§ 884.4350 Fetal head elevator.

2. Add § 884.4350 to subpart E to read—

(a) Identification. A fetal head elevator is a prescription device consisting of a mechanism that elevates the fetal head to facilitate delivery during a Caesarean section.

(b) Classification. Class II (special controls). The special controls for this device are:

(1) The patient-contacting components of the device must be demonstrated to be biocompatible.

(2) Performance data must demonstrate the sterility of patient-contacting components of the device.

(3) Performance data must support the shelf life of the device by demonstrating continued sterility, package integrity, and device functionality over the identified shelf life.

(4) Non-clinical performance data must demonstrate that the device performs as intended under anticipated conditions of use. The following performance characteristics must be tested:

(i) Reliability testing of device deployment and retrieval under relevant use conditions must be conducted.

(ii) Testing of the maximum force applied to the fetal head in an anatomic model must be conducted.

(iii) Testing of uniform application of the elevator mechanism on the fetal head must be conducted.

(5) Labeling must include the following:

(i) Contraindication for use in the presence of active genital infection;

(ii) Specific instructions regarding the proper placement and use of the device; and

(iii) A shelf life.

Leslie Kux,
Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 886

[Docket No. FDA–2017–N–6597]

Medical Devices; Ophthalmic Devices;
Classification of the Tear Electrostimulation Device

AGENCY: Food and Drug Administration, HHS.

ACTION: Final order.

SUMMARY: The Food and Drug Administration (FDA or we) is classifying the tear electrostimulation device into class II (special controls). The special controls that apply to the device type are identified in this order and will be part of the codified language for the tear electrostimulation device’s classification. We are taking this action because we have determined that classifying the device into class II (special controls) will provide a reasonable assurance of safety and effectiveness of the device. We believe this action will also enhance patients’ access to beneficial innovation, in part by reducing regulatory burdens by placing the device into a lower device class than the automatic class III assignment.

The automatic assignment of class III occurs by operation of law and without any action by FDA, regardless of the level of risk posed by the new device. Any device that was not in commercial distribution before May 28, 1976, is automatically classified as, and remains within, class III and requires premarket approval unless and until FDA takes an action to classify or reclassify the device (see 21 U.S.C. 360c(f)(1)). We refer to these devices as “postamendments devices” because they were not in commercial distribution prior to the date of enactment of the Medical Device Amendments of 1976, which amended the Federal Food, Drug, and Cosmetic Act (FD&C Act).

FDA may take a variety of actions in appropriate circumstances to classify or reclassify a device into class I or II. We may issue an order finding a new device to be substantially equivalent under section 513(f)(1) of the FD&C Act (21 U.S.C. 360c(f)(1)) to a predicate device that does not require premarket approval. We determine whether a new device is substantially equivalent to a predicate by means of the procedures for premarket notification under section 510(k) of the FD&C Act and part 807 (21 U.S.C. 360(k) and 21 CFR part 807, respectively).

FDA may also classify a device through “De Novo” classification, a common name for the process authorized under section 513(f)(2) of the FD&C Act. Section 207 of the Food and Drug Administration Modernization Act of 1997 established the first procedure for De Novo classification (Pub. L. 105–115). Section 607 of the Food and Drug Administration Safety and Innovation Act modified the De Novo application process by adding a second procedure (Pub. L. 112–144). A device sponsor may utilize either procedure for De Novo classification.

Under the first procedure, the person submits a 510(k) for a device that has not previously been classified. After receiving an order from FDA classifying the device into class III under section 513(f)(1) of the FD&C Act, the person then requests a classification under section 513(f)(2).
Under the second procedure, rather than first submitting a 510(k) and then a request for classification, if the person determines that there is no legally marketed device upon which to base a determination of substantial equivalence, that person requests a classification under section 513(f)(2) of the FD&C Act.

Under either procedure for De Novo classification, FDA shall classify the device by written order within 120 days. The classification will be according to the criteria under section 513(a)(1) of the FD&C Act. Although the device was automatically placed within class III, the De Novo classification is considered to be the initial classification of the device.

We believe this De Novo classification will enhance patients’ access to beneficial innovation, in part by reducing regulatory burdens. When FDA classifies a device into class I or II via the De Novo process, the device can serve as a predicate for future devices of that type, including for 510(k)s (see 21 U.S.C. 360c(f)(2)(B)(ii)). As a result, other device sponsors do not have to submit a De Novo request or premarket approval application in order to market a substantially equivalent device (see 21 U.S.C. 360c(i), defining “substantial equivalence”). Instead, sponsors can use the less-burdensome 510(k) process, when necessary, to market their device.

