[For the National Transportation Safety Board statement of organization, see the *Code of Federal Regulations*, Title 49, Part 800]

---

*The National Transportation Safety Board seeks to ensure that all types of transportation in the United States are conducted safely. The Board investigates accidents, conducts studies, and makes recommendations to Government agencies, the transportation industry, and others on safety measures and practices.*

The National Transportation Safety Board (NTSB) was established in 1967 and made totally independent on April 1, 1975, by the Independent Safety Board Act of 1974 (49 U.S.C. 1111).

The NTSB consists of five members appointed by the President with the advice and consent of the Senate for 5-year terms. The President designates two of these members as Chairman and Vice Chairman of the Board for 2-year terms. The designation of the Chairman is made with the advice and consent of the Senate.

### Activities

**Accident Investigation** The NTSB is responsible for investigating, determining probable cause, making safety recommendations, and reporting the facts and circumstances of the following:

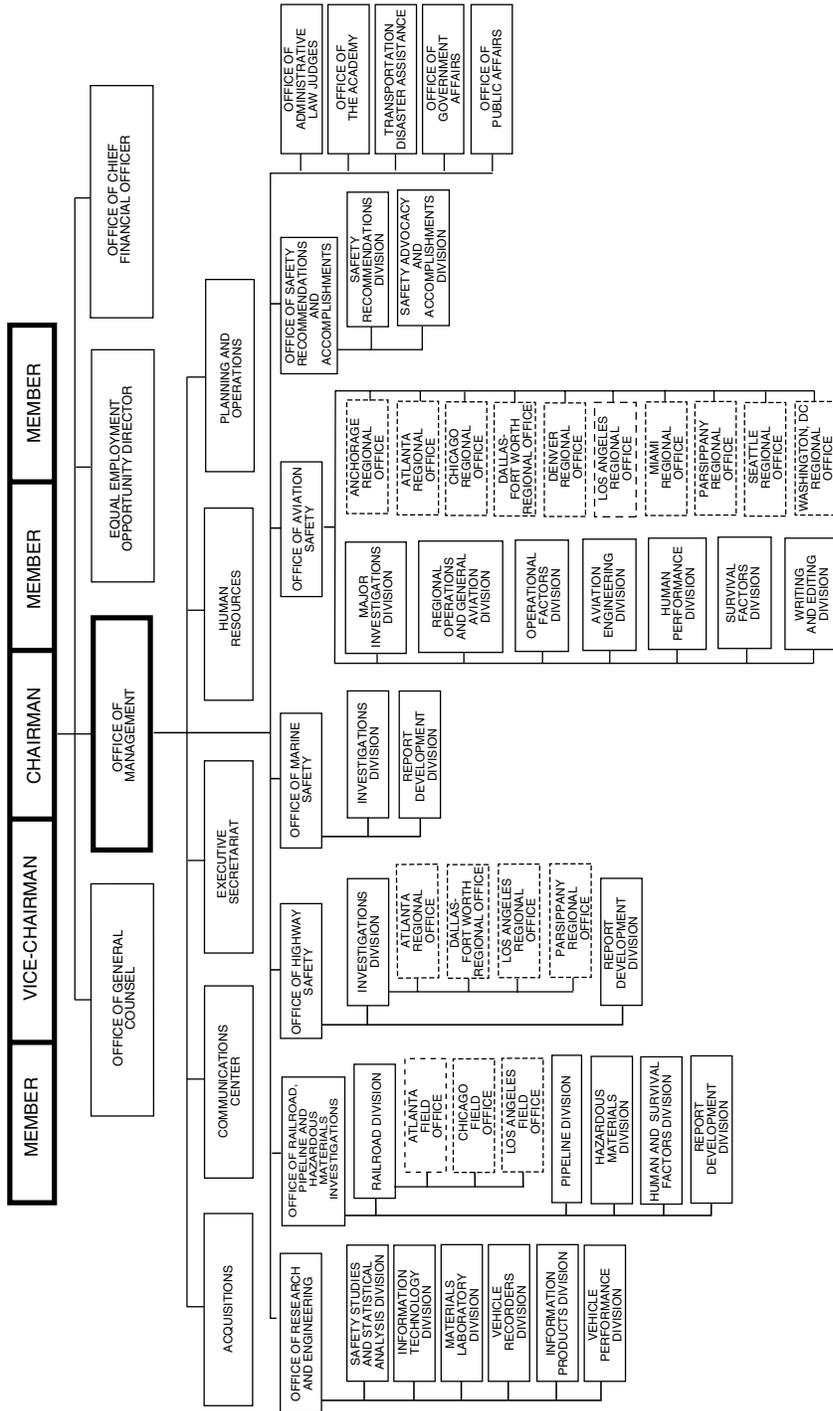

- U.S. civil aviation and certain public-use aircraft accidents;
- railroad accidents in which there is a fatality or substantial property damage, or that involve a passenger train;
- pipeline accidents in which there is a fatality, substantial property damage, or significant injury to the environment;
- highway accidents, including railroad grade-crossing accidents, that the Board selects in cooperation with the States;
- major marine casualties, and marine accidents involving a public vessel and a nonpublic vessel, in accordance with regulations prescribed jointly by the Board and the U.S. Coast Guard;
- certain accidents involving hazardous materials; and
- other transportation accidents that are catastrophic, involve problems of a recurring character, or otherwise should be investigated in the judgment of the Board.

**Safety Problem Identification** In addition, the NTSB makes recommendations on matters pertaining to transportation safety and is a catalyst for transportation accident prevention by conducting safety studies and special investigations, assessing techniques of accident investigation and publishing recommended procedures for these investigations, establishing regulatory requirements for reporting accidents, evaluating the transportation safety consciousness and efficacy of other Government agencies in the prevention of accidents, evaluating the adequacy of safeguards and procedures concerning the transportation of hazardous materials and the performance of other Government agencies charged with ensuring the safe transportation of such materials, and reporting annually to the Congress on its activities.

