We propose to retire this and the two other lipid control measures listed below as a result of new clinical guidelines released in 2013 by the American College of Cardiology and American Heart Association (see <https://circ.ahajournals.org/content/early/2013/11/11/01.cir.0000437738.63853.7a.full.pdf>). The new guidelines recommend treating individuals with moderate-to-high dose statin therapy based on cardiac risk rather than only treating high cholesterol to specific targets.

- *ACO #29, Ischemic Vascular Disease: Complete Lipid Profile and LDL Control (<100 mg/dl) (NQF #0075).* We propose to retire this lipid control related measure because of the new clinical guidelines for statin treatment as noted in the previous bullet.

- *ACO #30, Ischemic Vascular Disease: Use of Aspirin or another Antithrombotic (NQF #0068).* This measure would be replaced by the proposed new CAD measure for antiplatelet therapy (NQF #67), which reflects current clinical guidelines.

- *ACO #32, Coronary Artery Disease (CAD) Composite: Drug Therapy for Lowering LDL Cholesterol (NQF #74).*

We propose to retire this lipid control related measure because of the new clinical guidelines for statin treatment as noted above.

We seek comment on our proposal to remove these measures from the quality performance standards.

Finally, given these proposed changes, we propose updates and revisions to the Diabetes and CAD Composites. We propose that the Diabetes Composite would include the following measures:

- ACO #26: Diabetes Mellitus: Daily Aspirin or Antiplatelet Medication Use for Patients with Diabetes Mellitus and Ischemic Vascular Disease.
- ACO #27: Diabetes: Hemoglobin A1c Poor Control.
- ACO #41: Diabetes: Foot Exam.
- ACO #42: Diabetes: Eye Exam.

We further propose that the CAD Composite would include the following measures:

- ACO #33: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy—Diabetes or Left Ventricular Systolic Dysfunction (LVEF<40%).
- ACO #43: Antiplatelet Therapy.
- ACO #44: Symptom Management.
- ACO #45: Beta-Blocker Therapy—Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF<40%).

We seek comment on these proposed composites and whether there are any

concerns regarding calculation of a composite score. There has been increased interest in the use of composite performance measures over the past few years and stakeholders have raised general concerns regarding composite measures and their purpose for quality improvement. CMS worked with the National Quality Forum (NQF) and their technical expert panel in 2013 to update NQF's composite measure evaluation guidance, which in turn may also be used by developers for composite measure development. Given the general concerns around composite measures and their use, we seek comment on how we combine and incorporate component measure scoring for the composite. In particular, we are interested in whether stakeholders have any concerns about including ACO #27, reverse-scored measure, in the Diabetes Composite, and whether there are any methodological considerations we should consider when including a reverse-scored measures in composites.

To summarize, under these proposed changes, we would add 12 new measures and retire eight measures. We are also proposing to rename the EHR measure in order to reflect the transition from an incentive payment to a payment adjustment under the EHR Incentive Program and to revise the component measures within the Diabetes and CAD composites. In total, we propose to use 37 measures for establishing the quality

performance standards that ACOs must meet to achieve shared savings. Although the total number of measures would increase from the current 33 measures to 37 measures, we do not anticipate that this would increase the reporting burden on ACOs. The increased number of measures is accounted for by measures that would be calculated by CMS using administrative claims data or from a patient survey. The total number of measures that the ACO would need to directly report through the CMS Web site interface would actually decrease by one, in addition to removing redundancy in measures reported.

As part of these proposed changes, we would replace the current five component diabetes composite measure with a new four component diabetes composite measure. In addition, we would replace the current two component coronary artery disease composite measure with a new four component coronary artery disease composite measure. Twenty-one of the measures would be reported by ACOs through the GPRO web interface and scored as 15 measures.

An overview of the proposed changes is provided in Table 50 which demonstrates what measures would be used to assess ACO quality under the Shared Savings Program if our proposals are finalized.

Table 51 provides the current number of measures by domain and displays the total points and domain weights used for scoring purposes. The current scoring methodology is explained in the regulations at § 425.502 and in the preamble to the November 2011 final

rule (76 FR 67895 through 67900). Table 52 provides a summary of the proposed number of measures by domain and the resulting total points and domain weights that would be used for scoring purposes under these proposed changes. Otherwise, the current quality scoring

points methodology for calculating an ACO’s overall quality performance score would continue to apply. Table 53 provides the measures that are retired/replaced.

TABLE 51—CURRENT NUMBER OF MEASURES AND TOTAL POINTS FOR EACH DOMAIN WITHIN THE QUALITY PERFORMANCE STANDARD

Domain	Number of individual measures	Total measures for scoring purposes	Total possible points	Domain weight (percent)
Patient/Caregiver Experience	7	7 individual survey module measures	14	25
Care Coordination/Patient Safety	6	6 measures, including the EHR measure double-weighted (4 points).	14	25
Preventive Health	8	8 measures	16	25
At-Risk Population	12	7 measures, including 5-component diabetes composite measure and 2-component coronary artery disease composite measure.	14	25

We believe that these modifications will enhance ACO quality reporting, better reflect clinical practice guidelines, streamline measures reporting, and enhance alignment with PQRS and the EHR Incentive Program. Finally, we are proposing that these measures would become effective beginning with the 2015 reporting period, and 2015 performance year (PY). All 37 measures would be phased in for ACOs with 2015 start dates according to the phase-in schedule in Table 50. ACOs with start dates before 2015 would be responsible only for complete and accurate reporting of the new measures for the 2015 performance year, and then responsible for either reporting or performance on the measures according to the phase in schedule. For example, assume a new measure is scheduled to phase in with reporting in PY1, reporting in PY2, and performance in PY3. Further assume that an ACO with a 2014 start date will be in its second performance year (PY2) when the measure becomes effective. In this example, the ACO would be responsible for complete and accurate reporting of the new measure in PY2 and for performance on the measure in PY3. If we change the assumptions in the example to say that the new measure is scheduled to phase in with reporting in PY1, performance in PY2, and performance in PY3, then the ACO would be responsible for complete and accurate reporting of the new measure in PY2 and for performance on the measure in PY3. Finally, we note that

consistent with our proposed revisions to § 425.502(a) regarding quality reporting in a second and subsequent agreement period, an ACO that transitions to a new agreement period would continue to be assessed on the quality performance standard that would otherwise apply to an ACO in the third performance year of its first agreement period. Take the example of an ACO with a 2013 start date that will be responsible for reporting the new measure in the 2015 reporting period, its third performance year. Assume the measure is scheduled to phase in from reporting in PY1, reporting in PY2, and performance in PY3. In this case, the ACO would be responsible for complete and accurate reporting of the new measure in 2015 (PY3 of its first agreement period). If the ACO renews its participation agreement for another 3 years, the ACO would be responsible for performance on that measure for each year of its new agreement period because the measure is designated as a pay for performance measure in PY3 of the preceding agreement period.

Additionally, as noted in the November 2011 Shared Savings Program final rule (76 FR 67900), the Shared Savings Program uses the same sampling method used by PQRS GPRO. Specifically, the sample for the ACO GPRO must consist of at least 411 assigned beneficiaries per measure set/domain. If the pool of eligible, assigned beneficiaries is less than 411, the ACO must report on 100 percent, or all, of the assigned beneficiaries sampled. To the

extent that PQRS modifies and finalizes changes in the reporting requirements for group practices reporting via the GPRO web interface, we propose to make similar modifications to ACO reporting through the GPRO web interface. Specifically, as discussed in section III.K.4.a. of this proposed rule, we are proposing to reduce the GPRO web interface minimum reporting requirements for PQRS reporting from 411 to 248 consecutively ranked and assigned patients for each measure or 100 percent of the sample for each measure if there are less than 248 patients in a given sample. We propose that the reduced sample for each measure for reporting through the GPRO web interface would also apply to ACOs. We believe that a reduction in the number of sampled beneficiaries would reduce reporting burden for ACOs while maintaining high statistical validity and reliability in results.

3. Request for Comments for Future Quality Measures

In addition to the proposed changes to the current set of 33 quality measures for the Shared Savings Program discussed above, we are interested in public comment on additional measures that we may consider in future rulemaking. We particularly welcome comments regarding the following issues:

- *Gaps in measures and additional specific measures:* We recognize that there may be gaps in the ACO quality performance standard. For example,

ACOs are charged with improving care coordination for FFS beneficiaries. While above we propose to add a measure for SNF 30-day all-cause readmission to address current gaps in SNF settings, we seek comment on whether there are additional measures that might be used to assess the ACO's performance with respect to care coordination in post-acute care and other settings. We also recognize the need to balance filling gaps in the quality performance standard with the reporting burden on ACOs. To the extent possible, we wish to identify measures for filling any gaps in the quality performance standard that would not increase the reporting burden on ACOs unduly. We welcome comments on specific measures or measure groups that may be considered in future rulemaking to fill in gaps that may exist for assessing ACO quality performance. For example, we seek input on measures that address the quality of care in the various different settings that may be part of an ACO, such as post-acute care settings including SNF or home health. We note that any suggestions for new measures would be more thoroughly discussed in a future rulemaking cycle prior to being adopted as part of the quality performance standard under the Shared Savings Program and if we deem it appropriate we would also submit them to the NQF Measures Application Partnership (MAP) via the list of Measures Under Consideration that the Secretary annually makes available to the public as part of the pre-rulemaking process under section 1890A(a)(2) of the Act for the purpose of seeking multi-stakeholder group input, consistent with the requirements of section 3014 of the Affordable Care Act, if the measures have not already been reviewed by the MAP.

- *Caregiver experience of care:* While we recognize there is a concern about patient subjectivity to surveys, we include measures based on data collected via the patient experience of care survey in the quality performance standard because we believe patients' perception of their care experience reflects important aspects of the quality of the care they receive, such as communication and patient engagement in decision-making, that are not adequately captured by other measures. As such, patient surveys are important complements to the other process of care and outcomes measures. For this reason, we stated in November 2011 Shared Savings Program final rule (76 FR 67874) that we intended to expand the quality measures over time to

include more caregiver experience measures. Therefore, we seek comment on additional specific caregiver experience of care measures that might be considered in future rulemaking.

- *Alignment with Value-Based Payment Modifier (VM) measures:* We desire to continue to align with other Medicare quality initiatives in order to reduce ACO burden and streamline quality reporting and indicators. In the CY 2013 PFS final rule with comment period (77 FR 69313) we established a policy not to apply the VM in CY 2015 and CY 2016 to groups of physicians that participate in ACOs under the Shared Savings Program. Although section 1848(p)(4)(B)(iii)(I) of the Act gives the Secretary discretion to apply the VM to specific physicians and groups of physicians as the Secretary determines appropriate for 2015 and 2016, consistent with section 1848(p)(4)(B)(iii)(II), which requires application of the VM to all physicians and groups of physicians beginning not later than January 1, 2017, we are proposing to start applying the VM to physicians participating in ACOs beginning in 2017. In addition, in section III.K.4.b of this proposed rule, we discuss our proposal to also apply the VM to all nonphysician eligible professionals in groups with 2 or more eligible professionals and to solo practitioners who are nonphysician eligible professionals, including eligible professionals participating in ACOs, starting in CY 2017. To that end, we are seeking comment on whether there are synergies that can be created by aligning the ACO quality measures set with the measures used under the VM. For example, in the Value-based Modifier program, there are two claims-based composite outcomes measures, namely, the Composite of Acute Prevention Quality Indicators (PQIs) comprised by 3 measures (NQF #279 Bacterial Pneumonia Admission Rate, NQF #280 Dehydration Admission Rate, and NQF #281 Urinary Tract Infection Admission Rate) and the Composite of Chronic Prevention Quality Indicators (PQIs) comprised by 6 measures (NQF #638 Uncontrolled Diabetes, NQF #272 Short Term Diabetes complications, NQF #274 Long Term Diabetes Complications, NQF #285 Lower Extremity Amputation for Diabetes, NQF #275 COPD, and NQF #277 Congestive Heart Failure). (See <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Downloads/2012-ACSC-Outcomes-Msrs.pdf>). Because these VM measures are claims based measures, no additional reporting burden would be added to ACOs. In

addition, we note that two of these measures are currently a part of the ACO quality measures set, specifically, NQF #275, "Ambulatory Sensitive Conditions Admissions: Chronic Obstructive Pulmonary Disease," and NQF #277: "Ambulatory Sensitive Conditions Admissions: Congestive Heart Failure." Although we are not proposing changes at this time to align with the measures used under the VM, we are seeking comment on whether the VM composites should be considered in the future as a replacement for the two ACO claims based ambulatory sensitive conditions admissions (ASCA) measures.

- *Specific measures to assess care in the frail elderly population:* We recognize providers face challenges in caring for the health needs of the frail elderly. There are, however, many challenges in defining and measuring the quality of care for this population. In the November 2011 Shared Savings Program final rule, we incorporated a measure focused on the frail elderly population—ACO#13 Screening for Fall Risk, which rewards ACOs for incorporating fall risk assessments in the redesign of their care processes. Our expectation was that practitioners would use the results of the fall risk assessments to promote meaningful conversations with their frail elderly patients about fall risks and ways to prevent or reduce these events. We also stated that as ACOs gain more experience integrating the fall risk screening into their day-to-day practices, we planned to revisit the frail elderly measures in future rulemaking to build upon these achievements and to address additional issues for the frail elderly (76 FR 67886). We welcome comments with suggestions of new measures of the quality of care furnished to the frail elderly population that we may consider adopting in future rulemaking.

- *Utilization:* We did not include utilization measures in the quality performance standards adopted in the November 2011 final rule establishing the Shared Savings Program because we believed that ACOs have an intrinsic motivation to reduce inappropriate utilization of services in order to achieve shared savings. However, in recognition of the value of feedback on utilization, we include utilization data as part of the quarterly aggregate reports provided to ACOs. We welcome comments on whether it is sufficient for such utilization information to be included in the aggregate quarterly reports to ACOs or whether utilization measures should also be used to assess the ACO's quality performance as an

added incentive to provide more efficient care. If commenters are interested in having such utilization measures included in the quality performance standard, we welcome specific comments on what measures would be most appropriate and suggestions for how to risk adjust these measures.

- *Health outcomes:* Currently, the quality performance standard includes a self-reported health and functional status measure as part of the patient experience of care survey. We finalized this measure as pay for reporting for all 3-years of the agreement period to allow ACOs to gain experience with the measure (which had not previously been used for accountability purposes in any pay-for-performance initiative) and to provide important information to them on improving the health outcomes of the population they serve (76 FR 67876). Patient-reported outcomes, although subjective, provide valuable information not captured by other means. We continue to believe that it is appropriate to require ACOs to report this measure and to maintain the performance standard at full and accurate reporting in order to allow ACOs to gain experience with the measure. We welcome suggestions as to whether and when it would be appropriate to include a self-reported health and functional status measure in the quality performance standard. We specifically welcome comments on the appropriateness of using a tool such the Health Outcomes Survey for health plans which assesses changes in the physical and mental health of individual beneficiaries over time. This survey would require at least 2 years of reporting by the same beneficiary and assesses function over time rather than function at a particular point in time. We also welcome suggestions for alternatives to self-reported measures that may be considered in the future.

- *Measures for retirement:* Some measures may not provide sufficiently useful information for assessing ACO quality performance since they are “topped out”, meaning that all but a very few of organizations achieve near perfect performance on the measure. As a result, such measures may no longer provide meaningful information regarding an ACO’s quality performance. Other examples of candidates for retirement could be measures that do not drive quality improvement. We seek input from commenters on any measures that should be considered for retirement in future rulemaking. We welcome comments on whether to continue to require “topped out” measures be

included as pay for reporting measures. For example, it could be important to require ACOs to continue to report such measures so that we can assess performance to ensure quality of care does not decline or for other reasons. In addition, we note that as discussed below we are proposing changes to the benchmarking methodology for topped out measures.

- *Additional public health measures:* We may propose to include an additional preventive health measure in the quality measure set under the Shared Savings Program in future rulemaking. Specifically, we are considering adding “Preventive Care and Screening: Unhealthy Alcohol Use: Screening and Brief Counseling” (NQF #2152). This measure would reflect screening of Medicare beneficiaries covered under the existing Medicare benefit referred to as the “Screening and Behavioral Counseling Interventions in Primary Care to Reduce Alcohol Misuse” benefit. We welcome comments on the potential addition of this measure and would consider any comments received in developing any future proposal with respect to this measure.

4. Accelerating Health Information Technology

a. Overview

HHS believes all patients, their families, and their healthcare providers should have consistent and timely access to their health information in a standardized format that can be securely exchanged between the patient, providers, and others involved in the patient’s care. (HHS August 2013 Statement, “Principles and Strategies for Accelerating Health Information Exchange.” <http://www.healthit.gov/policy-researchers-implementers/accelerating-health-information-exchange-hie>). The Department is committed to accelerating health information exchange (HIE) through the use of electronic health records (EHRs) and other types of health information technology (HIT) across the broader care continuum through a number of initiatives including: (1) alignment of incentives and payment adjustments to encourage provider adoption and optimization of HIT and HIE services through Medicare and Medicaid payment policies; (2) adoption of common standards and certification requirements for interoperable HIT; (3) support for privacy and security of patient information across all HIE-focused initiatives; and (4) governance of health information networks. These initiatives are designed to encourage

HIE among health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for the EHR Incentive Programs, as well as those providers that are participating in the Medicare Shared Savings Program in an ACO and those that are not, and are designed to improve care delivery and coordination across the entire care continuum. For example, the Transition of Care Measure #2 in Stage 2 of the Medicare and Medicaid EHR Incentive Programs requires HIE to share summary records for more than 10 percent of care transitions. In addition, to increase flexibility in the Office of the National Coordinator for Health IT’s (ONC’s) HIT Certification Program and expand HIT certification, ONC has issued a proposed rule concerning a voluntary 2015 Edition of EHR certification criteria, which would more easily accommodate certification of HIT for technology used in health care settings where health care providers are not typically eligible for incentive payments under the EHR Incentive Programs, to facilitate greater HIE across the entire care continuum.

We believe that HIE and the use of certified EHRs can effectively and efficiently help ACOs and participating providers improve internal care delivery practices, support management of patient care across the continuum, and support the reporting of eCQMs. More information on the Voluntary 2015 Edition EHR Certification Criteria Proposed Rule is available at <http://healthit.gov/policy-researchers-implementers/standards-and-certification-regulations>.

b. Electronic Reporting of Quality Measure Data

We believe that certified EHR technology used in a meaningful way is one piece of a broader health information technology infrastructure needed to reform the health care system and improve health care quality, efficiency, and patient safety. Through our programs such as the Medicare and Medicaid EHR Incentive Programs and the Stage 2 meaningful use (MU) requirements we seek to expand the meaningful use of certified EHR technology. Adoption of certified EHR technology (CEHRT) by ACO participants and ACO providers/suppliers may help support efforts to achieve improvements in patient care and quality, including reductions in medical errors, increased access to and availability of records and data, improved clinical decision support, and the convenience of electronic prescribing. Additionally, we believe

that the potential for the Shared Savings Program to achieve its goals could be further advanced by direct EHR-based quality data reporting by ACOs and their ACO participants and ACO providers/suppliers. This could help reinforce the use of CEHRT, reduce errors in quality measure submission, and achieve data submission efficiencies. We believe ACOs and their providers should be leaders in encouraging EHR adoption and should be using CEHRT to improve quality of care and patient safety and to reduce errors.

Furthermore, beginning in 2015, eligible professionals that do not successfully demonstrate meaningful use of certified EHR technology will be subject to a downward payment adjustment under Medicare that starts at –1 percent and increases each year that an eligible professional does not demonstrate meaningful use, to a maximum of –5 percent. A final rule establishing the requirements of Stage 2 of the Medicare EHR Incentive Program appeared in the September 4, 2012 **Federal Register** (Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 2 Final Rule) (77 FR 53968). Included in this final rule are the meaningful use and other requirements that apply for the payment adjustments under Medicare for covered professional services provided by eligible professionals failing to demonstrate meaningful use of CEHRT, including the CQM reporting component of meaningful use. As previously discussed in section III.M.2, we are proposing to revise the name and the specifications for the quality measure regarding EHR adoption to take the changing incentives into account. Specifically, we are proposing to change the name of ACO #11 from “Percent of PCPs Who Successfully Qualify for an EHR Incentive Program Payment” to “Percent of PCPs Who Successfully Meet Meaningful Use Requirements” to more accurately reflect what is being measured.

Additionally, under a group reporting option established for the Medicare EHR Incentive Program (77 FR 54076 through 54078), EPs participating in an ACO under the Shared Savings Program who extract the data necessary for the ACO to satisfy the quality reporting requirements of the Shared Savings Program from CEHRT would satisfy the CQM reporting component of meaningful use as a group for the Medicare EHR Incentive Program. In addition to submitting CQMs as part of an ACO, EPs have to individually satisfy the other objectives and associated

measures for their respective stage of meaningful use.

However, we clarify that if an EP intends to use this group reporting option to meet the CQM reporting component of meaningful use, then the EP would have to extract all its CQM data from a CEHRT and report it to the ACO (in a form and manner specified by the ACO) in order for the EP to potentially qualify for the Medicare EHR Incentive Program. The ACO must also report the GPRO web interface measures and satisfy the reporting requirements under the Shared Savings Program in order for its EPs to satisfy the CQM reporting component of meaningful use for the Medicare EHR Incentive Program.

Although these group reporting requirements were established under the Medicare EHR Incentive Program, the Shared Savings Program regulations were not amended to reflect these reporting requirements. Therefore, we propose to amend the regulations governing the Shared Savings Program to align with the requirements previously adopted under the Medicare EHR Incentive Program in order to provide that EPs participating in an ACO under the Shared Savings Program can satisfy the CQM reporting component of meaningful use for the Medicare EHR Incentive Program when the ACO reports GPRO web interface measures by adding new paragraph (d) to § 425.506. This new paragraph will provide that EPs participating in an ACO under the Shared Savings Program satisfy the CQM reporting component of meaningful use for the Medicare EHR Incentive Program when: (1) The eligible professional extracts data necessary for the ACO to satisfy its GPRO quality reporting requirements from CEHRT; and (2) the ACO satisfactorily reports the ACO GPRO measures through a CMS Web interface. Although this proposal will align the Medicare Shared Savings Program regulations with the existing requirements under the Medicare EHR Incentive Program, we intend to take steps in the future to better align and integrate EHR use into quality reporting under the Shared Savings Program.

We recognize there are operational constraints that must be considered when developing policies related to electronic reporting of quality measures under the Shared Savings Program. First, many ACO legal entities are conveners of Medicare-enrolled entities, but are not Medicare-enrolled themselves, that is, many ACO legal entities do not provide direct health care services, and therefore, may not thus far have had a need for an EHR.

Further, ACO participants and ACO providers/suppliers may be at different levels of EHR adoption. For example, an ACO may have ACO participants that do not own an EHR. Other ACOs may have ACO participants that have and use EHR platforms, but have chosen different platforms, each requiring different modifications to make them uniformly extract required quality data. In addition, ACOs have told us that different EHR platforms may not yet be seamlessly interoperable. Finally, within each ACO participant, there may be differing levels of EHR use among the ACO providers/suppliers that are EPs. Operationally, a few options could be considered for implementing the eCQM portion of the meaningful use requirements in the future. For example, we could consider whether it would be preferable for the EPs within each ACO participant to individually submit EHR data to CMS, whether each ACO participant should report as a group; whether the ACO itself should aggregate EHR data from its ACO participants and then submit the quality measures to CMS; or whether the ACO could submit quality measure data via a data submission vendor that would be responsible for aggregating and submitting the data on the ACO's behalf.

Although we are not proposing any new requirements regarding EHR based reporting under the Shared Savings Program at this time, we welcome suggestions and comments about these issues which we would consider in developing any future proposals. We especially seek comment on the feasibility of an ACO to be a convener and submitter of quality measures through an EHR or alternative method of electronically reporting quality measures to us. We are interested in the opportunities and barriers to ACO EHR quality measure reporting, as well as ways to overcome any barriers. We also welcome suggestions on alternative ways that we might implement EHR-based reporting of quality measures in the Shared Savings Program, such as directly from EHRs or via data submission vendors. We seek comment on whether EHR reporting should be a requirement for all Shared Savings Program ACOs or if the requirement for EHR reporting should be phased in gradually, for instance through a separate risk track or by the establishment of a “core and menu” quality measure set approach in which we would establish a core set of required quality measures and then supplement these required measures with a menu of additional measures (such as EHR-based reporting) from

which an ACO could choose. This approach could provide ACOs with additional flexibility and allow them to report on quality measures that better reflect any special services they provide. As an alternative, we also seek comment on whether ACO providers/suppliers could use a local registry-like version of the GPRO Web interface to capture relevant clinical information and to monitor performance on all Medicare patients throughout the year and to more easily report quality data to CMS annually.

3. Quality Performance Benchmarks

a. Overview of Current Requirements

Section 1899(b)(3)(C) of the Act directs the Secretary to “establish quality performance standards to assess the quality of care furnished by ACOs” and to “seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both for purposes of assessing such quality of care.” Under the current Shared Savings Program regulations at § 425.502, the following requirements with regard to establishing a quality performance benchmark for measures apply: (1) During the first performance year of an ACO’s agreement period, the quality performance standard is set at the level of complete and accurate reporting; (2) during subsequent performance years, the quality performance standard will be phased in such that ACOs will be assessed on their performance on certain measures (see Table 1 of the November 2011 Shared Savings Program final rule (76 FR 67889 through 67890), for details of the transition for each of the 33 measures); (3) we designate a quality performance benchmark and minimum attainment level for each measure, and establish a point scale for the level of achievement on each measure; and (4) we define quality performance benchmarks using FFS Medicare data or using flat percentages when the 60th percentile is equal to or greater than 80.00 percent.

Section 425.502(b)(2) governs the data that CMS uses to establish the quality performance benchmarks for quality performance measures under the Shared Savings Program. Consistent with section 1899(b)(3)(C) of the Act, which requires CMS to seek to improve the quality of care furnished by ACOs participating in the Shared Savings Program over time, § 425.500(b)(3) states that in establishing the measures to assess the quality of care furnished by an ACO, CMS seeks to improve the quality of care furnished by ACOs over

time by specifying higher standards, new measures, or both.

Subsequently, we discussed several issues related to the establishment of quality performance benchmarks in the CY 2014 PFS final rule with comment period (78 FR 74759 through 74764). In that rule (78 FR 74760), we finalized a proposal to combine all available Medicare FFS quality data, including data gathered under PQRS (through both the GPRO web interface tool and other quality reporting mechanisms) and other relevant FFS quality data reported to CMS (including data submitted by Shared Savings Program and Pioneer ACOs) to set the quality performance benchmarks for 2014 and subsequent reporting periods. In establishing this policy, we determined that it was appropriate to use all FFS data rather than only ACO data, at least in the early years of the program, to avoid the possibility of punishing high performers where performance is generally high among all ACOs. We did not finalize a proposal to use Medicare Advantage (MA) data alone or in combination with FFS data in the short-term. Instead, we stated in the CY 2014 PFS final rule with comment period (78 FR 74760) that we intended to revisit the policy of using MA data in future rulemaking when we have more experience setting benchmarks for ACOs.

Additionally, in the CY 2014 PFS final rule with comment period, we retained the ability to use flat percentages to set benchmarks when many reporters demonstrate high achievement on a measure, so that ACOs with high performance on a measure are not penalized (78 FR 74760). More specifically, we will now use all available FFS data to calculate benchmarks, including ACO data, except where performance at the 60th percentile is equal to or greater than 80 percent for individual measures. In these cases, a flat percentage will be used to set the benchmark for the measure. This policy allows ACOs with high scores to earn maximum or near maximum quality points while still allowing room for improvement and rewarding that improvement in subsequent years.

As previously discussed, the first year of an ACO’s agreement period is pay for reporting only, so ACOs earn their maximum sharing rate for completely and accurately reporting all 33 quality measures. Quality performance benchmarks are released in subregulatory guidance prior to the start of the quality reporting period for which they apply so that as we phase in measures to pay for performance ACOs are aware of the actual performance

rates they will need to achieve to earn the maximum quality points under each domain. In the November 2011 Shared Savings Program final rule, we indicated our intent to gradually raise the minimum attainment level to continue to incentivize quality improvement over time and noted that we would do so through future rulemaking after providing sufficient advance notice with a comment period to allow for industry input (76 FR 67898). In the CY 2014 PFS final rule with comment period, we reiterated our policy of setting quality performance benchmarks prior to the reporting year for which they would apply (78 FR 74759). Specifically, we use data submitted in 2013 for the 2012 reporting period to set the quality performance benchmarks for the 2014 reporting period. However, we recognize that in the first few years of the Shared Savings Program, we will only have a limited amount of data for some measures, which may cause the benchmarks for these measures to fluctuate, possibly making it difficult for ACOs to improve upon their previous year’s performance. Stakeholders have also told us that they prefer to have a stable benchmark target so that they can be rewarded for quality improvement from one year to the next. Therefore, instead of modifying quality performance benchmarks annually, in the CY 2014 PFS final rule with comment period (78 FR 74761) we stated that we would set the benchmarks for the 2014 reporting year in advance using data submitted during 2013 for the 2012 reporting year, and continue to use that benchmark for 2 reporting years (specifically, the 2014 and 2015 reporting years). We further indicated our intention to revisit this issue in future rulemaking to allow for public comment on the appropriate number of years that a benchmark should apply before it is updated.

b. Proposed Revisions for Benchmarking Measures That Are “Topped Out”

In the discussion of measures above, we indicated that some measures may be topped out, meaning that all but a very few of organizations achieve near perfect performance on the measure. Since publication of the quality performance benchmarks for the 2014 and 2015 quality reporting years, a number of ACOs have noted that using available national FFS data has resulted in some benchmarks where the 80th or 90th percentiles approach 100 percent performance on the measure. Stakeholders have suggested it is unreasonable to hold organizations, especially very large organizations such as ACOs to this high standard and that

it may be easier for smaller and medium size physician practices to achieve higher levels of performance given their smaller patient populations. We believe these concerns have merit because we have looked at the FFS data submitted to CMS and agree it is possible that smaller practices or practices with smaller populations may be able to achieve these higher levels of performance more easily than larger practices or organizations with larger patient populations. Therefore, we are proposing certain modifications to our benchmarking methodology to address the way that such “topped out” measures are treated for purposes of evaluating an ACO’s performance. Specifically, when the national FFS data results in the 90th percentile for a measure are greater than or equal to 95 percent, we would use flat percentages for the measure, similar to our policy under § 425.502(b)(2)(i) of using flat percentages when the 60th percentile is greater than 80 percent to address clustered measures. We believe this approach would address concerns about how topped out measures affect the quality performance standard while continuing to reward high performance, and being readily understandable to all. We propose to revise § 425.502(b)(2)(ii) to reflect this proposed policy. We invite comments on this proposal. We also invite comments on other potential approaches for addressing topped out measures. We would use any comments received to help develop any future proposals regarding topped out measures. For example, we welcome comments on whether we should drop topped out measures from the measures set, fold them into composites, or retain them but make them pay for reporting only.

c. Proposed Quality Performance Standard for Measures That Apply to ACOs That Enter a Second or Subsequent Participation Agreement

As discussed previously, during an ACO’s first participation agreement period, the quality performance standard during the first performance year is initially set at the level of complete and accurate reporting, and then, during performance years 2 and 3 within the ACO’s first agreement period, the quality performance standard is phased in such that the ACO is assessed on its performance on selected measures. We did not directly indicate the quality performance standard that would apply if an ACO were to subsequently enter into a second or subsequent participation agreement. However, § 425.502(a)(1) provides that during the first performance year of an

ACO’s agreement period, CMS will define the quality performance standard at the level of complete and accurate reporting of all quality measures. As drafted, this regulation could be read to imply that the quality performance standard for ACOs in the first performance year of a subsequent agreement period would also be set at the standard of full and accurate reporting. We do not believe it is appropriate for an ACO in a second or subsequent agreement period to report quality measures on a pay-for-reporting basis if they have previously reported these measures in a prior agreement period. The ACO would have gained experience reporting the quality measures during the earlier agreement period, and as a result, we do not believe it would be necessary to provide any further transition period. Rather, we believe it would be appropriate to assess the ACO’s actual performance on measures that have been designated as pay for performance during all 3 years of the second or subsequent participation agreement period.

Accordingly, we propose to revise our regulations to expressly provide that during a second or subsequent participation agreement period, the ACO would continue to be assessed on its performance on each measure that has been designated as pay for performance. That is, the ACO would continue to be assessed on the quality performance standard that would otherwise apply to an ACO if it were in the third performance year of the first agreement period. We will do this by modifying § 425.502(a)(1) and (a)(2) to indicate that the performance standard will be set at the level of complete and accurate reporting of all quality measures only for the first performance year of an ACO’s first agreement period, and that during subsequent agreement periods, pay for performance will apply for all three performance years. As proposed earlier in this section, new measures that are added to the quality performance standard would be phased in along the timeline indicated when the measure is added and in operational documents.

d. Proposed Timing for Updating Benchmarks

As discussed in the CY 2014 PFS final rule with comment (78 FR 74761), we have further considered suggestions from ACOs regarding the appropriate number of years that a benchmark should apply before it is updated. ACOs suggested that there be a longer period of time to gain experience with the performance measure, before benchmarks are further updated. ACOs

also indicated that it would be desirable to set and leave benchmarks static for additional performance years so that they have a quality improvement target to strive for that does not change frequently. ACOs believe that a stable benchmark would enhance their ability to be rewarded for quality improvement, as well as quality achievement, from one year to the next. We recognize, however, that there could be some concerns about lengthening the period between updates to the quality performance benchmarks. The current benchmarks as discussed previously, for example, are based on a combination of all available Medicare FFS quality data, including data gathered under PQRS, the Shared Savings Program and Pioneer ACO Model, but not MA quality data. To the extent that the benchmarks are based on quality data reported by a large number of ACOs and other FFS entities, we believe it is reasonable to use them to assess the quality performance of ACOs. Furthermore, as discussed in the 2014 PFS final rule with comment period (78 FR 74761), we are also persuaded that we should establish a longer period between updates to the benchmarks in order to provide ACOs with a more stable target for measuring quality improvement. In the absence of this stability, it could be very difficult to assess quality improvement from year to year.

In the 2014 PFS final rule with comment period, we noted that we intended to address the number of years between updates to the benchmarks again in future rulemaking in order to allow for public comment. Therefore, we considered how long benchmarks should be in place before they are updated. We considered a range of options, from setting benchmarks every 2 years to setting benchmarks every 5 years. For example, we considered the option of setting benchmarks every 3 years. However, we note that ACO agreement periods are 3 years long and a new cohort of ACOs enters the program each year. As a result, setting benchmarks every 3 years might advantage some ACOs over others, particularly ACOs that have an agreement period during which benchmarks are not updated. Therefore, we propose to update benchmarks every 2 years. We believe 2 years is an appropriate amount of time because the Shared Savings Program is relatively new and we do not have extensive experience in setting benchmarks under the Shared Savings Program. Updating the benchmarks every 2 years would enable us to be more flexible and give us the ability to make adjustments more

frequently if appropriate. We note, however, that we may revisit this policy as more ACOs enter the program, more FFS data is collected which could help us better understand to what extent benchmarks should vary from year to year, or if we make any future proposals regarding the use of MA quality data for setting benchmarks.

Accordingly, we propose to revise § 425.502(b) to add a new paragraph (b)(4)(i), which will provide that CMS will update benchmarks every 2 years. To illustrate this proposed policy, the existing quality performance benchmarks, which are based on data submitted in 2013 for the 2012 reporting period would apply for a total of 2 performance years (the 2014 and 2015 performance years) after which we would reset the benchmarks for all ACOs based on data for the 2014 reporting period that is reported during 2015. These updated benchmarks would

apply for the 2016 and 2017 performance years. This timeline is summarized in Table 54. Under this proposal, ACOs would have a stable target for quality achievement for 2 years, which should improve the opportunity for ACOs to be rewarded for improvement from year to year compared to that benchmark. We also propose to revise § 425.502(b) to add a new paragraph (b)(4)(ii), which will provide that for measures introduced in the first year of the 2-year benchmarking cycle, the benchmark will be established in the second year and updated along with the other measures at the start of the next 2-year benchmarking cycle.

We seek comment on this proposal. We specifically seek comment on the appropriate number of years that a benchmark should remain stable before it is updated. We also welcome comments about when annual updates might be appropriate such as when

there is a substantive specification change to a measure between years. For instance, the age range used for the breast cancer screening measure is different in 2014 than in 2013, or when the measure owner modifies or retires a measure. Additionally, although we are proposing to retain our current policy of using the most recent available data to set the quality performance benchmarks, we also seek comment on whether data from other reporting periods should also be considered in establishing benchmarks that will apply for 2 performance years. Specifically, we seek input on whether data from multiple years should be used to help provide more stable benchmarks. For example, should data submitted for the 2013 and 2014 reporting periods be combined to set benchmarks for the 2016 and 2017 performance years?

TABLE 54—PROPOSED TIMELINE FOR SETTING AND UPDATING QUALITY PERFORMANCE BENCHMARKS

Reporting period for data used to set benchmark	Year data is collected, analyzed, and benchmark is published	Performance year and reporting period to which benchmark applies
2012	2013	2014 & 2015
2014	2015	2016 & 2017
2016	2017	2018 & 2019

4. Rewarding Quality Improvement

a. Current Approach To Rewarding ACOs for Both Quality Attainment and Quality Improvement

ACOs must meet a CMS-specified quality performance standard in order to be eligible to share in savings. The Shared Savings Program quality performance standard currently consists of a set of quality measures spanning four domains that are collected via the patient and caregiver experience of care survey, calculated by CMS from internal administrative and claims data, and submitted by the ACO through the CMS web interface. The four domains include patient/caregiver experience of care, care coordination/patient safety, preventive health, and at-risk populations. The measures collected through the CMS web interface are also used to determine whether eligible professionals that bill through the TIN of an ACO participant qualify for the PQRS incentive payment or avoid the downward PQRS payment adjustment. Eligible professionals that bill through the TIN of an ACO participant may qualify for the PQRS incentive payment or avoid the downward PQRS payment adjustment when the ACO satisfactorily

reports the ACO GPRO quality measures on their behalf.

Under current policy, the quality performance standard is defined at the level of full and complete reporting for the first performance year of an ACO's agreement period. After that, an ACO must meet certain thresholds of performance and is rewarded on a sliding scale in which higher levels of quality performance translate to higher rates of shared savings. This scale, therefore, rewards improvement over time, since higher performance translates to higher shared savings. For example, an ACO that performs at the 80th percentile one year and then at the 90th percentile the next year would receive a higher level of shared savings in its second year than its first year, based on its improved quality performance. In this way, ACOs are rewarded for both attainment and improvement. This is particularly true when benchmarks are stable for more than one year, as proposed previously.

We recognize that rewards for both quality attainment, as well as quality improvement are not always built in to pay-for-performance initiatives. For example, in HVBP (Hospital Value-Based Purchasing) hospitals are scored

based on the higher of their achievement or improvement on specified quality measures, with some hospitals receiving incentive payments if their overall performance is high enough relative to their peers. In the November 2011 final rule establishing the Shared Savings Program (76 FR 67897), we indicated in response to comments that we believe the approach of offering more points for better quality performance also offers an implicit incentive for continuous quality improvements, since it incorporates a sliding scale in which higher levels of quality performance translate to higher sharing rates. We believed that high performing ACOs should do well under this approach since it recognizes and provides incentives for ACOs to maintain high quality performance in order to maximize their share of savings and minimize their share of losses.

b. Additional Rewards for Quality Improvement

ACOs and other stakeholders have suggested that the current quality points scale described above does not adequately reward ACOs for both quality attainment and improvement. They request that we further strengthen

the incentives for quality improvement by including an additional explicit reward for those ACOs that improve from one year to the next.

As discussed previously, the existing quality performance standard includes a sliding point scale that rewards ACOs for certain levels of attainment. In addition, we note that under the proposal discussed above in which we propose to establish a stable quality performance benchmark for a period of 2 years, there should be an even greater opportunity for every ACO to demonstrate improvement and be rewarded for that improvement from year to year. However, we are persuaded by suggestions from stakeholders that an additional, more explicit reward should be included for ACOs that improve their quality scores from year to year. The success of the Shared Savings Program is partially dependent on ACOs further improving the quality of the care they provide, not merely maintaining current levels of quality. Therefore, we are proposing to revise our existing quality scoring strategy to explicitly recognize and reward ACOs that make year-to-year improvements in their quality performance scores on individual measures. We believe that offering an additional and explicit reward for improving quality performance would complement and reinforce our current quality performance scoring system that implicitly takes into account improvements over prior performance and rewards ACOs with a greater share in savings for greater quality performance. We believe that adding an explicit incentive places even greater emphasis on quality improvement, encouraging all ACOs to continue to improve quality for their patient populations over time, in addition to maintaining existing high quality levels.

To develop such an approach, we looked to the MA program, which has already successfully developed and implemented a formula for measuring quality improvement. The MA five star rating program computes an improvement change score which is defined as the score for a measure in performance year minus the score in previous performance year. The MA five star rating program then measures each plan's net quality improvement by calculating the total number of significantly improved quality measures and subtracting the total number of significantly declined quality measures. This is an approach that we believe is also appropriate for measuring quality improvement for ACOs. (For more details on the formula for calculating the MA quality improvement measure, see the discussion in "Medicare 2014

Part C & D Star Rating Technical Notes", Attachment I, page 80, which can be downloaded from the CMS Web site at <http://www.cms.gov/Medicare/Prescription-Drug-Coverage/PrescriptionDrugCovGenIn/PerformanceData.html>.)

We continue to believe it is important to recognize that the Shared Savings Program is not a managed care program. Unlike MA, this program's design retains FFS flexibility and the freedom of choice available to beneficiaries under Medicare Parts A and B which generally necessitates different program requirements. However, in this case we believe there would be significant advantages for the Shared Savings Program to adopt the formula for a quality improvement measure that MA has already developed and implemented rather than attempt to develop a new formula for a quality improvement measure. In particular, the MA measure formula has already been fully developed and vetted with stakeholders, in the context of the MA program, with detailed operational specifications and previously shared with the public.

In addition, we believe it is important to add a quality improvement measure to the Shared Savings Program in a manner that would minimize disruption for ACOs. We believe it would be undesirable for both ACOs and the program if the quality improvement measure were added in a way that required extensive revisions to the current quality measurement methodology, for example, reweighting of the four quality measure domains. Therefore, we propose to add a quality improvement measure to award bonus points for quality improvement to each of the existing four quality measure domains. For each quality measure domain, we would award an ACO up to two additional bonus points for quality performance improvement on the quality measures within the domain. These bonus points would be added to the total points that the ACO achieved within each of the four domains. Under this proposal, the total possible points that can be achieved in a domain, including up to 2 bonus points, could not exceed the current maximum total points achievable within the domain. For example, as shown in Table 51, currently the total possible points for the patient/caregiver experience domain, which has seven individual measures, is 14 total possible points. Under this proposal to provide for quality improvement bonus points, the maximum possible points within this domain would continue to be 14. If an ACO scored 12 points and was awarded two additional bonus points for quality

improvement then the ACO's total points for this domain would be 14. However, if instead this same ACO had scored 13 points, then this ACO's total points after adding the bonus points could still not exceed 14.

ACOs would achieve bonus points for this quality improvement measure in a domain if they achieve statistically significant levels of quality improvement for measures within the domain, as discussed below. Otherwise, the current methodology for calculating the ACO's overall quality performance score would continue to apply (see § 425.502(e) and 76 FR 67895 through 67900). Additional details about the proposal to incorporate bonus points into the quality performance scoring methodology follow:

Table 51 shows the maximum possible points that currently may be earned by an ACO in each domain and for all domains. Table 52 shows the maximum possible points that may be earned under the proposed quality measures changes. The data in Tables 51 and 52 are not affected by this proposal to provide for bonus points for quality improvement and do not include the proposed maximum of two bonus points in each domain. The quality improvement measure scoring for a domain would be based on the ACO's net improvement in quality for the other measures in the domain. The calculation of the quality improvement measure for each domain would generally be based on the formula used for the MA five star rating program, as follows:

$$\text{Improvement Change Score} = \text{score for a measure in performance year} - \text{score in previous performance year.}$$

In general, for a measure to be eligible to be included for purposes of determining quality improvement and awarding bonus points in a domain for a performance year, the measure must be a measure for which an ACO was scored in both the performance year and the immediately preceding performance year. Measures that were not scored in both the performance year and the immediately preceding performance year, for example, new measures, would not be included in the assessment of improvement. Otherwise, for purposes of determining quality improvement and awarding bonus points, we would include all of the individual measures within the domain, including both pay-for-reporting measures and pay-for-performance measures. We believe it would be appropriate to include pay-for-reporting measures for purposes of determining quality improvement and

awarding bonus points since under § 425.500(f) ACOs that fail to report all quality measures, including pay-for-reporting measures completely, accurately, and timely may be subject to termination or other corrective action. As an example, pay for reporting applies to the CAHPS health status/functional status measure for all three performance years. However, the ACO's performance on the health status/functional status measure would still be considered in performance years two and three when we evaluate whether an ACO should be awarded bonus points.

In determining improvement, the actual performance score achieved by the ACO on the measure would be used, not the score used to determine shared savings. In other words, we calculate a performance score for each measure, regardless of whether it is pay for reporting or pay for performance, and include the score in the report we provide to the ACO. For example, all measures are pay for reporting in the first year of an ACO's first agreement period, but even though the ACO will receive full credit for all reported measures, its actual performance on those measures will also be scored and provided to the ACO for informational purposes. We believe it is appropriate to use these actual performance scores to assess improvement on a measure from year to year, regardless of whether the measure is designated as a pay for reporting or a pay for performance measure in that performance year because the performance scores achieved by the ACO provide the best indication of the actual change in quality performance by the ACO.

If the ACO is in its first performance year of its first agreement period, then it would not be possible, of course, to measure quality improvement. Therefore, for these ACOs the existing scoring methodology would continue to apply and no bonus points would be awarded. If an ACO in its second or subsequent performance year does not experience an improvement nor a decline in quality performance for any of the selected measures compared to its previous reporting period, or it experiences an improvement for some measures but has an equal or greater number of measures where quality performance has declined, then the ACO would likewise not be awarded any bonus points. If an ACO renews a participation agreement, then the measurement of quality improvement would be based on a comparison between performance in the first year of the new agreement period and performance in the 3rd year of the previous agreement period.

For each qualifying measure, we would determine whether there was a significant improvement or decline between the two performance years by applying a common standard statistical test. (See the discussion of the t-test for calculating the MA quality improvement measure in "Medicare 2014 Part C & D Star Rating Technical Notes", Attachment I, page 80, which can be downloaded from the CMS Web site at <http://www.cms.gov/Medicare/Prescription-Drug-Coverage/PrescriptionDrugCovGenIn/PerformanceData.html>). Statistical significance testing in this case assesses how unlikely it is that differences as big as those observed would be due to chance when the performance is actually the same. Under this methodology, we can be reasonably certain, at a 95 percent level of confidence, that statistically significant differences in an ACO's quality measure performance for a year compared to the previous year are real and not simply due to random variation in measure sampling.

The awarding of bonus points would be based on an ACO's net improvement within a domain, and would be calculated by determining the total number of significantly improved measures and subtracting the total number of significantly declined measures. Up to two bonus points would be awarded on a sliding scale based on the ACO's net improvement for the domain to the total number of individual measures in the domain. Specifically, the bonus points, up to a maximum of 2 points, would be awarded in direct proportion to the ACO's net improvement for the domain to the total number of individual measures in the domain. For example, there are seven individual measures for the patient/caregiver experience of care domain. If the ACO achieved a significant quality increase in all seven measures then the ACO would be awarded the maximum of two bonus points for this domain. However, if the ACO achieved a significant quality increase in only one of the seven measures in this domain and no significant quality decline on any of the measures then the ACO would be awarded 0.29 bonus points for quality improvement in the domain that is $\frac{1}{7}$ times 2 = 0.29. The total points that the ACO could achieve in this domain could still not exceed the current maximum of 14 points shown in Table 51.

Tables 51 and 52 reflect the current quality measure scoring methodology which would continue under this proposal. These tables show the number

of points available per domain under both the current quality performance standard and the proposed revisions to the quality performance standard.

Consistent with our current quality scoring methodology, the total points earned for measures in each domain, including any quality improvement bonus points up to the total possible points, would be summed and divided by the total points available for that domain to produce an overall domain score of the percentage of points earned versus points available. The percentage score for each domain will be averaged together to generate a final overall quality performance score and sharing rate for each ACO that will be used to determine the amount of savings it shares or, if applicable, the amount of losses it owes, consistent with the requirements under § 425.502(e).

In developing this proposal to award bonus points for quality improvement, we considered several alternative options. Specifically, we considered whether it would be more appropriate not to award bonus points but instead to include a computed quality improvement measure that would be incorporated into the current scoring methodology just as any other measure would be added. Under this alternative approach, we would increase the total possible points that could be awarded in a domain. However, we did not propose that approach because we believe that awarding bonus points would provide the desired incentive, would be more understandable and less disruptive, and would not require extensive changes to the quality performance standard. By awarding bonus points we also avoid the need to develop ways to avoid unfairly penalizing new ACOs. Similarly, ACOs that have already achieved a very high level of quality for an individual measure may not be able to achieve further statistically significant improvement for the measure. Such ACOs could otherwise be disadvantaged if they were not able to earn performance points for a new quality improvement measure added to the total measures in the domain. We believe our quality improvement proposal mitigates these concerns because the measure recognizes incremental improvement at higher levels of performance and does not impose any penalty on ACOs that have already achieved a high level of performance.

We also considered whether we should provide an even greater additional incentive by increasing the total possible bonus points, perhaps up to 4 points to provide a higher incentive for greater levels of quality

improvement. However, we are not proposing that option because we are concerned that awarding 4 points for the quality improvement measure could overweight the additional incentive for quality improvement given that the program already rewards higher performance with a greater share of any savings.

In addition, we have some concerns about whether it would be appropriate to use the “pay for reporting” data reported to us, given that the accuracy does not affect an ACO’s quality performance score in the first performance year. Therefore, we considered whether the proposed quality improvement score should apply only to those ACOs that have completed at least two performance years. Under this alternative approach, ACOs would have an opportunity to be assessed based on their actual quality measure performance before being assessed on their quality improvement scores. We did not select this approach because we wanted to provide an incentive that would apply as soon as possible in the agreement period. Furthermore, as noted earlier, we believe it would be appropriate to include pay-for-reporting measures for purposes of awarding bonus points since under § 425.500(f) ACOs are required to report pay-for-reporting measures completely, accurately, and timely.

We are proposing to add a new paragraph (e)(4) to § 425.502 to incorporate this proposed process for calculating bonus points for quality improvement into the quality performance scoring methodology. We seek comments on this proposal and welcome comments on the alternative approaches discussed above. We also seek comments on whether there are other alternative approaches to explicitly rewarding quality improvement for ACOs, and whether the implicit reward for quality improvement provided under the current regulations is sufficient.

We also welcome any suggestions on how the Shared Savings Program might integrate elements of other quality improvement methodologies such as those employed by HVBP or MA. Such comments would be considered in developing possible future proposals to further align with other Medicare quality improvement programs.

5. Technical Corrections

Currently § 425.502(d)(2)(ii) states that ACOs must score above the minimum attainment level determined by CMS on 70 percent of the measures in each domain. If an ACO fails to achieve the minimum attainment level

on at least 70 percent of the measures in a domain, CMS will take the actions described in § 425.216(c). We note that § 425.216, which addresses the actions we may take prior to termination of an ACO from the Shared Savings Program does not include a paragraph (c). To encompass all of the actions we may take prior to termination, we believe the correct reference should be to § 425.216 generally, and therefore, propose to make a technical correction to § 425.502(d)(2)(ii) to eliminate the specific reference to paragraph (c) of § 425.216. We also propose to correct a typographical error in this provision by revising “actions describe” to read “actions described.”

In addition, we are also proposing to make a technical correction to § 425.502(a)(2). This provision currently states that ACOs will be assessed on performance based on the minimum attainment level for certain measures. However, as explained above and in the November 2011 Shared Savings Program final rule (76 FR 67895 through 67896), ACO performance on a measure is assessed not only based on the minimum attainment level for the measure but also based upon the quality performance benchmark that has been established for that measure. This methodology for calculating the performance score for a measure is codified in the regulations at § 425.502(c). Accordingly, we propose to amend § 425.502(a)(2) to state that ACO performance will be assessed based on the quality performance benchmark and minimum attainment level for certain measures.

We request comments on these proposed technical corrections.

N. Value-Based Payment Modifier and Physician Feedback Program

1. Overview

Section 1848(p) of the Act requires that we establish a value-based payment modifier (VM) and apply it to specific physicians and groups of physicians the Secretary determines appropriate starting January 1, 2015, and to all physicians and groups of physicians by January 1, 2017. On or after January 1, 2017, section 1848(p)(7) of the Act provides the Secretary discretion to apply the VM to eligible professionals as defined in section 1848(k)(3)(B) of the Act. Section 1848(p)(4)(C) of the Act requires the VM to be budget neutral.

In this rule, we are proposing policies to apply the VM to all physicians and groups of physicians and also nonphysician eligible professionals and to increase the amount of payment at risk. We also are proposing to refine the

methodologies used to determine our quality and cost composites and also to establish a corrections process for 2015.

2. Governing Principles for VM Implementation

In the CY 2013 PFS final rule with comment period, we discussed the goals of the VM and also established that specific principles should govern the implementation of the VM (77 FR 69307). We refer readers to that rule for a detailed discussion and list those principles here for reference.

- *A focus on measurement and alignment.* Measures for the VM should consistently reflect differences in performance among groups or solo practitioners, reflect the diversity of services furnished, and be consistent with the National Quality Strategy and other CMS quality initiatives, including the PQRS, the Shared Savings Program, and the Medicare EHR Incentive Program.

- *A focus on physician and eligible professional choice.* Physicians and other nonphysician eligible professionals should be able to choose the level (individual or group) at which their quality performance will be assessed, reflecting eligible professionals’ choice over their practice configurations. The choice of level should align with the requirements of other physician quality reporting programs.

- *A focus on shared accountability.* The VM can facilitate shared accountability by assessing performance at the group level and by focusing on the total costs of care, not just the costs of care furnished by an individual professional.

- *A focus on actionable information.* The Quality and Resource Use Reports (QRURs) should provide meaningful and actionable information to help groups and solo practitioners identify clinical areas where they are doing well, as well as areas in which performance could be improved by providing groups and solo practitioners with QRURs on the quality and cost of care they furnish to their patients.

- *A focus on a gradual implementation.* The VM should focus initially on identifying high and low performing groups and solo practitioners. As we gain more experience with physician measurement tools and methodologies, we can broaden the scope of measures assessed, refine physician peer groups, create finer payment distinctions, and provide greater payment incentives for high performance.

3. Overview of Existing Policies for the Physician VM

In the CY 2013 PFS final rule with comment period (77 FR 69310), we finalized policies to phase-in the VM by applying it starting January 1, 2015, to payments under the Medicare PFS for physicians in groups of 100 or more eligible professionals. A summary of the existing policies that we finalized for the CY 2015 VM can be found in the CY 2013 PFS proposed rule (77 FR 44991 through 45021). Similarly, in the CY 2014 PFS final rule with comment period, we finalized policies to phase-in the VM by applying it starting January 1, 2016 to payments under the Medicare PFS for physicians in groups of 10 or more eligible professionals. The policies that we finalized for the CY 2016 VM can be found in the CY 2014 final rule with comment period (78 FR 74765 through 74787).

4. Provisions of This Proposed Rule

We are making the following proposals regarding the VM policies:

- To apply the VM to all physicians and nonphysician eligible professionals in groups with 2 or more eligible professionals and to solo practitioners starting in CY 2017.
- To make quality-tiering mandatory for groups and solo practitioners within Category 1 for the CY 2017 VM. Category 1 includes: (1) Groups that meet the criteria for satisfactory reporting of data on PQRS quality measures via the group practice reporting option (GPRO) for the CY 2017 PQRS payment adjustment; (2) groups that do not register to participate in the PQRS as a group practice participating in the PQRS GPRO in CY 2015 and that have at least 50 percent of the group's eligible professionals meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals for the CY 2017 PQRS payment adjustment, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the CY 2017 PQRS payment adjustment; and (3) solo practitioners that meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals for the CY 2017 PQRS payment adjustment, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the CY 2017 PQRS payment adjustment. However, groups

with between 2 and 9 eligible professionals and solo practitioners would be subject only to any upward or neutral adjustment determined under the quality-tiering methodology, and groups with 10 or more eligible professionals would be subject to upward, neutral, or downward adjustments determined under the quality-tiering methodology.

- To apply the VM to physicians and nonphysician eligible professionals participating in the Shared Savings Program, the Pioneer ACO Model, the CPC Initiative, or other similar Innovation Center models or CMS initiatives starting in CY 2017.
- To clarify the exclusion of non-assigned claims for non-participating providers from the VM.
- To increase the amount of payment at risk under the VM from 2.0 percent in CY 2016 to 4.0 percent in CY 2017.
- To align the quality measures and quality reporting mechanisms for the VM with those available to groups and individuals under the PQRS during the CY 2015 performance period.
- To expand the current informal inquiry process to allow additional corrections for the CY 2015 payment adjustment period.
- To address the concerns raised by NQF regarding the per capita cost measures in the cost composite.

We also seek comment on, but make no proposals regarding the treatment of hospital-based physicians with regard to the VM.

a. Group Size

Section 1848(p)(4)(B)(iii) of the Act requires the Secretary to apply the VM to items and services furnished under the PFS beginning on January 1, 2015, for specific physicians and groups of physicians the Secretary determines appropriate, and beginning not later than January 1, 2017, for all physicians and groups of physicians.

In the CY 2013 PFS final rule with comment period, we stated that we would gradually phase in the VM in CY 2015 by first applying it to large groups (77 FR 69308), which we defined as groups of physicians with 100 or more eligible professionals. In the CY 2014 PFS final rule with comment period, we continued our phase-in of the VM and adopted a policy to apply the VM in CY 2016 to groups of physicians with 10 or more eligible professionals (78 FR 74765–74767).

As mentioned above, section 1848(p)(4)(B)(iii)(II) of the Act requires the Secretary to apply the VM to items and services furnished under the PFS beginning not later than January 1, 2017, for all physicians and groups of physicians. Therefore, we propose to apply the VM in CY 2017 and each subsequent calendar year payment adjustment period to physicians in groups of physicians with 2 or more eligible professionals and to physicians who are solo practitioners. For purposes of the VM, we defined a physician, a group of physicians, and an eligible professional in the CY 2013 PFS final rule with comment period (77 FR 69307–69310). We propose to define a “solo practitioner” at § 414.1205 as a single Tax Identification Number (TIN) with 1 eligible professional who is identified by an individual National Provider Identifier (NPI) billing under the TIN. This proposal completes our phase in of the VM as required by the Act. Please note that in section III.N.4.b of this proposed rule, we discuss our proposal to also apply the VM to nonphysician eligible professionals in groups subject to the VM and to nonphysician eligible professionals who are solo practitioners in CY 2017 and subsequent CY payment adjustment periods. Additionally, we note that in section III.N.4.g of this proposed rule, we state that performance on quality and cost measures in CY 2015 will be used to calculate the VM that is applied to items and services for which payment is made under the PFS during CY 2017.

Table 55 shows the number of groups, eligible professionals, physicians, and nonphysician eligible professionals in groups of various sizes based on an analysis of CY 2012 claims with a 90-day run-out period. We note that the number of eligible professionals includes other practitioners, such as physician assistants and nurse practitioners, in addition to physicians. We estimate that our proposals to apply the VM to all groups with 2 or more eligible professionals and to all solo practitioners in CY 2017 would affect approximately 83,500 groups and 210,000 solo practitioners (as identified by their TINs) that consist of approximately 815,000 physicians and 315,000 nonphysician eligible professionals.

TABLE 55—ELIGIBLE PROFESSIONAL/PHYSICIAN GROUP SIZE DISTRIBUTION (2012 CLAIMS)

Group size	Number of groups (TINs)*	Eligible professionals (EPs)	Number of physicians	Number of non-physician EPs	Percent of physicians	Percent of non-physician EPs
100+ EPs	1,044	303,009	223,917	79,092	27	25
50–99 EPs	1,526	103,998	71,089	32,909	9	10
25–49 EPs	3,675	125,314	85,127	40,187	10	13
20–24 EPs	1,831	39,887	27,115	12,772	3	4
10–19 EPs	8,356	112,553	76,905	35,648	9	11
2–9 EPs	67,065	235,756	166,807	68,949	20	22
1 EP	209,950	209,950	164,334	45,616	20	14
Total	293,447	1,130,467	815,294	315,173	100	100

*The number of groups (TINs) does not include TINs that have one or more EPs participating in the Shared Savings Program, the Pioneer ACO Model, or the Comprehensive Primary Care Initiative.

As discussed in the CY 2014 PFS proposed rule with comment period (78 FR 43500 through 43502), we conducted statistical reliability analysis on the PQRS quality measures contained in the 2010 and 2011 group and individual Quality and Resource Use Reports (QRURs). These reports contained the PQRS quality measures used in these years, and these PQRS measures are similar to the PQRS measures that will be used in the VM starting in CY 2015. The quality measures in the group reports were statistically reliable at a high level. Moreover, at that time, the average reliability score was high for 98 percent of the individually reported PQRS measures included in the individual feedback reports; therefore, with the exceptions discussed in section III.N.4.h of this proposed rule regarding the all cause hospital readmission measure, we believe that the PQRS quality measures for groups with 2 or more eligible professionals and solo practitioners will also be reliable since they are chosen by the physicians and reflect their patients' conditions and practices' clinical priorities.

We believe that we can validly and reliably apply a VM to groups with 2 or more eligible professionals and to solo practitioners because we would be basing the quality of care composite on the PQRS measures selected, and reported on, by the groups (or the eligible professionals in the groups) and the solo practitioners. We believe that the VM should recognize the diversity of medical practices and the various measures used to assess quality of care furnished by these practices and provide flexibility on the data they report for quality measures under the PQRS. Therefore, beginning in the CY 2014 performance period for the groups of physicians subject to the CY 2016 VM, we have permitted these groups for purposes of the VM to participate in the PQRS as a group under the GPRO or to have at least 50 percent of the eligible

professionals in the group participate in the PQRS as individuals (78 FR 74767 through 74768). As a result, physicians and other eligible professionals in the group are able to report data on quality measures that reflect their own clinical practice. In the latter case, as proposed in section III.N.4.c of this proposed rule, a group would be included in Category 1 (as described in section III.N.4.c of this proposed rule) if at least 50 percent of the eligible professionals in the group meet the criteria to avoid the CY 2017 PQRS payment adjustment by using any of the reporting options available to them under the PQRS in CY 2015.

We also conducted statistical reliability analyses on the cost measures contained in the 2010 and 2011 group and individual QRURs. These reports contained the same 5 per capita cost measures that will be used for the VM. The cost measures in the group reports were statistically reliable at a high level, and the average reliability score was high for all of the cost measures included in the individual feedback reports. In addition, as discussed in the CY 2014 PFS final rule with comment period (78 FR 74774–74784), we are including the Medicare Spending per Beneficiary (MSPB) measure in the cost composite of the VM and are adjusting the cost comparison approach to consider the medical specialty composition of the group of physicians. Based on an analysis of CY 2012 claims, we estimate that approximately 48 percent of all eligible professionals are in a group (as identified by a TIN) that would have the total per capita cost measure, as identified in § 414.1235(a)(1), in its cost composite score; approximately 41 percent of all eligible professionals are in a TIN that would have the MSPB measure in its cost composite score; and approximately 34 percent of all eligible professionals are in a TIN that would have both measures in its cost composite score. Therefore, we believe

that we will be able to calculate a cost composite score for a significant number of groups and solo practitioners. In the CY 2014 PFS final rule with comment period, we finalized the proposal that if we are unable to attribute a sufficient number of beneficiaries to a group of physicians subject to the VM, and thus, are unable to calculate any of the cost measures with at least 20 cases, then the group's cost composite score would be classified as "average" under the quality-tiering methodology (78 FR 74780 through 74781). However, we note this policy was codified in § 414.1270(b)(5) as a group of physicians subject to the value-based payment modifier will receive a cost composite score that is classified as "average" under § 414.1275(b)(2) if such group does not have at least one cost measure with at least 20 cases. We believe the regulation text at § 414.1270(b)(5) better reflects the intent of this policy, and accordingly, we propose to clarify that the description of this policy in the preamble of the CY 2014 PFS final rule with comment period (78 FR 74780 through 74781) should be the same as the regulation text at § 414.1270(b)(5). We propose to apply the same policy to groups and solo practitioners beginning in CY 2017. That is, a group or solo practitioner would receive a cost composite score that is classified as "average" under the quality-tiering methodology if the group or solo practitioner does not have at least one cost measure with at least 20 cases. We propose to revise § 414.1270 accordingly.

We believe we have provided smaller groups and solo practitioners sufficient lead time to understand how the VM works and how to participate in the PQRS. In the late summer of 2014, we plan to disseminate QRURs based on CY 2013 data to all groups of physicians and physicians who are solo practitioners. These QRURs will contain performance information on the quality

and cost measures used to calculate the quality and cost composites of the VM and will show how all TINs would fare under the policies established for the VM. The QRURs will also include additional information about the TINs' performance on the MSPB measure, individually-reported PQRS measures, and the specialty-adjusted cost measures. Then, during the summer of 2015, we intend to disseminate QRURs based on CY 2014 data to all groups of physicians and physicians who are solo practitioners and the reports would show how all TINs would fare under the policies established for the VM for the CY 2016 payment adjustment period. Thus, we believe all groups and solo practitioners will have adequate data to improve performance on the quality and cost measures that will be used to calculate the VM in CY 2017. Although we are sensitive to providing groups and solo practitioners with adequate lead time to understand the impact of the beneficiary attribution method used for the VM, we believe our proposal to hold harmless groups with between 2 and 9 eligible professionals and solo practitioners from any downward payment adjustments under quality-tiering in CY 2017 would likely mitigate unintended consequences that could occur (see section III.N.4.c of this proposed rule).

Accordingly, we propose to revise the regulations at § 414.1210 to reflect that beginning in the CY 2017 payment adjustment period, the VM would be applied to physician and nonphysician eligible professionals in groups with 2 or more eligible professionals and to solo practitioners based on the performance period described at § 414.1215. As established in the CY 2014 PFS final rule with comment period (78 FR 74772) and stated in section III.N.4.g of this proposed rule, CY 2015 is the performance period for the CY 2017 VM. Since the VM policies established for the CY 2017 payment adjustment period and each subsequent calendar year payment adjustment period would apply to groups and solo practitioners, we propose to amend the regulations under subpart N to add references to solo practitioners accordingly. We seek comments on all of these proposals.

b. Application of the VM to Nonphysician EPs

Section 1848(p) of the Act requires that we establish a VM and apply it to items and services furnished under the PFS beginning on January 1, 2015, for specific physicians and groups of physicians the Secretary determines appropriate, and beginning not later

than January 1, 2017, for all physicians and groups of physicians. Section 1848(p)(7) of the Act provides the Secretary discretion to apply the VM on or after January 1, 2017 to eligible professionals as defined in section 1848(k)(3)(B) of the Act. In CY 2015 and CY 2016, we apply the VM to the items and services billed under the PFS by physicians in groups (as identified by their Medicare-enrolled TIN) subject to the VM, but not to the other eligible professionals that also may bill under the TIN. We finalized in the CY 2013 PFS final rule with comment period (77 FR 69307 through 69310) that physicians, as defined in section 1861(r) of the Act, include doctors of medicine or osteopathy, doctors of dental surgery or dental medicine, doctors of podiatric medicine, doctors of optometry, and chiropractors.

In section III.N.4.a. of this proposed rule, we discussed our proposal to apply the VM in the CY 2017 payment adjustment period and each subsequent calendar year payment adjustment period to physicians in groups of physicians with 2 or more eligible professionals and to physicians who are solo practitioners as required by section 1848(p)(4)(B)(iii)(II) of the Act.

Under the discretion afforded the Secretary in section 1848(p)(7) of the Act, we propose to apply the VM beginning in the CY 2017 payment adjustment period to all of the eligible professionals in groups with 2 or more eligible professionals and to eligible professionals who are solo practitioners. That is, we propose to apply the VM beginning in CY 2017 to the items and services billed under the PFS by all of the physicians and nonphysician eligible professionals who bill under a group's TIN. We propose to apply the VM beginning in CY 2017 to groups that consist only of nonphysician eligible professionals (for example, groups with only nurse practitioners or physician assistants). We propose to modify the definition of "group of physicians" under § 414.1205 to also include the term "group" to reflect these proposals. We also propose to apply the VM beginning in CY 2017 to nonphysician eligible professionals who are solo practitioners. Additionally, we propose that physicians and nonphysician eligible professionals would be subject to the same VM policies established in earlier rulemakings and under 42 CFR part 414, subpart N. For example, nonphysician eligible professionals would be subject to the same amount of payment at risk and quality-tiering policies as physicians. We propose to modify the regulations under 42 CFR part 414, subpart N accordingly.

We finalized in the CY 2013 PFS final rule with comment period (77 FR 69307 through 69310) that, for purposes of establishing group size, we will use the definition of an eligible professional as specified in section 1848(k)(3)(B) of the Act. This section defines an eligible professional as any of the following: (1) A physician; (2) a practitioner described in section 1842(b)(18)(C) of the Act: physician assistant, nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, certified nurse-midwife, clinical social worker, clinical psychologist, registered dietician, or nutrition professional; (3) a physical or occupational therapist or a qualified speech-language pathologist; or (4) a qualified audiologist. Beginning CY 2017, under our proposal, the VM would apply to all of the eligible professionals, as specified in section 1848(k)(3)(B) of the Act, that bill under a group's TIN based on the TIN's performance during the applicable performance period. During the payment adjustment period, all of the nonphysician eligible professionals who bill under a group's TIN would be subject to the same VM that would apply to the physicians who bill under that TIN.

We stated in the CY 2013 PFS final rule with comment period (77 FR 69307) that one of the principles that govern the implementation of the VM is our focus on shared accountability and that we have a role in fostering high value care for individual patients, but also focusing on how that patient interacts with the health care system generally. We stated our belief that the VM can facilitate shared accountability by assessing performance at the group practice level and by focusing on the total costs of care, not just the costs of care furnished by an individual physician. We believe that our proposal to apply the VM to the physicians and nonphysician eligible professionals in a group will foster shared accountability among all of the eligible professionals in the group and encourage them to seek innovative ways to furnish high-quality, patient-centered, and efficient care to the Medicare FFS patients they treat.

Moreover, section 1848(p)(5) of the Act requires us to, as appropriate, apply the VM "in a manner that promotes systems-based care." We stated in the CY 2013 PFS proposed rule that, in this context, systems-based care is the processes and workflows that (1) make effective use of information technologies, (2) develop effective teams, (3) coordinate care across patient conditions, services, and settings over time, and (4) incorporate performance and outcome measurements for

improvement and accountability.¹⁰ (77 FR 44996) We believe that applying the VM to all of the eligible professionals in a group, rather than only the physicians in the group, would enhance their ability and the resources to redesign such processes and workflows to achieve these objectives and furnish high-quality and cost-effective clinical care with greater care coordination.

As mentioned above, we are also proposing to apply the VM to groups that consist only of nonphysician eligible professionals, as well as solo practitioners who are nonphysician eligible professionals beginning in CY 2017. The quality of care composite for these groups and solo practitioners would be based on the quality data submitted under the PQRS at the group or individual level in accordance with our policy. To the extent we are able to attribute beneficiaries to these groups and solo practitioners under the attribution methodology proposed in section III.N.4.j of this proposed rule to calculate cost measures, we propose to calculate the cost composite using those cost measures. If a cost composite cannot be calculated for a group or solo practitioner, then we propose to classify the group or solo practitioner's cost composite as "average" as specified in § 414.1270. We seek comments on all of our proposed policies for applying the VM to nonphysician eligible professionals beginning in CY 2017.

c. Approach To Setting the VM Adjustment Based on PQRS Participation

In the CY 2014 PFS final rule with comment period (78 FR 74767–74768), we adopted a policy to categorize groups of physicians subject to the VM in CY 2016 based on a group's participation in the PQRS. Specifically, we categorize groups of physicians eligible for the CY 2016 VM into two categories. Category 1 includes groups of physicians that (a) meet the criteria for satisfactory reporting of data on PQRS quality measures through the GPRO for the CY 2016 PQRS payment adjustment or (b) do not register to participate in the PQRS as a group practice in CY 2014 and that have at least 50 percent of the group's eligible professionals meet the criteria for satisfactory reporting of data on PQRS

quality measures as individuals for the CY 2016 PQRS payment adjustment, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the CY 2016 PQRS payment adjustment. For a group of physicians that is subject to the CY 2016 VM to be included in Category 1, the criteria for satisfactory reporting (or the criteria for satisfactory participation, if the PQRS-qualified clinical data registry reporting mechanism is selected) must be met during the CY 2014 reporting period for the PQRS CY 2016 payment adjustment. For the CY 2016 VM, Category 2 includes those groups of physicians that are subject to the CY 2016 VM and do not fall within Category 1. For those groups of physicians in Category 2, the VM for CY 2016 is –2.0 percent.

We propose to use a similar two-category approach for the CY 2017 VM based on participation in the PQRS by groups and solo practitioners. To continue to align the VM with the PQRS and accommodate the various ways in which EPs can participate in the PQRS, for purposes of the CY 2017 VM, we propose that Category 1 would include those groups that meet the criteria for satisfactory reporting of data on PQRS quality measures via the GPRO (through use of the web-interface, EHR, or registry reporting mechanism, as proposed in section III.K of this proposed rule) for the CY 2017 PQRS payment adjustment. Our proposed criteria for satisfactory reporting of data on PQRS quality measures via the GPRO for the PQRS payment adjustment for CY 2017 are described in section III.K of this proposed rule. We also propose to include in Category 1 groups that do not register to participate in the PQRS as a group practice participating in the PQRS group practice reporting option (GPRO) in CY 2015 and that have at least 50 percent of the group's eligible professionals meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals (through the use of claims, EHR, or registry reporting mechanism) for the CY 2017 PQRS payment adjustment, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the CY 2017 PQRS payment adjustment, all as proposed in section III.K of this proposed rule. We note that these proposals are consistent with the policies for inclusion in Category 1 as established for the CY 2016 VM (78 FR 74767 through 74768). We would maintain the 50 percent threshold for the CY 2017 VM as we expand the application of the VM to all groups and

solo practitioners in CY 2017. Our proposed criteria for satisfactory reporting by individual eligible professionals for the claims, EHR, and registry reporting mechanisms and for satisfactory participation in a qualified clinical data registry for the CY 2017 PQRS payment adjustment are described in section III.K of this proposed rule. Lastly, we propose to include in Category 1 those solo practitioners that meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals (through the use of claims, registry, or EHR reporting mechanism) for the CY 2017 PQRS payment adjustment, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the CY 2017 PQRS payment adjustment, all as proposed in section III.K of this proposed rule. Category 2 would include those groups and solo practitioners that are subject to the CY 2017 VM and do not fall within Category 1. As discussed in section III.N.4.f of this proposed rule, for CY 2017, we are proposing to apply a –4.0 percent VM to groups with two or more eligible professionals and solo practitioners that fall in Category 2. We seek comment on these proposals.

For a group and a solo practitioner that would be subject to the CY 2017 VM to be included in Category 1, the criteria for satisfactory reporting (or the criteria for satisfactory participation, in the case of solo practitioners and the 50 percent option described above for groups) would need to be met during the reporting periods occurring in CY 2015 for the CY 2017 PQRS payment adjustment. As noted earlier, CY 2015 is the performance period for the CY 2017 payment adjustment period for the VM. In the event that the criteria that are finalized for the CY 2017 PQRS payment adjustment differ from what is proposed for the PQRS in this proposed rule, our intention is to align the criteria for inclusion in Category 1 to the extent possible with the criteria that are ultimately established for the CY 2017 PQRS payment adjustment.

In the CY 2014 PFS final rule with comment period (78 FR 74768–74770), we finalized that the quality-tiering methodology will apply to all groups in Category 1 for the VM for CY 2016, except that groups of physicians with between 10 and 99 eligible professionals would be subject only to upward or neutral adjustments derived under the quality-tiering methodology, while groups of physicians with 100 or more eligible professionals would be subject to upward, neutral, or downward adjustments derived under the quality-

¹⁰ Johnson JK, Miller SH, Horowitz SD. Systems-based practice: Improving the safety and quality of patient care by recognizing and improving the systems in which we work. In: Henriksen K, Battles JB, Keyes MA, Grady ML, editors. *Advances in Patient Safety: New Directions and Alternative Approaches*, Vol 2: Culture and Redesign. AHRQ Publication No. 08–0034–2. Rockville, MD: Agency for Healthcare Research and Quality; August 2008. p. 321–330.

tiering methodology. In other words, we finalized that groups of physicians in Category 1 with between 10 and 99 eligible professionals would be held harmless from any downward adjustments derived from the quality-tiering methodology for the CY 2016 VM.

For the CY 2017 VM, we propose to continue a similar phase-in of the quality-tiering based on the number of eligible professionals in the group. We propose to apply the quality-tiering methodology to all groups and solo practitioners in Category 1 for the VM for CY 2017, except that groups with between 2 and 9 eligible professionals and solo practitioners would be subject only to upward or neutral adjustments derived under the quality-tiering methodology, while groups with 10 or more eligible professionals would be subject to upward, neutral, or downward adjustments derived under the quality-tiering methodology. In other words, we propose that solo practitioners and groups with between 2 and 9 eligible professionals in Category 1 would be held harmless from any downward adjustments derived from the quality-tiering methodology for the CY 2017 VM. Accordingly, we propose to revise § 414.1270 to reflect these proposals. We believe this proposed approach would reward groups and solo practitioners that provide high-quality/low-cost care, reduce program complexity, and would also fully engage groups and solo practitioners into the VM as we complete the phase-in of the VM in CY 2017. We seek comments on these proposals.

We believe it is appropriate to hold groups with between 2 and 9 eligible professionals and solo practitioners in Category 1 harmless from any downward adjustments under the quality-tiering methodology, which is similar to the policy we apply to groups with between 10 and 99 eligible professionals during the first year the VM applies to them (CY 2016). We note that we anticipate applying the CY 2018 VM with both upward and downward adjustments based on a performance period of CY 2016 to all groups and solo practitioners, and therefore, we would make proposals in future rulemaking accordingly.

For groups with between 10 and 99 eligible professionals, we believe it is appropriate to begin both the upward and the downward payment adjustments under the quality-tiering methodology for the CY 2017 VM. As stated in the CY 2014 PFS final rule with comment period (78 FR 74769), on September 16, 2013, we made available to all groups of 25 or more eligible

professionals an annual QRUR based on 2012 data to help groups estimate their quality and cost composites. As discussed in section III.N.4.a. of this proposed rule, in the late summer of 2014, we plan to disseminate QRURs based on CY 2013 data to all groups of physicians and physicians who are solo practitioners. These QRURs will contain performance information on the quality and cost measures used to calculate the quality and cost composites of the VM and will show how all TINs would fare under the policies established for the VM for the CY 2015 payment adjustment period. Then, during the summer of 2015, we intend to disseminate QRURs based on CY 2014 data to all groups and solo practitioners, and the reports would show how all TINs would fare under the policies established for the VM for the CY 2016 payment adjustment period. The QRURs will also include additional information about the TINs' performance on the MSPB measure, individually-reported PQRS measures, and the specialty-adjusted cost measures. Thus, we believe groups with between 10 and 99 eligible professionals will have adequate data to improve performance on the quality and cost measures that will be used to calculate the VM in CY 2017. As a result, we believe it is appropriate to apply both upward and downward adjustments under the quality-tiering methodology to groups with 10 or more eligible professionals in 2017.

Based on an analysis of CY 2012 claims, we estimate that approximately 6 percent of all eligible professionals are in a Category 1 TIN that would be classified in tiers that would earn an upward adjustment, approximately 11 percent of all eligible professionals are in a Category 1 TIN that would be classified in tiers that would receive a downward adjustment, and approximately 83 percent of all eligible professionals are in a Category 1 TIN that would receive no payment adjustment in CY 2017. These results suggest that our quality-tiering methodology identifies a small number of groups and solo practitioners that are outliers—both high and low performers—in terms of whose payments would be affected by the VM, thus limiting any widespread unintended consequences.

We will continue to monitor the VM program and continue to examine the characteristics of those groups that could be subject to an upward or downward payment adjustment under our quality-tiering methodology to determine whether our policies create anomalous effects in ways that do not reflect consistent differences in

performance among physicians and physician groups.

d. Application of the VM to Physicians and Nonphysician Eligible Professionals that Participate in the Shared Savings Program, the Pioneer ACO Model, the CPC Initiative, or Other Similar Innovation Center Models or CMS Initiatives

We established a policy in the CY 2013 PFS final rule with comment period (77 FR 69313) to not apply the VM in CY 2015 and CY 2016 to groups of physicians that participate in the Shared Savings Program Accountable Care Organizations (ACOs), the Pioneer ACO Model, the Comprehensive Primary Care (CPC) Initiative, or other similar Innovation Center or CMS initiatives. We stated in the CY 2014 PFS final rule with comment period (78 FR 74766) that from an operational perspective, we will apply this policy to any group of physicians that otherwise would be subject to the VM, if one or more physician(s) in the group participate(s) in one of these programs or initiatives during the relevant performance period (CY 2013 for the CY 2015 VM, and CY 2014 for the CY 2016 VM).

