¹The Current Population Survey (CPS) defines families on the basis of marital and blood relations, and treats families as a basic economic unit in its measures of family poverty and income. Under such definitions, an unmarried, cohabiting, couple would be viewed as two distinct economic units; either as two unrelated individuals, if no child dependents were involved, or as one or two single-parent families, if one or both members of the couple had children residing in the household. Cohabiting couples are identifiable on the CPS only by inference. The Census Bureau identifies such families as unmarried couple households—a household with only two adults who are unrelated and of the opposite sex (one of whom is the householder) with or without the presence of children under the age of 15. The CPS assigns a residing child to only one of the two adult members of the unmarried couple, even though the child may be the couple's offspring.

²Single female-headed families (either primary or unrelated subfamilies) with children, living in a household with either an unrelated single adult male, or with an unrelated family headed by a single adult male.

Note.—Details may not sum to totals due to rounding. Numbers are estimates subject to sampling error. Caution should be exercised in interpreting differences based on small cell sizes. Marital status and family living arrangements are for the family head, as of March 1996. Poverty status is based on family income in the prior year (1995).

¹ Spontaneous fetal losses from recognized pregnancies of all gestational periods as reported to women in the 1982 and 1988 National Survey of Family Growth conducted by the National Center for Health Statistics. The rate of pregnancy loss depends on the degree to which losses at very early gestations are detected.

² Sum of births, induced abortions, and fetal losses.

³ Population is women aged 14 years.

¹ Hispanic ethnicity is independent of race; persons of Hispanic origin may be of any race.² Rates are by race of child; see sources below for additional information.

NA—Not available.

Note.—For 1966–75, births to unmarried women are estimated for the United States from the data for registration areas in which marital status of mother was reported. Beginning 1980, data for States in which marital status was not reported have been inferred and included with data from the remaining States. Race is determined by race of the child for 1966–89 and by race of the mother for 1990–93.

² Data for 1992 include residents only.

NA—Not available.

Note.—Legal induced abortion data are by State of occurrence because abortion data by State of residence are not available for all States. Caution should therefore be exercised when comparing rates from State to State and over time. Rates are not available for 10 States in 1990 and 8 States in 1992 because age-specific abortion data were not available. Rates by race are not available for States that did not report abortion information by race. Rates were not computed if age or race information for more than 15 percent of the abortions was not reported, or if there were fewer than 20 abortions or fewer than 1,000 women in the group.

¹ Includes cases prior to 1985.

² Computed using resident population estimates for 1995 based on extrapolation from 1990 census counts from the U.S. Bureau of the Census; data presented is cases per 100,000 population.

³ Includes Aleut and Eskimo.

⁴ Includes Chinese, Japanese, Filipino, Hawaiian and part Hawaiian, and other Asian or Pacific Islander.

⁵ Category not applicable.

Note.—The AIDS case definition as changed in September 1987 to allow for the presumptive diagnosis of AIDS-associated diseases, and conditions and to expand the spectrum of human immunodeficiency virus-associated diseases reportable as AIDS. Excludes residents of U.S. territories. Data are updated periodically because of reporting delays. Data for all years have been updated through June 30, 1995. Data are based on reporting by State health departments.

¹ In 1993, the question text was changed slightly in three of six forms to indicate that a "drink" meant "more than a few sips." Data for 1993 and years after are based on all six forms which include this change.

² Other illicit drugs include hallucinogens, cocaine, and heroin, or any other opiates, stimulants, sedatives, or tranquilizers not prescribed by a doctor.

NA— Not available.

Note.—A revised questionnaire was used in 1982 and later years to reduce the inappropriate reporting of nonprescription stimulants. This slightly reduced the positive responses for some types of drug use.
