

# HOUSE OF REPRESENTATIVES—Thursday, October 8, 1992

The House met at 12 noon and was called to order by the Speaker pro tempore [Mr. MONTGOMERY].

## DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

WASHINGTON, DC,  
October 7, 1992.

I hereby designate the Honorable G.V. (SONNY) MONTGOMERY to act as Speaker pro tempore on Thursday, October 8, 1992.

THOMAS S. FOLEY,

Speaker of the House of Representatives.

## PRAYER

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

With gratitude and thanksgiving, O gracious God, we welcome this day with all its blessings and with all its opportunities. From the verdant fields and from the labor of those who till the earth we receive the blessing of our nourishment; from the toil of those who use their minds and their hands to build and to create, we welcome the bounty of daily life; from the beauty of nature with the streams and forests and the colors of the season, we are nurtured and embraced; by the support and love of friends and family, we are blessed more than we deserve; for all these good gifts, we celebrate Your creation and offer our grateful praise. Teach us, O God, to accept these good gifts with reverence and with a generous spirit so they will be a source of strength and of serenity for us and for all the generations. As we meditate upon Your blessings to us, O God, may we learn to live our lives with a spirit of gratitude and thanksgiving that touches us and all we do. In Your name, we pray. Amen.

## THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule 1, the Journal stands approved.

## PLEDGE OF ALLEGIANCE

The SPEAKER pro tempore. Will the gentleman from New Mexico [Mr. RICHARDSON] lead the House in the Pledge of Allegiance.

Mr. RICHARDSON led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

## MESSAGE FROM THE SENATE

A message from the Senate by Mr. Hallen, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 1592. An act to increase the size of the Big Thicket National Preserve in the State of Texas by adding the Village Creek Corridor unit, the Big Sandy Corridor unit, the Canyonlands unit, the Sabine River Blue Elbow unit, and addition to the Lower Neches Corridor unit.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 1514. An act to resolve the status of certain lands relinquished to the United States under the Act of June 4, 1987 (30 Stat. 11, 36), and for other purposes;

H.R. 1624. An act to authorize the American Battle Monuments Commission to establish a memorial, in the District of Columbia or its environs, to honor members of the Armed Forces who served in World War II and to commemorate the participation of the United States in that war;

H.R. 2141. An act to establish the Snake River Birds of Prey National Conservation Area in the State of Idaho, and for other purposes;

H.R. 2444. An act to revise the boundaries of the George Washington Birthplace National Monument;

H.R. 2502. An act to establish the Jemez National Recreation Area in the State of New Mexico, and for other purposes;

H.R. 2790. An act to withdraw certain lands located in the Coronado National Forest from the mining and mineral leasing laws of the United States, and for other purposes;

H.R. 2893. An act to extend to 1991 crops the disaster assistance provisions of the Food, Agriculture, Conservation, and Trade Act of 1990;

H.R. 3011. An act to amend the National Trails System Act to designate the American Discovery Trail for study to determine the feasibility and desirability of its designation as a national trail;

H.R. 3215. An act to reinvigorate cooperation between the United States and Latin America in science and technology;

H.R. 3457. An act to amend the Wild and Scenic Rivers Act to designate certain segments of the Delaware River in Pennsylvania and New Jersey as components of the national wild and scenic rivers system;

H.R. 3614. An act amending the Land Remote-Sensing Commercialization Act of 1984 to secure United States leadership in land remote-sensing by providing data continuity

for the Landsat program and by establishing a new national Landsat policy, and for other purposes;

H.R. 3837. An act to make certain changes to improve the administration of the medicare program, to reform customs overtime pay practices, to prevent the payment of Federal benefits to deceased individuals, and to require reports on employers with underfunded pension plans;

H.R. 4906. An act to amend the Consolidated Farm and Rural Development Act to establish a program to aid beginning farmers and ranchers and to improve the operation of the Farmers Home Administration, and to amend the Farm Credit Act of 1971, and for other purposes;

H.R. 5118. An act to exchange lands within the State of Utah, between the United States and the State of Utah; and

H.R. 6077. An act concerning United States participation in a Cascadia Corridor commission.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House is requested:

S. 289. An act to authorize the Board of Regents of the Smithsonian Institution to plan and design an extension of the National Air and Space Museum at Washington Dulles International Airport, and for other purposes;

S. 814. An act to amend the Environment Programs Assistance Act of 1984 to provide that for purposes of liability for damage, injury or death caused by the negligence or wrongful acts or omissions of individuals authorized by such Act, the United States is liable, and for purposes of access to trade secrets and confidential business information such individuals are authorized representatives of the United States Environmental Protection Agency;

S. 1925. An act to remove a restriction from a parcel of land owned by the City of North Charleston, South Carolina, in order to permit a land exchange, and for other purposes;

S. 1990. An act to authorize the transfer of certain facilities and lands in the Wenatchee National Park Forest, Washington;

S. 2006. An act to establish the Fox River National Heritage Corridor in Wisconsin, and for other purposes;

S. 2021. An act to amend the Wild and Scenic Rivers Act by designating a segment of the Rio Grande in New Mexico as a component of the National Wild and Scenic Rivers System, and for other purposes;

S. 2045. An act to authorize a study of the prehistoric Casas Grandes Culture in the State of New Mexico, and for other purposes;

S. 2105. An act to direct the Secretary of Transportation to establish a Civil Tiltrotor Development Advisory Committee in the Department of Transportation, and for other purposes;

S. 2499. An act for the relief of Elham Ghandour Cicippio;

S. 2544. An act to authorize the Secretary of the Interior to formulate a program for the research, interpretation, and preserva-

Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

tion of various aspects of colonial New Mexico history, and for other purposes;

S. 2606. An act to further clarify authorities and duties of the Secretary of Agriculture in issuing ski area permits on National Forest System lands;

S. 2749. An act to grant a right of use and occupancy of a certain tract of land in Yosemite National Park to George R. Lange and Lucille F. Lange, and for other purposes;

S. 2936. An act to amend the Competitiveness Policy Council Act to provide for reauthorization, to rename the Council, and for other purposes;

S. 3229. An act to protect the security of valuable goods in interstate commerce in the service of an armored car company;

S. 3256. An act to amend the Public Health Service Act to authorize grants for construction at certain historically Black colleges and universities and similar institutions granting biomedical graduate degrees and enrolling substantial numbers of students from disadvantaged backgrounds, including racial and ethnic minorities;

S. 3345. An act to designate the Gallipolis Locks and Dam, Ohio River, Ohio and West Virginia, as the "Robert C. Byrd Locks and Dam";

S. 3346. An act to establish a health registry of veterans of the Persian Gulf War, to authorize health examinations of such veterans, to coordinate and improve research on the health consequences of military service in the Persian Gulf theater of operations during the Persian Gulf War, and for other purposes;

S. 3349. An act entitled "Biden-Thurmond Justice Improvements Act";

S. 3362. An act to provide that the Georgia Baptist Hospital College of Nursing shall be deemed as satisfying, for academic year 1992-1993, the accreditation requirements described in section 1201(a)(5) of the Higher Education Act of 1965;

S. 3363. An act to amend the John F. Kennedy Center Act (20 U.S.C. 76th et seq.) to provide authorization of appropriations for fiscal years 1993 through 1997 for the John F. Kennedy Center for the Performing Arts, and for other purposes;

S. 3364. An act to amend certain provisions of law relating to establishment, in the District of Columbia or its environs, of a memorial to honor Thomas Paine;

S. 3365. An act entitled the "Central Valley Project Fish and Wildlife Act of 1992";

S. 3366. An act entitled the "ADAMHA Reorganization Technical Amendments Act of 1992";

S. 3367. An act to amend the Employee Retirement Income Security Act of 1974 to provide for the treatment of settlement agreements reached with the Pension Benefit Guaranty Corporation;

S. 3368. An act to provide for the establishment of the Brown versus Board of Education National Historic Site in the State of Kansas, and for other purposes;

S. 3369. An act to allow certain political subdivisions of the State of Arizona continued access to FBI identification records for a period of 180 days pending restoration of statutory authorization by the legislature of the State of Arizona;

S. 3370. An act to provide for the full settlement of all claims of Swain County, North Carolina, against the United States under the agreement dated July 30, 1943, and for other purposes;

S. 3371. An act to amend the Public Health Service Act to provide for excellence in research with respect to juvenile arthritis, and for other purposes; and

S.J. Res. 335. Joint resolution to acknowledge the 100th anniversary of the January 17, 1893 overthrow of the Kingdom of Hawaii, and to offer an apology to Native Hawaiians on behalf of the United States for the overthrow of the Kingdom of Hawaii.

The message also announced that the Senate agrees to the amendment of the House to the bill (S. 1183) "An Act to reduce the restrictions on the lands conveyed by deed to the city of Kaysville, Utah, and for other purposes" with an amendment.

The message also announced that the Senate agrees to the amendment of the House to the bill (S. 1187) "An Act to amend the Stock Raising Homestead Act to provide certain procedures for entry onto Stock Raising Homestead Act lands, and for other purposes" with an amendment.

The message also announced that the Senate agrees to the amendments of the House to the bill (S. 1392) "An Act to strengthen the authority of the Federal Trade Commission regarding fraud committed in connection with sales made with a telephone, and for other purposes" with an amendment.

The message also announced that the Senate agrees to the amendments of the House to the bill (S. 1579) "An Act to provide for regulation and oversight of the development and application of the telephone technology known as pay-per-call, and for other purposes" with an amendment.

The message also announced that the Senate agrees to the amendments of the House to the bill (S. 1709) "An Act to amend the Farm Credit Act of 1971 to enhance the financial safety and soundness of the Farm Credit System, and for other purposes" with an amendment.

The message also announced that the Senate agrees to the amendments of the House to the bill (S. 1985) "An Act to establish a commission to review the Bankruptcy Code, to amend the Bankruptcy Code in certain aspects of its application to cases involving commerce and credit and individual debtors and add a temporary chapter to govern reorganization of small businesses, and for other purposes", with an amendment.

Mr. CLEMENT. Mr. Speaker, on Sunday, October 4, I requested and received a leave of absence for the balance of this session of the 102d Congress. My absence was due to the death of my brother, Gary, who died in the early morning hours of that day.

I share this information to explain why I have not been in Washington to cast votes on the measures considered since Sunday.

#### ADJOURNMENT

Mr. FASCELL. Mr. Speaker, I move that the House now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 2 minutes p.m.)

the House adjourned until tomorrow, Friday, October 9, 1992, at 10 a.m.

#### EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

4364. A letter from the Secretary of the Air Force, transmitting notification that a major defense acquisition program has breached the unit cost by more than 15 percent, pursuant to 10 U.S.C. 2433; to the Committee on Armed Services.

4365. A letter from the Secretary of Housing and Urban Development, transmitting a copy of a report on auction of multifamily mortgages, pursuant to Public Law 101-625, section 336 (104 Stat. 4146); to the Committee on Banking, Finance and Urban Affairs.

4366. A letter from the Director, Office of Management and Budget, transmitting OMB estimate of the amount of change in outlays or receipts, as the case may be, in each fiscal year through fiscal year 1997 resulting from passage of H.R. 2967 and S. 1607, pursuant to Public Law 101-508, section 13101(a) (104 Stat. 1388-582); to the Committee on Government Operations.

4367. A letter from the Director, Office of Management and Budget, transmitting OMB estimate of the amount of change in outlays or receipts, as the case may be, in each fiscal year through fiscal year 1997 resulting from passage of H.R. 238 and H.R. 712, pursuant to Public Law 101-508, section 13101(a) (104 Stat. 1388-582); to the Committee on Government Operations.

4368. A letter from the Director, Office of Management and Budget, transmitting OMB's estimate of the amount of discretionary new budget authority and outlays for the current year (if any) and the budget year provided by H.R. 5373, pursuant to Public Law 101-508, section 13101(a) (104 Stat. 1388-578); to the Committee on Government Operations.

4369. A letter from the Director, Office of Management and Budget, transmitting OMB's annual report on the Federal Agencies' Implementation of the Computer Matching and Privacy Protection Act of 1988 for calendar year 1990; to the Committee on Government Operations.

4370. A letter from the Administrator, Panama Canal Commission, transmitting a report on activities under the Freedom of Information Act during calendar year 1991, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

4371. A letter from the Deputy Associate Director for Collection and Disbursement, Department of the Interior, transmitting notification of proposed refunds of excess royalty payments in OCS areas, pursuant to 43 U.S.C. 1339(b); to the Committee on Interior and Insular Affairs.

4372. A letter from the Secretary of Commerce, transmitting a draft of proposed legislation to implement the provisions of the Protocol Relating to the Madrid Agreement Concerning the International Registration of Marks; to the Committee on the Judiciary.

4373. A letter from the Secretary of Health and Human Services, transmitting a report entitled "Physician Participation, Assignment, and Extra Billing in the Medicare Program"; jointly, to the Committees on Ways and Means and Energy and Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DINGELL: Committee on Energy and Commerce. H.R. 5748. A bill to amend title XVIII of the Social Security Act to make miscellaneous amendments to the Medicare Program, and for other purposes; with an amendment (Rept. 102-1046, Pt. 1). Ordered to be printed.

Mr. CONYERS: Committee on Government Operations. A report on the Politics of AIDS Prevention: Science Takes a Time Out (Rept. 102-1047). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

Mr. HUGHES (for himself (by request) and Mr. MOORHEAD):

H.R. 6211. A bill to amend the Trademark Act of 1946, to provide for the registration and protection of trademarks used in commerce, to carry out provisions of certain international conventions, and for other purposes; which was referred to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

- H.R. 3764: Mr. BLAZ.
- H.R. 3928: Mr. DOOLEY and Mrs. JOHNSON of Connecticut.
- H.R. 4571: Mr. LEWIS of Georgia.
- H.R. 5140: Mr. COX of California.
- H.R. 5451: Mr. BARNARD, Mr. BURTON of Indiana, Mr. ERDREICH, Mr. HOLLOWAY, Mr. LAUGHLIN, Mr. MANTON, and Mr. MYERS of Indiana.
- H.R. 5545: Mr. GINGRICH.
- H.R. 5745: Mr. WELDON.
- H.R. 6003: Mr. GEKAS.
- H.J. Res. 463: Mrs. KENNELLY, Mr. STUDDS, Mrs. MEYERS of Kansas, and Mr. JENKINS.
- H.J. Res. 550: Mr. MORAN, Mrs. PATTERSON, and Mr. POSHARD.

## SENATE—Thursday, October 8, 1992

(Legislative day of Wednesday, September 30, 1992)

JULY 28, 1992.

The Senate met at 8:40 a.m., on the expiration of the recess, and was called to order by the Honorable HOWELL HEFLIN, a Senator from the State of Alabama.

## PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray:

Eternal God, loving Father in Heaven, as the 102d Congress adjourns, may all who labor here disperse in the confidence that You will never leave them nor forsake them; that Your love and guidance can be theirs as often as they want it; and that Your presence will be constant and relentless.

*The Lord bless you, and keep you: The Lord make his face to shine upon you, and be gracious unto you: The Lord lift up his countenance upon you, and give you peace.—Numbers 7:24-26.*

Amen.

## APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore [Mr. BYRD].

The assistant legislative clerk read the following letter:

U.S. SENATE,  
PRESIDENT PRO TEMPORE,  
Washington, DC, October 8, 1992.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable HOWELL HEFLIN, a Senator from the State of Alabama, to perform the duties of the Chair.

ROBERT C. BYRD,  
President pro tempore.

Mr. HEFLIN thereupon assumed the chair as Acting President pro tempore.

## RESERVATION OF LEADER TIME

The ACTING PRESIDENT pro tempore. Under the previous order, the leadership time is reserved.

## PILOT PROJECT TO STRENGTHEN COMMUNICATIONS BETWEEN THE COURTS AND CONGRESS

Mr. MITCHELL. Mr. President, for the information of the Senate, I would like to describe briefly a pilot project to improve communications between the judicial and legislative branches.

The project, which the distinguished Republican leader and I have been ad-

vised is already underway in the House, is to establish and test a system for communicating to the Congress Federal appellate opinions which identify drafting problems in acts of Congress. While the Congress is naturally aware of major issues concerning the construction of its legislation, there is concern that other issues regarding the interpretation of statutes, which do not evoke public controversy, may escape the attention of the Congress. Courts, Government agencies, citizens, and businesses may be required to expend considerable public and private resources to resolve even relatively minor questions of statutory interpretation through litigation.

Under the project, which will begin with the U.S. Court of Appeals for the District of Columbia Circuit, staff counsel at the court will identify, and transmit to the Senate's legislative counsel, Frank Burk, recent opinions which address noncontroversial issues of statutory interpretation that are based on apparent errors or omissions in legislative drafting. On the Senate side, the legislative counsel, who has joined in recommending the project to us, will bring to the attention of the appropriate committees of jurisdiction the opinions he receives from the court. Our hope is that committee staff and legislative assistants to members will then join the legislative counsel in an effort to identify the issues in those opinions that suggest the possibility of corrective legislation for particular matters or, importantly, bear generally on the drafting of future legislation that effectuates the intent of Congress and provides clear guidance to the courts and affected parties.

I ask unanimous consent that there be placed in the RECORD a July 28, 1992, letter from U.S. Senior Circuit Judge Frank M. Coffin and former Representative Robert W. Kastenmeier, to the distinguished Republican leader and me, bringing the project to our attention, and a letter of September 28, 1992, to the Senate legislative counsel, in which the distinguished President pro tempore of the Senate joined the Republican leader and me in expressing our support of the project.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

Hon. GEORGE MITCHELL,  
Majority Leader,  
U.S. Senate.  
Hon. ROBERT DOLE,  
Minority Leader,  
U.S. Senate.

DEAR SENATOR MITCHELL AND SENATOR DOLE: From our perspectives as legislator and judge, we hope that we might interest you in a pilot project which seeks to build a bridge between the judiciary and the Congress. Our effort tries to strengthen communications between the branches by developing an institutional process whereby opinions of the federal courts of appeal, identifying discrete noncontroversial issues in statutes, will be forwarded without comment to the legislative branch. Those technical matters have to do with apparent grammatical errors, drafting glitches, litigation-brewing ambiguities, or gap-filling. Research indicates that Congress tends to be largely unaware of the judicial opinions interpreting legislation (but for major cases, or those in which an interest group seeks some legislative relief). Although there are many things that may be done to make communication between the branches more effective, this project would seem to be among the most promising. It does not impinge upon the autonomy of either branch. Congressional committees need act only on those statutory omissions, ambiguities, or internal inconsistencies that they deem worthy of correction. But to the extent that "statutory housekeeping" takes place, the Congress better fulfills its purpose and courts will benefit by having needless litigation forestalled.

The first focus of this project is the opinions of the U.S. Court of Appeals for the D.C. Circuit, but other circuits are expected to become involved. Indeed, at its recent meeting in June, the U.S. Judicial Conference Committee on the Judicial Branch (chaired by Judge Deane R. Tacha) took steps to elicit the interest of other circuits.

This pilot project is already underway in the House of Representatives. We enclose the bipartisan letter of Speaker Foley, Majority Leader Gephardt and Republican Leader Michel, launching this good government, non-partisan effort. We quite agree with the House leadership's view that "the program would be most useful if it were applied to all circuits and both houses of Congress." As we seek to implement this pilot project in the Senate, we have been grateful for the support of Legislative Counsel Francis L. Burk, and Legal Counsel Michael Davidson. At their suggestion, we turn now to you for your guidance and, we hope, approval.

This project on judicial-legislative relations began some years ago, at the initiative of the U.S. Judicial Conference Committee on the Judicial Branch (then chaired by Judge Coffin). It was the feeling of the judges, several of whom were former legislators, that efforts should be made to improve communications between the branches, to overcome unnecessary tensions that impeded the effective functioning of each. The Governance Institute, a non-profit organization in Washington, D.C., was created to help ex-

plore the full range of relations between the branches, working with decisionmakers with an eye towards practical results. We have been very much involved in its activities (Judge Coffin as a founding director and Bob Kastenmeier as Distinguished Fellow).

With the opinion transmittal process in place, Congress will have a better sense of the judiciary's interpretation of its work. Moreover, the judiciary may have a better sense of congressional views about judicial interpretation of statutes. Over time, improvements might be seen in the drafting, interpretation and revision of statutes.

We hope we might have your support to extend this pilot effort to the Senate, and that some appropriate communication (perhaps similar to the one initiated by the House leadership), might be sent to relevant persons in the Senate. Should you or your staffs need further information about the project, we would be happy to provide it. Please feel free to contact us or Robert Katzmann, the president of the Governance Institute (and the Walsh Professor of Government and Professor of Law at Georgetown University). By way of context, apart from the letter of the bipartisan House leadership, we enclose: information about the process to be followed in the House of Representatives; a background memorandum; a law review article on the subject; some information about the Governance Institute; and a copy of "Judges and Legislators: Toward Institutional Comity."

Knowing how busy you and your staffs are, we are especially thankful for your attention.

Sincerely,

FRANK M. COFFIN,

*U.S. Senior Circuit Judge Board Director, the Governance Institute.*

ROBERT W. KASTENMEIER,

*Chair, National Commission on Judicial Discipline and Removal, Distinguished Fellow, the Governance Institute.*

U.S. SENATE,

*Washington, DC, September 28, 1992.*

FRANCIS L. BURK, JR., Esq.  
*Legislative Counsel,*

*U.S. Senate, Washington, DC.*

DEAR MR. BURK: We are writing to express our support for the pilot project that the Governance Institute has developed, in cooperation with the United States Court of Appeals for the District of Columbia Circuit, to improve communications between the courts and Congress about questions of statutory construction and congressional intent.

We understand that this pilot project has already begun in the House of Representatives and that the D.C. Circuit is prepared to extend the project to the Senate. As Judge Coffin and Representative Kastenmeier have described this program to us, staff counsel at the D.C. Circuit will identify recent opinions of that court which address noncontroversial issues of statutory interpretation based on apparent errors or omissions in legislative drafting. The hope is that the identification and transmittal of such opinions to the appropriate congressional committees will furnish information helpful to Congress's efforts to improve its communication of legislative intent in statutory drafting.

This project offers great promise as a thoughtful and productive step in improving communications between the judiciary and the Congress to the benefit of both branches. Its extension to both Houses of Congress should enhance the project's usefulness and permit a more accurate appraisal of its potential benefits as consideration is given to expanding the effort to other Circuits.

We are pleased that you have agreed to join our counterpart in the House, David Meade, in serving as the point of communication for this program by receiving opinions from the D.C. Circuit on behalf of the Senate and forwarding them to the appropriate committees of jurisdiction for their consideration. We encourage all Members and committees of the Senate to take advantage of the information that will become available through this mechanism.

Please let us know if there is anything we can do to assure the success of this project as it is implemented in the Senate.

Sincerely,

ROBERT C. BYRD,

*President pro tempore.*

ROBERT DOLE,

*Republican Leader.*

GEORGE J. MITCHELL,

*Majority Leader.*

#### MORNING BUSINESS

The ACTING PRESIDENT pro tempore. There will now be a period for the transaction of morning business for not to extend beyond the hour of 9 a.m., with Senators permitted to speak therein for not to exceed 5 minutes each.

The Senator from Florida [Mr. GRAHAM] will be recognized to speak for up to 20 minutes.

There will then be 2 hours of debate prior to the vote on the motion to invoke cloture on the conference report accompanying H.R. 776.

Under the previous order, the Senate will proceed at the proper time to the consideration of the conference report accompanying H.R. 429.

Who seeks recognition?

Mr. GRAHAM addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from Florida is recognized.

#### CONCERNS REGARDING ENERGY BILL

Mr. GRAHAM. Mr. President, the purpose of my remarks this morning is to address some concerns about the pending energy bill that we will be considering later in the morning. I am going to be talking about three issues, two of them now, and one later during the general debate on the energy bill. At this point, I would like to talk about the question of, have we properly diagnosed the problem and, second, the specific applications of that diagnosis to the use of our Outer Continental Shelf resources.

I am afraid that the history of recent congresses could include a chapter on a series of failed legislative initiatives, which had appropriate public goals, but which fell short of their realization. There are a variety of explanations for that, but I believe recurrent is the theme of failed diagnoses. That is, before legislating, the Congress did an inadequate job of understanding what the priority problem was and addressing itself to that resolution.

I would put it in the category of failed legislation because of misdiagnosis and enactments such as the 1986 tax bill. The 1986 tax bill defined the problem as being an overly complex Internal Revenue Code, and the objective was simplification.

Mr. President, that would be analogous to someone having a serious blood disease which had manifested itself by a skin rash and defining the problem as the skin rash and dealing with that. The problem, of course, was a hemorrhaging Federal deficit, up until 1986, which has now cascaded to a \$4 trillion national debt. The failure to diagnose the problem and dealing with that deficit rather than simplification has contributed substantially to the recession in which we are currently mired and to our failure to deal with the deficit. In 1987, we passed a catastrophic health care bill that defined the problem as being older Americans needing the gaps in Medicare coverage. What we failed to recognize was that 60 to 70 percent of older Americans had already provided, on their own initiative or by their previous employment, for many of those gaps in coverage.

The real problem was long-term care that was not being made available to older Americans and which the catastrophic health care bill did not advance. Again, the failure to properly diagnose led to a bill which, within a matter of months, became the subject of great disappointment, scorn, and finally repeal.

And then I add, as the third example, the 1989 efforts to deal with the problems of the savings and loan industry. The diagnosis was that the problems were inadequate regulation and, therefore, the solution was a mountain of new regulation applied to both the savings and loan industry and the commercial banks. That, I submit, was not the problem. The problem was an insurance fund, deposit insurance fund, which had been systematically underfunded and which was not based on serious insurance standards, such as applying premiums based on the degree of risk which individual institutions placed against the fund.

Again, by that misdiagnosis and misprescription, we have loaded up the regulations on our financial institutions to the point that they have been virtually squeezed from their ability to serve as an appropriate intermediary; that is, the institution that takes all of our deposits and then targets them toward job-creating businesses. And, again, this has contributed significantly, in my judgment, to the current economic recession.

I cite those three examples of failures of appropriate diagnosis, which led not only to the failure to solve the basic problem, but also to an exacerbation, to unintended negative consequences.

I am concerned that we are about to make another of those errors. This en-

ergy bill starts with a definition of the problem as being the fact that we are importing too much petroleum from outside the United States. I might agree with that statement. We are importing too much petroleum from outside the United States. I do not agree, however, that that is the fundamental problem to which we should be addressing ourselves in a national strategic energy policy.

The fundamental problem is that we are using too much petroleum from whatever source. Here are the facts: The United States today is consuming a little over 6 billion barrels per year of petroleum. Approximately half of that is imported; half of it is domestic. The United States has, by the best estimates, approximately 75 to 80 billion barrels of petroleum within its domestic boundaries. It does not take much of a mathematician to calculate that, if we continue at the current rate of consumption, that is, approximately 3 billion barrels a year of domestic petroleum, within approximately 25 years we are going to have totally depleted our domestic reserves and resources.

If we do as some would suggest, to become totally energy independent now, that is, instead of using 3 billion barrels, use 6 billion plus per year from our domestic reserves, we will cut in half the number of years to 12 to 14 years as the remaining time in which there will be petroleum left in the United States.

The problem is the excessive use of petroleum in our society and the urgency of effective action to reduce that use of petroleum. I say, Mr. President, that this is not a fanciful goal. Our major industrial competitors, such as Japan and much of Europe, use half the petroleum per capita, half the petroleum per unit of production, as we do in the United States of America.

That has to be our goal, the dramatic reduction in the use of petroleum. One area in which this is being illustrated—and the legislation has to do with the use of Outer Continental Shelf resources, a part of that 75 to 80 billion barrels of remaining petroleum—the way in which this legislation deals with that issue is not to deal with it at all.

There had been legislation adopted both in the Senate and in the House that would have directed new national policies in the use of our Outer Continental Shelf. In the conference committee it was all dropped. So what we have in this national strategic energy bill is the status quo. And what is the status quo?

The status quo is an energy policy relative to our Outer Continental Shelf, which essentially says that the primary criteria for its development will be its energy potential. It encourages a rapid evaluation and extraction of our OCS potential. We now have many thousands and thousands of acres

which have been leased and which are subject to drilling and recovery of the resource. It is a glaring example of what has been described as the drain-America-first policy, taking these resources as our first line rather than as our ultimate reserve of domestic petroleum resources.

The example of what is happening in my State of Florida is illustrative of what has happened elsewhere in the United States.

Beginning approximately 10 or 15 years ago, there was an escalation of the granting of leases off the coast of Florida. Many of these leases have subsequently been found to be environmentally inappropriate and create significant dangers to not only natural resources but also the economy.

Recognizing that fact, President Bush, in 1990, ordered the Department of the Interior to ban further leasing in the area off southwest Florida and the Florida Keys, and also ban drilling until the year 2000. He also ordered that there begin the process of buying back 73 existing leases which were considered to be in an inappropriate location.

To quote the President:

Today I am announcing my support for a moratorium on oil and gas leasing and development in (the sale area) off the coast of Florida until after the year 2000. The combined effect of these decisions is that the southwest coast of Florida will be off limits to oil and gas leasing and development until the year 2000. I am asking the Secretary of the Interior to begin a process that may lead to the buyback and cancellation of (the 73) existing leases off southwest Florida.

That was the President recognizing that the current policy is not working.

Efforts were made, particularly in the House of Representatives, to place that philosophy that the current system is not working into statute. Unfortunately that codification of the President's promise was dropped, and it was dropped in large part because of the pressure from the White House where Representatives of the administration, particularly in the Department of Energy, threatened that there would be a Presidential veto if language which codified the President's statements of 1990 were adopted in this final conference report.

I think that indicates, Mr. President, that there is a desire to accelerate the pace of draining America first in spite of the statements to the contrary.

Mr. President, while the issue of Outer Continental Shelf use has been left unaddressed in this legislation, it cannot be left unaddressed from the national agenda. We must deal with the questions of the appropriate reserve of our Outer Continental Shelf resources so that they will be retained as America's ultimate reservoir of domestic petroleum. We must also change the current law which encourages the expeditious development of Outer Continental Shelf resources to a more balanced

approach that takes into effect other economic interests and the protection of natural resources. We must also allow the States that are affected to have a more effective role. And, we must avoid what is happening now, that is leases being granted subject to subsequent environmental and safety studies, but which the possessor of the lease considers to be a property interest and, if it is found to be inappropriate to drill because of environmental, safety, or other considerations, he then demands huge ransom from the Federal Government for its cancellation.

Even more egregious has been a proposal from the Department of Energy that the States ought to have to repay for that cancellation, the States which got none of the money when the leases were originally granted, which in many instances fought vigorously against the grant of leases for exactly the inappropriate economic and environmental consequences that they foresaw when the original proposal was made. Those, Mr. President, are outrageous suggestions.

I believe, Mr. President, that we are going along a path of misdiagnosis of the problem which is going to lead to an acceleration of our depletion of domestic petroleum resources, and that we will, in this Chamber, live to see the day when the issue of energy independence as it relates to petroleum is no longer a relevant national goal, because we will have depleted our domestic petroleum.

There were provisions which were also deleted in this bill that, in my judgment, would have focused our attention on some things that ought to be done to reduce our dependence on petroleum.

Sixty percent of that 6 billion barrels of petroleum is used for transportation. Approximately 3½ to 4 billion are used in areas of transportation. So clearly if we are going to reduce our dependence on petroleum, that must be the point of attack.

There had been an original proposal to continue a process that has been underway for almost 20 years, led, in fact, by our distinguished colleague from Nevada, to increase efficiency of automobiles, one of the clearest ways in which we could contribute to the reduction of our dependence on petroleum. There was also, in this legislation, proposals that would have accelerated the development of high-speed rail systems as an alternative both to the automobile and short-range commercial aircraft.

A high-speed rail system such as that which is utilized in Japan and France will transport a person between Washington and New York or other equivalent distances at four to five times less use of energy than the shuttle aircraft which are providing that service today and do so with a speed, efficiency and safety which would be very appropriate

to the mix of transportation for our Nation. That provision to enhance the development of high-speed rail was also dropped from this energy bill.

So, Mr. President, my basic concern is that we have a bill which misdiagnoses the problem, misprescribes against the problem, in the area of Outer Continental Shelf drilling, will do nothing about the current egregious standards that are bad energy policy, bad economic policy, bad environmental policy, and that we have not advanced in a sufficiently, aggressively, urgent way, those steps that are available to us to reduce our dependence on petroleum. And thus we have almost assured that these young pages in front of us today, and our children and grandchildren, are going to live in an America which will be totally bereft of its petroleum resources.

Those, Mr. President, are, I think, reasons sufficient for this Congress to say, let us start anew in our quest for a strategic energy policy, let us not accept what is available to us today.

As I close, I will say there will be some other items that I will discuss later on that I hope might be made available.

Mr. REID. Mr. President, will the Senator yield?

Mr. GRAHAM. Yes.

Mr. REID. Will the Senator from Florida now wish to take the 10 minutes, and I will yield to him?

Mr. GRAHAM. I say to my friend from Nevada, I would prefer if I could wait until the debate is open to use the time to discuss the final issue that I want to discuss, and that is the question of changes in our Nation's nuclear policy both as it relates to licensing, but particularly to the issue of the disposal of high-level nuclear waste, another area which I fear this bill will achieve a different and negative intention from that which its designers have in mind.

I look forward to the opportunity to discuss that issue later in the debate.

Mr. President, I ask unanimous consent to print in the RECORD items which related to this legislation, particularly its impact on Outer Continental Shelf drilling.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### STATEMENT BY THE PRESIDENT

*Tuesday, June 26, 1990.*

I have often stated my belief that development of oil and gas on the outer continental shelf (OCS) should occur in an environmentally sound manner.

I have received the report of the interagency OCS Task Force on Leasing and Development off the coasts of Florida and California, and have accepted its recommendation that further steps to protect the environment are needed.

Today, I am announcing my support for a moratorium on oil and gas leasing and development in Sale Area 116, Part II, off the coast of Florida, Sale Area 91 off the coast of

northern California, Sale Area 119 off the coast of central California, and the vast majority of Sale Area 95 off the coast of southern California, until after the year 2000.

The combined effect of these decisions is that the coast of southwest Florida and more than 99 percent of the California coast will be off limits to oil and gas leasing and development until after the year 2000.

Only those areas which are in close proximity to existing oil and gas development in Federal and state waters, comprising less than 1% of the tracts off the California coast, may be available before then. These areas, concentrated in the Santa Maria Basin and the Santa Barbara Channel, will not be available for leasing in any event until 1996—and then only if the further studies for which I am calling in response to the report of the National Academy of Sciences satisfactorily address concerns related to these tracts.

I am also approving a proposal that would establish a National Marine Sanctuary in California's Monterey Bay and provide for a permanent ban on oil and gas development in the sanctuary, and I am asking the Secretary of the Interior to begin a process that may lead to the buyback and cancellation of existing leases in Sale Area 116, Part II, of southwest Florida.

In addition, I am directing the Secretary of the Interior to delay leasing and development in several other areas where questions have been raised about the resource potential and the environmental implications of development. For Sale Area 132 off the coasts of Washington and Oregon, I am accepting the recommendation of the Secretary that further leasing and development activity be deferred until a series of environmental studies are completed, and directing that no such activity take place until after the year 2000. I am also cancelling Lease Sale 96, in the Georges Bank area of the North Atlantic, and directing that no leasing and development activity take place in this area until after the year 2000. This will allow time for additional studies to determine the resource potential of the area and address the environmental and scientific concerns which have been raised.

Finally, I am today directing the Secretary to take several steps to improve the OCS program and respond to several of the concerns expressed by the Task Force. My goal is to create a much more carefully targeted OCS program—one that is responsive to local concerns, to environmental concerns, and to the need to develop prudently our nation's domestic energy resources. Although I have today taken these strong steps to protect our environment, I continue to believe that there are significant offshore areas where we can and must go forward with resource development.

While I believe that a leaner OCS program will ultimately be more effective, Americans must recognize that the OCS program is a vital source of fuel for our growing economy. My desire is to achieve a balance between the need to provide energy for the American people and the need to protect unique and sensitive coastal and marine environments.

#### FACTSHEET—PRESIDENTIAL DECISION CONCERNING OIL AND GAS DEVELOPMENT ON THE OUTER CONTINENTAL SHELF

*June 26, 1990.*

The President today announced a series of decisions related to oil and gas development on the outer continental shelf (OCS). The President believes that these decisions strike a needed balance between develop-

ment of the Nation's important domestic energy resources and protection of the environment in sensitive areas.

#### DECISIONS BY THE PRESIDENT ON THREE PENDING SALES

##### *Decision for California sales*

Cancel all sales scheduled for 1990, 1991 and 1992 offshore California, including Sale 91 off the coast of northern California and Sale 95 off the coast of southern California.

Conduct additional oceanographic and socioeconomic studies as recommended by the National Academy of Sciences in a review conducted for the Interagency Task Force on Leasing and Development of the OCS (the Task Force). These studies should take 3 to 4 years.

Exclude more than 99 percent of the tracts (including all of the Sale 91 area and all of the Sale 95 area south of the Santa Barbara Channel) off California from consideration for any lease sale until after the year 2000. The Interior Department has identified 87 tracts off the coast of southern California within the Sale 95 area that have high resource potential. These tracts are located in the Santa Maria Basin and Santa Barbara Channel, where oil and gas production is currently underway. They comprise approximately 0.7 percent of all of the tracts off California, or 0.67 percent of the 74 million total acres off California that could be leased and 1.63 percent of the 30.5 million acres in the Southern California Planning Area. These tracts will not be available for leasing consideration until after January 1, 1996 and completion of the additional studies. They will then be available only if development appears viable based on the guiding principles outlined below and the results of the studies.

##### *Decision for Florida*

Cancel Sale 116, Part II, and exclude the area from consideration for any lease sale until after the year 2000. Any development after the year 2000 would be pursued only if it appears viable based on the guiding principles outlined below and the results of additional studies.

Conduct additional oceanographic, ecological and socioeconomic studies as recommended by the National Academy of Sciences in its review. These studies should be completed within 5 to 6 years.

Begin cancellation of existing leases off Florida and initiate discussions with the State of Florida for its participation in a joint federal-state buy-back of the leases.

#### GUIDING PRINCIPLES

The President's decisions were based on the following principles:

(1) Adequate Information and Analysis.—Adequate scientific and technical information regarding the resource potential of each area considered for leasing and the environmental, social and economic effects of oil and gas activity must be available and subjected to rigorous scrutiny before decisions are made. No new leasing should take place without such information and analysis.

(2) Environmental Sensitivity.—Certain areas off our coasts represent unique natural resources. In those areas even the small risks posed by oil and gas development may be too great. In other areas where science and experience and new recovery technologies show development may be safe, development will be considered.

(3) Resource Potential.—Priority for development should be given to those areas with the greatest resource potential. Given the inexact nature of resource estimation, particularly offshore, priority should be given to

those areas where earlier development has proven the existence of economically recoverable reserves.

(4) **Energy Requirements.**—The requirements of our nation's economy for energy and the overall costs and benefits of various sources of energy must be considered in deciding whether to develop oil and gas offshore. The level of petroleum imports, which has been steadily increasing, is a critical factor in this assessment.

(5) **National Security Requirements.**—External events, such as supply disruptions, might require a reevaluation of the OCS program. All decisions regarding OCS development are subject to a national security exemption. If the President determines that national security requires development in the areas of these three lease sales or in other areas, he has the ability to direct the Interior Department to open the areas for development.

The need to develop adequate information, particularly needed to meet the inadequacies identified by the National Academy of Science, is an essential factor in calling for further studies and cancellation of the pending sales. The Sale 116 area off southwest Florida, which contains our nation's only mangrove-coral reef ecosystem and is a gateway for the precious Everglades, deserves special protection. The presence of successful drilling operations and known resources off certain areas of southern California merits allowing continued development, assuming scientific and environmental uncertainties can be resolved.

#### OTHER ACTIONS BY THE PRESIDENT

The President has also directed certain other actions affecting offshore oil and gas development.

#### *Sale 119 and Monterey Bay sanctuary*

The Task Force consideration of development off northern and southern California has been accompanied by strong concern about the prospect of development off central California and Sale 119. Sale 119, originally scheduled for March 1991, covers an area stretching from San Francisco southward to the northern tip of Monterey Bay. This area includes unique coastal and marine resources and a portion of the area of the Monterey Bay National Marine Sanctuary proposed by the National Oceanic and Atmospheric Administration (NOAA) (the proposed sanctuary would cover approximately 2,200 square miles). NOAA has also proposed regulations to prohibit all oil and gas exploration and development activities within the sanctuary. This area contains nationally significant, environmentally sensitive resources, including the largest breeding ground for marine mammals in the lower 48 states. The President has directed Interior Secretary Manual Lujan and NOAA Administrator John Knauss to take the following actions:

Cancel Sale 119 and adopt the sanctuary proposed by NOAA.

Permanently prohibit all oil and gas exploration and development within the sanctuary.

Allow no development in the Sale 119 area outside the sanctuary until after the year 2000. At that time the guiding principles outlined above will be applied to determine the viability of development in the area.

#### *Sale 96 in North Atlantic*

Sale 96 has been proposed for the Georges Bank area of the North Atlantic Planning Area, which stretches northward from Rhode Island to Canada. The President has directed Interior Secretary Lujan to:

Cancel Sale 96 and exclude it from the 1992-1997 five-year plan.

Conduct additional studies, including studies designed to determine the resource potential of the North Atlantic area and to assess the environmental, scientific and technical considerations of development in the area.

Consult with the governors of the states whose residents would be affected by future development of oil and gas in the North Atlantic.

These actions ensure that no sale will be considered in the North Atlantic Planning Area until after the year 2000, and then only if studies show that development is warranted because of resource potential and is environmentally safe.

#### OCS DEVELOPMENT OFF WASHINGTON AND OREGON

The President has accepted the recommendation of Interior Secretary Lujan to conduct a series of additional environmental studies of the effects of oil and gas development off Washington and Oregon, including the Sale 132 area, before any environmental impact statement would be completed. These studies are expected to take 5 to 7 years. No sale will be considered off Washington and Oregon until after the year 2000 and then only if studies show that development can be pursued in an environmentally safe manner.

#### GENERAL OCS DECISIONS

The President also decided that:

Air quality controls for oil and gas development offshore California should be substantially the same as those applied onshore.

Immediate steps should be taken to improve the ability of industry and the federal government to respond to oil spills offshore, regardless of their source.

Federal agencies should develop a plan to reduce the possibility of oil spills offshore from whatever source, including and especially from tanker traffic. This plan should include moving tanker routes further away from sensitive areas near the Florida Keys and the Everglades.

#### RESTRUCTURING THE OCS PROGRAM

The President determined that providing the necessary balance between developing domestic energy resources and protecting the environment requires certain revisions to the OCS program. The program must be:

Targeted more carefully toward areas with truly promising resource potential;

Buttressed by information adequate to ensure that oil and gas development proceeds in an environmentally sound manner; and

Sensitive to the concerns and needs of local areas affected by offshore development.

Accordingly, the President directed Interior Secretary Lujan to take three actions to improve the overall OCS program:

Improve the information needed to make decisions on OCS development by conducting the studies identified by the National Academy of Sciences and studies to explore new technologies for alleviating the risks of oil spills from OCS platforms and new oil and gas drilling technologies, such as subsea completion technology.

Target proposed sale areas in future OCS five-year plans to give highest priority to areas with high resource potential and low environmental risk. This will result in offering much smaller and more carefully selected blocks of tracts.

Prepare a legislative initiative that will provide coastal communities directly affected by OCS development with a greater share of the financial benefits of new development and with a larger voice in decision-making. Currently, states receive 100 percent

of revenues from leases within three miles of shore. Revenues from leases between three and six miles of shore are divided 73 percent to the federal government and 27 percent to the states. Revenues from leases six miles or further offshore go 100 percent to the federal government. Coastal communities directly affected by development are not presently guaranteed any of these revenues.

#### BACKGROUND ON SALES

##### *Sale 91*

The Sale 91 area contains approximately 1.1 million acres and lies offshore Mendocino and Humboldt Counties in northern California, primarily in two areas off Eureka and from south of Cape Mendocino to south of Point Arena. It is within the Northern California Planning Area, which stretches from the California/Oregon border to the Sonoma/Mendocino County lines. There is currently no oil and gas production within this planning area. The Minerals Management Service (which is responsible for the OCS program within the Interior Department) estimates that there are between 210 million and 1.54 billion barrels of crude oil and approximately 2.5 trillion cubic feet of natural gas in the Northern California Planning Area and between 20 million and 820 million barrels of oil and approximately 1.0 trillion cubic feet of natural gas in the Sale 91 area. Congress imposed a moratorium prohibiting leasing in the Northern California Planning Area as part of the Interior Department's FY 1990 appropriations bill.

##### *Sale 95*

The Sale 95 area contains approximately 6.7 million acres and lies offshore southern California from the northern border of San Luis Obispo County to the United States/Mexico border. It is within the Southern California Planning Area, which extends from the northern border of San Luis Obispo County to the United States/Mexico border. Oil and gas production is currently taking place in the Southern California Planning Area in the Santa Maria Basin, the Santa Barbara Channel and offshore Long Beach. There are 135 active federal leases in the area, producing approximately 90,000 barrels of crude oil and 95 million cubic feet of natural gas daily from 17 producing platforms in federal waters. One platform in federal waters is used exclusively for processing and four other platforms are under construction or completed but not yet producing. In addition, there are 10 platforms and four artificial islands in the area supporting production facilities within state waters, which extend three miles from the shore. The Minerals Management Service estimates that there are between 610 million and 2.23 billion barrels of crude oil and approximately 3.01 trillion cubic feet of natural gas in the Southern California Planning Area and between 200 million and 960 million barrels of oil and approximately 1.1 trillion cubic feet of natural gas in the Sale 95 area.

##### *Sale 116, part II*

The area of Sale 116, Part II contains approximately 14 million acres, lying south of 26 degrees north latitude off the southwest Florida coast off Collier, Monroe and Dade Counties. This area is within the southeastern portion of the Eastern Gulf of Mexico Planning Area. (In 1988 the Eastern Gulf of Mexico was divided for leasing purposes into two parts along the 26 degrees north latitude line.) There is no oil and gas production within the sale area, although 73 active leases are held within the area by ten oil and gas companies. The Minerals Management Service estimates that there are between 440

million and 1.72 billion barrels of crude oil and approximately 1.68 trillion cubic feet of natural gas in the Eastern Gulf of Mexico Planning Area and between 279 million and 1.06 billion barrels of oil and approximately 110 billion cubic feet of natural gas in the Sale 116, Part II area.

#### BACKGROUND ON THE OCS TASK FORCE

In his February 9, 1989 budget message to Congress, the President indefinitely postponed three OCS lease sales scheduled for FY 1990—Sale 91 off the coast of northern California, Sale 95 off the coast of southern California and Sale 116, Part II off the coast of southwestern Florida—pending a study of the sales by a Cabinet-level task force charged with reviewing and resolving environmental concerns over adverse impacts of the sales. The Task Force was named on March 21, 1989. It consisted of Interior Secretary Manuel Lujan as Chairman, Energy Secretary James Watkins, Administrator John Knauss of the National Oceanic and Atmospheric Administration (NOAA), Administrator William Reilly of the Environmental Protection Agency, and Director of the Office of Management and Budget Richard Darman. The Task Force conducted nine public workshops in Florida and California, heard from over 1,000 witnesses, took ten field trips to sites in the two states, received briefings from various federal agencies, met twice with members of Congress, and solicited and received over 11,000 written public comments.

The Task Force also commissioned a technical review from the National Academy of Sciences regarding the environmental and other information available on which decisions could be made. The National Academy of Sciences determined that adequate ecological, oceanographic or socioeconomic information was not available to some extent for each of the three sale areas.

The Task Force found that:

The southwest Florida shelf comprises subtidal and nearshore habitats that are unique within the U.S. continental margin and provide refuge to a number of rare and endangered species;

The incremental risks of an oil spill associated with the Sale 91 area off northern California are greater than those associated with the other two sales.

Information concerning the onshore socioeconomic effects of oil and gas development is particularly lacking for Sale 116, Part II off Florida and Sale 91.

Additional studies in response to the report of the National Academy of Sciences are needed before the Secretary of the Interior makes leasing decisions in any of the three areas.

#### BACKGROUND ON THE OCS PROGRAM

Management of oil and gas found in federal waters offshore (which generally begin three miles from a state's coast and can extend out 200 to 300 miles) is vested in the Department of the Interior under the Outer Continental Shelf Lands Act of 1953, as amended. The Act directs the Interior Department to:

Make OCS resources available to meet the nation's energy needs;

Protect human, marine and coastal environments;

Ensure that states and local governments have timely access to information and opportunities to participate in OCS program planning and decisionmaking; and

Obtain for the federal government a fair and equitable return on resources while preserving and maintaining free enterprise competition.

These responsibilities within the Interior Department are administered by the Minerals Management Service (MMS), created in 1982 to oversee the orderly development of offshore energy and mineral resources while safeguarding the environment. The current director of the MMS is Barry Williamson.

The MMS makes resources available by leasing federal acreage offshore to private companies, which explore for and can develop and produce commercial deposits, subject to continuing review and permitting procedures. Environmental standards are established by the MMS in regulations and lease stipulations and enforced through review of companies' exploration development and production plans (including drilling permits that must be obtained) before operations can begin on leases, and an offshore facility inspection program, under which inspectors review safety, operational and environmental activities on offshore platforms. Inspectors currently oversee 3,800 platforms in the Gulf of Mexico and 22 platforms off California.

Oil and gas lease sales are conducted in a competitive sealed bid process. Sales are scheduled in five-year planning cycles (the first of which was in 1978) developed by the Secretary of the Interior with public review and comment on the draft plan. Efforts are made to address concerns raised during this review process, which normally takes two years. After the adoption of a plan, extensive pre-lease activities are conducted before any sales occur. These activities include the preparation of an environmental impact statement for each sale, with opportunities for public review and comment, and submission of sale proposals to the governors of the affected states before final decisions are made. These steps generally take an additional two or more years.

The total OCS area covers 1.4 billion acres, and is composed of over 260,000 tracts. Since 1954 over 118,000 (or approximately 45 percent) of the tracts have been offered for lease; 10,115 (3.9 percent) have been leased; 4,111 (1.6 percent) have been drilled; and slightly more than 1,250 (approximately .05 percent) are occupied by platforms. Production from the OCS program since 1954 totals over 8.5 billion barrels of crude oil and condensate and 88 trillion cubic feet of natural gas. Since its creation, the Minerals Management Service has been responsible for overseeing the production of more than two billion barrels of crude oil and condensate and over 25.6 trillion cubic feet of natural gas and for generating over \$90 billion in revenues from lease sales and lease rental payments for the United States Treasury.

The OCS accounts for a significant portion of existing United States oil and gas resources. Table 1 shows: the quantities of proven oil and gas reserves that have been discovered and are economically recoverable within the United States as a whole and the OCS separately (Column A); the quantities of undiscovered oil and gas resources estimated to be economically recoverable using existing technologies within the United States as a whole and the OCS separately (Column B).

TABLE 1.—OIL AND GAS RESERVES IN THE UNITED STATES AND THE OUTER CONTINENTAL SHELF [OCS]

	Column A: Proven oil and gas reserves		Column B: Estimated oil and gas reserves	
	All United States	OCS only	All United States	OCS only
Oil (billion barrels) .....	26.8	2.6	34.8	8.2
Natural gas liquids (billion barrels) .....	8.2	.6	6.3	.8

TABLE 1.—OIL AND GAS RESERVES IN THE UNITED STATES AND THE OUTER CONTINENTAL SHELF [OCS]—Continued

	Column A: Proven oil and gas reserves		Column B: Estimated oil and gas reserves	
	All United States	OCS only	All United States	OCS only
Natural gas (trillion cubic feet) .....	168.0	32.3	262.7	74.0

Note.—Column A shows the quantities of proven oil and gas reserves that have been discovered and are economically recoverable within the United States as a whole and the OCS separately; column B shows the quantities of undiscovered oil and gas resources estimated to be economically recoverable using existing technologies within the United States as a whole and the OCS separately.

THE SECRETARY OF ENERGY,  
Washington, DC, September 8, 1992.

HON. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: Three years ago the Bush Administration embarked upon the most comprehensive effort in over 20 years to craft a National Energy Strategy. For the last 18 months we have worked diligently with the Congress to translate key provisions of the Strategy into legislation. We are now within striking distance of reaching our common goal of sound, comprehensive energy legislation.

As the Conference Committee prepares to reconcile differences in the House and Senate energy bills, I thought it prudent to provide a comprehensive summary of our views on various provisions of the two bills.

Of particular concern, the Office of Management and Budget has advised me that the legislation, as passed by both Houses of Congress, contains provisions that will substantially increase direct spending and reduce receipts. The preliminary estimated net PAYGO cost of the House bill is \$1.6 billion and the Senate bill is \$2.9 billion for the period 1993-1997. In addition, the Senate bill creates new exemptions from sequestration for the Bonneville Power Administration and certain fund transfers to the Bureau of Reclamation and the Corps of Engineers. It also exempts certain spending of these agencies from the appropriations process and reclassifies discretionary spending to the mandatory category. If these provisions are included in the enacted legislation and not offset, the President's senior advisors would recommend that he veto the bill.

Assuming the Administration's problems are resolved, it strongly supports the prompt enactment of balanced and comprehensive national energy legislation to provide for economic growth and increased energy security, while protecting the environment. We believe that essential elements of a balanced and comprehensive bill include provisions that:

Encourage increased cost-effective in Federal, State, industrial, commercial, and residential uses;

Permanently provide much-needed Alternative Minimum Tax relief for independent oil and gas producers;

Proportionately extend the current tax exemption for ethanol/gasoline blends to blends of less than 10% ethanol;

Promote the development and use of domestic renewable resources and of alternative transportation fuels;

Amend the Public Utility Holding Company Act (PUHCA) to increase competition in electricity generation;

Expedite licensing procedures for construction of interstate natural gas pipelines;

Reform the nuclear powerplant licensing process and restructure the uranium enrichment enterprise;

Support the environmentally compatible use of our Nation's abundant coal resources; and

Enhance mass transit and vanpool use by increasing the tax-free limit on employer-provided benefits and limit employer exclusions of parking benefits from gross income.

We are concerned, however, that the significant progress made to date in achieving these objectives not be jeopardized by provisions contained in a final bill that the Administration will be unable to support. I would note that, as indicated in the enclosed summary, we have a considerable number of concerns. We believe that some of these can be addressed by reasonable compromise, while others are simply contrary to the national interest and should be stricken.

In addition to the PAYGO problems, if the energy legislation presented to the President contains the following provisions, the President's senior advisors would recommend that he veto the bill:

Expansion of Federal limitations on State regulatory authority over the production of natural gas (the House prorationing amendment);

Long-term moratoria and other provisions concerning oil and gas exploration and production on the Outer Continental Shelf (OCS) that go beyond the President's 1990 de-

cision to defer leasing in environmentally sensitive areas. Particularly objectionable are OCS lease cancellation and buyback provisions that could result in Federal spending of as much as \$1.5 billion in FY 1992/1993;

Onerous regulatory requirements in the House bill that severely limit development and retention of non-polluting and renewable hydroelectric resources. These provisions would circumvent the Electric Consumers Protection Act, which requires balancing of all beneficial uses of the Nation's rivers;

Counterproductive expansion of the Strategic Petroleum Reserve drawdown authority to include mitigation of petroleum price increases and a costly and unnecessary creation of a 50 million barrel refined petroleum product reserve, as proposed in the House bill;

Radioactive waste provisions in the House bill that require reinstatement of EPA standards for disposal of high-level waste and permit State low-level waste regulation that is more stringent than NRC regulation. These provisions constitute burdensome, costly, and unnecessary regulation that will hamper civilian nuclear power activities, including medical and scientific applications; and

Provisions that could be vulnerable to challenge as inconsistent with our inter-

national obligations under the General Agreement on Tariffs and Trade (GATT), or other laws or treaties agreed upon or in force.

SCORING FOR PURPOSES OF PAYGO

Several provisions of the Senate and House bills increase direct spending or decrease receipts; therefore, both bills are subject to the Pay-As-You-Go requirement of the Omnibus Budget Reconciliation Act (OBRA) of 1990. A budget point of order applies in both the House and the Senate against any bill that is not offset under CBO scoring. If, contrary to the Administration's recommendation, the Congress waives any such point of order that applies against this legislation, the effects of enactment would be included in a look back pay-as-you-go sequester report at the end of the congressional session.

OMB's preliminary scoring estimates of the bills as written are presented in the table below. OMB is still reviewing the budget impacts of the Coal Industry Retiree Health Benefit Act, which was amended to the Senate bill. Final scoring of enacted legislation may deviate from these preliminary estimates.

If legislation is enacted, final OMB scoring estimates would be published within five days of enactment, as required by OBRA.

ESTIMATES FOR PAY-AS-YOU-GO

[In millions of dollars]

	1993	1994	1995	1996	1997	1993-97

As we have to date, we will work closely with the Conferees to resolve issues on which we disagree and to assure passage of a bill that the President will be able to sign into law before the end of this Congress. I look forward to working with you to complete successfully the development of a sound, comprehensive energy bill.

Sincerely,

JAMES D. WATKINS,  
Admiral, U.S. Navy (Retired).

OFFICE OF MANAGEMENT  
AND BUDGET,

Washington, DC, September 30, 1992.

Hon. MALCOLM WALLOP,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR WALLOP: It is my understanding that during the course of discussions on the Senate-House Conference meeting on H.R. 776 this evening the following proposal on Outer Continental Shelf moratoria and lease buy-back was made:

1. a drilling ban would be in place from the date of enactment until October 1, 1997 on all leases in existence on the date of enactment and

2. the Secretary of Interior would be directed to enter into negotiations to establish written lease cancellation and compensation agreements to the lessees.

While we have not been provided with the text of such an offer it appears similar to a House Staff Counter-Offer dated September 25, 1992 which has been provided to us.

Our preliminary determination is that the first of these provisions could lead a court to decide that the owners of the leases involved have suffered a takings of their property interests under the Fifth Amendment of the Constitution. The second could be interpreted to provide the Secretary of Interior the budgetary resources to enter into such an agreement. Therefore, we believe these proposals still raise serious PAYGO issues pursuant to the Budget Enforcement Act of 1990 and their enactment would trigger a sequester as provided in that Act, unless these provisions are offset.

Sincerely,

PAUL GILMAN,  
Associate Director, Natural Resources, Energy and Science.

DEPARTMENT OF THE INTERIOR,  
OFFICE OF THE SECRETARY,  
Washington, DC., September 28, 1992.

Hon. J. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: We understand that the Conference Committee on H.R. 776, "The Comprehensive National Energy Policy Act," has been considering various alternatives to the provisions of H.R. 776 relating to the cancellation and buyback of certain Outer Continental Shelf oil and gas leases. We are pleased the conference has chosen to focus on the many problems inherent in these provisions.

We have reviewed the proposals on this issue that have been exchanged by the House and Senate staffs and continue to have serious concerns. For example, the Administration believes enactment of a five-year drilling ban, as provided in subparagraph (A) of the current House proposal, significantly raises the risk that a court would decide that the owners of the leases involved have suffered a taking of their property interests under the Fifth Amendment of the Constitution. In addition, we think that subparagraph (B) grants the Secretary of the Inte-

rior contract authority to compensate the lessees for cancellation of their leases, thus incurring mandatory spending. Therefore, we believe that these proposals still raise serious PAYGO issues pursuant to the Budget Enforcement Act of 1990 and their enactment would trigger a sequester as provided in that debt.

The Office of Management and budget has advised that it has no objection to the presentation of this letter from the standpoint of the Administration's programs.

Sincerely,

Assistant Secretary.

[From the Miami Herald, Oct. 7, 1992]

#### CLINTON IS RIGHT ON TRADE

Democratic presidential nominee Bill Clinton was under considerable pressure to take a quick, simple position on the proposed North American Free Trade Agreement. Instead, after weeks of deliberation, he gave the treaty a solid, if nuanced, endorsement.

Good for him. Now perhaps the trade debate can rise out of the partisan mire into which it has been sinking for two years.

Mr. Clinton is known to favor free trade. He's also known to favor winning elections. He might have given himself a better shot at winning this one if he had demagogued the trade issue the way House Majority Leader Richard Gephardt had done. He could have tried to argue, like Mr. Gephardt and some labor leaders, that Americans can somehow protect their *status quo* from a changing world economy simply by closing the borders to more foreign goods.

Instead, Mr. Clinton stuck to principles—not only to the principle of free trade, but to another, equally important one: that those who benefit from change should also pay for it. He argues, in brief, that Americans should not expect to receive the considerable rewards of expanded commerce while piling its cost onto a small group of displaced workers and farmers, or onto an already victimized environment.

He offers this alternative: A nation that will benefit handsomely from wider markets and cheaper consumer goods should use some of the proceeds to retrain workers whose jobs are lost in the process such as retraining, he adds, should be part of an overall national training policy. He favors aid to farmers who would be forced to change crops. And he would negotiate supplemental agreements with the Canadians and Mexicans to ensure decent working conditions and safeguard to the environment.

None of those is an unreasonable impediment to the treaty. True, Mr. Clinton's call for international commissions on labor and the environment would have to be negotiated with Mexico City. But Mexican President Carlos Salinas de Gortari repeatedly has issued that his government is as committed to those issues as anyone. There's no reason to believe that an acceptable accommodation would be unreachable.

Unlike ideologues on either side, Mr. Clinton took care to weight, publicly, the costs and benefits of freer trade, and to strike a balance. If that helps to provoke a more temperate debate on the issue's subtler points, all the better.

#### DRILLED BETWEEN THE EYES

The energy bill just passed by Congress leaves the 10-year ban on oil-drilling off the Everglades and the Keys intact. That's the good news.

The bad news is that the White House foiled congressional attempts to begin buy-

ing back the area's 73 leases. Energy Secretary James Watkins told Congress that the president would veto efforts to expand the ban to North Florida waters and the Atlantic, or to implement a buy-back plan.

The House included these and other progressive measures on exploration in the Outer Continental Shelf in its bill anyhow. The Senate was more cautious. In the end, facing the veto threat, a conference committee dropped all the leasing provisions.

This means that the moratorium on lease exploration below the 26th parallel is still in effect—but only at the whim of the executive branch. President Bush imposed the ban in 1990, promising then to pursue "cancellation of the leases."

Florida has sought to have Congress codify the ban and proceed with buy-back or cancellation plans, knowing that a presidential ban could dissipate at will. The quest for a permanent solution was prescient, given that the president is now backing away from his commitment to deal permanently with the leases.

Meanwhile, the buy-back cost escalates every year. The leases sold for \$100 million. Now their estimated worth is \$500 million to \$1.5 billion. This isn't an easily resolved issue. The lease-sale profits are supposed to be spent, in part, for conservation in the states most affected by leases.

Yet that \$100 million, even if used to buy Everglades and Keys lands for conservation, couldn't begin to equal the damage to Florida's coast from one drilling accident. Witness the oil rig explosion off Louisiana this week, causing an uncontrollable gusher into coastal waters.

To be sure, drilling accidents are few these days. Yet exploration itself causes pollution from chemicals, and a disruption of the marine ecosystem could damage Florida's fisheries. Florida thought that Mr. Bush, who loves fishing in the Keys, got the message in 1990. Florida thought wrong.

#### HIGH-SPEED RAIL TAX-EXEMPT BONDS

Mr. GRAHAM. Mr. President, Senator SYMMS and I joined together to bring high-speed rail systems closer to a reality in the United States.

We came close, the Senate adopted the Graham-Symms high-speed rail tax exempt bond amendment to the energy bill July 29.

However, when the conference committee completed their work on the energy bill, the amendment was no longer a part of the package.

Mr. President, by striking the provision which would have provided an essential financing component for high-speed ground transportation systems, the conference committee weakened our country's ability to develop an energy efficient, environmentally sensitive transportation system.

Senator SYMMS and my efforts were undertaken not just for the benefit of the systems already under development in Texas and Florida, but also for incentives that will encourage a high-speed ground transportation system across America.

Other projects being discussed include a Chicago hub system linking Minneapolis, St. Louis, and Detroit; another linking Washington, New York, New Jersey, Rhode Island, and Massachusetts; and a Seattle hub system linking Portland and Vancouver.

Mr. President, the projects in Florida include a magnetic levitation system of which the first leg is a 14-mile line between the Orlando International Airport and International Drive in Orlando, and a high-speed steel wheel system connecting Miami, Tampa, and Orlando. When these projects faced difficulties in raising the capital set out in their plans, it became clear that the public partner would have to become active.

At this point, I set out to determine what was needed from the public partner by meeting with members of the High-Speed Rail Association, as well as representatives of the different systems.

During this discussion, it became clear that not only would the private sector interests continue to honor their agreements of the partnership, but that there is a clear precedent for a public role in the development of transportation systems as well.

What the projects sought were incentives similar to those provided to airports, in which the public partner would assist in building the infrastructure, and the private partner would own and operate the trains.

Since it was unanimous that the private sector did have an interest in continuing its role in the development of high-speed rail systems, the private sector representatives suggested tax exempt bond financing and loan guarantees.

Mr. President, Congress included the loan guarantee financing concept in the recently enacted Intermodal Surface Transportation Efficiency Act.

Mr. President, then on July 29, the Senate adopted a Graham/Symms amendment to the energy bill, which would have removed the 25-percent inclusion of tax exempt bonds issued to finance intercity high-speed rail facilities from State private activity bond caps.

The amendment did not create a new category of tax exempt financing, but rather expanded a provision enacted in 1988 as a result of the Technical and Miscellaneous Revenue Act.

The 1988 act allows private entities to finance intercity high-speed rail facilities with tax exempt bonds, but requires that 25 percent of each bond issued receive an allocation under the State's private activity volume cap.

The policy rationale behind the 25-percent requirement is to ensure that the project is subject to public oversight. This financing tool was structured to force the projects to compete with other State priorities in order to raise the level of accountability and legitimacy.

What has happened in practice, however, is that the level of tax exempt bond financing needed to build these facilities has precluded the projects from using private activity tax exempt financing.

In drafting legislation to remove bonds issued for intercity high-speed rail facilities from the State volume caps, it was clear that the airlines preferred for these bonds to have the same oversight and restrictions that airport facility bonds had.

Senator SYMMS and I worked with the high-speed rail community to design legislation requiring that portions of the rail facilities that are to be financed with tax exempt bonds be publicly owned.

Public ownership would ensure oversight of the facility, and satisfy the airline concern that high-speed rail facilities not have a competitive advantage over them.

Mr. President, I thought in developing this legislation that we had engendered the support needed to enact it into law.

I stand corrected.

Mr. President, I hope that the next time my colleagues have an opportunity to act on legislation to make high-speed ground transportation systems a reality they will consider the history of public involvement in both the construction and maintenance of transportation facilities.

In addition, I hope that my colleagues will consider the letters of support from the High-Speed Rail Association, the Electric Transportation Coalition, and from the following environmental groups: Friends of the Earth, National Wildlife Federation, National Audubon Society, Natural Resources Defense Council, Environmental Defense Fund, Rails to Trails Conservancy, American Council for an Energy-Efficient Economy, and the Union of Concerned Scientists.

Mr. President, as Congress showed in the Intermodal Surface Transportation Efficiency Act, there is a pressing need to solidify public-private partnerships in order to meet the transportation needs of our country.

Providing tax exempt bond financing is vital to the partnerships that will build a national high-speed ground transportation system in the United States.

#### WATERTOWN PUBLIC OPINION

Mr. PRESSLER. Mr. President, Gordon Garnos of the Watertown Public Opinion in Watertown, SD, has written an insightful editorial about the nomination process for the U.S. attorney position in South Dakota.

I ask unanimous consent that the entire editorial be placed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### THERE IS MORE BEING DUG UP THAN DINOSAUR BONES

The U.S. attorney for South Dakota, Kevin Schieffer, in the few months he has been in office seems to have received more ink in the state's newspapers than did his predecessor,

Phil Hogan, during all of his years that he held the job. The lastest was last week when Schieffer's former boss, Sen. Larry Pressler, put a hold on a number of federal judgeship appointments until he got the White House to add Pierre attorney Ron Schmidt to that list.

Apparently there was some confusion in the Senate when Pressler put a hold action on those other appointments and that he did so because he wanted Schieffer's name added to the list for confirmation of his U.S. attorney's job. Pressler clarified what he was doing and Schmidt's name was then assured of going further up the ladder for the eventual confirmation of his federal judgeship—to replace retiring Judge Don Porter.

But, alas! Poor Kevin Schieffer's name was once again back on the pages of a lot of newspapers. Even though it was a mistake.

But speaking of mistakes, did South Dakota's senior senator, Mr. Pressler, make a mistake when he nominated his chief of staff for the high position of U.S. Attorney for South Dakota? A number of people seem to think so. Schieffer never practiced law before getting Hogan's job. But perhaps that is OK. Bobby Kennedy wasn't too familiar with a law office either before his brother named him the U.S. Attorney General.

And as we said before, Schieffer, a Yankton native, hardly had his bags unpacked after he got back to his home state than he started making headlines—good headlines. They centered on the fact that he was starting to close in on a number of the state's farmers who were terribly late in making payments on some of their loans from one federal farm loan program or another. The people we heard from said this should have been done a long time ago, even before Hogan was retired from the job.

There were also some other actions taken by Schieffer, as U.S. Attorney, that got "good ink" before the sky fell in on him for kidnapping the bones of Sue T. Rex, the 65-million-year-old dinosaur that had taken up residency in the Black Hills Institute of Geological Research in Hill City. Consequently, the cost of the subsequent hearings on the case will cost the taxpayers far more than what the bones cost the Hill City residents in the first place.

Actually, Schieffer didn't kidnap the fossil. He had the S.D. National Guard do it—in its trucks. They hauled the bones to Rapid City. However, no National Guard action generally can be taken until the governor gives his OK. Gov. Mickelson didn't know about it until the caper was completed. Needless to say, as a result, he was no stoic Norwegian.

We suspect the Sue T. Rex case has also taken so much of Schieffer's time lately that he hasn't been able to do much with the farmers holding the delinquent federal loan papers. So far, there seem to be so many plots and subplots that the whole thing is looking a lot like a soap opera.

From last week's news stories, we also learned the Senate's Judiciary Committee has an "inch-thick FBI report" on Schieffer. We suspect a lot of newspapers have thicker files on him than that. However, its chairman, Sen. Joseph Biden, D-Del., said his committee has only had the report for about 12 days so hasn't had time yet to review it. However, last month a committee aide said the FBI report on Schieffer was sent to that group last March. Thus, the plot is getting thicker than corn-starch gravy.

So, what's the score? Did Pressler step out of line making the original nomination? No. That's the way jobs like this get filled. Was

Schieffer right in closing in on the delinquent farm loans? A lot of people said he was. Most definitely! Others can't get away with it. Why should they, they said. But did Schieffer overstep his bounds when it came to the Sue T. Rex caper? Perhaps not, according to the law books he recently completed. But has this entire escapade slowed down other, more meaningful duties of a potentially permanent U.S. Attorney? We think so. So, what's the score? The Senate should either confirm or deny his appointment. There has been more than enough time to review that "inch-thick" FBI report. Then he will either sink or swim at the job he is supposed to be doing.

#### TRIBUTE TO WAYNE MEHL

Mr. REID. Mr. President, Wayne Mehl has worked on Capitol Hill for two decades. He has worked for me for 6 years as my legislative director. His work for me and the people of Nevada has been impressive. He is a man of keen intellect and outstanding judgment. I am sorry to see his retirement from Government. I wish him well in his new career. I am a better person because of my association with Wayne. I am proud to call him my friend.

#### CONFERENCE REPORT TO H.R. 5482 THE REHABILITATION ACT AMENDMENTS OF 1992

Mr. DURENBERGER. Mr. President, I once again have the honor of standing together on the floor with my friend and colleague from Iowa in support of the major piece of legislation addressing the needs of Individuals with Disabilities of this Congress, the Rehabilitation Act Amendments of 1992.

Reauthorizing this bill has been a long and challenging process, and there are many people to thank and recognize for the conference report that we proudly put forth to our colleagues today, but first on the list is the chairman of the subcommittee and champion of the disability community, TOM HARKIN. Senator HARKIN's fine leadership and unyielding vision of an America that is free of discrimination and provides opportunity for all, has made the Subcommittee on Disability Policy a place in the Senate truly to be proud of. At a time when partisan politics and legislative gridlock are the norms in Congress, this subcommittee has been able to see through a series of momentous pieces of legislation including the Americans with Disabilities Act, all passed by unanimous consent.

One cannot talk about the strides we have made in this body over the past 10 years for individuals with disabilities in this country without recognizing the important role that numerous other Members of the Senate have made, including my predecessor, Lowell Weicker, the distinguished chairman of the Committee on Labor and Human Resources, Senator KENNEDY, the ranking minority member Senator HATCH, and the minority leader, Senator DOLE.

Mr. President, I want to express special recognition and gratitude to the talented staff of the subcommittee. I have said this before and I will say it again, without the staff director of the subcommittee, Bob Silverstein, we would not have a bill. Anybody that knows Bobby knows the special powers of consensus building he possesses. His approach is simple, nobody leaves the room until there is an agreement—but it is his extensive knowledge of the subject matter and ability to inspire trust which really makes it work. I also want to mention the extraordinary efforts of my own staff person, Anne Silberman. She has labored intensively on this legislation and I want to thank her on behalf of myself and my constituents. Beyond that, special thanks should go to Linda Hinton and Melanie Gabel, the majority legislative assistant, and staff assistant of the subcommittee.

The final version of the bill that the Senate will pass today represents real progress, and it is one we are all proud of. When we began this reauthorization, we were presented with a breadth of widely divergent views by the disability community about the direction this reauthorization should take. It was the task of our staffs, who worked long and diligently, to forge a consensus between those who wanted no changes at all and those who wanted to discard the entire bill and start over again. The conference report we will ratify today is the product of their labor; it is a compromise.

By their nature, compromises never mean that everyone is happy. Some will think that these changes are not enough. They have argued for and will continue to advocate for, even more substantive amendments. I hear them.

But the truth is that this legislation does represent some significant accomplishments and changes to this program. Over the years, the face of vocational rehabilitation in America has changed. With the technological advances of the last 20 years, almost anyone can be employed. The Vocational Rehabilitation Program has had to make adjustments as well. With the addition of the Independent Living Program, the Supported Employment Program, and the research and services in assistive technology, more people than ever are eligible and able to benefit from this program.

In this reauthorization, we have done all that was possible to continue to widen the door and expand opportunities for consumers. Some of the major accomplishments include:

A revision of the act that ensures the concepts of empowerment for individuals with disabilities will be followed, including respect for individual dignity, self-determination, inclusion, integration, and full participation of individuals with disabilities.

A presumption that individuals with disabilities, including individuals with

the most severe disabilities, are capable of benefiting from vocational rehabilitation services unless the State agency can demonstrate by clear and convincing evidence that the individual cannot benefit.

An improved relationship between the State agencies and public schools through a directive to establish policies and methods, including inter-agency agreements, to facilitate both the long-term rehabilitation goals for students and the transition of students from schools to State rehabilitation agencies.

Increased consumer involvement and choice by requiring a joint signoff between the consumer and counselor in the Individualized Written Rehabilitation Program.

The inclusion of a definition of personal assistance services.

The establishment of a State Rehabilitation Advisory Council for the basic grant program a majority of whose members shall be persons with disabilities.

A choice demonstration project which gives States broad authority to implement consumer choice programs.

A counselor incentive demonstration to allow the commissioner to fund projects to identify appropriate incentives to vocational rehabilitation counselors, such as weighted case closures, to achieve high-quality placements for individuals with severe disabilities.

The establishment of the Rehabilitation Research Advisory Council within the Department of Education to advise the Director of the National Institute on Disability and Rehabilitation Research with respect to research priorities.

Increased accountability and quality through the consumer councils and State plans.

In addition to these provisions, I am particularly pleased that the conference report includes language regarding two additional issues important to Minnesota: Social Security reimbursements, and a formula for the Older Blind Program.

Many State vocational rehabilitation programs, including my own, see their independent living centers as a vital part of the entire vocational rehabilitation picture. Therefore State directors should have the option of giving some of their Social Security reimbursement funds to their independent living centers. To me, there is no better sign that the relationship between the State VR and the independent living center is strong and healthy.

Likewise, the numbers of older blind are growing and the need for greater availability of these services has been well demonstrated. Certainly, the older blind population in this country will benefit from the change of this program to a formula.

Mr. President, this reauthorization has blessed me with the opportunity to

further get to know the disability community in my State. Starting in the spring, when I had the privilege to meet and talk with 40 members of the disability community in Minneapolis, up until the last hours before this legislation went to be printed, the input from Minnesotans on this bill has been crucial.

Some of the Minnesotans who have provided valuable assistance and advice to me and my staff that I wish to thank are: Colleen Wieck, the director of the Governor's Council on Developmental Disabilities; Mary Shorthall, the director of the State Vocational Rehabilitation Program; Paula Goldberg, and the other parent advocates in the group called PACER; Jerry Krueger, Jay Johnson, and the other independent living directors in Minnesota; Charlie Lakin; Dan Klint, who testified before the subcommittee; Mike Ehrlichmann, chair of the regional transit board; Margo Imdieke, director of the Minnesota State Council on Disability; Bruce Johnson, Office of Ombudsman for Mental Health and Mental Retardation; Mary O'Hara-Anderson; Elin Ohlson; David Schwartzkopf; Kurt Strom with the Minnesota State Council on Disability; Leah Welch, director of Independence Crossroads, Kathy Wingen, Advocacy Plus Action; Rachel Wobschall, Governor's Initiative on Technology for People with Disabilities, and the many, many other Minnesotans who have consulted with either me or my staff about this legislation.

I urge my colleagues to support this conference report, and I look forward to the President signing this bill into law.

#### TRIBUTE TO THOSE WHO HELPED WITH THE REAUTHORIZATION OF THE OLDER AMERICANS ACT

Mr. ADAMS. Mr. President, as we conclude business for the 102d Congress, I would like to take a few minutes to recognize the many individuals and organizations that contributed so much to the 1992 reauthorization of the Older Americans Act [OAA].

The OAA is the single most significant source of support for discretionary social services for the elderly. The variety of services provided under the act is quite extraordinary: congregate and home-delivered meals, employment for low-income seniors, legal assistance, ombudsman services, transportation, senior centers and many others. As I outlined when the Senate passed the final version of my reauthorization bill, the 1992 amendments will make many improvements to these programs and add several important new initiatives to the OAA.

As my colleagues know, the journey to reauthorize this legislation was a lengthy one and took nearly 1 year longer than we had originally antici-

pated. But I know that seniors and the people who serve them across the country are genuinely pleased and, indeed, relieved that the 1992 amendments are now Public Law 102-375. As chairman of the Subcommittee on Aging, with responsibility for the OAA reauthorization, I would like to express my great appreciation to those who helped us to complete this journey.

A major breakthrough on the gridlock that hung up the reauthorization for so long was achieved on September 9, when over 1,200 senior citizens came to Capitol Hill for a national rally to break loose the OAA legislation. Not only did these older Americans visit key Senators but phone calls came in from thousands of other seniors and their representatives from all over the country. I sincerely thank these thousands of individuals for their crucial contributions.

The OAA rally was the brainchild of the Leadership Council of Aging Organizations [LCAO]. The LCAO can feel very proud of its effort. Many were involved in this pivotal effort and I want to especially recognize: Dr. Dan Thursz and Victoria Wagman of the National Council on Aging [NCOA]; Larry Smedley and Dan Schulder of the National Council of Senior Citizens [NCSC]; Dan Quirk and Diane Justice of the National Association of State Units on Aging [NASUA]; John Linkous and Larry Rickards of the National Association of Area Agencies on Aging [N4A]; Sam Simmons and Larry Crecy of the National Caucus and Center on Black Aged [NCBA]; Toby Felcher and Connie Benton-Wolfe of the National Association of Nutrition and Aging Service Programs [NANASP]; Diana Porter of the Older Women's League [OWL]; and Rindy O'Brien of Families USA.

I must also thank my staff of the Subcommittee on Aging. I want to acknowledge Bill Benson, the subcommittee staff director, for his commitment and hard work in seeing this reauthorization through from the very beginning to its enactment into law. There are not many others in the country who know the Older Americans Act and the needs of the elderly as well as Bill does.

Many others associated with the subcommittee over the past 2 years helped with the OAA reauthorization. I want to single out three individuals who served on my staff through fellowships or internships and contributed a great deal to the OAA reauthorization. They certainly learned a great deal about the legislative process by their experience with the OAA and the subcommittee, and I am indebted to them. They are: Dr. Joanne Lee, a professor of industrial psychology at the University of North Carolina at Charlotte, fellowship from the American Psychological Association; Cynthia Massie, a doctoral candidate at the Virginia Poly-

technic Institute and State University and founder of the New River Valley Hospice in Blacksburg, VA, fellowship from the Women's Research and Education Institute-WREI; and Jill Feasley, who contributed an extraordinary amount of her time and talent last fall and earlier this year to the OAA. Jill, who brought with her a great deal of hands-on experience in direct services for seniors in the District of Columbia, is now working at the University of Maryland's Aging Policy Center on a national program funded by the Robert Wood Johnson Foundation.

Other staff members who deserve recognition include: Jodi Sternoff, staff assistant; Don Kramer, legislative assistant; former staff assistant Sandy Bublick, now with the House Select Committee on Aging; Sally Garrett, now in graduate school; Adele Robinson, now at the National Association of State Boards of Education; and Susan Asbury, of my Seattle office. These staff members contributed a great deal to this reauthorization.

Several other congressional fellows and interns helped me with the reauthorization: Ann Corbett, currently serving the subcommittee under a legislative fellowship from the Social Security Administration; Judith Littlejohn, graduate student at the University of Maryland's School of Nursing, now with the Older Women's League; Carissa Janis, management intern from the Department of Housing and Urban Development; Karen Goldmeier, now in her third year of law school; Deborah Sheets, trauma nurse and doctoral intern from the University of Southern California's Andrus Gerontology Center; Mark Paskowsky, a master of public policy intern from the University of Michigan at Ann Arbor; Petra Smeltzer; Kirsten Stewart, student at the University of Puget Sound; Laurie Bernstein, student at Indiana University; Kirsten Winters, student at Frostburg State College; Lou Leonard, student at Georgetown University; Marjorie DePuy, now with Lehman Brothers; and Emily Gamble, graduate of James Madison University.

The reauthorization legislation reflects the thoughtful contributions of many Senators and Representatives and their staff from both sides of the aisle, including the members of the subcommittee and their able staffs. Jim Lofton, minority staff director of the subcommittee for Senator COCHRAN; Marsha Simon of Senator KENNEDY's staff; and Michele Varnhagen of Senator METZENBAUM's staff, each deserve particular recognition.

From the House, I want to thank Congressman MARTINEZ and Eric Jensen, Dan Adcock, and Roger McClellan of his staff. Chairman FORD of the Education and Labor Committee, and Alan Lopatin of his staff, also made major contributions to the legislation.

Also deserving recognition for their outstanding and unique contributions are Carol O'Shaughnessy and Ann Lordeman of the Congressional Research Service [CRS]; Liz Aldrich of the Senate's legislative counsel; and the staff of the General Accounting Office [GAO], particularly Eleanor Chelimsky, Assistant Comptroller General, Program Evaluation and Methodology Division [PEMD], and Dr. Sushil Sharma of PEMD. Each of these individuals contributed an extraordinary amount to this reauthorization.

I must thank collectively the many organizations and individuals who contributed to the reauthorization process. I regret that they are too numerous to mention but the diversity is extraordinary and included: the National Indian Council on Aging, the AARP, the National Association of State Ombudsman Programs, the National Association of Social Workers, the organizations I cited earlier, and many, many others.

Finally, Mr. President, I want to especially say thank you to the many individuals from Washington State—my constituents—who helped so much with the reauthorization. I wish that I could name them all but there are several that must be singled out: Charles Reed, Assistant Secretary for Aging and Adult Services at the Department of Social and Health Services; Bill Moyer, director of nutrition services for Senior Services of Seattle/King County; Ken Camper, director of Seattle's SPICE Program; Gail Hiestand, president of the Washington State Association of Area Agencies on Aging [AAA's], James DeLaCruz and Sharon Hamilton of the Washington State Indian Council on Aging, and Helen Spencer of Evergreen Legal Services.

Many others played a role in this reauthorization and I regret all cannot be individually recognized. But I am honored to have been associated throughout this process with each and every one of them.

#### COL. THOMAS M. REISE—A SOLDIER'S SOLDIER

Mr. NUNN. Mr. President, I would like to bring to the Senate's attention the untimely death of one of the Army's most highly respected officers, Col. Thomas M. Reise, originally of Macon, GA. Colonel Reise died May 17 in Woodbridge, VA, after suffering cardiac arrest while running to maintain his top-notch physical condition as a combat arms officer. He was buried with full military honors in a very moving ceremony at Arlington National Cemetery the day after the Nation honored all our veterans on Memorial Day. At age 45, he had distinguished himself admirably in the service of his country, decorated with the Legion of Merit with two Oak Leaf Clusters, the Meritorious Service

Medal with three Oak Leaf Clusters, and the Army Commendation Medal with Oak Leaf Cluster.

Colonel Reise was commissioned in the Arm Defense Artillery Branch through the ROTC Program in 1968. He was a graduate of North Georgia College, one of the Nation's most respected military colleges. He also graduated from the Armed Forces Staff College and the Army War College.

During his initial duty tour in Europe with the Army, he served in team and detachment commander positions in special weapons units with the German and Dutch Air Forces, moving on to command a Hawk Air Defense Artillery Battery in Korea. After tours at the Air Defense School and the Army Recruiting Command in the United States, he returned to Europe, becoming a commander of the 59th Air Defense Artillery in Neubruecke, Germany, in 1985. Colonel Reise went on to serve in the director's office of the Army's Deputy Chief of Staff of Personnel before becoming Chief of the Inspections Division of the Army Inspector General.

During this time in Washington, he worked with the Senate Armed Services Committee and earned the respect and admiration of all who knew him. He was particularly well-known to the committee's staff director, Arnold Punaro, who was a boyhood friend from the town of Macon. Arnold told me on several occasions of Colonel Reise's outstanding performance and accomplishments.

He was one of the Army's most highly respected officers, and he is missed. Mr. President, I would like to extend my deepest sympathies to Colonel Reise's family—his wife Barbara, his daughters Jodie and Kirstin, and his son Aaron—whose sadness we share at the death of a fine officer, an outstanding patriot, a loving husband, and a superb father.

#### EXPRESSION OF APPRECIATION TO THE SENATE FLOOR STAFF

Mr. NUNN. Mr. President, as the 102d Congress draws to a close, I want to say a special word of appreciation to our Democratic support staff for all of their help to the members and staff of the Armed Services Committee during the past 2 years. It is a tribute to Senator MITCHELL's leadership that his staff is so supportive of the committee process and helps to ensure that the work of the Senate is accomplished.