II. De Novo Classification

On July 7, 2016, Oculeve, Inc., submitted a request for De Novo classification of the Intranasal Tear Neurostimulator. FDA reviewed the request in order to classify the device under the criteria for classification set forth in section 513(a)(1) of the FD&C Act.

We classify devices into class II if general controls by themselves are insufficient to provide reasonable assurance of safety and effectiveness, but there is sufficient information to establish special controls that, in combination with the generals controls, provide reasonable assurance of the safety and effectiveness of the device for its intended use (see 21 U.S.C. 360c(a)(1)(B)). After review of the information submitted in the request, we determined that the device can be classified into class II with the establishment of special controls. FDA has determined that these special controls, in addition to the general controls, will provide reasonable assurance of the safety and effectiveness of the device.

Therefore, on April 24, 2017, FDA issued an order to the requester classifying the device into class II. FDA is codifying the classification of the device by adding 21 CFR 886.5300. We have named the generic type of device tear electrostimulation device, and it is identified as a non-implantable, electrostimulation device intended to increase tear production.

FDA has identified the following risks to health associated specifically with this type of device and the measures required to mitigate these risks in table 1.

<table>
<thead>
<tr>
<th>Identified risks</th>
<th>Mitigation measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tissue damage due to over-stimulation/understimulation or mechanical injury (ex: tips too long), device breakage.</td>
<td>Non-clinical performance testing; Software verification, validation and hazard analysis; Electrical, thermal, and mechanical safety testing; and Labeling.</td>
</tr>
<tr>
<td>Pain, headache, or discomfort</td>
<td>Non-clinical performance testing; Electrical, thermal, and mechanical safety testing; and Labeling.</td>
</tr>
<tr>
<td>Adverse tissue reaction</td>
<td>Biocompatibility, and Labeling.</td>
</tr>
<tr>
<td>Infection</td>
<td>Electrical, thermal, and mechanical safety testing; Software verification, validation and hazard analysis; and Labeling.</td>
</tr>
<tr>
<td>Electrical shock reaction</td>
<td>Electromagnetic compatibility (EMC) testing; Software verification, validation, and hazard analysis; and Labeling.</td>
</tr>
<tr>
<td>Interference or burn</td>
<td></td>
</tr>
</tbody>
</table>

FDA has determined that special controls, in combination with the general controls, address these risks to health and provide reasonable assurance of safety and effectiveness. In order for a device to fall within this classification, and thus avoid automatic classification in class III, it would have to comply with the special controls named in this final order. The necessary special controls appear in the regulation codified by this order. This device is subject to premarket notification requirements under section 510(k) of the FD&C Act.

III. Analysis of Environmental Impact

The Agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IV. Paperwork Reduction Act of 1995

This final order establishes special controls that refer to previously approved collections of information found in other FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in the guidance document “De Novo Classification Process (Evaluation of Automatic Class III Designation)” have been approved under OMB control number 0910–0644; the collections of information in 21 CFR part 814, subparts A through E, regarding premarket approval, have been approved under OMB control number 0910–0231; the collections of information in part 807, subpart E, regarding premarket notification submissions, have been approved under OMB control number 0910–0120; and the collections of information in 21 CFR part 801, regarding labeling, have been approved under OMB control number 0910–0485.

List of Subjects in 21 CFR Part 886

Medical devices, Ophthalmic goods and services.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 886 is amended as follows:

PART 886—OPHTHALMIC DEVICES

1. The authority citation for part 886 is revised to read as follows:

Authority: 21 U.S.C. 351, 360, 360c, 360e, 360j, 360f, 371.
§ 886.5300 Tear electrostimulation device.

(a) Identification. A tear electrostimulation device is a non-
implantable, electrostimulation device intended to increase tear production.

(b) Classification. Class II (special controls). The special controls for this
device are:

1. Non-clinical performance testing must assess the following electrical
output specifications: waveforms, output modes, maximum output
voltage, maximum output current, pulse duration, frequency, net charge per
pulse, maximum phase charge at 500
ohms, maximum current density, maximum average current, and
maximum average power density.

2. Patient-contacting components of the device must be demonstrated to be
bio-compatible.

3. Performance testing must
demonstrate the electrical, thermal, and
mechanical safety along with
electromagnetic compatibility (EMC) of
the device in the intended use
environment.