Although section 1848(p)(4)(B)(iii)(I) of the Act gives the Secretary discretion to apply the VM beginning on January 1, 2015 to specific physicians and groups of physicians the Secretary determines appropriate, section 1848(p)(4)(B)(iii)(II) of the Act requires application of the VM beginning not later than January 1, 2017 to all physicians and groups of physicians. Therefore, as discussed in section III.N.4.a. of this proposed rule, we are proposing to apply the VM to all physicians in groups with 2 or more eligible professionals and to solo practitioners who are physicians starting in CY 2017. In section III.N.4.b of this proposed rule, we discussed our proposal to also apply the VM starting in CY 2017 to all nonphysician eligible professionals in groups with 2 or more eligible professionals and to solo practitioners who are nonphysician eligible professionals. We describe in this section how we propose to apply the VM beginning in the CY 2017 payment adjustment period to the physicians and nonphysician eligible professionals in groups, as well as those who are solo practitioners, participating in the Shared Savings Program, Pioneer ACO Model, the CPC Initiative, or other similar Innovation Center models or CMS initiatives.

(1) Physicians and Nonphysician Eligible Professionals That Participate in ACOs Under the Shared Savings Program

Beginning with the CY 2017 payment adjustment period, we propose to apply the VM to physicians and nonphysician eligible professionals in groups with 2 or more eligible professionals and to physicians and nonphysician eligible professionals who are solo practitioners that participate in the Shared Savings Program. Groups and solo practitioners participate in the Shared Savings Program as part of an ACO as provided in section 1899 of the Act. Under the Shared Savings Program, an ACO may consist of multiple participating groups and solo practitioners (as identified by the ACO participants' TINs). As of April 1, 2014, there are 338 ACOs participating in the Shared Savings Program. This number includes 31 ACOs that consist of only one ACO participant TIN. The ACO submits quality data on behalf of all the ACO participant TINs in that ACO under the Shared Savings Program.

Beginning with the CY 2017 payment adjustment period, we propose to classify the cost composite for the VM as "average cost" for groups and solo practitioners (as identified by the ACO's participant TINs) that participate in the Shared Savings Program during the payment adjustment period (for example, CY 2017). We propose to apply "average cost" to these groups and solo practitioners regardless of whether they participated in the Shared Savings Program during the performance period (for example, in CY 2015 for the CY 2017 VM). We believe that it would not be appropriate to apply the quality-tiering methodology to calculate the cost composite for these groups and solo practitioners because of the differences in the methodology used to calculate the cost benchmarks under the Shared Savings Program and the VM. Under the Shared Savings Program, cost benchmarks are based on the actual historical Medicare fee-for-service expenditures for beneficiaries that would have been assigned to the ACO during the historical benchmark period, and are updated to reflect changes in national FFS spending; however, the cost benchmarks under the VM are based on national averages. We believe that these are significant differences in the methodology for calculating the cost benchmarks under the two programs. Consequently, we believe that any attempt to calculate the cost composite for groups and solo practitioners participating in the Shared Savings Program using the quality-tiering

methodology would create two sets of standards for ACOs for their cost performance. We believe that having two sets of standards for ACOs for cost performance would be inappropriate and confusing. We seek comments on our proposals to classify the cost composite as "average cost" for groups and solo practitioners that participate in the Shared Savings Program during the payment adjustment period.

For groups and solo practitioners that participate in the Shared Savings Program during the performance period (for example, CY 2015), but no longer participate in the Shared Savings Program during the payment adjustment period (for example, CY 2017), we propose to apply the quality-tiering methodology to calculate the cost composite for the VM for the payment adjustment period based on the groups' and solo practitioners' performance on the cost measures, as identified under § 414.1235, during the performance period. We believe that it would be appropriate to apply the quality-tiering methodology to calculate the cost composite because these groups and solo practitioners are no longer part of the Shared Savings Program during the payment adjustment period and their cost benchmarks would be calculated only under the VM during the payment adjustment period.

Beginning with the CY 2017 payment adjustment period, we propose to calculate the quality of care composite score for the VM for groups and solo practitioners that participate in an ACO under the Shared Savings Program in accordance with the following policies:

(a) We propose to calculate the quality of care composite score based on the quality-tiering methodology using quality data submitted by the ACO, as discussed in section III.N.4.h of this proposed rule, from the performance period and apply the same score to all of the groups and solo practitioners under the ACO during the payment adjustment period. In other words, using CY 2017 as an example, we propose to calculate the quality of care composite score for the CY 2017 VM for all of the groups and solo practitioners participating in the ACO in CY 2017 based on the ACO's CY 2015 quality data. We note that in section III.N.4.h of this proposed rule, we are proposing to exclude the claims-based outcome measures identified under § 414.1230 from the calculation of the quality of care composite score for groups and solo practitioners that participate in the Shared Savings Program during the payment adjustment period.

(b) For groups and solo practitioners that participate in the ACO during the

payment adjustment period (for example, CY 2017) and either did not participate in the Shared Savings Program or were part of a different ACO during the performance period (for example, CY 2015), we propose to calculate the quality of care composite score based on the quality-tiering methodology using the quality data submitted by the ACO from the performance period. For example, if a group or solo practitioner is in ACO 1 during CY 2017, and either was not in the Shared Savings Program or was part of ACO 2 during CY 2015, we would use ACO 1's quality data from CY 2015 to calculate the quality of care composite. We believe this approach is consistent with our policy not to "track" or "carry" an individual professional's performance from one TIN to another TIN (see 77 FR 69308 through 69310). In other words, if a professional changes groups from TIN A in the performance period to TIN B in the payment adjustment period, we would apply TIN B's VM to the professional's payments for items and services billed under TIN B during the payment adjustment period.

(c) If the ACO did not exist during the performance period (for example, CY 2015), then we would not have the ACO's quality data to use in the calculation of the quality of care composite score for the payment adjustment period (for example, CY 2017). Therefore, if the ACO exists during the payment adjustment period but did not exist during the performance period, we propose to classify the quality of care composite for all groups and solo practitioners that participate in the ACO during the payment adjustment period as "average quality" for the payment adjustment period. We propose to apply this policy to groups and solo practitioners regardless of their status during the performance period—in other words, regardless of whether they participated in the Shared Savings Program as part of a different ACO, or did not exist during the performance period (for example, a TIN forms or newly enrolls in Medicare after the end of the performance period). We believe this proposal is appropriate since we would not have the ACO's quality data from the performance period to calculate a quality of care composite for all of the groups and solo practitioners participating in the ACO during the payment adjustment period. We note that some of these groups and solo practitioners may have participated in the PQRS during the performance period; therefore, we would have quality data for those groups and solo

practitioners. If they were part of a different ACO during the performance period, then we would also have that ACO's quality data. However, we do not believe that it would be appropriate to use the groups' and solo practitioners' PQRS or other ACO quality data from the performance period to calculate a quality of care composite because the groups and solo practitioners are part of a new ACO during the payment adjustment period. We believe this approach is consistent with our policy not to "track" or "carry" an individual professional's performance from one TIN to another TIN (see 77 FR 69308 through 69310). In this case, if a TIN's status changes from the performance period to the payment adjustment period (that is, participating in ACO 2 or not participating in the Shared Savings Program in the performance period, to participating in ACO 1 in the payment adjustment period), then we would not "track" or "carry" ACO 2's

quality data or the TIN's PQRS quality data to determine the quality of care composite for groups and solo practitioners that participate in ACO 1. (d) For groups and solo practitioners that participate in the Shared Savings Program during the performance period (for example, CY 2015) but no longer participate in the Shared Savings Program during the payment adjustment period (for example, CY 2017), we propose to classify the quality of care composite as "average quality" for the VM for the payment adjustment period. Since these groups and solo practitioners were part of an ACO during the performance period, we would have the ACO's quality data from that period. However, we do not believe that it would be appropriate to use the ACO's quality data from the performance period to calculate a quality of care composite because the groups and solo practitioners are no longer part of the ACO during the

payment adjustment period. We believe this approach is also consistent with our policy not to "track" or "carry" an individual professional's performance from one TIN to another TIN (see 77 FR 69308 through 69310). Even though we are proposing to classify the quality of care composite for these groups and solo practitioners as "average quality," we seek comments on whether we should use the ACO's quality data from the performance period to calculate the quality composite for these groups and solo practitioners for the payment adjustment period.

We seek comments on all of our proposals to calculate the quality composite for groups and solo practitioners participating in the Shared Savings Program as described above. A summary of these proposals is shown in Table 56 using TIN A and ACO 1 and ACO 2 as examples.

TABLE 56—SUMMARY OF PROPOSED POLICIES FOR GROUPS AND SOLO PRACTITIONERS WITH SHARED SAVINGS PROGRAM PARTICIPATION CHANGES

Scenario	TIN's Status during the performance period (for example, CY 2015)	TIN's Status during the payment adjustment period (for example, CY 2017)	TIN's Quality composite for the payment adjustment period (for example, CY 2017)	TIN's Cost composite for the payment adjustment period (for example, CY 2017)
a. <i>Continued ACO participation</i> —TIN A participates in ACO 1 during both the performance and payment adjustment periods.	TIN A is part of ACO 1.	TIN A is part of ACO 1.	Based on ACO 1's quality data from the performance period (for example, CY 2015).	Average cost.
b. <i>Joining an existing ACO and not from another ACO</i> —TIN A was not part of any ACO during the performance period, but participates in ACO 1 during the payment adjustment period (ACO 1 existed in the performance period) OR <i>Joining an existing ACO from another ACO</i> —TIN A participated in ACO 2 during the performance period, but is part of ACO 1 during the payment adjustment period (ACO 1 existed in the performance period)	TIN A is not part of any ACO and ACO 1 exists OR TIN A is not part of ACO 2 and ACO 1 exists	TIN A is part of ACO 1.	Based on ACO 1's quality data from the performance period (for example, CY 2015).	Average cost.
c. <i>Joining a new ACO as a new TIN</i> —TIN A participates in ACO 1 during the payment adjustment period (ACO 1 and TIN A did not exist in the performance period) OR <i>Joining a new ACO and not from another ACO</i> —TIN A was not part of any ACO during the performance period, but participates in ACO 1 during the payment adjustment period (ACO 1 did not exist in the performance period) OR <i>Joining a new ACO from another ACO</i> —TIN A participated in ACO 2 during the performance period, but is part of ACO 1 during the payment adjustment period (ACO 1 did not exist in the performance period).	TIN A and ACO 1 did not exist OR TIN A is not part of any ACO and ACO 1 did not exist OR TIN A is part of ACO 2 and ACO 1 did not exist.	TIN A is part of ACO 1.	Average quality	Average cost.
d. <i>Dropping out of an ACO</i> —TIN A participated in ACO 1 during the performance period, but is not part of any ACO during the payment adjustment period.	TIN A is part of ACO 1.	TIN A is not part of any ACO.	Average quality	Based on TIN A's cost data for the performance period using the quality-tiering methodology.

We believe that our proposal to apply the VM to groups and solo practitioners that participate in ACOs under the Shared Savings Program is appropriate in light of the statutory requirement under section 1848(p)(4)(B)(iii)(II) of the Act to apply the VM to all physicians and groups of physicians beginning not later than January 1, 2017. We believe our proposals, as described above, would further encourage groups and solo practitioners that participate in ACOs under the Shared Savings Program to furnish high quality care to Medicare beneficiaries by providing them with an opportunity to earn upward payment adjustments. We propose to apply the same VM, which would be calculated based on the policies proposed above, to all groups and solo practitioners, as identified by their TINs, that participate in an ACO under the Shared Savings Program during the payment adjustment period. Consequently, the same VM would also apply to the physicians and nonphysician eligible professionals in those groups and to the physicians and nonphysician eligible professionals who are solo practitioners that participate in the ACO during the payment adjustment period.

In section III.N.4.c of this proposed rule, we discussed our proposal to hold groups with between 2 and 9 eligible professionals and solo practitioners who are in Category 1 harmless from any downward adjustments under the quality-tiering methodology for the CY 2017 payment adjustment period. We propose to also hold harmless from any downward adjustments groups with between 2 and 9 eligible professionals and solo practitioners that participate in ACOs under the Shared Savings Program during the CY 2017 payment adjustment period based on their size during the performance period. We would follow our established process for determining group size, which is described at § 414.1210(c). Therefore, to the extent that a quality of care composite can be calculated for an ACO, and the cost composite would be classified as “average cost,” groups with 10 or more eligible professionals participating in the Shared Savings Program would be subject to an upward, downward, or no payment adjustment in CY 2017, and groups with between 2 and 9 eligible professionals and solo practitioners would be subject to an upward or no payment adjustment in CY 2017. We also propose that groups and solo practitioners participating in ACOs under the Shared Savings Program would be eligible for the additional upward payment adjustment

of +1.0x for caring for high-risk beneficiaries, as proposed in section III.N.4.f. We propose to modify § 414.1210 to reflect these proposals.

(2) Physicians and Nonphysician Eligible Professionals that Participate in the Pioneer ACO Model, the Comprehensive Primary Care (CPC) Initiative, or Other Similar Innovation Center Models or CMS Initiatives

Section 1115A of the Act authorizes the Innovation Center to test innovative payment and service delivery models to reduce Medicare, Medicaid, or Children’s Health Insurance Program (CHIP) expenditures, while preserving or enhancing the quality of care furnished to beneficiaries under those programs. Therefore, all models tested by the Innovation Center would be expected to assess participating entities (for example, providers, ACOs, states) based on quality and cost performance. As noted above, we established a policy in the CY 2013 PFS final rule with comment period (77 FR 69313) to not apply the VM in CY 2015 and CY 2016 to groups of physicians that are participating in the Pioneer ACO Model, the CPC Initiative, or in other Innovation Center initiatives or other CMS programs which also involve shared savings and where participants make substantial investments to report quality measures and to furnish higher quality, more efficient and effective healthcare.

In section III.N.4.a. of this proposed rule, we discussed our proposal to apply the VM to all physicians in groups with 2 or more eligible professionals and to solo practitioners who are physicians starting in CY 2017, as required under section 1848(p)(4)(B)(iii)(II) of the Act. In section III.N.4.b, we discussed our proposal to also apply the VM starting in CY 2017 to all nonphysician eligible professionals in groups with 2 or more eligible professionals and to solo practitioners who are nonphysician eligible professionals.

The Pioneer ACO Model and the CPC Initiative are scheduled to end on December 31, 2016. Therefore, the relevant performance periods for consideration for participants in these initiatives are CY 2015 for the CY 2017 VM payment adjustment period and potentially CY 2016 for the CY 2018 VM payment adjustment period. Under the Pioneer ACO Model, an ACO may consist of practitioners from multiple participating groups and solo practitioners (as identified by their individual TIN/NPI combination). Thus, a group practice may consist of one or more eligible professionals who participate in the Pioneer ACO Model

and other eligible professionals who do not participate in the Pioneer ACO Model. In the case of the CPC Initiative, a practice site may participate in the model even if one or more other practice sites that use the same TIN does not participate. Beginning with the CY 2017 payment adjustment period, we propose to apply the VM to physicians and nonphysician eligible professionals in groups with 2 or more eligible professionals and to physicians and nonphysician eligible professionals who are solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the relevant performance period in accordance with the policies described below.

(a) For groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period (for example, CY 2015) and do not participate in the Shared Savings Program or other similar Innovation Center models or CMS initiatives during the payment adjustment period (for example, CY 2017), we propose to calculate the quality of care composite score for the VM for the payment adjustment period based on the following three scenarios:

Scenario 1: If a group participates in the PQRS as a group practice under the PQRS GPRO during the performance period and meets the criteria for satisfactory reporting of data on PQRS quality measures via one of the GPRO reporting mechanisms, as proposed in section III.K of this proposed rule, for the respective PQRS payment adjustment, then we propose to use the PQRS GPRO data to calculate the group’s quality of care composite for the VM for the payment adjustment period. We propose to apply the same quality of care composite to all eligible professionals that bill under the group’s TIN during the payment adjustment period. We also propose that if the group registers for GPRO for the performance period and does not meet the criteria for satisfactory reporting of data on PQRS quality measures via one of the GPRO reporting mechanisms for the respective PQRS payment adjustment, then the group would fall in Category 2. As discussed in section III.N.4.f of this proposed rule, for CY 2017, we are proposing to apply a –4.0 percent VM to groups with two or more eligible professionals and solo practitioners that fall in Category 2. In this case, all eligible professionals that bill under the group’s TIN during the payment adjustment period would be subject to the –4.0% VM payment adjustment. We seek comment on this proposal.

Scenario 2: In the case of a group that does not report under the PQRS GPRO during the performance period and includes one or more eligible professionals that participate in a Pioneer ACO under the Pioneer ACO Model or in the CPC Initiative during the performance period, as well as other eligible professionals that do not participate in these models, we propose that if at least 50 percent of all eligible professionals in the group satisfactorily report quality data to CMS for the performance period, then we would calculate a quality of care composite using the quality-tiering methodology and the satisfactorily reported data on the PQRS quality measures submitted by the eligible professionals in the group as individuals under PQRS. For purposes of this scenario, by “satisfactorily report quality data to CMS,” we mean that at least 50 percent of the group’s eligible professionals meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals for the PQRS payment adjustment during the performance period, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the PQRS payment adjustment during the performance period, or successfully report quality data to the Pioneer ACO Model or the CPC Initiative during the performance period. The quality of care composite would be calculated using satisfactorily reported data on the PQRS quality measures submitted by the eligible professionals in the group as individuals under PQRS regardless of whether or not the eligible professionals who report the data participate in the Pioneer ACO Model or the CPC Initiative. We propose to assign the group a quality of care composite that is the higher of “average quality” or the group’s actual classification as determined under the quality-tiering methodology. We propose to apply the same quality of care composite to all eligible professionals that bill under the group’s TIN during the payment adjustment period, regardless of whether they participated in the model during the performance period.

We propose that if less than 50 percent of all eligible professionals in the group satisfactorily report quality data to CMS for the performance period, then this group would fall in Category 2. In other words, less than 50 percent of the group’s eligible professionals meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals for the PQRS payment adjustment during the

performance period, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the PQRS payment adjustment during the performance period, or successfully report quality data to the Pioneer ACO Model or the CPC Initiative during the performance period. As discussed in section III.N.4.f of this proposed rule, for CY 2017, we are proposing to apply a –4.0 percent VM to groups with two or more eligible professionals and solo practitioners that fall in Category 2. In this case, all eligible professionals that bill under the group’s TIN during the payment adjustment period would be subject to the –4.0 percent VM payment adjustment, regardless of whether they participated in the model during the performance period.

We note the eligible professionals in these groups that participate in the Pioneer ACO Model or the CPC Initiative submit quality data under their respective model. However, we do not believe that we can reasonably use the quality data submitted under these models in the calculation of the quality of care composite for these groups. At this time, we are unable to operationally integrate the data from these models with the value modifier program due to systems constraints and the unique nature of reporting for participants in these models. We also do not believe that we are able to predict how the quality data submitted under these models would affect the group’s quality composite. We note that because these models are at the forefront of innovation, we believe that the eligible professionals participating in these models would have higher quality performance. For example, results from the first performance year of the Pioneer ACO Model demonstrated that Pioneer ACOs performed better than published rates in fee-for-service for 15 clinical quality measures for which comparable data are available. On readmissions, 25 of 32 Pioneer ACOs generated lower risk-adjusted readmission rates for their aligned beneficiaries than the benchmark rate for all Medicare fee-for-service beneficiaries. On clinical quality measures that assess hypertension control for Medicare beneficiaries, the median rate among Pioneer ACOs with diabetes was 68 percent compared to 55 percent as measured in adult diabetic population in 10 managed care plans across 7 states from 2000 to 2001. Also, on clinical quality measures that assess low density lipoprotein (LDL) control for patients with diabetes, the median rate among Pioneer ACOs for low density lipoprotein control among

beneficiaries with diabetes was 57 percent compared to 48 percent in an adult diabetic population in 10 managed care plans across 7 states from 2000 to 2001. For these reasons, we seek to ensure that these groups are at least considered to have “average” quality, as reflected in our proposal above.

We also considered two alternatives to our proposal above for Scenario 2. First, we considered assigning these groups a quality composite of “average quality” without consideration of any PQRS quality data that may be available to calculate quality measure scores and a quality composite. We did not believe it would be appropriate to make such a proposal because we believe it is important to use data on quality, to the extent practicable, to determine a group’s quality composite. Consequently, we believe it is appropriate to use the data that is reported under PQRS to calculate a quality composite for these groups. We recognize that some eligible professionals in these groups may not submit quality data under PQRS and that these professionals are likely to participate in a model and submit quality data through that model. Since we believe that participants in these models tend to perform better than average with regard to quality as described above, we believe that it is possible that we would underestimate a group’s quality performance if we consider PQRS data only. Accordingly, to the extent that the data reported under PQRS by individual eligible professionals in the group results in a quality composite that is one standard deviation above average (that is, “high quality”), we believe it is likely that this composite would increase by including data (were it available) from the eligible professionals who report quality data through the model. Therefore, we believe that it would be inappropriate to reduce a quality composite from “high quality” to “average quality.” Second, we considered assigning a quality composite of “average quality” to groups where less than 50 percent of all eligible professionals in the group meet the criteria for satisfactory reporting of data on PQRS quality measures as individuals for the PQRS payment adjustment during the performance period, or in lieu of satisfactory reporting, satisfactorily participate in a PQRS-qualified clinical data registry for the PQRS payment adjustment during the performance period, because we would not have quality data for more than half of the group that we could use to calculate a quality composite. Similarly, if at least 50 percent of all

eligible professionals in a group satisfactorily report or participate under PQRS as individuals, we considered using their PQRS quality data to calculate a quality composite for the group and applying the quality-tiering methodology to classify the group as high, average, or low quality. We did not believe it would be appropriate to make such a proposal. We do not believe that it is appropriate to classify a group as “low quality” when more than half of the eligible professionals in the group successfully report quality data (whether it be under PQRS or a model), even though we do not believe at this time we can reasonably use quality data reported through a model for the VM, because we believe that participants in these models would likely increase the group’s quality performance were their data included. In other words, to the extent that the data reported under PQRS by individual eligible professionals in the group results in a quality composite that is “low quality” (that is, one standard deviation below average), we believe that this could be in part because the quality data of higher performing eligible professionals reported through the model would not be included in the calculation of the quality composite. Therefore, we believe it would be inappropriate to classify such a group as lower than “average quality.”

We note that it may be possible for a group to have a disproportionately large number of eligible professionals participating in the Pioneer ACO Model or the CPC Initiative. In this instance, our proposal would result in the use of the PQRS data reported by a relatively small number of eligible professionals who are not participating in the model to determine the quality of care composite that would apply to all eligible professionals in the group. We seek comment on the degree to which this situation occurs and the appropriateness of our proposal in this instance, as well as alternatives to our proposal.

Scenario 3: If a group does not report under the PQRS GPRO during the performance period, consists entirely of eligible professionals that participate in the Pioneer ACO Model or the CPC Initiative, and successfully reports quality data to CMS under the model for the performance period, then we propose to classify the group’s quality of care composite as “average quality.” We also propose to classify as “average quality” the quality of care composite of solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative and successfully report quality data to CMS under the model for the

performance period. We propose to apply the same quality of care composite to all eligible professionals that bill under the group’s TIN during the payment adjustment period. These eligible professionals submit quality data to the Pioneer ACO Model or the CPC Initiative; however, as discussed above, we do not believe that we can reasonably use the model quality data in the calculation of the quality of care composite for these groups and solo practitioners. Additionally, we propose that if the group or the solo practitioner does not successfully report quality data to CMS under the model for the performance period, then the group or solo practitioner would fall in Category 2. As discussed in section III.N.4.f of this proposed rule, for CY 2017, we are proposing to apply a –4.0 percent VM to groups with two or more eligible professionals and solo practitioners that fall in Category 2. In this case, all eligible professionals that bill under the group’s TIN during the payment adjustment period would be subject to the –4.0% VM payment adjustment.

As an alternative to this proposal, we considered assigning “average quality” to groups and solo practitioners that do not successfully report quality data to CMS under the model for the performance period. We believe that this policy would not have been consistent with our proposal to consider groups and solo practitioners that do not satisfactorily report or participate for PQRS as Category 2 as described in section III.N.4.c of this proposed rule. We also believe that assigning “average quality” may inadvertently create incentives for groups and solo practitioners to not report quality data to CMS under these models.

For groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period (for example, CY 2015) and do not participate in the Shared Savings Program or other similar Innovation Center models or CMS initiatives during the payment adjustment period (for example, CY 2017) (Scenarios 1 through 3 above), we propose to apply the quality-tiering methodology to calculate the cost composite for the VM for the payment adjustment period based on a group’s and solo practitioner’s performance on the cost measures, as identified under § 414.1235, during the performance period. We believe that it would be appropriate to apply the quality-tiering methodology to calculate the cost composite because these groups and solo practitioners are no longer part of the Pioneer ACO Model or the CPC during the payment adjustment period,

and their cost benchmarks would be calculated only under the VM during the payment adjustment period.

(b) For groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period (for example, CY 2015) and participate in other similar Innovation Center models or CMS initiatives during the payment adjustment period (for example, CY 2017) (but not the Shared Savings Program), we propose to calculate the quality of care composite based on the three scenarios described above to the extent we are able. We recognize that these three scenarios might not be applicable to all of the various models and initiatives that may be developed in future years. We also propose to classify the cost composite for these groups and solo practitioners for the payment adjustment period as “average cost.” We believe that, for groups and solo practitioners participating in other similar models or initiatives during the payment adjustment period, calculating a cost composite based on the quality-tiering methodology may create two sets of standards for evaluating their cost performance; therefore, we believe it would be appropriate to assign “average cost” to these groups and solo practitioners. If we believe a different approach to applying the VM would be appropriate for a new model or initiative, we intend to address it in future rulemaking.

(c) For groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period (for example, CY 2015) and participate in an ACO under the Shared Savings Program during the payment adjustment period (for example, CY 2017), we propose to calculate the quality of care composite score based on the quality-tiering methodology using quality data submitted by the Shared Savings Program ACO from the performance period. For groups and solo practitioners that participate in a Shared Savings Program ACO during the payment adjustment period that did not exist during the performance period, we propose to classify the quality of care composite as “average quality” for the payment adjustment period because we would not have quality data from the performance period for that ACO. We also propose to classify the cost composite for the VM as “average cost” for groups and solo practitioners that participate in a Shared Savings Program ACO during the payment adjustment period. As we stated in section III.N.4.d.1 of this proposed rule, we believe that there are significant

differences in the methodology for calculating the cost benchmarks under the VM and the Shared Savings Program. Consequently, we believe that any attempt to calculate the cost composite for groups and solo practitioners participating in the Shared Savings Program using the quality-tiering methodology would create two sets of standards for ACOs for their cost performance, which would be inappropriate and confusing. These proposals are consistent with the proposals for participants in the Shared Savings Program described above.

(d) In section III.N.4.c of this proposed rule, we discussed our proposal to hold groups with between 2 and 9 eligible professionals and solo practitioners who are in Category 1 harmless from any downward adjustments under the quality-tiering methodology for the CY 2017 payment adjustment period. We propose to also hold harmless from any downward adjustments for CY 2017 groups with between 2 and 9 eligible professionals, where one or more eligible professionals participate in the Pioneer ACO Model or the CPC, and solo practitioners that participate in the Pioneer ACO Model or the CPC during the CY 2015 performance period based on their size during the performance period. We would follow our established process for determining group size, which is described at § 414.1210(c). We also propose that groups where one or more eligible professionals participate in the Pioneer Model or the CPC during the performance period, and solo practitioners participating in the Pioneer ACO Model or the CPC during the performance period would be

eligible for the additional upward payment adjustment of +1.0x for caring for high-risk beneficiaries, as proposed in section III.N.4.f below.

(e) In addition, beginning with the CY 2017 payment adjustment period, we propose to apply the VM to physicians and nonphysician eligible professionals in groups with 2 or more eligible professionals and to physicians and nonphysician eligible professionals who are solo practitioners that participate in other similar Innovation Center models or CMS initiatives during the relevant performance period for the VM in accordance with the proposed policies described above for the Pioneer ACO Model and the CPC Initiative. We are unable to propose an exhaustive list of the models and initiatives that would fall under this category because many of them have not yet been developed. In addition, it is possible that the timeline for implementing some of these new models and initiatives may not coincide with the timeline for rulemaking for the VM. To address these issues, we propose to rely on the following general criteria to determine whether a model or initiative would fall in this “other similar” category and thus would be subject to the policies described above for the Pioneer ACO Model and the CPC Initiative: (1) The model or initiative evaluates the quality of care and/or requires reporting on quality measures; (2) the model or initiative evaluates the cost of care and/or requires reporting on cost measures; (3) participants in the model or initiative receive payment based at least in part on their performance on quality measures and/or cost measures; (4) potential for conflict between the methodologies used for the

VM and the methodologies used for the model or initiative; or (5) other relevant factors specific to a model or initiative. We note that a model or initiative would not have to satisfy or address all of these criteria to be included in this “other similar” category. Rather, the criteria are intended to serve as a general framework for evaluating models and initiatives with regard to the application of the VM to groups and solo practitioners that participate. We are seeking public comment on these or other appropriate criteria for determining which models or initiatives we should classify as “other similar” models, for the purposes of applying the policies for the Pioneer ACO Model and the CPC Initiative described above.

As noted above, we recognize that the policies we finalize for the Pioneer ACO Model and the CPC Initiative after consideration of public comments might not be applicable to all of the various models and initiatives that could be developed in future years. If we believe a different approach to applying the VM would be appropriate for a model or initiative, we intend to address it in future rulemaking. In addition, if we were to determine that a model or initiative falls under this “other similar” category based on the general criteria that we finalize after consideration of public comments, we propose to provide notice to participants in the model or initiative through the methods of communication that are typically used for the model or initiative.

We propose to modify § 414.1210 to reflect all of these proposals.

A summary of these proposals is shown in Table 57 using TIN A as an example.

TABLE 57—SUMMARY OF PROPOSED POLICIES FOR GROUPS AND SOLO PRACTITIONERS WITH PIONEER ACO MODEL, CPC INITIATIVE, OR OTHER SIMILAR INNOVATION CENTER MODEL OR CMS INITIATIVE PARTICIPATION CHANGES

Scenario	TIN's status during the performance period (for example, CY 2015)	TIN's status during the payment adjustment period (for example, CY 2017)	TIN's quality composite for the payment adjustment period (for example, CY 2017)	TIN's cost composite for the payment adjustment period (for example, CY 2017)
a. Scenario 1: TIN A participates in the Pioneer ACO Model or the CPC Initiative during the performance period, but does not participate in the Shared Savings Program or other similar Innovation Center models or CMS initiatives during the payment adjustment period (some or all of the eligible professionals in TIN A participate in the Pioneer ACO Model or CPC Initiative) AND TIN A registers for PQRS GPRO for the performance period	TIN A is part of the Pioneer ACO Model or CPC Initiative.	TIN A is not part of the Shared Savings Program or other similar Innovation Center models or CMS initiatives.	If TIN A satisfactorily reports under PQRS GPRO for the performance period: Based on TIN A's PQRS GPRO data. If TIN A does not satisfactorily report under PQRS GPRO for the performance period: TIN A falls in Category 2 and a -4.0 percent VM is applied to the TIN in the payment adjustment period.	If TIN A satisfactorily reports under PQRS GPRO for the performance period: Based on TIN A's cost data for the performance period using the quality-tiering methodology.

e. Clarification Regarding Treatment of Non-Assigned Claims for Non-Participating Physicians

As indicated earlier, section 1848(p) of the Act requires the Secretary to establish a payment modifier that provides for differential payment to a physician or a group of physicians under the PFS based upon the quality of care furnished compared to cost during a performance period. In the CY 2013 PFS final rule with comment period in which we established a number of key policies for the VM, we stated that we had received few comments on our proposal to apply the VM to the Medicare paid amounts for the items and services billed under the PFS so that beneficiary cost-sharing or coinsurance would not be affected (77

FR 69309). These commenters generally agreed with the proposal to apply the VM to the Medicare paid amounts for the items and services billed under the PFS at the TIN level so that beneficiary cost-sharing would not be affected. Therefore, we finalized this policy and accordingly established a definition of the VM at § 414.1205 that was consistent with the proposal and the statutory requirement to provide for differential payment to a physician or a group of physicians under the fee schedule based upon the quality of care furnished compared to cost during a performance period.

We continue to believe it is important that beneficiary cost-sharing not be affected by the VM and that the VM should be applied to the amount that

Medicare pays to physicians. However, in previous rulemaking, we did not directly address whether the VM would be applied to both assigned services for which Medicare makes payment to the physician, and to non-assigned services for which Medicare makes payment to the beneficiary. Participating physicians are those who have signed an agreement in accordance with section 1842(h)(1) of the Act to accept payment on an assignment-related basis for all items and services furnished to Medicare beneficiaries. In other words, participating physicians agree to accept the Medicare approved amount as payment in full and to charge the beneficiary only the Medicare deductible and coinsurance amount. In contrast, non-participating physicians

have not signed an agreement to accept assignment for all services furnished to beneficiaries, but they can still choose to accept assignment for individual services. If they choose not to accept assignment for particular services non-participating physicians can charge the beneficiary more than the Medicare-approved amount, up to a limit called the "limiting charge." The limiting charge is defined at section 1848(g)(2)(C) of the Act as 115 percent of the recognized payment amount for nonparticipating physicians. In contrast, if a non-participating physician chooses to accept assignment for a service, they receive payment from Medicare at the approved amount for non-participating physicians, which is 95 percent of the fee schedule amount. Over 99 percent of Medicare physician services are billed on an assignment related basis by both participating and non-participating physicians and other suppliers, with the remainder billed as non-assigned services by non-participating physicians and other suppliers.

For assigned claims, Medicare makes payment directly to the physician. In accordance with section 1848(p)(1) of the Act and the regulations at § 414.1205 and § 414.1210(a), the VM should be applied to assigned claims. However, for non-assigned claims, the limiting charge (the amount that the physician can bill a beneficiary for a non-assigned service) would not be affected if the VM were applied to the claim. This is so, because for non-assigned claims, application of the VM would not affect the limiting charge. Rather, Medicare makes payment for the non-assigned services directly to the beneficiary and the physician receives all payment for a non-assigned service directly from the beneficiary. If the VM were to be applied to non-assigned services, then the Medicare payment to a beneficiary would be increased when the VM is positive and decreased when the VM is negative. The application of the VM to non-assigned claims would therefore directly affect beneficiaries and not physicians, contrary to our intent as discussed in previous rulemaking (77 FR 69309). On that basis, we are proposing to clarify that we would apply the VM only to assigned services and not to non-assigned services starting in CY 2015. We do not expect this proposed clarification, to not apply the VM to non-assigned claims, would be likely to affect a physician's decision to participate in Medicare or to otherwise accept assignment for a particular claim. This is because the amount that a provider is entitled to receive from the

beneficiary for non-assigned claims is not affected by whether or not the VM is applicable to non-assigned claims. Additionally, to the extent our proposal to expand application of the VM to nonphysician eligible professionals is finalized, we would likewise apply the VM only to services billed on an assignment-related basis and not to non-assigned services. We invite comments on this proposed clarification.

f. Payment Adjustment Amount

Section 1848(p) of the Act does not specify the amount of payment that should be subject to the adjustment for the VM; however, section 1848(p)(4)(C) of the Act requires the VM be implemented in a budget neutral manner. Budget neutrality means that payments will increase for some groups and solo practitioners based on high performance and decrease for others based on low performance, but the aggregate expected amount of Medicare spending in any given year for physician and nonphysician eligible professional services paid under the Medicare PFS will not change as a result of application of the VM.

In the CY 2014 PFS final rule with comment period (78 FR 74770–74771), we adopted a policy to apply a maximum downward adjustment of 2.0 percent for the CY 2016 VM for those groups of physicians with 10 or more eligible professionals that are in Category 2 and for groups of physicians with 100 or more eligible professionals that are in Category 1 and are classified as low quality/high cost groups.

Although we received comments suggesting that larger payment adjustments (both upward and downward) would be necessary to more strongly encourage quality improvements, we finalized our proposed adjustments as we believed they better aligned with our goal to gradually phase in the VM. However, we noted that as we gained experience with our VM methodologies, we would likely consider ways to increase the amount of payment at risk (77 FR 69324).

We received comments on the CY 2014 proposed rule suggesting that the payment adjustment under the VM must be of significant weight to drive physician behavior toward achieving high quality and low cost care and that the VM should represent a larger percentage of physician payments under the PFS that should be increased incrementally from 2.0 percent and subject to annual review. In our response to these comments, we agreed that the amount of payment at risk should be higher to incentivize

physicians to provide high quality and low cost care. We also stated that our experience under PQRS has shown us that a 1.0 or 2.0 percent incentive payment has not produced widespread participation in the PQRS. Thus, we believed that we needed to increase the amount of payment at risk for the CY 2016 VM to incentivize physicians and groups of physicians to report PQRS data, which will be used to calculate the VM. We continue to believe this is the appropriate strategy.

We believe that we can increase the amount of payment at risk because we can reliably apply a VM to groups with 2 or more eligible professionals and to solo practitioners in CY 2017 as discussed in section III.N.4.a. of this proposed rule. Therefore, we propose to increase the downward adjustment under the VM by doubling the amount of payment at risk from 2.0 percent in CY 2016 to 4.0 percent in CY 2017. That is, for CY 2017, we propose to apply a -4.0 percent VM to groups with two or more eligible professionals and solo practitioners that fall in Category 2. In addition, we propose to increase the maximum downward adjustment under the quality-tiering methodology in CY 2017 to -4.0 percent for groups and solo practitioners classified as low quality/high cost and to set the adjustment to -2.0 percent for groups and solo practitioners classified as either low quality/average cost or average quality/high cost. However, as discussed in section III.N.4.c of this proposed rule, we are proposing to hold solo practitioners and groups with between 2 and 9 eligible professionals that are in Category 1 harmless from any downward adjustments under the quality-tiering methodology in CY 2017. Consistent with our previous policy, we note that the estimated funds derived from the application of the downward adjustments to groups and solo practitioners in Category 1 and Category 2 would be available to all groups and solo practitioners eligible for VM upward payment adjustments. Based on an estimate of these funds, we also propose to increase the maximum upward adjustment under the quality-tiering methodology in CY 2017 to +4.0× for groups and solo practitioners classified as high quality/low cost and to set the adjustment to +2.0× for groups and solo practitioners classified as either average quality/low cost or high quality/average cost. We also propose to continue to provide an additional upward payment adjustment of +1.0× to groups and solo practitioners that care for high-risk beneficiaries (as evidenced by the average HCC risk score of the

attributed beneficiary population). Lastly, we propose to revise § 414.1270 and § 414.1275(c) and (d) to reflect the proposed changes to the payment adjustments under the VM for the CY

2017 payment adjustment period. Table 58 shows the proposed quality-tiering payment adjustment amounts for CY 2017 (based on CY 2015 performance). We believe that the proposed VM

amount differentiates between cost and quality tiers in a more meaningful way. We seek comments on all of these proposals.

TABLE 58—CY 2017 VALUE-BASED PAYMENT MODIFIER AMOUNTS

Cost/quality	Low quality	Average quality	High quality
Low Cost	+0.0%	+2.0 ^x *	+4.0 ^x *
Average Cost	-2.0%	+0.0%	+2.0 ^x *
High Cost	-4.0%	-2.0%	+0.0%

* Groups and solo practitioners eligible for an additional +1.0^x if reporting Physician Quality Reporting System quality measures and average beneficiary risk score is in the top 25 percent of all beneficiary risk scores.

Consistent with the policy adopted in the CY 2013 PFS final rule with comment period (77 FR 69324 through 69325), the upward payment adjustment factor (“x” in Table 58) would be determined after the performance period has ended based on the aggregate amount of downward payment adjustments.

In section III.N.4.d of this proposed rule, we discussed our proposal to apply the VM to physicians and nonphysician eligible professionals in groups with 2 or more eligible professionals and to physicians and nonphysician eligible professionals who are solo practitioners that participate in the Shared Savings Program during the payment adjustment period beginning with the CY 2017 payment adjustment period. We will have the final list of ACOs that will participate in the Shared Savings Program during the payment adjustment period and their participant TINs during the late fall prior to the beginning of the payment adjustment period (for example, the late fall of CY 2016 prior to the CY 2017 payment adjustment period). We note that this final list may not be available until after the beginning of the payment adjustment period. Therefore, we propose to calculate preliminary payment adjustment factors (“x” in Table 58) prior to the beginning of the payment adjustment period, and subsequently finalize the payment adjustment factors after the final ACO participation list is completed. We note that the final payment adjustment factors may be updated depending on the outcome of the informal inquiry process described later at section III.N.4.i of this proposed rule.

g. Performance Period

In the CY 2014 PFS final rule with comment period (78 FR 74771 through 74772), we adopted a policy that performance on quality and cost measures in CY 2015 will be used to calculate the VM that is applied to items

and services for which payment is made under the PFS during CY 2017. Accordingly, we added a new paragraph (c) to § 414.1215 to indicate that the performance period is CY 2015 for VM adjustments made in the CY 2017 payment adjustment period.

h. Quality Measures

In the CY 2014 PFS final rule with comment period (78 FR 74773), we aligned our policies for the VM for CY 2016 with the PQRS group reporting mechanisms available to groups in CY 2014 and the PQRS reporting mechanisms available to individual eligible professionals in CY 2014, such that data that groups submit for quality reporting purposes through any of the PQRS group reporting mechanisms in CY 2014 and the data that individual eligible professionals submit through any of the individual PQRS reporting mechanisms in CY 2014 will be used for calculating the quality composite under the quality-tiering approach for the VM for CY 2016. Moreover, all of the quality measures for which groups and individual eligible professionals are eligible to report under the PQRS in CY 2014 would be used to calculate the VM for a group for CY 2016 to the extent the group or individual eligible professionals in the group submits data on such measure in accordance with our 50 percent threshold policy (78 FR 74768). We also noted that, in accordance with 42 CFR 414.1230, three additional quality measures (outcome measures) for groups subject to the VM will continue to be included in the quality measures used for the VM in CY 2016. These measures are: (1) A composite of rates of potentially preventable hospital admissions for heart failure, chronic obstructive pulmonary disease, and diabetes; (2) a composite rate of potentially preventable hospital admissions for dehydration, urinary tract infections, and bacterial pneumonia; and (3) rates

of an all-cause hospital readmissions measure (77 FR 69315).

PQRS Reporting Mechanisms: We believe it is important to continue to align the VM for CY 2017 with the requirements of the PQRS, because quality reporting is a necessary component of quality improvement. We also seek not to place an undue burden on eligible professionals to report such data. Accordingly, for purposes of the VM for CY 2017, we propose to include all of the PQRS GPRO reporting mechanisms available to groups for the PQRS reporting periods in CY 2015 and all of the PQRS reporting mechanisms available to individual eligible professionals for the PQRS reporting periods in CY 2015. These reporting mechanisms are described in Tables 21 through 49 of this proposed rule.

PQRS Quality Measures: We propose to use all of the quality measures that are available to be reported under these various PQRS reporting mechanisms to calculate a group or solo practitioner’s VM in CY 2017 to the extent that a group (or individual eligible professionals in the group, in the case of the “50 percent option”) or solo practitioner submits data on these measures. These PQRS quality measures are described in Tables 21 through 49 of this proposed rule. We propose that groups with 2 or more eligible professionals would be able to elect to include the patient experience of care measures collected through the PQRS CAHPS survey for CY 2015 in their VM for CY 2017. We propose to continue to include the three outcome measures in § 414.1230 in the quality measures used for the VM in CY 2017. For groups that are assessed under the “50 percent option” for the CY 2017 VM, we propose to calculate the group’s performance rate for each measure reported by at least one eligible professional in the group by combining the weighted average of the performance rates of those eligible professionals

reporting the measure. We also propose for groups that are assessed under the “50 percent option” for the CY 2017 VM to classify a group’s quality composite score as “average” under the quality-tiering methodology, if all of the eligible professionals in the group satisfactorily participate in a PQRS qualified clinical data registry in CY 2015 and we are unable to receive quality performance data for those eligible professionals. If some EPs in the group report data using a qualified clinical data registry and we are unable to obtain the data, but other EPs in the group report data using the other PQRS reporting mechanisms for individuals, we would calculate the group’s score based on the reported performance data that we obtain through those other mechanisms.

While we finalized policies in the CY 2014 final rule with comment period that would allow groups assessed under the “50 percent option” to have data reported through a PQRS qualified clinical data registry in CY 2014 used for the purposes of their CY 2016 VM to the extent performance data are available, we note that we did not directly address the issue of how we would compute the national benchmarks for these measures. Under § 414.1250, benchmarks for the quality of care measures for the VM are the national mean of a measure’s performance rate during the year prior to the performance period. In the CY 2013 PFS final rule with comment period (77 FR 69322), we finalized a policy that if a measure is new to the PQRS, we will be unable to calculate a benchmark, and hence, performance on that measure will not be included in the quality composite. Therefore, we propose to apply that policy to measures reported through a PQRS qualified clinical data registry that are new to PQRS (in other words, measures that were not previously reported in PQRS). Performance on these measures would not be included in the quality composite for the VM because we would not be able to calculate benchmarks for them. This proposal would apply beginning with the measures reported through a PQRS qualified clinical data registry in the CY 2014 performance period for the CY 2016 payment adjustment period. We welcome public comment on this proposal.

In addition, we note that the PQRS administrative claims option, which included the outcome measures described in § 414.1230, is no longer available through PQRS. We propose to clarify that we calculate benchmarks for those outcome measures described in § 414.1230 using the national mean for a measure’s performance rate during the

year prior to the performance period in accordance with our regulation at § 414.1250(b). We welcome public comment on this proposal.

Quality Measures for the Shared Savings Program: Starting with the CY 2017 payment adjustment period, as described in section III.M. of this proposed rule, we are proposing to apply the value modifier to groups and solo practitioners participating in ACOs under the Shared Savings Program. To do so, we are proposing quality measures and benchmarks for use with these groups and solo practitioners and seek public comment on these proposals. We describe these proposals more fully below.

With regard to quality measures, we note that there is substantial overlap between those used to evaluate the ACOs under the Shared Savings Program and those used in the PQRS program and for the value modifier payment adjustment. For the CY 2017 payment adjustment period and subsequent payment adjustment periods, to determine a quality composite for the VM for groups and solo practitioners that participate in an ACO under the Shared Savings Program, we propose to use the quality measures that are identical for the two programs. Specifically, for the CY 2017 payment adjustment period, we propose to use the PQRS GPRO Web Interface measures and the outcome measure described at § 414.1230(c) to determine a quality composite for groups and solo practitioners that participate in an ACO under the Shared Savings Program. Because the ACO GPRO measures and PQRS GPRO Web Interface measures will be the same in CY 2015, we propose to use the GPRO Web Interface measures reported by ACOs in determining the quality composite for groups and solo practitioners participating in ACOs under the Shared Savings Program in CY 2017. Utilizing these GPRO Web Interface measures in this regard further encourages successful quality reporting for Shared Savings Program ACOs. Additionally, we believe that the all-cause hospital readmissions measure as calculated for ACOs under the Shared Savings Program is equivalent to the all-cause hospital readmissions measure we have adopted for the VM at § 414.1230(c) and therefore propose use of that measure as calculated for ACOs in the Shared Savings Program for inclusion in the VM for the CY 2017 payment adjustment period. We note that the outcome measures described at § 414.1230(a) and § 414.1230(b) are not currently calculated for ACOs in the Shared Savings Program. These

measures are: (1) A composite of rates of potentially preventable hospital admissions for heart failure, chronic obstructive pulmonary disease, and diabetes; and (2) a composite rate of potentially preventable hospital admissions for dehydration, urinary tract infections, and bacterial pneumonia. Because we have no experience with these measures in the Shared Savings Program, at this time, we do not propose to include these measures for groups and solo practitioners that participate in ACOs under that program. We propose to modify the regulations at § 412.1230 accordingly.

To determine the standardized scores for these quality measures proposed for use with those participating in ACOs under the Shared Savings Program, we propose to apply the benchmark policy for quality measures for the VM as described under § 414.1250. Under this policy, the VM benchmarks are the national mean for a measure’s performance rate based on data from one year prior to the performance period. We believe these are the appropriate benchmarks to use when determining the value modifier payment adjustment because they are the same benchmarks used to determine the value modifier payment adjustment for other groups and solo practitioners. In other words, we believe that use of the VM benchmarks creates a fair comparison among groups and solo practitioners because we believe it is appropriate to evaluate those that participate in Shared Savings Program ACOs on the same basis as those that do not participate in the Shared Savings Program for the purpose of the value modifier. We believe the VM benchmarks are appropriate because they include all PQRS data available (77 FR 69322), including quality data used for the Shared Savings Program. On the other hand, while the Shared Savings Program develops benchmarks using all available Medicare fee-for-service data, we do not believe it is appropriate to use the benchmarks from the Shared Savings Program to determine standardized scores for the quality composite of the value modifier payment adjustment. We do not think this enables a fair comparison among groups and solo practitioners subject to the value modifier because the Shared Savings Program benchmarks are calculated using a different methodology, providing gradients by decile (including the median) of national performance based on data two years prior to the performance period (78 FR 74759 through 74760).

All-Cause Hospital Readmissions Measure: In addition, since finalizing the all-cause hospital readmissions measure described at § 414.1230(c) in the CY 2013 PFS final rule with comment (77 FR 69285), we have investigated the reliability of this measure. According to § 414.1265, to calculate a composite score for a quality or cost measure based on claims, a group subject to the VM must have 20 or more cases for that measure. Furthermore, according to § 414.1265(a), if a group has fewer than 20 cases for a measure in a performance period, that measure is excluded from its domain and the remaining measures in the domain are given equal weight.

Based on 2012 data, we found that the average reliability for the all-cause hospital readmissions measure was below 0.4 when we examined groups with fewer than 200 cases but exceeded 0.4 for groups with 200 or more cases. Although we do not believe there is a universal consensus concerning a minimum reliability threshold, reliability scores in the 0.4 to 0.7 range are often considered moderate, and scores greater than 0.7 are considered high. In general, we found that the groups with at least 10 eligible professionals were more likely to have 200 or more cases as compared to groups with fewer eligible professionals. Thirty percent of groups with 10 or more eligible professionals had 200 or more cases, as compared to 3 percent of groups with 1–9 eligible professionals. Nonetheless, the finding that the average reliability exceeded 0.4 for groups with 200 or more cases included all group sizes (1 or more eligible professionals).

After examining the reliability of the all-cause hospital readmissions measure data for 2012 across all group sizes and considering its impacts on the cost composite of the VM as discussed below, we propose to change the reliability policy (minimum number of cases) with respect to this measure. Specifically, beginning with the CY 2017 payment adjustment period, we propose to change the reliability policy (minimum number of cases) with respect to the all-cause hospital readmissions measure as described in § 414.1230(c) from a minimum of 20 cases to a minimum of 200 cases for this measure to be included in the quality composite for the VM. For this measure only, we propose to exclude the measure from the quality domain for a group or solo practitioner if the group or solo practitioner has fewer than 200 cases for the measure during the relevant performance period. In implementing this proposal, we note

that we would only apply it to the all-cause hospital readmissions measure as it is calculated for groups or solo practitioners that are not part of a Shared Savings Program ACO. In instances where we are including Shared Savings Program data for groups or solo practitioners that are part of a Shared Savings Program ACO, we would include their all-cause hospital readmissions measure as it is calculated for the Shared Savings Program. We believe that this approach to implementing this proposal is appropriate, because the Shared Savings Program has taken into consideration the size of its groups in finalizing inclusion of this measure, and we value consistency with the Shared Savings Program's reporting requirements for its participants, to the extent it is practicable. We would continue to include the measure in the VM quality domain for groups or solo practitioners that have 200 or more cases. We propose to modify the regulations at § 414.1265 to reflect this proposal. We welcome comments on this proposal.

If we were to revise the minimum case size for the all-cause hospital readmissions measure for the quality composite of the VM, we note that poor performance on controlling readmissions would continue to have an effect on the VM for groups with between 20 and 199 cases through the cost composite of the VM. The Medicare Spending per Beneficiary (MSPB) measure, as finalized in the CY 2014 PFS final rule (78 FR 74775–74780), is a measure of all Medicare Part A and Part B payments during an episode spanning from 3 days prior to an index hospital admission through 30 days post-discharge with certain exclusions. Since all Part A and Part B spending is included in the 30 day post-discharge window, Medicare Part A payments for a readmission that are included in an MSPB episode will increase the MSPB amount relative to an MSPB episode without a readmission in the 30-day post-discharge window. Additionally, the cost of readmissions is incorporated as part of the 5 total per capita cost measures that comprise the remainder of the cost composite of the VM. The 5 total per capita cost measures are annual measures that include the costs of all Part A and Part B spending during the year, including the costs of readmissions. Therefore, readmission costs will have the effect of increasing total per capita cost spending for the groups attributed these patients' costs. As a result, poor performance on controlling readmissions already will have an adverse effect on an attributed

group's cost composite of the VM, even if poor performance on the all-cause hospital readmissions measure would no longer be reflected in certain groups' or solo practitioners' quality composite of the VM due to having fewer than 200 all-cause hospital readmission cases. Even for those groups for which the all-cause hospital readmissions measure would be excluded from the quality composite calculations, groups would continue to have incentive to control readmissions, since doing so would reduce readmission costs, thereby improving performance on the payment-standardized, risk-adjusted cost measures used for the cost composite of the VM.

i. Proposed Expansion of the Informal Inquiry Process to Allow Corrections for the Value-Based Payment Modifier

Section 1848(p)(10) of the Act provides that there shall be no administrative or judicial review under section 1869 of the Act, section 1878 of the Act, or otherwise of the following:

- The establishment of the VM;
- The evaluation of the quality of care composite, including the establishment of appropriate measures of the quality of care;
- The evaluation of the cost composite, including the establishment of appropriate measures of costs;
- The dates of implementation of the VM;
- The specification of the initial performance period and any other performance period;
- The application of the VM; and
- The determination of costs.

These statutory requirements regarding limitations of review are reflected in § 414.1280. Despite the preclusion of administrative and judicial review, we previously indicated in the CY 2013 PFS final rule with comment period (77 FR 69326) that we believed an informal review mechanism is appropriate for groups of physicians to review and to identify any possible errors prior to application of the VM, and we established an informal inquiry process at § 414.1285. We stated that we intend to disseminate reports containing CY 2013 data in the fall of 2014 to groups of physicians subject to the VM in 2015 and that we will make a help desk available to address questions related to the reports.

We believe it would be appropriate to align with PQRS to consider requests for informal review of whether a group or solo practitioner successfully reported under the PQRS program and requests for reconsideration of PQRS data as described in section III.K, as well as to expand our current informal inquiry

process to accept requests from groups and solo practitioners to review and correct certain other errors related to the VM, such as errors made by CMS in assessing the eligibility of a group or solo practitioner for the value modifier based on participation in a Shared Savings Program ACO, the Pioneer ACO Model, the CPC Initiative, or other similar Innovation Center models or CMS initiatives; computing standardized scores; computing domain scores; computing composite scores; or computing outcome or cost measures. We are working to develop and operationalize the necessary infrastructure to support such a corrections process, but at this time, we do not believe we would be able to implement the process until 2016 at the earliest.

Therefore, for the CY 2015 payment adjustment period, to align with PQRS, we are proposing to expand the informal inquiry process at § 414.1285 to establish an initial corrections process that would allow for some limited corrections to be made. Specifically, under this initial corrections process, for the CY 2015 payment adjustment period, we are proposing to establish a deadline of January 31, 2015 for a group to request correction of a perceived error made by CMS in the determination of its CY 2015 VM payment adjustment. Alternatively, we seek comment on a deadline of no later than the end of February 2015 to align with the PQRS informal review process. We would then make a determination regarding the request. At this time, we do not anticipate it would be operationally feasible for us to fully evaluate errors with regard to quality measure data and accept data as described above under section III.K. for the CY 2015 payment adjustment period, and thus we propose to classify a TIN as “average quality” in the event we determine that we have made an error in the calculation of quality composite. We propose to recompute a TIN’s cost composite in the event we determine that we have made an error in its calculation. We propose to adjust a TIN’s quality tier if we make corrections to a TIN’s quality and/or cost composites as a result of this initial corrections process. We note that there would be no administrative or judicial review of the determinations resulting from this expanded informal inquiry process under section 1848(p)(10) of the Act.

Starting with the CY 2016 payment adjustment period (which has a performance period of CY 2014), we are proposing to continue the expanded informal inquiry process at § 414.1285 as described above. However, in

anticipation of having the necessary operational infrastructure to support the reconsideration of quality measure data, we are proposing to establish a 30-day period that would start after the release of the QRURs for the applicable performance period for a group or solo practitioner to request correction of a perceived error made by CMS in the determination of the group or solo practitioner’s VM for that payment adjustment period. These QRURs will contain performance information on the quality and cost measures used to calculate the quality and cost composites of the VM and will show how all TINs would fare under the policies established for the VM for the CY 2015 payment adjustment period. Similar to our proposal for the initial corrections process in CY 2015, we would then make a determination regarding the requests received. Since we anticipate it would be operationally feasible for us to fully evaluate errors with regard to quality measure data at that point, and accept data as described above under section III.K. for the CY 2016 payment adjustment period, we propose to recompute a TIN’s quality composite and/or cost composite in the event we determine that we have made an error in the calculation. We note that if the operational infrastructure is not available to allow this recomputation, we propose to continue the approach of the initial corrections process to classify a TIN as “average quality” in the event we determine that we have made an error in the calculation of the quality composite. We propose to adjust a TIN’s quality tier if we make a correction to a TIN’s quality and/or cost composites as a result of this corrections process. We note that there would be no administrative or judicial review of the determinations resulting from this expanded informal inquiry process under section 1848(p)(10) of the Act.

In future rulemaking and guidance, we plan to address how we would propose to refine and further develop this expanded informal inquiry process to allow for corrections for the value modifier. We believe it is important that the corrections process not undermine incentives for appropriate timely reporting. We welcome comment on these proposals, especially regarding the types of errors, timeline and other considerations that should be given to both the initial corrections process in the CY 2015 payment adjustment period and the corrections process we propose beginning with the CY 2016 payment adjustment period.

j. Potential Methods To Address NQF Concerns Regarding the Total Per Capita Cost Measures

In the CY 2013 PFS final rule with comment period (77 FR 69322), we established a policy to create a cost composite for each group subject to the VM that includes five payment-standardized and risk-adjusted annual per capita cost measures. To calculate each group’s per capita cost measures, we first attribute beneficiaries to the group. We attribute beneficiaries using a two-step attribution methodology that is based on the assignment methodology used for the Shared Savings Program and the PQRS GPRO and that focuses on the delivery of primary care services (77 FR 69320).

In the CY 2014 PFS final rule with comment period (78 FR 74780), we finalized inclusion of the MSPB measure as proposed in the cost composite beginning with the CY 2016 VM, with a CY 2014 performance period. As we proposed, we are using the MSPB amount as the measure’s performance rate rather than converting it to a ratio as is done under the Hospital Inpatient Quality Reporting (IQR) and VBP Programs. We finalized that the MSPB measure is added to the total per capita costs for all attributed beneficiaries domain and equally weighted with the total per capita cost measure in that domain. Additionally, we finalized that an MSPB episode is attributed to a single group of physicians that provides the plurality of Part B services (as measured by standardized allowed charges) during the index admission, for the purpose of calculating that group’s MSPB measure rate. Finally, we finalized a minimum of 20 MSPB episodes for inclusion of the MSPB measure in a physician group’s cost composite.

Additionally, in the CY 2014 PFS final rule with comment period (78 FR 74780), we finalized our proposal to use the specialty adjustment method to create the standardized score for each group’s cost measures beginning with the CY 2016 VM. That is, we refined our current peer group methodology to account for specialty mix using the specialty adjustment method. We also finalized our proposal to include this policy in our cost composite methodology. Additionally, we finalized our proposal to identify the specialty for each EP based on the specialty that is listed on the largest share of the EP’s Part B claims.

As discussed in the CY 2014 PFS final rule with comment period (78 FR 74781), we submitted the total per capita cost measure for National Quality

Forum (NQF) endorsement in January 2013. In the final voting in September 2013, the NQF Cost and Resource Use Committee narrowly voted against the measure by a count of 12 in support and 13 in opposition. We are proposing to address two of the major concerns that Committee raised in its review of the measure. First, we propose modifications to our two-step attribution methodology. Second, we propose to reverse the current exclusion of certain Medicare beneficiaries during the performance period. We discuss these proposals further below, and they would apply beginning with the CY 2017 payment adjustment period for the VM. The proposals would apply to all five of the total per capita cost measures under § 414.1235(a)(1) through (5). The modifications to the two-step attribution methodology also would apply to the methodology used for attributing beneficiaries for the computation of claims based quality measures under § 414.1230, except for participants in the Shared Savings Program as described later.

The attribution methodology for the 5 total per capita cost measures and claims based quality measures in the VM, as finalized in the CY 2013 PFS final rule with comment period (77 FR 66318 through 66320), includes two steps. Before applying the two steps, however, we first identify all beneficiaries who have had at least one primary care service rendered by a physician in the group. Primary care services include evaluation and management visits in office, other outpatient, skilled nursing facility, and home settings. After this “pre-step”, we assign, under Step 1, beneficiaries to the group practice who had a plurality of primary care services (as measured by allowed charges) rendered by primary care physicians in the group, which include Family Practice, Internal Medicine, General Practice, and Geriatric Medicine. If a beneficiary is non-assigned under Step 1, we proceed to Step 2, which is to assign beneficiaries to the group practice whose affiliated non-primary care physicians, nurse practitioners (NPs), physician assistants (PAs), and clinical nurse specialists (CNSs) together provided the plurality of primary care services (as measured by allowed charges), as long as at least one primary care service was provided by a non-primary care physician in the group.

To address NQF concerns regarding the attribution methodology of the total per capita cost measure, we propose two modifications to the two-step attribution methodology as applied to the five total per capita cost measures, as well as the

claims based quality measures in the VM. NQF Committee members discussed how primary care services often are provided by NPs, PAs, or CNSs, but Step 1 of the attribution methodology assigns beneficiaries to the group who had a plurality of primary care services rendered by primary care physicians in the group. After further consideration, we agree that it is appropriate to include NPs, PAs, and CNSs in Step 1 of the attribution method insofar as they provide primary care services. Consequently, we propose to move these NPs, PAs, and CNSs from Step 2 of the attribution method to Step 1. This proposed change would affect all five of the total per capita cost measures under § 414.1235(a)(1) through (5) and the claims-based quality measures under § 414.1230.

Additionally, we propose to remove the “pre-step” described above for the purposes of the value modifier. The “pre-step” was included in the Shared Savings Program assignment methodology to comply with the statutory requirement (77 FR 67851) that beneficiary assignment be based upon the utilization of primary care services furnished by a physician. However, no such limitation exists for the VM. Consequently, we propose to remove the “pre-step” that identifies a pool of assignable beneficiaries that have had at least one primary care service furnished by a physician in the group. Removing the “pre-step” would result in streamlining the attribution process and attributing beneficiaries based on a plurality of primary care services according to Step 1 and Step 2. In addition, we believe that this proposal would ensure that beneficiaries can be assigned to group practices made up of nonphysician eligible professionals because it would eliminate the criterion that a beneficiary have at least one primary care service furnished by a physician in the group practice. This proposed change (removing the “pre-step”) would affect all five of the total per capita cost measures under § 414.1235(a)(1) through (5) and the claims-based quality measures under § 414.1230.

The two step attribution rule would remain intact after these two proposed modifications, and the method would continue to be generally consistent with the method of assignment of beneficiaries under the Shared Savings Program, as specified under § 414.1240. As discussed previously, the “pre-step” would be removed. We would assign, under Step 1, beneficiaries to the group who had a plurality of primary care services (as measured by allowed charges) rendered by primary care

physicians, NPs, PAs, or CNSs in the group. If a beneficiary is non-assigned under Step 1, we still would proceed to Step 2, which would assign beneficiaries to the group practice whose affiliated non-primary care physicians provided the plurality of primary care services (as measured by allowed charges). We propose these modifications only for groups and solo practitioners who are not participating in the Shared Savings Program. We note that for groups and solo practitioners who participate in the Shared Savings Program, we would not remove the pre-step or change the attribution methodology for quality measures and cost measures, but would continue to rely on the methodology used by the Shared Savings Program to attribute beneficiaries to ACOs in the Shared Savings Program.

One of the reasons we originally proposed this two-step attribution process for the total per capita cost measures and claims based quality measures was that it was aligned with the attribution methodologies used by the Shared Savings Program and also the PQRS GPRO web interface (77 FR 69318 through 69320). We recognize that these programs may seek to establish changes to their methodologies, and note that for the purposes of the VM, we intend to retain the two-step beneficiary attribution methodology that was described in the CY 2013 PFS final rule with comment period (77 FR 69318 through 69320), subject to the changes proposed above. However, to address the concerns raised by NQF, we believe the proposed modification to the two-step beneficiary attribution method would more appropriately reflect the multiple ways in which primary care services are provided, which are not limited to physician groups. We welcome comments on our proposed modification to the two-step attribution methodology as applied to the five total per capita cost measures under § 414.1235(a)(1) through (5) and to the claims-based quality measures under § 414.1230 of the VM.

Second, NQF committee members raised concerns about the exclusion of certain beneficiaries in the methodology used for the total per capita cost measure. Committee members expressed concern that end-of-life costs were not being captured by the measure. We considered this argument and agree that it is important to include certain beneficiaries with these costs during the performance period. As a result, we propose to include certain part-year Medicare FFS beneficiaries. This proposed change would affect all five of

the total per capita cost measures under § 414.1235(a)(1) through (5). We believe the proposed change would provide a more complete assessment of end of life costs associated with the patients a physician group sees during the year. We seek comment on this proposal.

We propose to continue excluding other part-year beneficiaries (those who spend part of the performance period in a Medicare Advantage (Part C) plan and those enrolled in Part A only or Part B only for part of the performance period and both Part A and Part B for the remainder of the performance period). Excluding part-year Medicare Advantage enrollees would remain consistent with the Shared Savings Program and PQRS GPRO web interface reporting policy. If we were to include these part-year Medicare Advantage enrollees, we would need to determine a method to impute their costs for the portion of the performance period in which they were enrolled in FFS Medicare Parts A and B so that we could compare beneficiaries' annual per capita costs appropriately. Similarly, Medicare Part A only or Medicare Part B only enrollees who were enrolled in both Part A and Part B for only part of the performance period would also require a method to impute their costs if they were no longer excluded. Furthermore, these Part A only or Part B only beneficiaries are excluded from the Shared Savings Program and PQRS GPRO methodology.

We propose including Medicare FFS beneficiaries who are newly enrolled to Medicare during the performance period and enrolled in both Part A and Part B while in Medicare FFS. Additionally, while we believe inclusion of new enrollees is inconsistent with GPRO's methodology, it would be consistent with the Shared Savings Program's methodology. We welcome comments on the inclusion of these part-year beneficiaries. We also welcome comments on whether other part-year Medicare FFS beneficiaries (that is, those who are part-year Medicare Advantage enrollees or part-year Medicare Part A only or Part B only enrollees) should be included in the five total per capita cost measures under § 414.1235(a)(1) through (5) in the VM.

In this proposed rule, we are choosing not to address the other concerns about the total per capita cost measures that were raised by NQF. First, we are deferring addressing the issue of whether to incorporate socioeconomic status in our measures until after the NQF has finalized its guidance regarding risk adjustment for resource use measures. Second, we are not proposing to include Part D data in the

total per capita cost measures at this time due to the complexity of the issue. Based on data compiled by the Medicare Payment Advisory Commission (MedPAC), we estimate that approximately 60 percent of Medicare FFS beneficiaries were enrolled in stand-alone Part D in 2013.¹¹ Including Part D data would incorrectly indicate higher costs for these beneficiaries compared to others without Part D coverage. Before we are able to propose inclusion of Part D data, we would need to determine an approach to address this issue. We welcome comments on suggested methods for including Part D data in the total per capita cost measures.

k. Discussion Regarding Treatment of Hospital-Based Physicians

We are considering including or allowing groups that include hospital-based physicians or solo practitioners who are hospital-based to elect the inclusion of Hospital Value-Based Purchasing (VBP) Program performance in their VM calculation in future years of the program. We would include hospital performance for the hospital or hospitals in which they practice. We would propose such a change through future notice and comment rulemaking, taking into consideration public comment and any relevant empirical evidence available at that time. We are considering this potential policy to expand the performance data included for hospital-based physicians and to better align incentives for quality improvement and cost control across CMS programs. Such a policy would also address public comments we received on the CY 2014 PFS proposed rule (78 FR 74775), suggesting that the Hospital VBP Program total performance score for the hospital in which a specialist practices should be used in the VM. Commenters made this suggestion, noting that there were limited measures that apply to certain specialties and that those specialties may exercise wide influence over the quality of care provided in a hospital. We note that a hospital's final Hospital VBP Program performance for a given performance period would not be available to a group at the time that they

register for PQRS reporting. In other words, if we were to establish a voluntary policy where groups could elect to include hospital performance, they would make the election to have that performance included in their VM for a payment adjustment period based on the hospital's historic VBP Program performance which would be known to the TIN at the time of election.

To identify groups or solo practitioners that would have Hospital VBP Program performance data in their VM or allow such groups to elect its inclusion, we first have to identify who would have this option. Because the VM is applied at the TIN level, we believe that the election to include Hospital VBP Program data must also be made at the TIN level. We considered two general methods for identifying which TINs represent hospital-based physicians and should therefore have Hospital VBP Program data included or have the option to elect its inclusion. The first approach would be self-nomination, by which a group would attest that it is comprised primarily of hospital-based physicians. This approach would be consistent with public comment we received on the CY 2013 PFS proposed rule (77 FR 69312), in which commenters suggested that we should include hospital performance information on a voluntary basis and that it should be based on self-nomination. The second approach would be for CMS to specify criteria that a TIN would have to satisfy, to have Hospital VBP Program data included or have the option to elect its inclusion. The latter approach might provide a more objective method for determining whether a TIN would be eligible to elect inclusion of hospital performance information or would have it automatically included in its VM. These criteria could include specialty types or percentage of Medicare payments for services provided in the hospital setting. For example, the EHR Incentive Program has defined in 42 CFR 495.4 a hospital-based EP generally as an EP who furnishes 90 percent or more of his or her covered professional services in sites of service identified by the codes used in the HIPAA standard transaction as an inpatient hospital or emergency room setting. We could adopt a similar criterion for identifying hospital-based physicians for the purpose of electing or receiving mandatory inclusion of Hospital VBP Program data in the VM. If we were to take the approach of identifying appropriate criteria for eligibility for inclusion of hospital performance data, we would need to then determine whether the criteria

¹¹ Please see http://www.medpac.gov/documents/Mar14_EntireReport.pdf for underlying data. We estimated that there were 37.3 million Medicare FFS beneficiaries by subtracting the number of beneficiaries enrolled in Medicare Advantage (14.5 million) from the estimated total number of Medicare beneficiaries using data in table 13-1 (P. 328). We estimated that there were 22.4 million beneficiaries with a stand-alone prescription drug plan, which represented 64 percent of the 35 million beneficiaries with Medicare Part D coverage (p. 355).

would have to apply to the majority of physicians within a given TIN, or whether the TIN as a whole would have to meet the criteria in the aggregate. That is, using the example criterion above, we could either require that 90 percent of the total Medicare covered professional services provided by all physicians within a given TIN are furnished in a hospital setting or require that some proportion of the individual physicians within a TIN provide 90 percent of their individual Medicare covered services in the hospital setting. Additionally, since we are proposing to expand application of the VM to nonphysician eligible professionals, we seek comment on whether these methods should apply in identifying hospital-based nonphysician eligible professionals in addition to hospital based physicians. We welcome public comment on the appropriate methodology to identify hospital-based groups and solo practitioners for the purpose of having Hospital VBP Program data included or allowing them to elect inclusion of Hospital VBP Program performance data in the VM at the TIN level.

After determining which groups or solo practitioners would be eligible to have hospital VBP Program performance data included or to elect inclusion of hospital VBP Program performance data in the VM, we would require a methodology to determine which hospital or hospitals' performance would apply to a given TIN. We could base this determination on the plurality of services provided by a TIN. That is, the TIN would be attributed the Hospital VBP Program performance of the hospital at which its physicians (or physicians and nonphysician eligible professionals) billed the most professional services during a given performance period. Alternatively, we could attribute hospital performance to a TIN that provided some threshold of its hospital-based services at that hospital. For example, we could require that a TIN have performed at least 30 percent of its hospital-based services at a given hospital to have that hospital's performance included in the TIN's VM. In that example, a TIN could have up to three hospitals' performance included in its VM. We could weight the performance of the hospitals included, based on Medicare dollars paid to the TIN for services their physicians (or physicians and nonphysician eligible professionals) provided to beneficiaries hospitalized at a given hospital, or based on number of cases treated by physicians (or physicians and nonphysician eligible professionals)

from the TIN that are discharged from a given hospital. We welcome public comment on these or other alternatives for determining which hospital or hospitals' Hospital VBP Program performance data should be included in a physician TIN's VM and how to weight the hospitals, if more than one is included.

After we have determined which hospital or hospitals' Hospital VBP Program performance data would be included in a TIN's VM, we would have to incorporate that hospital's or hospitals' Total Performance Score(s) (TPS(s)) or some subset of it into the VM. Under the Hospital VBP Program, a hospital receives a TPS, which is a weighted total of underlying quality performance scores the hospital receives on quality and efficiency measures included in the program. Further details about the Hospital VBP Program may be found on CMS' Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/hospital-value-based-purchasing/index.html?redirect=/hospital-value-based-purchasing/>. We generally finalize the measures, domains into which the measures are grouped for scoring purposes, and scoring methodology (which includes the measure and domain weights that apply to a particular program year) for each Hospital VBP Program year in the IPPS/LTCH final rule that we issue each summer. For the FY 2017 Hospital VBP Program, the finalized domains are: Safety; Clinical Care (subdivided into Clinical Care—Outcomes and Clinical Care—Process); Efficiency and Cost Reduction; and Patient and Caregiver Centered Experience of Care/Care Coordination (78 FR 50703 through 50704). Other proposals for the FY 2017 Hospital VBP Program can generally be found in the FY 2015 IPPS/LTCH Proposed Rule (79 FR 28117 through 28134).

When determining what part of the TPS to include in the VM, we have to consider the varied performance periods of measures included in the Hospital VBP Program. The majority of measures used in the Hospital VBP Program are scored based on calendar year performance periods, and performance on measures under the program is used to adjust the base-operating DRG payment made to hospitals under the IPPS on a fiscal year basis. For these measures in which calendar year performance periods are used, hospitals generally report data two calendar years prior to the fiscal year in which their performance on those measures will affect their payment. For example, hospitals' CY 2016 performance on

these measures under the program would affect their FY 2018 payments. If we were to incorporate Hospital VBP Program performance into the VM as in the example, we could incorporate the CY 2016 performance into VMs for CY 2018 physician payments.

In determining which portion of the TPS to include in the VM, we also have to consider the incentives generated by different approaches. Inclusion of the entire TPS score encourages shared accountability for and shared incentive to improve on all aspects of the quality of care provided during a hospitalization, while selecting some subset might better target factors over which physicians exert more influence. The latter approach might, for example, exclude measures such as HCAHPS survey dimensions focused on nursing interventions.

We considered three options for including Hospital VBP Program performance in the VM: (1) Include the entire TPS in the cost composite; (2) Include the Efficiency and Cost Reduction domain score in the cost composite, and include all or some subset of the other domain scores in the quality composite; and (3) Include some subset of the measures in the cost and quality composites. The first approach, inclusion of the TPS in the cost composite, was suggested during public comment on the CY 2014 PFS rule (78 FR 74775). This approach is a straightforward one and it encourages joint accountability and coordination between hospitals and physicians on all aspects of hospital quality. However, it could be construed as counting quality measures within the cost composite because, as noted above, the TPS is computed based on hospital performance on measures in a number of quality domains in addition to hospital performance on the Medicare Spending Per Beneficiary measure in the Efficiency and Cost Reduction domain. Additionally, we note that the VM is structured in such a manner that a score would need to be included as part of either the quality composite or the cost composite. Under this approach and the second one, measures with performance periods exceeding one calendar year would be captured in the VM for a given payment year. The second approach, inclusion of the Efficiency and Cost Reduction domain score in the cost composite and all or some subset the other domain scores in the quality composite remains relatively straightforward, encourages shared accountability and coordination between hospitals and physicians on all aspects of hospital quality, and enables us to avoid counting quality measures

within the VM cost composite, but it could still capture measures with performance periods exceeding a calendar year in the VM for a given year. We note that for the Hospital VBP Program, the Efficiency and Cost Reduction domain includes Medicare Spending per Beneficiary measure attributed to hospitals and that, starting with the CY 2016 payment adjustment period, the VM includes as part of its total cost domain the Medicare Spending per Beneficiary measure attributed to groups. While the third approach would be the most complex one, inclusion of some subset of the domain measures in the cost and quality composites would enable us to use only measures with performance periods aligning with the remainder of the VM measures to be included in the quality and cost composites, if we wished to do so. It would also enable us to identify measures over which we believe hospital-based physicians exert sufficient influence to be held accountable through payment adjustments. The third approach places less emphasis on hospital and physician coordination to improve all aspects of the quality of care provided during a hospitalization and it requires a judgment call regarding which measures to include. We believe that the second approach, inclusion of all TPS domains or some subset of the TPS domains in the VM, with the Efficiency and Cost Reduction domain included in the cost composite and the other domains (based on whether all of the measures in the domain have the same performance periods as the performance period being considered in the VM) included in the quality composite would strike the best balance between a straightforward approach, appropriate capture of different aspects of the TPS as they relate to the VM composites, and encouraging physician and hospital coordination to improve all aspects of care provided to Medicare beneficiaries who are hospitalized. We welcome public comment on the approaches we considered, as well as alternative approaches for inclusion of all or part of the Hospital VBP Program TPS into the VM. We also welcome public comment on what criteria we should consider in selecting a subset of Hospital VBP Program measures or domains in the VM, if we were to adopt such a policy.

Once we have determined which portion of the TPS to include in the VM, if we were to move forward with including Hospital VBP performance data into the VM, we would need to determine how we would incorporate it into the quality and cost composite

scores. If more than one hospital's Hospital VBP Program performance data were to be included in a given TIN's VM because a multiple hospital attribution approach were selected, as discussed above, we would first weight the hospitals' performance. That performance could be measured at the TPS level, the domain level, or the individual measure level, depending which we decide to use, also discussed above. We could treat the TPS itself, the individual domain, or the individual measure as an additional measure in the composite or composites into which we incorporate it. Under this approach, the TPS, domain, or measure score could be given a standardized score, similar to other measures within the VM. For example, a given hospital's Efficiency and Cost Reduction Domain score would be arrayed along with that of all other TINs electing inclusion and the standardized score would be calculated, according to the methodology we finalized in the CY 2013 PFS final rule with comment period (77 FR 69321). That standardized score would then be weighted into the cost composite for the value modifier. The weight could depend on the number of measures underlying the domain score or TPS, it could be weighted evenly with other composite measures if calculated at the individual measure level, or it could be assigned a weight based on relative importance of the measure, to be determined through rulemaking. We welcome public comment on this potential methodology or other approaches for including Hospital VBP Program performance into a TIN's VM.

5. Physician Feedback Program

Section 1848(n) of the Act requires us to provide confidential reports to physicians (and, as determined appropriate by the Secretary, to groups of physicians) that measure the resources involved in furnishing care to Medicare FFS beneficiaries. Section 1848(n)(1)(A)(iii) of the Act also authorizes us to include information on the quality of care furnished to Medicare FFS beneficiaries. In the fall of 2013, we provided QRURs to certain physicians and groups as discussed below, which were based on CY 2012 data. We intend to make reports based on CY 2013 data available in the fall of 2014. These reports provide physicians and groups of physicians with comparative performance data (both quality and resource use) that can be used to improve quality and coordinate care furnished to Medicare FFS beneficiaries. Additionally, in June 2013 and June 2014, we provided Supplemental QRURs to group report

recipients that featured episode-based costs of care. We derived these episode-based costs using an episode grouper as required by section 1848(n)(9)(A) of the Act, as well as using methodologies proposed in the FY 2015 IPPS rule to measure episode costs under the Hospital Value Based Purchasing program (79 FR 28122 through 28124).

a. CY 2013 Quality and Resource Use Reports Based on CY 2013 Data and Disseminated in CY 2014

On September 16, 2013, we made available CY 2012 QRURs to 6,779 groups nationwide with 25 or more EPs. These reports covered approximately 400,000 physicians practicing in large medical groups. The QRURs provided groups of 100 or more EPs with quality-tiering information on 2012 data that they could use to decide whether to elect to be assessed under the quality-tiering approach that we adopted for the VM that will be applied in 2015, based on 2013 performance. Additionally, and in response to feedback we received from prior year recipients of the QRURs, the CY 2012 QRURs contained detailed beneficiary-specific data on each group's attributed beneficiaries and their hospitalizations, and the group's associated eligible professionals. Complementing the CY 2012 QRURs were three downloadable drill down tables that provide information on each beneficiary attributed to the group and each eligible professional billing under the group's TIN. We have received very positive feedback from report recipients and expect to enhance the information we provide in future years.

