SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations: Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Memorialize Functionality Designed To Assist Members in the Event that They Lose Communication

February 13, 2018.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),1 and Rule 19b–4 thereunder,2 notice is hereby given that on February 2, 2018, Nasdaq ISE, LLC (“ISE” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to memorialize its detection of loss of connection risk protection, which is applicable to all Members, at ISE Rule 711(e). This automated process is in effect if a Member’s SQF, FIX or OTTO Port loses communication with a Client Application due to a loss of connectivity. This feature is designed to protect ISE Market Makers6 and other market participants from inadvertent exposure to excessive risk.

Members currently enter quotes and/or orders utilizing either an SQF, FIX or OTTO Port. SQF is utilized by ISE Market Makers and FIX and OTTO are utilized by all market participants. These ports are trading system components through which a Member communicates its quotes and/or orders to the Exchange’s match engine through the Member’s Client Application. The Exchange proposes to define “Client Application” as the system component of the Member through which the Member communicates its quotes and orders to the Exchange at proposed Rule 711(e)(i)(E). Under the proposed rule change, an SQF Port would be defined as the Exchange’s proprietary system component through which ISE Market Makers communicate their quotes and orders to the Exchange’s match engine through the Member’s Client Application. The Exchange proposes to define “Act” as the system component of the Member through which the Member communicates its quotes and orders to the Exchange at proposed Rule 711(e)(i)(E). Under the proposed rule change, an SQF Port would be defined as the Exchange’s proprietary system component through which ISE Market Makers communicate their quotes and orders to the Exchange at proposed Rule 711(e)(i)(E). An OTTO Port would be defined as the Exchange’s universal system component through which Members communicate their orders from the Member’s Client Application at proposed Rule 711(e)(i)(D). An OTTO Port would be defined as the Exchange’s proprietary system component through which Members communicate their orders from the Member’s Client Application at proposed Rule 711(e)(i)(C). ISE Market Makers may submit quotes to the Exchange from one or more SQF Ports. Similarly, market participants may submit orders to the Exchange from one or more FIX or OTTO Ports. The proposed cancellation feature will be mandatory for each ISE Market Maker utilizing SQF for the removal of quotes and optional for any market participant utilizing FIX or OTTO for the removal of orders.

When the SQF Port detects the loss of communication with a Member’s Client Application because the Exchange’s server does not receive a Heartbeat message7 for a certain period of time (a period of “nn” seconds), the Exchange will automatically logoff the Member’s affected Client Application and automatically cancel all of the Member’s open quotes. Quotes will be cancelled across all Client Applications that are associated with the same ISE Market Maker ID and underlying issues.

The Exchange proposes to define a “Heartbeat” message as a communication which acts as a virtual pulse between the SQF, FIX or OTTO Port and the Client Application at proposed Rule 711(e)(i)(A). The Heartbeat message sent by the Member and subsequently received by the Exchange allows the SQF, FIX or OTTO Port to continually monitor its connection with the Member.

SQF Ports

The Exchange’s system has a default time period, which will trigger a disconnect from the Exchange and remove quotes, set to fifteen (15) seconds for SQF Ports. A Member may change the default period of “nn” seconds of no technical connectivity to trigger a disconnect from the Exchange and remove quotes to a number between one hundred (100) milliseconds and 99,999 milliseconds for SQF Ports prior to each Session of Connectivity to the Exchange. This feature is enabled for each ISE Market Maker and may not be disabled.

There are two ways to change the number of “nn” seconds: (1) Systematically or (2) by contacting the Exchange’s operations staff. If the Member changes the default number of “nn” seconds, that new setting shall be in effect throughout the current Session of Connectivity and will then default back to fifteen seconds.8 The Member may change the default setting prior to each Session of Connectivity. A Session of Connectivity would be defined to mean each time the Member connects to the Exchange’s system. If the Member were to connect and then disconnect within a trading day several times, each