Our floor staff works under the capable direction of Abby Saffold, the secretary of the majority. Abby's thorough knowledge and attention to the details of the legislative process have made her indispensable in the U.S. Senate. Abby and assistant secretary to the majority Marty Paone have always been available to provide counsel and assistance whenever they were needed.

We especially appreciate their support in ensuring prompt Senate consideration of the thousands of nominations that the Armed Services Committee reports every year.

John Hilley, Senator MITCHELL's chief of staff; Kim Wallace on Senator MITCHELL's staff; and Brett O'Brien and Sarah Sewell on the Democratic Policy Committee staff have worked very effectively with the Armed Services Committee members and staff on national security issues and legislation. They were particularly helpful this year in the difficult task of coordinating the work on Defense conversion and transition legislation with the two Senate task forces led by Senator PRYOR on the Democratic side and Senator RUDMAN on the Republican side.

Mr. President, I cannot say enough about the excellent day-to-day support we have had from the Democratic floor staff of Charles Kinney, Lula Davis, Arthur Cameron, and Nancy Iacomini. It has not been easy passing the Defense authorization bills and other legislative items in this Congress. Charles, Lula, Arthur, and Nancy have always been very helpful in assisting us in moving our committee bills through the Senate.

I also want to thank our excellent Democratic cloakroom staff of Leonard Oursler, Katherine Drummond, Gary Myrick, and Paul Cloutier for all of their assistance during the past 2 years. They must get asked "When is the next vote and when will we adjourn?" hundreds of times a day—and they never fail to respond cheerfully. Their selfless and dedicated service has made all of our jobs easier.

I should also note that while not working with them on a day-to-day basis as we do with our own floor staff, the Republican floor staff has always tracked down and helped to resolve any problem areas associated with our committee's work.

The legislative clerks—Bill Farmer, Scott Bates—make a tremendous contribution to the legislative process on the Senate floor. This year during the debate on the Defense authorization bill we had the equivalent of almost 200 pages of amendments added to the bill reported by the Armed Services Committee in just 3 days of floor debate. Somehow, the legislative clerks, along with enrolling clerk, Brian Hallen, were able to keep track of this large amount of amendment text and produce a complete text of the Senate-passed bill for us in a very short period of time.

Finally, I want to express my appreciation to the Senate Parliamentarian, Alan Frumin, and his assistants Kevin Kayes, James Weber, and Beth Smerko. Alan and his staff have consistently provided objective and timely answers to the many questions that our committee has directed to them.

Mr. President, on behalf of the members and staff of the Armed Services

Committee, I want to say thanks to all of the Senate floor staff for a job well done during the 102d Congress.

#### TRIBUTE TO CHARLES THOMPSON

Mr. HEFLIN. Mr. President, it is with a great sense of sadness that I rise today to pay tribute to Charles Thompson, a close friend of mine for many years who died last week. Charles, a beloved member of his community, was the former chief of Tuscumbia, AL, my hometown.

Charles was more than just the chief law enforcement official in Tuscumbia. He was a true friend and protector of the people, exemplifying the very best relationship that can and should exist between a community and its police force. That relationship became an example that other local leaders and surrounding areas tried to emulate.

Charles Thompson was a native of Town Creek, AL. He served as chief of police in Tuscumbia for 12 years before retiring in 1988 and served a total of 31 years with the department. He was Tuscumbia's first motorcycle policeman and first plainclothes detective. The knowledge and experience he gained while attending the FBI Academy proved invaluable to carrying out his duties in Tuscumbia.

Charles helped found the Tuscumbia Federal Credit Union, serving as its treasurer for 31 years. He was a Mason, a member of the Fraternal Order of Police, a U.S. Air Force veteran, and a member of Calvary Baptist Church. He was an accomplished guitarist, and played country and other types of music with a number of local bands.

Charles Thompson was an outstanding officer who was totally committed to serving his community. He spent virtually his entire adult life serving the people of Tuscumbia, its police department, and the credit union he helped establish. He was one of the most dedicated public servants I have ever known, and will be sorely missed.

I extend my condolences to Charles' wife Toggie, their daughter Tracy, and the other members of his family in the wake of their tremendous loss. He was a true friend and asset to Tuscumbia who served us very well over the many years he called Tuscumbia home. We were better off for having him among our ranks.

#### TRIBUTE TO SENATOR JAKE GARN

Mr. KENNEDY. Mr. President, it is a privilege to take this opportunity to join my colleagues in commending the 18 years of distinguished service in the Senate by Senator JAKE GARN, and his even longer career of distinguished public service to the people of Salt Lake City and the State of Utah.

I know that President Kennedy would have especially admired Senator GARN's historic voyage on the space

shuttle *Discovery*, as did all of us in the Senate and throughout the country. Our Senate work together for the past 18 years may have taken us in different directions on various issues, but I have always respected Senator GARN's ability, his commitment to dealing with the challenges America faces, and his dedication to keeping this country strong at home and around the world.

As he retires from the Senate, I extend my warmest regards to Senator GARN and his family. Knowing Senator GARN, I am sure that life will begin again at 60, that he welcomes this well-deserved time with his family, and that he may well find new endeavors to reach for the stars and serve our country in the future.

#### THE CAREER OF SENATOR CRANSTON

Mr. METZENBAUM. Mr. President, the conclusion of this Congress marks the end of the distinguished Senate career of ALAN CRANSTON. Since 1968, he has ably represented the people of California.

For ALAN CRANSTON, his Senate service is just one chapter in a rich and rewarding life.

As a young journalist working in Germany in the 1930's he recognized the horrors unfolding under the regime of Adolf Hitler. ALAN CRANSTON knew what the world was up against. His tireless effort to have Hitler's autobiography published in this country resulted in the alarms being sounded to the rest of the world.

Later on, Hitler's German publishers won a copyright lawsuit against ALAN. But for ALAN CRANSTON the loss in the courtroom was a victory—Hitler could not longer hide his vicious anti-semitism and his hideous ambitions for the world.

Those of us who know ALAN understand his passionate commitment to world peace. Throughout his life—not only in words, but in actions—he has energized and enlightened others.

Long before he ran for the Senate, ALAN recognized the threat of the nuclear age arms buildup. In the Senate he has been a vigorous fighter for arms control. He was a leader in moving the INF Treaty through the Senate. And time after time he has fought to block arms sales to the Middle East.

His long service as Democratic whip earned him the respect of his colleagues. We respected his ability to form coalitions and help move bills through this body. Any time there was an important vote, you could count on at least one thing—ALAN CRANSTON would be working the well counting the votes.

Many Americans—some who know it and some who don't—are better off because of ALAN CRANSTON.

It was ALAN CRANSTON who recognized the chaos of Federal housing pro-

grams. In 1987, he marshaled through a new housing authorization bill; to bring some order to the chaos.

For the people of this Nation who believe in a woman's right to choose, ALAN CRANSTON has been a strong and consistent voice of support.

For America's veterans, no chairman of the Veterans' Affairs Committee has been more compassionate and understanding. ALAN moved bills that improved veterans' education, health, and housing benefits.

ALAN's retirement ends a long era of public life. I am honored to have had an opportunity to work with him through the years, and I wish him well.

#### OMNIBUS BANKRUPTCY LEGISLATION

Mr. HEFLIN. Mr. President, I rise to discuss S. 1985, the Omnibus Bankruptcy reform legislation that past in the Senate last evening.

The passage of this bill brings to a close almost 2 years of work on this legislation. While it is unclear whether this legislation will pass the House of Representatives, I would like to briefly outline some of the major provisions of this legislation.

The first title of this bill is a collection of provisions intended to increase the efficiency of the Bankruptcy Court; helping debtors and creditors alike.

The second title relates to consumer bankruptcy issues. Included in this section is an amendment allowing for the curing of a default on a person's principal residence, as well as a provision that will help ensure child support and alimony will continue to be paid after the filing of an individual bankruptcy.

The next title addresses the area of commercial bankruptcy, specifically the role of chapter 11 in today's economy. In this section of the bill there are various provisions intended to update the bankruptcy code in light of the tremendous number of commercial filings each year.

Title 5 of this substitute may be the most important section of the entire bill. This title establishes the National Bankruptcy Review Commission. The Commission will have the ability to review and study a wide range of problems presently facing the bankruptcy system, as well as help prepare for the future. While the agenda of the Commission is not dictated by this legislation, I would like to suggest several topics of importance that have come to my attention during consideration of this bill. This, of course, is not an exclusive list:

The establishment of a small business chapter;

The problems in cases with single asset real estate;

The conflict indentured trustees face during the pendency of a bankruptcy;

The problems faced by issuing card companies when a debtor uses their

card to pay Federal taxes and subsequently files for bankruptcy;

The issue of substantial abuse under section 707 of the Bankruptcy Code;

The confusion over the hotel income/rents issue;

The modernization and possible automation of the Bankruptcy Court system;

The highly complex and controversial issues that result from mass torts, health care, environmental, and ERISA law.

Mr. President, I would like to thank all of the Members of the Senate who have worked with me on this important legislation. I am hopeful that this bill will be signed into law.

#### MAINTENANCE AND RETURN COLLOQUY

Mr. GRASSLEY. Mr. Chairman, I understand that the agreement before us includes most of the changes in the Bankruptcy Code related to aircraft and rail financing that were originally developed in the Senate. I believe that these were an important part of the Senate bill and I am pleased that they are included in the final agreement. A question has arisen about why the maintenance and return expense provision included in the original Senate legislation was not retained in the final bill. Could you discuss the effect of the compromise on this issue?

Mr. HEFLIN. If the Senator will yield I would be happy to. In agreeing to the overall compromise, the House insisted on not including several provisions related to rights under sections 507 and 503 of the code. They preferred to consider these issues in a more comprehensive fashion at a later date. As a result, the proposed maintenance and return expense language for sections 1110 and 1168 also was not included. While this may leave some questions about the application of section 503 in certain situations, it does not create any negative inferences about the current state of the law regarding sections 1110 and 1168. The decision to further study this matter would not change the status of such expenses in any new litigation where there are section 1110 and 1168 agreements in place. Since these agreements are, by their nature, postpetition agreements, it would seem that the costs of performing maintenance and other related obligations under them can be considered actual and necessary costs of preserving the estate.

#### TRIBUTE TO SENATOR WARREN RUDMAN

Mr. KENNEDY. Mr. President, I am pleased to take this opportunity to pay tribute to the extraordinary service in the Senate of our colleague WARREN RUDMAN as he retires from the Senate. Through his integrity and his intellect, his tenacity and his fearless commitment to principle, he has made an enormous contribution to New Hamp-

shire, New England, and the entire Nation.

WARREN RUDMAN is an excellent lawyer who understands justice, too. He knows that laws are the wise restraints that make us free, and that genuine liberty in America depends on achieving justice for all. For many years, true to this ideal, Senator RUDMAN led the often lonely fight in the Senate to protect and preserve the Federal Legal Services Program. Without his indispensable leadership, millions of low income Americans would have been denied help in protecting their most basic rights. The statute authorizing the program should be called the WARREN B. RUDMAN, Legal Services Corporation Act, as a reminder of his skill, his dedication, and his outstanding contributions to its fundamental purposes and achievements.

Senator RUDMAN has been a strong voice of principle in the Senate on many other issues. I think particularly of the constitutional amendment on flag burning, our continuing debates on school prayer and the exclusionary rule, and, of course, the legendary Gramm-Rudman-Hollings deficit reduction statute. As Senator RUDMAN leaves the Senate, I know that he will continue to hold our feet to the fire to reduce the budget deficit and to act responsibly in other ways to fulfill our commitment to public service and to future generations.

In addition, Senator RUDMAN helped us to find a satisfactory bipartisan middle ground on the contentious Civil Rights Act last year, and thereby heal the unnecessary wounds caused by that divisive debate. And in 1984 and 1988, he played an important role in fashioning comprehensive, and responsible, anticrime legislation.

Senator RUDMAN also took on two of the most difficult and thankless tasks in the Senate through his service on the Ethics Committee and in the Iran-Contra investigation. He performed each of these responsibilities with great distinction.

On a more personal note, I have enjoyed our service together on the Senior Advisory Committee of the Kennedy School of Government at Harvard. That school is near and dear to the hearts of my family. Senator RUDMAN's participation has enhanced the school's excellence and vitality in fulfilling its important mission.

Finally, I note that although Senator RUDMAN's first love in public life is New Hampshire, he also has longstanding ties to Massachusetts and has many friends in the State. In fact, he was born in Boston and educated at Boston College Law School. JOHN KERRY and I are delighted that he moved to New Hampshire to pursue his career in law and public service.

One of President Kennedy's favorite sayings was from John Buchan's "Pilgrim's Way." As he wrote, "Public life

is regarded as the crown of a career, and to young men it is the worthiest ambition. Politics is still the greatest and the most honorable adventure." When I think of those words, I think of WARREN RUDMAN, and we shall miss him dearly in this Chamber in the years ahead.

#### NIH REAUTHORIZATION AND WOMEN'S HEALTH AGENDA

Mr. DECONCINI. Mr. President, I rise today to express my disappointment in this Congress' inability to reach agreement on the National Institutes of Health reauthorization, S. 2899. While the demise of this bill will not jeopardize the biomedical research activities which are currently in place and ongoing at the National Institutes of Health [NIH], it does defer unnecessarily an important national commitment to redress the longstanding inattention to the medical research needs of women.

When my female constituents tell me that decades of medical research haven't resulted in a reduction of diseases which disproportionately afflict them, and that after annual investment of billions of Federal dollars in medical research for the past two, three decades, breast cancer mortality rates have not changed since 1930, I am left wondering how we could have allowed this to happen. There is no doubt that the gaps in medical knowledge within our research community are costing American women dearly. We simply cannot allow this to continue.

The women's health research provisions of S. 2899 represented a major step forward in our efforts to begin closing the gender gap in our Nation's biomedical research programs. It unequivocally committed America to eliminating discrimination against our mothers, wives and daughters by bringing equity into the application of our biomedical research resources to their health care problems. It spoke urgently to the need to reverse the 33-percent increase in the incidence of breast cancer over the past decade by more than doubling the authorization for breast and reproductive research to \$400 million a year. It emphasized research on disease prevention, treatment and cures with the goal of reducing the mortality rate for women with breast and cervical cancers.

Last year we celebrated the 20th anniversary of the National Cancer Act. Yet, our 20-year war against cancer hasn't benefited American women. In fact, during this time period, our Nation has lost increasing numbers of women to the deadly diseases of breast, ovarian and cervical cancers. For example, the experts tell us that more than twice as many breast cancer cases were detected in 1992 as were diagnosed in 1973—with the number of cases rising to 180,000 from 73,000. Over a quarter of these women are expected to lose

their battle with the disease. Ovarian cancer will strike 20,000 women in any given year with over half of them dying.

Our optimism over winning the war against cancer must be tempered by these startling statistics and by the recognition that we have failed to make any inroads into reducing breast cancer mortality. As recently as the end of 1991, GAO found a "still uncertain state of scientific knowledge" surrounding the disease. This is a shocking indictment of our national research program.

Mr. President, this bill's response to women's health needs is a testament to the perseverance, foresight and leadership of my distinguished colleague, the Senator from Maryland, Ms. MIKULSKI. She was the one who blew the whistle on the pattern of neglect and historical indifference to women's health needs which, unfortunately, had been shaping our national research agenda. She was the one who educated us to the sad fact that only 14 percent of every research dollar was used to study the health problems experienced by 51 percent of our population.

The practice of excluding women from research projects must end. The policy of ignoring women gave us the notorious 1988 study on heart disease and aspirin intake. It was a major study which involved 22,000 men but not a single woman, despite the fact that heart disease is the No. 1 killer for women and men alike. Institute officials reportedly told the GAO that women were not included because adding them would have increased the cost of the study. As unbelievable as it is, the Institute never gave a second thought to the serious life-threatening consequences of their actions for women.

Mr. President, diagnostic and treatment protocols based on studies done exclusively on men inevitably results in women getting inadequate treatment although they may be at equal or greater risk of serious illness. Our Federal research policy has built gender bias into the development of diagnostic and therapeutic options. It has resulted in second rate care for women.

Studies have found that common procedures like bypass surgery are more readily used to treat men while a woman must be much sicker before her doctor will recommend it for her. How can we expect our doctors to apply treatment protocols to women which are based on male-only studies giving them not a clue about how hormonal or other gender differences may alter the benefits or complicate the risks of the therapy for their female patients?

We can begin the process of eliminating gender bias now by reinforcing the efforts of Bernadine Healy, M.D., the current Director of the NIH, to expedite the Institute's enforcement of its 1983 rule requiring its studies to in-

clude women and minorities unless there was good reason for their exclusion. Inclusion of women and minorities in research studies must not be dependent upon the commitment of the NIH leadership. Gender and racial equity in research must be written into the law. S. 2899 statutorily mandated inclusion of women and minorities, except when it was scientifically inappropriate, in all future Federal research practices and policies.

Without this bill, new initiatives designed to address preventable bone diseases like osteoporosis which afflict nearly 50 percent of all postmenopausal women and to implement a women's health research data collection, analysis and distribution system will not be possible. This bill would have ensured adequate emphasis on diseases prevalent among women of all ages by establishing permanent statutory authority for the Office of Research in Women's Health in NIH.

Mr. President, while we have begun to address women's health needs through increased annual appropriations for research and prevention, we must also recognize that these and other current NIH and congressional efforts represent a modest beginning.

I voted for the fiscal year 1993 appropriations of \$72 million for breast and cervical cancer screening, \$209 million for breast cancer research and the original Harkin amendment transferring \$200 million out of SDI funding for breast cancer research. As a Defense Appropriations Subcommittee conferee, I supported the final commitment of \$210 million for breast cancer research out of general funds appropriated to the Department of Army.

I am a cosponsor of critical bills like Senator MIKULSKI's Women's Health Equity Act, S. 514, Senator LEAHY's Cancer Registries Act, S. 2205; and Senator ADAMS' Breast Cancer Screening Safety Act, S. 1777. In addition, I am cosponsoring bills which would make cancer screening and the expensive breast cancer drug, tamoxifen, more accessible by authorizing tax credits and import duty suspensions.

I am proud to have joined my colleagues in enacting some of these bills and in increasing Federal funds for women's health research and disease prevention initiatives during this Congress. However, we cannot assure an end to the history of denying American women their fair share of our national health research resources until we have enacted the NIH Reauthorization Act. The majority leader is absolutely right to make its enactment the first order of business for the 103d Congress on January 21. I intend to support the efforts of the majority leader with respect to this critical legislation when we return in January 1993.

#### CONSENT TO ANTARCTIC ENVIRONMENTAL PROTECTION PROTOCOL

Mr. KERRY. Mr. President, I was pleased last night by the Senate's decision to lend its consent to ratification of the 1991 Antarctic environmental protection protocol. I note, however, that the protocol is not a self-executing agreement and that Congress must also enact strong implementing legislation as soon as possible. This past August 12, I introduced a bill (S. 3189) to implement the protocol and I will reintroduce that legislation early next year.

The negotiation of the protocol was a major milestone in the international effort to protect the environment of Antarctica. It was signed in Madrid on October 4, 1991, by the United States and the 25 other consultative parties to the Antarctic Treaty System. The protocol designates Antarctica as a natural reserve, dedicated to peaceful and scientific purposes, and establishes an extensive, legally binding environmental protection regime that will be applicable to human activities on the continent.

Of particular importance, the protocol bans all mineral prospecting, exploration, and production activities for at least 50 years. It also sets forth a series of environmental principles governing activities in Antarctica, establishes an Advisory Committee on Environmental Protection and provides for a dispute settlement procedure.

Annexes to the protocol contain specific guidelines for environmental assessment, the conservation of native plants and animals, the disposal of waste, marine pollution, and specially protected areas.

Although I congratulate the State Department and other officials who participated in negotiating the protocol, I have been disappointed by the administration's slowness in developing and forwarding draft implementing legislation to Capitol Hill. The issue of implementing legislation is particularly important because of the consensus nature of the Antarctic Consultative process. The protocol will not go into effect until the 30th day following the date on which all 26 Antarctic treaty consultative parties have deposited their instruments of ratification, acceptance, approval, or accession. As one of the founders of the Antarctic Treaty System, the United States has an obligation to enact strong implementing legislation and to guarantee that its citizens adhere to and—where appropriate—go beyond the minimum standards established by the protocol.

Antarctica is the largest remaining wilderness on our planet. It provides habitat for vast quantities of wildlife including penguins, seals, whales, krill, fish, and seabirds. For obvious, climatological reasons, the ecology of the region is extremely fragile—slow to

change but also slow to recover from damage. Antarctica is also home to extraordinarily important scientific research efforts conducted by more than a dozen countries and has become a growing magnet for tourist-related activities.

Negotiation of the protocol resulted from international concern about evidence of environmental damage caused to Antarctica by human activity. The problems included abandoned fuel drums, appliances and machinery, the use of open-air incinerators, dumping of raw sewage, oilspills, burning of hazardous chemicals, and a lack of environmental planning.

The international community has responded positively to these problems by agreeing to the protocol, which is truly a landmark accomplishment in the management of human activities in Antarctica. Senate consent to ratification constitutes another important step in the right direction. And the enactment of strong implementing legislation, I hope early next year, will complete the job.

Mr. President, we have both the ability and the responsibility to act as stewards for the fragile and irreplaceable resources of the Antarctic continent. I pledge personally to remain involved in this effort, and I congratulate Senators for lending their support to this protocol during yesterday's session.

#### TRIBUTE TO SENATOR ALAN DIXON

Mr. KENNEDY. Mr. President, I want to join my colleagues in taking this occasion to commend the outstanding service of Senator ALAN DIXON in the U.S. Senate. He has served the Senate, the people of Belleville and Illinois, and the Nation well, and it has been both an honor and a privilege to work with him for the past 12 years.

I have particularly enjoyed our work together on the Armed Services Committee. The years ahead will show that his leadership helped steer the Pentagon in a more responsible direction, consistent with the Nation's evolving needs, especially in the post-cold war era. He also brought great eloquence and passion to Senate floor debates; no debate was ever dull when ALAN DIXON held the floor.

I am grateful for his leadership and his friendship, and I extend my best wishes to the Senator and his family as he leaves the Senate. He has been both talented and tireless in his commitment to public service, and I hope that the country will have the opportunity to benefit again from his ability in the future.

#### TRIBUTE TO SENATOR ALAN CRANSTON

Mr. WOFFORD. Mr. President, I have known ALAN CRANSTON and seen him in

action in American public life since the end of World War II. It was in 1945 that I read and talked to him about his book, "The Killing of the Peace," the story of the Senate's rejection of the League of Nations. Over the 47 years since then, he has earned my great respect, as I have enjoyed his friendship. I know no one who in his time has contributed more to the common good.

ALAN CRANSTON has served this Nation in the Senate for 24 years, crafting legislation for social policy and international relations that has made a profound impact for the better on the lives of people both in America and overseas.

In this past week alone, much of the legislation considered by the Senate shows the influence of ALAN CRANSTON. The Strategic Arms Reduction Treaty and the moratorium on nuclear testing contained in the Energy and Water appropriations bill reflect his lifelong commitment to fighting nuclear proliferation and ending the arms race.

Legislation attaching conditions to the renewal of most-favored-nation trade status for China, and other protests of human rights abuses bear the imprint of this man who in 1975 was the author of legislation barring U.S. military assistance to persistent violators of human rights.

As chair of the Foreign Relations Subcommittee on East Asian and Pacific Affairs, ALAN CRANSTON was responsible for reversing the administration's position of providing lethal assistance to Cambodian rebel groups aligned with the Khmer Rouge, prolonging the Cambodian conflict. The landmark hearings he chaired on this subject were the longest ever held since the debate over the Vietnam war. And just this week, the Senate voted funds for peacekeeping troops and refugee repatriation in Cambodia.

Domestic policy never took a back seat to these accomplishments in foreign policy. ALAN CRANSTON is one of America's preeminent fighters for improving this country's education system. He fought for those who often are left out or left behind, for children, for the elderly and for those with disabilities as the author of a "Bill of Rights" for Americans with disabilities.

Throughout his career, ALAN CRANSTON has been one of the Senate's strongest supporters of Americans' constitutional rights, of the rights of women and of minorities, and he has been a champion of immigration reform and wildlife protection.

ALAN CRANSTON'S achievements prior to seeking public office are equally diverse and exceptional. An early pioneer in the struggle for world law, his book "The Killing of the Peace" was rated one of the 10 best books of 1945 by the New York Times. And how many Senators have set a world record in track and field, and had the distinction of being sued by Adolf Hitler? As foreign correspondent, businessman, author,

and artist, he has brought his vision and intelligence to each endeavor and career.

Even now, he is finding new ways to combine his personal experience as foreign correspondent and Senate proponent of improved relations with the Soviet Union. Last February, he undertook to write a free weekly column for ITAR-Tass, the Russian news agency, sharing his ideas with those struggling to develop democracy. In these articles he addresses such issues as the role of intelligence services in post-cold-war democracies, and civil-military relations in democratic regimes. His Russian audience is as fortunate to benefit from his extraordinary experience and long-tested commitment to democracy, as we are unfortunate to lose him.

So I join my other colleagues in saluting his life of public service which will now continue beyond these walls and without borders.

#### SOUTH DAKOTA FARM BUREAU'S 75TH ANNIVERSARY

Mr. PRESSLER. Mr. President, this year marks the 75th anniversary of the South Dakota Farm Bureau. In addition to being its 75th anniversary, 1992 also represents the first time that the South Dakota Farm Bureau has had over 10,000 South Dakotan farm families as members. The strength of the South Dakota Farm Bureau is demonstrated by its steady increase in membership over the last two decades.

The strength of the farm bureau organization is rooted in the fact that it starts on the farm. The history of the South Dakota Farm Bureau is impressive. As early as 1913, several county farm bureaus were organized and operating in South Dakota. Within a few years, more county farm bureaus were organized and in 1917, the operating county farm bureaus formed the South Dakota Farm Bureau Federation. From its humble start, the South Dakota Farm Bureau has become one of my State's leading agricultural organizations and a highly regarded voice for South Dakota agriculture.

As with the practice of farming and ranching, there have been good times as well as the bad times for the farm bureau in South Dakota. The good times are reflected by the fact that by 1921, membership in the organization rose to 5,673 families. However, it would be over 50 years and several generations of farm and ranch families before that membership level would again be reached. In fact, membership in the South Dakota Farm Bureau dropped to a low of 500 families during the 1930's.

After World War II, the South Dakota Farm Bureau began a strong rebuilding effort. The process was slow but successful. By the late 1950's several county farm bureaus reorganized and began building new programs.

Throughout the 1950's and the 1960's membership averaged 3,100 farm families. During the 1970's, its programs were expanded and in 1977 membership surpassed the all time high set 56 years earlier.

Since 1977, farm family membership in the South Dakota Farm Bureau has grown each and every year. The organization reached a milestone this year when it counted over 10,000 farm and ranch families as members.

Of the many programs sponsored by the farm bureau, one that is particularly impressive is the South Dakota Farm Bureau Young Farmers and Ranchers Committee. This group provides opportunities for greater participation by young, active farmers and ranchers. It helps young farm bureau members to analyze their particular agricultural problems and collectively make decision on solutions which best meet their needs.

The South Dakota Farm Bureau also offers the Farmer Idea Exchange, which provides a forum to discuss inventions, equipment modifications, innovative crops and farming practices developed by farmers. It also encourages farmers and ranchers to share ideas and help find ways to cut costs, become more efficient, and improve net income.

The soul and strength of the South Dakota Farm Bureau is in its county units. That is where the problems and challenges facing farmers and ranchers are best identified, and that is where the best solutions are found. The farm bureau policymaking process, one that begins at the farm and ranch level, is excellent. I always look forward to receiving the South Dakota Farm Bureau policy recommendations. This type of information helps me to be better informed on the impact of my voting decisions on those who are affected by them—including the farmers and ranchers of South Dakota.

The South Dakota Farm Bureau is committed to the goal of improving net farm income and strengthening the quality of rural life. I congratulate the South Dakota Farm Bureau on its 75th anniversary.

#### WILL TAX TREATIES GO THE ROUTE OF GATT?

Mr. PRESSLER. Mr. President, recently I rose to discuss the significant role played by tax treaties in U.S. trade policy. During that speech I raised the idea of creating a multilateral tax treaty among, for example, the United States and all countries of the European Community instead of continuing the current practice of entering into such treaties on a bilateral basis. Today, I would like to pursue this issue a bit further.

The United States already has taken the first step in the direction of establishing multilateral tax treaties. On

November 8, 1989, President Bush submitted to the Senate, the Council of Europe-Organization for Economic Cooperation and Development [OECD] Convention on Mutual Administrative Assistance in Tax Matters. The multilateral convention was negotiated and drawn up over a period of several years. The United States played an active role in the convention's development. The Senate Foreign Relations Committee held public hearings on the multilateral convention on June 14, 1990, and favorably reported it to the full Senate on June 28, 1990.

On September 18, 1990, the Senate voted 99-0 to approve the resolution of ratification. In addition to the United States, Norway, Sweden, and Denmark have ratified the multilateral convention. The convention will enter into force once 5 of the 28 countries eligible to do so have ratified it. Finland and The Netherlands also have signed the convention and Finland may ratify it in the next few months, thus bringing the convention into force.

The purpose of the convention is to promote cooperation—through the sharing of information—among national tax authorities as they administer their respective tax laws. Thus the convention is not as broad in scope as the bilateral tax treaties the United States has entered into with numerous other countries. However, it does mark the first time the United States has entered into a multilateral treaty on tax assistance. Does it also mark a first step in creating a multilateral treaty structure for taxes similar to the multilateral GATT structure for trade?

One important information sharing provision in the multilateral convention allows for what are called simultaneous examinations of taxpayers. A simultaneous examination is really two separate tax examinations of the same taxpayer conducted by two countries at the same time. During the simultaneous examination process, information is exchanged if relevant to the other country's examination. This can be an extremely useful technique where both treaty jurisdictions are concerned that a taxpayer might be misallocating profits to a third jurisdiction—a tax haven country. Thus, simultaneous examinations are a significant tool in the fight against international tax evasion.

The multilateral convention also provide for spontaneous exchanges of information among signatory countries. Such an exchange occurs when a party to the convention determines it has information that could be useful to the administration of tax laws of one of its convention partners. Spontaneous exchanges of information have the potential to increase tax compliance at a relatively low cost as the information shared is already in the possession of one party to the convention.

While the multilateral convention has yet entered into force, although it

appears that it soon will, it seems this multilateral agreement will provide a framework by which international tax relations will be strengthened. Can we go further than a multilateral agreement governing the sharing of tax information? Can we develop a multilateral tax treaty structure akin to the General Agreement on Tariffs and Trade? Perhaps, but it likely will not be an easy process.

Joel Slemrod, associate professor of economics and business economics at the University of Michigan, has written an excellent piece entitled "Tax Principles in an International Economy" which appears as a chapter in "World Tax Reform: Case Studies of Developed and Developing Countries." Part of Professor Slemrod's chapter, subtitled "A GATT for taxes" sets forth his creative ideas on creating a multilateral GATT-like structure for taxes and some of the problems inherent in such an approach. I ask unanimous consent that the relevant portion of Professor Slemrod's article appear in the RECORD at the conclusion of my remarks.

Professor Slemrod sees national sovereignty as perhaps too great a hurdle to overcome in an effort to create a GATT for taxes. In the case of GATT and trade, the goal is clear and ostensibly shared by all parties to the agreement—low or no tariffs. However, in the case of tax policy, countries find it much more difficult to reach agreement on a common goal. The interests of each nation result in unique approaches to the determination of revenue requirements, the ability to raise taxes and, indeed, to the kinds of taxes upon which its system will depend. As a result, Professor Slemrod sees no prospect for a comprehensive international tax agreement. While I do not share the view that there is no prospect for the development of a comprehensive multilateral tax treaty, I agree it will be no easy task.

One possible way in which a comprehensive multilateral tax treaty might evolve is through the expanded use of regional multilateral tax treaties—a kind of North American Free-Trade Agreement for taxes, to continue the GATT analogy. Two regional multilateral conventions on tax assistance are now in force among various European countries, although the United States is a party of neither. In addition, the European Community has submitted to its members a multilateral convention establishing a procedure for the arbitration of transfer pricing disputes—a serious international tax policy issue I addressed in my last speech on this topic and intend to explore more fully in the future. This multilateral tax treaty would enter into force upon ratification by all 12 EC member countries. Again here, the United States is not a party to the convention. However, it does dem-

onstrate that the multilateral approach to tax treaties is evolving beyond only the exchange of tax information.

Mr. President, I expect that we will learn much once the OECD Multilateral Convention on Mutual Administrative Assistance in Tax Matters enters into force and we have had the opportunity to evaluate its effectiveness and the ability of countries to cooperate in a multilateral tax treaty framework. Hopefully our experience in that regard will allow us to more fully evaluate the advantages and disadvantages to U.S. taxpayers and the role multilateral tax treaties could play in enhancing international trade.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

[From the Book: "World Tax Reform: Case Studies of Developed and Developing Countries"]

THE PROBLEMS AND PROMISE OF TAX  
HARMONIZATION  
A GATT FOR TAXES?

The General Agreement on Tariffs and Trade (GATT) has, by most accounts, succeeded in lowering the tariff barriers to the international flow of goods (although the success has been mitigated to some extent by the apparent growth in nontariff barriers to trade). There is no analogous multilateral agreement for taxes. Why is there no GATT for taxes?

The most important reason is almost certainly that ceding tax-policy-making authority to an international agreement would compromise national sovereignty too greatly. In the case of tariffs, there exists a clear benchmark goal of zero tariffs, a goal which does not severely compromise the revenue needs of most countries. In the case of tax policy, countries differ enormously in their revenue requirements, capacity to raise taxes, and their predisposition toward alternative tax systems, including the perceived need to use tax policy to affect economic activity. For this reason I see no prospect for a comprehensive international agreement that sets severe limits on tax policy.

Are more modest goals worth pursuing? I believe so, and therefore as food for thought I offer the following skeleton of a multilateral agreement of the future:

1. Harmonization of statutory corporate tax rates. I believe that tax authorities will always be unable to adequately monitor the ability of multinational companies to allocate income among jurisdictions via transfer pricing and other financial transactions. The differences among countries' statutory corporate tax rates provide the incentive to shift income in this way. An agreement to keep statutory rates within a small band would minimize this problem. Note that such an agreement would not compromise the ability of countries to set the marginal effective rate of tax on new investment at any level they desired through the appropriate setting of tax depreciation schedules and investment tax credits.

2. Harmonization of withholding taxes on passive income. A multilateral agreement to impose a harmonized rate of withholding tax on interests, dividends, and royalties would reduce the detrimental effects of the asymmetrical ability of countries to impose residence-based taxes. It would also reduce the incentives created by the current patchwork

of bilateral tax treaties for tax-treaty "shopping" by those searching for the minimum-tax way to arrange a financial transaction. (Bilateral tariff agreements would similarly lead to tariff shopping and tariff havens, and existing bilateral trade quotas have certainly encouraged quota shopping.) Many countries set themselves up as tax havens, and offer tax "sales" to tax-minimizing shoppers. A common rate of withholding would reduce the rewards to tax-haven transactions. This withholding tax would probably work best if it were made refundable to the payer upon notification that tax has been paid in the country of residence, if that country has signed the multilateral tax agreement.

3. Policy toward nonsigners. Countries that choose not to sign the multilateral treaty (presumably because they wish to levy rates below what the treaty designates) will be designated tax-haven countries. Income earned in these countries will be taxed as accrued at the rate of the home country. In this way, the advantages of deferral or complete exemption are sacrificed. Residents of countries that do not sign the agreement are also not eligible for refund of the withholding tax levied by the treaty countries.

I am under no illusions about the possibility that a multilateral agreement like this will ever occur. The lukewarm reception given the recent proposal for multilateral information sharing is not a good sign.<sup>4</sup> As a nonlawyer I am blissfully ignorant of the complications such an agreement will engender, though I naively suggest that they will be no worse than the complications that arise under current practice. My modest goal is to outline the minimal structure of a multilateral agreement that will preserve a large measure of national sovereignty over capital income taxation but at the same time deal with some of the important problems caused by the current structure of national tax systems and bilateral tax treaties. In particular, an agreement of this kind would reduce the extent of inefficient cross-border capital flows caused by the inability of some countries to tax their residents' foreign-source income, and would reduce the cost of monitoring transfer pricing and other policies designed to shift reported income to low-tax jurisdictions.

#### NOTES AND REFERENCES

##### Chapter 2. Joel Slemrod, "Tax Principles in an International Economy"

1. This point is developed in McLure (1987) and Slemrod (1988a).

2. See Slemrod (1988b) for a further discussion of the tax arbitrage possibilities opened by international capital mobility.

3. The GATT does attempt to regulate internal taxes, but only those that discriminate against imported goods in favor of domestic goods. Income taxes are excluded from the scope of GATT.

4. I refer to the Multinational Convention on Mutual Assistance in Tax Matters, developed by the Organization for Economic Cooperation and Development, which standardizes procedures for sharing of tax information among countries. Open to signature beginning in 1988, it has as of this writing been signed by few.

#### ANNUAL OXFORD/CAMBRIDGE CHALLENGE CUP REGATTA

Mr. PRESSLER. Mr. President, recently I had the opportunity to participate in the 1992 J&B Challenge Cup Regatta—Oxford versus Cambridge. I am

pleased to note that my alma mater, Oxford, won four of the five races held during the regatta. I am not so pleased to note that Oxford lost to Cambridge in the race in which this Senator captained the losing boat.

The rainy weather did not dampen our competitive alumni spirits as we rowed our respective university boats along Washington Harbour. The centuries old Oxford/Cambridge rowing rivalry continued as alumni competed in the race.

Boat racing has been around since the early 1700's. A trophy, named the "Doggett Coat and Badge" after its originator, Englishman Thomas Doggett, was given to the winner of a race held on the River Thames. This race marked the beginning of the rowing regatta. The first race between Oxford and Cambridge took place in 1829. Harvard and Yale, the oldest inter-collegiate rowing rivalry in the United States, held its first regatta in 1852.

Mr. President, to recognize all those who participated in the Oxford/Cambridge alumni event, I ask unanimous consent that articles from the Washington Post plus the names of participants in the event be included in the RECORD immediately following my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Sept. 28, 1992]

#### RAIN AN APT BACKDROP FOR REGATTA (By Julian Rubinstein)

The driving rain and low gray clouds were unmistakably British, making several of the competitors in the Eighth Annual Oxford/Cambridge Potomac River Row-Off yesterday at Washington Harbour feel right at home, but convincing many would-be spectators to stay away.

When the races began, though, the approximately 300 supporters of the prestigious universities left the stewards tent to line the north bank of the Potomac for a better view of one of the world's prettiest sports and oldest rivalries, dating back over 300 years.

"It's classic," said Cambridge alum Simon Webb from under a multi-colored umbrella. "Without [the rain] it wouldn't be the event we know."

The featured race, the men's 1,500-meter eight-man invitational, was won by a younger, stronger Oxford team boasting four former Olympians. The team, which practiced together only once before the race, pulled to a one-length lead after 500 meters and held on to win by two in 4:14.

"We were content with a one-length lead," said Chris Huntington, a member of the U.S. Olympic rowing team in '84 and '88. "I was surprised how strong and clean our start felt, but not that we won. We are much bigger and more experienced."

The biggest cheer of the day came in the first race—a four-man event jokingly referred to as the "celebrity fours" because of its high-powered participants—as the Cambridge shell glided past the finish line far in front of a tired Oxford squad for the school's first victory at the regatta since 1988.

"We had a slow start, a slow finish, and a slow middle, but it was still fun," said Sen. LARRY PRESSLER (R-S.D.), captain of the Oxford boat.

LIVINGSTON REBUILD CENTER

Mr. BAUCUS. I appreciate this oppor-  
 tunity to express my concern to the

senior Senator from Massachusetts,  
 the chairman of the Senate Labor Com-  
 mittee, about a recent ruling by the  
 seventh circuit court of appeals in a  
 case involving the railroad retirement  
 system that could have serious conse-  
 quences for a group of workers in my  
 State.

In Livingston, MT, there is an inde-  
 pendent investor-owned business called  
 the Livingston Rebuild Center, or  
 [LRC]. LRC rebuilds diesel loco-  
 motives, repairs railroad cars and em-  
 ploys 115 workers. It began in 1988 in  
 former facilities of the Burlington  
 Northern Railroad which has been  
 closed for several years and which at  
 the time of closure caused the loss of  
 over 1,000 jobs.

This past summer, the seventh cir-  
 cuit court of appeals held that LRC is  
 retroactively liable for railroad retire-  
 ment taxes based on a strict interpre-  
 tation of the Railroad Retirement Act.  
 The court's opinion noted that the  
 structure of the railroad industry has  
 changed dramatically since the provi-  
 sions defining which entities should be  
 covered by the act were enacted in 1937.  
 However, the court also said, and I be-  
 lieve correctly, that problems involv-  
 ing the application of the statute to  
 modern-day business entities are for  
 the political branches of government,  
 not the courts, to correct.

I am a strong supporter of the rail-  
 road retirement system and would op-  
 pose anything which would be unfair to  
 railroad workers and retirees. However,  
 I believe this is a situation where clar-  
 ification of the law is needed so it does  
 not produce unfair results which unex-  
 pectedly throw nonrailroad workers  
 out of work. That is the situation we  
 face today.

LRC has informed me that it will  
 likely be forced to close if liability is  
 imposed for the outstanding tax, espe-  
 cially since LRC's business competitors  
 are not liable for those same taxes.  
 This has subsequently led to an over-  
 whelming call by the community for a  
 legislative solution to the impending  
 job losses.

I have introduced legislation to ef-  
 fect this change. My question to my  
 colleague from Massachusetts is  
 whether he would work with me to ad-  
 dress this problem and achieve some  
 acceptable solution that is fair to the  
 workers.

Mr. KENNEDY. I can certainly un-  
 derstand the concerns of my friend and  
 colleague from Montana for the work-  
 ers and their families in Livingston  
 and his desire to do everything possible  
 to save these jobs. I too am a strong  
 supporter of the railroad retirement  
 system, and I am committed to main-  
 taining the financial integrity of that  
 system. However, as chairman of the  
 Labor and Human Resources, I am  
 more than willing to work with the  
 Senator from Montana to see if we can  
 find a way to address this problem that  
 would be fair to all those involved.

Mr. BAUCUS. I am in agreement  
 with the remarks expressed by my col-  
 league from Massachusetts and I thank  
 him for his expression of concern. I  
 promise to work with him, at the earli-  
 est opportunity, to resolve this very  
 important issue to Montanans.

1993 FOREIGN OPERATIONS  
 APPROPRIATIONS BILL

Mr. SASSER. Mr. President, before  
 the 102d Congress adjourns, I would  
 like to make some brief comments on  
 the 1993 Foreign Operations appropria-  
 tions bill.

To begin, I would like to congratu-  
 late the managers of this conference  
 report for completing a bill within  
 their budgetary allocations. It is al-  
 ways difficult to pass a foreign aid bill  
 in the Senate; and usually even more  
 difficult in an election year.

Overall, the conference report con-  
 tains \$14.1 billion in budget authority  
 and \$13.3 billion in outlays to maintain  
 this Nation's ongoing foreign economic  
 and military assistance programs and  
 provide export loans and guarantees by  
 the Export-Import Bank. Additionally,  
 the bill appropriates \$12.3 billion in  
 budget authority for the United States  
 quota subscription to the International  
 Monetary Fund.

I am pleased that this bill provides  
 the \$10 billion in loan guarantees  
 sought by the administration and the  
 Government of Israel. These guaran-  
 tees will help support Israel's efforts to  
 resettle new emigres from the Soviet  
 Union.

The language contained in the bill re-  
 quires Israel to pay a fee to fully offset  
 the subsidy cost of these guarantees as  
 scored by OMB. For this reason, OMB  
 affirms that these loan guarantees will  
 not cost anything to the U.S. taxpayer.

It is my hope that these loan guaran-  
 tees, coupled with the economic re-  
 forms announced by Prime Minister  
 Yitzhak Rabin, will open a new era of  
 economic growth in Israel. Israel is  
 taking concrete steps to scale back its  
 own budget deficit, to promote eco-  
 nomic competition within Israel, to de-  
 regulate its capital markets, to insti-  
 tute tax reform, to reduce trade bar-  
 riers, to reform its pension system and,  
 to create new incentives. These are  
 dramatic and positive steps in the  
 right direction.

Our loan guarantees will be part of  
 this process. They will encourage long-  
 term private economic investment  
 rather than temporary government-im-  
 posed solutions to Israel's economic  
 problems. They will help spur the kind  
 of economic growth which Israel needs  
 not only to absorb the recent influx of  
 immigrants, but to pave the way to-  
 ward creating a vibrant Israeli econ-  
 omy capable of independently meeting  
 the challenges of the next century.

I am also pleased that the bill con-  
 tains a provision prohibiting the Agen-

cy for International Development from continuing its practice of using foreign aid funds to persuade American businesses to relocate their manufacturing plants to Central America.

It is insulting to the American taxpayer that hard-earned tax dollars are going to benefit foreign countries to the immediate detriment of the American economy. It is insulting, it is wrong, and this bill will ensure that this practice does not continue.

Like many Members, I do not believe that this bill goes far enough in providing new directions for our foreign affairs community. It is, in so many ways, still a cold war bill. It shies away addressing the needs of a new world order. It maintains high levels of military assistance. Like our defense bills, it largely maintains the status quo.

Thriving in this new world order will require more imagination, more energy, and more resourcefulness than ever before. Yet, 3 years after the fall of the Berlin Wall, our foreign aid program remains unchanged. The State Department and the other foreign affairs agencies of the United States—the U.S. Information Agency, Voice of America, the Agency for International Development, CIA, and others—have made little progress on reformulating their roles, structures, and missions. We have made scant changes in our foreign affairs priorities and the agencies which implement these policies.

I hope that more can be done next year to chart a different course.

#### ENERGY EFFICIENCY ACT— CONFERENCE REPORT

The PRESIDING OFFICER (Mr. KOHL). There will now be 2 hours of debate prior to the vote on the motion to invoke cloture on the conference report accompanying H.R. 776, which the clerk will report.

The assistant legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two House on the amendment of the Senate to the bill (H.R. 776) to provide for improved energy efficiency, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of October 5, 1992.)

The PRESIDING OFFICER. Who yields time?

Mr. REID addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Nevada.

Mr. REID. Mr. President, I yield myself 20 minutes.

Mr. President, when historians finally get around to chronicling the debate that is taking place in the Senate

today, they will no doubt index it under "energy, national policy." Technically, they will be correct. However, there is a much larger debate taking place today which has to do with fairness and the treatment of a small minority of American citizens, by their brothers in the majority.

In a democratic body like Congress, like the Senate it is a truism that might makes right. The majority almost always get what it wants—even when what it wants is unfair to the minority. That is the case we face here today. In the name of the needs of the majority, the citizens of Nevada are being stripped of the protection that the environmental laws of this Nation guarantee to all of its citizens. A special law is being written for the people of my State—a law that provides them with less protection from the dangers of radioactive poison than is afforded to other Americans. That is wrong. I know it is wrong. You know it is wrong. The Members of this body know it is wrong. The sponsors of this legislation know it is wrong.

If it is so patently wrong, some might ask "How can it happen?" The answer is very simple. Nuclear powerplants produce nuclear waste which must be stored somewhere until it is no longer a threat to human life. No one—I repeat, Mr. President—no one wants this poisonous waste stored near them. So a decision has been made by the majority of the other 49 States in the Union to force the people of Nevada to accept this poison against their will. Simply put, the majority prevails.

But this is not enough for the proponents of nuclear power. The people of Nevada have gone to the courts to protect our rights, in the hope that the laws which protect other people's public health will also protect us. We look for a little fairness. We are still looking for fairness. According to former Supreme Court Justice Potter Stewart, "Fairness is what justice really is."

What is the response of the Congress? Do they wish us well and support our day in court? No; they do not. Instead, the Congress embarks on a new legislative assault on the people of Nevada. They concoct the legislation pending final approval in the Senate today, legislation which purposely strips the people of Nevada from the protection afforded them under the environmental laws of this Nation. They argue that, "It is too hard to meet the requirements of these laws." They say it will "cost the nuclear power industry too much money to comply." Instead of backing our efforts to protect the people of the state of Nevada, they take the extraordinary step of proposing to direct the environmental regulators to write special laws that apply only to Nevada.

The aim of this legislation's sponsors is to weaken, by Government fiat, the legal protection afforded to the people

of Nevada under Federal environmental laws. Why? For the same old tired reason. Nuclear waste is building up at nuclear powerplants all over the country. The people who live near these powerplants want it moved yesterday. They do not want it moved now, they want it moved yesterday. Once again, the majority in Congress acts to trample the rights of the minority—the citizens of the sovereign State of Nevada.

My personal battles on this issue go back a long way, a decade. In 1982, there was crafted a nuclear waste bill that had broad bipartisan support in both Houses of Congress. It had taken a long time to develop that. However, during the next 5 years, the Reagan administration did its best to ignore the mandates laid down in that legislation for objectively, scientifically choosing the most suitable site for a permanent nuclear waste dump. By 1987, fear was rampant that the dump might end up in some Member's State or district, so much so that a so-called screw Nevada bill was forced through Congress to effectively dictate that the site be located in Nevada. I personally filibustered that legislation and held it up for 5 or 6 weeks.

I offered an amendment that would have made health and safety the highest considerations in siting the geologic repository. That amendment was defeated.

Even this travesty against fairness was not enough. Back we come this year with new efforts to strip public health and safety protections that environmental laws provide the people of Nevada. My colleague, Senator BRYAN from Nevada, and I have fought these efforts for a long time—on this particular issue for months. We have had some victories, but the energy bill strips Nevada of very important protections for the public health and safety of the people of Nevada. That is why we asked you, Mr. President, and our colleagues to vote with us against cloture on this energy bill.

Some have called this legislation good energy policy. I disagree. No matter what benefits this bill provides our national energy programs, it suffers the fatal flaw of running roughshod over the rights of a minority for no better reason than that is what the majority can do when it wishes. I tell my colleagues that this is nothing for which we as a body should be proud. In fact, it threatens the very fiber of our democratic society. Because you see, Mr. President, tomorrow it could be your State.

Mr. President, I share the views of President Franklin Roosevelt when he said:

The moment a mere numerical superiority of either States or voters in this country proceeds to ignore the needs and desires of the minority, and for their own selfish purpose or advancement, hamper or oppress that minority, or debar them in any way from equal privileges and equal rights—that mo-

ment will mark the failure of our constitutional system.

This, Mr. President, is the beginning. Democracy, you see, fails, we have been told, from within, not from without. And when democracy gets too cumbersome, it is at that time that people start coming up with short cuts, like term limitations. It is too cumbersome to have an elective process. We will set some arbitrary standard just to knock people out of office; or it is too cumbersome to go through the procedures of law that affect everyone. If one State will not comply, we will pass the majority and run over that minority. That is what Franklin Roosevelt was talking about.

With the actions of the sponsors of this legislation, the provisions about which we speak, we are taking a giant step in that direction.

I would like to discuss now some specific problems with this language in the energy bill that I am concerned about.

This bill contains dreadful provisions affecting the State of Nevada which are an offense to the people of my State. The inclusion of these provisions make it impossible for me to support this legislation. That is too bad. These provisions are wrong because they include not only bad policy decisions but also utilize bad scientific judgment.

These provisions go beyond the scope of the original legislation. Neither the House nor Senate bills contained language requiring new Nuclear Waste Policy Act regulations. I want to be very clear on this point. Requiring the Nuclear Regulatory Commission to promulgate new regulations on high-level radioactive waste was never part of either bill. Why then have the energy conferees chosen to go beyond their charge?

They are responding to the intense pressure of the nuclear lobby to move forward on the Yucca Mountain project. The conference report specifically states, "the repository at the Yucca Mountain site." Not the proposed repository at Yucca Mountain.

Mr. President, the decade-long site characterization program has just started at Yucca Mountain. In fact the Department of Energy itself has indicated more studies are needed before the DOE can actually recommend building a repository at Yucca Mountain. It is foolhardy to say that Yucca Mountain is the right place to store nuclear waste for the next 10,000 years, with the meager amount of scientific research that has been completed to date. This proposed legislation will short-circuit the site characterization work.

These provisions will apply only to the Yucca Mountain site. Why should Yucca Mountain, the proposed repository for both civilian and defense wastes, be subject to less stringent regulations than other facilities? Environ-

mental regulations such as the Clean Water Act, Resource Conservation and Recovery Act, and the Safe Drinking Water Act apply national standards.

Why do we have one drinking regulation for Nevada residents and another for people in other States?

We do not. We have the same standard. And we should have the same standard for nuclear waste. The reason we do not is because the nuclear lobby thinks Yucca Mountain will be disqualified under the present regulations, and they cannot let that happen.

It does not take a scientist to understand the provisions which lie at the heart of this matter. Our Nation's environmental law has for decades been based on population exposure, not individual exposure. That is, what would happen to an entire population, not to a specific individual. The present EPA regulations were remanded to the Agency in 1987, and have gone through at least three revisions. All parties have been involved in this process. Why do we now abandon this process and require the EPA to follow the binding recommendations and findings of the National Academy of Sciences, as set forth in this repugnant amendment that is in this conference report?

Mr. President, the Nuclear Waste Policy Act of 1982 clearly outlined the responsibility for the siting, licensing, operation, and closure of a geological repository. Even after it was amended in 1987, the act still holds that the Department of Energy is to select the site, after careful and complete characterization. That selection is to be forwarded to the Nuclear Regulatory Commission for licensing consideration—two steps. The guidelines for licensing were to rest with the NRC and the level of protection needed for the facility were to rest with the Environmental Protection Agency.

It is both bad policy and bad science to change the rules after a process has started, especially when the health and safety of the public is at stake.

The provisions in this bill require the National Academy of Sciences to return binding findings and recommendations to the Environmental Protection Agency and the Nuclear Regulatory Commission. While the National Academy of Sciences is a learned body, it is not a regulatory body. In addition, the Academy is not politically accountable for its actions. Mr. Stephen Merrill, the executive director of the National Research Council, clearly stated that fact in his September 30, 1992, letter to the Energy and Natural Resources Committee staff, when he wrote:

This is to advise you that the Academy is prepared to conduct the study as described although we would not assume a standard-setting role that is properly the responsibility of government officials.

That is what they are being mandated to do. He says they are going to do something they cannot do.

My point is further supported by Acting Chairman, Kenneth C. Rogers, of the Nuclear Regulatory Commission, in an October 2, 1992, letter to Senator BOB GRAHAM, when he wrote:

As we currently understand this legislation, NRC's actions would be required ultimately to be consistent with Academy recommendations for dealing with human intrusions into the repository.

The National Academy of Sciences was nowhere given the responsibility in the Nuclear Waste Policy Act to undertake that task. Why should the National Academy of Sciences be dictating binding recommendations and findings to the EPA and NRC?

Mr. President, another change to the rules is the provision that the Department of Energy will keep control of the site forever. This concept is based on bad science. The whole idea behind geological disposal is that both natural and engineered barriers will protect the public. By changing the rules and requiring the DOE to control the site, the radioactive waste will now be isolated from the environment by engineered barriers and institutional control only. It is not logical to expect DOE watchdogs to be guarding the site in the next millennium.

Finally, Mr. President, it is bad science to subscribe to the false conclusion that we need Yucca Mountain now. The capacity to store nuclear waste at the nuclear power plants in dry-cask storage is adequate for a generation to come.

My point has been strongly supported by an August 24, 1992, letter to Gov. Bob Miller from Chairman Ivan Selin of the Nuclear Regulatory Commission. In the letter Chairman Selin wrote:

If necessary, spent fuel can be stored safely and without significant environmental impacts for at least 30 years beyond the licensed period of life for operation (which may include the term of a revised or renewed license) of any reactor in its spent fuel storage basin or at either onsite independent spent fuel storage installations (ISFSIs).

Further, the letter states:

NRC staff safety reviews of topical reports on dry storage designs and dry storage installations at four reactor sites, as well as the EA [Environmental Assessment] for Part 72, support the finding that storage of spent fuel in such installations for a period of up to 70 years does not significantly affect the environment.

We have had testimony before Senator GRAHAM's subcommittee that they can store on site for 100 years. Science is in agreement that in fact that is the case.

Other countries, such as Sweden, Germany, France, and Canada, are taking their time and carefully evaluating where and how best to store nuclear waste. Some of these nations will not even be selecting a site in the next 20 years. Taking the time to answer all questions concerning the safe and permanent disposal of nuclear waste is something our Nation can afford to do

also. Hopefully, a new administration will look at other countries and be more fair than the ones during the last decade to Nevada.

Also this bill is loaded with new taxes, over \$5 billion of taxes. The President should react as he has to other tax measures during the past few months and veto this bill.

In conclusion, both bad policy and bad science are evident in this provision, this legislation. It is sad that the Nation is stuffing this offensive and oppressive regulatory scheme down Nevadans' throats. Finally, it is bad that the nuclear body is pushing so hard to speed up this flawed process.

Bad, Mr. President: Bad, bad, bad. It is not going to get better, and I am concerned that Congress is going to lurch forward and adopt this conference report. It would be a tragedy and a travesty. I urge my colleagues to vote against cloture.

I reserve the remainder of my time for Senator BRYAN and for me.

The PRESIDING OFFICER. Who yields time?

Mr. JOHNSTON. Mr. President, I yield myself 10 minutes.

Mr. President, I am uncomfortable opposing my friends from Nevada. We just made common cause on the question of nuclear testing in Nevada. Both of us. I, because I was anxious to have testing for the purpose of safety in Nevada; my friends from Nevada, I think, not only because of safety but because of jobs.

It is curious that my friends from Nevada want to continue nuclear testing in Nevada where there are 600 holes in the ground which are, in effect, many nuclear repositories containing everything from cesium-137, strontium-90—all of the long-lived nuclear isotopes, and they are not sealed off at all from the environment. So we start with that curiosity, that this argument is really not grounded on science but more on emotion.

I want to make 5 points, which I think are very important. The first is that this was absolutely necessary to be in this bill in the conference committee. There was a provision in the House bill, fixing radionuclides at a previously withdrawn EPA standard. So the House bill legislatively fixed the standard for radionuclides. The Senate had no such language. So, in conference committee, we had to deal with this issue.

It was not an issue about which my friends from Nevada had no notice. We had discussed it personally and informally, the question of radionuclides and the question of what I call the caveman test. That is, whether or not you can assume that civilization continues and people would know the location of the site so as to keep human intrusion away.

My friends were aware of that. We spread it on the CONGRESSIONAL

RECORD in a colloquy among us. So they were on full notice as to the question of radionuclides. My colleagues will recall they had mounted a filibuster against this bill in its consideration on the Senate floor and, in accordance with my agreement not to press the question of preemption. The House bill had preempted the right of the State of Nevada to issue water permits, air permits, and other permits because of the record of Nevada in delaying those permits. The RECORD shows that these permits have been delayed by litigation, by delay for periods of years when those same permits, if they were for a gold mine or for other purposes, would be issued promptly in a period of up to 3 months at most.

So the House had put in language to preempt the State of Nevada. My friends from Nevada had said they were no longer going to delay. I indicated I was willing to accept that, and our compromise was that I would take that language out, or would attempt to, and eventually did, in the conference committee in response for which they would do away with the filibuster.

But I made very clear that this issue of radionuclides was not included in our agreement and had to be addressed in the conference committee and, in fact, was addressed in the conference committee.

Now, is it a matter of importance? Mr. President, this is a \$3.2 billion problem. If, in fact, we had adopted the language of the House, then it would have put in place a release limit for carbon 14. Carbon 14, by the way, is ubiquitous everywhere in life. It is generated in the atmosphere. The regular carbon 12 atoms are hit by solar radiation, turned into carbon 14. It is everywhere. It is how we do carbon dating. The caveman, not too long ago, discovered up in the Alps, who was 5,000 years old, they found out how old he was by carbon 14 dating. So carbon 14 is ubiquitous.

Previously, the EPA had come up with a standard for release limits on a lot of things, including carbon 14. That was back in 1985. They set that limit at that which they considered to be achievable, not that which had anything to do with human health.

The assumption was at that time that the repository was going to be located below the level of saturated rock. Water absorbs carbon 14. So they set the release limits for carbon 14 at such minuscule amounts that it ended up being one-millionth of background radiation; one-millionth of background radiation. We are bombarded by radiation all the time from solar radiation, some from rocks, from granite, from radon, from other sources, but it was one-millionth of background radiation or  $\frac{1}{6400}$  of the radiation which occurs naturally in the body.

So, obviously, it did not have anything to do with human health because

it set that limit so low as to have no relationship to human health.

Lo and behold, the Congress came along and sited the repository at Yucca Mountain, which is in dry rock so that we can no longer count on the absorption of the carbon 14 in the wet rock. So then the question came, how would you comply with the carbon 14 standard? According to the Department of Energy, it would take \$3.2 billion to comply.

In a letter of October 7, 1992, from John W. Bartlett, Director of the Office of Civilian Radioactive Waste Management, he says, among other things:

One means to comply with the existing standard—

That is the carbon 14 standard.

even though public health would not be endangered, would be to use specially designed waste canisters to contain the carbon 14. As stated in a technical report on the subject transmitted by DOE to EPA on August 12, 1992, DOE estimates that the specially designed carbon 14 canisters would cost a total of \$5.4 billion. In contrast, the estimated cost of canisters to meet all other requirements is \$2.2 billion.

Thus, use of canisters to comply with the existing EPA carbon 14 standard would cost the nuclear waste program an additional \$3.2 billion without any health benefits.

Mr. President, I ask unanimous consent that this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF ENERGY,  
Washington, DC, October 7, 1992.

HON. J. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: This is in reply to your inquiry concerning the effect of existing Environmental Protection Agency (EPA) nuclear waste disposal standards on the cost of waste canisters for disposal in a potential repository at the Yucca Mountain site. Of specific concern is the potential additional cost of canisters in order to prevent release of carbon-14 in excess of EPA requirements.

The existing EPA standards are based on expectation that the repository would be below the water table so that any released nuclide would be transported to the environment by groundwater. At Yucca Mountain, the proposed repository would be above the water table so that nuclides such as carbon-14 would migrate to the environment as gases.

The existing EPA disposal standards for carbon-14 are technically achievable for a repository beneath the water table, but at Yucca Mountain the carbon-14 could be released to exceed the standard. Calculations have shown that release of the entire inventory of carbon-14 in a repository at Yucca Mountain would exceed the standard but would not endanger public health.

One means to comply with the existing standard, even though public health would not be endangered, would be to use specially designed waste canisters to contain the carbon-14. As stated in a technical report on this subject transmitted by DOE to EPA on August 12, 1992, DOE estimates that the specially-designed carbon-14 canisters would cost a total of \$5.4 billion. In contrast, the

estimated total cost of canisters to meet all other requirements is \$2.2 billion.

Thus, use of canisters to comply with the existing EPA carbon-14 standard would cost the nuclear waste program an additional \$3.2 billion dollars without any health benefit. The Department strongly believes that this is an unwarranted expenditure. Rather than incurring unwarranted costs to comply with an inappropriate standard, the standard should be revised.

Please let me know if you have further questions on this subject.

Sincerely,

JOHN W. BARTLETT,  
Director, Office of Civilian  
Radioactive Waste Management.

Mr. JOHNSTON. Mr. President, this is an issue as to which my friends from Nevada were on notice, an issue that we had to deal with in the conference, and a \$3.2 billion problem which has no relationship to health or safety. None. And no one I know of has ever argued that it does.

Now, how did we fix the problem? In the conference, Mr. President, we had long conversations about how to deal with this issue, and we said, look, this ought to be a matter of science, for the scientists to deal with in the first instance and for EPA to deal with in the next instance. So we came up with a very simple solution. The National Academy of Sciences, the most distinguished scientific group in the world, is to make the scientific determinations and EPA is to make the policy determinations after a study by the National Academy of Sciences.

I forget to say, Mr. President, that those standards on radionuclides were later withdrawn by the court and remanded to EPA back in 1987 where they have remained, and EPA has not come up with a new standard. So there is no standard now applicable to radionuclide release from Yucca Mountain or the Waste Isolation Pilot Plant or other nuclear waste facilities. No standard is now applicable.

The question is, how do we get a standard? What, pray tell, Mr. President, could be more reasonable than to have the National Academy of Sciences do a study and to have EPA come up with a standard based upon and consistent with that?

Mr. President, we are told the argument is that the National Academy of Sciences is going to set the standard. That is not so. That is not what is intended. That is not what the report of the managers says. That is not what the language clearly says.

In fact, Stephen A. Merrill, executive director of the National Research Council, which is the research arm of the National Academy of Sciences, says, among other things—they have seen this language and they say:

This is to advise that the Academy is prepared to conduct the study as described, although we would not assume a standard-setting role. That is properly the responsibility of Government officials.

They do not see that as their role. They see their role as scientific research.

The EPA also says in a letter to Senator GRAHAM, dated October 5, 1992, from Henry Habicht, a deputy administrator of EPA, which says, among other things:

\*\*\* EPA believes that a scientific study by the NAS could result in helpful input for improvement of the standards for the storage and disposal of radioactive material.

The agency—

That is EPA—

takes note of the following language in the statement of managers of the conference report on H.R. 776:

"Under the provisions of section 801, the authority and responsibility to establish the standards would remain with the Administrator, as is the case under existing law. The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues."

He goes on to say:

I assure you that, consistent with our important statutory and regulatory responsibilities, EPA will ensure that any standards for radioactive materials that are ultimately issued will be the subject of public comment and involvement and will be fully protective of human health and environment.

Mr. President, I ask unanimous consent that that letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ENVIRONMENTAL PROTECTION AGENCY,  
Washington, DC, October 5, 1992.

Hon. BOB GRAHAM,

Chairman, Subcommittee on Nuclear Regulation, Committee on Public Works and the Environment, U.S. Senate, Washington, DC.

DEAR SENATOR GRAHAM: This responds to your request for the Environmental Protection Agency's (EPA) views on section 801 of the Conference Report on H.R. 776 regarding the Yucca Mountain nuclear waste repository.

Section 801 directs the Administrator of EPA to contract with the National Academy of Sciences (NAS) for a study of reasonable public health and safety standards for the storage and disposal of radioactive materials at the proposed repository at Yucca Mountain. It also requires the Administrator to promulgate public health and safety standards applicable to Yucca Mountain that are "based upon and consistent with the findings and recommendations" of the NAS.

It appears that the intent of section 801 is to provide for a review of the scientific foundation of EPA's draft standards for the disposal of radioactive materials. We recognize that EPA's draft standards have been controversial and our policy generally is to support open peer involvement in important science decisions. As such, EPA believes that a scientific study by the NAS could result in helpful input for improvement of standards for the storage and disposal of radioactive material.

The Agency takes note of the following language in the Statement of Managers of the Conference Report on H.R. 776:

"Under the provisions of section 801, the authority and responsibility to establish the standards would remain with the Adminis-

trator, as is the case under existing law. The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues."

I assure you that, consistent with our important statutory and regulatory responsibilities, EPA will ensure that any standards for radioactive materials that are ultimately issued will be the subject of public comment and involvement and will be fully protective of human health and the environment.

Sincerely,

F. HENRY HABICHT II,  
Deputy Administrator.

Mr. JOHNSTON. Mr. President, I also have a letter from PHIL SHARP, who is chairman of the Subcommittee on Energy and Power in the House of Representatives, who states as follows:

As a conferee on this bill, I was unalterably opposed to legislating a new, weaker standard for waste disposal at Yucca Mountain. I would not have signed the conference report and managed it on the House floor had we done so.

Instead, we provided for a scientific review of all relevant questions followed by a new rulemaking by EPA before a new standard is issued. Some opponents of the bill are arguing that we do not allow the National Academy of Sciences to review the collective dose issues. This is categorically false.

For a host of reasons, H.R. 776 is the most environmentally sound comprehensive energy bill we have ever considered. I hope you will see fit that it becomes law.

And he attaches to his letter excerpts from the statement of managers.

I ask unanimous consent that letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSE OF REPRESENTATIVES, COMMITTEE ON ENERGY AND COMMERCE, SUBCOMMITTEE ON ENERGY AND POWER,

Washington, DC, October 7, 1992.

As you consider your vote on the cloture petition on H.R. 776, the Energy Policy Act, I hope you will look at the actual language of the conference report, and especially the Statement of Managers, on the Yucca Mountain issue.

As a conferee on this bill, I was unalterably opposed to legislating a new, weaker standard for waste disposal at Yucca Mountain. I would not have signed the conference report and managed it on the House floor had we done so.

Instead, we provided for a scientific review of all relevant questions, followed by a new rulemaking by EPA before a new standard is issued. Some opponents of the bill are arguing that we do not allow the National Academy of Sciences to review the "collective dose" issue. This is categorically false.

I hope the attached excerpts from the Statement of Managers will be helpful to you.

For a host of reasons, H.R. 776 is the most environmentally sound comprehensive energy bill we have ever considered. I hope you will vote to see that it becomes law.

Sincerely,

PHIL SHARP,  
Chairman.

EXCERPTS FROM THE STATEMENT OF MANAGERS, SECTION 801 OF H.R. 776

Standards must protect the public health:

"The provisions . . . require the Administrator to promulgate health-based standards for protection of the public from releases of radioactive materials from a repository at Yucca Mountain, based upon and consistent with the findings and recommendations of the National Academy of Sciences."

National Academy of Sciences has discretion in its study:

"In carrying out the study, the National Academy of Sciences would not be precluded from addressing additional questions or issues related to the appropriate standards for radiation protection at Yucca Mountain beyond those that are specified. For example, the study could include an estimate of the collective dose to the general population. . . ."

The NAS study provides scientific guidance:

"The Conferees do not intend for the National Academy of Sciences, in making its recommendations, to establish specific standards for protection of the public but rather to provide expert scientific guidance on the issues involved in establishing those standards."

The authority of the EPA and the NRC is preserved:

"The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues. . . . As with the Administrator, the provisions of section 801 are not intended to limit the Commission's discretion in the exercise of its authority related to public health and safety."

Mr. JOHNSTON. Mr. President, what we do ask the National Academy of Sciences and the EPA is to come up with a standard which defines health and safety to an affected individual and the effect comes up with a dose to the individual.

Now, my friends from Nevada complain that a dose to the individual is not the way to do it; it ought to be a release to the atmosphere, in general.

Mr. President, a health-based standard is one that is expressed in millirems and provides for the maximum dose that is safe for an individual. That is what we have asked them to come up with. A performance or objective release standard expressed in curies prescribes the maximum amount of radioactive material that may be released to environment.

The two types of standards are opposite sides of the same coin. They can be translated one from the other like deutsche marks into dollars. The dose levels to which the public would be exposed from a given release can be calculated from the release limit and vice versa.

Mr. President, this is the best way to set a standard, do it scientifically with the best scientific brains to make the scientific determinations and then leave it up to the policymakers to set the policy based on the science. That is the way it ought to be done in every instance. That is the way we have done it, Mr. President.

One final word which I will repeat. If this cloture vote goes down, this bill goes down, national energy policy goes

down, a bill that is supported by President Bush, by President to be Clinton, by the majority leader, by the minority leader, by the Speaker of the House, by the minority leader of the House. All of them support this bill because it is badly needed. We cannot let this bill go down simply because we are asking that we set a standard based on science and leave it to the EPA to set the policy.

I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. BRYAN. Mr. President, I yield myself 10 minutes.

The PRESIDING OFFICER. The Chair recognizes the Senator from Nevada [Mr. BRYAN].

Mr. BRYAN. I thank the Chair.

Mr. President, no Member of this body ought to be misled by the opposition that what has been done to Nevada is a legislative travesty of the first magnitude. It changes a fundamental rule of public health. In every single enactment—the Clean Air Act, Clean Water Act—you name it—the population standard is a universally recognized way of determining the potential impact on human health of toxic agents, in this case radionuclides.

What was done to Nevada at the last minute, without the benefit of a hearing, no opportunity to be heard or expert testimony received, is to change this standard so that if a nuclear waste dump is ever located at Yucca Mountain, only those of us in Nevada will have a lower standard of health and protection from radiation than anyone else in the country.

We have been considering during the course of this Congress the Waste Isolation Pilot Plant [WIPP] in New Mexico. That is a type of radioactive material which is less dangerous and yet it will have a higher standard based upon the population standards than Yucca Mountain, if ever built, would have for the most dangerous substance known to mankind.

Mr. JOHNSTON. Will the Senator yield?

Mr. BRYAN. I will yield.

Mr. JOHNSTON. Is not the Senator presuming that the National Academy of Sciences and EPA will set a standard that is lower than that which was contained in the so-called part B?

Mr. BRYAN. I would respond to the Senator's question by saying that, indeed, the legislation that the Senator from Louisiana added by way of conference, for the first time, mandates that conclusion. All of the talk that we will have this covered by colloquy, we have this covered by report language, is a smokescreen, Mr. President.

Every constitutional lawyer, every legislative analyst knows that if the language of the statute is clear, report language and colloquies on the floor mean nothing.

Nevada is shafted in two ways by this legislation.

First, in the conference report language added by the distinguished Senator from Louisiana, it is mandated that the standard to be applicable to Yucca Mountain shall be the individual standard, not the population standard.

Second, the National Academy of Sciences is empowered to make recommendations in this conference, and the Environmental Protection Agency, which since the 1982 act has been charged by law with establishing public health and safety standards at nuclear wastesites, is effectively muzzled. They are gutted. They have no authority at all in the language of this bill to do anything other than to follow the mandatory language contained.

So when the Senator says that the EPA has no objection to it, if you read the language of the letter that the Senator has incorporated in the RECORD, October 5, 1992, the EPA does not say that they agree to it at all. In fact, the author of that letter, a gentleman by the name of Mr. Habicht, indicated in an analysis, a guidance for risk characterization for risk managers on February 26 of this year, specifically makes reference to the fact that the population risk standard ought to be included, the same man.

I ask unanimous consent that that report dated, or at least received February 26 with a date stamp be made a part of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ENVIRONMENTAL PROTECTION AGENCY,  
Washington, DC, February 26, 1992.  
MEMORANDUM

Subject: Guidance on Risk Characterization for Risk Managers and Risk Assessors.  
From: F. Henry Habicht II, Deputy Administrator.

To: Assistant Administrators, Regional Administrators.

#### INTRODUCTION

This memorandum provides guidance for managers and assessors on describing risk assessment results in EPA reports, presentations, and decision packages. The guidance addresses a problem that affects public perception regarding the reliability of EPA's scientific assessments and related regulatory decisions. EPA has talented scientists, and public confidence in the quality of our scientific output will be enhanced by our visible interaction with peer scientists and thorough presentation of risk assessments and underlying scientific data.

Specifically, although a great deal of careful analysis and scientific judgment goes into the development of EPA risk assessments, significant information is often omitted as the results of the assessment are passed along in the decision-making process. Often, when risk information is presented to the ultimate decision-maker and to the public, the results have been boiled down to a point estimate of risk. Such "short hand" approaches to risk assessment do not fully convey the range of information considered and used in developing the assessment. In short, informative risk characterization clarifies the scientific basis for EPA decisions, while numbers alone do not give a true picture of the assessment.

This problem is not EPA's alone. Agency contractors, industry, environmental groups, and other participants in the overall regulatory process use similar "short hand" approaches.

We must do everything we can to ensure that critical information from each stage of the risk assessment is communicated from risk assessors to their managers, from middle to upper management, from EPA to the public, and from others to EPA. The Risk Assessment Council considered this problem over many months and reached several conclusions: (1) We need to present a full and complete picture of risk, including a statement of confidence about data and methods used to develop the assessment; (2) we need to provide a basis for greater consistency and comparability in risk assessments across Agency programs; and (3) professional scientific judgment plays an important role in the overall statement of risk. The Council also concluded that Agency-wide guidance would be useful.

#### BACKGROUND

Principles emphasized during Risk Assessment Council discussions are summarized below and detailed in the attached Appendix.

##### Full characterization of risk

EPA decisions are based in part on risk assessment, a technical analysis of scientific information on existing and projected risks to human health and the environment. As practiced at EPA, the risk assessment process depends on many different kinds of scientific data (e.g., exposure, toxicity, epidemiology), all of which are used to "characterize" the expected risk to human health or the environment. Informed use of reliable scientific data from many different sources is a central feature of the risk assessment process.

Highly reliable data are available for many aspects of an assessment. However, scientific uncertainty is a fact of life for the risk assessment process as a whole. As a result, agency managers make decisions using scientific assessments that are less certain than the ideal. The issues, then, become when is scientific confidence sufficient to use the assessment for decision-making, and how should the assessment be used? In order to make these decisions, managers need to understand the strengths and the limitations of the assessment.

On this point, the guidance emphasizes that informed EPA risk assessors and managers need to be completely candid about confidence and uncertainties in describing risks and in explaining regulatory decisions. Specifically, the Agency's risk assessment guidelines call for full and open discussion of uncertainties in the body of each EPA risk assessment, including prominent display of critical uncertainties in the risk characterization. Numerical risk estimates should always be accompanied by descriptive information carefully selected to ensure an objective and balanced characterization of risk in risk assessment reports and regulatory documents.

Scientists call for fully characterizing risk not to question the validity of the assessment, but to fully inform others about critical information in the assessment. The emphasis on "full" and "complete" characterization does not refer to an ideal assessment in which risk is completely defined by fully satisfactory scientific data. Rather, the concept of complete risk characterization means that information that is needed for informed evaluation and use of the assessment is carefully highlighted. Thus, even though risk

characterization details limitations in an assessment, a balanced discussion of reliable conclusions and related uncertainties enhances, rather than detracts, from the overall credibility of each assessment.

This guidance is not new. Rather, it restates, clarifies, and expands upon current risk assessment concepts and practices, and emphasizes aspects of the process that are often incompletely developed. It articulates principles that have long guided experienced risk assessors and well-informed risk managers, who recognize that risk is best described not as a classification or single number, but as a composite of information from many different sources, each with varying degrees of scientific certainty.

##### Comparability and consistency

The Council's second finding, on the need for greater comparability, arose for several reasons. One was confusion—for example, many people did not understand that a risk estimate of  $10^{-6}$  for an "average" individual should not be compared to another  $10^{-6}$  risk estimate for the "most exposed individual". Use of such apparently similar estimates without further explanation leads to misunderstandings about the relative significance of risks and the protectiveness of risk reduction actions. Another catalyst for change was the SAB's report, *Reducing Risk: Setting Priorities and Strategies for Environmental Protection*. In order to implement the SAB's recommendation that we target our efforts to achieve the greatest risk reduction, we need common measures of risk.

EPA's newly revised Exposure Assessment Guidelines provide standard descriptors of exposure and risk. Use of these terms in all Agency risk assessments will promote consistency and comparability. Use of several descriptors, rather than a single descriptor, will enable us to present a more complete picture of risk that corresponds to the range of different exposure conditions encountered by various populations exposed to most environmental chemicals.

##### Professional judgment

The call for more extensive characterization of risk has obvious limits. For example, the risk characterization includes only the most significant data and uncertainties from the assessment (those that define and explain the main risk conclusions) so that decision-makers and the public are not overwhelmed by valid but secondary information.

The degree to which confidence and uncertainty are addressed depends largely on the scope of the assessment and available resources. When special circumstances (e.g., lack of data, extremely complex situations, resource limitations, statutory deadlines) preclude a full assessment, such circumstances should be explained. For example, an emergency telephone inquiry does not require a full written risk assessment, but the caller must be told that EPA comments are based on a "back-of-the-envelope" calculation and, like other preliminary or simple calculations, cannot be regarded as a risk assessment.

##### GUIDANCE PRINCIPLES

Guidance principles for developing, describing, and using EPA risk assessments are set forth in the Appendix. Some of these principles focus on differences between risk assessment and risk management, with emphasis on differences in the information content of each process. Other principles describe information expected in EPA risk assessments to the extent practicable, emphasizing that discussion of both data and confidence in the data are essential features of

a complete risk assessment. Comments on each principle appear in the Appendix; more detailed guidance is available in EPA's risk assessment guidelines (e.g., 51 *Federal Register* 33992-34054, 24 September 1986).

Like EPA's risk assessment guidelines, this guidance applies to the development, evaluation, and description of Agency risk assessment for use in regulatory decision-making. This memorandum does not give guidance on the use of completed risk assessments for risk management decisions, nor does it address the use of non-scientific considerations (e.g., economic or societal factors) that are considered along with the risk assessment in risk management and decision-making. While some aspects of this guidance focus on cancer risk assessment, the guidance applies generally to human health effects (e.g., neurotoxicity, developmental toxicity) and, with appropriate modifications, should be used in all health risk assessments. Guidance specifically for ecological risk assessment is under development.

##### IMPLEMENTATION

Effective immediately, it will be Agency policy for each EPA office to provide several kinds of risk assessment information in connection with new Agency reports, presentations, and decision packages. In general, such information should be presented as carefully selected highlights from the overall assessment. In this regard, common sense regarding information needed to fully inform Agency decision-makers is the best guide for determining the information to be highlighted in decision packages and briefings.

1. Regarding the interface between risk assessment and risk management, risk assessment information must be clearly presented, separate from any non-scientific risk management considerations. Discussion of risk management options should follow, based on consideration of all relevant factors, scientific and non-scientific.

2. Regarding risk characterization, key scientific information on data and methods (e.g., use of animal or human data for extrapolating from high to low doses, use of pharmacokinetics data) must be highlighted. We also expect a statement of confidence in the assessment that identifies all major uncertainties along with comment on their influence on the assessment, consistent with guidance in the attached Appendix.

3. Regarding exposure and risk characterization, it is Agency policy to present information on the range of exposures derived from exposure scenarios and on the use of multiple risk-descriptors (i.e., central tendency, high end of individual risk, population risk, important subgroups, if known) consistent with terminology in the attached Appendix and Agency guidelines.

This guidance applies to all Agency offices. It applies to assessments generated by EPA staff and to those generated by contractors for EPA's use. I believe adherence to this Agency-wide guidance will improve understanding of Agency risk assessments, lead to more informed decisions, and heighten the credibility of both assessments and decisions.

From this time forward, presentations, reports, and decision packages from all Agency offices should characterize risk and related uncertainties as described here. Please be prepared to identify and discuss with me any program-specific modifications that may be appropriate. However, we do not expect risk assessment documents that are close to completion to be rewritten. Although this is internal guidance that applies directly to as-

assessments developed under EPA auspices, I also encourage Agency staff to use these principles as guidance in evaluating assessments submitted to EPA from other sources, and in discussing these submissions with me and with the Administrator.

This guidance is intended for both management and technical staff. Please distribute this document to those who develop or review assessments and to your managers who use them to implement Agency programs. Also, I encourage you to discuss the principles outlined here with your staff, particularly in briefings on particular assessments.

In addition, I expect that the Risk Assessment Council will endorse new guidance on Agency-wide approaches to risk characterization now being developed in the Risk Assessment Forum for EPA's risk assessment guidelines, and that the Agency and the Council will augment that guidance as needed.

The Administrator and I believe that this effort is very important. It furthers our goals of rigor and candor in the preparation, presentation, and use of EPA risk assessments. The tasks outlined above may require extra effort from you, your managers, and your technical staff, but they are critical to full implementation of these principles. We are most grateful for the hard work of your representatives on the RAC and other staff in pulling this document together. I appreciate your cooperation in this important area of science policy, and look forward to our discussions.

#### GUIDANCE FOR RISK ASSESSMENT

(Environmental Protection Agency, Risk Assessment Council, November 1991)

##### SECTION 1. RISK ASSESSMENT—RISK MANAGEMENT INTERFACE

Recognizing that for many people the term risk assessment has wide meaning, the National Research Council's 1983 report on risk assessment in the federal government (hereafter "NRC report") distinguished between risk assessment and risk management.

Broader uses of the term [risk assessment] than ours also embrace analysis of perceived risks, comparisons of risks associated with different regulatory strategies, and occasionally analysis of the economic and social implications of regulatory decisions—*functions that we assign to risk management* (emphasis added). (1)

In 1984, EPA endorsed these distinctions between risk assessment and risk management for Agency use (2), and later relied on them in developing risk assessment guidelines (3).

The distinction suggests that EPA participants in the process can be grouped into two main categories, each with somewhat different responsibilities, based on their roles with respect to risk assessment and risk management.

##### *Risk Assessment*

One group generates the risk assessment by collecting, analyzing, and synthesizing scientific data to produce the hazard identification, dose-response, and exposure assessment portion of the risk assessment and to characterize risk. This group relies in part on Agency risk assessment guidelines to address science policy issues and scientific uncertainties.

Generally, this group includes scientists and statisticians in the Office of Research and Development, the Office of Pesticides and Toxic Substances and other program offices, the Carcinogen Risk Assessment Verification Endeavor (CRAVE), and the RfD/RfC Workgroups.

Others use analyses produced by the first group to generate site- or media-specific exposure assessments and risk characterizations for use in regulation development. These assessors rely on existing databases (e.g., IRIS, ORD Health Assessment Documents, CRAVE and RfD/RfC Workgroup documents) to develop regulations and evaluate alternatives.

Generally, this group includes scientists and analysts in program offices, regional offices, and the Office of Research and Development.

##### *Risk Management*

A third group integrates the risk characterization with other non-scientific considerations specified in applicable statutes to make and justify regulatory decisions.

Generally, this group includes Agency managers and decision-makers.

Each group has different responsibilities for observing the distinction between risk assessment and risk management. At the same time, the risk assessment process involves regular interaction between each of the groups, with overlapping responsibilities at various stages in the overall process.

The guidance to follow outlines principles specific for those who generate, review, use, and integrate risk assessments for decision-making.

1. Risk assessors and risk managers should be sensitive to distinctions between risk assessment and risk management.

The major participants in the risk assessment process have many shared responsibilities. Where responsibilities differ, it is important that participants confine themselves to tasks in their areas of responsibility and not inadvertently obscure differences between risk assessment and risk management.

Shared responsibilities of assessors and managers include initial decisions regarding the planning and conduct of an assessment, discussions as the assessment develops, decisions regarding new data needed to complete an assessment and to address significant uncertainties. At critical junctures in the assessment, such consultations shape the nature of, and schedule for, the assessment.

For the generators of the assessment, distinguishing between risk assessment and risk management means that scientific information is selected, evaluated, and presented without considering non-scientific factors including how the scientific analysis might influence the regulatory decision. Assessors are charged with (1) generating a credible, objective, realistic, and balanced analysis; (2) presenting information on hazard, dose-response, exposure and risk; and (3) explaining confidence in each assessment by clearly delineating uncertainties and assumptions along with the impacts of these factors (e.g., confidence limits, use of conservative/non-conservative assumptions) on the overall assessment. They do not make decisions on the acceptability of any risk level for protecting public health or selecting procedures for reducing risks.

For users of the assessments into regulatory decisions, the distinction between risk assessment and risk management means refraining from influencing the risk description through consideration of non-scientific factors—e.g., the regulatory outcome—and from attempting to shape the risk assessment to avoid statutory constraints, meet regulatory objectives, or serve political purposes. Such management considerations are often legitimate considerations for the overall regulatory decisions (see next principle), but they have no role in estimating or describing risk.