In the late summer of 2014, we plan to disseminate the QRURs based on CY 2013 data to all physicians (that is, TINs of any size) even though groups with fewer than 100 eligible professionals will not be subject to the VM in CY 2015. Additionally, in CY 2015, the VM will not apply to any group that participated in the Shared Saving Program, the Pioneer ACO model, or the Comprehensive Primary Care Initiative during the performance period (CY 2013). These reports will contain performance on the quality and cost measures used to score the composites and additional information to help physicians coordinate care and improve the quality of care furnished.

b. Episode Costs and the Supplemental QRURs

Section 1848(n)(9)(A) of the Act requires CMS to develop an episode grouper and include episode-based costs in the QRURs. An episode of care consists of medical and/or procedural services that address a specific medical

condition or procedure that are delivered to a patient within a defined time period and are captured by claims data. An episode grouper organizes administrative claims data into episodes.

We have developed a prototype set of episodes that expands upon the set of episodes that were described in the CY 2014 PFS final rule with comment period (78 FR 74785). In June 2013, we made available to 54 large group practices Supplemental QRURs based on 2011 data that illustrated the general approach to classifying episodes of care. The 2011 Supplemental QRURs included episode-based costs for five clinical conditions (pneumonia, acute myocardial infarction (AMI), coronary artery disease, percutaneous coronary intervention (PCI), and coronary artery bypass graft (CABG)), which also were broken into 12 episode subtypes to account for various underlying clinical factors. We chose these episode types to gain experience with the prototype methodology of the episode grouper in acute, chronic, and procedural conditions. In summer 2014, we distributed Supplemental QRURs based on 2012 data to a greater number of groups (groups with at least 100 EPs¹² EPs) that included a broader set of episodes than the 2011 Supplemental QRURs. In addition to the five clinical conditions in the 2011 Supplemental QRURs, the 2012 Supplemental QRURs included: Chronic congestive heart failure (CHF); chronic obstructive pulmonary disease (COPD)/asthma; acute COPD/asthma; permanent pacemaker system replacement/insertion; and bilateral cataract removal with lens implant. For the 2012 Supplemental QRURs, we broke down these episode types into 20 subtypes altogether. In addition to these 20 episode subtypes, we included in the 2012 Supplemental QRURs 6 clinical episode-based measures that we are adapting from those considered for inclusion in the Hospital VBP program (79 FR 28122 through 28124). These 6 additional episode-based measures will be described following discussion of the 20 episode subtypes.

For the 20 episode subtypes discussed above, we applied different attribution rules, depending on episode type (for example, chronic, acute, or procedural) and whether the episode included a

hospitalization. Following feedback we received from physician groups on the 2011 Supplemental QRURs, we have simplified our attribution rules to a single plurality attribution rule with a 20 percent minimum threshold. We believe that it is critical to attribute an episode to the group of physicians that is in the best position to oversee the quality of care furnished and the resources used to furnish that care. For chronic episodes, attribution was based on the plurality of outpatient E&M visits during the episode, because these conditions seem best managed in an outpatient setting. For acute inpatient-based episodes, attribution was based on the plurality of inpatient E&M visits during the trigger event; for outpatient-based acute episodes, attribution was based on the plurality of E&M visits during the entire episode. For procedural episodes, attribution is made to the group that includes the performing surgeon. For chronic and acute episodes, attribution required at least 20 percent of the relevant type of E&M visits, as applicable to the episode type. Additional tie-breaking rules were applied when necessary, and further details on attribution rules can be found in "Detailed Methods of the 2012 Medical Group Practice Supplemental Quality and Resource Use Reports (QRURs)" at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Episode-Costs-and-Medicare-Episode-Grouper.html>.

To control for patient case-mix, we applied a risk-adjustment methodology. We also used a slightly different risk adjustment methodology to adjust the costs for the underlying risk factors for the beneficiaries with these episodes as compared to the total per capita cost measures that we have used in the CY 2013 QRURs. The episode grouper used to generate the 2012 episode data for the 20 episode subtypes, as discussed above, adjusted costs for health and treatment history in the 6 months prior to the beginning of the episode. The risk-adjustment methodology calculated each episode's expected cost based on health (for example, severity), and non-health (for example, age) explanatory variables. Using these variables, the risk-adjustment model calculated the predicted cost of an episode using information available at the start of the episode. The use of such a prospective risk model avoids allowing providers to influence their risk-adjusted costs by changing their treatment patterns during the episode. We are continuing to examine ways to refine this approach as we develop further episode costs for

additional clinical conditions. All cost figures used in the risk-adjustment model are payment-standardized.

We have worked with stakeholders and specialty societies to gain input for the next iteration of the Supplemental QRURs. Based on input received, we have modified episode attribution rules, and increased drill down capability. The Supplemental QRURs contained summary information about each episode type, comparisons to national benchmarks, as well as specific information describing each episode attributed to the group of physicians. We view these 2012 Supplemental QRURs as part of an extended process of incorporating episode costs into the QRURs. We intend to further develop the episode grouper and to broaden the range of conditions that are addressed by episode grouping, such as the additional clinical episode based measures we adapted from the Hospital Value-Based Purchasing Program. The feedback that CMS expects from the medical practice groups on the 2012 Supplemental QRURs will inform next steps.

In the future, we plan to further develop these episode reports and to include not only additional episodes, and to make this information available to an even greater number of medical group practices. In addition, we have begun preliminary investigation of how to marry these measures of resource use with clinical quality measures included in the PQRS, because resource use is to be considered in context of the quality of care furnished for the value modifier. We have also begun investigation of how to align episode measures across provider settings and describe this effort more below.

We note that for the 2012 Supplemental QRURs released in summer of 2014, we included six additional clinical episode-based measures that were adapted from measures proposed for future inclusion in the Hospital VBP Program. In the FY 2015 IPPS proposed rule (79 FR 28122 through 28124), we discussed six clinical episode-based condition-specific measures for hospitals that we also adapted for use in the 2012 Supplemental QRURs. In that proposed rule, we stated that these measures that we are considering for potential future inclusion in the Hospital VBP Program would create additional incentives for coordination between hospitals and physicians to optimize the care they provide to Medicare beneficiaries and would facilitate alignment between the Hospital VBP Program and the VM. Initially, these measures have been included only in the Physician

¹² For Supplemental QRUR purposes, groups were also included if they did not to participate in multiple accountable care organizations (ACOs) and did not to participate in more than one of the following initiatives in program year 2012: The Shared Savings Program, the Pioneer Accountable Care Organization (ACO) Model, or the Comprehensive Primary Care Initiative (CPCI).

Feedback Program, through the 2012 Supplemental QRURs, and we would consider whether to propose their inclusion in the VM through future rulemaking.

The episode-based measures we included in the 2012 Supplemental QRURs and are considering for future inclusion in the Hospital VBP Program are similar in many ways to the MSPB measures already included in the Efficiency domain of the Hospital VBP Program and finalized in the CY 2014 PFS final rule (78 FR 74780) for the VM. As discussed in the FY 2015 IPPS proposed rule (79 FR 28123), like the MSPB measure, these episode-based standardized payment measures would include services initiated during an episode that spans from 3 days prior to a hospital admission through 30 days post-discharge from the hospital. While the MSPB measure includes all Medicare Part A and Part B payments during this time window, the six hospital-based episodes only include Medicare payments for services that are clinically related to the health conditions treated during the hospital stay that triggered the episode. We sum the standardized Medicare payment amounts for Part A and Part B services provided during this timeframe. Medicare payments included in these episode-based measures are standardized according to the CMS standardization methodology finalized for the MSPB in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51626). Episodes in the six new measures are risk-adjusted in a manner similar to the MSPB measure risk adjustment methodology finalized in the FY 2013 IPPS final rule (76 FR 51625 through 51626).¹³ The payment standardization methodology is available in the document entitled “CMS Price Standardization” available at <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1228772057350>. The risk adjustment methodology specific to these six episode-based standardized payment measures can be found on the CMS Web site at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Episode-Costs-and->

¹³ There are a few difference between the risk adjustment approaches for the six clinical episode-based measures and the MSPB. MSPB episodes are risk-adjusted at the Major Diagnostic Category (MDC) level, whereas two of the new episode-based measures, the hip episode measure and the knee episode measure, represent conditions that are in the same MDC. Accordingly, the six clinical episode-based measures are individually risk-adjusted at the specific episode type level, to recognize the distinctions.

Medicare-Episode-Grouper.html. Risk adjustment and payment standardization allow us to compare performance on these measures in the QRURs, attributed to a physician group, across physician groups.

We included three medical and three surgical episodes in the 2012 Supplemental QRURs. The medical episode measures are for the following conditions: (1) Kidney/urinary tract infection; (2) cellulitis; and (3) gastrointestinal hemorrhage. A medical episode is ‘triggered’ by an inpatient claim with a specified MS-DRG. The surgical episode measures are: (1) Hip replacement; (2) knee replacement/revision; and (3) lumbar spine fusion/refusion. A surgical episode is triggered when an inpatient claim has one of the specified MS-DRGs and at least one of the procedure codes specified for that episode. We welcome public comment on the three medical and three surgical episode measures that we included in the 2012 Supplemental QRURs.

Attribution for the six clinical episode-based measures at the group level are the same as the rules used for comparable types of the 20 episode subtypes in the 2012 Supplemental QRURs as discussed above. Attribution rules varied depending on whether a the clinical episode-based measure was one of the three surgical (or procedural) episodes or one of the three medical (or acute condition) episodes. Further details on attribution rules can be found in “Detailed Methods of the 2012 Medical Group Practice Supplemental Quality and Resource Use Reports (QRURs)” at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Episode-Costs-and-Medicare-Episode-Grouper.html>.

Specifications for these six clinical episode-based measures, including the MS-DRG and procedure codes used to identify each of the episodes, and details of episode construction methodology, are available in “Detailed Methods of the 2012 Medical Group Practice Supplemental Quality and Resource Use Reports (QRURs)” at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Episode-Costs-and-Medicare-Episode-Grouper.html>. We welcome public comments on these specifications and the construction of the six clinical episode-based measures that we included in the 2012 Supplemental QRURs.

CMS’ episodes will continue to evolve over the coming years as more experience is gained. More information about the Supplemental QRURs can be

found at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/Episode-Costs-and-Medicare-Episode-Grouper.html>.

We will continue to seek stakeholder input as we develop the episode framework. We are considering proposing to add episode-based payment measures to the VM through future rulemaking for all 12 episode subtypes, or some subset of these episode subtypes, of the selected respiratory and selected heart conditions that have appeared in both the 2011 Supplemental QRURs and 2012 Supplemental QRURs. These 12 episode subtypes include: Pneumonia (all), pneumonia without an inpatient hospitalization, pneumonia with an inpatient hospitalization, acute myocardial infarction (now called acute coronary syndrome or ACS), ACS without percutaneous coronary interventions (PCI) or coronary artery bypass graft (CABG), ACS with PCI, ACS with CABG, coronary artery disease (now called ischemic heart disease or IHD), IHD without ACS, IHD with ACS, CABG without preceding ACS, and PCI without preceding ACS. Additionally, we are considering proposing to add hospital episode-based payment measures to the VM at a later time, such as the six hospital episodes described above. We welcome public comments on the specifications included on the Web site and the construction of the episode-based payment measures that we are considering.

c. Future Plans for the Physician Feedback Reports

We will continue to develop and refine the annual QRURs in an iterative manner. As we have done in previous years, we will seek to further improve the reports by welcoming suggestions from recipients, specialty societies, professional associations, and others. We have worked with several specialty societies to develop episode costs or other cost or utilization metrics to include in the annual QRURs. We believe these efforts could be productive as we use the QRURs to not only describe how the VM would apply, but in addition to provide groups with utilization and other statistics that can be used for quality improvement and care coordination.

In the late summer of 2014, we plan to disseminate the QRURs based on CY 2013 data to all physicians (that is, TINs of any size) even though groups with fewer than 100 eligible professionals will not be subject to the VM in CY 2015. Additionally, the VM will not

apply to any group that participated in the Shared Saving Program, the Pioneer ACO model, or the Comprehensive Primary Care Initiative during the performance period (CY 2013). These reports will contain performance on the quality and cost measures used to score the composites and additional information to help physicians coordinate care and improve the quality of care furnished. Improvements to this year's reports include: Additional supplementary information on the specialty adjusted benchmarks; inclusion of the individual PQRS measures for informational purposes for individual EPs reporting PQRS measures on their own; enhanced drill down tables; and a dashboard with key performance measures. The reports will be based on the VM policies that were finalized in the CY 2013 PFS final rule with comment period (77 FR 69310), and that will affect physician payment starting January 1, 2015. Groups will, therefore, have an opportunity to see how the policies adopted will apply to them. After the reports are released we will again solicit feedback from physicians and continue to work with our partners to improve them. We note that physicians will have some time to determine the impact of our revised policies and revise their practices accordingly before the new policies impact them. We look forward to continue working with the physician community to improve the QRURs.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

To derive average costs, we used data from the U.S. Bureau of Labor Statistics for all salary estimates. The salary estimates include the cost of fringe

benefits, calculated at 35 percent of salary, which is based on the June 2012 Employer Costs for Employee Compensation report by the Bureau.

We are soliciting public comment on each of the section 3506(c)(2)(A)-required issues for the following information collection requirements (ICRs). For cohesion, the ICRs are set out below under the same headings found in sections II (Provisions of the Proposed Rule for PFS) and III (Other Provisions of the Proposed Regulations) of this preamble.

A. Information Collection Requirements (ICRs)

1. ICRs Regarding the Removal of Employment Requirements for Services Furnished Incident to Rural Health Clinics and Federally Qualified Health Center Visits

This provision would remove the requirement that nonphysician RHC or FQHC practitioners be W-2 employees. This action would not require the modification of existing contracts or the creation of new contracts, nor does CMS collect any information on contracting. Consequently, the provision is not subject to the requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

2. ICRs Regarding Access to Identifiable Data for the Center for Medicare and Medicaid Models

While this provision concerns the evaluation of 3021-funded models, section 3021(a) of the Affordable Care Act exempts any collection of information associated with the testing and evaluation or expansion of 3021-funded models from the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

3. ICRs Regarding Molecular Diagnostic Testing Local Coverage Determination Process

The information collection requirements and burden associated with the proposed LCD process for clinical diagnostic laboratory testing would not impose any new or revised reporting, recordkeeping, or third-party disclosure requirements and, therefore, does not require additional OMB review under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

4. ICRs Regarding the Solicitation of Comments on the Payment Policy for Substitute Physician Billing Arrangements

In this section of this preamble, we are soliciting public comments regarding substitute physician billing

arrangements. Since we are not proposing any new or revised collection of information requirements, this section is not subject to the requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

5. Reports of Payments or Other Transfers of Value to Covered Recipients ICRs Regarding Reports of Payments or Other Transfers of Value and Physician Ownership and Investment Interests (§ 403.904(c)(8)(d)(3), and (g))

The proposed amendment of § 403.904(c)(8) would require applicable manufacturers and applicable group purchasing organizations (GPOs) to report the marketed name of covered and non-covered drugs, devices, biologicals and medical supplies. This amendment would have non-measurable effect on current burden estimates since the manufacturers and GPOs are already required to report the marketed name for drugs and biologicals and report either the marketed name, therapeutic area, or product category for devices and medical supplies. This requirement has been approved by OMB under control number 0938-1173.

Section 403.904(d)(3) would require that applicable manufacturers and applicable GPOs report the form of payment or other transfers of value as: Cash or cash equivalent, in-kind items or services, stock, stock option, or any other ownership investment. The burden associated with this provision is the time and effort it would take each applicable manufacturer and applicable GPO to revise their reporting system to report the form of payment.

The proposed removal of § 403.904(g) would require applicable manufacturers and applicable GPOs of covered drugs, devices, biologicals, and medical supplies to report annually to CMS all payments or other transfers of value provided as compensation for speaking at a continuing education program. The ongoing burden associated with this provision is the time and effort it would take each applicable manufacturer and applicable GPO to report payments or other transfers of value to CMS which were provided to physicians at a continuing education program. We estimate that it will take 1.0 hour to report payments or other transfers of value to CMS which were provided to physician at a continuing education program.

We estimate that it would take 1.0 hour to report payments or other transfers of value to CMS which were provided to physician covered

recipients as compensation for speaking at a continuing education program and 0.5 hours to revise an applicable manufacturer or applicable GPO's reporting system to report the form of payment.

In deriving these figures, we used the following hourly labor rates and estimated the time to complete each task: \$26.39/hr and 1.0 hours for support staff to report payments or other transfers of value to CMS which were provided to physician covered recipients as compensation for speaking at a continuing education program and \$47.55/hr and 0.5 hours for support to revise their reporting system to report the form of payment.

The preceding requirements and burden estimates will be added to the existing PRA-related requirements and burden estimates that have been approved by OMB under OCN 0938-1173.

6. ICRs Regarding Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting System

The annual burden estimate is calculated separately for the 2015 PQRS for: (1) Individual eligible professionals and group practices using the claims (for eligible professionals only), (2) qualified registry and QCDR, (3) EHR-based reporting mechanisms, and (4) group practices using the group practice reporting option (GPRO). There is also a separate annual burden estimate for qualified registry and QCDR vendors who wish to be qualified to submit quality measures data. Please note that we are grouping group practices using the qualified registry and EHR-based reporting mechanisms with the burden estimate for individual eligible professionals using the qualified registry and EHR-based reporting mechanisms because we believe the criteria for satisfactory reporting for group practices using these 2 reporting mechanisms under the GPRO are similar to the satisfactory reporting criteria for eligible professionals using these reporting mechanisms.

a. Burden Estimate for PQRS Reporting by Individual Eligible Professionals: Reporting in General

According to the 2012 Reporting Experience, "more than 1.2 million eligible professionals were eligible to participate in the 2012 PQRS, Medicare Shared Savings Program, and Pioneer ACO Model."¹⁴ In this burden estimate,

we assume that 1.2 million eligible professionals, the same number of eligible professionals eligible to participate in the PQRS in 2012, will be eligible to participate in the PQRS. Historically, the PQRS has never experienced 100 percent participation in reporting for the PQRS. Therefore, we believe that although 1.2 million eligible professionals will be subject to the 2017 PQRS payment adjustment, not all eligible participants will report quality measures data for purposes of the 2017 PQRS payment adjustment. In this burden estimate, we will only provide burden estimates for the eligible professionals and group practices who attempt to submit quality measures data for purposes of the 2017 PQRS payment adjustment.

In 2012, 435,871 eligible professionals (36 percent of eligible professionals, including those who belonged to group practices that reported under the GPRO and eligible professionals within an ACO that participated in the PQRS via the Shared Savings Program or Pioneer ACO model) participated in the PQRS, Medicare Shared Savings Program, or Pioneer ACO Model.¹⁵ We expect to see a significant increase in participation in reporting for the PQRS in 2015 than 2012 as eligible professionals were not subject to a PQRS payment adjustment in 2012. Last year, we estimated that we would see a 50 percent participation rate in 2015. We still believe that a 14 percent increase in participation from 2012 is reasonable in 2015. Therefore, we estimate that 50 percent of eligible professionals (or approximately 600,000 eligible professionals) will report quality measures data for purposes of the 2017 PQRS payment adjustment.

With respect to the PQRS, the burden associated with the requirements of this voluntary reporting initiative is the time and effort associated with individual eligible professionals identifying applicable quality measures for which they can report the necessary information, selecting a reporting option, and reporting the information on their selected measures or measures group to CMS using their selected reporting option.

We believe the labor associated with eligible professionals and group practices reporting quality measures data in the PQRS is primarily handled by an eligible professional's or group practice's billing clerk or computer analyst trained to report quality measures data. Therefore, we will consider the hourly wage of a billing clerk and computer analyst in our estimates. For purposes of this burden

estimate, we assume that a billing clerk will handle the administrative duties associated with participating in the PQRS. According to information published by the Bureau of Labor Statistics, available at <http://www.bls.gov/oes/current/oes433021.htm>, the mean hourly wage for a billing clerk is approximately \$16.00/hour. Therefore, for purposes of handling administrative duties, we estimate an average labor cost of \$16.00/hour. In addition, for purposes of this burden estimate, we assume that a computer analyst will engage in the duties associated with the reporting of quality measures. According to information published by the Bureau of Labor Statistics, available at <http://www.bls.gov/oes/current/oes151121.htm>, the mean hourly wage for a computer analyst is approximately \$41.00/hour. Therefore, for purposes of reporting on quality measures, we estimate an average labor cost of \$41.00/hour.

For individual eligible professionals, the burden associated with the requirements of this reporting initiative is the time and effort associated with eligible professionals identifying applicable quality measures for which they can report the necessary information, collecting the necessary information, and reporting the information needed to report the eligible professional's measures. We believe it is difficult to accurately quantify the burden because eligible professionals may have different processes for integrating the PQRS into their practice's work flows. Moreover, the time needed for an eligible professional to review the quality measures and other information, select measures applicable to his or her patients and the services he or she furnishes to them, and incorporate the use of quality data codes into the office work flows is expected to vary along with the number of measures that are potentially applicable to a given professional's practice. Since eligible professionals are generally required to report on at least 9 measures covering at least 3 National Quality Strategy domains criteria for satisfactory reporting (or, in lieu of satisfactory reporting, satisfactory participation in a QCDR) for the 2017 PQRS payment adjustment, we assume that each eligible professional reports on an average of 9 measures for this burden analysis.

For eligible professionals who are participating in PQRS for the first time, we will assign 5 total hours as the amount of time needed for an eligible professional's billing clerk to review the PQRS measures list, review the various

¹⁴ Centers for Medicare and Medicaid Services, *2012 Reporting Experience Including Trends (2007-2013): Physician Quality Reporting System and Electronic Prescribing (eRx) Incentive Program*, March 14, 2014, at xiii.

¹⁵ 15 Id. at XV.

reporting options, select the most appropriate reporting option, identify the applicable measures or measures groups for which they can report the necessary information, review the measure specifications for the selected measures or measures groups, and incorporate reporting of the selected measures or measures groups into the office work flows. The measures list contains the measure title and brief summary information for the eligible professional to review. Assuming the eligible professional has received no training from his/her specialty society, we estimate it will take an eligible professional's billing clerk up to 2 hours to review this list, review the reporting options, and select a reporting option and measures on which to report. If an eligible professional has received training, then we believe this would take less time. CMS believes 3 hours is plenty of time for an eligible professional to review the measure specifications of 9 measures or 1 measures group they select to report for purposes of participating in PQRS and to develop a mechanism for incorporating reporting of the selected measures or measures group into the office work flows. Therefore, we believe that the start-up cost for an eligible professional to report PQRS quality measures data is 5 hours \times \$16/hour = \$80.

We continue to expect the ongoing costs associated with PQRS participation to decline based on an eligible professional's familiarity with and understanding of the PQRS, experience with participating in the PQRS, and increased efforts by CMS and stakeholders to disseminate useful educational resources and best practices.

We believe the burden associated with reporting the quality measures will vary depending on the reporting mechanism selected by the eligible professional. As such, we break down the burden estimates by eligible professionals and group practices participating in the GPRO according to the reporting mechanism used.

b. Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: Claims-Based Reporting Mechanism

According to the 2011 PQRS and eRx Experience Report, in 2011, 229,282 of the 320,422 eligible professionals (or 72 percent) of eligible professionals used the claims-based reporting mechanism. According to the 2012 Reporting Experience, 248,206 eligible professionals participated in the PQRS using the claims-based reporting

mechanism in 2012.¹⁶ Preliminary estimates show that 252,567 eligible professionals participated in the PQRS using the claims-based reporting mechanism in 2013.¹⁷

According to the historical data cited above, while the claims-based reporting mechanism is still the most widely-used reporting mechanism, we are seeing a decline in the use of the claims-based reporting mechanism in the PQRS. While these eligible professionals continue to participate in the PQRS, these eligible professionals have started to shift towards the use of other reporting mechanisms—mainly the GPRO web interface (whether used by a PQRS GPRO or an ACO participating in the PQRS via the Medicare Shared Savings Program or the Pioneer ACO Model), registry, or the EHR-based reporting mechanisms. For purposes of this burden estimate, based on PQRS participation using the claims-based reporting mechanism in 2012 and 2013, we assume that approximately 250,000 eligible professionals will participate in the PQRS using the claims-based reporting mechanism.

For the claims based reporting option, eligible professionals must gather the required information, select the appropriate quality data codes (QDCs), and include the appropriate QDCs on the claims they submit for payment. The PQRS will collect QDCs as additional (optional) line items on the existing HIPAA transaction 837 P and/or CMS form CMS-1500 (OMB control number 0938-0999). We do not anticipate any new forms and or any modifications to the existing transaction or form. We also do not anticipate changes to the 837 P or CMS-1500 for CY 2015.

We estimate the cost for an eligible professional to review the list of quality measures or measures groups, identify the applicable measures or measures group for which they can report the necessary information, incorporate reporting of the selected measures into the office work flows, and select a PQRS reporting option to be approximately \$205 per eligible professional (\$41 per hour \times 5 hours).

Based on our experience with the Physician Voluntary Reporting Program (PVRP), we continue to estimate that the time needed to perform all the steps necessary to report each measure (that is, reporting the relevant quality data code(s) for 9 measures measure) would range from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. To report 9

measures, we estimate that it would take approximately 2.25 minutes to 108 minutes to perform all of the necessary reporting steps.

Per measure, at an average labor cost of \$41/hour per practice, the cost associated with this burden will range from \$0.17 to about \$8.20 for more complicated cases and/or measures, with the cost for the median practice being \$1.20. To report 9 measures, using an average labor cost of \$41/hour, we estimated that the cost of reporting for an eligible professional via claims would range from \$1.53 (2.25 minutes or 0.0375 hours \times \$41/hour) to \$73.80 (108 minutes or 1.8 hours \times \$41/hour) per reported case.

The total estimated annual burden for this requirement will also vary along with the volume of claims on which quality data is reported. In previous years, when we required reporting on 80 percent of eligible cases for claims based reporting, we found that on average, the median number of reporting instances for each of the PQRS measures was 9. Since we reduced the required reporting rate by over one third to 50 percent, then for purposes of this burden analysis we assume that an eligible professional or eligible professional in a group practice will need to report each selected measure for 6 reporting instances. The actual number of cases on which an eligible professional or group practice is required to report quality measures data will vary, however, with the eligible professional's or group practice's patient population and the types of measures on which the eligible professional or group practice chooses to report (each measure's specifications includes a required reporting frequency).

Based on these assumptions, we estimate that the total annual reporting burden per individual eligible professional associated with claims based reporting will range from 13.5 minutes (0.25 minutes per measure \times 9 measures \times 6 cases per measure) to 648 minutes (12 minutes per measure \times 9 measures \times 6 cases per measure), with the burden to the median practice being 94.5 minutes (1.75 minutes per measure \times 9 measures \times 6 cases). We estimate the total annual reporting cost per eligible professional or eligible professional in a group practice associated with claims based reporting will range from \$9.18 (\$0.17 per measure \times 9 measures \times 6 cases per measure) to \$442.80 (\$8.20 per measure \times 9 measures \times 6 cases per measure), with the cost to the median practice being \$64.58 per eligible professional (\$1.20 per measure \times 9 measures \times 6 cases per measure).

¹⁷ *Id.*

c. Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: Qualified Registry-based and QCDR-based Reporting Mechanisms

In 2011, approximately 50,215 (or 16 percent) of the 320,422 eligible professionals participating in PQRS used the qualified registry-based reporting mechanism. According to the 2012 Reporting Experience, 36,473 eligible professionals reported individual measures via the registry-based reporting mechanism, and 10,478 eligible professionals reporting measures groups via the registry-based reporting mechanism in 2012.¹⁸ Therefore, approximately 47,000 eligible professionals participated in the PQRS using the registry-based reporting mechanism in 2012. Please note that we currently have no data on participation in the PQRS via a QCDR as 2014 is the first year in which an eligible professional may participate in the PQRS via a QCDR.

We believe that the rest of the eligible professionals not participating in other PQRS reporting mechanisms will use either the registry or QCDR reporting mechanisms for the following reasons:

- The PQRS measures set is moving away from use of claims-based measures and moving towards the use of registry-based measures.

- We believe the number of QCDR vendors will increase as the QCDR reporting mechanism evolves.

Therefore, based on these assumptions, we expect to see a significant jump from 47,000 eligible professionals to approximately 165,000 eligible professionals using either the registry-based reporting mechanism or QCDR in 2015. We believe the majority of these eligible professionals will participate in the PQRS using a QCDR, as we presume QCDRs will be larger entities with more members.

For qualified registry based and QCDR-based reporting, there will be no additional time burden for eligible professionals or group practices to report data to a qualified registry as eligible professionals and group practices opting for qualified registry based reporting or use of a QCDR will more than likely already be reporting data to the qualified registry for other purposes and the qualified registry will merely be repackaging the data for use in the PQRS. Little, if any, additional data will need to be reported to the qualified registry or QCDR solely for purposes of participation in the PQRS. However, eligible professionals and group practices will need to authorize or

instruct the qualified registry or QCDR to submit quality measures results and numerator and denominator data on quality measures to CMS on their behalf. We estimate that the time and effort associated with this will be approximately 5 minutes per eligible professional or eligible professional within a group practice.

Please note that, unlike the claims-based reporting mechanism that would require an eligible professional to report data to CMS on quality measures on multiple occasions, an eligible professional would not be required to submit this data to CMS, as the qualified registry or QCDR would perform this function on the eligible professional's behalf.

d. Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: EHR-Based Reporting Mechanism

According to the 2011 PQRS and eRx Experience Report, in 2011, 560 (or less than 1 percent) of the 320,422 eligible professionals participating in PQRS used the EHR-based reporting mechanism. In 2012 there was a sharp increase in reporting via the EHR-based reporting mechanism. Specifically, according to the 2012 Reporting Experience, in 2012, 19,817 eligible professionals submitted quality data for the PQRS through a qualified EHR.¹⁹

We believe the number of eligible professionals and group practices using the EHR-based reporting mechanism will steadily increase as eligible professionals become more familiar with EHR products and more eligible professionals participate in programs encouraging the use of an EHR, such as the EHR Incentive Program. In particular, we believe eligible professionals will transition from using the claims-based to the EHR-based reporting mechanism. To account for this anticipated increase, we continue to estimate that approximately 50,000 eligible professionals, whether participating as an individual or part of a group practice under the GPRO, would use the EHR-based reporting mechanism in CY 2015.

For EHR-based reporting, which includes EHR reporting via a direct EHR product and an EHR data submission vendor's product, the eligible professional or group practice must review the quality measures on which we will be accepting PQRS data extracted from EHRs, select the appropriate quality measures, extract the necessary clinical data from his or her EHR, and submit the necessary data

to the CMS-designated clinical data warehouse.

For EHR based reporting for the PQRS, the individual eligible professional or group practice may either submit the quality measures data directly to CMS from their EHR or utilize an EHR data submission vendor to submit the data to CMS on the eligible professional's or group practice's behalf. To submit data to CMS directly from their EHR, the eligible professional or eligible professional in a group practice must have access to a CMS specified identity management system, such as IACS, which we believe takes less than 1 hour to obtain. Once an eligible professional or eligible professional in a group practice has an account for this CMS specified identity management system, he or she will need to extract the necessary clinical data from his or her EHR, and submit the necessary data to the CMS designated clinical data warehouse. With respect to submitting the actual data file for the respective reporting period, we believe that this will take an eligible professional or group practice no more than 2 hours, depending on the number of patients on which the eligible professional or group practice is submitting. We believe that once the EHR is programmed by the vendor to allow data submission to CMS, the burden to the eligible professional or group practice associated with submission of data on quality measures should be minimal as all of the information required to report the measure should already reside in the eligible professional's or group practice's EHR.

e. Burden Estimate for PQRS Reporting by Group Practices Using the GPRO Web Interface

As we noted in last year's estimate, according to the 2011 Experience Report, approximately 200 group practices participated in the GPRO in 2011. According to the 2012 Reporting Experience, 66 practices participated in the PQRS GPRO.²⁰ In addition, 144 ACOs participated in the PQRS GPRO through either the Medicare Shared Savings Program (112 ACOs) or Pioneer ACO Model (32 practices).²¹ These group practices encompass 134,510 eligible professionals (or approximately 140,000 eligible professionals).²² Since it seems that roughly 200 group practices participated in the GPRO in 2011 and 2012, based on these numbers, we assume that 200 group practices (accounting for approximately 135,000

¹⁸ *Id.* at xvi. See Figure 4.

¹⁹ *Id.* at xv.

²⁰ *Id.* at xv.

²¹ *Id.* at xvi.

²² *Id.* at 18.

eligible professionals) will participate in the PQRS using the GPRO web interface in 2015.

With respect to the process for group practices to be treated as satisfactorily submitting quality measures data under the PQRS, group practices interested in participating in the PQRS through the GPRO must complete a self-nomination process similar to the self-nomination process required of qualified registries. However, since a group practice using the GPRO web interface would not need to determine which measures to report under PQRS, we believe that the self-nomination process is handled by a group practice's administrative staff. Therefore, we estimate that the self-nomination process for the group practices for the PQRS involves approximately 2 hours per group practice to review the PQRS GPRO and make the decision to participate as a group rather than individually and an additional 2 hours per group practice to draft the letter of intent for self-nomination, gather the requested TIN and NPI information, and provide this requested information. It is estimated that each self-nominated entity will also spend 2 hours undergoing the vetting process with CMS officials. We assume that the group practice staff involved in the group practice self-nomination process has an average practice labor cost of \$16 per hour. Therefore,

assuming the total burden hours per group practice associated with the group practice self-nomination process is 6 hours, we estimate the total cost to a group practice associated with the group practice self-nomination process to be approximately \$96 (\$16 per hour × 6 hours per group practice).

The burden associated with the group practice reporting requirements under the GPRO is the time and effort associated with the group practice submitting the quality measures data. For physician group practices, this would be the time associated with the physician group completing the web interface. We estimate that the time and effort associated with using the GPRO web interface will be comparable to the time and effort associated to using the PAT. As stated above, the information collection components of the PAT have been reviewed by OMB and are approved under OCN 0938–0941 (form CMS–10136) with an expiration date of July 31, 2015, for use in the PGP, MCMP, and EHR demonstrations. As the GPRO was only recently implemented in 2010, it is difficult to determine the time and effort associated with the group practice submitting the quality measures data. As such, we will use the same burden estimate for group practices participating in the GPRO as we use for group practices participating in the PGP, MCMP, and EHR

demonstrations. Since these changes will not have any impact on the information collection requirements associated with the PAT and we will be using the same data submission process used in the PGP demonstration, we estimate that the burden associated with a group practice completing data for PQRS under the web interface will be the same as for the group practice to complete the PAT for the PGP demonstration. In other words, we estimate that, on average, it will take each group practice 79 hours to submit quality measures data via the GPRO web interface at a cost of \$40 per hour. Therefore, the total estimated annual cost per group practice is estimated to be approximately \$3,160.

7. ICRs Regarding the Medicare Shared Savings Program

Section 3022 of the Affordable Care Act exempts any collection of information associated with the Medicare Shared Savings Program from the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

B. Summary of Proposed Burden Estimates

Table 59 summarizes this rule's proposed requirements and burden estimates.

TABLE 59—PROPOSED ANNUAL RECORDKEEPING AND REPORTING REQUIREMENTS AND BURDEN

Regulation section(s)	OMB & CMS ID Nos.	Respondents	Responses (total)	Burden (time) per response	Total annual burden (hours)	Labor cost of reporting (\$/hr)	Total cost (\$)

TABLE 59—PROPOSED ANNUAL RECORDKEEPING AND REPORTING REQUIREMENTS AND BURDEN—Continued

Regulation section(s)	OMB & CMS ID Nos.	Respondents	Responses (total)	Burden (time) per response	Total annual burden (hours)	Labor cost of reporting (\$/hr)	Total cost (\$)
CY 2015 PQRS (Group Practices Using the GPRO Web Interface).	0938–1059 (CMS–10276).	200	200 (self-nomination process).	6 hr	1,200	16.00	19,200
Total		630,770	200 (reporting) 14,130,970	79 hr	15,800 2,496,855	41.00	647,800 81,259,510

* 13,500,000 = 250,000 × number of measures (9) × number of cases (6).

** There is no set cost. As explained above, the cost would vary depending on the registry used. Additionally, many EPs and group practices using a registry or QCDR will most likely use a registry or QCDR for other purposes.

*** As explained above, the burden associated with the submission of data is minimal.

C. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule's information collection and recordkeeping requirements. These requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS' Web site at <http://www.cms.hhs.gov/PaperworkReductionActof1995>; email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov; or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you comment on these information collection and recordkeeping requirements, please submit your comments electronically as specified in the **ADDRESSES** section of this proposed rule.

PRA-specific comments must be received by September 2, 2014.

V. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VI. Regulatory Impact Analysis

A. Statement of Need

This proposed rule is necessary to make payment and policy changes under the Medicare PFS and to make required statutory changes under the Pathway for SGR Reform Act of 2013 and the PAMA. This proposed rule also

is necessary to make changes to Part B payment policy for clinical diagnostic lab tests and other Part B related policies.

B. Overall Impact

We have examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate, as discussed below in this section, that the PFS provisions included in this proposed rule will redistribute more than \$100 million in 1 year. Therefore, we estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit

organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details see the SBA's Web site at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section as well as elsewhere in this proposed rule is intended to comply with the RFA requirements.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is

located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. We are not preparing an analysis for section 1102(b) of the Act because we have determined, and the Secretary certifies, that this proposed rule would not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately \$141 million. This proposed rule would impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. Since this regulation does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We have prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we are proposing to implement a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and to implement statutory provisions. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare revenues for PFS services compare payment rates for CY 2014 with proposed payment rates for CY 2015 using CY 2013 Medicare utilization. The payment impacts in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual physician could vary from the average and would depend on the mix of services the practitioner furnishes. The average percentage change in total revenues would be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Lab Fee Schedule.

The annual update to the PFS conversion factor (CF) is calculated based on a statutory formula that measures actual versus allowed or "target" expenditures, and applies a sustainable growth rate (SGR) calculation intended to control growth in aggregate Medicare expenditures for physicians' services. This update methodology is typically referred to as the "SGR" methodology, although the SGR is only one component of the formula. Medicare PFS payments for services are not withheld if the percentage increase in actual expenditures exceeds the SGR. Rather, the PFS update, as specified in section 1848(d)(4) of the Act, is adjusted to eventually bring actual expenditures back in line with targets. If actual expenditures exceed allowed expenditures, the update is reduced. If actual expenditures are less than allowed expenditures, the update is increased. We provide our most recent estimate of the SGR and physician update for CY 2015 on the CMS Web site at <http://www.cms.gov/Medicare/>

[Medicare-Fee-for-Service-Payment/SustainableGRatesConFact/index.html?redirect=/SustainableGRatesConFact/](#).

The PAMA has replaced the reduction in the PFS update that would otherwise occur on January 1, 2015 with a zero percent update from January 1, 2015 to March 31, 2015. We estimate that, based upon the zero percent update and the adjustments necessary to maintain budget neutrality for the policies in this proposed rule the CF for this period will be \$35,7977. Although the PAMA provides for a zero percent update for only the first 3 months of the year, the impacts in this proposed rule are based upon this CF being applicable throughout the year. However, in the absence of further Congressional action, the applicable update for the remainder of the year will be based on the statutory SGR formula and the CF will be adjusted accordingly.

By law, we are required to apply these updates in accordance with sections 1848(d) and (f) of the Act, and any negative updates can only be averted by an Act of the Congress. While the Congress has provided temporary relief from negative updates for every year since 2003, a long-term solution is critical. We are committed to working with the Congress to permanently reform the SGR methodology for Medicare PFS updates.

Table 60 shows the payment impact on PFS services of the proposals contained in this proposed rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 60 (CY 2015 PFS Proposed Rule Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 60:

- *Column A (Specialty)*: Identifies the specialty for which data is shown.
- *Column B (Allowed Charges)*: The aggregate estimated PFS allowed charges for the specialty based on CY 2013 utilization and CY 2014 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- *Column C (Impact of Work RVU Changes)*: This column shows the estimated CY 2015 impact on total allowed charges of the proposed changes in the work RVUs, including

the impact of changes due to potentially misvalued codes.

• *Column D (Impact of PE RVU Changes):* This column shows the estimated CY 2014 impact on total allowed charges of the proposed changes in the PE RVUs.

• *Column E (Impact of RVU Changes):* This column shows the estimated CY 2015 impact on total allowed charges of the proposed changes in the MP RVUs, which are primarily driven by the required five-year review and update of MP RVUs.

• *Column F (Combined Impact):* This column shows the estimated CY 2015 combined impact on total allowed charges of all the proposed changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

* Table 60 shows only the payment impact on PFS services and does not include the effects of the change in the CF scheduled to occur on April 1, 2015 under current law.

** Column F may not equal the sum of columns C, D, and E due to rounding.

2. CY 2015 PFS Impact Discussion

a. Work RVU Impacts

The changes in work RVU impacts are almost entirely attributable to the payment for CCM services beginning in CY 2015. We finalized this separately billable CCM service in the CY 2014 final rule with comment period, effective beginning in CY 2015 (78 FR 74414 through 74427). We propose a payment rate for CCM services for CY 2015 in this proposed rule. Payment for this service at the proposed rate is expected to result in modest payment increases for family practice, internal medicine, and geriatrics.

b. PE RVU Impacts

Payment for CCM services also has a positive impact on the PE RVUs attributable to family practice, internal medicine, and geriatrics. The most widespread specialty impacts in PE RVUs are generally related to our proposal to implement the RUC recommendation regarding the film-to-digital migration of imaging inputs, which primarily affects portable x-ray

suppliers, diagnostic testing facilities, and interventional radiology. Radiation oncology and radiation treatment centers are negatively impacted by our proposal to treat radiation treatment vaults as indirect PE rather than direct PEs. Other impacts result from adjustments of PE RVUs for services as discussed in section II.B.

c. MP RVU Impacts

The changes in MP RVUs are primarily attributable to proposed changes as part of the statutorily required review of MP RVUs every five years as described in section II.C of this proposed rule. Of particular note are the impacts on the specialties of ophthalmology (– 2 percent) and optometry (– 1 percent). In the course of preparation of the proposed MP RVUs, we discovered that we had made an error in calculating the MP RVUs for ophthalmology codes in the last five-year review CY that resulted in higher MP RVUs for ophthalmology and optometry for CY 2010 than would have resulted had the MP RVUs been calculated correctly.

d. Combined Impact

Column F of Table 60 displays the estimated CY 2015 combined impact on total allowed charges by specialty of all the proposed RVU changes. These impacts are estimated prior to the application of the negative CF update effective April 1, 2015, applicable under the current statute.

Table 61 (Impact of Proposed Rule on CY 2015 Payment for Selected Procedures) shows the estimated impact on total payments for selected high volume procedures of all of the proposed changes. We have included proposed payment rates for the period of January 1, 2015 through March 31, 2015, as well as those for April 1, 2015 through December 31, 2015. We selected these procedures for sake of illustration from among the most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A of this proposed rule.

¹CPT codes and descriptions are copyright 2013 American Medical Association. All Rights Reserved. Applicable FARS/DFARS apply.

²The CY 2014 CF is 35.8228.

³Payments based on the CY 2014 CF of 35.8228, adjusted to 35.7977 to include the budget neutrality adjustment and the zero percent update in the CF required by PAMA.

D. Effect of Proposed Changes in Telehealth List

As discussed in section II.E. of this proposed rule, we are proposing to add several new codes to the list of Medicare telehealth services. Although we expect these changes to increase access to care in rural areas, based on recent utilization of similar services already on the telehealth list, we estimate no significant impact on PFS expenditures from the proposed additions.

E. Effect of Proposed Changes in Geographic Practice Cost Indices (GPCIs)

As discussed in section II.D of this proposed rule, we are required to review and revise the GPCIs at least every 3 years and phase in the adjustment over 2 years (if there has not been an adjustment in the past year). For CY 2015, we are not proposing any revisions related to the data or the methodologies used to calculate the GPCIs except in regard to the Virgin Islands locality discussed in section II.E. However, since the 1.0 work GPCI floor provided in section 1848(e)(1)(E) of the Act is set to expire on March 31, 2015, we have included two set of GPCIs and GAFs for CY 2015—one set for January 1, 2015 through March 31, 2015 and another set for April 1, 2015 through December 31, 2015. The April 1, 2015 through December 31, 2015 GPCIs and GAFs reflect the statutory expiration of the 1.0 work GPCI floor.

F. Other Provisions of the Proposed Regulation

1. Ambulance Fee Schedule

The statutory ambulance extender provisions are self-implementing. As a result, there are no policy proposals associated with these provisions or associated impact in this rule. We are proposing only to correct the dates in the Code of Federal Regulations (CFR) at 42 CFR 414.610(c)(1)(ii) and 42 CFR 414.610(c)(5)(ii) to conform the regulations to these self-implementing statutory provisions.

The geographic designations for approximately 99.48 percent of ZIP codes would be unchanged if we adopt OMB's revised statistical area delineations and the updated RUCA codes. There are a similar number of ZIP codes that would change from rural to urban (122, or 0.28 percent) and from urban to rural (100, or 0.23 percent). In general, if we adopt OMB's revised delineations and the updated RUCA codes, it is expected that ambulance providers and suppliers in 100 ZIP codes within 11 states may experience payment increases while ambulance providers and suppliers in 122 ZIP codes within 22 states may experience payment decreases. None of the current "Super Rural Bonus" areas would lose their status if we adopt the revised OMB delineations and the updated RUCA codes. We estimate that the adoption of the revised OMB delineations and the updated RUCA codes would have minimal fiscal impact on the Medicare program because payments would, in effect, be redistributed.

2. Clinical Laboratory Fee Schedule

There is no impact because we are merely deleting language from the Code of Federal Regulations.

3. Removal of Employment Requirements for Services Furnished "Incident to" RHC and FQHC Visits

The removal of employment requirements for services furnished "incident to" RHC and FQHC visits will provide RHCs and FQHCs with greater flexibility in meeting their staffing needs, which may result in increasing access to care in underserved areas. There is no cost to the federal government, and we cannot estimate a cost savings for RHCs or FQHCs.

4. Access to Identifiable Data for the Center for Medicare and Medicaid Models

Given that, in general, participants in Innovation Center models receive funding support to participate in model tests, we do not anticipate an impact.

5. Local Coverage Determination Process for Clinical Diagnostic Laboratory Tests

The Local Coverage Determination Process for Clinical Diagnostic Laboratory Tests in section III.F of this proposed rule would not impact CY 2015 physician payments under the PFS.

6. Private Contracting/Opt Out

We are correcting cross-references and outdated terminology in the regulations that we inadvertently neglected to revise, and proposing a change in the appeals process to be used for certain

appeals relating to opt-out private contracting. We anticipate no or minimal impact as a result of these corrections.

7. Payment Policy for Locum Tenens Physicians

We are soliciting public comments regarding substitute physician billing arrangements. Since we are not proposing any new or revised requirements, there is no impact.

8. Reports of Payments or Other Transfers of Value to Covered Recipients

The changes to the Transparency Reports and Reporting of Physician Ownership or Investment Interests in section III.I of this proposed rule would not impact CY 2015 physician payments under the PFS.

9. Physician Compare

There will be no impact for the Physician Compare Web site because we are not collecting any information for the Physician Compare Web site.

10. Physician Quality Reporting System

According to the 2012 Reporting Experience, “more than 1.2 million eligible professionals were eligible to participate in the 2012 PQRS, Medicare Shared Savings Program, and Pioneer ACO Model.”²³ In this burden estimate, we assume that 1.2 million eligible professionals, the same number of eligible professionals eligible to participate in the PQRS in 2012, will be eligible to participate in the PQRS. Since all eligible professionals are subject to the 2017 PQRS payment adjustment, we estimate that all 1.2 million eligible professionals will participate, participate (which includes, for the purposes of this discussion, being eligible for the 2017 PQRS payment adjustment) in the PQRS in 2015 for purposes of meeting the criteria for satisfactory reporting (or, in lieu of satisfactory reporting, satisfactory participation in a QCDR) for the 2017 PQRS payment adjustment.

Historically, the PQRS has never experienced 100 percent participation in reporting for the PQRS. Therefore, we believe that although 1.2 million eligible professionals will be subject to the 2017 PQRS payment adjustment, not all eligible participants will actually report quality measures data for purposes of the 2017 PQRS payment adjustment. In this burden estimate, we will only

provide burden estimates for the eligible professionals and group practices who attempt to submit quality measures data for purposes of the 2017 PQRS payment adjustment. In 2012, 435,871 eligible professionals (36 percent) eligible professionals (including those who belonged to group practices that reported under the GPRO and eligible professionals within an ACO that participated in the PQRS via the Shared Savings Program or Pioneer ACO Model) participated in the PQRS, Medicare Shared Savings Program, or Pioneer ACO Model.²⁴ We expect to see a significant increase in participation in reporting for the PQRS in 2015 than 2012 as eligible professionals were not subject to a PQRS payment adjustment in 2012. Last year, we estimated that we would see a 50 percent participation rate in 2015. We still believe that a 14 percent increase in participation from 2012 is reasonable in 2015. Therefore, we estimate that 50 percent of eligible professionals (or approximately 600,000 eligible professionals) will report quality measures data for purposes of the 2017 PQRS payment adjustment.

For participation in the PQRS using the claims-based reporting mechanism, according to the 2011 PQRS and eRx Experience Report, in 2011, 229,282 of the 320,422 eligible professionals (or 72 percent) of eligible professionals used the claims-based reporting mechanism. According to the 2012 Reporting Experience, 248,206 eligible professionals participated in the PQRS using the claims-based reporting mechanism in 2012.²⁵ Preliminary estimates show that 252,567 eligible professionals participated in the PQRS using the claims-based reporting mechanism in 2013.²⁶ According to the historical data cited above, although the claims-based reporting mechanism is still the most widely-used reporting mechanism, we are seeing a decline in the use of the claims-based reporting mechanism in the PQRS. Although these eligible professionals continue to participate in the PQRS, these eligible professionals have started to shift towards the use of other reporting mechanisms—mainly the GPRO web interface (whether used by a PQRS GPRO or an ACO participating in the PQRS via the Medicare Shared Savings Program or Pioneer ACO model), registry, or the EHR-based reporting mechanisms. For purposes of this burden estimate, based on PQRS participation using the claims-based reporting mechanism in 2012 and 2013,

we will assume that approximately 250,000 eligible professionals will participate in the PQRS using the claims-based reporting mechanism.

For participation in the PQRS using a qualified registry or QCDR, in 2011, approximately 50,215 (or 16 percent) of the 320,422 eligible professionals participating in PQRS used the qualified registry-based reporting mechanism. According to the 2012 Reporting Experience, 36,473 eligible professionals reported individual measures via the registry-based reporting mechanism, and 10,478 eligible professionals reporting measures groups via the registry-based reporting mechanism in 2012.²⁷ Therefore, approximately 47,000 eligible professionals participated in the PQRS using the registry-based reporting mechanism in 2012. Please note that we currently have no data on participation in the PQRS via a QCDR as 2014 is the first year in which an eligible professional may participate in the PQRS via a QCDR. We believe that the rest of the eligible professionals not participating in other PQRS reporting mechanisms will use either the registry or QCDR reporting mechanisms for the following reasons: (1) The PQRS measures set is moving away from use of claims-based measures and moving towards the use of registry-based measures; or (2) we believe the number of QCDR vendors will increase as the QCDR reporting mechanism evolves. Therefore, based on these assumptions, we expect to see a significant jump from 47,000 eligible professionals to approximately 165,000 eligible professionals using either the registry-based reporting mechanism or QCDR in 2015. We believe the majority of these eligible professionals will participate in the PQRS using a QCDR, as we presume QCDRs will be larger entities with more members.

For participation in the PQRS using the EHR-based reporting mechanism, according to the 2011 PQRS and eRx Experience Report, in 2011, 560 (or less than 1 percent) of the 320,422 eligible professionals participating in PQRS used the EHR-based reporting mechanism. 2012 saw a sharp increase in reporting via the EHR-based reporting mechanism. Specifically, according to the 2012 Reporting Experience, in 2012, 19,817 eligible professionals submitted quality data for the PQRS through a qualified EHR.²⁸ We believe the number of eligible professionals and group practices using the EHR-based reporting mechanism will steadily increase as

²³ Centers for Medicare and Medicaid Services, *2012 Reporting Experience Including Trends (2007–2013): Physician Quality Reporting System and Electronic Prescribing (eRx) Incentive Program*, March 14, 2014 at xiii.

²⁴ *Id.* at XV.

²⁵ *Id.* at xvi. See Figure 4.

²⁶ *Id.*

²⁷ *Id.* at xvi. See Figure 4.

²⁸ *Id.* at xv.

eligible professionals become more familiar with EHR products and more eligible professionals participate in programs encouraging use of an EHR, such as the EHR Incentive Program. In particular, we believe eligible professionals will transition from using the claims-based to the EHR-based reporting mechanisms. To account for this anticipated increase, we continue to estimate that approximately 50,000 eligible professionals, whether participating as an individual or part of a group practice under the GPRO, would use the EHR-based reporting mechanism in CY 2015.

For participation in the PQRS using the GPRO web interface, as we noted in last year's estimate, according to the 2011 Experience Report, approximately 200 group practices participated in the GPRO in 2011. According to the 2012 Reporting Experience, 66 practices participated in the PQRS GPRO.²⁹ In addition, 144 ACOs participated in the PQRS GPRO through either the Medicare Shared Savings Program (112 ACOs) or Pioneer ACO Model (32 practices).³⁰ These group practices encompass 134,510 eligible professionals (or approximately 140,000 eligible professionals).³¹ Since it seems that roughly 200 group practices participated in the GPRO in 2011 and 2012, based on these numbers, we will assume that 200 group practices (accounting for approximately 135,000 eligible professionals) will participate in the PQRS using the GPRO web interface in 2015.

Please note that, while we are proposing the reporting of CAHPS survey measures using a CMS-certified survey vendor, we are not including this reporting mechanism in this impact statement as we believe that eligible professionals wishing to report CAHPS survey measures will do so for purposes other than the PQRS.

(a) Assumptions for Burden Estimates

For the PQRS, the burden associated with the requirements of this voluntary reporting initiative is the time and effort associated with individual eligible professionals identifying applicable quality measures for which they can report the necessary information, selecting a reporting option, and reporting the information on their selected measures or measures group to CMS using their selected reporting option.

We believe the labor associated with eligible professionals and group

practices reporting quality measures data in the PQRS is primarily handled by an eligible professional's or group practice's billing clerk or computer analyst trained to report quality measures data. Therefore, we will consider the hourly wage of a billing clerk and computer analyst in our estimates. For purposes of this burden estimate, we will assume that a billing clerk will handle the administrative duties associated with participating in the PQRS. According to information published by the Bureau of Labor Statistics, available at <http://www.bls.gov/oes/2013/may/oes433021.htm>, the mean hourly wage for a billing clerk is approximately \$16.80/hour. Therefore, for purposes of handling administrative duties, we estimate an average labor cost of \$16.00/hour. In addition, for purposes of this burden estimate, we will assume that a computer analyst will engage in the duties associated with the reporting of quality measures. According to information published by the Bureau of Labor Statistics, available at <http://www.bls.gov/oes/2013/may/oes151121.htm>, the mean hourly wage for a computer analyst is approximately \$41.00/hour. Therefore, for purposes of reporting on quality measures, we estimate an average labor cost of \$41.00/hour.

For individual eligible professionals, the burden associated with the requirements of this reporting initiative is the time and effort associated with eligible professionals identifying applicable quality measures for which they can report the necessary information, collecting the necessary information, and reporting the information needed to report the eligible professional's measures. We believe it is difficult to accurately quantify the burden because eligible professionals may have different processes for integrating the PQRS into their practice's work flows. Moreover, the time needed for an eligible professional to review the quality measures and other information, select measures applicable to his or her patients and the services he or she furnishes to them, and incorporate the use of quality data codes into the office work flows is expected to vary along with the number of measures that are potentially applicable to a given professional's practice. Since eligible professionals are generally required to report on at least 9 measures covering at least 3 National Quality Strategy domains criteria for satisfactory reporting (or, in lieu of satisfactory reporting, satisfactory participation in a QCDR) for the 2017

PQRS payment adjustment, we will assume that each eligible professional reports on an average of 9 measures for this burden analysis.

For eligible professionals who are participating in PQRS for the first time, we will assign 5 total hours as the amount of time needed for an eligible professional's billing clerk to review the PQRS Measures List, review the various reporting options, select the most appropriate reporting option, identify the applicable measures or measures groups for which they can report the necessary information, review the measure specifications for the selected measures or measures groups, and incorporate reporting of the selected measures or measures groups into the office work flows. The measures list contains the measure title and brief summary information for the eligible professional to review. Assuming the eligible professional has received no training from his/her specialty society, we estimate it will take an eligible professional's billing clerk up to 2 hours to review this list, review the reporting options, and select a reporting option and measures on which to report. If an eligible professional has received training, then we believe this would take less time. We believe 3 hours is plenty of time for an eligible professional to review the measure specifications of 9 measures or 1 measures group they select to report for purposes of participating in PQRS and to develop a mechanism for incorporating reporting of the selected measures or measures group into the office work flows. Therefore, we believe that the start-up cost for an eligible professional to report PQRS quality measures data is 5 hours × \$16/hour = \$80.

We believe the burden associated with actually reporting the quality measures will vary depending on the reporting mechanism selected by the eligible professional. As such, we break down the burden estimates by eligible professionals and group practices participating in the GPRO according to the reporting mechanism used.

(b) Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: Claims-Based Reporting Mechanism

For the claims-based reporting option, eligible professionals must gather the required information, select the appropriate quality data codes (QDCs), and include the appropriate QDCs on the claims they submit for payment. The PQRS will collect QDCs as additional (optional) line items on the existing HIPAA transaction 837-P and/or CMS

²⁹ *Id.* at xv.

³⁰ *Id.* at xvi.

³¹ *Id.* at 18.

Form 1500 (OCN: 0938–0999). We do not anticipate any new forms and or any modifications to the existing transaction or form. We also do not anticipate changes to the 837–P or CMS Form 1500 for CY 2015.

We estimate the cost for an eligible professional to review the list of quality measures or measures groups, identify the applicable measures or measures group for which they can report the necessary information, incorporate reporting of the selected measures into the office work flows, and select a PQRS reporting option to be approximately \$205 per eligible professional (\$41 per hour × 5 hours).

Based on our experience with the Physician Voluntary Reporting Program (PVRP), we continue to estimate that the time needed to perform all the steps necessary to report each measure (that is, reporting the relevant quality data code(s) for 9 measures measure) would range from 15 seconds (0.25 minutes) to over 12 minutes for complicated cases and/or measures, with the median time being 1.75 minutes. To report 9 measures, we estimate that it would take approximately 2.25 minutes to 108 minutes to perform all the steps necessary to report 9 measures.

Per measure, at an average labor cost of \$41/hour per practice, the cost associated with this burden will range from \$0.17 in labor to about \$8.20 in labor time for more complicated cases and/or measures, with the cost for the median practice being \$1.20. To report 9 measures, using an average labor cost of \$41/hour, we estimated that the time cost of reporting for an eligible professional via claims would range from \$1.53 (2.25 minutes or 0.0375 hours × \$41/hour) to \$73.80 (108 minutes or 1.8 hours × \$41/hour) per reported case.

The total estimated annual burden for this requirement will also vary along with the volume of claims on which quality data is reported. In previous years, when we required reporting on 80 percent of eligible cases for claims-based reporting, we found that on average, the median number of reporting instances for each of the PQRS measures was 9. Since we reduced the required reporting rate by over one-third to 50 percent, then for purposes of this burden analysis we will assume that an eligible professional or eligible professional in a group practice will need to report each selected measure for 6 reporting instances. The actual number of cases on which an eligible professional or group practice is required to report quality measures data will vary, however, with the eligible professional's or group practice's patient

population and the types of measures on which the eligible professional or group practice chooses to report (each measure's specifications includes a required reporting frequency).

Based on the assumptions discussed previously, we estimate the total annual reporting burden per individual eligible professional associated with claims-based reporting will range from 13.5 minutes (0.25 minutes per measure × 9 measures × 6 cases per measure) to 648 minutes (12 minutes per measure × 9 measures × 6 cases per measure), with the burden to the median practice being 94.5 minutes (1.75 minutes per measure × 9 measures × 6 cases). We estimate the total annual reporting cost per eligible professional or eligible professional in a group practice associated with claims-based reporting will range from \$9.18 (\$0.17 per measure × 9 measures × 6 cases per measure) to \$442.80 (\$8.20 per measure × 9 measures × 6 cases per measure), with the cost to the median practice being \$64.58 per eligible professional (\$1.20 per measure × 9 measures × 6 cases per measure).

(c) Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: Qualified Registry-Based and QCDR-Based Reporting Mechanisms

For qualified registry-based and QCDR-based reporting, there will be no additional time burden for eligible professionals or group practices to report data to a qualified registry as eligible professionals and group practices opting for qualified registry-based reporting or use of a QCDR will more than likely already be reporting data to the qualified registry for other purposes and the qualified registry will merely be re-packaging the data for use in the PQRS. Little, if any, additional data will need to be reported to the qualified registry or QCDR solely for purposes of participation in the PQRS. However, eligible professionals and group practices will need to authorize or instruct the qualified registry or QCDR to submit quality measures results and numerator and denominator data on quality measures to CMS on their behalf. We estimate that the time and effort associated with this will be approximately 5 minutes per eligible professional or eligible professional within a group practice.

Based on the assumptions discussed above and in Part B of this supporting statement, Table 62 provides an estimate of the total annual burden hours and total annual cost burden associated with eligible professionals using the qualified registry-based or QCDR-based reporting mechanism.

Please note that, unlike the claims-based reporting mechanism that would require an eligible professional to report data to us on quality measures on multiple occasions, an eligible professional would not be required to submit this data to us, as the qualified registry or QCDR would perform this function on the eligible professional's behalf.

(d) Burden Estimate for PQRS Reporting by Individual Eligible Professionals and Group Practices: EHR-Based Reporting Mechanism

For EHR-based reporting, which includes EHR reporting via a direct EHR product and an EHR data submission vendor's product, the eligible professional or group practice must review the quality measures on which we will be accepting PQRS data extracted from EHRs, select the appropriate quality measures, extract the necessary clinical data from his or her EHR, and submit the necessary data to the our designated clinical data warehouse.

For EHR-based reporting for the PQRS, the individual eligible professional or group practice may either submit the quality measures data directly to us from their EHR or utilize an EHR data submission vendor to submit the data to us on the eligible professional's or group practice's behalf. To submit data to us directly from their EHR, the eligible professional or eligible professional in a group practice must have access to our specified identity management system, such as IACS, which we believe takes less than 1 hour to obtain. Once an eligible professional or eligible professional in a group practice has an account for our specified identity management system, he or she will need to extract the necessary clinical data from his or her EHR, and submit the necessary data to the our designated clinical data warehouse. With respect to submitting the actual data file for the respective reporting period, we believe that this will take an eligible professional or group practice no more than 2 hours, depending on the number of patients on which the eligible professional or group practice is submitting. We believe that once the EHR is programmed by the vendor to allow data submission to us, the burden to the eligible professional or group practice associated with submission of data on quality measures should be minimal as all of the information required to report the measure should already reside in the eligible professional's or group practice's EHR.

(e) Burden Estimate for PQRS Reporting by Group Practices Using the GPRO Web Interface

With respect to the process for group practices to be treated as satisfactorily submitting quality measures data under the PQRS, group practices interested in participating in the PQRS through the group practice reporting option (GPRO) must complete a self-nomination process similar to the self-nomination process required of qualified registries. However, since a group practice using the GPRO web interface would not need to determine which measures to report under PQRS, we believe that the self-nomination process is handled by a group practice's administrative staff. Therefore, we estimate that the self-nomination process for the group practices for the PQRS involves approximately 2 hours per group practice to review the PQRS GPRO and make the decision to participate as a group rather than individually and an additional 2 hours per group practice to draft the letter of intent for self-nomination, gather the requested TIN and NPI information, and provide this requested information. It is estimated that each self-nominated entity will also spend 2 hours undergoing the vetting

process with CMS officials. We assume that the group practice staff involved in the group practice self-nomination process has an average practice labor cost of \$16 per hour. Therefore, assuming the total burden hours per group practice associated with the group practice self-nomination process is 6 hours, we estimate the total cost to a group practice associated with the group practice self-nomination process to be approximately \$96 (\$16 per hour × 6 hours per group practice).

The burden associated with the group practice reporting requirements under the GPRO is the time and effort associated with the group practice submitting the quality measures data. For physician group practices, this would be the time associated with the physician group completing the web interface. We estimate that the time and effort associated with using the GPRO web interface will be comparable to the time and effort associated with using the PAT. As stated above, the information collection components of the PAT have been reviewed by OMB and was approved under OMB control number 0938-0941—Form 10136, with an expiration date of December 31, 2011 for use in the PGP, MCMP, and EHR demonstrations. As the GPRO was only

recently implemented in 2010, it is difficult to determine the time and effort associated with the group practice submitting the quality measures data. As such, we will use the same burden estimate for group practices participating in the GPRO as we use for group practices participating in the PGP, MCMP, and EHR demonstrations. Since these changes will not have any impact on the information collection requirements associated with the PAT and we will be using the same data submission process used in the PGP demonstration, we estimate that the burden associated with a group practice completing data for PQRS under the web interface will be the same as for the group practice to complete the PAT for the PGP demonstration. In other words, we estimate that, on average, it will take each group practice 79 hours to submit quality measures data via the GPRO web interface at a cost of \$40 per hour. Therefore, the total estimated annual cost per group practice is estimated to be approximately \$3,160.

Tables 62 and 63 provide our total estimated costs for reporting in the PQRS for the 2017 PQRS payment adjustment, the reporting periods of which occur in CY 2015.

TABLE 62—SUMMARY OF BURDEN ESTIMATES FOR ELIGIBLE PROFESSIONALS AND/OR GROUP PRACTICES USING THE CLAIMS, QUALIFIED REGISTRY, AND EHR-BASED REPORTING MECHANISMS

	Minimum burden estimate	Maximum burden estimate
Estimated Annual Burden Hours for Claims-based Reporting (for individual eligible professionals only)	1,201,543	3,633,006.40
Estimated Annual Burden for Qualified registry-based or QCDR-based Reporting	1,333,695	1,333,695
Estimated Annual Burden Hours for EHR-based Reporting	450,000	450,000
Estimated Total Annual Burden Hours for Eligible Professionals or Eligible Professionals in a Group Practice	2,985,238	5,416,701.40
Estimated Cost for Claims-based Reporting (for individual eligible professionals only)	\$53,545,000	\$161,875,000
Estimated Cost for Qualified registry-based Reporting	\$54,681,495	\$54,681,495
Estimated Cost for EHR-based Reporting	\$16,400,000	\$16,400,000
Estimated Total Annual Cost for Eligible Professionals or Eligible Professionals in a Group Practice	\$124,626,495	\$232,956,495

TABLE 63—ESTIMATED COSTS PER VENDOR TO PARTICIPATE IN THE PQRS

	Maximum burden estimate
Estimated # of Participating Group Practices	200
Estimated # of Burden Hours Per Group Practice to Self-Nominate to Participate in PQRS and the Electronic Prescribing Incentive Program Under the Group Practice Reporting Option	6
Estimated # of Burden Hours Per Group Practice to Report Quality Measures	79
Estimated Total Annual Burden Hours Per Group Practice	85
Estimated Total Annual Burden Hours for Group Practices	17,000
Estimated Cost Per Group Practice to Self-Nominate to Participate in PQRS for the Group Practice Reporting Option	\$96
Estimated Cost Per Group Practice to Report Quality Measures	\$3,160
Estimated Total Annual Cost Per Group Practice	\$3,256
Annual Burden Cost for Group Practices	\$651,200

11. EHR Incentive Program

The changes to the EHR Incentive Program in section III.L of this proposed

rule would not impact CY 2015 physician payments under the PFS.

12. Medicare Shared Saving Program

The requirements for participating in the Medicare Shared Saving Program

and the impacts of these requirements were established in the final rule implementing the Medicare Shared Savings Program that appeared in the **Federal Register** on November 2, 2011 (76 FR 67802). The proposals for the Medicare Shared Savings Program set forth in the CY 2015 MPFS proposed rule revisit the current quality performance standard, propose changes to the quality measures, propose modifications to the timeframe between updates to the quality performance benchmarks, and propose to establish an additional incentive to reward ACO quality improvement. Since the proposed policies are not expected to increase the quality reporting burden for ACOs participating in the Shared Savings Program and their ACO participants, there is no impact for these proposals.

13. Value-Based Payment Modifier and the Physician Feedback Program

Section 1848(p) of the Act requires that we establish a VM and apply it to specific physicians and groups of physicians the Secretary determines appropriate starting January 1, 2015 and to all physicians and groups of physicians by January 1, 2017. Section 1848(p)(4)(C) of the Act requires the VM to be budget neutral. Budget-neutrality means that, in aggregate, the increased payments to high performing physicians and groups of physicians equal the

reduced payments to low performing physicians and groups of physicians.

The proposed changes to the VM in section III.N of this proposed rule would not impact CY 2015 physician payments under the PFS. We finalized the VM policies that would impact the CY 2015 physician payments under the PFS in the CY 2013 PFS final rule with comment period (77 FR 69306–69326).

In the CY 2013 PFS final rule with comment period, we finalized policies to phase-in the VM by applying it starting January 1, 2015 to payments under the Medicare PFS for physicians in groups of 100 or more eligible professionals. We identify a group of physicians as a single taxpayer identification number (TIN). We apply the VM to the items and services billed by physicians under the TIN, not to other eligible professionals that also may bill under the TIN. We established CY 2013 as the performance period for the VM that will be applied to payments during CY 2015 (77 FR 69314). We also finalized that we will not apply the VM in CYs 2015 and 2016 to any group of physicians that is participating in the Medicare Shared Savings Program, the Pioneer ACO Model, or the Comprehensive Primary Care Initiative, or other similar Innovation Center or CMS initiatives (77 FR 69313).

We finalized policies to determine the amount of the VM for CY 2015 by categorizing groups of physicians with 100 or more eligible professionals into

two categories. Category 1 includes groups of physicians that either (a) self-nominate for the PQRS as a group and report at least one measure or (b) elect the PQRS Administrative Claims option as a group. Category 2 includes groups that do not fall within either of the two subcategories (a) or (b) of Category 1. Groups within Category 1 may elect to have their VM for CY 2015 calculated using the quality-tiering methodology, which could result in an upward, neutral, or downward adjustment amount. The VM for groups of physicians in Category 1 that do not elect-quality tiering is 0.0 percent, meaning that these groups will not receive a payment adjustment under the VM for CY 2015. Category 2 includes groups that do not fall within either of the two subcategories (a) or (b) of Category 1. For the groups that are in Category 2, the VM for the CY 2015 payment adjustment period is –1.0 percent.

Under the quality-tiering approach, each group’s quality and cost composites are classified into high, average, and low categories depending upon whether the composites are at least one standard deviation above or below the mean. We compare the group’s quality of care composite classification with the cost composite classification to determine the VM adjustment for the CY 2015 payment adjustment period according to the amounts in Table 64.

TABLE 64—2015 VALUE-BASED PAYMENT MODIFIER AMOUNTS UNDER QUALITY-TIERING

Cost/quality	Low quality	Average quality	High quality
Low Cost	+0.0%	*+1.0x	*+2.0x
Average Cost	–0.5%	+0.0%	*+1.0x
High Cost	–1.0%	–0.5%	+0.0%

* Groups of physicians eligible for an additional +1.0x if (1) reporting Physician Quality Reporting System quality measures through the GPRO Web-interface or CMS-qualified registry, and (2) average beneficiary risk score is in the top 25 percent of all beneficiary risk scores.

To ensure budget neutrality, we first aggregate the downward payment adjustments in Table 64 for those groups in Category 1 that have elected quality tiering with the -1.0 percent downward payment adjustments for groups of physicians subject to the VM that fall within Category 2. Using the aggregate downward payment adjustment amount, we then calculate the upward payment adjustment factor (x). These calculations will be done after the performance period has ended.

At the time of this proposed rule, we have not completed the analysis of the impact of the VM in CY 2015 on physicians in groups with 100 or more eligible professionals based on their performance in CY 2013. Therefore, in

this proposed rule, we present estimates based on CY 2012 claims data that were used to produce the 2012 QRURs, which were available to groups of 25 or more eligible professionals on September 16, 2013. The findings from the CY 2012 QRURs will be available on the CMS Web site at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeedbackProgram/2012-QRUR.html> in a document titled “Experience Report for the Performance Year 2012 Quality and Resource Use Reports”. We will update this section in the CY 2015 final rule with comment period based on CY 2013 data that will be used to calculate the value-based payment modifier in CY 2015. The impact of the policies for the CY 2017

VM proposed in this rule, if finalized, would be discussed in the PFS rule for CY 2017.

Please note that we are not able to determine which groups would fall in Category 1 and Category 2, as described above, using CY 2012 claims data. Therefore, the 2012 estimates that we present in this section are based on groups for which we produced a 2012 QRUR and for whom the quality or cost composite could be calculated. Based on our simulation of the 1,032 groups with 100 or more eligible professionals for which we produced a 2012 QRUR and for whom the quality or cost composite could be calculated, the vast majority of groups (81.0 percent) are in the average quality and average cost tiers (this

includes groups missing either the quality or cost composite score, who are assigned to average quality or average cost). The simulation also found that approximately 8 percent of groups are in

tiers that would receive an upward adjustment, resulting in a payment incentive of between +1.0x and +2.0x percent; and approximately 10.4 percent of groups are in tiers that would receive

a downward adjustment of between -0.5 and -1.0 percent to payments under Medicare PFS (Table 65).

TABLE 65—SIMULATED DISTRIBUTION USING 2012 DATA OF QUALITY AND COST TIERS FOR GROUPS WITH 100 OR MORE ELIGIBLE PROFESSIONALS FOR WHICH A QUALITY OR COST COMPOSITE SCORE COULD BE CALCULATED (1,032 GROUPS)

Cost/quality	Low quality (percent)	Average quality (percent)	High quality (percent)
Low Cost	0.5	3.3	0.7
Average Cost	4.4	81.0	4.0
High Cost	3.6	2.4	0.2

In 2013, 136 groups with 100 or more eligible professionals elected to have their CY 2015 VM calculated using the quality-tiering methodology; therefore, these groups will receive an upward, neutral, or downward adjustment based on the calculation of their quality and cost composites. The VM for groups with 100 or more eligible professionals that did not elect quality tiering and self-nominated for the PQRS as a group and reported at least one measure or elected the PQRS administrative claims option will be 0.0 percent, meaning that these groups will not receive a payment adjustment under the VM in CY 2015.

Please note that in CY 2015, only the physicians in groups with 100 or more eligible professionals that are in Category 1 and elect quality-tiering will be subject to upward, downward, or no payment adjustment under the VM according to Table 64. Additionally, physicians in groups with 100 or more eligible professionals that fall in Category 2 will be subject to the -1.0 percent value-modifier payment adjustment in CY 2015. In the CY 2015 final rule with comment period, we will present the actual number of groups and physicians that will be subject to the VM in CY 2015.

G. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides

descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our final policies and, where relevant, alternatives that were considered.

H. Impact on Beneficiaries

There are a number of changes in this proposed rule that would have an effect on beneficiaries. In general, we believe that many of the proposed changes, including the refinements of the PQRS with its focus on measuring, submitting, and analyzing quality data; establishing the basis for the VM to adjust physician payment beginning in CY 2015; improved accuracy in payment through revisions to the inputs used to calculate payments under the PFS and the five year review of MPRVUs; and revisions to payment for Part B drugs will have a positive impact and improve the quality and value of care provided to Medicare beneficiaries.

Most of the aforementioned proposed policy changes could result in a change in beneficiary liability as relates to coinsurance (which is 20 percent of the fee schedule amount if applicable for the particular provision after the beneficiary has met the deductible). To illustrate this point, as shown in Table 61, the CY 2014 national payment amount in the nonfacility setting for CPT code 99203 (Office/outpatient visit, new) is \$77.02, which means that in CY 2014 a beneficiary would be responsible

for 20 percent of this amount, or \$15.40. Based on this proposed rule, using the current (CY 2014) CF of \$35.8228, adjusted to \$35.7997 to include budget neutrality, the CY 2015 national payment amount in the nonfacility setting for CPT code 99203, as shown in Table 61, is \$77.32, which means that, in CY 2015, the proposed beneficiary coinsurance for this service would be \$15.46.

In section II.H, we propose to define colorectal cancer screening to include the anesthesia associated with the procedure. If this proposal is adopted, there would be no beneficiary coinsurance or deductible applied to anesthesia associated with screening colonoscopy even when the anesthesia is furnished by a different practitioner than the one who furnishes the procedure.

I. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table 66 (Accounting Statement), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2014 to CY 2015 based on the FY 2015 President's Budget baseline. Note that subsequent legislation changed the updates for 2015 from those shown in the 2015 President's Budget baseline.

TABLE 66—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

Category	Transfers
CY 2015 Annualized Monetized Transfers From Whom To Whom?	Estimated decrease in expenditures of \$1.1 billion for PFS CF update. Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.
CY 2015 Annualized Monetized Transfers From Whom To Whom?	Estimated increase in payment of \$234 million. Federal Government to eligible professionals who satisfactorily participate in the Physician Quality Reporting System (PQRS).

TABLE 67—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

Category	Transfers
CY 2015 Annualized Monetized Transfers of beneficiary cost coinsurance.	\$9 million.
From Whom to Whom?	Federal Government to Beneficiaries.

J. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provides an initial “Regulatory Flexibility Analysis.” The previous analysis, together with the preceding portion of this preamble, provides a Regulatory Impact Analysis.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Health facilities, Health professions, Kidney diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 498

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1395b–3 and Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 403.902 [Amended]

■ 2. Section 403.902 is amended by removing the definition of “Covered device”.

■ 3. Section 403.904 is amended by—
 ■ a. Revising paragraphs (c)(8) and (d)(3) and (4).

■ b. Adding paragraphs (d)(5) and (6).

■ c. Removing paragraph (g).

■ d. Redesignating paragraphs (h) and (i) as paragraphs (g) and (h), respectively.

The revisions and additions read as follows:

§ 403.904 Reports of payments or other transfers of value to covered recipients.

* * * * *

(c) * * *

(8) *Related covered and non-covered drug, device, biological or medical supply.* Report the marketed name of the related covered and non-covered drugs, devices, biologicals, or medical supplies, unless the payment or other transfer of value is not related to a particular covered or non-covered drug, device, biological or medical supply.

(i) For drugs and biologicals, if the marketed name has not yet been selected, applicable manufacturers must indicate the name registered on clinicaltrials.gov.

(ii) For devices and medical supplies, applicable manufacturers may also report the therapeutic area or product category for the device or medical supply.

(iii) Applicable manufacturers must indicate if the related drug, device, biological, or medical supply is covered or non-covered.

(iv) Applicable manufacturers must indicate if the payment or other transfer of value is not related to any covered or non-covered drug, device, biological or medical supply.

* * * * *

(d) * * *

(3) Stock.

(4) Stock option.

(5) Any other ownership interest.
 (6) Dividend, profit or other return on investment.

* * * * *

■ 4. New subparts J and K are added to part 403 to read as follows:

Subpart J—[Reserved]

Subpart K—Access to Identifiable Data for the Center for Medicare and Medicaid Models

Sec.
 403.1100 Purpose and scope.
 403.1105 Definitions.
 403.1110 Evaluation of models.

Subpart J—[Reserved]

Subpart K—Access to Identifiable Data for the Center for Medicare and Medicaid Models

§ 403.1100 Purpose and scope.

The regulations in this subpart implement section 1115A of the Act. The intent of that section is to enable CMS to test innovative payment and service delivery models to reduce program expenditures while preserving and/or enhancing the quality of care furnished to individuals under titles XVIII, XIX, and XXI of the Act. The Secretary is also required to conduct an evaluation of each model tested.

§ 403.1105 Definitions.

For purposes of this subpart—
Applicable title means titles XVIII, XIX, or XXI of the Act.

§ 403.1110 Evaluation of models.

(a) *Evaluation.* The Secretary conducts an evaluation of each model tested under section 1115A of the Act. Such evaluation must include an analysis of the following:

(1) The quality of care furnished under the model, including the measurement of patient-level outcomes and patient-centeredness criteria determined appropriate by the Secretary.

(2) The changes in spending under the applicable titles by reason of the model.

(b) *Information.* Any State or other entity participating in the testing of a model under section 1115A of the Act must collect and report such information, including “protected health information” as that term is defined at 45 CFR 160.103, as the

Secretary determines is necessary to monitor and evaluate such model. Such data must be produced to the Secretary at the time and in the form and manner specified by the Secretary.

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 5. The authority citation for part 405 continues to read as follows:

Authority: Secs. 205(a), 1102, 1861, 1862(a), 1869, 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 405(a), 1302, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

■ 6. Section 405.400 is amended by revising the definition of “Emergency care services” to read as follows:

§ 405.400 Definitions.

* * * * *

Emergency care services means “emergency services” as that term is defined in § 424.101 of this chapter.

* * * * *

§ 405.420 [Amended]

■ 7. Section 405.420 is amended in paragraph (e) by removing the phrase “Medicare+Choice” and adding in its place the phrase “Medicare Advantage”.

§ 405.425 [Amended]

■ 8. Section 405.425 is amended in paragraph (a) by removing the phrase “Medicare+Choice” and adding in its place the phrase “Medicare Advantage”.

§ 405.450 [Amended]

■ 9. Section 405.450 is amended by—
 ■ a. In paragraph (a) removing the reference “405.803” and adding in its place the reference “498.3(b)”.
 ■ b. In paragraph (b) removing the reference “405.803” and adding in its place “405.924”.