---

3 SQF is an interface that allows market makers to connect and send quotes, sweeps and auction responses into the Exchange.
4 FIX is an interface that allows market participants to connect and send orders and auction orders into the Exchange.
5 OTTO is an interface that allows market participants to connect and send orders, auction orders and auction responses into the Exchange.
6 The term “market makers” refers to “Competitive ISE Market Makers” and “Primary ISE Market Makers” collectively.
7 It is important to note that the Exchange separately sends a connectivity message to the Member as evidence of connectivity.
8 The Exchange’s system would capture the new setting information that was changed by the Member and utilize the amended setting for that particular session. The setting would not persist beyond the current Session of Connectivity and the setting would default back to 15 seconds for the next session if the Member did not change the setting again.
time the Member disconnected the next session would be a new Session of Connectivity. This definition is proposed at proposed Rule 711f(e)(i)(F). The Member may also communicate the time to the Exchange by calling the Exchange’s operations staff. If the time period is communicated to the Exchange by calling Exchange operations, the number of “nn” seconds selected by the Member shall persist for each subsequent Session of Connectivity until the Member either contacts Exchange operations by phone and changes the setting or the Member selects another time period in the Client Application prior to the next Session of Connectivity.

Similar to SQF Ports, when a FIX or OTTO Port detects the loss of communication with a Member’s Client Application for a certain time period (a period of “nn” seconds), the Exchange will automatically logoff the Member’s affected Client Application and if elected, automatically cancel all orders. The Member may have an order which has routed away prior to the cancellation, in the event that the order returns to the Order Book, because it was either not filled or partially filled, that order will be cancelled.

The disconnection feature is mandatory for FIX and OTTO users however the user has the ability to elect to also enable a removal feature, which will cancel all orders submitted through that FIX or OTTO Port. If the removal of orders feature is not enabled, the system will simply disconnect the FIX and/or OTTO user and not cancel any orders. The FIX and/or OTTO user would have to commence a new Session of Connectivity to add, modify or cancel its orders once disconnected.

OTTO Ports via a separate and distinct Client Application for a certain time period (a period of “nn” seconds), the Exchange will automatically logoff the Member’s affected Client Application and if elected, automatically cancel all orders. The Member may have an order which has routed away prior to the cancellation, in the event that the order returns to the Order Book, because it was either not filled or partially filled, that order will be cancelled.

The exchange believes that its proposal is consistent with Section 6(b) of the Act, 9 in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest, by requiring ISE Market Makers to provide liquidity to the market place and have obligations unlike other market participants. 10 This risk feature is important because it will enable ISE Market Makers to avoid risks associated with inadvertent executions in the event of a loss of connectivity with the Exchange. The proposed rule change is designed to not permit unfair discrimination among market participants, as it would apply uniformly to all ISE Market Makers utilizing FIX Ports.

Utilizing a time period for SQF and OTTO Ports of fifteen (15) seconds and permitting ISE Market Makers and Members to modify the setting to between 100 milliseconds and 99,999 milliseconds. All orders will be automatically cancelled.

There are two ways to change the number of “nn” seconds: (1) Systematically or (2) by contacting the Exchange’s operations staff. If the Member changes the default number of “nn” seconds, that new setting shall be in effect throughout that Session of Connectivity and will then default back to thirty seconds for FIX Ports or fifteen seconds for OTTO Ports at the end of that session. The Member may change the default setting prior to each Session of Connectivity. The Member may also communicate the time to the Exchange by calling the Exchange’s operations staff. If the time period is communicated to the Exchange by calling Exchange operations, the number of “nn” seconds selected by the Member shall persist for each subsequent Session of Connectivity until the Member either contacts Exchange operations by phone and changes the setting or the Member selects another time period in the Client Application prior to the next Session of Connectivity.

ISE Market Makers will be required to utilize this disconnect and removal functionality with respect to SQF Ports. This feature will remove impediments to and improve the mechanism of a free and open market and a national market system aimed at protecting investors and the public interest by requiring ISE Market Makers to provide quotes in all products in which they are registered, market participants utilizing FIX or OTTO do not bear the same magnitude of risk of potential erroneous or unintended executions. In addition, market participants utilizing FIX or OTTO may desire their orders to remain on the order book despite a technical disconnect, so as not to miss any opportunities for execution of such orders while the FIX and/or OTTO port is disconnected.