4. Software verification, validation,
and hazard analysis must be performed.

5. Physician and patient labeling
must include:
(i) Summaries of electrical stimulation
parameters;
(ii) Instructions on how to correctly
use and maintain the device;
(iii) Instructions and explanations of
all user-interface components;
(iv) Information related to
electromagnetic compatibility
classification; and
(v) Instructions on how to clean the
device.

Leslie Kux,
Associate Commissioner for Policy.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117
[Docket No. USCG–2017–1026]

Drawbridge Operation Regulation;
Newark Bay, Newark, NJ

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from
drawbridge regulations.

SUMMARY: The Coast Guard has issued a
temporary deviation from the operating
schedule that governs the Lehigh Valley
Railroad Bridge across the Newark Bay,
mile 4.3, at Newark, New Jersey. The
development is necessary to test a change to
the drawbridge operation schedule to
determine whether a permanent change to
the schedule is needed. This
development allows the Lehigh Valley RR
Bridge to operate under an alternate
schedule for ninety (90) days to alleviate
high volume of rail service across the
Lehigh Valley RR Bridge and to better
accommodate vessel traffic.

DATES: This deviation is effective from
12:01 a.m. on January 1, 2018 to 11:59
p.m. on March 31, 2018.

Comments and related material must
reach the Coast Guard on or before
March 31, 2018.

ADDRESSES: You may submit comments
identified by docket number USCG–
2017–1026 using Federal eRulemaking
See the “Public Participation and
Request for Comments” section of the
SUPPLEMENTARY INFORMATION
section below for instructions on submitting
comments.

FOR FURTHER INFORMATION CONTACT:
If you have questions on this temporary
deviation, call or email Judy K. Leung-
Yee, Project Officer, First Coast Guard
District; telephone 212–514–4336, email
Judy.K.Leung-Yee@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Background, Purpose and Legal Basis

The Lehigh Valley Railroad Bridge
across the Newark Bay, mile 4.3, at
Newark, New Jersey is a lift bridge with a
vertical clearance of 35 feet at mean
high water and 39 feet at mean low
water in the closed position. The
existing drawbridge operating
regulations are listed at 33 CFR 117.35
and 33 CFR 117.735.

The owner of the bridge, Consolidated
Rail Corporation, requested a change to
the Drawbridge Operation Regulations
because the volume of train traffic and
maneuvering of train movements from
the adjacent rail yard across the bridge
cause significant delays to marine
traffic.

The waterway users are seasonal
recreational vessels and commercial
vessels of various sizes.

The Coast Guard is publishing this
temporary deviation to test the proposed
regulation change to determine whether
a permanent change to the schedule is
necessary to better balance the needs of
marine and rail traffic.

Under this deviation, in effect from
12:01 a.m. on January 1, 2018 to 11:59
p.m. on March 31, 2018, the Lehigh
Valley Railroad Bridge will open on
signal if at least one hour advance
notice is given.

Vessels able to pass through the
bridge in the closed position may do so
at anytime. There are no alternate
routes. The bridge will be able to open
for emergencies.

The Coast Guard contacted the
waterway users regarding this proposed
temporary deviation to test a proposed
change to the Drawbridge Operation
Regulations and no objections were
received. The Coast Guard will also
inform the users of the waterways
through our Local and Broadcast
Notices to Mariners and other
appropriate local media of the change in
operating schedule for the bridge so that
vessel operators may arrange their
transits to minimize any impact caused
by the temporary deviation.

In accordance with 33 CFR 117.35(e),
the drawbridge must return to its regular
operating schedule immediately at the
end of the effective period of this
temporary deviation. This deviation
from the operating regulations is
authorized under 33 CFR 117.35.

II. Public Participation and Request for
Comments

We view public participation as
essential to effective rulemaking, and
will consider all comments and material
received during the comment period.
Your comment can help shape the
outcome of this rulemaking. If you
submit a comment, please include the
docket number for this rulemaking,
indicating the specific section of this
document to which each comment
applies, and provide reason for each
suggestion or recommendation.

We encourage you to submit
comments through the Federal
eRulemaking Portal at http://
www.regulations.gov, contact the person
in the FOR FURTHER INFORMATION
CONTACT section of this document for
alternate instructions.

We accept anonymous comments. All
comments received will be posted
without change to http://
www.regulations.gov and will include
any person information you have
provided. For more about privacy and
the docket, visit http://
www.regulations.gov/privacynotice.

Documents mentioned in this notice
as being available in this docket and all
public comments, will be in our online
docket at http://www.regulations.gov
and can be viewed by following that
website’s instructions. Additionally, if
you go to the online docket and sign up
for email alerts, you will be notified
when comments are posted or a final
rule is published.