§ 405.455 [Amended]

■ 10. Section 405.455 is amended by—
 ■ a. In the section heading removing the phrase “Medicare+Choice” and adding in its place the phrase “Medicare Advantage”.
 ■ b. In the introductory text removing the phrase “Medicare+Choice (M+C)” and adding in its place the phrase “Medicare Advantage”.
 ■ 11. Section 405.924 is amended by adding paragraph (b)(15) to read as follows:

§ 405.924 Actions that are initial determinations.

* * * * *

(b) * * *

(15) A claim not payable to a beneficiary for the services of a physician who has opted-out.

* * * * *

■ 12. Section 405.2413 is amended by—

- a. In paragraph (a)(4) removing “;” and adding in its place “; and”.
 - b. Revising paragraph (a)(5).
 - c. Removing paragraph (a)(6).
- The revision reads as follow:

§ 405.2413 Services and supplies incident to a physician’s services.

(a) * * *

(5) Furnished under the direct supervision of a physician.

* * * * *

■ 13. Section 405.2415 is amended by—

- a. Revising the section heading and paragraph (a)(5).
 - b. In paragraph (a)(4) removing “;” and adding in its place “; and”.
 - c. Removing paragraph (a)(6).
- The revision reads as follows:

§ 405.2415 Services and supplies incident to nurse practitioner, physician assistant, or certified nurse-midwife services.

(a) * * *

(5) Furnished under the direct supervision of a nurse practitioner, physician assistant, or certified nurse-midwife.

* * * * *

■ 14. Section 405.2452 is amended by—

- a. In paragraph (a)(4) removing “;” and adding in its place “; and”.
 - b. Revising paragraph (a)(5).
 - c. Removing paragraph (a)(6).
- The revision reads as follows:

§ 405.2452 Services and supplies incident to clinical psychologist and clinical social worker services.

(a) * * *

(5) Furnished under the direct supervision of a clinical psychologist or clinical social worker.

* * * * *

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 15. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102, 1834, 1871, 1881, and 1893 of the Social Security Act (42 U.S.C. 1302, 1395m, 1395hh, and 1395ddd).

■ 16. Section 410.26 is amended by revising paragraphs (b)(5) and (6) to read as follows:

§ 410.26 Services and supplies incident to a physician’s professional services: Conditions.

* * * * *

(b) * * *

(5) In general, services and supplies must be furnished under the direct

supervision of the physician (or other practitioner). Services and supplies furnished incident to transitional care management and chronic care management services can be furnished under general supervision of the physician (or other practitioner) when these services or supplies are provided by clinical staff. The physician (or other practitioner) supervising the auxiliary personnel need not be the same physician (or other practitioner) upon whose professional service the incident to service is based.

(6) Services and supplies must be furnished by the physician, practitioner with an incident to benefit, or auxiliary personnel.

* * * * *

■ 17. Section 410.37 is amended by revising paragraph (a)(1)(iii) to read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

(a) * * *

(1) * * *

(iii) Screening colonoscopies, including anesthesia furnished in conjunction with the service.

* * * * *

■ 18. Section 410.59 is amended by revising paragraph (c)(1)(ii) to read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

* * * * *

(c) * * *

(1) * * *

(ii) Engage in the private practice of occupational therapy on a regular basis as an individual, in one of the following practice types: A solo practice, partnership, or group practice; or as an employee of one of these.

* * * * *

■ 19. Section 410.60 is amended by revising paragraph (c)(1)(ii) to read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

* * * * *

(c) * * *

(1) * * *

(ii) Engage in the private practice of physical therapy on a regular basis as an individual, in one of the following practice types: A solo practice, partnership, or group practice; or as an employee of one of these.

* * * * *

■ 20. Section 410.62 is amended by revising paragraph (c)(1)(ii) to read as follows:

§ 410.62 Outpatient speech-language pathology services: Conditions and exclusions.

* * * * *
(c) * * *
(1) * * *

(ii) Engage in the private practice of speech-language pathology on a regular basis as an individual, in one of the following practice types: A solo practice, partnership, or group practice; or as an employee of one of these.

* * * * *

■ 21. Section 410.78 is amended by revising paragraph (b) introductory text and paragraph (f) to read as follows:

§ 410.78 Telehealth services.

* * * * *

(b) General rule. Medicare Part B pays for covered telehealth services included on the telehealth list when furnished by an interactive telecommunications system if the following conditions are met:

* * * * *

(f) Process for adding or deleting services. Changes to the list of Medicare telehealth services are made through the annual physician fee schedule rulemaking process. A list of the services covered as telehealth services under this section is available on the CMS Web site.

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 22. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

■ 23. Section 414.24 is amended by—

■ a. Revising the section heading and paragraphs (a) and (b).

■ b. Redesignating paragraph (c) as paragraph (d).

■ c. Adding new paragraph (c).

The revisions and addition read as follows:

§ 414.24 Publication of RVUs and direct PE inputs.

(a) Definitions. For purposes of this section, the following definitions apply:

Existing code means a code that is not a new code under paragraph (c)(2) of this section, and includes codes for which the descriptor is revised and codes that are combinations or subdivisions of previously existing codes.

New code means a code that describes a service that was not previously described or valued under the PFS using any other code or combination of codes.

(b) Revisions of RVUs and direct PE Inputs. CMS publishes, through notice

and comment rulemaking in the Federal Register (including proposals in a proposed rule), changes in RVUs or direct PE inputs for existing codes.

(c) Establishing RVUs and direct PE inputs for new codes. (1) General rule. CMS establishes RVUs and direct PE inputs for new codes in the manner described in paragraph (b) of this section.

(2) Exception for new codes for which CMS does not have sufficient information. When CMS determines for a new code that it does not have sufficient information in order to include proposed RVUs or direct PE inputs in the proposed rule, but that it is in the public interest for Medicare to use a new code during a payment year, CMS will publish in the Federal Register RVUs and direct PE inputs that are applicable on an interim basis subject to public comment. After considering public comments and other information on interim RVUs and PE inputs for the new code, CMS publishes in the Federal Register the final RVUs and PE inputs for the code.

* * * * *

■ 24. Section 414.90 is amended by—

■ a. Removing the phrase “CG CAHPS” and adding in its place the phrase “CAHPS for PQRS” everywhere it appears.

■ b. Removing the phrase “CAHPS” and adding in its place the phrase “CAHPS for PQRS” everywhere it appears.

■ c. In paragraph (b) revising the definition of “Measures group”.

■ d. Revising paragraphs (j)(4) and (m)(1) and (3).

■ e. Adding paragraphs (j)(6) and (k)(4).

The revisions read as follows:

§ 414.90 Physician Quality Reporting System (PQRS).

* * * * *

(b) * * *

Measures group means a subset of six or more PQRS measures that have a particular clinical condition or focus in common. The denominator definition and coding of the measures group identifies the condition or focus that is shared across the measures within a particular measures group.

* * * * *

(j) * * *

(4) Satisfactory reporting criteria for individual eligible professionals for the 2017 PQRS payment adjustment. An individual eligible professional who wishes to meet the criteria for satisfactory reporting for the 2017 PQRS payment adjustment must report information on PQRS quality measures identified by CMS in one of the following manners:

(i) Via claims. (A) For the 12-month 2017 PQRS payment adjustment reporting period—

(1)(i) Report at least 9 measures, covering at least 3 of the NQS domains and report each measure for at least 50 percent of the eligible professional’s Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the 9 measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, the eligible professional must report on at least 2 measures contained in the proposed cross-cutting measure set specified by CMS. If less than 9 measures apply to the eligible professional, report up to 8 measures and report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, the eligible professional must report on at least 2 measures contained in the cross-cutting measure set. Measures with a 0 percent performance rate would not be counted.

(ii) [Reserved]

(2) [Reserved]

(B) [Reserved]

(ii) Via qualified registry. (A) For the 12-month 2017 PQRS payment adjustment reporting period—

(1)(i) Report at least 9 measures, covering at least 3 of the NQS domains and report each measure for at least 50 percent of the eligible professional’s Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the 9 measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, the eligible professional must report on at least 2 measures contained in the proposed cross-cutting measure set specified by CMS. If less than 9 measures apply to the eligible professional, report up to 8 measures and report each measure for at least 50 percent of the Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, the eligible professional must report on at least 2 measures contained in the cross-cutting measure set.

(ii) Report at least 1 measures group and report each measures group for at least 20 patients, a majority of which must be Medicare Part B FFS patients.

(2) Measures with a 0 percent performance rate or measures groups containing a measure with a 0 percent performance rate will not be counted.

(B) [Reserved]

(iii) *Via EHR direct product.* For the 12-month 2017 PQRS payment adjustment reporting period, report 9 measures covering at least 3 of the NQS domains. If an eligible professional's CEHRT does not contain patient data for at least 9 measures covering at least 3 domains, then the eligible professional must report the measures for which there is Medicare patient data. An eligible professional must report on at least 1 measure for which there is Medicare patient data.

(iv) *Via EHR data submission vendor.* For the 12-month 2017 PQRS payment adjustment reporting period, report 9 measures covering at least 3 of the NQS domains. If an eligible professional's CEHRT does not contain patient data for at least 9 measures covering at least 3 domains, then the eligible professional must report the measures for which there is Medicare patient data. An eligible professional must report on at least 1 measure for which there is Medicare patient data.

* * * * *

(6) *Satisfactory reporting criteria for group practices for the 2017 PQRS payment adjustment.* A group practice who wishes to meet the criteria for satisfactory reporting for the 2017 PQRS payment adjustment must report information on PQRS quality measures identified by CMS in one of the following manners:

(i) *Via the GPRO Web interface.* For the 12-month 2017 PQRS payment adjustment reporting period, for a group practice of 25 or more eligible professionals, report on all measures included in the Web interface and populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then report on 100 percent of assigned beneficiaries. A group practice must report on at least 1 measure for which there is Medicare patient data.

(ii) *Via qualified registry.* For a group practice of 2 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report at least 9 measures, covering at least 3 of the NQS domains and report each measure for at least 50 percent of the group practice's Medicare Part B FFS patients seen during the reporting period to which the measure applies; or if less than 9 measures covering at least 3 NQS domains apply to the eligible professional, then the group practice must report up to

measures for which there is Medicare patient data and report each measure for at least 50 percent of the group practice's Medicare Part B FFS patients seen during the reporting period to which the measure applies. Of the measures reported, if the eligible professional sees at least 1 Medicare patient in a face-to-face encounter, the eligible professional must report on at least 2 measures contained in the cross-cutting measure set. Measures with a 0 percent performance rate would not be counted; or

(iii) *Via EHR direct product.* For a group practice of 2 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report 9 measures covering at least 3 of the NQS domains. If a group practice's CEHRT does not contain patient data for at least 9 measures covering at least 3 domains, then the group practice must report the measures for which there is Medicare patient data. A group practice must report on at least 1 measure for which there is Medicare patient data.

(iv) *Via EHR data submission vendor.* For a group practice of 2 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report 9 measures covering at least 3 of the NQS domains. If a group practice's CEHRT does not contain patient data for at least 9 measures covering at least 3 domains, then the group practice must report the measures for which there is Medicare patient data. A group practice must report on at least 1 measure for which there is Medicare patient data.

(v) *Via a certified survey vendor in addition to a qualified registry.* For a group practice of 25 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report all CAHPS for PQRS survey measures via a CMS-certified survey vendor and report at least 6 additional measures covering at least 2 of the NQS domains using a qualified registry. If less than 6 measures apply to the group practice, the group practice must report up to 6 measures. Of these 6 measures, if any eligible professional in the group practice sees at least 1 Medicare patient in a face-to-face encounter, the group practice must report on at least 1 measure in the cross-cutting measure set.

(vi) *Via a certified survey vendor in addition a direct EHR product or EHR data submission vendor.* For a group practice of 25 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report all CAHPS for PQRS survey measures via a CMS-certified

survey vendor and report at least 6 additional measures, outside of CAHPS for PQRS, covering at least 2 of the NQS domains using the direct EHR product that is CEHRT or EHR data submission vendor that is CEHRT. If less than 6 measures apply to the group practice, the group practice must report up to 6 measures. Of the additional 6 measures that must be reported in conjunction with reporting the CAHPS for PQRS survey measures, a group practice would be required to report on at least 1 measure for which there is Medicare patient data.

(vii) *Via a certified survey vendor in addition to the GPRO Web interface.* (A) For a group practice of 25 to 99 eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report all CAHPS for PQRS survey measures via a CMS-certified survey vendor and report on all measures included in the GPRO Web interface; AND populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then the group practice would report on 100 percent of assigned beneficiaries. A group practice would be required to report on at least 1 measure for which there is Medicare patient data.

(B) For a group practice of 100 or more eligible professionals, for the 12-month 2017 PQRS payment adjustment reporting period, report all CAHPS for PQRS survey measures via a certified survey vendor. In addition, the group practice would report on all measures included in the GPRO Web interface; AND populate data fields for the first 248 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 248, then the group practice would report on 100 percent of assigned beneficiaries. A group practice would be required to report on at least 1 measure for which there is Medicare patient data.

(k) * * *

(4) *Satisfactory participation criteria for individual eligible professionals for the 2017 PQRS payment adjustment.* An individual eligible professional who wishes to meet the criteria for satisfactory participation in a QCDR for the 2017 PQRS payment adjustment must report information on quality measures identified by the QCDR in one of the following manner:

(i) For the 12-month 2017 PQRS payment adjustment reporting period,

report at least 9 measures available for reporting under a QCDR covering at least 3 of the NQS domains, and report each measure for at least 50 percent of the eligible professional's patients. Of these measures, report on at least 3 outcome measures, or, if 3 outcomes measures are not available, report on at least 2 outcome measures and at least 1 of the following types of measures— resource use, patient experience of care, or efficiency/appropriate use.

(ii) [Reserved]

* * * * *

(m) * * *

(1) To request an informal review for reporting periods that occur prior to 2014, an eligible professional or group practice must submit a request to CMS within 90 days of the release of the feedback reports. To request an informal review for reporting periods that occur in 2014 and subsequent years, an eligible professional or group practice must submit a request to CMS within 30 days of the release of the feedback reports. The request must be submitted in writing and summarize the concern(s) and reasons for requesting an informal review and may also include information to assist in the review.

* * * * *

(3) If, during the informal review process, CMS finds errors in data that was submitted using a third-party vendor using either the qualified registry, EHR data submission vendor, or QCDR reporting mechanisms, CMS may allow for the resubmission of data to correct these errors on an ad-hoc basis.

(i) CMS will not allow resubmission of data submitted via claims, direct EHR, and the GPRO Web interface reporting mechanisms.

(ii) CMS will only allow resubmission of data that was already previously submitted to CMS.

(iii) CMS will only accept data that was previously submitted for the reporting periods for which the corresponding informal review period applies.

* * * * *

§ 414.511 [Removed]

■ 25. Section 414.511 is removed.

■ 26. Section 414.610 is amended by revising paragraphs (c)(1)(ii) introductory text and (c)(5)(ii) to read as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(1) * * *

(ii) For services furnished during the period July 1, 2008 through March 31, 2015, ambulance services originating in:

* * * * *

(5) * * *

(ii) For services furnished during the period July 1, 2004 through March 31, 2015, the payment amount for the ground ambulance base rate is increased by 22.6 percent where the point of pickup is in a rural area determined to be in the lowest 25 percent of rural population arrayed by population density. The amount of this increase is based on CMS's estimate of the ratio of the average cost per trip for the rural areas in the lowest quartile of population compared to the average cost per trip for the rural areas in the highest quartile of population. In making this estimate, CMS may use data provided by the GAO.

* * * * *

■ 27. Section 414.1200 is amended by revising paragraphs (a) and (b)(5) to read as follows:

§ 414.1200 Basis and scope.

(a) *Basis.* This subpart implements section 1848(p) of the Act by establishing a payment modifier that provides for differential payment starting in 2015 to a group of physicians and starting in 2017 to a group and a solo practitioner under the Medicare Physician Fee Schedule based on the quality of care furnished compared to cost during a performance period.

(b) * * *

(5) Additional measures for groups and solo practitioners.

* * * * *

■ 28. Section 414.1205 is amended by—

■ a. Revising the definitions of “Group of physicians” and “Value-based payment modifier”.

■ b. Adding the definition of “Solo practitioner” in alphabetical order.

The addition and revisions read as follows:

§ 414.1205 Definitions.

* * * * *

Group of physicians (Group) means a single Taxpayer Identification Number (TIN) with 2 or more eligible professionals, as identified by their individual National Provider Identifier (NPI), who have reassigned their Medicare billing rights to the TIN.

* * * * *

Solo practitioner means a single TIN with 1 eligible professional as identified by an individual NPI billing under the TIN.

* * * * *

Value-based payment modifier means the percentage as determined under

§ 414.1270 by which amounts paid to a group or solo practitioner under the Medicare Physician Fee Schedule established under section 1848 of the Act are adjusted based upon a comparison of the quality of care furnished to cost as determined by this subpart.

■ 29. Section 414.1210 is amended by—
■ a. Adding paragraphs (a)(3) and (b)(2), (3), and (4).

■ b. Revising paragraph (c).

The additions and revision reads as follows:

§ 414.1210 Application of the value-based payment modifier.

(a) * * *

(3) For the CY 2017 payment adjustment period and each subsequent calendar year payment adjustment period, to physicians and eligible professionals in groups with 2 or more eligible professionals and to physicians and eligible professionals who are solo practitioners based on the performance period described at § 414.1215(c).

(b) * * *

(2) For the CY 2017 payment adjustment period and each subsequent payment adjustment period, the value-based payment modifier is applicable to physicians and eligible professionals in groups with 2 or more eligible professionals and to physicians and eligible professionals who are solo practitioners that participate in the Shared Savings Program. The value-based payment modifier for groups and solo practitioners that participate in the Shared Savings Program during the payment adjustment period is determined based on paragraphs (b)(2)(i) through (iv) of this section. For groups and solo practitioners that participate in the Shared Savings Program during the performance period, but do not participate in the Shared Savings Program during the payment adjustment period, the quality composite is classified as “average” under § 414.1275(b)(1) and the cost composite score is calculated under § 414.1260(b) based on performance on the cost measures identified under § 414.1235 during the performance period.

(i) The cost composite is classified as “average” under § 414.1275(b)(2) for the payment adjustment period.

(ii) The quality composite score is calculated under § 414.1260(a) using quality data from the ACO in which the groups and solo practitioners participate during the payment adjustment period, as collected under § 425.500 of this chapter for the performance period.

(iii) If the ACO did not exist during the performance period, then the quality composite for the groups and solo

practitioners is classified as “average” under § 414.1275(b)(1) for the payment adjustment period.

(iv) The same value-based payment modifier applies to all groups and solo practitioners participating in an ACO during the payment adjustment period.

(3) For the CY 2017 payment adjustment period and each subsequent payment adjustment period, the value-based payment modifier is applicable to physicians and eligible professionals in groups with 2 or more eligible professionals and to physicians and eligible professionals who are solo practitioners that participate in the Pioneer ACO Model or the Comprehensive Primary Care (CPC) Initiative during the performance period. The value-based payment modifier for groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period and do not participate in the Shared Savings Program or other similar Innovation Center models or CMS initiatives during the payment adjustment period is determined based on paragraphs (b)(3)(i) through (iv) of this section.

(i) If a group reports under PQRS GPRO for the performance period and meets the criteria for satisfactory reporting for the PQRS payment adjustment, then the quality composite score is calculated under § 414.1260(a) based on the PQRS GPRO quality data, and the cost composite score is calculated under § 414.1260(b) based on performance on the cost measures identified under § 414.1235 during the performance period. If the group fails to meet the criteria for satisfactory reporting, then the group is in Category 2 and receives a downward adjustment under the value-based payment modifier for the payment adjustment period equal to the percentage applied for high cost/low quality under § 414.1275(c).

(ii) If a group is composed of one or more eligible professionals that participate in the Pioneer ACO Model or CPC Initiative and others who do not participate, and at least 50 percent of all eligible professionals in the group satisfactorily report quality data to CMS for the performance period, then the quality composite score is calculated under § 414.1260(a) based on the quality data reported under PQRS by individual eligible professionals in the group, and the group receives the higher of “average quality” or the actual classification under § 414.1275(b)(1), and the cost composite score is calculated under § 414.1260(b) based on performance on the cost measures identified under § 414.1235 during the

performance period. If less than 50 percent of all eligible professionals in the group satisfactorily report quality data to CMS for the performance period, then the group is in Category 2 and receives a downward adjustment under the value-based payment modifier for the payment adjustment period equal to the percentage applied for high cost/low quality under § 414.1275(c).

(iii) If a group is composed entirely of eligible professionals that participate in the Pioneer ACO Model or CPC Initiative, and the group successfully reports quality data to the Pioneer ACO Model or CPC Initiative for the performance period, then the quality composite is classified as “average” under § 414.1275(b)(1), and the cost composite score is calculated under § 414.1260(b) based on performance on the cost measures identified under § 414.1235 during the performance period. If the group fails to successfully report quality data to the Pioneer ACO Model or the CPC Initiative for the performance period, then the group is in Category 2 and receives a downward adjustment under the value-based payment modifier for the payment adjustment period equal to the percentage applied for high cost/low quality under § 414.1275(c).

(iv) If a solo practitioner successfully reports quality data to the Pioneer ACO Model or CPC Initiative for the performance period, then the quality composite is classified as “average” under § 414.1275(b)(1), and the cost composite score is calculated under § 414.1260(b) based on performance on the cost measures identified under § 414.1235 during the performance period. If the solo practitioner fails to successfully report quality data to the Pioneer ACO Model or the CPC Initiative for the performance period, then the solo practitioner is in Category 2 and receives a downward adjustment under the value-based payment modifier for the payment adjustment period equal to the percentage applied for high cost/low quality under § 414.1275(c).

(v) For groups and solo practitioners that participate in the Pioneer ACO Model or the CPC Initiative during the performance period and participate in other similar Innovation Center models or CMS initiatives during the payment adjustment period (but not the Shared Savings Program), the quality composite is determined based on paragraphs (b)(3)(i) through (iv) of this section for the payment adjustment period. The cost composite is classified as “average” under § 414.1275(b)(2) for the payment adjustment period.

(4) For the CY 2017 payment adjustment period and each subsequent

payment adjustment period, the value-based payment modifier is applicable to physicians and eligible professionals in groups with 2 or more eligible professionals and to physicians and eligible professionals who are solo practitioners that participate in other similar Innovation Center models or CMS initiatives during the performance period. The quality composite and cost composite are determined based on paragraphs (b)(3)(i) through (v) of this section.

(c) Group size determination. The list of groups of physicians subject to the value-based payment modifier for the CY 2015 payment adjustment period is based on a query of PECOS on October 15, 2013. For each subsequent calendar year payment adjustment period, the list of groups and solo practitioners subject to the value-based payment modifier is based on a query of PECOS that occurs within 10 days of the close of the Physician Quality Reporting System group registration process during the applicable performance period described at § 414.1215. Groups are removed from the PECOS-generated list if, based on a claims analysis, the group did not have the required number of eligible professionals, as defined in § 414.1210(a), that submitted claims during the performance period for the applicable calendar year payment adjustment period. Solo practitioners are removed from the PECOS-generated list if, based on a claims analysis, the solo practitioner did not submit claims during the performance period for the applicable calendar year payment adjustment period.

§ 414.1220 [Amended]

■ 30. Section 414.1220 is amended by removing the phrase “Groups of physicians” and adding in its place the phrase “Solo practitioners and groups”.

■ 31. Section 414.1225 is revised to read as follows:

§ 414.1225 Alignment of Physician Quality Reporting System quality measures and quality measures for the value-based payment modifier.

All of the quality measures for which solo practitioners and groups (or individual eligible professionals within such groups) are eligible to report under the Physician Quality Reporting System in a given calendar year are used to calculate the value-based payment modifier for the applicable payment adjustment period, as defined in § 414.1215, to the extent a solo practitioner or a group (or individual eligible professionals within such group) submit data on such measures.

■ 32. Section 414.1230 is amended by revising the section heading and the introductory text to read as follows:

§ 414.1230 Additional measures for groups and solo practitioners.

The value-based payment modifier includes the following additional quality measures (outcome measures) as applicable for all groups and solo practitioners subject to the value-based payment modifier:

* * * * *

§ 414.1235 [Amended]

■ 33. Section 414.1235 is amended in paragraph (a) introductory text by removing the phrase “of physicians subject” and add in its place the phrase “and solo practitioners subject”.

■ 34. Section 414.1240 is revised to read as follows:

§ 414.1240 Attribution for quality of care and cost measures.

(a) Beneficiaries are attributed to groups and solo practitioners subject to the value-based payment modifier using a method generally consistent with the method of assignment of beneficiaries under § 425.402 of this chapter, for measures other than the Medicare Spending per Beneficiary measure.

(b) For the Medicare Spending per Beneficiary (MSPB) measure, an MSPB episode is attributed to the group or the solo practitioner subject to the value-based payment modifier whose eligible professionals submitted the plurality of claims (as measured by allowable charges) under the group’s or solo practitioner’s TIN for Medicare Part B services, rendered during an inpatient hospitalization that is an index admission for the MSPB measure during the applicable performance period described at § 414.1215.

§ 414.1245 [Amended]

■ 35. Section 414.1245 is amended in the introductory text by removing the phrase “of physicians subject” and adding in its place the phrase “and solo practitioner subject”.

■ 36. Section 414.1250 is amended by revising paragraph (a) to read as follows:

§ 414.1250 Benchmarks for quality of care measures.

(a) The benchmark for quality of care measures reported through the PQRS using the claims, registries, EHR, or web interface is the national mean for that measure’s performance rate (regardless of the reporting mechanism) during the year prior to the performance period. In calculating the national benchmark, solo practitioners’ and groups’ (or individual eligible professionals’ within such groups) performance rates are weighted

by the number of beneficiaries used to calculate the solo practitioners’ or groups’ (or individual eligible professionals’ within such groups) performance rate.

* * * * *

■ 37. Section 414.1255 is amended by revising paragraphs (b) and (c) to read as follows:

§ 414.1255 Benchmarks for cost measures.

* * * * *

(b) Beginning with the CY 2016 payment adjustment period, the cost measures of a group and solo practitioner subject to the value-based payment modifier are adjusted to account for the group’s and solo practitioner’s specialty mix, by computing the weighted average of the national specialty-specific expected costs. Each national specialty-specific expected cost is weighted by the proportion of each specialty in the group, the number of eligible professionals of each specialty in the group, and the number of beneficiaries attributed to the group.

(c) The national specialty-specific expected costs referenced in paragraph (b) of this section are derived by calculating, for each specialty, the average cost of beneficiaries attributed to groups and solo practitioners that include that specialty.

■ 38. Section 414.1265 is amended by—

■ a. In the introductory text, removing the phrase “of physicians subject” and add in its place the phrase “or solo practitioner subject”.

■ b. Revising paragraph (a)

The addition reads as follows:

§ 414.1265 Reliability of measures.

* * * * *

(a) In a performance period, if a group or a solo practitioner has fewer than 20 cases for a measure, that measure is excluded from its domain and the remaining measures in the domain are given equal weight.

(1) Starting with the CY 2017 payment adjustment period, the exception to paragraph (a) of this section is the all-cause hospital readmission measure described at § 414.1230(c). In a performance period, if a group or a solo practitioner has fewer than 200 cases for this all-cause hospital readmission measure, that measure is excluded from its domain and the remaining measures in the domain are given equal weight.

(2) [Reserved]

* * * * *

■ 39. Section 414.1270 is amended by adding paragraph (c) to read as follows:

§ 414.1270 Determination and calculation of Value-Based Payment Modifier adjustments.

* * * * *

(c) For the CY 2017 payment adjustment period:

(1) A downward payment adjustment of –4.0 percent will be applied to a group and a solo practitioner subject to the value-based payment modifier if, during the applicable performance period as defined in § 414.1215, the following apply:

(i) Such group does not self-nominate for the PQRS GPRO and meet the criteria as a group to avoid the PQRS payment adjustment for CY 2017 as specified by CMS; and

(ii) Fifty percent of the eligible professionals in such group do not meet the criteria as individuals to avoid the PQRS payment adjustment for CY 2017 as specified by CMS; or

(iii) Such solo practitioner does not meet the criteria as an individual to avoid the PQRS payment adjustment for CY 2017 as specified by CMS.

(2) For a group comprised of 10 or more eligible professionals that is not included in paragraph (c)(1) of this section, the value-based payment modifier adjustment will be equal to the amount determined under § 414.1275(c)(3).

(3) For a group comprised of between 2 and 9 eligible professionals and a solo practitioner that are not included in paragraph (c)(1) of this section, the value-based payment modifier adjustment will be equal to the amount determined under § 414.1275(c)(3), except that such adjustment will be 0.0 percent if the group and the solo practitioner are determined to be low quality/high cost, low quality/average cost, or average quality/high cost.

(4) If all of the eligible professionals in a group and a solo practitioner subject to the value-based payment modifier participate as individuals in the PQRS using a qualified clinical data registry or any other reporting mechanism available to them, and CMS is unable to receive quality performance data for those eligible professionals and the solo practitioner under that reporting mechanism, the quality composite score for such group and solo practitioner will be classified as “average” under § 414.1275(b)(1).

(5) A group and a solo practitioner subject to the value-based payment modifier will receive a cost composite score that is classified as “average” under § 414.1275(b)(2) if such group and solo practitioner do not have at least one cost measure with at least 20 cases.

■ 40. Section 414.1275 is amended by—
■ a. Revising paragraph (a).

- b. Redesignating paragraphs (d), (d)(1), and (d)(2) as paragraphs (d)(1), (d)(1)(i), and (d)(1)(ii), respectively.
- c. Adding paragraphs (c)(3) and (d)(2).
The revision and additions read as follows:

§ 414.1275 Value-based payment modifier quality-tiering scoring methodology.
(a) The value-based payment modifier amount for a group and a solo practitioner subject to the value-based payment modifier is based upon a comparison of the composite of quality

of care measures and a composite of cost measures.
* * * * *
(c) * * *
(3) The following value-based payment modifier percentages apply to the CY 2017 payment adjustment period:

CY 2017—VALUE-BASED PAYMENT MODIFIER AMOUNTS FOR THE QUALITY-TIERING APPROACH

Cost/quality	Low quality (percent)	Average quality	High quality
Low Cost	+0.0	*+2.0x	*+4.0x
Average Cost	-2.0	+0.0%	*+2.0x
High Cost	-4.0	-2.0%	+0.0%

*Groups and solo practitioners eligible for an additional +1.0x if reporting Physician Quality Reporting System quality measures and average beneficiary risk score is in the top 25 percent of all beneficiary risk scores.

- (d) * * *
- (2) Groups and solo practitioners subject to the value-based payment modifier that have an attributed beneficiary population with an average risk score in the top 25 percent of the risk scores of beneficiaries nationwide and for the CY 2017 payment adjustment period are subject to the quality-tiering approach, receive a greater upward payment adjustment as follows:
- (i) Classified as high quality/low cost receive an upward adjustment of +5x (rather than +4x); and
 - (ii) Classified as either high quality/average cost or average quality/low cost receive an upward adjustment of +3x (rather than +2x).

§ 414.1285 [Amended]

- 41. Section 414.1285 is amended by removing the phrase “of physicians may” and adding in its place the phrase “and a solo practitioner may”.

PART 425—MEDICARE SHARED SAVINGS PROGRAM

- 42. The authority citation for part 425 continues to read as follows:

Authority: Secs. 1102, 1106, 1871, and 1899 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

- 43. Section 425.502 is amended by—
 - a. In paragraph (a)(1), removing the phrase “of an ACO’s agreement, CMS” and adding in its place the phrase “of an ACO’s first agreement period, CMS”
 - b. In paragraph (b)(2)(ii), removing the phrase “80.00 percent.” and adding in its place the phrase “80.00 percent, or when the 90th percentile is equal to or greater than 95%.”
 - c. Revising paragraph (a)(2).
 - d. Adding paragraphs (a)(3) and (4), (b)(4), and (e)(4).

The revision and additions read as follows:

§ 425.502 Calculating the ACO quality performance score.
(a) * * *
(2) During subsequent performance years of the ACO’s first agreement period, the quality performance standard will be phased in such that the ACO must continue to report all measures but the ACO will be assessed on performance based on the quality performance benchmark and minimum attainment level of certain measures.

(3) Under the quality performance standard for each performance year of an ACO’s subsequent agreement period, the ACO must continue to report on all measures but the ACO will be assessed on performance based on the quality performance benchmark and minimum attainment level of certain measures.

(4) The quality performance standard for a measure introduced during an ACO’s agreement period is set at the level of complete and accurate reporting for the first performance year for which reporting of the measure is required. For subsequent performance years, the quality performance standard for the measure will be assessed according to the phase-in schedule for the measure.

- (b) * * *
(4) (i) CMS will update the quality performance benchmarks every 2 years.
- (ii) For measures introduced in the first year of the 2-year benchmarking cycle, the benchmark will be established in the second year and updated along with the other measures at the start of the next 2-year benchmarking cycle.

- * * * * *
(e) * * *
(4) (i) ACOs that demonstrate quality improvement on established quality measures from year to year will be eligible for up to 2 bonus points per domain.
- (ii) Bonus points are awarded based on an ACO’s net improvement in

measures within a domain, which is calculated by determining the total number of significantly improved measures and subtracting the total number of significantly declined measures.

(iii) Up to two bonus points are awarded based on a comparison of the ACO’s net improvement in performance on the measures for the domain to the total number of individual measures in the domain.

(iv) When bonus points are added to points earned for the quality measures in the domain, the total points received for the domain may not exceed the maximum total points for the domain in the absence of the quality improvement measure.

(v) If an ACO renews its participation agreement for a subsequent agreement period, quality improvement will be measured based on a comparison between performance in the first year of the new agreement period and performance in the third year of the previous agreement period.

- 44. Section 425.506 is amended by revising the section heading and adding paragraph (d) to read as follows:

§ 425.506 Incorporating reporting requirements related to adoption of electronic health records technology.

* * * * *
(d) Eligible professionals participating in an ACO under the Shared Savings Program satisfy the CQM reporting component of meaningful use for the Medicare EHR Incentive Program when the following occurs:

- (1) The eligible professional extracts data necessary for the ACO to satisfy the quality reporting requirements under this subpart from certified EHR technology.
- (2) The ACO reports the ACO GPRO measures through a CMS web interface.

PART 498—APPEALS PROCEDURES FOR DETERMINATIONS THAT AFFECT PARTICIPATION IN THE MEDICARE PROGRAM AND FOR DETERMINATIONS THAT AFFECT THE PARTICIPATION OF ICFs/IID AND CERTAIN NFs IN THE MEDICAID PROGRAM

■ 45. The authority citation for part 498 continues to read as follows:

Authority: Secs. 1102, 1128I and 1871 of the Social Security Act (42 U.S.C. 1302, 1320a-7j, and 1395hh).

■ 46. Section 498.3 is amended by adding paragraph (b)(19) to read as follows:

§ 498.3 Scope and applicability.

* * * * *

(b) * * *

(19) Whether a physician or practitioner has failed to properly opt-out, failed to maintain opt-out, failed to timely renew opt-out, failed to privately contract, or failed to properly terminate opt-out.

* * * * *

Dated: June 13, 2014.

Marilyn Tavenner,
Administrator, Centers for Medicare & Medicaid Services.

Approved: June 19, 2014.

Energy Conservation Program for Consumer Products and Certain Commercial and Industrial Equipment: Test Procedures for Residential and Commercial Water Heaters; Final Rule

DEPARTMENT OF ENERGY

10 CFR Parts 429, 430, and 431

[Docket No. EERE-2011-BT-TP-0042]

RIN 1904-AC53

Energy Conservation Program for Consumer Products and Certain Commercial and Industrial Equipment: Test Procedures for Residential and Commercial Water Heaters**AGENCY:** Office of Energy Efficiency and Renewable Energy, Department of Energy.**ACTION:** Final rule.

SUMMARY: On November 4, 2013, the U.S. Department of Energy (DOE) issued a notice of proposed rulemaking (NOPR) to amend its test procedures established under the Energy Policy and Conservation Act for residential water heaters and certain commercial water heaters, which serves as the basis for today's action. This rulemaking fulfills DOE's statutory obligation for residential and certain commercial water heaters to review its test procedure for covered products and equipment at least once every seven years. In addition, this rulemaking satisfies DOE's statutory obligation to develop a uniform efficiency descriptor for residential and commercial water heaters. The test method applies the same efficiency descriptor to all residential and certain commercial water heaters, and extends coverage to eliminate certain gaps in the current residential test procedure, updates the simulated-use-test draw pattern, and updates the outlet water temperature requirement.

DATES: The effective date of this rule is July 13, 2015. Compliance will be mandatory starting one year after the publication in the **Federal Register** of a mathematical conversion factor to convert from the existing efficiency ratings to efficiency ratings under the test procedure adopted by this final rule, or December 31, 2015, whichever is later.

The incorporation by reference of certain publications listed in this rule is approved by the Director of the Federal Register as of July 13, 2015. Other publications referenced were approved on March 23, 2009, and May 16, 2012.

ADDRESSES: The docket for this rulemaking is available for review at www.regulations.gov, including **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials. All documents in the docket are listed in the

www.regulations.gov index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

A link to the docket on the www.regulations.gov Web page can be found at: <http://www.regulations.gov/#!docketDetail;D=EERE-2011-BT-TP-0042>. The www.regulations.gov Web page contains simple instructions on how to access all documents, including public comments, in the docket.

For further information on how to review the docket, contact Ms. Brenda Edwards at (202) 586-2945 or by email: Brenda.Edwards@ee.doe.gov.

FOR FURTHER INFORMATION CONTACT: Ms. Ashley Armstrong, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE-5B, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 586-6590. Email: Ashley.Armstrong@ee.doe.gov.

Mr. Eric Stas, U.S. Department of Energy, Office of the General Counsel, GC-71, 1000 Independence Avenue SW., Washington, DC 20585-0121. Telephone: (202) 586-9507. Email: Eric.Stas@hq.doe.gov.

SUPPLEMENTARY INFORMATION: This final rule incorporates by reference the following industry standards into subpart B of 10 CFR part 430:

ASTM D2156-09, ("ASTM D2156"), Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels.

Copies of ASTM D2156-09 can be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428-2959, or go to <http://www.astm.org>.

I. Authority and Background

Title III, Part B¹ of the Energy Policy and Conservation Act of 1975 ("EPCA" or "the Act"), Public Law 94-163 (42 U.S.C. 6291-6309, as codified) sets forth a variety of provisions designed to improve energy efficiency and established the Energy Conservation Program for Consumer Products Other Than Automobiles.² These include residential water heaters, one subject of this rulemaking. (42 U.S.C. 6292(a)(4)) Title III, Part C³ of EPCA, Public Law 94-163 (42 U.S.C. 6311-6317, as codified), added by Public Law 95-619, Title IV, Sec. 441(a), established the Energy Conservation Program for Certain Industrial Equipment, which includes the commercial water-heating equipment that is another subject of this rulemaking. (42 U.S.C. 6311(1)(K))

Under EPCA, energy conservation programs generally consist of four parts: (1) Testing; (2) labeling; (3) establishing Federal energy conservation standards; and (4) certification and enforcement procedures. The testing requirements

¹ For editorial reasons, upon codification in the U.S. Code, Part B was redesignated as Part A.

² All references to EPCA in this document refer to the statute as amended through the American Energy Manufacturing Technical Corrections Act (AEMTCA), Public Law 112-210 (Dec. 18, 2012).

³ For editorial reasons, upon codification in the U.S. Code, Part C was redesignated Part A-1.

consist of test procedures that manufacturers of covered products and equipment must use as the basis for certifying to DOE that their products and equipment comply with the applicable energy conservation standards adopted pursuant to EPCA and for making other representations about the efficiency of those products. (42 U.S.C. 6293(c); 42 U.S.C. 6295(s); 42 U.S.C. 6314) Similarly, DOE must use these test requirements to determine whether the products comply with any relevant standards promulgated under EPCA. (42 U.S.C. 6295(s))

Under 42 U.S.C. 6293, EPCA sets forth the criteria and procedures that DOE must follow when prescribing or amending test procedures for residential water heaters. EPCA provides, in relevant part, that any test procedures prescribed or amended under this section must be reasonably designed to produce test results which measure energy efficiency, energy use, or estimated annual operating cost of a covered product during a representative average use cycle or period of use, and must not be unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) In addition, if DOE determines that a test procedure amendment is warranted, it must publish proposed test procedures and offer the public an opportunity to present oral and written comments on them. (42 U.S.C. 6293(b)(2))

For commercial water heaters, EPCA requires that if the test procedure referenced in the American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) Standard 90.1, "Energy Standard for Buildings Except Low-Rise Residential Buildings," is updated, DOE must amend its test procedure to be consistent with the updated test procedure unless DOE determines by rule published in the **Federal Register** and supported by clear and convincing evidence that the amended test procedure is not reasonably designed to produce test results which reflect the energy efficiency, energy use, or estimated operating costs of that type of ASHRAE equipment during a representative average use cycle. In addition, DOE must determine that the amended test procedure is not unduly burdensome to conduct. (42 U.S.C. 6314(a)(2) and (4))

In any rulemaking to amend a test procedure, DOE must determine to what extent, if any, the proposed test procedure would alter the product's measured energy efficiency. (42 U.S.C. 6293(e)(1)) If DOE determines that the amended test procedure would alter the measured efficiency of a covered product, DOE must amend the

applicable energy conservation standard accordingly. (42 U.S.C. 6293(e)(2))

Further, the Energy Independence and Security Act of 2007 (EISA 2007) amended EPCA to require that DOE must review test procedures for all covered products at least once every seven years and either amend test procedures (if the Secretary determines that amended test procedures would more accurately or fully comply with the requirements of 42 U.S.C. 6293(b)(3) for residential products or 42 U.S.C. 6314(a)(2)–(3) for commercial equipment) or publish notice in the **Federal Register** of any determination not to amend a test procedure. (42 U.S.C. 6293(b)(1)(A); 42 U.S.C. 6314(a)(1)(A)) Under this requirement, DOE must review the test procedures for residential water heaters not later than December 19, 2014 (seven years after the enactment of EISA 2007), and DOE must review the test procedures for commercial water heaters not later than May 16, 2019 (seven years after the last final rule for commercial water heater test procedures⁴). The final rule resulting from this rulemaking will satisfy the requirement to review the test procedures for residential and certain commercial water heaters every seven years.

DOE's test procedure for residential water heaters is found in the Code of Federal Regulations (CFR) at 10 CFR 430.23(e) and 10 CFR part 430, subpart B, appendix E. The test procedure includes provisions for determining the energy efficiency (energy factor (EF)), as well as the annual energy consumption of these products. DOE's test procedure for commercial water heaters is found at 10 CFR 431.106. That test procedure incorporates by reference American National Standards Institute (ANSI) Z21.10.3, *Gas Water Heaters—Volume III, Storage Water Heaters With Input Ratings Above 75,000 Btu Per Hour, Circulating and Instantaneous*, and provides a method for determining the thermal efficiency and standby loss of this equipment.

In addition to the test procedure review provision discussed above, EISA 2007 also amended EPCA to require DOE to amend its test procedures for all covered consumer products to include measurement of standby mode and off mode energy consumption. (42 U.S.C. 6295(gg)(2)(A)) Consequently, DOE recently completed a rulemaking to consider amending its test procedure for residential water heaters to include provisions for measuring the standby

mode and off mode energy consumption of those products. Pursuant to the requirements of EPCA, DOE published a notice of proposed rulemaking (NOPR) in the **Federal Register** on August 30, 2010, for three different residential heating products (water heaters, pool heaters, and direct heating equipment) related to standby mode and off mode energy consumption, but the NOPR proposed no amendments to the DOE test procedure for residential water heaters because DOE tentatively concluded that standby mode and off mode energy consumption was already accounted for in the existing DOE test method.⁵ 75 FR 52892, 52895. Subsequently, DOE published a final rule in the **Federal Register** on December 17, 2012, which affirmed its conclusion that no changes were needed to the existing test procedure for residential water heaters. 77 FR 74559, 74561–62. However, that rulemaking was limited to consideration of test procedure amendments to address the above-referenced standby mode and off mode requirements; it did not address other issues regarding DOE's existing test procedure for residential water heaters. DOE addresses these issues in this final rule.

On October 12, 2011, DOE published in the **Federal Register** a request for information (RFI) that identified and requested comment on a number of issues regarding the test procedures for residential water heaters. 76 FR 63211. DOE accepted comments and information on the RFI until November 28, 2011. Key issues discussed in the RFI include the scope, draw patterns, and test conditions for residential water heaters. The RFI began the process of fulfilling DOE's obligation to periodically review its test procedures under 42 U.S.C. 6293(b)(1)(A) by initiating a rulemaking to examine all aspects of the DOE test procedure.

On December 18, 2012, the American Energy Manufacturing Technical Corrections Act (AEMTCA), Public Law 112–210, was signed into law. In relevant part, it amended EPCA to require that DOE publish a final rule establishing a uniform efficiency descriptor and accompanying test methods for covered residential water heaters and commercial water-heating equipment within one year of the enactment of AEMTCA. (42 U.S.C. 6295(e)(5)(B)) The final rule must replace the current energy factor, thermal efficiency, and standby loss metrics with a uniform efficiency

⁴ On May 16, 2012, DOE published a final rule in the **Federal Register** amending the test procedures for commercial water heaters. 77 FR 28928.

⁵ For more information, please visit DOE's Web site at: http://www1.eere.energy.gov/buildings/appliance_standards/residential/waterheaters.html.

descriptor. (42 U.S.C. 6295(e)(5)(C)) AEMTCA requires that, beginning one year after the date of publication of DOE's final rule establishing the uniform descriptor, the efficiency standards for covered water heaters must be denominated according to the uniform efficiency descriptor established in the final rule (42 U.S.C. 6295(e)(5)(D)), and that DOE must develop a mathematical factor for converting the measurement of efficiency for covered water heaters from the test procedures and metrics currently in effect to the new uniform energy descriptor. (42 U.S.C. 6295(e)(5)(E)(i)–(ii)) After the effective date of the final rule, covered water heaters shall be considered to comply with the final rule and with any revised labeling requirements established by the Federal Trade Commission (FTC) to carry out the final rule, if the covered water heater was manufactured prior to the effective date of the final rule and complies with the efficiency standards and labeling requirements in effect prior to the final rule. (42 U.S.C. 6295(e)(5)(K))

AEMTCA also requires that the uniform efficiency descriptor and accompanying test method apply, to the maximum extent practicable, to all water-heating technologies currently in use and to future water-heating technologies. (42 U.S.C. 6295(e)(5)(H)) AEMTCA allows DOE to provide an exclusion from the uniform efficiency descriptor for specific categories of otherwise covered water heaters that do not have residential uses, that can be clearly described, and that are effectively rated using the current thermal efficiency and standby loss descriptors. (42 U.S.C. 6295(e)(5)(F))

AEMTCA outlines DOE's various options for establishing a new uniform efficiency descriptor for water heaters, including: (1) A revised version of the energy factor descriptor currently in use; (2) the thermal efficiency and standby loss descriptors currently in use; (3) a revised version of the thermal efficiency and standby loss descriptors; (4) a hybrid of descriptors; or (5) a new approach. (42 U.S.C. 6295(e)(5)(G)) Lastly, AEMTCA requires that DOE invite stakeholders to participate in the rulemaking process, and that DOE contract with the National Institute of Standards and Technology (NIST), as necessary, to conduct testing and simulation of alternative descriptors identified for consideration. (42 U.S.C. 6295(e)(5)(I)–(J))

On January 11, 2013, DOE published in the **Federal Register** an RFI (hereinafter the "January 2013 RFI") that requested comment on its

interpretation of the requirements for developing a uniform efficiency descriptor in AEMTCA. DOE also sought comment on how to implement those requirements. 78 FR 2340. DOE accepted comments and information on the RFI until February 11, 2013.

On November 4, 2013, DOE published a NOPR in the **Federal Register** (hereinafter the "November 2013 NOPR") regarding the test procedure for residential and certain commercial water heaters. DOE accepted comments and information on the NOPR until January 21, 2014. The November 2013 NOPR proposed to modify the current test procedures for residential water heaters and certain commercial water heaters to be more representative of conditions encountered in the field (including modifications to both the test conditions and the draw patterns) and to expand the scope of the test procedure to apply to certain commercial water heaters and certain residential water heaters that are not covered by the current test procedure. The proposal also included a number of other improvements identified by commenters in response to both the October 2011 RFI and the January 2013 RFI. On December 6, 2013, DOE held a public meeting to discuss the test procedure proposals outlined in the November 2013 NOPR. The feedback received from stakeholders was taken into consideration and is discussed further in section III of this final rule.

II. Summary of the Final Rule

Through this final rule, DOE amends its test procedure for residential water heaters and certain commercial water heaters. The amendments will modify the test procedure to be more representative of conditions encountered in the field (including modifications to the test conditions and the draw patterns) and expand the scope of the test procedure to apply to certain commercial water heaters and certain residential water heaters that are not covered by the current test procedure. The following paragraphs summarize these changes.

DOE also modifies the test procedure for water heaters to establish a uniform descriptor that can be applied to: (1) All residential water heaters (including certain residential water heaters that are covered products under EPCA's definition of "water heater" at 42 U.S.C. 6291(27), but that are not covered under the current test procedure); and (2) to certain commercial water heaters that have residential applications. These modifications include the establishment of test procedure provisions that are applicable to water heaters with storage

volumes between 2 gallons (7.6 L) and 20 gallons (76 L), and the creation of a definition for "electric instantaneous water heater." In addition, DOE establishes a new equipment class of commercial water heaters and corresponding definition for "residential-duty commercial water heater." DOE will require water heaters that are classified as "residential-duty commercial" to be tested using the test procedure for the uniform efficiency descriptor established in this final rule.

In addition, DOE establishes the use of multiple draw patterns for testing water heaters, with certain draw patterns prescribed as a function of equipment capacity. Further, DOE establishes updates to the water heater draw pattern to be more reflective of actual field usage based on recent field test data. Lastly, DOE modifies the outlet water temperature requirement to better reflect conditions encountered in typical field installations.

III. Discussion

In response to the November 2013 NOPR, DOE received 24 written comments from the following interested parties: Thomas Harman, Seisco, Applied Energy Technology (AET), two separate comments from Heat Transfer Products, Inc. (HTP), the National Propane Gas Association (NPGA), Bradford White, A.O. Smith, Edison Electric Institute (EEL), a joint comment from Northwest Energy Efficiency Alliance (NEEA) and Northwest Power and Conservation Council (NPCC) (NEEA and NPCC), Sequentric Energy Systems, LLC (SES), Stone Mountain Technologies (SMT), six separate comments from Affiliated International Management, LLC (AIM), the American Gas Association (AGA), Rheem Manufacturing Company (Rheem), the Air-Conditioning, Heating, and Refrigeration Institute (AHRI), Giant Factories, Inc. (Giant), a joint comment submitted by the American Council for an Energy-Efficient Economy (ACEEE) (Joint Comment),⁶ and General Electric Company (GE).

These interested parties commented on a range of issues, including those identified by DOE in the October 2011 RFI, the January 2013 RFI, and the November 2013 NOPR, as well as several other pertinent issues. The issues on which DOE received comment, as well as DOE's response to

⁶ ACEEE submitted a joint comment on behalf of ACEEE, the Appliance Standards Awareness Project (ASAP), the Alliance to Save Energy (ASE), Consumers Union (CU), the National Consumer Law Center (NCLC), the Natural Resources Defense Council (NRDC), and the Northeast Energy Efficiency Partnership (NEEP).

those comments and the resulting changes to the test procedures for water heaters, are discussed in the subsections immediately below.

A. Scope

DOE's current test procedures for residential water heaters codified at 10 CFR 430.23(e) and 10 CFR part 430, subpart B, appendix E address gas-fired, electric, and oil-fired storage-type (*i.e.*, storage volume not less than 20 gallons (76 L)) and gas-fired and electric instantaneous type (*i.e.*, storage volume less than 2 gallons (7.6 L)) water heaters. However, the current DOE test procedure does not define "electric instantaneous water heater." In addition, it does not address the following types of products: (1) Gas-fired water heaters that have a storage volume at or above 2 gallons and less than 20 gallons (76 L); (2) electric storage water heaters with storage volume less than 20 gallons (76 L); and (3) storage water heaters with very large storage capacities, including oil-fired water heaters with storage volumes greater than 50 gallons (190 L), gas-fired water heaters with storage volumes above 100 gallons (380 L), and electric water heaters with storage volumes above 120 gallons (450 L). In the NOPR, DOE proposed an expansion of the scope of coverage of its test method so that it applies to all products that meet the definition of residential water heater, including those products listed above that are not addressed by the existing DOE test method. 78 FR 66202, 66205 (Nov. 4, 2013). DOE also proposed revising 10 CFR 430.32(d) to clarify the applicability of the existing standards with respect to the expanded test procedure scope. *Id.* As discussed below, DOE adopts the proposed changes along with several clarifications based on comments received from interested parties.

DOE's test procedures for commercial water heaters are found at 10 CFR 431.106. In terms of capacity, the procedures for commercial water heaters cover storage water heaters with an input rating up to 4,000 British thermal units (Btu) per hour (Btu/h) per gallon of stored water, instantaneous water heaters with input ratings not less than 4,000 Btu/h per gallon of stored water, and hot water supply boilers with input ratings from 300,000 Btu/h to 12,500,000 Btu/h and of at least 4,000 Btu/h per gallon of stored water. Models using natural gas, oil, or electricity are covered by these test methods.

EPCA includes definitions for both residential and commercial water heaters that set the scope of DOE's authority for these products. (42 U.S.C.

6291(27); 42 U.S.C. 6311(12)) As required by AEMTCA, by this final rule, DOE establishes a uniform metric and test method for all covered water heaters,⁷ regardless of whether a particular water heater falls under the scope of residential water heaters or commercial water heaters as defined in EPCA. In doing so, DOE also expands the scope of the test procedure to include test methods for certain product types that are not covered by the current DOE test procedure. DOE identified these topics as issues for comment in the October 2011 RFI, the January 2013 RFI, and the November 2013 NOPR. 76 FR 63211, 63212–13 (Oct. 12, 2011); 78 FR 2340, 2344–2346 (Jan. 11, 2013); 78 FR 66202, 66205–66224 (Nov. 4, 2013).

1. Coverage Range of Uniform Metric and Test Procedure

As proposed in the November 2013 NOPR, and in accordance with AEMTCA (42 U.S.C. 6295(e)(5)(F)), DOE excludes from the uniform efficiency descriptor any specific categories of covered water heaters that do not have a residential use, can be clearly described in the final rule, and are effectively rated using the current thermal efficiency and standby loss descriptors. In the November 2013 NOPR, DOE proposed to define a new classification of commercial water heaters for which the uniform efficiency descriptor would apply, which DOE believes can be clearly distinguished from the commercial water heaters for which the uniform descriptor would not apply under this final rule; DOE proposed to name the new classification "light commercial water heater." 78 FR 66202, 66206 (Nov. 4, 2013). DOE received 4 comments on this proposal in response to the NOPR. AHRI, AIM, A.O. Smith, and NEEA and NPCC suggested that the proposed name could lead to confusion. (AHRI, No. 75 at p. 2; AIM, No. 67 at p. 1; A.O. Smith, No. 62 at p. 1; NEEA and NPCC No. 64 at p. 3).⁸ Further, AHRI and A.O. Smith suggested that a more appropriate name for this product classification would be "residential-duty water heater." (AHRI, No. 75 p. 2; A.O. Smith, No. 62 at p. 1) DOE considered this comment and

⁷ As provided by 42 U.S.C. 6295(e)(5)(F), DOE is excluding from the uniform efficiency descriptor certain commercial water heaters that do not have a residential use, can be clearly described in the final rule, and are effectively rated using the thermal efficiency and standby loss descriptors. The water heaters that DOE is excluding are discussed further in section III.A.1.

⁸ All references to comments received in response to the November 2013 NOPR identify the commenter, the identification number applied by DOE, and the page of the comment package on which the particular point has been discussed.

agrees that "light commercial" is a term already used in industry and that using this term in this context could cause stakeholder and consumer confusion. Thus, DOE adopts a new name for the classification, as suggested by commenters, and creates a "residential-duty" commercial water heater classification.⁹

In the November 2013 NOPR, DOE proposed three characteristics to distinguish water heaters intended only for commercial use: (1) For models requiring electricity, uses three-phase power supply; (2) is capable of delivering hot water at temperatures of 180 °F or above; and/or (3) bears a Code Symbol Stamp signifying compliance with the requirements of the American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code. DOE did not propose input and storage capacity criteria to differentiate commercial water heaters that would only be used in non-residential applications from commercial water heaters that could have residential applications, given that changes to the input and storage capacity criteria would likely occur over time and require updating. 78 FR 66202, 66206–66207 (Nov. 4, 2013).

No comments were received opposing the proposal to exclude from the "residential-duty commercial water heater" classification any water heater which uses three-phase power, so DOE has decided to retain that characteristic in this final rule.

Five comments (AHRI, A.O. Smith, Bradford White, Giant, Joint Comment) requested that the language "capable of delivering" water at 180 °F or more should be changed to "designed to deliver," given that the delivery temperature of a water heater is a result of the field conditions and usage. These commenters also pointed out that even a water heater that is not designed to deliver water at or above 180 °F might be capable of doing so. (AHRI, No. 75 at pp. 1–2; A.O. Smith, No. 62 at p. 5; Bradford White, No. 61 at pp. 2–3; Giant, No. 76 at p. 1; Joint Comment, No. 77 at p. 5)

Four commenters (AHRI, A.O. Smith, Giant, Joint Comment) stated that the ASME Boiler and Pressure Vessel Stamp is not required in all jurisdictions and would not adequately classify a water heater as a commercial water heater

⁹ As discussed in the NOPR, DOE determined that the current metrics for commercial water heaters that are used only in commercial settings (*i.e.*, non-"residential-duty" commercial water heaters) are appropriate and adequate to characterize the performance of such commercial water heaters due to the typical operating patterns of such equipment. 78 FR 66202, 66206 (Nov. 4, 2013).

without a residential application. (AHRI, No. 75 at p. 2; A.O. Smith, No. 62 at p. 4; Giant, No. 76 at p. 1; Joint Comment, No. 77 at p. 5)

Nine comments (AHRI, A.O. Smith, EEI, Giant, NEEA and NPCC, Joint Comment, Rheem, SMT, Seisco)

suggested the addition of input and storage capacity criteria, stating that the three criteria listed above do not adequately distinguish water heaters not intended for residential use. (AHRI, No. 75 at p. 2; A.O. Smith, No. 62 at p. 4; EEI, No. 63 at p. 5; Giant, No. 76 at pp.

1–2; NEEA and NPCC, No. 64 at p. 3; Joint Comment, No. 77 at p. 4; Rheem, No. 69 at p. 2; SMT, No. 66 at p. 1; Seisco, No. 57 at p. 11) The suggested criteria are presented in Table III.1 and are grouped by water heater type.

TABLE III.1—SUGGESTED CAPACITY CRITERIA FOR DEFINING NON-RESIDENTIAL WATER HEATERS

Water heater type	Indicator of non-residential application by commenter
Gas-fired Storage	AHRI, A.O. Smith, Giant, Rheem: Rated input >100 kBtu/h; Rated storage volume >100 gallons.
Oil-fired Storage	AHRI, A.O. Smith, Giant, Rheem: Rated input >140 kBtu/h; Rated storage volume >50 gallons. NEEA and NPCC: Rated input >105 kBtu/h; Rated storage volume >120 gallons.
Electric Storage	AHRI, A.O. Smith, Giant, Rheem: Rated input >12kW; Rated storage volume >120 gallons. NEEA and NPCC: Rated input >12kW; Rated storage volume <2 gallons and >120 gallons.
Heat Pump with Storage.	AHRI, A.O. Smith, Giant, Rheem: Rated current >24 A at a rated voltage of not greater than 250 V; Rated storage volume >120 gallons. NEEA and NPCC: Rated Input >15 kW; Rated current >24 A at a rated voltage of not greater than 250 V; Rated storage volume >120 gallons.
Gas-fired Instantaneous.	AHRI, A.O. Smith, Giant, Rheem: Rated input >200 kBtu/h; Rated storage volume < 1 gallon per 4000 Btu/h of input. NEEA and NPCC: Rated input >200 kBtu/h; Rated storage volume <2 gallons.
Electric Instantaneous.	AHRI, A.O. Smith, Giant, Rheem: Rated input >25 kW; Rated storage volume >2 gallons. NEEA and NPCC: Rated input >58.6 kW; Rated storage volume >2 gallons. Seisco: Rated input >56 kW (at a minimum).
Oil-fired Instantaneous.	AHRI, A.O. Smith, Giant, Rheem: Rated input >210 kBtu/h; Rated storage volume >2 gallons.

Upon considering these comments, DOE decided to modify the criteria for distinguishing water heaters intended only for non-residential, commercial use. First, upon examining the commercial water heaters available on the market, DOE found that many water heaters that are marketed for residential applications and would otherwise be classified as “residential-duty” would be exempted from coverage under the uniform efficiency descriptor because of the requirement that “residential-duty” units be capable of delivering water at temperatures only up to 180 °F. (In the November 2013 NOPR, DOE proposed that “residential-duty” units would be capable of delivery water temperature up to but not including 180 °F. 78 FR 66202, 66246 (Nov. 4, 2013).) As stated in section I, AEMTCA requires that the test method apply, to the maximum extent practicable, to all water-heating technologies currently in use (42 U.S.C. 6295(e)(5)(H)), except for specific categories of water heaters that do not have residential uses, that can be clearly described, and that are effectively rated using the current thermal efficiency and standby loss descriptors (42 U.S.C. 6295(e)(5)(F)). DOE believes that the proposed criteria to distinguish water heaters intended only for commercial use based on the capability to deliver hot water at temperatures of 180 °F or above would have inappropriately excluded commercial water heaters marketed for residential applications, because such models are designed to include 180 °F as the maximum delivery

temperature. However, DOE believes that including 180 °F as the maximum delivery temperature of “residential-duty” commercial water heaters is still a valuable distinguishing feature between water heaters intended for residential use and those that are not.

DOE also agrees with commenters to adjust the language of the 180 °F delivery temperature criteria to read “designed to deliver” as opposed to “capable of delivering,” because a water heater that is “designed to deliver” hot water at or below 180 °F might be capable of delivering hot water in excess of 180 °F depending on the field conditions and usage. DOE is aware of situations where a water heater could be subjected to a series of several short draws, which can cause an influx of cold water at the bottom of the tank. Due to stratification, the water at the bottom of the tank near the thermostat may be colder than the water at the top of the tank, causing the burner or elements to turn on and heat the water to a temperature above that for which the water heater is designed. DOE considers a water heater that is “designed to deliver” water at or below 180 °F as one that has a user-operable temperature control device with a maximum setting of 180 °F or a maximum setting that would deliver water at or below 180 °F under the conditions defined by the test method. In order to more closely match the language of the test procedure when defining water heaters, DOE is slightly changing the wording from “designed to

deliver water” to “designed to provide outlet water.”

Second, because the ASME Boiler and Pressure Vessel Stamp criterion is not required in all jurisdictions and because this criterion is not a definitive identifier of whether a unit is truly commercial, DOE does not adopt this proposed requirement. Rather, as suggested by commenters, DOE adopts limitations on input rating and storage capacity. (Additional comments related to storage capacity and input capacity limitations are discussed in the subsections immediately following this section.) DOE agrees that water-heating units exist in the current marketplace that are not intended for residential use that do not meet the three criteria proposed in the November 2013 NOPR (and listed above) and, thus, establishes input and storage capacity criteria based on water heater type as shown in Table III.2. Although DOE still believes that changes to the input and storage capacity criteria could occur over time and require these criteria to be updated, DOE has concluded that these criteria are necessary to properly classify the scope of the uniform efficiency descriptor.

TABLE III.2—CAPACITY CRITERIA FOR DEFINING NON-RESIDENTIAL WATER HEATERS

Water heater type	Indicator of non-residential application
Gas-fired Storage.	Rated input >105 kBtu/h; Rated storage volume >120 gallons.
Oil-fired Storage.	Rated input >140 kBtu/h; Rated storage volume >120 gallons.
Electric Storage.	Rated input >12 kW; Rated storage volume >120 gallons.
Heat Pump with Storage.	Rated input >15 kW; Rated current >24 A at a rated voltage of not greater than 250 V; Rated storage volume >120 gallons.
Gas-fired Instantaneous.	Rated input >200 kBtu/h; Rated storage volume >2 gallons.
Electric Instantaneous.	Rated input >58.6 kW; Rated storage volume >2 gallons.
Oil-fired Instantaneous.	Rated input >210 kBtu/h; Rated storage volume >2 gallons.

DOE establishes a definition of “residential-duty commercial water heater” at 10 CFR 431.102 that defines a “residential-duty commercial water heater” as any gas-fired, electric, or oil storage or instantaneous commercial water heater that meets the following conditions:

- (1) For models requiring electricity, uses single-phase external power supply;
- (2) Is not designed to provide outlet hot water at temperatures greater than 180 °F; and
- (3) Is not excluded by the specified limitations regarding rated input and storage volume as described in Table III.2 above.

Although residential-duty commercial water heaters could have residential applications, DOE notes that the new “residential-duty commercial water heater” definition represents a type of water heater that, to a significant extent, is distributed in commerce for industrial or commercial use. These water heaters were and continue to be covered industrial equipment, and will continue to be subject to the applicable energy conservation standards in 10 CFR part 431 and the certification requirements for commercial and industrial equipment in 10 CFR part 429. Similarly, although DOE recognizes that some consumer water heaters may be installed in a commercial setting, those water heaters are covered consumer products for the purposes of DOE regulations; the applicable energy conservation standards in 10 CFR part

430 continue to apply; and they must be certified as consumer products under 10 CFR part 429.

If a commercial water heater does not meet all of the three conditions discussed above, it would be classified as a commercial water heater that would not be expected to be used in residential applications and would be subject to the current test methods prescribed in 10 CFR 431.106 and the certification requirements for commercial and industrial equipment in 10 CFR part 429. If a commercial water heater meets all three criteria, DOE will consider it a “residential-duty commercial water heater,” which would be subject to the uniform efficiency descriptor and test method established in this final rule. Accordingly, DOE is adding a row to Table 1 of 10 CFR 431.106 specifying 10 CFR part 430, subpart B, appendix E as the test method for this type of equipment.

As stated in the November 2013 NOPR, DOE has determined that certain commercial equipment, including unfired storage tanks, add-on heat pump water heaters, and hot water supply boilers, are not appropriately rated using the uniform descriptor applicable to other water heaters. 78 FR 66202, 66207 (Nov. 4, 2013). Unfired storage tanks are not complete water-heating systems and require additional equipment in the field to operate. As such, their performance as part of a complete water-heating system is dependent upon other components of the system so that use of the uniform descriptor may be unrepresentative of its performance as part of a complete water-heating system. In a similar vein, DOE previously determined that residential add-on heat pump water heaters are not covered residential products. 75 FR 20112, 20127 (Apr. 16, 2010). DOE has authority to cover commercial add-on heat pumps; however, this equipment does not have residential applications and, therefore, is not suitable for application of the uniform efficiency descriptor. DOE also determined that hot water supply boilers are more appropriately rated using the existing metrics for commercial water heaters, as this equipment has very high input ratings and their use is similar to that of other commercial water heaters in commercial applications. 78 FR 66202, 66207 (Nov. 4, 2013). DOE will address the types of commercial water-heating equipment that are excluded from the uniform descriptor (e.g., unfired storage tanks, add-on heat pump water heaters, and hot water supply boilers) in a subsequent test procedure rulemaking. DOE did not receive any comments

regarding the exclusion of unfired storage tanks, add-on heat pump water heaters, and hot water supply boilers from coverage under the uniform descriptor.

2. Storage Capacity Limits

As noted above, under the existing regulatory definitions, DOE’s current residential water heater test procedures are not applicable to gas or electric water heaters with storage tanks that are at or above 2 gallons (7.6 L) and less than 20 gallons (76 L). The current DOE test procedure for residential water heaters only applies to gas-fired water heaters with storage volumes less than or equal to 100 gallons (380 L), electric resistance and heat pump storage water heaters with storage volumes less than or equal to 120 gallons (450 L), and oil-fired water heaters with storage volumes less than or equal to 50 gallons (190 L). 10 CFR part 430, subpart B, appendix E, sections 1.12.1, 1.12.2, and 1.12.4.

The definitions in the current DOE test procedure specify that gas instantaneous water heaters have a storage volume of less than two gallons (7.6 L) and that electric or gas storage-type water heaters have a storage volume of 20 gallons (76 L) or more. The storage capacity of oil water heaters in the test method is not restricted by a lower limit, with the specification stating that an oil-fired storage water heater simply has a rated capacity less than or equal to 50 gallons (190 L). 10 CFR part 430, subpart B, appendix E, sections 1.7 and 1.12. The definitions for “Electric Instantaneous Water Heater” and “Storage-type Water Heater of More than 2 Gallons (7.6 Liters) and Less than 20 Gallons (76 Liters)” are currently reserved. *Id.* at section 1.12.5.

In the 1998 rulemaking establishing test procedures for residential water heaters, DOE proposed to include units with storage volumes between 2 and 20 gallons, but commenters raised concerns that the test procedure demand of 64.3 gallons per day was not appropriate for these small units. 63 FR 25996, 26000 (May 11, 1998). At that time, DOE concluded that the data necessary to determine an appropriate representative daily hot water consumption for water heaters with these storage volumes did not exist and that alternative procedures proposed by commenters were not fully evaluated. For these reasons, the Department tabled consideration of the inclusion of these water heaters until a future revision of the DOE test procedure.

As proposed in the November 2013 NOPR, DOE has decided to expand the scope of the water heater test procedure for the uniform efficiency descriptor to

include water heaters with storage volumes between 2 and 20 gallons. 78 FR 66202, 66208 (Nov. 4, 2013). Rheem supported the expansion of the scope to include units between 2 and 20 gallons, but asserted that these products should not be covered by the current energy conservation standards. (Rheem, No. 69 at pp. 7–8) Bradford White requested clarification as to whether products between 2 and 20 gallons would be covered by the current energy conservation standards or test procedure only. (Bradford White, No. 61 at p. 2) AHRI stated that, although DOE is developing a test method for water heaters with storage volumes between 2 and 20 gallons, the current DOE minimum efficiency standards for residential water heaters do not and should not apply to models having rated storage volumes less than 20 gallons, and AHRI requested information regarding DOE activities with regard to standards for these products. (AHRI, No. 80 at pp. 2–3)

The test procedure modifications for water heaters with a storage volume between 2 and 20 gallons specify the method of test set-up (including instrumenting such water heaters), a test method to assess the delivery capacity, and the draw pattern to be used to determine the energy efficiency of such units. The amendments for water heaters with storage volumes between 2 and 20 gallons are discussed in detail in section III.C of this final rule. Currently, there are no minimum energy conservation standards applicable to water heater products with a storage volume between 2 and 20 gallons, which will be the case until DOE conducts a rulemaking to establish such standards. DOE clarifies this point in this final rule's amendments to 10 CFR 430.32(d).

AEMTCA requires DOE to reconsider the scope of all water heater test procedures. AEMTCA amended EPCA to require that the new uniform metric apply to the extent possible to all water-heating technologies. (42 U.S.C. 6295(e)(5)(F) and (H))

In considering the upper limit to the storage capacity range, DOE is not aware of any residential water heaters available on the market with storage volumes above 100 gallons, 120 gallons, and 50 gallons for gas-fired, electric (resistance and heat pump), and oil-fired water heaters, respectively, that would be covered as residential products under EPCA. AHRI, A.O. Smith, Giant, and Rheem supported the continued use of the current maximum storage capacity limits. (AHRI, No. 75 at p. 2; A.O. Smith, No. 62 at p. 4; Giant, No. 76 at p. 2; Rheem, No. 69 at p. 2)

In contrast, as AET stated in response to the January 2013 RFI, the ASME Boiler and Pressure Vessel Code requires that vessels intended to store fluids under pressure must individually undergo a rigorous test and inspection procedure if they have volumes greater than 120 gallons. AET noted that because these test and certification procedures are expensive, manufacturers will avoid making products intended for residential use that require an ASME inspection and code stamp. For this reason, AET commented that the upper limit of 120 gallons would be appropriate for all residential water heaters. (AET, No. 22 at pp. 6–7)

DOE has reconsidered the water heater test procedure scope and expands the scope of the test procedure to include all covered water heaters that could have residential applications and adjusts the current limitations on maximum storage volume in the residential test procedure for gas-fired, electric, and oil storage water heaters to 120 gallons for all three types. DOE concludes that the amended test method adopted in today's final rule adequately addresses water heaters regardless of storage volume, provided that they meet the definition of a "residential water heater" or a "residential-duty commercial water heater." Consequently, DOE's uniform descriptor test procedure will apply to residential storage water heaters and "residential-duty commercial water heaters" with storage volumes up to 120 gallons. As noted previously in section III.A.1, DOE excludes non-residential (commercial) water heaters, and DOE agrees with AET that a storage capacity limit of 120 gallons adequately separates residential and commercial units of all water heater types.

3. Input Capacity Limits

AEMTCA requires that the new uniform efficiency descriptor apply to the maximum extent practical to all water-heating technologies in use now or in the future. (42 U.S.C. 6295(e)(5)(H)) DOE's current residential water heater test procedure is not applicable to gas-fired instantaneous water heaters with input capacities at or below 50,000 Btu/h or at or above 200,000 Btu/h. 10 CFR part 430, subpart B, appendix E, section 1.7.2. In addition, the existing test procedure is not applicable to gas-fired storage water heaters with input capacities above 75,000 Btu/h, electric storage water heaters with input ratings above 12 kW, and oil-fired storage water heaters with input ratings above 105,000 Btu/h. 10

CFR part 430, subpart B, appendix E, section 1.12.

In the November 2013 NOPR, DOE proposed to eliminate the minimum limit on the firing rate of instantaneous gas water heaters of 50,000 Btu/h. 78 FR 66202, 66209 (Nov. 4, 2013). As discussed in section III.C, DOE adopts multiple draw patterns that vary based on the delivery capacity of the water heater. Because the draw pattern is dependent upon delivery capacity, gas-fired instantaneous units with a firing rate below 50,000 Btu/h can be tested under the new procedure. Thus, DOE has concluded that there is no reason to retain this lower limit on gas-fired instantaneous water heater delivery capacity. No comments were received opposing this measure.

Similarly, DOE proposed to remove the maximum input ratings for gas-fired, electric, and oil-fired storage water heaters and for gas-fired instantaneous water heaters from the test procedure (although maximum input ratings specified in EPCA would still apply for the purposes of equipment classification). Because draw patterns vary based on delivery capacity, the new test procedure applies to models with input capacities above those included in the current residential water heater test procedure. Although these maximum input limitations were based upon EPCA's "water heater" definition at 42 U.S.C. 6291(27), because the AEMTCA amendments require that the new metric apply to all water-heating technologies except those that do not have a residential use, DOE believes that such limits are no longer controlling or appropriate in terms of the scope of the water heaters test procedure. DOE did not receive any comments in response to the NOPR related specifically to the inclusion of input limitations on residential products in the test procedure, but did receive comments regarding the application of the test procedure to commercial models and suggesting input capacity limitations. Those comments are discussed in section III.A.1. As discussed in section III.A.1, input rating limitations are useful to distinguish water heaters without a residential use. Therefore, although DOE will remove the input capacity limitations from the scope of the test method, DOE establishes input capacity limits to define which units would qualify as "residential-duty" commercial units and, thus, be required to be tested using the uniform descriptor test method. These input capacity limitations are shown in Table III.2 above.

4. Electric Instantaneous Water Heaters, Gas-Fired Heat Pump Water Heaters, and Oil-Fired Instantaneous Water Heaters

As discussed in the November 2013 NOPR, DOE's test procedures do not contain a definition for "electric instantaneous water heater," but rather have a space reserved to define that term (10 CFR part 430, subpart B, appendix E, section 1.7.1). 78 FR 66202, 66209 (Nov. 4, 2013). EPCA defines "electric instantaneous water heater" as containing no more than one gallon of water per 4,000 Btu per hour of input and having an input capacity of 12 kilowatts (kW) or less. (42 U.S.C. 6291(27)(B)) As noted in the November 2013 NOPR, the heating power required for electric instantaneous water heaters intended for whole-home applications typically is much higher than the power capability commonly found in storage-type electric water heaters. 78 FR 66202, 66209 (Nov. 4, 2013). In the November 2013 NOPR, DOE proposed to amend its water heater test procedure to include applicable provisions for electric instantaneous water heaters, and to define the term "electric instantaneous water heater." *Id.* at 66210.

AIM commented that DOE needs to be more inclusive of all types of water heaters when defining the types of water heaters that will be covered by the uniform descriptor. (AIM No. 70 at p. 2)

DOE agrees in principle that all existing types of water heaters should be defined and, thus, adopts definitions of "gas-fired heat pump water heater" and "oil-fired instantaneous water heater," in addition to a definition for "electric instantaneous water heater." While not yet commercially available, DOE is aware that manufacturers are currently developing gas-fired heat pump water heaters and oil-fired instantaneous water heaters. Further, the new test procedure applies to these types of water heaters. Accordingly, DOE adds definitions for these types of water heaters at 10 CFR 430.2. (In addition, as proposed in the November 2013 NOPR, DOE is moving all other definitions pertaining to defining the types of water heaters to 10 CFR 430.2.) All three definitions reflect the definitions of these products as set forth in EPCA (42 U.S.C. 6291(27)) and are based on the current definitions for other types of water heaters. The definition for "electric instantaneous water heater" has been altered slightly from the definition proposed in the November 2013 NOPR to better align with the requirements of EPCA for these products. These definitions read as follows:

Gas-fired Heat Pump Water Heater means a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h (79 MJ/h) or less, has a maximum current rating of 24 amperes (including all auxiliary equipment such as fans, pumps, controls, and, if on the same circuit, any resistive elements) at an input voltage of no greater than 250 volts, has a rated storage capacity of 120 gallons (450 liters) or less, and is designed to transfer thermal energy from one temperature level to a higher temperature level to deliver water at a thermostatically-controlled temperature less than or equal to 180 °F (82 °C).

Oil-fired Instantaneous Water Heater means a water heater that uses oil as the main energy source, has a nameplate input rating of 210,000 Btu/h (220 MJ/h) or less, contains no more than one gallon of water per 4,000 Btu per hour of input, and is designed to provide outlet water at a controlled temperature less than or equal to 180 °F (82 °C). The unit may use a fixed or variable burner input.

Electric Instantaneous Water Heater means a water heater that uses electricity as the energy source, has a nameplate input rating of 12 kW (40,956 Btu/h) or less, contains no more than one gallon of water per 4,000 Btu per hour of input, and is designed to provide outlet water at a controlled temperature less than or equal to 180 °F (82 °C). The unit may use a fixed or variable burner input.

DOE notes that the definition of "electric instantaneous water heater" being added to 10 CFR 430.2 encompasses only electric instantaneous water heaters that are residential (*i.e.*, with an input capacity of 12 kW or less). However, as discussed in section III.A.1, commercial (*i.e.*, with an input capacity greater than 12 kW) electric instantaneous water heaters with input ratings up to 58.6 kW are considered "residential-duty commercial water heaters," and because water heaters both above and below 12 kW have residential applications, both types would be covered by the uniform efficiency descriptor.

In response to the November 2013 NOPR, Seisco and Thomas Harman commented that 12 kW is not an appropriate cutoff for electric instantaneous water heaters because there are many electric instantaneous water heaters designed for and used in residences that have input ratings above 12 kW. (Harman, No. 53 at p. 1; Seisco, No. 57 at pp. 10–11) In response, DOE notes that the 12 kW limit is defined by EPCA and it is not at DOE's discretion to change. However, the 12 kW criteria

will apply only insofar as determining the applicable minimum energy conservation standard. As such, it remains the point above which electric instantaneous models would be classified as "commercial" equipment for the basis of determining the applicable energy conservation standards. Limits on the application of the uniform efficiency descriptor pursuant to the new test procedure based on input and volume capacities are set forth in Table III.2, above.

This final rule also provides for a maximum flow rate test for electric instantaneous water heaters and a test to determine the energy efficiency expressed in terms of uniform energy factor for these products. (As discussed in section III.B, the energy efficiency metric for water heaters will be changed from "energy factor" to "uniform energy factor.") These tests are identical to those provided for gas-fired instantaneous water heaters.

B. Uniform Efficiency Descriptor Nomenclature

AEMTCA provided the following options for the uniform efficiency descriptor metric: (1) A revised version of the energy factor descriptor currently in use; (2) the thermal efficiency and standby loss descriptors currently in use; (3) a revised version of the thermal efficiency and standby loss descriptors; (4) a hybrid of descriptors; or (5) a new approach. (42 U.S.C. 6295(e)(5)(G))

In the November 2013 NOPR, DOE proposed to use a revised version of the energy factor as the uniform efficiency descriptor. 78 FR 66202, 66210 (Nov. 4, 2013). DOE received no comments opposing the continued use of the energy factor metric in response to the November 2013 NOPR. However, DOE received four comments (A.O. Smith, Bradford White, EEI, Joint Comment) suggesting that the "energy factor" nomenclature be adjusted to distinguish the old energy factor from the new. Additionally, the four commenters suggest that the new "energy factor" nomenclature be differentiated by class (*i.e.*, subscripts with the draw classification). (A.O. Smith No. 62 at p. 3; Bradford White No. 61 at p. 6; EEI No. 63 at p. 4; Joint Comment No. 77 at p. 2) NEEA and NPCC commented that the "energy factor" nomenclature as it currently stands is appropriate and that changes to the test procedure are not significant enough to warrant a new descriptor. (NEEA and NPCC No. 64 at p. 1) NEEA and NPCC and the Joint Comment stated that the new "energy factor" nomenclature should not be distinguished by fuel type or technology

group. (NEEA and NPCC No. 64 at p. 16; Joint Comment No. 77 at p. 2)

DOE agrees with commenters that confusion could occur if the name of the metric remains unchanged between the current and amended test procedures. Because the existing and new ratings are determined under different test conditions, which can result in a different rating, DOE believes it is necessary to adopt a new name to distinguish between the efficiency result under the existing test procedure and the result under the amended test procedure. As a result, DOE adopts a “uniform energy factor,” to be denoted as “UEF” in the test procedure, as distinguished from the “E_r” rating determined under the current test procedure.