Utilizing a time period for SQF and OTTO Ports of fifteen (15) seconds and permitting ISE Market Makers and Members to modify the setting to between 100 milliseconds and 99,999 milliseconds is consistent with the Act because the Exchange does not desire to trigger unwanted logoffs of Members and therefore allows Members the ability to set their time in order to enable the Exchange the authority to disconnect the Member with this feature. Both SQF and OTTO are proprietary system components offered by ISE. The Exchange believes that the proposed settings for SQF and OTTO

---

11 See ISE Rule 804(e).
are appropriate timeframes. Each ISE Market Maker and Member has different levels of sensitivity with respect to this disconnect setting and each ISE Market Maker and Member has their own system safeguards as well. A default setting of fifteen (15) seconds is appropriate to capture the needs of all ISE Market Makers and Members and high enough not to trigger unwarranted removal of quotes and orders.

Further, ISE Market Makers and Members are able to customize their settings. The Exchange’s proposal to permit a timeframe for SQF and OTTO Ports between 100 milliseconds and 99,999 milliseconds is consistent with the Act and the protection of investors because the purpose of this feature is to mitigate the risk of potential erroneous or unintended executions associated with a loss in communication with a Client Application. Members are able to better anticipate the appropriate time within which they may require prior to a logoff as compared to the Exchange. The Member is being offered a timeframe by the Exchange within which to select the appropriate time. The Exchange does not desire to trigger unwarranted logoffs of Members and therefore permits Members to provide an alternative time to the Exchange, within the Exchange’s prescribed timeframe, which authorizes the Exchange to disconnect the Member. The “nm” seconds serve as the Member’s instruction to the Exchange to act upon the loss of connection and remove quotes from the system, and if elected, orders from the System. This range will accommodate Members in selecting their appropriate times within the prescribed timeframes.

With respect to SQF, the Exchange’s proposal is further consistent with the Act because it will mitigate the risk of potential erroneous or unintended executions associated with a loss in communication with a Client Application which protects investors and the public interest. Also, any interest that is executable against a ISE Market Maker’s quotes that is received by the Exchange prior to the trigger of the disconnect to the Client Application, which is processed by the system, automatically executes at the price up to the ISE Market Maker’s size. In other words, the system will process the request for cancellation in the order it was received by the system.

With respect to FIX, a universal system component, the Exchange’s proposal would set a default timeframe of thirty (30) seconds and permit a FIX user to modify the timeframe for FIX Ports to between 1 second and 30 seconds for the removal of orders. This proposal is consistent with the Act and the protection of investors because this feature, which is optional, will mitigate the risk of potential erroneous or unintended executions associated with a loss in communication with a Client Application. With respect to the longer timeframe for FIX, as compared to SQF and OTTO, the Exchange notes that unlike SQF and OTTO which are proprietary system components, FIX is a universal component. The settings on FIX remain different given FIX is not a proprietary system component. ISE Market Makers require a quicker timeframe (15 seconds as compared to 30 seconds). ISE Market Makers have quoting obligations and are more sensitive to price movements as compared to other market participants. It is consistent with the Act to provide a longer timeframe within which to customize settings for FIX as compared to SQF Ports because ISE Market Makers need to remain vigilant of market conditions and react more quickly to market movements as compared to other Members entering orders into the system. The proposal acknowledges this sensitivity borne by ISE Market Makers and reflects the reaction time of ISE Market Makers as compared to Members entering orders. Of note, the proposed customized timeframe for FIX might be too long for ISE Market Makers given their quoting requirements and sensitivity to price movements. ISE Market Makers would be severely impacted by a loss of connectivity of more than several seconds. The ISE Market Maker would have exposure during the time period in which they are unable to manage their quote and update that quote. The Member is best positioned to determine their setting. With respect to other market participants that enter orders, they have the option of selecting either OTTO or FIX and therefore are able to obtain a shortened timeframe with OTTO if they desire.