However, decision-makers establish policy directions that determine the overall nature and tone of Agency risk assessments and, as appropriate, provide policy guidance on difficult and controversial risk assessment issues. Matters such as risk assessment priorities, degree of conservatism, and acceptability of particular risk levels are reserved for decision-makers who are charged with making decisions regarding protection of public health.

2. The risk assessment product, that is, the risk characterization, is only one of several kinds of information used for regulatory decision-making.

Risk characterization, the last step in risk assessment, is the starting point for risk management considerations and the foundation for regulatory decision-making, but it is only one of several important components in such decisions. Each of the environmental laws administered by EPA calls for consideration of non-scientific factors at various stages in the regulatory process. As authorized by different statutes, decision-makers evaluate technical feasibility (e.g., treatability, detection limits), economic, social, political, and legal factors as part of the analysis of whether or not to regulate and, if so, to what extent. Thus, regulatory decisions are usually based on a combination of the technical analysis used to develop the risk assessment and information from other fields.

For this reason, risk assessors and managers should understand that the regulatory decision is usually not determined solely by the outcome of the risk assessment. That is, the analysis of the overall regulatory problem may not be the same as the picture presented by the risk analysis alone. For example, a pesticide risk assessment may describe moderate risk to some populations but, if the agricultural benefits of its use are important for the nation's food supply, the product may be allowed to remain on the market with certain restrictions on use to reduce possible exposure. Similarly, assessment efforts may produce an RfD for a particular chemical, but other considerations may result in a regulatory level that is more or less protective than the RfD itself.

For decision-makers, this means that societal considerations (e.g., costs, benefits) that, along with the risk assessment, shape the regulatory decision should be described as fully as the scientific information set forth in the risk characterization. Information on data sources and analyses, their strengths and limitations, confidence in the assessment, uncertainties, and alternative analyses are as important here as they are for the scientific components of the regulatory decision. Decision-makers should be able to expect, for example, the same level of rigor from the economic analysis as they receive from the risk analysis.

Decision-makers are not "captives of the numbers." On the contrary, the quantitative and qualitative risk characterization is only one of many important factors that must be considered in reaching the final decision—a difficult and distinctly different task from risk assessment per se. Risk management decisions involve numerous assumptions and uncertainties regarding technology, economics and social factors, which need to be explicitly identified for the decision-makers and the public.

##### SECTION 2. RISK CHARACTERIZATION

EPA risk assessment principles and practices draw on many sources. The environmental laws administered by EPA, the National Research Council's 1983 report on risk

assessment (1), the Agency's Risk Assessment Guidelines (3), and various program-specific guidance (e.g., the Risk Assessment Guidance for Superfund) are obvious sources. Twenty years of EPA experience in developing, defending, and enforcing risk assessment-based regulation is another. Together these various sources stress the importance of a clear explanation of Agency processes for evaluating hazard, dose-response, exposure, and other data that provide the scientific foundation for characterizing risk.

This section focuses on two requirements for full characterization of risk. First, the characterization must address qualitative and quantitative features of the assessment. Second, it must identify any important uncertainties in the assessment as part of a discussion on confidence in the assessment.

This emphasis on a full description of all elements of the assessment draws attention to the importance of the qualitative as well as the quantitative dimensions of the assessment. The 1983 NRC report carefully distinguished qualitative risk assessment from quantitative assessments, preferring risk statements that are not strictly numerical.

The term *risk assessment* is often given narrower and broader meanings than we have adopted here. For some observers, the term is synonymous with *quantitative risk assessment* and emphasizes reliance on numerical results. Our broader definition includes quantification, but also includes qualitative expressions of risk. Quantitative estimates of risk are not always feasible, and they may be eschewed by agencies for policy reasons. (Emphasis in original) (1)

More recently, an Ad Hoc Study Group (with representatives from EPA, HHS, and the private sector) on Risk Presentation reinforced and expanded upon these principles by specifying several "attributes" for risk characterization.

1. The major components of risk (hazard identification, dose-response, and exposure assessment) are presented in summary statements, along with quantitative estimates of risk, to give a combined and integrated view of the evidence.

2. The report clearly identifies key assumptions, their rationale, and the extent of scientific consensus; the uncertainties thus accepted; and the effect of reasonable alternative assumptions on conclusions and estimates.

3. The report outlines specific ongoing or potential research projects that would probably clarify significantly the extent of uncertainty in the risk estimation. . . . (4)

Particularly critical to full characterization of risk is a frank and open discussion of the uncertainty in the overall assessment and in each of its components. The uncertainty statement is important for several reasons.

Information from different sources carries different kinds of uncertainty and knowledge of these differences is important when uncertainties are combined for characterizing risk.

Decisions must be made on expending resources to acquire additional information to reduce the uncertainties.

A clear and explicit statement of the implications and limitations of a risk assessment requires a clear and explicit statement of related uncertainties.

Uncertainty analysis gives the decision-maker a better understanding of the implications and limitations of the assessments.

A discussion of uncertainty requires comment on such issues as the quality and quantity of available data, gaps in the data base

for specific chemicals, incomplete understanding of general biological phenomena, and scientific judgments or science policy positions that were employed to bridge information gaps.

In short, broad agreement exists on the importance of a full picture of risk, particularly including a statement of confidence in the assessment and that the uncertainties are within reasons. This section discusses information content and uncertainty aspects of risk characterization, while Section 3 discusses various descriptors used in risk characterization.

1. The risk assessment process calls for characterizing risk as a combination of qualitative information, quantitative information, and information regarding uncertainties.

Risk assessment is based on a series of questions that the assessor asks about the data and the implications of the data for human risk. Each question calls for analysis and interpretation of the available studies, selection of the data that are most scientifically reliable and most relevant to the problem at hand, and scientific conclusions regarding the question presented. As suggested below, because the questions and analyses are complex, a complete characterization includes several different kinds of information, carefully selected for reliability and relevance.

a. *Hazard Identification*—What do we know about the capacity of an environmental agent for causing cancer (or other adverse effects) in laboratory animals and in humans?

Hazard identification is a qualitative description based on factors such as the kind and quality of data on humans or laboratory animals, the availability of ancillary information (e.g., structure-activity analysis, genetic toxicity, pharmacokinetics) from other studies, and the weight-of-the-evidence from all of these data sources. For example, to develop this description, the issues addressed include:

1. the nature, reliability, and consistency of the particular studies in humans and in laboratory animals;

2. the available information on the mechanistic basis for activity; and

3. experimental animal responses and their relevance to human outcomes.

These issues make clear that the task of hazard identification is characterized by describing the full range of available information and the implications of that information for human health.

b. *Dose-Response Assessment*—What do we know about the biological mechanisms and dose-response relationships underlying any effects observed in the laboratory or epidemiology studies providing data for the assessment?

The dose-response assessment examines quantitative relationships between exposure (or dose) and effects in the studies used to identify and define effects of concern. This information is later used along with "real world" exposure information (see below) to develop estimates of the likelihood of adverse effects in populations potentially at risk.

Methods for establishing dose-response relationships often depend on various assumptions used in lieu of a complete data base and the method chosen can strongly influence the overall assessment. This relationship means that careful attention to the choice of a high-to-low dose extrapolation procedure is very important. As a result, an assessor who is characterizing a dose-response relationship considers several key issues:

1. relationship between extrapolation models selected and available information on biological mechanisms;

2. how appropriate data sets were selected from those that show the range of possible potencies both in laboratory animals and humans;

3. basis for selecting interspecies dose scaling factors to account for scaling doses from experimental animals to humans; and

4. correspondence between the expected route(s) of exposure and the exposure route(s) utilized in the hazard studies, as well as the interrelationships of potential effects from different exposure routes.

EPA's Integrated Risk Information System (IRIS) is a primary source of this information. IRIS includes data summaries representing Agency consensus on specific chemicals, based on a careful review of the scientific issues listed above. For specific risk assessments based on data in IRIS and on other sources, risk assessors should carefully review the information presented, emphasizing confidence in the database and uncertainties (see subsection d below). The IRIS statement of confidence should be included as part of the risk characterization for hazard and dose-response information.

c. *Exposure Assessment*—What do we know about the paths, patterns, and magnitudes of human exposure and numbers of persons likely to be exposed?

The exposure assessment examines a wide range of exposure parameters pertaining to the "real world" environmental scenarios of people who may be exposed to the agent under study. The data considered for the exposure assessment range from monitoring studies of chemical concentrations in environmental media, food, and other materials to information on activity patterns of different population subgroups. An assessor who characterizes exposure should address several issues.

1. The basis for the values and input parameters used for each exposure scenario. If based on data, information on the quality, purpose, and representativeness of the database is needed. If based on assumptions, the source and general logic used to develop the assumption (e.g., monitoring, modeling, analogy, professional judgment) should be described.

2. The major factor or factors (e.g., concentration, body uptake, duration/frequency of exposure) thought to account for the greatest uncertainty in the exposure estimate, due either to sensitivity or lack of data.

3. The link of the exposure information to the risk descriptors discussed in Section 3 of this Appendix. This issue includes the conservatism or non-conservatism of the scenarios, as indicated by the choice of descriptors.

In summary, confidence in the information used to characterize risk is variable, with the result that risk characterization requires a statement regarding the assessor's confidence in each aspect of the assessment.

d. *Risk Characterization*—What do other assessors, decision-makers, and the public need to know about the primary conclusions and assumptions, and about the balance between confidence and uncertainty in the assessment?

In the risk characterization, conclusions about hazard and dose response are integrated with those from the exposure assessment. In addition, confidence about these conclusions, including information about the uncertainties associated with the final risk summary, is highlighted. As summarized

below, the characterization integrates all of the preceding information to communicate the overall meaning of, and confidence in, the hazard, exposure, and risk conclusions.

Generally, risk assessments carry two categories of uncertainty, and each merits consideration. Measurement uncertainty refers to the usual variance that accompanies scientific measurements (such as the range around an exposure estimate) and reflects the accumulated variances around the individual measured values used to develop the estimate. A different kind of uncertainty stems from data gaps—that is, information needed to complete the data base for the assessment. Often, the data gap is broad, such as the absence of information on the effects of exposure to a chemical on humans or on the biological mechanism of action of an agent.

The degree to which confidence and uncertainty in each of these areas is addressed depends largely on the scope of the assessment and the resources available. For example, the Agency does not expect an assessment to evaluate and assess every conceivable exposure scenario for every possible pollutant, to examine all susceptible populations potentially at risk, or to characterize every possible environmental scenario to determine the cause and effect relationships between exposure to pollutants and adverse health effects. Rather, the uncertainty analysis should reflect the type and complexity of the risk assessment, with the level of effort for analysis and discussion of uncertainty corresponding to the level of effort for the assessment. Some sources of confidence and of uncertainty are described below.

Often risk assessors and managers simplify discussion of risk issues by speaking only of the numerical components of an assessment. That is, they refer to the weight-of-evidence, unit risk, the risk-specific dose or the  $q^{*}$  for cancer risk, and the  $RD/FDC$  for health effects other than cancer, to the exclusion of other information bearing on the risk case. However, since every assessment carries uncertainties, a simplified numerical presentation of risks is always incomplete and often misleading. For this reason, the NRC (1) and EPA risk assessment guidelines (2) call for "characterizing" risk to include qualitative information, a related numerical risk estimate and a discussion of uncertainties, limitations, and assumptions.

Qualitative information on methodology, alternative interpretations, and working assumptions is an important component of risk characterization. For example, specifying that animal studies rather than human studies were used in an assessment tells others that the risk estimate is based on assumptions about human response to a particular chemical rather than human data. Information that human exposure estimates are based on the subjects' presence in the vicinity of a chemical accident rather than tissue measurements defines known and unknown aspects of the exposure component of the study.

Qualitative descriptions of this kind provide crucial information that augments understanding of numerical risk estimates. Uncertainties such as these are expected in scientific studies and in any risk assessment based on these studies. Such uncertainties do not reduce the validity of the assessment. Rather, they are highlighted along with other important risk assessment conclusions to inform others fully on the results of the assessment.

2. Well-balanced risk characterization presents information for other risk assessors,

EPA decision-makers, and the public regarding the strengths and limitations of the assessments.

The risk assessment process calls for identifying and highlighting significant risk conclusions and related uncertainties partly to assure full communication among risk assessors and partly to assure that decision-makers are fully informed. Issues are identified by acknowledging noteworthy qualitative and quantitative factors that make a difference in the overall assessment of hazard and risk, and hence in the ultimate regulatory decision.

The key word is "noteworthy": information that significantly influences the analysis is retained—that is, noted—in all future presentations of the risk assessment and in the related decision. Uncertainties and assumptions that strongly influence confidence in the risk estimate require special attention.

As discussed earlier, two major sources of uncertainty are variability in the factors upon which estimates are based and the existence of fundamental data gaps. This distinction is relevant for some aspects of the risk characterization. For example, the central tendency and high end individual exposure estimates are intended to capture the variability in exposure, lifestyles, and other factors that lead to a distribution of risk across a population. Key considerations underlying these risk estimates should be fully described. In contrast, scientific assumptions are used to bridge knowledge gaps such as the use of scaling or extrapolation factors and the use of a particular upper confidence limit around a dose-response estimate. Such assumptions need to be discussed separately, along with the implications of using alternative assumptions.

For users of the assessment and others who rely on the assessment, numerical estimates should never be separated from the description information that is integral to risk characterization. All documents and presentations should include both; in short reports, this information is abbreviated but never omitted.

For decision-makers, a complete characterization (key descriptive elements along with numerical estimates) should be retained in all discussions and papers relating to an assessment used in decision-making. Fully visible information assures that important features of the assessment are immediately available at each level of decision-making for evaluating whether risks are acceptable or unreasonable. In short, differences in assumptions and uncertainties, coupled with non-scientific considerations called for in various environmental statutes, can clearly lead to different risk management decisions in cases with ostensibly identical quantitative risks; i.e., the "number" alone does not determine the decision.

Consideration of alternative approaches involves examining selected plausible options for addressing a given uncertainty. The key words are "selected" and "plausible;" listing all options, regardless of their merits would be superfluous. Generators of the assessment should outline the strengths and weaknesses of each alternative approach and as appropriate, estimates of central tendency and variability (e.g., mean, percentiles, range, variance.)

Describing the option chosen involves several statements.

1. A rationale for the choice.
2. Effects of option selected on the assessment.
3. Comparison with other plausible options.

4. Potential impacts of new research (ongoing, potential near-term and/or long-term studies).

For users of the assessment, giving attention to uncertainties in all decisions and discussions involving the assessment, and preserving the statement of confidence in all presentations is important. For decision-makers, understanding the effect of the uncertainties on the overall assessment and explaining the influence of the uncertainties on the regulatory decision.

#### SECTION 3. EXPOSURE ASSESSMENT AND RISK DESCRIPTORS

The results of risk assessment are usually communicated to the risk manager in the risk characterization portion of the assessment. This communication is often accomplished through *risk descriptors* which convey information and answer questions about risk, each descriptor providing different information and insights. Exposure assessment plays a key role in developing these risk descriptors, since each descriptor is based in part on the exposure distribution within the population of interest. The Risk Assessment Council (RAC) has been discussing the use of risk descriptors from time to time over the past two years.

The recent RAC efforts have laid the foundation for the discussion to follow. First, as a result of a discussion paper on the comparability of risk assessments across the Agency programs, the RAC discussed how the program presentations of risk led to ambiguity when risk assessments were compared across programs. Because different assessments presented different descriptors of risk without always making clear what was being described, the RAC discussed the advisability of using separate descriptors for population risk, individual risk, and identification of sensitive or high exposed population segments. The RAC also discussed the need for consistency across programs and the advisability of requiring risk assessments to provide roughly comparable information to risk managers and the public through the use of a consistent set of risk descriptors.

The following guidance outlines the different descriptors in a convenient order that should not be construed as a hierarchy of importance. These descriptors should be used to describe risk in a variety of ways for a given assessment, consistent with the assessment's purpose, the data available, and the information the risk manager needs. Use of a range of descriptors instead of a single descriptor enables Agency programs to present a picture of risk that corresponds to the range of different exposure conditions encountered for most environmental chemicals. This analysis, in turn, allows risk managers to identify populations at greater and lesser risk and to shape regulatory solutions accordingly.

EPA risk assessments will be expected to address or provide descriptions of (1) individual risk to include the central tendency and high end portions of the risk distribution, (2) important subgroups of the population such as highly exposed or highly susceptible groups or individuals, if known, and (3) population risk. Assessors may also use additional descriptors of risk as needed when these add to the clarity of the presentation. With the exception of assessments where particular descriptors clearly do not apply, some form of these three types of descriptors should be routinely developed and presented for EPA risk assessments. Furthermore, presenters of risk assessment information should be prepared to routinely answer questions by risk managers concerning these descriptors.

It is essential that presenters not only communicate the results of the assessment by addressing each of the descriptors where appropriate, but they also communicate their confidence that these results portray a reasonable picture of the actual or projected exposures. This task will usually be accomplished by highlighting the key assumptions and parameters that have the greatest impact on the results, the basis or rationale for choosing these assumptions/parameters, and the consequences of choosing other assumptions.

In order for the risk assessor to successfully develop and present the various risk descriptors, the exposure assessment must provide exposure and dose information in a form that can be combined with exposure-response or dose-response relationships to estimate risk. Although there will be differences among individuals within a population as to absorption, intake rates, susceptibility, and other variables such that a high exposure does not necessarily result in a high dose or risk, a moderate or highly positive correlation among exposure, dose, and risk is assumed in the following discussion. Since the generation of all descriptors is not appropriate in all risk assessments and the type of descriptor translates fairly directly into the type of analysis that the exposure assessor must perform, the exposure assessor needs to be aware of the ultimate goals of the assessment. The following sections discuss what type of information is necessary.

1. Information about individual exposure and risk is important to communicating the results of a risk assessment.

Individual risk descriptors are intended to address questions dealing with risks borne by individuals within a population. These questions can take the form of:

Who are the people at the highest risk?  
What risk levels are they subjected to?  
What are they doing, where do they live, etc., that might be putting them at this higher risk?

What is the average risk for individuals in the population of interest?

The "high end" of the risk distribution is, conceptually, above the 90th percentile of the actual (either measured or estimated) distribution. This conceptual range is not meant to precisely define the limits of this descriptor, but should be used by the assessor as a target range for characterizing "high end risk". Bounding estimates and worse case scenarios<sup>1</sup> should not be termed high end risk estimates.

The high end risk descriptor is a plausible estimate of the individual risk for those persons at the upper end of the risk distribution. The intent of this descriptor is to convey an estimate of risk in the upper range of the distribution, but to avoid estimates which are beyond the true distribution. Conceptually, high end risk means risks above about the 90th percentile of the population distribution, but not higher than the individual in the population who has the highest risk.

<sup>1</sup> High end estimates focus on estimates of the exposure or dose in the actual populations. "Bounding estimates," on the other hand, purposely overestimate the exposure or dose in an actual population for the purpose of developing a statement that the risk is "not greater than..." A "worst case scenario" refers to a combination of events and conditions such that, taken together, produces the highest conceivable risk. Although it is possible that such an exposure, dose, or sensitivity combination might occur in a given population of interest, the probability of an individual receiving this combination of events and conditions is usually small, and often so small that such a combination will not occur in a particular, actual population.

This descriptor is intended to estimate the risks that are expected to occur in small but definable "high end" segments of the subject population. The individuals with these risks may be members of a special population segment or individuals in the general population who are highly exposed because of the inherent stochastic nature of the factors which give rise to exposure. Where no particular difference in sensitivity can be identified within the population, the high end risk will be related to the high end exposure or dose.

In those few cases where the complete data on the population distributions of exposures and doses are available, high end exposure or dose estimates can be represented by reporting exposures or doses at selected percentiles of the distributions, such as the 90th, 95th, or 98th percentile. High end exposures or dose, as appropriate, can then be used to calculate high end risk estimates.

In the majority of cases where the complete distributions are not available, several methods help estimate a high end exposure or dose. If sufficient information about the variability in lifestyles and other factors are available to simulate the distribution through the use of appropriate modeling, e.g., Monte Carlo simulation, the estimate from the simulated distribution may be used. As in the method above, the risk manager should be told where in the high end range the estimate is being made by stating the percentile or the number of persons above this estimate. The assessor and risk manager should be aware, however, that unless a great deal is known about exposures and doses at the high end of the distribution, these estimates will involve considerable uncertainty which the exposure assessor will need to describe.

If only limited information on the distribution of the exposure or dose factors is available, the assessor should approach estimating the high end by identifying the most sensitive parameters and using maximum or near-maximum values for one or a few of these variables, leaving others at their mean values.<sup>2</sup> In doing this, the exposure assessor needs to avoid combinations of parameter values that are inconsistent, e.g., low body weight used in combination with high intake rates, and must keep in mind the ultimate objective of being within the distribution of actual expected exposures and doses, and not beyond it.

If almost no data are available on the ranges for the various parameters, it will be difficult to estimate exposures or doses in the high end with much confidence, and to develop the high end risk estimate. One method that has been used in these cases is to start with a bounding estimate and "back off" the limits used until the combination of parameter values is, in the judgment of the assessor, clearly within the distribution of expected exposure, and still lies within the upper 10% of persons exposed. Obviously, this method results in large uncertainty and requires explanation.

The risk descriptor addressing central tendency may be either the arithmetic mean risk (Average Estimate) or the median risk (Median Estimate), either of which should be clearly labeled. Where both the arithmetic

<sup>2</sup> Maximizing all variables will in virtually all cases result in an estimate that is above the actual values seen in the population. When the principal parameters of the dose equation (e.g., concentration, intake rate, duration) are broken out into sub-components, it may be necessary to use maximum values for more than two of these subcomponent parameters, depending on a sensitivity analysis

mean and the median are available but they differ substantially, it is helpful to present both.

The Average Estimate, used to approximate the arithmetic mean, can be derived by using average values for all the exposure factors. It does not necessarily represent a particular individual on the distribution. The Average Estimate is not very meaningful when exposure across a population varies by several orders of magnitude or when the population has been truncated, e.g., at some prescribed distance from a point source.

Because of the skewness of typical exposure profiles, the arithmetic mean is not necessarily a good indicator of the midpoint (median, 50th percentile) of a distribution. A Median Estimate, e.g., geometric mean, is usually a valuable descriptor for this type of distribution, since half the population will be above and half below this value.

2. Information about population exposure leads to another important way to describe risk.

Population risk refers to an assessment of the extent of harm for the population as a whole. In theory, it can be calculated by summing the individual risks for all individuals within the subject population. This task, of course, requires a great deal more information than is normally, if ever, available.

Some questions addressed by descriptors of population risk include:

How many cases of a particular health effect might be probabilistically estimated in this population for a specific time period?

For noncarcinogens, what portion of the population are within a specified range of some benchmark level, e.g., exceedance of the RfD (a dose), the Ffc (a concentration), or other health concern level?

For carcinogens, how many persons are above a certain risk level such as  $10^{-6}$  or a series of risk levels such as  $10^{-5}$ ,  $10^{-4}$ , etc.?

Answering these questions require some knowledge of the exposure frequency distribution in the population. In particular, addressing the second and third questions may require graphing the risk distribution. These questions can lead to two different descriptors of population risk.

The first descriptor is the probabilistic number of health effect cases estimated in the population of interest over a specified time period.

This descriptor can be obtained either by (a) summing the individual risks over all the individuals in the population when such information is available, or (b) through the use of a risk model such as carcinogenic models or procedures which assume a linear non-threshold response to exposure. If risk varies linearly with exposure, knowing the mean risk and the population size can lead to an estimate of the extent of harm for the population as a whole, excluding sensitive subgroups for which a different dose-response curve needs to be used.

Obviously, the more information one has, the more certain the estimate of this risk descriptor, but inherent uncertainties in risk assessment methodology place limitations on the accuracy of the estimate. With the current state of the science, explicit steps should be taken to assure that this descriptor is not confused with an actuarial prediction of cases in the population (which is a statistical prediction based on a great deal of empirical data).

Although estimating population risk by calculating a mean individual risk and multiplying by the population size is sometimes appropriate for carcinogen assessments using

linear, non-threshold models<sup>3</sup>, this is not appropriate for non-carcinogenic effects or for other types of cancer models. For non-linear cancer models, an estimate of population risk must be calculated by summing individual risks. For non-cancer effects, we generally have not developed the risk assessment techniques to the point of knowing how to add risk probabilities, so a second descriptor, below, is more appropriate.

Another descriptor of population risk is an estimate of the percentage of the population, or the number of persons, above a specified level of risk or within a specified range of some benchmark level, e.g., exceedance of the RfD or the RfC, LOAEL, or other specific level of interest.

This descriptor must be obtained through measuring or simulating the population distribution.

3. Information about the distribution of exposure and risk for different subgroups of the population are important components of a risk assessment.

A risk manager might also ask questions about the distribution of the risk burden among various segments of the subject population such as the following:

How do exposure and risk impact various subgroups?

What is the population risk of a particular subgroup?

Questions about the distribution of exposure and risk among such population segments require additional risk descriptors.

Highly exposed subgroups can be identified, and where possible, characterized and the magnitude of risk quantified. This descriptor is useful when there is (or is expected to be) a subgroup experiencing significantly different exposures or doses from that of the larger population.

These subpopulations may be identified by age, sex, life-style, economic factors, or other demographic variables. For example, toddlers who play in contaminated soil and certain high fish consumers represent subpopulations that may have greater exposures to certain agents.

Highly susceptible subgroups can also be identified, and if possible, characterized and the magnitude of risk quantified. This descriptor is useful when the sensitivity or susceptibility to the effect for specific subgroups is (or is expected to be) significantly different from that of the larger population. In order to calculate risk for these subgroups, it will sometimes be necessary to use a different dose-response relationship.

For example, upon exposure to a chemical, pregnant women, elderly people, children, and people with certain illnesses may each be more sensitive than the population as a whole.

Generally, selection of the population segments is a matter of either a priori interest in the subgroup, in which case the risk assessor and risk manager can jointly agree on which subgroups to highlight, or a matter of discovery of a sensitive or highly exposed subgroup during the assessment process. In either case, once identified, the subgroup can be treated as a population in itself, and characterized the same way as the larger population using the descriptors for population and individual risk.

4. Situation-specific information adds perspective on possible future events or regulatory options.

These postulated questions are normally designed to answer "what if" questions,

which are either directed at low probability but possibly high consequence events or are intended to examine candidate risk management options. Such questions might take the following form:

What if a pesticide applicator applies this pesticide without using protective equipment?

What if this site becomes residential in the future?

What risk level will occur if we set the standard at 100 ppb?

The assumptions made in answering these postulated questions should not be confused with the assumptions made in developing a baseline estimate of exposure or with the adjustments in parameter values made in performing a sensitivity analysis. The answers to these postulated questions do not give information about how likely the combination of values might be in the actual population or about how many (if any) persons might be subjected to the calculated exposure or risk in the real world.

A calculation of risk based on specific hypothetical or actual combinations of factors postulated within the exposure assessment can also be useful as a risk descriptor. It is often valuable to ask and answer specific questions of the "what if" nature to add perspective to the risk assessment.

The only information the answers to these questions convey is that if conditions A, B, and C are assumed, then the resulting exposure or risk will be X, Y, or Z, respectively. The values for X, Y, and Z are usually fairly straightforward to calculate and can be expressed as point estimates or ranges. Each assessment may have none, one, or several of these types of descriptors. The answers do not directly give information about how likely that combination of values might be in the actual population, so there are some limits to the applicability of these descriptors.

Mr. BRYAN. So all of this talk that Nevada is adequately protected is absolutely pure bunk. If, as the distinguished Senator from Louisiana maintains, the same standard could be achieved because there is sufficient discretion, why—why, I ask—was it necessary to incorporate that specific, restrictive statutory language?

I thought when I came to the Congress there would certainly be disagreement on where the site ought to be located. I understand that nobody wants the nuclear waste dump in their State. I had hoped everyone would agree that wherever it may be ultimately located, if indeed it is ever built, public health and safety standards ought to be maintained.

And as this chart points out, the fundamental difference between the current law, which calculates radiation release limits based upon potential exposures to the general population, is now effectively gutted in this language and calculates radiation release limits based upon potential releases to a maximum exposed individual.

Mr. JOHNSTON. Will the Senator yield?

Mr. BRYAN. That is as fundamental in terms of public health policy as night to day. There is no way to smooth that over, and that is what is involved.

I voted for the energy bill when it came through. I would like to have the opportunity to vote and support it again. But this language was added at the last minute without one bit of testimony, one bit of opportunity to be heard, and no scientific evidence to support it.

Mr. JOHNSTON. Will the Senator yield?

Mr. BRYAN. When my colleagues say the National Academy of Sciences can make recommendations I do not have a problem with that. But the language of the conference report indicates not only do they make recommendations but their recommendations must be accepted by the Environmental Protection Agency, thereby gutting and muzzling that Agency. I have had an opportunity to speak to the Environmental Protection Agency staff, and they strongly disagree with this.

But you and I and our colleagues know the rule. They are effectively muzzled in this administration.

Mr. JOHNSTON. Would the Senator yield at that point?

Mr. BRYAN. I am happy to, on the distinguished chairman's time.

Mr. JOHNSTON. Mr. President, I yield myself 30 seconds.

Mr. President, the Senator has a chart up there that says "current and proposed". Is the Senator not aware that there is no current release limit applicable to radionuclides, that the previous 1985 standard was withdrawn by the court and remanded to EPA? So there is no current applicable release method.

Mr. BRYAN. But the current standard being developed by the EPA clearly includes the population standard, and indeed the language in the WIPP legislation which the chairman supports was based upon the population standard and that legislation reinstates the exact standards. And the Senator would deprive Nevada with potentially more dangerous radioactive waste, a standard which he endorses for New Mexico, which in my view is indefensible as a matter of policy.

Mr. JOHNSTON. When the Senator says "current" he means somebody told him they were developing.

Mr. BRYAN. Not somebody "told me." As the distinguished chairman knows, that standard was developed with the population standard and repromulgated by the WIPP legislation. As the Senator points out—

Mr. JOHNSTON. If that standard has been remanded now for 5 years, it has not been out, and I am not aware of any draft of it.

Mr. BRYAN. It was remanded not because of the population standard, but another provision irrelevant to our discussion today. And indeed it is the nuclear power industry that has put the pressure on the Environmental Protection Agency not to produce the new standard.

<sup>3</sup>Certain important cautions apply. These cautions are more explicitly spelled out in the Agency's Guidelines for Exposure Assessment, tentatively scheduled to be published in late 1991.

What we are talking about, my friends, is public health versus cutting a few corners, saving a few bucks, and Nevadans are being asked that if this site is developed to accept a lower health standard so that the nuclear power utilities—

Mr. JOHNSTON. Mr. President, is this on my time?

Mr. BRYAN. To save a few dollars.

The PRESIDING OFFICER. It is on the time of the Senator from Nevada.

Mr. JOHNSTON. Mr. President, I yield myself 1 minute.

Mr. President, I do not know how clearly we can express it in the language of the statute, in the language of the report. We dictate that EPA come up with a standard. We put no limits on the discretion of the EPA other than that their standards shall be consistent with and based upon science as stated by the National Academy of Sciences. I do not know what better way to determine science than on the best advice of the National Academy of Sciences.

Mr. President, there is much to be determined by the National Academy of Sciences. What is the proper health risk per milligram? Is there a straight-line extrapolation?

Extrapolation between the studies has been done on Hiroshima victims and Nagasaki victims as it pertains to low-level radiation. It is a very big scientific question that needs to be resolved by the National Academy of Sciences. Those are the kinds of determinations that the National Academy of Sciences should make. As the assistant administrator of EPA says, they make the policy and they have full sway as to making that policy.

The National Academy of Sciences makes recommendations as to science, which is not setting of the standard. The setting of the standard, the setting of the policy is up to EPA, not to the National Academy of Sciences.

Mr. President, I yield 2 minutes to the distinguished Senator from Wyoming.

#### PRIVILEGES OF THE FLOOR

Mr. WALLOP. Mr. President, I ask unanimous consent that Jim Tate, and Vaughn Baker, fellows assigned to the Committee on Energy and Natural Resources, be granted privileges of the floor during consideration of H.R. 776.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WALLOP. Mr. President, I join with my distinguished chairman in claiming that there has been much misrepresentation of what this legislation actually does.

I ask unanimous consent that letters from PHIL SHARP, chairman of the Subcommittee on Energy and Power, of the Committee on Energy and Commerce, and a letter from the U.S. Environmental Protection Agency be put in the RECORD in full.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HOUSE OF REPRESENTATIVES, COMMITTEE ON ENERGY AND COMMERCE, SUBCOMMITTEE ON ENERGY AND POWER,

Washington, DC, October 7, 1992.

As you consider your vote on the cloture petition on H.R. 776, the Energy Policy Act, I hope you will look at the actual language of the conference report, and especially the Statement of Managers, on the Yucca Mountain issue.

As a conferee on this bill, I was unalterably opposed to legislating a new, weaker standard for waste disposal at Yucca Mountain. I would not have signed the conference report and managed it on the House floor had we done so.

Instead, we provided for a scientific review of all relevant questions, followed by a new rulemaking by EPA before a new standard is issued. Some opponents of the bill are arguing that we do not allow the National Academy of Sciences to review the "collective dose" issue. This is categorically false.

I hope the attached excerpts from the Statement of Managers will be helpful to you.

For a host of reasons, H.R. 776 is the most environmentally sound comprehensive energy bill we have ever considered. I hope you will vote to see that it becomes law.

Sincerely,

PHIL SHARP,  
Chairman.

#### EXCERPTS FROM THE STATEMENT OF MANAGERS

##### SECTION 801 OF H.R. 776

Standards must protect the public health: The provisions . . . requiring the Administrator to promulgate health-based standards for protection of the public from releases of radioactive materials from a repository at Yucca Mountain, based upon and consistent with the findings and recommendations of the National Academy of Sciences.

National Academy of Sciences has discretion in its study:

In carrying out the study, the National Academy of Sciences would not be precluded from addressing additional questions or issues related to the appropriate standards for radiation protection at Yucca Mountain beyond those that are specified. For example, the study could include an estimate of the collective dose to the general population . . .

The NAS study provides scientific guidance:

The Conferees do not intend for the National Academy of Sciences, in making its recommendations, to establish specific standards for protection of the public but rather than provide expert scientific guidance on the issues involved in establishing those standards.

The authority of the EPA and the NRC is preserved:

The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues . . . As with the Administrator, the provisions of section 801 are not intended to limit the Commission's discretion in the exercise of its authority related to public health and safety.

ENVIRONMENTAL PROTECTION AGENCY,  
Washington, DC, October 5, 1992.

Hon. BOB GRAHAM,

Chairman, Subcommittee on Nuclear Regulation, Committee on Public Works and the Environment, U.S. Senate, Washington, DC.

DEAR SENATOR GRAHAM: This responds to your request for the Environmental Protection Agency's (EPA) views on section 801 of the Conference Report on H.R. 776 regarding the Yucca Mountain nuclear waste repository.

Section 801 directs the Administrator of EPA to contract with the National Academy of Sciences (NAS) for a study of reasonable public health and safety standards for the storage and disposal of radioactive materials at the proposed repository at Yucca Mountain. It also requires the Administrator to promulgate public health and safety standards applicable to Yucca Mountain that are "based upon and consistent with the findings and recommendations" of the NAS.

It appears that the intent of section 801 is to provide for a review of the scientific foundation of EPA's draft standards for the disposal of radioactive materials. We recognize that EPA's draft standards have been controversial and our policy generally is to support open peer involvement in important science decisions. As such, EPA believes that a scientific study by the NAS could result in helpful input for improvement of standards for the storage and disposal of radioactive material.

The Agency taken note of the following language in the Statement of Managers of the Conference Report on H.R. 776:

Under the provisions of section 801, the authority and responsibility to establish the standards would remain with the Administrator, as is the case under existing law. The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues.

I assure you that, consistent with our important statutory and regulatory responsibilities, EPA will ensure that any standards for radioactive materials that are ultimately issued will be the subject of public comment and involvement and will be fully protective of human health and the environment.

Sincerely,

F. HENRY HABICHT II,  
Deputy Administrator.

Mr. WALLOP. Let me read the letter from PHIL SHARP to my friends from Nevada:

As you consider your vote on the cloture petition on H.R. 776, the Energy Policy Act, I hope you will look at the actual language of the conference report, and especially the Statement of Managers, on the Yucca Mountain issue.

As a conferee on this bill, I was unalterably opposed to legislating a new, weaker standard for waste disposal at Yucca Mountain. I would not have signed the conference report and managed it on the House floor had we done so.

Instead, we provided for a scientific review of all relevant questions, followed by a new rulemaking by EPA before a new standard is issued. Some opponents of the bill are arguing that we do not allow the National Academy of Sciences to review the "collective dose" issue. This is categorically false.

I hope the attached excerpts from the Statement of Managers will be helpful to you.

For a host of reasons, H.R. 776 is the most environmentally sound comprehensive en-

ergy bill we have ever considered. I hope you will vote to see that it becomes law.

Sincerely,

PHIL SHARP,  
Chairman.

Congressman SHARP's letter includes excerpts from the statement from the managers on H.R. 776, Mr. President.

The letter to Senator BOB GRAHAM, chairman of the Subcommittee on Nuclear Regulation is from the Environmental Protection Agency.

ENVIRONMENTAL PROTECTION AGENCY,  
Washington, DC, October 5, 1992.

Hon. BOB GRAHAM,  
Subcommittee on Nuclear Regulation, Committee on Public Works and the Environment, U.S. Senate, Washington, DC.

DEAR SENATOR GRAHAM: This responds to your request for the Environmental Protection Agency's (EPA) views on section 801 of the Conference Report on H.R. 776 regarding the Yucca Mountain nuclear waste repository.

Section 801 directs the Administrator of EPA to contract with the National Academy of Sciences (NAS) for a study of reasonable public health and safety standards for the storage and disposal of radioactive materials at the proposed repository at Yucca Mountain. It also requires the Administrator to promulgate public health and safety standards applicable to Yucca Mountain that are "based upon and consistent with the findings and recommendations" of the NAS.

It appears that the intent of section 801 is to provide for a review of the scientific foundation of EPA's draft standards for the disposal of radioactive materials. We recognize that EPA's draft standards have been controversial and our policy generally is to support open peer involvement in important science decisions. As such, EPA believes that a scientific study by the NAS could result in helpful input for improvement of standards for the storage and disposal of radioactive material.

The Agency takes note of the following language in the Statement of Managers of the Conference Report on H.R. 776:

"Under the provisions of section 801, the authority and responsibility to establish the standards would remain with the Administrator, as is the case under existing law. The provisions of section 801 are not intended to limit the Administrator's discretion in the exercise of his authority related to public health and safety issues."

I assure you that, consistent with our important statutory and regulatory responsibilities, EPA will ensure that any standards for radioactive materials that are ultimately issued will be the subject of public comment and involvement and will be fully protective of human health and the environment.

F. HENRY HABICHT II,  
Deputy Administrator.

I would say, Mr. President, that the EPA and Chairman PHIL SHARP, who is not known for a yielding view on issues regarding nuclear power, have made a statement that is worthy of the Senate.

And for this reason, I would say to my friend from Nevada that I am confident that nobody is riding roughshod over the health or safety of Nevadans; and for the other reasons that are contained in this bill that it is the first time the Nation has of being able to

look at comprehensive energy policy legislation that is both environmentally sound and great for America's energy future.

I hope that the Senate will vote for cloture, and that at long last we can send an energy policy strategy to the President's desk. All Americans deserve it.

Mr. BRYAN. Mr. President, I yield myself 2 minutes.

Mr. President, by way of response to my friend from Wyoming, all of the letters and proclamations in the world, signed by our colleagues, cannot change a single line of legislative text. Congressman SHARP is dead wrong. This is a fundamental change. And the proof of that, as a Member of this body I sat as an observer at the conference, and a House conferee said to the distinguished chairman of the Senate Energy Committee, the Senator from Louisiana, will you include a population standard in the legislative text? The answer was no.

All of the report language does not help one bit in terms of changing that language, and although it is true in a very narrow and technical sense, that EPA promulgates the standards, the ability to consider population health risk is constrained.

That is the cleverness of these words. EPA is bound by the NAS study. We do not have an objection to the NAS study. But EPA can go no further in the first instance than the NAS study and, second, may not consider the population standard. That is fundamentally wrong, Mr. President. I suggest to my colleagues that what is sauce for the goose, is sauce for the gander. The regulations that would relate to WIPP include these standards, which is the full range of protection. Why is that not good enough for Nevada?

I yield the floor.

Mr. JOHNSTON. Mr. President, did the Senator from Nevada [Mr. REID] wish to speak?

Mr. REID. No.

Mr. JOHNSTON. Mr. President, as I said earlier, under the unanimous-consent agreement, there will be one cloture vote, and if cloture fails on this bill, the bill and all it represents is dead.

Mr. President, this bill represents a legislative miracle, because we have been trying for many, many years to get a comprehensive energy policy. It has not been possible to do so, because there never seems to be a balance that could be struck. Some who say you ought to have something that produces energy would kill the energy efficiency and energy conservation provisions if they are all you have. And contrariwise, if the legislation does not contain the other balance, some who would want something in terms of energy efficiency and conservation, would prevent the bill from getting off of the ground.

I have been here now 20 years, Mr. President. We have yet to come up

with a comprehensive energy policy. This is it. This is it, Mr. President. It is the most environmentally sound bill ever considered on energy. It contains broad provisions for energy efficiency, everything from standards for electric motors to showerheads, to the use of energy in Federal buildings. For example, we have provisions here that you can contract to save energy in Federal buildings and actually be paid for it. Very innovative provisions. We have least cost energy strategies so that utilities will be encouraged to conserve energy as opposed to building new electric powerplants.

Those are very far-reaching provisions, Mr. President, on energy efficiency and conservation. We have new standards for construction of public buildings and private buildings. We have renewable fuels. We have clean coal provisions. We have the solar energy lobby as part of the coalition supporting this bill.

Mr. President, we have alternative fuels, such as ethanol, natural gas, electric cars, methanol; all of these new fuels will be provided for in a broad ranging program, including mandatory Federal alternative fuels programs. Starting next year, State and local governments will be included. Fuel providers will be included and, in addition, we provide for rulemaking with respect to private fleets.

We expect, Mr. President, that by the year 2000, there will be millions of alternative fuel vehicles on the road, mandated as a result of this legislation. It will solve the chicken-and-the-egg proposition with respect to alternative fuels. In the past, we have not had the cars manufactured because there was not the demand. There was not the demand because there were not the cars. There was not fueling because there was no demand for the fuel, because there were no cars.

We solve that chicken and the egg by mandating the manufacture and the use of these—not mandating manufacturing, but the demand, by requiring that the purchases be in gradually increasing increments.

Mr. President, we provide for a revolution in the generation of electric power, what we call PUHCA reform, Public Utility Holding Company Act reform. It fundamentally changes our electric power generation to a competitive market from one which has been a monopoly sole source market.

Mr. President, the way it has been, the way it is now, unless we pass this bill, is that if you are a public utility and you want to build a new plant, then your incentive is to build the biggest, most expensive plant you can, and you can put that in your rate base and get a guaranteed rate of return—no competition. No one else is permitted to come in and compete with you in your own territory. Consequently, it is highly inefficient, and the consumer

gets it in the neck. This provides for competition, Mr. President, so that public utility commissions will be able to know what the real cost of electric power is and insist that the consumer gets that low cost power.

We have uranium enrichment. We are turning over the Department of Energy's enterprise to a new quasi-public corporation which also will compete, not only to preserve the 5,000 American jobs, but hopefully to expand in international markets. In effect, that is a jobs program to preserve the jobs we have in America here today.

Mr. President, there are many other provisions of this bill. Suffice it to say that it is the most balanced, the most effective, the most comprehensive energy bill ever considered by either House of Congress. It is supported by President-elect Clinton, and it is supported by President George Bush. It is supported by the Secretary of Energy. It is supported by my dear friend Senator WALLOP on that side of the aisle, who was the cosponsor in getting this bill initially introduced. It is supported on both sides of the aisle.

Mr. President, it would be a tragedy if this legislation were not approved at this late hour, because of a miscomprehension about a provision which was overwhelmingly supported in the conference committee. This same issue of radionuclides was dealt with on the House floor. That is, an amendment to take out this provision with respect to radionuclides, it was defeated by a margin of over 3 to 1. There were over 300 votes against taking out this provision.

Mr. President, it is sound science. It is sound policy. Cloture should be invoked by an overwhelming margin, and we ought to pass this bill and send it to the President. The American people need it.

Mr. REID addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Nevada [Mr. REID].

Mr. REID. In responding to the initial statement made by the manager of this bill, I note that scientists say that there is 1.2 million more curies of radiation in the proposed nuclear repository waste than in testing. That is very logical, because in nuclear testing versus nuclear waste, you have a situation where when there is a nuclear test, the materials are fused into glass by temperatures exceeding 1 million degrees. So that is easy to determine the difference between nuclear testing and a nuclear repository.

I also say, Mr. President, that it seems to me that the one thing—I mentioned this earlier—the President should recognize is the fact that this bill contains new taxes. That, in recent weeks, has been a detriment to getting other bills signed. I will be interested to see what the President and his advisers do on this matter.

Mr. JOHNSTON. Mr. President, how much time remains?

The PRESIDING OFFICER. There are 29 minutes for the Senator from Louisiana; 32 minutes and 20 seconds remain on the other side.

Mr. JOHNSTON. Mr. President, I yield 2 minutes to the Senator from New Mexico.

Mr. DOMENICI. Mr. President, there are so many positive things in this bill, along with a few that are not so positive, that I can probably speak for a couple of hours. But I am going to settle for 2 minutes and just speak on one portion of the bill, and that has to do with the alternative minimum tax which was imposed on those who went out into the oil patch and natural gas patch and took risks to drill wells to try to find oil for this country.

That alternative minimum tax put on in 1986 became so punitive that the resources that were going to go to oil patch so that holes could be drilled, rigs could be put to use, work men and women in America put back to work, and, yes, find American oil, that tax got so onerous that there is no capital flowing into oil patch United States, Louisiana, New Mexico, Colorado, Kansas, Wyoming, wherever it is. It is dried up, because American investors do not want to invest, take a risk and then have the earnings taxed punitively. While others would be paying the average income tax, this tax is as high as 50, 60 and in some cases 67 percent. Absolutely, it is ludicrous, counterproductive, anti-jobs, anti-American oil production.

Finally, Mr. President, we have arrived at common sense and changed that so that at least those who want to produce American oil have a reasonable opportunity to get investors to invest, take a risk, and that will indeed cause more rigs to go into the field, more jobs in oil patch and, yes, what we all want, more American oil produced rather than less.

I commend the President for being for this, the House leadership, and the tax writing committee, the same here and obviously the general conferees who worked so hard to get this bill.

I thank the Senator from Louisiana for the time and I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. BRYAN addressed the Chair.

The PRESIDING OFFICER. The Senator from Nevada is recognized.

Mr. BRYAN. Mr. President, the distinguished senior Senator from Florida is to be here in just a moment.

Let me take just 1 minute to talk about one other aspect of this. Not only will this fundamentally alter the public health and safety standards, but this will change the fundamental premise of the nuclear waste policy, all without hearing, without testimony, and without an opportunity for meaningful debate.

The original act contemplated that the site itself, wherever it was to be located within the engineered barriers and natural geological barriers in place, would be sufficiently safe for a period of 10,000 years and therefore would not require human monitoring after the site was filled with the nuclear waste.

In this conference report, with the provision that was added at the last minute, the original act is reversed by 180 degrees, and now we have a concept in which the standard is so diminished, so lowered, that indeed what is contemplated is monitoring on an ongoing basis, if you will, a DOE watch man at the site for a period of 10,000 years. This is an agency whose monitoring track record at other waste sites for only 40 years may very well cost the American taxpayer \$100 billion in a host of other sites.

Mr. REID. I yield to the Senator from Florida [Mr. GRAHAM] 10 minutes.

The PRESIDING OFFICER (Mr. SIMON). The Senator from Florida is recognized for 10 minutes.

Mr. GRAHAM. Mr. President, at this time I would like to explain my particularly strong opposition to section 801 of this legislation. This section would require the National Academy of Sciences [NAS] to conduct a study on the appropriate regulatory standards for a high-level nuclear waste repository at Yucca Mountain, NV. This section would then require the Environmental Protection Agency [EPA] and the Nuclear Regulatory Commission [NRC] to rewrite the environmental and standards and licensing requirements for a repository in a manner consistent with the findings and recommendations of the NAS.

I submit that this section is built upon poor science. It is poor public policy. It is a radical departure from the current scientific and political consensus regarding the technical and procedural bases for this Nation's Nuclear Waste Program. It is fundamentally unfair to the present citizens of the State of Nevada and to future generations of Nevadans. The implementation of this approach will be fraught with technical and legal challenges.

The manner in which this legislation was considered sends the message that the procedures and standards for the protection of the public health and safety for nuclear waste disposal are just items to be horse traded in the political process. This proposal emerged from a closed meeting, with only a small group of Members of Congress involved. It was adopted as part of a compromise energy bill in which the Members of Congress and their constituents had many interests other than nuclear waste disposal. No hearings were conducted. There is no record as to why these provisions were adopted. No public comments were considered. None of the Federal agencies with expertise in these issues was consulted.

In addition to undermining confidence in the legislative process, this legislation will fuel cynicism regarding the integrity and independence of the Federal agencies responsible for establishing and enforcing the standards for the protection of the public health and safety. This legislation compromises the integrity and independence of the Environmental Protection Agency [EPA] and the Nuclear Regulatory Commission [NRC] by pressuring those agencies to alter their public health and safety standards to make sure that Yucca Mountain will be found suitable as the site of the repository. As the Queen said to Alice in Wonderland, "Sentence first—verdict afterwards."

Adoption of this legislation most likely will have an effect that is the opposite of what its proponents would like to see. Rather than expedite the process for finding a permanent disposal site for high-level nuclear waste, this hasty, ill-considered, radical, and unfair restructuring of nuclear waste policy is likely to create additional extensive and enduring turmoil in the program. I do not believe that the Nuclear Waste Program will succeed under the approach that the Congress is adopting today.

THE PREMISE OF THIS APPROACH IS FLAWED  
THE PROBLEMS WITH THE PROGRAM ARE DUE TO  
DOE MISMANAGEMENT

The redirection of the nuclear waste program in this section has arisen because Congress is frustrated with the pace and cost of the current program. The costs of the program have escalated tremendously since the Nuclear Waste Policy Act was enacted in 1982. Over the same period, the pace of the program has slowed tremendously. The cause of the rising costs and lengthy delays is DOE's mismanagement of the Nuclear Waste Program. Instead of addressing this problem, however, this legislation seeks to alter the public health and safety standards that the program must meet. This approach will do nothing to solve the current problems with the Nuclear Waste Program. Rather than containing a cure for DOE's troubles, this approach is just another symptom.

Over the past decade the projected cost of site characterization has climbed from \$60 million in 1982, to over \$1 billion in 1987, when the Nuclear Waste Policy Amendments Act was enacted, to approximately \$2 billion in 1991, to approximately \$6 billion in 1992.

Over this same period the accomplishments of the program have remained at a minimal level. Over \$1 billion has been spent on studying Yucca Mountain. There is almost nothing to show for this. Hardly any progress has been made on either surface or underground characterization of the site. DOE has been conducting surface characterization activities for just over a year and is still over a year away from starting underground characterization.

The lack of any progress in underground characterization activities is particularly dismaying. DOE supported the 1987 amendments to the Nuclear Waste Policy Act in order to expedite the start of underground characterization and to save costs. In 1987 DOE told the Congress that it would be ready to begin sinking the exploratory shaft for underground characterization activities in the fourth quarter of 1988. DOE stated that the 1987 amendments would enable it to commence underground characterization in 1988.

It is now October 1992. No shaft has been dug. Costs have risen almost six-fold. The latest projected date for sinking the exploratory shaft is November 1993.

At the time of the passage of the 1987 amendments, DOE projected that the date of operation of repository would be 2003. This was 5 years later than the 1998 date originally projected in the Nuclear Waste Policy Act of 1982. DOE now projects that the repository will not be ready for operation until 2010. Even this date is optimistic. In reality, the program could take an additional 10 to 25 years.

In sum, a lot of money has been spent, but hardly anything has been done.

DOE has been consistent in its response to questions and criticisms about the cost escalations and the delays in the program. DOE's consistent response has been to blame others. For the delays in surface characterization DOE has blamed Nevada. For the delays in underground characterization it has blamed Congress. For sloppy management and worthless technical work, it has blamed the NRC. For the cost escalations and schedule delays, it has blamed the environmental laws, the EPA, and the NRC.

The record shows, however, that DOE management, rather than any of these regulatory boogymen, is at fault for the poor record of the program.

First, DOE has blamed the State of Nevada for the delay in the start of surface characterization. In particular, DOE has claimed that the failure of Nevada to issue environmental permits more quickly has been the cause of delay in the program. Since 1990 DOE has been advocating legislation to preempt Nevada's environmental permitting authority. Hence, in April 1991, DOE stated that "The principal obstacle to \* \* \* progress [in the nuclear waste program] is currently the continuing inability of DOE to undertake needed activities incident to characterizing a candidate site for a potential geologic repository due to the actions of the State of Nevada." [Nuclear Waste Disposal Issues: Hearing Before the Senate Subcommittee on Nuclear Regulation of the Committee on Environment and Public Works, 102d Cong., 1st sess. 100 (statement of Hon. John Bartlett, Director, Office of Civilian Radioactive Waste Management).]

The record shows, however, that DOE was not ready to begin all but a few surface characterization activities until March 1991. It took until March 1991 for DOE to establish an adequate quality assurance [QA] program. An adequate QA program is necessary in order to be able to use the information obtained from characterization activities in a licensing proceeding.

According to both the Nuclear Regulatory Commission and the General Accounting Office [GAO], only two specified trenching activities by DOE contractors could have been conducted prior to March 1991. Even these activities could not have been conducted until October 1990. Moreover, because DOD's QA program had not been accepted until March 1991, prior to this date these contractor activities could have been conducted only without DOE coordination. [Nuclear Waste: DOE's Repository Site Investigations, a Long and Difficult Task, U.S. General Accounting Office, GAO/RCED-92-73.]

Thus, DOE was not yet ready to conduct most of the activities for which it has blamed Nevada for delaying. It is DOE, rather than Nevada, which is responsible for most of the delay in commencing surface characterization.

Second, DOE has blamed the NRC and EPA for mistakes in its core sampling program. Upon until 1987, DOE has spent \$48 million on drilling holes at Yucca Mountain to obtain core samples. These core samples were contaminated with fluids during the drilling process and so would be unusable in the licensing process for the site. Additionally, the U.S. Geological Survey, a DOE contractor responsible for managing all core samples, lost track of from where the samples had been obtained. These samples also are unusable in the licensing process.

DOE has blamed the mistakes in its core sampling program on a changing regulatory environment. In April 1991, Dr. Bartlett testified to the Subcommittee on Nuclear Regulation that the failure of the core sampling program to meet quality assurance requirements was because "the regulatory requirements for the program, including a measure of the quality assurance requirements were not in place until 3 years [after the passage of the Nuclear Waste Policy Act of 1982]. \* \* \* So during all of that period, if you will, the program was not operating with specific requirements in terms of technical activities and requirements."

The record is to the contrary. The NRC had issued draft quality assurance guidelines in 1981. DOE knew or should have known of these requirements. DOE ignored them. According to GAO, in 1988, a DOE quality assurance audit team reviewing the cores obtained from 1981 to 1983 concluded that "there had been a projectwide failure to implement quality assurance require-

ments and to understand the role of the quality assurance program in licensing." Additionally, according to GAO, from 1983 to 1986 DOE contractors had identified shortcomings in the core sampling program, yet DOE chose to continue its work despite these deficiencies. DOE has now chosen not to use the samples obtained during this period to support its license application.

Thus, it is not the changing regulatory requirements of NRC, but rather DOE's failure to follow the NRC's requirements, that is responsible for the rework in the core sampling program. Again, DOE has misleadingly blamed others for its own mistakes.

Third, DOE has blamed the Congress for the delay in the start of the construction of the exploratory shaft facility [ESF]. The ESF is necessary to conduct underground characterization activities. In 1987, DOE represented to the Congress that it could start constructing the ESF in late 1988. The projected start of construction is now November 1993.

DOE says that it is the fault of the Congress that construction of this facility will not commence this year. On March 31, 1992, in testimony presented to the Senate Committee on Energy and Natural Resources, DOE stated that—

One area in which we have not recently made progress as planned is our schedule for start of construction of the ESF. The schedule for start of ESF construction was delayed by 1 year, from November 1992 to November 1993, as a result of a fiscal year appropriation that was \$30 million less than the \$305 million requested.

The record reveals that DOE rather than the Congress or anyone else is solely responsible for the delay in ESF construction. According to GAO's testimony before the Senate Subcommittee on Nuclear Regulation in April 1991, inadequate design work by DOE has been responsible for the delay in the program:

DOE spent about \$49 million, or 10 percent of total project costs, on exploratory shaft facility activities during fiscal years 1988 through 1990. In fiscal years 1988 and 1989, over \$36 million was spent on management and integration activities primarily related to developing preliminary and more advanced designs of its proposed facility. These design activities were stopped late in early fiscal year 1990 because of external criticism, and it is questionable whether this work will be usable for constructing the ESF. As a result, DOE has begun studying alternative facility designs. Depending on the final selection of a new facility design and construction method, according to the manager of the project, significant modifications to the original design may be required; however, the extent and cost of these modifications cannot be determined at this time.

In 1990, DOE spent over \$12 million on exploratory shaft facility activities, including about \$4 million on the study of facility design and construction activities.

The Nuclear Waste Technical Review Board was a significant source of the

criticism of DOE's original ESF design. According to DOE, the redesign activities delayed the ESF construction from November 1989 to November 1992. The redesign activities have cost at least \$40 million.

All of the added costs and the delay in ESF construction from 1988 to November 1992 are due to DOE's mistakes and inadequacies. It is disingenuous for DOE to now blame Congress for any additional delay due to the absence of new funds to cover the costs of DOE's mistakes during the previous 4-year period.

Most recently, and perhaps most outrageously, DOE is now blaming NRC and EPA requirements, and all of the environmental laws, for the cost escalations and programs delays over the past several years. At the Senate Energy Committee hearing in March of this year, the chairman of the committee, Senator JOHNSTON, asked Dr. Bartlett why the projected cost of site characterization had risen astronomically over the past decade:

Senator JOHNSTON. Now what fundamentally has changed? Has it been the NRC or the EPA or DOE or what?

Dr. BARTLETT. Two things, Mr. Chairman. One is, let me call it development of understanding of what it is going to take in the way of information to comply with those regulatory requirements. We have over 2,500 of them, collectively, as well as the stringency of the safety requirements. That is one thing that we have learned, dialog in the technical community. NRC says, well here is what I think you need to do.

Senator JOHNSTON. \*\*\* Now is it the NRC driving the program? Is the NRC unreasonable? Are they going to come up with that many more regulations? Is this just a way to perpetuate thousands upon thousands of bureaucrats and jobs? I mean what is it? We have got to have a better explanation for this thing.

Dr. BARTLETT. The Nuclear Work Proliferation Act, Mr. Chairman, not the NRC. Although I will say, in my opinion and I think it is more than an opinion, the cost, the activities, the schedules are, in fact being driven by compliance with regulatory requirements, a host of them.

There are two critical factors which are leading to these cost factors. One is the stringency of the EPA requirements. That is requirements. That is the master requirement, that is the one that is the difference between standing up and sitting down. And then the NRC, on top of that, says here is what you have to do to get in our comfort zone. A 1,000-year canister and prove it, and also now here is what you have to do in order to demonstrate, broadly, this compliance.

Now the other cost factor is the complexity, the geologic complexity of the Yucca Mountain site. It is not a monolith. As you saw from Mr. Gertz's picture, it is a very complicated geology, it has a very complicated history. That has to be characterized well enough so you have defensible information in this licensing arena against these standards. The EPA standard is a factor of a million, roughly, more stringent than all the other standards we humans normally accept for protection of health and safety in radiological conditions.

DOE again bluntly blamed the NRC and EPA regulations for the cost escalations in its responses to written questions following this hearing:

Question 7. In your statement, you said that site characterization is now estimated to cost \$6 billion. Five years ago, the cost was estimated at close to \$2 billion. Five years before that, the cost was estimated to be between \$40 million and \$60 million. What has caused this severe escalation of costs? \*\*\*

Answer. The increase of estimated site characterization costs can be attributed to regulatory requirements and the required interactions with external organizations.

Here again DOE misrepresents the record. In response to posthearing questions following this hearing, another witness, Mr. John T. Kauffman, chairman of the board and chief executive officer of Pennsylvania Power and Light, testifying on behalf of the American Nuclear Energy Council, the Edison Electric Institute, and the Utility Nuclear Waste and Transportation Program, disputed DOE's attribution of increased costs solely to regulatory requirements:

According to DOE, there are 25 specific items that make up the base site characterization effort totaling \$122 million in fiscal year 1992. This would seem to be a disproportionately high percentage of the overall program costs and the industry is concerned that the money could be better spent. \*\*\* There is no one element greater than \$12.5 million and most are about \$5 million. Each one needs to be reviewed objectively against the goals of the program and eliminated if not needed.

DOE states that many of these cost [sic] are associated with having to meet numerous regulatory requirements on an ongoing basis. However, in assigning costs to regulations from the list of 25 items, it appears that less than half of \$122 million is being spent to meet regulations. At least half of the costs appear to relate to activities not associated with regulations.

Thus, the nuclear industry disagrees with DOE's attribution of its costs to regulatory compliance.

Ivan Selin, the Chairman of the Nuclear Regulatory Commission, has sharply disagreed with DOE for blaming NRC regulations for cost increases. In June, following the hearing at which DOE blamed NRC for the cost increases, Dr. Bartlett briefed the NRC on the status of the DOE program. Mr. President, I ask unanimous consent that a copy of an article that appeared in the Las Vegas Review-Journal of Thursday, June 25, 1992, be printed in the RECORD. In correspondence with the chairman of the House Committee on Energy and Commerce, Dr. Selin confirms that this article accurately reflects the substance of the briefing. I also ask that the correspondence between Chairman DINGELL and Chairman Selin be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. GRAHAM. According to the article "Selin also chided Bartlett for

blaming NRC regulations for skyrocketing costs in developing the Yucca Mountain repository." It then quotes Chairman Selin, "You haven't come to NRC and said you disagree with the procedures. The Department of Energy has not come up with suggestions on how to reduce cost." Incredibly, "Bartlett denied he had blamed the NRC for escalating costs," the article reports. ("No, I'm not saying that it's causing problems.")

In his letter to Chairman DINGELL, Chairman Selin stated:

As an independent regulatory agency, the NRC is committed to ensuring the protection of public health and safety while avoiding new and eliminating existing requirements that may be either unnecessary or unnecessarily burdensome. \* \* \*

During the June 24 briefing, the Commission encouraged Dr. Bartlett to bring to our attention proposals for cost cutting. Since the briefing, Dr. Bartlett has not brought to our attention any proposal for cutting costs at the Yucca Mountain project. NRC stands ready to meet and discuss any specific proposal that would allow DOE to run a more efficient and effective repository program consistent with ensuring the protection of the public health and safety.

The electric and nuclear utility industries dispute DOE's attribution of program costs to regulatory requirements. The NRC disputes DOE's assertion that NRC's regulations are the cause of the huge increase in the projected cost of characterization. Considering DOE's record of blaming others for its own mistakes, DOE's position on this issue does not carry credibility in the face of these assertions to the contrary.

We have seen, therefore, that DOE falsely has blamed everyone else for all of its troubles in implementing this program. As GAO reports and congressional hearings have demonstrated, the foremost cause of rising costs and lengthy delays in the nuclear waste program is the DOE's mismanagement of the nuclear waste program. Neither the State of Nevada, nor the EPA regulations, nor the NRC regulations, nor the environmental laws are to blame for the problems of the program to date. By focusing attention on other extraneous issues and away from this fundamental cause, this bill disserves the interest of the Nation in terms of providing for a safe and effective method of disposing of our high-level nuclear waste.

#### THE CURRENT STANDARDS ARE ACHIEVABLE

With respect to the future of the program, the nuclear industry and DOE have stated in testimony to the Congress that they believe that the repository program as currently structured can succeed. They believe that a repository at Yucca Mountain could meet the current EPA and NRC regulations. If DOE and the nuclear industry believe the present program can succeed, then it is not apparent why there is a need for this legislation to radically alter the program.

DOE and the nuclear industry have expressed confidence that the current Nuclear Waste Program, including the current regulatory environment, will succeed in response to some very specific skepticism to the contrary. In August 1990, the Board on Radioactive Waste Management of the National Academy of Sciences issued a report very critical of the current program. The report was entitled "Rethinking High-Level Radioactive Waste Disposal." The Subcommittee on Nuclear Regulation conducted a hearing on the nuclear waste program shortly after this report was issued. At this hearing, DOE and the nuclear industry stated that the major problems in the waste program as identified by the Board report had been addressed.

The NAS Board report had pessimistically concluded that "the U.S. program, as conceived and implemented over the past decade, is unlikely to succeed." The Board stated that "geologic models, and indeed scientific knowledge generally, are being inappropriately applied in the U.S. radioactive waste repository program."

The basic reason for this pessimism is that the Board believed that the program could not deliver the technical certainty that the program as currently structured will require in order to allow for the licensing of a repository. The NAS Board stated that:

The Government's HLW Program and its regulation may be a 'scientific trap' for DOE and the U.S. public alike, encouraging the public to expect absolute certainty about the safety of the repository for 10,000 years and encouraging DOE program managers to pretend that they can provide it.

The Board recommended a more flexible approach for the repository program to accommodate the uncertainties that the Board believes inevitably will arise in the course of this first-of-a-kind technical and political undertaking. NAS stated that there is a "need to revise both technical design and regulatory criteria as more information is discovered."

The Board made a number of additional recommendations. These included reconsideration by EPA of its performance standards, the use of quantitative probabilistic release criteria in the standard, and the use of only a dose requirement in the standard. The Board suggested that NRC reconsider its detailed licensing requirements, including the use of engineered features, the level of statistical or modeling evidence required, and how design changes can be accommodated during construction of the repository.

Mr. President, I ask unanimous consent that the full study by the Board and its recommendations be included in the record following my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. GRAHAM. In August 1990, the Subcommittee on Nuclear Regulation,

which I chair, conducted a hearing on the Federal program for the disposal of spent nuclear fuel and high-level radioactive waste. At this hearing the subcommittee examined the Board's report. The subcommittee asked the DOE, the NRC, the EPA, the nuclear industry, the National Association of Regulatory Utility Commissioners [NARUC], and the State of Nevada to comment on the Board report.

DOE stated its confidence in the program as follows:

The [Board's] position statement is based largely on an assessment of the high-level radioactive waste management program as it was two years ago. Significant changes in the program were initiated last fall by the Secretary, as reflected in the November 1989 "Report to Congress on Reassessment of the Civilian Radioactive Waste Management Program." These and other initiatives are being implemented by the program with the full support of the Secretary. The current approach taken by the Department is not, therefore, the approach actually assessed by the [Board]. Although the program faces many challenges, the Department does not believe that the approach currently being taken is unlikely to succeed.

The EPA also believes the program can succeed:

There is no doubt that the country has set for itself a considerable challenge in seeking to establish a high-level radioactive waste repository. In our evaluation of the regulatory aspects of this issue we do not see the system as broken beyond repair. We believe that it is more appropriate for DOE, as program manager, to comment on the likelihood of success of the current program. We believe that our original 1985 standards would be implementable and we anticipate that any changes resulting from our revised regulation, based on comments to date, will result in regulations that support the development of a high-level waste disposal program that is technologically sound and protective of human health.

We recognize that flexibility is necessary to address unforeseen circumstances, and we believe that the regulatory system allows such flexibility.

The nuclear industry agreed that "[t]he program can succeed."

Although DOE and the nuclear industry believe that the current program can succeed, they also have stated that their belief that the EPA's standards are unduly restrictive. For example, DOE believes the EPA's containment requirements may be too stringent. At the subcommittee's hearing DOE stated that it is "concerned with the implementability of the containments [sic] requirements as they are being interpreted. A literal interpretation of the requirements would preclude the use of qualitative judgment by the implementing agency as intended by EPA. Without a significant measure of qualitative judgment allowed by the rule, the combination of the quantitative, probabilistic nature of the standard and the stringency of the numerical limits for allowable releases would make it difficult to demonstrate compliance at any site."

The EPA containment standards criticized by DOE are designed to limit the total projected release of specific radionuclides over a 10,000-year period. Total releases within these limits, from both anticipated and unanticipated events, are projected to cause no more than 1,000 premature deaths over the entire 10,000-year period. Compliance with the containment requirements must be demonstrated in a probabilistic manner. Cumulative releases must have a probability of less than 1 chance in 10 of exceeding the limits, and must have a probability of less than 1 chance in 1,000 of exceeding 10 times the limits.

The nuclear industry also has expressed its concern over the stringency of the EPA containment standards. Additionally, the Nuclear Waste Technical Review Board questioned the conservatism of the EPA standard. It recommended that the limits in the standard "be reevaluated in light of current environmental and regulatory requirements." NRC has commented that EPA should "reexamine the stringency of the standard in light of other risks experienced by society and risk levels used as the basis for other safety standards."

However, the concern over the implementability of the EPA containment standards has not been expressed only with respect to the potential repository site at Yucca Mountain. This concern has not been expressed for the other potential site for the disposal of highly radioactive nuclear wastes, the Waste Isolation Pilot Plant [WIPP] site in New Mexico.

The WIPP facility is over 2,000 feet below ground and consists of several miles of mined drifts in a geologically stable salt formation. WIPP is intended to be used for the permanent, deep geologic burial of transuranic wastes generated by the Department of Energy's nuclear weapons complex.

Until now, the EPA's generally applicable environmental standards for the release of radiation from the disposal of high-level and transuranic nuclear wastes applied in the same manner to both the Yucca Mountain site and the WIPP site. Both sites had to comply with the same EPA standards.

According to the EPA, "Early performance assessments conducted for the Department of Energy on the Waste Isolation Pilot Plant facility in southeastern New Mexico, show 'reasonable confidence that compliance with the standard is achievable. (See 'Sandia Status Report: Potential for Long-Term Isolation by the WIPP Disposal System, June 1990')."

More recently, in December 1991, Sandia National Laboratories issued a preliminary evaluation of the ability of WIPP to comply with the EPA standards. The Sandia report concluded that, "Results of the 1991 preliminary performance assessment do not indi-

cate potential violations of subpart B of the standard and support the conclusion based on previous analyses, including the 1990 preliminary performance assessment, that reasonable confidence exists that compliance with [the EPA standard] can be achieved."

The selective concern over the stringency of the EPA standard indicates that perhaps it is the site, rather than the standard, which may be defective. If compliance with the EPA standard is achievable at a stable salt site like WIPP, but less certain at geologically complex site like Yucca Mountain, then perhaps Yucca Mountain is not an ideal site.

At the subcommittee's hearing in 1990, I asked this question:

Senator GRAHAM. If the panelists believe that the New Mexico project, the WIPP project, can meet EPA standards, with the possible exception of the problem of human intrusion, then why do you believe that there is a problem with the standards at the Yucca Mountain site? Why is there a problem with the site rather than the standards?

Mr. LOUX (Executive Director, Nuclear Waste Project Office, State of Nevada). Mr. Chairman, if I might just offer, parenthetically, at the recent symposium that the National Academy conducted earlier this month, several Department of Energy program people associated with Yucca Mountain stated their belief that the EPA standards could be met at Yucca Mountain in some cases by several orders of magnitude, in conclusion with the statements by some DOE people that they could be met at WIPP as well and Nevada is sort of asking the same sort of question.

Senator GRAHAM. Is there any more comment on that question?

Mr. BARTLETT. Yes, Mr. Chairman, if I may. I would concur with what Mr. Loux said. It is not appropriate to characterize the concern as whether or not Yucca Mountain would meet the standard at this point because we don't have a sufficient information base. There is too high a degree of uncertainty at this stage about what the properties and characteristics of the Yucca Mountain site are and how they would be relevant to the standards as they would be applied to an evaluation for licensing purposes, and initially, as appropriate to a suitability evaluation.

Thus, in reality, despite DOE's criticisms of the containment standards, DOE does not believe that the current EPA standards are not achievable at Yucca Mountain. Additionally, DOE believes these standards are achievable at WIPP.

The Nuclear Waste Technical Review Board, despite its criticisms of the EPA containment standards, nonetheless also believes the current standards are achievable at Yucca Mountain. In response to written questions following the Senate Energy Committee's March 1992 hearing, the NWTRB stated:

Although predicting the performance of a repository at Yucca Mountain over the next 10,000 years will be a significant challenge, the Board is optimistic that adequate and reasonable technical and scientific judgments about the geologic barriers to radionuclide migration can be made to support

conclusions on repository performance for 10,000 years within the current regulatory framework.

\* \* \* \* \*

At this point, the Board is not aware of any technical problems such that the proposed repository or other elements of the storage, transport, and disposal system are "destined to fail" in obtaining regulatory approval.

In 1987, when Congress was considering the legislation which selected Nevada as the sole site to be characterized, DOE testified before the Congress that it was "not conceivable that this site would fail to meet the NRC and EPA standards." The same EPA and NRC regulations that are in place today that were in place when this statement was made in 1987. To date, DOE has never informed the Congress that the confidence it expressed in 1987 was erroneous.

Thus, the DOE, the Nuclear Waste Technical Review Board, the nuclear industry, and the EPA believe that the current program, which includes the current EPA and NRC regulatory requirements, can succeed. There are critics of certain aspects of these requirements, but none of these critics have stated any belief that these criticisms constitute fatal flaws in the program.

In sum, the NRC and EPA regulatory requirements have not been the cause of the problems in DOE's program. The DOE is the problem with the DOE program.

Hence, the solution in this legislation to the cost increases and schedule delays in the DOE program does nothing to address the cause of those costs and delays. The cause of the program's problems is the management and attitude of DOE. To fix the program, the Congress should consider removing the program from DOE, changing the management structure of the program within DOE, adopting a more flexible schedule for the operation of the repository, and other possible structural changes to the program that may be suggested. This legislation, unfortunately, does nothing to change the management or structure of this program.

Instead, this legislation will encourage a controversial rewriting of the EPA and NRC standards for the protection of the public health and safety. The existing problems in the program will persist, and will be compounded by the new contentious issues introduced by this legislation.

I would now like to address those new issues.

THE SUBSTANCE AND PROCEDURE OF THIS PROVISION IS FLAWED

The approach in section 801 of this legislation on several scientific issues represents a significant departure from the current scientific consensus on those issues. The procedures specified in section 801 to consider or encourage

the adoption of these controversial scientific positions raise a host of difficult issues of constitutional and administrative law. This section will entangle the high-level waste program in a legal and scientific quagmire for years.

#### TECHNICAL ISSUES

One major technical problem with this legislation is that it attempts to increase the reliance of the repository program on postclosure oversight to protect the public health and safety. This attempt squarely conflicts with the current scientific consensus on how best to protect the public health and safety over the long term from highly radioactive wastes.

Section 801(b)(2) of the bill states:

The Commission's requirements and criteria shall assume, to the extent consistent with the findings and recommendations of the National Academy of Sciences, that following repository closure, the inclusion of engineered barriers and the Secretary's postclosure oversight of the Yucca Mountain site, in accordance with subsection (c), shall be sufficient to—

(A) prevent any activity at the site that poses an unreasonable risk of breaching the repository's engineered barriers; and

(B) prevent any increase in the exposure of individual members of the public to radiation beyond allowable limits.

Subsection (c) then directs to Secretary of Energy to conduct postclosure oversight activities.

This emphasis on postclosure oversight is technically unsound. Both EPA and NRC have determined that postclosure oversight is not reliable for more than 100 years. Current NRC and EPA regulations do not rely on postclosure oversight to protect the public health and safety.

The current EPA high-level waste standard states that—

Active institutional controls over disposal sites should be maintained for as long a period of time as is practicable after disposal; however, performance assessments that assess isolation of the wastes from the accessible environment shall not consider any contributions from active institutional controls for more than 100 years after disposal.

NRC's low-level radioactive waste disposal standard similarly limits reliance on institutional controls to 100 years. According to the NRC, "a clear consensus was developed which supported the 100-year limit. The Commission has not seen any compelling reason to change its view on the 100-year limit." (Supplementary Information for Part 61 Final Rule, 47 Fed. Reg. 57,446, Dec. 27, 1982).

Mr. President, I ask unanimous consent to enter into the record material that was provided to the subcommittee concerning the basis for the 100-year limit for the period of institutional controls. The NRC states in this document that, "Most observers have accepted the idea that long-term use of 'active' institutional controls is not a reliable way to achieve safe waste disposal."

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. GRAHAM. To the extent that this legislation would require reliance upon institutional controls for more than 100 years, this legislation would impose upon the repository program a methodology for waste disposal that most observers believe is not reliable to protect the public health and safety.

Another major problem with this legislation is that it appears to diminish reliance upon geologic barriers in the repository system. This also squarely conflicts with the current scientific consensus regarding how to best protect the public health and safety.

Section 801(b)(2) directs the NRC to assume, to the extent consistent with the findings and recommendations of the NAS, that following repository closure, the inclusion of engineered barriers and postclosure oversight of Yucca Mountain shall be sufficient to prevent either an unreasonable risk of a breach of the repository or any exposure of individuals to radiation in excess of the allowable limits.

To the extent that this provision would require NRC to assume that engineered barriers and postclosure oversight are sufficient, without the consideration or use of geologic barriers as an integral component of the repository system, this provision makes no technical or legal sense. What is the purpose of the geologic barriers, which are referenced in section 801(b)(2)(A), if the engineered barriers and postclosure oversight are to be assumed to be sufficient to prevent any breach of the repository?

According to the NAS Board report I discussed earlier:

There is a strong worldwide consensus that the best, safest long-term option for dealing with HLW is geological isolation. High-level waste should be put into specially designed and engineered facilities underground, where the local geology and ground water conditions have been chosen to ensure isolation of the waste for tens of thousands of years or longer, and where waste materials will migrate very slowly if they come into contact with the rock.

The United States, after careful and deliberate consideration by both the technical community and the Congress, has adopted deep geologic disposal as the preferable approach to protect the public over the long-term from spent nuclear fuel and high-level nuclear waste.

In 1978, President Carter created an Interagency Review Group [IRG], consisting of representatives from 14 Federal agencies, to make recommendations for Federal policy for the long-term management of nuclear wastes. After examining a variety of technologies, the IRG concluded that, "Disposal in mined repositories is the nearest-term option."

The IRG final report recommended that a system of multiple barriers be

structured to isolate the high-level wastes from the environment. These barriers would include the waste form itself, other engineered barriers, and the natural repository environment.

With respect to the type of barriers to be used to isolate the wastes, the IRG stated as follows:

The IRG review identified a number of important technical findings which it believes to represent the views of a majority of informed technical experts.

A systems approach should be used to select the geologic environment, repository site, and waste form. A systems approach recognizes that, over thousands of years, the fate of radionuclides in a repository will be determined by the natural geologic environment, by the physical and chemical properties of the medium chosen for waste emplacement, by the waste form itself and other engineered barriers.

In the Nuclear Waste Policy Act of 1982 [NWPA] Congress adopted the IRG's recommendations concerning deep geologic disposal and multiple barriers. The NWPA required DOE to conduct two searches for two geologic repositories. Section 121(b) of the NWPA states that the NRC's licensing requirements and criteria "shall provide for the use of a system of multiple barriers in the design of the repository. \* \* \*" Accordingly, in conformance with the global scientific consensus and the direction in section 121(b) of the NWPA, current NRC and EPA regulations rely on engineered and geologic barriers, and not on postclosure oversight.

Hence, to the extent that this legislation is interpreted to require the NRC to issue requirements that assume that engineered barriers and postclosure oversight are sufficient, without reliance on geologic barriers, the legislation contradicts a worldwide and national scientific consensus that engineered barriers and geologic barriers should be the fundamental elements of a repository for long-term isolation of nuclear wastes from the human environment.

Standards that rely upon engineered barriers and post-closure oversight are more appropriately applicable to a storage facility for nuclear wastes rather than a disposal facility. It is clear, however, that this legislation does not reference and is not intended to apply to a storage facility for nuclear wastes. It clearly is intended to apply to a geologic repository, where wastes are intended to be disposed of permanently.

This is obvious from the use of the term "repository" in several instances. The section refers to "the repository at the Yucca Mountain site," "the repository's engineered or geologic barriers", and "radioactive materials stored or disposed of in the repository." The NWPA defines "repository" as "any system licensed by the Commission that is intended to be used for, or may be used for, the permanent deep geo-

logic disposal of high-level radioactive waste and spent nuclear fuel, whether or not such system is designed to permit the recovery, for a limited period during initial operation, of any materials placed in such system. Such term includes both surface and subsurface areas at which high-level radioactive waste and spent nuclear fuel handling activities are conducted."

The term "disposal" is defined as "the emplacement in a repository of high-level radioactive waste, spent nuclear fuel, or other highly radioactive material with no foreseeable intent of recovery, whether or not such emplacement permits the recovery of such waste."

Thus, this section pertains to standards for a deep geologic repository for the emplacement of nuclear waste with no intent of recovery. It is clear, therefore, that the standards established under this section, or the repository referred to in this section, is not a storage facility, such as a monitored retrievable storage facility.

Accordingly, nothing in this section should be interpreted to authorize or direct the construction of a monitored retrievable storage facility at Yucca Mountain or elsewhere. Nothing in this section should be interpreted to authorize or direct the NRC or the EPA to establish standards or criteria or any other regulatory requirements for a monitored retrievable storage facility at Yucca Mountain or elsewhere.

A third major technical deficiency in this legislation is that this section directs the EPA only to promulgate standards for the maximum dose that any individual can be exposed to from radiation that might escape from the repository. It fails to also direct EPA to promulgate standards for the maximum cumulative releases of radioactive material over an extended period of time. This notable omission conflicts with EPA's current judgment that both a containment standard and an individual dose standard is the appropriate manner in which to protect the public health and safety.

Currently, EPA's regulations provide for containment standards and individual dose standards. As I mentioned previously, containment standards limit the total amount of radioactive material that may be released to the environment over 10,000 years. Individual dose standards limit the amount of radiation any one individual may be exposed to from the repository.

The NRC has stated that the containment standards are "the most substantive of the three [EPA standards] because it applies for a full 10,000 years and because it restricts releases following disturbances to the repository as well as releases from undisturbed performance."

It is important for a standard to include some type of limit on the total radiation that may be released from a

repository, in addition to limits on the amount of radioactivity that any particular individual may receive. The inclusion of either a population standard or a cumulative release limit will ensure that a large number of persons will not be injured as a result of a large number of exposures to doses that may be permissible for individuals.

Hence, the legislative language adopted today does not explicitly direct EPA to promulgate the full range of standards that have been determined appropriate for the protection of the public health and safety from the release of radioactivity at a nuclear waste repository. If EPA only promulgated the standards explicitly specified in this legislation, EPA would be offering less protection to the public health and safety than it has determined is appropriate.

#### PROCEDURAL ISSUES

The language adopted today raises many difficult procedural and legal issues. These procedural and legal issues will surely delay the program.

First, the legislation requires both the EPA and the NRC to promulgate, by rule, specified regulations "based upon and consistent with the findings and recommendations of the National Academy of Sciences." The conference report on this provision ambiguously states both that the EPA's and NRC's standards promulgated under this section must be "based upon and consistent with the findings and recommendations of the National Academy of Sciences," and that, "The provisions of section 801 are not intended to limit the [Commission's or Administrator's] discretion in the exercise of [its or his] authority related to public health and safety."

The statement in the conference report that the agencies must issue rules based on and consistent with the findings and recommendations of the NAS is inconsistent with the other statement in the conference report that the agencies retain their discretion on the public health and safety issues that the Board may address. Given this confusing set of explanations of what this provision means, the issue of the binding nature of the NAS recommendations is sure to provoke lively litigation.

To the extent that this legislation is interpreted as limiting the discretion of either the EPA or the NRC in those matters addressed in findings and recommendations of the NAS, the legislation raises constitutional issues regarding the appointments clause of the U.S. Constitution and the delegation of executive powers to a private body. If the legislation is interpreted as requiring that the NAS findings and recommendations be translated into rules and regulations, either in whole or in part, by EPA or by NRC, then it would appear that the National Academy of Sciences would be exercising legisla-

tive authority. The case law on the extent to which a private body can exercise this type of legislative authority is unclear.

It also appears that the NAS would be subject to the Federal Advisory Committee Act [FACA] in carrying out its task to provide advice and recommendations to Federal agencies in the manner specified in this section. Under FACA, an advisory committee "means any committee, board, commission, council, conference, panel, task force, or other similar group, or any subcommittee or other subgroup thereof \* \* \* which is (A) established by statute or reorganization plan, or (B) established or utilized by the President, or (C) established or utilized by one or more agencies, in the interest of obtaining advice or recommendations for the President or one or more agencies or officers of the Federal Government \* \* \*." It certainly appears, from this definition, that the NAS's role under this legislation would qualify the NAS as an advisory committee under FACA.

In *Public Citizen v. U.S. Department of Justice*, 109 Sup. Ct. 2558 (1989), the U.S. Supreme Court interpreted the requirements of FACA. The Court stated:

The phrase "or utilized" [in section 3] therefore appears to have been added simply to clarify that FACA applies to advisory committees established by the Federal Government in a generous sense of that term, encompassing groups formed indirectly by quasi-public organizations such as the National Academy of Sciences "for" public agencies as well as "by" such agencies themselves.

Read in this way, the term "utilized" would meet the concerns of the [House] that advisory committees covered by Executive Order 11007 because they were "utilized by a department or agency in the same manner as a Government-formed advisory committee"—such as the groups organized by the National Academy of Sciences and its affiliates which the Report discussed—would be subject to FACA's requirements.

It thus appears that FACA would apply to the NAS in its role under this legislation.

There are a host of requirements that apply to advisory committees under FACA. For example, FACA requires that committee memberships be "fairly balanced in terms of the points of view represented and the functions to be performed." FACA members are subject to the Federal conflict of interest statutes. Federal advisory committees must arrange meetings for reasonably accessible and convenient locations and times, publish adequate advance notice of planned meetings in the Federal Register, open meetings to the public, make available for public inspection all papers and records, including detailed minutes of each meeting, and maintain records of expenditures, with limited exceptions, for public inspection.

Substantively, the NAS is not suited for the prominent role in Federal nu-

clear waste policy contemplated by the sponsors of this legislation. The NAS can provide excellent peer review of the science underlying public policy choices, including the science underlying the Federal regulations to protect the public health and safety but the NAS is not suited to go beyond that limited role.

The NAS is neither a regulatory nor a standard-setting body. It has no expertise or experience in establishing standards to protect the public health and safety. Its members are not politically accountable for their findings and recommendations. Thus, the NAS is not the proper institution to make findings or recommendations that Federal agencies must use and that will directly affect the public health and safety. It also is not the proper institution to bind Federal agencies to particular policies or scientific viewpoints. As the NAS acknowledges, the application of science to the citizens in a democratic society must be done with the consent of those governed, and not imposed upon the public by a politically unaccountable scientific organization.