C. Draw Pattern

The term “draw pattern” describes the number, flow rate, length, and timing of hot water removal from the water heater during testing. Primary decisions in developing draw patterns include the total amount of water to be removed during the test and the number of draws during the test. The total amount of water taken in each draw, which is a function of the flow rate and the length of the draw, must also be specified. Finally, the spacing between those draws is needed to complete the specification of the draw pattern.

DOE proposed to modify the draw pattern that is used in the existing test procedure in the November 2013 NOPR. 78 FR 66202, 66210–17 (Nov. 4, 2013). Under DOE’s proposal, the single draw pattern that is currently applied during the 24-hour simulated use test would be replaced with one of four patterns that is more representative of the demand put on a water heater of different delivery capacity. These four draw patterns were termed “point-of-use,” “low usage,” “medium usage,” and “high usage.” The selection of the draw pattern to be used in the simulated-use test would be based upon the results of the first-hour rating test or the maximum GPM (gallons per minute) rating test.

DOE received seven comments in general support of the move to four different draw patterns. (HTP No. 59 at p. 2; A.O. Smith No. 62 at p. 2; EEI No. 63 at p. 4; NEEA and NPCC No. 64 at p. 3; AHRI No. 75 at p. 3; Giant No. 76 at p. 3; Joint Comment No. 77 at p. 6) HTP recommended that DOE consider altering the total water drawn in the medium-usage pattern to 64.8 gallons to assist in correlating between current metrics and the proposed metrics. NEEA and NPCC indicated a slight preference for draw patterns proposed as part of the

deliberations for ASHRAE 118.2, “Method of Testing for Rating Residential Water Heaters,” because those draws are more consistent with the daily hot water use found in their field data. AHRI indicated that the proposed draw patterns were appropriate but that it preferred the draw patterns submitted in its comment to the January 2013 RFI. (AHRI No. 46 at p. 5)

DOE received one comment that supported the move to multiple draw patterns but that recommended five draw patterns instead of four and provided alternative bases for developing the patterns. (AET No. 58 at p. 3) AET commented that the proposed draw patterns could result in water being delivered during the simulated-use test that may be considered to be too cold for typical uses and recommended that a fifth category termed “Sink” be created that would apply to the smallest water heaters. AET discussed how the amount of water that can be withdrawn in a continuous draw can be estimated from the first-hour rating and stated that the maximum draw volumes imposed in the proposed draw patterns may yield an “invalid test.” Particular emphasis was placed on the point-of-use category, in which a 2-gallon water heater would be expected to deliver a 2-gallon draw. Another concern expressed by AET is that water heaters with the same storage volume but with slightly different input rates would be tested according to different draw patterns. AET suggested that selection of the draw pattern used for the simulated-use test should be based on two factors: the measured storage volume and the first-hour rating. AET recommended the largest draw volume that should be implemented in each draw pattern to meet the capabilities of the water heaters in that category. AET estimated that the first draw delivery capability of a storage water heater is $0.95 \times 0.85 \times (\text{Rated Storage Volume})$, where 0.95 represents the currently allowed tolerance on storage volume and 0.85 accounts for mixing of hot and cold water during draws. *Id.*

DOE received three comments from AET, SMT, and Bradford White related to the details in the proposed test procedure of determining the standby loss coefficient, “UA,” which is used to adjust the daily energy consumption to account for deviations from nominal conditions. AET expressed concern that, with water heaters having very slow recoveries, the test could result in a water heater with drastically different stored water temperature at the start of the test than at the end, thereby necessitating a major correction to the energy consumed. AET recommended

extending the test beyond 24 hours for such water heaters, ending the test only after a recovery occurs. Energy consumption during the test would be modified to normalize to a 24-hour time period by removing the estimated standby loss during the time exceeding 24 hours. AET commented that it is much more accurate to normalize to a common time period than it is to end the test prior to a recovery occurring. AET stated that this approach would ensure that a recovery occurs during the period of the test when the UA value is determined and that it would result in an average tank temperature that changes less from the start of the test to the end of the test. (AET No. 58 at p. 1). SMT expressed concern that large-capacity models may not initiate recovery during the first draw cluster of tests or may initiate a recovery during a standby portion of the test. In these cases, SMT commented that determination of the UA may not be possible. SMT suggested that the test should start with a fully-charged water heater and that the first draw cluster should start eight hours after this point. According to SMT, the UA value would be determined during this eight-hour period. (SMT No. 66 at p. 2). Bradford White commented that the new test procedure can take standby loss readings when the water heater is recovering and/or when water is being drawn, which would lead to inaccurate measures of standby loss. (Bradford White No. 61 at p. 8).

After consideration of these comments, DOE has decided to adopt the modifications to the draw patterns as originally proposed in the November 2013 NOPR. DOE has reviewed the total amount of water drawn per day in each draw pattern and has observed that those values match well with field data collated by the Lawrence Berkeley National Laboratory.¹⁰ DOE acknowledges that a medium-use draw pattern having the same daily draw volume as that prescribed in the current test procedure would remove some uncertainty in converting from the existing efficiency metric to the new uniform metric since the total daily draw volume would not impact the rating. However, DOE has decided to maintain a lower daily draw volume in the new draw schedule to better match

¹⁰ Lutz, JD, Renaldi, Lekov A, Qin Y, and Melody M., “Hot Water Draw Patterns in Single Family Houses: Findings from Field Studies,” Lawrence Berkeley National Laboratory Report number LBNL-4830E (May 2011) (Available at <http://www.escholarship.org/uc/item/2k24v1kj>) (last accessed June 17, 2014).

field data available for a medium-usage situation.

DOE considered adding a fifth draw pattern as recommended by AET, but a review of data from testing of low-volume water heaters indicate that the efficiency can be accurately determined using the four proposed draw patterns. While delivery temperatures did drop below 120 °F during some draws of these tests, DOE has concluded that the efficiency is still accurately determined using this test procedure and that the added complexity of an additional draw pattern is not warranted.

DOE will continue to use the first-hour rating to assign a draw pattern for use during the simulated-use test. DOE examined using a combination of first-hour rating and storage volume to categorize the water heater for assigning a draw pattern, as suggested by AET, but is concerned that some water heaters may not fit into any category because their storage volumes would correspond to one draw pattern while their first-hour ratings would correspond to a different one. Additionally, as noted above, AET estimates that the first draw delivery capability of a storage water heater is $0.95 * 0.85 * (\text{Rated Storage Volume})$, which accounts for the tolerance currently afforded manufacturers on storage volume and the effect of mixing of hot and cold water within the storage water heater during draws. DOE agrees that this method for estimating first draw delivery capacity is appropriate for conventional electric storage water heaters. However, the Department is concerned that the effect of mixing hot and cold water within the unit during draws is not well understood for the emerging water-heating technologies that are noted by the commenter. Therefore, basing the categorization of water heaters into usage bins (*i.e.*, very small, low, medium, and high) to determine the appropriate draw pattern based on this uncertain number is likely to lead to miscategorization for some water heaters. In the end, DOE has decided that the first-hour rating is the best metric available for determining water heater size classification for purposes of efficiency testing.

DOE is adopting the draw volumes proposed in the November 2013 NOPR. Test results¹¹ indicate that the draw volumes incorporated into the proposed patterns, while resulting in delivery temperatures that may not match the

nominal outlet temperatures, provide a sufficiently accurate estimate of the energy efficiency and that these draw patterns will result in an accurate estimate of the efficiency of water heaters within each size classification. The flow rates and volumes specified in the November 2013 NOPR represent the best alternative for characterizing water heaters at both the lower and upper limits of a size category.

In response to the comment from Bradford White stating concern that the standby loss coefficient (UA) can be determined while a recovery is occurring, DOE notes that there is a possibility of a recovery taking place during the portion of the test when data are collected to determine UA, just as there is the possibility in the current test method. The determination of UA, however, may require a reheat to maintain the stored water temperature to obtain a valid estimate of UA. As for the standby time period during which energy loss to the ambient is corrected, DOE notes that time when draws are taking place are omitted from the calculation. See section 6.3.5 of appendix E as adopted in this final rule. Therefore, DOE is making no changes in response to the comment.

DOE considered amending the timing of the simulated-use test, as suggested by some commenters, to improve the determination of UA. DOE examined data from a range of simulated-use tests and decided that the test procedure requires modification to improve the determination of UA for some special cases.

The first modification responds to concerns expressed about the determination of UA for water heaters with low recovery rates. DOE observed that the first recovery may not begin until several hours into the designated standby period and could extend into the second draw cluster. DOE examined data from tests on such water heaters and modified the test procedure provisions for determining UA in the event that a recovery does not begin during the first draw cluster.

As proposed in the November 2013 NOPR, the standby period for determination of UA was intended to occupy the majority of the period between the end of the first draw cluster and the start of the second draw cluster. 78 FR 66202, 66217, 66236 (Nov. 4, 2013). However, because the standby period is supposed to start at the end of the first recovery under the proposed procedure, the standby period may not start until well into the 24-hour test for water heaters with a very slow recovery rate. For one tested water heater, DOE observed that the first recovery did not

begin until several hours past the end of the first draw cluster and ended after subsequent draws occurred during the test. Under the proposed test procedure, the standby period started at the end of this first recovery period and continued until the next draw started. This procedure could result in a very short time period for determination of UA, which might lead to erroneous results.

To address this issue, DOE amends the proposed test procedure by starting the standby period five minutes following the last draw of the first draw cluster if a recovery is not occurring, as opposed to waiting until after the first recovery period ends. The end point of the standby period will remain as proposed in the November 2013 NOPR. This change ensures an accurate determination of UA for all units, including those with low recovery rates and those that delay onset of heating until after the first cluster of draws.

The second clarification addresses water heaters that undergo a recovery that begins at the end of the first draw cluster and continues over the entire standby period between the first and second draw clusters. In these instances, the standby period continues past the end of the 24-hour test. To address this issue, DOE amends the test procedure to initiate the standby period at the end of the first recovery following the final draw and to continue measurements for eight hours from that point.

DOE concludes that the approaches implemented in the final rule will determine a standby loss coefficient that accurately adjusts the daily energy consumption when the ambient temperature deviates from the nominal value during testing. The Department is adopting this approach, as opposed to the one presented by AET, in order to maintain a test duration of 24 hours for nearly all water heaters while providing accurate representation of the water heater's energy efficiency.

DOE received one comment requesting a change in the name of the "point-of-use" draw pattern, stating that the term "point-of-use" describes the installed location of a water heater as opposed to the delivery capacity, which is the characteristic described by the other three category names (*i.e.*, "low," "medium," and "high"). (AIM No. 71 at p. 1) AIM suggested a name of "very small" for this category. DOE agrees in principle with this comment and has decided to change the name of the "point-of-use" category to "very-small-usage."

Bradford White commented that the tolerances of ± 0.25 gallons for the volume removed in each draw in the proposed test procedure could lead to

¹¹ Test results from DOE testing for the NOPR are summarized in the November 2013 Water Heater Test Procedure Rulemaking Development Testing Preliminary Report, available in the rulemaking docket at: <http://www.regulations.gov/#/documentDetail;D=EERE-2011-BT-TP-0042-0052>.

large discrepancies in the overall volume removed, which could in turn necessitate a test laboratory to skip a final draw to achieve the overall tolerance of +/- 1 gallon for the daily water delivery. (Bradford White No. 61 at pp. 8-9) DOE agrees with this observation and is tightening the tolerances on some draws in the final rule. For draws taken at a nominal flow rate of 1.7 GPM or less, DOE is requiring that those draws have a tolerance of +/- 0.1 gallons. With the data acquisition rate during draws set to 3 seconds, DOE believes that this level of tolerance is achievable. At the nominal flow rate of 3 GPM, however, the frequency of data collection may not

allow for such tight control of draw volumes during each draw, so DOE is maintaining the tolerance of +/- 0.25 GPM for those draws. DOE is already increasing the frequency of data collection and does not believe it is necessary to increase it further to allow for a stricter tolerance on 3 GPM draws. DOE notes that only the high-usage pattern contains draws with a flow rate of 3 GPM, and only 3 of the 14 draws are at that flow rate. As a result, DOE expects that the overall tolerance of +/- 1 gallon for the daily water delivery can be achieved because the tighter tolerance applies to the remaining 11 draws.

DOE acknowledges that, given the tolerances on individual draws, a situation may arise whereby the volume of the final draw would need to be adjusted downward so much that a draw volume of zero may be required to meet the overall tolerance on the daily draw volume. DOE concludes that this scenario would result in an invalid test and has inserted a statement in the test procedure indicating that "if this adjustment to the volume drawn in the last draw results in no draw taking place, the test is considered invalid." Table III.3 through Table III.6 show the draw patterns that DOE is adopting.

TABLE III.3—VERY-SMALL-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow rate** [GPM (L/min)]
1*	0:00	2.0 (7.6)	1 (3.8)
2*	1:00	1.0 (3.8)	1 (3.8)
3*	1:05	0.5 (1.9)	1 (3.8)
4*	1:10	0.5 (1.9)	1 (3.8)
5*	1:15	0.5 (1.9)	1 (3.8)
6	8:00	1.0 (3.8)	1 (3.8)
7	8:15	2.0 (7.6)	1 (3.8)
8	9:00	1.5 (5.7)	1 (3.8)
9	9:15	1.0 (3.8)	1 (3.8)

Total Volume Drawn Per Day: 10 gallons (38 L)

* Denotes draws in first draw cluster.

** Should the water heater have a maximum GPM rating less than 1 GPM (3.8 L/min), then all draws shall be implemented at a flow rate equal to the rated maximum GPM.

TABLE III.4—LOW-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
1*	0:00	15.0 (56.8)	1.7 (6.4)
2*	0:30	2.0 (7.6)	1 (3.8)
3*	1:00	1.0 (3.8)	1 (3.8)
4	10:30	6.0 (22.7)	1.7 (6.4)
5	11:30	4.0 (15.1)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:15	2.0 (7.6)	1 (3.8)
10	16:45	2.0 (7.6)	1.7 (6.4)
11	17:00	3.0 (11.4)	1.7 (6.4)

Total Volume Drawn Per Day: 38 gallons (144 L)

* Denotes draws in first draw cluster.

TABLE III.5—MEDIUM-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
1*	0:00	15.0 (56.8)	1.7 (6.4)
2*	0:30	2.0 (7.6)	1 (3.8)
3*	1:40	9.0 (34.1)	1.7 (6.4)
4	10:30	9.0 (34.1)	1.7 (6.4)
5	11:30	5.0 (18.9)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:00	1.0 (3.8)	1 (3.8)

TABLE III.5—MEDIUM-USAGE DRAW PATTERN—Continued

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
10	16:15	2.0 (7.6)	1 (3.8)
11	16:45	2.0 (7.6)	1.7 (6.4)

12	16:30	2.0 (7.6)	1.7 (6.4)
13	16:45	2.0 (7.6)	1.7 (6.4)
14	17:00	14.0 (53.0)	3 (11.4)

Total Volume Drawn Per Day: 84 gallons (318 L)

* Denotes draws in first draw cluster.

D. Instrumentation

In the November 2013 NOPR, DOE proposed to maintain the instrumentation installation requirements and piping configuration as currently specified in the residential water heater test procedure. 78 FR 66202, 66217 (Nov. 4, 2013). For storage water heaters having a rated volume below 20 gallons, which are not covered in the existing DOE test method, DOE proposed that the average tank temperature be determined based on three temperature sensors located at the vertical midpoints of three sections of equal volume within the storage tank, as opposed to the currently required six sensors for storage water heaters having a rated volume above 20 gallons. *Id.* No comments were received opposing this approach, but AET requested that guidance should be provided regarding the unspecified horizontal lengths of pipe in the figures. (AET No. 58 at p. 20) For the final rule, DOE has modified Figures 1 through 4 of the test procedure to include those dimensions.

DOE proposed in the November 2013 NOPR to tighten the allowed accuracy on electric power and energy measuring equipment from the current value of ± 1 percent to ± 0.5 percent. 78 FR 66202, 66217 (Nov. 4, 2013). A study has shown the significant effect of the

accuracy of the electric power measurements on the uncertainty in the overall energy factor.¹² A similar change was made in ASHRAE 118.2–2006, “Method of Testing for Rating Residential Water Heaters,” and DOE research confirms that equipment having this tolerance level is readily available. DOE also proposed in the November 2013 NOPR that, for mass measurements greater than or equal to 10 pounds (4.5 kg), a scale that is accurate within ± 0.5 percent of the reading must be used to make the measurement. *Id.* Lastly, DOE proposed that, for relative humidity measurements, a sensor that is accurate within ± 1.5 percent of the reading be used to make the measurement. *Id.* at 66220. No comments were received opposing these proposals, so DOE has incorporated these proposals into the final rule.

DOE also proposed in the November 2013 NOPR to modify the data acquisition rate of the inlet and outlet water temperature during draws. *Id.* at 66217. Currently, for all water heaters except variable firing rate instantaneous water heaters, measurements of the inlet

and outlet water temperature are taken at 5-second intervals starting 15 seconds after the draw commences. For instantaneous water heaters with a variable firing rate, inlet and outlet water temperature measurements are taken at 5-second intervals starting 5 seconds after the draw commences. The test procedure amendments call for temperature data at the inlet and outlet temperature sensors to be recorded at 3-second intervals starting 5 seconds after commencement of the draw for all water heaters. Accordingly, DOE also proposed that the time constant of the instruments used to measure the inlet and outlet water temperatures be no greater than 2 seconds. DOE anticipates that this approach will better capture the energy impact of water heater startup and cycling. *Id.* at 66217. No comments were received opposing these measures, so DOE has incorporated these proposals into the final rule.

E. Test Conditions

1. Outlet Water Temperature

The current residential water heater test procedure calls for the temperature of the tank to be set so that the average hot water temperature within the storage tank is at $135 \text{ }^\circ\text{F} \pm 5 \text{ }^\circ\text{F}$ ($57.2 \text{ }^\circ\text{C} \pm 2.8 \text{ }^\circ\text{C}$). 10 CFR part 430, subpart B, appendix E, section 2.4. The set point

¹² Healy WM, Lutz JD, and Lekov AB., “Variability in Energy Factor Test Results for Residential Electric Water Heaters,” *HVAC&R Research*, Vol. 9, No. 4 (October 2003).

impacts the performance of various types of water heaters differently, so DOE reexamined in the proposed test procedure the set point specification and how it is determined. In the November 2013 NOPR, DOE proposed to use a measurement of the temperature of the delivered water, rather than mean tank temperature, for setting the temperature for storage-type water heaters, and also proposed that the set point temperature of all residential water heaters be reduced to 125 °F +/- 5 °F (51.7 °C +/- 2.8 °C). 78 FR 66202, 66219–20 (Nov. 4, 2013). This value was primarily selected based on data available in DOE's analysis for the April 2010 energy conservation standards final rule, which found that the average set point temperature for residential water heaters in the field is 124.2 °F (51.2 °C). Additionally, the recent compilation of field data across the United States and southern Ontario by LBNL (referenced above) found a median daily outlet water temperature of 122.7 °F (50.4 °C), which supports specifying a test set point temperature of 125 °F. DOE proposed that this new value would apply to first-hour rating tests for storage water heaters, maximum flow rate tests for instantaneous water heaters, and energy factor tests for all water heaters. DOE also tentatively concluded that a set point of 125 °F in the test method would not result in safety concerns related to the growth of Legionella. Further, DOE noted that water heaters are commonly set to temperatures in the range of 120 °F to 125 °F even though the current set point in the test method is 135 °F. 78 FR 66202, 66219 (Nov. 4, 2013).

DOE received five comments (AET, EEI, HTP, NEEA and NPCC, Joint Comment) in response to DOE's outlet water temperature proposals in the November 2013 NOPR supporting the switch to a set point temperature of 125 °F for the first-hour rating and maximum flow rate tests and the 24-hour simulated-use test. (AET, No. 58 at p. 5; EEI, No. 63 at p. 5; HTP, No. 59 at pp. 1–3; NEEA and NPCC, No. 64 at p. 9; Joint Comment, No. 77 at pp. 6–7) Advocates for the 125 °F outlet water temperature argue that it is the most representative of actual use in the field and, thus, should be used to determine performance under representative conditions. Additionally, AET and HTP suggested that specifying an outlet water temperature, as opposed to a stored water temperature, is more appropriate for evaluating water heaters using certain controls that purposely keep the stored water temperature at a low value. (AET No. 58 at p. 1; HTP, No. 59 at p.

3) DOE received five comments (AIM, AHRI, A.O. Smith, GE, and Giant) in favor of keeping the set point temperature at 135 °F for the first-hour rating test or increasing it for both the first-hour rating/maximum flow rate test and the 24-hour simulated-use test. (AIM, No. 72 at p. 3; AHRI, No. 75 at pp. 3–4; A.O. Smith, No. 62 at p. 2; GE, No. 78 at p. 1; Giant, No. 76 at pp. 2–3) Four of the commenters who opposed the decrease in set point (AHRI, A.O. Smith, GE, Giant) argue that the burden of reestablishing the draw pattern bin categories using first-hour rating and maximum GPM values under the lower set point is too great because the change in first-hour ratings will add additional uncertainty to the establishment of the bins. AIM argued that the set point temperature should be increased because when the temperature is decreased in the field, the water heater will see a boost in energy efficiency. Rheem acknowledged that many water heaters are operated at lower temperatures than the set point specified in the current DOE test procedure and suggested that the 24-hour simulated-use test and associated draws would be more representative at the 125 °F set point temperature. However, based on test data, Rheem argued that the changes to the first-hour rating values from the change in set point are too unpredictable to serve as a basis for determining the draw pattern bin categories and suggested that the first-hour rating test should continue to be performed at 135 °F, as is current practice. (Rheem, No. 69 at pp. 3, 5)

DOE has carefully considered these comments and concludes that a delivered water temperature of 125 °F will be applied to first-hour rating tests for storage water heaters, maximum flow rate tests for flow-activated water heaters, and energy factor tests for all water heaters. DOE is required to establish test procedures that are representative of how a covered product would be used in the field, and based on the data discussed previously, DOE concludes that 125 °F is the most representative temperature for the United States market. DOE has determined that the test should be conducted at a typical operating temperature and should not penalize those units optimized for such typical conditions. Moreover, DOE has determined that conducting the simulated-use test at a different temperature from the delivery capacity tests would add an undue burden on manufacturers and would result in ratings that would not be representative of typical usage in the field. While

maintaining the test temperature at the value currently used in the test procedure could eliminate one source of uncertainty in converting existing energy factors to new uniform energy factors, DOE has determined that this conversion is feasible and that the benefits of testing at a representative temperature outweigh the short-term challenges in converting existing ratings.

In response to the concerns expressed by AHRI, A.O. Smith, GE, and Giant regarding uncertainties in converting first-hour ratings values obtained at 135 °F to comparable values at 125 °F, DOE revisited the values that were used to place water heaters into bins for uniform energy factor testing. In the November 2013 NOPR, DOE based these breakpoint values on information present in the current plumbing code that indicate appropriate water heaters for various home configurations based on their first hour rating values obtained under the existing test procedure. 78 FR 66202, 66214 (Nov. 4, 2013). Preliminary testing by DOE indicated that the first-hour ratings obtained under the new procedure were comparable to those obtained under the existing test procedure, so DOE proposed to maintain the breakpoints between bins despite the change in the conditions for the first-hour rating test.

DOE requested data to demonstrate the effect of modifying the first-hour rating test conditions and received data from Rheem and Bradford White. (Rheem No. 69 at p. 3; Bradford White No. 61 at p. 8) Rheem presented actual first-hour rating values under both the current test and the proposed test, whereas Bradford White simply provided the percentage change in the first-hour rating between the two test procedures. Both data sets suggest an overall downward trend of first-hour rating under the proposed test procedure but that there is variability in the results. Based on these data and additional data collected by DOE, the Department concludes that numerous characteristics of a water heater affect the change in its first-hour rating obtained at 135 °F, as compared to that obtained at 125 °F. The uncertainty in how the ratings change, however, does not justify abandoning the 125 °F test temperature. Since DOE has determined that the most representative delivery temperature is 125 °F and no comments were received that refuted the method applied to obtain the first-hour rating at that temperature, DOE concludes that the first-hour rating test, as proposed, provides an appropriate measure of the delivery capacity of a water heater as would be observed in the field.

DOE maintains that the breakpoint values used to place water heaters into bins for uniform energy factor testing presented in the NOPR are appropriate for tests conducted at 135 °F, but acknowledges that some adjustments may be needed for tests conducted at 125 °F since first-hour rating values may change at this temperature. To better account for the change in the first-hour rating procedure, DOE used the expanded set of available experimental data to reassess the proposed breakpoint values of first-hour ratings for placing water heaters into sizing bins for the simulated-use test. DOE examined different regressions using the data submitted by Rheem and those collected by the Department and found that the ratings at 125 °F and those at 135 °F could be modeled as functions of storage volume and the product of input rate and recovery efficiency. The recovery efficiency for data presented by Rheem was estimated based on the description of the water heater being tested. These regressions were then used to determine what breakpoint values would result in nearly the same classification for a particular water heater tested at 125 °F as it would have when tested at 135 °F, based on its storage volume, recovery efficiency, and input rate. Based on this analysis, DOE decreased the breakpoint values for each size classification for testing at 125 °F under the new test procedure, as compared to the breakpoint values proposed in the NOPR.¹³ The new limits of first-hour ratings (FHR) for each category are as follows:

Very Small: FHR < 18 gallons

Low: 18 ≤ FHR < 51 gallons

Medium: 51 ≤ FHR < 75 gallons

High: FHR ≥ 75 gallons

For the first-hour rating test, DOE proposed in the November 2013 NOPR that draws would terminate when the outlet temperature drops 15 °F (8.3 °C) from its maximum outlet temperature during the draw, as opposed to the drop of 25 °F (13.9 °C) implemented in the current test procedure. This change would ensure that water delivered meets the nominal useful temperature of 110 °F (43.3 °C). AET and AIM supported this proposal. (AET, No. 58 at p. 6; AIM, No. 72 at p. 1) AET suggested that water delivered at a temperature lower than the minimum useful temperature of 110 °F should not be counted in the first-hour rating test.

AIM suggested that useful hot water delivered be measured separately from total water delivered. AET and AIM also suggested that water delivered below 110 °F should not be counted as useful delivered hot water in the 24-hour simulated use test. (AET No. 58 at p. 7; AIM No. 72 at p.1)

DOE concludes that the lower temperature limit of useful hot water at 110 °F is appropriate for the first-hour rating test and establishes that draws during the test will terminate when the delivery temperature drops to 15 °F below the outlet water temperature (which is nominally 125 °F), resulting in a draw termination temperature of approximately 110 °F for draws during the first-hour test. For the simulated-use test, however, DOE does not restrict outlet water temperature to at or above 110 °F. While it strongly considered the comments made by AET and AIM in this regard, in DOE's view, the simulated-use test, which provides a measure of energy efficiency rather than delivery capability, is best conducted without regard to water outlet temperature. A standard cutoff temperature of 110 °F is necessary for the first-hour rating test in order to determine the appropriate draw pattern, but no minimum temperature is necessary to estimate energy efficiency. Although DOE has selected its draw patterns to ensure that a water heater can deliver hot water during all draws, DOE recognizes that there may be cases where water heaters on the lower end of the capacity limit in each bin deliver water at a lower temperature than a consumer might desire. In these cases, DOE believes that accounting for water delivered at temperatures below 110 °F would be representative of water heater energy performance in the field. DOE uses correction factors in the test procedure's calculation routines to adjust the daily energy consumption to estimate energy consumption at a nominal outlet temperature of 125 °F since daily energy consumption will differ based on the outlet temperature of the water provided.

As noted above, in addition to proposing to change the temperature setting at which the test occurs, DOE also proposed in the November 2013 NOPR to change the methodology for setting the temperature of storage-type units to rely on outlet water temperature rather than mean tank temperature. For water heaters with a single thermostat, DOE proposed to specify a set point based on the outlet water temperature during a draw. For water heaters with multiple thermostats, DOE proposed to maintain the procedure currently prescribed in the residential water

heater test method, which specifies the set point based on water temperature inside the tank. 78 FR 66202, 66219–20 (Nov. 4, 2013).

In response, DOE received three comments that supported the proposed approach for specifying the set point based on the temperature of delivered water for water heaters with a single thermostat in the tank. However these commenters argued that the same approach should be applied for water heaters with multiple thermostats. (AET, HTP, A.O. Smith) Specifically, AET and HTP cautioned that the terminology used in the NOPR that provides a procedure for water heaters with multiple “thermostats” could be problematic because some water heaters utilize multiple temperature sensors (*i.e.*, thermostats) that are not available to the user for modifying the delivery temperature but that are instead installed to relay data to a single controller that determines whether or not to activate heating. (AET No. 58 at p. 2; HTP No. 59 at p. 3). AET and HTP both submitted recommendations for setting the temperature controllers on water heaters with multiple control points. (AET No. 58 at p. 14; HTP No. 59 at p. 4) AET urged DOE to utilize the first-hour rating test to verify that the temperature controllers are set to their proper value. According to AET, the temperature controls on a unit with multiple controllers would be determined to be within their proper settings if all of the following conditions are met: (1) At least 50 percent of the water drawn during the first draw of the first-hour rating test was delivered at a temperature between 120 °F and 130 °F; (2) no water is delivered with a temperature above 130 °F during the first-hour rating test; and (3) the initial delivery temperature of second and subsequent draws of the first-hour rating test is between 120 °F and 130 °F. AET asserts that, if these three conditions are met, then the water heater has the correct set-point and the results from the temperature set-point test can be used to determine the first-hour rating. On this topic, HTP suggested a method that progressively disables the thermostats, and uses draws of one-fourth of the total volume, taken after full recovery of each of the heat inputs being controlled by the active thermostats, to determine if the delivery temperature falls within the requisite 125 °F +/- 5 °F range. If the water heater does not achieve the required delivery temperature within five iterations, the test laboratory would resort to the technique proposed in the NOPR.

¹³ In the November 2013 NOPR, DOE proposed the following breakpoints for each size classification for testing at 125 °F. Point-of-use (since renamed “very small”): < 20 gallons; low: 20 ≤ FHR < 55 gallons; medium: 55 ≤ FHR < 80 gallons; and high: ≥ 80 gallons. 78 FR 66202, 66235 (Nov. 4, 2013).

DOE also received several comments opposed to the proposed approach. DOE received one comment (Rheem) that opposed the approach of specifying a set point for a water heater with a single thermostat in the tank based on outlet temperature, arguing that this method mischaracterizes the stored energy inside the tank. (Rheem No. 69 at p. 5) DOE does not agree with this claim since the stored energy inside the tank is measured in the proposed procedure in the same manner as is done in the current procedure and because setting the outlet temperature or stored water temperature is independent of the determination of stored energy. AHRI and Giant stated that they do not agree with the proposed method because “the method used when the model has more than one thermostat should follow the basic principles of the procedure for setting thermostats in the current test method.” (AHRI No. 75 at p.4; Giant No. 76 at p.3) On the point raised by AHRI and Giant, DOE notes that the method for models with more than one thermostat proposed in the November 2013 NOPR already matches the approach specified in the current test method.

After careful consideration of the comments, DOE has decided to adopt several changes to the method to determine set point temperature for storage-type water heaters. First, in response to comments regarding the use of the terminology “thermostat,” DOE has changed the description from thermostat to “temperature controller” and has added a definition of temperature controller as “a device that is available to the user to adjust the temperature of the water inside a storage-type water heater or the outlet water temperature.” This change in terminology should eliminate any confusion on the part of the user of the test procedure between the user-accessible temperature controls and temperature sensors that are used in the water heater but may not be directly accessible to the user for making temperature adjustments.

Second, DOE has decided to maintain its stated approach in the NOPR for setting the temperature for water heaters with a single temperature controller. In the final rule, DOE specifies that the set point be based on outlet water temperature. DOE determined that some water heaters would be disadvantaged by requiring an average tank temperature of 125 °F—due to stratification, a tank with an average temperature of 125 °F would deliver water at a temperature higher than 125 °F. Such a setting could have an unrepresentative detrimental effect on

efficiency compared to its intended operation in the field if the design of the water heating system relies on the average temperature of the stored water being at a lower temperature than the temperature of the water delivered to the user.

Third, DOE incorporates the method suggested by AET to specify the set point of a water heater with multiple temperature controllers because it can be performed in conjunction with the first-hour rating test. However, DOE has modified one aspect of AET’s suggested method by allowing water delivered during a final draw of the first-hour rating test that begins at the end of the test to fall below 120 °F because the water heater may not have recovered fully when the final draw is initiated. This approach ensures proper temperature settings and will be less burdensome than the alternate technique proposed by HTP because it can be performed in conjunction with the first-hour rating test.

Finally, DOE eliminates normalization of the daily water-heating energy consumption to a nominal stored water temperature, as provided in the current test procedure. DOE received two comments recommending that, because of the proposed technique to base the temperature setting of the water heater on the outlet water temperature, the test procedure should not normalize the energy consumption of any storage water heater to a nominal stored water temperature of 125 °F. (AET No. 58 at p. 14; SMT No. 66 at p. 3) AET indicated that normalizing to a nominal stored water temperature penalizes advanced control technologies that manipulate storage temperature to reduce heat losses and improve performance. SMT commented that some water heater models are designed to operate with stratified tanks and that many utilize control algorithms that purposely manage the water temperature at the middle and lower levels differently from the top of the tank. DOE agrees with these comments. DOE is concerned that the temperature setting on the water heater could be lowered during the simulated-use test to an unrealistic value that would result in delivered water that is below a usable level. To avoid this situation, the final rule provides that the temperature control settings shall not be changed for the duration of the delivery capacity test and the simulated-use test once they are determined pursuant to the test procedure. Additionally, the final rule includes language that will allow a test laboratory to verify that the temperature settings are appropriate throughout the test by conducting a second 24-hour

simulated-use test immediately after the test used to determine the uniform energy factor and with an identical draw pattern. If the average delivered temperature during this second 24-hour test is within the temperature bounds specified by the test procedure, then the temperature control scheme meets the requirements of the test procedure in providing the required outlet water temperature.

2. Ambient Temperature and Relative Humidity

The residential water heater test procedure requires that testing be performed in an environment with an ambient air temperature fixed at 67.5 °F \pm 2.5 °F (19.7 °C \pm 1.4 °C). 10 CFR part 430, subpart B, appendix E, section 2.2. For heat pump water heaters, however, the environmental conditions are more tightly constrained, with an ambient air temperature requirement of 67.5 °F \pm 1 °F (19.7 °C \pm 0.6 °C) and a relative humidity requirement of 50 percent \pm 1 percent. *Id.* These specifications for heat pump water heaters reflect the fact that heat pump water heater energy use is highly dependent on the ambient temperature and relative humidity. Because water heaters are placed in a wide variety of locations within and outside of a home, and given the large impact of these factors on heat pump water heater efficiency, DOE considered potential revisions to the ambient air test conditions set forth in the DOE test procedure in order to assess whether the currently-specified conditions are representative of conditions typically encountered in residential installations.

In the November 2013 NOPR, DOE proposed not to change the current ambient dry bulb temperature of between 65 °F and 70 °F when testing water heaters other than heat pump water heaters and at 67.5 °F \pm 1 °F when testing heat pump water heaters. DOE also proposed to include the current relative humidity of 50 percent for heat pump water heaters, but to relax the tolerance to \pm 2 percent relative humidity. DOE believes these conditions are representative of typical field conditions encountered by water heaters installed in the U.S. and has not found any data to justify changing these conditions. DOE proposed to relax the tolerance for relative humidity because research indicates that commonly-used, laboratory-grade relative humidity sensors have uncertainties on the order of 1 to 1.5 percent (78 FR 66202, 66220 (Nov. 4, 2013)), and the tolerance cannot exceed the accuracy of the measuring equipment. It should be noted that the relative humidity can be obtained from measurements of dry bulb and wet bulb

temperatures and the determination of relative humidity through these temperature measurements would result in a measure of relative humidity with much lower uncertainty because dry bulb and wet bulb temperatures can be measured with high accuracy. However, most laboratories use relative humidity sensors that provide an accurate measurement of relative humidity through a less burdensome method. DOE received one comment from SMT suggesting that imposing the same dry bulb air temperature for all water heaters that is imposed for heat pump water heaters could eliminate the necessity of correcting the energy consumption for differences between the measured air temperature and the nominal temperature. (SMT No. 66 at p.3) DOE is not adopting this recommendation because it may necessitate significant changes in laboratory environmental conditioning equipment that would be very costly to manufacturers and testing laboratories. DOE believes the current method for accounting for ambient temperature allows for sufficiently accurate test results.

Regarding heat pump water heaters, NEEA and NPCC urged DOE to require testing under a variety of conditions due to differing average temperature and humidity conditions found in the northern climates. (NEEA and NPCC, No. 64 at p. 10) HTP submitted a comment stating that heat pump water heaters should be tested at a range of ambient conditions due to their sensitivity to temperature and humidity. (HTP, No. 59 at pp. 6–7) The Joint Comment suggested a representative temperature of 50 °F “with appropriately high humidity levels,” thereby reflecting installations in cool basements and garages. (Joint Comment, No. 77 at p. 5)

After carefully considering these comments, DOE has decided to maintain the current ambient dry bulb temperature of 67.5 °F ± 1 °F and adopt the proposed relative humidity of 50 percent ± 2 percent for heat pump water heaters. DOE recognizes that regional differences in ambient dry bulb temperature and relative humidity exist and that these differences can have an effect on the efficiency of heat pump water heaters. However, DOE has determined that the conditions established in this final rule are representative of the country as a whole and that testing of heat pump water heaters at various temperature and humidity conditions is unnecessary to determine the efficiency under a representative set of conditions. DOE also notes that adding multiple rating

points for heat pump water heaters would increase test burden significantly.

3. Laboratory Airflow

The existing test procedure specifies that the water heater shall be set up in an area that is protected from drafts. To clarify this statement, DOE proposed in the November 2013 NOPR to require that the area be protected from drafts of more than 50 ft/min (2.5 m/s). 78 FR 66202, 66220 (Nov. 4, 2013). This value is in accordance with specifications in Canadian Standard 745–03, “Energy Efficiency of Electric Storage Tank Water Heaters and Heat Pump Water Heaters.” DOE did not receive any comments opposing this proposal, but the Department did receive one comment indicating that a typographical error was present in the NOPR’s conversion from ft/min to m/s. (A.O. Smith No. 62 at p. 5) DOE is adopting the provision in its corrected form, which requires that the area be protected from drafts of more than 50 ft/min (0.25 m/s).

F. Storage Tank Pre-Conditioning

In the November 2013 NOPR, DOE tentatively concluded that initiating draw patterns on two consecutive days, with measurements only taking place during the second 24-hour period would lead to more consistent results since the state of the water heater at the beginning of the 24-hour test period on the second day will be similar to that at the end of that test period. 78 FR 66202, 66221 (Nov. 4, 2013). Thus, DOE tentatively proposed to require storage water heaters to be pre-conditioned in this manner.

DOE received ten comments in response to the November 2013 NOPR regarding the proposed water heater pre-conditioning requirements. AET and the Joint Comment stated there was no significant burden associated with a 24-hour simulated-use-test preconditioning. However, AHRI, A.O. Smith, Giant, HTP, NEEA and NPCC, Rheem, and SMT stated that there is a significant burden associated with this requirement. (AET, No. 58 at p. 12; AHRI, No. 75 at p. 3; A.O. Smith, No. 62 at p. 3; Giant, No. 76 at p. 3; HTP, No. 59 at p. 2; NEEA and NPCC, No. 64 at p. 4; Joint Comment, No. 77 at p. 6; Rheem, No. 69 at p. 4) Bradford White (referring to comments submitted by AHRI in response to the January 2013 RFI that suggested the adoption of the pre-conditioning period proposed in the NOPR) commented that the AHRI comments were originally proposed in an effort to remove use of an internal tank temperature probe, which is no

longer included in the test procedure. (Bradford White, No. 61 at p. 9) Eight commenters (AHRI, A.O. Smith, Bradford White, Giant, HTP, NEEA and NPCC, Joint Comment, Rheem) recommended continuing the use of the current preconditioning procedures. DOE notes that these commenters include AHRI, the commenter that originally suggested the 24-hour simulated-use-preconditioning. (AHRI, No. 75 at p. 3; A.O. Smith, No. 62 at p. 3; Bradford White, No. 61 at p. 9; Giant, No. 76 at p. 3; HTP, No. 59 at p. 2; NEEA and NPCC, No. 64 at p. 4; Joint Comment, No. 77 at p. 6; Rheem, No. 69 at p. 4)

DOE has considered these comments and has determined that the added burden of mandating a 24-hour preconditioning as described above outweighs the potential benefits that could be provided by such an approach. However, DOE has determined that some specification of test preparation is needed to improve the reproducibility of the test results. First, DOE has found that a storage water heater must be maintained with its stored water at a temperature typically seen during normal operation for a period of time (a “soak-in period”) prior to the start of any test to ensure that the materials making up the water heater reach a relatively steady temperature. Comments from the December 2013 Public Meeting indicated that such an approach is currently a best practice in testing water heaters and that this soak-in period can be conducted while the water heater is not connected to a test apparatus. (Public Meeting Transcript, No. 81 at p. 82) This latter point reduces the need for an additional test apparatus to maintain the rate of testing that is currently achieved in laboratories and will, therefore, minimize the need to purchase additional test equipment to meet the requirements of the new test procedure. After a computational analysis of heat transfer through the walls of a storage water heater, DOE has determined that a soak-in period of at least 12 hours will minimize transient heat transfer effects. Therefore, DOE adopts a requirement that a storage water heater (including heat pump water heaters with storage volume) sit in an idle state (*i.e.*, no water draws) with water stored in it for a minimum of 12 hours following the end of recovery from a cold start prior to conducting either a first-hour rating test or a simulated-use test.

Second, DOE has found that a water heater must not undergo a recovery immediately prior to the start of the 24-hour simulated-use test because the recovery will add significant

uncertainty to the critical measurement of average tank temperature at the start of the test. Consequently, DOE adopts a requirement that the 24-hour simulated-use test be preceded by at least a one-hour period during which all heat sources to the water in the tank do not energize. DOE concludes that incorporating these requirements will help ensure reproducible test results without being unduly burdensome.

G. Operational Mode Selection

In the November 2013 NOPR, DOE noted that heat pump water heaters that have recently entered the market typically have multiple operational modes and that selection of the operational mode could impact the results of energy efficiency testing. 78 FR 66202, 66234 (Nov. 4, 2013). As a result, DOE proposed that water heaters should be tested under the default or “out-of-the-box” mode of operation when both obtaining the first-hour rating and determining the energy factor. In addition, DOE proposed several clarifications for testing of units with multiple operational modes but no default mode. The clarifications are consistent with guidance issued by DOE on June 12, 2012 (*see: http://www1.eere.energy.gov/guidance/detail_search.aspx?IDQuestion=623&pid=2&spid=1*). DOE did not receive any comments related to this proposal in response to the November 2013 NOPR and adopts the proposed requirements without change.

H. Annual Energy Consumption Calculation

The annual energy consumption is calculated for residential water heaters in the existing test procedure based on the daily energy consumption multiplied by 365 days. As discussed in the November 2013 NOPR, AHRI submitted a letter to the FTC on September 16, 2013, pointing out that calculating the annual energy consumption based on the daily energy consumption can lead to differing annual energy consumption, and consequently, differing estimated yearly operating costs, for different water heater models with the same energy factor rating. 78 FR 66202, 66220–21 (Nov. 4, 2013). AHRI provided an example of two water heaters with differing daily energy consumption values but with energy factor values that would round to the same value based on the DOE rounding requirements provided in 10 CFR 430.23(e). AHRI stated that having slightly different yearly operating cost estimates for two water heaters with the same efficiency rating can be confusing to consumers

and somewhat misleading based on the accuracy of the test method. AHRI suggested revising the calculation of the annual energy consumption so that it is based on the energy factor rating.

In the November 2013 NOPR, DOE proposed to adopt the calculation method suggested by AHRI for annual energy consumption, which is based on the nominal energy consumed during the test and the energy factor rating rather than the daily energy consumption. *Id.* at 66221. NEEA and NPCC strongly opposed any calculation of annual energy use for water heaters, arguing that the calculation of annual energy use is misleading in a large number of instances due to wide variations in annual household hot water use. (NEEA and NPCC, No. 64 at p. 16)

Although DOE agrees with NEEA and NPCC that the actual annual energy consumption of water heaters can vary widely based on variations in field conditions, DOE believes that calculating an estimated annual energy consumption based on the results of the test procedure can provide consumers with valuable information for comparing two water heaters under a standard set of conditions (*i.e.*, those conditions defined in the DOE test procedure). DOE believes that this additional metric can provide consumers who are unfamiliar with the uniform energy factor metric with a more familiar and easier-to-understand metric for comparing water heater performance. For this reason, DOE chooses to retain the calculation of annual energy consumption proposed in the November 2013 NOPR.

I. Conversion of Existing Energy Factor Ratings

AEMTCA amended EPCA to require that, along with developing a uniform descriptor, DOE must also develop a mathematical conversion factor to translate the results based upon use of the efficiency metric under the existing test procedure to the new uniform descriptor. (42 U.S.C. 6295(e)(5)(E)) AEMTCA provided that a manufacturer may apply the conversion factor to rerate existing models of covered water heaters manufactured prior to the effective date of the final rule establishing the uniform descriptor. Further, the conversion factor must not affect the minimum efficiency requirements for covered water heaters, and, as a result, would not lead to a change in measured energy efficiency for existing products. DOE interprets these requirements to mean that DOE must translate existing ratings from the current metrics to the new metric, while

maintaining the stringency of the current standards.

In response to the November 2013 NOPR, DOE received three comments (AHRI, BWC, Joint Comment) regarding the conversion of existing ratings. (AHRI, No. 75 at p. 6–7; BWC, No. 61 at p. 7; Joint Comment, No. 77 at p. 2) AHRI and BWC suggested water heater types to test and urged DOE to release a schedule and process for the development of the conversion factor as soon as possible. The Joint Comment suggested that the sensitivity of the energy factor to draw pattern should be investigated and that systematic differences between “old” and “new” values were expected for several technologies.

DOE notes these comments regarding the conversion factor and will consider them fully once the test procedure is finalized to assist in developing the conversion factor. DOE plans to conduct a separate rulemaking to establish the conversion factor once the test method is finalized. DOE also plans to translate its current energy conservation standards to equivalent standards denominated in the new uniform efficiency metric in a separate rulemaking. Should it become apparent in the rulemaking to establish the conversion factor that changes may be required in the test procedure, DOE will address these issues at that time.

J. Full Fuel Cycle

In response to the November 2013 NOPR, DOE received additional comments related to source-based metrics. EEI stated that, consistent with other Federal laws, any new descriptor or conversion factor should only be based on point-of-use metrics. (EEI, No. 63 at p. 4) AGA and NPGA supported a metric based on the full fuel cycle that would provide a complete accounting of energy consumption from extraction, processing, and transportation of energy. (AGA, No. 68 at p. 1; NPGA, No. 60 at p. 1)

In the November 2013 NOPR, DOE responded in detail to similar concerns brought forth by stakeholders in response to the January 2013 RFI. In short, DOE reviewed the proposed water heater test procedure in relation to the Department’s newly established full fuel cycle (FFC) policy, and tentatively concluded that no substantive amendments are needed to the water heater test procedure to accommodate the FFC policy. 78 FR 66202, 66222 (Nov. 4, 2013). However, for the purposes of representations, DOE tentatively concluded that some small improvements to the water heater test procedure are appropriate to

accommodate the FFC policy. DOE proposed in the November 2013 NOPR to define new terms in the test procedure to make it possible to quantify daily electric energy consumption separately from fossil fuel energy consumption and to add separate estimates of annual fossil fuel energy consumption and annual electrical energy consumption in addition to the overall annual energy consumption. This separation allows the user of the test procedure to estimate the operational cost of water heaters that use both fossil fuel and electricity based on the prices of those different energy sources. From a consumer's perspective, annual operating cost is particularly useful for the products that have dual fuel inputs. DOE believes this consumer cost perspective is reasonably reflected in the FFC (*i.e.*, the source/site factors recommended by the commenter are essentially numerically identical to the fuel cost ratios published biennially by the Secretary).

In response to the November 2013 NOPR, DOE received seven comments regarding the addition of terms to quantify daily electric energy consumption separately from fossil fuel energy consumption and adding separate estimates of annual fossil fuel energy consumption and annual electrical energy consumption in addition to the overall annual energy consumption. Four commenters supported the addition of these terms (AET, AIM, Joint Comment, NPGA), while three commenters did not (EEI, HTP, AHRI). (AET, No. 58 at p. 15; AIM, No. 74 at p. 1; EEI, No. 63 at p. 4; HTP, No. 59 at p. 5; Joint Comment, No. 77 at p. 7; NPGA, No. 60 at p. 1–2; AHRI No. 80 at p. 2) EEI stated that it is not clear whether a separation by fuel type will be meaningful to the customer; HTP and AHRI argued that these terms are unnecessary.

After considering these comments, DOE has decided to include terms to quantify daily electric energy consumption separately from fossil fuel energy consumption and to add separate estimates of annual fossil fuel energy consumption and annual electrical energy consumption (in addition to the overall annual energy consumption). DOE believes these added terms will provide consumers with more accurate information for comparing various water heating technologies without significantly adding to the overall test burden.

K. Certification, Compliance, and Enforcement Issues

1. Storage Volume Requirements

In the November 2013 NOPR, DOE proposed to make several changes to its certification, compliance, and enforcement regulations at 10 CFR part 429. First, DOE proposed to add requirements to 10 CFR 429.17 that the rated value of storage tank volume must equal the mean of the measured storage volumes of the units in the sample. 78 FR 66202, 66223 (Nov. 4, 2013). DOE notes that there are currently no requirements from the Department limiting the allowable difference between the tested (*i.e.*, measured) storage volume and the “rated” storage volume that is specified by the manufacturer. DOE has tested 65 residential storage-type water heaters, including 44 gas-fired water heaters, 19 electric water heaters, and 2 oil-fired water heaters. Through this testing, DOE has found that water heaters are consistently rated at storage volumes above their measured storage volume. For gas-fired water heaters, the rated volume ranged from 1.5 percent to 15.6 percent above the measured volume, with the mean being 4.8 percent. For electric water heaters, the rated volume ranged from 5.0 to 10.6 percent above the measured volume, with the mean being 9.4 percent. DOE notes that its minimum energy conservation standards are based on the rated storage volume and decrease as rated storage volume increases. DOE believes consumers often look to storage volume as a key factor in choosing a storage water heater. Consequently, DOE proposed to adopt requirements that the rated value must be the mean of the measured values. In addition, DOE proposed to specify that for DOE-initiated testing, the measured storage volume must be within five percent of the rated volume in order to use the rated storage volume in downstream calculations. *Id.* If the measured storage volume is more than five percent different than the rated value, then DOE proposed to use the measured value in downstream calculations. DOE proposed to specify similar requirements for residential-duty commercial water heaters.

AHRI, A.O. Smith, Bradford White, HTP, the Joint Comment, and Rheem opposed the proposal to require that the rated storage value be the mean of the measured values. (AHRI, No. 75 at p. 4; A.O. Smith, No. 62 at p. 3; Bradford White, No. 61 at p. 10; HTP, No. 59 at p. 8; Joint Comment, No. 77 at p. 3; Rheem, No. 69 at p. 6) AHRI argued that the proposal is unnecessary and not an

efficiency-related matter, but a safety matter. As such, AHRI argued that it is outside the scope of the DOE's authority and has been adequately addressed in ANSI Z21 and the UL standards for water heaters. AHRI stated that there are currently no units on the market that would allow the difference between rated and measured volume to dodge the minimum efficiency standards. A.O. Smith and Bradford White noted that adding this requirement would make a water heater which was legal under the old test procedure illegal, which in turn would necessitate updating the minimum efficiency standards. HTP stated that the five-percent tolerance on the measured storage volume as compared to rated storage volume is too stringent and would impose a significant re-design burden upon manufacturers. HTP instead suggests a ten-percent tolerance to reduce the manufacturer's burden.

After carefully considering these comments, DOE has decided to require that the rated storage volume be based on the mean of the measured values. The efficiency of a water heater is clearly related to the rated storage volume and, therefore, within DOE's authority to regulate. DOE seeks to eliminate any potential incentives for manufacturers to continue the current practice of exaggerating the storage volume of water heaters currently on the market by inflating the rated volume as compared to the actual measured volume. While DOE acknowledges AHRI's assessment that no current water heaters on the market could evade minimum efficiency standards, this does not rule out the possibility that future water heaters could do so; the revised approach adopted in this final rule addresses this concern going forward. Regarding the comment from A.O. Smith and Bradford White that adding this requirement would make a water heater which was legal under the old test procedure illegal, DOE notes that if AHRI's comment about the current water heater market is correct, the difference between rated and measured volume should not cause any water heaters to be subject to different energy conservation standards, thereby rendering such concerns theoretical. Furthermore, there will be a mathematical conversion for water heater models that are currently compliant to transition from results generated under the old test procedure to the new test procedure. Additionally, DOE-initiated testing will require that all measured storage volumes be within ± 5 percent of the rated storage volume to be considered valid. DOE agrees with

HTP that the 5 percent tolerance will result in manufacturers having to rerate certain models at an additional burden. However, DOE has concluded that any tolerance greater than 5 percent will not have the desired effect of harmonizing rated and measured storage volume values, and it is likely that a significant gap would persist between the values if a larger tolerance were adopted. If an invalid storage volume is found, the measured storage volume will be used in determining the applicable minimum energy conservation standard and calculations within the test procedure.

2. First-Hour Rating and Maximum GPM Requirements

Because the first-hour and maximum GPM ratings will determine the applicable draw pattern for use during the uniform energy factor test, DOE proposed in the November 2013 NOPR to include rating requirements for those values. 78 FR 66202, 66223 (Nov. 4, 2013). DOE proposed that the first-hour rating or maximum GPM rating, as applicable, must be the mean of the measured values of the sample used for certifying the basic model's efficiency. For DOE testing, the rated value will be considered valid if it is within five percent of the measured value. In such a case, DOE proposed that the rated value would be used for the purposes of choosing the appropriate draw pattern for the uniform energy factor test. In the case of an invalid rating (*i.e.*, the first-hour rating or maximum GPM rating is more than five percent different from the measured value), DOE proposed to use the measured value to determine the applicable draw pattern for the uniform energy factor test. DOE did not receive any comments objecting to these proposals, and, thus, DOE is adopting them in this final rule.

3. Ratings for Untested Models

In reviewing the current test procedure, DOE has concluded that 10 CFR part 430, subpart B, appendix E, section 7.0, "Ratings for Untested Models," is more appropriately addressed in 10 CFR part 429, which deals with requirements for certification of residential water heaters, than in the test procedure. In the November 2013 NOPR, DOE proposed to remove this section from Appendix E and place a similar section in 10 CFR 429.17. 78 FR 66202, 66223–24 (Nov. 4, 2013). DOE proposed to maintain the same requirements for gas water heaters in 10 CFR 429.17 that were previously in section 7.0, which allow units using propane gas that have an input rating within 10 percent of an otherwise identical natural gas unit to use the

rating for the natural gas unit in lieu of separate testing. DOE did not receive any comments related to this proposal, and thus, DOE adopts it in this final rule; however, DOE has moved the provision to 10 CFR 429.70 to reflect that this is an alternative method of determining efficiency (in lieu of testing).

DOE also proposed to eliminate the provisions for electric water heaters that currently allow a manufacturer of electric water heaters that are identical except with different input ratings to designate a standard input rating at which to test the water heater. 78 FR 66202, 66224 (Nov. 4, 2013). Under the current procedure, the manufacturer of electric water heaters may designate the standard input rating that would apply to all models that are identical with the exception of the power input to the heating element and test only at a single standard input rating. It also provides instructions for specifying the first-hour rating of units with higher and lower input ratings than the standard rating. The procedure also provides that the energy factor can be assumed to be the same across all input ratings. As noted above, DOE proposed to remove these provisions due to the proposed revisions in the test method for the first-hour rating and energy factor tests. The first-hour rating would be expected to vary based on the power input to the electric heating element. Under the revised test procedure, the applicable draw pattern for the uniform energy factor test is based on the first-hour rating. Thus, the first-hour rating must be accurate for the tested model to ensure accurate test results for the uniform energy factor test.

In response to the November 2013 NOPR, DOE received five comments (AHRI, BWC, Giant, Joint Comment, Rheem) opposing the proposal to remove the manufacturer's ability to designate electric water heaters that are identical except for their respective input ratings as having a standard input, and one comment was received from HTP suggesting alternate methods of testing the units with different input ratings. (AHRI, No. 75 at p. 7; BWC, No. 61 at p. 10–11; Giant, No. 76 at p. 3–4; HTP, No. 79 at p. 1–6; Joint Comment, No. 77 at p. 7; Rheem, No. 69 at p. 7). The five opposing comments stated that there would be a significant undue test burden associated with testing each model with a different input rating. Id. AHRI and Giant stated that the only case where a different input rating might be a concern is if the change in input rating results in a lower first-hour rating such that the unit would be tested under a different draw pattern than the unit

with a "standard" input rating. (AHRI, No. 75 at p. 7; Giant, No. 76 at p. 3–4).

DOE agrees that removing the provisions for rating electric water heaters with different input ratings could cause significant additional test burden for manufacturers. Thus, DOE is adopting the following requirements, which are roughly based on the method recommended by HTP to lessen burden while still ensuring that the ratings are representative of a model's efficiency and capacity. DOE is adopting provisions in 10 CFR 429.70 that will allow manufacturers to use the first-hour rating and uniform energy factor determined by testing one basic model to rate other basic models, in certain, limited circumstances. Untested basic models with input ratings higher than the rating of the tested basic model can be assumed to have the same first-hour rating and uniform energy factor and may be rated as such. For untested basic models that only differ from the tested basic model in that they contain heating elements with input ratings below the tested basic model, the untested basic model with the lowest input rating for all heating elements must be tested for first-hour rating. If that untested basic model has a first-hour rating that would group it in the same draw pattern bin as the tested basic model, then all basic models with lower input ratings than the tested basic model may be assumed to have the same uniform energy factor as the tested basic model. These untested basic models can be assigned a first-hour rating equivalent to the volume removed in the first draw of the first-hour rating test of the tested basic model of electric water heater. However, if the unit with the lowest input rating has a first-hour rating that would result in classification in a draw pattern with a lower total volume drawn per day for the simulated-use test, the unit must be tested according to that lower draw pattern. At this point, the manufacturer may choose to test a second basic model that would represent water heaters in the lower sizing bin and apply the same principles noted above to determine the uniform energy factor and first-hour rating.

DOE notes that the alternative efficiency determination method (AEDM) provisions for these consumer water heaters and residential-duty commercial water heaters are quite different from AEDM provisions for other types of covered products and equipment for which use of an AEDM is authorized. Specifically, these AEDM provisions do not permit any type of modeling or calculations of efficiency; they only permit use of a rating determined by testing to be used for

other basic models that meet certain criteria. In addition, DOE notes that the tested basic model will be indicated in a certification report with the number of units tested, while the untested basic models will be indicated in a certification report as having been certified using an AEDM.

L. Reference Standards

DOE's test procedure for residential water heaters currently references two industry standards: (1) American Society for Testing and Measurement (ASTM) D2156-80, "Smoke Density in Flue Gases from Burning Distillate Fuels, Test Method for" and (2) ASHRAE Standard 41.1-1986, "Standard Measurement Guide: Section on Temperature Measurements."

DOE retains these references in the uniform efficiency descriptor test method, but updates the referenced standards to the most recent versions: (1) ASTM D2156-09, "Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels" and (2) ASHRAE Standard 41.1-1986 (RA2006), "Standard Method for Temperature Measurement." For the November 2013 NOPR, DOE reviewed both of the updated standards and concluded that their adoption would not substantially impact the revised test method. 78 FR 66202, 66224 (Nov. 4, 2013). DOE did not receive any comments on this issue in response to the NOPR, and consequently, DOE incorporates these industry standards by reference into DOE's regulations for the water heaters test procedure.

M. Compliance With Other EPCA Requirements

As mentioned above, in amending a test procedure, EPCA directs DOE to determine to what extent, if any, the test procedure would alter the measured energy efficiency or measured energy use of a covered product. (42 U.S.C. 6293(e)(1)) If the amended test procedure alters the measured energy efficiency or measured energy use, the Secretary must amend the applicable energy conservation standard to the extent the amended test procedure changes the energy efficiency of products that minimally comply with the existing standard. (42 U.S.C. 6293(e)(2)) The current energy conservation standards for residential water heaters are based on energy factor, and the energy conservation standards for commercial water heaters are based on thermal efficiency and standby loss. DOE believes that the conversion factor (or factors) required by AEMTCA (as discussed in section III.I) and developed in a subsequent rulemaking will ensure

that there is no change in measured energy efficiency.

Consistent with 42 U.S.C. 6293(c), DOE typically requires that any representations of energy consumption of covered products must be based on any final amended test procedures 180 days after the publication of the test procedure final rule. However, in this instance, the statute specifically provides for an effective date of the test procedure final rule which is one year after the date of the publication of the final rule. (42 U.S.C. 6295(e)(5)(D)(ii)) In addition, AEMTCA provides for the use of a conversion factor that will apply beginning on the date of publication of the conversion factor in the **Federal Register** and ending on the later of one year after the date of publication of the conversion factor or December 31, 2015. (42 U.S.C. 6295(e)(5)(E)(v)) Thus, the test procedure final rule will become effective one year after its publication, and manufacturers may at their discretion make representations of energy efficiency based either (a) on the final amended test procedures or (b) on the previous test procedures after applying the conversion factor until such time as use of the amended test procedure is required. The current test procedures for residential water heaters are set forth at 10 CFR part 430, subpart B, appendix E as contained in 10 CFR parts 200 to 499 edition revised as of January 1, 2014. The current test procedures for commercial water heating equipment are set forth at 10 CFR 431.106 as contained in 10 CFR parts 200 to 499 edition revised as of January 1, 2014. As required by AEMTCA, the conversion factor may be used until the later of one year after the publication of the factor, or December 31, 2015, after which time all testing must be conducted in accordance with the new amended test procedure. (Note, in this final rule, DOE provides that the conversion factor may be used until December 31, 2015, but DOE will amend that date, if necessary, upon publication of the conversion factor final rule.) DOE notes that during the interim period, manufacturers must use the same version of the test procedure for all representations of energy efficiency, including certifications of compliance.

N. Other Issues

At the December 6, 2013 public meeting, AIM and EEI requested clarification on the applicability of the first-hour rating and maximum GPM test for water heaters that may have a storage volume above 2 gallons but which also have heating elements or burners that are designed to deliver a continuous flow of hot water. (Public transcript, p.

80-81, 84-86, 121-122) After considering these comments, DOE acknowledges that it may be possible to improve the test procedure's specifications as to which tests must be conducted on each water heater, so the Department is clarifying the proper implementation of the applicable tests as part of this final rule.

The proposed test procedure stated that storage water heaters should be tested to obtain a first-hour rating and that instantaneous water heaters be tested to obtain a maximum GPM rating. 78 FR 66202, 66234-36 (Nov. 4, 2013). As noted by AIM, "flow-dominated" or "heat-on-demand" water heaters exist that have very large burners but have some storage volume as a buffer. (AIM No. 70 at p. 2) DOE believes that the delivery capacity of such water heaters is best captured by a maximum GPM rating and is, thus, requiring water heaters with a heating input that is activated by the flow of water through them to be tested according to the maximum GPM test procedure regardless of storage volume. For all other storage water heaters, the first-hour rating test is to be applied to determine delivery capacity. DOE is using the term "flow-activated" in this final rule and is adding a definition for that term in the test procedure that is consistent with the definition of "instantaneous water heater" currently at 10 CFR 430.2.

For determining the uniform energy factor, DOE believes that any water heater with a storage volume greater than or equal to 2 gallons must be tested to account for the storage volume, even if they meet EPCA's definition of an instantaneous water heater, which does not limit the stored volume. (42 U.S.C. 6291(27)(B)) The reason for this determination is that changes in the stored energy in the water heater and variations in the heat loss from the water heater to the ambient can affect the uniform energy factor, and the test procedure proposed for storage water heaters captures these effects while that for instantaneous water heaters does not. While it might be possible to include such terms in the proposed test procedure for instantaneous water heaters, such a step would add no benefit for instantaneous water heaters with minimal storage volume and could be considered as adding an undue burden to the testing of those units. Therefore, DOE clarifies the applicability of the simulated-use test based on rated storage volume instead of by the terminology of "storage" versus "instantaneous" in section 5 of appendix E.

DOE also clarifies the determination of the UA value to account for situations where the maximum tank temperature is achieved immediately following the recovery following the first draw cluster. As noted above, test data suggest that starting the standby period immediately following a recovery can lead to erroneous results due to the challenges in determining the average stored water temperature at that time. DOE has adjusted the start of the period used to determine the UA so that it must begin no less than five minutes following the end of the first recovery following the first draw cluster.

IV. Procedural Issues and Regulatory Review

A. Review Under Executive Order 12866

The Office of Management and Budget has determined that test procedure rulemakings do not constitute “significant regulatory actions” under section 3(f) of Executive Order 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993). Accordingly, this action was not subject to review under the Executive Order by the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB).

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996) requires preparation of an initial regulatory flexibility analysis (IFRA) for any rule that by law must be proposed for public comment and a final regulatory flexibility analysis (FRFA) for any such rule that an agency adopts as a final rule, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. A regulatory flexibility analysis examines the impact of the rule on small entities and considers alternative ways of reducing negative effects. Also, as required by Executive Order 13272, “Proper Consideration of Small Entities in Agency Rulemaking,” 67 FR 53461 (August 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the DOE rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel’s Web site: <http://energy.gov/gc/office-general-counsel>.

This final rule prescribes test procedure amendments used to

determine compliance with energy conservation standards for residential water heaters and certain commercial water heaters. For residential water heaters and certain commercial water heaters, the amendments establish a uniform efficiency descriptor which is more representative of conditions encountered in the field (including modifications to both the test conditions and the draw patterns), and expand the scope of the test procedure to apply to certain residential water heaters and certain commercial water heaters that are currently not covered by the test procedure. DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the policies and procedures published on February 19, 2003. 68 FR 7990.

For the manufacturers of the covered water heater products, the Small Business Administration (SBA) has set a size threshold, which defines those entities classified as “small businesses” for the purposes of the statute. DOE used the SBA’s small business size standards to determine whether any small entities would be subject to the requirements of the rule. The SBA size standards, listed by North American Industry Classification System (NAICS) code and industry description, are codified at 13 CFR part 121 and are available at <http://www.sba.gov/content/table-small-business-size-standards>. Residential water heater manufacturing is classified under NAICS 335228—“Other Major Household Appliance Manufacturing.” The SBA sets a threshold of 500 employees or less for an entity to be considered as a small business. Commercial water heaters are classified under NAICS 333318—“Other Commercial and Service Industry Machinery Manufacturing,” for which SBA also sets a size threshold of 1,000 employees or fewer for being considered a small business.

DOE has identified 19 manufacturers of residential water heaters (including manufacturers of products that fall under the expanded scope) that can be considered small businesses. DOE identified seven manufacturers of “residential-duty” water heaters that can be considered small businesses. Six of the “residential-duty” water heater manufacturers also manufacture residential water heaters, so the total number of water heater manufacturers impacted by this rule would be 20. DOE’s research involved reviewing several industry trade association membership directories (*e.g.*, AHRI), product databases (*e.g.*, AHRI, CEC, and ENERGY STAR databases), individual company Web sites, and marketing research tools (*e.g.*, Hoovers reports) to

create a list of all domestic small business manufacturers of products covered by this rulemaking.

For the reasons explained below, DOE has concluded that the test procedure amendments contained in this final rule would not have a significant economic impact on any manufacturer, including small manufacturers.

For residential water heaters, the amendments adopted in this final rule apply primarily to the draw pattern and outlet water temperature. Under DOE’s existing test procedure, manufacturers must perform a simulated-use test consisting of 6 draws of equal lengths with a water heater delivery temperature of 135 °F. This final rule will require manufacturers to perform a simulated-use test consisting of 9 to 14 draws of varied length, depending on the capacity of the water heater, at an outlet water temperature of 125 °F. The change in outlet water temperature requires no additional effort or expense for the manufacturer, because establishing the test temperature is simply a matter of choosing the appropriate setting on the water heater. Likewise, the change in the number of draws would also result in very little burden on manufacturers. The length and timing of draws for the existing test procedure are largely controlled automatically by computer control. The changes will likely result in manufacturers having to reprogram the computer test programs to account for the new draw patterns. DOE estimates that this effort would take approximately one week to program and confirm operation of the amended test. It is estimated that approximately two days of a programmer’s time would be needed at a cost of \$1,000, including overhead and benefits. This one-time cost is comparable to that charged by a third-party test laboratory for a single test, so it is not considered burdensome for water heater manufacturers. Since the simulated-use test takes 24 hours under both the existing and new test method, the length of the test would not change. The new test method does specify a 12-hour soak-in period prior to the 24-hour test for storage water heaters, however, which would add to the time required to conduct the test. This extra test time would not require extra personnel and would not necessitate the development of additional test platforms. DOE understands that a preconditioning period is already implemented by manufacturers as a best practice to allow the water heater to achieve operational temperature, so the added burden from the 12-hour soak-in would be minimal. In addition, these tests can be

conducted in the same facilities used for the current energy testing of these products, so there would be no additional facility costs required by the final rule.

Lastly, the only potential instrumentation upgrade required to conduct the test would be electric power and energy measuring equipment that meets the accuracy levels that have changed from ± 1 percent to ± 0.5 percent. DOE believes that equipment meeting these tolerances is already the industry standard. Purchase of a new instrument, if needed, would be expected to cost approximately \$1,000.

For certain commercial water heaters included in the scope of this rulemaking, the efficiency test required for equipment would change from the thermal efficiency and standby loss tests specified in the current DOE test method, to the simulated-use test for uniform energy factor in this final rule. The uniform energy factor test is inherently more complex than the thermal efficiency and standby loss tests, and, thus, it may be more difficult to implement. However, the standby loss test takes a significant amount of time, which is comparable to the 24-hour simulated-use test. Accordingly, overall testing time should remain fairly constant. DOE understands that the complexity of the uniform energy factor test would impose additional costs on manufacturers due to the need to automate draw patterns, as compared to the thermal efficiency test. In addition, some hardware purchases may be needed to allow for computer-controlled draws of hot water that are required in a simulated use test. However, DOE notes that many commercial water heater manufacturers also manufacture residential water heaters, and may already have this equipment from testing of residential units. Nonetheless, DOE estimates that this hardware could cost approximately \$1,000, assuming that the laboratory already has a computer-controlled data acquisition system to collect data during the thermal efficiency and standby loss tests currently required. DOE estimates the costs for a programmer to create a computer program that automatically controls the hot water draws would be similar to the costs above, but that the time required may be slightly longer if the program is being developed from scratch. Under such circumstances, DOE estimates that 5 days of programmer time would be needed for a cost of \$2,500, including overhead and benefits.

Lastly, DOE considered the impacts on small businesses that manufacture residential water heaters that fall into

categories that were previously not covered by the DOE residential water heater test procedure (e.g., models with storage volumes between 2 and 20 gallons). In reviewing the market for these products, DOE did not identify any manufacturers that did not also manufacture other types of water heating equipment. Thus, DOE believes that these manufacturers would already have the needed equipment and computer programs to conduct the current DOE test. For the reasons stated previously, DOE does not believe the updates will cause significant additional burdens for these manufacturers.

Accordingly, DOE concludes and certifies that this final rule would not have a significant economic impact on a substantial number of small entities, so DOE has not prepared a regulatory flexibility analysis for this rulemaking. DOE has provided its certification and supporting statement of factual basis to the Chief Counsel for Advocacy of the SBA for review under 5 U.S.C. 605(b).

C. Review Under the Paperwork Reduction Act of 1995

Manufacturers of water heaters must certify to DOE that their products comply with all applicable energy conservation standards. In certifying compliance, manufacturers must test their products according to the DOE test procedures for water heaters, including any amendments adopted for the test procedure on the date that compliance is required. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including residential and commercial water heaters. 76 FR 12422 (March 7, 2011). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910-1400. Public reporting burden for the certification is estimated to average 20 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

In this final rule, DOE amends its test procedure for residential and commercial water heaters. DOE has determined that this rule falls into a class of actions that are categorically excluded from review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) and DOE's implementing regulations at 10 CFR part 1021. Specifically, this rule amends an existing rule without affecting the amount, quality or distribution of energy usage, and, therefore, will not result in any environmental impacts. Thus, this rulemaking is covered by Categorical Exclusion A5 under 10 CFR part 1021, subpart D, which applies to any rulemaking that interprets or amends an existing rule without changing the environmental effect of that rule. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

E. Review Under Executive Order 13132

Executive Order 13132, "Federalism," 64 FR 43255 (August 10, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have Federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have Federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE examined this final rule and determined that it will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products that are the subject of this final rule. States can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297(d)) No further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

Regarding the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," 61 FR 4729 (Feb. 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Regarding the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in sections 3(a) and 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Pub. L. 104-4, sec. 201 (codified at 2 U.S.C. 1531). For a regulatory action resulting in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a

"significant intergovernmental mandate," and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. (This policy is also available at <http://energy.gov/gc/office-general-counsel>.) DOE examined this final rule according to UMRA and its statement of policy and has determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any year. Accordingly, no further assessment or analysis is required under UMRA.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This final rule will not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to Executive Order 12630, "Governmental Actions and Interference with Constitutionally Protected Property Rights," 53 FR 8859 (March 18, 1988), DOE has determined that this regulation will not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). DOE has reviewed this final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use," 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A "significant energy action" is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use if the regulation is implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

This regulatory action to amend the test procedure for measuring the energy efficiency of residential and certain commercial water heaters is not a significant regulatory action under Executive Order 12866 or any successor order. Moreover, it would not have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as a significant energy action by the Administrator of OIRA. Therefore, it is not a significant energy action, and, accordingly, DOE has not prepared a Statement of Energy Effects for this rulemaking.

L. Review Under Section 32 of the Federal Energy Administration Act of 1974

Under section 301 of the Department of Energy Organization Act (Pub. L. 95-91; 42 U.S.C. 7101 *et seq.*), DOE must comply with all laws applicable to the former Federal Energy Administration, including section 32 of the Federal Energy Administration Act of 1974 (Pub. L. 93-275), as amended by the Federal Energy Administration Authorization Act of 1977 (Pub. L. 95-70). (15 U.S.C. 788; FEAA) Section 32 essentially provides in relevant part that, where a proposed rule authorizes or requires use of commercial standards, the notice of proposed rulemaking must inform the public of the use and background of such standards. In addition, section 32(c) requires DOE to consult with the Attorney General and the Chairman of the Federal Trade Commission (FTC) concerning the

impact of the commercial or industry standards on competition.

The modifications to the test procedures addressed by this action incorporate testing methods contained in the following commercial standards: (1) ASTM D2156 09, "Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels"; and (2) ASHRAE Standard 41.1-1986 (RA 2006), "Standard Method for Temperature Measurement." While this test procedure is not exclusively based on these standards, components of the test procedures are adopted directly from these standards without amendment. The Department has evaluated these standards and is unable to conclude whether they fully comply with the requirements of section 32(b) of the FEAA, (*i.e.*, that they were developed in a manner that fully provides for public participation, comment, and review). DOE has consulted with the Attorney General and the Chairman of the FTC concerning the impact on competition of requiring manufacturers to use the test methods contained in these standards and has received no comments objecting to their use.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the rule is not a "major rule" as defined by 5 U.S.C. 804(2).

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 429

Confidential business information, Energy conservation, Household appliances, Imports, Reporting and recordkeeping requirements.

10 CFR Part 430

Administrative practice and procedure, Confidential business information, Energy conservation, Household appliances, Imports, Incorporation by reference, Intergovernmental relations, Small businesses.

10 CFR Part 431

Administrative practice and procedure, Confidential business information, Test procedures, Incorporation by reference, Reporting and recordkeeping requirements.

Issued in Washington, DC, on June 27, 2014.

Kathleen B. Hogan,

Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

For the reasons stated in the preamble, DOE amends parts 429, 430, and 431 of Chapter II, Subchapter D of Title 10, Code of Federal Regulations, as set forth below:

PART 429—CERTIFICATION, COMPLIANCE, AND ENFORCEMENT FOR CONSUMER PRODUCTS AND COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 429 continues to read as follows:

Authority: 42 U.S.C. 6291-6317.

■ 2. Section 429.17 is amended by:

- a. Revising paragraphs (a) introductory text and (a)(1);
- b. Redesignating paragraphs—
 - i. (a)(2)(i) introductory text as (a)(1)(ii)(A);
 - ii. (a)(2)(i)(A) as (a)(1)(ii)(A)(1);
 - iii. (a)(2)(1)(B) as (a)(1)(ii)(A)(2);
 - iv. (a)(2)(ii) introductory text as (a)(1)(ii)(B);
 - v. (a)(2)(ii)(A) as (a)(1)(ii)(B)(1); and
 - vi. (a)(2)(ii)(B) as (a)(1)(ii)(B)(2);
- c. Adding paragraphs (a)(1)(ii)(C), and (D);
- d. Revising paragraph (a)(2); and
- e. Revising paragraph (b)(2).

The revisions and additions read as follows:

§ 429.17 Residential water heaters.

(a) *Determination of represented value.* Manufacturers must determine the represented value, which includes the certified rating, for each basic model of residential water heater either by testing, in conjunction with the applicable sampling provisions, or by applying an alternative efficiency determination method (AEDM) approved for use by DOE.

(1) *Units to be tested.* (i) If the represented value is determined through testing, the general requirements of § 429.11 are applicable; and

(ii) For each basic model selected for testing, a sample of sufficient size shall be randomly selected and tested to ensure that—

* * * * *

(C) Any represented value of the rated storage volume must be equal to the mean of the measured storage volumes of all the units within the sample.

(D) Any represented value of first-hour rating or maximum gallons per minute (GPM) must be equal to the mean of the measured first-hour ratings

or measured maximum GPM ratings, respectively, of all the units within the sample.

(2) *Alternative efficiency determination methods.* In lieu of testing, represented values for a basic model must be determined through the application of an AEDM pursuant to the requirements of § 429.70.

(b) * * *

(2) Pursuant to § 429.12(b)(13), a certification report shall include the following public product-specific information: The uniform energy factor (UEF, rounded to the nearest 0.01), rated storage volume in gallons (gal), first-hour rating or maximum gallons per minute (GPM), and recovery efficiency (percent).

- 3. Section 429.44 is amended by:
 - a. Redesignating paragraphs (a), (b), and (c) as (b), (c), and (d), respectively.
 - b. Adding new paragraph (a); and
 - c. Revising newly redesignated paragraph (b).

The revisions and additions read as follows:

§ 429.44 Commercial water heating equipment.

(a) For residential-duty commercial water heaters, all represented values must be determined in accordance with § 429.17.

(b) *Determination of Represented Value for All Types of Commercial Water Heaters Except Residential-Duty Commercial Water Heaters.*

Manufacturers must determine the represented value, which includes the certified rating, for each basic model of commercial water heating equipment except residential-duty commercial water heaters, either by testing, in conjunction with the applicable sampling provisions, or by applying an AEDM as set forth in § 429.70.

* * * * *

- 4. Section 429.70 is amended by adding paragraph (g) to read as follows:

§ 429.70 Alternative methods for determining energy efficiency and energy use

* * * * *

(g) *Alternative determination of ratings for untested basic models of residential water heaters and residential-duty commercial water heaters.* For models of water heaters that differ only in fuel type or power input, ratings for untested basic models may be established in accordance with the following procedures in lieu of testing. This method allows only for the use of ratings identical to those of a tested basic model as provided below; simulations or other modeling predictions for ratings of the uniform

energy factor, volume, first-hour rating, or maximum gallons per minute (GPM) are not permitted.

(1) *Gas Water Heaters.* For untested basic models of gas-fired water heaters

that differ from tested basic models only in whether the basic models use natural gas or propane gas, the represented value of uniform energy factor, first-hour rating, and maximum gallons per

minute for an untested basic model is the same as that for a tested basic model, as long as the input ratings of the tested and untested basic models are within ±10%, that is:

$$\frac{|input\ rating\ of\ untested\ basic\ model - input\ rating\ of\ tested\ basic\ model|}{input\ rating\ of\ tested\ basic\ model} \leq 10\%$$

(2) *Electric Storage Water Heaters.* Rate an untested basic model of an electric storage type water heater using the first-hour rating and the uniform energy factor obtained from a tested basic model as a basis for ratings of basic models with other input ratings, provided that certain conditions are met:

(i) For an untested basic model, the represented value of the first-hour rating and the uniform energy factor is the same as that of a tested basic model, provided that each heating element of the untested basic model is rated at or above the input rating for the corresponding heating element of the tested basic model.