**Family Assistance for Aviation Disasters** The NTSB coordinates the resources of the Federal Government and other organizations to support the efforts of local and State governments and airlines to meet the needs of aviation disaster victims and their families. It assists in making Federal resources available to local authorities and airlines.

**Certificate, Civil Penalty, or License Appeal** The NTSB also reviews on appeal the suspension, amendment, modification, revocation, or denial of certain certificates, licenses, or assessments of civil penalties issued by the Secretary of Transportation and the decisions of the Commandant of the Coast Guard on appeals from the orders of any administrative law judge, revoking, suspending, or denying certain licenses, certificates, documents, or registers.

Chief Information Officer	ELLIS W. MERSCHOFF
Director, Office of Congressional Affairs	DENNIS K. RATHBUN
Director, Office of Public Affairs	ELIZABETH A. HAYDEN, <i>Acting</i>
Inspector General	HUBERT T. BELL, JR.

[For the Nuclear Regulatory Commission statement of organization, see the *Code of Federal Regulations*, Title 10, Part I]

*The Nuclear Regulatory Commission licenses and regulates civilian use of nuclear energy to protect public health and safety and the environment. This is achieved by licensing persons and companies to build and operate nuclear reactors and other facilities and to own and use nuclear materials. The Commission makes rules and sets standards for these types of licenses. It also carefully inspects the activities of the persons and companies licensed to ensure compliance with the safety rules of the Commission.*

The Nuclear Regulatory Commission (NRC) was established as an independent regulatory agency under the provisions of the Energy Reorganization Act of 1974 (42 U.S.C. 5801 *et seq.*) and Executive Order 11834 of January 15, 1975. All licensing and related regulatory functions formerly assigned to the Atomic Energy Commission were transferred to the Commission.

The Commission's major program components are the Office of Nuclear

Reactor Regulation, the Office of Nuclear Material Safety and Safeguards, and the Office of Nuclear Regulatory Research. Headquarters offices are located in suburban Maryland, and there are four regional offices.

The Commission ensures that the civilian uses of nuclear materials and facilities are conducted in a manner consistent with the public health and safety, environmental quality, national security, and the antitrust laws. Most of