The fundamental controversies underlying the nuclear waste program are as much political as they are technical. Whether the current EPA standards are too stringent or too lax is as much a question of social policy as it is of science. As the NAS Board on Radioactive Waste Management itself stated, "Safety is in part a social judgment, not just a technical one. How safe is safe? Is it safer to leave the waste where it is, mostly at reactor sites, or to put it in an underground repository? In either case safety cannot be 100 percent guaranteed. Technical analyses can provide background for answering such questions, but ultimately the answers depend on choices made by the citizens of a democratic society."

Thus, it is the Federal regulatory agencies, which are politically accountable, that are most suited to answer the questions that the legislation directs to the NAS. The NAS can provide peer review on the science underlying the decisions to be made by the political system, but it cannot make policy that is in any sense binding upon the regulatory agencies.

The use of the NAS in the manner contemplated by this legislation perpetuates some of the problems with the current program that the NAS Board report discussed. To the extent that this legislation is based upon the premise that the NAS, as a non-politically accountable scientific organization, will be able to arrive at reasonable and objective "scientific" recommendations upon which the federal regulations will be based, and therefore somehow bring credibility, objective science, and definite answers to the program, the legislation puts the NAS into the scientific trap that the NAS Board report warned about. The NAS

Board report also stated that "a management plan that promises that every problem has been anticipated, or assumes that science will provide all the answers, is almost certainly doomed to fail."

Furthermore, this legislation seeks to use the NAS to further a basic approach that the NAS believes is inappropriate for the repository program. This legislation calls for the NAS to make findings and recommendations as to what constitutes reasonable protection to the public health and safety from radioactive releases at a nuclear waste repository at Yucca Mountain. The NAS Board report has concluded, however, that an approach to repository siting and licensing that attempts to answer the question of what constitutes reasonable protection prior to the development of extensive knowledge about the site is an inappropriate use of science and is unlikely to succeed. In light of the NAS's criticism of the type of task presented to it by this legislation, it will be difficult for the NAS to provide the findings and recommendations requested in this legislation without compromising its earlier position and therefore its credibility.

In its report, the NAS Board recommended a flexible regulatory approach in order to accommodate the surprises that the Board believes are inevitable in a repository program. The flexible approach advocated by the Board would be based upon the following three principles:

Start with the simplest description of what is known, so that the largest and most significant uncertainties can be identified early in the program and given priority attention.

Meet problems as they emerge, instead of trying to anticipate in advance all the complexities of a natural geological environment.

Define the goal broadly in ultimate performance terms, rather than immediate requirements, so that increased knowledge can be incorporated in the design at a specific site.

According to the Board, this approach would use science in the proper fashion. The Board added that "Implicit in this approach, however, is the need to revise the program schedule, the repository design, and the performance criteria as more information is obtained."

I am not yet persuaded that the Board's flexible approach should be adopted. It is something to consider. I am concerned that such an approach would impair public confidence in the program by giving the appearance that the standards were continually being changed in order to fit the data presented by the site.

Similarly, this legislation does not adopt the flexible approach. In this respect, the legislation is not based upon and consistent with the findings and

recommendations of the NAS. Instead, it continues the current approach, which the NAS has so sharply criticized.

However, with respect to the degree of protection afforded by the EPA and NRC standards, this legislation seeks to substitute the judgment of the NAS for the current judgments of the EPA and NRC as to what constitutes reasonable protection. It thus uses the NAS findings and recommendations in a selective manner. It uses the NAS only when the NAS findings and recommendations are consistent with a particular preconceived objective.

Thus, rather than seeking to base the repository program on the views of a scientific body such as the NAS, this legislation simply has chosen the NAS to be used solely as a vehicle to force a rewrite of the current safety standards. This approach is nothing more than blatant "standard shopping" and "scientist shopping" in order to produce a desired political result. It seeks to cloak the desired political changes to the standards with the imprimatur of the NAS.

I would hope that the NAS would resist the pressures to be used in this manner. It will damage the credibility of both the repository program and the NAS for the NAS to become entangled in a contrived process to rewrite the standards as to what constitutes reasonable protection to the public health and safety.

#### PREJUDGMENT OF SUITABILITY OF YUCCA MOUNTAIN SITE

This legislation judges the suitability of the Yucca Mountain site for a nuclear waste repository prior to the characterization activities that are necessary to determine whether the site is, in fact, suitable for a repository. This prejudgment of the site conflicts with the requirement that the licensing of Yucca Mountain be based upon scientific information. It makes it clear that the Federal Government will do everything it can to try to put nuclear waste in Nevada regardless of what the science tells us about the suitability of the site.

Section 801 refers to "the repository at the Yucca Mountain site." The conference report also refers to "a repository at the Yucca Mountain site," and "a repository at Yucca Mountain." The legislation directs the EPA and the NRC to promulgate standards for this specific site for a repository.

It seems both logically nonsensical and scientifically unsound to establish site-specific standards for a repository at a location which has not yet been determined to be suitable for a repository. Moreover, the establishment of site-specific standards by the NRC would appear to compromise the impartiality of the NRC to make a determination in a licensing proceeding of whether a repository at Yucca Mountain will provide adequate protection

to the public health and safety. The NRC essentially already would have determined that question in establishing its licensing standards. A licensing proceeding that is called upon to determine whether an application meets a standard that the judge already has determined is met will be a sham.

The DOE presently is characterizing Yucca Mountain to determine whether Yucca Mountain is suitable for a nuclear waste repository. DOE states that "The overall objective of the scientific studies is to determine if Yucca Mountain can isolate radioactive materials by using natural and engineered barriers. The studies are expected to take from seven to ten years to complete." At present, DOE does not anticipate making a determination on the suitability of Yucca Mountain for a repository until 2001.

It is difficult to understand how the NAS, the EPA, or the NRC could establish standards for the protection of the public health and safety for a repository site that has not yet been determined to be suitable for a repository. Such standards could be promulgated at this date only in ignorance of the scientific information that is necessary to establish such site-specific standards.

The concept of site-specific standards is difficult to understand logically. It is either an oxymoron or a tautology. If the site-specific standard is expected to be based upon requirements that are supposed to be achievable at the specified site, then it would not represent a standard at all, but rather a judgment about the capabilities of the site. By definition, judgments about the capabilities of the site will meet the judgments about the capabilities of the site. In this case, the concept is a meaningless tautology.

On the other hand, if the site-specific standard is expected to be based upon general principles of what constitutes reasonable protection of the public health and safety, and does not take into account or depend solely upon whether those principles can be met at the specific site, then it would not be a site-specific standard. It would be no different from a general standard. In this case, the concept is a meaningless oxymoron.

Thus, if it's site-specific, it can't be a standard, and if it's a standard, it can't be site-specific. This bizarre concept of site-specific standards will cause tremendous confusion and controversy for the repository program.

To the extent that the standards adopted by NRC represent any type of determination as to what is achievable at Yucca Mountain, it would call into question the NRC's ability to function as an impartial judge in an adjudicatory licensing proceeding as to whether the site meets the standards. If the NRC's licensing standards constitute a judgement by the NRC on site-specific

issues regarding Yucca Mountain, then it would be impossible for parties appearing before the NRC to obtain an impartial and unbiased hearing on those site-specific issues.

The Nuclear Waste Policy Act and the NRC's regulations, pursuant to that act, provide for an adjudicatory hearing on an application for a license to construct and operate a repository. A host of due process issues would be raised if the Commission were to begin addressing and deciding site-specific issues, through its regulations, either promulgated by rule or by EPA or NAS judgments that may be binding on the NRC under this legislation, establishing site-specific standards, prior to the commencement of the adjudication on the suitability of the site. Moreover, due process issues are raised to the extent that the NAS and the EPA use non-adjudicatory procedures to determine adjudicatory issues—that is, site-specific issues—in a manner that affects persons who are entitled by law to an adjudicatory hearing before the NRC on the licensing of the nuclear waste repository.

Thus, there may be serious due process concerns with the promulgation of site-specific standards if such standards are to be a basis for the licensing of that same specific site.

#### NRC INDEPENDENCE COULD BE UNDERMINED

To the extent that this legislation reduces, in any manner, the discretion of the NRC to promulgate regulations in the manner that the NRC deems most appropriate, the integrity and independence of the NRC could legitimately be called into question. Under this provision the NAS will be a contractor of the EPA. It would be a clear infringement upon the independence of the NRC for the NRC to be required to base its views on how to protect the public health and safety on the findings and recommendations of an EPA contractor.

More generally, this legislation further confuses the relationship between the EPA and the NRC. These two agencies have had a history of duplication, confusion, and conflict in fulfilling their respective responsibilities to protect the public health and safety from radiological hazards. Recently the relationship and cooperation between the two agencies has improved. This legislation will disrupt the current positive relationship and reintroduce conflict and confusion between the agencies.

Under current law, EPA has the responsibility and authority for issuing generally applicable environmental standards to protect the public health and safety from radiation hazards. Pursuant to this authority the EPA has issued generally applicable environmental standards for the protection of the public from a variety of activities that use radioactive materials, such as the operation of nuclear powerplants and the operation of a nuclear waste repository.

Under current law NRC has the responsibility for issuing technical requirements and criteria to ensure that the generally applicable EPA standards are met by persons conducting activities within NRC's licensing authority. The NRC technical requirements must be not inconsistent with the EPA general standards.

These overlapping roles in protecting the public health and safety from radiation hazards have led to a number of conflicts between the two agencies. It has taken many years and a considerable amount of effort for the NRC and the EPA to come to agreement on how to best minimize conflicts and duplication in their overlapping roles. In March of this year the EPA and the NRC signed a memorandum of understanding [MOU] on how to cooperate in the exercise of their respective responsibilities.

This legislation will raise many new issues regarding the roles of the EPA and the NRC. Never before has the EPA been directed to issue site-specific standards for NRC-licensed activities, as section 801 directs EPA to do with respect to Yucca Mountain.

Additionally, section 801(a)(2) is confusing with respect to the role of the NRC and other environmental laws. This section states that EPA's standards for the protection of the public health and safety from releases of radiation "shall be the only such standards applicable to the Yucca Mountain site." The conference report explains that:

The provisions of section 801 address only the standards of the Environmental Protection Agency, and comparable regulations of the Nuclear Regulatory Commission, related to protection of the public from releases of radioactive materials stored or disposed of at the Yucca Mountain site pursuant to authority under the Atomic Energy Act, Reorganization Plan No. 3 of 1970, the Nuclear Waste Policy Act of 1982, and this Act. The provisions of section 801 are not intended to affect in any way the application of any other existing laws to activities at the Yucca Mountain site.

It could be disputed, therefore, what section 801 means with respect to NRC's regulations. Although section 801(a)(2) would seem to rule out any role for the NRC once EPA issues its standards, section 801(b) directs the NRC to promulgate regulations. Clearly, therefore, section 801(a)(2) cannot be given an expansive reading, since such a reading would be inconsistent with section 801(b). To minimize confusion between the NRC and the EPA, and to protect the public health and safety and the nature environment to the full extent that federal and state laws provide, I hope that section 801(a)(2) is given as narrow a reading as possible.

Under section 801(b), however, the NRC's role is defined differently from its role under current law. Section 801(b) states that NRC's regulations

shall be "consistent with" the regulations of the EPA. This is a novel standard. Under current law the NRC's requirements and criteria shall "not be inconsistent with" EPA's standards. This legislation raises a host of questions regarding the relationships between the NRC and EPA with respect to these standards. Is there a difference between "consistent with" and "not inconsistent with"? If so, what is it? If there is no difference, then why is a new standard used? If NRC's regulations differ from EPA's by one word, does this mean NRC's regulations are not "consistent with" the EPA's?

It is not sound public policy to attempt to undermine the NRC's independence by providing a needless opportunity for persons to contend that this legislation requires the NRC to conform its judgments to those of the EPA to a greater degree than under current law. I do not believe that this language should be interpreted in this manner, but, unfortunately, the language does open up this question. It will be harmful to public confidence in this program—if there is any left after this legislation is enacted—to provide an opportunity to force the NRC to conform its regulations to the findings of an agency that is a member of the same executive branch that is attempting to license this facility.

**PUBLIC PARTICIPATION COULD BE SEVERELY CURTAILED**

This legislation raises a host of problems regarding how the public is to participate in the contemplated studies and rulemakings. I already have mentioned there may be due process concerns with proceeding to determine site-specific issues, which may involve adjudicative facts, outside of the adjudicatory proceeding to which affected persons are entitled. I also have mentioned the applicability of FACA to the NAS.

There are other issues that come to mind. I have not had time to fully analyze them, so I shall only briefly mention a few. One issue concerns the role of the public in the EPA and NRC rulemakings. If the EPA and NRC must issue regulations based upon and consistent with the findings and recommendations of the NAS, then what is the purpose of notice and comment in these rulemakings—is notice and comment appropriate for all of the issues raised by the proposed regulations, or appropriate only for the issue of whether the proposed agency regulations are truly consistent with the NAS findings and recommendations? To the extent it is the latter, then there would be no opportunity for effective public notice and comment on the substance of the regulations, and thus may violate the Administrative Procedure Act.

Another issue concerns the record of these rulemakings for judicial review. To the extent that either the EPA or

the NRC rely upon the NAS findings and recommendations, and do not develop an independent record, those NAS findings and recommendations will be subject to judicial review as part of the the rulemaking record. Hence, to the extent that the NAS seeks to have its findings and recommendations incorporated into EPA or NRC regulations—a course which I discourage—the NAS findings and recommendations may have to be able to withstand judicial review.

These are just a few of the public participation issues that stand out. I am confident that more will arise as the EPA and NRC attempt to implement this.

**PUBLIC TRUST**

Mr. President, this is no way to run a nuclear waste program. This is a transparent attempt to rewrite the public health and safety standards governing nuclear waste disposal at Yucca Mountain so that the Yucca Mountain site will be able to pass muster.

The standards for the WIPP site are not being rewritten in this manner. They are being rewritten like this only at the Yucca Mountain site.

There were no hearings on this proposal. Hardly anyone other than a few a conferees on the Energy bill had any knowledge or opportunity to comment on this proposal prior to its inclusion in the conference report. The Nuclear Regulatory Commission, the agency with the ultimate responsibility for protecting the public health and safety from nuclear wastes, has not had enough time to analyze the significant issues raised by this legislation. Mr. President, I ask unanimous consent that the NRC's letter on this legislation be printed in the RECORD. At the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 4).

Mr. GRAHAM. This approach will destroy any remaining public confidence in the integrity, fairness, and trust worthiness of the Federal Government in carrying out its responsibilities with respect to nuclear waste. The message from this legislation is simple: the Federal Government will do anything, it will say anything, it will spend an unlimited amount of ratepayer dollars, and it will make up the rules as it goes along, including the standards for the protection of the public health and safety, in order to find as quickly as possible a place to dispose of or to store highly radioactive level nuclear waste. Any State, scientific viewpoint, fact, or law that becomes an obstacle to this objective will be legislated out of the process.

I do not believe that this strong-arm approach can succeed. We live in a democracy, where the consent of the governed and truth in government are part of the foundation of the rule of law. Even in a totalitarian state, however,

these tactics could not succeed. In the former Soviet Union, following the Chernobyl accident the credibility of the Soviet Government on nuclear issues was so damaged that public distrust and opposition prevented the siting of any new facilities. If these tactics could not work in the former Soviet Union, I doubt they can work here.

At this time I would like to enter into the RECORD the letter that Gov. Mike Sullivan of Wyoming sent to the Fremont County Commissioners regarding his decision to veto Fremont County's request to proceed to Phase IIa of the program to consider whether to locate a monitored retrievable storage facility in Fremont County, WY. The basic reason cited by Governor Sullivan in his decision to terminate the study process was that he did not trust the DOE or the Federal Government. Here are some examples of what the Governor said about the credibility of the Federal Government:

(c) Can we take comfort from the DOE record of nuclear facilities in the West? I think not. Can we be assured of continuing control or oversight of such a facility? Last month the House of Representatives voted to exempt Yucca Mountain from state environmental permitting because DOE contended Nevada was not cooperative. Unless the Supremacy clause of the U.S. Constitution is changed, Congress, for fiscal reasons or preemptive reasons, can mandate new terms and new controls as it deems expedient or simply not accept the terms initially negotiated.

(d) Can we trust the federal government or the assurance of negotiation to protect our citizens' interests? To do so would disregard the geographical voting power in Congress and 100 years of history and experience.

\* \* \* \* \*

I am absolutely unpersuaded that Wyoming can rely on the assurances we receive from the federal government.

I ask unanimous consent that the Governor's letter be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 5).

Mr. GRAHAM. Today's actions make Governor Sullivan's letter prophetic. Unfortunately, this only will reinforce the essential point of the letter—that the States can't trust the Federal Government when it comes to nuclear waste disposal.

**CONCLUSION**

Mr. President, I support nuclear power. I come from a State which has used nuclear power extensively. I come from a State which has had a good experience with nuclear power.

I want to see nuclear power moved in the direction that will allow it to play a larger role in our energy future. I believe that nuclear power is one of the ways in which we can achieve what I described in my earlier remarks as the fundamental goal of a national energy strategy, which is to reduce our current level of reliance on petroleum.

I believe, however, that fundamental to a resurrection of this industry is a resurrection of public trust in this industry.

Therefore, I believe that this legislation which goes in the opposite direction by degrading public trust will have a negative impact on the future of nuclear as an energy source in this Nation.

Unfortunately, section 801 of this legislation will undermine rather than bolster public confidence in the regulation of nuclear power. It also will make the nuclear waste disposal process less credible and more difficult to implement. It is a major mistake.

## EXHIBIT 1

NUCLEAR REGULATORY COMMISSION,  
Washington, DC, August 18, 1992.

Hon. JOHN D. DINGELL,  
Chairman, Committee on Energy and Commerce,  
House of Representatives, Washington, DC.

DEAR MR. CHAIRMAN: I am responding to your July 24, 1992 letter requesting my comments on the June 25, 1992 Las Vegas Review-Journal article on the possibility of reducing costs of high-level waste repository program activities at Yucca Mountain. I believe that the article generally reflects the discussions that took place during the June 24, 1992 briefing by Dr. John Bartlett, Director of the Department of Energy's (DOE's) Office of Civilian Radioactive Waste Management. As an independent regulatory agency, the NRC is committed to ensuring the protection of public health and safety while avoiding new and eliminating existing requirements that may be either unnecessary or unnecessarily burdensome. As NRC has developed and is implementing Part 60 of Title 10 of the Code of Federal Regulations: "Disposal of Radioactive Wastes in Geologic Repositories" (10 CFR Part 60), we have continued to strive to meet these objectives and to identify ambiguities and uncertainties in these regulations that need to be clarified. DOE has not identified any regulatory requirements which have imposed an unnecessary cost burden.

During the June 24 briefing, the Commission encouraged Dr. Bartlett to bring to our attention proposals for cost cutting. Since the briefing, Dr. Bartlett has not brought to our attention any proposal for cutting costs at the Yucca Mountain project. NRC stands ready to meet and discuss any specific proposal that would allow DOE to run a more efficient and effective repository program consistent with ensuring the protection of public health and safety.

I trust that this reply responds to your concerns. If I can be of further assistance, please let me know.

Sincerely,

IVAN SELIN.

HOUSE OF REPRESENTATIVES, COMMITTEE ON ENERGY AND COMMERCE,

Washington, DC, July 24, 1992.

Hon. IVAN SELIN,  
Chairman, Nuclear Regulatory Commission,  
Washington, DC.

DEAR CHAIRMAN SELIN: I have enclosed a June 25, 1992 newspaper article from the Las Vegas Review-Journal.

I would appreciate your comments on the article and the suggestion in it that changes could be made to the Nuclear Regulatory Commission's regular procedures which would assist in reducing costs of the Yucca Mountain project.

I would also like to know of subsequent communications you may have had with officials at the Department of Energy on this issue.

With every good wish.

Sincerely,

JOHN D. DINGELL,  
Chairman.

Enclosure.

[From the Las Vegas Review-Journal, June 25, 1992]

## DOE AIMS TO CUT COSTS OF NUKE DUMP

(By Tony Batt)

WASHINGTON.—The Energy Department still is thinking out loud about ways to reduce the estimated \$6.3 billion cost of licensing a nuclear waste repository at Yucca Mountain, including the possibility of storing waste at the site before it is fully licensed, the program's director told the Nuclear Regulatory Commission on Wednesday.

While the placement of nuclear waste at Yucca Mountain before its projected opening in 2010 would require a special license from the NRC and legislation from Congress, the department also is considering cost-cutting options that would not require special permission, said John Bartlett, director of the Office of Civilian Radioactive Waste Management.

He told regulators that project officials are weighing the idea of conducting fewer site tests to back its license application, or placing nuclear waste at a "test evaluation facility" near Yucca Mountain but off the study site. Bartlett said he did not know how much money these measures could save.

"What I want to emphasize is that there's nothing new here," Bartlett told commissioners. "We have for years been looking at contingencies, alternatives for dealing with cost, dealing with progress."

The department has suggested accepting some waste at Yucca Mountain and incorporating it into studies of whether the site, 100 miles northwest of Las Vegas, could safely store the highly radioactive material for 10,000 years. Department officials have not said how much waste would be needed to speed its studies.

Discussion of cost-cutting options accelerated after several senators at a March 81 hearing on Capitol Hill expressed alarm about escalating expenses, Bartlett said.

Bartlett's comments drew a puzzled reaction from NRC chairman Ivan Selin.

"I really am up in the air as to what you're thinking about and where it is that the NRC would have to change its procedures," Selin told Bartlett. "Are you going to come to us with some quite different course of action or is this just sort of thinking out loud?"

"It's really thinking out loud at this stage," Bartlett responded. "We are not coming with any proposed alternative course of action."

Asked after the hearing if the NRC would be willing to consider issuing a special license for the early storage of nuclear waste at Yucca Mountain, Selin said, "I'm not going to answer that until something is actually proposed. So far, he (Bartlett) hasn't asked us to do anything that would require us to change our procedures."

Bartlett first discussed the possible early storage of nuclear waste at Yucca Mountain during an address to a group of nuclear utility executives on May 6 in Washington.

At that time, he said the Energy Department hoped to decide within a few weeks whether to pursue that option. But he said Wednesday he did not think the department would decide before August.

Bartlett has said early storage of nuclear waste at Yucca Mountain could save money by allowing the Energy Department to more quickly collect data for licensing reviews.

But NRC Commissioner Kenneth Rogers suggested Wednesday early storage of nuclear waste away from Yucca Mountain would be preferable because it could be done at a "modest cost" without triggering "public concern issues which raise the cost very, very high."

Bartlett seemed cool to Rogers' suggestion, saying if the early storage of waste occurs at a site away from Yucca Mountain, it probably could not be located further away than Arizona.

"One of the issues in using a test evaluation facility is how representative really is the data," Bartlett said. "If you're not in the same geology, if you're not in the same formation, that's one of the issues associated with that."

On a related subject, Bartlett said the Energy Department believes it is not obligated to take possession of nuclear waste from power plants if a temporary or permanent repository is not ready by 1998.

However, Commissioner James Curtiss cited a Sept. 7, 1984, letter from then Energy Secretary Donald Hodel who said the department had interpreted federal law to require it to accept the waste in 1998 even if it had no place to store it.

Selin also chided Bartlett for blaming NRC regulations for skyrocketing costs in developing the Yucca Mountain repository.

"You haven't come to NRC and said you disagree with the procedures," Selin said. "The Department of Energy has not come up with suggestions on how to reduce cost."

Bartlett denied he had blamed the NRC for escalating costs.

Carl Gertz, the Energy Department's site supervisor at Yucca Mountain, told the commission that recent drilling at the site revealed its geology is more uniform than previously thought.

"This may be simpler than we thought," Gertz said about the site characterization studies.

Gertz said 7 inches of rain this spring gave Energy Department officials an opportunity to monitor seepage of rainfall at Yucca Mountain. He said preliminary studies showed the rain did not go further down than 100 feet, and the repository will be 1,000 feet below the mountain.

John Roberts, the Energy Department's acting director of the Office of Systems and Compliance, told the commission that erosion at Yucca Mountain "appears to be minimal."

At the beginning of Wednesday's hearings, Energy Department officials played segments of Las Vegas television news broadcasts about a June 16 news media tour of Yucca Mountain. Bartlett and Gertz said local news media are treating the Energy Department more fairly.

## EXHIBIT 2

RETHINKING HIGH-LEVEL RADIOACTIVE WASTE DISPOSAL: A POSITION STATEMENT OF THE BOARD ON RADIOACTIVE WASTE MANAGEMENT

(Commission on Geosciences, Environment, and Resources, National Research Council)

Notice: The project that is the subject of this report was approved by the Governing Board of the National Research Council, whose members are drawn from the councils of the National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine. The members of the

committee responsible for the report were chosen for their special competences and with regard for appropriate balance.

This report has been reviewed by a group other than the authors according to procedures approved by a Report Review Committee consisting of members of the National Academy of Sciences, the National Academy of Engineering, and the Institute of Medicine.

The National Academy of Sciences is a private, nonprofit, self-perpetuating society of distinguished scholars engaged in scientific engineering research, dedicated to the furtherance of science and technology and to their use for the general welfare. Upon the authority of the charter granted to it by the Congress in 1863, the Academy has a mandate that requires it to advise the federal government on scientific and technical matters. Dr. Frank Press is president of the National Academy of Sciences.

The National Academy of Engineering was established in 1964, under the charter of the National Academy of Sciences, as a parallel organization of outstanding members, sharing with the National Academy of Sciences the responsibility for advising the federal government. The National Academy of Engineering also sponsors engineering programs aimed at meeting national needs, encourages education and research, and recognizes the superior achievements of engineers. Dr. Robert M. White is president of the National Academy of Engineering.

The Institute of Medicine was established in 1970 by the National Academy of Sciences to secure the services of eminent members of the appropriate professions in the examination of policy matters pertaining to the health of the public. The Institute acts under the responsibility given to the National Academy of Sciences by its congressional charter to be an adviser to the federal government and, upon its own initiative, to identify issues of medical care, research, and education. Dr. Samuel O. Thier is president of the Institute of Medicine.

The National Research Council was organized by the National Academy of Sciences in 1916 to associate the broad community of science and technology with the Academy's purposes of furthering knowledge and advising the federal government. Functioning in accordance with general policies determined by the Academy, the Council has become the principal operating agency of both the National Academy of Sciences and the National Academy of Engineering in providing services to the government, the public, and the scientific and engineering communities. The Council is administered jointly by both Academies and the Institute of Medicine. Dr. Frank Press and Dr. Robert M. White are chairman and vice chairman, respectively, of the National Research Council.

The material summarized in this report was the product of a July 1988 retreat sponsored by the Board on Radioactive Waste Management and was supported by the U.S. Department of Energy under Contract No. DE-AC01-86DP48039.

#### ABSTRACT

There is a worldwide scientific consensus that deep geological disposal, the approach being followed in the United States, is the best option for disposing of high-level radioactive waste (HLW). There is no scientific or technical reason to think that a satisfactory geological repository cannot be built. Nevertheless, the U.S. program, as conceived and implemented over the past decade, is unlikely to succeed.

For reasons rooted in the public's concern over safety and in the implementing and reg-

ulatory agencies' need for political credibility, the U.S. waste disposal program is characterized by a high degree of inflexibility with respect to both schedule and technical specifications. The current approach, in which every step is mandated in detail in advance, does have several advantages:

It facilitates rigorous oversight and technical auditing;

Its goals and standards are clear;

It is designed to create a sense of confidence in the planning and operation of the repository; and

If carried out according to specifications, it is robust in the face of administrative or legal challenge.

This approach is poorly matched to the technical task at hand. It assumes that the properties and future behavior of a geologic repository can be determined and specified with a very high degree of certainty. In reality, however, the inherent variability of the geological environment will necessitate frequent changes in the specifications, with resultant delays, frustration, and loss of public confidence. The current program is not sufficiently flexible or exploratory to accommodate such changes.

The Board on Radioactive Waste Management is particularly concerned that geological models, and indeed scientific knowledge generally, have been inappropriately applied. Computer modeling techniques and geophysical analysis can and should have a key role in the assessment of long-term repository isolation. In the face of public concerns about safety, however, geophysical models are being asked to predict the detailed structure and behavior of sites over thousands of years. The Board believes that this is scientifically unsound and will lead to bad engineering practice.

The United States appears to be the only country to have taken the approach of writing detailed regulations before all of the data are in. As a result, the U.S. program is bound by requirements that may be impossible to meet. The Board believes, however, that enough has been learned to formulate an approach that can succeed. This alternative approach emphasizes flexibility: time to assess performance and a willingness to respond to problems as they are found, remediation if things do not turn out as planned, and revision of the design and regulations if they are found to impede progress toward the health goal already defined as safe disposal. To succeed, however, this alternative approach will require significant changes in laws and regulations, as well as in program management.

#### SUMMARY

Since 1955, the National Research Council (NRC) has been advising the U.S. government on technical matters related to the management of radioactive waste. Today, this advice is provided by the Board on Radioactive Waste Management (BRWM or "the Board"), a permanent committee of the NRC. The conclusions presented in this position statement are the result of several years of discussions within the Board, whose members possess decades of professional experience in relevant scientific and technical fields.

In July 1988, the Board convened a week-long study session in Santa Barbara, California, where experts from the United States and abroad joined BRWM in intensive discussions of current U.S. policies and programs for high-level radioactive waste management. The group divided its deliberations into four categories: (1) the limitations of analysis; (2) moral and value issues; (3) mod-

eling and its validity; and (4) strategic planning. A summary of the findings of these discussions, from which this position statement has been developed, follows the Summary.

#### Current U.S. Policy and Program

In the Nuclear Waste Policy Act of 1982 (NWPAA), Congress assigned responsibility to the Department of Energy (DOE) for designing and eventually operating a deep geological repository for high-level radioactive waste (HLW). The repository must be licensed by the U.S. Nuclear Regulatory Commission (USNRC) and must meet radionuclide release limits, based on a generic repository, that would result in less than 1000 deaths in 10,000 years as specified in a Standard established by the Environmental Protection Agency (EPA) (40 CFR 191).

The U.S. program is unique among those of all nations in its rigid schedule, in its insistence on defining in advance the technical requirements for every part of the multibarrier system, and in its major emphasis on the geological component of the barrier as detailed in 10 CFR 60. Because one is predicting the fate of the HLW into the distant future, the undertaking is necessarily full of uncertainties. In this sense the government's HLW program and its regulation may be a "scientific trap" for DOE and the U.S. public alike, encouraging the public to expect absolute certainty about the safety of the repository for 10,000 years and encouraging DOE program managers to pretend that they can provide it.

For historical and institutional reasons, DOE managers tend to feel compelled to do things perfectly the first time, rather than to make changes in concept and design as unexpected geological features are encountered and as scientific understanding develops. This "perfect knowledge" approach is unrealistic, given the inherent uncertainties of this unprecedented undertaking, and it runs the risk of encountering "show-stopping" problems and delays that could lead to a further deterioration of public and scientific trust. Today, because of the regulatory requirements and the way the program is being carried out, U.S. policy has not led to satisfactory progress on the problem of radioactive waste disposal.

#### Scientific Consensus on Geological Isolation

There is a strong worldwide consensus that the best, safest long-term option for dealing with HLW is geological isolation. High-level waste should be put into specially designed and engineered facilities underground, where the local geology and groundwater conditions have been chosen to ensure isolation of the waste for tens of thousands of years or longer, and where waste materials will migrate very slowly if they come into contact with the rock.

Although the scientific community has high confidence that the general strategy of geological isolation is the best one to pursue, the challenges are formidable. In essence, geological isolation amounts to building a mine in which "ore" will be put back into the ground rather than taken out. Mining, however, has been and remains fundamentally an exploratory activity: because our ability to predict rock conditions in advance is limited, miners often encounter surprises. Over the years, mining engineers have developed methods to deal with the vagaries of geological environments, so that mineral extraction and construction can continue safely even when the conditions encountered are different from those anticipated.

It is at this point that geological isolation of radioactive waste differs in an important

sense from mining. In the United States, radioactive waste management is a tightly regulated activity, surrounded by laws and regulations, criteria and standards. Some of these rules call for detailed predictions of the behavior of the rock for the tens of thousands of years that the radioactive materials are to be isolated.

Preparing quantitative predictions so far into the future stretches the limits of our understanding of geology, groundwater chemistry and movement, and their interactions with the emplaced material (radioactive waste package, backfill, sealants, and so forth). Although the basic scientific principles are well known, quantitative estimates (no matter how they are obtained) must rely on many assumptions. As a consequence, the resulting estimates are uncertain to some degree, and they will remain uncertain no matter how much additional information is gathered.

#### *Treatment of Uncertainty*

The character and implications of these uncertainties must be clearly understood by political leaders, program managers, and the concerned public. Engineers and scientists, no matter how experienced or well trained, are unable to anticipate all of the potential problems that might arise in trying to site, build, and operate a repository. Nor can science "prove" (in any absolute sense) that a repository will be "safe" as defined by EPA standards and USNRC regulations. This is so for two reasons.

First, proof in the conventional sense cannot be available until we have experience with the behavior of an engineered repository system—precisely what we are trying to predict. The existence of uncertainties has prompted efforts to improve the technical analysis, but there will always remain some residual uncertainty. It is important to recognize, however, that uncertainty does not necessarily mean that the risks are significant. What it does mean is that a range of results are possible, and a successful management plan must accommodate residual uncertainties and still provide reasonable assurance of safety.

Second, safety is in part a social judgment, not just a technical one. How safe is safe enough? Is it safer to leave the waste where it is, mostly at reactor sites, or to put it in an underground repository? In either case safety cannot be 100 percent guaranteed. Technical analyses can provide background for answering such questions, but ultimately the answers depend on choices made by the citizens of a democratic society. The EPA has not based its standards (which must allow for these choices by the citizenry) on social judgments derived from realistic consideration of these alternatives. Both of these important limitations of the analysis have been understated.

The federal government must provide full public accountability as information about the risks changes with experience. This is not an impossible task: government and business make decisions every day under similar conditions of uncertainty. But a policy that promises to anticipate every conceivable problem, or assumes that science will shortly provide all the answers, is bound to fail.

The public has been told too often that absolute guarantees can be provided, but most citizens watching the human frailties of their governments and technologists know better. A realistic—and attainable—goal is to assure the public that the likelihood of serious unforeseen events (serious enough to cause catastrophic failure in the long term)

is minimal, and that the consequences of such events will be limited. These assurances rest on the credible application of general principles, rather than a reliance on detailed predictions.

#### *Modeling of Geological Processes*

The current U.S. approach to developing a geological repository (with a mandated 10,000-year lifetime) for radioactive waste is based on a regulatory philosophy that was developed from the licensing of nuclear power plants (which have a nominal 40-year lifetime). The geological medium, however, cannot be specified in advance to the degree possible for man-made components, such as valves or electronic instruments, nor can it be tested over its projected lifetime as can many man-made components. Commercial mining and underground construction both operate on the sound principle of "design (and improve the design) as you go." The inherent variability of the geological environment necessitates changes in specifications as experience increases. If that reality is not acknowledged, there will be unforeseen delays, rising costs, frustration among field personnel, and loss of public confidence in the site and in the program.

Models of the repository system are useful, indeed indispensable. The computerized mathematical models that describe the geological structure and hydrological behavior of the rock are needed to manage the complex calculations that are necessary to evaluate a proposed site. Models are vital for two purposes: (1) to understand the history and present characteristics of the site; and (2) to predict its possible future behavior. Putting the available data into a coherent conceptual framework should focus attention on the kinds of uncertainty that persist. For example, the modeling of groundwater flow through fractured rock lies at the heart of understanding whether and how a repository in hard rock will perform its essential task of isolating radioactive materials. The studies done over the past two decades have led to the realization that the phenomena are more complicated than had been thought. Rather than decreasing our uncertainty, this line of research has increased the number of ways in which we know that we are uncertain. This does not mean that science has failed: we have learned a great deal about these phenomena. But it is a commonplace of human experience that increased knowledge can lead to greater humility about one's ability to fully understand the phenomena involved.

Uncertainty is treated inappropriately in the simulation models used to describe the characteristics of the waste repository. As the quantity of information about natural geological settings grows, so too does our appreciation of their variability and unpredictability. This distinction has often been ignored. Indeed, the very existence of large databases and sophisticated computer models suggests, erroneously, that it is appropriate to design a geological repository as if it were a nuclear power plant or jet airliner, both of which have predictable attributes over their short lifetimes. That assumption of accurate predictability will continue to produce frustration and failure. Under the present program models are being asked to provide answers to questions that they were not designed to address. One scientifically sound objective of geological modeling is to learn, over time, how to achieve reasonable assurance about the long-term isolation of radioactive waste. That objective is profoundly different from predicting quantitatively the long-term behavior of a repository.

Yet, in the face of public concerns about the safety of HLW disposal, it is the latter use to which models have been put.

The Board believes that this use of geological information and analytical tools—to pretend to be able to make very accurate predictions of long-term site behavior—is scientifically unsound. Its conclusion is based on detailed reviews of the methods used by the DOE and the regulatory agencies in implementing the NWPA.

Well-known geophysical principles can be used to estimate or to set bounds on the behavior of a site, so that its likely suitability as a waste repository can be evaluated. But it is inappropriate to stretch the still-incomplete understanding of a site into a quantitative projection of whether a repository will be safe if constructed and operated there. Only after a detailed and costly examination of the site itself can an informed judgment be reached, and even then there will still be uncertainties.

Many of the uncertainties associated with a candidate repository site will be technically interesting but irrelevant to overall repository performance. Further, the issues that are analytically tractable are not necessarily the most important. The key task for performance modeling is to separate the significant uncertainties and risks from the trivial. Similarly, when there are technical disputes over characteristics and processes that affect calculations of waste transport, sensitivity analysis with alternative models and parameters can indicate where further analysis and data are required and where enough is known to move on to other concerns.

It may even turn out to be appropriate to delay permanent closure of a waste repository until adequate assurances concerning its long-term behavior can be obtained through continued in-site geological studies. Judgments of whether enough is known to proceed with placement of waste in a repository will be needed throughout the life of the project. But these judgments should be based on a comparison of available alternatives, rather than a simplistic debate over whether, given current uncertainties, a repository site is "safe." Even while the detailed, long-term behavior of an underground repository is still being studied, it may be marginally safer to go ahead and store reactor waste there (in a way that permits retrieval if necessary), rather than leaving it at reactors.

As a rule, the values determined from models should only be used for comparative purposes. Confidence in the disposal techniques must come from a combination of remoteness, engineering design, mathematical modeling, performance assessment, natural analogues (see below), and the possibility of remedial action in the event of unforeseen events. There may be political pressure on implementing agencies to provide absolute guarantees, but a more realistic—and attainable—goal is to assure the public that the likelihood of unforeseen events is minimal, and that the magnitude of the consequences of such events is limited. Such an alternative approach, now being used in Canada and Sweden, promises to be far more successful in achieving a safe and practical waste disposal system.

#### *Moral and Ethical Questions*

Radioactive waste poses hazards that raise moral and ethical concerns. First, some of the radioactivity lasts for extremely long periods of time—the EPA standard for HLW calls for isolation of the waste for 10,000 years and more, a time longer than recorded human history. Second, the risks of high-

level waste will be concentrated at a very few geological repositories. The neighbors of proposed waste repositories have understandably been alarmed at the prospect of hosting large quantities of a material that needs to be handled with great care. Ethical studies in this area underscore two points: (1) the central role of fair process; and (2) the pervasive problem of promising more certainty than can be delivered.

The need for a fair process is simply stated: people feel threatened by radioactive waste; and they deserve to be taken seriously in the decision-making process. The sense of threat is often ill informed, in a narrow technical sense; but when that occurs, it is the duty of technical experts and program managers to provide information and employ analyses that will be credible to the affected populations. Only with valid information that they believe can those affected parties negotiate equitable solutions. The primary goal of the program is to provide safe disposal; a secondary goal is to provide it without any gross unfairness. As a result, the mechanisms of negotiation, persuasion, and compensation are fundamental parts of any program to manage and dispose of radioactive waste—not mere procedural hoops through which program managers must jump.

The second ethical point is also important: the demand for accountability in our political system has fostered a tendency to promise a degree of certainty that cannot be realized. Pursuing that illusory certainty drives up costs without delivering the results promised or comparable benefits. The consequence is frustration and mistrust. For example, it is politically costly to admit that one has been surprised in exploring sites being considered for HLW repositories. Yet, this situation is self-defeating: surprises are bound to occur because a principal reason for exploration is to discover what is there.

Instead of pursuing an ever-receding mirage, it is sensible to pursue an empirical exploratory approach: one that emphasizes fairness in the process while seeking outcomes that the affected populations judge to be equitable in light of their own values. This is not an easy course, but it is necessary.

#### *An Alternative Approach*

There are scientific reasons to think that a satisfactory HLW repository can be built and licensed. But for the reasons described earlier, the current U.S. program seems unlikely to achieve that desirable goal. The Board proposes an alternative approach that is built on well-defined goals and objectives, utilizes established scientific principles, and can be achieved in stages with appropriate review by regulatory and oversight bodies and with demonstrated management capabilities. The Board suggests an institutional approach that is more flexible and experimental—in other words, a strategy that acknowledges the following premises:

Surprises are inevitable in the course of investigating any proposed site, and things are bound to go wrong on a minor scale in the development of a repository.

If the repository design can be changed in response to new information, minor problems can be fixed without affecting safety and major problems, if any appear, can be remedied before damage is done to the environment or to public health.

This flexible approach can be summarized in three principles:

Start with the simplest description of what is known, so that the largest and most significant uncertainties can be identified early in the program and given priority attention.

Meet problems as they emerge, instead of trying to anticipate in advance all the complexities of a natural geological environment.

Define the goal broadly in ultimate performance terms, rather than immediate requirements, so that increased knowledge can be incorporated in the design at a specific site.

In short, this approach uses a scientific approach and employs modeling tools to identify areas where more information is needed, rather than to justify decisions that have already been made on the basis of limited knowledge.

The principal virtue of this strategy is that it would use science in the proper fashion. It would be similar to the strategies now being followed in Canada and Sweden, where the exploration and construction of an underground test laboratory and a shallow underground low-level waste repository have followed a flexible path. At each step, information and understanding developed during the prior stages are combined with experience from other underground construction projects, in order to modify designs and procedures in light of the growing stock of knowledge. During operations and after closure of the facilities, the emphasis will be on monitoring and assuring the capability to remedy unforeseen problems. In that way, the possibility is minimized that unplanned or unexpected events will compromise the integrity of the facility.

This flexible approach has more in common with research and underground exploration than with conventional engineering practice. The idea is to draw on natural analogues, integrate new data into the expert judgments of geologists and engineers, and take advantage of favorable surprises or compensate for unfavorable ones.

Natural analogues—geological settings in which naturally occurring radioactive materials have been subjected to environmental forces for millions of years—demonstrate the action of transport processes like those that will affect the release of man-made radionuclides from a repository in a similar setting. Where there is scientific agreement that the analogy applies, this approach provides a check on performance assessment methodology and may be more meaningful than sophisticated numerical predictions to the lay public.

A second element is to use professional judgment of technical experts as an input to modeling in areas where there is uncertainty as to parameters, structures, or even future events. Such judgments, which may differ from those of DOE program managers, should be incorporated early in the process; a model created in this way might redirect the DOE program substantially.

The large number of underground construction projects that have been completed successfully around the world are evidence that this approach works well. Implicit in this approach, however, is the need to revise the program schedule, the repository design, and the performance criteria as more information is obtained. Putting such an approach into effect would require major changes in the way Congress, the regulatory agencies, and DOE conduct their business.

#### *The Risk of Failing to Act*

Given the history of radioactive waste management in the United States, a likely alternative is that the program will continue as at present. That would leave the nation's inventory of high-level waste, indefinitely, where it is now: mostly at reactor sites at or near the earth's surface. By the year 2000

spent fuel is expected to contain more than  $3 \times 10^{10}$  curies, while High Level Waste is expected to contain another  $10^9$  curies.\* This alternative is safe in the short term—on-site storage systems are safe for at least 100 years, according to present evidence.\*\* The at-surface alternative may be irresponsible for the long run, however, due to the uncertainties associated with maintaining safe institutional control over HLW at or near the surface for centuries.

In judging disposal options, therefore, it is essential to bear in mind that the comparison is not so much between ideal systems and imperfect reality as it is between a geologic repository and at-surface storage. From that standpoint, both technical experts and the general public would be reassured by a conservative engineering approach toward long-term safety, combined with an institutional structure designed to permit flexibility and remediation.

#### INTRODUCTION

##### *The Origins and Purpose of This Document*

Since 1955, the National Research Council (NRC) has been advising the U.S. government on technical matters related to the management of radioactive waste. Today, such review and advice is rendered by the Board of Radioactive Waste Management (BRWM or "the Board"), a permanent committee of the National Research Council. Over the past quarter century, the BRWM and its predecessors have acted as observer, critic, and adviser to the federal agencies responsible for the management of radioactive waste. In 1955, the National Research Council's Committee on Earth Sciences, the forerunner of the BRWM, first examined the problem of high-level radioactive waste (HLW) and recommended the strategy of isolation in stable geological formations. That basic approach is the one still being pursued in the United States and throughout the world. In 1983, the Board published the report of its Waste Isolation Systems Panel, a technical document that supported the use of "performance assessment." This method, first employed by the Karnbranslesakerhet (KBS) in Sweden for judging the performance of high-level waste and its packaging in geological formations, makes it possible to evaluate the ability of a repository to contain waste for the very long term. Performance assessment has become the keystone of the policies and regulations guiding the planning of HLW disposal in the United States as well as other nations.

Thus far, however, the technical programs carried out by government and industry in the United States have not led to a socially satisfactory resolution of the problem of HLW management and disposal. There are two reasons for this future.

The first is the controversy over nuclear energy and radioactive waste disposal as part of nuclear energy development. The Board takes no position on the use of nuclear energy. However, it notes that even if nuclear power in this country were discontinued tomorrow—a highly unlikely event—we would still need to dispose of nuclear waste from existing power plants and defense programs, and we would therefore still require a viable HLW disposal program.

The second reason that radioactive waste management remains in trouble is the way in which the programs have been designed and carried out. That problem is the subject of this report: the Board believes that important scientific and technical issues concern-

\*Footnotes at end of article.

ing HLW have been widely misunderstood; the result is a set of programs that will not achieve their stated goals. Neither the technical nor the social problems of the waste materials already in existence are being handled effectively. The Board believes that the safe and effective isolation of radioactive waste is feasible. Improvements to what is now being done are described below.

These conclusions are the result of several years of discussions within the Board and are based on the decades of scientific and professional experience represented among the members of the BRWM. In July 1988 the Board convened a week-long study session in Santa Barbara, California, where the Board was joined by experts from the United States and abroad. The group divided its deliberations into four categories: (1) the limitation of analysis; (2) moral and value issues; (3) modeling and its validity; and (4) strategic planning. These categories also determine the structure of this position statement, although in the analysis here, as in the real world, there is no easy separation among them.

Although this position statement is critical of present policies, it must be emphasized that the changes that need to be made are not restricted to the U.S. government. The nature of the risks and the government's responsibility to address them need to be presented and understood in terms different from those reflected in today's public policy. Doing so will not lead to less safety but to more. Yet achieving that result will require courage on the part of leaders in government and industry, as well as a willingness to rethink risks among the public at large and in the interest groups concerned with public policies for the management of risk.

These questions touch on far more than radioactive waste, and the rethinking they imply will be difficult to launch and to sustain. The Board believes, however, that this rethinking is essential and that radioactive waste management is a reasonable place to begin. This position statement is a step in that direction.

#### *High-Level Waste in Context*

At present, approximately 17 percent of the world's electricity is derived from about 400 nuclear power plants, although the percentage is as high as 70 percent in France and 50 percent in Sweden. The challenge of HLW disposal is dominated by the spent fuel from these nuclear power plants. Each 1,000-megawatt (MWE) nuclear power plant produces each year about 30 tons of spent fuel, which if reprocessed and vitrified could be reduced to between 4 and 11 cubic meters ( $m^3$ ) of highly radioactive glass. Some countries, including the United States, have chosen to dispose of commercial spent fuel directly. Each power plant also produces some 400  $m^3$  of short-lived, low-level waste (LLW) each year. Fuel production would leave another 86,000 tons of mill tailings on the earth's surface for each reactor, per year.

#### *Radioactive Waste Management Policy*

Because HLW must be isolated from the living environment for 10,000 years or more, all nations faced with the task of radioactive waste disposal have chosen underground repositories as the basic technical approach. In the United States, the Department of Energy (DOE) has been given the task of designing and eventually operating such a repository. Before operations begin, however, DOE must demonstrate to the U.S. Nuclear Regulatory Commission (USNRC) that the repository will perform to standards established by the U.S. Environmental Protection Agency

(EPA) that limit the release of radionuclides to specific levels for 10,000 years after disposal. Before the USNRC will grant a license to operate a repository, DOE must present convincing data and analysis to the USNRC showing that the proposed facility can meet specified release limits.

To develop such an assessment, it is necessary to examine all credible possibilities for the movement of radionuclides from the repository and into the accessible environment. In conducting these analyses, DOE has relied heavily on building computer models of the repository and surrounding geological environment, along with possible pathways of radionuclide transport. However, preparing quantitative predictions so far into the future pushes the boundaries of our understanding of geology, groundwater chemistry and movement, and their interactions with the emplaced material (radioactive waste package, backfill, sealants, and so on). Although the basic scientific principles are well known, quantitative estimates (no matter how they are obtained) must rely on many assumptions. The resulting estimates cover a range of outcomes.

While continued scientific investigations should reduce the uncertainty, absolute certainty cannot be achieved. Indeed, a major theme of this position statement is the need for public policy to benefit from, and change in response to, accumulating experience.

#### FINDINGS

##### *The Limitations Of Analysis Overview*

Engineers are unable to anticipate all of the potential problems that might arise in trying to site, build, and operate a repository. Nor can science prove that a repository will be absolutely "safe." This is so for two reasons. First, proof in the conventional sense cannot be available until we have experience with the behavior of an engineered repository system—precisely what we are trying to predict ahead of time. And second, safety is in part a social judgment, not just a technical one. While technical analysis can greatly illuminate the judgment of whether a repository is safe, technical analysis alone cannot substitute for decisions about the degree of risk that is acceptable. These decisions belong to the citizenry of a democratic society. Both of these important limitations of technical analysis have been understated, a lapse that feeds the concern and magnifies the public's distrust of nuclear waste management when these limitations are pointed out by the program's critics.

##### *Uncertainty and Significant Risks*

A principal source of concern over the U.S. program is the uncertainty in estimating the risks from a radioactive waste repository. Technical approaches are available to reduce or at least bound these uncertainties. Yet in focusing on ways to improve the analysis, public discussion has often overlooked a more important question: whether the uncertainty matters. This is, in principle, the domain of performance assessment, which draws together the different portions of the technical analysis so that one can see which parts of the waste confinement system may pose environmental hazards during or after the time when the repository receives waste.

Performance assessment of a repository system is necessarily a task for computer modeling. The waste management system, which starts at the reactor and continues into the distant future of a sealed repository, includes many different parts and processes that are described through different kinds of data (with different levels of quality), and

different kinds of analysis (with different level of accuracy). It is a practical consequence of the complexity of HLW disposal, together with the fact that no one has ever operated a repository, that performance assessment is, in the end, a matter of technical judgment.

The traditional approach in such cases, where an important social decision hinges on uncertain scientific data and projections, is to inform the political decision through a consensus of the appropriate technical community. Such consensus is difficult to reach in this case, however, given the political controversy, conflicting value systems, and overlapping technical specialties involved in assessing repository performance. Indeed, the allowable residual risk associated with a permissible repository site is a political choice; EPA has taken the position that the implementation of their guidelines constitutes the exercise of this choice. Unfortunately, the number and magnitude of the uncertainties in the probabilistic approach may be expected to reintroduce political controversy. This was recognized by the High-Level Radioactive Waste Disposal Subcommittee of EPA's Science Advisory Board in their January 1984 report reviewing EPA Draft Standard 40 CFR 191. That subcommittee concluded there was "insufficient basis for agreeing with the EPA staff that the proposed release criterion with its probabilistic corollary can be demonstrated to have been met with reasonable assurance, and that this could be argued definitively in a legal setting."

The subcommittee strongly affirmed the validity of EPA's probabilistic approach, but warned that "if EPA cannot have high confidence in the adequacy and workability of a quantitative, probabilistic standard, [it should] use qualitative criteria, such as recommended by [the US] NRC."

Specifically, with regard to the first major topic of the Science Advisory Board's findings and recommendations, "Uncertainty and the Standard," the subcommittee recommended relaxing the nuclide release limits by a factor of 10, modifying the probabilistic release criteria so that "analysis of repository performance shall demonstrate that there is less than a 50% chance of exceeding the Table 2 release limits, modified as is appropriate. Events whose median frequency is less than one in one-thousand in 10,000 years need not be considered," and, finally "that use of a quantitative probabilistic condition on the modified Table 2 release limits be made dependent on EPA's ability to provide convincing evidence that such a condition is practical to meet and will not lead to serious impediments, legal or otherwise, to the licensing of high-level-waste geologic repositories. If such evidence cannot be provided, we recommend that EPA adopt qualitative criteria, such as those suggested by the [US]NRC."

Unfortunately none of these recommendations was adopted.

The USNRC staff, in commenting on the EPA Draft Standard, strongly questioned the workability of quantitative probabilistic requirements for the defined releases stating, in part "numerical estimates of the probabilities or frequencies of some future events may not be meaningful. The [US]NRC considers that identification and evaluation of such events and processes will require considerable judgment and therefore will not be amenable to quantification by statistical analyses without the inclusion of very broad ranges of uncertainty. These uncertainty ranges will make it difficult, if not impos-

sible, to combine the probabilities of such events with enough precision to make a meaningful contribution to a licensing proceeding.<sup>21</sup>

The problem is compounded when the adequacy of the performance assessment—to determine if the allowable residual risk is achieved—is judged by its political impact (i.e., the effect of reopening the discussion on what is allowable residual risk) as well as its technical accuracy.

The difficulty of evaluating performance assessments is compounded by the fact that there is no actual experience in the disposal of HLW on which to base estimates of the risk. Some risk scenarios include low-probability/high-consequence events. Others are based on explicit or implicit assumptions that cannot be plausibly proved or disproved—for example, the consequences of climatic changes that could increase rainfall and groundwater flows at a repository site. The data and methodologies for modeling of repository isolation performance are still under development.

The actual performance of a repository is difficult to predict for many reasons. Geologists often disagree about the interpretation of data in analyzing the history of a site or geological structure. Long-term predictions are even more uncertain. Releases may occur thousands of years in the future, and they are likely to be diffuse and hard to detect. The potential for (and effects of) human exposure will be further shaped by unpredictable changes in demographics and technology.

These uncertainties do not necessarily mean that the risks are significant, nor that the public should reject efforts to site the repository. Rather, they simply mean that there are certain irreducible uncertainties about future risk. An essential part of any successful management plan is how to operate with large residual uncertainties, and how to maintain full public accountability as information about the risks changes with experience. This is not an impossible task: public policy is made every day under these conditions, and private firms undertake all sorts of activities in the face of uncertainty.

What is clear, however, is that a management plan that promises that very problem has been anticipated, or assumes that science will provide all the answers, is almost certainly doomed to fail. There have been many cases where attempts to understand uncertainly have damaged an agency's credibility and subverted its mission. For this reason, experienced regulatory agencies like EPA now pay careful attention to describing the uncertainties associated with their risk assessments.

#### Perceptions of Risk

Studies have linked the high public perceptions of the risk from nuclear power plants to certain qualities of that risk, in particular to perceptions that the risks are catastrophic, new, uncertain, and involuntary (i.e., beyond individual control). Radioactive waste poses risks with many of the same technical characteristics: the principal health risks (chiefly cancer and genetic defects) originate in the hazards of ionizing radiation. The risks from radioactive waste also have some of the same social characteristics as risks from nuclear reactors: a long time may pass before the hazards become apparent, dangers may be imposed involuntarily on populations, and there is a perceived possibility of catastrophe. The last perception, in particular, is qualitatively incorrect for HLW, since radioactive waste materials have far lower energy levels in comparison

to those of reactors, thereby limiting the risk associated with HLW to much lower levels in virtually all accident scenarios.

Given the complexity of the potential risks from HLW, most people will transfer the judgment of the safety of geologic disposal to the experts. The key question is which experts they will listen to. The answer depends on who seems more trustworthy: citizens may have little experience with radioactive waste, but they have considerable experience in evaluating people.

The perception of integrity and competence in risk managers depends not only on their personal attributes but also on the character of the policies they implement and the institutions they represent. The current decision process is structured in a way that does not promote trust in those who are implementing the waste management program. The current situation in Nevada, for example, demonstrates the importance of local input in the acceptance of risk. The political leadership of Nevada in fighting the proposed repository and portraying their State as a victim, reinforcing the perception on the part of the broader public that the program is beyond local control.

The Department of Energy should recognize that communications about the program will be ineffective so long as Nevadans believe they have no voice in the process. To the extent that DOE can share power, however, the increased perception of local control is likely to improve acceptance of a repository. The funding of a technical review group whose members are selected by the State government would be one positive step in this direction. In order to encourage rigorous technical analysis, it should be required that the findings of this review group include a statement of the technical evidence and reasoning behind the conclusions, as is done now by the State of New Mexico's Environmental Evaluation Group for the Waste Isolation Pilot Plant.

Given the highly polarized reactions to radioactive waste disposal, it is reasonable to anticipate criticisms and challenges to the technical competence and integrity of the program and its participants. Critics of the program point to the perceived incentives to find the proposed site and technology suitable, the motivation to meet schedules and budgets, and the resulting incentive to disregard or play down troubling findings. Claims to predict accurately events like earthquakes and climatic change are guaranteed to be challenged. These concerns have been addressed through a regulatory review process that is carefully designed to reveal errors, optimistic assumptions, and omissions; but the perceived credibility of that process can be bolstered if state and local groups and individuals have an opportunity to participate, not only in the formal review process but also through informal working relationships with project staff.

Those involved in HLW management must also avoid the trap of promising to reduce uncertainties to levels that are unattainable. Uncertainties are certain to persist. Whether the uncertainties in geologic disposal are too great to allow proceeding can only be judged in comparison to the projected risks and uncertainties for the alternatives, such as delayed implementation of disposal or surface storage of spent fuel. As a rule, the values determined from models should only be used for comparative purposes. Confidence in the disposal techniques must come from a combination of remoteness, engineering design, mathematical modeling, performance assessment, natural analogues, and the possibility

of remedial action in the event of unforeseen events. There may be public desire or political pressure on implementing agencies to provide absolute guarantees, but a more realistic—and attainable—goal is to assure that the likelihood of unforeseen events is minimal, and that the consequences of such events are of limited magnitude.

Technical program managers may ask whether it is better for the public to know too much or not enough. When unforeseen events occur, for example, the public can raise questions about the validity of the technical approach, as well as the competence of the risk analysis that was used to justify it. Conversely, when foreseen events occur, they lead to questions about why they were not prevented. The technical credibility of the project team suffers in either case, but it probably suffers more when the organization has understated the risk or uncertainly.

#### Moral And Value Issues

##### Overview

The foregoing discussion suggests that, in the area of radioactive waste, ethical issues are as important as management and technical decisions. Interested parties approach the issues with different views about the right way to proceed, often due to differences in moral and value perspectives. As a result, an exploration of ethical issues can illuminate the fundamental policy debates in this field by showing the technical issues in their political and social context. Such an exploration also provides scientists with an opportunity to explore their own ethical responsibilities as they provide society with technical advice on controversial subjects. During its 1988 study session the Board examined recent work on ethical questions in radioactive waste management conducted by scholars from a variety of disciplines.

These ethical concerns fall into two principal areas; (1) questions concerning the professional responsibility of scientists and engineers; and (2) questions concerning the appropriate uses of science in the decision-making process. Science and engineering are part of broader human activities, and as science enters the public arena, decisions can no longer be purely scientific; good science is not enough. Science has also become an important source of information and analysis for the public policy process, and scientists find themselves being called to account for, and to justify the results of, those decisions. Is this responsible, good, or desirable? How can the process be improved and the parties satisfied? Scientists have been sheltered from such questions in the past, but the increasing scale, sophistication, and pervasiveness of technical information require a corresponding increase in the sophistication with which these value judgments are made.

##### Three Issues of Equity

To see how questions of equity apply to radioactive waste management, consider first a study by Roger E. Kasperson and Samuel Ratick.<sup>3</sup> This project identified three sets of equity concerns, each of which raises questions of differential impact, public values, and moral accountability:

**Labor:** Who does the work and who pays for it? Congress has determined that DOE will be responsible for the work and that the beneficiaries of nuclear power will pay for it through a surcharge on their electric rates.

**Legacy:** What do we owe to future generations? Moral intuition tells us that our descendants deserve a world that we have tried to make better.<sup>4</sup> Posterity matters to us, independent of economic trade-offs; policy

should therefore take that interest into account. The EPA regulation requiring evidence that radioactive waste releases will be limited for 10,000 years and more is an illustration of such a concern for the distant future.

**Locus:** Who benefits, and who is exposed to risk? A repository is the final resting place for the waste from nuclear power plants that provide benefits spread over the whole nation for a short time; but it also concentrates risks and burdens along transportation routes and, for a much longer time, at the disposal site. A radioactive waste repository poses additional complications: it will be the first facility of its kind; the risks it poses are uncertain and, to the extent they exist at all, are likely to emerge over very long time spans; public fears are unusually high; and the history of federal action has raised concerns about whether the interests of local populations will be treated equitably.

These ethical questions, when applied to radioactive waste management, demonstrate that once science enters the policymaking arena, good science is no longer enough, because technical decisions are no longer simply scientific. When the questions are no longer scientific, scientists alone cannot be expected to answer them. Sheldon Reaven suggests that the Nuclear Waste Policy Act creates a "scientific trap," in which citizens are encouraged to expect certainty from flawless science, and in which scientists and engineers are encouraged to believe or pretend that they can supply it.<sup>5</sup>

Sheila Jasanoff makes the same point: the political need for accountability in the United States pressures regulators to seek a "scientifically correct" answer, even when there is none.<sup>6</sup> The attempt is doomed to scientific and political failure. It is therefore critical to recognize the boundaries of scientific understanding as it can be applied to a societal problem.

#### Five Issues of Policy

These ethical considerations have been applied to the current HLW situation by an interdisciplinary team led by E. William Colglazier.<sup>7</sup> For each of five key policy issues, the study discusses the "fairness" and appropriateness of the procedures for making decisions, the distribution of costs and benefits, and the type of evidence that is considered sufficient and admissible. The study placed special emphasis on the role of scientific evidence because of the large scientific uncertainties and the continuing controversy, even among experts, on what is known and not known. The study's observations include the following:

**The need for the repository:** The core policy dispute concerns the choice between permanent disposal in a geologic repository and long-term monitored storage in an engineered facility (including at-reactor storage) at or near the surface. The controversy has been over the distribution of costs and benefits to current and future generations and to various stakeholder groups:

Pro-nuclear groups feel that the federal government promoted nuclear power and therefore has a special responsibility (spelled out in contractual obligations) to accept spent fuel in a timely manner for permanent disposal.

Many environmental groups, on the other hand, view radioactive waste as a special threat to people and the environment; they also favor permanent disposal in order to fulfill this generation's responsibility, and view interim storage as an unfair "legacy" to future generations.

Some proponents of interim storage, however, argue that this generation should not make decisions that would be costly to correct in the future; new technological developments may occur over the next century that could change our view of how to handle nuclear waste.

In short, all stakeholder groups agree that this generation should fulfill its responsibility to future generations, but they disagree on how to turn this value principle into policy.

**Siting:** In making politically difficult siting decisions, political leaders have two basic options: make the choice internally and impose it on a weak constituency; or set up and follow a selection process perceived as objective, scientifically credible, and procedurally fair. When NWPA was passed in 1982 the latter course appeared necessary for both technical and political reasons. However, critics soon claimed that DOE was being political rather than objective in its decisions, citing as evidence DOE's choice of first-round sites and its decision to defer the second round of site selection. This perception led to a stalemate: DOE lacked credibility, and credibility is essential to implement the siting approach set forth in the NWPA. This stalemate was broken by Congress with the 1987 NWPA amendments, which designated Yucca Mountain, Nevada (one of DOE's first-round choices), as the initial site to be characterized and, if acceptable, to be licensed.

**Intergovernmental sharing of power:** Procedural values were also important in NWPA, which established rules for sharing power among the affected governmental entities. However, the states feel that federal agencies, and especially DOE, have generally chosen to try to meet milestones rather than slow down the process to live up to the spirit of "consultation and cooperation." DOE, for its part, feels that it has a mandate to move forward expeditiously; it has tried to accommodate the states, which (in DOE's view) seek delays to throw obstacles in the way of efficient implementation. Nevada, in particular, interprets the 1987 NWPA amendments as unfair on procedural (as well as distributional and evidential) grounds.

**Safety.** The fundamental safety issue is the determination of a fair evidential process and standard of proof for showing that the repository is acceptably safe for the thousands of years over which the waste will remain dangerously radioactive. The United States has adopted a set of licensing criteria (e.g., groundwater flow time, package lifetime, waste release limits, and so on) that require considerable certainty. As is often the case with frontier science, however, knowing more may actually increase rather than decrease the uncertainties, at least in the near term. The evidential uncertainties in assessing repository safety may point to a more flexible and evolutionary approach (see below); but this conflicts with the concerns to keep to a fixed schedule, so as to limit costs, discharge obligations to future generations, and meet contractual commitments to utilities holding spent fuel.

**Impacts.** The debate over the distributional impacts of the repository program include such issues as who should pay for the program, how the impacts can be fairly calculated, and what is fair compensation for negative impacts. NWPA determined that the costs should be paid by the beneficiaries of nuclear-generated electricity through fees, initially, of one mill per kilowatt-hour. An evidential dispute concerns the potential "stigma effect," including lost jobs and lost

tax revenues, due to nuclear waste; the social science methodologies for assessing this effect are still controversial. Another issue concerns the use of incentives and compensation: in the 1987 amendments, Congress authorized special payments for the host state, provided it forgoes its right to object. This runs the risk of being perceived by opponents as a bribe, offered in exchange for taking otherwise unacceptable risks. Congress also sought a procedural solution to these distributional impacts through creation of the Office of Special Negotiator, hoping that the negotiator might find an acceptable arrangement with the host state.

Consideration of these policy debates regarding the disposal of radioactive waste leads to three important conclusions:

No interested party has an exclusive claim to be rational or to articulate the public interest;

What is considered fair or unfair is subjective and can change over time;

And with regard to repository safety, the issue is acceptability rather than certainty—acceptability being what is acceptable to society, given the evidential uncertainties, perceptions of risk, and contentious stakeholder debates.

These conclusions highlight the advantage of an empirical approach—one that examines fairness in process, outcomes, and evidence; one that reflects an understanding of the values as well as the interests of the stakeholders. Such an approach may lead to policies that have greater chance of surviving over time because they are more widely perceived as fair.

#### Modeling And Its Validity Overview

Models based on geological principles play a central role in the design and licensing of a waste repository. Because this is where science enters into the design and evaluation process, the Board discusses the appropriate use of models at some length, including the following topics: the purposes for which models are used; the relationship among modeling, treatment of uncertainties, and regulation; and supplements to the use of models in the current program.

The role of models in the design and licensing of the repository should properly be understood to be different from the use of models in designing airplanes or licensing nuclear reactors. There are major sources of uncertainty in quantitative geophysical modeling—even geohydrology, the best developed, can provide only approximate answers. Geoscientists will need more time to learn how to do more reliable predictive modeling of near-term events, and some events may prove to be chaotic—that is, impossible to predict in detail.

In particular, there is a critical need for (1) better communication between modelers and geological experts, in order to improve model prediction; and (2) a more open, quality-reinforcing process such as could be obtained through a peer-reviewed research program at universities and elsewhere. This would do more to improve technical and public confidence in models. DOE could support such an effort by allocating R&D funds, possibly through or in cooperation with the National Science Foundation, for model improvements.

In the meantime, however, models can be useful in identifying and evaluating significant contributors to risk and uncertainty. Models are not well suited to describe the risk and uncertainties to lay audiences, however. Natural analogues, if they can be found, are far more useful for this purpose (see below).

Problems of repository performance assessment, according to the scheme shown in Figure 1, belong in Region 2 or at the border between Regions 4 and 2. However, there is a general tendency to assume that we can address them using a Region 3 approach: that is, start with a deterministic model that incorporates all "relevant" contributors to overall behavior, and then attempt to collect enough data to move the problem from Region 2 into Region 3. In reality, however, this approach leads to increasingly complex models and increasingly expensive site evaluations, without a concomitant improvement in either understanding or design. Anthony M. Starfield and P.A. Cundall have suggested that we sometimes demand answers that the model is incapable of providing because of complexity or input demands. The design of the model should be driven by the questions that the model is supposed to answer, rather than by the details of the system that is being modeled. Under the present HLW program, geophysical models are being asked to provide answers to questions that they were not designed to tackle.<sup>9</sup>

#### Models and Modeling Problems

Figure 1 illustrates a general classification of the types of modeling problems taken from C.S. Holling.<sup>9</sup> In Region 1 there are good data but little understanding; this is where statistics is the appropriate analytic tool. In Region 3 there are both data and understanding; this is where models can be built, validated, and used with conviction. The use of finite-element models in structural design is a good example of Region 3 models. Regions 2 and 4 contain problems that are data-limited in the sense that the relevant data are unavailable or cannot be placed in a rigorous theoretical framework. In Region 2 the understanding of basic mechanisms is good; it is the detailed information that is unobtainable. In Region 4 there is not even a sound understanding of the basic mechanisms and interactions.

#### Appropriate Uses for Geophysical Models

In the Board's judgment, a scientifically sound objective of geophysical modeling is learning, over time, how to achieve the long-term isolation of radioactive waste. That is a profoundly different objective from predicting the detailed structure and behavior of a site before, or even after, it is probed in detail. Yet, in the face of public concerns about safety, it is the latter use to which models have been put. The Board believes that this is scientifically unsound. This conclusion is based on review of the modeling approach used by DOE and the regulatory agencies in order to implement the NHPA.

In order to support the regulatory and political argument that a site will be safe, it is necessary to make detailed, expensive, and extended extrapolations. These are informed speculations based on existing knowledge. In many instances the guesses are likely to be correct. The geotechnical models used to assure that the foundations of a building or bridge will be secure in the event of earthquakes provide an example of a well-founded predictive use of geophysical modeling. But to predict accurately the response of a complex mass of rock and groundwater as it reacts over thousands of years to the insertion of highly radioactive materials is not possible.

This point is important to the public concerns that have surrounded the U.S. radioactive waste program. Use of complex computer models is necessary to apply well-known geophysical principles in order to estimate or to set bounds on the behavior of a

site, so that its likely suitability for a waste repository can be evaluated. But it is impossible to stretch the almost always incomplete understanding of a site into an accurate quantitative projection of whether a repository will be safe if constructed and operated there. Even after a detailed and costly examination of the site itself, only an informed judgment can be reached, and even then there will be uncertainties.

As modelers have become more aware of the processes they are attempting to model, they are also recognizing that the geological environment is more complex than originally thought and that quantitative prediction is correspondingly more difficult and uncertain. Many computer simulation models of geological environments are based on deterministic models that have been used successfully in branches of mechanics such as aerospace engineering, where the basic phenomena are much better defined. Such models are of limited value for the ill-defined, data-limited, long-term situations such as the repository isolation problem. It is illusory to expect accurate quantitative estimates of radionuclide releases from them.

#### Sources of Uncertainty in Geophysical Models

Performance assessments—estimates of the repository's ability to isolate HLW—are based on current computer simulations and parameters derived from laboratory and field measurements. As a consequence, they will have large uncertainties associated with the predicted performance. These uncertainties could pose serious obstacles in demonstrating compliance with licensing requirements. Discussions at BRWM's 1988 study session identified four principal causes of uncertainty:

1. Structural uncertainty. Do the equations adequately represent the operative physical processes? Do we in fact understand the system well enough to model it mathematically? Modeling will be most successful in solving Region 3 problems (see Figure 1), where we have a great deal of data and a good understanding of how the system works.

2. Parametric uncertainty. Have we chosen the right values for the variables (e.g., permeability) in the equations? Have we in fact chosen the right variables to represent the behavior of the system? Are our measurement techniques valid? Will they produce enough, and good enough, data?

3. Uncertainties in initial and boundary conditions. Have we interpolated adequately from a few spatially isolated point measurements to a broad three-dimensional domain (e.g., groundwater, heat, in situ stress)?

4. Uncertainties in forcing functions. How well can we characterize past and future events that might play a part in the fate of the repository (e.g., climate, tectonics, human intrusion)?

Urgent attention should be given to examining these and other causes of uncertainty, but even with continuing research along the present lines, improvement will come slowly. It may even turn out to be appropriate to delay permanent closure of a waste repository until adequate assurances concerning its long-term behavior can be obtained through geophysical studies. Judgments of whether enough is known to proceed with placement of waste in a repository are needed throughout the life of the project. But to repeat the Board's earlier point: these judgments should be based on a comparison of the available alternatives, rather than just a simplistic debate over whether, given cur-

rent uncertainties, a repository site is "safe." Even when the detailed behavior of an underground repository is still under study, it may well be safer to put waste there, in a way that permits retrieval if necessary, rather than leaving it at reactors or in storage at, or near, the surface of the earth.

#### Modeling Limitations—An Example

The inherent difficulties of modeling are illustrated by the case of groundwater flow, which is used as an example precisely because it is the best developed in terms of modeling. Groundwater flow has been extensively modeled for a broad range of engineering problems, and it consequently has a richer base from which to draw than do many other aspects of repository isolation. Groundwater flow is also generally accepted as the primary mechanism by which radionuclides could move from the repository to the biosphere, so it has been emphasized in modeling studies of repository isolation. Several experts, however, have commented on the difficulty of applying classical hydrology models to the problem of radioactive waste isolation.

Groundwater hydrologists are becoming increasingly aware that inadequate and insufficient data limit the reliability of traditional deterministic [distributed-parameter] groundwater models. The data may be inadequate because aquifer heterogeneities occur on a scale smaller than can be defined on the basis of available data, time-dependent variables are monitored too infrequently, and measurement errors exist.<sup>10</sup>

To carry out these [repository flow] calculations, hydrogeologists are applying geostatistical models and stochastic simulation methods originally developed to assess piezometric response in near-surface unconsolidated aquifers over limited spatial distances and short time frames with relatively abundant data \* \* \*. These techniques may not be as valuable when applied to the assessment of radionuclide transport in deep rock formations, over large distances and long time frames, under conditions of sparse data availability \* \* \*. [The authors] have repeatedly drawn attention to the potential problems associated with the geostatistical methods (Bayesian and otherwise) when data networks are sparse and sample sizes small. In our opinion, this is the potential Achilles heel for the application of geostatistics at nuclear repository sites.<sup>11</sup>

With regard to repository isolation modeling, increased study has thus far resulted in the identification of greater complexity. Progress is being made toward including some of this complexity in the models, at least in terms of groundwater studies; but other geotechnical aspects of repository isolation (such as constitutive properties of rock joints, excavation and repository scale deformation behavior, and regional in situ stress) are far less developed. It will take years of additional research to represent them adequately in the models. As a result, the prospects are poor, especially in the short term, for models that can produce reliable quantitative measures of isolation performance.

#### Appropriate Objectives for Modeling

Repository performance assessments are unlikely to prove beyond doubt that risks are below established limits. Nor do the regulations require it—EPA requires only a "reasonable assurance." The problem is that in a case without clear precedents, it is unclear what is "reasonable." The Board's point is that unsound use of technical infor-

mation is not a proper substitute for the political reasoning that, in a democratic society, must in the end win consent for taking reasonable steps to advance public health and safety.

In light of the limitations of technical knowledge, the Board concludes that it makes sense to conduct the assessments through an iterative process, in which the assessment provides direction to those characterizing a repository site and developing the repository engineering features. As further information is developed about the candidate site, it is also used in the performance assessment.

Many of the uncertainties associated with a candidate repository site will be technically interesting but irrelevant to overall repository performance. Conversely, the issues that are analytically tractable are not necessarily the most important. A key task for performance modeling is to separate the significant uncertainties and risks from the trivial. Similarly, when there are technical disputes over characteristics and processes that affect calculations of waste transport, sensitivity analysis with alternative models and parameters can indicate where further analysis is required and where enough is known to move on to other concerns.

#### Using Models To Reduce Uncertainty

Models do have an indispensable role in developing understanding of such problems, provided that the models are developed and used within the proper limitations. In other words, modeling can be used to improve models. The following quotations from those concerned with such problems illustrate this point:

"\* \* \* much time can be saved in the early stages of hypothesis formulation by the exploration of these hypotheses through mathematical models. Similarly, mathematical models can be used to investigate phenomena from the viewpoint of existing theories, by the integration of disparate theories into a single working hypothesis, for example. Such models may quickly reveal inadequacies in the current theory and indicate gaps where new theory is required."<sup>12</sup>

"The updating properties of the Bayesian approach \* \* \* are well suited to the iterative approach we espouse for the modeling/data gathering sequence at a site. We feel that the first modeling efforts should precede or accompany initial site investigations."<sup>13</sup>

A good example of this general approach is the "regionalized sensitivity analysis" approach, by which G. M. Hornberger and his collaborators have been able to identify the "critical uncertainties" in applying a particular model to several data-sparse ecological problems, and thereby define programs of investigations to reduce those uncertainties.<sup>14</sup>

In summary, models should be qualitatively sensible, robust to sensitivity analysis, and independent of minor effects or processes, and they should include acceptable levels of uncertainty. However, models cannot prove that the repository is safe, nor can they resolve public concerns about the repository.

#### Supplements to Modeling

**Natural Analogues:** Because models cannot be conclusive with regard to the safety of a repository site, it is important to think carefully about natural analogues. These are natural "test cases," geological settings in which naturally occurring radioactive materials have been subjected to environmental forces for millions of years. These natural

experiments demonstrate the action of transport processes that are similar to those that will govern the release of man-made radionuclides from a repository in a similar setting.

The natural analogue approach depends, of course, on whether the natural case is in fact an analogue for a repository situation. Where there is scientific agreement that the analogy applies, however, the approach is powerful because it allows us to predict processes with confidence over many millennia. And natural analogues can serve two additional roles: (1) they can provide a check on performance assessment methodology; and (2) they may be more meaningful than sophisticated numerical predictions to the lay public. The alternative management strategy described in the following section would make substantial use of natural analogues, such as undisturbed natural deposits of radioactive elements and groundwater systems, in order to illuminate the behavior of the geologic environment.

**Professional Judgment:** A second approach is to use the professional judgment of technical experts as an input to modeling in areas where there is uncertainty as to parameters, structures, or even future events. Such judgments, which may differ from those of DOE program managers and their staffs, should be incorporated early in the process. A model created by this process can redirect the DOE program substantially.

It is important to bear in mind that all uses of technical information entail judgments of what is important and what is less so. If the technical community is to learn from the successes and failures of the DOE program, it is essential that these technical judgments be documented. Setting out the reasoning of DOE staff and of independent outside experts contributes to learning and builds credibility in the process even when the experts disagree with DOE staff and among themselves.

#### Implications for Program Management

The Board has concluded that geological models, and indeed scientific knowledge generally, are being inappropriately applied in the U.S. radioactive waste repository program. That misapplication prompts this Board to outline an alternative management strategy. The next section describes an alternative management approach that employs natural analogues and professional judgment in a program design that uses science appropriately in the search for a safe disposal system. Putting such an approach into effect, however, would require major changes in the way Congress, the regulatory agencies, and DOE conduct their business. Such changes will be difficult to achieve, but the Board has reluctantly concluded that nothing else will put to rest the problems that plague the national program today.

#### Strategic Planning

##### Overview

There is no scientific reason to think that an acceptable HLW repository cannot be built and licensed. For historic and institutional reasons, however, DOE managers often feel compelled to "get it right the first time." This management strategy runs the risk of encountering "show-stopping" problems that may delay licensing and will certainly cause further deterioration of public and scientific trust.

The alternative would be a more flexible, experimental strategy that embodies the following principles:

Respond with conservative design changes as site attributes are discovered;

Use modeling to identify areas where more information is needed; and

Allow for remediation if things do not turn out as planned.

Implicit in this approach is the need to revise both technical design and regulatory criteria as more information is discovered. This is difficult to achieve in a governmental structure that disperses authority among legislative and executive agencies and separates regulation from implementation. When presented with intense controversy, such an institutional arrangement breeds distrust among governmental units and the public. In that setting, partial remedies further entangle the procedural morass.

More practically, however, DOE can enhance the credibility of the program and reduce the likelihood of late-stage surprises by (1) encouraging effective communication within its complex management structure; and (2) providing incentives for field personnel to identify and solve problems. DOE and the USNRC can also enhance credibility by encouraging periodic external reviews of the repository design, construction, and licensing requirements and associated processes.

#### Policy Context

The present U.S. approach to HLW disposal is increasingly vulnerable to being derailed by minor surprises. This vulnerability does not arise from a lack of talent or effort among the federal agencies and private contractors working on the program. Nor does the design or construction of the repository represent an unusually difficult technical undertaking. Instead, the program is at risk because it is following the wrong approach to implementation. The current predetermined process, in which every step is mandated in detail as in the more than 6,000 page "Site Characterization Plan,"<sup>15</sup> is inappropriate.

The current policy calls for a sequential process in which EPA and the USNRC first establish the criteria for safe disposal, and then DOE describes in detail what steps will be taken to move through site characterization, licensing, and operation of the facility. The result of this approach is that any late change, by any of the participating agencies, is taken as an admission of error.

And late changes are bound to happen. One worker was killed and five injured in an HLW repository under construction in West Germany when a support ring failed unexpectedly. At the Waste Isolation Pilot Plant (WIPP) in New Mexico, the discovery of pockets of pressurized brine in formations below the repository level led to public outcries and a continual National Research Council review of the suitability of the site.

The United States seems to be the only country that has taken the approach of writing detailed regulations before all of the data are in. Almost all other countries have established limitations on the allowable levels of radiation dose to individuals or populations resulting from repository establishment—but have taken a "wait and see" approach on design, while collecting data that may be of use in setting design. The United States, on the other hand, seems to have felt that detailed regulations can be, in fact must be, written without regard to any particular geological setting or other circumstance. As a direct consequence, the U.S. HLW program is bound by requirements that may be impossible to meet, even though overall dose limits can be achieved.

#### Alternative Management Strategies

The preceding sections have shown that there are a number of unresolved issues in

the U.S. radioactive waste disposal program, as well as (and in part because of) high levels of uncertainty and public unease about the performance of the repository. The Board's consideration of these subjects indicates that the proper response to distrust is greater openness in the process, and that the proper response to uncertainty is greater knowledge and flexibility, as well as redundancy of barriers to nuclide transport. The U.S. program will continue to face controversy until it adopts a management strategy based on these principles.

The current approach to the design, construction, and licensing of the Nevada site is derived from the philosophy and procedures used for licensing nuclear power plants. The characteristics of the repository and its geological setting are carefully determined and specified as a basis for a complex set of calculations that describes the behavior of the system. This model is used to generate predictions of the migration of radioactive elements into the biosphere and analyzes the consequences of various events ("scenarios") that might affect the site over the next 10,000 years, in order to demonstrate that the repository site meets regulatory requirements (i.e., is "safe"). Based on the model and geologic studies of the site, the construction of the repository is specified in detail and then carried out under an aggressive quality assurance program, which is designed to withstand regulatory review and legal challenge. Within these requirements it is the geological setting that ensures isolation, not the engineered characteristics of the system; closure aims for complete entombment and discourages subsequent remediation. For all the reasons discussed above, a management process based on the regulation of nuclear power stations is inappropriate to the development of a waste repository.

A well-documented alternative to this approach is being followed, to various degrees, by countries such as Canada and Sweden. The exploration and construction of a geological test facility and a low-level waste repository, respectively, follow a flexible path, allowing each step in the characterization and design to draw on the information and understanding developed during the prior steps, and from prior experience with similar underground construction projects. During and subsequent to the closing of the repository, the emphasis will be on monitoring and on the ability to repair, in order to minimize the possibility that unplanned or unexpected events will compromise the integrity of the disposal system. Engineered modifications can be incorporated (e.g., in the waste containers or in the material used to backfill the repository) if the computer models suggest unacceptable or irreducible uncertainties in the performance of the unmodified containment system.

The Canadian experience at their Underground Research Laboratory provides a good example. All of the major rock structures and groundwater conditions were defined from surface and borehole observations before shaft construction began. Detailed geological structure can never be totally determined from surface information, however, and the final details of the facility design were modified to take account of information gathered during shaft construction.

What are the risks and benefits of the two approaches? The U.S. approach facilitates rigorous oversight and technical auditing. Its goals and standards are clear, and, if carried out according to specifications, this approach is robust in the face of administrative or legal challenge. It is designed to create a

sense of confidence in the planning and operation of the repository, and it facilitates precise answers to specific technical questions.

However, such an approach is not consistent with normal geologic or mining practice. It assumes that the properties of the geologic medium can be determined and specified in advance to a degree analogous to that required for man-made components, such as reinforcing rods, structural concrete, or pipes. In reality, geologic exploration and mine construction never proceed in this way. Most underground construction projects are more qualitative, using a "design (and improve the design) as you go" principle. New sections of drill core often reveal surprises that must be incorporated into the geologists' concept of the site, integrated with past experience, and used to modify the exploration plan or mine design. In a project where adherence to predetermined specifications is paramount, the inherent variability of the geologic environment will result in endless changes in the specifications, with resultant delays, frustration for field personnel, high overhead costs, and loss of public confidence in both the suitability of the site and the competence of the professionals working on the project.

The second approach has more in common with research than with conventional engineering practice. This approach continually integrates new data into the expert judgments of geologists and engineers. It makes heavy use of natural analogues, such as undisturbed natural deposits of radioactive elements and groundwater systems, in order to illuminate the behavior of the geologic environment. It can immediately take advantage of favorable surprises and compensate for unfavorable ones. That this approach works well is evidenced by the enormous number of underground construction projects in diverse geologic settings that have been completed successfully around the world. These projects were not designed to contain radioactive waste for thousands of years, but many of them faced technical problems of comparable magnitude, such as crossing active faults, sealing out massive groundwater flows, or stabilizing highly fractured and structurally weak rock masses.

The second approach, with its reliance on continuous adaptation, would be much more difficult to document, audit, and defend before a licensing authority or court of law than is the more prescriptive approach. Some aspects of quality assurance can work well, such as document and sample control, the use of standard procedures and tools, and personnel qualifications. Other quality assurance techniques are likely to be contentious and may be impossible to implement in the same way they are implemented in nuclear power plants, including design control, instructions, procedures, drawings, inspections, and control of nonconforming items. An alternative is to use an aggressive and independent peer review system to appraise the decisions made and the competence of the technical personnel and managers responsible.