(ii) For an untested basic model having any heating element with an input rating that is lower than that of the corresponding heating element in the tested basic model, the represented value of the first-hour rating and the uniform energy factor is the same as that of a tested basic model, provided that the first-hour rating for the untested basic model results in the same draw pattern specified in Table I of appendix E for the simulated-use test as was applied to the tested basic model. To establish whether this condition is met, determine the first-hour ratings for the tested and the untested basic models in accordance with the procedure described in section 5.3.3 of 10 CFR part 430, subpart B, appendix E, then compare the appropriate draw pattern specified in Table I of appendix E for the first-hour rating of the tested basic model with that for the untested basic model. If this condition is not met, then the untested basic model must be tested and the appropriate sampling provisions applied to determine its uniform energy factor in accordance with appendix E and this part.

■ 5. Section 429.134 is amended by removing and reserving paragraph (c) and adding paragraph (d) to read as follows:

§ 429.134 Product-specific enforcement provisions.

* * * * *

(d) *Residential Water Heaters and Residential-Duty Commercial Water Heaters—(1) Verification of first-hour*

rating and maximum GPM rating. The first-hour rating or maximum gallons per minute (GPM) rating of the basic model will be measured pursuant to the test requirements of 10 CFR part 430 for each unit tested. The mean of the measured values will be compared to the rated values of first-hour rating or maximum GPM rating as certified by the manufacturer. The certified rating will be considered valid only if the measurement is within five percent of the certified rating.

(i) If the rated value of first-hour rating or maximum GPM rating is found to be within 5 percent of the mean of the measured values, then the rated value will be used as the basis for determining the applicable draw pattern pursuant to the test requirements of 10 CFR part 430 for each unit tested.

(ii) If the rated value of first-hour rating or maximum GPM rating is found to vary more than 5 percent from the measured values, then the mean of the measured values will serve as the basis for determining the applicable draw pattern pursuant to the test requirements of 10 CFR part 430 for each unit tested.

(2) *Verification of rated storage volume.* The storage volume of the basic model will be measured pursuant to the test requirements of 10 CFR part 430 for each unit tested. The mean of the measured values will be compared to the rated storage volume as certified by the manufacturer. The rated value will be considered valid only if the measurement is within five percent of the certified rating.

(i) If the rated storage volume is found to be within 5 percent of the mean of the measured value of storage volume, then that value will be used as the basis for calculation of the required uniform energy factor for the basic model.

(ii) If the rated storage volume is found to vary more than 5 percent from the mean of the measured values, then the mean of the measured values will be used as the basis for calculation of the required uniform energy factor for the basic model.

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 6. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 7. Section 430.2 is amended by adding the definitions of “Electric heat pump water heater,” “Electric instantaneous water heater,” “Electric storage water heater,” “Gas-fired instantaneous water heater,” “Gas-fired storage water heater,” “Gas-fired heat pump water heater,” “Oil-fired instantaneous water heater,” and “Oil-fired storage water heater” in alphabetical order to read as follows:

§ 430.2 Definitions.

* * * * *

Electric heat pump water heater means a water heater that uses electricity as the energy source, has a maximum current rating of 24 amperes (including the compressor and all auxiliary equipment such as fans, pumps, controls, and, if on the same circuit, any resistive elements) at an input voltage of no greater than 250 volts, has a rated storage capacity of 120 gallons (450 liters) or less, is designed to transfer thermal energy from one temperature level to a higher temperature level for the purpose of heating water, including all ancillary equipment such as fans, storage tanks, pumps, or controls necessary for the device to perform its function, and is designed to heat and store water at a thermostatically-controlled temperature less than or equal to 180 °F (82 °C).

* * * * *

Electric instantaneous water heater means a water heater that uses electricity as the energy source, has a nameplate input rating of 12 kW (40,956 Btu/h) or less, contains no more than one gallon of water per 4,000 Btu per hour of input, and is designed to provide outlet water at a controlled temperature less than or equal to 180 °F (82 °C). The unit may use a fixed or variable burner input.

* * * * *

Electric storage water heater means a water heater that uses electricity as the energy source, has a nameplate input rating of 12 kW (40,956 Btu/h) or less, has a rated storage capacity of 120 gallons (450 liters) or less, contains more than one gallon of water per 4,000 Btu per hour of input, and may be designed to heat and store water at a thermostatically-controlled temperature less than or equal to 180 °F (82 °C).

* * * * *

Gas-fired heat pump water heater means a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h (79 MJ/h) or less, has a maximum current rating of 24 amperes (including all auxiliary equipment such as fans, pumps, controls, and, if on the same circuit, any resistive elements) at an input voltage of no greater than 250 volts, has a rated storage volume not more than 120 gallons (450 liters), and is designed to transfer thermal energy from one temperature level to a higher temperature level to deliver water at a thermostatically controlled temperature less than or equal to 180 °F (82 °C).

Gas-fired instantaneous water heater means a water heater that uses gas as the main energy source, has a nameplate input rating less than 200,000 Btu/h (210 MJ/h), contains no more than one gallon of water per 4,000 Btu per hour of input, and is designed to provide outlet water at a controlled temperature less than or equal to 180 °F (82 °C). The unit may use a fixed or variable burner input.

Gas-fired storage water heater means a water heater that uses gas as the main energy source, has a nameplate input rating of 75,000 Btu/h (79 MJ/h) or less, has a rated storage capacity of 120 gallons (450 liters) or less, contains more than one gallon of water per 4,000 Btu per hour of input, and is designed to heat and store water at a thermostatically-controlled temperature less than or equal to 180 °F (82 °C).

* * * * *

Oil-fired instantaneous water heater means a water heater that uses oil as the main energy source, has a nameplate input rating of 210,000 Btu/h (220 MJ/h) or less, contains no more than one gallon of water per 4,000 Btu per hour of input, and is designed to provide outlet water at a controlled temperature less than or equal to 180 °F (82 °C). The unit may use a fixed or variable burner input.

Oil-fired storage water heater means a water heater that uses oil as the main energy source, has a nameplate input rating of 105,000 Btu/h (110 MJ/h) or less, has a rated storage capacity of 120

gallons (450 liters) or less, contains more than one gallon of water per 4,000 Btu per hour of input, and is designed to heat and store water at a thermostatically-controlled temperature less than or equal to 180 °F (82 °C).

* * * * *

■ 8. Section 430.3 is amended by:

■ a. Redesignating paragraphs (h) through (t) as (i) through (u), respectively; and

■ b. Adding a new paragraph (h).

The addition reads as follows:

§ 430.3 Materials incorporated by reference.

* * * * *

(h) *ASTM*. American Society for Testing and Materials International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA 19428–2959 (www.astm.org).

(1) ASTM D 2156–09 (“ASTM D2156”), Standard Test Method for Smoke Density in Flue Gases from Burning Distillate Fuels, approved December 1, 2009, IBR approved for appendix E to subpart B.

(2) [Reserved].

* * * * *

■ 9. Section 430.23 is amended by revising paragraph (e) to read as follows:

§ 430.23 Test procedures for the measurement of energy and water consumption.

* * * * *

(e) *Water Heaters*. (1) The estimated annual operating cost for water heaters shall be—

(i) For a gas or oil water heater, the sum of: the product of the annual gas or oil energy consumption, determined according to section 6.1.10 or 6.2.7 of appendix E of this subpart, times the representative average unit cost of gas or oil, as appropriate, in dollars per Btu as provided by the Secretary; plus the product of the annual electric energy consumption, determined according to section 6.1.9 or 6.2.6 of appendix E of this subpart, times the representative average unit cost of electricity in dollars per kilowatt-hour as provided by the Secretary, the resulting sum then being rounded off to the nearest dollar per year.

(ii) For an electric water heater, the product of the annual energy consumption, determined according to section 6.1.9 or 6.2.6 of appendix E of this subpart, times the representative average unit cost of electricity in dollars per kilowatt-hour as provided by the Secretary, the resulting product then being rounded off to the nearest dollar per year.

(2) For an individual test, the tested uniform energy factor for a water heater shall be—

(i) For a gas or oil water heater, as determined by section 6.1.7 or 6.2.4 of appendix E of this subpart rounded to the nearest 0.01.

(ii) For an electric water heater, as determined by section 6.1.7 or 6.2.4 of appendix E of this subpart rounded to the nearest 0.01.

* * * * *

■ 10. Appendix E to Subpart B of Part 430 is revised to read as follows:

Appendix E to Subpart B of Part 430—Uniform Test Method for Measuring the Energy Consumption of Water Heaters

Note: After December 31, 2015, any representations made with respect to the energy use or efficiency of residential water heaters and commercial water heaters covered by this test method must be made in accordance with the results of testing pursuant to this appendix. (Because the statute permits use of a conversion factor until the later of December 31, 2015 or one year after publication of a conversion factor final rule, DOE may amend the mandatory compliance date for use of this amended test procedure, as necessary.)

Manufacturers conducting tests of residential water heaters and commercial water heaters covered by this test method after July 13, 2015, and prior to December 31, 2015, must conduct such test in accordance with either this appendix or the previous test method. For residential water heaters, the previous test method is appendix E as it appeared at 10 CFR part 430, subpart B, appendix E, in the 10 CFR parts 200 to 499 edition revised as of January 1, 2014. For commercial water heaters, the previous test method is 10 CFR 431.106 in the 10 CFR parts 200 to 499 edition revised as of January 1, 2014. Any representations made with respect to the energy use or efficiency of such water heaters must be in accordance with whichever version is selected.

1. Definitions.

1.1. *Cut-in* means the time when or water temperature at which a water heater control or thermostat acts to increase the energy or fuel input to the heating elements, compressor, or burner.

1.2. *Cut-out* means the time when or water temperature at which a water heater control or thermostat acts to reduce to a minimum the energy or fuel input to the heating elements, compressor, or burner.

1.3. *Design Power Rating* means the nominal power rating that a water heater manufacturer assigns to a particular design of water heater, expressed in kilowatts or Btu (kJ) per hour as appropriate.

1.4. *Draw Cluster* means a collection of water draws initiated during the simulated-use test during which no successive draws are separated by more than 2 hours.

1.5. *First-Hour Rating* means an estimate of the maximum volume of “hot” water that a storage-type water heater can supply within

an hour that begins with the water heater fully heated (*i.e.*, with all thermostats satisfied). It is a function of both the storage volume and the recovery rate.

1.6. *Flow-activated* describes an operational scheme in which a water heater initiates and terminates heating based on sensing flow.

1.7. *Heat Trap* means a device that can be integrally connected or independently attached to the hot and/or cold water pipe connections of a water heater such that the device will develop a thermal or mechanical seal to minimize the recirculation of water due to thermal convection between the water heater tank and its connecting pipes.

1.8. *Maximum GPM (L/min) Rating* means the maximum gallons per minute (liters per minute) of hot water that can be supplied by an instantaneous water heater while maintaining a nominal temperature rise of 67 °F (37.3 °C) during steady-state operation, as determined by testing in accordance with section 5.3.2 of this appendix.

1.9. *Rated Storage Volume* means the water storage capacity of a water heater, in gallons (liters), as certified by the manufacturer pursuant to 10 CFR part 429.

1.10. *Recovery Efficiency* means the ratio of energy delivered to the water to the energy content of the fuel consumed by the water heater.

1.11. *Recovery Period* means the time when the main burner of a storage water heater is raising the temperature of the stored water.

1.12. *Standby* means the time, in hours, during which water is not being withdrawn from the water heater. There are two standby time intervals used within this test procedure: $\tau_{\text{stby},1}$ represents the elapsed time between the time at which the maximum mean tank temperature is observed after the first draw cluster and the minute prior to the start of the first draw following the end of the first draw cluster of the 24-hour simulated-use test; $\tau_{\text{stby},2}$ represents the total time during the 24-hour simulated-use test when water is not being withdrawn from the water heater.

1.13. *Symbol Usage*. The following identity relationships are provided to help clarify the symbology used throughout this procedure:

C_p —specific heat of water

E_{annual} —annual energy consumption of a water heater

$E_{\text{annual},e}$ —annual electrical energy consumption of a water heater

$E_{\text{annual},f}$ —annual fossil-fuel energy consumption of a water heater

F_{hr} —first-hour rating of a storage-type water heater

F_{max} —maximum GPM (L/min) rating of an instantaneous water heater rated at a temperature rise of 67 °F (37.3 °C)

i —a subscript to indicate the draw number during a test

M_i —mass of water removed during the i th draw of the 24-hour simulated-use test

M^*_i —for storage-type water heaters, mass of water removed during the i th draw during the first-hour rating test

M_{10m} —for instantaneous water heaters, mass of water removed continuously during a 10-minute interval in the maximum GPM (L/min) rating test

n —for storage-type water heaters, total number of draws during the first-hour rating test

N —total number of draws during the 24-hour simulated-use test

Q —total fossil fuel and/or electric energy consumed during the entire 24-hour simulated-use test

Q_d —daily water heating energy consumption adjusted for net change in internal energy

Q_{da} — Q_d with adjustment for variation of tank to ambient air temperature difference from nominal value

Q_{dm} —overall adjusted daily water heating energy consumption including Q_{da} and Q_{HWD}

Q_e —total electrical energy used during the 24-hour simulated-use test

Q_f —total fossil fuel energy used by the water heater during the 24-hour simulated-use test

Q_{hr} —hourly standby losses

Q_{HW} —daily energy consumption to heat water at the measured average temperature rise across the water heater

$Q_{HW,67^\circ F}$ —daily energy consumption to heat quantity of water removed during test over a temperature rise of 67 °F (37.3 °C)

Q_{HWD} —adjustment to daily energy consumption, Q_{HW} , due to variation of the temperature rise across the water heater not equal to the nominal value of 67 °F

Q —energy consumption of water heater from the beginning of the test to the end of the first recovery period following the first draw, which may extend beyond subsequent draws

Q_{stby} —total energy consumed by the water heater during the standby time interval $\tau_{\text{stby},1}$

$Q_{\text{su},0}$ —total fossil fuel and/or electric energy consumed from the beginning of the test to the end of the cutout following the first draw cluster

$Q_{\text{su},f}$ —total fossil fuel and/or electric energy consumed from the beginning of the test to the initiation of the first draw following the first draw cluster

\bar{T}_0 —mean tank temperature at the beginning of the 24-hour simulated-use test

\bar{T}_{24} —mean tank temperature at the end of the 24-hour simulated-use test

$\bar{T}_{a,\text{stby}}$ —average ambient air temperature during standby periods of the 24-hour simulated-use test

\bar{T}_{del} —for flow-activated water heaters, average outlet water temperature during a 10-minute continuous draw interval in the maximum GPM (L/min) rating test

$\bar{T}_{del,i}$ —average outlet water temperature during the i th draw of the 24-hour simulated-use test

\bar{T}_{in} —for flow-activated water heaters, average inlet water temperature during a 10-minute continuous draw interval in the maximum GPM (L/min) rating test

$\bar{T}_{in,i}$ —average inlet water temperature during the i th draw of the 24-hour simulated-use test

$\bar{T}_{\text{max},1}$ —maximum measured mean tank temperature after cut-out following the first draw of the 24-hour simulated-use test

$\bar{T}_{\text{su},0}$ —maximum measured mean tank temperature at the beginning of the

standby period which occurs after cut-out following the final draw of the first draw cluster

$\bar{T}_{\text{su},f}$ —measured mean tank temperature at the end of the standby period which occurs at the minute prior to commencement of the first draw that follows the end of the first draw cluster

$\bar{T}^*_{del,i}$ —for storage-type water heaters, average outlet water temperature during the i th draw ($i = 1$ to n) of the first-hour rating test

$\bar{T}^*_{\text{max},i}$ —for storage-type water heaters, maximum outlet water temperature observed during the i th draw ($i = 1$ to n) of the first-hour rating test

$\bar{T}^*_{\text{min},i}$ —for storage-type water heaters, minimum outlet water temperature to terminate the i th draw ($i = 1$ to n) of the first-hour rating test

UA —standby loss coefficient of a storage-type water heater

UEF —uniform energy factor of a water heater

V_i —volume of water removed during the i th draw ($i = 1$ to N) of the 24-hour simulated-use test

V^*_i —volume of water removed during the i th draw ($i = 1$ to n) of the first-hour rating test

V_{10m} —for flow-activated water heaters, volume of water removed continuously during a 10-minute interval in the maximum GPM (L/min) rating test

V_{st} —measured storage volume of the storage tank

W_f —weight of storage tank when completely filled with water

W_t —tare weight of storage tank when completely empty of water

η_r —recovery efficiency

ρ —density of water

$\tau_{\text{stby},1}$ —elapsed time between the time the maximum mean tank temperature is observed after the first draw cluster and the minute prior to the start of the first draw following the first draw cluster

$\tau_{\text{stby},2}$ —overall time of standby periods when no water is withdrawn during the 24-hour simulated-use test

1.14. *Temperature controller* means a device that is available to the user to adjust the temperature of the water inside a storage-type water heater or the outlet water temperature.

1.15. *Uniform Energy Factor* means the measure of water heater overall efficiency.

2. Test Conditions.

2.1 *Installation Requirements*. Tests shall be performed with the water heater and instrumentation installed in accordance with section 4 of this appendix.

2.2 *Ambient Air Temperature*. The ambient air temperature shall be maintained between 65.0 °F and 70.0 °F (18.3 °C and 21.1 °C) on a continuous basis. For heat pump water heaters, the dry bulb temperature shall be maintained at 67.5 °F \pm 1 °F (19.7 °C \pm 0.6 °C) and the relative humidity shall be maintained at 50% \pm 2% throughout the test.

2.3 *Supply Water Temperature*. The temperature of the water being supplied to the water heater shall be maintained at 58 °F \pm 2 °F (14.4 °C \pm 1.1 °C) throughout the test.

2.4 *Outlet Water Temperature*. The temperature controllers of a storage-type

water heater shall be set so that water is delivered at a temperature of 125 °F ± 5 °F (51.7 °C ± 2.8 °C).

2.5 *Set Point Temperature.* The temperature controller of instantaneous water heaters shall be set to deliver water at a temperature of 125 °F ± 5 °F (51.7 °C ± 2.8 °C).

2.6 *Supply Water Pressure.* During the test when water is not being withdrawn, the supply pressure shall be maintained between 40 psig (275 kPa) and the maximum allowable pressure specified by the water heater manufacturer.

2.7 *Electrical and/or Fossil Fuel Supply.*

2.7.1 *Electrical.* Maintain the electrical supply voltage to within ±1% of the center of the voltage range specified by the water heater and/or heat pump manufacturer.

2.7.2 *Natural Gas.* Maintain the supply pressure in accordance with the manufacturer's specifications. If the supply pressure is not specified, maintain a supply pressure of 7–10 inches of water column (1.7–2.5 kPa). If the water heater is equipped with a gas appliance pressure regulator, the regulator outlet pressure shall be within ± 10% of the manufacturer's specified manifold pressure. For all tests, use natural gas having a heating value of approximately 1,025 Btu per standard cubic foot (38,190 kJ per standard cubic meter).

2.7.3 *Propane Gas.* Maintain the supply pressure in accordance with the manufacturer's specifications. If the supply pressure is not specified, maintain a supply pressure of 11–13 inches of water column (2.7–3.2 kPa). If the water heater is equipped

with a gas appliance pressure regulator, the regulator outlet pressure shall be within ± 10% of the manufacturer's specified manifold pressure. For all tests, use propane gas with a heating value of approximately 2,500 Btu per standard cubic foot (93,147 kJ per standard cubic meter).

2.7.4 *Fuel Oil Supply.* Maintain an uninterrupted supply of fuel oil. Use fuel oil having a heating value of approximately 138,700 Btu per gallon (38,660 kJ per liter).

3. Instrumentation

3.1 *Pressure Measurements.* Pressure-measuring instruments shall have an error no greater than the following values:

Item measured	Instrument accuracy	Instrument precision
Gas pressure	±0.1 inch of water column (±0.025 kPa)	±0.05 inch of water column (±0.012 kPa).
Atmospheric pressure	±0.1 inch of mercury column (±0.34 kPa)	±0.05 inch of mercury column (±0.17 kPa).
Water pressure	±1.0 pounds per square inch (±6.9 kPa)	±0.50 pounds per square inch (±3.45 kPa).

3.2 *Temperature Measurement*
 3.2.1 *Measurement.* Temperature measurements shall be made in accordance with the Standard Method for Temperature

Measurement, ASHRAE 41.1–1986 (incorporated by reference, see § 430.3).
 3.2.2 *Accuracy and Precision.* The accuracy and precision of the instruments,

including their associated readout devices, shall be within the following limits:

Item measured	Instrument accuracy	Instrument precision
Air dry bulb temperature	±0.2°F (±0.1°C)	±0.1°F (±0.06°C).
Air wet bulb temperature	±0.2°F (±0.1°C)	±0.1°F (±0.06°C).
Inlet and outlet water temperatures	±0.2°F (±0.1°C)	±0.1°F (±0.06°C).
Storage tank temperatures	±0.5°F (±0.3°C)	±0.25°F (±0.14°C).

3.2.3 *Scale Division.* In no case shall the smallest scale division of the instrument or instrument system exceed 2 times the specified precision.

3.2.4 *Temperature Difference*
 Temperature difference between the entering and leaving water may be measured with any of the following:

- a. A thermopile
- b. Calibrated resistance thermometers
- c. Precision thermometers
- d. Calibrated thermistors
- e. Calibrated thermocouples
- f. Quartz thermometers

3.2.5 *Thermopile Construction.* If a thermopile is used, it shall be made from calibrated thermocouple wire taken from a single spool. Extension wires to the recording device shall also be made from that same spool.

3.2.6 *Time Constant.* The time constant of the instruments used to measure the inlet and outlet water temperatures shall be no greater than 2 seconds.

3.3 *Liquid Flow Rate Measurement.* The accuracy of the liquid flow rate measurement, using the calibration if furnished, shall be equal to or less than ±1% of the measured value in mass units per unit time.

3.4 *Electrical Energy.* The electrical energy used shall be measured with an instrument and associated readout device that is accurate within ±0.5% of the reading.

3.5 *Fossil Fuels.* The quantity of fuel used by the water heater shall be measured with an instrument and associated readout device that is accurate within ±1% of the reading.

3.6 *Mass Measurements.* For mass measurements greater than or equal to 10 pounds (4.5 kg), a scale that is accurate within ±0.5% of the reading shall be used to make the measurement. For mass measurements less than 10 pounds (4.5 kg), the scale shall provide a measurement that is accurate within ±0.1 pound (0.045 kg).

3.7 *Heating Value.* The higher heating value of the natural gas, propane, or fuel oil shall be measured with an instrument and associated readout device that is accurate within ±1% of the reading. The heating values of natural gas and propane must be corrected from those reported at standard temperature and pressure conditions to provide the heating value at the temperature and pressure measured at the fuel meter.

3.8 *Time.* The elapsed time measurements shall be measured with an instrument that is accurate within ±0.5 seconds per hour.

3.9 *Volume.* Volume measurements shall be measured with an accuracy of ±2% of the total volume.

3.10 *Relative Humidity.* If a relative humidity (RH) transducer is used to measure the relative humidity of the surrounding air while testing heat pump water heaters, the relative humidity shall be measured with an accuracy of ±1.5% RH.

4. Installation

4.1 *Water Heater Mounting.* A water heater designed to be freestanding shall be placed on a ¾ inch (2 cm) thick plywood platform supported by three 2 x 4 inch (5 cm x 10 cm) runners. If the water heater is not approved for installation on combustible flooring, suitable non-combustible material shall be placed between the water heater and the platform. Counter-top water heaters shall be placed against a simulated wall section. Wall-mounted water heaters shall be supported on a simulated wall in accordance with the manufacturer-published installation instructions. When a simulated wall is used, the construction shall be 2 x 4 inch (5 cm x 10 cm) studs, faced with ¾ inch (2 cm) plywood. For heat pump water heaters not delivered as a single package, the units shall be connected in accordance with the manufacturer-published installation instructions and the overall system shall be placed on the above-described plywood platform. If installation instructions are not provided by the heat pump manufacturer, uninsulated 8 foot (2.4 m) long connecting hoses having an inside diameter of 5/8 inch (1.6 cm) shall be used to connect the storage tank and the heat pump water heater. The testing of the water heater shall occur in an area that is protected from drafts of more than 50 ft/min (0.25 m/s) from room ventilation registers, windows, or other external sources of air movement.

4.2 *Water Supply.* Connect the water heater to a water supply capable of delivering water at conditions as specified in sections 2.3 and 2.6 of this appendix.

4.3 *Water Inlet and Outlet Configuration.* For freestanding water heaters that are taller than 36 inches (91.4 cm), inlet and outlet piping connections shall be configured in a manner consistent with Figures 1 and 2 of section 6.4.6 of this appendix. Inlet and outlet piping connections for wall-mounted water heaters shall be consistent with Figure 3 of section 6.4.6 of this appendix. For freestanding water heaters that are 36 inches or less in height and not supplied as part of a counter-top enclosure (commonly referred to as an under-the-counter model), inlet and outlet piping shall be installed in a manner consistent with Figures 4, 5, or 6 of section 6.4.6 of this appendix. For water heaters that are supplied with a counter-top enclosure, inlet and outlet piping shall be made in a manner consistent with Figures 7a and 7b of section 6.4.6 of this appendix, respectively. The vertical piping noted in Figures 7a and 7b shall be located (whether inside the enclosure or along the outside in a recessed channel) in accordance with the manufacturer-published installation instructions.

All dimensions noted in Figures 1 through 7 of section 6.4.6 of this appendix must be achieved. All piping between the water heater and inlet and outlet temperature sensors, noted as T_{IN} and T_{OUT} in the figures, shall be Type "L" hard copper having the same diameter as the connections on the water heater. Unions may be used to facilitate installation and removal of the piping arrangements. Install a pressure gauge and diaphragm expansion tank in the supply water piping at a location upstream of the inlet temperature sensor. Install an appropriately rated pressure and temperature relief valve on all water heaters at the port specified by the manufacturer. Discharge piping for the relief valve must be non-metallic. If heat traps, piping insulation, or pressure relief valve insulation are supplied with the water heater, they must be installed for testing. Except when using a simulated wall, provide sufficient clearance such that none of the piping contacts other surfaces in the test room.

4.4 *Fuel and/or Electrical Power and Energy Consumption.* Install one or more instruments that measure, as appropriate, the quantity and rate of electrical energy and/or fossil fuel consumption in accordance with section 3 of this appendix.

4.5 *Internal Storage Tank Temperature Measurements.* For water heaters with rated storage volumes greater than or equal to 20 gallons, install six temperature measurement sensors inside the water heater tank with a vertical distance of at least 4 inches (100 mm) between successive sensors. For water heaters with rated storage volumes between 2 and 20 gallons, install three temperature measurement sensors inside the water heater tank. Position a temperature sensor at the vertical midpoint of each of the six equal volume nodes within a tank larger than 20 gallons or the three equal volume nodes within a tank between 2 and 20 gallons. Nodes designate the equal volumes used to

evenly partition the total volume of the tank. As much as is possible, the temperature sensor should be positioned away from any heating elements, anodic protective devices, tank walls, and flue pipe walls. If the tank cannot accommodate six temperature sensors and meet the installation requirements specified above, install the maximum number of sensors that comply with the installation requirements. Install the temperature sensors through: (1) The anodic device opening; (2) the relief valve opening; or (3) the hot water outlet. If installed through the relief valve opening or the hot water outlet, a tee fitting or outlet piping, as applicable, must be installed as close as possible to its original location. If the relief valve temperature sensor is relocated, and it no longer extends into the top of the tank, install a substitute relief valve that has a sensing element that can reach into the tank. If the hot water outlet includes a heat trap, install the heat trap on top of the tee fitting. Cover any added fittings with thermal insulation having an R value between 4 and 8 h-ft²·°F/Btu (0.7 and 1.4 m²·°C/W).

4.6 *Ambient Air Temperature Measurement.* Install an ambient air temperature sensor at the vertical mid-point of the water heater and approximately 2 feet (610 mm) from the surface of the water heater. Shield the sensor against radiation.

4.7 *Inlet and Outlet Water Temperature Measurements.* Install temperature sensors in the cold-water inlet pipe and hot-water outlet pipe as shown in Figures 1, 2, 3, 4, 5, 6, 7a, and 7b of section 6.4.6 of this appendix, as applicable.

4.8 *Flow Control.* Install a valve or valves to provide flow as specified in sections 5.3 and 5.4 of this appendix.

4.9 *Flue Requirements.*

4.9.1 *Gas-Fired Water Heaters.* Establish a natural draft in the following manner. For gas-fired water heaters with a vertically discharging draft hood outlet, connect to the draft hood outlet a 5-foot (1.5-meter) vertical vent pipe extension with a diameter equal to the largest flue collar size of the draft hood. For gas-fired water heaters with a horizontally discharging draft hood outlet, connect to the draft hood outlet a 90-degree elbow with a diameter equal to the largest flue collar size of the draft hood, connect a 5-foot (1.5-meter) length of vent pipe to that elbow, and orient the vent pipe to discharge vertically upward. Install direct-vent gas-fired water heaters with venting equipment specified in the manufacturer's instructions using the minimum vertical and horizontal lengths of vent pipe recommended by the manufacturer.

4.9.2 *Oil-Fired Water Heaters.* Establish a draft at the flue collar at the value specified in the manufacturer's instructions. Establish the draft by using a sufficient length of vent pipe connected to the water heater flue outlet, and directed vertically upward. For an oil-fired water heater with a horizontally discharging draft hood outlet, connect to the draft hood outlet a 90-degree elbow with a diameter equal to the largest flue collar size of the draft hood, connect to the elbow fitting a length of vent pipe sufficient to establish the draft, and orient the vent pipe to discharge vertically upward. Direct-vent oil-

fired water heaters should be installed with venting equipment as specified in the manufacturer's instructions, using the minimum vertical and horizontal lengths of vent pipe recommended by the manufacturer.

5. Test Procedures

5.1 *Operational Mode Selection.* For water heaters that allow for multiple user-selected operational modes, all procedures specified in this appendix shall be carried out with the water heater in the same operational mode (*i.e.*, only one mode). This operational mode shall be the default mode (or similarly-named, suggested mode for normal operation) as defined by the manufacturer in its product literature for giving selection guidance to the consumer. For heat pump water heaters, if a default mode is not defined in the product literature, each test shall be conducted under an operational mode in which both the heat pump and any electric resistance backup heating element(s) are activated by the unit's control scheme, and which can achieve the internal storage tank temperature specified in this test procedure; if multiple operational modes meet these criteria, the water heater shall be tested under the most energy-intensive mode. If no default mode is specified and the unit does not offer an operational mode that utilizes both the heat pump and the electric resistance backup heating element(s), the first-hour rating test and the simulated-use test shall be tested in heat-pump-only mode. For other types of water heaters where a default mode is not specified, test the unit in all modes and rate the unit using the results of the most energy-intensive mode.

5.2 *Water Heater Preparation.*

5.2.1 *Determination of Storage Tank Volume.* For water heaters with a rated storage volume greater than or equal to 2 gallons, determine the storage capacity, V_{st} , of the water heater under test, in gallons (liters), by subtracting the tare weight—measured while the tank is empty—from the gross weight of the storage tank when completely filled with water (with all air eliminated and line pressure applied as described in section 2.5 of this appendix) and dividing the resulting net weight by the density of water at the measured temperature.

5.2.2 *Setting the Outlet Discharge Temperature.*

5.2.2.1 *Flow-Activated Water Heaters, including certain instantaneous water heaters and certain storage-type water heaters.* Initiate normal operation of the water heater at the full input rating for electric water heaters and at the maximum firing rate specified by the manufacturer for gas or oil water heaters. Monitor the discharge water temperature and set to a value of 125 °F ± 5 °F (51.7 °C ± 2.8 °C) in accordance with the manufacturer's instructions. If the water heater is not capable of providing this discharge temperature when the flow rate is 1.7 gallons ± 0.25 gallons per minute (6.4 liters ± 0.95 liters per minute), then adjust the flow rate as necessary to achieve the specified discharge water temperature. Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the

maximum GPM test and the simulated-use test.

5.2.2.2 Storage-Type Water Heaters that Are Not Flow-Activated.

5.2.2.2.1 Tanks with a Single Temperature Controller.

5.2.2.2.1.1 Water Heaters with Rated Volumes Less than 20 Gallons. Starting with a tank at the supply water temperature, initiate normal operation of the water heater. After cut-out, initiate a draw from the water heater at a flow rate of 1.0 gallon \pm 0.25 gallons per minute (3.8 liters \pm 0.95 liters per minute) for 2 minutes. Starting 15 seconds after commencement of draw, record the outlet temperature at 15-second intervals until the end of the 2-minute period. Determine whether the maximum outlet temperature is within the range of 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C). If not, turn off the water heater, adjust the temperature controller, and then drain and refill the tank with supply water. Then, once again, initiate normal operation of the water heater, and repeat the 2-minute outlet temperature test following cut-out. Repeat this sequence until the maximum outlet temperature during the 2-minute test is within 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C). Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the first-hour rating test and the simulated-use test such that a second identical simulated-use test run immediately following the one specified in section 5.4 would result in average delivered water temperatures that are within the bounds specified in section 2.4 of this appendix.

5.2.2.2.1.2 Water Heaters with Rated Volumes Greater than or Equal to 20 Gallons. Starting with a tank at the supply water temperature, initiate normal operation of the water heater. After cut-out, initiate a draw from the water heater at a flow rate of 1.7 gallons \pm 0.25 gallons per minute (6.4 liters \pm 0.95 liters per minute) for 5 minutes. Starting 15 seconds after commencement of draw, record the outlet temperature at 15-second intervals until the end of the 5-minute period. Determine whether the maximum outlet temperature is within the range of 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C). If not, turn off the water heater, adjust the temperature controller, and then drain and refill the tank with supply water. Then, once again, initiate normal operation of the water heater, and repeat the 5-minute outlet temperature test following cut-out. Repeat this sequence until the maximum outlet temperature during the 5-minute test is within of 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C). Once the proper temperature control setting is achieved, the setting must remain fixed for the duration of the first-hour rating test and the simulated-use test such that a second identical simulated-use test run immediately following the one specified in section 5.4 would result in average delivered water temperatures that are within the bounds specified in section 2.4 of this appendix.

5.2.2.2.2 Tanks with Two or More Temperature Controllers. Verify the temperature controller set-point while removing water in accordance with the procedure set forth for the first-hour rating test in section 5.3.3 of this appendix. The

following criteria must be met to ensure that all temperature controllers are set to deliver water at 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C):

(a) At least 50 percent of the water drawn during the first draw of the first-hour rating test procedure shall be delivered at a temperature of 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C).

(b) No water is delivered above 130 °F (54.4 °C) during first-hour rating test.

(c) The delivery temperature measured 15 seconds after commencement of each draw begun prior to an elapsed time of 60 minutes from the start of the test shall be at 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C).

If these conditions are not met, turn off the water heater, adjust the temperature controllers, and then drain and refill the tank with supply water. Repeat the procedure described at the start of section 5.2.2.2.2 until the criteria for setting the temperature controllers is met.

If the conditions stated above are met, the data obtained during the process of verifying the temperature control set-points may be used in determining the first-hour rating provided that all other conditions and methods required in sections 2 and 5.2.4 in preparing the water heater were followed.

5.2.3 Power Input Determination. For all water heaters except electric types, initiate normal operation (as described in section 5.1) and determine the power input, P, to the main burners (including pilot light power, if any) after 15 minutes of operation. If the water heater is equipped with a gas appliance pressure regulator, the regulator outlet pressure shall be set within \pm 10% of that recommended by the manufacturer. For oil-fired water heaters, the fuel pump pressure shall be within \pm 10% of the manufacturer's specified pump pressure. Adjust all burners to achieve an hourly Btu (kJ) rating that is within \pm 2% of the value specified by the manufacturer. For an oil-fired water heater, adjust the burner to give a CO₂ reading recommended by the manufacturer and an hourly Btu (kJ) rating that is within \pm 2% of that specified by the manufacturer. Smoke in the flue may not exceed No. 1 smoke as measured by the procedure in ASTM D2156 (incorporated by reference, see § 430.3).

5.2.4 Soak-In Period for Water Heaters with Rated Storage Volumes Greater than or Equal to 2 Gallons. For storage-type water heaters and instantaneous water heaters having greater than 2 gallons (7.6 liters) of storage (including heat pump water heaters having greater than 2 gallons of storage), the water heater must sit filled with water and without any draws taking place for at least 12 hours after initially being energized so as to achieve the nominal temperature set-point within the tank and with the unit connected to a power source.

5.3 Delivery Capacity Tests.

5.3.1 General. For flow-activated water heaters, conduct the maximum GPM test, as described in section 5.3.2, *Maximum GPM Rating Test for Flow-Activated Water Heaters*, of this appendix. For all other water heaters, conduct the first-hour rating test as described in section 5.3.3 of this appendix.

5.3.2 Maximum GPM Rating Test for Flow-Activated Water Heaters. Establish normal water heater operation at the full

input rate for electric water heaters and at the maximum firing rate for gas or oil water heaters with the discharge water temperature set in accordance with section 5.2.2.1 of this appendix.

For this 10-minute test, either collect the withdrawn water for later measurement of the total mass removed or use a water meter to directly measure the water volume removed. Initiate water flow through the water heater and record the inlet and outlet water temperatures beginning 15 seconds after the start of the test and at subsequent 5-second intervals throughout the duration of the test. At the end of 10 minutes, turn off the water. Determine and record the mass of water collected, M_{10m}, in pounds (kilograms), or the volume of water, V_{10m}, in gallons (liters).

5.3.3 First-Hour Rating Test.

5.3.3.1 General. During hot water draws for water heaters with rated storage volumes greater than or equal to 20 gallons, remove water at a rate of 3.0 \pm 0.25 gallons per minute (11.4 \pm 0.95 liters per minute). During hot water draws for storage-type water heaters with rated storage volumes below 20 gallons, remove water at a rate of 1.0 \pm 0.25 gallon per minute (3.8 \pm 0.95 liters per minute). Collect the water in a container that is large enough to hold the volume removed during an individual draw and is suitable for weighing at the termination of each draw to determine the total volume of water withdrawn. As an alternative to collecting the water, a water meter may be used to directly measure the water volume(s) withdrawn.

5.3.3.2 Draw Initiation Criteria. Begin the first-hour rating test by starting a draw on the storage-type water heater. After completion of this first draw, initiate successive draws based on the following criteria. For gas-fired and oil-fired water heaters, initiate successive draws when the temperature controller acts to reduce the supply of fuel to the main burner. For electric water heaters having a single element or multiple elements that all operate simultaneously, initiate successive draws when the temperature controller acts to reduce the electrical input supplied to the element(s). For electric water heaters having two or more elements that do not operate simultaneously, initiate successive draws when the applicable temperature controller acts to reduce the electrical input to the energized element located vertically highest in the storage tank. For heat pump water heaters that do not use supplemental, resistive heating, initiate successive draws immediately after the electrical input to the compressor is reduced by the action of the water heater's temperature controller. For heat pump water heaters that use supplemental resistive heating, initiate successive draws immediately after the electrical input to the first of either the compressor or the vertically highest resistive element is reduced by the action of the applicable water heater temperature controller. This draw initiation criterion for heat pump water heaters that use supplemental resistive heating, however, shall only apply when the water located above the thermostat at cut-out is heated to 125 °F \pm 5 °F (51.7 °C \pm 2.8 °C). If this

criterion is not met, then the next draw should be initiated once the heat pump compressor cuts out.

5.3.3.3 *Test Sequence.* Establish normal water heater operation. If the water heater is not presently operating, initiate a draw. The draw may be terminated any time after cut-in occurs. After cut-out occurs (*i.e.*, all temperature controllers are satisfied), record the internal storage tank temperature at each sensor described in section 4.5 of this appendix every one minute, and determine the mean tank temperature by averaging the values from these sensors.

Initiate a draw after a maximum mean tank temperature (the maximum of the mean temperatures of the individual sensors) has been observed following a cut-out. Record the time when the draw is initiated and designate it as an elapsed time of zero ($\tau^* = 0$). (The superscript * is used to denote variables pertaining to the first-hour rating test). Record the outlet water temperature beginning 15 seconds after the draw is initiated and at 5-second intervals thereafter until the draw is terminated. Determine the maximum outlet temperature that occurs during this first draw and record it as $T^*_{max,1}$. For the duration of this first draw and all successive draws, in addition, monitor the inlet temperature to the water heater to ensure that the required $58 \text{ }^\circ\text{F} \pm 2 \text{ }^\circ\text{F}$ ($14.4 \text{ }^\circ\text{C} \pm 1.1 \text{ }^\circ\text{C}$) test condition is met. Terminate the hot water draw when the outlet temperature decreases to $T^*_{max,1} - 15 \text{ }^\circ\text{F}$ ($T^*_{max,1} - 8.3 \text{ }^\circ\text{C}$). (Note, if the outlet temperature does not decrease to $T^*_{max,1} - 15 \text{ }^\circ\text{F}$ ($T^*_{max,1} - 8.3 \text{ }^\circ\text{C}$) during the draw, then hot water would be drawn continuously for the duration of the

test. In this instance, the test would end when the temperature decreases to $T^*_{max,1} - 15 \text{ }^\circ\text{F}$ ($T^*_{max,1} - 8.3 \text{ }^\circ\text{C}$) after the electrical power and/or fuel supplied to the water heater is shut off, as described in the following paragraphs.) Record this temperature as $T^*_{min,1}$. Following draw termination, determine the average outlet water temperature and the mass or volume removed during this first draw and record them as $\bar{T}^*_{del,1}$ and M^*_1 or V^*_1 , respectively.

Initiate a second and, if applicable, successive draw(s) each time the applicable draw initiation criteria described in section 5.3.3.2 are satisfied. As required for the first draw, record the outlet water temperature 15 seconds after initiating each draw and at 5-second intervals thereafter until the draw is terminated. Determine the maximum outlet temperature that occurs during each draw and record it as $T^*_{max,i}$, where the subscript *i* refers to the draw number. Terminate each hot water draw when the outlet temperature decreases to $T^*_{max,i} - 15 \text{ }^\circ\text{F}$ ($T^*_{max,i} - 8.3 \text{ }^\circ\text{C}$). Record this temperature as $T^*_{min,i}$. Calculate and record the average outlet temperature and the mass or volume removed during each draw ($\bar{T}^*_{del,i}$ and M^*_i or V^*_i , respectively). Continue this sequence of draw and recovery until one hour after the start of the test, then shut off the electrical power and/or fuel supplied to the water heater.

If a draw is occurring at one hour from the start of the test, continue this draw until the outlet temperature decreases to $T^*_{max,n} - 15 \text{ }^\circ\text{F}$ ($T^*_{max,n} - 8.3 \text{ }^\circ\text{C}$), at which time the draw shall be immediately terminated. (The subscript *n* shall be used to denote

measurements associated with the final draw.) If a draw is not occurring one hour after the start of the test, initiate a final draw at one hour, regardless of whether the criteria described in section 5.3.3.2 of this appendix are satisfied. This draw shall proceed for a minimum of 30 seconds and shall terminate when the outlet temperature first indicates a value less than or equal to the cut-off temperature used for the previous draw ($T^*_{min,n-1}$). If an outlet temperature greater than $T^*_{min,n-1}$ is not measured within 30 seconds of initiation of the draw, zero additional credit shall be given towards first-hour rating (*i.e.*, $M^*_n = 0$ or $V^*_n = 0$) based on the final draw. After the final draw is terminated, calculate and record the average outlet temperature and the mass or volume removed during the final draw ($\bar{T}^*_{del,n}$ and M^*_n or V^*_n , respectively).

5.4 *24-Hour Simulated Use Test.*

5.4.1 *Selection of Draw Pattern.* The water heater will be tested under a draw profile that depends upon the first-hour rating obtained following the test prescribed in section 5.3.3 of this appendix, or the maximum GPM rating obtained following the test prescribed in section 5.3.2 of this appendix, whichever is applicable. For water heaters that have been tested according to the first-hour rating procedure, one of four different patterns shall be applied based on the measured first-hour rating, as shown in Table I of this section. For water heater that have been tested according to the maximum GPM rating procedure, one of four different patterns shall be applied based on the maximum GPM, as shown in Table II of this section.

TABLE I—DRAW PATTERN TO BE USED BASED ON FIRST-HOUR RATING

First-hour rating greater than or equal to:	... and first-hour rating less than:	Draw pattern to be used in simulated-use test
0 gallons	18 gallons	Very-Small-Usage (Table III.1). Low-Usage (Table III.2). Medium-Usage (Table III.3). High-Usage (Table III.4).
18 gallons	51 gallons	
51 gallons	75 gallons	
75 gallons	No upper limit	

TABLE II—DRAW PATTERN TO BE USED BASED ON MAXIMUM GPM RATING

Maximum GPM rating greater than or equal to:	and maximum GPM rating less than:	Draw pattern to be used in simulated-use test
0 gallons/minute	1.7 gallons/minute	Very-Small-Usage (Table III.1). Low-Usage (Table III.2). Medium-Usage (Table III.3). High-Usage (Table III.4).
1.7 gallons/minute	2.8 gallons/minute	
2.8 gallons/minute	4 gallons/minute	
4 gallons/minute	No upper limit	

The draw patterns are provided in Tables III.1 through III.4 in section 5.5 of this appendix. Use the appropriate draw pattern when conducting the test sequence provided in section 5.4.2 of this appendix for water heaters with rated storage volumes greater than or equal to 2 gallons or section 5.4.3 of this appendix for water heaters with rated storage volumes less than 2 gallons.

5.4.2 *Test Sequence for Water Heaters with Rated Storage Volumes Greater Than or Equal to 2 Gallons.* If the water heater is turned off, fill the water heater with supply

water and maintain supply water pressure as described in section 2.6 of this appendix. Turn on the water heater and associated heat pump unit, if present. If turned on in this fashion, the soak-in period described in section 5.2.4 of this appendix shall be implemented. If the water heater has undergone a first-hour rating test prior to conduct of the simulated-use test, allow the water heater to fully recover after completion of that test such that the main burner, heating elements, or heat pump compressor of the water heater are no longer raising the

temperature of the stored water. In all cases, the water heater shall sit idle for 1 hour prior to the start of the 24-hour test; during which time no water is drawn from the unit and there is no energy input to the main heating elements, heat pump compressor, and/or burners. At the end of this period, the 24-hour simulated-use test will begin.

At the start of the 24-hour test, record the mean tank temperature (\bar{T}_0), and the electrical and/or fuel measurement readings, as appropriate. Begin the 24-hour simulated use test by withdrawing the volume specified

in the appropriate table in section 5.5 of this appendix (*i.e.*, Table III.1, Table III.2, Table III.3, or Table III.4, depending on the first-hour rating or maximum GPM rating) for the first draw at the flow rate specified in the applicable table. Record the time when this first draw is initiated and assign it as the test elapsed time (τ) of zero (0). Record the average storage tank and ambient temperature every minute throughout the 24-hour simulated-use test. At the elapsed times specified in the applicable draw pattern table in section 5.5 of this appendix for a particular draw pattern, initiate additional draws pursuant to the draw pattern, removing the volume of hot water at the prescribed flow rate specified by the table. The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 1 GPM or 1.7 GPM is ± 0.1 gallons (± 0.4 liters). The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 3 GPM is ± 0.25 gallons (0.9 liters). The quantity of water withdrawn during the last draw shall be increased or decreased as necessary such that the total volume of water withdrawn equals the prescribed daily amount for that draw pattern ± 1.0 gallon (± 3.8 liters). If this adjustment to the volume drawn during the last draw results in no draw taking place, the test is considered invalid.

All draws during the 24-hour simulated-use test shall be made at the flow rates specified in the applicable draw pattern table in section 5.5 of this appendix, with a tolerance of ± 0.25 gallons per minute (± 0.9 liters per minute). Measurements of the inlet and outlet temperatures shall be made 5 seconds after the draw is initiated and at every subsequent 3-second interval throughout the duration of each draw. Calculate and record the mean of the hot water discharge temperature and the cold water inlet temperature for each draw $\bar{T}_{\text{del},i}$ and $\bar{T}_{\text{in},i}$. Determine and record the net mass or volume removed (M_i or V_i), as appropriate, after each draw.

At the end of the first recovery period following the first draw, which may extend beyond subsequent draws, record the maximum mean tank temperature observed after cut-out, $\bar{T}_{\text{max},1}$, and the energy consumed by an electric resistance, gas, or oil-fired water heater (including electrical energy), from the beginning of the test, Q_r . For heat pump water heaters, the total energy consumed during the first recovery by the heat pump (including compressor, fan, controls, pump, etc.) and, if applicable, by the resistive element(s) shall be recorded as Q_r .

The start of the portion of the test during which the standby loss coefficient is determined depends upon whether the unit has fully recovered from the first draw cluster. If a recovery is occurring at or within five minutes of the end of the final draw in the first draw cluster, as identified in the applicable draw pattern table in section 5.5 of this appendix, then the standby period starts when a maximum average tank temperature is observed starting five minutes after the end of the recovery period that

follows that draw. If a recovery does not occur at or within five minutes of the end of the final draw in the first draw cluster, as identified in the applicable draw pattern table in section 5.5 of this appendix, then the standby period starts five minutes after the end of that draw. Determine and record the total electrical energy and/or fossil fuel consumed from the beginning of the test to the start of the standby period, $Q_{\text{su},0}$.

In preparation for determining the energy consumed during standby, record the reading given on the electrical energy (watt-hour) meter, the gas meter, and/or the scale used to determine oil consumption, as appropriate. Record the mean tank temperature at the start of the standby period as $\bar{T}_{\text{su},0}$. At 1-minute intervals, record the mean tank temperature and the electric and/or fuel instrument readings until the next draw is initiated. Just prior to initiation of the next draw, record the mean tank temperature as $\bar{T}_{\text{su},f}$. If the water heater is undergoing recovery when the next draw is initiated, record the mean tank temperature $\bar{T}_{\text{su},f}$ at the minute prior to the start of the recovery. The time at which this value occurs is the end of the standby period. Determine the total electrical energy and/or fossil fuel energy consumption from the beginning of the test to this time and record as $Q_{\text{su},f}$. Record the time interval between the start of the standby period and the end of the standby period as $\tau_{\text{stby},1}$. Record the time during which water is not being withdrawn from the water heater during the entire 24-hour period as $\tau_{\text{stby},2}$.

In the event that the recovery period continues from the end of the last draw of the first draw cluster until the subsequent draw, the standby period will start after the end of the first recovery period after the last draw of the simulated-use test, when the temperature reaches the maximum average tank temperature, though no sooner than five minutes after the end of this recovery period. The standby period shall last eight hours, so testing will extend beyond the 24-hour duration of the simulated-use test. Determine and record the total electrical energy and/or fossil fuel consumed from the beginning of the simulated-use test to the start of the 8-hour standby period, $Q_{\text{su},0}$. In preparation for determining the energy consumed during standby, record the reading(s) given on the electrical energy (watt-hour) meter, the gas meter, and/or the scale used to determine oil consumption, as appropriate. Record the mean tank temperature at the start of the standby period as $\bar{T}_{\text{su},0}$. Record the mean tank temperature, the ambient temperature, and the electric and/or fuel instrument readings until the end of the 8 hour period. Record the mean tank temperature at the end of the 8 hour standby period as $\bar{T}_{\text{su},f}$. If the water heater is undergoing recovery at the end of the standby period, record the mean tank temperature $\bar{T}_{\text{su},f}$ at the minute prior to the start of the recovery, which will mark the end of the standby period. Determine the total electrical energy and/or fossil fuel energy consumption from the beginning of the test to the end of the standby period and record this value as $Q_{\text{su},f}$. Record the time interval between the start of the standby period and the end of the standby period as $\tau_{\text{stby},1}$.

Following the final draw of the prescribed draw pattern and subsequent recovery, allow

the water heater to remain in the standby mode until exactly 24 hours have elapsed since the start of the simulated-use test (*i.e.*, since $\tau = 0$). During the last hour of the simulated-use test, power to the main burner, heating element, or compressor shall be disabled. At 24 hours, record the reading given by the gas meter, oil meter, and/or the electrical energy meter as appropriate. Determine the fossil fuel and/or electrical energy consumed during the entire 24-hour simulated-use test and designate the quantity as Q .

5.4.3 Test Sequence for Water Heaters With Rated Storage Volume Less Than 2 Gallons.

Establish normal operation with the discharge water temperature at $125 \text{ }^\circ\text{F} \pm 5 \text{ }^\circ\text{F}$ ($51.7 \text{ }^\circ\text{C} \pm 2.8 \text{ }^\circ\text{C}$) and set the flow rate as determined in section 5.2 of this appendix. Prior to commencement of the 24-hour simulated-use test, the unit shall remain in an idle state in which controls are active but no water is drawn through the unit for a period of one hour. With no draw occurring, record the reading given by the gas meter and/or the electrical energy meter as appropriate. Begin the 24-hour simulated-use test by withdrawing the volume specified in Tables III.1 through III.4 of section 5.5 of this appendix for the first draw at the flow rate specified. Record the time when this first draw is initiated and designate it as an elapsed time, τ , of 0. At the elapsed times specified in Tables III.1 through III.4 for a particular draw pattern, initiate additional draws, removing the volume of hot water at the prescribed flow rate specified in Tables III.1 through III.4. The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate less than or equal to 1.7 GPM (6.4 L/min) is ± 0.1 gallons (± 0.4 liters). The maximum allowable deviation from the specified volume of water removed for any single draw taken at a nominal flow rate of 3 GPM (11.4 L/min) is ± 0.25 gallons (0.9 liters). The quantity of water drawn during the final draw shall be increased or decreased as necessary such that the total volume of water withdrawn equals the prescribed daily amount for that draw pattern ± 1.0 gallon (± 3.8 liters). If this adjustment to the volume drawn in the last draw results in no draw taking place, the test is considered invalid.

Measurements of the inlet and outlet water temperatures shall be made 5 seconds after the draw is initiated and at every 3-second interval thereafter throughout the duration of the draw. Calculate the mean of the hot water discharge temperature and the cold water inlet temperature for each draw. Record the mass of the withdrawn water or the water meter reading, as appropriate, after each draw. At the end of the recovery period following the first draw, determine and record the fossil fuel and/or electrical energy consumed, Q_r . Following the final draw and subsequent recovery, allow the water heater to remain in the standby mode until exactly 24 hours have elapsed since the start of the test (*i.e.*, since $\tau = 0$). At 24 hours, record the reading given by the gas meter, oil meter, and/or the electrical energy meter, as appropriate. Determine the fossil fuel and/or electrical energy consumed during the entire

24-hour simulated-use test and designate the quantity as Q.

5.5 *Draw Patterns.* The draw patterns to be imposed during 24-hour simulated-use tests are provided in Tables III.1 through III.4. Subject each water heater under test to

one of these draw patterns based on its first-hour rating or maximum GPM rating, as discussed in section 5.4.1 of this appendix. Each draw pattern specifies the elapsed time in hours and minutes during the 24-hour test when a draw is to commence, the total

volume of water in gallons (liters) that is to be removed during each draw, and the flow rate at which each draw is to be taken, in gallons (liters) per minute.

TABLE III.1—VERY-SMALL-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (L)]	Flow Rate ** [GPM (L/min)]
1*	0:00	2.0 (7.6)	1 (3.8)
2*	1:00	1.0 (3.8)	1 (3.8)
3*	1:05	0.5 (1.9)	1 (3.8)
4*	1:10	0.5 (1.9)	1 (3.8)
5*	1:15	0.5 (1.9)	1 (3.8)
6	8:00	1.0 (3.8)	1 (3.8)
7	8:15	2.0 (7.6)	1 (3.8)
8	9:00	1.5 (5.7)	1 (3.8)
9	9:15	1.0 (3.8)	1 (3.8)

Total Volume Drawn Per Day: 10 gallons (38 L)

* Denotes draws in first draw cluster.

** Should the water heater have a maximum GPM rating less than 1 GPM (3.8 L/min), then all draws shall be implemented at a flow rate equal to the rated maximum GPM.

TABLE III.2—LOW-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
1*	0:00	15.0 (56.8)	1.7 (6.4)
2*	0:30	2.0 (7.6)	1 (3.8)
3*	1:00	1.0 (3.8)	1 (3.8)
4	10:30	6.0 (22.7)	1.7 (6.4)
5	11:30	4.0 (15.1)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:15	2.0 (7.6)	1 (3.8)
10	16:45	2.0 (7.6)	1.7 (6.4)
11	17:00	3.0 (11.4)	1.7 (6.4)

Total Volume Drawn Per Day: 38 gallons (144 L)

* Denotes draws in first draw cluster.

TABLE III.3—MEDIUM-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
1*	0:00	15.0 (56.8)	1.7 (6.4)
2*	0:30	2.0 (7.6)	1 (3.8)
3*	1:40	9.0 (34.1)	1.7 (6.4)
4	10:30	9.0 (34.1)	1.7 (6.4)
5	11:30	5.0 (18.9)	1.7 (6.4)
6	12:00	1.0 (3.8)	1 (3.8)
7	12:45	1.0 (3.8)	1 (3.8)
8	12:50	1.0 (3.8)	1 (3.8)
9	16:00	1.0 (3.8)	1 (3.8)
10	16:15	2.0 (7.6)	1 (3.8)
11	16:45	2.0 (7.6)	1.7 (6.4)
12	17:00	7.0 (26.5)	1.7 (6.4)

Total Volume Drawn Per Day: 55 gallons (208 L)

* Denotes draws in first draw cluster.

TABLE III.4—HIGH-USAGE DRAW PATTERN

Draw No.	Time during test [hh:mm]	Volume [gallons (liters)]	Flow rate [GPM (L/min)]
1*	0:00	27.0 (102)	3 (11.4)
2*	0:30	2.0 (7.6)	1 (3.8)
3*	0:40	1.0 (3.8)	1 (3.8)
4*	1:40	9.0 (34.1)	1.7 (6.4)
5	10:30	15.0 (56.8)	3 (11.4)
6	11:30	5.0 (18.9)	1.7 (6.4)
7	12:00	1.0 (3.8)	1 (3.8)
8	12:45	1.0 (3.8)	1 (3.8)
9	12:50	1.0 (3.8)	1 (3.8)
10	16:00	2.0 (7.6)	1 (3.8)
11	16:15	2.0 (7.6)	1 (3.8)
12	16:30	2.0 (7.6)	1.7 (6.4)
13	16:45	2.0 (7.6)	1.7 (6.4)
14	17:00	14.0 (53.0)	3 (11.4)

Total Volume Drawn Per Day: 84 gallons (318 L)

* Denotes draws in first draw cluster.

6. Computations

6.1 *First-Hour Rating Computation.* For the case in which the final draw is initiated at or prior to one hour from the start of the test, the first-hour rating, F_{hr} , shall be computed using,

$$F_{hr} = \sum_{i=1}^n V_i^*$$

Where:

n = the number of draws that are completed during the first-hour rating test.
 V_i^* = the volume of water removed during the i th draw of the first-hour rating test, gal (L) or, if the mass of water is being measured,

$$V_i^* = \frac{M_i^*}{\rho}$$

Where:

$$F_{hr} = \sum_{i=1}^{n-1} V_i^* + V_n^* \left(\frac{\bar{T}_{del,n}^* - T_{min,n-1}^*}{\bar{T}_{del,n-1}^* - T_{min,n-1}^*} \right)$$

M_i^* = the mass of water removed during the i th draw of the first-hour rating test, lb (kg).
 ρ = the water density corresponding to the average outlet temperature measured during the i th draw, ($\bar{T}_{del,i}^*$), lb/gal (kg/L).

For the case in which a draw is not in progress at one hour from the start of the test and a final draw is imposed at the elapsed time of one hour, the first-hour rating shall be calculated using

where n and V_i^* are the same quantities as defined above, and
 V_n^* = the volume of water drawn during the n th (final) draw of the first-hour rating test, gal (L).
 $\bar{T}_{del,n-1}^*$ = the average water outlet temperature measured during the

$(n-1)$ th draw of the first-hour rating test, °F (°C).
 $\bar{T}_{del,n}^*$ = the average water outlet temperature measured during the n th (final) draw of the first-hour rating test, °F (°C).
 $T_{min,n-1}^*$ = the minimum water outlet temperature measured during the

$(n-1)$ th draw of the first-hour rating test, °F (°C).

6.2 *Maximum GPM (L/min) Rating Computation.* Compute the maximum GPM (L/min) rating, F_{max} , as:

$$F_{max} = \frac{M_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(\rho)(125^{\circ}\text{F} - 58^{\circ}\text{F})}$$

or,

$$F_{max} = \frac{M_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(\rho)(51.7^{\circ}\text{C} - 14.4^{\circ}\text{C})}$$

which may be expressed as:

$$F_{max} = \frac{M_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(\rho)(67^{\circ}\text{F})}$$

or,

$$F_{max} = \frac{M_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(\rho)(37.3^{\circ}\text{C})}$$

Where:

M_{10m} = the mass of water collected during the 10-minute test, lb (kg).

\bar{T}_{del} = the average delivery temperature, °F (°C).

\bar{T}_{in} = the average inlet temperature, °F (°C).

ρ = the density of water at the average delivery temperature, lb/gal (kg/L).

If a water meter is used, the maximum GPM (L/min) rating is computed as:

$$F_{max} = \frac{V_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(67^{\circ}\text{F})}$$

or,

$$F_{max} = \frac{V_{10m}(\bar{T}_{del} - \bar{T}_{in})}{10(37.3^{\circ}\text{C})}$$

Where:

V_{10m} = the volume of water measured during the 10-minute test, gal (L).

\bar{T}_{del} = as defined in this section.

\bar{T}_{in} = as defined in this section.

6.3 *Computations for Water Heaters with a Rated Storage Volume Greater Than or Equal to 2 Gallons.*

6.3.1 *Storage Tank Capacity.* The storage tank capacity, V_{st} , is computed as follows:

$$V_{st} = \frac{(W_f - W_t)}{\rho}$$

Where:

V_{st} = the storage capacity of the water heater, gal (L)

W_f = the weight of the storage tank when completely filled with water, lb (kg)

W_t = the (tare) weight of the storage tank when completely empty, lb (kg)

ρ = the density of water used to fill the tank measured at the temperature of the water, lb/gal (kg/L)

6.3.2 *Recovery Efficiency.* The recovery efficiency for gas, oil, and heat pump storage-type water heaters, η_r , is computed as:

$$\eta_r = \frac{M_1 C_{p1}(\bar{T}_{del,1} - \bar{T}_{in,1})}{Q_r} + \frac{V_{st} \rho_2 C_{p2}(\bar{T}_{max,1} - \bar{T}_0)}{Q_r}$$

Where:

M_1 = total mass removed from the start of the 24-hour simulated-use test to the end of the first recovery period, lb (kg), or, if the volume of water is being measured,

$M_1 = V_1 \rho_1$

Where:

V_1 = total volume removed from the start of the 24-hour simulated-use test to the end of the first recovery period, gal (L).

ρ_1 = density of the water at the water temperature measured at the point where the flow volume is measured, lb/gal (kg/L).

C_{p1} = specific heat of the withdrawn water evaluated at $(\bar{T}_{del,1} + \bar{T}_{in,1})/2$, Btu/(lb·°F) (kJ/(kg·°C))

$\bar{T}_{del,1}$ = average water outlet temperature measured during the draws from the start of the 24-hour simulated-use test to the end of the first recovery period, °F (°C).

$\bar{T}_{in,1}$ = average water inlet temperature measured during the draws from the start

of the 24-hour simulated-use test to the end of the first recovery period, °F (°C).
 V_{st} = as defined in section 6.3.1.
 ρ_2 = density of stored hot water evaluated at $(\bar{T}_{max,1} + \bar{T}_0)/2$, lb/gal (kg/L).
 C_{p2} = specific heat of stored hot water evaluated at $(\bar{T}_{max,1} + \bar{T}_0)/2$, Btu/(lb·°F) (kJ/(kg·°C)).
 $\bar{T}_{max,1}$ = maximum mean tank temperature recorded after cut-out following the first recovery of the 24-hour simulated use test, °F (°C).
 \bar{T}_0 = maximum mean tank temperature recorded prior to the first draw of the 24-hour simulated-use test, °F (°C).
 Q_r = the total energy used by the water heater between cut-out prior to the first draw

and cut-out following the first recovery period, including auxiliary energy such as pilot lights, pumps, fans, etc., Btu (kJ). (Electrical auxiliary energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu).

The recovery efficiency for electric water heaters with immersed heating elements is assumed to be 98 percent.

6.3.3 *Hourly Standby Losses.* The energy consumed as part of the standby loss test of the 24-hour simulated-use test, Q_{stby} , is computed as:

$$Q_{stby} = Q_{su,f} - Q_{su,0}$$

Where:

$$Q_{hr} = \frac{Q_{stby} - \frac{V_{st}\rho C_p(\bar{T}_{su,f} - \bar{T}_{su,0})}{\eta_r}}{\tau_{stby,1}}$$

Where:

Q_{hr} = the hourly standby energy losses of the water heater, Btu/h (kJ/h).
 V_{st} = as defined in section 6.3.1 of this appendix.
 ρ = density of stored hot water, $(\bar{T}_{su,f} + \bar{T}_{su,0})/2$, lb/gal (kg/L).
 C_p = specific heat of the stored water, $(\bar{T}_{su,f} + \bar{T}_{su,0})/2$, Btu/(lb·F), (kJ/(kg·K))
 $\bar{T}_{su,f}$ = the mean tank temperature observed at the minute prior to the start of the draw following the first draw cluster or the minute prior to a recovery occurring at the start of the draw following the end of the first draw cluster, °F (°C).
 $\bar{T}_{su,0}$ = the maximum mean tank temperature observed starting five minutes after the first recovery following the final draw of the first draw cluster, °F (°C).
 η_r = as defined in section 6.3.2 of this appendix.
 $\tau_{stby,1}$ = elapsed time between the time at which the maximum mean tank temperature is observed starting five minutes after recovery from the first draw cluster and the minute prior to the start of the first draw following the end of the first draw cluster of the 24-hour simulated-use test or the minute prior to a recovery occurring at the start of the draw following the end of the first draw cluster, h.

The standby heat loss coefficient for the tank is computed as:

$$UA = \frac{Q_{hr}}{\bar{T}_{t,stby,1} - \bar{T}_{a,stby,1}}$$

Where:

UA = standby heat loss coefficient of the storage tank, Btu/(h·°F), (kJ/(h·°C)).
 $\bar{T}_{t,stby,1}$ = overall average storage tank temperature between the time when the maximum mean tank temperature is observed starting five minutes after cut-out following the first draw cluster and the minute prior to commencement of the next draw following the first draw cluster of the 24-hour simulated-use test or the minute prior to a recovery occurring at the start of the draw following the end of the first draw cluster, °F (°C).
 $\bar{T}_{a,stby,1}$ = overall average ambient temperature between the time when the maximum mean tank temperature is observed starting five minutes after cut-out following the first draw cluster and the minute prior to commencement of the next draw following the first draw cluster of the 24-hour simulated-use test or the minute prior to a recovery occurring at the start of the draw following the end of the first draw cluster, °F (°C).

6.3.4 *Daily Water Heating Energy Consumption.* The daily water heating energy consumption, Q_d , is computed as:

$$Q_d = Q - \frac{V_{st}\rho C_p(\bar{T}_{24} - \bar{T}_0)}{\eta_r}$$

Where:

$Q = Q_r + Q_c$ = total energy used by the water heater during the 24-hour simulated-use test, including auxiliary energy such as

$Q_{su,0}$ = cumulative energy consumption of the water heater from the start of the 24-hour simulated-use test to the time at which the maximum mean tank temperature is attained starting five minutes after the recovery following the end of the first draw cluster, Btu (kJ).

$Q_{su,f}$ = cumulative energy consumption of the water heater from the start of the 24-hour simulated-use test to the minute prior to the start of the draw following the end of the first draw cluster or the minute prior to a recovery occurring at the start of the draw following the end of the first draw cluster, Btu (kJ).

The hourly standby energy losses are computed as:

pilot lights, pumps, fans, etc., Btu (kJ). (Electrical energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu.)
 Q_r = total fossil fuel energy used by the water heater during the 24-hour simulated-use test, Btu (kJ).
 Q_c = total electrical energy used during the 24-hour simulated-use test, Btu (kJ).
 V_{st} = as defined in section 6.3.1 of this appendix.
 ρ = density of the stored hot water, evaluated at $(\bar{T}_{24} + \bar{T}_0)/2$, lb/gal (kg/L)
 C_p = specific heat of the stored water, evaluated at $(\bar{T}_{24} + \bar{T}_0)/2$, Btu/(lb·F), (kJ/(kg·K)).
 \bar{T}_{24} = mean tank temperature at the end of the 24-hour simulated-use test, °F (°C).
 \bar{T}_0 = mean tank temperature at the beginning of the 24-hour simulated-use test, recorded one minute before the first draw is initiated, °F (°C).
 η_r = as defined in section 6.3.2 of this appendix.

6.3.5 *Adjusted Daily Water Heating Energy Consumption.* The adjusted daily water heating energy consumption, Q_{da} , takes into account that the ambient temperature may differ from the nominal value of 67.5 °F (19.7°C) due to the allowable variation in surrounding ambient temperature of 65 °F (18.3 °C) to 70 °C (21.1°C). The adjusted daily water heating energy consumption is computed as:

$$Q_{da} = Q_d - (67.5^\circ\text{F} - \bar{T}_{a, \text{stby}, 2})UA \tau_{\text{stby}, 2}$$

or,

$$Q_{da} = Q_d - (19.7^\circ\text{C} - \bar{T}_{a, \text{stby}, 2})UA \tau_{\text{stby}, 2}$$

Where:

Q_{da} = the adjusted daily water heating energy consumption, Btu (kJ).

Q_d = as defined in section 6.3.4 of this appendix.

$\bar{T}_{a, \text{stby}, 2}$ = the average ambient temperature during the total standby portion, $\tau_{\text{stby}, 2}$, of the 24-hour simulated-use test, °F (°C).

UA = as defined in section 6.3.3 of this appendix.

$\tau_{\text{stby}, 2}$ = the number of hours during the 24-hour simulated-use test when water is not being withdrawn from the water heater.

A modification is also needed to take into account that the temperature difference between the outlet water temperature and

supply water temperature may not be equivalent to the nominal value of 67 °F (125 °F–58 °F) or 37.3 °C (51.7 °C–14.4 °C).

The following equations adjust the experimental data to a nominal 67 °F (37.3 °C) temperature rise.

The energy used to heat water, Btu/day (kJ/day), may be computed as:

$$Q_{HW} = \sum_{i=1}^N \frac{M_i C_{pi} (\bar{T}_{del,i} - \bar{T}_{in,i})}{\eta_r}$$

Where:

N = total number of draws in the draw pattern.

M_i = the mass withdrawn for the i th draw ($i = 1$ to N), lb (kg)

C_{pi} = the specific heat of the water of the i th draw evaluated at $(\bar{T}_{del,i} + \bar{T}_{in,i})/2$, Btu/(lb·°F) (kJ/(kg·°C)).

$\bar{T}_{del,i}$ = the average water outlet temperature measured during the i th draw ($i = 1$ to N), °F (°C).

$\bar{T}_{in,i}$ = the average water inlet temperature measured during the i th draw ($i = 1$ to N), °F (°C).

η_r = as defined in section 6.3.2 of this appendix.

The energy required to heat the same quantity of water over a 67 °F (37.3 °C) temperature rise, Btu/day (kJ/day), is:

$$Q_{HW, 67^\circ\text{F}} = \sum_{i=1}^N \frac{M_i C_{pi} (125^\circ\text{F} - 58^\circ\text{F})}{\eta_r}$$

or

$$Q_{HW, 37.3^\circ\text{C}} = \sum_{i=1}^N \frac{M_i C_{pi} (51.7^\circ\text{C} - 14.4^\circ\text{C})}{\eta_r}$$

The difference between these two values is:

$$Q_{HWD} = Q_{HW, 67^\circ\text{F}} - Q_{HW}$$

$$\text{or } Q_{HWD} = Q_{HW, 37.3^\circ\text{C}} - Q_{HW}$$

This difference (Q_{HWD}) must be added to the adjusted daily water heating energy

consumption value. Thus, the daily energy consumption value which takes into account that the ambient temperature may not be 67.5 °F (19.7 °C) and that the temperature rise

across the storage tank may not be 67 °F (37.3 °C) is:

$$Q_{dm} = Q_{da} + Q_{HWD}$$

6.3.6 *Uniform Energy Factor*. The uniform energy factor, UEF, is computed as:

$$UEF = \sum_{i=1}^N \frac{M_i C_{pi} (125^\circ\text{F} - 58^\circ\text{F})}{Q_{dm}}$$

or,

$$UEF = \sum_{i=1}^N \frac{M_i C_{pi} (51.7^\circ\text{C} - 14.4^\circ\text{C})}{Q_{dm}}$$

Where:

N = total number of draws in the draw pattern

Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.3.5 of this appendix, Btu (kJ)

M_i = the mass withdrawn for the i th draw ($i = 1$ to N), lb (kg)

C_{pi} = the specific heat of the water of the i th draw, evaluated at $(125^\circ\text{F} + 58^\circ\text{F})/2 =$

91.5 °F ((51.7 °C + 14.4 °C)/2 = 33 °C),
Btu/(lb · °F) (kJ/(kg · °C)).

6.3.7 *Annual Energy Consumption.* The annual energy consumption for water heaters with rated storage volumes greater than or equal to 2 gallons is computed as:

$$E_{\text{annual}} = 365 \times \frac{(V)(\rho)(C_p)(67)}{UEF}$$

Where:

UEF = the uniform energy factor as computed in accordance with section 6.3.6 of this appendix

365 = the number of days in a year

V = the volume of hot water drawn during the applicable draw pattern, gallons
= 10 for the very-small-usage draw pattern
= 38 for the low-usage draw pattern
= 55 for the medium-usage draw pattern
= 84 for high-usage draw pattern

ρ = 8.24 lb_m/gallon, the density of water at 125 °F

C_p = 1.00 Btu/lb_m · °F, the specific heat of water at 91.5 °F

67 = the nominal temperature difference between inlet and outlet water

6.3.8 *Annual Electrical Energy Consumption.* The annual electrical energy consumption in kilowatt-hours for water heaters with rated storage volumes greater than or equal to 2 gallons, $E_{\text{annual,e}}$, is computed as:

$$E_{\text{annual,e}} = E_{\text{annual}} * (Q_e/Q) / 3412$$

Where:

E_{annual} = the annual energy consumption as determined in accordance with section 6.3.7, Btu (kJ)

Q_e = the daily electrical energy consumption as defined in section 6.3.4 of this appendix, Btu (kJ).

Q = total energy used by the water heater during the 24-hour simulated-use test in accordance with section 6.3.4 of this appendix, Btu (kJ)

3412 = conversion factor from Btu to kWh

6.3.9 *Annual Fossil Fuel Energy Consumption.* The annual fossil fuel energy consumption for water heaters with rated storage volumes greater than or equal to 2 gallons, $E_{\text{annual,f}}$, is computed as:

$$E_{\text{annual,f}} = E_{\text{annual}} - (E_{\text{annual,e}} \times 3412)$$

Where:

E_{annual} = the annual energy consumption as determined in accordance with section 6.3.7 of this appendix, Btu (kJ)

$E_{\text{annual,e}}$ = the annual electrical energy consumption as determined in accordance with section 6.3.8 of this appendix, kWh

3412 = conversion factor from kWh to Btu
6.4 *Computations for Water Heaters With Rated Storage Volume Less Than 2 Gallons.*

6.4.1 *Recovery Efficiency.* The recovery efficiency, η_r , is computed as:

$$\eta_r = \frac{M_1 C_{p1} (\bar{T}_{del,1} - \bar{T}_{in,1})}{Q_r}$$

Where:

M_1 = total mass removed during the first draw of the 24-hour simulated-use test, lb (kg), or, if the volume of water is being measured, $M_1 = V_1 \cdot \rho$

Where:

V_1 = total volume removed during the first draw of the 24-hour simulated-use test, gal (L).

ρ = density of the water at the water temperature measured at the point where the flow volume is measured, lb/gal (kg/L).

C_{p1} = specific heat of the withdrawn water, $(\bar{T}_{del,1} \mp \bar{T}_{in,1})/2$, Btu/(lb · °F) (kJ/(kg · °C)).

$\bar{T}_{del,1}$ = average water outlet temperature measured during the first draw of the 24-hour simulated-use test, °F (°C).

$\bar{T}_{in,1}$ = average water inlet temperature measured during the first draw of the 24-hour simulated-use test, °F (°C).

Q_r = the total energy used by the water heater between cut-out prior to the first draw and cut-out following the first draw, including auxiliary energy such as pilot lights, pumps, fans, etc., Btu (kJ). (Electrical auxiliary energy shall be converted to thermal energy using the following conversion: 1 kWh = 3412 Btu.)

6.4.2 Daily Water Heating Energy

Consumption. The daily water heating energy consumption, Q_d , is computed as:

$$Q_d = Q$$

Where:

Q = $Q_f + Q_e$ = the energy used by the water heater during the 24-hour simulated-use test.

Q_f = total fossil fuel energy used by the water heater during the 24-hour simulated-use test, Btu (kJ).

Q_e = total electrical energy used during the 24-hour simulated-use test, Btu (kJ).

A modification is needed to take into account that the temperature difference between the outlet water temperature and supply water temperature may not be equivalent to the nominal value of 67 °F (125 °F–58 °F) or 37.3 °C (51.7 °C–14.4 °C). The following equations adjust the experimental data to a nominal 67 °F (37.3 °C) temperature rise.

The energy used to heat water may be computed as:

$$Q_{HW} = \sum_{i=1}^N \frac{M_i C_{pi} (\bar{T}_{del,i} - \bar{T}_{in,i})}{\eta_r}$$

Where:

N = total number of draws in the draw pattern

M_i = the mass withdrawn for the i th draw ($i = 1$ to N), lb (kg)

C_{pi} = the specific heat of the water of the i th draw evaluated at $(\bar{T}_{del,i} + \bar{T}_{in,i})/2$, Btu/(lb · °F) (kJ/(kg · °C)).

$\bar{T}_{del,i}$ = the average water outlet temperature measured during the i th draw ($i = 1$ to N), °F (°C).

$\bar{T}_{in,i}$ = the average water inlet temperature measured during the i th draw ($i = 1$ to N), °F (°C).

η_r = as defined in section 6.4.1 of this appendix.

The energy required to heat the same quantity of water over a 67 °F (37.3 °C) temperature rise is:

$$Q_{HW,67°F} = \sum_{i=1}^N \frac{M_i C_{pi} (125°F - 58°F)}{\eta_r}$$

or

$$Q_{HW,37.3°C} = \sum_{i=1}^N \frac{M_i C_{pi} (51.7°C - 14.4°C)}{\eta_r}$$

Where:

N = total number of draws in the draw pattern
 M_i = the mass withdrawn during the *i*th draw, lb (kg)
 C_{pi} = the specific heat of water of the *i*th draw, Btu/(lb · °F) (kJ/(kg · °C))
 η_r = as defined in section 6.4.1 of this appendix.

The difference between these two values is:

$$Q_{HWD} = Q_{HW,67°F} - Q_{HW}$$

OR

$$Q_{HWD} = Q_{HW,37.3°C} - Q_{HW}$$

This difference (Q_{HWD}) must be added to the daily water heating energy consumption value. Thus, the daily energy consumption value, which takes into account that the temperature rise across the water heater may not be 67 °F (37.3 °C), is:

$$Q_{dm} = Q_d + Q_{HWD}$$

6.4.3 *Uniform Energy Factor*. The uniform energy factor, UEF, is computed as:

$$UEF = \sum_{i=1}^N \frac{M_i C_{pi} (125°F - 58°F)}{Q_{dm}}$$

or,

$$UEF = \sum_{i=1}^N \frac{M_i C_{pi} (51.7°C - 14.4°C)}{Q_{dm}}$$

Where:

N = total number of draws in the draw pattern
 Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.4.2 of this appendix, Btu (kJ)
 M_i = the mass withdrawn for the *i*th draw (i = 1 to N), lb (kg)
 C_{pi} = the specific heat of the water at the *i*th draw, evaluated at (125 °F + 58 °F)/2 = 91.5 °F ((51.7 °C + 14.4 °C)/2 = 33.1 °C), Btu/(lb · °F) (kJ/(kg · °C)).

6.4.4 *Annual Energy Consumption*. The annual energy consumption for water heaters with rated storage volumes less than 2 gallons, E_{annual}, is computed as:

$$E_{annual} = 365 \times \frac{(V)(\rho)(C_P)(67)}{UEF}$$

Where:

UEF = the uniform energy factor as computed in accordance with section 6.4.3 of this appendix
 365 = the number of days in a year.