The system operates consistently with the firm quote obligations of a broker-dealer pursuant to Rule 602 of Regulation NMS. Specifically, with respect to ISE Market Makers, their obligation to provide continuous two-sided quotes on a daily basis is not diminished by the automatic removal of such quotes triggered by the disconnect. ISE Market Makers are required to provide continuous two-sided quotes on a daily basis. ISE Market Makers will not be relieved of the obligation to provide continuous two-sided quotes on a daily basis, nor will it prohibit the Exchange from taking disciplinary action against a ISE Market Maker for failing to meet the continuous quoting obligation each trading day as a result of disconnects.

With respect to FIX and OTTO Ports, the Exchange will offer this optional removal functionality to all market participants. Offering the removal feature on a voluntary basis to all other market participants is consistent with the Act because it permits them an opportunity to utilize this risk feature, if desired, and avoid risks associated with inadvertent executions in the event of a loss of connectivity with the Exchange. The removal feature is designed to mitigate the risk of missed and/or unintended executions associated with a loss in communication with a Client Application. The proposed rule change is designed to not permit unfair discrimination among market participants, as this optional removal feature will be offered uniformly to all Members utilizing FIX and/or OTTO.

The Exchange will disconnect Members from the Exchange and not cancel a Member’s orders if the removal feature is disabled. The disconnect feature is mandatory and will cause the Member to be disconnected within the default timeframe or the timeframe otherwise specified by the Member. This feature is consistent with the Act because it enforces FIX and OTTO users to be disconnected based upon the data provided by the Exchange. The Exchange believes that it is consistent with the Act to require other market participants to be disconnected because the participant is otherwise not connected to the Exchange’s system and the Member simply needs to reconnect to commence submitting and cancelling orders. The Exchange believes requiring a disconnect when a loss of communication is detected is a rational course of action for the Exchange to alert the Member of the technical connectivity issue.

The proposed rule change will help maintain a fair and orderly market which promotes efficiency and protects investors. This mandatory removal feature for ISE Market Makers and optional removal for all other market

14 See note 11 above.

15 See ISE Rule 711(d).
participants will mitigate the risk of potential erroneous or unintended executions associated with a lack of connectivity which the participants needs to weigh. Finally, the Exchange does not believe that such change will impose any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. Other options exchange offer similar functionality.  

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. Specifically, the Exchange does not believe that the proposed rule change will cause an undue burden on intra-market competition because ISE Market Makers, unlike other market participants, have greater risks in the market place. Quoting across many series in an option creates large principal positions that expose ISE Market Makers, who are required to continuously quote in assigned options, to potentially significant market risk. Providing a broader timeframe for the disconnect and removal of orders for FIX as compared to the removal of quotes for SQF Ports and OTTO orders does not create an undue burden on competition because ISE Market Makers have quoting obligations and are more sensitive to price movements as compared to other market participants. ISE Market Makers need to remain vigilant of market conditions and react more quickly to market movements as compared to other Members entering multiple orders into the system. The proposal reflects this sensitivity borne by ISE Market Makers and reflects the reaction time of ISE Market Makers as compared to other Members entering orders. With respect to other market participants that enter orders, they have the option of selecting either OTTO or FIX and therefore are able to obtain a shortened timeframe with OTTO if they desire.

Offering the removal feature to other market participants on an optional basis does not create an undue burden on intra-market competition because unlike ISE Market Makers, other market participants do not bear the same risks of potential erroneous or unintended executions. FIX and OTTO users have the opportunity to disable the cancellation feature and simply disconnect from the Exchange. FIX and OTTO users may also set a timeframe that is appropriate for their business. It is appropriate to offer this optional cancellation functionality to other market participants for open orders, because those orders are subject to risks of missed and/or unintended executions due to a lack of connectivity which the participants needs to weigh. Finally, the Exchange does not believe that such change will impose any burden on inter-market competition that is not necessary or appropriate in furtherance of the purposes of the Act. Other options exchange offer similar functionality.  

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, the Exchange does not believe that such proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2018–12, and should be submitted on or before March 13, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.

Eduardo A. Aleman,  
Assistant Secretary.