The legal system is able to accept expert opinion as a basis for action or assessments of action, but one cannot predict whether a repository could ever be licensed in the face of the batteries of opposing "experts" who would inevitably be called on to assess a flexibly designed and constructed repository for HEW disposal. The debate will hinge in part on a clear understanding of the alternatives against which a proposed "solution" will be judged. By contrast, the EPA standards and USNRC regulations define require-

ments that, if met, form the basis for the presumption that the facility is "safe."

Given the unhappy history of radioactive waste disposal in the United States, however, one very real and likely alternative is that nothing at all will be done. In judging disposal options, therefore, one should also adopt inaction or some other likely scenario as a default option, so that comparison can be made and progress consistently assessed over time. The combination of a conservative engineering approach and designed-in maximum flexibility, to allow unanticipated problems to be corrected, should reassure both technical experts and concerned non-experts. The barrier is not logical but institutional, and the prescriptive approach in the U.S. program is dictated by a governmental structure that separates regulation from implementation.

Within the present program, for example, "quality assurance" has become the *bête noire* of frustrated field personnel, who are trying to work within a system that is hostile to surprises in a world that is full of them. Because almost any geologic phenomenon has more than one possible cause, flexibility (including the recognition that uncertainty is inevitable and must be accommodated) is more likely to lead to the design and construction of a safe repository system than are rigid, predetermined protocols. In employing and evaluating such an adaptive approach to construction, emphasis focuses on those decisions that have irreversible or noncorrectable consequences on disposal, rather than on the myriad small adjustments that do not affect the basic flexibility and robustness of a repository.

#### The Elements of a More Flexible System

In a program governed by this alternative approach, change would not be seen as an admission of error; the system would be receptive and responsive to a continuing system of information from site characterization. The main actors would reduce their reliance on detailed preplanning during initial site characterization, making it possible to debug the preliminary design during rather than before characterization.<sup>16</sup> But the necessary conditions of the system are flexibility and resiliency-flexibility to respond rapidly to ongoing findings in the geology, geohydrology, and geochemistry (within broad constraints); and resiliency to continuously adjust the performance assessment to reflect new information, especially where such information indicates possible precursors of substantial increases in risk. These quantities could be developed through the following steps:

**Interactive performance assessment:** The basic approach outlined here would start with a simplified performance assessment, based on known data and methods of interpretation. Given the inherent uncertainties and technical difficulties of the process, the present system may well expand large efforts on small risks, and vice versa. An iterative approach, on the other hand, could allow characterization efforts to give priority to major uncertainties and risks, while there is still time and money left to do something about them. As in probabilistic risk assessment, analysis focuses on efforts to reduce the important risks and uncertainties. In this case, that means acquiring information on the design features and licensing criteria that are most likely to determine whether the site is suitable or should be abandoned.

**Fixing problems vs. anticipating problems:** The underlying concept of the present, anticipatory U.S. management strategy is "Get it right the first time." One result is a 6,300-

page site characterization plan for Yucca Mountain. For the reasons described above, however, a process based on getting all of the needed measurements and analysis on the first pass, with acceptably high quality, is not likely to succeed. The geological environment will always produce surprises, like the pockets of pressurized brine at WIPP. No matter what technical approach is initially adopted, the design can be improved by matching it with specific features of the site. Experiments are now being conducted at WIPP with backfill material and other engineered barriers that were not part of the original design. These are being tried as ways to make the disposal system as a whole robust in the face of newly discovered uncertainties in the geology.

Define the problem broadly: As characterization proceeds, especially if it is done without the guidance of iterative performance assessment, DOE may eventually find it difficult or impossible to meet some of the criteria set by the USNRC and/or EPA. This will not mean that Yucca Mountain is unsuitable for a repository—the problem could be with the detailed criteria. This is no reason to arbitrarily abandon the release limits—it is the more detailed requirements that may need to be reconsidered, since they ultimately affect the release limits and the imputed dose. However, one should not take EPA's release standards or the USNRC's detailed licensing requirements as immutable constraints. They are roadmarkers to, and surrogates for, dose limits. Although the EPA standards and the USNRC regulations recognize and accept a certain level of uncertainty, the discussion to date of the application of these standards and regulations does not warrant confidence in the acceptance of uncertainty in licensing procedures.

Some process is needed in order to determine whether DOE's inability to meet a particular requirement is due to a disqualifying deficiency in the site or to an unreasonable regulatory demand, one that is unlikely to be met at any site and is unnecessary to protect public health. And to the extent that regulatory criteria can be corrected earlier instead of later in the process, they are more likely to be perceived as technical adjustments rather than as a diminution of public safety. Given the history of U.S. efforts to dispose of radioactive waste, current plans for the program have little chance of progressing without major modification in the 20 years or more that will be required to get a repository into operation.

#### RECOMMENDATIONS

The Board's conclusions are explicit or implicit throughout this document, as are many of the actions it would recommend to the various players. These recommendations are summarized below.

1. Congress should reconsider the rigid, inflexible schedule embodied in NWPA and the 1987 amendments. It may be appropriate to delay the licensing application, or even the scheduled opening of the repository, until more of the uncertainties can be resolved. The Secretary of Energy's recent announcement of a more realistic schedule, with the repository opening in 2010 rather than 2003, is a welcome step.

2. The Environmental Protection Agency, during its revision of the remanded 40 CFR Part 191, should reconsider the detailed performance standards to be met by the repository, to determine how they affect the level of health risks that will be considered acceptable. In addition, EPA should reexamine the use of quantitative probabilistic release criteria in the standard and examine what

will constitute a reasonable level of assurance (i.e., by what combination of methods and strategies can DOE demonstrate that those standards will be met?). All other countries use only a dose requirement. In setting regulatory standards and licensing requirements, the EPA should consider using only dose requirements.

3. The U.S. Nuclear Regulatory Commission, likewise, should reconsider the detailed licensing requirements for the repository. For example:

What level of statistical or modeling evidence is really necessary, obtainable, or even feasible?

To what extent is it necessary to prescribe engineering design, rather than allowing alternatives that accomplish the same goal?

What can be done to accommodate design changes necessitated by surprises during construction?

What new strategies (e.g., engineered features like copper containers) might be allowed or encouraged as events dictate?

4. The Department of Energy, for its part, should continue and also expand its current efforts to become a more responsive player in these regulatory issues. The following activities should be included:

Publicly negotiated preclicensing agreements with the USNRC on how to deal with the high levels of uncertainty arising from numerical predictions of repository performance;

Publicly negotiated preclicensing agreements with the USNRC on improved strategies for performance assessment;

Active negotiations with EPA and the USNRC on the real goals and precise definitions of their standards and requirements;

An extramural grant program, in cooperation with the National Science Foundation, for the development of improved modeling methodology, in combination with training programs and public education efforts;

Expanded use of expert scientists from outside the program to review and critique detailed aspects and to provide additional professional judgment;

Greatly expanded risk communication efforts, aimed at reaching appropriate and achievable goals acceptable to the U.S. public;

Meaningful dialogue with state and local governments, Indian tribes, environmental public interest groups, and other interested organizations.

5. The Department of Energy should make greater use of conservative engineering design instead of using unproven engineering design based on scientific principles.

6. The Department of Energy should participate more actively in international studies and forums, such as those sponsored by the International Atomic Energy Agency, the Nuclear Energy Agency, and the Commission of European Communities, and should subject its plans and procedures to international scientific review, as Sweden, Switzerland, and the United Kingdom have already done.

7. Although geologic disposal has been the national policy for many years, and the Board believes it to be feasible, contingency planning for other sites and options (for example Subseabed Disposal of spent fuel and high-level radioactive waste) should be pursued. The nation, the Congress, the federal government, utilities, and the nuclear industry should recognize the importance of contingency planning in the event that some issue should make it impossible to license a geologic repository.

#### EXHIBIT 3

[Material submitted to the Subcommittee on Nuclear Regulation by the U.S. Nuclear Regulatory Commission, October 1, 1992]

#### QUESTIONS CONCERNING REGULATORY REQUIREMENTS FOR HLW REPOSITORY

(1) EPA's high-level waste standard explicitly limits reliance on active institutional controls to a period not to exceed 100 years. What is the rationale for this approach? How does this approach compare to the approach taken in other regulatory programs that address risks that extend over a long period of time (e.g., low-level waste, uranium mill tailings, hazardous waste)? Is there a similar assumption contained in NRC's 10 CFR 60?

EPA's rationale for limiting reliance on active institutional controls is skepticism about the ability (or willingness) of society to maintain active institutional controls for periods of time longer than about a century. EPA distinguishes between "active" institutional controls, which include monitoring or guarding a site, and longer-lived "passive" institutional controls such as monuments, markers, and land-use records. The NRC's HLW repository regulations similarly anticipate that "passive" controls can be effective in providing long-term protection for a repository site, but do not anticipate long-term reliance on "active" controls.

EPA admits that the specific time limit allowed for reliance on "active" controls is judgmental. However, the time limit imposed by EPA has not been especially contentious during development of EPA's HLW standards. Most observers have accepted the idea that long-term use of "active" institutional controls is not a reliable way to achieve safe waste disposal. For example, while the NRC's final decommissioning rule does not contain specific restrictions on the time period involved for delay in completion of decommissioning, the proposed rule indicates this period should be on the order of 100 years because this is considered a reasonable time period for reliance on institutional control (53 FR 24,018, dated June 27, 1988). In discussing delay in completion of decommissioning, as in the case of SAFSTOR or ENTOMB, and after noting appropriate delay will depend on the type of facility and the contaminant isotopes involved, the Commission said that delay "should be no greater than about 100 years as this is considered a reasonable time period for reliance on institutional control" (citing NUREG/CR-2241, dated January 1982).

The 100-year limit for reliance on active institutional controls emerged, in part, as a consensus position from a series of public workshops on low-level radioactive waste disposal held by NRC in the 1970s. Those workshops resulted in an NRC requirement (10 CFR Part 61.59(b)) that institutional controls may not be relied upon for more than 100 years following transfer of control of a low-level waste disposal site to the owner. In response to comments that the period of institutional control should be raised from 100 to 300 years, the Commission said "it is not a question of how long the government can survive [that determines the institutional control period], but how long should they be expected to provide custodial care." The Commission went on to note that "a clear consensus was developed which supported

the 100 year limit. The Commission has not seen any compelling reason to change its view on the 100 year limit." (Supplementary Information for Part 61 Final Rule, 47 FR 57,446 dated December 27, 1982).

EPA appears to have consistently used a 100 year limit on active institutional controls in all standard-setting for radioactive waste disposal. EPA's approach for non-radioactive wastes, however, has differed somewhat with respect to reliance on long-term institutional controls to protect members of the public and the environment. In the hazardous waste program, for example, EPA generally requires the operator of a hazardous waste disposal facility to control and maintain the facility for 30 years following closure (i.e., the post-closure care period). At the conclusion of this period, EPA's standards allow some reliance on continuing institutional controls through permanent deed restrictions. EPA's current guidelines for land disposal of solid wastes (as compared to hazardous wastes) in 40 CFR Part 241 do not address institutional controls. EPA has not addressed the potential for inadvertent human intrusion into hazardous or solid waste after closure. However, control over the disposal facility may be reimposed at a later date under the Comprehensive Environmental Response, Compensation, and Liability Act if the facility causes or threatens a release of hazardous constituents to the environment.

The NRC's repository regulations in 10 CFR Part 60 do not contain an explicit limit on the duration of active institutional control. However, the provision (in Section 60.52) for termination of a repository license indicates that long-term reliance on active institutional controls is not anticipated.

#### EXHIBIT 4

#### NUCLEAR REGULATORY COMMISSION,

Washington, DC, October 2, 1992.

Hon. BOB GRAHAM,

Chairman, Committee on Environment and Public Works, U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: This is in response to your telephone call to me this afternoon requesting the Nuclear Regulatory Commission's views on proposed provisions to be included in H.R. 776, National Energy Strategy legislation, relating to the Yucca Mountain high-level waste repository. While we have not had time to fully evaluate the implications of the legislation, we are pleased to provide you with our initial thoughts.

NRC is examining the legislation to determine the role of the National Academy of Sciences in relation to NRC's important licensing function as an independent regulatory commission. Among other things, we are examining whether the Academy's recommendations under (a)(2)(B) and/or (b)(2)(B) extend only to the role of the Secretary's post-closure oversight and engineered barriers in dealing with releases resulting from human intrusions into the repository, or also extend to the role of oversight and barriers in dealing with other potential causes of releases, including geologic and hydrologic processes.

Under existing legislation NRC would be required to publish requirements and criteria not inconsistent with any comparable standards promulgated by EPA. As we currently understand this legislation, NRC's actions would be required ultimately to be consistent with Academy recommendations of the same scope and with Academy recommendations for dealing with human intrusions into the repository. We do not read the legislation as otherwise affecting NRC's regulatory and

licensing functions regarding the Yucca Mountain repository.

Sincerely,

KENNETH C. ROGERS,  
Acting Chairman.

#### EXHIBIT 5

STATE OF WYOMING,

Cheyenne, WY, August 21, 1992.

FREMONT COUNTY COMMISSIONERS,  
Office of the County Commissioners, Lander,  
WY.

DEAR COMMISSIONERS: The process which you requested commence relating to the siting of a Monitored Retrievable Storage (MRS) facility for storing nuclear waste in Fremont County has reached the conclusion of Phase I and you have not requested that I agree to a continuation of the process into Phase IIa. I conclude not to do so. This is not a decision I make lightly or without considerable thought for I know this issue of continuing the process has many supporters as well as detractors and there are many people whose opinions I respect on both sides, including your own. I arrive at this decision, which the federal government in its infinite wisdom has placed in the lap of the Governor, because I believe it to be in the best long term interests of Wyoming, its citizens and future generations. Before outlining the reasons for my decision, let me make some observations:

(1) While the Phase I process has been subjected to criticism from some quarters, I believe it has worked well. The participants, including the Citizens Advisory Group and the County Commissioners, have worked conscientiously to generate public debate and discussion and they have done so. While I do not accept the recommendation, I commend you and the Citizens Advisory Group for your efforts. Many on both sides of this issue have called or written my office eloquently expressing their views.

(2) This is not an issue that simply pits antis or "environmentalists;" vs. "proponents". It cuts across all segments of Wyoming citizens and has caused them to assess personal values, emotions, economic realities, their personal image of Wyoming, the image they want others to have of Wyoming and ultimately their vision for this great State.

(3) This is not a political issue in the sense of a Republican-Democrat, Liberal-Conservative ideological controversy. I have received comments pro and con from citizens of both political persuasions and philosophies and it cannot be divided by politics or philosophy.

(4) Phase IIa, while billed as simply additional education and study, is clearly programmed to be more than that. The process provides that an applicant to receive the grant shall conduct the following initial activities during the grant period:

"1. Conduct of public information activities;

2. Participation in MRS meetings; and,

3. For a state or local unit of government . . . execution of a letter in which the governor of the state . . . in which an area has been identified to be considered for a potential MRS site, notifies the Office that:

(a) The state . . . is requesting to enter into credible formal discussion with the Negotiator which may lead to an agreement for presentation to the Congress;

(b) One or more areas to be considered for a potential MRS site has been identified;

(c) The area proposed is within the jurisdiction of the applicant, and the applicant

has identified the means by which they have control of the area; and,

(d) Appropriate intergovernmental notification and coordination has been conducted."

Phase IIa clearly anticipates a greater involvement than simply further public education, including the obligation to identify sites and secure the Governor's agreement to negotiate.

(5) The MRS siting and operation is a project that is essentially federal government sponsored, will be controlled and overseen by the federal government.

(6) While a persuasive argument for Phase II is that a vote be allowed in Fremont County, the issue is not local but statewide and, if the MRS were proposed to be sited in Wyoming, would ultimately become a regional issue. While nothing in my decision precludes the Commissioners from conducting a vote in Fremont County, should they choose to do so, such a vote would not and could not address the statewide nature of the issue.

I am vetoing the federally adopted and programmed Phase II because by training as a lawyer and my experience as governor clearly supports the conclusion that under the current circumstances, this rural sparsely populated state cannot expect to control the terms under which such a long term decision would be implemented. I do not object to further education or debate but the discussion I would seek is only tangentially related to Phase II. The process is federally engineered to avoid several basic questions that I am not convinced can be answered to the satisfaction of the people of Wyoming. They are:

(a) Does the national policy which was initially designed to place the MRS in the East near the point of origination of the waste and now appears to target the West continue to make sense? Does a policy, which the Nuclear Regulatory Commission states is not required for public health and safety, i.e. transporting a portion of the waste from the approximately 70 points of storage half way across the country to a "temporary" site only to be moved again if and when a permanent site is established, represent appropriate national policy? If the storage of the waste is as safe and as benign as represented, does it not make better sense to leave it where it is or, if it is to be moved temporarily, to place it at or near the location of the permanent repository?

(b) After five years and even a billion dollars of investment, and more billions to be spent, the permanent repository at Yucca Mountain, Nevada, is neither sited nor assured of its permanent status. Can we be willing to trust the federal government's assurances that the MRS site will be temporary? Can we be paid enough or place enough in trust to accept a permanent repository that was intended to be temporary? It is my belief we cannot.

(c) Can we take comfort from the DOE record of nuclear facilities in the West? I think not. Can we be assured of continuing control or oversight of such a facility? Last month the House of Representatives voted to exempt Yucca Mountain from state environmental permitting because DOE contended Nevada was not cooperative. Unless the Supremacy clause of the U.S. Constitution is changed, Congress, for fiscal reasons or preemptive reasons, can mandate new terms and new controls as it deems expedient or simply not accept the terms initially negotiated.

(d) Can we trust the federal government or the assurance of negotiation to protect our citizens' interest? To do so would disregard the geographical voting power in Congress

and 100 years of history and experience. We have had such assurances on issues like grazing fees, federal mineral royalty administrative costs, operations of dams and waterways, and wolves, and yet we are continually called upon to fight to retain those assurances because of a change in circumstances (fiscal or otherwise) or a change in the attitudes in Congress. Let us not deceive ourselves—we are being invited through continuing study to dance with a 900-pound gorilla. Are we willing to ignore the experience history would provide us for the siren song of promised economic benefits and a policy that is clearly a moving target. As Governor, I am not.

(e) Who can assure us what risks we would accept that new businesses may choose not to locate in Wyoming or what the alteration of our image as a state, our environment or our tourism industry may be from our willingness to embrace this nuclear waste? The technical quantification of the risk to citizens and environment has not been done by an independent body. It has been done by the federal agency promoting the facility and the economic report provided was basically prepared by the group hired to design the facility. Is this the federal fox in charge of the henhouse?

I am absolutely unpersuaded that Wyoming can rely on the assurances we receive from the federal government. Even granting the personal integrity and sincerity of the individuals currently speaking for the federal government, there can be no guarantees or even assurances that the federal government's attitudes or policies will be the same one, five, ten or 50 years from now. We have seen the roller coaster ride of federal involvement and attitudes. During the Arab Oil Embargo, this state fought against federal proposals for an energy mobilization board. That board would have had authority to override state and local laws to facilitate energy development. Even the most ardent supporters of developing Wyoming's energy resources were appalled by the federal proposals.

(f) The MRS is a federal facility. It will be run by the federal government. The Government Accounting Office Report of September 1991 concluded that an MRS would likely only reduce the amount of on-site storage capacity utilities would have to add not eliminate that need. The Nuclear Regulatory Commission concluded, as related in a letter to me dated January 16, 1992, that spent fuel generated at nuclear plants can be stored safely and without significant environmental impacts in reactor storage pools or independent spent fuel storage installations for at least 30 years beyond the licensed life for operation and that a permanent repository will likely be available thereafter. The House Interior and Insular Affairs Committee views on the FY 1993 DOE budget stated, "Conversely, the Subcommittee believes that the Monitored Retrievable Storage Program, no longer represents a useful or necessary interim step in the high level waste program." While this position on the budget request was not adopted by the House Budget Committee, all of these views reflect, at best, the tenuous nature of the MRS strategy and the difficulty of relying upon the current policy of the federal government.

Finally, since there will be a great deal of speculation about my motivation and my true intent in taking this action, let me reduce the opportunity for speculation. I am vetoing Phase II. I do so with no great sense of satisfaction because there are a substantial number of thoughtful, well intentioned

people in Fremont County and throughout Wyoming who are firmly convinced that the MRS is valuable to, if not the savior of, our future. I do not fault their position. I simply do not endorse the wisdom of the policy adopted by the federal government nor do I trust the federal government or the nuclear industry to assure our interests as a state are protected. I have great respect for this great State and faith in its future and I believe it is better served with a greater independence from the federal government rather than more dependence. While further discussion and study may be illuminating and I am extremely reluctant to discourage public discussion, I am now satisfied the federal government cannot provide assurances or guarantees to the issues raised herein and originally raised in my no objection letter or that even given those assurances the voluntary acceptance of nuclear waste is in the interests of Wyoming. Given these circumstances and my own reservations listed above, it makes no sense to me as Governor to put this State or its citizens through the agonizing and divisive study and decision making process of further evaluating the risks and benefits of an MRS facility. Many have urged me to do just that but the ultimate decision would be no easier and, I am convinced, no different.

For better or for worse, the process Congress has now adopted places the decision making authority to halt this process in the Governor. In what I believe to be the interests of Wyoming I choose to make the decision at this time.

With best regards, I am  
Very truly yours,

MIKE SULLIVAN,  
Governor.

Mr. JOHNSTON. I yield 4 minutes to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 4 minutes.

Mr. FORD. Mr. President, this is a milestone day for the U.S. Senate. More than 2 years after the start of the gulf crisis, we have finally responded to the primary cause of the gulf war—oil. Mr. President, we put the lives of hundreds of thousands of brave American soldiers on the line during the war with Iraq. The passage of the energy bill by the U.S. Congress should remind everyone that their valor and sacrifice is not forgotten.

Mr. President, this bill has many important features in the area of energy efficiency and conservation as well as energy production. The bill is far reaching and complex. To save time, I will limit my remarks to just a few items.

The country has recoverable coal reserves for more than two centuries. The bill rightfully emphasizes the role coal can and should play in this Nation's energy production. With such a large domestic resource and the emphasis on clean coal technologies, there is no reason why coal should not play an even greater role in our goal towards energy self-sufficiency.

The Nation cannot forget the retired coal mine workers who worked long and hard so that coal can provide the Nation's energy needs. The bill assures that their health benefits will remain

fully funded. I am glad that I was able to contribute to these difficult negotiations.

We need to do all we can to conserve energy and improve energy efficiency for residential and commercial buildings as well as appliances. We need to develop alternative fuels and their use in fleets. Electric vehicles hold tremendous promise. Further research in electric vehicle development and new sources of energy is necessary. The bill covers these and many other areas.

Mr. President, the bill recognizes that we need to work hard to make sure that our domestic uranium enrichment industry does not become another victim of foreign domination. This industry must not go the same way as consumer electronics and other industries that are now totally dominated by other countries.

This Nation is losing its competitive edge. Half of our trade deficit is due to oil imports. We cannot and should not let this continue any more. For the sake of this Nation's economic security and its future, we must now implement as soon as possible the national energy policy bill.

Mr. President, this is a historic bill. This Nation has never had a comprehensive energy policy. But we are finally here through the hard work and dedication of many Members of the House and the Senate and their staff. I would especially like to thank the chairman of the Senate Energy Committee, Mr. JOHNSTON, for his untiring and single-minded leadership. Without his dedication and hard work, we would not be here today. The cooperation and dedication of the ranking minority leader, Mr. WALLOP, has been equally outstanding and we thank him for his leadership.

To reiterate, there is a piece in this legislation for almost every segment of our economy. Fifty percent of our deficit in the balance of trade is energy. We need to be energy self-sufficient. We are allowing one group to hold up the entire comprehensive package.

Mr. President, for 20 years I have been working personally on clean coal technologies. Our State put up \$60 million and built one of the finest labs to test new pilot programs in the country. We were moving in the right direction.

Along came the Reagan administration and did away with President Carter's moral equivalent of war, to return us to energy self-sufficiency.

In that time, Kentucky has, by struggle, three pilot projects, one major one now about to complete a demonstration program at Shawnee in far west Kentucky—fluidized combustion bed. A new pilot project will be started by the end of this month. And with Government help we would be well on our way, instead of struggling.

In this bill we have the uranium enrichment lease, where it will become a quasi-business operation that will be

able to be competitive. We will save 1,800 jobs. We will put the United States back in competition with the rest of the world. We will have the AVLIS. We will be doing things that are right. And this bill gives us that opportunity.

So if we say it is not good for my State or it is not good for my State—Mr. President, I believe this bill is good for America.

Sure you struggle for a year or two. You struggle for 3 or 4—there are 6 hard years in this bill, in order to transfer the uranium enrichment to a private corporation. We have 20 years of work on clean coal technologies in this bill. And I do not want my colleagues—and I hope they will not—to turn this piece of legislation down. There is too much work, there is too much hope. The future is ours in this bill as it relates to energy.

We can work out other things. If you have problems, I have always found that sitting down together and trying to compromise, like Henry Clay did in the early days—we can make things work around here. But to stop a comprehensive energy package? We have never had a comprehensive energy policy in this country. We tried several times. This is the closest thing we have ever had.

So, Mr. President, I urge my colleagues to vote for cloture on this particular piece of legislation and give us an energy policy. Let us help the consumer. Let us help our business people. Let us help our entrepreneurs. And let us save jobs in this country, by this particular piece of legislation and increase the job opportunities for the future.

I yield the remainder of my time.

Mr. JOHNSTON. Mr. President, I yield 4 minutes to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized for 4 minutes.

Mr. BENTSEN. Let me join in strongly supporting the vote for cloture on an issue of major importance to our country. What we are talking about is a constructive, effective national energy policy. This conference report has already passed the House by a massive vote, by a vote of some 363 to 60. So the responsibility now lies with us—we have something to accomplish.

The Senate's decisive approval of this piece of legislation in July by a vote of 93 to 3 reflected this Chamber's urgent desire to enact meaningful energy policies this year.

What happened to us in the gulf war further emphasized the danger of depending on the Middle East—a politically unstable area—for the energy supplies of this country. We are talking about a situation where, by the year 2010, we will be 70-percent dependent on foreign oil. That means that we will have to have the equivalent of 36 super-

tankers a day arriving at our shores to deliver oil to us. We are talking about a serious threat to our economic future and an incredible increase in our deficit in foreign trade.

The stabilization of our domestic energy supply, the encouragement of energy conservation, and the promotion of renewable and alternative sources of energy that are emphasized in this bill are major steps forward for the economic and energy security of this country.

Look at the tax title of this package, which was our responsibility in the Finance Committee. It provides a balanced package of incentives to promote conservation, to encourage the use of renewable energy and alternative fuel supplies, and to foster our domestic production.

The conference agreement increases the exclusion for employer-provided mass transit benefits to \$60 per month and caps the exclusion for employer-provided parking subsidies at \$155 per month. By tilting employer-sponsored benefits toward the utilization of mass transit, it assists in further conservation. The conference agreement also promotes residential, commercial, and industrial energy conservation by excluding from customers' income the rebates that the utilities offer them for utilizing conservation measures.

The conference agreement bolsters development of environmentally sound renewable energies and alternative fuels. It permanently extends the 10-percent investment tax credit for solar and geothermal energy, and it provides a tax credit for electricity produced from wind or biomass. That is coming from a Senator from Texas, where oil and gas have been a major part of our economy.

The future of our country is at stake as the result of its increasing dependence on foreign oil and foreign energy. We have here in our hands the ability to turn that around.

This conference agreement gives tax incentives for vehicles that run on domestically abundant, clean-burning fuels such as methanol, natural gas, ethanol, and electricity. It also includes provisions designed to expand the use of ethanol and other alcohol fuels for blending with gasoline.

And finally, the conference agreement promotes domestic production of oil and gas by providing minimum tax relief for independent producers. The minimum tax currently undercuts exploration and development of U.S. reserves and accelerates our dependence on foreign oil.

Mr. President, I urge my colleagues to send this much needed legislation forward by invoking cloture on H.R. 776.

I do not think our country can afford a delay in the benefits that accrue to it under this legislation.

I congratulate the distinguished chairman and ranking minority mem-

ber of the committee for the amount of work that they have done on this piece of legislation—and the staffs for their contribution.

The PRESIDING OFFICER. Who yields time?

Mr. JOHNSTON. How much time remains, Mr. President?

The PRESIDING OFFICER. The Senator from Louisiana has 17 minutes and 13 seconds remaining; the Senator from Nevada has 15 minutes and 51 seconds remaining.

Mr. JOHNSTON. Mr. President, I yield 2 minutes to the distinguished Senator from Idaho.

The PRESIDING OFFICER. The Senator from Idaho is recognized for 2 minutes.

Mr. SYMMS. Mr. President, conservation of electricity ought to be the cornerstone of our tax policy and the cornerstone of our energy strategy.

H.R. 776 corrects a flaw in our tax law by making utility conservation rebates tax-free. This is one of many good things in the legislation before us today. The provision in the bill does not go quite as far as my proposal, S. 83, but it represents significant progress on this issue.

There are several other good provisions in this legislation. For example, the nuclear power option benefits in many ways from H.R. 776.

First, nuclear licensing is significantly reformed under the provisions of the bill. A licensing process that takes as long as 10 to 12 years today is expected to usually last no more than 6 or 7 years because of the changes made in this bill. Utilities can expect to spend resources on engineers rather than lawyers and the licensing process will reach a conclusion, rather than lapse into periods of uncertainty.

Second, uranium enrichment will no longer be the Government's responsibility. The uranium enrichment corporation established by this legislation will bring more free-market innovation to the entire industry.

Third, the bill incorporates S. 1641, a proposal by Senator BREAUX that I've supported for years regarding nuclear decommissioning funds. The IRS Code unnecessarily restricts how these funds can be invested. This bill lifts those restrictions so that fund managers can invest in more profitable securities. This provision will help provide more resources for the decommissioning of older nuclear powerplants and it will reduce the need for future rate increases for customers who are served by nuclear plants.

Fourth, significant progress is made in this bill on spent fuel disposal. Revision of the Environmental Protection Agency rules for acceptable radiation exposure is long overdue. Current EPA standards represent unrealistic paranoia about radiation risk. The idea by Senator JOHNSTON to bring the National Academy of Science into this de-

bate is a good one. I am confident that the NAS will come up with technologically feasible standards that will adequately protect the environment and human health.

As I have said many times on the floor of this Senate, we have the technology to safely dispose of spent fuel. This bill adds the political courage to do something about this obstacle—the nuclear option.

Not only do we keep an environmentally sound energy option by helping nuclear power in this bill, but also we will maintain a demand for better, safer, and more efficient nuclear power technology. This will undoubtedly benefit the premiere nuclear power research laboratory in the world—the Idaho National Engineering Laboratory.

The bill does many other good things, but in the interest of time, I will just mention two other things in H.R. 776 that particularly impress me, as follows:

The bill encourages U.S. businesses to use energy more efficiently without imposing excessive commands and controls on industry; and

It promotes the research, development, and exportation of clean fossil fuel, and renewable and energy-efficient technologies made in the U.S.A.

Mr. President, I compliment Senators WALLOP and JOHNSTON on the job they did on the energy side of this bill. And also I think the Finance Committee deserves commendation. However, I have one very sad disappointment that is not in the bill that the chairman is very well aware of. But I would hope in the future this would just be a temporary setback. That, of course, is the bond issue on high-speed rail. I will talk about this issue at length in just a moment.

But I think it is important and significant that in this bill we will now be moving forward with the question of nuclear waste disposal. We will be imposing sound, solid environmental protections for disposal of those products. We will be getting this country moving forward so we can have a nuclear alternative to foreign fossil fuels, I think is most important.

Then on the tax side, I also say that there is a great deal of encouragement, now, for the conservation of electricity. It will encourage people to have many, many innovative approaches to energy conservation.

Nuclear licensing is significantly reformed in the bill. Uranium enrichment will no longer be the Government's responsibility.

The proposal Senator BREAUX and I have supported for years, regarding nuclear decommissioning funds, will be corrected. The IRS code unnecessarily has restricted how these funds could be invested. This bill lifts those restrictions so that those funds managers can invest more profitably in securities.

And, as I said, significant progress has been made on the bill on spent fuel disposal. So we can move forward with Yucca Mountain and with other facilities and complete the cycle we have been working on. The President's Office of Nuclear Waste Negotiator has been continued.

I think the provisions in title VIII have great potential because I believe, once people become enlightened, they are going to recognize that some of the nuclear materials that are called waste have great value for the future for re-fitting, for reprocessing, and reuse.

I know Senator GRAHAM has spoken on this. I will vote for cloture even though I am extremely disappointed that the high-speed rail amendment we have worked on for several years, which is so important for transportation policy in the United States, was not included in this bill. We now have a policy in the United States that discriminates against private investment into high-speed rail. I think it is a mistake. I think it is unfortunate it was not put in this bill. We discussed it on the Senate floor. We had a thorough airing of it. We debated it, we voted for it, and then it was dropped in the conference.

I do not know what happened in that conference. I am hopeful that in the future—I will not be here—but that Senator GRAHAM and others will continue this fight and Senators from all the States affected in this country. That is, all the States along the Eastern seaboard, through the Midwest, from Chicago, Milwaukee, down to St. Louis, from Seattle, WA, to Vancouver, BC, clear back down to Portland, OR, and then to San Francisco, to Los Angeles, back over to Las Vegas, all these States and cities will benefit from high-speed rail projects.

I hope they all will weigh in on this matter with the Finance Committee next year and see that we correct an inequity in our Tax Code with respect to the sale of tax-free revenue bonds so we can get on with a more efficient means to move the American people.

#### SYMMS HIGH-SPEED RAIL AMENDMENT

I am very disappointed that I will leave the Senate without seeing this provision become law. I believe removing the volume cap requirement for tax-exempt bonds issued to finance high-speed rail could have had a dramatic impact on our future transportation and energy policy.

I am saddened that the energy conference did not see the importance of high-speed rail to our future national energy strategy. High-speed trains require approximately one-third of the energy consumed by automobiles and one-fourth of that used by airplanes. A trip on high-speed rail would cut hydrocarbon emissions by 90 percent, carbon monoxide by 75 percent, and nitrogen oxides by up to 75 percent compared to travel by automobile.

It is my sincere hope that some of my other colleagues will take up where I left off. This is only a setback for high-speed rail projects. Although this provision was dropped this time, I hope next year on another vehicle it will become law.

My amendment has support from both sides of the aisle. The administration has spoken out in favor of high-speed rail numerous times. Governor Clinton the Democratic Presidential nominee has stated:

\*\*\* new high speed rail and maglev technologies offer ways to improve competitiveness, create jobs, reduce pollution, combat gridlock, and provide access for disabled citizens and save energy. \*\*\* Only with strong leadership in Washington can we encourage the kinds of innovative public-private partnerships necessary for success in such large infrastructure projects.

Perhaps next year the administration, no matter who occupies the White House, will make this legislation one of their top priorities.

The exemption from the volume cap to finance transportation systems is not a new concept. Currently, airports and seaports are exempted from the State activity bond cap simply because they are too expensive to fit under any State cap. For precisely the same reason, high-speed rail tax-exempt bonds must be exempted from the cap.

I am afraid that those who oppose high-speed rail just want to keep out competition. This time they were successful but I am confident they will not keep high-speed rail from becoming a reality. It is true that high-speed rail offers an alternative to flying relatively short distances, but competition leads to innovation which is vital to our domestic and international economic health. Protection will lead only to stagnation which will ultimately put us at a disadvantage.

I believe public/private partnerships for these major infrastructure projects is the wave of the future. The Federal budget can no longer fully subsidize these projects. Public/private partnerships involve a small amount of Federal participation, but this leadership inspires billions of dollars of private capital to be unleashed to finance the needed high-speed rail infrastructure. This is undoubtedly the most cost-effective method of expanding our transportation system.

High-speed rail will play a major role in our future transportation policy. It is safe and efficient. The United States is the only industrialized country in the world that has not developed a high-speed rail system. Right now, the British are working to connect themselves to the continent with high-speed rail, and to connect that to an expanding European rail system.

We are always talking about the importance of the United States' international competitiveness. Japan has its bullet train and the entire European Community is covered with high-

speed rail lines and working on more. Is this yet another development that the United States wants to ignore—so that in 10 years we can say we should have pursued high-speed rail? I think not.

The U.S. transportation infrastructure needs to be greatly expanded during the next century in order to accommodate our population growth. I believe high-speed rail is the key to our future transportation infrastructure. High-speed rail offers a safe, energy efficient, and environmentally sound way to move people.

This legislation is good economic policy, good transportation policy, good energy policy, good environmental policy—and good tax policy, and I hope my colleagues will take up where I left off so that this temporary setback will not stifle the development of this important transportation mode in the United States in the near future.

Also, there are many issues, like high-speed rail, that are not in this bill. There is very little convention resource development in this bill. Future offshore oil drilling is greatly restricted, as is oil exploration on the northern coast of Alaska. Without provisions for development of U.S. oil resources, Congress is deciding that U.S. jobs are not very important when setting national energy policy.

Despite all these concerns, the good stuff in the bill outweighs the bad. Some jobs will be created by developing energy conservation technology and marketing it to the world. Alternative fuels will be used more than ever before. For these other reasons I talked about earlier, I urge my colleagues to vote for cloture.

The PRESIDING OFFICER. Who yields time?

The Senator from Nevada is recognized.

Mr. BRYAN. Mr. President, I yield myself 10 minutes.

I want to restate the case. My colleague and I, in forcing this vote on cloture, did not intend to take down the energy bill. Both of us voted for that bill when it came before this body. But what has occurred thereafter, as my colleague referred to, is a legislative travesty. It is part of a continuous modus operandi that affects Nevada, to which I take great exception.

In 1987, without having had the opportunity of a hearing or of calling witnesses, which is a chance to be heard in the traditional legislative process, a last minute deal—not motivated by science, but by politics, the muscle, if you will—stripped the Nuclear Policy Act of its original mission, which was to search for the best site, to now look only at Yucca Mountain.

Here again, at this last minute, we face a similar proposition. Two fundamental things are occurring here that go far beyond Nevada, yet we are most directly affected. One is a change

in the public health policy standard. Every piece of environmental legislation this Congress has enacted, provides for a population-based standard in determining the risk of toxic agents, chemicals, and in this case radionuclei. That has been the universally accepted approach. Notwithstanding all of the phony letters that are waved around here, and all of the assertions in the report language, every one of us on this floor, every Senator, knows you cannot change the explicit language in a statute by a lot of words uttered on the floor. It is meaningless. And that is the effect of what is happening to us—by changing that standard.

That is not just an academic debate, Mr. President. In effect, what it means is that if Yucca Mountain were ever developed, we in Nevada would experience thousands and thousands of additional cancer deaths, and thousands of additional people who would be potentially affected by some kind of genetic damage.

So, Mr. President, when my colleague and I get energized, please, I implore you, think of the implications of this. We are not trying to kill this energy bill. We came to Senator JOHNSTON time and time again and said, please do not do this. Please do not do this to us. Why is it necessary?

The project manager in 1987, Mr. Vieth, said the existing proposed standards, the ones temporarily remanded, could indeed be met by the Department of Energy by a fivefold order of magnitude.

I ask unanimous consent that the testimony of Mr. Vieth offered before the Senate Energy Committee, June 29, 1987, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT OF DONALD L. VIETH, PROJECT MANAGER, WASTE MANAGEMENT PROJECT OFFICE, NEVADA OPERATIONS OFFICE, DEPARTMENT OF ENERGY

Thank you very much, Mr. Chairman and Members of the Committee. My name is Donald Vieth, and I am director of the office that is managing the investigation of the mountains of the Yucca Mountain site in Nevada. I am pleased to have this opportunity to discuss these activities. I will present a brief history of the site, a description of the site's specific technical issues, a current status of activities, and a summary of our interactions with the representative State and local governments.

Let me turn now for a short history. In 1976, DOE's predecessor, The Energy Research and Development Administration, initiated the National Waste Terminal Storage Program to develop geologic repositories. In April of 1977, ERDA expanded the NWTS program to focus on a wider variety of geologic formations, including those at the Nevada Test Site.

By August of 1978, DOE focused its effort on six potential sites in the southwest corner of the NTS, including Skull Mountain, Calico Hills, Jackass Flats, Little Skull Mountain, Wahmonie Mountain, and Yucca Mountain. Yucca Mountain was judged to have the

best overall prospects for being considered a suitable repository site.

For the next three and one-half years, the NNWSI project performed a series of technical activities that resulted in data which provided the basis for the identification of Yucca Mountain as a potentially acceptable site for the first repository under the Nuclear Waste Policy Act of 1982.

Now let me turn to the site specific technical issues and how they are being addressed. The requirements for determining the suitability of a site are outlined in the DOE siting guidelines, 10 CFR Part 960, the NRC regulations, 10 CFR Part 60, and the EPA standard, 40 CFR Part 191.

Data developed in response to these requirements during the initial site investigations have established a fundamental understanding of the site and identified site specific technical issues.

STATEMENT OF DONALD L. VIETH, PROJECT MANAGER, WASTE MANAGEMENT PROJECT OFFICE, NEVADA OPERATIONS OFFICE, DEPARTMENT OF ENERGY, BEFORE THE COMMITTEE ON ENERGY AND NATURAL RESOURCES, U.S. SENATE, JUNE 29, 1987

The CHAIRMAN. Mr. Vieth, as I asked Mr. Anttonen earlier, with respect to your site, let us say that we suspended activity on the other sites and proceeded to characterize one site at a time. There are advantages to doing that, of course. You save a couple of billion dollars. Secondly, I think it was both the NRC and the—or at least the National Academy of Sciences' said one advantage is you can focus your scientific talent on one site.

Now the disadvantage is that in case the first site, wherever it is, turns out to be unsuitable, then you must go to the next one and there would be a time delay. It has also been criticized in that there might be some pressure because of the time delay to get it done.

Now, can you elucidate a little bit about the degree of confidence you would have that the site would be suitable? Is there any way in the world to tell? Do you think it is more likely that it would be suitable than non-suitable? Is three sites enough to characterize it, or should we have ten sites? Can you speak to that?

Mr. VIETH. Let me try to put it in proper perspective. We have looked at the site fairly thoroughly since 1977. I think we understand the nature of the forces that are acting on the site. If one takes the information we have now, and tries to project the kinds of things that are liable to be discovered in the next five or six years of site characterization, it is not conceivable to me that we would discover something on a major nature that would cause us to change our mind about it.

I think that we are comfortable in our analysis that the site would be capable of meeting the NRC requirements and EPA requirements. The processes of doing the modeling and the calculations that estimate the radioactive releases from the repository tells us that we may be five orders of magnitude below a very conservative EPA standard.

I think that we are very confident about the potential for that piece of earth being able to isolate the waste if it is placed there.

Now with regard to your question about the philosophy about how you go about picking and choosing sites, I think there are a number of other forces that we have to deal with. This issue goes back to as early as 1978 when the NRC was initially writing its regulations. They argued that in order to satisfy NEPA appropriately, you had to consider at

least three sites in at least in two different geologic media.

So that philosophy has held for almost ten years now, and if we are going to deviate from that, then we are going to have to go back and look at some other broader factors like NEPA and so on, which we are still required to fulfill under the Nuclear Waste Policy Act.

The CHAIRMAN. NEPA would not suspend, or would not override what we would do. The question is, would it be prudent to do because, as I say, you save \$2 billion, which is not insignificant even in the United States. The question is is it prudent. In your view you would have a high degree of confidence with respect to your site, the Nevada site, that you could provide its ability to isolate the waste?

Mr. VIETH. I have a fairly high level of confidence about the site for which I am responsible. Whether or not it is prudent as national policy, I do not know whether or not I am the person to that question.

The CHAIRMAN. Will you tell me about the Ghost Dance Fault at Yucca Mountain? Is it a limiting fault?

Mr. VIETH. The Ghost Dance Fault is a geologic feature that runs on the eastern side of the specific block that we are looking at for the repository. It is not a limiting fault from the point of view of affecting the amount of radioactive waste to be placed in the site. It is simply a geologic feature. We know where it is. We know most of its characteristics. We do not see it as a problem from a safety or operational point of view in the repository.

There are other faults that bound the site such as Solitier Canyon Fault, or the fault under Drill Hole Wash, or the Imbricate Normal faults to the east which do represent a limit. While they represent a boundary for the block of the repository, Ghost Dance Fault does not.

The CHAIRMAN. There are other faults that would act as a limit?

Mr. VIETH. Yes, there are.

The CHAIRMAN. And the limit in the law now I think is 70,000 tons, at least in the plan. In your view, would those faults which do limit the site, would they permit 70,000 tons or more? Do you have a view on that?

Mr. VIETH. With the land that we have now in the conceptual design of the repository that has been completed, we are looking at an area of roughly 1,850 acres. The 70,000 metric tons calculated at 57 kilowatts per acre in terms of heat load would fill an area of roughly 1,520 acres. We may have about 800 acres of additional space for disposal of waste in excess of 70,000 metric tons.

If we looked at some other positive ways of doing things, we can estimate that up to 100,000 metric tons of waste could be placed in the 1,850 acres of land.

The CHAIRMAN. The 1,850 acres, is that the limit as you know it now?

Mr. VIETH. Yes, but there is potential to expanding to the area to the north, however, we will not know that until we get underground and look at the perceived fault that lays underneath of Drill Hole Wash.

Mr. BRYAN. Mr. President, let me tell you how diabolical this is. The Environmental Protection Agency has been working with the DOE, and in a letter dated September 11 to Mr. Ziemer, they indicated: We are not aware that you have any concerns that we are not reasonably addressing. Come to us and tell us if you are. What are they? These standards have not

been finalized, Mr. President. There is opportunity in the administrative process for men and women of good will, who may have differences of opinion, to come forward and present them.

What we are left with is an Environmental Protection Agency that is being muzzled. Make no mistake, the effect of this legislation, the specific language, is to limit, for the first time to my knowledge in the history of the Environmental Protection Agency, to deprive the Agency from exercising its best judgment and to be mandated to adopt a standard that excludes the population risk standard and limits that Agency to whatever the recommendations are.

Think for a moment what we are talking about in terms of change to public policy. You have people who are not part of an agency at all, who are not regulators. The way this is crafted—I have to say that the drafters of this get an A for cleverness, an F for public policy, and an F for fairness. But that is the effect of what we are talking about.

Moreover, we change the fundamental premise of this by making it so that a site now, if it is ever developed, does not have to have sufficient standards so that site itself, the geological formation, and the engineering standards built into the design, would provide safety for public health for 10,000 years. Now we are lowering that. We are saying, look, we are not going to do that. We are simply going to say, look, we will have a night watchman out there hired by the Department of Energy for 10,000 years.

That is fundamentally wrong, Mr. President. That is fundamentally wrong. And I must say that, in my view, the world's greatest deliberative body, as the Senate of the United States prides itself, is about to commit a shameless, shameful act on the State of Nevada by subjecting us to a public health and safety standard that is unique to the Yucca Mountain project. Nowhere else is it found. Nowhere else do we limit the EPA. That, Mr. President, is what this debate is all about. All of the other provisions of the bill notwithstanding, to do this at the last minute is simply wrong.

The Senate Energy conferees proposed legislation during the final days of the energy bill conference that would radically revise the regulatory environment for the Yucca Mountain nuclear waste project, and turn the program from a final repository for the Nation's high-level commercial nuclear waste to an ill-conceived facility that would require monitoring the facility by the Secretary of Energy for the next 10,000 years or more.

There are existing EPA standards (40 CFR 191) for radiation releases from a repository that the Yucca Mountain site would have to meet. The original regulations were remanded to EPA in

1987 and the process of repromulgating them has been continuing since that time.

Now, in the last hours of this Congress, legislation appeared in the energy bill which dramatically changes the rules regarding Yucca Mountain, to once again put the interests of the nuclear power industry ahead of public health and safety, as well as good science.

The differences between the existing EPA standard and the proposed standard under the legislation include:

Prescribing that the new standard will be based on exposures to the individual versus the general public, and by requiring the DOE to engage in permanent site monitoring, Yucca Mountain can be found safe, simply by DOE keeping individuals far away from the site, forever—or at least for a time longer than that of recorded human history.

The effect on the general population of southern Nevada and elsewhere could be dramatic; that is, many more cancer fatalities in the public at large, but as long as DOE keeps the maximally exposed individual away from the site, the reference case, the site could meet the standard.

By prescribing how EPA is to develop a new standard based on exposures to individuals versus to the general public, the authors of the bill are dictating to scientists and health experts how to create health and safety standards; that is, legislating a standard that should, and has in the past, been based on science.

DOE has been attempting to persuade the EPA and the National Academy of Sciences over the past several months to change the EPA standard the way in which this bill does. However, both entities have rejected DOE's arguments, as without scientific or technical foundation. As a result, DOE is using the energy bill to legislate their agenda.

DOE testified before Congress, specifically the Senate Energy Committee, as long ago as 1987, that the Yucca Mountain site could meet the existing EPA standard "by better than 5 orders of magnitude," resulting in part in the original screw Nevada bill. Since 1987 they have discovered, as the Department of Energy has found since beginning to deal with the commercial nuclear waste issue in 1957, that their statements as well as their plans are optimistic and flawed. Once again, they can succeed only by changing the rules.

This proposal, if adopted, would place a greater health and safety standard at the Waste Isolation Pilot Project [WIPP] in New Mexico, than for Yucca Mountain, even though the waste at Yucca Mountain would be more lethal and longer lasting.

This new proposal continues a long and sorry history of the Nation's attempt to deal with the nuclear waste issue. From the air premise of the

original 1982 Waste Policy Act, the Congress has consistently moved backward—first, to less fair in the 1987 amendments, and now, in 1992 to less safe as well.

EPA's final rule 40, part 191, Environmental Standards for the Management and Disposal of Spent Nuclear Fuel, High-Level and Transuranic Radioactive Wastes, was promulgated on September 19, 1985. This completed a long process, begun in the late 1970's, in which issuance of the proposed rule was preceded by 24 working papers that were distributed for comment from interested parties, and numerous meetings were held to discuss the basic concepts and particulars of the developing regulation. Following petition for review by numerous States and national environmental organizations, the First U.S. Circuit Court of Appeals issued on July 27, 1987, an order of remand of the final rule based on two substantive issues and one procedural issue. The procedural issues involved substantial change from the proposed to the final rule in the ground water protection approach. The substantive issues remanded were first, the basis for selecting a period of 1,000 years for the individual protection standard; and second, the rationale for selecting a maximum dose standard for ground water different from that which is established in EPA's Safe Drinking Water Act regulations.

Since the remand of 40 CFR, part 191, EPA staff have been reviewing the issues of the remand, as well as at least five other issues raised by DOE and nuclear power industry representatives. The EPA has issued 4 working papers for discussion in the course of this review; has asked the EPA's Science Advisory Board [SAB] to review the technical basis for the release standard for Carbon-14; and has asked the National Academy of Sciences, National Research Council Board on Radioactive Waste Management [BRWM] to review the technical basis of four additional issues of concern to DOE and nuclear industry interests. The reports from the SAB and BRWM are pending, and expected to become final near the end of calendar year 1992. Following these reports, EPA plans to proceed in a timely manner to repromulgation of 40 CFR, part 191.

Included within the five issues to be reported upon by the SAB and BRWM in the near future are the technical evaluations implicit in the directions to the National Academy of Sciences contained in the proposed language of section 801 of the energy bill regarding a risk basis for the EPA rule and postclosure protection of waste isolation at a repository.

Prior to issuance of 40 CFR, part 191, in 1985, the EPA committed significant resources to development of the regulation, as did the many interested governmental, industry, and public organi-

zations who participated in its development. Since the 1987 court remand of the rule, EPA and the interested parties have again spent millions of dollars in attempting to resolve not only the original issues of the remand, but on issues newly introduced by DOE and nuclear industry representatives. Introduction of the new issues is largely in response to compliance concerns raised by the growing body of information regarding both the Yucca Mountain site and WIPP.

When President Reagan signed the Nuclear Waste Policy Act on January 7, 1983, less than a week after I became Nevada's Governor, our Nation embarked on a costly scheme to resolve a vexing technological problem—how to manage for hundreds of thousands of years the most toxic and harmful waste products that man has ever created.

The premise of the 1982 Nuclear Waste Policy Act was to evaluate a variety of sites and different geological formations so that the best solution to the high-level commercial radioactive waste disposal problem could be found.

That act also contemplated a regional balance so that no single area of the Nation would be unfairly burdened with the entire Nation's commercially generated radioactive waste.

In the Nuclear Waste Policy Amendments Act of 1987, signed by President Reagan on December 22, 1987, a political decision was made to abandon the premise of the 1982 act and to shift the national policy from a balanced, scientific approach to targeting only one site—Yucca Mountain, NV—for further consideration for a repository location. This ill-conceived policy—abandoning science for politics when trying to solve a great scientific problem—was tangible evidence of the undue influence the commercial nuclear utility industry has had on the repository program since its inception.

The DOE and nuclear industry policymakers, however, have consistently underestimated the resolve of Nevada's citizens to oppose this flawed proposal. Even more fundamentally, they were blind to the merits of the State's technical arguments that Yucca Mountain was a poor choice to even study for a repository.

I have said many times the national policy we are following is destined to fail. If, as Nevada's scientists and others strongly believe, Yucca Mountain is ultimately proven to be unsuitable for storing radioactive waste, more billions of dollars will have been wasted, and the Nation will face an environmental crisis of epic proportions after the turn of the century without even so much as a contingency plan.

As I have pointed out at every opportunity, all the existing program has succeeded in doing is to waste billions of dollars of utility ratepayer's money. And unfortunately, like other Federal

Government failures of recent years, the price tag on the repository grows each time the plan is revised and each time its cost is estimated.

We must remember that the original 1982 act and 1988 repository date opening were a reaction to a perceived fuel storage crisis. Now, with the 12 or more year delay in the repository, utilities are managing their waste storage needs in anticipation of the fact that no repository will be available to solve their immediate problem. A few reactors have already exceeded their spent fuel storage pool capacity, even after installing more compact storage racks—reracking. A growing number of utilities are purchasing and planning on using NRC-licensed dry cask storage units at reactor sites to meet their interim storage needs.

The Nuclear Regulatory Commission has issued a revision of its waste confidence rule which indicates that at-reactor-spent-fuel-storage can be safely and effectively implemented for a period up to 100 years. Thus, the crisis that prompted the 1982 act and its deadlines DOE was unable to meet has now vanished with better technological approaches gaining acceptance.

When this issue first was raised in 1983, I based my opposition to nuclear waste storage at Yucca Mountain on the fact that Nevada had done its share and more for our country's nuclear efforts. Since we produced no high-level waste, it seemed inequitable and unreasonable to ship the waste products of other State's commercial nuclear power generation across the entire country to be stored for thousands of years in Nevada.

Not just Nevada was threatened by that prospect, but the transportation of lethal wastes, generated mainly east of the Mississippi, across thousands of miles of our roads and highways, through hundreds of communities, threatened millions of Americans. It simply made no sense then, nor does it make sense now. The risks are too great.

The story has changed dramatically after 6 years of scientific study by the State. As our technical knowledge increases, our initial concerns about the suitability of the Yucca Mountain site are being confirmed.

The geology, hydrology, volcanism, and mineral potential at the site all indicate it is unable to isolate these lethal wastes from the environment for the tens of thousands of years it will take for them to decay to less dangerous levels of radioactivity.

The entire course of the Nation's nuclear waste effort has resulted in more than two decades of failures and false starts, and apparently 1992 sadly will not be the end of this continuing saga of waste and failure.

While DOE blindly ignores expert opinion and the facts which continue to mount against Yucca Mountain, the

U.S. taxpayers and utility ratepayers are footing the bill for DOE's follies. Since the passage of the NWPA in 1982, nearly \$3 billion have been wasted with no tangible progress evident for solving a very serious problem. Utility ratepayers are paying over a million dollars a day that DOE treats as its own largesse.

I believe the time for a new institutional approach to this problem has arrived.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. JOHNSTON. Mr. President, I yield 3 minutes to the distinguished Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 3 minutes.

Mr. WIRTH. Mr. President, I thank the distinguished chairman for yielding. I will, in this moment of time, say what enormous admiration I have for the chairman and the ranking member of the committee. Their persistence in keeping behind this, pushing it, pushing it, pushing it has been absolutely remarkable. Not only has there been great persistence, but the product has been worth that.

I understand the concerns of my very good friends and the wonderful Senators from the State of Nevada. They get an A for eloquence, an A for effort, an A for advocacy for their State, and I wish that we had in this an A for agreement. I am just very sorry to see this kind of disagreement between the committee and the two Senators. I understand their position. They have argued it very, very well, and I have enormous and unflagging admiration for them. I only wish we were not in this position, but here we are.

I think the Senator from Louisiana has done everything that he can to take care of this concern and at the same time making sure that we are moving ahead with the problem of what we are going to do with nuclear waste. That has to be done. We all know that has to be done.

Leaving that aside, this is an extraordinary change of policy in this bill. It is wonderful shift from where we have been going ever since the dawn of the fossil fuel revolution. We have begun to move in a different direction, and that is absolutely positive. We have in here the most stringent conservation standards that the Government has ever agreed to with the private sector after extraordinary negotiations in which so many different industry groups have been involved. We owe them our thanks for really sitting down and working this out.

We are beginning to move toward alternative fuels, and that is the right thing for us to do, have a bridge particularly with natural gas, that plentiful fuel that is so much cleaner and of which we ought to be using a great deal

more. We are beginning to set a strategy for backing out foreign oil, which we must do. I think much of the economic malaise in this country comes from our continuing dependence on foreign oil and our continuing export of scarce American capital. That cannot continue.

We have in this for the first time a beginning of a balance between the environment and energy policy. Beforehand, they have been all too often mutually exclusive. People say, as the President has said, unfortunately, you cannot protect jobs and the environment at the same time. That has been much of the debate in the past about energy policy: You cannot have good energy policy and care for the environment at the same time.

For the first time we have linked these two together in a meaningful fashion and we are beginning to make progress in that direction. Of course, everything is not here that we would like to have. It is not a perfect piece of legislation by any means. But it is a significant step in the right direction.

I urge my colleagues to vote for the conference report. I think it is major progress for us in this Congress.

Again, I thank the distinguished Senators from Louisiana and Wyoming, and I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. REID. Will the Chair inform the managers of this legislation as to the time on each side?

The PRESIDING OFFICER. Yes. The Senator from Nevada has 9 minutes and 42 seconds, the Senator from Louisiana has 8 minutes, 59 seconds.

Mr. REID addressed the Chair.

The PRESIDING OFFICER. The Senator from Nevada is recognized.

Mr. REID. In the early part of the 13th century a group of barons met with King John in a place called Runnymede. The uproar for that meeting was to have the king affix his x—he could not sign his name—to a document called the Magna Carta, which has been the foundation for the great English common law in many respects the English system of parliament.

That meeting they had in the meadows at Runnymede has not only the basis for the British common law but it was carried over the ocean to the United States and has been the basis for things like trial by jury, but also in it was much of what we call the legislative process, the parliamentary form of government, which we have developed into the form of government that now directs us.

That document, the Magna Carta, stand for fairness, equity, and justice, as I believe this country stands, that is, for fairness, equity and justice.

What is about to take place today flies in the face of these standards of fairness, equity, and justice.

What is being done to the State of Nevada today could be done to you tomorrow.

What is happening to the State of Nevada today—and the junior Senator from Nevada and this Senator certainly can count. We know what is going to happen. Mr. President, this is not the golden rule that is in action today. It is something probably like the ungolden rule. Do not do it to us today, Mr. President, because tomorrow they may do it to you. That is what is going to happen.

Everyone should understand that in this system now in operation in the Senate today, that is, the oppression of the majority is overpowering the minority. Everyone here today in the sound of my voice should understand that it could happen to you tomorrow. It could happen. Probably not, Mr. President, to the powerful State of Illinois, with numerous Members in the House of Representatives, probably not to the State of California, Texas, Florida, but it could happen to most of the other States.

So I ask those Senators and staff directors who are listening today, those legislative directors, to understand that what is going to happen to the State of Nevada today is going to happen to you tomorrow. That is too bad. It should not happen.

I know I have learned a great lesson today, one that I have always known, that is, always do what you can to make sure that the minority is not overrun by the majority.

I hope we would all be cognizant of the fact that is about to happen. I think it is wrong.

Mr. JOHNSTON addressed the Chair. The PRESIDING OFFICER. The Senator from Louisiana.

Mr. JOHNSTON. Mr. President, I yield myself 3 minutes.

Mr. President, I ask unanimous consent that letters in support of this legislation be put into the RECORD at this point. Those letters of support come from the American Federation of Labor and Congress of Industrial Organizations, signed by Robert M. McGlotten; from the American Council for an Energy-Efficient Economy, signed by Howard S. Geller; by the UAW, signed by Alan Reuther; by the Business Executives for National Security, signed by Tyrus W. Cobb; from the Electric Generation Association, signed by Carlos A. Riva; from the Independent Petroleum Association of America, signed by Denise Bode; from the National Coal Association, signed by Richard L. Lawson; from the Energy Consumers and Producers Association, signed by E.L. Bud Stewart, Jr.; from the American Gas Association, AGA, signed by Mike Baly III; from the American Wind Energy Association, signed by Scott Sklar, for the Solar Energy Industries Association; Larry Burkholder, for the National Wood En-

ergy Association; Michael Marvin, for the American Wind Energy Association; and Donald Liddell, for the Geothermal Resources Association; from the Alliance To Save Energy, signed by James L. Wolf; from the National Association of Energy Service Companies, by Terry E. Singer; from the Polyisocyanurate Insulation Manufacturers Association, signed by Jared O. Blum; from the Consolidated Natural Gas Company, signed by George Davidson; from the United Mine Workers of America, signed by Richard L. Trumka; from the Clean Coal Technology Coalition, signed by Ben Yamagata; from the Natural Gas Supply Association, signed by Nicholas Bush; from the North American Insulation Manufacturers Association, signed by Kenneth D. Mentzer; from the National Association of Home Builders, signed by Jay Buchert; from Oryx Energy Company, by Robert Hauptfuhrer; from the National Association of Manufacturers—this is a wire that is unsigned; from the National Independent Energy Producers, signed by Steven D. Burton; from the National Association of State Energy Officials, signed by Carson D. Culbreth; from the National Community Action Foundation, signed by Charles Braithwait; from Knauf Fiber Glass, signed by William Black.

Mr. President, the list goes on and on. I ask unanimous consent that the whole bunch of letters be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AMERICAN FEDERATION OF LABOR  
AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,

Washington, DC, October 6, 1992.

DEAR SENATOR: We understand that the Senate is scheduled to vote on a cloture motion on H.R. 776, the National Energy Policy conference report, when it reconvenes Thursday, Oct. 8 following the Yom Kippur holiday recess. With 60 votes needed for cloture, the AFL-CIO urges your presence for the vote and your support for cloture.

An important part of this legislation is the Rockefeller amendment which shores up health benefits for retired coal miners. More than 120,000 retired miners—covered by the UMWA Health Benefit Funds—face the loss of their health coverage without passage of H.R. 776.

In addition, this legislation will create tens of thousands of jobs for the clean up of federal uranium enrichment sites as outlined in the Uranium enrichment Reorganization Title.

The purpose of that title is to create a federally-owned corporation with responsibility for operating, the two U.S. uranium enrichment facilities and another which currently is not operating. These facilities are under the jurisdiction of the Department of Energy (DOE).

AFL-CIO affiliated unions, including the OCAW, USWA, Building and Construction Trade unions and other affiliates have represented the workers at these plants for nearly 40 years. Many basic worker protections are contained in the uranium enrichment title, including transition language

covering contractual matters such as the employee benefit package, hiring rights, health care and pension benefits. Also included are provisions protecting the collective bargaining agreement during transition and ensures workers coverage under OSHA, the Davis-Bacon Act and the Service Contract Act.

The AFL-CIO strongly urges your support for cloture and for passage of the H.R. 776 conference report.

Sincerely,

ROBERT M. MCGLOTTEN,  
Director, Department of Legislation.

AMERICAN COUNCIL FOR AN  
ENERGY-EFFICIENT ECONOMY,  
Washington, DC, October 6, 1992.

Senator J. BENNETT JOHNSTON,  
Chairman, Senate Energy Committee, U.S. Senate, Washington, DC.

DEAR CHAIRMAN JOHNSTON: We are writing to indicate our support for the energy bill recently reported out of conference. The bill contains many valuable energy efficiency provisions which will save significant amounts of energy, save consumers money, and reduce pollutant emissions. The energy efficiency and renewable energy portions of the bill will help to move our nation towards a sustainable energy future. We are urging Members of the Senate to vote for cloture and final passage of the bill.

Sincerely,

HOWARD S. GELLER,  
Executive Director.

INTERNATIONAL UNION, UNITED  
AUTOMOBILE, AEROSPACE & AGRICULTURAL IMPLEMENT WORKERS  
OF AMERICA—UAW,

Washington, DC, October 7, 1992.

DEAR SENATOR: As you know, the Senate is scheduled to vote tomorrow morning on a cloture motion on the conference report on H.R. 776, the proposed Comprehensive National Energy Policy Act. The UAW supports the conference report on the energy bill, which contains a key amendment sponsored by Senator Rockefeller that would protect the health care benefits for retired mineworkers. Without this very important provision and without enactment of H.R. 776, more than 120,000 retired mineworkers will lose their health protections.

Accordingly, the UAW strongly urges your support for both cloture and for passage of the conference report on H.R. 776.

Sincerely,

ALAN REUTHER,  
Legislative Director.

BUSINESS EXECUTIVES FOR  
NATIONAL SECURITY, INC.,  
Washington, DC, October 7, 1992.

Hon. J. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, Dirksen Senate Office Building, Washington, DC.

DEAR SENATOR JOHNSTON: On behalf of Business Executives for National Security (BENS), I would like to express our continued support for the passage of H.R. 776, the National Energy Policy Act. We commend you, your colleagues, and your staff for producing a balanced conference report to H.R. 776.

BENS represents over 1500 business leaders from many industries across the nation in their common goal to bring about more efficient management of our military and economic security. Energy Security is a major component of this effort, and H.R. 776 promises to make considerable headway in reduc-

ing national dependence on foreign energy sources.

It is essential therefore, that the Senate vote to invoke cloture on Thursday and vote on final passage before recess. The alternative is business as usual, and an even more rapid increase in energy imports. We have therefore asked our membership to urge their Senators to be in attendance and vote favorably tomorrow.

Please do not hesitate to advise me if BENS can be of further assistance in this matter.

Sincerely,

TYRUS W. COBB,  
President and CEO.

ELECTRIC GENERATION ASSOCIATION,  
Washington, DC, October 5, 1992.

Hon. BROCK ADAMS,  
U.S. Senate, Washington, DC.

DEAR SENATOR ADAMS: On behalf of the members of the Electric Generation Association, I would like to express our support for H.R. 776, the National Energy Security Act.

The Electronic Generation Association is the national trade association representing the entire spectrum of the competitive wholesale electric generation industry, including independent power producers, utility affiliates and suppliers of good and services to the industry.

We applaud the conferees' efforts to pass a balanced comprehensive energy bill. The bill represents a fair and equitable compromise of all interested parties. We urge your support of this fine legislation and ask that you be present on Thursday, October 8, to support the cloture vote on the H.R. 776 conference report and final passage. It is vitally important that H.R. 776 be enacted into law and not allowed to die due to Members of the Senate not being present to vote on Thursday. Please support passage of H.R. 776.

Sincerely,

CARLOS A. RIVA,  
President, J. Makowski Associates, Inc.;  
President, Electric Generation Association.

INDEPENDENT PETROLEUM  
ASSOCIATION OF AMERICA,  
Washington, DC, October 5, 1992.

Hon. BENNETT JOHNSTON,  
Hart Senate Office Building, Washington, DC.

DEAR MR. CHAIRMAN: It is with great pleasure that I write today on behalf of the 8,000 independent producers in over thirty-three states to heartily endorse H.R. 776. The Comprehensive National Energy Act of 1992. With the loss of over 400,000 jobs in our industry, 45,000 in the last year alone, domestic producers are ready to be back to work.

H.R. 776 contains policy changes which will result in a cleaner and safer environment while providing for America's energy needs. The tax title contains provisions which will promote greater energy conservation, increase the use of alternative fuels, enhance production of solar, wind and geothermal energy resources, and encourage domestic production of natural gas.

Clean burning natural gas is a critical part of the energy equation as we continue to search for safe and effective alternative energy sources. The elimination of the alternative minimum tax will free up a significant amount of capital which can be reinvested in domestic natural gas production.

We estimate that passage of the AMT relief provision in H.R. 776 could mean that as many as seven thousand new wells would be drilled in each year and creating up to 45,000 new American jobs in the coming year.

We believe that domestic energy producers hold the key to America's long term security and environmental well-being. H.R. 776 provides the means to allow America to become more efficient and innovative in developing our indigenous energy resources. H.R. 776 is vital for America's energy future and we appreciate your leadership in the development of this legislation.

Sincerely,

DENISE A. BODE,  
President.

NATIONAL COAL ASSOCIATION,  
Washington, DC, October 2, 1992.

DEAR SENATOR: Approximately three years ago the President directed the Secretary of Energy to develop a National Energy Strategy. Later that year the United States became embroiled in a regional conflict in the Middle East, in part, to assure the continued availability of oil to the strategically dependent nations of the world. Subsequently, in furtherance of a National Energy Strategy, the Administration forwarded a comprehensive legislative proposal early in this Congress. Under the leadership of key members of the House and Senate, both bodies have developed and given overwhelming bipartisan support to H.R. 776, the Comprehensive National Energy Policy Act.

This legislation provides a comprehensive strategy to provide a broad-based foundation for further development and expansion of all domestic energy sources, including American coal. The bill is balanced and provides a framework for simultaneously meeting our nation's energy, economic and environmental objectives. It will be an important step toward reducing our strategic dependence on imported energy while creating new jobs and keeping billions of energy dollars at home rather than spending them on imported resources.

We strongly urge your active support for expeditious approval of the conference report on H.R. 776 prior to adjournment of the 102nd Congress.

Sincerely,

RICHARD L. LAWSON.

ENERGY CONSUMERS  
AND PRODUCERS ASSOCIATION,  
Seminole, OK, September 30, 1992.

Hon. J. BENNETT JOHNSTON,  
Hart Senate Office Building, Constitution Avenue & 2nd St. NE, Washington, DC.

DEAR SENATOR JOHNSTON: The enactment of comprehensive energy legislation is long overdue. Hopefully, the ongoing Senate/House conference on H.R. 776 will successfully conclude its work and Congress will pass an acceptable energy bill this year.

At a time when jobs, gained or lost, are a large part of a great national debate, it is important to mention that the U.S. petroleum industry has experienced more job loss by far than any other employment sector—375,000 lost in oil and gas extraction alone (421,000 total) which represents over 51% decline in work-force in the 1982-1992 period. Percentage-wise, this compares to only a 10% loss in textiles and even a 13% gain in vehicle manufacturing during the same ten year period. Only steel manufacturing at 38% had comparable losses with very large gains made by lumber, service, homebuilding, and government employment sectors according to the Bureau of Labor Statistics data.

Thus, both the country and the industry need passage of H.R. 776 and it is needed before the year is out. American energy consumers should welcome passage of this bill as well. It should vastly improve the reliability

of natural gas supplies for many years to come.

The reform of the alternative minimum tax provided in H.R. 776 is by far the most important feature in the bill for independent producers and this reform should result in increased drilling activity. However, it will take much more than this reform to restore the industry to its former health. Our oil imports are far too high and growing each month which adversely affect our balance of payments and greatly influence both military and foreign policies.

While H.R. 776 will not cure all the U.S. energy ills, it is a very positive beginning and your help and support for it will be greatly appreciated.

Sincerely,

E.L. BUD STEWART, Jr.,  
President.

AMERICAN GAS ASSOCIATION,  
Arlington, VA, October 2, 1992.

Hon. J. BENNETT JOHNSTON,  
Chairman, Senate Energy and Natural Resources Committee, U.S. Senate, Washington, DC.

DEAR MR. CHAIRMAN: The American Gas Association strongly supports Senate passage of H.R. 776 the Comprehensive National Energy Policy Act of 1992. Our nation needs an energy policy, and should not wait for a crisis to develop one. We especially need to reduce our nation's dependence on imported oil.

The provisions of H.R. 776 will provide the natural gas industry with significant opportunities, in areas such as natural gas vehicles, gas research and development, integrated resource planning, development of natural gas resources in the Outer Continental Shelf and high-efficiency electric generation. Increased use of natural gas will assist the nation in achieving its energy security goals, and, as the cleanest burning fossil fuel, will assist in achieving national environmental and economic goals.

Further, we urge that the energy-related tax provisions be included in the conference report on H.R. 776.

Thank you, Mr. Chairman, for your tireless and strong leadership in working to establish a national energy policy.

Sincerely,

MICHAEL BALY III.

AMERICAN WIND ENERGY ASSOCIATION;  
SOLAR ENERGY INDUSTRIES ASSOCIATION,

Washington, DC, October 5, 1992.

Hon. J. BENNETT JOHNSTON,  
Hart Senate Office Building, U.S. Senate, Washington, DC.

DEAR SENATOR JOHNSTON: On behalf of the American Wind Energy Association, Geothermal Resources Association, National Wood Energy Association and Solar Energy Industries Association, we urge your vote in support of the Johnston motion to invoke cloture on H.R. 776, the Comprehensive National Energy Policy Act, scheduled for Thursday, October 8.

H.R. 776 provides much-needed tax equity for our nation's renewable resources through a unique combination of production- and investment-based tax credits. Further, it provides crucial transmission access for renewable energy sources that could not otherwise be fully utilized without access to the nation's electricity grid. Finally, through Title XII it allows for expanded joint venture programs and enhanced research and development for biomass, geothermal, solar and wind energy.

America's emerging energy technologies are facing increased international competition in these billion-dollar markets of the future. With over \$15 billion in private investment in these energy sources in the past decade, the economic and environmental consequences of ignoring renewable energy would be staggering.

H.R. 776 is vital to the sustained health of our industries. We urge your attendance on Oct. 8 and your support of the cloture motion.

Sincerely,

SCOTT SKLAR,  
Solar Energy Industries Association,  
LARRY BURKHOLDER,  
National Wood Energy Association,  
MICHAEL MARVIN,  
American Wind Energy Association,  
DONALD LIDDELL,  
Geothermal Resources Association.

THE ALLIANCE TO SAVE ENERGY,  
Washington, DC, October 5, 1992.

Hon. J. BENNETT JOHNSTON,  
U.S. Senate, Chairman Energy and Natural Resources Committee, Hart Senate Office Building, Washington, DC.

DEAR SENATOR JOHNSTON: The Alliance to Save Energy strongly supports passage of H.R. 776, the Energy Policy Act of 1992. The bill contains many significant provisions that promote energy efficiency, ranging from efficiency standards on products, to improved building codes, to energy efficient mortgage programs. These provisions will improve the environment, make housing more affordable, and enhance our competitiveness. The tax section of the bill contains important provisions that will encourage the use of renewable and efficiency resources.

Many of the provisions in the bill on the energy "supply side" are also of great value. We know that some of the provisions on the energy supply side are controversial, and we do not necessarily endorse them. Nevertheless, we believe the bill is a comprehensive and balanced one that does advance the national interest. We hope that it is speedily passed by the Senate and signed by the President.

Yours truly,

JAMES L. WOLF,  
Executive Director.

NATIONAL ASSOCIATION OF  
ENERGY SERVICE CO.,  
Washington, DC, October 2, 1992.

Hon. J. BENNETT JOHNSTON,  
U.S. Senate, Hart Office Building,  
Washington, DC.

DEAR SENATOR JOHNSTON: As Executive Director of the National Association of Energy Service Companies (NAESCO) which represents energy service companies, utilities, and manufacturers of energy efficiency equipment, I am writing to urge expeditious action on the conference agreement on national energy legislation as reported. Our members are particularly interested in ensuring that legislative language supporting the use of performance-based energy savings contracts by the Federal government be enacted into law. We urge you not to support efforts to delay passage of the legislation.

Very truly yours,

TERRY E. SINGER,  
Executive Director.

POLYISOCYANURATE INSULATION  
MANUFACTURERS ASSOCIATION,  
Washington, DC, October 2, 1992.

Hon. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, Senate Dirksen Office Building,  
Washington, DC.

DEAR SENATOR JOHNSTON: On behalf of PIMA, we applaud your efforts and those of the House and Senate conferees for reporting the National Energy Strategy legislation, H.R. 776. We support the provisions which enhance our nation's building energy efficiency standards and believe this country's consumers and homeowners will greatly benefit from the Conference Committee's deliberations.

Sincerely,

JARED O. BLUM,  
President.

CONSOLIDATED NATURAL GAS CO.,  
Pittsburgh, PA, October 5, 1992.

Hon. ARLEN SPECTER,  
Hart Senate Office Building, Washington, DC.

DEAR SENATOR SPECTER: As you know, the Senate will soon vote on the conference report on the Energy Policy Act of 1992, perhaps after a cloture vote on Thursday.

We strongly support the energy bill, particularly those titles which address alternative fuel vehicles and reform of the Public Utility Holding Company Act to facilitate the development of independent power.

We understand that the bill has strong support in the Senate, but we are concerned that there may be difficulty in assuring that 60 Senators will be available for the Thursday vote. We certainly hope that we can count on you to be there on Thursday, and to do all that you can to assure passage of this important legislation.

Sincerely,

GEORGE A. DAVIDSON, Jr.,  
Chairman and CEO.

UNITED MINE WORKERS  
OF AMERICA,  
Washington, D.C. October 6, 1992.

DEAR SENATOR: As you know, the Comprehensive National Energy Policy Act, H.R. 776, contains a provision securing the retiree medical benefits of over 200,000 beneficiaries of the United Mine Workers Health Benefit Funds. The so-called Rockefeller provision, supported by the Administration and a bipartisan majority of the Senate, simply requires that all current and past signatory coal companies live up to the commitment they made to provide retiree medical coverage.

On behalf of the active and retired members of the United Mine Workers of America, I urge you to support the effort to end the filibuster on H.R. 776 and to support the conference report on final passage.

Sincerely,

RICHARD L. TRUMKA.

CLEAN COAL TECHNOLOGY  
COALITION,  
Washington, DC, October 5, 1992.

Hon. BROCK ADAMS,  
U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR ADAMS: On behalf of the Clean Coal Technology Coalition, I am writing in support of the coal-related provisions contained in the National Energy Policy Act and to ask for your support and leadership in assuring that this Congress acts upon the Conference Report on H.R. 776.

Among the items we are supporting are the coal R&D program with its emphasis on the

development and demonstration of next generation clean coal technologies; the technology transfer/export promotion program for clean coal technologies; the PURPA "avoided cost" exemption provision for clean coal demonstration projects; and the program to promote coal exports. These important measures are an integral part of securing a national energy strategy designed to increase energy efficiency and promote the commercialization of environmentally sound energy technologies, while increasing U.S. competitiveness among international private power markets.

The Coalition firmly believes these provisions are important to the creation of a comprehensive national energy strategy, and we hope you will encourage and support the adoption of the Conference Report to H.R. 776 before the conclusion of the 102nd Congress.

Sincerely,

BEN YAMAGATA,  
Executive Director.

NATURAL GAS SUPPLY ASSOCIATION,  
Washington, DC, October 6, 1992.  
Hon. J. BENNETT JOHNSTON,  
Hart Senate Office Building, U.S. Senate,  
Washington, DC.

DEAR SENATOR JOHNSTON: The members of the Natural Gas Supply Association understand that the Senate may be required to return to Washington on Thursday, October 8 to vote on a cloture petition on H.R. 776, the Energy Policy Act, and then on final passage of the Act. These votes may be the only votes on Thursday and may be the final votes to occur in this Congress.

The Association and its members strongly support the final passage of H.R. 776. Of particular interest to our members are the provisions that introduce competition in electricity generation and introduce alternative fuels for use in vehicles. We believe that these provisions provide an opportunity for expanded use of natural gas, the nation's cleanest burning fossil fuel. These provisions also provide significant benefits to our nation's energy security, for the environment, and for American energy consumers.

We regret that disagreement over one or two provisions of the bill may inconvenience members of the Senate so shortly before the November elections. Nevertheless, we believe that this legislation is extremely important to the nation and may be one of the most important achievements of this Congress. We encourage you to be present for any votes that are necessary on Thursday, October 8 and to vote for cloture and for final passage of H.R. 776.

Sincerely,

NICHLAS J. BUSH.

CLEAN COAL TECHNOLOGY COALITION,  
Washington, DC, October 5, 1992.  
Hon. J. BENNETT JOHNSTON,  
U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR JOHNSTON: On behalf of the Clean Coal Technology Coalition, I am writing in support of the coal-related provisions contained in the National Energy Policy Act and to ask for your support and leadership in assuring that this Congress acts upon the Conference Report on H.R. 776.

Among the items we are supporting are the coal R & D program with its emphasis on the development and demonstration of next generation clean coal technologies; the technology transfer/export promotion program for clean coal technologies; the PURPA "avoided cost" exemption provision for clean

coal demonstration projects and the program to promote coal exports. These important measures are an integral part of securing a national energy strategy designed to increase energy efficiency and promote the commercialization of environmentally sound energy technologies, while increasing U.S. competitiveness among international private power markets.

The Coalition firmly believes these provisions are important to the creation of a comprehensive national energy strategy, and we hope you will encourage and support the adoption of the Conference Report to H.R. 776 before the conclusion of the 102nd Congress.

Sincerely,

BEN YAMAGATA,  
Executive Director.

NORTH AMERICAN INSULATION  
MANUFACTURERS ASSOCIATION,  
October 6, 1992.

HON. J. BENNETT JOHNSTON,  
Hart Senate Office Building, Washington, DC.

DEAR SENATOR JOHNSTON: The National Energy Policy Act of 1992 is and remains the top legislative priority of the North American Insulation Manufacturers Association ("NAIMA"). The energy legislation—years of hard work by countless individuals and organizations both in the public and private sector—represents America's best hope for energy conservation, national energy independence and reduction of environmental pollution. NAIMA deeply appreciates the vision and leadership that you have brought to these issues and this legislation over the years. Now, as the 102nd Congress winds down, NAIMA urges you and your colleagues to continue efforts to bring this legislation to a successful conclusion. We recognize the obstacles and the time constraints, and are deeply grateful for your commitments and perseverance in the face of all these difficulties.

NAIMA is a trade association of North American manufacturers of fiber glass, rock wool and slag wool insulation products. NAIMA's members manufacture the vast majority of fiber glass, rock and slag wool insulations produced and used in North America. NAIMA's role is to promote energy efficiency and environmental preservation through the use of fiber glass, rock and slag wool insulation products and to encourage safe production and use of these insulation products. NAIMA member companies are: Celotex Corporation, CertainTeed Corporation, Knauf Fiber Glass, Owens-Corning, Partek Insulations Incorporated, Rock Wool Manufacturing Company, Sloss Industries Corporation, USG Interiors Incorporated, U.S. Mineral Products Company and Western Fiberglass Incorporated.

Please advise me immediately if we can be of any further assistance in this matter.

Sincerely,

KENETH D. MENTZER,  
Executive Vice President.

NATIONAL ASSOCIATION  
OF HOME BUILDERS,  
Washington, DC, October 6, 1992.

HON. J. BENNETT JOHNSTON,  
Chairman, Senate Committee on Energy & Natural Resources, Hart Senate Office Building, Washington, DC.

DEAR CHAIRMAN: On behalf of the National Association of Home Builders (NAHB), I am pleased to inform you of our support for the conference report to H.R. 776, the Comprehensive National Energy Policy Act.

This National Energy Strategy provides a comprehensive framework for both curbing

energy demand and enhancing the supply of energy sources so as to reduce our nation's dependence on foreign sources. Recognizing the time and effort that you, your Senate colleagues and staff have dedicated to crafting this far reaching legislation, it is a monument to your dedication.

NAHB realizes that energy efficiency and building standards are a key component to any national energy strategy. NAHB believes that the provisions in H.R. 776 represent a fair balance between energy efficiency and affordable housing. By mandating a private sector industry code for federally assisted new homes that is cost effective, Congress is acknowledging the inherent tension between increased energy efficiency and housing affordability. It is our hope that this legislation will go far towards resolving this issue.

While NAHB supports an energy efficient mortgage program for new homes and is disappointed that provisions were taken out in conference, we look forward to tackling this issue in the next congress.

Again, we thank you and your staff for your cooperation and good work.

Respectfully yours,

ROBERT "JAY" BUCHERT.

ORYX ENERGY Co.,  
Dallas, TX, October 5, 1992.

HON. J. BENNETT JOHNSTON,  
Hart Senate Office Building, Washington, DC.

DEAR SENATOR JOHNSTON: Perhaps the most crucial vote on whether this Congress will approve final energy legislation is expected to occur on Thursday, October 8.

We at ORYX Energy Co. believe this bill makes an important step toward a more secure energy future—and it will provide the basis for additional necessary energy policy decisions by the next Congress and beyond. It should be supported.

It is critically important that you and your colleagues be present to vote for cloture on the energy bill this Thursday.

Thank you.

Sincerely,

ROBERT P. HAUPTFUHRER,  
Chairman and CEO.

NATIONAL ASSOCIATION  
OF MANUFACTURERS,  
Washington, DC, October 2, 1992.

HON. J. BENNETT JOHNSTON,  
U.S. Senate, Washington, DC.

The National Association of Manufacturers (NAM) supports the conference agreement to comprehensive energy bill H.R. 776. NAM urges prompt consideration of the complete conference report to H.R. 776—including the tax title. We strongly oppose any efforts to block action on the conference report before the 102d Congress adjourns.

Sincerely,

NATIONAL ASSOCIATION OF MANUFACTURERS.

NATIONAL INDEPENDENT  
ENERGY PRODUCERS,  
October 5, 1992.

HON. J. BENNETT JOHNSTON,  
Chairman, Senate Committee on Energy and Natural Resources, U.S. Senate, Hart Senate Office Building, Washington, DC.

DEAR MR. CHAIRMAN: The National Independent Energy Producers (NIEP) writes to urge you to support a cloture vote on HR 776 and final passage of this important energy legislation. NIEP is a leading trade organization representing the independent power industry.

The Senate will vote this week to approve the conference report on a landmark energy bill which will promote efficiency and com-

petition in the electric power industry. The bill also contains important tax incentives for renewable energy and conservation. If the conference report is filibustered in the closing hours of this Congress, sixty votes will be needed to send this bill to the President.

This bill represents three years of strong bipartisan effort to improve this nation's energy economy. Any absentee on the day of the vote (which could come up as early as Wednesday night) may leave us one vote short of cloture. Thank you for your support of this important legislation.

Sincerely,

STEVEN D. BURTON,  
Chair, National Independent  
Energy Producers.

NATIONAL ASSOCIATION OF  
STATE ENERGY OFFICIALS,  
Washington, DC, October 6, 1992.

HON. J. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, Dirksen Senate Office Building, Washington, DC.

DEAR CHAIRMAN JOHNSTON: On behalf of the National Association of State Energy Officials (NASEO), we wanted to take this further opportunity to support the passage of H.R. 776. We strongly support your efforts to obtain passage this week.