V = the volume of hot water drawn during the applicable draw pattern, gallons
 = 10 for the very-small-usage draw pattern
 = 38 for the low-usage draw pattern
 = 55 for the medium-usage draw pattern
 = 84 for high-usage draw pattern
 ρ = 8.24 lb_m/gallon, the density of water at 125 °F
 C_p = 1.00 Btu/lb_m °F, the specific heat of water at 91.5 °F
 67 = the nominal temperature difference between inlet and outlet water

6.4.5 *Annual Electrical Energy Consumption*. The annual electrical energy consumption in kilowatt-hours for water heaters with rated storage volumes less than 2 gallons, E_{annual, e}, is computed as:

$$E_{annual,e} = E_{annual} * (Q_e/Q) / 3412$$

Where:

Q_e = the daily electrical energy consumption as defined in section 6.4.2 of this appendix, Btu (kJ)
 E_{annual} = the annual energy consumption as determined in accordance with section 6.4.4 of this appendix, Btu (kJ)

Q = total energy used by the water heater during the 24-hour simulated-use test in accordance with section 6.4.2 of this appendix, Btu (kJ)

Q_{dm} = the modified daily water heating energy consumption as computed in accordance with section 6.4.2 of this appendix, Btu (kJ)

3412 = conversion factor from Btu to kWh

6.4.6 *Annual Fossil Fuel Energy Consumption*. The annual fossil fuel energy consumption for water heaters with rated storage volumes less than 2 gallons, E_{annual, f}, is computed as:

$$E_{annual,f} = E_{annual} - (E_{annual,e} \times 3412)$$

Where:

E_{annual, e} = the annual electrical energy consumption as defined in section 6.4.5 of this appendix, kWh.
 E_{annual} = the annual energy consumption as defined in section 6.4.4 of this appendix, Btu (kJ)
 3412 = conversion factor from kWh to Btu

■ 11. Section 430.32 is amended by revising paragraph (d) to read as follows:

§ 430.32 Energy and water conservation standards and their compliance dates.

* * * * *

(d) *Water heaters.* The energy factor of water heaters shall not be less than the following for products manufactured on or after the indicated dates.

Product class	Storage volume	Energy factor as of January 20, 2004	Energy factor as of April 16, 2015
Gas-fired Storage Water Heater.	≥20 gallons and ≤100 gallons.	0.67 – (0.0019 × Rated Storage Volume in gallons).	For tanks with a Rated Storage Volume at or below 55 gallons: EF = 0.675 – (0.0015 × Rated Storage Volume in gallons). For tanks with a Rated Storage Volume above 55 gallons: EF = 0.8012 – (0.00078 × Rated Storage Volume in gallons).

Product class	Storage volume	Energy factor as of January 20, 2004	Energy factor as of April 16, 2015
Oil-fired Storage Water Heater.	≤50 gallons	0.59 – (0.0019 × Rated Storage Volume in gallons).	EF = 0.68 – (0.0019 × Rated Storage Volume in gallons).
Electric Storage Water Heater.	≥20 gallons and ≤120 gallons.	0.97 – (0.00132 × Rated Storage Volume in gallons).	For tanks with a Rated Storage Volume at or below 55 gallons: EF = 0.960 – (0.0003 × Rated Storage Volume in gallons). For tanks with a Rated Storage Volume above 55 gallons: EF = 2.057 – (0.00113 × Rated Storage Volume in gallons).
Tabletop Water Heater	≥20 gallons and ≤120 gallons.	0.93 – (0.00132 × Rated Storage Volume in gallons).	EF = 0.93 – (0.00132 × Rated Storage Volume in gallons).
Instantaneous Gas-fired Water Heater.	<2 gallons	0.62 – (0.0019 × Rated Storage Volume in gallons).	EF = 0.82 – (0.0019 × Rated Storage Volume in gallons).
Instantaneous Electric Water Heater.	<2 gallons	0.93 – (0.00132 × Rated Storage Volume in gallons).	EF = 0.93 – (0.00132 × Rated Storage Volume in gallons).

Note: The Rated Storage Volume equals the water storage capacity of a water heater, in gallons, as certified by the manufacturer.

Exclusions: The energy conservation standards shown in this paragraph do not apply to the following types of water heaters: gas-fired, oil-fired, and electric water heaters at or above 2 gallons storage volume and below 20 gallons storage volume; gas-fired water heaters above 100 gallons storage volume; oil-fired water heaters above 50 gallons storage volume; electric water heaters above 120 gallons storage volume; gas-fired instantaneous water heaters at or below 50,000 Btu/h.

* * * * *

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 12. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317.

■ 13. Section 431.102 is amended by adding the definition of “Residential-duty commercial water heater” in alphabetical order to read as follows:

§ 431.102 Definitions concerning commercial water heaters, hot water supply boilers, and unfired hot water storage tanks.

* * * * *

Residential-duty commercial water heater means any gas-fired, electric, or oil storage or instantaneous commercial water heater that meets the following conditions:

(1) For models requiring electricity, uses single-phase external power supply;

(2) Is not designed to provide outlet hot water at temperatures greater than 180 °F; and

(3) Does not meet any of the following criteria:

Water heater type	Indicator of non-residential application
Gas-fired Storage	Rated input >105 kBtu/h; Rated storage volume >120 gallons.
Oil-fired Storage	Rated input >140 kBtu/h; Rated storage volume >120 gallons.
Electric Storage	Rated input >12 kW; Rated storage volume >120 gallons.
Heat Pump with Storage	Rated input >12 kW; Rated current >24 A at a rated voltage of not greater than 250 V; Rated storage volume >120 gallons.
Gas-fired Instantaneous	Rated input >200 kBtu/h; Rated storage volume >2 gallons.
Electric Instantaneous	Rated input >58.6 kW; Rated storage volume >2 gallons.
Oil-fired Instantaneous	Rated input >210 kBtu/h; Rated storage volume >2 gallons.

* * * * *

■ 14. In § 431.106, paragraph (b), Table 2, is revised to read as follows:

§ 431.106 Uniform test method for the measurement of energy efficiency of commercial water heaters and hot water supply boilers (other than commercial heat pump water heaters).

* * * * *

(b) * * *

TABLE 2 TO § 431.106—TEST PROCEDURES FOR COMMERCIAL WATER HEATERS AND HOT WATER SUPPLY BOILERS [Other Than Commercial Heat Pump Water Heaters]

Equipment type	Energy efficiency descriptor	Test procedure	Test procedure required for compliance on and after	With these additional stipulations
Residential-Duty Commercial Water Heater.	Uniform Energy Factor.	10 CFR Part 430, Subpart B, Appendix E.	December 31, 2015***	None.

TABLE 2 TO § 431.106—TEST PROCEDURES FOR COMMERCIAL WATER HEATERS AND HOT WATER SUPPLY BOILERS—
Continued

[Other Than Commercial Heat Pump Water Heaters]

Equipment type	Energy efficiency descriptor	Test procedure	Test procedure required for compliance on and after	With these additional stipulations
Gas-fired Storage and Instantaneous Water Heaters and Hot Water Supply Boilers*.	Thermal Efficiency	Use test set-up, equipment, and procedures in subsection labeled "Method of Test" of ANSI Z21.10.3–2011**, Exhibit G1.	May 13, 2013	A. For all products, the duration of the standby loss test shall be until whichever of the following occurs first after you begin to measure the fuel and/or electric consumption: (1) The first cut-out after 24 hours or (2) 48 hours, if the water heater is not in the heating mode at that time. B. For oil and gas products, the standby loss in Btu per hour must be calculated as follows: $SL \text{ (Btu per hour)} = S \text{ (\% per hour)} \times 8.25 \text{ (Btu/gal-F)} \times \text{Measured Volume (gal)} \times 70 \text{ (degrees F)}$.
	Standby Loss	Use test set-up, equipment, and procedures in subsection labeled "Method of Test" of ANSI Z21.10.3–2011**, Exhibit G2.	May 13, 2013	
Oil-fired Storage and Instantaneous Water Heaters and Hot Water Supply Boilers*.	Thermal Efficiency	ANSI Z21.10.3–2011**, Exhibit G1. Use test set-up, equipment, and procedures in subsection labeled "Method of Test" of ANSI Z21.10.3–2011**, Exhibit G2.	May 13, 2013	C. For oil-fired products, apply the following in conducting the thermal efficiency and standby loss tests: (1) Venting Requirements—Connect a vertical length of flue pipe to the flue gas outlet of sufficient height so as to meet the minimum draft specified by the manufacturer. (2) Oil Supply—Adjust the burner rate so that: (a) The hourly Btu input rate lies within ±2 percent of the manufacturer's specified input rate, (b) the CO ₂ reading shows the value specified by the manufacturer, (c) smoke in the flue does not exceed No. 1 smoke as measured by the procedure in ASTM–D2156–80 (reference for guidance only, see §431.104), and (d) fuel pump pressure lies within ±10 percent of manufacturer's specifications. D. For electric products, apply the following in conducting the standby loss test: (1) Assume that the thermal efficiency (Et) of electric water heaters with immersed heating elements is 98 percent. (2) Maintain the electrical supply voltage to within ±5 percent of the center of the voltage range specified on the water heater nameplate. (3) If the set up includes multiple adjustable thermostats, set the highest one first to yield a maximum water temperature in the specified range as measured by the topmost tank thermocouple. Then set the lower thermostat(s) to yield a maximum mean tank temperature within the specified range. E. Install water-tube water heaters as shown in Figure 2, "Arrangement for Testing Water-tube Type Instantaneous and Circulating Water Heaters."
	Standby Loss		May 13, 2013	
Electric Storage and Instantaneous Water Heaters.	Standby Loss	Use test set-up, equipment, and procedures in subsection labeled "Method of Test" of ANSI Z21.10.3–2011**, Exhibit G2.	May 13, 2013	
			May 13, 2013	

* As to hot water supply boilers with a capacity of less than 10 gallons, these test methods become mandatory on October 21, 2005. Prior to that time, you may use for these products either (1) these test methods if you rate the product for thermal efficiency, or (2) the test methods in subpart E if you rate the product for combustion efficiency as a commercial packaged boiler.

** Incorporated by reference, see § 431.105.

*** Because the statute permits use of a conversion factor until the later of December 31, 2015 or one year after publication of a conversion factor final rule, DOE may amend the mandatory compliance date for use of this amended test procedure, as necessary.

■ 15. Section 431.107 is added to read as follows:

§ 431.107 Uniform test method for the measurement of energy efficiency of commercial heat pump water heaters.

Department of Transportation

Pipeline and Hazardous Materials Safety Administration

49 CFR Parts 171, 172, 173, et al.

Hazardous Materials: Compatibility With the Regulations of the International Atomic Energy Agency (RRR); Final Rule

DEPARTMENT OF TRANSPORTATION**Pipeline and Hazardous Materials Safety Administration****49 CFR Parts 171, 172, 173, 174, 175, 176, 177 and 178****[Docket No. PHMSA–2009–0063 (HM–250)]****RIN 2137–AE38****Hazardous Materials: Compatibility With the Regulations of the International Atomic Energy Agency (RRR)****AGENCY:** Pipeline and Hazardous Materials Safety Administration (PHMSA), Department of Transportation (DOT).**ACTION:** Final rule.

SUMMARY: PHMSA, in coordination with the Nuclear Regulatory Commission (NRC), is amending requirements in the Hazardous Materials Regulations (HMR) governing the transportation of Class 7 (radioactive) materials based on recent changes contained in the International Atomic Energy Agency (IAEA) publication “Regulations for the Safe Transport of Radioactive Material, 2009 Edition, IAEA Safety Standards Series No. TS–R–1.” The purposes of this rulemaking are to harmonize requirements of the HMR with international standards for the transportation of Class 7 (radioactive) materials and update, clarify, correct, or provide relief from certain regulatory requirements applicable to the transportation of Class 7 (radioactive) materials.

DATES: *Effective date:* October 1, 2014.*Voluntary compliance date:* PHMSA is authorizing voluntary compliance beginning July 11, 2014.*Delayed compliance date:* Unless otherwise specified, compliance with the amendments adopted in this final rule is required beginning July 13, 2015.*Incorporation by reference date:* The incorporation by reference of certain publications listed in this rule is approved by the Director of the Federal Register as of October 1, 2014.**FOR FURTHER INFORMATION CONTACT:** Steven Webb, Standards and Rulemaking Division, telephone (202) 366–8553, or Michael Conroy, Engineering and Research Division, telephone (202) 366–4545, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 1200 New Jersey Avenue SE., 2nd Floor, Washington, DC, 20590–0001.**SUPPLEMENTARY INFORMATION:**

I. Executive Summary

In this final rule, PHMSA is amending the Hazardous Materials Regulations (HMR; 49 CFR parts 171–180) to incorporate changes adopted in the 2009 Edition of the IAEA Safety Standards publication titled “Regulations for the Safe Transport of Radioactive Material, 2009 Edition, Safety Requirements, No. TS–R–1” (hereinafter referred to as “TS–R–1.”)¹ Additionally, PHMSA is making other changes to amend or clarify the requirements for transport of radioactive materials. These changes will help ensure that the classification, packaging requirements, and hazard communication requirements for shipments of radioactive materials provide the requisite level of public safety and are consistent with those employed throughout the world.

The harmonization of domestic and international standards for hazardous materials transportation enhances safety by creating a uniform framework for compliance. Harmonization also facilitates international trade by minimizing the costs and other burdens of complying with multiple or inconsistent safety requirements and avoiding hindrances to international shipments. Harmonization has become increasingly important as the volume of hazardous materials transported in international commerce grows.

Accordingly, federal law and policy strongly favor the harmonization of domestic and international standards for

¹ A copy of the 2009 Edition of TS–R–1 may be obtained from the U.S. distributors, Bernan, 15200 NBN Way, P.O. Box 191, Blue Ridge Summit, PA 17214, telephone 800–865–3457, email: customercare@bernan.com, or Renouf Publishing Company Ltd., 812 Proctor Ave., Ogdensburg, NY 13669, telephone: 1–888–551–7470, email: orders@renoufbooks.com. An electronic copy of TS–R–1 has been placed in the docket of this rulemaking and may also be found at the following IAEA Web site: http://www-pub.iaea.org/MTCD/publications/PDF/Pub1384_web.pdf.

hazardous materials transportation. The Federal hazardous materials transportation law (Federal hazmat law; 49 U.S.C. 5101 *et seq.*) directs PHMSA to participate in relevant international standard-setting bodies and encourages DOT to align the HMR with international transport standards to the extent practicable, while recognizing that deviations may be appropriate, at times in the public interest (see 49 U.S.C. 5120). Under this authority, PHMSA actively participates in relevant international standard-setting bodies and promotes the adoption of standards consistent with the high safety standards set by the HMR. PHMSA’s continued leadership in maintaining consistency with international regulations and enhances the hazardous materials safety program.

II. Background

Under their respective statutory authorities, DOT and the NRC jointly regulate the transportation of radioactive materials to, from, and within the United States. In accordance with their July 2, 1979, Memorandum of Understanding (a copy of which has been placed in the docket of this rulemaking) (44 FR 38690):

1. DOT regulates both shippers and carriers with respect to:

- A. Packaging requirements;
- B. Communication requirements for:
 - Shipping paper contents,
 - Package labeling and marking requirements, and
 - Vehicle placarding requirements;
- C. Training and emergency response requirements; and
- D. Highway routing requirements.²

2. NRC requires its licensees to satisfy requirements to protect public health and safety and to assure the common defense and security, and:

A. Certifies Type B and fissile material package designs and approves package quality assurance programs for its licensees;

B. Provides technical support to PHMSA and works with PHMSA to ensure consistency with respect to the transportation of Class 7 (radioactive) materials; and

C. Conducts inspections of licensees and an enforcement program within its jurisdiction to assure compliance with its requirements.

Since 1968, PHMSA and the NRC (and their predecessor agencies) have, to the extent practicable, harmonized their

² Within DOT, PHMSA is currently delegated the authority to carry out the functions assigned to DOT, except for highway routing requirements which are set forth in regulations of the Federal Motor Carrier Safety Administration. 49 CFR part 397, subpart D.

respective regulations with international regulations of the IAEA in:

- Safety Series No. 6, Regulations for the Safe Transport of Radioactive Material, as published in 1961 and revised in 1964 and 1967. Amendments to the HMR were adopted in a final rule published on October 4, 1968 in Docket HM-2 (33 FR 14918).

- The major updates of Safety Series No. 6 in 1973 and 1985. See the final rules published on March 10, 1983 in Docket HM-169 (48 FR 10218) and September 28, 1995, in Docket HM-169A (60 FR 50291).

- The 1996 major revision to the Safety Series No. 6, renamed "Regulations for the Safe Transport of Radioactive Material, 1996 Edition, No. ST-1" issued by the IAEA in 1996 and republished in 2000 to include minor editorial changes at which time the previous title was changed to "Regulations for the Safe Transport of Radioactive Material, 1996 Edition, No. TS-R-1 (ST-1, Revised)." See the final rule published on January 26, 2004, in Docket HM-230 (69 FR 3632).

Since then, the IAEA has published amendments and revised editions of TS-R-1 in 2003, 2005, and 2009.³ PHMSA published a notice of proposed rulemaking (NPRM) on August 12, 2011 (76 FR 50332) that proposed to amend the HMR to maintain alignment with the 2009 Edition of TS-R-1, which incorporates all of the changes made to TS-R-1 in the 2003 amendments, the 2005 Edition, as well as other revisions. In this final rule, PHMSA is adopting the proposal with some changes. In addition to changes to harmonize with TS-R-1, PHMSA is enacting regulatory amendments identified through internal regulatory review processes to update, clarify, correct, or provide relief from certain regulatory requirements applicable to the transportation of Class 7 (radioactive) materials. Notable amendments to the HMR in this final rule include the following:

- Revise paragraph § 173.25(a)(4) to adopt the new TS-R-1 requirement for the marking of all overpacks of Class 7 (radioactive) packages with the word "OVERPACK."

- Revise §§ 172.203(d)(3) and 172.403(g) to clarify that the total activity indicated on the shipping paper and label must be the maximum activity during transportation.

- Revise Table 1 in § 172.504 to additionally require conveyances carrying unpackaged LSA-I material or SCO-I, all conveyances required by

§§ 173.427, 173.441, and 173.457 to operate under exclusive use conditions, and all closed vehicles used in accordance with § 173.443(d) to be placarded. This change is a result of internal PHMSA review.

- Update definitions in § 173.403 for contamination, criticality safety index (CSI) for conveyances, fissile material, LSA, and radiation level. These changes are proposed primarily to align with definitions in the TS-R-1, and the change to the definition of "criticality safety index" is made to align with the NRC definition.

- Extend the retention period for Type A, Type IP-2, and Type IP-3 package documentation from one year to two years, to coincide with the minimum retention period currently required for shipping papers. PHMSA is also including more detailed language describing the kinds of information required to be included as part of the Type A package documentation. This change is being made based on internal PHMSA review of existing regulations, and is intended to ensure proper testing and preparation of these packages prior to being offered for transportation.

- Require that any conveyance, overpack, freight container, tank, or intermediate bulk container involved in an exclusive use shipment under § 173.427 or § 173.443(b) be surveyed with appropriate radiation detection instrumentation after each such shipment, and not be permitted to be used for another such exclusive use shipment until the removable surface contamination meets package contamination limits and the radiation dose rate at each accessible surface is no greater than 0.005 mSv/h (0.5 mrem/h). These changes are a result of internal PHMSA review.

- Update matter incorporated by reference to align with updated references in the TS-R-1 in § 171.7 and applicable sections.

- Clarify labeling requirements for radioactive shipments with subsidiary hazards in § 172.402. This change is a result of internal PHMSA review.

- Require that, when it is evident that a package of radioactive material or conveyance carrying unpackaged radioactive material is leaking or suspected to have leaked, access to the package or conveyance must be restricted and, as soon as possible, the extent of contamination and the resultant radiation level of the package or conveyance must be assessed in § 173.443. This will more closely align with the requirements in TS-R-1.

As in PHMSA's past rulemakings to incorporate updates of the IAEA regulations into the HMR, PHMSA has

worked in close cooperation with the NRC in the development of this rulemaking. The NRC published a parallel NPRM on May 16, 2013 (78 FR 28988). PHMSA anticipates that NRC will publish a parallel final rule at a future date. Since the proposed rules will be published separately, there is a risk of differences in overlapping proposals that may affect the compatibility of the NRC and PHMSA regulations. PHMSA and the NRC have coordinated the development and publication schedules for the final rules. Several actions have been taken to mitigate possible problems that may arise from such asynchronous publication, including but not limited to: A delayed mandatory compliance date, enforcement guidance/discretion, and deferred consideration of a proposed change to § 173.453 regarding a fissile material exception for uranium enriched in uranium-235. PHMSA believes these actions, most specifically the delayed mandatory compliance date, will allow the NRC to complete its rulemaking cycle and to publish a final rule with an effective date in line with our effective date. This final rule addresses only the areas for which DOT has jurisdiction as defined in the MOU with NRC.

In response to the 2011 NPRM we received comments from the following persons, companies, associations and other entities:

- Alaska Inter-Tribal Council
- B&W Y-12 L.L.C. (B&W)
- Energy Solutions
- J. L. Shepherd & Associates (J. L. Shepherd)
- Lawrence Laude
- Nuclear Information and Resource Service (NIRS) & Citizens for Alternatives to Chemical Contamination (CACC) (NIRS & CACC)
- QSA Global Inc. (QSA Global)
- Regulatory Resources
- The Pennsylvania State University (Penn State)
- U.S. Army Corps of Engineers (USACE)
- United States Enrichment Corporation (USEC)
- Veolia ES Technical Solutions, L.L.C. (Veolia)

These comments are discussed in the section-by-section portion of this rule.⁴ In considering each proposal in the NPRM and each comment, we reviewed and evaluated each amendment on its own merit, on the basis of its overall impact on transportation safety, and on the basis of the economic implications

³In 2012, the IAEA published the Specific Safety Requirements-6 (SSR-6) which may be addressed in a future rulemaking.

⁴Comments which were outside the scope of this rulemaking are not addressed in this final rule.

associated with its adoption into the HMR. Our goal is to harmonize the HMR with TS-R-1 without diminishing the level of safety currently provided by the HMR or imposing undue burdens on the regulated community.

III. Section-by-Section Review

Part 171

Section 171.7

In § 171.7, which contains a listing of all standards incorporated by reference into the HMR, PHMSA is replacing the 1996 edition of “TS-R-1 (ST-1, Revised)” with the 2009 edition of TS-R-1, with which we are harmonizing requirements in the HMR. We are also replacing the International Organization for Standardization standard “ISO 2919-1980(E) Sealed radioactive sources—classification” with “ISO 2919-1999(E) Radiation Protection—Sealed radioactive sources—General requirements and classification,” applicable to § 173.469(d).

We are removing from § 171.7 all entries that are only listed in §§ 178.356 and 178.358 covering the construction and use of 20PF and 21PF specification overpacks, respectively. These overpacks are no longer authorized in hazardous materials regulations. We are also deleting references to 2R vessels, and any materials incorporated by reference solely into § 178.360. The specifications for these packages are being removed from §§ 178.356, 178.358, and 178.360, respectively, as discussed below. J. L. Shepherd raised a concern about a possible effect on currently issued special permits that allow use of 2R vessels, but these changes would not affect existing special permits.

As a consequence of the removal of §§ 178.356, 178.358, and 178.360 the following references are being removed from the list of matter incorporated by reference in § 171.7:

- ANSI B16.5-77, Steel Pipe Flanges, Flanged Fittings, 1977 from § 171.7(d)(2),
- AWWA Standard C207-55, Steel Pipe Flanges, 1955 from § 171.7(i)(1),
- the reference heading for *American Water Works Association* from § 171.7(i); and
- all listings and the reference heading for Department of Energy under § 171.8(p)
 - USDOE, CAPE-1662, Revision 1, and Supplement 1, Civilian Application Program Engineering Drawings, April 6, 1988, from § 171.7(p)(1)
 - USDOE, Material and Equipment Specification No. SP-9, Rev. 1, and Supplement—Fire Resistant Phenolic

Foam, March 28, 1968, from § 171.7(p)(2)

○ USDOE, KSS-471,—Proposal for Modifications to U.S. Department of Transportation Specification 21PF-1, Fire and Shock Resistant Phenolic Foam—Insulated Metal Overpack, November 30, 1986 from § 171.7(p)(3).

Part 172

Section 172.203

This section details additional description requirements that are required for certain shipments of hazardous materials. As proposed in our NPRM, we are revising § 172.203(d)(2) to specify that when a material is in “special form” the words “special form” must be included in the description, unless those words already appear in the proper shipping name. Lawrence Laude noted that this change would require that the offeror have the proper documentation to declare the material as special form. We agree, but note that an offeror of special form Class 7 material is already required to maintain documentation showing that the material meets the special form test requirements in § 173.469 or has an IAEA Certificate of Competent Authority showing this (see § 173.476). Consequently, if such documentation does not exist, the offeror may not classify the material as special form. An offeror who does not have the proper special form documentation, or does not wish to classify the material as special form, has the option to not declare it as special form.

In our NPRM we proposed that the activity included on shipping papers and labels required by § 172.203(d)(3) should include all parent radionuclides and daughter products, even those daughters that have half-lives shorter than 10 days and not greater than that of the parent. Several commenters raised concerns on our proposal. Lawrence Laude and J.L. Shepherd commented that as proposed the NPRM changes would require listing multiple daughter products on the label with limited space, and create a potential conflict with the 95 percent requirement of § 173.433(g). (§ 173.433(g). requires that those radionuclides that constitute 95% of the total radioactive hazard, based on nuclide-specific activity/Type A ratios, to be listed on the shipping paper) While we did not propose any changes to the listing of the radionuclides, but only to the total activity, we agree this could introduce confusion between the list and the total. Lawrence Laude also noted that the proposed change would introduce an inconsistency with § 173.433(c)(2) for

the calculation of A values for chains with short-lived daughters as that paragraph omits short-lived daughters. Lawrence Laude and J. L. Shepherd additionally noted that the A₁ and A₂ values for those radionuclides with short-lived daughters were derived taking the presence of the short-lived daughters into account; adding their activity would not be a fair comparison to the A₁ and A₂ values and would not be in harmony with TS-R-1. To avoid confusion with the nuclides to be listed, and to maintain consistency with the calculated A₁ and A₂ values, we are not adopting the proposed requirement to include daughter products when those daughters have half-lives less than 10 days and not greater than that of the parent.

As proposed in the NPRM, we are also more closely aligning with the wording in TS-R-1 by specifying that the activity should be the maximum activity of the radioactive contents during transport. Lawrence Laude agreed with adding “maximum” to require that the offeror take into account changes in the activity due to decay and/or buildup of daughters, and suggested it would be useful to include a short explanation of “maximum” in the regulations. We believe the phrase “maximum activity of the radioactive contents contained in each package during transport” is self-explanatory.

We are also amending § 172.203(d)(3) to permit the mass of each fissile nuclide for mixtures to be included when appropriate, that is, when there is a mixture present.

Additionally, in § 172.203(d)(4), we are revising the example to clarify that the word “RADIOACTIVE” is not required to be included in the description of the category of label.

Section 172.310

This section contains additional marking requirements for packages containing Class 7 (radioactive) material. In the NPRM we proposed to align the marking requirements in this section with the requirements in § 178.350 which references the marking requirements of § 178.3. Lawrence Laude noted that our proposed change would have the unintended effect of requiring all Type A packages, including those with an AF certificate of compliance, to be marked with “DOT 7A” which is also required by § 178.350. The commenter also noted that an alternate approach is to simply change the current marking size requirements in § 172.310 to 12 mm (0.47 inches). We agree and are revising this paragraph accordingly.

Section 172.402

This section prescribes additional labeling requirements for shipments of hazardous materials. We are revising paragraph (d)(1) to clarify that for a package containing a Class 7 (radioactive) material that meets the definition of one or more additional hazard classes a subsidiary label is not required on the package if the non-radioactive material conforms to the small quantity exception in § 173.4, excepted quantities exception in § 173.4a, or de minimis exceptions in § 173.4b. Lawrence Laude suggested modification to clarify that applicable packaging and marking requirements for the subsidiary hazard need not be met. However, our intent is to except these packages only from labeling. Regulatory Resources stated that paragraph (d)(1) is redundant with the referenced paragraphs and should be deleted in its entirety. However we are keeping the paragraph to provide clarity that the subsidiary label is not needed in these situations.

Section 172.403

This section describes labeling requirements for shipments of Class 7 (radioactive) materials. We are correcting the reference in paragraph (d) from § 173.428(d) to § 173.428(e). We are revising paragraph (g)(2) to be consistent with the change included herein for § 172.203(d)(3) to more closely align with the wording in TS-R-1 by specifying that the activity should be the maximum activity of the radioactive contents during transport. In response to several comments, and as discussed under § 172.203(d)(3), we are not including the word “total” before “maximum activity”. Further, we are amending the activity printing requirement on the RADIOACTIVE label to permit the mass of each fissile nuclide, as appropriate for mixtures, to be included.

Section 172.504

This section prescribes general placarding requirements. In the NPRM we proposed to require placards to be affixed to conveyances carrying fissile material packages, unpackaged low specific activity (LSA) material or surface contaminated object (SCO) in category I (i.e., LSA-I and SCO-I respectively), all conveyances required by §§ 173.427 and 173.441 to operate under exclusive use conditions, and all closed vehicles used in accordance with § 173.443(d). This would more closely align domestic placarding requirements with those of TS-R-1.

Regulatory Resources and Lawrence Laude stated their belief that packages bearing a fissile label do not warrant a radioactive placard, as adequate controls are provided by packaging and criticality safety index (CSI) labels. Lawrence Laude recommended that, if placarding fissile shipments is considered necessary, placarding should be limited to shipments required by § 173.457 to be operated under exclusive use. While adoption of placarding for all shipments of packages with fissile labels would be consistent with the requirements of TS-R-1, PHMSA recognizes this could be a burden for shipments of small quantities of fissile material. We are therefore adopting the suggested approach to require placarding only for shipments required by § 173.457 to be operated under exclusive use (that is, packages with CSI greater than 50).

Regulatory Resources stated that under the proposed requirement, a shipper cannot “apply full markings and labels per 49 CFR 172 Subparts D and E on a package containing low specific activity (LSA) material or surface contaminated objects (SCO) and ship them as exclusive use unless the shipper placards the vehicle—regardless of the label applied.” While this is true, when it is not required to be shipped as exclusive use, a shipper may apply full markings and labels per 49 CFR part 172 subparts D and E on a package containing LSA material or SCO and choose to not declare the shipment as exclusive use.

Regulatory Resources and Lawrence Laude noted that the placarding of all conveyances required by § 173.441 to operate under exclusive use would extend applicability to shipments where the aggregate transport index (TI) for packages with Radioactive Yellow II labels exceeds 50. Regulatory Resources stated that this would provide little benefit and would result in large training costs, though they did not provide a specific cost estimate. PHMSA believes there is a safety benefit to providing a clear indication to personnel that a package or packages have TI's larger than allowed on non-exclusive use shipments. PHMSA further believes that this benefit will exceed the costs. For further information on costs and benefits, please see the “placarding” and “benefits of the rule” sections of the RIA placed in the docket for this rulemaking.

Lawrence Laude noted that the use of the word “conveyances” in our proposed footnote, at least as defined in § 173.403, would require vessels and aircraft to be placarded, which is not consistent with § 172.504(a). While the

definition in § 173.403 does not apply to § 172.504(a), we recognize that such an interpretation could be made. USEC added that based upon previous letters of interpretation changes to the existing text in sections to § 172.504(e) and § 173.427 to require only the conveyance to be placarded and not the conveyance and the package(s) would be beneficial. After analyzing the above comments on the NPRM, we are revising § 172.504(e) Table 1 Footnote 1 to read as set out in the regulatory text of this rule.

Section 172.505

This section describes when placarding for subsidiary risks is required. In paragraph (b), we proposed to remove the reference to “low specific activity uranium hexafluoride” to be consistent with changes to § 173.420(e). Lawrence Laude noted that the phrase “non-fissile, fissile-excepted, or fissile uranium hexafluoride” covers all the possible shipments requiring subsidiary placarding, so it should suffice to just refer to “uranium hexafluoride.” We agree, but choose to list the three different proper shipping names used for uranium hexafluoride for clarity.

Part 173

Section 173.4

This section provides requirements for shipments of small quantities by highway and rail. We proposed to revise paragraph (a)(1)(iv) to remove the reference to § 173.425, as the references in §§ 173.421 and 173.424 already cite the activity limits in § 173.425. Lawrence Laude noted that the reference to § 173.426 should also be deleted since, as noted in the preamble, it also does not specify a dose rate limit. The commenter also noted that the current and proposed § 173.4(b) already invoke §§ 173.421 and 173.424 which give activity limits for the package, making the inner receptacle activity limit references in § 173.4(a)(1)(iv) redundant. We agree and are removing paragraph (a)(1)(iv) from § 173.4.

In the NPRM we proposed to revise paragraph (b) to specify that small quantities of Class 7 (radioactive) materials must satisfy the requirements of §§ 173.421, 173.424, or 173.426 in their entirety. Lawrence Laude asked for justification, noting that as proposed, the change brings in all the requirements of § 173.422, including the requirements for notification, training, and for hazardous waste and hazardous substances, shipping papers; not just the marking change highlighted in our NPRM. We agree and we are revising paragraph (b) to cite only the previously

referenced paragraphs while adding the similar paragraphs of § 173.426. The commenter also noted that, as currently written, § 173.4 does not require shipping papers for small quantity packages containing hazardous waste or hazardous substances and suggested considering whether this needs to be addressed. General relief applicable to all hazard classes and divisions was not proposed in the NPRM, and is outside the scope of this rulemaking.

Lawrence Laude suggested that PHMSA should eliminate the marking requirements of §§ 173.4 and 173.4a for UN2910 and UN2911 excepted packages, viewing them as redundant. We did not propose these changes in the NPRM and such a change would be result in a substantive change not proposed and made available for public comment. Thus, such a change is considered outside the scope of this rulemaking. Commenters are welcome to petition for change by following the process detailed in §§ 106.95 and 106.100.

Section 173.25

This section provides requirements for packages utilizing overpacks. In the NPRM, we proposed to require the "OVERPACK" marking on all overpacks containing packages of Class 7 (radioactive) materials, unless package type markings representative of each Class 7 package contained therein are visible from the outside of the overpack.

J.L. Shepherd claimed that the historical meaning and understanding by users of Type B packages is that "overpacks" are heat and impact resistant structures, and thus the term should not be used for cardboard boxes, shrink wrap or wooden boxes. However, we did not propose any change to the definition of the term "overpack" already found in § 171.8 which does not preclude the use of cardboard boxes, shrink wrap, or wooden boxes as overpacks. The commenter also claimed that the IAEA has never addressed the use of "overpacks" related to type B shipments; however, the IAEA does define "overpack" in TS-R-1 which applies to all radioactive material packages and has marking requirements for overpacks similar to those proposed in our NPRM.

Lawrence Laude suggested deletion of the text "(Type IP-1, -2, or -3)" since industrial package by definition includes Type IP-1, -2, or -3. We agree and have made this change. He also suggested revisions to § 173.25(a)(6). However, we did not propose any changes to that paragraph in the NPRM and so those changes are outside the scope of this rulemaking. Clarifications

were also requested on several other portions of this section that were not within the scope of this rulemaking. Lawrence Laude asked for clarification whether an overpack containing only excepted packages would need to be marked only with the UN number(s), consistent with Table 10 of TS-R-1. This is correct, but we see no needed changes to the proposed language. Regulatory Resources also requested we clarify the overpack marking requirements in § 173.448(g)(2), which references subpart D of part 172 and § 173.25(a), by removing the reference to subpart D. Although we agree that, because the part 172 marking requirements do not cover overpacks, this reference is unnecessary, we did not propose any changes to § 173.448 in the NPRM so this is outside the scope of this rulemaking. We may address this in a future rulemaking.

Section 173.401

This section outlines the scope of subpart I; subsection (b) specifies materials that are outside of that scope. We are modifying § 173.401(b)(4) to add the phrase "which are either in their natural state, or which have only been processed for purposes other than for extraction of the radionuclides." We also added "or determined in accordance with § 173.433" to account for calculations for mixtures of radionuclides. We are also adding a new paragraph (b)(5) to clarify, based on internal PHMSA review of existing requirements, that non-radioactive solid objects with radioactive substances present on any surfaces in quantities not exceeding the limits cited in the definition of contamination in § 173.403 are not subject to the Class 7 (radioactive) material requirements of the HMR.

B & W requested that we consider PHMSA interpretation 06-0274 (issued May 6, 2008) and add that contaminated items below the consignment exemption limits are also not regulated. We believe this concept is already addressed in the regulations as referenced in the letter of interpretation and have not made this addition. The commenter also requested that we recognize "free release" limits that have been established by other federal agencies. We are not aware of any other specific codified federal limits and DOT does not have authority to set such limits.

Section 173.403

Section 173.403 contains definitions specific to Class 7 (radioactive) materials. We are revising the definitions of "contamination," "criticality safety index (CSI)," "fissile

material," "low specific activity (LSA) material," "radiation level," and "uranium." NIRS & CACC expressed "serious concerns" with the changes in the definitions but provided no specific comments.

We are changing the definition of "contamination" by deleting the word "radioactive" from the present definitions of "Fixed radioactive contamination" and "Non-Fixed radioactive contamination." In addition, we are replacing the phrase "contamination exists in two phases" with "there are two categories of contamination." Lawrence Laude noted that we were not consistent in our subsequent use of the term used for "non-fixed contamination" in the NPRM, using variations such as "non-fixed (removable) radioactive surface contamination," "removable (non-fixed) radioactive contamination," and "removable radioactive surface contamination." We agree this could cause confusion, so we are standardizing by using "non-fixed contamination" as given in the definition and have made corresponding edits to §§ 173.421(c), 173.443, 174.715, 176.715, and 177.843.

We are revising the definition of "criticality safety index (CSI)" to include the sum of criticality safety indices of all fissile material packages contained within a conveyance. Lawrence Laude suggested that the language "(rounded up to the next tenth)" should be deleted from the definition of CSI as this is effectively addressed in the referenced sections of 10 CFR part 71 and would seem to eliminate a valid CSI of zero. The referenced NRC regulations contain the same words as our definition, except the last paragraph which says, "Any CSI greater than zero must be rounded up to the first decimal place." PHMSA is not adopting the suggestion because we are consistent with the NRC definition in 10 CFR 71.4, and we reference 10 CFR 71.59 in our definition which includes the statement, "Any CSI greater than zero must be rounded up to the first decimal place." We are revising the definition of "fissile material" to align with NRC's definition and to clarify that certain exceptions are provided in § 173.453. Lawrence Laude suggested that we adopt the IAEA definition, which makes a distinction between fissile nuclides and fissile material, rather than the NRC definition. We choose the NRC definition for domestic consistency and as we believe it more precisely defines what is intended by the regulation.

As proposed we are revising the definition of "low specific activity

(LSA) material” to more closely align with the definitions in TS-R-1 and in the NRC regulations.

We proposed slight modifications in the definition of “package” to replace “Industrial package Type 1 (IP-1) . . . (IP-2) . . . (IP-3)” with “Industrial package Type 1 (Type IP-1) . . . (Type IP-2) . . . (Type IP-3).” However, as Lawrence Laude and USEC noted, we introduced an error, repeating the word “together” under “Industrial package.” We are now correcting that error and changing only the references to package types.

We are revising the definition of “radiation level” to clarify the types of radiation that contribute to the radiation level, stating that it consists of the sum of the dose-equivalent rates from all types of ionizing radiation present including alpha, beta, gamma, and neutron radiation. Energy Solutions claimed this is inapplicable and overly burdensome when applied to container/conveyance release surveys. We do not use the term “release survey” in the regulations as DOT does not regulate the transfer of radioactive materials from control while “radiation level” limits are given in §§ 173.441 and 173.443. The commenter claims that alpha emitting radionuclides are not a contributor to external radiation dose equivalent and are already addressed in the removable surface contamination limits prescribed in the rule; he also claims that low-energy beta emissions should not be of concern and that it is not possible to accurately quantify beta dose at very low levels. We agree that for a large majority of radioactive packages, gamma or neutron radiation is the only significant contributor to dose at one meter from the surface of the package and although low energy beta emissions are typically more difficult to measure or might contribute little or even nothing to the radiation level, it is still possible and appropriate to measure their contribution, or the absence of any contribution, in order to ensure radiological safety.

However there are a few packages where neutrons must be considered (as noted in the current definition), and alpha and beta radiation should also be considered in meeting the regulatory requirements. The commenter proposed a new definition of “Release Survey Effective Radiation Dose Equivalent;” we do not believe such a term is needed.

We are revising the definition of “uranium” to include natural uranium that has not been chemically separated from accompanying constituents. Lawrence Laude said we should consider deleting “(which may be chemically separated)” as unnecessary.

While this is true, we prefer to leave the words in for clarification.

B & W suggested we also change the § 173.403 definition of “low toxicity alpha emitters” to be consistent with the NRC and IAEA definitions. However, we did not propose such a change in the NPRM. We may consider changing the definition in a future rulemaking.

USEC suggested that we add a definition of “overpack” to § 173.403 specifically for radioactive material, separate from the definition of “overpack” in § 171.8. While the definition in § 171.8 is different than the definition in the TS-R-1 we do not see a need for change at this time. We did not propose such a change in the NPRM and believe that multiple definitions within the regulations are unnecessary.

Section 173.410

This section describes general design requirements for packages used to ship Class 7 (radioactive) materials. In paragraph (i)(3), we are revising the requirement for transporting liquid Class 7 (radioactive) material by air to specify that the package must be capable of withstanding, without leakage (i.e., without release of radioactive material), a pressure differential of not less than the “maximum normal operating pressure” (defined in § 173.403) plus 95 kPa (13.8. psi). The HMR currently require a package to be capable of withstanding a pressure differential of not less than 95 kPa. We are adding the maximum normal operating pressure (defined in § 173.403) to account for the contribution of internally generated gas pressure to the overall pressure differential.

USEC suggested we change “13.8 psi” to “13.8 psia.” We are not making this change, because “psi” is consistent with similar usage in § 173.27 and other sections of the HMR. Furthermore, the differential pressure may be either absolute or gage pressure, as long as both points are measured in the same units.

Section 173.411

Section 173.411 provides transportation requirements for industrial packagings. We are making several editorial revisions to improve consistency with the nomenclature used for package types, and to clarify the meaning of two authorized alternatives to Type IP-2 or IP-3 packages. We are replacing the word “packaging” with “package” in each place it appears in this section. We are also replacing the terms IP-1, IP-2, and IP-3 with Type IP-1, Type IP-2, and Type IP-3 to make the designations for industrial packages more consistent with the language used

in the HMR for other Class 7 (radioactive) material package types, such as Type A and Type B(U).

We proposed modifying the requirement that tests for Type IP-2 and Type IP-3 packages must not result in a significant increase in the external surface radiation levels, with wording to indicate that the package tests must not result in more than a 20% increase in the maximum radiation level at any external surface of the package, consistent with the § 173.411 requirements for tank containers, tanks, freight containers, and metal intermediate bulk containers that are used as Type IP-2 or Type IP-3 packages. Penn State and Lawrence Laude stated that the 20% criterion could be difficult to meet for low-dose-rate packages. Regulatory Resources questioned the need for change as we had not previously adopted the IAEA approach. Regulatory Resources claimed there is already a quantified external package surface dose rate increase limit in § 173.441. However, that section provides the upper limits on allowable dose rates, whereas this criterion relates to the ability of the package design to maintain its shielding effectiveness in normal conditions of transport. Lawrence Laude stated that the proposed change would necessitate a review of all designs in domestic use and would entail large costs for little benefit. We agree that compliance with the 20% criterion could be burdensome for very low-dose-rate packages and that consideration needs to be given to use of previously allowable packages. Due to the issues raised we are not adopting the change to 20% at this time.

However, we are not deleting the existing requirements in § 173.441 for tanks, freight containers, and intermediate bulk containers to meet the 20% limit and are revising the language in § 173.411 to be consistent with TS-R-1.

For consistency with the language in TS-R-1, in § 173.411(b)(4) we are replacing the phrases in paragraphs (b)(4), (b)(5), (b)(6) and (b)(7), “designed to satisfy” or “designed to conform to” certain requirements with the words, “meet” or “designed to meet.” In the NPRM we proposed to use the term “satisfy,” but after further consideration we believe it is clearer and simpler to instead replace the phrases in question with “meets,” which is also consistent with the language in TS-R-1.

USEC suggested that in both existing § 173.411(b)(4)(iii) and in proposed § 173.411(b)(5)(ii) we indicate “38.4 psia,” rather than “37.1 psig” as the U.S. standard or customary unit

equivalent to 265 kPa. We agree and are making these changes.

In § 173.411(b)(5) we are removing references to DOT Specification IM-101 and IM-102 steel portable tanks as Type IP-2 or IP-3 packages because they are no longer listed in Part 178 of the HMR and authorization for their use terminated on January 1, 2010 (although their use would still be permitted if it can be shown that they meet the requirements of § 173.411(b)(4)). We are revising § 173.411(b)(5) to contain the TS-R-1 requirements for cargo tanks and tank cars.

In paragraph (c), we are extending the retention period for Type IP-2 and Type IP-3 package documentation from one year to two years after the offeror's latest shipment, to correspond to the minimum period an offeror is required to retain copies of shipping papers. Regulatory Resources noted that the shipper of a package may not be the manufacturer of the package; in these instances, the commenter suggested that the documentation requirements should be placed on the manufacturer rather than the user/shipper. However, since Part 173 only applies to shippers, any requirement on manufacturers would need to be placed in Part 178. Furthermore, we are not introducing a new documentation requirement here, but only extending the required retention period. The commenter also suggested a delayed compliance timeframe to allow use of existing documentation requirements. We feel that this provision can be met by the delayed compliance date of this rule.

Section 173.412

This section prescribes additional design requirements for Type A packages. We are changing § 173.412(f) to require the containment system of a Type A package to be capable of retaining its contents under the reduction of ambient pressure to 60 kPa (8.7 psi) instead of the current 25 kPa (3.6 psi). Lawrence Laude expressed support for the change on the ground that it was more representative of the reduced pressures that could be experienced in ground transportation. J.L. Shepherd asked whether we would require the retesting of current Type A packages or provide a transition period. PHMSA believes that since packages currently have to withstand a reduction in ambient pressure from 100 kPa to 25 kPa, they should already be able to meet the new requirement (the old requirement was to withstand a reduction of 75 kPa (100 to 25 kPa), but now a reduction of only 40 kPa (100 kPa to 60 kPa) will be required). USEC suggested that we should use 8.7 psia

instead of 60 kPa for clarity; we agree and have made this change.

We proposed revising § 173.412(j)(2) to specify that the maximum radiation level at the external surface of the package not increase by more than 20%. We received multiple comments on this proposal similar to those on the change proposed in § 173.411; as discussed above, due to the issues raised we are not adopting the change to 20% at this time.

Paragraph (k)(3) sets forth requirements for the retention of liquid contents in a Type A package. To provide further clarity, we are adopting the revised wording in TS-R-1, which states that a packaging designed for liquids must "Have a containment system composed of primary inner and secondary outer containment components designed to enclose the liquid contents completely and ensure their retention within the secondary outer component in the event that the primary inner component leaks."

Section 173.415

This section discusses authorized Type A packages. We proposed to extend the retention period for Type A package documentation from one year to two years after the offeror's latest shipment, to correspond to the minimum period for which an offeror is currently required to retain copies of shipping papers. We also proposed to include more detailed language describing the kinds of information expected to be included as part of the Type A package documentation.

While we received support from some commenters for the two-year retention period, Lawrence Laude requested that there be a delayed compliance period to accommodate shipments made more than one year prior to the effective date of the final rule and for which the documentation is no longer available. Several commenters (Veolia, J. L. Shepherd, Lawrence Laude, and Penn State) expressed concern that current Type A package documentation would not meet the new requirements, and that any new requirements would invalidate the use of such packages until the documentation could be developed. Several commenters (Veolia, J. L. Shepherd, Lawrence Laude, and Penn State) suggested a phase-in period be authorized for Type A packages currently in use until additional detailed documentation is available.

We agree that there may be a need for a transition period until the two-year retention period takes effect. We also agree that time may be needed to review and upgrade documentation. Therefore, we are not requiring compliance with

the revised documentation requirements until January 1, 2017.

Veolia stated that the offeror of a Type A package should be able to use additional shielding or packing materials inside that package beyond that described in the package's documentation. We disagree. The current regulations require the packaging to be tested "as normally prepared for transport" which means shielding must be considered; additional shielding could change how the package performs and thus would need to be evaluated.

Penn State stated that providing engineering drawings of a package for a one-time-only shipment would increase the cost from negligible to significant with no added benefit and suggested that minimal documentation was required in such instances. However, the current regulations require even single use packages to be appropriately evaluated and documented. We agree that for some packages, engineering drawings may not be necessary, so we are not requiring engineering drawings in this final rule.

QSA Global and Penn State noted that in some instances, such as when a manufacturer ships a Type A package to a customer and the customer subsequently uses the package, following the manufacturer's instructions for the evaluated contents, the customer should be able to rely upon a certification from the manufacturer. Examples given include radiopharmaceuticals, sealed sources, instruments and gauges. In such instances, the shipper complies with the package assembly and closure instructions provided by the package manufacturer without modifying the design of the package system or contents except as authorized by the manufacture (e.g., various sources authorized for a given packaging system). It should be noted that under the existing requirements of § 173.415, the offeror must maintain the complete documentation.

QSA Global stated that full Type A package documentation files for reusable containers can be thousands of pages in length and contain information considered proprietary and confidential. The company currently maintains documentation on numerous packages used for Type A transport, and claims to provide sufficient information to ensure that users are aware of limitations associated with content, form and weight. The company also notes that there are hundreds of users of their Type A package designs, and recommended that shippers of Type A specification packages be required to

maintain package assembly instructions and obtain a Type A specification certification for the package from the packaging manufacturer.

Under the existing § 178.350, the term “packaging manufacturer” means the person certifying that the package meets all requirements of that section, which can often be the offeror, especially if the packaging or contents have been altered from that evaluated by another party. However, we agree that there are instances where the offeror is provided a packaging from another source for a particular set of contents and should not be considered to be the packaging manufacturer. Therefore, as an optional alternative to the current and revised requirement for offerors to maintain complete package documentation we are also including an option for offerors who receive a packaging from another party acting as the manufacturer, to rely on a manufacturer’s certification. This certification would include a signed statement from the manufacturer affirming that the package meets all the requirements of § 178.350 for the radioactive contents presented for transport. This alternative creates no obligation on manufacturers to supply such a certification; it is merely an option available if an offeror is able to obtain the certification from the manufacturer. In such instances, the offeror will also be required to maintain a copy of the manufacturer’s certification, and if requested by DOT, be able to obtain a copy of the complete documentation from the manufacturer. However, if the offeror has modified the packaging or contents from that evaluated and documented by the other party, the offeror must perform an evaluation of the changes and then maintain the complete documentation which must be provided to DOT on request. This will enable users to reuse packagings expressly made for certain contents and rely on documentation from another party acting as the manufacturer, but does not allow them to modify the packaging or contents without a documented evaluation of those changes.

Section 173.416

This section discusses authorized Type B packages. We are removing the present paragraph (c), which allowed the continued use of an existing Type B packaging constructed to DOT specification 6M, 20WC, or 21WC until October 1, 2008, and replacing it with a new paragraph (c) to authorize the domestic shipment of a package conducted under a special package authorization granted by the U.S. Nuclear Regulatory Commission in

accordance with 10 CFR 71.41(d). That NRC provision is only applicable to limited, one-time shipments of large components that cannot be shipped inside a certified package, or for which designing a packaging would be impracticable due to their large size.

J. L. Shepherd requested that we maintain reference to the obsolete specification packages to allow continued use of those packages under special permits, but removal of this paragraph would have no impact on any such special permits. Lawrence Laude requested that we specify what proper shipping name should be used for packages authorized by this new paragraph. In the rulemaking establishing 10 CFR 71.41(d), the NRC stated that, for a package approved under that paragraph, the NRC will issue a Certificate of Compliance or other approval (i.e., special package authorization letter). In those cases where the NRC issues a certificate, the proper shipping name will be associated with the certificate (e.g., “Radioactive material, Type B(M) package, *non-fissile or fissile-excepted*”). In instances where the NRC issues a special package authorization letter, the proper shipping name will be “Radioactive material, transported under special arrangement, *non-fissile or fissile-excepted*”.

Section 173.417

This section discusses authorized fissile materials packages. We are removing the present paragraph (c), which allows the continued use of an existing fissile material packaging constructed to DOT specification 6L, 6M, or 1A2 until October 1, 2008. We are also removing the references to 20 PF and 21PF overpacks in paragraphs (a)(3), (b)(3), and (b)(3)(ii) in Table 3 because those overpacks are no longer in service.

We are adding a new paragraph (c) to authorize the domestic shipment of a package conducted under a special package authorization granted by the U.S. Nuclear Regulatory Commission in accordance with 10 CFR 71.41(d). Lawrence Laude requested that we specify what proper shipping name should be used for packages authorized by this new paragraph. In those cases where the NRC issues a certificate, the proper shipping name will be associated with the certificate (e.g., “Radioactive material, Type B(M) package, fissile”). In instances where the NRC issues a special package authorization letter, the proper shipping name will be “Radioactive material, transported under special arrangement, fissile.”

Section 173.420

Section 173.420 sets forth requirements for uranium hexafluoride (fissile, fissile excepted and non-fissile). We are removing and reserving paragraph (a)(2)(ii), which refers to specifications for DOT-106A multi-unit tank car tanks as these multi-unit tank car tanks are not used, nor planned to be used for transporting UF₆.

We had proposed to add the specification 30C package to the table in § 173.420(a)(2)(iii)(D). However, as USEC pointed out, the 30C cylinder is not a Section VIII ASME pressure vessel but is an ANSI N14.1 packaging. Therefore, we are not adding it to the table.

USEC suggested that in 173.420(a)(3)(i) we should change “200 psi” to “200 psia” and in 173.420(a)(6) we should change “14.8 psig” to “14.7 psia”. For the first reference, the ANSI standard referenced in this section uses psig, not psia, thus we are not adopting the suggested change, but are changing it to “200 psig” instead. We do agree with the second suggestion as these packages are required to be shipped with an internal pressure less than atmosphere, and so we are adopting this change.

We proposed adding a paragraph (e) to require that, when there is more than one way to describe a UF₆ shipment, the proper shipping name and UN number for the uranium hexafluoride should take precedence (e.g., the uranium hexafluoride shipping description should take precedence over the shipping description for LSA material). Lawrence Laude noted that while the bullet-list summary of changes in the NPRM stated that this change would apply only to shipments of 0.1 kg or more of UF₆, our later discussion and draft text applied the change to all quantities. Lawrence Laude and USEC requested that this paragraph only apply to packages with 0.1 kg or more of UF₆, allowing small packages of uranium hexafluoride to be re-classified as Class 8 in accordance with § 173.423. We note that because we are harmonizing with the 2009 edition of the IAEA regulations, and this point has been raised regarding interpretation of the corresponding paragraph in TS-R-1, we will limit application of this paragraph to packages of 0.1 kg or more of UF₆. As the IAEA is working to clarify application of this requirement to packages of less than 0.1 kg of UF₆, we may consider changes to this requirement in a future rulemaking.

Section 173.421

This section outlines requirements for excepted packages for limited quantities of Class 7 (radioactive) materials. Presently, § 173.421(b) permits excepted packages of limited quantities of radioactive material that are a reportable quantity of hazardous substance or waste to be shipped without having to comply with § 172.203(d) or § 172.204(c)(4). We are extending this relief from these shipping paper requirements to all excepted packages that are a hazardous substance or waste by removing § 173.421(b) and adding the exclusion from §§ 172.203(d) and 172.204(c)(4) to § 173.422.

Section 173.422

Section 173.422 sets forth additional requirements for excepted packages containing Class 7 (radioactive) materials. PHMSA is revising the introductory text to specify that a small quantity of another hazard class transported by highway or rail (as defined in § 173.4) that would otherwise qualify for shipment as a Class 7 (radioactive) material in an excepted package must also satisfy the requirements of § 173.422. Lawrence Laude suggested that we also add excepted quantities as defined in § 173.4a. However such packages are currently covered by § 173.4a(a)(3).

As noted above, § 173.421(b) currently permits excepted packages of limited quantities of radioactive material that are a hazardous substance or hazardous waste to be shipped without having to comply with § 172.203(d) or § 172.204(c)(4). We are extending this relief from shipping paper requirements to include those excepted packages that contain a hazardous substance or hazardous waste by moving the exclusion from § 172.203(d) and § 172.204(c)(4) provisions to § 173.422(e). In the discussion in our NPRM, we stated that we were proposing to add an exclusion from § 172.202(a)(5) for such packages; however, in the draft of the regulatory text we referenced § 172.202(a)(6) instead. Lawrence Laude suggested that we should include both paragraphs; we agree and are including both.

We are also adding to § 173.422(a) a requirement that all excepted packages whose contents meet the definition of a hazardous substance, be marked with the letters "RQ". This will provide consistency with existing marking requirements for a package containing a hazardous substance. Lawrence Laude and Regulatory Resources noted that to be consistent with § 172.324, this should only apply to non-bulk excepted

packages, we agree and have made that change.

Section 173.423

Section 173.423 prescribes requirements for multiple hazard limited quantity Class 7 materials. Lawrence Laude suggested several changes to § 173.423. However, as we did not propose any changes to that section in the NPRM, we are not adopting his proposals in this final rule.

Section 173.427

This section prescribes transport requirements for low specific activity (LSA) Class 7 (radioactive) material and surface contaminated objects (SCO). In the introductory paragraph of § 173.427(a), we are changing the phrase "LSA material and SCO . . . must be packaged" to "LSA material and SCO must be transported." This should help clarify that paragraphs (c) and (d) apply to subcategories of LSA material or SCO, specifically unpackaged LSA material or SCO, and LSA or SCO which require packaging in accordance with NRC requirements in 10 CFR 71. NIRS and CACC opposed provisions in the proposed changes that remove packaging requirements for some SCO; however, this is a misunderstanding of these changes as no packaging changes were proposed. Lawrence Laude noted that for consistency, § 173.427(a)(2) should read "LSA material and SCO" instead of "LSA and SCO material," and we are adopting that correction.

In § 173.427(a)(6)(v), we are removing the placarding exception for shipments of unconcentrated uranium or thorium ores. The increased communication requirement is intended to compensate for the fact that packaging requirements are minimal for these materials. We are also clarifying that all of the placarding requirements of subpart F of part 172 must be met by rewording this paragraph from referring to vehicle placarding, to requiring appropriate placarding of the shipment.

In § 173.427(a)(6)(vi), we proposed to require that when LSA material or SCO are shipped in accordance with that paragraph and contain a subsidiary hazard from another hazard class, § 172.402(d) labeling requirements for the subsidiary hazard would apply. Presently, § 173.427(a)(6)(vi) excepts such shipments from all marking and labeling requirements, other than for the stenciling or marking as "RADIOACTIVE—LSA" or "RADIOACTIVE—SCO," as appropriate. Lawrence Laude noted that it is unclear how labels would be applied to unpackaged material, how many labels would be required, and whether labels

or placards would be required for bulk packages with a volumetric capacity greater than 18 m³ (640 ft³). The commenter also claimed the proposed change has the potential for conflicting with the proposed change to § 172.402(d)(1) regarding not requiring subsidiary labels for Class 7 packages with subsidiary hazards meeting the requirements of §§ 173.4, 173.4a, and 173.4b. While this change cannot conflict with the new § 172.402(d), to which paragraph (a)(6)(vi) makes reference, the concerns on labeling of unpackaged material are valid. Therefore, we are amending this change to apply only to packaged material; for larger bulk packages, labels or placards could be used as required in § 172.400.

Lawrence Laude further claimed that portions of the proposed (and existing) § 173.427(a)(6) are either redundant or inconsistent with other requirements of subpart I and recommended that paragraphs (a)(6)(i) through (v) be deleted, that only paragraph (a)(6)(vi) be retained, and that paragraph (a)(6)(vii) be moved to a new paragraph (b)(6) or, alternately, a new paragraph (f). However, § 173.427(a)(6) does contain some unique requirements, and the changes suggested would be beyond the scope of what was proposed in the NPRM, so we are not adopting them.

We are revising paragraph (b)(1) to replace "IP-1, IP-2, or IP-3" with "Type IP-1, Type IP-2, or Type IP-3," to coincide more closely with the IAEA nomenclature in TS-R-1.

In the NPRM we proposed to rearrange the wording in paragraph (b)(4), to indicate that for an exclusive use shipment of less than an A₂ quantity, the packaging must meet the requirements of § 173.24a or § 173.24b, depending on whether the packaging would be considered non-bulk or bulk according to the definition in § 171.8. Lawrence Laude noted that the reference to §§ 173.24a and 173.24b is redundant since the introductory text of § 173.410, which is also referenced, includes a requirement to meet subparts A and B of part 173, and §§ 173.24a and 173.24b are included in subpart B. We agree and are revising this paragraph to reference only § 173.410. Lawrence Laude also commented that we should address issues related to bulk Type A and Type B packages. However, we did not propose such changes in the NPRM.

In paragraph (b)(5), we are withdrawing the explicit authorization for certain DOT Specification tank cars and cargo tanks, and replacing it with the general authorization for use of portable tanks, cargo tanks and tank cars as provided in § 173.411. The previously authorized DOT

Specification tank cars and cargo tanks are seldom used and the § 173.411 requirements provided by this rulemaking offer a broader range of options.

In § 173.427(c)(3), we are changing the phrase “where it is suspected that non-fixed contamination exists” to “where it is reasonable to suspect that non-fixed contamination exists” to clarify that the shipper must have a justifiable reason if it decides that it is not necessary to take measures to ensure that contamination from SCO-I is not released into the conveyance or the environment.

We proposed adding a new paragraph (c)(4) to require that when unpackaged LSA-I material or SCO-I required to be transported as exclusive use is contained in receptacles or wrapping materials, the outer surfaces of the receptacles or wrapping materials must be marked “RADIOACTIVE LSA-I” or “RADIOACTIVE SCO-I” as appropriate. We proposed an additional new paragraph (c)(5) to require that all highway or rail conveyances carrying unpackaged SCO-I be placarded. USACE noted that paragraph (c)(4) would not provide hazard communication when a liner is shipped inside a transport vehicle (e.g. rail gondola) or an intermodal container and suggested that the outside of the transport vehicle and/or the receptacle or intermodal container would be the only place the marking should be required. We agree that the proposed markings could be obscured and we note that conveyance marking is already covered by § 173.427(a)(vi); hence we are not including this suggestion in the final rule. Lawrence Laude suggested that for consistency with other usage, the proposed § 173.427(c)(5) should refer to “transport vehicle” rather than “highway or rail conveyance.”

However, conveyance includes freight containers, which sometimes need to be placarded. Lawrence Laude also asked for clarification that the placarding requirement of paragraph (c)(5) applies to non-exclusive use shipments of SCO-I made in accordance with paragraph (c)(2), whereas for other LSA material and SCO shipments, placards are only required for exclusive use shipments. Mr. Laude is correct, in this final rule, the placarding required in paragraph (c)(4) would only apply to exclusive use shipments, except for those SCO-I non-exclusive use shipments cited in paragraph (c)(2).

We are modifying Table 5 by adding a separate column for conveyances traveling by inland waterways, in which the authorized activity limits for combustible solids, liquids and gases of LSA-II and LSA-III and SCO would be

10% of those for other types of conveyances. NIRS & CACC asserted that this change could weaken existing regulations and opposed a change. However, these are newly added and more restrictive requirements so they do not “weaken” the regulations. In Table 6, we are replacing the terms IP-1, IP-2, and IP-3 with Type IP-1, Type IP-2, and Type IP-3 to be consistent with the similar changes made in § 173.411.

Section 173.433

Section 173.433 sets forth requirements for determining radionuclide values, and for listing radionuclides on shipping papers and labels. In the NPRM, we proposed to revise paragraphs (b), (c), (d)(3), and (h) Tables 7 and 8.

We are revising paragraph (b) to clarify the use of line 3 in Tables 7 and 8 when no relevant data are available. Currently, paragraph (b) allows use of Table 7 for values of A_1 and A_2 and Table 8 for exemption values when the individual radionuclides are not listed in §§ 173.435 or 173.436. Tables 7 and 8 also indicate values that may be used when “No relevant data are available,” but there is no reference in the text to when those entries may be used.

We are revising paragraph (c)(1) to conform to the current wording in TS-R-1 that “it is permissible to use an A_2 value calculated using a dose coefficient for the appropriate lung absorption type.” We are also adding language to paragraph (c) to clarify that this method of calculation only applies to the alternative specified in paragraph (b)(2), which requires approval by the Associate Administrator, or for international transportation, multilateral approval from the appropriate Competent Authorities.

We are revising paragraph (d)(3) to correct incorrect references to other paragraphs. Currently, the explanation of the symbols in paragraph (d)(3) refers to paragraph (d)(2) and itself. We are revising it to refer to paragraphs (d)(1) and (d)(2).

We are modifying the second category descriptions in both Tables 7 and 8, which presently read “Only alpha emitting nuclides are known to be present.” To conform as nearly as possible to the current wording in TS-R-1, we are replacing the current wording with “Alpha emitting nuclides, but no beta, gamma, or neutron emitters, are known to be present” (in Table 7), and “Alpha emitting nuclides, but no neutron emitters, are known to be present” (in Table 8).

In Table 7 we are also adding a footnote for the case when alpha emitters and beta or gamma emitters but

no neutron emitters are known to be present. The reason for this footnote is that the IAEA default A_1 value for the case when alpha emitters are known to be present is larger than the value when only beta or gamma emitters are known to be present; the footnote entry clarifies that if both alpha and beta or gamma emitters are present, the lower default A_1 value should be used. The lesser A_1 default value that would be prescribed in this case would be the more logical and conservative choice. The third category presently reads “No relevant data are available,” we are replacing it with “Neutron emitting nuclides are known to be present or no relevant data are available.” The revised wording clarifies that if there are different default values for different types of radiation, the smaller, most conservative value for the types of radiation known to be present should be used. Regulatory Resources questioned how an A_1 value can be assigned when there are no relevant data concerning the nuclide(s); it is done by assigning a value that is equal to the lowest entry for nuclides listed in the table in § 173.435.

Section 173.435

This section contains the table of A_1 and A_2 values for the most commonly transported radionuclides. We are revising the table as follows:

- In the entry for Cf-252, in column 1, the reference to footnote (h) is removed, and in columns 3 and 4, the A_1 value is revised (this adopts the new TS-R-1 value for A_1 , which is the same as previously allowed by domestic exception in footnote (h) and eliminates the domestic exception for A_2);
- A_1 and A_2 values and the intrinsic specific activity for Krypton-79 (Kr-79) are added to the table; the A values were calculated using the Q system, and added to TS-R-1 in its 2009 edition, and the specific activity calculated from the relation specific activity in Bq/g = 0.693 times Avogadro’s number divided by the half-life in seconds times the atomic mass; and
- In the footnotes to the table, footnote (a) is revised to add a reference to TS-R-1 Table 2’s list of daughter products, footnote (c) is revised to clarify that the comparison of “output” activity to the A-values is restricted to special form sources of Ir-192, and footnote (h) is removed for the Cf-252 entry, as discussed above, and reserved.

NIRS and CACC said they oppose weakening of definitions and increases in exemption levels. However, these are not changes to exemption levels but are corrections and clarifications.

Regulatory Resources suggested that the tables in §§ 173.435 and 173.436 be

combined into a single table. We prefer to keep the current format in order to maintain all the current content without reducing readability.

Section 173.436

This section contains exempt material activity concentrations and exempt consignment activity limits for radionuclides. To reflect corresponding changes in TS-R-1, we are revising the total consignment activity exemption for Tellurium-121m (Te-121m), from 1×10^5 Bq to 1×10^6 Bq, and we are adding an entry for Krypton-79 (Kr-79). We are also revising the list of parent nuclides and their progeny listed in secular equilibrium in footnote (b) to the table. The chains for parents Cerium-134 (Ce-134), Radon-220 (Rn-220), Thorium-226 (Th-226), and Uranium 240 (U-240) are removed. We are adding an entry for Silver-108m (Ag-108m).

Section 173.443

This section prescribes contamination control provisions. Paragraph (a) provides that the level of non-fixed contamination “must be kept as low as reasonably achievable” and specifies alternative methods for determining the level of non-fixed contamination, which may not exceed certain permissible limits. The remaining paragraphs of § 173.443 address situations under which a higher level of non-fixed contamination is allowed;

- When a closed transport vehicle is used only for transportation by highway or rail of Class 7 (radioactive) material, the contamination level on the package may be as great as ten times the applicable limit specified in paragraph (a) if (1) a survey shows that the radiation dose rate at any point does not exceed specified values; (2) the outside of the vehicle is stenciled on both sides with the words “For Radioactive Materials Use Only” at least three inches high; and (3) the vehicle is kept closed excluding loading or unloading.

- Alternatively, if a package is transported as an “exclusive use” shipment by rail or highway, the level of non-fixed contamination on a package during the course of transportation may be as much as ten times the applicable limit specified in paragraph (a) so long as:

- At the beginning of transport, the level of non-fixed contamination on the package does not exceed the applicable limit set forth in paragraph (a); and
- the transport vehicle is surveyed and is not returned to service until the radiation dose rate at each accessible surface does not exceed a specified value and there is no significant

removable (non-fixed) surface contamination.

Paragraph (a)

The alternative methods for determining the level of non-fixed contamination are currently set forth in paragraphs (a)(1) and (2). In the NPRM, we proposed to redesignate these two paragraphs as paragraphs (a)(1)(i) and (a)(1)(ii), respectively, and provide in new paragraph (a)(2) that a “conveyance used for non-exclusive use shipments is not required to be surveyed unless there is reason to suspect that it may exhibit contamination.” We also proposed to apply the existing requirement that the level of non-fixed (removable) radioactive contamination on the external surfaces of each package be kept as low as reasonably achievable on the external and internal surfaces of an overpack, freight container, tank, intermediate bulk container (IBC), or conveyance—but not to the internal surfaces of a conveyance, freight container, tank or IBC dedicated to the transport of unpackaged radioactive material in accordance with § 173.427(c) and remaining under that specific exclusive use. This change ensures that any associated transportation equipment utilized for transportation does not exhibit excessive levels of non-fixed (removable) radioactive contamination and aligns the domestic contamination control requirements with international standards in TS-R-1.

In response to comments from Lawrence Laude and Regulatory Resources that the contamination levels should not apply to the interior surfaces of packages, we are clarifying that the contamination control requirements in paragraph (a) do not apply to the interior surfaces of (1) a tank, intermediate bulk container or other “package,” or (2) a conveyance or freight container dedicated to the transport of unpackaged LSA-1 material and SCO-1 in accordance with § 173.427(c) and remaining under that exclusive use.

In Table 9, which is referenced in the new § 173.443(a)(1)(i), we are changing the contamination limits in the column labeled dpm/cm² from 220 to 240 for contamination due to beta and gamma emitters and low toxicity alpha emitters, and from 22 to 24 for contamination due to all other alpha emitting nuclides, respectively. This will provide the correct conversions from the 4 and 0.4 Bq/cm² values. Lawrence Laude also raised additional concerns with our proposed changes to § 173.443(a):

- Mr. Laude inquired whether we should adopt any limit on fixed contamination, because we only

addressed non-fixed contamination. We do not believe it is necessary or practical to impose fixed contamination limits on conveyances, overpacks, or freight containers being used for radioactive material transport, as radiation levels from the Class 7 material would make this practice difficult and unduly expensive, if not impossible to implement. It would also be unnecessary since the other transport controls for the declared hazard of the packaged or unpackaged radioactive material provides sufficient protection. Moreover, once these conveyances, overpacks, or freight containers are no longer used for transport of Class 7 material, they become subject to the HMR independently for possible radioactive material classification to address any possible fixed contamination hazard.

- Mr. Laude inquired whether the first sentence of the proposed paragraph (a)(1) should be limited to conveyances to be consistent with § 173.427(c), which prescribes requirements for shipping LSA-I and SCO-I in conveyances. However, a freight container can also be used in accordance with § 173.427(c) and should be subject to these requirements. Any requirement to measure non-fixed contamination on the internal surface of a tank or IBC is addressed by our change to the introductory language of paragraph (a).

- Finally, Mr. Laude inquired whether paragraph (a)(2) should apply to overpacks as well as conveyances. While this seems possible, we consider this change unnecessary because we are addressing the misconception that conveyances used for non-exclusive use transport were required to be routinely surveyed for contamination.

Paragraph (b)

Section 173.443(b) currently allows non-fixed radioactive contamination limits on a package to be up to ten times the limits in § 173.443(a) during exclusive use shipments by rail or highway, if the initial contamination is no greater than the § 173.443(a) limits. We proposed to apply this exception to the external and internal surfaces of conveyances, overpacks, freight containers, tanks, and IBCs, in addition to the external surfaces of each package. This ensures that any radioactive substances on the associated items utilized during transportation do not exceed the designated upper limits for non-fixed (removable) radioactive contamination of the package during transport.

In response to comments from Lawrence Laude and Regulatory

Resources, we are removing the reference to the “internal surfaces” of tanks and IBCs from the proposed § 173.443(b) because they are covered by the term “package.” However, we disagree that the reference to tanks and IBCs should be removed from the “return to service” provisions in § 173.443(c), which should be applicable to tanks and IBCs. And we do not find any inconsistency with the provisions in § 173.428 on the transport of empty Class 7 (radioactive) packagings.

Paragraph (c)

In paragraph (c), we proposed to replace the phrase “returned to service until the radiation dose at each accessible surface” is at a specified level with “returned to Class 7 (radioactive) materials exclusive use transport service, and then only for a subsequent exclusive use shipment utilizing one of the above cited provisions, unless the radiation dose rate at each accessible surface” is at that specified level. Under this proposal, with limited exceptions provided by §§ 173.443(a) and (d), a conveyance, freight container, overpack, tank, or intermediate bulk container used for exclusive use transport of radioactive materials under §§ 173.427(b)(4), 173.427(c), or 173.443(b) would need to be surveyed with appropriate radiation detection instruments. These conveyances, freight containers, overpacks, tanks, or intermediate bulk containers would have to exhibit a radiation dose rate no greater than 0.005 mSv per hour (0.5 mrem per hour) at any accessible surface, and non-fixed radioactive surface contamination no greater than the limits in § 173.443(a), in order to continue to be used for one of the following specified Class 7 (radioactive) materials exclusive use transport scenarios:

(1) The use of the packaging exception for less than an A₂ quantity authorized in § 173.427(b)(4);

(2) The use of the authorization in § 173.427(c) to ship unpackaged LSA-I and SCO-I; or

(3) The use of the authorization in § 173.443(b) to ship packages that may develop increased contamination during transport up to ten times the normal package limits, so long as the package meets the non-fixed contamination limits at the beginning of transport.

The procedure described in § 173.443(c) would not be applicable, and would in fact generally be prohibited, for unrestricted return to general service of the item or conveyance. The rationale for this proposed change in §§ 173.443(c),

174.715(a), 175.705(c), 176.715, and 177.843(a), is as follows:

(1) If this “returned to service” criterion were to be considered a criterion for unrestricted release following exclusive use transport of Class 7 (radioactive) materials, it would be providing a radioactive material unrestricted transfer (free release) limit, which DOT cannot authorize. DOT has authority only for the regulation of radioactive material while in transport. The clearance (unrestricted or free release) from regulatory control of radioactive materials for further use or disposal, or ownership, is subject to regulations of the Nuclear Regulatory Commission, NRC Agreement States or is effected pursuant to the control of the Department of Energy from their facilities (pursuant to the Atomic Energy Act of 1954, as Amended and the Energy Reorganization Act of 1974;

(2) Non-hazardous material, even foodstuffs, could be transported in contact with these items or conveyances, and an unacceptable health physics practice would result if these limits were construed to be a criterion for free release (i.e., for unrestricted radioactive material transfer);

(3) Adhering to the requirements for non-fixed contamination (no greater than the § 173.443(a) values) and radiation level (no greater than 0.005 mSv per hour, or 0.5 mrem per hour, at the surface of the vehicle) of § 173.443(c) would not provide sufficient protection for unrestricted transfer, considering that over time factors such as weathering could gradually convert any fixed contamination to non-fixed contamination; and

(4) Allowing the free release or unrestricted transfer of radioactive material at these levels would be incompatible with currently and generally accepted radiation protection practices.

USACE stated that the proposed rulemaking does not eliminate the confusion about “contamination,” especially for internal surfaces of conveyances, tanks, or intermediate bulk containers and whether they can be released from non-radioactive shipments. It also noted there are discrepancies concerning “unrestricted release” between PHMSA (in the HMR) and other Federal government agencies (in various guidance documents) and recommended that we consult with the NRC to develop “unrestricted release” criteria that would be applicable to both transport and transfer. While such a project may have merit, it would be beyond the scope of this rulemaking and

could involve attempts to reconcile non-internationally accepted standards and/or U.S. standards that may be less restrictive or decades old. In this rulemaking, we are adopting the most recent international standards on contamination promulgated by the United Nations and the IAEA to be as consistent as possible with transport safety standards required by the rest of the countries in the world and facilitate international commerce.

Energy Solutions commented that the “return to service” provisions in revised paragraph (c) would create ambiguities, are contrary to the intent of the 1979 DOT and NRC memorandum of understanding, and are not compliant with Presidential Executive Orders 12866 and 13272, the Paperwork Reduction Act, the Unfunded Mandates Reform Act and ALARA mandates. The questions that Energy Solutions presented and our responses are as follows:

- Would a manifest be required when the package, conveyance, overpack, freight container, tank, or intermediate bulk container meets the return to service criteria, under the revised language? Since the exclusive use provision would continue to apply, at a minimum, the exclusive use requirements in § 173.403 would be applicable. The shipper must also classify and offer the material appropriate to the hazard, as applicable.

- What is the proper shipping name if the remaining material is exempt from Class 7 transport in accordance with § 173.436? If the remaining material can be demonstrated to be exempt from the regulations, then the HMR do not apply and therefore a proper shipping name is not necessary.

- How would the return to service requirements apply to various hypothetical situations, such as:

- If a reportable quantity of radioactive material is being offered that is also exempt from the HMR in accordance with § 173.436. We do not know of a realistic scenario that could cause this situation to happen, but if the radioactive material can be demonstrated to be exempt from the HMR, then the HMR do not apply.

- If the radioactive Class 7 hazard present is the subsidiary hazard of the material. We see no ambiguity; the return to service requirements criteria apply whether the radioactive material is the primary or subsidiary hazard.

- If the conveyance returned to service under the proposed language remains under the control of the licensee or if it must be returned to a licensed facility? The material will need to be transferred in accordance with the

transfer license conditions of the shipper, which the DOT does not regulate.

○ If a closed transport vehicle meets the criteria in § 173.443(d) and is marked and placarded, would a manifest be required and what proper shipping name should be used? The return to service requirements in paragraph (c) do not apply to a vehicle that meets the conditions in paragraph (d).

Overall, we disagree with Energy Solutions' position that the proposed rulemaking does not provide the clarification DOT seeks. We believe the proposed rulemaking clarifies possible longstanding misinterpretations on the distinction between transport and transfer of radioactive material and that the benefits realized for the public, transport workers and emergency responders far outweigh any possible disadvantages of the proposal.

We also disagree that this rulemaking is inconsistent with the 1979 Memorandum of Understanding or that it is not in "the public interest." DOT and the NRC have advised and consulted with one another on this subject for a number of years and worked to clarify that return to service does not refer to, and cannot be interpreted to mean, unrestricted release or transfer. Class 7 accidental release statistics which the commenter referred to in the comments are not applicable in this case, because even if such accidents were to have occurred and no hazard communications were available, there would be no way of knowing such data should even be gathered because the human senses cannot detect radiation. Additionally, the possible detrimental scenarios need not be accident related, even weathering effects could possibly cause the spread of contamination, or as stated in the proposed rulemaking the contamination could be commingled with foodstuffs in subsequent transports, creating an unsatisfactory health physics practice.

Based on currently-accepted health physics theory, these revisions provide benefits to the public. Any data or documentation would be unrevealing, as there would be no deterministic health effects observed from low level contamination and any stochastic health effects would be equally difficult to observe empirically.

Similarly, we do not agree with Energy Solutions' arguments that this rulemaking fails to comply with the Executive Orders 12866 and 13271, the Unfunded Mandates Reform Act, and the Paperwork Reduction Act on the theory that the amendments proposed in the NPRM would result in a dramatic

increase in operational costs of approximately 800–1,000% without any offsetting benefit or reduction in exposure to the public. Energy Solutions was the only entity to assert that there would be any increase in costs, much less the extreme increase it claimed. We consider that some relatively minor adaptation to new practices would enable return shipments of packages classified under a relatively lower Class 7 hazard category, such as an excepted package, and the regulatory benefits of modest transport requirements (primarily hazard communication provided to transport workers, emergency responders and members of the public) far outweigh the burden imposed.

Lastly, Energy Solutions recommended creating a new definition in § 173.403 for the term "release survey effective radiation dose equivalent" and additional rewording of § 173.443, as proposed in the NPRM, to provide "relief from the unnecessary burdens and inaccuracies" of the proposal. However, these recommended changes are beyond the scope of the proposals in this rulemaking.

Regulatory Resources expressed uncertainty over what the intention was for the proposed § 173.443(c) "return to service" criteria, but seemed to believe it applied primarily to packages. Our intention is unchanged, and we believe it is widely recognized that the basic contamination limits provided in § 173.443 will not typically lead to cross contamination of conveyances or any other items in contact with packaged radioactive material. For this reason, we do not require periodic radiation and contamination surveys related to non-exclusive use transport.