This legislation is a balanced initiative that will increase our Nation's energy security, increase energy efficiency, increase the use of alternative fuels and renewable energy, as well as a number of innovative initiatives in the electric area and in a variety of other matters. The tax provisions will increase the use of mass transit, energy efficiency, alternative fuels, renewable energy and production from certain oil and gas properties.

It would indeed be a tragedy if the comprehensive energy bill failed to pass at this late date.

Sincerely,

CARSON D. CULBRETH,  
Chairman.

NATIONAL COMMUNITY  
ACTION FOUNDATION,  
Washington, DC, October 6, 1992.

DEAR SENATOR: The passage of H.R. 776 will not only mean a more appropriate course has been set toward a sustainable energy future but will immediately produce expanded energy efficiency initiatives in the public and private sectors.

You may not be aware of H.R. 776's important provisions for the conservation programs which improve low-income housing and reduce the energy burdens of the poor. The Conference Report authorizes programs which are designed to expand the partnerships between local low-income weatherization providers and utility conservation programs. Over the decade, this should mean expanded levels of energy efficiency investment in the low-income residential sector.

Community Action agencies have been pioneers in public/private residential conservation programs for low-income Americans and are eager to expand these activities.

We urge you to be present on October 8, 1992 to support this important, and perhaps final, contribution of 102d Congress.

Sincerely,

CHARLES BRAITHWAIT,  
President.

KNAUF FIBER GLASS.

HON. J. BENNETT JOHNSTON,  
136 Hart Senate Office Building, Washington, DC.

DEAR SENATOR JOHNSTON: The National Energy Policy Act of 1992 is and remains the

top legislative priority of the North American Insulation Manufacturers Association ("NAIMA"). The energy legislation—years of hard work by countless individuals and organizations both in the public and private sector—represents America's best hope for energy conservation, national energy independence and reduction of environmental pollution. NAIMA deeply appreciates the vision and leadership that you have brought to these issues and this legislation over the years. Now, as the 102d Congress winds down, NAIMA urges you and your colleagues to continue efforts to bring this legislation to a successful conclusion. We recognize the obstacles and the time constraints, and are deeply grateful for your commitment and perseverance in the face of all these difficulties.

NAIMA is a trade association of North American manufacturers of fiber glass, rock wool and slag wool insulation products. NAIMA's members manufacture the vast majority of fiber glass, rock and slag wool insulations produced and used in North America. NAIMA's role is to promote energy efficiency and environmental preservation through the use of fiber glass, rock and slag wool insulation products and to encourage safe production and use of these insulation products. NAIMA member companies are: Celotex Corporation, CertainTeed Corporation, Knauf Fiber Glass, Owens-Corning, Partek Insulations Incorporated, Rock Wool Manufacturing Company, Roxul Inc., Schuller International, Incorporated, a subsidiary of Manville Corporation, Sloss Industries Corporation, USG Interiors Incorporated, U.S. Mineral Products Company and Western Fiberglass Incorporated.

However, I'm not writing this letter in my capacity as President of NAIMA. I'm writing on behalf of my company, Knauf Fiber Glass. We are a family-owned company recognized as a leading U.S. manufacturer of quality insulation products for industrial, commercial, HVAC, marine, and residential applications. Since our founding in 1978, we have become known as the fastest growing fiber glass manufacturer in America, with plants in several states. This growth attests to our commitment to the importance of energy conservation for America's future.

Please advise me immediately if we can be of any further assistance in this matter.

Sincerely,

WILLIAM BLACK III,

*Sr. Vice President, Sales & Marketing.*

SMACNA,

*September 12, 1992.*

Hon. BROCK ADAMS,  
U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR ADAMS: On behalf of the Sheet Metal and Air Conditioning Contractor's National Association, Inc. (SMACNA), supported by more than 5,000 construction firms engaged in industrial, commercial, residential, architectural and specialty sheet metal and air conditioning contracting throughout the United States, I urge your support for the House passed version of the small business fair competition language contained in sections 131 and 141 of Title I, Subtitle C, Part II of H.R. 776, The National Energy Efficiency Act of 1992. If enacted, this important provision will promote demand side management (DSM) and energy efficiency programs while preventing anti-competitive and predatory practices by electric and gas utilities harmful to small business. While the Senate version (Title VI, Section 6301) applies to the anti-competitive

practices of electric utilities, gas utilities are exempt from the Senate's well reasoned fair competition protections.

SMACNA contractors employ hundreds of thousands of construction workers and have maintained a tradition and record of achievement in energy conservation and energy efficient construction. As a leader in promoting energy efficiency in heating, ventilating and air conditioning (HVAC) systems, SMACNA finds numerous energy efficiency incentives and initiatives to support in both the House and Senate versions of H.R. 776. However, without the House's strong fair competition language gas utilities will be rewarded with dominance of energy efficiency markets in energy equipment sales, supply, service and installation, especially where ratepayer subsidized demand side management (DSM) is in place.

The National Energy bill, if enacted into law would offer small business vast new market opportunities created by utility DSM and efficiency programs. Without section 131 and 141 of Title I of the House bill the current marketplace confrontation between small business and utilities will continue to grow. California, Iowa, Wisconsin, and a number of other states passed legislation to ban or strictly limit anti-competitive utility practices. Legislation is pending before dozens of state legislatures to limit anti-competitive utility intrusions into the private sector. Further, there are major cases pending before the state courts and public service commissions in Michigan, Minnesota, New Jersey and other States. Congress supports these important State efforts by embracing energy efficiency efforts with reasonable competitive restrictions protecting small businesses. By passing a fair competition component to the energy bill the Congress would send a strong signal to private sector small businesses that unfair utility competition by electric or gas utilities will not be tolerated or sanctioned.

While demand side management and other federal incentives for energy conservation are important to increasing the energy efficiency of our homes, public buildings, factories and businesses, SMACNA believes that the private sector, not utilities, should continue to lead the way. *Please express your support for the House passed fair competition provisions to the Senate Conferees on H.R. 776.* Thank you for your support of private sector small business.

Sincerely,

STANLEY E. KOLBE, Jr.

OCTOBER 6, 1992.

To: All NECA Chapter Managers.

From: Bob White, Director, Government Affairs.

Re: Urgent Legislative Action Call.

Final passage of an energy bill, HR 776, is awaiting Senate action right now. The measure would promote Demand Side Management programs by utilities. Passage would mean a \$50 billion market for electrical contractors. The bill also contains language, inserted at NECA's request, to prevent utilities from using unfair competitive tactics to do the work with their own forces.

The measure is being filibustered because of unrelated provisions dealing with nuclear waste disposal. The House is adjourning today—and it has already passed this measure. The Senate expects to adjourn Thursday. It is essential that the Senate cut off the filibuster, invoke cloture, and act to pass H.R. 776 before it adjourns.

Please call, telegraph or fax your Senators today, urging them to support cloture on

H.R. 776 and then to support passage before adjournment!

This bill will provide for major new energy conservation initiatives which will help protect our nation's energy independence, keep utility rates at a reasonable level by preventing the need for utilities to provide additional peak generating capacity, and stimulate a new market in energy conservation-related goods and services for industries hard-hit by the economic downturn of recent years.

The timing on this is critical! Rapid response is essential. If you can get some of your members to respond as well, the effort will be even more effective.

Please let me know if you are able to make these contacts, and what response you receive.

Thanks for your help.

The Energy Bill, H.R. 776, is essential for the nation's safety and growth. Electrical contractors strongly urge you to vote for cloture on the Energy Bill filibuster and quickly pass this necessary legislation.

ROBERT L. WHITE,

*Director, Government Affairs, National Electrical Contractors Association.*

BETHESDA, MD.

ALLIANCE FOR FAIR COMPETITION,

*Bethesda, MD, October 6, 1992.*

DEAR SENATOR: The Alliance For Fair Competition (AFC) is composed of major national trade associations, State associations, local coalitions, and independent firms engaged in the sale and installation of energy efficient appliances and products, service contracting, energy fuels distribution, as well as contracting in the electrical, plumbing, heating, and air conditioning trades. Over 20,000 individual small businesses are represented under the umbrella of AFC.

AFC and its members are vitally interested in the prompt passage of The Comprehensive National Energy Policy Act, H.R. 776.

This legislation is needed now. It represents as balanced approach as is possible and, more importantly it is acceptable to an overwhelming majority of the members of Congress from both parties. The House of Representatives has voted for passage by a wide margin. The President indicates he will sign the measure when it is sent to him. Previous votes in the Senate indicate there is substantial support for its passage.

After almost two years of constant debate, at the subcommittee and committee levels, and on the floor of both chambers, and after a Senate filibuster last year, there is absolutely no reason why the substantial benefits of this vital legislation should be denied to the American people any longer.

The House of Representatives has acted responsibly in passing this measure. We hope the Senate will show as much wisdom and act swiftly to end debate and pass The Comprehensive National Energy Policy Act.

Respectfully,

A. M. PONTICELLI,  
*Executive Director, AFC.*

MEMBERS OF THE ALLIANCE FOR FAIR COMPETITION

Air Conditioning Contractors of America; American Supply Association; Carolinas Electrical Contractors Association; Eastern Illinois Chapter, NECA; Michigan Chapter, ACCA; National Association of Plumbing, Heating & Cooling Contractors; National Association of Wholesaler-Distributors; National Electrical Contractors Association; Petroleum Marketers Association of America; Sheet Metal Contractors of Iowa, Inc.; Sheet Metal and Air Conditioning Contract-

tors National Association; SMACNA Metropolitan Detroit Chapter; Berico Fuels, Inc.; Harry Cooper Supply Co.; and George Sumrow, Houston Chapter, NECA.

SIEMENS POWER CORP.,  
Bellevue, VA, October 8, 1992.

Hon. DALE BUMPERS,  
U.S. Senate, Senate Office Building, Washington, DC.

DEAR SENATOR: As the president of Siemens Power Corporation, I urge you to support passage of the Conference Committee Report on the national energy strategy bill.

I understand that the bill may be prevented by a planned filibuster from coming to a vote. Please be in Washington this Thursday to cast your vote to support the cloture motion to allow debate on the bill to proceed. It would be disgraceful if the bill were allowed to die in the closing hours of the 102nd Congress at the hands of a few disgruntled Senators.

The energy bill, like all bills of comparable national importance, is a compromise. But its shortcomings should not blind us to the fact that it would take the country a long way toward cleaner, safer energy technologies and greater energy efficiency.

America cannot continue to allow its dependence on Middle Eastern oil to grow. It needs to promote a range of alternative energy sources that are cleaner than the current generation of coal-fired plants and more acceptable to the public than the current generation of nuclear plants. We also need to develop technologies that enable U.S. industries to improve their competitiveness by using energy more efficiently. For all its flaws in the eyes of its critics, the energy bill—unlike the status quo—would accelerate progress toward these goals.

You and your colleagues have spoken from time to time of the need for action to change the nation's unsustainable ways of getting and using energy. The need for this change has not diminished since the most recent Gulf war. As the opportunity for change now hangs in the balance, we all might well ask ourselves: "If not now, when?"

Your active support of this legislation is essential.

Very truly yours,  
R. B. STEPHENSON,  
President, Chief Executive Officer.

COMPUTER AND BUSINESS EQUIPMENT  
MANUFACTURERS ASSOCIATION,  
Washington, DC, October 6, 1992.

Hon. J. BENNETT JOHNSTON,  
Chairman, Committee on Energy and Natural Resources, Hart Senate Building, Washington, DC.

DEAR SENATOR JOHNSTON: The Computer and Business Equipment Manufacturers Association, CBEMA, appreciates all of the work that you, your colleagues and your staff have accomplished in conference on H.R. 776. We want particularly to endorse the voluntary program established in Section 195, "Energy Efficiency Information for Commercial Office Equipment."

We look forward to working with you and your colleagues to ensure the effectiveness of a voluntary program for industry and the public at large.

Sincerely,  
JOHN L. PICKITT,  
President.

INTERNATIONAL NATURAL GAS  
ASSOCIATION OF AMERICA,  
Washington, DC, October 5, 1992.

Hon. J. BENNETT JOHNSTON,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR JOHNSTON: I want to express INGAA's strong support for passage of the Comprehensive National Energy Policy Act Conference Report (H.R. 776). We are especially pleased that the conferees approved provisions to exempt independent power producers from the Public Utility Holding Company Act. Independent power is expected to account for between thirty-five and forty percent of all new capacity brought on line through 2000. Passage of PUHCA reform has always been the highest priority for INGAA as it will increase competition in the wholesale power generation market by eliminating barriers to the growth of independent power production and enhance opportunities of natural gas in this market.

This legislation also contains provisions that deregulate imports and exports of natural gas from and to countries with which we have a free trade agreement. It provides more opportunities for natural gas use as an alternative fuel. It enhances natural gas research and development. It also encourages additional drilling by eliminating the tax penalty for independent producers under the alternative minimum tax and provides tax deductions for clean-fuel vehicles. H.R. 776 is a balanced, constructive bill which has had partisan support at every stage of its consideration.

The Senate will vote on cloture on this legislation on Thursday, October 8. I urge you to be here to vote for cloture and passage of this important piece of legislation.

Sincerely,  
JERALD V. HALVORSEN,  
President.

AMERICAN PUBLIC  
TRANSIT ASSOCIATION,  
Washington, DC, September 30, 1992.

Hon. J. BENNETT JOHNSTON,  
U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR JOHNSTON: On behalf of the members of the American Public Transit Association, and the millions of transit riders nationwide, I want to thank you for your efforts to increase the transit commute benefit to \$60 per month. Having already passed both chambers in the omnibus tax bill and now in H.R. 776, the energy bill, we deeply appreciate your support on this issue.

We understand the difficulties facing the energy bill conference in the waning hours of the 102nd Congress and want to offer our help in gaining final passage of this important legislation. An increase in the monthly tax exempt transit benefit is good public policy and we look forward to helping implement the new legislation when it is signed into law.

Again, thank you for your support and please call on us if we can assist you in passing H.R. 776.

Cordially,  
JACK R. GILSTRAP,  
Executive Vice President.

Mr. JOHNSTON. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator has 5 minutes 14 seconds.

Mr. JOHNSTON. I yield to the Senator from Wyoming.

ENERGY POLICY ACT OF 1992  
Mr. WALLOP. Mr. President, one of the most important challenges faced by

the 102d Congress was the establishment of a long-term, comprehensive, and consensus-based energy strategy for the United States. The Energy Policy Act of 1992 accomplishes that task.

After an intense, 2-year effort, success is near. Our conference agreement reforms outdated energy policies from the 1970's that were quickly formulated during a time of crises and shortages. This failed legacy, which plagued us throughout the decades, is finally corrected.

The Energy Policy Act of 1992 contains the necessary reforms to assure sustainable economic development in a manner that reflects today's sensitivity to global environmental concerns. The conference agreement before us responds to the challenge.

This agreement was forged through the bipartisan efforts of the Senate and the House of Representatives working closely with the Department of Energy and the White House. The outcome speaks well for the legislative process. Through accommodation and compromise, the bill actually improved as it proceeded through the conference.

The Energy Policy Act of 1992 prepares America for the 21st century. In response to an expanding national and global economy, America must rely on energy production as well as increased efficiency and conservation. The conference agreement redefines our national energy focus in several fundamental ways:

First, the conference agreement contains a broad portfolio of energy supply initiatives to foster an expanded use of conventional energy supplies such as natural gas, oil, coal, and uranium—all of which we have in abundance. Provisions are included to enhance oil and gas production as well as to foster greater use of solar, renewables, and alternative transportation fuels.

Second, the conference agreement contains incentives which foster a more efficient use of domestic supplies. Provisions are included to promote energy efficiency in the utility and transportation sectors of our economy. Equally important, the agreement requires the Federal Government to take important steps toward this end. Federal agencies are required to improve energy efficiency in the buildings they own or lease, and to switch to the use of alternative fuels in their fleets.

Electric and gas utilities are encouraged to consider integrated resource planning and demand side management programs. Recognition also is given to States who have already considered demand-side management options.

In addition, the conference agreement includes important reforms of the 1935 Public Utility Holding Company Act. Competition will be enhanced by creating a new class of independent power producers free from corporate and geographic restrictions imposed by current law.

American utilities and entrepreneurs will also be allowed to build, own, and operate domestic and international independent power production facilities without undue regulatory entanglements. By ensuring the freedom of U.S. companies to compete both here and abroad, the conference agreement will put American technology, American equipment, American industry, and American workers to work building state-of-the-art, clean, and efficient powerplants.

In the transportation sector—our largest consumer of imported oil—the conference agreement contains a broad range of initiatives. Section 2021 calls for a broad, 5-year program to reduce the transportation use of oil. In addition, there are provisions to accelerate alternative fuel vehicle technologies as well as support for the commercialization of electric and electric-hybrid vehicles.

Provisions also are included that require the use of alternative fuels by Federal, State, and some private fleets in metropolitan areas. According to DOE these provisions could save as much as 193,000 barrels of oil per day.

Recognition is given to the interrelationship between this requirement and the Clean Fuels Fleet programs contained in the 1990 Clean Air Act Amendments that takes effect in 1998 in 21 cities. The Clean Air Act Program was designed to accelerate the introduction of cleaner vehicles that meet phase II emission requirements through reliance on such clean fuels as reformulated gasoline. This objective is preserved by the conference agreement.

Before the fleet vehicles that are a part of the Clean Fuels Fleet Program could be brought under the coverage of the Energy Policy Act, section 507(g)(3) requires the Secretary to make certain findings that presume compliance with applicable requirements of the Clean Air Act including phase II emission standards. This requirement recognizes the extensive effort that has been launched by the auto and fuel supply industries to develop a system that can meet anticipated future Clean Air Act requirements through the use of reformulated gasoline. This may well conflict with the requirements of the fleet provisions of the conference agreement.

In all candor, I am concerned about the complexity of these private fleet provisions. The drafting is confusing, and the rulemakings are excessive. This title alone contains at least 11 separate rulemakings and 3 additional requirements to promulgate regulations. The Congress may well find it necessary to revisit this section again to address these ambiguities.

A third, and important area, is the conference agreements support for advanced nuclear power technologies. Without nuclear power as a viable en-

ergy option for the United States, our dependence on imported oil will threaten our Nation's economic health and energy security.

The conference agreement enhances the nuclear power option by enhancing the one-stop nuclear licensing process already developed by the Nuclear Regulatory Commission and provides for the development of advanced nuclear reactor technologies.

Fourth, the conference agreement provides for the transformation of the Federal Government's uranium enrichment enterprise into a federally owned corporation that can be nursed back into financial health and eventually sold to private investors. Provision is also made for the U.S. Enrichment Corporation to purchase the highly enriched uranium made available from the member States of the former Soviet Union for use in the business operations of the Corporation. The blending and conversion of this material for use in commercial reactors is going to take many years if its impact on domestic mining and other industries is to be minimized. Provision thus is made by section 1408 for the development of least-cost business plan. To be effective in minimizing the domestic effect of this program, the required major investments in conversion facilities are going to have to be recovered over an extended period.

Fifth, the conference agreement restructures Federal research and development programs to establish commercial applications as a principal objective for Federal energy research, development and demonstration programs. In the future, any demonstration program supported by the Department of Energy must determine the technical and commercial feasibility of new energy technologies.

Because of the importance of industry participation in such commercialization efforts, the conference agreement provides for a compulsory, financial commitment from non-Federal sources wishing to receive funding support from the Department of Energy. Such cost-sharing is essential to the commercialization of new energy technologies.

As a commercialization incentive, the conference agreement extends the provisions of the 1990 amendments to Stevenson-Wydler Technology Innovation Act of 1980 regarding the protection of intellectual property and other sensitive information to any research, development, demonstration and commercial application activities under the Energy Policy Act of 1992.

Sixth, significant initiatives are included to assist U.S. manufacturers in dealing with international competition. Provisions are included that support the development and export of advanced energy technologies. Such programs can serve as a critical component in the growth of the U.S. economy.

Title 25 of the conference agreement contains a number of provisions which affect the coal mining segment of our energy industry—some good, some not so good.

One provision extends the Abandoned Mine Lands Fund until 2004 to help offset the costs of the retired coal miner health benefits fund and encourage the re-mining and revegetation of surface coal mining operations. Also included in this title are provisions requiring repair and compensation for damages to residential dwellings resulting from subsidence and replacement of drinking water contaminated as a result of underground mining. While the subsidence provisions are not perfect, they do address concerns expressed by homeowners and the natural gas pipeline industry about the impacts of coal mining on structures and other buildings.

In place of a Federal coal royalty study that was dropped the conferees agreed to a royalty reduction for lignite coal in the Fort Union region of North Dakota and Montana. This reduction will benefit some Wyoming coal miners who produce coal in the Fort Union formation by giving them more stability and security in planning their coal mining operations.

Independent oil and gas operators will also benefit greatly from a provision included in this bill which makes both the competitive and noncompetitive lease terms 10 years. This provision is substantially different than the original House language—language which alleged collusion in the sale of oil and gas leases. The final language is more reasonable and will do much to encourage competitive new lease sales.

One of the more complex and controversial items in title 25 that the conferees agreed to is a provision intended to promote coal-bed methane development, a source of energy which is marginally economic. Economics aside, this provision embraces the reverse of federalism: where irresponsible State legislatures fail to act, the Federal Government steps in to promulgate regulations and manage State resources. Although the conferees did provide for a strong opt-out clause allowing States to avoid such a broad-sweeping Federal mandate, I will make every effort to notify the appropriate Governors of the pitfalls of such extreme Federal intrusion.

Mr. President, our country is fortunate to have a broad spectrum of energy resource choices—coal, uranium, oil, gas, renewables, and energy conservation. I was pleased that the conference agreement removed all provisions dealing with Outer Continental Shelf moratoria or lease cancellation. A credible energy policy shouldn't make it a policy to frustrate the production of domestic energy.

For a national energy strategy to be effective it must provide sufficient flexibility for all supply and demand

options to compete in the marketplace. The conference agreement sets forth an energy strategy that will further our national security, create American jobs, help our balance of payments, and lessen our dependence on foreign energy markets and international cartels.

The Energy Policy Act of 1992 provides a long-term comprehensive and consensus-based energy policy for the United States. I recommend adoption of the conference report.

UNITED MINE WORKERS RETIRED COAL MINERS'  
HEALTH BENEFIT PROGRAM

Mr. WALLOP. Mr. President, one of the most difficult issues we encountered in seeking the passage of what is now called the Energy Policy Act of 1992 was the dispute over the United Mine Workers Retired Coal Miners' Health Benefit Program. That plan, negotiated between the UMWA and the Bituminous Coal Operators of America as a labor contract benefit, was in severe financial difficulties. A proposal surfaced to create a new tax on coal producers—including western State coal companies which had no involvement in the UMWA-BCOA agreement.

This egregious solution was basically dead on arrival. After lengthy discussions, a compromise was devised which became the Rockefeller amendment to H.R. 776. This amendment was adopted by the conference without change. I did notice that the chairman of the Ways and Means Committee indicated that this issue will be revisited by his committee in the next Congress.

In the meantime, I did want to provide for the RECORD a technical explanation of the provision, and ask that it be printed at the conclusion of my remarks.

I would also ask that a recent paper from the Congressional Research Service on the use of abandoned mine reclamation funds to pay for benefits be included in the RECORD. I would like to clarify a point in this report which states that interest earnings would, absent the Rockefeller amendment, would be used for the fund's reclamation activities, reduce future AML fees, or make refunds to companies paying the fees. But, any excess funds would also be used to reimburse the States for their, to-date, underfunded share of the program. For instance, Federal payments to my State of Wyoming are millions of dollars in arrears. One of my objectives regarding the AML program is to seek full funding of the State share. The most sensible solution would be to allow States to opt out of the Federal program if they establish their own reclamation program and fee. This is another issue which will have to be revisited.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONFERENCE REPORT

SUBTITLE (C).—HEALTH CARE OF COAL MINERS  
Section 1942. Findings and Declaration of Policy

The Coal Industry Retiree Health Benefit Act of 1992 has had a complex and arduous history. The Conference Agreement represents the efforts of many concerned Senators and Congressmen who worked together to conclude legislation to provide the approximately 120,000 beneficiaries in the United Mine Workers of America 1950 and 1974 Benefit Plans ("Plans") with continuing health care coverage. These multiemployer benefit plans were created in collective bargaining negotiations between the United Mine Workers of America ("UMWA") and the Bituminous Coal Operators Association ("BCOA") and perpetuated in successive bargaining agreements. Under those agreements, retirees and their dependents have been promised lifetime health care benefits. In many cases the last employer of a beneficiary is no longer in business, or no longer has a contractual responsibility to provide coverage. The need for legislative intervention arose because mounting deficits in the Plans threatened to curtail the flow of benefits absent a legislative solution. The Conference Report makes provision for the continuation of health care coverage to the existing beneficiary population.

The essence of the Conference Agreement is that those companies which employed the retirees in question, and thereby benefitted from their services, will be assigned responsibility for providing the health care benefits promised in their various collective bargaining agreements. This will be accomplished through a formulation designed to allocate the greatest number of beneficiaries in the Plans to a prior responsible operator. For this reason, definitions are intended by the drafters to be a given broad interpretation to accomplish this goal.

In addition to insuring the continuation of benefits for those individuals in the UMWA Plans, the Conference Agreement insures that signatory employers will provide coverage to all other eligible UMWA miners who are retired or who retire on or before September 30, 1994. These UMWA retirees and their eligible dependents also are assured of receiving the lifetime health benefits promised under the collective bargaining agreements, and their benefits will be paid for directly by their own employer. Current signatories, in conjunction with the UMWA, will also set up a new, limited plan to provide a safety net for benefit coverage should the last employer of any UMWA retiree in this group become unable to provide coverage.

The legislation does not affect post-September 30, 1994 retirees and their dependents. Companies which employ people in this category may bargain with the Union concerning the level and duration of their health care benefits upon retirement.

This Conference Agreement came about as a result of the arguments advanced by the Plans, the BCOA and the UMWA that absent legislation the beneficiaries could be without benefits because of deficits in those Plans. As the statement of policy makes clear, the Conference Agreement is intended to remedy those problems, to allow for sufficient operating assets and to provide for continuation of a privately financed self-sufficient benefit program. The purpose of the Conference Agreement is to facilitate a private party solution, not create a new federal entitlement program or establish a precedent for other federal action.

On November 19, 1991, S. 989 was passed by the Finance Committee, and was appended to

HR 4210, the Democratic tax package, which was vetoed on March 20, 1992. S. 989 was highly controversial because it would have taxed the entire coal industry in order to pay for the health care of UMWA retirees. This industry tax was the subject of contentious debate because those companies with no relationship to the UMWA or BCOA were to be taxed to subsidize the BCOA's private promises. The claim that health care for UMWA retirees is an industry-wide responsibility is specifically rejected in the final Conference Agreement, which imposes the cost of this particular employee benefit program on current and former signatory companies and their related companies.

In addition, S. 989 exempted any company, other than a producer of bituminous coal, from the payment obligation. The Conference Agreement rejects this concept in favor of a definition of responsible operator which includes every entity related to the responsible operator which continues in business, whether or not the related company is in the coal mining industry. Broadening the definition of responsible operator in this manner is the essence of the Conference Agreement. It recognizes the financial interdependence of these related entities, and is consistent with the drafters' view that it is more appropriate to assign the cost of providing these benefits to ongoing business entities which have or had a relationship with the signatory employer, than to tax totally unrelated entities to fund the contractually promised benefits.

Another important difference is the fact that S. 989 provided for a government fund to administer the payment of benefits to an open ended beneficiary group. This concept is rejected in the Conference Agreement, which provides instead for a privately financed and administered benefit plan structure, with eligibility limited to those individuals actually receiving benefits from the UMWA Plans on July 20, 1992. This formulation solves the existing problem, but guarantees that the Congressional solution will not provide an avenue or incentive for abuse or for a continuation of the existing flawed program.

Both earlier bills and the Conference Agreement requires those companies which once were signatory to coal wage agreements with contribution obligations to resume paying for the cost of providing benefits to retirees assigned to them, even though those companies no longer have a contractual obligation to do so under their current relationship with the UMWA. The drafters in both cases took into consideration the claim of these so-called "reach back" companies that they had bargained out of their funding obligations. It was determined, however, that an equitable solution would require that such companies remain obligated to help fund the benefit program which covers retired persons who worked for those companies.

On March 6, 1992, the Senate Finance Committee reported out amendments to H.R. 4210, once again including provisions for an industry-wide tax to finance provision of health care benefits to UMWA retirees. While the specific assessment formula differed, it was essentially patterned on S. 989. It was not passed by the full Senate. The CONGRESSIONAL RECORD of March 10, 1992 reflects the strong opposition to that measure, and any measure that extends obligations beyond the signatory companies and their related companies as those terms are defined in the Conference Agreement. The version of the legislation similar to the Conference Agreement was substituted for the version

reported by the Finance Committee, and represents the solution which best accommodates the legitimate concerns of the many interested parties.

SUBTITLE J.—COAL INDUSTRY HEALTH BENEFITS  
Chapter 99—Coal Industry Health Benefits  
Subchapter A.—Definitions of General Applicability

Section 9701. Definitions of General Applicability

The terms "current 1950 and 1974 UMWA Benefit Plans and Pension Plans" refer to those plans created by the UMWA and BCOA in collective bargaining. The 1950 and 1974 Benefit Plans will, as of February 1, 1993, be merged into a "Combined Fund" which will begin providing benefits on February 1, 1993.

The term "coal wage agreement" means a collective bargaining agreement between the BCOA and the UMWA. This term includes every National Bituminous Coal Wage Agreement (NBCWA). It was in the 1974 NBCWA that the 1950 and 1974 Benefit Plans were instituted. These Plans are, in effect, successors to and a continuation of the employee health care program that was created in the 1950 NBCWA, and carried forward in every agreement through 1974. In their private collective bargaining, the UMWA and the BCOA agreed to provide UMWA retirees lifetime health care benefits. Companies signatory to coal wage agreements similar to the NBCWA are also obligated to contribute to the Combined Fund.

Section (c), "terms relating to operators," encumbers only those persons or entities which actually signed a collective bargaining agreement (the NBCWA or a similar contract) with the UMWA with the obligation to provide benefits. They are referenced as "signatory operator" throughout the Subtitle. However, because of complex corporate structures which are often found in the coal industry, the number of entities made jointly and severally liable for a signatory operator's obligations under the definition of related persons is intentionally very broad.

In this regard, the term "related person" is defined broadly to include companies related to the signatory operator. The Conference Agreement makes each such related person fully responsible for the signatory operator's obligation to provide benefits under the Act should the signatory no longer be in business, or otherwise fail to fulfill its obligations under the Act. Thus, the statute provides that related persons—meaning (i) those within the controlled group of corporations including the signatory operator, using a 50% common ownership test, (ii) a trade or business under common control with a signatory operator, (iii) one with a partnership interest or joint venture with the signatory operator, or (iv) in specific instances successors to the collective bargaining agreement obligations of a signatory operator—are equally obligated with the signatory operator to pay for continuing health care coverage.

The "time for determination of relationships" between signatory operators, related persons, and successors is July 20, 1992. This date was fixed to insure that parent corporations or other entities related to a signatory company could not evade responsibility for the obligations imposed under the Conference Agreement by divesting themselves of their ownership connection prior to enactment. The only exception is if, as of July 20, 1992, no signatory operator or related person remains in business. In such a case, the relationship shall be determined as of the time

immediately before the signatory operator ceased to be in business. The purpose of this provision is to insure that every reasonable effort is made to locate a responsible party to provide the benefits before the cost is passed to other signatory companies which have never had any connection to the individual (other than having been signatory to a labor agreement which maintained the UMWA Plans). Allocation of beneficiaries to an entity or business which continues in business is the basic statutory intent. Thus, the Conference Agreement's overriding purpose is to find and designate a specific obligor for as many beneficiaries in the Plans as possible.

The term "1988 agreement operator" refers to operators which are signatory to the 1988 NBCWA or a collective bargaining agreement which contained health care contribution and benefit provisions similar to those in the 1988 NBCWA. This definition recognizes that many companies have signed labor agreements with the UMWA which require contributions to the UMWA Plans, but which may differ from the NBCWA in other respects.

"Last signatory operator" is a key term for determining the obligor for provision of benefits to each eligible beneficiary. The last signatory operator is the last person or entity by whom the eligible retiree was employed in the coal industry.

The term "assigned operator" is a broad term including signatory operator, related person and last signatory operator and means the obligor for the purpose of provision of benefits to a retiree and his dependents.

Because the statute is intended to provide the greatest number of beneficiaries with health care benefits paid for by a company which remains in business and was the retiree's signatory employer, or is or was a person related to such signatory, the term "business" is broadly defined. Earlier versions of UMWA retiree health care legislation had restricted "business" to the bituminous coal mining business. The Conference Agreement specifically states that "a person shall be considered to be in business if such person conducts or derives revenue from any business activity, whether or not in the coal industry." Thus, even if the signatory operator is no longer in the coal mining business, or indeed any business at all, but it or a related person continues to derive revenues from any type of business or otherwise has assets sufficient to provide benefit coverage, it will be deemed to be the assigned operator for provision of benefits required under this Subtitle.

Subchapter B.—Combined Benefit Fund

PART I—ESTABLISHMENT AND BENEFITS

Section 9702. Establishment of the United Mine Workers of America Combined Benefit Fund

Effective February 1, 1993, the Conference Agreement merges the UMWA 1950 and 1974 Benefit Plans into a newly created United Mine Workers of America Combined Benefit Fund. Although the Combined Fund will be created within 60 days of enactment, the Combined Fund will not make benefit payments until the effective date of this merger. Until the February 1, 1993 merger, all current beneficiaries in the UMWA 1950 and 1974 Plans will continue to receive their health care benefits from the existing UMWA Plans.

The Combined Fund shall be treated as tax exempt under Section 501(a) of the Internal Revenue Code and shall qualify as a Section 102(2)(5) plan under the Labor Management Relations Act, 1947, 29 U.S.C. 186(c)(5), an em-

ployee welfare benefit plan within the meaning of Section 3(1) of the Employee Retirement Income Security Act of 1974, 29 U.S.C. 1002(1), and a multiemployer plan within the meaning of Section 3(37) of ERISA, 29 U.S.C. 1002(37).

The statute makes provision for the Combined Fund to be administered by a Board of Trustees. The Board has been constituted to ensure as high degree of impartiality in the administration of the Combined Fund as possible. It is specifically intended that the Combined Fund not be a government corporation. The mechanism for selecting trustees is designed to ensure that those companies with the largest financial obligation to the Combined Fund are adequately represented in the selection of trustees. Furthermore, the Trustees' sole responsibility is to administer the Combined Fund in the best interest of the beneficiaries within the confines of the Act. The Trustees are not the representatives of the BCOA, the UMWA, or any other group. Procedures, rules and decisions affecting the Fund shall be established as needed by the Trustees, and shall not be the result of or subject to, or affected by collective bargaining between the UMWA and the BCOA.

Section 9703. Plan Benefits

Health benefits under the Combined Fund will be substantially the same as those provided pursuant to the terms of the 1988 NBCWA as of January 1, 1992. In addition, the statute makes provision for death benefits at the same level as those in effect on July 20, 1992 under the 1988 NBCWA. A major difference is that, unlike the UMWA Plans, the Combined Fund is designed to require adherence to rigorous cost containment measures to control the rate of utilization. The Combined Fund will be a prepaid, managed care program. The Trustees will adopt certain cost containment strategies like negotiating with existing provider groups, soliciting the formation of new provider networks, or taking other actions as may be necessary to arrange for the most cost effective delivery of medical care to cover all beneficiaries. It is recognized that, due to geographical location, such managed care arrangements may not be feasible for all beneficiaries. Although the beneficiaries tend to be concentrated in specific geographical areas, some are located in isolated rural areas incompatible with a pre-paid, managed care program. The Trustees will address these isolated instances on a case-by-case basis. In each case the Trustees will negotiate with providers and manage the beneficiary's care utilization to assure not only that benefits under the Combined Fund are being delivered in a cost effective manner, but also that the Combined Fund maintains financial viability.

Significantly, the legislation provides that benefit coverage may be readjusted if the amount of money available to the Trustees under the financing arrangements in the statute is insufficient to continue benefits at current levels. While the statute's intention is to begin the provision of benefits from the Combined Fund at the 100 percent coverage levels specified in the 1988 NBCWA, benefits are not locked in at this level. While the contribution level may be increased on a yearly basis to match certain increases in the health care component of the CPI, the Trustees may adjust benefit levels if necessary to meet income projections.

The Trustees have full authority to develop and administer a plan of coverage and the mechanism for delivery of health care. All benefit eligibility limitations in the cur-

rent Plans shall be continued under the Combined Fund. The program should result in the availability of uniform coverage levels for all beneficiaries. Since the drafters have envisioned that the primary structure of benefit delivery will be through a pre-paid managed care program, the imposition of cost sharing arrangements on the beneficiaries would be considered by the Trustees only as a last resort.

Only assigned operators are responsible for paying the Combined Fund's cost of providing benefits. The liability of each operator depends upon the number of beneficiaries allocated to that company under the statute's assignment provisions for allocating beneficiaries to assigned operators, signatory operators and related persons.

#### PART II—FINANCING

##### Section 9704. Liability of Assigned Operators

Each assigned operator will pay a premium to the Combined Fund consisting of three parts: a health premium for its assigned beneficiaries, an actuarially determined death benefit premium, and a premium to cover its pro-rata share of the health benefits allocable to unassigned beneficiaries. Beneficiaries will be assigned to current and past signatory operators, and the Conference Report makes clear that their related companies are fully liable for the retirees and dependents allocated to each assigned operator. It will be the responsibility of the Secretary of Health and Human Services to calculate a yearly per beneficiary health premium, to be paid on a monthly basis. Premiums may be increased annually to reflect certain increases in the 1992 medical component of the Consumer Price Index. Provisions are also made for certain adjustments in the event of changes in Medicare coverage so that the benefits continue as supplementary. The purpose of this is to insure that the coverage available to beneficiaries in 1992 is not lessened solely because of future changes in the scope of benefit coverage under the Medicare program.

As a practical matter, not all beneficiaries can be assigned to a specific last signatory operator, related person or assigned operator for payment purposes. This is because in some instances, none of those persons remain in business, even as defined to include non-mining related businesses. Thus, provisions are made for unassigned beneficiary premiums. In each plan year each assigned operator will pay a premium earmarked to cover the health costs of these unassigned beneficiaries.

The amount of the unassigned beneficiary premium payable by each assigned operator will be calculated on the basis of the number of beneficiaries assignable to each operator as of October 1, 1993. For example, a person who, on October 1, 1993, is the assigned operator for 10 percent of all beneficiaries in the Combined Fund who can be assigned to an operator (or related person) still in business, will pay ten percent of the total yearly premium cost allocable to unassigned beneficiaries in the Combined Fund. Likewise, this pro-rata calculation will be used for future years. Although the percentage of the unassigned beneficiary premiums allocable to each assigned operator on October 1, 1993 will remain fixed in future years, the statute makes provision for readjustment on an annual basis to take into account the fact that, in the future, assigned operators (and related persons) may go out of business and be unable to continue payments to the Combined Fund.

The first plan year is an eight-month period running from February 1, 1993 through

October 1, 1993. Thereafter, each plan year will be a twelve month period from October 1 through September 30. In the first plan year the Secretary of HHS will review the work history of each beneficiary and will prepare the assigned operator allocations which are required to be made by October 1, 1993. During this period, the 1988 NBCWA signatories will pay all of the Combined Fund's costs. Amounts will be paid based on the percentage of the total of each company's contributions to the UMWA 1950 and 1974 Benefit Plans made during the term of the 1988 Agreement. The statute makes provision for adjustments during the following plan year should a company under-pay or over-pay its actual obligations during this eight month period.

In recognition of the fact that unassigned beneficiaries were not employed by the assigned operators at the time of their retirement, provisions are made to subsidize the assigned operators' payment obligations for the unassigned beneficiaries. The inclusion of such subsidies was a key component of the legislative compromise. One such subsidy involves a transfer of assets from the overfunded 1950 UMWA Pension Plan to the Combined Fund. This money was previously paid into the pension plan by the signatory companies and is actuarially determined to be in excess of what is needed to provide pension benefits. Thus, on February 1, 1993, October 1, 1994 and October 1, 1995, \$70 million will be transferred from the 1950 Pension Plan to the Combined Fund. This money may be used only to reduce the amounts that assigned operators would otherwise have to pay to provide health benefits to unassigned beneficiaries, and may not be used for any other purpose.

Deficits currently exist in the UMWA Benefit Plans. The 1988 signatories are solely and exclusively responsible for paying off the amount of any deficit which may exist on February 1, 1993, when the UMWA Plans are merged into the Combined Fund. The deficit must be paid off on a pro-rata basis over a twenty-month period. Transfers from the overfunded UMWA 1950 Pension Plan and the Abandoned Mine Land fund (discussed below) may not be used to pay off the deficits.

##### Section 9705. Transfers

At Section (b) of the Conference Agreement, provision is made for monies to be transferred from the Abandoned Mine Land Fund (AML Fund) in an amount up to, but not more than, \$70 million per year beginning on October 1, 1996 and on October 1 of each subsequent plan year. The AML Fund is funded by a cents per ton tax imposed on all coal mining companies under Title IV of the Surface Mining Control and Reclamation Act of 1977. As with the transfer of excess assets from the UMWA 1950 Pension Plan, this money may be used solely for the purpose of subsidizing the cost of providing health care to unassigned beneficiaries. The money which is available from the AML Trust Fund is interest earned on the corpus. The Conference Agreement specifically intends that no part of the corpus of the Abandoned Mine Lands Trust Fund be used for this purpose. This subsidy was critical to the compromise legislation and is not intended to impact on budgetary scoring issues or to suggest that any person which was not signatory to a coal wage agreement, or related to such a signatory, has any obligation or responsibility under the Conference Agreement. It is expected that, in future years, the amount of the yearly AML transfer will decrease as the total number of unassigned beneficiaries in the Combined Fund decreases.

##### Section 9706. Assignment of Eligible Beneficiaries

The method of assignment of eligible beneficiaries was the source of much debate and controversy prior to the Conference Agreement. The conferees intend that the largest possible number of beneficiaries in the Plans be assigned to a specific or designated company. Under the statute, each eligible beneficiary shall be assigned in the following order:

First, to the operator which was signatory to the 1978 or later coal wage agreement and which most recently employed the retiree in the coal industry for at least two years. This assignment shall be based on a signatory operator and related persons basis. If that signatory operator, including related person, is still engaged in any business and employed the miner for two years or more, that person becomes the assigned operator under the statute. Second, if the retiree was not assigned on the basis of a two year employment status, he will be assigned to any post-1978 coal wage agreement signatory, or related person, which remains in business and which was the retiree's majority employer, even if such majority employment was for a period less than two years. Third, if no post-1978 signatory (including related persons) remains in business, then the individual will be assigned to the pre-1978 signatory which employed the individual for the longest period of time, regardless of that length of service. Finally, if no operator remains in business under the formulations described above, that retiree becomes an unassigned beneficiary. In all categories, the retiree's dependents are to be treated in the same manner as the retiree for purposes of determining the assigned operator.

It is emphasized that employment of a coal industry retiree in the coal industry by a signatory operator shall be treated as employment by any related persons to such operator. For purposes of calculating the last employer and majority employer and two year employer, employment with persons no longer in business (including related persons) and persons during a period during which such person was not signatory to a coal wage agreement shall be disregarded.

The statute makes provision by which assigned operators may transfer the assignment of an eligible beneficiary to a successor employer pursuant to private contractual arrangements for a purchase. An assigned operator may inform the Trustees of the Combined Fund of the transfer of its responsibility to make premium payments under the Act to a third party and the Combined Fund Trustees will make appropriate accommodations. However, even in such case the assigned operator remains the guarantor of the benefits under the Conference Report. The Conference Report's purpose is to assure that any beneficiary, once assigned, remains the responsibility of a particular operator, and that the number of unassigned beneficiaries is kept to an absolute minimum.

The statute makes provision for record searches an other necessary administrative functions by the Secretary of HHS. This will enable the Department to carry out its responsibilities under this section. In addition, it is intended under the statute that the Secretary have the authority to promulgate regulations governing the method by which determinations of the assigned operator will be made and setting out the review procedures available to an assigned operator once such determinations are made. It is anticipated that this procedure will be time consuming and it is known that the corporate relation-

ships in the coal industry are often complex. The Secretary of HHS is not intended to be overburdened by standards of proof. As long as the determination is based on accurate data and that reasonable inferences are drawn under the circumstances, the determination made by the Secretary of HHS is intended to prevail.

The section on private actions provides that if parties have commercial contracts relate to acquisition or disposition of coal bearing properties or facilities which delineate their respective responsibilities concerning the obligation for provision of retiree health care, the parties may enter into private litigation to enforce such contracts for indemnification or any other form of payment allocation as may be appropriate under their private contract. Otherwise, this language does not create new private rights of action where they would not exist in the absence of this provision.

#### PART III—ENFORCEMENT

##### Section 9707. Failure to Pay Premium

The statute makes provision for assigned operators to be penalized up to \$100 per day for failure to make required payments. The Secretary may waive such penalty payments in certain situations, for example, where the failure to make payments is for reasonable cause.

#### PART IV—OTHER PROVISIONS

##### Section 9708. Effect on Pending Claims or Obligations

This section relates to pending litigation involving the UMWA Benefit Plans and certain companies. The statute provides that it shall control all liability for contributions on or after February 1, 1993. For periods prior to that date, the plan documents, collective bargaining agreements and litigation shall determine respective rights, duties and obligations. The Conference Report shall not interfere with the results of such litigation, nor be used to interpret such litigation.

##### Subchapter C—Health Benefits of Certain Miners

#### PART I—INDIVIDUAL EMPLOYER PLANS

##### Section 9711. Continued Obligations of Individual Employer Plans

In some instances, signatories to the 1978 or subsequent coal wage agreements provide retiree health benefits from an individual employer plan maintained pursuant to those coal wage agreements. The statute makes provision for such health benefits coverage to continue at the same levels provided the last signatory operator (and any related person) remains in business. Thus, for example, 1988 NBCWA signatories which are presently providing retiree health care through an individual employer plan will be statutorily obligated to continue such benefits for life with respect to all former employees who are already retired, or who become eligible to retire by February 1, 1993, and who in fact retire on or before September 30, 1994. Should the last signatory operator go out of business, all related companies are jointly and severally liable to continue the retiree health care benefits for pre-October 1, 1994 retirees and their dependents. It is the intent of the drafters that provision of health care benefits to pre-October 1, 1991 retirees be specifically resolved by the legislation.

Health care benefits for employees retiring after September 30, 1994 are subject to collective bargaining between their company and the UMWA. These persons are not guaranteed a specific level of benefits, guaranteed funding of any benefits or provided benefits under the Conference Report. It is the inten-

tion of the drafters to close the UMWA 1950 and 1974 Benefit Plans as of July 20, 1991, and that a new private party plan (discussed below) be created to provide future coverage for all other eligible UMWA miners who retire before October 1, 1994, but who are not eligible for the Combined Fund because they were not receiving benefits from the UMWA 1950 or 1974 Plans on July 20, 1991. Further, the issue of benefits for pre-October 1994 retirees shall not be reopened. This was a matter of considerable debate and controversy by the drafters. However, the status of all post-September 1994 retirees is to be resolved by the coal operators and the Union in collective bargaining.

The reason for this legislation was the unique nature of the coal industry and its benefit plans. This statute is not intended to be precedent setting for other industries, other benefit plans, or other coal industry workers who may retire in the future.

#### PART II—1992 UMWA BENEFIT PLAN

##### Section 9712. Establishment and Coverage of 1992 UMWA Benefit Plan

The question of the cut off date for determination of eligibility for benefits under this statute was an issue of concern to the interested parties. The drafters determined that eligibility to receive benefits from the Combined Fund would be limited to individuals actually receiving benefits from the UMWA Plans as of July 20, 1992. Questions remained as to the coverage of retirees after that date. At the urging of the UMWA and the BCOA, the drafters agreed to provide statutory authority and direction to the UMWA and the BCOA to establish a new fund called the 1992 UMWA Benefit Plan to cover those persons who retire between July 20, 1992 and October 1, 1994. To be eligible for coverage under the 1992 UMWA Benefit Plan the retiree (and his eligible dependents) must: (i) have retired prior to October 1, 1994, and (ii) not be able to qualify for receipt of benefits from the Combined Fund. This fund is expected to be a bridge to cover employees who have not yet retired but who are retiring within a very short time after the Conference Report's effective date. It is expected that this population will not be large.

The 1992 Fund will include all eligible retirees who retire prior to October 1994 (assuming they were eligible to retire by February 1, 1993) who would have been eligible to receive benefits from the UMWA 1950 or 1974 Plans but for the enactment of this legislation. Any person eligible for benefits from the 1992 Fund shall be allocated to such assigned operator or related person which remains in business and that assigned operator shall be assessed premiums sufficient to guarantee benefits to such eligible beneficiaries. These premiums, which shall be paid by all 1988 signatory operators, shall consist of (i) an annual prefunding premium for each eligible beneficiary attributable to it, and (ii) a monthly per beneficiary premium for all eligible beneficiaries whose last signatory operator (including related persons) is no longer in business, and (iii) the provision of security to insure future compliance with these payment obligations. These assessments shall be applied uniformly to each 1988 last signatory operator on the basis of the number of eligible and potentially eligible beneficiaries attributable to it. Additionally, any last signatory operator which is not a 1988 signatory but which has a retiree assignable to it under this plan shall be assessed a monthly per beneficiary premium for each such eligible retiree and his dependents.

The 1992 Fund trustees may implement managed care programs, but have less discre-

tion and authority to deviate from the benefit structure and benefit levels in effect under the prior UMWA Plans than do the trustee of the Combined Fund.

#### Subchapter D.—Other Provisions

##### Section 9722. Sham Transactions

This provision is modeled after, and should be interpreted consistent with Section 4212(c) of The Multiemployer Pension Plan Amendments Act of 1981, 29 U.S.C. 1392(c).

##### Section (b). Amendments to Surface Mining Act

The Conference Report makes provision to accomplish the transfer of interest payments from the Surface Mine account to the Combined Fund. After the initial transfer of \$210 million, beginning in 1996, up to \$70 million per year of interest will be transferred from the Surface Mine account to the Combined Fund. If the Trustees determine that the benefits for unassigned beneficiaries will be less than \$70 million in any year, only the amount needed will be transferred. The Conference Report also extends the Surface Mining Control and Reclamation Act of 1977 through September 30, 2004. The statute makes no employer other than a signatory operator or related company responsible for payment of benefits. The provisions allowing use of AML money are restricted to the use of interest from that Fund and will not affect budgetary scoring. It is intended that this money be used solely and exclusively for the benefit of unassigned beneficiaries to the Combined Fund.

[CRS Report for Congress, Sept. 10, 1992]

#### COAL INDUSTRY: USE OF ABANDONED MINE RECLAMATION FUND MONIES FOR UMWA "ORPHAN RETIREE" HEALTH BENEFITS

(Nonna A. Noto, Specialist in Public Finance Economics Division)

Financing the retiree health benefits now provided by the United Mine Workers of America (UMWA) 1950 and 1974 Benefit Plans would be substantially revamped by the Coal Industry Retiree Health Benefit Act of 1992. This proposal was included as subtitle C of Title XX, the revenue provisions of H.R. 776, the National Energy Security Act of 1992, as passed by the Senate on July 30, 1992. The coal industry retiree health benefit proposal was not included in the version of H.R. 776 approved by the full House and consequently remains a difference for the conference committee to resolve.

One component of the proposal is to transfer interest earnings on the balance in the Abandoned Mine Reclamation Fund, popularly referred to as the AML (Abandoned Mine Land) Fund, to help finance UMWA orphan retiree health benefits. The success of this approach requires maintaining a large unspent balance in the AML Fund. This report examines the implications of the AML interest transfer proposal in terms of Federal budgeting policy, spending on reclamation activities, and the incidence of the financing burden on different parts of the coal industry.

The report begins with a brief background on the problems facing the UMWA Health Benefit Plans and the alternative proposals advanced in the 102nd Congress to provide some financial relief. The second section summarizes the main financing elements in the H.R. 776 plan for coal industry retiree health benefits, pointing out major differences from the current system. The third section provides a brief description of the AML program. The fourth section explains the budgetary implications of spending the interest credited to a special fund within the

U.S. Treasury. The fifth section shows how the AML interest transfer proposal would divert monies away from their designated purpose of land reclamation. The sixth and final section measures the relative burden of the AML tonnage fees by type of coal and geographic region, in contrast to alternative forms of taxes on the coal industry. Appendix 1 presents more detailed State-by-State statistics on the financing distribution. Appendix 2 summarizes the various legislative proposals introduced in the 102nd Congress to help finance UMWA orphan retiree health benefits.

#### BACKGROUND ON THE UMWA HEALTH BENEFIT FUNDS

Currently, the basic financing mechanism for the UMWA Health Benefit Funds is a per-production-hour contribution made by coal companies that are still "signatory" to the National Bituminous Coal Wage Agreement (NBCWA), the main collective bargaining agreement between the United Mine Workers and employers represented by the Bituminous Coal Operators' Association (BCOA). This hourly contribution pays for health benefits covering beneficiaries of three types: those directly associated with the signatory companies, "reachback orphans" associated with companies previously signatory and still in business, and "true orphans" associated with companies previously signatory but no longer in business.

The coal companies that are still fully signatory to the bargaining agreement have complained that for every dollar they have been paying into the UMWA 1950 and 1974 Health Benefit Funds for their own retirees and dependents, they pay an additional three dollars on behalf of "orphans" of other companies. These companies have suggested that they can no longer afford to bear the full costs of the orphans on their own. Altogether, the Funds service approximately 120,000 beneficiaries.<sup>1</sup>

Like most retiree health benefit plans in the United States, the UMWA 1950 and 1974 Benefit Funds were intended to operate on a current year, pay-as-you-go basis. No attention was given to prefunding. The Benefit Funds were established as multiemployer plans, again based on the common assumption that while some employers in the industry group might go out of business, other companies would emerge to take their place.

What went wrong? Output of the coal industry as a whole has been growing. Total tonnage produced in the U.S. rose from 599 million tons in 1973 to 1,029 million tons in 1990.<sup>2</sup> Simultaneously, however, the nature of the industry was changing dramatically, shifting from underground mining toward higher productivity surface mining operations. Much of the new growth in the coal industry has occurred outside the reach of the UMWA, BCOA, and NBCWA. Virtually no new mines have been opened under the National Bituminous Coal Wage Agreement since the mid-1970s. In 1978, the Bituminous Coal Operators of America had 130 member companies; by 1992, the number had dropped to 13 or 14. The share of domestic tonnage covered by the NBCWA fell from approximately 80 percent during the 1950s, to 66 percent in 1973, and 30 percent in 1990. UMWA-represented surface mines in the Western States signed separate agreements with employers that did not require full contributions to the UMWA Benefit Funds. The UMWA also signed separate agreements with other major coal companies, permitting them to reduce their payments to the Benefit Funds.

The coal companies that remained signatory to the NBCWA and full contributors to the UMWA Benefit Plans were thus left to bear the health care costs of retirees from many companies that had gone out of business or ceased to contribute to the Funds. In addition, as a result of separate court decisions, the UMWA Benefit Funds were held responsible for paying benefits for some retirees, but the former employers were not held responsible for continuing to contribute to the Funds. Overall, the BCOA contribution rates were not set high enough to fully cover outlays of the Funds, despite several court-ordered temporary rate increases. As a consequence, in recent years, the UMWA Benefit Funds have been operating at a deficit; the cumulative deficit of the combined funds as of June 30, 1992, was estimated to be approximately \$100 million.

The basic public policy question is who should pay for the health benefits promised to "orphan" retired United Mine Workers and their related beneficiaries if specific former employers cannot be held responsible. Should it be only the current and former signatories to the bargaining agreement or should other parts of the coal industry provide some relief? Should the general public bear responsibility for orphan retirees through Federal or State health care programs?

Shaky retiree health benefits are not unique to the coal industry. Many other retiree groups have recently been orphaned or abandoned by their former employers with regard to health benefits. Pan American Airlines and Eastern Airlines are well-known examples, but there are many others.<sup>3</sup> Other multiemployer benefit plans, such as those in the rail and steel industries, also face a shrinking contribution base.

It is noteworthy that many beneficiaries of the UMWA Health Benefit Plans are eligible for health benefits under two Federal programs. Many retired miners, as well as spouses and widows, are eligible for Medicare. According to statistics presented in early 1992, 88 percent of the 1950 and 56 percent of the 1974 Benefit Fund beneficiaries were Medicare-eligible.<sup>4</sup> In addition, about 71 percent of retired miners (but not dependents) receiving UMWA health benefits are also covered under the medical-care portion of the Black Lung Disability program. Thus, the potential issue for most orphan beneficiaries involved in the coal industry case is not being without any health insurance coverage at all. Rather, the issue—for those retired miners and dependents old enough to qualify for Medicare—is a Medigap policy with prescription drug coverage.<sup>5</sup> But many older Americans—in addition to coal industry retirees—are affected by the fact that Medicare does not cover 100 percent of their health care costs.

There may be good reasons for the Congress to address the issue of retiree health benefits on a comprehensive nationwide basis, rather than an industry-specific basis. But a major overhaul of the Nation's health care financing system is unlikely in 1992. Meanwhile, the coal industry faces an imminent time deadline. The current bargaining agreement between the UMWA and the BCOA, known as the 1988 Agreement, is scheduled to expire after February 1, 1993. There has been concern that the failure to resolve in advance of contract negotiations the issue of how to finance orphan retiree health benefits could lead to a strike by the miners and/or a refusal by BCOA employers to continue to support health benefits previously promised to retire miners and dependents.

Several proposals were introduced in the 102nd Congress for financing coal industry retiree health benefits. This report focuses on aspects of those proposals that involve taxing the coal industry to help pay for "true orphans."

The initial proposal by Senator Rockefeller (The Coal Industry Retiree Health Benefit Act of 1991, S. 1989) for financing orphan retiree health benefits was based on an industrywide tax of \$.75 per production hour on domestic coal and an equivalent tax of \$.15 per ton for imported coal. This proposal drew strong protests from coal companies never signatory to the National Bituminous Coal Wage Agreement who argued that they had no part in promising the retiree health benefits at issue and should therefore not be required to pay.

A revised financing proposal (included in H.R. 4210, the Tax Fairness and Economic Growth Act of 1992) was to tax only bituminous coal production, at \$.99 per hour for coal mined East of the Mississippi River, \$.15 per hour in the West, and \$.25 per ton for imported bituminous coal. The version of H.R. 776, the national energy legislation, approved by the Senate Finance Committee included a similar proposal with slightly higher rates.

The bituminous coal tax proposal was an attempt to target the tax more precisely on the part of the coal industry that could be considered most responsible for the promised UMWA retiree health benefits. Historically, UMWA representation was most likely in underground coal mines, located in the East, and involving bituminous coal. The bituminous coal tax proposal exempted Western subbituminous coal and lignite production and taxed Western bituminous at a much lower rate. However, a large fraction of Eastern bituminous mining has not been affiliated with the UMWA or the NBCWA. These non-signatory companies strongly objected to the proposed tax.

Both the proposal to tax all coal production and the proposal to tax only bituminous coal production—whether or not the companies had ever been signatory to the NBCWA—had met opposition in the Senate and were threatened with a presidential veto.

Meanwhile, in the House of Representatives, there was a proposal to transfer \$50 million per year from the Abandoned Mine Reclamation Fund, first introduced by Rep. Rahall as H.R. 4344, and subsequently included in H.R. 776 as approved by the House Committee on Interior and Insular Affairs, but not included in H.R. 776 as approved by the full House. It was a revised version of this AML transfer proposal—tied to the interest earnings of the AML fund and increased to \$70 million per year—that was included in H.R. 776, the National Energy Security Act of 1992, as approved by the full Senate.<sup>6</sup>

#### THE FINANCING MECHANISM PROPOSED IN H.R. 776

Under the proposal in the full Senate version of H.R. 776, the basic financing mechanism for UMWA retiree health benefits would switch from the current per-production-hour contribution to a per-beneficiary premium. Wherever possible, responsibility for individual beneficiaries would be assigned (by the U.S. Secretary of Health and Human Services) to a previous employer still in business—whether a current signatory or a "reachback" company. The net total premiums due on behalf of the remaining unassigned beneficiaries (the true orphans) would be allocated to the signatory and reachback companies in proportion to their "applicable percentage" of all assigned beneficiaries.

<sup>1</sup>Footnotes at end of article.

These aggregate premiums due on behalf of the unassigned beneficiaries would be reduced by transfers from other sources of \$70 million each fiscal year starting in FY93. The first three transfers (February 1, 1993, October 1, 1993, and October 1, 1994) would come from the surplus assets of the UMWA 1950 Pension Fund. Starting October 1, 1995, the annual transfers would come from the interest earnings of the AML Fund. The AML interest transfer proposal is linked to the extension of the AML tonnage fees on coal. The legislation would extend the AML fees another nine years, from their scheduled expiration on Sept. 30, 1995, until Sept. 30, 2004.

For any single fiscal year the amount that could be transferred from the AML Fund may not exceed the amount of expenditures that the trustees of the new United Mine Workers of America Combined Benefit Fund estimate will be spent for health care on behalf of the "unassigned" beneficiaries.<sup>7</sup> Furthermore, the amount to be transferred at the beginning of each fiscal year is defined in the legislation as the amount of interest estimated to be paid to the AML Fund during that coming fiscal year, plus the amount by which that interest amount is less than \$70 million. The cumulative amount of this supplement to interest that may be transferred for all fiscal years cannot exceed the amount equivalent to all the interest earned and paid to the AML Fund for fiscal years 1993, 1994, and 1995—years before the transfers are to begin.

The proposal addresses the problems associated with the defined group of miners who have already retired or are soon to retire. It does not offer any protection for miners who will retire after September 30, 1994.

To a large extent, the proposal would codify into Federal law the recent trend in support commitments that have been made under the private bargaining agreement between the UMWA and the BOCA, and which the courts have been trying to enforce. Originally, the UMWA multiemployer health benefit plan was intended to service, without differentiation, both nonorphan and orphan retirees. That policy changed with the 1974 bargaining agreement (NBCWA) and the establishment of the separate 1950 and 1974 Benefit Funds.

The 1950 Fund was to service all those who retired prior to December 31, 1975, both nonorphans and orphans. (Today, approximately half of the beneficiaries of the 1950 Fund are orphans, and half nonorphans.) For those retiring in 1976 or later years the 1974 Fund was to service only those considered orphans. Nonorphans were to receive their retiree health benefits directly from their last employer as long as that employer remained in business. The Senate's H.R. 776 proposal would make a very strong effort to identify former employers and hold them financially responsible for their "assigned" beneficiaries.

The UMWA multiemployer plans were initially financed by a contribution assessed per ton of coal production. This was supplemented in 1974 and totally replaced in 1988 by a contribution assessed per hour of coal production work. A company's contributions to the multiemployer plans were thus made in some proportion to its current production activity, whether measured by coal output or labor input. This was in some sense a measure of current "ability-to-pay."

The H.R. 776 proposal would allocate the payments due on behalf of "unassigned" or orphan beneficiaries on the basis of a company's "applicable percentage," defined as the number of beneficiaries assigned to that

company divided by the total number of assigned beneficiaries. Thus companies with the largest number of current beneficiaries of their own would also bear the largest burden for orphans. Signatory companies which had no current assigned beneficiaries would not be required to contribute (after the first plan year of the new program).

As a source of subsidy for orphan retirees, the proposal identified two sums of money that have already been collected from the coal industry: the surplus assets in the UMWA 1950 Pension Fund and the balance in the Abandoned Mine Reclamation Fund. The ability to tap those monies would mean that orphan retiree health benefits could be subsidized without having to levy additional private (BOCA) fees or Federal taxes on the coal industry. The remainder of this report focuses on the AML transfer proposal, especially its implications for Federal budgeting and its incidence on the coal industry.

#### BRIEF DESCRIPTION OF THE AML PROGRAM<sup>8</sup>

The bulk of H.R. 776 relating to coal industry retiree health benefits (section 20143(a)) would amend the Internal Revenue Code of 1986. In contrast, the section (20143(b)) providing for transfers from the AML Fund would involve an amendment to the Surface Mining Control and Reclamation Act of 1977 (30 U.S.C. 1232) (SMCRA).

SMCRA established the abandoned mine land reclamation program, taxing current coal production to restore mined land that had been left too compromised for other productive use. Monies collected from tonnage fees on coal were to be allocated among the various coal mining States to reclaim lands mined and abandoned prior to August 3, 1977, the date the Surface Mining Control and Reclamation Act (P.L. 95-87) was enacted. Surface mining conducted after that date was expected to meet Federal reclamation standards implemented through State regulatory programs.

In recognition of funding limitations, Congress in SMCRA established priorities for the use of AML money. First priority goes to mining abandonments that could present imminent danger to public health and safety. Examples of priority one projects include open mine shafts or subsidence (underground holes from mining) under schools or other public buildings. Any remaining AML funds are designated to eliminate environmental hazards and finally, at the lowest end of the scale, mining scars considered aesthetically offensive. Abandoned mine sites around the country have been ranked according to a national priority list.

Under current spending allocation rules, AML fee collections are split in half. One half returns to the State of origin, and the other half is used for a variety of Federal programs, most under the authority of the Secretary of the Interior. The Western States have already dealt with most of their high-priority abandoned areas. Much of the Federal half of the money has come East to pay for AML projects addressing remaining high-priority public health and safety hazards. This interregional subsidy has been a contentious issue for Western mine operators.<sup>9</sup>

The Omnibus Budget Reconciliation Act of 1990 (P.L. 101-508, section 6003) authorized the collection of the AML reclamation fees through September 30, 1995, thereby extending the fees past their scheduled expiration in 1992.

#### BUDGETARY IMPLICATIONS OF SPENDING INTEREST

The growing balance in the AML Fund attracted the attention of those searching for

a "costless" revenue source to subsidize orphan retiree health benefits. This section first presents data on the balances and interest expected to be available in the AML Fund. It then explains the costs of the proposal in terms of Federal budget accounting.

As shown in table 1, in FY91, \$243.8 million in revenues were collected for the AML Fund from tonnage fees on coal; appropriations for the reclamation programs were \$199.0 million. The unappropriated balance available for future reclamation expenditures was expected to rise from \$529.4 million at the beginning of FY91 to \$795.0 million by the end of FY93.

Part of the growth in the balance after FY91 is the result of a provision included in the Omnibus Budget Reconciliation Act of 1990 (OBRA90, section 6002) which provided that the AML could henceforth earn interest on the cumulated balance in its special fund with the U.S. Treasury. During FY92, the first year of such interest earnings, the AML Fund was expected to be credited \$40.4 million in interest income. Interest earnings of \$46.2 million were projected for FY93.<sup>10</sup>

TABLE 1—ABANDONED MINE RECLAMATION (AML) FUND BUDGET, FISCAL YEARS 1991-93

(In thousands of dollars)

	1991 actual	1992 estimated	1993 estimated
Balance, start of year	529,407	574,211	664,866
Receipts:			
AML fees	243,759	238,100	240,100
Interest		40,358	46,164
Subtotal, receipts	243,759	278,458	286,264
Appropriation	-198,955	-187,803	-156,151
Balance, end of year	574,211	664,866	794,979

Source: U.S. Executive Office of the President, Budget of the United States Government, Fiscal Year 1993, Washington, U.S. Govt. Print. Off., 1992. (Released Jan. 29, 1992), p. Appendix One—586.

As long as the AML Fund could maintain such a large balance, nearly \$50 million could be transferred out of the Fund annually (to orphan retiree health benefits or any other purpose) without appearing to decrease the Fund's balance and without imposing new taxes on the coal industry. This apparently "costless" way to subsidize orphan retiree health benefits provides a powerful appeal to its proponents. But would the proposed AML transfer really be "costless?"

Neither the H.R. 4344 nor the H.R. 776 AML transfer proposals would impose any additional taxes on the coal industry in order to help finance the orphan retiree health benefits. But both would extend the current AML fees intended to pay for reclamation programs. According to Congressional Budget Office cost estimates for H.R. 776, the proposed extension of the AML fees beyond FY95 would cover the mandatory authorization of outlays for UMWA retiree health benefits. Thus, in a technical sense, the proposal does not violate the deficit-control accounting established by the Budget Enforcement Act of 1990 (BEA) (Title XIII of OBRA90, P.L. 101-508).

In the economic context of the unified Federal budget, however, the interest-transfer proposal would constitute an increase in deficit spending. The interest to be credited to the AML Fund does not reflect new, additional revenue to the Federal Government, only a debt of the general fund to the AML Fund. The interest earnings of the AML fund are by no means "free money" awaiting use in the U.S. Treasury. Indeed, there is really no cash balance sitting in the AML Fund.

In this era of large annual deficits in the consolidated U.S. budget, the U.S. Govern-

ment spends every dollar it collects in taxes and other receipts—and more. A particular special fund (or trust fund) may show a surplus in its budget account if the receipts credited to it (collections from the public plus interest credited by the Government) exceed the outlays from the fund for that year. In a cash accounting sense, however, any excess of collections from the public over outlays for that particular program are spent to cover other activities of the Government in that fiscal year. The surplus collections are in effect borrowed from the special fund by the general fund. If the special fund surplus were not available, the general fund would otherwise have to borrow that amount from the public by issuing Treasury debt and pay interest on that debt.

Prior to FY92 the general fund was receiving an interest-free loan represented by the balance in the AML Fund. The payment of interest to the AML Fund (as a result of the provision in OBRA90) now acknowledges the time value of the money already paid in by coal operators in the form of AML tonnage fees but not yet spent on reclamation activities. If either the Fund's annual interest earnings or cumulative balance are spent, however, that spending would have to be financed on a current-year basis by new revenues, cuts in other spending, or new debt. This budget rule applies whether the spending is for orphan retiree benefits or any other purpose, including AML activities.

The proposal to spend the interest credits of the AML Fund entails three additional problems. First, it is unduly complex in order not to violate the deficit-control provisions of the Budget Enforcement Act, which is to remain in force through fiscal year 1995. In essence, H.R. 776 authorizes the spending of all of the interest earned by the AML Fund for fiscal years FY93 and beyond, but the proposed transfers of \$70 million per year to the retiree health benefits fund would not begin until FY96. The interest earned for fiscal years 1993-95 would be drawn upon to supplement the difference between the interest earned each year beginning with FY96 and \$70 million.

Second, the ability of the proposal to provide revenues for UMWA orphan retiree health benefits depends on maintaining a large, unspent balance in the AML Fund. It is not standard budget policy, however, for most trust funds or special funds to intentionally "sit" on a large balance.<sup>11</sup> If there is no convincing reason defending a large balance, there is frequently pressure to cut or suspend additional fee collections until the balance is spent down to an acceptable level. In some cases, it has been written into the authorizing legislation that the continuation of the fee is contingent on the fund balance being below a certain level. For similar reasons, coal mining companies could object to paying further AML tonnage fees as long as the balance in the AML fund remains high.

During the late 1980s, the Reagan and Bush Administrations were criticized for holding back on expenditures from the trust funds (especially the Highway Trust Fund and the Airport and Airway Trust Fund) in order to help offset the deficit in the Government's general fund. Under continuing pressure to contain the consolidated deficit, trust fund and special fund balances have been permitted to build, and some of the caps triggering the reduction or removal of charges have been raised or eliminated by legislation. The monies, however, are left to accumulate for future use by the particular fund on its own programs.

Third, in net budgetary terms, the proposal is equivalent to removing the interest-

earning capability granted to the AML Fund by OBRA90<sup>12</sup> (for fiscal years other than 1992) and authorizing a payment of up to \$70 million per year from the general fund of the U.S. Treasury to the UMWA Combined Benefit Fund, for fiscal years beginning in 1966.

CRS is not aware of any other example in the Federal budget where the interest earnings of a special fund or trust fund are dedicated to another program. In the absence of the proposed transfer legislation, the interest earnings would otherwise accrue to the AML Fund and be available for future appropriation to the Fund's own reclamation activities, reducing future AML fees, or making refunds to companies which had paid fees in the past.

In sum, the AML interest transfer proposal offers a solution to the immediate problem of how to finance health benefits promised under past UMWA bargaining agreements to miners who have already retired (and their dependents) but whose former employers are not around to pay. The proposal represents a compromise acceptable to the Bush Administration and members of the Senate who had opposed alternative proposals to levy a new tax on the coal industry, including many companies that had never been signatory to the National Bituminous Coal Wage Agreement. This proposal does not involve a new tax or fee. Rather, it extends the current AML fees past their scheduled expiration at the end of FY95. The success of the proposal is based on the assumption that future appropriations for reclamation activities will not exceed fee collections and, consequently, that a large, interest-earning balance will remain in the AML Fund. The proposal would draw upon the interest earnings to pay for orphan retiree health benefits.

On the downside, this analysis suggests that the AML transfer proposal would have real budgetary costs for the U.S. Treasury that may not be readily apparent. The interest transfer provision is unduly complex in order to circumvent restrictions imposed by the Budget Enforcement Act. The straightforward authorization of a transfer to orphan retiree health benefits within the limits of annual AML fee collections would better honor the spirit of the pay-as-you-go provisions of the Budget Enforcement Act.

The proposal violates usual standards for trust fund or special fund management. Diverting monies specifically raised for one purpose to another program raises additional questions of incidence on both the benefits (spending) side and on the taxing side. The AML transfer proposal has implications in terms of the diversion of spending benefits from reclamation activities to orphan retiree health care and the distribution of the financing burden on the coal industry. These incidence issues are discussed further in the following two sections of the report.

#### DIVERSION FROM RECLAMATION EFFORTS

The fact that there is a large and growing balance in the AML Fund does not mean that the money is not needed by the AML program. Analysts of the AML program say that even if all the Fund's receipts were spent, this would not be adequate to finance all of the high priority projects that remain in the Eastern States. All AML project grants, including those covered under the 50 percent State allocation, are subject to annual congressional appropriation. In brief, the Administration has not been requesting—and the Congress has not been appropriating—monies for reclamation activities at the same pace that AML fees are being collected. For FY93 the Administration requested an appropriation of \$156 million; the

House Appropriations Committee recommended \$188 million; and the Senate Appropriations Committee recommended \$191 million. All are far less than estimated AML fee collections of \$240 million (see table 1).

This proposal in effect authorizes the transfer of interest earned on monies collected on behalf of reclamation activities for the purchase of health care for UMWA orphan retirees. The beneficiaries of these two functions are quite different.

The specific structure of the AML interest transfer plan under the Senate's H.R. 776 proposal holds a potentially more adverse impact on reclamation activities than would a straightforward authorization (such as that originally proposed on the House side). Because it would be depending on the interest earnings of the AML Fund, the UMWA Combined Benefit Fund stands to receive more, the less the AML Fund spends on reclamation and consequently the larger the AML Fund balance. Under a straightforward authorization from the AML program, the orphan retiree benefit fund would receive its transfer but would not otherwise benefit from a curtailment of reclamation activities. If the AML Fund's contribution were set as a percentage of reclamation expenditures, the orphan retiree program would benefit only if reclamation activity took place.

#### SPECIAL AML FEE STRUCTURE

The interest earnings of the AML Fund, since they simply reflect the time value of the contribution to the fund, are attributable to coal producers in proportion to AML fees previously paid to the Federal Government but not yet spent. Tapping AML fund monies has the effect of applying the tax structure specifically designed for the abandoned mine land reclamation program to another, very different program purposes.

The AML tonnage fee is much higher on surface-mined (nonlignite) than underground-mined coal, presumably reflecting their differing responsibility for environmental damage to the land. The AML fees are levied at the lesser of 15 cents per ton for underground-mined coal and 35 cents per ton for surface-mined coal, or 10 percent of the value of the coal at the mine.<sup>13</sup> For lignite the rate is the lesser of 10 cents per ton, or 2 percent of the value of the coal at the mine. This distribution may not be as appropriate for financing orphan retiree health benefits which are presumably more closely related to the number of employees used in production.

Relying on the AML fee structure would place a larger share of the burden on surface-mined coal and coal mined in the Western States than would a contribution based on coal production hours. A uniform tonnage fee would also place a greater burden on Western coal than an hourly fee, though not quite to the degree that the AML fees do. The proposal to tax bituminous coal production hours would be at the other extreme, placing nearly all of the burden on Eastern coal.

As shown in table 2, surface-mined coal accounted for 71 percent of estimated AML fees (column 1) compared with 50 percent of U.S. coal tonnage (column 2) in 1990. In contrast, underground-mined coal accounted for 25 percent of estimated AML fees compared with 41 percent of tonnage. Lignite accounted for only 4 percent of AML fees but 9 percent of tonnage.

TABLE 2.—PERCENT OF ESTIMATED AML FEES COMPARED WITH PERCENT OF U.S. TONS MINED, BY TYPE OF MINING AND REGION, 1990

Type of mining:	Percent of estimated AML fees, 1990	Percent of U.S. tons mined, 1990
Underground	25	41
Surface	71	50
Lignite	4	9
U.S. total	100	100
Regional breakdown:		
East of Mississippi River	56	61
West of Mississippi River	44	39

Source: Calculations by CRS. See appendix table A.2.

One might expect that because nearly all Western coal is surface-mined (91 percent in 1990) Western States would pay a much larger share of AML fees than their tonnage represents. But this is largely balanced by that fact that almost as much surface (non-lignite) coal is mined East of the Mississippi River as West. As a result, Western coal contributes only a slightly larger share of estimated AML fees than its share of tonnage—44 percent of fees compared with 39 percent of tons in 1990. Conversely, Eastern mining accounted for 56 percent of the AML fees compared with 61 percent of tons.<sup>14</sup>

#### COMPARISON WITH AN HOURLY CHARGE

Because they operate at higher rates of labor productivity, surface mining in general, and Western surface mining in particular, contribute at a much higher rate relative to underground-mined coal whenever coal production is charged on a per ton rather than a per hour basis. This difference is magnified under the AML fee structure which charges a higher rate per ton for surface compared with underground-mined coal, as shown in the top part of table 3. Measured alternatively, a uniform fee per hour would place a higher burden per ton on Eastern than Western coal, simply because of differences in average productivity between the regions, as shown in the bottom part of table 3.

TABLE 3.—PER HOUR EQUIVALENT OF AML TONNAGE FEE AND PER TON EQUIVALENT OF A \$1 PER HOUR FEE, BY TYPE OF MINING AND REGION

	Productivity (average tons per hour) <sup>1</sup>	Fee (dollars per ton)	Equivalent fee dollars per hour (col. 1 x col. 2)
<b>AML Fees</b>			
<b>Underground mining:</b>			
East of Mississippi River	2.46	0.15	0.37
West of Mississippi River	4.01	.15	.60
U.S. total	2.54	.15	.38
<b>Surface mining:</b>			
East of Mississippi River	3.32	.35	1.16
West of Mississippi River	12.26	.35	4.29
U.S. total	5.94	.35	2.08
<b>UNIFORM FEE OF \$1 PER HOUR</b>			
<b>All U.S. mining:</b>			
East of Mississippi River	2.73	.37	1.00
West of Mississippi River	10.41	.10	1.00
U.S. total	3.83	.26	1.00

<sup>1</sup>Average tons produced per miner per hour in 1990 for underground and surface mining, in States East and West of the Mississippi River. U.S. Department of Energy, Energy Information Administration. "Coal Production 1990." T. 23, p. 53 and T. 28, p. 58.

The original Rockefeller financing proposal (S. 1989, H.R. 4013) was to levy a uniform charge on the entire U.S. coal industry of \$0.75 per production hour. A revised proposal was to levy an hourly tax, but only on the bituminous coal portion of the industry, and at a much higher rate on Eastern bituminous coal than Western. The proposals based on hourly rates would have placed a larger share of the financing burden on Eastern coal than the AML transfer proposal.

Because each proposal would raise a different amount of total revenue, it could be misleading to compare the nominal tax rates directly.<sup>15</sup> Instead, table 4 compares four financing mechanisms based on the share of total revenue (or the share of each dollar raised) that would be paid on coal production from the regions East and West of the Mississippi River. Table 4 builds upon the regional breakdown estimated at the bottom of table 2 for AML fees and a uniform per ton fee.

TABLE 4.—Regional Share of the Financing Burden under Four Alternative Contribution Mechanisms [Eastern or Western region as a percent of U.S. total]

TABLE 4.—Regional Share of the Financing Burden under Four Alternative Contribution Mechanisms—Continued [Eastern or Western region as a percent of U.S. total]

Region	Bituminous coal hourly tax	Industry-wide hourly tax	Uniform tonnage fee	AML tonnage fee
West of Mississippi River	1	15	39	44
U.S. total	100	100	100	100

Source: Calculate by CRS. Appendix table A.3 presents State-by-State percentages for hours, tons, and AML fees.

CRS estimates that under the bituminous coal proposal (with exemptions for subbituminous and lignite coal and a \$0.15 per hour rate for Western bituminous coal compared with \$1.18 for Eastern coal), Eastern coal would pay 99 percent and Western coal only about 1 percent of the revenues paid by the domestic coal industry.<sup>16</sup> A straightforward hourly fee would place 85 percent of the burden on Eastern coal, and 15 percent on Western. By comparison, under a uniform tonnage fee, Eastern coal's share would be 61 percent, and Western coal's 39 percent. Under the AML tonnage fees, Eastern coal's share is slightly lower, 56 percent; conversely, Western coal's share is slightly higher, 44 percent.

AML fees are collected from the entire domestic coal industry. Thus, it is relevant to compare the incidence of the AML interest transfer proposal with other proposals advanced to tax the coal industry on behalf of the orphan retirees. Given that the nature of U.S. coal production has shifted dramatically from underground to surface mining and from Eastern to Western mining, any industry wide tax will necessarily place some burden on coal companies that were never involved with today's retirees. Even if and when it is decided that the entire coal industry should bear some of the financing burden, it is not easy to say that some categories of non-signatory operators should pay a much higher charge than others.

Comparing the four financing mechanisms, the tax on bituminous coal production hours would be at one extreme in placing nearly all of the burden on Eastern coal. In contrast, AML tonnage fees place the highest share on Western coal. A uniform hourly fee—either alone or in combination with a uniform tonnage fee—would have a more balanced incidence across regions and types of coal.

#### APPENDIX 1. STATISTICAL TABLES

TABLE A.1.—ESTIMATED AML FEES PAID BY TYPE OF COAL, BY STATE, CALENDAR 1990—Continued

	AML tonnage fees (thousands)				Percent of total AML fees			
	Under-ground at \$0.15/ton	Surface at \$0.35/ton	Lignite at \$0.10/ton	Total	Underground	Surface non-lignite	Lignite	Total
West Virginia	18,496	16,064	0	34,560	7.3	6.3	0	13.6
Wyoming	258	63,884	0	64,143	.1	25.2	0	25.3
East of Miss	58,493	84,092	0	142,585	23.1	33.2	0	56.3
West of Miss	5,188	96,662	8,809	110,660	2.0	38.2	3.5	43.7
U.S. Total	63,682	180,754	8,809	253,245	25.1	71.4	3.5	100.9

Note.—The AML tonnage fees are low enough that the percent-of-price cap seldom applies, unlike the Black Lung tonnage taxes. Consequently, it is reasonable to estimate AML collections by multiplying tonnage by the statutory tax rates, as was done to generate these numbers.

Source.—Calculated by CRS by multiplying the AML statutory tax rates times tonnage production data from: U.S. Department of Energy, Energy Information Administration, Office of Coal, Nuclear, Electric and Alternative Fuels. "Coal Production 1990." DOE/EIA-0118(90). Washington, U.S. Govt. Print Off., Sept. 12, 1991. Underground and surface: table 2, p. 19; lignite, table 5, p. 28. All lignite is surface-mined; consequently, the tonnage reported for surface-mined were reduced by the amount of lignite tonnage.

TABLE A.2.—COAL PRODUCTION HOURS, TONS MINED, AND ESTIMATED ABANDONED MINE LAND RECLAMATION (AML) FEES PAID, BY STATE, 1990

State	Coal production—		Estimated AML fees (\$thousands)

APPENDIX 2. LEGISLATIVE PROPOSALS

Following the release of the Coal Commission Report in November 1990, several pieces of legislation were introduced in the 102nd Congress with the intention of providing financial relief to the United Mine Workers of America (UMWA) 1950 and 1974 Health Benefit Funds. As the proposal evolved, several major alterations were made, both with regard to restructuring the current UMWA Benefit Funds and the methods of financing the new funds. This summary of the legislative proposals focuses on the financing methods for subsidizing the payments made on behalf of orphan retirees and related beneficiaries, particularly those aspects that would involve Federal taxing and budgeting authority.

The Coal Commission report

An advisory Coal Commission was appointed by then-Labor Secretary Elizabeth Dole in March 1990 as part of the settlement of the 11-month miners' strike against the Pittston Company. The Coal Commission Report outlined two basic approaches for financing orphan retiree health benefits.<sup>17</sup> The industry-wide funding proposal was to levy a fee (or tax) on all employers in the coal business in the United States, and on imported coal as well. The alternative funding proposal concentrated on current and former signatories. It included shifting surplus assets from the UMWA's 1950 Pension Fund to the 1950 and 1974 Health Benefit Funds, increasing the hourly contribution rate on current signatories, "reaching back" to charge former signatories, and an additional tonnage charge on signatory coal companies.<sup>18</sup>

S. 1989, the coal industry retiree Health Benefit Act of 1991

A leading congressional supporter of legislation to protect UMWA retiree health benefits has been Senator John D. Rockefeller, IV, of West Virginia. On November 19, 1991, Senator Rockefeller introduced the Coal Industry Retiree Health Benefit Act of 1991 (S. 1989, H.R. 4013). This initial plan would have created a Government-sponsored corporation

to handle the health benefits for orphan retired miners and their related beneficiaries. The Coal Industry Retiree Benefit Corporation was to be financed by a combination of taxes on the entire coal industry to support true orphans and premiums collected from reachback companies considered responsible for specific orphans. The tax or fee to be collected from all U.S. coal producers would have been set initially at \$0.75 for each hour an employee of the firm worked in coal production work (not office or management work); imported coal would be taxed at the per-ton equivalent of \$0.15 per ton. These taxes were expected to raise approximately \$155 million per year.

The legislation also would have created a new UMWA 1991 Benefit Fund to serve those beneficiaries of the current 1950 Benefit Fund who could be linked to former employers still contributing to the UMWA Benefit Funds. This would be financed by monthly premiums paid by employers on behalf of specific beneficiaries.

In addition, the excess assets in the UMWA 1950 Pension Fund would have been distributed, without tax penalty, in the following order: 1) \$50 million as initial assets for the Government-sponsored Corporation; 2) the amount needed to pay off the existing deficits of the 1950 and 1974 Health Benefit Funds; 3) \$50 million as initial assets for the 1991 UMWA fund; and, 4) the remainder to the 1991 UMWA Fund, when and as directed by the UMWA and BCOA. All subsequent versions of the Rockefeller proposal have included a transfer of the surplus pension assets to help finance orphan retiree health benefits.

H.R. 4210, the Tax Fairness and Economic Growth Act of 1992, from the Senate Finance Committee

The tax financing portion of the proposal was revised to tax only bituminous coal production, at \$.15 per hour (fixed) in States west of the Mississippi River, and initially at \$.99 per hour east of the Mississippi and \$.25 per ton of imported bituminous coal (both to rise in subsequent years). For FY 93, the bituminous coal tax was projected to raise \$186 million, and the per beneficiary premiums \$89 million.<sup>19</sup>

The bituminous coal tax proposal was included in the version of the tax bill, H.R. 4210, approved by the Senate Finance Committee on March 3, 1992. The provision was included in Title VI (sections 6001-6003) of the Tax Fairness and Economic Growth Act of 1992, the final version of H.R. 4210 which was passed by both Houses of Congress but vetoed by President Bush on March 20, 1992.

H.R. 776, Senate Finance Committee Version

Another refinement of the Rockefeller proposal was included in the Senate Finance Committee's amendment to serve as a substitute for Title XIX, the revenue provisions

of H.R. 776, the Comprehensive National Energy Act, as approved by the Committee on June 16, 1992. The tax financing mechanism was again to be a tax on bituminous coal, but the initial rates on Eastern and imported coal were higher than in H.R. 4210. The new proposed Eastern rates were \$1.18 per hour for calendar years 1992 and 1993; \$1.19 for 1994 and 1995; and \$1.20 for 1996. The per ton premium on imported coal was set initially at \$0.39 per ton. The rate on Western bituminous coal remained at \$0.15 per hour. The bituminous coal fees were expected to raise approximately \$205 million per year as of FY92.

This version also specified the amount of the "reachback premium" to be paid into the Coal Industry Retiree Benefit Fund by a previous employer or last signatory operator to whom an orphan miner could be "attributed." The annual amount of the premium, applicable by calendar year, would be \$1,215 in 1992; \$2,532 in 1993; \$2,745 in 1994; \$2,973 in 1995; \$3,216 in 1996; and \$3,479 in 1997 and thereafter. The premiums were expected to raise \$89 million per year as of FY92.<sup>20</sup>

#### S. 2550, Senator Boren

The bill introduced by Senator David L. Boren of Oklahoma on April 8, 1992, proposed a transfer, without tax penalty, of excess pension assets from the 1950 Pension Plan to erase the deficits in the 1950 and 1974 Benefit Plans; establishing strong withdrawal liability provisions for companies which completely or partially withdraw from the UMWA Benefit Plans; and adopting a mandatory cost containment program for the Benefit Plans. S. 2550 emphasized the guarantee of future funding by signatory companies through an increase in contribution rates as soon as a deficit is recognized. It did not propose any new, outside funding source.

#### H.R. 4344, Representative Rahall

The original AML transfer proposal was introduced by Representative Nick Joe Rahall, II, of West Virginia, on Feb. 27, 1992, as H.R. 4344. It would have extended the abandoned mine reclamation fees from 1995 to the year 2007 and transferred \$50 million each fiscal year to the "Coal Industry Benefit Fund."<sup>21</sup> H.R. 776, the National Energy Policy Act, from the House Committee on Interior and Insular Affairs

A similar AML transfer proposal was included in the version of the National Energy Policy Act, H.R. 776, as approved by the House Committee on Interior and Insular Affairs on April 8, 1992. This version would have extended the AML fees from 1995 to the year 2010 and transferred \$50 million per year from the AML Fund to a "Coal Industry Retiree Benefit Fund."

Neither H.R. 4344 nor the Interior Committee bill mentioned the interest earnings of the AML Fund, although supporters pointed out that these earnings could make the transfer proposal appear nearly costless. Also, neither bill provided for the creation of a benefit fund, which would be outside the jurisdiction of the Interior Committee. The original AML transfer proposal was intended to supplement the Rockefeller plan set forth in S. 1989 and included in H.R. 4210 which would have established a Government-sponsored Coal Industry Retiree Health Benefit Corporation.

#### H.R. 776, full House version

The AML transfer provision was not included in the version of H.R. 776 reported by the Rules Committee to the full House for floor action in May 1992, in accordance with a recommendation by the House Ways and Means Committee.<sup>22</sup>

#### H.R. 776, the National Energy Security Act of 1992, full Senate version

A variation of the Rahall proposal became part of the financing mechanism in the "compromise" version of the Rockefeller plan, approved as an amendment to H.R. 776 on the Senate floor on July 29, 1992. The Coal Industry Retiree Health Benefit Act of 1992 was included as subtitle C, sections 20141 to 20143, of Title XX, the revenue provisions of H.R. 776, the National Energy Security Act of 1992, as passed by the Senate on July 30, 1992. In section 20143(b) of the bill, the amount that could be transferred each year from the AML Fund was set at \$70 million, and the amount of the transfers was specifically linked to the interest earnings of the AML Fund as described in the body of this report.

The version of the Rockefeller plan included in the Senate-passed H.R. 776 also proposed a new configuration of the health benefit funds, into two new funds, both private—the UMWA Combined Benefit Fund and the 1992 UMWA Benefit Plan. Beneficiaries would be assigned to the Combined Fund if they were already receiving benefits as of July 20, 1992. Miners (and related beneficiaries) retiring after July 20, 1992, but before September 30, 1994, who would otherwise be covered by the 1974 Fund because their employer went out of business, would be covered by the new 1992 Fund.

This proposal represented a bipartisan compromise within the Senate, principally between Senator Rockefeller of West Virginia and Senator Wallop of Wyoming, and with the Bush Administration. The prior Rockefeller proposals to tax all coal production or to tax only bituminous coal production, whether or not the companies had ever been signatory to the NBCWA, had met opposition in the Senate and were threatened with a presidential veto. This version placed a much stronger emphasis on identifying reachback employers and collecting a per beneficiary premium from them.

#### Conference committee

Because the Coal Industry Retiree Health Benefit proposal was included in the Senate version but was not included in the version of H.R. 776 approved by the House, it remains a difference for the conference committee to resolve when it meets in September 1992.

#### FOOTNOTES

<sup>1</sup>Beneficiaries include both the retired miners and their dependents. Throughout this report, the term retiree or orphan is often used as a substitute for beneficiary and is intended to encompass both the retired miners and their dependents, unless otherwise noted.

Cited in the Memorandum opinion by Judge Williams accompanying the preliminary injunction order preventing the UMWA Benefit Trusts from either suspending health benefits or threatening to do so, p. 34.

<sup>5</sup>Pharmaceuticals account for approximately 40 percent of the expenses of the UMWA Health Benefit Trusts. Testimony presented as Funds Exhibit 17, McGlothlin v. Connors. Cited in the Memorandum opinion by Judge Glen M. Williams, p. 35.

<sup>6</sup>These legislative proposals are explained in more detail in Appendix 2.

<sup>7</sup>At some point in the future, the \$70 million per year transfer is expected to cover all of the costs for

orphan retirees, thereby relieving signatory and reachback companies of any additional responsibility to pay premiums on behalf of true orphans. Eligibility for the UMWA Combined Benefit Fund would be essentially closed to new beneficiaries as of July 20, 1992. Consequently, the obligations of the UMWA Combined Benefit Fund are expected to decrease each year in the future as a result of elderly beneficiaries dying; younger retirees, spouses, or widows becoming Medicare-eligible; and young dependents reaching age 22.

<sup>8</sup>Duane A. Thompson, Analyst in Energy Policy, Environment and Natural Resources Division, Congressional Research Service, contributed to this section.

<sup>9</sup>The regional dichotomy in remaining high-priority hazardous sites is what lies behind the proposal made by Arch Mineral Corporation, in response to the Coal Commission report, to eliminate the Federal AML fee and program, and let States which still have AML problems set up their own program. This would eliminate the cross-State subsidies, and create "tax room" in those States (primarily Western States) that have already dealt with their high-priority abandoned areas. The inference is that Western coal producers would be more willing to support a new Federal tax to help orphan retiree health benefits if their AML taxes were reduced. It also would be more straightforward budget practice to design a separate fee for orphan retiree health benefits.

<sup>10</sup>The other Federal fund supported by coal tonnage taxes owes a large debt to the U.S. Treasury. The Black Lung Disability Trust Fund has been operating in deficit each year since it began in 1978. To balance its books, the trust fund has received advances from the general fund of the U.S. Treasury, to be repaid from future revenues of the trust fund. Through FY85, interest was charged to the trust fund each year on the cumulative balance it owed to the general fund. The general fund in turn made additional advances to help cover these interest obligations, thereby increasing the trust fund's future interest and repayment obligations.

Since 1986, revenues from the Black Lung tonnage taxes on coal have approximately matched the trust fund's current outlays for Black Lung benefits. But the excess tax revenues have not been adequate to make interest, let alone principal, payments on the deficit that accumulated in the trust fund from FY79 through FY85. The Comprehensive Omnibus Budget Reconciliation Act of 1986 forgave the interest payments due from the trust fund to the general Treasury for fiscal years 1986-1990. Consequently, for these years, the trust fund was able to balance its accounts with relatively small advances from the general fund.

With this grace period over, the trust fund owed \$324 million in interest for FY91 and an estimated \$344 million for FY92. To help cover most of this interest expense, the annual advances from the general fund to the trust fund were increased—to \$217 million for FY91 and an estimated \$339 million for FY92. The cumulative advances that the Black Lung Disability Trust Fund owed to the general fund was \$3.266 billion at the end of FY91 and is projected to grow to an estimated \$3.609 billion by the end of FY92.

<sup>11</sup>Some situations where accumulating a balance may be appropriate include the Social Security Trust Fund or pension funds designed on an actuarial basis; where capital expenditures are "lumpy" (to be spent infrequently, in large amounts); where there are technological or procedural problems delaying the implementation of the program (as in the case of the new air traffic control system); or where reserves are being built up to protect against potential future liabilities.

<sup>12</sup>Of approximately 100 special fund accounts in the U.S. Treasury, only 16 receive interest or earnings on investments. U.S. General Accounting Office. Special tabulation. Washington, Aug. 11, 1992.

<sup>13</sup>In contrast, the excise taxes that finance the Black Lung Disability Trust Fund excise tax rates have been set twice as high on underground-mined as surface-mined coal. The current rates are \$1.10 per ton of underground-mined coal and \$0.55 per ton of surface-mined coal, not to exceed 4.4 percent of the price for which the coal is sold.

<sup>14</sup>The Eastern coal-mining States include Alabama, Illinois, Indiana, Kentucky, Maryland, Ohio, Pennsylvania, Tennessee, Virginia, and West Virginia. The Western coal-mining States include Alaska, Arizona, Arkansas, California, Colorado, Iowa, Kansas, Louisiana, Missouri, Montana, New Mexico, North Dakota, Oklahoma, Texas, Utah, Washington, and Wyoming.

<sup>15</sup>The \$0.75 per hour industrywide tax was projected to raise approximately \$155 million per year; the \$0.15 and \$1.18 per hour taxes on bituminous coal, \$210 million per year; and the AML transfer proposal, \$70 million per year.

<sup>16</sup>In 1990, only 9.6 percent of U.S. bituminous coal tonnage was mined West of the Mississippi River. Because its productivity is typically higher, Western mining is likely to have accounted for an even smaller share of hours involved in bituminous coal production. Furthermore, Western bituminous production hours would have been taxed at less than one-eighth the rate of Eastern hours (\$0.15 compared with \$1.18 per hour).

#### PRICING PROVISIONS

Mr. WALLOP. I would like to engage the chairman of the House-Senate conference committee on H.R. 776, the chairman of the Committee on Energy and Natural Resources, in a colloquy regarding the pricing provisions contained in title VII of the conference report.

It is my understanding that the conferees rejected codifying existing or past FERC decisions regarding the pricing of electric transmission services. Is that the Senator's understanding?

Mr. JOHNSTON. Yes; that is the case. The language in the conference report does not endorse or reject present or past FERC decisions. It sets forth a new set of pricing principles—within the just and reasonable standard of the Federal Power Act—to guide the FERC in future pricing decisions.

Mr. WALLOP. It is my understanding that these principles would require that the FERC—consistent with the other requirements under section 212(a)—allow a transmitting utility to recover all costs incurred in connection with transmission services provided pursuant to an order under section 211. Is that the Senator's understanding?

Mr. JOHNSTON. Yes; it is. The conference report requires that the costs

that may be recovered include, but not be limited to, all costs involved in providing the transmission service, including those of any enlargement of transmission facilities, as well as any other economic costs of performing a wheeling transaction.

This could include the pro rata share of the cost of existing facilities used to provide the transmission service. Such costs must be verifiable, but it is not necessary that the costs be incurred at this time the transmission rate is set. FERC may allow the recovery of projections of future costs, including opportunity costs, based upon the historical experience of the transmitting utility.

However, all cost recovery under new FPA section 212(a) is still bound by the requirement that rates, charges, terms and conditions must be just and reasonable and not unduly discriminatory or preferential.

Actual benefits to the transmission system of providing the service may be taken into account, namely documented operational cost savings. However, except to the extent to which they receive benefits, native customers should not be required to pay for facilities that would not have been constructed but for a mandatory wheeling order.

Mr. WALLOP. Do the pricing provisions of new FPA section 212(a) apply only to FERC-ordered transmission pursuant to section 211, or do they also apply to the pricing of transmission pursuant to other authorities under the FPA?

Mr. JOHNSTON. The conference report does not exclude their application beyond section 211. As a matter of policy I see no reason why these new pricing principles should not be applied by the FERC to other transmission orders. It would make good policy sense to do so.

Mr. WALLOP. Would you agree that subsection 212(a) is a complete substitute for the transmission pricing provisions of the original House-passed bill, and as such will have the full force and effect of Federal law on the basis of the plain meaning of the statutory provision adopted in the conference report? And would you also not agree that the pricing provisions in the original House-passed bill, and the associated legislative history, cannot be invoked to interpret pricing provisions of the conference report?

Mr. JOHNSTON. I agree. Subsection 212(a) is a complete substitute for the House-passed transmission pricing provisions and, as a matter of law, has the full force and effect of its plain meaning. I do not believe that the Senate would have accepted any form of mandatory transmission access without the complete substitution of the conference report for the original House-passed pricing language. That view is reflected in my September 9, 1992 pro-

posal to the Committee on Conference. Consequently, it would be wrong to assert that subsection 212(a) merely rephrases or otherwise codifies the original House-passed pricing provisions.

Mr. WALLOP. Does the distinguished floor manager agree that the provisions of subsection 212(a) do not require, nor allow any subsidization of transmission services by the native load customers of the transmitting utility?

Mr. JOHNSTON. I agree that subsection 212(a) will not allow nor require, to the extent practicable, any subsidy by the native load customers. The intent is to ensure that transmitting utilities and their customers do not subsidize the provision of transmission services for others and that transmitting utilities are fully compensated for use of their transmission system. That is precisely why the conference report adopts a complete substitute for the House-passed pricing provision to assure that there will be no subsidy of transmission services.

With respect to current law, I should express my own disagreement with FERC's apparent policy which considers all enlargement of transmission capacity, other than radial lines, to provide system benefits. The result of this policy is that in cases of enlargement, the new transmission user pays the higher of embedded costs or enlargement, but no more. My quarrel with this formulation is that there are undoubtedly instances in which a system enlargement only benefits the new transmission customer within any foreseeable planning horizon. In such instances, the new transmission customer should pay for the enlargement and make an appropriate contribution to existing fixed costs of the system in return for use of such system. I do not know how frequent these instances are; they can be determined only on a case-by-case basis. In any case current FERC policy has categorically rejected the notion that a transmission user can ever be required to pay the costs of enlargement, plus an appropriate contribution to existing fixed costs. I believe that this policy is wrong.

Mr. WALLOP. In several recent decisions, including the Northeast Utilities case and the Penelec decision, the Federal Energy Regulatory Commission applied a very narrow approach to the costs which a transmitting utility can recover from a transmission customer. I believe this approach causes native load customers to subsidize transmission services provided to others.

Does the chairman agree that this act does not endorse the Northeast Utilities decisions or other recent Commission decisions regarding pricing policies for transmission services?

Mr. JOHNSTON. I agree. The conference report neither endorses nor rejects these decisions.

Mr. WALLOP. The intent of the retail wheeling and sham transactions

provisions of the conference report is to prevent directly, or indirectly, what amounts to a retail sale effectuated through a FERC order. Does the distinguished floor manager agree?

Mr. JOHNSTON. I agree. Let me explain further.

In new section 212(h) of the Federal Power Act, FERC is prohibited from requiring retail wheeling—that is, the transmission of electric energy directly to an ultimate consumer. The Commission is also prohibited from requiring what can be called sham wholesale wheeling—that is, transmission of electric energy to an entity for resale to an ultimate consumer in instances in which the substance of the transaction amounts to retail wheeling because the wholesale sale to the entity is in fact a subterfuge intended to circumvent the ban on retail wheeling. Such a subterfuge would occur, for example, if a large industrial customer of a utility—say the XYZ Steel Co.—interposed a paper purchasing corporation in front of it—say the XYZ Steel Power Procurement Corp.—and claimed that such corporation was a legitimate wholesale purchaser entitled to a transmission order under section 211, or other sections of the Federal Power Act, because the corporation would in fact resell any wheeled power to the large industrial customer. Under section 212(h)(2) such an order is prohibited.

Section 212(h)(2) prohibits both transmission to an entity for resale and transmission for the benefit of an entity for resale subject to certain additional criteria. The for the benefit of language is intended to prevent extended interposition of paper purchasing corporations in front of the initial one—i.e. the XYZ Steel Power Procurement Corp. in the above example. Without the “for the benefit of” language, the XYZ Steel Co. in the above example would simply be able to interpose the XYZ Electric Purchasing Corp. in front of the XYZ Steel Power Procurement Corp., which would stand in front of the XYZ Steel Co., and still be able to circumvent the ban on mandatory retail wheeling.

It is important to note, however, that the “for the benefit of” language does not reach behind the “entity” referenced in section 212(h)(2). Thus, to the extent that such an entity desires to deliver electric energy to an ultimate customer to whom the entity was providing electric service on the date of enactment, as permitted in conjunction with a wholesale wheeling order under 212(h)(2)(B), such delivery cannot be compelled by means of an order issued under section 211 or any other provisions of the act. To put it another way, a transmitting utility can only be required under the Federal Power Act to deliver transmitted electric energy to an entity described in section 212(h)(2). At that point such an entity

may either deliver such electric energy to ultimate consumers over transmission lines that it owns or controls or—in the case of a retail customer that it was serving on the date of enactment—it may be able to achieve such delivery by means of retail wheeling provided by another party. Such retail wheeling, however, must be provided voluntarily by such party or perhaps under State law. In no case can such retail wheeling be compelled under any provision of the Federal Power Act.

This point is of more than abstract interest. I am aware of certain arrangements by electric utilities with paper municipal utility agencies operating in the electric utilities’ service territories under which the electric utilities agree to wheel limited amounts of low-cost energy, when available, to ultimate consumers of such municipal utility agencies. Under these arrangements, the wheeling utilities retain the legal obligation to serve these ultimate consumers and therefore are the providers of electric service to such consumers. Because the wheeling of electric energy in these cases is not to any entity specified in section 212(h)(2)(A) but rather to ultimate consumers, these retail wheeling arrangements cannot be compelled under section 211 or any other provisions of the Federal Power Act.

Mr. WALLOP. I thank the chairman. I want to clarify one more point.

With regard to the application of the traditional “just and reasonable” standard in the context of section 212(a), would you agree that the proper interpretation is that—as articulated in the Jersey Central Power & Light decision of the U.S. Court of Appeals for the D.C. Circuit—these transmission rates are bounded by a zone of reasonableness. And, that zone is defined at the lower end by a prohibition against confiscatory rates as to the electric utility and at the upper end by a prohibition against exorbitant rates to consumers. Does the Senator agree?

Mr. JOHNSTON. Yes; I agree.

#### OIL PIPELINE REGULATORY REFORM PROVISIONS

Mr. WALLOP. Mr. President, I rise to discuss the Oil Pipeline Regulatory Reform provisions—Title XVIII—of the Energy Policy Act of 1992.

The Oil Pipeline Regulatory Reform Title of the Energy Policy Act of 1992 addresses ratemaking for the Oil pipelines regulated by the Federal Energy Regulatory Commission pursuant to the applicable provisions of the Interstate Commerce Act. This jurisdiction was transferred from the Interstate Commerce Commission in 1977, when the Department of Energy was founded by the Congress.

This legislation does not change the substantive standards of the applicable provisions of the Interstate Commerce Act. What it does, instead, is essentially three things.

First, section 1801, titled “Oil Pipeline Ratemaking Methodology”, calls

on the FERC to develop within 1 year a simplified methodology for setting common carrier oil pipeline rates. They are to be generally applicable in 2 years, thus giving the Congress the opportunity to examine the methodology and to consider further legislation. No particular methodology is mandated by this requirement. Nor is there a substantive change in the standards of the Interstate Commerce Act; this provision relates solely to methods for compliance with existing law.

Second, Section 1802, titled “Streamlining of Commission Procedures”, provides for the present and future changes in the procedures for handling oil pipeline rate cases. It has four subparts.

First, within 18 months, the FERC must consider and adopt regulations governing: (a) what, if any, information will be required to be filed by a pipeline prior to charging increased rates; (b) what notice and information, if any, will be given to the public of an impending rate increase; (c) which members of the public, if any, will have standing to protest pipeline rate increases; (d) which grounds of protest, if any, will be considered by the Commission; (e) when, if ever, staff will be able to seek initiation of proceedings to challenge oil pipeline rates; and (f) provision of an opportunity for pipelines to respond to protests. With two exceptions, there are no specific procedural changes from the status quo mandated by this section. First, with respect to the last item mentioned above, an opportunity for the pipeline to respond to protests, is mandatory. Second, the Commission is ordered to establish alternative dispute resolution procedures as part of the process.

Second, in addition to the rule-making, the Commission must identify and transmit to the Congress any suggestions for procedural reform that require legislative authority.

Third, effective immediately, any oil pipeline will have the ability to terminate FERC consideration of the legality of rates brought into question by either protests of rate increase filings or complaints against existing rates. The former will be accomplished by allowing the pipeline to withdraw its rate increase filing and refunding any additional rates collected, thus restoring the prior rate without risk of further reduction through Commission review. The latter will be accomplished by compelling dismissal of further consideration of an oil pipeline’s rates when the complainant has been satisfied by settlement or otherwise induced to withdraw the complaint.

Fourth, under section 1803, titled “Protection of Certain Rates,” the Congress declares that under certain circumstances certain rates of oil pipelines are “grandfathered” under the Interstate Commerce Act and cannot be examined by the Federal Energy

Regulatory Commission, except under certain limited circumstances. The grandfathering applies only to rates that have not been challenged by the Commission or any protestor or complainant within a year of date of enactment. Thus, all pipelines with pending rate and complaint proceedings will not have their rates grandfathered.

The grandfathered rates can only be challenged in certain enumerated changed circumstances or if there is undue discrimination in an existing rate. If a pipeline with grandfathered rates seeks a rate increase, only the increase can be addressed by the Commission, not the underlying grandfathered rate, in the absence of these limited exceptions.

Section 1804 is definitional only.

In sum, the legislation prevents FERC consideration of some existing rates, provides for the future consideration of how best to set oil pipeline rates and how best to proceed with pipeline rate cases, and presently provides for procedures for oil pipelines to terminate Commission investigation of their rates when they either withdraw rate increase filings and refund or when they induce complainants to withdraw complaints.

All of the applicable standards of the Interstate Commerce Act remain intact, and the Commission is given the opportunity to choose between a continuation of the present procedure for regulation or a different method and procedure of regulation, applicable primarily to those pipelines who wish to seek increases in rates. For those pipelines who elect to stand on present rates, the Commission is largely barred from reexamination of their rates.

#### ELECTRICITY PROVISIONS

Mr. WALLOP. Mr. President, I rise to discuss the electricity provisions of the Energy Policy Act of 1992.

#### TITLE VII—ELECTRICITY

##### Overview

One of the most exciting features of this legislation is that it will allow American utilities and entrepreneurs to build, own, and operate domestic and international independent power production facilities without undue regulatory entanglements.

By ensuring the freedom of U.S. companies to compete both domestically and internationally, this legislation will put Americans to work building state-of-the-art, clean, and efficient power plants.

By allowing American technology, American equipment, American industry, and American workers to build new powerplants, jobs will be created and our economy will benefit significantly.

By encouraging the construction of needed new powerplants, this legislation will materially benefit our energy future.

##### General discussion

The Electricity Title (Title VII) of the Energy Policy Act of 1992 (H.R. 776) is divided into two subtitles: Subtitle A addresses Public Utility Holding Company Act (PUHCA) reform; Subtitle B addresses transmission access.

Both the Senate and the House of Representatives passed legislation that was

merged into the Conference Report on H.R. 776. Thus, the full legislative history of the Senate-passed bill, S. 2166, must be taken into consideration when interpreting the Congressional intent of H.R. 776, particularly with respect to the PUHCA reform provisions.

With respect to PUHCA reform, the original House bill was far narrower than the Conference Report. The House would have prohibited entirely affiliate transactions, even if the state public utility commission were to consent. The Senate position was to allow affiliate transactions if authorized by the relevant state public utility commission. The Senate position was adopted by the Conference Report.

The Senate position was to retain existing law with respect to transmission access. It was felt that the Federal Energy Regulatory Commission (FERC) had adequate authority under existing law to address these matters. Thus, S. 2166 did not include any provisions addressing transmission access.

The House of Representatives felt otherwise. The original House-passed bill included far-reaching transmission access provisions, including pricing. These were rejected by the House-Senate Conference Committee, and therefore do not appear in the Conference Report.

In comparison to the original House bill, the Conference Report adopts a much more limited and narrow modification to existing law with respect to transmission access. The key differences between the Conference Report and the original House bill are the transmission authority being discretionary rather than mandatory, and the total absence of mandated open access transmission. The Conference Committee also rejected on its merits the transmission pricing language (section 212(b)(2)) of the original House bill.

Under the Conference Report, transmission access (including enlargement of facilities) is to be ordered by the FERC only on a case-by-case basis. It is to occur only upon request by a third party, and not upon the FERC's own motion. Moreover, the FERC is to order wheeling only if it makes a determination that the specific ordered transmission is in the public interest.

The Conference Report did not give the FERC the authority, the discretion, or the mandate to bring about sweeping changes in the way the electric utility industry operates, or to restructure the electric utility industry. The vast majority of the activities of the electric utility industry are subject to state public utility commission jurisdiction, and that has not been changed by this legislation.

The FERC is expected to use their new powers carefully and wisely. These are matters far too significant to the health, welfare, safety and economy of this Nation to be dealt with lightly.

It would be a mistake to take the presence of transmission access provisions in the Conference Report as a sign of change in position on my part or that of the Senate. I would have strongly preferred PUHCA reform without any transmission access provisions, as was the Senate position. However, in order to obtain the very significant benefits of PUHCA reform contained in the Senate bill, it was necessary to accept some of the House transmission access provisions. On balance, I am satisfied with the overall outcome of the Conference Report.

Now for a more specific discussion of the important provisions contained in the Conference Report on H.R. 776.

#### SUBTITLE A—EXEMPT WHOLESALE GENERATORS

##### General Discussion

The purpose of Subtitle A is to streamline and minimize federal regulation of utilities and non-utilities who want to own and operate an "exempt wholesale generator" (EWG), which is to generate power exclusively for the purpose of making wholesale sales.

##### Section-By-Section Discussion

#### Section 711. Public Utility Holding Company Act Reform

New PUHCA section 32(a)(1) requires the FERC to make a determination that a facility is an "eligible facility." The FERC is required to make this determination within 60 days of the receipt of the application. Additionally, the FERC must promulgate general rules implementing this requirement within one year after the date of the enactment.

With respect to the implementing rules, I expect them to be simple and straightforward. I would even encourage the FERC to develop rules to provide for "self-certifying," somewhat akin to QF self-certification under PURPA.

By a plain reading of the provisions, it is clear that the role the FERC is to play in this process is ministerial in nature. The bill makes that abundantly clear in several ways.

First, the bill itself sets forth clear and unambiguous guidelines for determining which entities are eligible to be an EWG and what constitutes an eligible facility. Thus, the final rule need merely restate the statutory provisions in a similarly straightforward manner. No further elaboration by the FERC is needed, warranted, or desired.

Second, the FERC's determination that an entity is an EWG, and the communication of that fact to the Securities and Exchange Commission (SEC), are also ministerial acts that will require little, if any, exercise of discretion by the FERC. Again, the FERC needs only to apply the test which is spelled out with absolute clarity in new PUHCA section 32(a)(1).

Finally, these provisions were added to the bill largely as a means of allowing the FERC to accumulate a minimum of data about EWGs, and not as a means of granting of FERC nonratemaking jurisdiction over EWGs. For all these reasons, the FERC should exercise maximum regulatory restraint and facilitate the development of EWGs, consistent with the intent of Congress.

New PUHCA section 32(g) permits registered holding companies to acquire and hold the securities of EWGs, so registered companies may compete on an equal basis with other market participants. Registered companies will remain subject to SEC scrutiny regarding the issuance or guarantee of securities and other matters. It is the intention that a registered company may hold an EWG at the registered company level, or through another of its subsidiaries (e.g., a subsidiary which also engages in development and ownership of qualifying facilities, or other permitted businesses). The reference in new PUHCA section 32(g) to a registered company acquiring or holding the securities of an EWG is meant to include a registered company holding such securities through a subsidiary.

Similarly, new PUHCA section 32(g) permits a registered company to acquire or hold the securities of an EWG without SEC consent, but under new PUHCA subsection 32(a)(1) an entity does not become an EWG until it has filed in good faith at the FERC. It is not the intention to require a registered

company (or its subsidiary) to obtain SEC approval to form a company, which would then file at the FERC, in order to permit the registered company to then hold the EWG securities without further SEC consent. That would be a significant regulatory impediment to equal participation by registered holding companies. Rather, it is the intent that the language in new PUHCA subsection 32(g) which states that a registered company may "acquire and hold" the securities of an EWG is meant to include a registered company's formation of an entity for the purpose of filing at FERC for EWG status, without SEC action or approval prior to the formation. Of course, SEC approval would still be required for the formation of entities which are not for the purpose of filing for EWG status.

New PUHCA section 32(h)(6) requires the SEC to promulgate regulations that will ensure that the financial integrity of a registered holding company is not adversely impacted by investments in EWGs. It is expected that the SEC will make every possible effort to promulgate final regulations prior to the six month deadline. The SEC should give this matter the highest priority. I am acutely aware of the need to provide certainty for registered holding companies and potential investors in the development of EWG projects. Thus, during the period the regulations are under consideration and after publication of such regulations, the SEC should approve actions of a registered holding company that are consistent with the guidelines and protections established in this subtitle.

Until final regulations are in place, the SEC is expected to put in place interim regulations to avoid a regulatory gap that would inadvertently prevent registered holding companies from participating in wholesale electric generation, even for the briefest of times. Interim regulations clearly can satisfy the statutory requirement for regulations within six months.

New PUHCA section 32(h) provides the standards under which a registered company may seek SEC approval of the issuance or sale of securities by a registered company to finance an EWG. New PUHCA subsection 32(h)(6) provides for the promulgation by the SEC of regulations that are to provide assurance that the registered company actions will not adversely impact a utility subsidiary or its customers. The intent of these provisions is to assure that the risk, if any, of any EWG is not borne by the operating company subsidiaries (i.e., those subsidiaries which provide retail electric service to consumers), and is not borne by those companies' ratepayers.

Of course, where the operating company enters into a contract with an EWG, there may be some possibility of an effect on the rating of debt by rating agencies, and there may be normal commercial risks regarding contractual terms. It is not the intent to preclude all risk, but rather to assure that the relationship between the registered company and the EWG does not increase the risks that otherwise are borne in the ordinary course of business, nor to transfer those risks unreasonably to ratepayers. The SEC has appropriate discretion in considering the issues and promulgating the regulations to take the steps reasonably necessary to protect operating companies and their customers.

New PUHCA section 32(k) imposes conditions on transactions between an EWG and an affiliated utility. I believe that these will assure that beneficial affiliate transactions

with an EWG will occur, while providing a clear mechanism to prevent abuse. It is the intention that beneficial EWG transactions be allowed.

New PUHCA section 32(k) also requires an affiliated utility to obtain the consent of the state commission or commissions with jurisdiction over its retail rates before it may enter into a contract with an EWG. It is the intent to permit a utility to enter into a contract, with its effectiveness contingent upon state consent. It is also the intent of this provision that only the affiliate utilities which are entering into the contractual arrangement with the EWG will be required to obtain consent. Particularly in the context of the operation of integrated systems by the registered companies, or other power pools, where capacity and energy belonging to or under contract to one utility can be dispatched to serve the load of any member of the system or pool, it is not the intent of this provision to require consent from every commission of every member which might at some point be served by the output of the EWG. The intent of this provision is to require the consent of the retail commissions of those utilities which are bound by a direct contract with the EWG. Of course, where the affiliated utility sells only on a wholesale basis, and has no retail rate commission, no separate state approval will be required.

#### SUBTITLE B—FEDERAL POWER ACT; INTERSTATE COMMERCE IN ELECTRICITY

##### General discussion

The original House-passed bill contained provisions that would have given the FERC sweeping new powers to order electric utilities to transmit ("wheel") electricity for other wholesale power generators (even if not requested), and would have mandated that the FERC use these powers unless there was an overriding public interest finding not to do so.

The Senate bill intentionally contained no transmission access provisions.

The proponents of the House mandatory transmission access provisions argued that wholesale power markets are not competitive and that mandatory wheeling is therefore necessary to promote competition and to spur efficient use of capacity. That argument and line of analysis is deeply flawed.

Experience has shown that wholesale markets in electricity are today intensely competitive. Indeed, the present system of free market transmission transactions works well. A great deal of voluntary transmission is ongoing. Many electric utilities have already voluntarily become an open access transporter, and many others are now in the process of becoming a transporter. This is occurring where the utility finds that doing so will benefit ratepayers and stockholders without jeopardizing reliable service.

Overall, no record has been developed to support the need for major changes with respect to FERC-ordered transmission access. To the extent that transmission access is not willingly being provided, the FERC should review its transmission rates to determine why they are not providing adequate economic incentives for utilities to voluntarily offer transmission. If the FERC priced transmission in a way which encouraged utilities and others to wheel, there would never have been a call for the FERC-ordered transmission access contained in Subtitle B.

After careful consideration of the merits of the original House transmission access provisions, the Conferees rejected all of the more far-reaching ones. For example, the House bill would have authorized and directed the FERC to require "tariffs of gen-

eral applicability," thus mandating for electric utilities the equivalent of the FERC's open access transmission program for natural gas pipelines (FERC Orders No. 436, 500, and 636). That was rejected by the Conference on its merits—there is no physical similarity between gas transmission and electric power transmission that could warrant equivalent application. The Conference Committee also rejected on its merits the transmission pricing language (section 212(b)(2)) of the original House bill, and instead adopted a wholly different set of pricing provisions.

The Conference Report provides that the FERC can order transmission services (and associated enlargement of facilities) only upon application, only on a case-by-case basis for an individual applicant, and only if such transmission is found by the FERC to be in the public interest. It is most important to note that this is to occur only upon request by a third party, and not upon the FERC's own motion. Moreover, the FERC is to order wheeling (and associated enlargement of facilities) only if it makes a determination that the specific ordered transmission is in the public interest.

The public interest determination by the FERC is to be based on a set of specific findings related to the particular requested transmission transaction. Consequently, the Conference Report gives the FERC no authority to require utilities to provide a tariff of general applicability in response to an order sought by an applicant, nor any mandate or direction to do so using any provision of existing law. In my opinion, neither the amendments made by this Act nor existing law give the FERC any authority to mandate open access transmission tariffs for electric utilities.

The original House bill also specified that the FERC must require as a condition precedent for any market rates for wholesale power sales, and for any approval of any merger or consolidation by an electric utility, that the utility provide "tariffs of general applicability." Open access transmission, in other words. Again, the Conferees also rejected those provisions on their merits.

While granting the FERC the discretion to order wheeling transactions upon request under certain limited circumstances, the Conference Report intends this to be a procedure of last resort for those who cannot otherwise obtain wheeling services voluntarily. To this end, the Conference Report requires a 60-day negotiation period before an application for a wheeling order may be filed, and sets forth the procedures for requests for transmission services in new FPA section 213.

The Conferees narrowed the scope of the House transmission provisions in several important respects. For example, by changing "shall" to "may" the Conferees gave the FERC maximum discretion not to order wheeling, and the construction or enlargement of new transmission facilities directly associated with such requested wheeling.

Under the amendments to the FPA made by this Act, the burden of proof for FERC-ordered wheeling (and any associated enlargement) remains on the applicant. To determine whether or not it would be in the public interest, the FERC must look at all relevant factors, including the potential adverse impact of the ordered wheeling and construction on the utility ordered to wheel and its customers, as well as on other interconnected utilities and their customers. Although it may be difficult for the FERC to

undertake such an investigation in order to reach a decision, it still must do so before it can order wheeling. This requirement of law can not be dispensed with.

One thing that the legislative history makes perfectly clear. In no case is the FERC authorized by this new transmission authority to order transmission where the result is to displace ongoing transmission. FERC is given no authority to decide that the requested transmission has a higher value than an ongoing transaction. The FERC is given no authority to invalidate, undo or otherwise displace an existing transmission arrangement. That is why I was very concerned about the use of the word "unduly" in the section 211 provisions of the original House-passed bill and insisted that it be stricken. The Conference Report makes it perfectly clear that the FERC can not order transmission where the result is displacement.

I want to note my deep displeasure that in the past, the FERC has all too often used its review authority to delay—and in effect deny—deals that were voluntarily negotiated at arm's-length. Moreover, the FERC has rejected freely negotiated arms-length agreements between the parties, even where no other party protested, and instead substituted its judgment as to what the parties ought to agree to. This is occurring for no apparent reason other than that the FERC preferred different results than the ones the parties negotiated. This occurred recently in the *Penelec* case.

There is no policy or public interest reason why the FERC should second-guess and frustrate arms-length transactions between independent businessmen, particularly when no other potentially affected interest raised objections. FERC is not charged by law to determine the precise outcome of each and every transaction over which it has some jurisdiction. The FERC has a great deal of discretion and latitude in determining what comports with the "just and reasonable" standard of the Federal Power Act. Arms-length agreements can be given considerable deference by the FERC.

Because the Conference Report provides effective procedures for parties to obtain wheeling orders at FERC-regulated terms and conditions, the FERC should allow freely-negotiated transmission agreements to be performed without interference from the FERC. This would further the Conference Report's goal of transmission access.

I would encourage the FERC at the earliest moment to begin to employ a "market screen" test, not unlike that which the Antitrust Division of the U.S. Department of Justice spoke about in the *United Illuminating* case. Where effective competition exists, there remains no valid public policy reason for the Federal government to intervene in privately negotiated activities.

Although the Conferees were ultimately not able to include provisions in the Conference Report to govern so-called regional transmission groups, that should not be taken as any indication that the Conferees affirmatively rejected the beneficial value of such groups. I strongly supported including such provisions.

During the House-Senate Conference there were three different regional transmission association proposals made: two by the Senate, and one by a group of consumer and trade associations representing all interests and elements of the electric power industry.

One by Senator Johnston appeared in his proposed amendments dated September 9, 1992; one by me was included in a subsequent

Senate offer to the House; and one was a consensus proposal as between the Edison Electric Institute, the American Public Power Association, the National Rural Electric Cooperative Association, Transmission Access Policy Study Group, Large Public Power Council, Western Association for Transmission Systems Coordination, and the Interregional Transmission Coordination Forum.

Unfortunately, due to the lack of time the Conference Committee was not able to take this matter up and decide which of the three proposals to include in the Conference Report. In addition, I was considering offering an amendment to authorize individual arms-length transactions with a minimum of FERC intervention, to address the situation in *Penelec*, but I did not do so also because of the press of business during the Conference. It is my expectation that Congress will revisit these issues next year to develop enabling legislation, particularly if FERC fails to approve regional transmission groups pursuant to existing law, and if the FERC continues its unwarranted interference in arms-length agreements.

Because of the importance of these matters, I am placing these proposals into the public record to form the basis of future debate. Accordingly, I ask unanimous consent that they be printed at the end of my statement as appendices one through three.

In summary, while the end result of the Conference Report may not be what each of us would have written if we had the sole authority, it provides for a delicate balance between providing for the needs of those seeking transmission and protecting the interests of the utilities, and their customers, that will have to provide the ordered services.

#### Section-By-Section Discussion

##### Section 721. Amendments to Section 211 of Federal Power Act

Section 721 amends FPA section 211 to provide that the FERC "may" order transmission services. The original House-passed bill used the word "shall"; the Conference Committee affirmatively substituted the word "may" so as to provide the FERC with full discretion to protect the public interest.

Subsection (2) removes the specific criteria from existing section 211(a)(2) and from the original House Bill. To order wheeling, the FERC must now make two findings: one, that the order meets the requirements of section 212 of the FPA; and two, that wheeling is "otherwise in the public interest."

The Conference Report envisions that the FERC will consider all the relevant circumstances before determining whether to require transmission services. While the FERC must make specific findings about reliability and rates, terms and conditions, it must also consider the likelihood and economic viability of the proposed transaction which underlies the requested service in order to assure the transmitting utility will have a reasonable opportunity to recover its investment. The FERC may not issue a wheeling order (including associated construction) if the result were to deny the utility a reasonable opportunity to recover its investment, either in transmission or generating facilities.

The FERC must also consider the impact of the requested wheeling on the customers of the utility, the reliable functioning of the electric system in general, the customers now receiving transmission services, and the similar consequences to interconnected utilities and their customers. Moreover, the FERC must also consider the relevant par-

ticular circumstances, such as whether the person requesting transmission is a QF or a Federal or state government-owned entity (foreign as well as domestic), and shall take into account all special advantages these entities already enjoy in determining whether a transmission order is warranted.

Section 721 amends existing section 211 of the FPA in several respects. In subsection (1) it extends the class of those authorized to apply for a wheeling order beyond electric utilities, geothermal producers and power marketing agencies to include "any other person generating electric energy for sale or resale". This manifests Congressional intent to continue to limit the FERC's authority to wholesale transactions only.

The amended subsection 211(a) specifies that a specific entity may apply for an order by the FERC requiring a transmitting utility to provide transmission services (including any enlargement of transmission capacity necessary to provide the services). The intent of this new transmission authority is solely to provide a way to effectuate the third-party requested transmission without adversely affecting a utility's existing and future firm and non-firm transactions.

This does not give the FERC the authority, on its own motion, to order transmission and the enlargement of transmission facilities; FERC-ordered transmission is to occur only in direct response to the request of a third party, and only to the extent of that request. Moreover, that such a request has been made does not give the FERC the authority to go beyond that which is necessary to satisfy the services requested by the applicant.

The transmitting utility's obligation under any such order to both transmit and to build would be relieved if the transmitting utility is unable to obtain the necessary authorizations, including any needed enlargement, pursuant to otherwise applicable Federal, state and local laws, including those related to environmental protection, siting, determinations of need, permits and approvals, as well as any necessary property rights. The necessary approvals will vary widely from state to state and locality to locality, but all relevant approvals are encompassed, regardless of whether they are in the form of environmental approvals, construction reviews, certificates of convenience and necessity, rights of eminent domain, or any other applicable Federal, state or local requirement. This arises out of a desire to let the states retain existing jurisdiction over these matters.

The requirement for a "good faith effort" does not mean that a utility must completely exhaust every conceivable administrative, legal or financial remedy before being excused from the order; but a utility must make a reasonable attempt to obtain the necessary property rights and approvals.

The FERC would not be able to enforce such an order to provide transmission services, nor impose the new monetary penalties contained in new FPA section 725, where all of the required authorizations under otherwise applicable Federal, state and local law have not been obtained for the ordered services or enlargement of transmission facilities.

It is also the intent of this provision that the FERC exercise this authority in such a way as to assure that the transmitting utility is not trapped between inconsistent local, state and Federal orders or requirements. For example, where a state will not permit expansion of the system, the FERC can not require the transmission to occur if there would be a diminution in reliability or loss

of the ability to make economy or coordination transactions to the benefit of customers, or where other existing arrangements would have to be terminated.

Similarly, if the effect of the ordered transmission were to lead the utility to terminate or cut back on ongoing or contracted-for transmission, the FERC can not issue the wheeling order, or must vacate one which had been issued. Moreover, the FERC cannot use a general public interest determination to override the statutory excusal, particularly by ordering a reallocation of the existing grid, or to curtail economy purchases or off system sales.

These limitations on ordered wheeling were added, in part, to solve the so called "immutable constraint" issue that has created controversy in a number of cases at the FERC. Under the provisions of the Conference Report, the FERC cannot legally reinstitute the so-called "hammer clause" of the *Utah Power & Light-PacifiCorp* merger [45 FERC ¶61,095, order on rehearing, 47 FERC ¶61,209 (1989), remanded on other grounds, *Environmental Action, et al. v. FERC*, 939 F.2d 1057 (D.C. Cir. 1991)], or through a FERC proceeding reallocate existing transmission capacity as was envisioned in the order overruling the Administrative Law Judge in the *Northeast Utilities-Public Service Company of New Hampshire* case [56 FERC ¶61,269 (1991)].

In addition, in its rehearing order in *Northeast Utilities* [58 FERC ¶61,070 (1992) petition for review pending, *Northeast Utilities Service Company, et al. v. FERC*, No. 92-1165 (1st Cir. filed Feb. 10, 1992)] the FERC, when it instituted its new transmission pricing scheme, left unclear how it would handle an immutable constraint. The intent of this provision in the Conference Report is to resolve that problem.

Subsection 211(a) requires an applicant to have made a request for voluntary transmission services from the utility at least 60 days prior to filing an application. Obviously, any such request must be bona fide under the applicable utility tariff, and must be pursued in good faith. A *pro forma* or frivolous request, or a request that did not satisfy reasonable information requirements, would not satisfy this requirement, and under those circumstances, and the FERC should dismiss the application for an order under section 211.

New FPA section 211(b) denies the FERC authority to mandate wheeling if it fails to make a finding that a wheeling order would not "unreasonably impair the continued reliability" of affected utilities. When reliability issues are raised, this is an affirmative requirement for the FERC to make; the FERC cannot simply assume that ordered transmission would not impair reliability. The burden of proof is on the applicant, not on the utility who has been requested to wheel.

The original House bill directed the FERC to consider the impact of wheeling orders on the reliability of the utility providing the service, but it left reliability of other connected systems vulnerable. The Conference Report broadened the FERC's consideration to the systems "affected" by the order. New FPA section 211(b) states that wheeling orders may not "unreasonably impair the continued reliability of electric" service. The FERC thus must protect the reliability of all the affected interconnected utility systems and the power pool/control area. Further, the FERC must ensure that any impairment in reliability will be completely reasonable (e.g. an acceptable, *de minimis* reduction in the amount of excess capacity or facility redundancy).

This phrase "unreasonably impair the continued reliability" also requires the FERC to refrain from mandating wheeling if the affected or transmitting utility's excess transmission capacity margins are depleted to the point where it can no longer engage in emergency transactions, or meet daily and seasonal need, including a reasonable reserve, or contract for short-term purchases of power in response to such things as planned and unplanned plant outages, or where it would lose the ability to keep the lights on in situations such as when a natural disaster takes out a large substation.

New FPA subsection 211(g) requires the FERC to give "consideration to consistently applied regional or national reliability standards, guidelines or criteria" in its assessment of reliability prior to issuing an order. I want to emphasize that when conducting that assessment, the FERC must ensure that reliability is measured in terms of continued conformance with regional and national reliability standards. Reliability is of paramount importance, and is "unreasonably impaired" under the statute when these standards are not met. While a transmission order may result in enhanced competition, economic efficiency or projected price relief, those are not a trade-off for reliability of service.

Reliability has been the hallmark of the U.S. electric utility system, and the FERC must act carefully in issuing wheeling orders so as to have no adverse impact. As was noted during the Conference, consumers deserve to have electricity when they want it; reliability of our nation's electric service stands as the envy of the world and in administering this section, the FERC should do nothing to degrade the system. I can not envision any circumstance under which the actual impairment of reliability would be considered to be in the public interest pursuant to the FPA.

Stated another way, if reliability concerns are raised the FERC as a practical matter should not issue an order under section 210 or section 211 unless it affirmatively finds that such order would preserve the reliability of affected electric systems. Anything less than full reliability would constitute an unreasonable impairment, and would be inconsistent with the clear statutory mandate of the FPA as amended by this Act. While the FERC order requiring provision of a new transmission service might reduce to some limited extent the existing reserve capacity of the transmission system or the margin or redundancy in transmission facilities, the overall reliability of each of the affected systems must be preserved. It would be manifestly unreasonable and clearly not in the public interest for the FERC to issue an order that did not achieve that result.

Subsection (4) removes the phrase "preserves existing competitive relationships" from existing FPA section 211. This can not be construed as intending to give the FERC authority or a mandate to restructure the electric utility industry. Rather, this change in existing FPA section 211 is necessary solely to allow the FERC to provide, upon request, additional transmission service opportunities to utilities and non-utility generators seeking to compete for power sales in the bulk power market.

It is not the intent of the Conference Report to allow wheeling to be ordered for phantom contracts, or contracts which lack sufficient certainty or economic viability, so that the transmitting utility (and other affected utilities) are left at substantial risk of recovering the associated costs. For exam-

ple, where the requested service would require enlargement or expansion of the system, the FERC must consider and receive sufficient assurance that termination of the underlying power purchase or some failure of the requesting party to complete the transaction would not leave the utility without a means to recover the costs of enlargement or expansion.

The FERC has an affirmative obligation to assure that the costs of transmission for others are not borne by either retail customers or shareholders of the transmitting utility. In making the determination as to whether or not to issue such order, the FERC has a legal obligation to ensure that the utility has a reasonable opportunity to recover its investment. Thus, the utility will not face the prospect of stranded investment in either transmission or generation facilities as a result of a FERC transmission order (which may include ordered enlargement of transmission facilities).

#### Section 722. Transmission services

This section provides for a wholesale transmission order under section 211 at rates, charges, terms, and conditions which permit the recovery by such utility of all the costs incurred in connection with transmission services and necessary associated services. For a more comprehensive discussion of pricing under the FPA as amended by this Act see Attachment 4.

Where the FERC orders wheeling, the rates, terms and conditions for transmission services must allow a transmitting utility to recover all costs incurred in connection with transmission services provided. The Conference Report provides that the appropriate share of such costs shall include, but not be limited to, all costs of any enlargement of transmission facilities and the economic costs of performing a wheeling transaction, including the pro rata share of the cost of existing facilities used to provide the transmission service. Such costs must be verifiable, but it is not necessary that the costs be incurred at the time the transmission rate is set.

An order shall allow the recovery of reasonably projected future costs, particularly opportunity costs, based either upon the historical experience or existing and planned arrangements of the transmitting utility, so long as an evidentiary basis exists. Actual benefits to the transmission system of providing the service may be taken into account, such as documented operational cost savings. Speculative benefits to the transmission system, such as the mere existence of facilities that would not have been constructed but for a mandatory wheeling order, are not to be credited against the costs incurred in connection with the transmission services.

These pricing provisions encompass the "just and reasonable" standard, but provide more detailed requirements for the FERC to apply in order to assure that when the FERC mandates transmission service (including enlargement of facilities), as opposed to reviewing voluntary arrangements, it does not force the transmitting utility or its customers to subsidize the provision of these services. When the government mandates use of private property it must provide adequate compensation. These provisions are flexible enough to allow incentives for transmission services, including market-based pricing in competitive bulk power markets.

The "just and reasonable" standard referenced in section 212(a) has been well articulated by the U.S. Court of Appeals for the D.C. Circuit in its *Jersey Central Power &*

Light decision (810 F. 2d 1168, 258 U.S. App. D.C. 189 (D.C. Cir. 1987) (en banc)). Here the Court noted that rates are bounded by a "zone of reasonableness", which is defined at the lower end by a prohibition against confiscatory rates as to the electric utility and at the upper end by a prohibition against exorbitant rates to consumers.

The specific pricing directions of new FPA section 212(a) will govern the establishment of the rate for the ordered transmission services, as long as the resulting rate is within the zone of reasonableness and is not otherwise unduly discriminatory or preferential. The FERC is authorized only to adjust the rate to comport with those specific pricing directions and as may be necessary to bring it into the zone of reasonableness, or to mitigate the undue discrimination or undue preference. Thus, under section 212(a) the FERC would be allowed and required to allow the transmitting utility to recover all costs incurred in connection with ordered transmission services, as is specified in the subsection.

FERC's existing precedent in reviewing arms-length transactions for energy and capacity give great weight to privately negotiated agreements, subject to third party rights to file a complaint under FPA sections 205 and 206. That well-established principle, long-known as *Sierra-Mobile Doctrine*, should also be the basis of FERC's review of voluntary transmission arrangements. The Conference Report, in putting stress on the need for voluntary transmission arrangements, gives ample opportunity for the FERC to apply properly that Doctrine to voluntary, arms-length transactions. The FERC should limit its intervention to only those circumstances where the public interest clearly compels it to do so.

In order to promote the economically efficient use of transmission and generation systems, rates, charges, terms and conditions and transmission services must include all costs associated with performing a transaction, including the costs of foregone alternative uses for the facilities.

In cases where the relevant market for delivered bulk power is competitive, the market price will best reflect the true value of the use of facilities and promote the economically efficient allocation of resources. In such cases, a market-based rate will fall into the "zone of reasonableness" and therefore can be deemed to be just and reasonable, and meet all the other requirements of new FPA section 212(a). This is true whether the FERC is approving transmission rates for a section 211 order or under any other authority under the FPA.

The Conference Report requires the FERC to fully review in each requested transaction the costs that will be incurred, to the degree they can be reasonably defined or proven in accordance with normal FERC procedures, and to assure, at a minimum, that all the costs incurred are recovered. In allocating costs, the FERC must assure that the parties which cause costs to be incurred will bear those costs, and to assure that no party will bear more costs than those from which it is receiving benefit. Just and reasonable rates, charges, terms and conditions under this section shall promote economic efficiency in the transmission and generation of electricity. Market-based rates can meet this requirement where the marketplace is workably competitive.

New FPA section 212(a) deals with transmission pricing. The overriding objective is to encourage utilities to offer transmission voluntarily. If FERC were to continue cur-

rent rate making, which calls for average system (embedded) costs as the basis for pricing, it could, and in the future, will increasingly result in utilities not recovering from transmission customers the economic costs of that service. Moreover, it fails to give the transmitting utility and its customers any incentive to offer transmission services.

For example, for systems built years ago, the average system costs include facilities built in the era when sites, material and labor came relatively cheap. In contrast, new lines are much more expensive and more difficult to site. Thus, if the transmitting utility can charge only average system embedded costs, the customer is not bearing the true costs of the transaction. The utility might, if allowed by its state commission, make that loss up through its native load (e.g., residential and small consumers) paying more, because the new line raises the system average on which the utility charges them. That type of subsidy by the native load customers constitutes bad economic, social and public policy. It also inhibits state commissions from approving construction. With more transmission services possible under this Conference Report, the problem could become more acute.

Offering third party transmission services can have another harmful effect on native load if not properly addressed. Because the transmission customer ties up existing facilities, the utility cannot use its facilities to buy cheaper power than it generates, or to sell excess power to others. Both result in native load paying too much (either directly for more expensive fuel or indirectly because off-system sales lower native load rates). Either way, the utility, which owes its first duty to its native load, again will be less likely to offer transmission services. For that very reason, the FERC's recent decision in the *Penelec* case (60 FERC Paragraph 61.313 (1992)) caused the utility to withdraw its offer of service to the cogenerator. The use of the term "economic costs" in new FPA section 212(a) requires FERC to permit recovery of these costs from the party seeking transmission services without the artificial limits imposed in *Penelec*.

Finally, a customer requesting transmission service may displace service from its existing supplier. Yet that supplier spent money on facilities and expected to recover those costs from the customer now leaving the system. Unless addressed directly by the FERC in its transmission orders, this "stranded investment" problem may become more acute because under this legislation as utilities will no longer have the discretion to refuse FERC-ordered transmissions. Stranded investment costs are also "economic costs" which must be recovered if the FERC mandates transmission.

New FPA section 212(a) states the overriding principle that the FERC must "permit the recovery by [the transmitting] utility of all costs incurred" in providing the service (emphasis added). Moreover, the costs also include those for "necessary associated services." In this way, the transmission customer will pay for all costs the utility incurs on that customer's behalf. As a way of illustration, the section lists: (1) the appropriate share of legitimate, verifiable and economic costs of providing the service; and (2) the appropriate share of expansion costs. The transmission customer must pay its appropriate share of the existing system plus any expansion the utility undertakes on behalf of that entity. In short, the transmission customer must pay its own way and the third

party transmission services will not be subsidized by native load customers under any circumstances.

This question, how to allocate costs between native load customers and third parties, has bedeviled the FERC ever since the rehearing order in the *Northeast Utilities* case and the companion *Northeast Utilities* opportunity cost case [58 FERC ¶ 61,069]. The FERC had held in the *Penelec* case [60 FERC ¶ 61,313 (1992), rehearing rejected (September 18, 1992)] that even where transmission results in higher fuel charges to native load, the utility can only recover those costs if they exceed embedded cost. In the facts of that case they never would. Therefore, the FERC, while ostensibly holding the native load harmless, has in fact made that class of customer bear higher fuel costs than the transmission customer created. Under the Conference Report, that will not be allowed.

In fact, just recently the FERC issued an order in which it reversed one of the early *Northeast Utilities* cases, to be detriment of native load. In a follow-up filing to the *Northeast Utilities* merger, the company chose to bill the customer so-called "out of rate" charges (the costs to the New England Power Pool of running more expensive generation because of constraints in transmission created by new third party transmission services) for every hour in which those costs exceeded embedded costs. The Commission majority refused, on the grounds that the company must compute the running costs for the 10-28 years of the transaction. In effect, because out-of-rate charges will occur on a less than regular basis, the FERC again has limited the utility's transmission rates to embedded costs even though the utility still must pay the out-of-rate charge to NEPOOL on a monthly basis and thereby subsidize third party transmission customers again.

Similarly, the FERC in *Penelec* held that with regard to expansion costs, a utility can charge only the "higher of" those costs or the embedded cost rates ("In no event may the utility simultaneously charge the wheeling customer an incremental cost rate and an embedded cost rate."). This does not allow the transmitting utility to recover all of its costs.

To eliminate this obvious unfairness, new FPA section 212(a) makes clear that the utility shall recover "all costs." In addition, it says the appropriate share of the existing "and" the expanded system. "All costs" therefore should include, at a minimum, the appropriate share of the costs of the existing system and any costs for enlargement of the existing system, costs incurred due to the curtailment, dispatch, re-dispatch, or other alteration of current generation or transmission operations to accommodate the new transmission customer, and any other reasonably ascertainable uncompensated burden imposed on the utility or its native load customers.

Finally, I wish to emphasize the "including but not limited to" language is intended to allow the utility to recover at least the costs listed in the section. If, however, the FERC finds that "all" costs include other items as well, it must allow full recovery of costs the section does not list expressly.

The stranded investment issue is also encompassed by this language. The Conference Report requires the FERC to allow a utility to recover costs "properly allocable" to the transmission customer from that customer, and not from the transmitting utility's existing customers. Therefore, if an existing customer for electricity from a utility changes suppliers and become a transmission

customer, that customer must pay for the stranded investment. While not a complete protection (for situations in which the customer departs from a utility not involved in transmission), at least the Conferees have provided protection for the most common situation.

Also, if a utility has expended funds to provide new transmission service using existing facilities or to enlarge the facilities to provide the service, and the applicant for the section 211 order does not accept the services, the applicant, and not the utility or its native load customers must bear the responsibility for those costs.

The provision in the Conference Report that requires "rates shall promote the economically efficient transmission and generation of electricity . . ." needs explanation. In a recent *United Illuminating* case [60 FERC ¶ 61,214 (1992)], the FERC overrode the competitive process that had led a utility and a supplier to negotiate rates not based on costs. The Department of Justice joined in petitioning for rehearing, arguing that the FERC should adopt existing judicial precedents of market efficiency when dealing with market-based rates. The FERC on rehearing dodged the issue and found that in the narrow facts of the case, the utility could have its deal. Adding the modifier "economically" to the word "efficient" calls to the FERC's attention that the science of economics has developed sophisticated doctrine on market efficiency. The FERC should draw on that knowledge in its cases and needs to identify situations where FERC can reasonably withdraw from transaction-by-transaction review.

It is noteworthy that the second sentence of amended FPA subsection (e)(1) includes the phrase "Except as provided in section 210, 211, 214 or this section . . ." That exception makes clear the intent that the provisions of those sections do, in fact, constrain the authority of the FERC to order transmission services under those and other provisions of law. Those amended sections of the FPA specify the circumstances, term, conditions, rates and procedures associated with any mandatory transmission services ordered by the FERC.

At the same time, however, if for some reason not based on this legislation the FERC concludes that it has a legitimate claim of authority to require transmission services under section 203 or section 205 (which I do not believe they do), the FERC should adopt the pricing criteria and standards included in amended FPA sections 211 and section 212 because they provide the clear intent of Congress with regard to any non-voluntary transmission services. The FERC should not, therefore, establish other criteria and standards for use in section 203 or section 205 cases where it believes it has a legitimate claim of authority. It would make no policy sense for the FERC to have two different regimes. Nothing in the FPA as amended by this Act prevents the FERC from so doing.

New FPA subsections 212(g) and (h) prohibit retail wheeling both directly, and indirectly through so-called sham transactions. In its efforts to prohibit retail wheeling, the original House bill unintentionally created a large loophole. The Conference Report instead provides a much more complete and comprehensive ban on retail wheeling. As a result, the FERC's authority is strictly limited to transmission services provided for the delivery of bulk power supplies to legitimate wholesale customers.

The Conference Report requires that the transmission service authorized by the FERC

order may not lead to retail wheeling, regardless of the terminology used in the transmission request or FERC order. Thus, the FERC has no authority to order or authorize a utility to provide transmission services where the practical result of the order will be to by-pass the utility's retail service and deliver wholesale power to a retail customer. The FERC must ensure that, in a particular fact pattern in an individual case, it does not allow or approve transactions that clearly are nothing more than an indirect sale to an ultimate consumer formulated for purposes of circumventing the statutory prohibitions. These provisions give the FERC full authority to prohibit transactions that technically might arguably meet criteria for a wholesale sale or transmission transaction, but the underlying intent and effect is to provide retail service to an ultimate consumer. The FERC already has taken such action in the area of municipalization for purposes of obtaining open access transmission services for otherwise ineligible retail customers (such as industrial facilities) in the *Entergy* transmission case. I expect the FERC to proceed in a similar manner to reject all forms of transmission transactions where the substantive result is service directly or indirectly for an ultimate consumer.

The Conference Report inserts a new Section 212(h) into the FPA, prohibiting the issuance of an order conditioned upon or requiring wheeling directly to an ultimate consumer. An order may not require wheeling to any entity that would sell the power to be wheeled to an ultimate consumer unless the entity fits into a list of categories of power selling entities, and owns transmission or distribution facilities. The only exception to the requirement that the wheeling entity own facilities is a grandfathering provision for persons that fit into the list of categories that are providing electric service to an ultimate consumer on the date of enactment of this legislation.

The grandfathering clause is intended to allow the FERC to continue, but not expand, existing retail wheeling arrangements. If a utility is currently wheeling a small fraction of a retail customer's energy requirements from another power producer, the other power producer is not providing "electric service" under this subsection. The grandfathering provision would not allow the FERC to order the utility to wheel a greater portion of the energy requirements of the retail customer, or to order the utility to wheel capacity, or wheel to facilities of such person not now receiving such power. Consequently, the legal effect of the provision is to maintain the status quo on a transmission specific basis with regard to the amount, source, and delivery point of the existing power sale contract for its current term.

By requiring FERC to consider who "benefits" from a wheeling transaction, the Conference Report requires the FERC to prevent what is in essence retail wheeling even though the technicalities of a wholesale wheeling transaction are otherwise met. Thus, the FERC must prevent "form" from prevailing over "substance" in order to frustrate clever attempts to engage in retail wheeling through "sham transactions." The FERC should be sensitive to proposed transactions which in form meet the technical requirements of a sale for resale but which are, in economic substance, a retail sale to an end user.

New FPA section 212(g) expressly allows existing state laws concerning service territories to remain in full force and effect and

nothing here can affect that. New FPA subsection (h) states that no order issued under the FPA (not just the new wheeling authority) shall require directly or indirectly wheeling for a retail customer. That includes merger orders or rate orders. This directly answers "no" to the D.C. Circuit's remand in *Environmental Action*, which held that the FERC must consider whether to allow retail wheeling in order to offset anti-competitive effects of a merger.

Sham transactions occur when the retail customer that wants the wheeling sends someone else to apply for it. Retail customers would do that to circumvent the ban on retail wheeling. Therefore, the Conference Report states that wheeling "for the benefit of" a retail customer falls under the ban. By the same token, legitimate existing co-operative or municipal wholesale sellers or Federal Power Marketing Agencies may apply for and obtain wheeling that lowers the rates of their retail customers. A very important part of new FPA section 212(h) also allows states or localities under state law to ban retail wheeling.

#### Section 723. Information Requirements

This section adds a new FPA section 213 which is much more fair and reasonable than the original House bill.

Subsection (a) requires that the parties must have a reasonable opportunity to negotiate. Not earlier than 60 days of the receipt of a bona fide, complete request and longer if the parties agree, the utility must explain to the customer why the transaction cannot occur, in an acceptable manner, rather than on the terms the requester wanted.

Subsection (b) establishes the information requirements the FERC must prescribe by rule, reducing substantially the requirements originally proposed by the House. The new language simply states "information . . . which is adequate to inform potential customers, State regulatory authorities, and the public of potentially available transmission capacity and known constraints." This leaves to the FERC rulemaking process the decision on what form these information requirements should take. However, the FERC cannot by rulemaking reimpose the information requirement provisions of the original House Bill, which the Conferees now have rejected with prejudice.

It is intended and expected that the information requirements would not be onerous or burdensome, but rather will require only such information as it is reasonably practicable to provide, so that the FERC, State Commissions and other interested parties have a reasonable basis upon which to act.

#### ATTACHMENT 1

(Proposal by Senator Malcolm Wallop (R-WY) Voluntary Regional Transmission Associations)

The Federal Power Act is amended by adding the following:

"Section 216. Voluntary Regional Transmission Association.

"(a) A voluntary regional transmission association may file with the Commission a copy of the agreement establishing such association, and may seek from the Commission certification of such agreement.

"(b) Upon application, and after notice and opportunity for comment, the Commission shall certify any agreement that includes provisions as specified in subsection (e). In considering certification, the Commission shall seek the views of all state regulatory authorities of the relevant region, and other interested and affected parties.

"(c) Upon complaint to the Commission by a member of the association alleging violation of the agreement (after an unsuccessful, good faith attempt at dispute resolution), the Commission may determine after a hearing that the agreement is not being implemented in accordance with its terms. In making this determination the Commission shall accord substantial deference to the results of any binding dispute resolution. Upon making such determination, the Commission shall provide a reasonable time for the association to change or implement its agreement in response to the Commission's order.

"(d) Any rate, charge, classification, rule, regulation, practice, or contract demanded, observed, charged, or collected for transmission service in accordance with an agreement, whether based on cost or non-cost factors, is considered just and reasonable.

"(e) An agreement for a voluntary regional transmission association shall include provisions consistent with the public interest that:

"(1) allow any wholesale seller or wholesale purchaser in the region to become a member;

"(2) permit wholesale transmission service for members of the association within and through the region on terms, including price, that are not unduly discriminatory or preferential;

"(3) provide the basis on which any rate, charge, classification, rule, regulation, practice, or contract demanded, observed, charged, or collected for transmission service shall be determined;

"(4) allow the future transmission requirements for wholesale electric energy sales and purchases by members to be included in plans, which shall be updated periodically, for enlargement, subject to applicable federal, state, and local law, of transmission capacity for any member who agrees to pay the reasonable costs of transmission services, including the costs of any enlargement of transmission facilities;

"(5) allow all wholesale sellers and wholesale purchasers who are members to plan for and reserve transmission capacity for firm and non-firm power transactions to the extent of available existing capacity, as supplemented by good faith efforts to enlarge transmission capacity to provide requested service in the future;

"(6) provide for a dispute resolution procedure, which may include binding arbitration, for members which protects the due process rights of the parties; and

"(7) allow members, at their sole discretion, to provide voluntary transmission services to a requesting non-member on a voluntary basis not subject to review by the Commission under any other provision of this act.

"(f) If an agreement of a voluntary regional transmission association is in effect, with respect to members of the association the Commission shall not: (i) accept an application for an order under section 211(a) ordering such member to provide transmission service; or (ii) condition its approval of a merger on the provision of transmission services; or (iii) condition the exercise of its rate jurisdiction on the provision of transmission services."

Section 3 of the Federal Power Act is amended by adding the following at the end thereof:

"(26) The term "voluntary regional transmission association" means an association—

"(A) open to all transmitting utilities and wholesale buyers and sellers in a region, and

"(B) which is intended to develop a voluntary agreement concerning—

"(i) regional transmission use;

"(ii) enlargement of transmission capacity, and

"(iii) rates, terms, and conditions for transmission service."

#### ATTACHMENT 2

(Proposal By Senator Malcolm Wallop (R-WY) for Authorizing Voluntary Transmission Agreements)

The Federal Power Act is amended by adding at the appropriate place the following:

"Section . An agreement or contract relating to the rates, terms, or conditions for transmission services, between unaffiliated entities shall be filed with the Commission and be effective as between the parties thereto, provided that this subsection shall not affect the right of any person or state commission under section 206 of this Act."

#### ATTACHMENT 3

(Regional Transmission Groups)

The consensus document reached by representatives of [EEL, APPA, NRECA, TAPS, LPPC, WATSCO, ITCF, consumer, environmental groups, EGA] to establish regional transmission groups provides for the following:

I. Authorizes FERC to approve an RTG if it finds the RTG's Governing Agreement is just and reasonable, not unduly preferential or discriminatory, and is otherwise consistent with Part II (electrical) of the Federal Power Act, and that it:

A. Provides for membership of sufficient size and scope to provide transmission services in a reliable and efficient manner.

B. Allows any entity which is subject to, or eligible to apply for, an order under §211 to join the RTG.

C. Imposes the affirmative obligation to provide transmission services to members (non-members retain all rights under §211 and §212) and to enlarge transmission capacity, as needed.

D. Requires members to coordinate transmission planning on a regional basis and to share transmission planning information to ensure that all known transmission needs of the region are met in an efficient manner.

E. Includes governance procedures to ensure due process and fair treatment of all members.

F. Provides for a fair dispute resolution process, which in certain circumstances may include voluntary binding arbitration. (Consent to engage in binding arbitration cannot be a condition of membership or the exercise of any right of membership.)

G. Requires that all rates, charges, terms, and conditions shall be consistent with §212, and subject to §§205 and 206, as appropriate.

II. Commission Authority over RTGs:

The Commission may require such information as it deems necessary, impose conditions consistent with the public interest, modify or revoke certification of the group, and remand or set aside any action (except as otherwise provided in binding arbitration) for inconsistency with the Federal Power Act and the RTG's Governing Agreement.

Members may agree, on a case-by-case basis, not to seek Commission review of an arbitration award. The Commission shall accord substantial deference to any decision rendered by an independent third party and based on an adequate record. The Commission also shall give a rebuttable presumption that any action by an RTG, or action of a member not contested by another member, is within the scope of the Agreement.

III. Federal Entities:

Federal power marketing authorities are authorized to participate in RTGs, subject to certain restrictions, and to engage in binding arbitration.

IV. Savings Provision:

FERC certification of an RTG shall not affect State siting, environmental, or utility regulatory authority which could otherwise be lawfully exercised over members of the RTG. Conforms savings clause in §212(e)(1) and (2) relating to antitrust to include this section.

#### REGIONAL TRANSMISSION GROUPS

Section 216. Regional Transmission Groups

(a) Commission Certification—

(1) On application, the Commission shall certify a regional transmission group ("RTG") if it determines, after notice and opportunity for hearing, that such RTG's Governing Agreement ("Governing Agreement") (and any revision thereof) is just, reasonable, is not unduly discriminatory or preferential, is otherwise consistent with this Part, and meets the following specific requirements:

(A) the Governing Agreement provides for membership of sufficient scope, and a region of sufficient size, (not inconsistent with determinations, if any, made under section 202(a)), to provide transmission services consistent with this Part and with reliable, efficient, and competitive wholesale power markets;

(B) the Governing Agreement allows any entity which is subject to, or eligible to apply for, an order under section 211, and which has an interest in transmission services in the region, to join the RTG;

(C) the Governing Agreement (i) imposes on member transmitting utilities an affirmative obligation to provide transmission services to other members on a basis that is consistent with (and no less comprehensive than) sections 211, 212, and 213, including an affirmative obligation, (except as provided in section 211(d)(1)(C)), to enlarge transmission capacity when needed to provide requested transmission service; and (ii) requires members to maintain electric system reliability, as measured by continued conformance with generally applicable and recognized guidelines;

(D) The Governing Agreement requires members:

(i) to coordinate in a timely manner transmission planning on a regional basis; and

(ii) to share transmission planning information as provided for in the Governing Agreement, and on request;

with the goals of (1) ensuring that members' forecasted loads, resources and requirements for transmission services, and as provided in the Governing Agreement the known requirements of non-members, within, into, out of, and through the region are accommodated in a reasonable and efficient manner, consistent with applicable state utility, siting, and environmental regulation; (2) ensuring efficient utilization, expansion and coordination of interconnected transmission systems; and (3) planning for transmission needs of members to enable reasonable and efficient utilization of their power supply resources.

(E) the Governing Agreement includes governance and decision-making procedures that are fair, are structured in a manner that takes into account the interests of all members, and are consistent with this Part;

(F) the Governing Agreement includes one or more dispute resolution procedures which provide fair and equitable process for all members, and which provide for the timely

resolution of any dispute; provided, however, that a member shall not be required to limit Commission review as provided in subsection (b)(2) as a condition of RTG membership or of the exercise of any right of RTG membership; and

(G) the Governing Agreement includes a requirement that the rates, charges, terms and conditions applicable to transmission service provided by members that are not public utilities to other members shall be consistent with the requirements of section 212(a), shall be filed with the Commission, and if the Governing Agreement so provides, may be subject to suspension and refund as if subject to sections 205 and 206.

(2) A Governing Agreement may establish service priorities when transmission capacity is constrained and may provide for reciprocal transmission services that extend beyond the RTG's region and for other arrangements consistent with sections 211, 212, and 213.

(3) The Commission, in certifying an RTG, may impose such terms and conditions as it finds necessary to ensure the RTG's Governing Agreement conforms with paragraph (1) and is consistent with the public interest under this Part. The RTG shall have 60 days to notify the Commission whether it accepts or rejects a Commission certification order under paragraph (1) of this subsection. The Commission shall not certify an RTG under this section if each state commission that has retail rate jurisdiction over RTG members in the region files a notice of disapproval of the Governing Agreement with the Commission under the procedures established under paragraph (1) of this subsection. The Commission may not impose as a condition of certification a requirement that a member must accept a planning decision of the RTG. A member's decision, if permitted by the Governing Agreement, not to accept a planning decision shall not relieve, affect, or qualify in any way that member's obligations to provide transmission service or enlarge transmission capacity pursuant to the Governing Agreement.

(b) Commission Authority Over RTGs—

(1) On complaint or on its own motion, the Commission may at any time:

(A) require an RTG, or a member thereof, to submit such information as the Commission determines by rule or other to be necessary or appropriate to carry out this section;

(B) modify or revoke the certification of an RTG if it finds that the Governing Agreement, or actions, taken thereunder, do not meet the requirements of subsection (a); and

(C) determine whether any action taken under the Governing Agreement (including any agreement among members or the resolution of any dispute) by a member or by the RTG or action under a filed rate implementing the Governing Agreement, is inconsistent with, or beyond the scope of, such Governing Agreement or filed rate, or is otherwise inconsistent with the Commission's certification order, or is unjust, unreasonable, unduly discriminatory or preferential, and on that basis: (i) remand the action to the RTG for timely modification consistent with the Commission's determination; or (ii) as the Commission determines is necessary or appropriate, set aside the action, or issue an order to comply with the Governing Agreement or filed rate. In taking action under this subparagraph (C), the Commission shall give a rebuttable presumption that any action by an RTG, and any action by a member (or agreement among members) that is not contested by another member, is within the

scope of and consistent with the Governing Agreement or filed rate. For purposes of any proceeding under paragraph (1)(C), decisions rendered on an adequate record by an independent arbitrator in accordance with the Governing Agreement and dispute resolution procedure that assures due process for members shall be accorded substantial deference by the Commission. For purposes of this subparagraph, the term "filed rate" means a rate referred to in subsection (b)(4) (B) or (C) that is filed and effective (not subject to refund) under section 205 or any rate described in subsection (a)(1)(G) that is in effect.

(2) If a member consents, on a case-by-case basis, not to seek Commission review under paragraph (1)(C) of a final resolution of a dispute, the Commission may not, on the basis of a complaint or protest filed by, or on behalf of, such member, set aside, remand, or issue a compliance order respecting such dispute, including any agreement among members (or any arbitration award) that resolves such dispute, except on the grounds available to a court exercising jurisdiction over the matter under applicable contract law (or sections 10 and 11 of Title 9, United States Code in the case of an arbitration award).

(3) A member of a certified RTG may not apply for an order under section 211 requiring another member of such RTG to provide transmission services within the RTG's region unless the RTG's dispute resolution mechanism has failed to provide a final resolution of a dispute related to such services within a reasonable time specified in the Governing Agreement. A transmitting utility that is a member of an RTG is exempt from the application of section 213(a) with respect to other members of the RTG. The Commission may not compel any entity to be a member of an RTG. Any member may withdraw from an RTG, provided, that such member's withdrawal is in accordance with the Governing Agreement. No member shall be subject to other provisions of this Act solely by reason of compliance with a Governing Agreement approved by the Commission. Nothing in this section shall prohibit an eligible applicant for transmission service that is not a member of an RTG from exercising any rights under this Part with respect to such RTG or any member thereof.

(4) Sections 205 and 206 shall apply to (A) the Governing Agreement (including, but not limited to, any rates, terms and conditions specified therein for transmission services by public utilities) and any changes in the Governing Agreement, (B) any initial rates, terms and conditions not specified in the Governing Agreement for transmission services by public utilities under the Governing Agreement, and (C) any changes in such rates, terms and conditions. The Governing Agreement may not require that any dispute resolution procedure under subsection (a)(1)(F) must be utilized with respect to such changes, unless such procedure applies to changes under both sections 205 and 206. A member seeking a change in the Governing Agreement may be required to first seek such change under the Governing Agreement.

(c) Federal Entities—

A Federal agency or instrumentality to which section 211 applies may be a member of an RTG and may subject legal and factual disputes with respect to a matter arising under an RTG's Governing Agreement to the RTG's dispute resolution mechanism, including binding arbitration which conforms to the requirements of subsection (b), except that:

(1) the establishment and review of rates and other terms of transmission service pro-

vided by the Federal Columbia River Transmission System shall be consistent with section 212(i); and

(2) notwithstanding subsection (b)(2), the Commission shall review and approve or set aside any binding arbitration decision.

(d) Other Law—(1) Certification of an RTG under this section shall not affect State siting, environmental or utility regulatory authority that could otherwise be lawfully exercised over members of such RTG.

Also make the following conforming changes to section 212(e) (1) and (2) in the Johnston/Sharp compromise, circulated on September 28, 1992 at 4:41 pm:

On page 21, line 10, add cross reference to new section 216 dealing with regional transmission groups.

On page 21, line 13, add cross reference to new section 216 dealing with regional transmission groups.

On page 21, line 16, add cross reference to new section 216 dealing with regional transmission groups.

On page 21, line 18, add insert before the period ".", except that nothing herein shall foreclose any claim or defense under those laws which may be applicable."

#### PROPOSED REPORT LANGUAGE

By federal law, the Tennessee Valley Authority is subject to certain service territory limitations. Section 211(j) seeks to accommodate these limits in an equitable manner. The conferees intend that governing agreements among utilities affected by that section may not require their members to provide service inconsistent with that section.

#### ATTACHMENT 4

Section 722 of the Conference Report amends section 212 of the Federal Power Act (FPA) to include a new subsection (a) entitled, "Rates, Charges, Terms, and Conditions for Wholesale Transmission Services."

Subsection 212(a) is a complete substitute adopted by the Conference Committee in lieu of the transmission pricing provisions of H.R. 776, as passed by the House of Representatives. Thus, the legislative history of the House bill's transmission pricing provisions are no guidance when interpreting Congressional intent of this section.

Subsection 212(a) requires the FERC to permit a transmitting utility, subject to an order requiring wholesale transmission services under section 212, to recover through its associated rates, charges, terms and conditions all the costs incurred in connection with the transmission services and necessary associated services. Thus, by law, the transmitting utility must be permitted to recover all costs incurred; those costs may include, but are not limited to, an appropriate share of the legitimate, verifiable and economic costs (including taking into account any benefits to the transmission system of providing the transmission services) and of the costs of any enlargement of transmission facilities.

It is important to note that this requirement on the FERC is not otherwise constrained or limited by existing FERC precedents or by the later provisions in subsection 212(a). By clear operation of this provision, the FERC must permit such recovery by the transmitting utility of all costs incurred even if that would have the effect of reversing existing FERC precedents. Thus, the later sentences in subsection 212(a) do not frustrate in any way that clear statutory requirement. In fact, the last sentence of the subsection makes clear beyond any reasonable doubt that costs incurred in providing the transmission services will be recovered

from the applicant and not from a transmitting utility's native load customers.

The statement that such rates, charges, terms and conditions also will "promote the economically efficient transmission and generation of electricity and shall be just and reasonable, and not unduly discriminatory or preferential" does not in any way legally reduce the mandatory requirements imposed on the FERC to permit such recovery of all incurred costs by the transmitting utility and to ensure that the costs are recovered from the applicant and not from the native load customers. To the contrary, the Conference Report specifically defines for the FERC and any reviewing court exactly what costs must be permitted to be recovered (i.e., all costs incurred, as described in the subsection) and expressly from whom the costs must be recovered (i.e., from the applicant for a section 211 order, as provided in the subsection, and not from the native load customers of the transmitting utility).

Consequently, the FERC's otherwise applicable discretion to set rates, charges, terms and conditions under the FPA will of necessity be much more narrow.

The FERC's promotion of economically efficient transmission and generation and the FERC's review under the traditionally otherwise free-standing "just and reasonable, and not unduly discriminatory or preferential" standard in other sections of the FPA will therefore be delimited by the express statutory direction to the FERC contained in the aforementioned portions of the subsection.

FERC cannot invoke the promotional hortatory language, nor the otherwise traditionally freestanding "just and reasonable" standard to limit in any way the recovery by the transmitting utility of costs specified in the subsection or to impose those costs on native load customers in contravention of the prohibition at the end of the subsection. Rather, the promotional language and the "just and reasonable" standard can only be considered and invoked by the FERC to the extent that they lead to a result completely consistent with such cost recovery and such cost responsibility.

With regard to the application of the traditional "just and reasonable" standard in the context of section 212(a), the proper interpretation is that—as articulated in the *Jersey Central Power & Light* decision of the U.S. Court of Appeals for the D.C. Circuit—transmission rates are bounded by a zone of reasonableness. That zone is defined at the lower end by a prohibition against confiscatory rates as to the electric utility and at the upper end by a prohibition against exorbitant rates as to consumers. Consequently, the FERC under section 212(a) would be required to allow the transmitting utility to recover all costs incurred in connection with ordered transmission services (as set forth in the subsection), while ensuring that the resulting rate will not be confiscatory as to the transmitting utility, nor exorbitant as to the wholesale transmission applicant/customer—always, of course, ensuring also that the native load customers of the transmitting utility do not subsidize these services in any event.

That formulation of the relationship between the traditional "just and reasonable" standard and the specific pricing directions or the FERC contained in section 212(a) is critical because, in the absence of the specific pricing directions, FERC would have somewhat greater discretion in setting the rates within the zone of reasonableness under otherwise applicable law. That discretion is intentionally constrained by the spe-

cific pricing directions provided by Congress, with the resulting rate being in the zone of reasonableness.

Generally, the FERC preserves competition and protects consumers against excessive rates through its traditional rate-making authority conferred by section 205 of the FPA. Section 205 requires that all rates charged for the transmission or sale of wholesale power in interstate commerce be "just and reasonable," and that any such rate not be found just and reasonable is unlawful. Neither the FPA nor its legislative history defines what is meant by the statutory phrase "just and reasonable."

While the FERC historically has accepted rates under section 205 based upon the supplier's cost-of-services, the FPA does not, by its own terms, require electric rates to be cost-based. Instead, the courts have held that the FPA requires that the ratemaking methodology employed serve a legitimate statutory objective, and produce a rate that falls within a "zone of reasonableness," which is "bounded at one end by the investor interest against confiscation and at the other by the consumer interest against exorbitant rates," as stated in *Jersey Central Power and Light Co.* The Supreme Court in *Wisconsin v. FPC*, also has held that no single method need be followed by the FERC in considering the justness and reasonableness of rates.

The Supreme Court in *FPC v. Hope Natural Gas Co.* also has made clear that under the statutory standard of "just and reasonable" it is the result reached, and not the method employed, which is controlling. That is true, because it is not theory, but the impact of the rate order which counts, such that if the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry is at an end. Consequently, under the general statutory standard, the FERC has some discretion to rely on a mix of factors in determining whether a rate is just and reasonable, i.e., in determining whether "the end result" constitutes "a reasonable balancing, based on factual findings, of the investor interest in maintaining financial integrity and access to capital markets and the consumer interest in being charged non-exploratory rates," in the words of the *Jersey Central* court.

In determining just and reasonable rates under the Natural Gas Act and the Natural Gas Policy Act, the FERC has consistently considered relevant non-cost factors, while relying on the costs of one or more sellers. Courts reviewing the FERC's decisions have generally affirmed the FERC's selection of particular cost methodologies and rate structures as being permitted by the reasonable exercise of the FERC's discretion under the general statutory standard. Notably, the courts have not mandated the use of historical cost methodologies and have affirmed the FERC's use of replacement cost as a proper basis for establishing just and reasonable rates.

Courts in a long series of cases have allowed the FERC to rely on factors other than the average embedded cost of service and have been willing to afford the FERC considerable latitude in approving rates under the "just and reasonable" standard. Indeed, the D.C. Circuit Court in *Town of Norwood v. FERC* recently affirmed marginal cost pricing under FPA section 205, accepting the FERC's rationale that rates based on marginal cost promote economically efficient investment and consumption decisions and noting the agreement as well of the leading authorities in the field of public utility regulation.

In addition to cost-based methods that diverge from embedded cost pricing, the courts have approved a variety of non-cost base factors in determining a just and reasonable rate, which embody other public interest considerations, such as increasing supply, managing demand, influencing industry structure and achieving price stability.