At the same time, we are clarifying the return to service criteria in this rulemaking, because regulatory relief in certain circumstances, such as provided by §§ 173.443(b), 173.427(b)(4), or 173.427(c), can possibly create cross contamination. For this reason, exclusive use provisions are needed, and return to service surveys are necessary, in order to mitigate and control the build-up of contamination levels in undesired locations when these provisions are utilized, while allowing flexibility and overall exposure reduction in these instances. As noted above, there seems to be some confusion that return to service standards can lead to a free release or unrestricted transfer situation, for which DOT does not have authority. Rather, exclusive use provisions may always be terminated when the items affected have been demonstrated to be no longer subject to the HMR or can be transported in

accordance with provisions of the HMR that do not require contamination related exclusive use transport.

Paragraph (d)

In paragraph (d), we proposed to require placarding of closed transport vehicles used solely for the exclusive transportation by highway or rail of Class 7 (radioactive) material packages with contamination levels that do not exceed 10 times the package contamination limits prescribed in § 173.443(a). We proposed to add the qualifier "exclusive use" to ensure that the exclusive use requirements described under the definition of "exclusive use" in § 173.403 are satisfied for these shipments. In this paragraph, we are deleting the word "packages" to allow this paragraph to apply to unpackaged radioactive material, which will provide consistency with similar requirements found in paragraphs §§ 174.715(b) and 177.843(b).

Lawrence Laude suggested that § 173.443(d)(2) be changed to allow the words to be a "marked" rather than "stenciled" to allow flexibility. PHMSA accepts that there are several ways to appropriately mark the required information, and has amended the regulatory text to allow marking, with stenciling as an example.

Paragraph (e)

In paragraph (e), we proposed to add required actions for leaking or suspect Class 7 (radioactive) packages or unpackaged material, including immediate actions and assessments, protective requirements, recovery techniques, and prerequisites for continued transport. In response to the suggestions from Regulatory Resources, we are adding the words "as applicable" and changing the second sentence in the paragraph to read "The scope of the assessment must include, as applicable, the package, the conveyance, the adjacent loading and unloading areas, and, if necessary, all other material which has been carried in the conveyance."

Section 173.453

This section prescribes exceptions for fissile materials. In the NPRM we proposed inserting a phrase into § 173.453(d) that would allow a fissile material exception for uranium enriched in uranium-235 to a maximum of 1 percent by weight under the conditions stated there only if the material in question is essentially homogeneous. After consulting with the NRC on its upcoming rulemaking, we have decided to not make the proposed change at this

time. If the NRC changes the defining criteria for this radionuclide we will update in a future rulemaking.

Regulatory Resources suggested a reorganization of § 173.453(c) for clarity. However, this was not included in our NPRM and we find the existing language to be clear, so we are not adopting the suggested changes.

Section 173.465

This section sets out requirements for Type A packaging tests. In paragraph (a), we are adding a specific reference to the standard in § 173.412(j) for when a test for a Type A package is deemed to be successful. In § 173.465(d)(i), we are adopting the revised TS-R-1 language to clarify that the stacking test weight must be calculated using five times the maximum weight of the loaded package. USEC suggested that we reword this requirement to “maximum allowable package weight,” but we choose to keep the wording shown in our NPRM for consistency with TS-R-1.

Section 173.466

This section describes additional tests for Type A packagings designed for liquids and gases. In paragraph (a), we are adding a specific reference to the standard in § 173.412(k) for when a test for a Type A package designed for liquids or gases is deemed to be successful.

Section 173.469

This section describes tests for special form Class 7 (radioactive) materials. In paragraph (b)(2)(ii), we are replacing the word “edges” with the word “edge” since this refers to the edge of a flat circular surface.

In paragraph (b)(2)(iii), we are revising the units of measure and the thickness requirement for the lead sheet used for the percussion test from “2.5 cm (1 inch) or greater” to “not more than 25 mm (1 inch)” in thickness, which is consistent with the requirement in TS-R-1. USEC asked that there be a transition period for previously tested materials that might not meet the revised criteria. PHMSA expects minimal impact because alternative testing in accordance with ISO 2919 or IAEA requirements has been typically used to demonstrate compliance. If any special form certificate renewals are impacted, they will be evaluated on a case-by-case basis to allow for transition if necessary.

In paragraph (d)(1) we are adding an alternative to allow the use of the ISO 2919 Class 5 impact test as an alternative to the impact and percussion test if the mass of the special form material is less than 500 g, as this

alternative was added to TS-R-1.

Updated references to the 1999 edition of ISO 2919 are being added to paragraphs (d)(1) and (d)(2).

We are adding a provision in new paragraph (e) in § 173.469 to allow sources subjected to the ISO 2919 heat test before the effective date of this final rule to not have to be retested to the newer revision of ISO 2919 (i.e. ISO 2919-1999(E)) which is being incorporated by reference in this rulemaking.

Section 173.473

This section prescribes requirements for foreign made packages. We are revising § 173.473(a)(1) to update the reference to the 2009 edition of the IAEA standards for transportation of radioactive materials, TS-R-1.

Section 173.476

This section details the requirements for approval of special form materials. We are revising paragraph (a) to extend the retention period for special form documentation from one year to two years after the offeror's latest shipment, to coincide with the minimum retention period for shipping papers. In the NPRM we proposed revising paragraph (d) to replace the reference to an obsolete proper shipping name with a reference to the current proper shipping names. This change was completed under a different rulemaking, Docket No. PHMSA-2013-0158 (HM-244F) 78 FR 60748 (Oct. 2, 2013). Further amendment to this paragraph is not needed in this final rule.

Lawrence Laude requested that paragraph (d) be expanded to include packages of special form material where the activity is less than A_2 to account for special form sources with expired or unavailable documentation which could be shipped as “Radioactive Material, Type A Package.” As discussed under our changes to § 172.203(d)(2), if such documentation does not exist, the shipper should not classify the material as special form and then this paragraph would not be applicable.

Section 173.477

This section details the requirements for approval of packagings containing greater than 0.1 kg of non-fissile or fissile-excepted uranium hexafluoride. In paragraph (a), we are extending the retention period for uranium hexafluoride packaging documentation from one year to two years after the offeror's latest shipment, to coincide with the minimum retention period for shipping papers.

Section 174.700

We are removing and reserving paragraph (e), which provided special handling requirements for fissile material, controlled shipments, since that term was removed from the regulations in our January 26, 2004 rulemaking (69 FR 3632 (HM-230)). Lawrence Laude stated that paragraph (e) should not be deleted, but should be reworded to be consistent with, for example, § 177.842(f) as “fissile material controlled shipments” were replaced with exclusive use shipments with a total CSI not to exceed 100. The commenter also stated that if this change is intended to rely on the references to §§ 173.457 and 173.459 in § 174.700(d), the requirements in part 177 should be similar and the different modal requirements should be consistent. However, paragraph (d) does provide references to §§ 173.457 and 173.459, as does § 177.842(f). The commenter also proposed deletion of § 173.459, but as we did not include any proposed changes to that section in the NPRM we are not adopting that suggestion.

Section 174.715

This section prescribes requirements for cleanliness of rail transport vehicles after use. We are revising § 174.715(a) to make this section consistent with the changes being made in § 173.443(c) to clarify the phrase “returned to service.”

Section 175.702

This section provides separation distance requirements for packages containing Class 7 (radioactive) materials in cargo aircraft. In the NPRM we proposed changes to § 175.702(b) and (c) to include references to the CSI limits in § 175.700(b). Lawrence Laude noted that this paragraph is inconsistent with TS-R-1, which does not have limits on groups of packages beyond the limits for the entire aircraft. We agree that this paragraph is more stringent than TS-R-1, but not otherwise contradictory. In other words, compliance with the existing requirements of § 175.702(b) satisfies the (lesser) requirements in TS-R-1. As such, we are adopting the changes to § 175.702 as proposed in the NPRM.

Section 175.705

This section describes requirements concerning radioactive contamination of aircraft. In paragraph (c) we are clarifying that the totality of any radioactive substances remaining after clean-up of an aircraft where radioactive material has been released must not meet the definition of radioactive material (as defined in § 173.403) before

returning the aircraft to service. Lawrence Laude noted the proposed change to § 175.705 appears to be more stringent than the requirement for other modes as well as the non-fixed contamination limits in § 173.443(a). The commenter is correct in noting the contamination related requirements for aircraft are different from the other modes. The differences are a result of the evolution of the requirements, dating back to aircraft contamination events that occurred in the 1960s. However, it should be noted that the contamination limits in § 173.443 apply to packages, conveyances and other related items that are offered for Class 7 transport. It should also be noted that § 173.443(a) does not just require compliance with the Table 9 limits, but also that contamination be kept as low as reasonably achievable.

Section 176.715

This section describes requirements concerning radioactive contamination of vessels. We are revising § 176.715 to make this section consistent with the changes being made in § 173.443(c) to clarify when holds, compartments, or deck areas used for the transportation of LSA material or SCO under exclusive use conditions may be “used again” (i.e. “returned to service”). Lawrence Laude stated these changes to § 176.715 would add increased ambiguity rather than eliminating it because it does not specifically address contamination limits for holds, compartments, and deck areas being returned to general service. The commenter also stated it was questionable whether a deck area would be used for unpackaged radioactive material. We believe the definition of contamination in conjunction with the new scope exclusion provided in § 173.401(b)(5) provides clear guidance as to when the HMR is applicable in these transport cases cited by the commenter, as well as all other transport scenarios. However, any further transfer or ownership criteria of radioactive material will be regulated separately by the applicable licensing authority. Use of a deck area for unpackaged transport is conceivable in accordance with § 173.427(c), so it is not appropriate to revise this wording.

Section 177.843

This section describes requirements concerning radioactive contamination of vehicles. In § 177.843(a), PHMSA is adding a reference to § 173.443(b). This is part of a larger proposed change developed from PHMSA internal review, that is intended to make this section consistent with the changes proposed in § 173.443(c). In this final

rule, PHMSA is modifying § 173.443(c), to eliminate the ambiguity and confusion concerning the phrase “returned to service,” for conveyances, overpacks, freight containers, tanks, and intermediate bulk containers that may have had radioactive substances deposited on them during certain Class 7 (radioactive) exclusive use transport scenarios.

Lawrence Laude suggested that § 177.843 fails to address the contamination limits to be applied to motor vehicles being returned to general service. We believe the definition of contamination in conjunction with the new scope of exclusions provided in § 173.401(b)(5) will provide clear guidance as to when the HMR is applicable in these transport cases cited by the commenter, as well as all other possible transport scenarios. However, any further transfer or ownership criteria of radioactive material will be regulated separately by the applicable licensing agency.

Lawrence Laude further stated the current and proposed § 177.843(a) requires that motor vehicles used for an exclusive use shipment of LSA material or SCO per § 173.427(b)(4) must be surveyed for contamination after each use. The commenter also noted § 173.427(b)(4) allows LSA material and SCO to be shipped in packages meeting the performance based criteria of § 173.410 and these are the same criteria that Type IP-1 packages have to meet, yet exclusive use shipments of LSA material and SCO in Type IP-1 packages do not require vehicle surveys after use. For consistency, the commenter recommended that the requirement for surveying vehicles used for § 173.427(b)(4) shipments be deleted from § 177.843(a) and the corresponding sections of Parts 174 and 176. We believe the commenter failed to note the longstanding domestic exception in § 173.427(b)(4) permits liquid LSA-I, LSA-II, LSA-III and SCO-II to be transported in a Type IP-1 package, under certain conditions, rather than a Type IP-2 or Type IP-3 as required by Table 6 in § 173.427. This practice has been demonstrated to provide needed flexibility and an effective level of safety for several decades. A shipper is not required to package in accordance with § 173.427(b)(4) and may elect to ship solid LSA-I and SCO-I in a Type IP-1 non-exclusive use in accordance with § 173.427(b)(1) and Table 6 in § 173.427. A shipper may also elect to package in accordance with §§ 173.427(b)(2), (3), or (5), which would not necessarily require the survey required by § 177.843(a).

Section 178.350

This section provides specifications for specification 7A packages. We are revising paragraph (c) to clarify that a DOT Specification 7A Type A package must satisfy the requirements of § 178.2 as well as the marking requirements of § 178.3.

Sections 178.356, 176.356-1 through 178.356-5

These sections provide specifications for specification 20PF phenolic-foam insulated, metal overpacks. USEC noted that this section, along with the sections cited below on the 21PF overpacks, should also be deleted in its entirety, as the 20PF series overpacks are old specification packages that also are no longer in service. We agree, and are removing and reserving these sections.

Sections 178.358, 178.358-1 through 178.358-6

These sections provide specifications for specification 21PF fire and shock resistant, phenolic-foam insulated, metal overpacks. We are removing §§ 178.358 and 178.358-1 through 178.358-6 because 21PF overpacks for uranium hexafluoride cylinders are no longer authorized.

Sections 178.360, 178.360-1 through 178.360-4

These sections provide specifications for specification 2R: Inside containment vessels. We are removing §§ 178.360, and 178.360-1 through 178.360-4 pertaining to the DOT Specification 2R inside containment vessel since specification 2R was only required, under certain conditions, to be used as the inner container for the DOT Specification 20WC, 21WC, 6L, and 6M packages, and authorization for use of these latter packages was terminated on October 1, 2008. J. L. Shepherd was concerned that removal of the 2R specification would impact Special Permits that include their usage; however, this change would not directly affect such Special Permits.

IV. Regulatory Analyses and Notices

A. Statutory/Legal Authority for This Rulemaking

This final rule is published under authority of 49 U.S.C. 5103 and 5120 which, respectively:

1. Authorize the Secretary of Transportation to (a) designate radioactive and other materials “as hazardous when the Secretary determines that transporting the material in commerce in a particular amount and form may pose an unreasonable risk to health and safety or

property,” and (b) “prescribe regulations for the safe transportation, including security, of hazardous material in intrastate, interstate, and foreign commerce.”

2. Direct the Secretary to (a) “participate in international forums that establish or recommend mandatory standards and requirements for transporting hazardous material in international commerce,” and (b) “consult with interested authorities to ensure that, to the extent practicable, regulations the Secretary prescribes . . . are consistent with standards and requirements related to transporting hazardous material that international authorities adopt,” except that the Secretary need not adopt an international standard or requirement which “the Secretary decides . . . is unnecessary or unsafe,” and the Secretary may prescribe a more stringent safety standard or requirement which the Secretary decides “is necessary in the public interest.” This final rule amends requirements in the HMR governing the transportation of Class 7 (radioactive) materials in commerce to maintain alignment with international standards by adopting recent updates in TS–R–1, including changes to packaging requirements, definitions, and activity limits.

Harmonization serves to facilitate international commerce; at the same time, harmonization promotes the safety of people, property, and the environment by reducing the potential for confusion and misunderstanding that could result if shippers and transporters were required to comply with two or more conflicting sets of regulatory requirements. While the intent of this rulemaking is to align the HMR with international standards, we review and consider each amendment on its own merit based on its overall impact on transportation safety and the economic implications associated with its adoption into the HMR. Our goal is to harmonize without sacrificing the current HMR level of safety and without imposing undue burdens on the regulated community. Thus, as explained in the corresponding sections above, we are not harmonizing with certain specific provisions of the TS–R–1. Moreover, we are maintaining a number of current exceptions for domestic transportation that should minimize the compliance burden on the regulated community.

In developing this final rule PHMSA consulted with the NRC and the U.S. Coast Guard.

B. Executive Orders 12866 and 13563 and DOT Regulatory Policies and Procedures

This rulemaking is not considered a significant regulatory action under Executive Order (E.O.) 12866 (“Regulatory Planning and Review”), as supplemented and reaffirmed by E.O. 13563 (“Improving Regulation and Regulatory Review”), stressing that, to the extent permitted by law, an agency rulemaking action must be based on benefits that justify its costs, impose the least burden, consider cumulative burdens, maximize benefits, use performance objectives, and assess available alternatives, and the Regulatory Policies and Procedures of the Department of Transportation (44 FR 11034).

During the rulemaking process, PHMSA considered three alternatives to harmonize domestic and international radioactive materials transportation requirements:

Alternative 1: Do nothing. The United States actively participates in the development of uniform international standards for transporting hazardous materials. Because all major countries and international carrier organizations have or will adopt the changes proposed in this rulemaking, a do-nothing approach would fail to adopt international standards which enhance safety in the transportation of radioactive materials and would result in complications in the movement of these materials. Future inconsistencies with international transport standards may result in foreign authorities refusing to accept hazardous material shipments prepared in accordance with the HMR. To successfully participate in international markets, U.S. companies would be required to conform to dual regulations. Inconsistent domestic and international regulations also have an adverse safety impact by making it more difficult for shippers and carriers to understand and comply with all applicable requirements. Unnecessary transportation delays may also expose international shipments to additional safety and security vulnerabilities. For these reasons, PHMSA did not adopt Alternative 1.

Alternative 2: Adopt the international standards in their entirety. Under this alternative, all revisions to the IAEA regulations would be incorporated into the HMR. In some instances PHMSA believes more stringent regulations are necessary to enhance transportation safety, and in others, less stringent regulations are necessary to reduce economic burden. Because of certain safety and economic concerns PHMSA

elects not to propose adoption into the HMR of some amendments incorporated into the IAEA regulations. In addition, PHMSA and the NRC have identified changes that are only applicable domestically that would increase safety, reduce costs, and improve compliance. For these reasons, PHMSA did not adopt Alternative 2.

Alternative 3: Adopt IAEA regulations with additional changes to the HMR that promise to enhance safety and decrease regulatory compliance obstacles. Under this alternative, PHMSA is harmonizing the HMR with the IAEA regulations and the NRC proposed amendments to an extent consistent with U.S. safety and economic goals. As indicated above, PHMSA is not adopting provisions that, in PHMSA’s view, do not provide an adequate level of safety. Further, PHMSA is providing for exceptions and extended compliance periods to minimize the potential economic impact of any revisions on the regulated community. PHMSA provides detailed justification for each instance in the final rule where the proposed change differs from the revised IAEA regulations. Alternative 3 is the only alternative that addresses, in all respects, the purpose of this regulatory action, which is to facilitate the safe and efficient transportation of hazardous materials in international commerce. For these reasons, Alternative 3 is PHMSA’s chosen alternative. A complete copy of the economic impact assessment for this final rule is available in the docket for this rulemaking action PHMSA–2009–0063 (HM–250).

C. Executive Order 13132

This final rule has been analyzed in accordance with the principles and criteria contained in Executive Order 13132 (“Federalism”). This final rule preempts State, local, and Indian tribe requirements but does not impose any regulation that has substantial direct effects on the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

The Federal hazardous material transportation law, 49 U.S.C. 5101–5128, contains an express preemption provision (49 U.S.C. 5125(b)) that preempts State, local, and Indian tribe requirements on certain subjects, as follows:

- (1) The designation, description, and classification of hazardous material;
- (2) The packing, repacking, handling, labeling, marking, and placarding of hazardous material;

(3) The preparation, execution, and use of shipping documents related to hazardous material and requirements related to the number, contents, and placement of those documents;

(4) The written notification, recording, and reporting of the unintentional release in transportation of hazardous material; and

(5) The design, manufacture, fabrication, inspection, marking, maintenance, recondition, repair, or testing of a packaging or container represented, marked, certified, or sold as qualified for use in transporting hazardous material in commerce.

This final rule addresses subject items (1), (2), (3), and (5) above and preempts State, local, and Indian tribe requirements not meeting the “substantively the same” standard. Federal hazardous materials transportation law provides at 49 U.S.C. 5125(b)(2) that, if DOT issues a regulation concerning any of the covered subjects, DOT must determine and publish in the **Federal Register** the effective date of Federal preemption. The effective date may not be earlier than the 90th day following the date of issuance of the final rule and not later than two years after the date of issuance. The effective date of Federal preemption is January 1, 2015.

D. Executive Order 13175

This final rule was analyzed in accordance with the principles and criteria contained in Executive Order 13175 (“Consultation and Coordination with Indian Tribal Governments”). PHMSA received two comments concerning Executive Order 13175. PHMSA received a comment from NIRS and CACC asking how we concluded that the proposed rule would not uniquely impact communities of Indian Tribal leadership. PHMSA also received a comment from the Alaska Inter-Tribal Council stating its opposition to the assertion that our proposed rule does not significantly or uniquely affect the communities of the Indian Tribal governments. The Alaska Inter-Tribal Council states that international shipping of radioactive materials is of great concern because of the potential adverse risks to the Arctic territory and its inhabitants. It further states that consultation between tribal governments and PHMSA must occur before any changes to PHMSA rules that could potentially adversely impact tribal communities, territories, peoples and traditional ways of life.

This rule has the intended goal of harmonizing with international standards for the safe transportation of radioactive materials, making internally

identified clarifications of requirements, and making changes that enhance safety while shipments of radioactive materials are in transportation. International and domestic shipments of radioactive materials are already transiting arctic waters and Alaska in compliance with the requirements of TS-R-1 or the HMR. The changes adopted in this final rule are simply creating greater harmonization with the international standard, and are not creating or authorizing new hazardous materials shipments or transit routes. Furthermore, consistency between U.S. and international regulations enhances the safety of international hazardous materials transportation through better understanding of the regulations, an increased level of industry compliance, the smooth flow of hazardous materials from their points of origin to their points of destination, and consistent emergency response in the event of a hazardous materials incident. Based on this information and the absence of specific indications to the contrary from these commenters, the revisions adopted in this final rule do not have direct tribal implications and do not impose substantial direct compliance costs on Indian tribal governments; consequently the funding and consultation requirements of Executive Order 13175 do not apply.

E. Regulatory Flexibility Act, Executive Order 13272, and DOT Procedures and Policies

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires an agency to review regulations to assess their impact on small entities and has been developed in accordance with Executive Order 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”) and DOT’s procedures and policies to promote compliance with the Regulatory Flexibility Act to ensure that potential impacts of draft rules on small entities are properly considered.

This final rule facilitates the transportation of hazardous materials in international commerce by providing consistency with international standards. This final rule applies to offerors and carriers of hazardous materials, some of whom are small entities, such as chemical manufacturers, users and suppliers, packaging manufacturers, distributors, and training companies. As discussed in the regulatory impact analysis, the majority of amendments in this final rule should result in cost savings and ease the regulatory compliance burden for shippers engaged in domestic and international commerce, including

trans-border shipments within North America.

Many companies will realize economic benefits as a result of these amendments. Additionally, the changes effected by this final rule will relieve U.S. companies, including small entities competing in foreign markets, from the burden of complying with a dual system of regulations. Therefore, we certify that these amendments will not have a significant economic impact on a substantial number of small entities. A complete copy of the regulatory flexibility analysis for this final rule is available in the docket for this rulemaking action.

F. Paperwork Reduction Act

PHMSA currently has approved information collections under Office of Management and Budget (OMB) Control Number 2137-0034, “Hazardous Materials Shipping Papers and Emergency Response Information,” and OMB Control Number 2137-0510, “Radioactive Materials Transportation Requirements.” Specifically, this final rule will result in:

- A decrease in the annual information collection burden of OMB Control Number 2137-0034 due to reductions in the shipping paper requirements for excepted quantities of RAM shipments. These reductions in burden include not requiring the mass of these shipments on the shipping papers for air shipments in § 172.202(a)(6), the additional description in § 172.203(d) for RAM shipments, and not requiring the shippers certification statement for RAM shipments in § 172.204(c)(4) and
- an increase in the annual information collection burden of OMB Control Number 2137-0510 due to an increase in the duration of record keeping requirements in §§ 173.411(c) and 173.415(a), and the documentation required to demonstrate a package complies with testing requirements in §§ 173.415(a)(1) and (a)(2).

In response to comments received from multiple commenters we are authorizing an option for alternative documentation to allow an offeror who receives a packaging from another party acting as the manufacturer, to rely on a manufacturer’s certification when available. In such instances, the offeror must maintain a copy of the manufacturer’s certification and, if requested by DOT, be able to obtain a copy of the complete documentation from the manufacturer. These changes will not result in an increase of respondents or responses, as the new requirements are in addition to existing package documentation requirements.

There will however be additional costs involved in the preparation and retention of the documents in question. The manufacturer's certification is an additional document, not previously provided for in the HMR, but is merely an optional alternative to the existing package documentation requirements.

Under the Paperwork Reduction Act of 1995, no person is required to respond to an information collection unless it has been approved by OMB and displays a valid OMB control number. Section 1320.8(d), title 5, Code of Federal Regulations requires that PHMSA provide interested members of the public and affected agencies an opportunity to comment on information and recordkeeping requests.

This rule identifies revised information collection requests that PHMSA will submit to OMB for approval based on the requirements in this final rule. PHMSA has developed burden estimates to reflect changes in this final rule, and estimates the information collection and recordkeeping burden in this rule to be as follows:

OMB Control Number 2137-0034

Annual Decrease in Number of Respondents: 10,000.

Annual Decrease in Annual Number of Responses: 100,000.

Annual Decrease in Annual Burden Hours: 140.

Annual Decrease in Annual Burden Costs: \$5,912.

100,000 responses at 5 seconds a response equals 140 hours at \$42.23 an hour.

OMB Control Number 2137-0510.

Annual Increase in Number of Respondents: 0.

Annual Increase in Annual Number of Responses: 500.

Annual Increase in Annual Burden Hours: 6100.

Annual Increase in Annual Burden Costs: \$394,731.

1400 modifications to existing responses at \$64.71 an hour and four hours per response and; 500 new certifications at \$64.71 an hour and one hour per response.

PHMSA will submit the revised information collection and recordkeeping requirements to OMB for approval.

G. Regulation Identifier Number (RIN)

A regulation identifier number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center generally publishes the Unified Agenda in April and October of

each year. The RIN contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

H. Unfunded Mandates Reform Act

This final rule does not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It does not result in costs of \$141.3 million or more, adjusted for inflation, to either State, local, or tribal governments, in the aggregate, or to the private sector in any one year, and is the least burdensome alternative that achieves the objective of the rule.

I. Environmental Assessment

The National Environmental Policy Act, 42 U.S.C. 4321-4375, requires that Federal agencies analyze proposed actions to determine whether the action will have a significant impact on the human environment. In accordance with the Council on Environmental Quality (CEQ) regulations, federal agencies must conduct an environmental review considering (1) the need for the proposed action, (2) alternatives to the proposed action, (3) probable environmental impacts of the proposed action and alternatives, and (4) the agencies and persons consulted during the consideration process. 40 CFR 1508.9(b).

1. Purpose and Need

PHMSA is amending requirements in the HMR pertaining to the transportation of Class 7 (radioactive) materials to harmonize the HMR with changes contained in the IAEA publication, entitled "Regulations for the Safe Transport of Radioactive Material, 2009 Edition, IAEA Safety Standards Series No. TS-R-1," and making other amendments based on PHMSA's own initiative. These amendments update, clarify, or provide relief from certain existing regulatory requirements to promote safer transportation practices, eliminate unnecessary regulatory requirements, facilitate international commerce, and make these requirements easier to understand.

2. Alternatives

In developing this rule, PHMSA considered three alternatives:

1. Do nothing;
2. Adopt the international standards in their entirety; or
3. Adopt IAEA regulations and DOT/NRC based changes that enhance safety and decrease regulatory compliance obstacles.

Alternative 1:

Because our goal is to facilitate uniformity, compliance, commerce and safety in the transportation of hazardous materials, we rejected this alternative.

Alternative 2:

By adopting the international standards in their entirety, PHMSA could potentially adopt provisions that, in our view, do not provide an adequate level of transportation safety and environmental safety and protection. Further, because we provide for domestic exceptions and extended compliance periods to minimize the potential economic impact of any revisions on the regulated community, this alternative was also rejected.

Alternative 3 is PHMSA's selected alternative, because it is the only alternative that addresses, in all respects, the purpose of this regulatory action to facilitate the safe and efficient transportation of hazardous materials in international commerce. Alternative 1 would not facilitate uniformity, compliance, commerce and safety in the transportation of hazardous materials. Alternative 2 includes, in some instances, less stringent regulations than are necessary to enhance transportation safety, and in other instances, more stringent regulations which unnecessarily increase economic burdens. In addition, PHMSA and the NRC have identified domestic-only changes that would increase safety, reduce costs, and improve compliance.

3. Analysis of Environmental Impacts

Hazardous materials are transported by aircraft, vessel, rail, and highway. The potential for environmental damage or contamination exists when packages of Class 7 (radioactive) material are involved in accidents or en route incidents resulting from cargo shifts, valve failures, package failures, or loading, unloading, or handling problems. The ecosystems that could be affected by a release include air, water, soil, and ecological resources (for example, wildlife habitats), as well as human exposure. The adverse environmental impacts associated with releases of most hazardous materials are short-term impacts that can be greatly reduced or eliminated through prompt clean-up of the accident scene. Most Class 7 (radioactive) materials are not transported in quantities sufficient to cause significant, long-term environmental damage if they are released, and those that have the potential to significantly impact human life or the environment must meet strict packaging and handling standards to ensure that even under accident conditions the hazardous material

would not be released into the environment.

The hazardous material regulatory system is a risk management system that is prevention-oriented and focused on identifying a hazard and reducing the probability and quantity of a hazardous material release. Making the regulatory provisions in the HMR clearer and more consistent with international standards will promote compliance and facilitate efficient transportation, thereby enhancing the safe transportation of hazardous materials and the protection of the environment. Relaxing certain regulatory requirements is based on PHMSA's experience, review, and conclusion that the changes are safe. PHMSA certifies that the amendments proposed in this final rule will not have a significant impact on the environment. In this final rule PHMSA is adopting the following noteworthy amendments to the HMR:

Placarding of conveyances.

In this final rule PHMSA is requiring placards to be affixed to conveyances carrying fissile material packages, unpackaged low specific activity (LSA) material or surface contaminated objects (SCO) in category I (i.e., LSA-I and SCO-I respectively), all conveyances required by §§ 173.427 and 173.441 to operate under exclusive use conditions, and all closed vehicles used in accordance with § 173.443(d). PHMSA expects a modest positive environmental impact due to awareness provided to transport personnel that shipments contain modest amounts of radioactivity, as well as a slight reduction in exposure to transportation personnel. The modest gains would not be achieved under alternative one or two.

Extension of package documentation retention requirement and clarification of information required to be maintained.

New clarification on types of information required to be retained for certain packages used to ship radioactive materials is provided in this final rule. PHMSA expects modest positive environmental gains due to a projected increase in appropriately tested and constructed packages, which will lead to a decrease in exposure to released radioactivity. As this change is a result an internal PHMSA review of existing domestic regulations, these modest environmental gains would not be achieved by selecting alternatives one or two.

Requirements for leaking or suspected leaking packages of radioactive material, or conveyance carrying leaking or suspected leaking unpackaged radioactive material.

PHMSA is adding new required actions for leaking or suspect Class 7 (radioactive) packages or unpackaged material, which include; immediate actions and assessments, protective requirements, recovery techniques, and prerequisites for continued transport. PHMSA expects modest positive environmental impact from this requirement. Increased clarity on responsibilities and actions to be taken when a leaking radioactive package is discovered are expected to reduce exposure to transportation workers and the general public. Any environmental gains from this change would be realized under alternatives two or three.

Contamination.

PHMSA is adding new as well as clarifying pre- and post-shipment requirements for Class 7 (radioactive) transport regarding external contamination of radioactive substances. PHMSA expects a modest positive environmental impact from this rulemaking. The increased clarity on responsibilities and actions to be taken before and after transportation will benefit the environment, workers, emergency responders, and the general public by minimizing the possibility of the unintended spread of radioactive contamination during routine conditions of transport. As this change is a result an internal PHMSA review of existing domestic regulations, these modest environmental gains would not be achieved by selecting alternatives one or two.

4. Agency Consultation and Finding of No Significant Impact

PHMSA, in consultation with the NRC, certifies that the amendments in this final rule will not have a significant impact on the environment.

J. Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comments (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) which may be viewed at <http://www.gpo.gov/fdsys/pkg/FR-2000-04-11/pdf/00-8505.pdf>.

K. Executive Order 13609 and International Trade Analysis

Under Executive Order 13609 ("Promoting International Regulatory Cooperation"), agencies must consider whether the impacts associated with

significant variations between domestic and international regulatory approaches are unnecessary or may impair the ability of American businesses to export and compete internationally. In meeting shared challenges involving health, safety, labor, security, environmental, and other issues, international regulatory cooperation can identify approaches that are at least as protective as those that are or would be adopted in the absence of such cooperation. International regulatory cooperation can also reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

Similarly, the Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. For purposes of these requirements, Federal agencies may participate in the establishment of international standards, so long as the standards have a legitimate domestic objective, such as providing for safety, and do not operate to exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

PHMSA participates in the establishment of international standards to protect the safety of the American public, and we have assessed the effects of this final rule to ensure that it does not cause unnecessary obstacles to foreign trade. In fact, the rule is designed to facilitate international trade. Accordingly, this rulemaking is consistent with Executive Order 13609 and PHMSA's obligations under the Trade Agreement Act, as amended.

List of Subjects

49 CFR Part 171

Exports, Hazardous materials transportation, Hazardous waste, Imports, Incorporation by reference, Reporting and recordkeeping requirements.

49 CFR Part 172

Education, Hazardous materials transportation, Hazardous waste, Incorporation by reference, Labeling, Markings, Packaging and containers, Reporting and recordkeeping requirements.

49 CFR Part 173

Hazardous materials transportation, Incorporation by reference, Packaging and containers, Radioactive materials,

Reporting and recordkeeping requirements, Uranium.

49 CFR Part 174

Hazardous materials transportation, Radioactive materials, Railroad safety.

49 CFR Part 175

Air carriers, Hazardous materials transportation, Incorporation by reference, Radioactive materials, Reporting and recordkeeping requirements.

49 CFR Part 176

Hazardous materials transportation, Incorporation by reference, Maritime carriers, Radioactive materials, Reporting and recordkeeping requirements.

49 CFR Part 177

Hazardous materials transportation, Motor carriers, Radioactive materials, Reporting and recordkeeping requirements.

49 CFR Part 178

Hazardous materials transportation, Incorporation by reference, Motor vehicle safety, Packaging and containers, Reporting and recordkeeping requirements.

In consideration of the foregoing, 49 CFR Chapter I is amended as follows:

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

■ 1. The authority citation for part 171 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; Pub. L. 101–410 section 4 (28 U.S.C. 2461 note); Pub. L. 104–134, section 31001; 49 CFR 1.81 and 1.97.

■ 2. Amend § 171.7 by:

- a. Revising paragraph (a)(1);
- b. Removing paragraph (d)(2) and redesignating paragraphs (d)(3) through (8) as (d)(2) through (7) respectively;
- c. Removing paragraph (i);
- d. Removing paragraph (p);
- e. Removing paragraph (ee);
- f. Redesignating paragraphs (j) through (o) as (i) through (m) respectively;
- g. Redesignating paragraphs (q) through (dd) as (n) through (bb) respectively; and
- h. Revising newly designated paragraphs (q)(1) and (u)(9) as follows:

§ 171.7 Reference material.

(a) * * *

(1) *General.* There is incorporated, by reference in parts 171–180 of this subchapter, matter referred to that is not specifically set forth. This matter is hereby made a part of the regulations in

parts 171–180 of this subchapter. The matter subject to change is incorporated only as it is in effect on the date of issuance of the regulation referring to that matter. The material listed in paragraphs (b) through (bb) of this section has been approved for incorporation by reference by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Material is incorporated as it exists on the date of the approval and a notice of any change in the material will be published in the **Federal Register**. Matters referenced by footnote are included as part of the regulations of this subchapter.

* * * * *

(q) * * *

(1) No. TS–R–1, IAEA Safety Standards for Protecting People and the Environment; Regulations for the Safe Transport of Radioactive Material, (IAEA Regulations), 2009 Edition, into §§ 171.22; 171.23; 171.26, 173.415, 173.416, 173.417, 173.473.

* * * * *

(u) * * *

(9) ISO 2919:1999(E), Radiation Protection—Sealed radioactive sources—General requirements and classification, (ISO 2919), second edition, February 15, 1999, into § 173.469.

* * * * *

PART 172—HAZARDOUS MATERIALS TABLE, SPECIAL PROVISIONS, HAZARDOUS MATERIALS COMMUNICATIONS, EMERGENCY RESPONSE INFORMATION, TRAINING REQUIREMENTS, AND SECURITY PLANS

■ 3. The authority citation for part 172 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96 and 1.97.

■ 4. In § 172.203, paragraphs (d)(2), (d)(3), and (d)(4) are revised to read as follows:

§ 172.203 Additional description requirements.

* * * * *

(d) * * *

(2) A description of the physical and chemical form of the material:

- (i) For special form materials, the words “special form” unless the words “special form” already appear in the proper shipping name; or
- (ii) If the material is not in special form, a description of the physical and chemical form of the material (generic chemical descriptions are permitted).

(3) The maximum activity of the radioactive contents contained in each

package during transport in terms of the appropriate SI units (*e.g.*, Becquerels (Bq), Terabecquerels (TBq)). The activity may also be stated in appropriate customary units (*e.g.*, Curies (Ci), milliCuries (mCi), microCuries (uCi)) in parentheses following the SI units. Abbreviations are authorized. Except for plutonium-239 and plutonium-241, the weight in grams or kilograms of fissile radionuclides (or the mass of each fissile nuclide for mixtures when appropriate) may be inserted instead of activity units. For plutonium-239 and plutonium-241, the weight in grams of fissile radionuclides (or the mass of each fissile nuclide for mixtures when appropriate) may be inserted in addition to the activity units.

(4) The category of label applied to each package in the shipment. For example: “RADIOACTIVE WHITE–I,” or “WHITE–I.”

* * * * *

■ 5. In § 172.310, paragraph (b) is revised to read as follows:

§ 172.310 Class 7 (radioactive) materials.

* * * * *

(b) Each industrial, Type A, Type B(U), or Type B(M) package must be legibly and durably marked on the outside of the packaging, in letters at least 12 mm (0.47 in) high, with the words “TYPE IP–1,” “TYPE IP–2,” “TYPE IP–3,” “TYPE A,” “TYPE B(U)” or “TYPE B(M),” as appropriate. A package which does not conform to Type IP–1, Type IP–2, Type IP–3, Type A, Type B(U) or Type B(M) requirements may not be so marked.

* * * * *

■ 6. In § 172.402, paragraph (d)(1) is revised to read as follows:

§ 172.402 Additional labeling requirements.

* * * * *

(d) * * *

(1) A subsidiary label is not required for a package containing material that satisfies all of the criteria in § 173.4, § 173.4a, or § 173.4b applicable to the subsidiary hazard class.

* * * * *

■ 7. In § 172.403, paragraphs (d) and (g)(2) are revised to read as follows:

§ 172.403 Class 7 (radioactive) material.

* * * * *

(d) *EMPTY label.* See § 173.428(e) of this subchapter for EMPTY labeling requirements.

* * * * *

(g) * * *

(2) *Activity.* The maximum activity of the radioactive contents in the package during transport must be expressed in

appropriate SI units (e.g., Becquerels (Bq), Terabecquerels (TBq)). The activity may also be stated in appropriate customary units (e.g., Curies (Ci), milliCuries (mCi), microCuries (uCi)) in parentheses following the SI units. Abbreviations are authorized. Except for plutonium-239 and plutonium-241, the weight in grams or kilograms of fissile radionuclides (or the mass of each fissile nuclide for mixtures when appropriate) may be inserted instead of activity units. For plutonium-239 and plutonium-241, the weight in grams of fissile radionuclides (or the mass of each fissile nuclide for mixtures when appropriate) may be inserted in addition to the activity units.

■ 8. In § 172.504, paragraph (e), footnote 1 to Table 1 is revised to read as follows:

§ 172.504 General placarding requirements.

(e) RADIOACTIVE placards are also required for: All shipments of unpackaged LSA-I material or SCO-I; all shipments required by §§ 173.427, 173.441, and 173.457 of this subchapter to be operated under exclusive use; and all closed vehicles used in accordance with § 173.443(d).

■ 9. In § 172.505, paragraph (b) is revised to read as follows:

§ 172.505 Placarding for subsidiary hazards.

(b) In addition to the RADIOACTIVE placard which may be required by § 172.504(e) of this subpart, each transport vehicle, portable tank or freight container that contains 454 kg (1,001 pounds) or more gross weight of non-fissile, fissile-excepted, or fissile uranium hexafluoride must be placarded with a CORROSIVE placard on each side and each end.

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

■ 10. The authority citation for part 173 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81, 1.96 and 1.97.

■ 11. In § 173.4, paragraph (a)(1)(iv) is removed and reserved, and paragraph (b) is revised to read as follows:

§ 173.4 Small quantities for highway and rail.

(a) * * *

(1) * * *
(iv) [Reserved]
(b) A package containing a Class 7 (radioactive) material also must conform to the requirements of § 173.421(a)(1) through (a)(5), § 173.424(a) through (g), or § 173.426(a) through (c) as applicable.

■ 12. In § 173.25, paragraph (a)(4) is revised to read as follows:

§ 173.25 Authorized packagings and overpacks.

(4) The overpack is marked with the word “OVERPACK” when specification packagings are required, or for Class 7 (radioactive) material when a Type A, Type B(U), Type B(M) or industrial package is required. The “OVERPACK” marking is not required when the required markings representative of each package type contained in the overpack are visible from the outside of the overpack.

■ 13. In § 173.401, paragraph (b)(4) is revised and a new paragraph (b)(5) is added to read as follows:

§ 173.401 Scope.

(4) Natural material and ores containing naturally occurring radionuclides which are either in their natural state, or which have only been processed for purposes other than for extraction of the radionuclides, and which are not intended to be processed for the use of these radionuclides, provided the activity concentration of the material does not exceed 10 times the exempt material activity concentration values specified in § 173.436, or determined in accordance with the requirements of § 173.433.

(5) Non-radioactive solid objects with radioactive substances present on any surfaces in quantities not exceeding the threshold limits set forth in the definition of contamination in § 173.403.

■ 14. Section 173.403 is amended as follows:

a. The definitions of “contamination,” “criticality safety index (CSI),” “fissile material,” “low specific activity (LSA) material,” “radiation level,” and “uranium” are revised.

b. In the definition of “package,” paragraphs (2)(i), (2)(ii), and (2)(iii) are revised to read as follows:

§ 173.403 Definitions.

Contamination means the presence of a radioactive substance on a surface in

quantities in excess of 0.4 Bq/cm² for beta and gamma emitters and low toxicity alpha emitters or 0.04 Bq/cm² for all other alpha emitters. There are two categories of contamination:

(1) Fixed contamination means contamination that cannot be removed from a surface during normal conditions of transport.

(2) Non-fixed contamination means contamination that can be removed from a surface during normal conditions of transport.

Criticality Safety Index (CSI) means a number (rounded up to the next tenth) which is used to provide control over the accumulation of packages, overpacks or freight containers containing fissile material. The CSI for a package containing fissile material is determined in accordance with the instructions provided in 10 CFR 71.22, 71.23, and 71.59. The CSI for an overpack, freight container, consignment or conveyance containing fissile material packages is the arithmetic sum of the criticality safety indices of all the fissile material packages contained within the overpack, freight container, consignment or conveyance.

Fissile material means plutonium-239, plutonium-241, uranium-233, uranium-235, or any combination of these radionuclides. Fissile material means the fissile nuclides themselves, not material containing fissile nuclides, but does not include: Unirradiated natural uranium or depleted uranium; and natural uranium or depleted uranium that has been irradiated in thermal reactors only. Certain exceptions for fissile materials are provided in § 173.453.

Low Specific Activity (LSA) material means Class 7 (radioactive) material with limited specific activity which is not fissile material or is excepted under § 173.453, and which satisfies the descriptions and limits set forth below. Shielding material surrounding the LSA material may not be considered in determining the estimated average specific activity of the LSA material. LSA material must be in one of three groups:

- (1) LSA-I:
(i) Uranium and thorium ores, concentrates of uranium and thorium ores, and other ores containing naturally occurring radionuclides which are intended to be processed for the use of these radionuclides; or
(ii) Natural uranium, depleted uranium, natural thorium or their

compounds or mixtures, provided they are unirradiated and in solid or liquid form; or

(iii) Radioactive material for which the A_2 value is unlimited; or

(iv) Other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 30 times the values for activity concentration specified in § 173.436 or calculated in accordance with § 173.433, or 30 times the default values listed in Table 8 of § 173.433.

(2) LSA-II:

(i) Water with tritium concentration up to 0.8 TBq/L (20.0 Ci/L); or

(ii) Other radioactive material in which the activity is distributed throughout and the average specific activity does not exceed 10^{-4} A_2/g for solids and gases, and 10^{-5} A_2/g for liquids.

(3) LSA-III. Solids (e.g., consolidated wastes, activated materials), excluding powders, that meet the requirements of § 173.468 and in which:

(i) The radioactive material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.);

(ii) The radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that, even under loss of packaging, the loss of Class 7 (radioactive) material per package by leaching when placed in water for seven days would not exceed 0.1 A_2 ; and

(iii) The estimated average specific activity of the solid, excluding any shielding material, does not exceed 2×10^{-3} A_2/g .

* * * * *

Package * * *

(1) * * *

(2) * * *

(i) “Industrial package Type 1 (Type IP-1);

(ii) “Industrial package Type 2 (Type IP-2); or

(iii) “Industrial package Type 3 (Type IP-3).

* * * * *

Radiation level means the radiation dose-equivalent rate expressed in millisieverts per hour or mSv/h (millirems per hour or mrem/h). It consists of the sum of the dose-equivalent rates from all types of ionizing radiation present including alpha, beta, gamma, and neutron radiation. Neutron flux densities may be used to determine neutron radiation levels according to Table 1:

TABLE 1—NEUTRON FLUENCE RATES TO BE REGARDED AS EQUIVALENT TO A RADIATION LEVEL OF 0.01 mSv/h (1mrem/h)¹

Energy of neutron	Flux density equivalent to 0.01 mSv/h (1 mrem/h) neutrons per square centimeter per second (n/cm ² /s) ¹
Thermal (2.5 10E-8) MeV ..	272.0
1 keV	272.0
10 keV	281.0
100 keV	47.0
500 keV	11.0
1 MeV	7.5
5 MeV	6.4
10 MeV	6.7

¹ Flux densities equivalent for energies between those listed in this table may be obtained by linear interpolation.

* * * * *

Uranium—natural, depleted or enriched means the following:

(1)(i) “Natural uranium” means uranium (which may be chemically separated) containing the naturally occurring distribution of uranium isotopes (approximately 99.28% uranium-238 and 0.72% uranium-235 by mass).

(ii) “Depleted uranium” means uranium containing a lesser mass percentage of uranium-235 than in natural uranium.

(iii) “Enriched uranium” means uranium containing a greater mass percentage of uranium-235 than 0.72%.

(2) For each of these definitions, a very small mass percentage of uranium-234 may be present.

* * * * *

■ 15. In § 173.410, paragraph (i)(3) is revised to read as follows:

§ 173.410 General design requirements.

* * * * *

(i) * * *

(3) A package containing liquid contents must be capable of withstanding, without leakage, an internal pressure that produces a pressure differential of not less than the maximum normal operating pressure plus 95 kPa (13.8 psi).

■ 16. Section 173.411 is revised to read as follows:

§ 173.411 Industrial packages.

(a) *General.* Each industrial package must comply with the requirements of this section which specifies package tests, and record retention applicable to Industrial Package Type 1 (Type IP-1), Industrial Package Type 2 (Type IP-2),

and Industrial Package Type 3 (Type IP-3).

(b) *Industrial package certification and tests.* (1) Each Type IP-1 package must meet the general design requirements prescribed in § 173.410.

(2) Each Type IP-2 package must meet the general design requirements prescribed in § 173.410 and when subjected to the tests specified in § 173.465(c) and (d) or evaluated against these tests by any of the methods authorized by § 173.461(a), must prevent:

(i) Loss or dispersal of the radioactive contents; and

(ii) A significant increase in the radiation levels recorded or calculated at the external surfaces for the condition before the test.

(3) Each Type IP-3 package must meet the requirements for Type IP-1 and Type IP-2 packages, and must meet the requirements specified in § 173.412(a) through (j).

(4) A portable tank may be used as a Type IP-2 or Type IP-3 package provided that:

(i) It meets the requirements for Type IP-1 packages specified in paragraph (b)(1);

(ii) It meets the requirements prescribed in Chapter 6.7 of the United Nations Recommendations on the Transport of Dangerous Goods, (IBR, see § 171.7 of this subchapter), “Requirements for the Design, Construction, Inspection and Testing of Portable Tanks and Multiple-Element Gas Containers (MEGCs),” or other requirements at least equivalent to those standards;

(iii) It is capable of withstanding a test pressure of 265 kPa (38.4 psia); and

(iv) It is designed so that any additional shielding which is provided must be capable of withstanding the static and dynamic stresses resulting from handling and routine conditions of transport and of preventing more than a 20% increase in the maximum radiation level at any external surface of the portable tanks.

(5) A cargo tank or a tank car may be used as Type IP-2 or Type IP-3 package for transporting LSA-I and LSA-II liquids and gases as prescribed in Table 6 of § 173.427, provided that:

(i) It meets the requirements for a Type IP-1 package specified in paragraph (b)(1);

(ii) It is capable of withstanding a test pressure of 265 kPa (38.4 psia); and

(iii) It is designed so that any additional shielding which is provided must be capable of withstanding the static and dynamic stresses resulting from handling and routine conditions of transport and of preventing more than a

20% increase in the maximum radiation level at any external surface of the tanks.

(6) A freight container may be used as Type IP-2 or Type IP-3 packages provided:

(i) The radioactive contents are restricted to solid materials;

(ii) It meets the requirements for a Type IP-1 packages specified in paragraph (b)(1); and

(iii) It meets the standards prescribed in the International Organization for Standardization document ISO 1496-1: "Series 1 Freight Containers—Specifications and Testing—Part 1: General Cargo Containers; excluding dimensions and ratings (IBR, see § 171.7 of this subchapter). It must be designed such that if subjected to the tests prescribed in that document and the accelerations occurring during routine conditions of transport it would prevent:

(A) Loss or dispersal of the radioactive contents; and

(B) More than a 20% increase in the maximum radiation level at any external surface of the freight containers.

(7) A metal intermediate bulk containers may be used as a Type IP-2 or Type IP-3 package, provided:

(i) It meets the requirements for a Type IP-1 package specified in paragraph (b)(1); and

(ii) It meets the requirements prescribed in Chapter 6.5 of the United Nations Recommendations on the Transport of Dangerous Goods, (IBR, see § 171.7 of this subchapter), "Requirements for the Construction and Testing of Intermediate Bulk Containers," for Packing Group I or II, and if subjected to the tests prescribed in that document, but with the drop test conducted in the most damaging orientation, it would prevent:

(A) Loss or dispersal of the radioactive contents; and

(B) More than a 20% increase in the maximum radiation level at any external surface of the intermediate bulk container.

(c) Except for Type IP-1 packages, each offeror of an industrial package must maintain on file for at least two years after the offeror's latest shipment, and must provide to the Associate Administrator on request, complete documentation of tests and an engineering evaluation or comparative data showing that the construction methods, package design, and materials of construction comply with that specification.

■ 17. In § 173.412, paragraphs (f) and (k)(3)(ii) are revised to read as follows:

§ 173.412 Additional design requirements for Type A packages.

* * * * *

(f) The containment system will retain its radioactive contents under the reduction of ambient pressure to 60 kPa (8.7 psia).

* * * * *

(k) * * *

(3) * * *

(ii) Have a containment system composed of primary inner and secondary outer containment components designed to enclose the liquid contents completely and ensure retention of the liquid within the secondary outer component in the event that the primary inner component leaks.

* * * * *

■ 18. In § 173.415, paragraph (a) is revised to read as follows:

§ 173.415 Authorized Type A packages.

* * * * *

(a) DOT Specification 7A (see § 178.350 of this subchapter) Type A general packaging. Until January 1, 2017 each offeror of a Specification 7A package must maintain on file for at least one year after the latest shipment, and shall provide to DOT on request, complete documentation of tests and an engineering evaluation or comparative data showing that the construction methods, packaging design, and materials of construction comply with that specification. After January 1, 2017 each offeror of a Specification 7A package must maintain on file for at least two years after the offeror's latest shipment, and shall provide to DOT on request, one of the following:

(1) A description of the package showing materials of construction, dimensions, weight, closure and closure materials (including gaskets, tape, etc.) of each item of the containment system, shielding and packing materials used in normal transportation, and the following:

(i) If the packaging is subjected to the physical tests of § 173.465, and if applicable, § 173.466, documentation of testing, including date, place of test, signature of testers, a detailed description of each test performed including equipment used, and the damage to each item of the containment system resulting from the tests, or

(ii) For any other demonstration of compliance with tests authorized in § 173.461, a detailed analysis which shows that, for the contents being shipped, the package meets the pertinent design and performance requirements for a DOT 7A Type A specification package.

(2) If the offeror has obtained the packaging from another person who

meets the definition of "packaging manufacturer" in § 178.350(c) of this subchapter, a certification from the packaging manufacturer that the package meets all the requirements of § 178.350 for the radioactive contents presented for transport and a copy of documents maintained by the packaging manufacturer that meet the requirements of paragraph (a)(1) of this section.

* * * * *

■ 19. In § 173.416, paragraph (c) is revised to read as follows:

§ 173.416 Authorized Type B packages.

* * * * *

(c) A package approved by the U.S. Nuclear Regulatory Commission under a special package authorization granted in accordance with 10 CFR 71.41(d) provided it is offered only for domestic transportation in accordance with the requirements in § 173.471(b) and (c).

■ 20. Section 173.417 is amended as follows:

■ a. Paragraphs (a)(3) and (b)(3) are removed;

■ b Table 3 is removed; and

■ c. Paragraph (c) is revised to read as follow:

§ 173.417 Authorized fissile materials packages.

* * * * *

(c) A package approved by the U.S. Nuclear Regulatory Commission under a special package authorization granted in accordance with 10 CFR 71.41(d) provided it is offered only for domestic transportation in accordance with the requirements in § 173.471(b) and (c).

■ 21. In § 173.420, paragraph (a)(2)(ii) is removed and reserved, paragraphs (a)(3)(i) and (a)(6) are revised, and a new paragraph (e) is added to read as follows:

§ 173.420 Uranium hexafluoride (fissile, fissile excepted and non-fissile).

(a) * * *

(2) * * *

(ii) [Reserved]

* * * * *

(3) * * *

(i) withstand a hydraulic test at an internal pressure of at least 1.4 MPa (200 psig) without leakage;

* * * * *

(6) The pressure in the package at 20 °C (68 °F) must be less than 101.3 kPa (14.7 psia).

* * * * *

(e) For a package containing 0.1 kg or more of UF₆, the proper shipping name and UN number "Radioactive material, uranium hexafluoride, UN 2978" must be used for the transportation of non-

fissile or fissile-excepted uranium hexafluoride and the proper shipping name and UN number “Radioactive material, uranium hexafluoride, fissile, UN 2977” must be used for the transport of fissile uranium hexafluoride.

■ 22. Section 173.421 is revised to read as follows:

§ 173.421 Excepted packages for limited quantities of Class 7 (radioactive) materials.

A Class 7 (radioactive) material with an activity per package which does not exceed the limited quantity package limits specified in Table 4 in § 173.425, and its packaging, are excepted from requirements in this subchapter for specification packaging, marking (except for the UN identification number marking requirement described in § 173.422(a)), labeling, and if not a hazardous substance or hazardous waste, shipping papers, and the requirements of this subpart if:

(a) Each package meets the general design requirements of § 173.410;

(b) The radiation level at any point on the external surface of the package does not exceed 0.005 mSv/h (0.5 mrem/h);

(c) The non-fixed contamination on the external surface of the package does not exceed the limits specified in § 173.443(a);

(d) The outside of the inner packaging or, if there is no inner packaging, the outside of the packaging itself bears the marking “Radioactive;”

(e) The package does not contain fissile material unless excepted by § 173.453; and

(f) The material is otherwise prepared for shipment as specified in accordance with § 173.422.

■ 23. In § 173.422, the introductory text and paragraphs (a) and (e) are revised to read as follows:

§ 173.422 Additional requirements for excepted packages containing Class 7 (radioactive) materials.

An excepted package of Class 7 (radioactive) material that is prepared for shipment under the provisions of § 173.421, § 173.424, § 173.426, or § 173.428, or a small quantity of another hazard class transported by highway or rail (as defined in § 173.4) which also meets the requirements of one of these sections, is not subject to any additional requirements of this subchapter, except for the following:

(a) The outside of each package must be marked with:

(1) The UN identification number for the material preceded by the letters UN, as shown in column (4) of the Hazardous Materials Table in § 172.101 of this subchapter; and

(2) The letters “RQ” on a non-bulk packaging containing a hazardous substance.

* * * * *

(e) For a material that meets the definition of a hazardous substance or a hazardous waste, the shipping paper requirements of subpart C of part 172 of this subchapter, except that such shipments are not subject to shipping paper requirements applicable to Class 7 (radioactive) materials in §§ 172.202(a)(5), 172.202(a)(6), 172.203(d) and 172.204(c)(4).

■ 24. Section 173.427 is revised to read as follows:

§ 173.427 Transport requirements for low specific activity (LSA) Class 7 (radioactive) material and surface contaminated objects (SCO).

(a) In addition to other applicable requirements specified in this subchapter, LSA material and SCO must be transported in accordance with the following conditions:

(1) The external dose rate may not exceed an external radiation level of 10 mSv/h (1 rem/h) at 3 m (10 feet) from the unshielded material;

(2) The quantity of LSA material and SCO transported in any single conveyance may not exceed the limits specified in Table 5;

(3) LSA material and SCO that are or contain fissile material must conform to the applicable requirements of § 173.453;

(4) Packaged and unpackaged Class 7 (radioactive) materials must conform to the contamination control limits specified in § 173.443;

(5) External radiation levels may not exceed those specified in § 173.441; and

(6) For LSA material and SCO consigned as exclusive use:

(i) Shipments must be loaded by the consignor and unloaded by the consignee from the conveyance or freight container in which originally loaded;

(ii) There may be no loose radioactive material in the conveyance; however, when the conveyance is the packaging, there may not be any leakage of radioactive material from the conveyance;

(iii) Packaged and unpackaged Class 7 (radioactive) material must be braced so as to prevent shifting of lading under conditions normally incident to transportation;

(iv) Specific instructions for maintenance of exclusive use shipment controls shall be provided by the offeror to the carrier. Such instructions must be included with the shipping paper information;

(v) The shipment must be placarded in accordance with subpart F of part 172 of this subchapter;

(vi) For domestic transportation only, packaged and unpackaged Class 7 (radioactive) material containing less than an A₂ quantity are excepted from the marking and labeling requirements of this subchapter, other than the subsidiary hazard labeling required in 172.402(d). However, the exterior of each package or unpackaged Class 7 (radioactive) material must be stenciled or otherwise marked “RADIOACTIVE—LSA” or “RADIOACTIVE—SCO”, as appropriate, and packages or unpackaged Class 7 (radioactive) material that contain a hazardous substance must be stenciled or otherwise marked with the letters “RQ” in association with the description in this paragraph (a)(6)(vi); and

(vii) Transportation by aircraft is prohibited except when transported in an industrial package in accordance with Table 6 of this section, or in an authorized Type A or Type B package.

(b) Except as provided in paragraph (c) or (d) of this section, LSA material and SCO must be packaged as follows:

(1) In an industrial package (Type IP-1, Type IP-2 or Type IP-3; § 173.411), subject to the limitations of Table 6;

(2) In a DOT Specification 7A (§ 178.350 of this subchapter) Type A package;

(3) In any Type B(U) or B(M) packaging authorized pursuant to § 173.416;

(4) For domestic transportation of an exclusive use shipment that is less than an A₂ quantity, in a packaging which meets the requirements of § 173.410; or

(5) In portable tanks, cargo tanks and tank cars, as provided in §§ 173.411(b)(4) and (5), respectively.

(c) LSA-I material and SCO-I may be transported unpackaged under the following conditions:

(1) All unpackaged material, other than ores containing only naturally occurring radionuclides, must be transported in such a manner that under routine conditions of transport there will be no escape of the radioactive contents from the conveyance nor will there be any loss of shielding;

(2) Each conveyance must be under exclusive use, except when only transporting SCO-I on which the contamination on the accessible and the inaccessible surfaces is not greater than 4.0 Bq/cm² for beta and gamma emitters and low toxicity alpha emitters and 0.4 Bq/cm² for all other alpha emitters;

(3) For SCO-I where it is reasonable to suspect that non-fixed contamination may exist on inaccessible surfaces in excess of the values specified in

paragraph (c)(2) of this section, measures shall be taken to ensure that the radioactive material is not released into the conveyance or to the environment; and

(4) The highway or rail conveyance must be placarded in accordance with subpart F of part 172 of this subchapter.

(d) LSA material and SCO that exceed the packaging limits in this section must

be packaged in accordance with 10 CFR part 71.

(e) Tables 5 and 6 are as follows:

TABLE 5—CONVEYANCE ACTIVITY LIMITS FOR LSA MATERIAL AND SCO

Nature of material	Activity limit for conveyances other than by inland waterway	Activity limit for hold or compartment of an inland waterway conveyance
1. LSA-I	No limit	No limit.
2. LSA-II and LSA-III; Non-combustible solids	No limit	100 A ₂ .
3. LSA-II and LSA-III; Combustible solids and all liquids and gases	100 A ₂	10 A ₂ .
4. SCO	100 A ₂	10 A ₂ .

TABLE 6—INDUSTRIAL PACKAGE INTEGRITY REQUIREMENTS FOR LSA MATERIAL AND SCO

Contents	Industrial packaging type	
	Exclusive use shipment	Non exclusive use shipment
1. LSA-I:		
Solid	Type IP-1	Type IP-1.
Liquid	Type IP-1	Type IP-2.
2. LSA-II:		
Solid	Type IP-2	Type IP-2.
Liquid and gas	Type IP-2	Type IP-3.
3. LSA-III	Type IP-2	Type IP-3.
4. SCO-I	Type IP-1	Type IP-1.
5. SCO-II	Type IP-2	Type IP-2.

■ 25. In § 173.433, paragraphs (b) introductory text, (c) introductory text, (c)(1), (d)(3) and (h) are revised to read as follows:

§ 173.433 Requirements for determining basic radionuclide values, and for the listing of radionuclides on shipping papers and labels.

* * * * *

(b) For individual radionuclides which are not listed in the tables in § 173.435 or § 173.436 or for which no relevant data are available:

* * * * *

(c) In calculating A₁ and A₂ values for approval in accordance with paragraph (b)(2) of this section:

(1) It is permissible to use an A₂ value calculated using a dose coefficient for the appropriate lung absorption type, as recommended by the International Commission on Radiological Protection, if the chemical forms of each radionuclide under both normal and accident conditions of transport are taken into consideration.

* * * * *

(d) * * *

(3) If the package contains both special and normal form Class 7 (radioactive) material, the activity which may be transported in a Type A package must satisfy:

$$\sum_i \frac{B(i)}{A_1(i)} + \sum_j \frac{C(j)}{A_2(j)} \leq 1$$

Where:

The symbols are defined as in paragraphs (d)(1) and (d)(2) of this section.

* * * * *

(h) Tables 7 and 8 are as follows:

TABLE 7—GENERAL VALUES FOR A₁ AND A₂

Radioactive contents	A ₁		A ₂	
	(TBq)	(Ci)	(TBq)	(Ci)
1. Only beta or gamma emitting nuclides are known to be present	1 × 10 ⁻¹	2.7 × 10 ⁰	2 × 10 ⁻²	5.4 × 10 ⁻¹
2. Alpha emitting nuclides, but no beta, gamma, or neutron emitters, are known to be present ¹	2 × 10 ⁻¹	5.4 × 10 ⁰	9 × 10 ⁻⁵	2.4 × 10 ⁻³
3. Neutron emitting nuclides are known to be present or no relevant data are available	1 × 10 ⁻³	2.7 × 10 ⁻²	9 × 10 ⁻⁵	2.4 × 10 ⁻³

¹ If beta or gamma emitting nuclides are also known to be present, the A₁ value of 0.1 TBq (2.7 Ci) should be used.

TABLE 8—GENERAL EXEMPTION VALUES

Radioactive contents	Activity concentration for exempt material		Activity limits for exempt consignments	
	(Bq/g)	(Ci/g)	(Bq)	(Ci)
1. Only beta or gamma emitting nuclides are known to be present	1×10^1	2.7×10^{-10}	1×10^4	2.7×10^{-7}
2. Alpha emitting nuclides, but no neutron emitters, are known to be present	1×10^{-1}	2.7×10^{-12}	1×10^3	2.7×10^{-8}
3. Neutron emitting nuclides are known to be present or no relevant data are available	1×10^{-1}	2.7×10^{-12}	1×10^3	2.7×10^{-8}

■ 26. The § 173.435 table is amended by adding the entry under “[ADD]” and revising entries under “[REVISE]” in the appropriate alphabetical sequence,

footnotes (a) and (c) are revised, and footnote (h) is removed and reserved to read as follows:

§ 173.435 Table of A₁ and A₂ values for radionuclides.

* * * * *

Symbol of radionuclide	Element and atomic number	A ₁ (TBq)	A ₁ (Ci) ^b	A ₂ (TBq)	A ₂ (Ci) ^b	Specific activity	
						(TBq/g)	(Ci/g)
[ADD]							
* * * * *							
Kr-79	Krypton (36)	4.0×10^0	1.1×10^2	2.0×10^0	5.4×10^1	4.2×10^4	1.1×10^6
* * * * *							
[REVISE]							
* * * * *							
Cf-252	1×10^{-1}	2.7	3.0×10^{-3}	8.1×10^{-2}	2.0×10^1	5.4×10^2
* * * * *							
Mo-99(a)(i)	1.0	2.7×10^1	6.0×10^{-1}	1.6×10^1	1.8×10^4	4.8×10^5
* * * * *							

^a A₁ and/or A₂ values for these parent radionuclides include contributions from daughter nuclides with half-lives less than 10 days as listed in footnote (a) to Table 2 in the “IAEA Regulations for the Safe Transport of Radioactive Material, No. TS-R-1” (IBR, see § 171.7 of this subchapter).

^b The values of A₁ and A₂ in curies (Ci) are approximate and for information only; the regulatory standard units are Terabecquerels (TBq), (see § 171.10).

^c The activity of Ir-192 in special form may be determined from a measurement of the rate of decay or a measurement of the radiation level at a prescribed distance from the source.

^h [Reserved]

■ 27. The § 173.436 table is amended by adding the entry under “[ADD]” in the appropriate alphabetical sequence, revising the entry under “[REVISE]”,

and revising footnote (b) to read as follows:

§ 173.436 Exempt material activity concentrations and exempt consignment activity limits for radionuclides.

* * * * *

Symbol of radionuclide	Element and atomic number	Activity concentration for exempt material (Bq/g)	Activity concentration for exempt material (Ci/g)	Activity limit for exempt consignment (Bq)	Activity limit for exempt consignment (Ci)
[ADD]					
* * * * *					
Kr-79	Krypton (36)	1.0×10^3	2.7×10^{-8}	1.0×10^5	2.7×10^{-6}
* * * * *					
[REVISE]					
* * * * *					
Te-121m	1.0×10^2	2.7×10^{-9}	1.0×10^6	2.7×10^{-5}
* * * * *

■ 28. Section 173.443 is revised to read as follows:

§ 173.443 Contamination control.

(a) The level of non-fixed contamination must be kept as low as reasonably achievable on the external surfaces of each package, conveyance, freight container, and overpack offered for transport, and the internal surfaces of each conveyance, freight container, and overpack in which inner packages or receptacles of Class 7 (radioactive) materials are offered for transport.

(1) Excluding the interior surfaces of the containment system of packages and the internal surfaces of a conveyance, freight container, tank, or intermediate bulk container dedicated to the

transport of unpackaged radioactive material in accordance with § 173.427(c) and remaining under that specific exclusive use, the level of non-fixed contamination may not exceed the limits set forth in Table 9 and must be determined by either:

(i) Wiping an area of 300 cm² of the surface concerned with an absorbent material, using moderate pressure, and measuring the activity on the wiping material. Sufficient measurements must be taken in the most appropriate locations to yield a representative assessment of the non-fixed contamination levels. The amount of radioactivity measured on any single wiping material, divided by the surface area wiped and divided by the

efficiency of the wipe procedure (the fraction of non-fixed contamination transferred from the surface to the absorbent material), may not exceed the limits set forth in Table 9 at any time during transport. For this purpose the actual wipe efficiency may be used, or the wipe efficiency may be assumed to be 0.10; or

(ii) Alternatively, the level of non-fixed contamination may be determined by using other methods of equal or greater efficiency.

(2) A conveyance used for non-exclusive use shipments is not required to be surveyed unless there is reason to suspect that it may exhibit contamination.

Table 9 is as follows:

TABLE 9—NON-FIXED EXTERNAL RADIOACTIVE CONTAMINATION LIMITS FOR PACKAGES

Contaminant	Maximum permissible limits		
	Bq/cm ²	uCi/cm ²	dpm/cm ²
1. Beta and gamma emitters and low toxicity alpha emitters	4	10 ⁻⁴	240
2. All other alpha emitting radionuclides	0.4	10 ⁻⁵	24

(b) In the case of packages transported as exclusive use shipments by rail or public highway only, except as provided in paragraph (d) of this section, at any time during transport the non-fixed contamination on the external surface of any package, as well as on the associated accessible internal surfaces of any conveyance, overpack, or freight container, may not exceed ten times the levels prescribed in paragraph (a) of this section. The levels at the beginning of transport may not exceed the levels prescribed in paragraph (a) of this section.

(c) Except as provided in paragraphs (a) and (d) of this section, each conveyance, overpack, freight container, tank, or intermediate bulk container used for transporting Class 7 (radioactive) materials as an exclusive use shipment that utilizes the provisions of paragraph (b) of this section, § 173.427(b)(4), or § 173.427(c) must be surveyed with appropriate radiation detection instruments after each exclusive use transport. Except as provided in paragraphs (a) and (d) of this section, these items may not be returned to Class 7 (radioactive)

materials exclusive use transport service, and then only for a subsequent exclusive use shipment utilizing one of the above cited provisions, unless the radiation dose rate at each accessible surface is 0.005 mSv per hour (0.5 mrem per hour) or less, and there is no significant non-fixed surface contamination as specified in paragraph (a) of this section. The requirements of this paragraph do not address return to service of items outside of the above cited provisions.

(d) Paragraphs (b) and (c) of this section do not apply to any closed

transport vehicle used solely for the exclusive use transportation by highway or rail of Class 7 (radioactive) material with contamination levels that do not exceed ten times the levels prescribed in paragraph (a) of this section if—

(1) A survey of the interior surfaces of the empty vehicle shows that the radiation dose rate at any point does not exceed 0.1 mSv/h (10 mrem/h) at the surface or 0.02 mSv/h (2 mrem/h) at 1 m (3.3 feet) from the surface;

(2) Each vehicle is marked (e.g. stenciled) with the words “For Radioactive Materials Use Only” in letters at least 76 millimeters (3 inches) high in a conspicuous place on both sides of the exterior of the vehicle; and

(3) Each vehicle is kept closed except for loading or unloading; and

(4) Each vehicle is placarded in accordance with subpart F of part 172 of this subchapter.

(e) If it is evident that a package of radioactive material, or conveyance carrying unpackaged radioactive material, is leaking, or if it is suspected that the package, or conveyance carrying unpackaged material, may have leaked, access to the package or conveyance must be restricted and, as soon as possible, the extent of contamination and the resultant radiation level of the package or conveyance must be assessed. The scope of the assessment must include, as applicable, the package, the conveyance, the adjacent loading and unloading areas, and, if necessary, all other material which has been carried in the conveyance. When necessary, additional steps for the protection of persons, property, and the environment must be taken to overcome and minimize the consequences of such leakage. Packages, and conveyances carrying unpackaged material, which are leaking radioactive contents in excess of limits for normal conditions of transport may be removed to an interim location under supervision, but must not be forwarded until repaired or reconditioned and decontaminated, or as approved by the Associate Administrator.

■ 29. In § 173.465, paragraphs (a) and (d)(1)(i) are revised to read as follows:

§ 173.465 Type A packaging tests.

(a) The packaging, with contents, must be capable of withstanding the water spray, free drop, stacking and penetration tests prescribed in this section. One prototype may be used for all tests if the requirements of paragraph (b) of this section are met. The tests are successful if the requirements of § 173.412(j) are met.

* * * * *

(d) * * *

(1) * * *

(i) A total weight equal to five times the maximum weight of the package; or
* * * * *

■ 30. In § 173.466, paragraph (a) is revised to read as follows:

§ 173.466 Additional tests for Type A packagings designed for liquids and gases.

(a) In addition to the tests prescribed in § 173.465, Type A packagings designed for liquids and gases must be capable of withstanding the following tests in this section. The tests are successful if the requirements of § 173.412(k) are met.

* * * * *

■ 31. In § 173.469, paragraphs (b)(2)(ii), (b)(2)(iii), (d)(1) and (d)(2) are revised, and a new paragraph (e) is added to read as follows:

§ 173.469 Tests for special form Class 7 (radioactive) materials.

* * * * *

(b) * * *

(2) * * *

(ii) The flat face of the billet must be 2.5 cm (1 inch) in diameter with the edge rounded off to a radius of 3 mm ± 0.3 mm (0.12 inch ± 0.012 inch).

(iii) The lead must be of hardness number 3.5 to 4.5 on the Vickers scale and thickness not more than 25 mm (1 inch), and must cover an area greater than that covered by the specimen.

* * * * *

(d) * * *

(1) The impact test and the percussion test of this section provided that the mass of the special form material is—

(i) Less than 200 g and it is alternatively subjected to the Class 4 impact test prescribed in ISO 2919 (IBR, see § 171.7 of this subchapter), or

(ii) Less than 500 g and it is alternatively subjected to the Class 5 impact test prescribed in ISO 2919 (IBR, see § 171.7 of this subchapter); and

(2) The heat test of this section, provided the specimen is alternatively subjected to the Class 6 temperature test specified in the International Organization for Standardization document ISO 2919 (IBR, see § 171.7 of this subchapter).

(e) Special form materials that were successfully tested prior to October 1, 2014 in accordance with the requirements of paragraph (d) of this section in effect prior to October 1, 2014 may continue to be offered for transportation and transported without additional testing under this section.

■ 32. In § 173.473, paragraph (a)(1) is revised to read as follows:

§ 173.473 Requirements for foreign-made packages.

* * * * *

(a) * * *

(1) Have the foreign competent authority certificate revalidated by the U.S. Competent Authority, unless this has been done previously. Each request for revalidation must be in triplicate, contain all the information required by Section VIII of the IAEA regulations in “IAEA Regulations for the Safe Transport of Radioactive Material, No. TS-R-1” (IBR, see § 171.7 of this subchapter), and include a copy in English of the foreign competent authority certificate. The request and accompanying documentation must be sent to the Associate Administrator for Hazardous Materials Safety (PHH-23), Department of Transportation, East Building, 1200 New Jersey Avenue SE., Washington, DC 20590-0001.

Alternatively, the request with any attached supporting documentation submitted in an appropriate format may be sent by facsimile (fax) to (202) 366-3753 or (202) 366-3650, or by electronic mail to “ramcert@dot.gov.” Each request is considered in the order in which it is received. To allow sufficient time for consideration, requests must be received at least 90 days before the requested effective date;

* * * * *

■ 33. In § 173.476, paragraph (a) is revised to read as follows:

§ 173.476 Approval of special form Class 7 (radioactive) materials.

(a) Each offeror of special form Class 7 (radioactive) materials must maintain on file for at least two years after the offeror’s latest shipment, and provide to the Associate Administrator on request, a complete safety analysis, including documentation of any tests, demonstrating that the special form material meets the requirements of § 173.469. An IAEA Certificate of Competent Authority issued for the special form material may be used to satisfy this requirement.

* * * * *

■ 34. In § 173.477, paragraph (a) is revised to read as follows:

§ 173.477 Approval of packagings containing greater than 0.1 kg of non-fissile or fissile-excepted uranium hexafluoride.

(a) Each offeror of a package containing more than 0.1 kg of uranium hexafluoride must maintain on file for at least two years after the offeror’s latest shipment, and provide to the Associate Administrator on request, a complete safety analysis, including documentation of any tests, demonstrating that the package meets

the requirements of § 173.420. An IAEA Certificate of Competent Authority issued for the design of the packaging containing greater than 0.1 kg of non-fissile or fissile-exempted uranium hexafluoride may be used to satisfy this requirement.

* * * * *

PART 174—CARRIAGE BY RAIL

■ 35. The authority citation for part 174 continues to read as follows:

Authority: 49 U.S.C. 5101–5128; 49 CFR 1.81 and 1.97.

■ 36. In § 174.700, paragraph (e) is removed and reserved.

■ 37. In § 174.715, paragraph (a) is revised to read as follows:

§ 174.715 Cleanliness of transport vehicles after use.

(a) Each transport vehicle used for transporting Class 7 (radioactive) materials under exclusive use conditions (as defined in § 173.403 of this subchapter) in accordance with § 173.427(b)(4), § 173.427(c), or § 173.443(b), must be surveyed with appropriate radiation detection instruments after each use. A transport vehicle may not be returned to Class 7 (radioactive) materials exclusive use transport service, and then only for a subsequent exclusive use shipment utilizing the provisions of any of the paragraphs § 173.427(b)(4), § 173.427(c), or § 173.443(b), until the radiation dose rate at any accessible surface is 0.005 mSv per hour (0.5 mrem per hour) or less, and there is no significant non-fixed contamination, as specified in § 173.443(a) of this subchapter

* * * * *

PART 175—CARRIAGE BY AIRCRAFT

■ 38. The authority citation for part 175 continues to read as follows:

Authority: 49 U.S.C. 5101–5128, 44701; 49 CFR 1.81 and 1.97.

■ 39. In § 175.702, paragraph (b) is revised to read as set forth below, and paragraph (c) is removed:

§ 175.702 Separation distance requirements for packages containing Class 7 (radioactive) materials in cargo aircraft.

* * * * *

(b) In addition to the limits on combined criticality safety indexes stated in § 175.700(b),

(1) The criticality safety index of any single group of packages must not

exceed 50.0 (as used in this section, the term “group of packages” means packages that are separated from each other in an aircraft by a distance of 6 m (20 feet) or less); and

(2) Each group of packages must be separated from every other group in the aircraft by not less than 6 m (20 feet), measured from the outer surface of each group.

■ 40. In § 175.705, paragraph (c) is revised to read as follows:

§ 175.705 Radioactive contamination.

* * * * *

(c) An aircraft in which Class 7 (radioactive) material has been released must be taken out of service and may not be returned to service or routinely occupied until the aircraft is checked for radioactive substances and it is determined that any radioactive substances present do not meet the definition of radioactive material, as defined in § 173.403 of this subchapter.

* * * * *

PART 176—CARRIAGE BY VESSEL

■ 41. The authority citation for part 176 continues to read as follows:

Authority: 49 U.S.C. 5101–5128; 49 CFR 1.81 and 1.97.

■ 42. Section 176.715 is revised to read as follows:

§ 176.715 Contamination control.

Each hold, compartment, or deck area used for the transportation of low specific activity or surface contaminated object Class 7 (radioactive) materials under exclusive use conditions in accordance with § 173.427(b)(4), or § 173.427(c) must be surveyed with appropriate radiation detection instruments after each use. Such holds, compartments, and deck areas may not be used again for Class 7 (radioactive) materials exclusive use transport service, and then only for a subsequent exclusive use shipment utilizing the provisions of § 173.427(b)(4), or § 173.427(c) until the radiation dose rate at every accessible surface is less than 0.005 mSv/h (0.5 mrem/h), and the non-fixed contamination is not greater than the limits prescribed in § 173.443(a) of this subchapter.

PART 177—CARRIAGE BY PUBLIC HIGHWAY

■ 43. The authority citation for part 177 is revised to read as follows:

Authority: 49 U.S.C. 5101–5128; sec. 112 of Pub. L. 103–311, 108 Stat. 1673, 1676 (1994); sec. 32509 of Pub. L. 112–141, 126 Stat. 405, 805 (2012); 49 CFR 1.81 and 1.97.

■ 44. In § 177.843 paragraph (a) is revised to read as follows:

§ 177.843 Contamination of vehicles.

(a) Each motor vehicle used for transporting Class 7 (radioactive) materials under exclusive use conditions in accordance with § 173.427(b)(4), § 173.427(c), or § 173.443(b) of this subchapter must be surveyed with radiation detection instruments after each use. A vehicle may not be returned to Class 7 (radioactive) materials exclusive use transport service, and then only for a subsequent exclusive use shipment utilizing the provisions of any of the paragraphs § 173.427(b)(4), § 173.427(c), or § 173.443(b), until the radiation dose rate at every accessible surface is 0.005 mSv/h (0.5 mrem/h) or less and the non-fixed contamination is not greater than the level prescribed in § 173.443(a) of this subchapter.

* * * * *

PART 178—SPECIFICATIONS FOR PACKAGINGS

■ 45. The authority citation for part 178 continues to read as follows:

Authority: 49 U.S.C. 5101–5128; 49 CFR 1.81 and 1.97.

■ 46. In § 178.350, paragraph (c) is revised to read as follows:

§ 178.350 Specification 7A; general packaging, Type A.

* * * * *

(c) Each Specification 7A packaging must comply with the requirements of §§ 178.2 and 178.3. In § 178.3(a)(2) the term “packaging manufacturer” means the person certifying that the package meets all requirements of this section.

■ 47. Section 178.356 and §§ 178.356–1 through 178.358–6 are removed.

■ 48. Section 178.358 and §§ 178.358–1 through 178.358–6 are removed.

■ 49. Section 178.360 and §§ 178.360–1 through 178.360–4 are removed.

Issued in Washington, DC, on June 27, 2014 under authority delegated in 49 CFR 1.97.

Cynthia L. Quarterman,
Administrator, Pipeline and Hazardous Materials Safety Administration.