In new subsection 212(a), the Congress has determined that the transmitting utility should recover all costs incurred for the transmission services from the applicant and that the native load customers should not subsidize that service in any way. As a result, Congress by statute has provided the express Congressional directions for the FERC to adopt as a public interest factor in its ratemaking methodology under section 212(a). As discussed, that statutory direction is wholly consistent with the judicially established interpretation of the traditional just and reasonable standard. Consequently, the FERC does not have the legal authority to adopt a different approach to setting rates for transmission services ordered pursuant to section 211.

Furthermore, the "not unduly discriminatory or preferential" limitation would enable the FERC to respond to a specific fact pattern in an individual case where the rate was the product of action by the transmitting utility which provided an unjustified preference to a transmission customer (as in an affiliate deal) or an unjustified discrimination against an unaffiliated competitor.

Under such case-specific circumstances, the FERC would be authorized to make an appropriate adjustment to the rate otherwise required by the specific pricing directions in section 212(a) to mitigate the effect of the undue preference or undue discrimination as to that particular customer in the individual case. So, on balance, the specific pricing directions will always govern the establishment of the rate for the ordered transmission services, as long as the resulting rate is within the zone of reasonableness, and in the absence of case specific undue discrimination or undue preference. And, additionally, FERC is only authorized to adjust the rate resulting from those specific pricing directions, as necessary to bring it into the zone of reasonableness (if it would otherwise be confiscatory or exorbitant) or to mitigate the undue discrimination or undue preference with regard to that particular customer.

It also is important to note that the determination by Congress that the native load customers of the transmitting utility not subsidize the third party transmission services is not legally susceptible to attack as unduly discriminatory or unduly preferential. Under this statute, third-party transmission customers are not similarly situated, and are not entitled to identical treatment, as the native load customers. Furthermore, holding native load customers harmless from costs for which they are not responsible is fully consistent with traditional notions of cost causation and would not otherwise be subject to allegations that such a principle is unduly discriminatory.

Congress here has determined that it is reasonable to ensure that the native load customers do not subsidize the cost of providing transmission service to third parties. Such a pricing requirement in subsection 212(a) that is designed to eliminate subsidies and produce a more efficient allocation of transmission capacity surely cannot be viewed as unduly discriminatory. Similarly, an applicant cannot, in the face of that Congressional determination, argue that allow-

ing the transmitting utility to recover all costs in providing the service (as provided in the subsection) unduly discriminates against the third-party transmission customer.

Further, the provisions of subsection 212(a) do not require, nor allow, any subsidization of transmission services by the native load customers of the transmitting utility and, to that extent, they would lead to a different result than the balancing of the three principles incorporated in the original House provision, which was drawn from the FERC transmission pricing principles in the Northeast Utility-Public Service of New Hampshire merger case. Indeed, that is precisely why the Conference Committee rejected the House passed provisions and the Conference Report adopts a complete substitute for the House passed pricing provision—to assure that there will be no subsidy of transmission services, regardless of what otherwise might be the result under the Northeast Utility principles adopted by FERC.

In that same regard, the provisions of subsection 212(a) cannot be interpreted to authorize the FERC under any existing case precedent to impose any limitation on the recovery by the transmitting utility of all costs incurred in connection with the transmission services, as specified in the subsection, or to require native load customers to bear such costs, as prohibited by the subsection. Rather, the plain meaning of these provisions of subsection 212(a) must control their interpretation and any existing FERC case precedent is irrelevant for that interpretation.

The Conference Report, by comparison to the purposed intent of the original House provision, does not attempt in any way to codify one or more FERC precedents. Quite the contrary, the Conference Report by the plain meaning of its express terms makes the Congressional determination about the recovery of costs incurred by transmitting utilities in providing wholesale transmission services pursuant to the provisions of section 211, as amended by this legislation. Consequently, under all applicable Supreme Court decisions on statutory construction, the Congressional determination in subsection 211(a) cannot be made subject to interpretation under any existing FERC order, let alone made subordinate to the determinations in any FERC order.

Additionally, the statutory provisions require that recovered costs include, among others, an appropriate share of legitimate, verifiable and economic costs which would allow for typical rate case projections of future costs that will be incurred in providing the mandated transmission services. It is well settled and judicially affirmed Federal rate making practice that the transmitting utility would use a "test year" calculation of costs to set its future rates. That practice would specifically allow for and include projections of economy sales and purchases, out-of-rate charges, and other opportunity charges based on the test year data and experience. That long standing rate making practice would not be affected by the adoption of subsection 212(a), even though the Congress in the Conference Report has specified a more precise cost recovery standard.

Therefore, the term "appropriate share" cannot be interpreted to swallow that more precise standard by means of some sweeping claim that there are generally available "system benefits" that offset in large measure the costs of the transmission service, such that native load customers bear the cost responsibility in place of the applicant. So-called "system benefits" cannot be used

as a cost-avoidance tactic by the applicant or a method to shift costs to the native load customers.

Furthermore, the FERC cannot impose on the transmitting utility the burden of proof to show that there is no system benefit in order to obtain any recovery of the costs in connection with transmission services, and then only to the strictly limited extent that such proof is persuasive, as the FERC attempted to do in the recent Ohio Edison case. Rather, the transmitting utility would file a rate case including all costs determined by Congress in subsection 212(a) to be recoverable, and then the applicant would be required to provide persuasive evidence that a portion of those costs had a demonstrable system benefit that should be shared by all customers, including both the applicant and native load customers. The FERC, on the basis of substantial evidence, would then have to find that the portion of costs associated with that system benefit was appropriately allowable to all rate payers.

#### HYDROELECTRIC PROVISIONS

Mr. WALLOP. Mr. President, I would like to make a few observations about the conference agreement relating to the hydroelectric provisions.

While I think the statutory language dealing with the definition of a fishway under section 18 of the Federal Power Act is clear on its face, there were some comments made during House consideration which should be clarified.

Congressman DINGELL at one point stated with reference to FERC's proposed fishway definition that it deals only "with fish movement in one direction." While this statement is true as to FERC's initial definition—in Order 533, 56 FR 61154, May 20, 1991—FERC hugely broadened its definition in response to requests for rehearing by Federal and State fish agencies—in Order 533-A, 57 FR 10809, March 31, 1992. The expanded definition recognized that fishways can be for upstream and downstream passage, and broadly interpreted them as facilities necessary for the life cycle of a fish species. It is important to emphasize, however, that at all times the definition was confined to physical structures.

Congressman DINGELL later stated that FERC's definition "presumed to limit the scope of the section 18 fishway prescription by administrative action at FERC."

As the agency with responsibility for implementing the Federal Power Act, and with lead authority over the licensing of non-Federal hydroprojects under the FPA, it is entirely appropriate for FERC to be interpreting the reach of section 19 of the FPA. As manager of the licensing process, FERC has every right—indeed duty—to set reasonable conditions or bounds on the participation of other agencies in the process, especially when the FPA or other statutory authority is ambiguous as to the extent of that authority. FERC did a thorough and careful job in crafting its regulatory definition, looking at historical understanding by fishery biologists of what constitutes a

fishway. FERC also carefully, and in a balanced way, responded to comments filed in reaction to its proposed definition. While Congress is vacating the definition—largely in response to reactions to the initial proposed version—Congress is doing so without prejudice to the definition.

Congressman DINGELL also stated that: "FERC has tried to impose its own will on how and what a fishway proper and other project facilities." In addition to my previous comment, I would note that FERC must be able to make the distinction between fishway facilities and other project facilities. Otherwise, a fishway agency would be able to exercise unbridled authority over projects, to the exclusion of any FERC control over the projects. But FERC is the agency responsible for implementing the FPA and for licensing hydroprojects.

Congressman DINGELL also mentioned the view of the Department of Commerce that "DOC believes \* \* \* the baseline from which project impacts are measured \* \* \* is the carrying capacity of the relevant fishery habitat without the project."

To the extent fishery agencies provides fish-related recommendations for existing projects, the Senate and House conferees who worked on the Electric Consumers Protection Act of 1986 make clear that FERC is not to ignore the existence of the project in determining what conditions are appropriate to impose on the projects. To quote page 22 of the ECPA conference report, "In exercising its responsibilities in relicensing, the conferees expect FERC to take into account existing structures and facilities in providing for these nonpower and nondevelopmental values." So as to "10(j) conditions" and other fishery recommendations, the quoted DOC statement is not true—the baseline for existing projects is not "preproject."

Citing DOC correspondence, Congressman DINGELL stated that "fishway prescriptions can typically include stream flows, project shutdown periods, and other non-structural measures needed to ensure protection of migrating anadromous fish"—also Congressman STUDDS stated that "an appropriate fishway might consist of a spill over a spillway; controls on timing of project operations or project features such as gate openings; project shutdown as an alternative to the construction of a fish screen or where fish screen is not practicable; the safe passage flow over a barrier such as waterfall in a project area; \* \* \*"

The statutory language in the conference report of H.R. 776 specifically rebuts these wildly expansive interpretations of the definition of a fishway. The report language specifically says that fishways are "limited to physical structures, facilities, or devices \* \* \* and project operations and measures

related to such structures, facilities, or devices \* \* \*—section 1701(b). The point was to limit fishways—those items that can be prescribed under section 18—to physical structures designed principally for the safe passage of fish, and such flows needed to ensure the effectiveness of those structures. There is no fair way to read this language to include stream flows or project shutdown or spillway flows or project operations more broadly. Furthermore, to do so would be to eviscerate FERC's authority over the licensing process under part 1 of the FPA.

The PRESIDING OFFICER. Who yields time?

If no one yields time, the time will be taken.

The Senator from Nevada is recognized.

Mr. BRYAN. Mr. President, let me take another minute.

All that we have gone through for the last 2 hours is so unnecessary. I wanted to vote for this bill. I voted for it before. But when you get sandbagged at the last minute with no opportunity for people to present a case, to make it out, to be fairly heard, you have no real alternative but to do this.

I realize that from my colleague's point of view this appears to be a Nevada specific issue. But as I said at the outset of the debate, if they can do this to us today on a very popular bill that people want to vote on, they can do it to your State tomorrow.

I think that the precedent that has been established is an extremely dangerous one. To change a public health and safety standard without one bit of testimony is absolutely incredulous and irresponsible. There is no predicate for doing that.

The last time the issue was considered, in 1987, the DOE Administrator said the existing standards that were proposed in the eighties and temporarily set aside by the court could be met by fivefold. That is in the RECORD. I made it a part of the RECORD in the testimony by Mr. Vieth.

Let everyone understand that what we are talking about here is profit, money, and greed, not public health and safety, not fairness. We are subjected to this because the nuclear power industry is unwilling to provide health and safety standards which the Environmental Protection Agency believes are necessary to protect local health and safety.

As our colleague, the senior Senator from Florida, set out, this today, we are going to lose. I understand how the votes are going.

Let me suggest to the nuclear power industry, it is a Pyrrhic victory. What community in the world, what group of people in the world who are open-minded on the question of nuclear power, would begin to enter into any kind of an understanding only to be

told in midstream that the standards are going to be changed, that the rules of the game are going to be changed, simply because it may be too expensive to provide all the public health and safety standards that are necessary.

Mr. President, I yield the floor. I reserve whatever time I have left.

Mr. JOHNSTON. Mr. President, make no mistake about it, by this cloture vote by unanimous consent we have one cloture vote which will determine the fate of this legislation. If this cloture vote goes down, with it goes the support of the President, the support of Mr. Clinton, the support of the House, of the Senate, the Democrats, the Republicans, for the most comprehensive energy legislation ever proposed.

Mr. President, with respect to this radionuclide issue, I make four quick points.

First of all, this is not an issue that arose in the middle of the night that came into the conference committee. It was placed into this bill by the House of Representatives which set a standard. There exists no standard for radionuclide release, none at the present time. The previous standards were remanded to the Environmental Protection Agency, and the House set that standard.

This was in the conference. It was discussed in the CONGRESSIONAL RECORD in an open colloquy between myself and the Senators from Nevada. It was discussed privately.

Mr. President, this is not a middle-of-the-night issue. It is an issue that has hung around for a long time. It is a \$3.2 billion issue because if you had to comply with the previous standards, according to the DOE, it would take \$3.2 billion to design containers without any effect on human health.

Mr. President, the fix that the conference committee came up with is the right fix. What the conference committee said is there exists, recognizing that there exists no standard now—it commissioned the National Academy of Sciences, the most distinguished scientific group in the world, to come up within a period of 1 year with a study on radionuclides and on the ability to keep people out of the site.

The Environmental Protection Agency based on that study then is to come up with the standards.

Mr. President, the National Academy of Sciences will make a report on the science, not on the policy, and the EPA will make a policy judgment. The National Academy of Sciences through their president says it will not be their role to fix the standard but rather to give advice with respect to the science, and the EPA says that this will be helpful to them. The report of managers says it does not in any way restrict the discretion of the Environmental Protection Agency.

Mr. President, how in the world anyone can disagree with having a sci-

entific standard studied by the National Academy of Sciences, their advice given to EPA, and EPA make the policy judgment, how anybody can object to that, I do not know unless the motive is as opposed to human health—

The PRESIDING OFFICER. The Senator's time has expired.

Mr. JOHNSTON. Mr. President, I urge my colleagues to vote for cloture. It is our last chance on the energy bill.

Mr. BRYAN. Mr. President, very briefly, the Senator from Louisiana is correct. The House brought to the conference committee this issue. What the House intended to do was to republish the standards that had been temporarily set aside by the court in 1987, if memory serves me correctly.

That standard was based upon the population standard. We accept that, no problem. That represented no fundamental change in the law. What he is talking about is changing the program and also the public health standard. It is also contended here that the EPA has full authority and full discretion.

Mr. President, look at the plain language of the statute. All of the oratory, all of the words, all of the letters cannot change the plain intent of the statute. The statute says the EPA will be bound to come up with whatever the recommendations are of the National Academy of Sciences. We do not object to the National Academy of Sciences making recommendations.

But we surely ought to object, as a body, to having the National Academy of Sciences, which is not a regulatory body, it is comprised of some private citizens, some public citizens, and to have them, in effect, gag, bind, and muzzle the EPA even though the EPA may feel that a much different standard would be appropriate for Yucca Mountain.

That is what we are talking about, health and safety, fundamental policy changes that have never been considered in public but rather done very surreptitiously in the conference, with only very few people there, with no testimony, and no opportunity to be heard.

I urge my colleagues to oppose the cloture petition.

I yield the floor, and I yield back any time I may have.

#### CLOTURE MOTION

The PRESIDING OFFICER. All time has expired.

Under the previous order, the clerk will state the motion to invoke cloture.

The legislative clerk read as follows:

#### CLOTURE MOTION

We, the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, hereby move to bring to a close the debate on the conference report on H.R. 776, the National Energy Policy Act:

George Mitchell, Daniel K. Akaka, Edward M. Kennedy, J. Bennett Johnston, Daniel K. Inouye, Jeff Bingaman, Timothy E. Wirth, Wendell Ford, Bill Bradley, Lloyd Bentsen, John Breaux, Clairborne Pell, Jay Rockefeller, Malcolm Wallop, Charles S. Robb, David L. Boren.

### CALL OF THE ROLL

The PRESIDING OFFICER. By unanimous consent, the quorum call has been waived.

### VOTE

The PRESIDING OFFICER. The question is, Is it the sense of the Senate that debate on the conference report accompanying H.R. 776, the Energy bill, shall be brought to a close?

The yeas and nays are required.

The clerk will call the roll.

The legislative clerk called the roll.

Mr. FORD. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Vermont [Mr. LEAHY], and the Senator from North Carolina [Mr. SANFORD], are necessarily absent.

Mr. SIMPSON. I announce that the Senator from Missouri [Mr. BOND], the Senator from North Carolina [Mr. HELMS], the Senator from Vermont [Mr. JEFFORDS], the Senator from Wisconsin [Mr. KASTEN], and the Senator from Alaska [Mr. MURKOWSKI], are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska [Mr. MURKOWSKI] would vote "Nay."

The PRESIDING OFFICER (Mr. ADAMS). Are there any other Senators in the Chamber desiring to vote?

The yeas and nays resulted—yeas 84, nays 8, as follows:

[Rollcall Vote No. 266 Leg.]

#### YEAS—84

Adams	Exon	Metzenbaum
Akaka	Ford	Mikulski
Baucus	Fowler	Mitchell
Bentsen	Garn	Nickles
Biden	Glenn	Nunn
Bingaman	Gorton	Packwood
Boren	Gramm	Pell
Bradley	Grassley	Pressler
Breaux	Harkin	Pryor
Brown	Hatch	Riegle
Bumpers	Hatfield	Robb
Burdick, Jocelyn	Heflin	Rockefeller
Burns	Hollings	Roth
Byrd	Inouye	Rudman
Coats	Johnston	Sarbanes
Cochran	Kassebaum	Sasser
Cohen	Kennedy	Seymour
Conrad	Kerrey	Simon
Craig	Kerry	Simpson
Cranston	Kohl	Smith
D'Amato	Lautenberg	Specter
Danforth	Levin	Stevens
Daschle	Lieberman	Symms
DeConcini	Lott	Thurmond
Dixon	Lugar	Wallop
Dodd	Mack	Warner
Dole	McCain	Wirth
Domenici	McConnell	Wofford

#### NAYS—8

Bryan	Graham	Shelby
Chafee	Moynihan	Wellstone
Durenberger	Reid	

#### NOT VOTING—8

Bond	Jeffords	Murkowski
Gore	Kasten	Sanford
Helms	Leahy	

The PRESIDING OFFICER. On rollcall number 266, the cloture motion on the conference report to H.R. 776, the yeas are 84, the nays are 8. Three-fifths of the Senators duly chosen and sworn having voted in the affirmative, the motion is agreed to.

Mr. JOHNSTON addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas.

#### PELLETIZED WASTE PAPER

Mr. BUMPERS. Mr. President, I would like to engage the distinguished chairman of the Energy and Natural Resources Committee in a colloquy concerning a relatively new technology which, consistent with the energy bill's goal of promoting the development of renewable energy technologies, will have a positive impact on reducing both our Nation's reliance on fossil fuels and the problems associated with solid waste disposal and recycling. Ashley County, AR has unveiled a visionary new program that will turn discarded paper into fuel pellets for existing industrial boilers. The county is constructing a rural recovery facility capable of traditional product-to-product recycling as well as waste paper recycling into fuel pellets. Waste from area homes and businesses will be collected and separated. The glass, plastic, and marketable papers will be recycled, while the nonmarketable paper will be pelletized. A local pulp and paper mill in the county is committed to providing a market for all of the pellets produced in this facility. The pellets will be sold at a profit, benefiting the local taxpayers.

Like many local governments across the Nation, Ashley County is facing new recycling and landfilling regulations and few existing options to meet its needs. Its 25,000 residents generate nearly 40 tons of trash daily, all of it sent to a single landfill. By pelletizing low-quality paper once destined for that landfill, Ashley County will transform 25 percent of its daily waste into energy. When combined with recycling efforts, this initiative will triple the lifespan of the county's landfill. In short, they are going to turn waste paper into energy.

This kind of innovative, market-based program can transform the paper that is disposed of in landfills every year into clean, renewable fuel and can be a strong contributor to America's energy independence. Pelletized paper fuel is priced competitively with coal and other solid fuels when considering the avoided cost of landfilling the waste paper. When you stop and consider that, in spite of massive investments in new recycling mills, roughly 40 percent of what is found in landfills is paper, it is easy to see that the paper recycling market, in particular, must

be expanded to include alternative uses for low-quality waste paper. Contaminated by coatings, glues and other impurities, this discarded paper includes such things as cereal boxes, magazines, colored paper and junk mail—a mix of low-grade paper few recyclers want.

In addition, Mr. President, 50 million tons of pelletized paper would provide the energy equivalent of 153 million barrels of crude oil—enough to light every home in Arkansas for approximately 68 years. Some industrialized States with critical landfill woes, now trucking their waste into other States, could find the pelletizing option especially attractive. Their existing industrial boiler capacity and their population concentration offer great potential to fuel a new market. Waste paper pellets can be sold as a supplemental fuel to virtually any industrial facility or utility powered by a solid fuel boiler. The estimated market demand for recovered waste paper fuel is more than five times the projected supply.

As one of the first joint efforts to explore new recycling options for waste paper fuels, Ashley County's project offers a practical model for communities nationwide. By reaching beyond existing disposal options, we have an opportunity to put alternative energy into paper recycling. In doing so, we will be buying time, and saving space, for America's landfills.

Mr. JOHNSTON. I agree with the Senator. The use of pelletized waste paper as an energy resource could have significant benefits, such as reducing our Nation's reliance on nonrenewable fossil fuels and reducing the demand for space in our landfills.

#### JOINT VENTURES

Mr. FOWLER. As the chairman knows, several years ago I authored the Renewable Energy and Energy Efficiency Technology Competitiveness Act (Public Law 101-218). This important legislation leverages Federal funds to support research, development, and demonstration of renewable energy and energy efficiency technologies. The legislation has already had an impact on the ability of the renewable energy and energy efficiency industries to commercialize their technologies and services.

One of the clear goals of the Renewable Energy and Energy Efficiency Technology Competitiveness Act was the specific allocation of funds for renewable energy and energy efficiency joint ventures. These joint venture programs had a threefold purpose: To improve the coordination of technology development between Government and the renewable energy and energy efficiency industry; to facilitate technology transfer to the private sector; and to enhance the ability of domestic renewable energy and energy efficiency firms to compete with foreign enterprises.

Mr. JOHNSTON. I was pleased to assist the Senator from Georgia in his

landmark renewable energy legislation and to incorporate provisions into the Energy Policy Act that provide the Secretary with greater flexibility to implement the joint ventures program under Public Law 101-218.

Mr. FOWLER. During Senate floor debate on the fiscal year 1992 Energy and Water Appropriations bill last July, the chairman and the distinguished ranking minority member of that subcommittee, Senator HATFIELD, engaged in a colloquy as to how these joint ventures should be funded. At that time, the chairman stated that it was your belief that funds in the fiscal year 1992 energy and water appropriations bill could be used for the joint ventures established under Public Law 101-218.

Mr. JOHNSTON. That is correct.

Mr. FOWLER. As a result of that colloquy between the Senator and Mr. HATFIELD, representatives of the Solar Energy Industries Association met with Secretary Watkins and his staff at the Department of Energy. It is my understanding that during this meeting the Department committed to \$4 million reprogramming of fiscal year 1992 nonrenewable energy funds.

The Department of Energy recently sent Congress a reprogramming request to fund, among other things, the joint ventures program in Public Law 101-218. But, I am deeply troubled to report, that the portion of the reprogramming package dealing with joint ventures was never implemented since the Department proposed to tap into a funding source that was not feasible. Since the Department's initial reprogramming request, industry representatives and officials of the National Association of State Energy Officials have tried, in vain, to persuade the administration to send us an acceptable reprogramming request for these joint ventures.

Mr. JOHNSTON. I understand that the Advisory Board on Renewable Energy and Energy Efficiency Joint Ventures has issued a report to the Department that laid out criteria and implementation policies for carrying out an effective program. As a result of this report, the Department formally requested authorization to use a percentage of core renewable R&D funds under the fiscal year 1993 appropriations for carrying out a limited number of renewable energy and energy efficiency joint ventures.

Mr. FOWLER. The intent of the original legislation was not to rob core Federal research programs in order to finance commercialization programs. On the contrary, the intent was to supplement world class research and development activities with commercial applications that increase U.S. exports and create jobs here in the United States.

In order to fund the important programs in Public Law 101-218 and H.R.

776, the Energy Policy Act of 1929, I urge the administration to make every effort to fund these initiatives. I ask my colleagues to join with me in urging the administration to help us bring these renewable energy and energy efficiency technologies to the marketplace and create new jobs right here at home.

Mr. JOHNSTON. The renewable energy and energy efficiency provisions in H.R. 776 are built on the foundation laid by Public Law 101-218, I join my colleague from Georgia in urging the administration to request an appropriate reprogramming to carry out the program established by Public Law 101-218.

Mr. LIEBERMAN. Mr. President, I rise today to express my overall support for the energy bill, despite some concerns I have about the legislation.

I am supporting this bill because it includes significant provisions on energy efficiency, global warming, and renewable energy. In the words of James Wolf, executive director of the Alliance to Save Energy in a letter dated October 5, 1992, to Chairman JOHNSTON: "These—the energy efficiency provisions—will improve the environment, make housing more affordable, and enhance our competitiveness." Howard Geller, the executive director of the American Council for an Energy Efficient Economy states in a letter dated October 6, 1992: "The bill contains many valuable energy efficiency provisions which will save significant amounts of energy, save consumers money, and reduce pollutant emissions. The energy efficiency and renewable energy portions of the bill will help to move our nation toward a sustainable energy future." Representatives of the renewable energy industries stated in a letter also dated October 5: "America's emerging energy technologies are facing increased international competition in these billion-dollar markets of the future. With over \$15 billion in private investment in these energy sources in the past decade, the economic and environmental consequences of ignoring renewable energy would be staggering. H.R. 776 is vital to the sustained health of our industries."

I am also going to vote for cloture because of what this energy bill does not include.

Most importantly to me, this legislation does not include language which would open up the Arctic National Wildlife Refuge to oil and gas drilling. We fought a hard battle over whether the oil possibly under the Nation's premier wildlife refuge was needed to help ease our dependency on foreign energy supplies. I believe we made a sound decision that whatever oil might be there would not be enough to reverse our trend toward dependency on foreign oil. We decided that we needed to look elsewhere—and we did—toward energy efficiency and new technologies. The

Congress wisely decided not to spoil the last remaining arctic and subarctic ecosystem of its kind in the world.

There are, however, several provisions of the legislation which concern me, and I want to note my reservations.

First, I share the concerns of my colleagues and friends, Senators BRYAN and REID regarding the Yucca Mountain provisions. My concerns are both procedural and substantive. These provisions were not contained in either the House or Senate bills and there have been no hearings on the provisions. We do not know the views of the scientific community or other experts on the Yucca Mountain provisions. The failure to hold hearings is particularly meaningful because the legislation takes a new approach to setting standards: The National Academy of Sciences is delegated the authority to make findings and recommendations to EPA and NRC regarding standards for the protection of public health and safety. The legislation also sets criteria for the setting of standards which are a departure from current law. If these provisions had come before the Congress in a separate bill without the Environment and Public Works Committee holding a hearing, I would not have supported them. But they are here attached to an energy bill which I have worked on, been privileged to contribute to, and feel represents, on balance, a major accomplishment of this 102d Congress.

Second, I have concerns about the ramifications of the Coal Industry Retiree Health Care Act. While the goal of this provision, ensuring that retired mine workers receive the health care benefits they deserve, is undoubtedly important, I am concerned that the provision will severely and unnecessarily harm a number of coal companies and their employees.

As I indicated when I spoke on the Senate floor on this issue in July, I remain concerned about the ramifications for those companies that previously were signatories to a BCOA-UMWA agreement and now have separate agreements with the UMWA. In the case of the Pittston Co., headquartered in the State of Connecticut, they had negotiated a separate agreement with the UMWA which included a provision covering payments for retirees. The language that has been included in the energy bill abrogates that negotiated collective bargaining agreement, the result of a painful 14-month long strike. I do not think that Congress should be in the business of abrogating collective bargaining agreements, except in the rarest of circumstances. Congressional interference in the collective bargaining process, working to retroactively alter the terms of contract, could have troubling long-term repercussions. If both sides believe there is always the option

to turn to the Congress to alter a contract, what incentive is there to negotiate in good faith?

I am also concerned that this provision will pose serious economic difficulties for those companies which export most of their coal. These companies cannot pass these additional costs through on the international market and continue to compete, while those coal companies that sell to domestic utility companies have contracts which allow them to pass through Government-mandated costs to consumers. Last year, Pittston exported approximately 70 percent of the coal it mined. These exports are critically important to our country's economic strength, particularly at a time when we should be bolstering, not undermining, our companies' capacity to do business abroad.

I hoped that there would be an opportunity in conference to amend this proposal to include an export credit for those payments mandated by the provision, which would not have impeded the goal of caring for the retired mine workers. Unfortunately, the bill as reported out of conference does not contain an export credit. As noted above, it is difficult for companies to compete on the international market if they are burdened by excessive Government fees or taxes. If these companies cannot continue to export coal it is their employees who will suffer, as well as the rail and port employees who currently move this coal around the United States and overseas.

I congratulate Senators FORD, ROCKEFELLER, and BYRD for their tireless efforts to reach a compromise to ensure that innocent retirees are protected. I certainly support their goal. I do hope, however, that early next year we will make an equally strong effort to ensure that the funding mechanism devised for the program is equitable and will not result in companies being driven out of the export market and perhaps out of business.

Third, I supported on the Senate floor a different approach to nuclear licensing which involved more public participation.

Now, Mr. President, let me now turn back to some of the key provisions of the bill which I strongly support.

First, I am especially pleased about the provision in this bill which establishes a system for corporations to register current emissions of greenhouse gases and allows them to record reductions in greenhouse gases for inclusion in a national data base. This provision will allow Government to recognize the achievements of American businesses who are taking steps to reduce the emission of greenhouse gases. Major utilities, natural gas producers, appliance manufacturers, forest companies, and others have taken voluntary steps to stop the growth of greenhouse gas emissions. Under this provision, these

companies can request the Federal Government to approve their reductions for inclusion in the greenhouse data base.

This provision was drawn from S. 1605 of the House bill, proposed by Congressmen COOPER and SYNAR, and it is derived from the Carbon Dioxide Offsets Efficiency Act, which Congressmen COOPER and SYNAR introduced in the House, and which I introduced with Senator CHAFEE in the Senate. I congratulate Congressmen COOPER and SYNAR and their staff for outstanding work in building a coalition of support from both the environmental and industrial community. I also extend my appreciation to Senators JOHNSTON and WIRTH and their staff, particularly Leslie Black Cordes and David Harwood, and to the Environmental Defense Fund for its help in developing and advancing this proposal. I was pleased to join them in playing a role as an advocate of this provision.

This is a relatively simple proposition. But it's an example of how environmental legislation is good for both the environment and American businesses. As an editorial in "The New Republic" states: "This measure could allow the United States to meet Rio's first-round greenhouse goals more quickly than first thought—and with scant dislocation." Let me give some examples of how the provision could benefit American industry.

Last spring, Mayor Bradley of Los Angeles announced that the Los Angeles Department of Water Power and the Southern California Edison Co. had pledged to reduce carbon dioxide emissions by 20 percent by the year 2010 with at least half of those reductions to be achieved by the year 2000. The program will actually reduce carbon dioxide emissions by more than 40 percent when compared with projected levels. The chairman of Southern California Edison stated in making this commitment:

Taking prudent, reasonable economic steps to reduce CO<sub>2</sub> emissions are warranted by current scientific understanding of the potential for global warming. We believe our actions make good environmental, scientific, and business sense.

Other companies, such as the AES Corp. and New England Electric, have made corporate commitments to offset greenhouse gas emissions. Working with the World Resources Institute and other conservation groups, AES has designed carbon sequestration projects to offset its carbon released from new power plants. New England Electric has announced a plan to lower or offset its air emissions by 45 percent by the year 2000, including a net reduction of approximately 3 million tons of carbon dioxide.

Under S. 1605 of this energy bill, companies engaged in these types of activities will be able to demonstrate that the Federal Government should ap-

prove their reductions for inclusion in the data base.

I believe this provision removes a disincentive facing U.S. firms seeking to reduce voluntarily their greenhouse gas emissions. Without this provision, those firms will not have an official data base which can be used by these firms to demonstrate achieved reductions of greenhouse gases. The simple accounting mechanism removes this disincentive by recognizing positive steps to reduce greenhouse gas emissions.

The provision also preserves American competitiveness as the United States seeks to meet its international obligations under the Rio agreement and potential future agreements. Historically, the United States has struggled to demonstrate that past achievements deserve credit as international emissions levels are negotiated. With this section, our negotiators will be able to demonstrate conclusively the real reductions by U.S. firms.

The conferees streamlined some of the details of the program, giving more discretion to the administration in implementation. Proper implementation is critical. Since the United States has committed in the Rio convention to report our actions for international review, I am confident that the agencies will implement these programs appropriately.

I am also pleased that the public will be given a full opportunity to participate in this new program. Clearly, the value of this program for many firms is the recognition for making real, bona fide reductions in greenhouse gases. Public input in the development of guidelines and in the review of reduction claims lends substantial credibility to the reduction claims and consequently, adds to the value of a firm's participation. Of course, I recognize and agree with the conference committee's interest in protecting vital trade secret information from public disclosure. However, it is clear that this provision affords the public an opportunity to review emission reduction claims within these understandable trade secret constraints.

Second, this legislation takes large leaps forward in the field of energy conservation in many sectors, including the Federal Government, commercial and industrial equipment, buildings and utilities. In the letter to Senator JOHNSTON mentioned above, James Wolf, executive director of the Alliance to Save Energy, further stated:

The Alliance to Save Energy strongly supports passage of H.R. 776, the Energy Policy Act of 1992. The bill contains many significant provisions that promote energy efficiency, ranging from efficiency standards on products, to improved building codes, to energy efficiency mortgage programs. These provisions will improve the environment, make housing more affordable, and enhance our competitiveness. The tax section of the bill contains important provisions that will

encourage the use of renewable and efficiency resources.

One important omission in the energy efficiency area is auto fuel economy standards and I hope we will pass legislation in that area next Congress.

I would like to note particularly the provisions on Federal Government energy conservation drawn in part from S. 417, legislation I introduced at the beginning of the Congress requiring the implementation of energy conservation measures with payback periods of 10 years or less.

The Congressional Office of Technology Assessment estimates that the Federal Government spent nearly \$4 billion in fiscal year 1989 for energy in Federal facilities. OTA further estimates that commercially available, cost-effective measures including high efficiency lighting and carefully operating heating, ventilating, and air-conditioning systems could save 25 percent of that cost without any sacrifice in comfort or productivity.

Yet our own Federal Government has failed to implement conservation measures in its facilities that would ultimately save the taxpayers billions of dollars. There is really no excuse for that. OTA points out that inefficient and costly lighting is still common throughout the millions of square feet of office space owned or leased by the Federal Government and its contractors. The Department of Energy has admitted that just reducing Federal lighting energy needs by 25 percent would save taxpayers up to \$930 million per year.

The legislation also requires the Secretary of Energy to promulgate regulations for the use of energy performance contracts with which the Federal Government can tap private sector funding for Federal Government energy efficiency improvement. I included similar provisions in S. 417. For the past 15 years, State and local governments have been retrofitting government buildings with energy conservation improvements without any capital investment. Our friends at the State and local government levels have been taking advantage of beneficial public-private partnerships. These arrangements can mean that a private energy company can come in and make a contract with a Federal agency to install and pay for energy conservation measures. The Federal agency would not be required to make any expenditure and the amount the Federal Government has to pay for electricity would be immediately reduced because of the energy conservation measures. Private companies can recoup their investment from energy savings resulting from the energy improvements.

The provisions on Federal Government energy conservation are as close to a win/win situation as I can imagine and should go a long way toward ensuring that the Federal Government is a

model energy consumer. We should set an example in energy efficiency for the rest of the country to take note and follow. I want to commend Senators JOHNSTON and WIRTH and their staff, Alan Stayman and David Harwood, for their outstanding work in putting together this title. I would also like to extend my congratulations to the Alliance to Save Energy and the American Council for an Energy Efficient Economy for successfully working with industry to reach agreement in so many areas.

Third, I strongly endorse the provisions in the legislation which will improve the hydroelectric regulatory process, specifically those which recognize the importance of the State's role in balancing the protection of river and parkland resources with the need for energy. These provisions are particularly important to the State of Connecticut. I'm pleased that FERC will now be required to give extra weight during the hearing process to the decisions States have already made concerning protection of rivers and parks.

Finally, other provisions in the legislation, including those ensuring: First, States are not restricted from regulating the disposal or incineration of radioactive waste regardless of the actions of the Nuclear Regulatory Commission; second, strengthened protection for whistleblowers at federally licensed facilities; and third, tax exclusions for utility conservation rebates, are also important to my constituents.

They say that politics is the art of compromise, and the same could be said of this bill. While I have objections to certain provisions in this bill, which I have addressed here, on the whole, I think this bill is made of sound measures which will work to enhance our Nation's energy policy enormously and I congratulate all those who labored to bring it forward.†

Mr. RIEGLE. Mr. President, I rise in support of the Comprehensive National Energy Policy Act because of the provisions contained in title VII of this Act. Title VII contains significant amendments to the Public Utility Holding Company Act and amends the Federal Power Act to broaden access to the electric transmission facilities in this country. It is important to note that PUHCA is a securities statute under the jurisdiction of the Banking Committee, which I chair. I have spoken on this legislation previously and will not repeat all of my remarks today. There are a few points that I do want to make.

Title 7 is intended to accomplish a restructuring of the utility industry to promote greater competition for the benefit of energy customers. By keeping the energy market competitive, the United States can maintain and improve its place in the global economy by making low cost reliable electric power available to industry. Residen-

tial consumers also benefit by ensuring low cost reliable power—electricity is one cost families cannot avoid. We must take steps to ensure that the necessities of life are affordable for U.S. families. Title III accomplishes these goals by simultaneously easing the regulatory burden on electric generators and improving access by all utilities to the country's electric transmission grid.

There are international implications to the bill before us today. New section 33 of PUHCA will allow U.S. companies, utilities and nonutilities, to enter the utility business—that is generation, transmission, and distribution—outside the United States is without complying with the provisions of PUHCA. I believe this provision will allow the United States to compete globally in the utility area—an industry that the United States is considered pre-eminent. There are also indications that U.S. companies—and U.S. labor—to produce the massive materials needed for energy generation, transmission, and distribution. I support this provision as a means of improving U.S. international competitiveness and producing more jobs in the United States.

I worked hard with my friend, the chairman of the Energy Committee, to ensure that this amendment contained strict consumer protection provisions so that ratepayers of a domestic utility would not bear the risk of a foreign investment by the utility company serving that ratepayer. I think that we have achieved this goal. Section 33 contains stringent firewalls that prevent a public utility from using its assets or resources for the benefit of an affiliated foreign utility company. In some instances, a subsidiary of a public utility is also prohibited from assisting an affiliated public utility.

Both the State public service commissions and the Federal Government have a role in the regulation and oversight of investments in foreign utility companies. Section 33 contains a careful balance between State and Federal regulation, and appropriate regulatory structures for registered holding companies and exempt holding companies.

I want to say a word about State regulation. Holding companies that are exempt from PUHCA are prohibited from becoming affiliated with a foreign utility company unless that appropriate State commissions certify to the SEC that the State commission "has the authority and resources to protect ratepayers subject to its jurisdiction and that it intends to exercise its authority." I hope and expect that State commissions will carefully analyze their statutory authority and resources before making such a certification. Domestic ratepayers are relying on these State regulators to protect the ratepayer from risks that may be associated with foreign investments. Further, if the State's jurisdiction is

changed, or there is a change in circumstances such that the State commission no longer has the resources to support the certification, the certification may be withdrawn.

Having said this, however, the State should not use their certification authority for purposes outside the scope of the statutory language. A State should not refuse to submit a certification or withdraw a certification already filed to gain leverage over a utility on issues entirely unrelated to issues connected with investments in foreign utility companies. Further, such certification goes to the State's jurisdiction and intention to exercise its jurisdiction—it is not a case-by-case certification required for specific transactions but rather a certification applicable to all utilities under that State's jurisdiction.

Similarly, under section 33, the Securities and Exchange Commission is directed to promulgate rules or regulations regarding registered holding companies' acquisitions of interests in foreign utility companies. These regulations must provide for the protection of the customers of a utility company associated with a foreign utility company as well as the maintenance of the financial integrity of the registered holding company system. These are responsibilities that the SEC is well suited to perform, especially in light of its investor or protection responsibilities in the financial system. If the SEC requires additional resources to fulfill these obligations, I know they will make the appropriate requests. As chairman of the Banking Committee, I will continue to work with the SEC to ensure that the Commission effectively discharges its responsibilities.

I want to take this opportunity to clear up any ambiguity about the timing of registered holding company investments in foreign utility companies. Subsection (c)(1) makes clear that a registered holding company may invest in foreign utility companies "as of the date of enactment of this section." Clearly, the SEC will not have promulgated its rules or regulations about such investment immediately upon enactment of this section. Thus, there will be a time period during which registered holding companies may invest in foreign utility companies in the absence of SEC rules or regulations. I note, however, that even during the time period between the date of enactment and the issuance of SEC rules or regulations, registered holding company financing is fully regulated under subsection (c)(2) and the consumer protection provisions of subsections (f) and (g) fully apply.

The conferees decided to allow the existence of this regulatory gap because there are immediate, and fleeting, market opportunities for U.S. companies. Around the world, countries are privatizing and upgrading

their energy networks, often seeking bids from U.S. companies to build and maintain these systems. We do not want to impose Government barriers to these historic opportunities.

Nonetheless, it is expected—and Congress will demand accountability—that the registered holding companies, which are extensively regulated on such matters as the issuance of securities, will use this leeway carefully and responsibly. Further, I anticipate that the SEC will publish temporary or proposed rules or regulation which, though not binding, would be followed by the registered holding companies. I urge the SEC to move as quickly as possible on this matter.

While section 33 is important, we must remember that international activities by utilities is permitted under current law. Specifically, under current law, the Securities and Exchange Commission has authority to permit, on a case-by-case, utility functions outside the United States. Further, new section 32 of PUHCA allows exempt wholesale generators located outside the United States to engage in both wholesale and retail generation. The provisions of section 33 supplement these foreign options for utility operations and do not in any way limit the ability to pursue the SEC approval under current law or the EWG course. We must remember that the purpose of section 33 is to facilitate foreign investment, not burden it. In order to enhance our competitive posture in the worldwide energy market, persons proposing to invest in foreign jurisdictions may rely on any lawful exemption, as subsection (d)(1) makes clear.

There has been some discussion regarding the meaning of section 32(h)(6). The chairman of the Energy Committee has indicated that under section 32(h)(6) the SEC may, prior to the promulgation of final rules, issue proposed or temporary rules, and registered holding companies may operate pursuant to those proposed or temporary rules until final rules are effective. The SEC and affected persons may continue to rely upon and proceed on the basis of such temporary or proposed rules if the promulgation of final rules is delayed beyond the 6-month deadline contained in section 32(h)(6). As chairman of the Banking Committee, which has jurisdiction over the Public Utility Holding Company Act, I concur with this interpretation.

In closing, I want to commend the senior Senator from Louisiana for his leadership on this issue. Over the last 2 years, there have been times where he and I disagreed on fundamental aspects of PUHCA reform, such as the need for transmission access and strong provisions to prevent self-dealing and cross-subsidization between a utility and an affiliated EWG. Yet, we have always worked together, found our common ground and achieved policy results that

are in the broad public interest. I would be remiss if I did not single out William Conway of the Energy Committee staff for his dedication and intelligence. Without Bill's efforts, we would not be here today. Mr. Chairman, he is a credit to you and the Energy Committee. With that, I offer my congratulations and my support for this legislation.

(At the request of Mr. DOLE, the following statement was ordered to be printed in the RECORD:)

• Mr. MURKOWSKI. Mr. President, today we will vote to invoke cloture on the National Energy Policy Act of 1992. I do not believe the legislation before this body represents a balanced approach to a national energy strategy and therefore I cannot support the motion to invoke cloture.

This legislation does not offer any major incentives for the domestic oil and gas industry, an industry struggling for survival in America.

This legislation does not include language that would authorize environmentally sound exploration and development on the coastal plain of the Arctic National Wildlife Refuge.

During the conference negotiations of the so-called national energy strategy almost all of the provisions important to Alaskans were stripped from the bill.

Cancellation and buyback of North Aleutian Basin oil and gas leases was passed out of the Senate but stripped from the bill before us.

Two important ANWR/industry provisions to study the economic impact of opening the ANWR coastal plain to oil and gas exploration and development were passed out of the Senate but stripped from the bill.

Funding for Arctic research was passed out of the House but stripped from the bill.

A provision to prevent the TAPAA fund from being the exclusive remedy for claims arising out of the *Exxon Valdez* oilspill was passed out of the House but stripped from the bill.

A provision to make Alaska OCS subject to ANILCA 810 subsistence review was passed out of the House but stripped from the bill.

A provision to allow subsistence claims against the TAPAA fund was passed out of the House but stripped from the bill.

Revenue sharing for State and local governments from OCS revenue sharing was passed out of the House and Senate but stripped from the bill.

And \$50 million in *Exxon Valdez* settlement funds to be directed for land acquisition in Prince William Sound was passed out of the House but stripped from the bill.

The energy bill conference was very frustrating since the Alaska delegation came so far and then could not reach agreement with the conference leadership on the many issues of importance to Alaskans.

This energy bill fails Alaskans on too many critical issues and I cannot support it.

The major provisions have been stripped. There is no Bristol Bay buyback, there is no protection for the rights of the fisherman and subsistence of Prince William Sound, and there is no subsistence review of the OCS. This so-called energy bill belongs to the special interest of the lower 48.

The facts are on the table.

I am deeply disappointed with the results of the energy bill conference. The House and Senate Democratic leadership's failure to address the rights of Alaska fishermen and subsistence users, and the failure of the conferees to accept legislation to protect the future of Bristol Bay leaves me with only one option.

I did not sign the conference report on the National Energy Policy Act and I will not support this legislation on the Senate floor.●

Mr. STEVENS. Mr. President, the Senate version of the national energy bill contained three site specific exemptions for three small hydroelectric projects from jurisdiction of the Federal Energy Regulatory Commission in Alaska.

These FERC exemptions were adopted by the Senate based on testimony from the Department and FERC that the purpose of FERC jurisdiction is to ensure that projects which have an effect on interstate commerce are regulated and integrated into interstate systems of power distributions. Furthermore, the Department of Energy and FERC testified in favor of a complete exemption from FERC jurisdiction for any project which generates power of 5 megawatts or less. Based on that testimony, the Senate adopted these three exemptions for the Alaska projects at the request of Senator MURKOWSKI.

In conference, a compromise provision, section 2407, was adopted that retained the FERC jurisdiction, but granted FERC authority to exempt these three projects. This exemption authority requires FERC to act within 6 months on an application for exemption. The application must be for a project which generates no more than 5 megawatts of installed capacity and may include terms and conditions which FERC finds necessary after consultation with specifically named fish and wildlife management agencies.

Mr. President, I want to personally thank the distinguished chairman and ranking member of the Senate and House Energy Committees. It was with their help that this compromise provision was adopted. They understood the special nature of these three projects and worked with us to come up with this solution. This provision will ensure that these three projects will receive the expedited consideration they deserve.

The project in Juneau with preliminary permit No. 10681-000 has an application for ancillary hydroelectric facilities to be constructed with a dam which will be built for another purpose, the creation of a tailings dam pond. The actual impoundment will be built with or without the hydro facilities. That impoundment will be approved as part of the ongoing NEPA EIS process which governs the opening of a mine at Juneau known as the Alaska-Juneau mine. The EIS for mine construction including the dam itself has been prepared by BLM.

The FERC law and procedure prevented the consolidation of the EIS and a FERC licensing procedure—in effect requiring a second EIS for the hydro license even where the actual facilities are very minor compared to the dam's actual construction. This exemption application process will prevent a second multiyear permitting process conducted by FERC particularly since all of the same resource and fish and wildlife agencies are consulting agencies as part of the mine and dam construction EIS.

The other two projects are less than 1 megawatt plants—one to provide electrical power to three remote Native villages of Illiamna, Newhalen, and Nondalton and the other to provide electrical power to the private non-profit Sheldon Jackson College from an existing dam near Sitka.

The one thing all three of these hydroelectric projects have in common is that they will all replace the use of diesel fuel for electrical power generation. The only result of the failure to grant the exemptions will be the use of fossil fuels in an environment in which a dam has already been constructed or where only a small amount of water is being diverted.

Mr. HATFIELD. Mr. President, many times in the last 20 years, the U.S. Congress has been called to action by the need to reduce America's dependence on fossil fuels. Like the energy crises of the 1970's, the Persian Gulf war of 1990 and 1991 catapulted the need for energy security back to the forefront of public concern. This interest, however, has been short-lived. No visible energy crisis is at hand. No lines are forming at gas pumps across our Nation. In fact, gas prices remain at just a little over \$1 per gallon—a price which is virtually unchanged since the mid-1980's.

So what's all the fuss about? Why is a national energy strategy so important? Gas is cheap and abundant, and concern about energy remain buried at the bottom of public opinion polls across the Nation. Education, health care, child care, and crime are the current priorities of people's lives. And while all of these areas are imminently significant in the lives of Americans, a future crisis over our Nation's lack of a diversified energy infrastructure still

looms large, even in the shadow of a war which was fought and won for access to oil.

In response to the impending threat of a new energy crisis, the Congress and the Bush administration embarked on a journey to boldly move America's energy policies forward. In 1989, Secretary of Energy Jim Watkins took the helm at the Department of Energy with the promise to shake things up and streamline the bureaucracy. Shortly after accepting his new post, Admiral Watkins and his staff held hearings all across the country with the goal of developing a National Energy Strategy. After 2 years of research and development this strategy was sent to Congress and the public.

Even before the admiral released his plan, however, my esteemed colleagues from the Senate Committee on Energy and Natural Resources, BENNETT JOHNSTON and MALCOLM WALLOP, were developing a national energy plan of their own. As the committee considered the Johnston/Wallop package in early 1991, a unique partnership formed with the administration and a highly credible energy plan was eventually developed by the Senate and the House of Representatives.

Our Nation cannot afford to allow this energy plan to slip through the cracks during the last days of the 102d Congress. Certainly, every Senator cannot support each and every title in this bill. I, too, have a number of concerns regarding the bill, including its streamlined nuclear licensing provisions and its lack of increased corporate average fuel economy standards. Nonetheless, I will support the bill because it is good for our Nation's energy security. Its implementation will help reduce our Nation's dependence on foreign sources of oil by encouraging investment in clean, efficient, renewable energy technologies, expanding energy efficiency and conservation programs, and pushing for the diversification of domestic energy use and domestic energy exploration.

The national energy strategy bill conference report also contains several provisions specifically designed to improve energy efficiency and water conservation in the Pacific Northwest. One such provision permits the Bonneville Power Administration to enter into agreements with the Secretary of the Interior and the Secretary of the Army to directly fund energy efficiency improvements and operation and maintenance costs at existing Columbia River hydrofacilities. This provision will benefit the Pacific Northwest in a number of ways. First, it will help increase the reliability of existing Corps of Engineers and Bureau of Reclamation hydroprojects. Second, it will allow BPA to produce more energy with less water, thus leaving more water in rivers and streams for fish. And finally, the provision will save the Pacific

Northwest ratepayers \$400 million in energy costs over time.

America's future depends on the wise stewardship of our domestic energy resources and our unwavering commitment to a balanced energy plan. The U.S. Congress has before it the opportunity to change the course of American energy use from a history of consumption to one which balances conservation, energy efficiency, and renewable energy development with the wise use of domestic energy resources. I am confident Congress will meet this challenge today and in the future.

Again, I thank the chairman and ranking member of the Energy Committee and look forward to passage of the conference report on H.R. 776.

Mr. BUMPERS. Mr. President, it is with some reservations that I rise today in support of the Energy Policy Act. Approximately 1½ years ago when we started the process in the Senate Energy Committee of putting together an energy bill, I was hopeful that Congress would finally enact a comprehensive national energy policy that would, first, significantly reduce our Nation's reliance on foreign sources of oil, second, promote energy conservation and the development of renewable, environmentally sound, sources of energy, and third, produce real competition in our energy markets for the benefit of consumers. While the bill we have before us today is certainly a step in the right direction, I am disappointed that we were unable to do more to resolve some of our Nation's energy problems.

Mr. President, I would like to take this opportunity to comment on several provisions of the bill:

#### ALTERNATIVE FUELS

The transportation sector is the biggest source of oil consumption in the United States. One of the most promising titles of the bill promotes the use of alternative vehicle fuels. We have a chance to make a real dent in our reliance on foreign oil through the use of alternative fuels such as natural gas, ethanol, methanol, electricity, and propane. The use of these fuels would have the benefit of not only reducing oil consumption, but also would reduce carbon dioxide emissions and global warming, while I am disappointed that more of the Senate bill's—more comprehensive—alternative fuel vehicles title could not be retained in conference, I am hopeful that the bill's provisions will spur the production and use of alternative vehicle fuels.

#### ENERGY EFFICIENCY AND RENEWABLE RESOURCES

Perhaps the greatest contribution which Congress can make toward our national energy security is the promotion of energy conservation. The potential benefits, in terms of energy savings and the reduction in the emission of pollutants related to the combustion of fossil fuels, is enormous. The energy bill taps into a small, but significant,

part of this potential through the establishment of certain energy efficiency standards for the Federal Government, office buildings, and homes. I hope that we can build on this in the future to meet our energy efficiency potential.

The use of renewable resources for the generation of electricity has similar benefits. Currently, less than 10 percent of the electricity produced in the United States comes from renewable resources. I believe that we can, and, if we are serious about reducing our reliance on foreign oil and fossil fuels, must substantially increase this percentage. The energy bill's production incentives and research and development provisions will certainly lead us toward that direction.

#### ELECTRICITY

When Congress began consideration of the energy bill, I had certain reservations about amending the Public Utility Holding Company Act [PUHCA] to permit utility holding companies to own exempt wholesale generators [EWG's]. However, as time went on, I became convinced that, if done correctly, the promotion of EWG's could increase competition in wholesale electric generation, thereby reducing rates for consumers. Additionally, I came to believe that true competition in electricity generation could not occur if those generators without transmission facilities did not have the ability to transmit their power where needed. On the whole, I believe the energy bill creates the potential for real competition which will benefit ratepayers.

However, the ability of customers of utility subsidiaries of holding companies registered under PUHCA to realize these same benefits remains very precarious. The 1988 U.S. Supreme Court ruling in the Mississippi Power & Light case made uncertain the ability of State regulatory commissions with retail authority over subsidiaries of registered holding companies to oversee certain transactions between holding company affiliates. While the so-called Pike County doctrine enables State regulators to oversee utility wholesale purchases, it is uncertain whether similar authority applies to State regulators of registered holding company subsidiaries. I had hoped that we would be able to resolve this problem by authorizing State regulators of registered holding company utilities to oversee holding company resource planning. However, the registered holding companies were able to put a stop to this effort.

In addition, Mr. President, I want to express my grave concerns about a provision in the bill permitting utility investments in foreign utility ventures. A provision included at the 11th hour in the conference committee with very little debate, would amend PUHCA to permit utilities and utility holding companies to invest in foreign utility

companies. For utilities and utility holding companies which are not associated with a registered holding company, each affected State regulatory commission would have to certify that it has the authority to protect ratepayers from the adverse impacts of these foreign investments and that it intends to do so. However, customers of registered holding company utilities would not be similarly protected. Instead, these State commissions are permitted only to file comments with the Securities and Exchange Commission [SEC] which must decide whether consumers will be protected.

While allowing utility companies to engage in foreign investments, with the proper consumer protections, might not be a bad idea, the process with which this provision was included in the energy bill exemplifies why the American people are so angry with Congress. No hearings were ever held, neither the House nor the Senate ever debated, or voted, on the provision, and the proponents of the provision waited until the final day of the energy bill conference to reveal their intentions. Mr. President, this is not a minor change in the law. For 57 years, registered utility holding companies were required to focus their activities primarily on providing reliable and economic electric service to a single region of the country. This provision permits holding companies to put their ratepayers at significant risk through their participation in foreign investments. Most notably, ratepayers in the 23 States where registered holding companies operate, including my State of Arkansas, have been put in a perilous position. The SEC, an agency which has continuously proven itself unwilling to protect ratepayers has been made the sole source of consumer protection. I intend to introduce legislation next year which will ensure that ratepayers are adequately protected from utility foreign investments.

#### NATIONAL ENERGY STRATEGY

Mr. DOLE. Mr. President, I am pleased we have reached agreement on this important domestic initiative—the National Energy Policy Act. Many of us who were here in the Senate remember the oil embargoes of the 1970's and the catastrophic impact they had on our economy. This legislation will help move us in the right direction—toward the goal of greater emphasis on domestic energy sources. It is critical we do everything we can to protect and expand our domestic petroleum industry—particularly small stripper well producers who have found themselves facing abandonment of their producing wells at an alarming rate.

It is equally critical that we do all we can to encourage and produce domestic sources of alternative fuels like ethanol, natural gas, and propane to provide domestic substitutes for imported fuels.

Mr. President, I believe several provisions that I sponsored within this legislation will contribute to our domestic energy security.

My provision to give the President the authority to acquire oil from domestic stripper well properties for storage in the strategic petroleum reserve, if the President finds that declines in the production of oil from domestic resources pose a threat to national energy security, is an important step toward preserving this increasingly abandoned domestic production.

In Kansas, 5,000 producing stripper well properties were abandoned in the last 3 years—production that is lost forever. About three of every four producing wells nationally are stripper wells; 55 million barrels of oil each year is produced in Kansas from 45,000 stripper wells. We can no longer afford to ignore the importance of this domestic resource.

Likewise, it is well known that billions of barrels of oil are locked in the ground because they are either economically or technologically unable to be recovered.

My provision to establish a midcontinent energy research center—envisioned for the University of Kansas Energy Research Center—will aid in the development of petroleum recovery techniques and help reduce our foreign dependence on oil. Programs that the center will focus on will include reservoir management, advanced recovery methods and development of new technologies. It is the goal of the center to get this type of technology and research support directly to the driller.

I am also pleased that the conferees included my alternative fuels research initiatives. Under the act, the Secretary shall select certain commercial application projects including ethanol byproduct processes. It is important that this type of research be carried out so that the development of additional uses for ethanol and improved techniques that broaden the market for these domestically produced fuels and byproducts further our goal of energy self-sufficiency.

Mr. President, there is much we can be proud of within the energy bill. Of particular interest are the sweeping changes that were adopted affecting the electric utility industry. We are entering a brave new world of new competition that will be stimulated by the provisions of this bill. This new age of independent power producers that will now be able to build, own, and operate powerplants and sell electricity on a wholesale basis to utilities and municipalities anywhere in the United States, will certainly change the electricity generation business in the future.

I am confident that the conferees took into account the competing interests and needs of various groups such as municipal electric systems and rural electric cooperatives to see that they

were adequately protected under the newly emerging electricity title. I know that in Kansas, much attention was given to this title by our Kansas electricity producers. I appreciate the good faith effort by representatives of Western Resources, Kansas City Power & Light, Sunflower Electric Cooperatives, Kansas Electric Cooperatives, Kepco, Kansas Municipal Utilities, Kansas Municipal Energy Agency, Utilicorp and other producers to produce a dialog that I believe guided the committee toward its final result.

I will continue to monitor this process closely—particularly as FERC implements the actions of Congress—to see to it that these Kansas electric producers are treated fairly in the future.

Mr. President, it has been a long process. I commend my colleagues on the Energy Committee, particularly Senator JOHNSTON and Senator WALLOP, for the outstanding job they did with this legislation.

The tax provisions of this conference agreement include employer provided transportation benefits, incentives for clean fuel vehicles, credit for electricity produced from renewable resources, the repeal of the alternate minimum tax for depletion and intangible drilling costs for independent producers and royalty owners, a permanent investment credit for solar, geothermal, and ocean property, proportionality for alcohol fuels and the tax exempt financing for environmental enhancements of hydroelectric generating facilities.

This list reflects the sound, balanced approach taken by the Senate during consideration of the energy bill, as was indicated by the 93-to-3 vote for that bill. The adoption of this conference report will mean an energy policy balanced between all fuel sources whether renewable or not, and balanced between environmental protection and national energy security.

I would like to say a few words about the alternate minimum tax provision for independent producers. The oil and gas extraction industry has the highest effective tax rate of any industry in the country—over 70 percent. This rate, coupled with the fact that oil and gas extraction is a highly capital intensive and risky venture has led to the devastation of that industry, increased imports and the resulting increased trade deficit. This provision is not only fair, it is absolutely essential for economic as well as energy policy.

Finally, the proportionality for ethanol provision is an effort to update the Tax Code to reflect the changing market mandated by Congress with the adoption of the Clean Air Act Amendments of 1990. When the exemptions and credits for ethanol were first enacted, no one thought the Congress might some day write a prescription for motor fuels. We did in 1990, and this provision is what I would call an al-

most technical change for ethanol due to changes mandated by the Congress.

#### THE COAL INDUSTRY RETIREE HEALTH ACT

Mr. ROCKFELLER. Mr. President, the agreement is now honored—44 years ago, John L. Lewis wired those words to the coalfields of West Virginia, Kentucky, Alabama, Pennsylvania, Ohio, and other States. With those five words, Lewis brought to an end the strike leading to implementation of the coal miner health benefit and pension funds. When the coal miner health benefit legislation before the Senate today is signed by the President of the United States, I will send that same five-word message to the coalfields—at long last, the agreement will be honored.

This has been a long road, and we have not reached the end of it. As long as there are people in America who are sick or injured and needing care, our efforts must continue. But we have reached a milestone.

Coal miners have been in the vanguard of the fight for decent health care because illness and injury have been so endemic to coal mining. For decades, the fight for good health care has been central to labor relations in the coal industry. The current health program derives from the one established when President Truman seized the mines in a 1946 strike in which health care was a central issue.

In the 1950's, a great compact was reached between labor and management in the coal industry. A commitment to provide health care and pension benefits was the keystone in the arch of that understanding. In return for health and pension security, labor agreed to mechanization of the mines, which led to elimination of 300,000 jobs in Appalachia alone. It is largely the retirees of that vast industrial restructuring whose health care is in jeopardy today. Those coal miners created the might of modern industrial America. They did not fail their country. I am proud to say today that their country will not fail them.

In the fall of 1989, health care was again a central issue in a coal strike. That led to my introduction of my first bill to prevent collapse of the trust funds that provide health care for retired coal miners. Over the years, the dwindling base of contributors resulting from bankruptcies and the failure of some companies to keep paying into the funds, along with exploding health care inflation, put the health trust funds in jeopardy. Then Secretary of Labor Elizabeth Dole appointed a mediator to assist in settlement of the strike. When the settlement was reached, she announced appointment of a commission to recommend a long-term solution to the crisis of the health trust funds.

Secretary Dole explained that during negotiation of the settlement of the strike, which involved a single com-

pany, "it became clear to all parties involved that the issue of health care benefits for retirees affects the entire industry." "A comprehensive, industrywide solution is desperately needed," she said.

The Dole Commission submitted its report in November 1990. The Commission observed that health benefits are an emotional subject in the coal industry, not only because coal miners have been promised and guaranteed health care benefits for life, but also because coal miners in their labor contracts have traded lower pensions over the years for better health care benefits. The Commission said it firmly believes that the retired miners are entitled to the health care benefits that were promised and guaranteed them and that such commitments must be honored.

The Dole Commission recommended a legislative solution to the crisis in the retired coal miner health trust funds and proposed various options. In a statement in the CONGRESSIONAL RECORD of March 13, 1992, I and other Senators supporting legislation explained at length why a legislative solution is necessary. Briefly, collective bargaining cannot work when companies are not around to bargain with, because they are bankrupt or have walked away from their responsibilities, sometimes through legal loopholes created by a crazy quilt of court decisions. Moreover, what many people seem not to realize is that the orphan retirees whose last employers are gone face the prospect that when the collective-bargaining agreement expires early next year, no one will be responsible for their health care. The shrinking funding base and spiraling costs make the continuation of the old program unworkable. The legislative task has been to assign responsibility for funding in the best way possible, realizing that there is no perfect solution.

In the fall of 1991, after hearings on the Dole Commission report, I introduced legislation, S. 1989, based on the Commission's recommendations. A version of that legislation was passed in March of this year as part of a larger tax package which was vetoed by the President. Although the veto was based on various aspects of the tax package, the administration did oppose the approach Congress took on the coal health problem. Subsequently, the administration joined in discussions with me and other Senators and we reached an accommodation reflected in the present approach. The funding mechanism in this approach is the one proposed by the administration and on which the administration insisted. The accommodation was embodied in legislation that passed the Senate as part of the omnibus energy bill on July 29, 1992.

While the approach taken by this measure is significantly different from

S. 1989, it is within the scope of the basic alternatives recommended by the Dole Commission. Instead of including a broad industrywide tax, the basic funding mechanism of this legislation generally requires premium payments from those for whom the retirees worked. These are the responsible companies. Some interests objected to the tax; others to the so-called reach-back approach of the present legislation. Both approaches are defensible and rational. The decision ultimately rested on the best basis for consensus in the legislative process.

Under both bills, companies with retirees still in the existing health funds would pay for their own retirees. The key difference between the two bills relates to the funding of health benefits for the orphan retirees. In general, under the current program, these are the people whose last employer is out of business. Under the earlier bill, the tax would have funded those benefits. Here, in general, the responsible coal operators and related companies will fund the benefits. The two existing health trust funds will be folded into a new, combined fund, in general for current orphans and nonorphans of the existing funds. Additionally, a new 1992 fund will be required to provide for certain other retirees, including those who might be orphaned by future bankruptcies or liquidations.

Even this brief narrative shows the long history of the promise of decent health care for retired coal miners that we address today. But no short narrative can do justice to a bargain in which coal miners gave their lives in return for decency. The bargain goes beyond any labor contract. The bargain goes even beyond the deal in which the companies mechanized the mines in return for benefits.

The real significance of the bargain has to do with the kind of commitment that our country makes to those who have sacrificed for the good of everyone. In 1947, John L. Lewis explained it this way to a congressional committee.

If we must grind up human flesh and bone in the industrial machine we call modern America, then before God I assert that those who consume the coal and you and I who benefit from that service because we live in comfort, we owe protection to those men first, and we owe security to their families if they die.

Many of the retirees whose health care is at stake today were born in the early decades of this century. Their active days in the mines were in the 1930's and 1940's and 1950's. They remember the days of the pick and shovel and dynamite, when cave-ins were not uncommon and methane explosions often brought sudden disaster. No wonder that health care became the ultimate labor issue in the coal industry.

The commitment to good health care for retired coal miners has been threatened. But in its time, the old system represented a great achievement. We

need to understand that because today we need again the spirit that gave rise to that achievement.

When they were created, the health trust funds transformed health care in the coalfields. The 1946 agreement establishing the funds required a survey of medical conditions in the coalfields and the retiree health program set to work responding to conditions the report found deplorable. Among other things, the program established hospitals and a rehabilitation program that combed the coalfields to identify the thousands of miners who had been crippled, with broken backs and severed limbs. At rehabilitation centers, they received the best treatment that modern medicine could offer.

The program under the health fund also made great strides for improvement of overall medical care in coal mining communities. For example, the average age of a coal miner at death in 1947 was 10 years less than the national average for males. In a few years, that difference was erased. The longevity of miners had increased by a remarkable 30 percent.

Three years ago, almost to the day, I took the floor of the Senate to introduce the first legislation on this issue. Referring to the transformation of health care in the coalfields, I said that we had come too far, and the road has been too long, for us to turn our backs on past achievements. The success for health care in the coalfields was an achievement of which all Americans can be proud. It provides a record of decency and of support for human dignity that is a model for the industrial world.

And I can now say, with gratitude, the Congress did not turn its back. It has been a long and sometimes contentious road to this moment. There were strong differences among many parties regarding the best solution to this problem. No one, however, challenged the right of these retirees to good health care. The issue was always the difficult one of how to pay for it. This could be expected to produce a classic legislative battle. But in the ultimate accommodation that saves health care for retired coal miners and their widows and dependents, we have not only a victory for the coal miners, but also for the country.

The national significance of this legislation can be seen in its impact on health care delivery in many States. The retired coal miners and their widows live in virtually every State of the Union. The trust funds contribute millions of dollars to the economies of many States. If allowed to continue unchecked, the financial difficulties of the trust funds could seriously erode health care delivery in West Virginia and the coal counties of States like Alabama, Colorado, Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and Virginia, and many others. And the

well-being of health care providers—doctors, hospitals, and pharmacies, dependent on payments from the funds—could be badly damaged.

Also of national significance is the impact of this legislation on the stability of the coal industry and our entire economy. We cannot go backward on decency in our industrial life. An effort to turn the clock back on our progress in industrial conditions would be sadly misguided. Industrial strength can only rest on a foundation of mutual respect and mutual support. Continuous industrial chaos and recriminations are a recipe for industrial decline. In the midst of the 1989 coal strike over health benefit cutoffs, I said that such a cutoff viewed as a tool of economic conflict had touched off a firestorm, with the flames threatening to engulf employers and employees alike, threatening to destroy the well-being of thousands and the position of the U.S. coal industry in global markets.

It was, in part, to avoid this kind of industrial chaos that coal industry labor relations were established 40 years ago on the rock of the UMWA pension and health trust funds. If that rock had been allowed to crumble, the consequences would have been felt far beyond the retired miners whose health benefits were in jeopardy. That thought has been ever present in my efforts to bring this matter to an amicable conclusion. I have remained ever mindful of the expiration of the industrywide collective bargaining agreement early next year.

The grounds for this bill are solid. After years of study and debate and exploration of various alternatives to resolution of a contentious issue, Congress and the administration have concluded that action is necessary. It is necessary in the name of decency for the retirees and to avert disruption in the coalfields and the consequent threat to commerce and the national interest. Congress has concluded that the health funds' ability to continue to meet commitments to retired miners is in serious jeopardy and that a statutory funding obligation should be imposed.

Congress has long recognized the importance of domestic coal production to the national economy. Indeed, the action taken in this bill to restructure the financing of coal retiree health benefits follows years of unparalleled governmental involvement with the industry, including involvement in the industry's retirement benefit programs. The health program was created originally in an agreement between the Secretary of the Interior and the UMWA during a period when President Truman had seized the mines. An early trustee of the funds was the late distinguished Republican leader, Senator Styles Bridges of New Hampshire.

Over the years since the original agreement, the Federal Government

continued to play a significant role in regulating the coal industry and in the provision of benefits to its retirees. In fact, the trust funds that are the subject of this bill have long been governed by provisions in both the Internal Revenue Code and the Employee Retirement Income Security Act designed specifically for and generally applicable only to them. It is important to emphasize, however, that the relief crafted in the bill is tailored narrowly to address the problem, imposing obligations on a specified group of businesses that were connected ultimately to the commitment to provide health care. And the bill offers protection to a specified class of beneficiaries.

I have often observed that this health care program arose out of a period of conflict decades ago and that we have passed through a contentious legislative battle to reach the present accommodation. But it is also important to commend the labor and industry statesmanship both then and now that produced accommodation. The press notices have often gone to those who complained about the burdens of providing benefits in an era of raging health care inflation. But commendation should go to the many companies that have met their commitments and that have said they would willingly meet their obligations under this legislation.

Beyond the legal arguments about past contracts and arcane points of legislative drafting, as everyone who has had anything to do with this problem ultimately comes to understand, this is a moral issue. In its editorial on the 1989 strike over health benefits for coal miners, *Business Week* said the company "should stand by its promises" and called that a matter of moral obligation.

Through government and private cooperation, four and a half decades ago, America achieved a victory in health care, in industrial statesmanship, in decency for hard-working people, and in the mutual pledges that form the foundation of our country. Today we renew those mutual pledges. We do not build without a foundation. We build on the efforts of those who have come before. As we survey the landscape of America today, we see a desperate need for renewal and revival of private and public statesmanship. We see a need for the revival of commitment to the strength of the Nation and to decency for those who have met their commitments and brought abundance and comfort for the rest of us.

Today, as the Senate approves this legislation, we do so knowing that we build on the struggle and efforts of others. With this legislation, we also renew and restore a commitment from the past. Time and change threatened that commitment, but the U.S. Senate and the American people can be proud

that the threat did not prevail. Today we can say of those on whose efforts we build, what the words of an old hymn say: "What they dreamed be ours to do, hope their hopes and seal them true."

In concluding, I wish to express my gratitude to my distinguished senior colleague from West Virginia, Senator BYRD, whose assistance in this legislative effort was indispensable. I am deeply grateful for his support and his wise counsel. I also want to thank Senator FORD for the tremendous assistance he provided, without which our success would have been impossible. And I thank Senator WALLOP for his cooperation, which was so important in reaching a final accommodation, and I thank the many other Members of Congress who helped us. And finally, I wish to thank the staff of all of these Members and the technical and drafting staff who worked tirelessly to help pass this legislation which will be so important to the retirees, to the coal industry, and to the Nation.

At this point, I would like to comment for the record on a few technical points. All references hereafter are to the new sections added to the Internal Revenue Code by the bill. The term "signatory operator," as defined in new section 9701(c)(1), includes a successor in interest of such operator. Under section 9703(b), the combined fund shall enroll each beneficiary in a health care services plan—whether or not maintained by the combined fund—which undertakes to provide benefits on a prepaid risk basis. Under this provision, the Fund will arrange for services through means such as contracts with health maintenance organizations, preferred provider arrangements, and individual practitioners in an effort to minimize the cost and eliminate the risk to the fund, while providing the coverage referred to in the bill. The bill does not preclude the fund from providing benefits through contracts of insurance or by direct payments for services, or through its own entities, such as health maintenance organizations or preferred provider arrangements, where the trustees determine that such contracts or other arrangements are either more advantageous or in instances where it is not feasible to provide benefits through other means. For example, the fund is permitted to continue providing benefits directly, after the bill becomes effective, while it is considering what is the best manner to deliver services in the future.

The provisions requiring increased premiums to cover shortfalls do not require such increases if a shortfall was caused by excessive expenditures for health care services plans maintained by the combined fund. Instead, the overall maximum limitation for the following year will be reduced by the amount such excessive expenditures cause the combined fund's total expenditures to exceed the maximum

limitation for the prior year. In the new section 9703(b)(2)(A)(ii), the reference to aggregate payments is to payments from premiums or from amounts treated as increases under subparagraph (C). In subparagraph (C)(i), amounts described under section 9704(i)(1)(D)(ii), would be treated the same way as transfers described in section 9705.

In addition, no increase would be made under subparagraph (C)(i) for transfers or payments used for death benefits. In section 9704(b)(2)(A)(i), the aggregate amount of payments is the aggregate amount of payments made and to be made from the 1950 UMWA Benefit Plan and the 1974 UMWA benefit plan for health benefits—less payments by the plans for Federal program benefits but including administrative costs—for the plan year beginning July 1, 1991, for all individuals covered under such plans for such plan year. In section 9704(i)(1)(D)(ii), in the case of a 1988 agreement operator which made or is making contributions under subparagraph (B), any remaining unpaid contributions under subparagraph (B) and the premium of such operator under subsection (a) are what are reduced. At various places in the bill, such as in section 9711(b)(1) and section 9712(b)(2), individuals must be receiving benefits by certain dates or must have retired by certain dates in order to be entitled to benefits under the bill. For purposes of these provisions, an individual is considered to be receiving benefits or to be retired if he is fully eligible for and has applied for benefits. An individual will not be considered ineligible for benefits merely because he has yet been determined to be eligible.

Additionally, an individual will be considered to be receiving benefits or to be retired as of a specified date if he is receiving benefits prior to such date, and such benefits are subsequently temporarily suspended. The 1992 plan and last signatory operators subject to the bill's requirement relating to individual employer plans may utilize certain managed care systems and cost containment rules, but they must be approved—and upon request of an operator or a settlor of the 1992 plan, an existing or future system or rule will be reconsidered—by a medical peer review panel. The requirement for initial approval does not preclude the 1991 plan or a last signatory operator from implementing—rules and programs that are permitted and implemented under the 1988 NBCWA, but any new managed care system that would limit beneficiaries' access or potentially affect quality of care would require review by a panel.

In addition, any new cost containment rule not agreed to by the UMWA would be subject to review by a panel. In section 9712(b)(2)(B), the determina-

tion is made without regard to whether the last signatory operator or any related person remains in business. In section 9712(d), the reference to "eligible and potentially eligible beneficiaries" means, with respect to any 1988 last signatory operator, the individuals receiving benefits from the UMWA 1992 benefit plan who are attributable to such operator, and the individuals receiving benefits from an individual employer plan maintained by such operator who are entitled to receive such benefits under section 9711 (a) or (b). In section 9712(d)(3), the payments continue to be made for as long as the signatory operator—or any related person—remains in business. Benefits required to be provided under the chapter are to be provided without regard to the continued existence of any coal wage agreement.

The bill provides that both the combined fund and the 1992 plan will be fully exempt from all tax under the Internal Revenue Code. In addition, because the bill requires various premiums and other payments to both the combined fund and the 1992 plan, all such premiums and payments are deductible without limitation. As has historically been the case, retiree health benefits provided by the program would be secondary to benefits paid under other governmental programs, except as otherwise provided by law. It is anticipated that the combined fund and the 1992 plan will have at least the same rights to coordinate benefits with other benefit plans and programs as the UMWA benefit plans have exercised in the past.

#### COAL MINERS RETIREE HEALTH BENEFITS TITLE

Mr. BENTSEN. Mr. President, as manager of the tax title of the energy bill, I rise to explain an issue that has come to my attention with regard to the coal miners retiree health benefits title of the bill.

The bill requires all coal companies that have ever been signatories to a coal wage agreement to pay premiums to fund retiree health benefits for the miners and their dependents. The bill also declares that affiliates of any such coal company are jointly and severally liable for the premiums owed by the company. Under the bill, the time for determining affiliate status is as follows: If the coal company was in business on July 20, 1992—whether or not as a coal company—affiliate status is to be determined on that date. On the other hand, if the company was not in business on that date, then affiliate status is to be determined as of the day immediately before the company ceased to be in business.

The idea behind these rules is that, if a holding company has a subsidiary that was once a signatory to a coal wage agreement, and if, through that subsidiary, the holding company is conducting a business—whether or not a coal business—on July 20, 1992, it is

appropriate to ask the holding company to be jointly liable for the premiums due from the subsidiary. The question arises, however, whether a different result would obtain where the holding company conducts the same business, with the same assets of the subsidiary, but through a different affiliate, such as a sister corporation to the subsidiary. In other words, in that case, the subsidiary would have transferred some of its assets to the sister corporation before the test date of July 20, 1992.

Mr. President, it is clear that the result should be the same in both cases. To treat the two cases differently would elevate form over substance and reward asset shifting within an affiliated corporate group. When HHS implements this legislation and begins the task of determining which former signatories to coal wage agreements are in business, we expect the agency to take the commonsense approach of determining how the assets of such companies are deployed in an affiliated group of companies. If some of the assets of the signatory company are used in the group in a business activity, then the signatory should be considered to be in business for purposes of section 9701(c)(7) of the legislation.

Mr. ROCKEFELLER. Mr. President, as the original author of this legislation, I agree entirely with the chairman of the Finance Committee. We do not intend for the legislation to be interpreted in a wooden manner. Clearly, where assets of a signatory company are used by an affiliate in a business activity, that signatory company should be considered to be in business.

Mr. BENTSEN. Mr. President, a related question arises with respect to the specific definition of "in business" included in the legislation. Under the bill, a company is considered to be in business if it "conducts or derives revenue from any business activity, whether or not in the coal industry." That definition has alternative tests: A company is considered to be in business if it either conducts a business activity or "derives revenue from" a business activity. As is apparent from the existence of the two tests, the intention of the legislation is to define the term "in business" broadly.

In general, the intention of the legislation is that where a company retains a valid charter, owns valuable properties, and has even a minimal level of activity, the company normally would be considered to be in business. Activity as a lessor of property would constitute a sufficient level of activity to meet that test.

Even in cases where a company is not considered to conduct a business of its own, if the company has leased any of its property in return for the right to receive royalties based on the use of the property in a business operated by

the lessee, the company would be considered to "derive revenue from" the business activity conducted by the lessee.

Mr. ROCKEFELLER. Mr. President, again I agree with the chairman of the Finance Committee. The language of the statute is purposely broad. Certainly, a company would be considered to be in business if it continued to own significant properties and has leased some of those properties so that it may derive revenue from the business operation of the leased properties by the lessee.

Mr. FORD. Mr. President, I have worked closely with the Senator from West Virginia in the drafting of the provisions of the bill relating to health benefits for retired coal miners and I have worked closely with the chairman of the Finance Committee as he and his committee considered these provisions. I agree that their interpretations of the bill are correct for purposes of determining when a company shall be considered to be in business notwithstanding transfers by sale or lease of business assets prior to the test date of July 20, 1992.

Mr. AKAKA. Mr. President, I rise in support of the conference report on the energy bill.

The bill before us is a comprehensive package of energy initiatives designed to ensure that commercial and residential energy consumers have access to a reliable supply of energy at reasonable prices. It is a good bill, and it deserves the support of the entire Senate.

My colleagues, this is an historic moment. Not since the days of the OPEC oil embargo has Congress considered legislation as comprehensive as the bill before us today. Enactment of this bill will ease our dependence on foreign supplies of energy and promote an energy future for America that is more secure.

This may be an energy bill, but it is also a good bill for the environment. A major emphasis of this legislation is conservation and increased energy efficiency. Among other things, the bill would establish energy efficiency standards for electric motors, lights and shower heads, establish efficiency standards for commercial heating and cooling equipment, encourage utilities to take steps to reduce demand for energy; improve energy efficiency of buildings, and; require the single largest user of energy—the Federal Government—to set an example for the rest of the Nation by using energy more efficiently.

We would never have succeeded in producing this landmark bill had it not been for the wisdom, leadership, and determination of the chairman of our committee, Senator BENNETT JOHNSTON, and ranking Republican, Senator MALCOLM WALLOP. The process of assembling this bill began nearly 2 years ago, and without the unyielding com-

mitment of our committee leadership, we would never be presenting a conference report on the Senate floor today.

There were times when many doubted we would complete an energy bill during the 102d Congress. Despite a fast start and early markup by our committee, there were fears that our inability to reach agreement on issues such as CAFE standards might sink the bill. I also remember the disappointment many of us felt last November when the bill appeared dead after the Senate failed by a wide margin to invoke cloture and cut off a filibuster.

There were the long, hot days this past summer when we waited for the House to pass its bill. We waited for the tax component of the bill to be assembled, then we waited and waited for House conferees to be appointed. But our bill could never be derailed, thanks to the leadership of our able chairman and ranking Republican.

Gentlemen, I salute you.

I also want to pay tribute to the fine staff of the Energy and Natural Resources Committee. Mr. President, we have a staff on our energy committee that knows no equal. They were the glue that held this 1,300 page bill together, and I know I speak for the entire committee when I say how grateful I am for their dedication and fine work.

I note with regret that the bill does not contain a number of provisions I had proposed that are important to Hawaii. Hawaii faces some severe energy problems. We are one of the most important dependent States in the Nation. I had hoped that the conference agreement would address this problem with a solution I had crafted to provide emergency SPR access for Hawaii. The bill does not solve Hawaii's problem, but we will address that issue another day. I look forward to working with the committee to resolve this issue during the 103d Congress.

In closing, this is a good energy bill and deserves the support of the full Senate.

UNITED MINE WORKERS OF AMERICA (UMWA)  
HEALTH BENEFIT TAX RELIEF

Mr. WARNER. Mr. President, I rise today to address H.R. 776, the National Energy Strategy Act. Implementation of the comprehensive energy policy embodied in this legislation is significant to our efforts in reversing this Nation's growing dependence on imported oil.

It is for this reason that I support many of the legislation's worthwhile provisions including: Reform of the Public Utility Holding Company Act [PUHCA]; initiatives to improve the efficiency of homes, offices and utilities; provisions to foster the development and production of renewable sources of energy; and provisions which promote the use of alternative fuels.

However, as with the passage of the original Senate version on August 12, I

continue to have the gravest concerns regarding the need to strengthen the financing provisions of the new United Mine Workers of America [UMWA] retiree health benefit plan.

With the passage of H.R. 776, the community of 120,000 UMWA retirees and their families truly have reason to rejoice. I am proud that Virginia is home to 10,000 members of this community, and I wish to assure them that the security of their hard-earned health benefits has been my first priority.

In an unprecedented effort, the Congress and the White House have joined together to craft and include mandatory financing provisions to restore the solvency of the ailing union retiree health plan. The present supporters of the health plan, the Bituminous Coal Operators Association [BCOA], are greatly burdened with its costs and, in fact, have been contributing on a deficit basis for sometime.

The BCOA and the UMWA signed a collective bargaining agreement nearly 4 years ago which spelled out their retiree health insurance obligations. Due to a combination of reasons, it has proven to be woefully inadequate. Recognizing the shortfall in funding, and faced with their inability to honor their obligations to the retired union membership, the BCOA and the UMWA have turned to the Federal Government.

As early as 1989, Federal relief legislation was initiated in the Senate suggesting an industrywide coal production excise tax. Up to and until this summer, different versions of the tax were still proposed, but on an unequal and inequitable basis. Eastern and Western States were taxed at different rates and, indeed, some States were exempted altogether.

The Federal election summer of 1992 arrived with turmoil in the coalfields. Only a Federal court order stood between the retirees and a cut off of their health insurance. Anxious to avoid labor unrest, the White House sent its domestic policy team up to Capitol Hill to craft a new and improved funding scheme for the retired union miners.

A period of arduous negotiations commenced. A comprehensive plan emerged, mandating contributions by not only present but former BCOA members as well. In general, dating back to 1950, the former employer of the longest duration will be assigned the health costs of the retiree. For the many thousand retirees whose former employers have ceased to exist, these orphans will be assigned to present and former BCOA members on a prorated basis.

The costs of the mandatory premiums alone will approach \$100 million per year. This refers only to that portion of the plan to be paid for by present and former employers. Another third will be transferred from the

UMWA pension fund, and yet another third eventually come from interest earned by the industry supported Federal abandoned mine lands [AML] fund.

A great deal of time and effort has been expended thus far on behalf of the retired union membership. It is their welfare which has been the deciding factor. The Congress and the White House have truly joined hands in assuring that the promised benefits will be continued. We have reached a point, however, in which I believe the promise falls short.

The companies which must comply with the mandate have not been provided with an appropriate, corresponding measure of tax relief. Many of the companies are marginally profitable at best, and the costs of the mandate will throw them into bankruptcy.

Imagine an American coal company, struggling to contain the growth of its health and labor costs. Imagine that this company is in the highly competitive coal export business where it is impossible to pass on extraordinary business costs. Then imagine that this company has a contract with the United Mine Workers of America and employs 2,000 miners—the largest individual coal operation in my State.

Mr. President, I have described the Pittston Coal Co. of Lebanon, VA; an operation whose health costs could increase tenfold under this bill. There is no question that the livelihood of 2,000 UMWA members and their families is at stake. It is ironic, is it not, that 2,000 union mining jobs may be sacrificed for the benefit of union retirees.

If this company and all the companies which will be newly burdened are not provided with offsetting tax credits, the retiree health funding problem will only be exacerbated. What possible benefit could there be for UMWA retirees in the demise of many of the companies which have been mandated to pay for their benefits. In the end, the premiums will be thrown back on those presently paying them, albeit with the aforementioned Federal support.

Mr. President, I implore my colleagues on the Finance Committee to fully complete this funding package. A number of States and valued corporate constituents will otherwise suffer as a result. The message is clear—Federal mandates which go beyond any real market basis must be accompanied with Federal relief.

I am encouraged that in the conference on H.R. 776, House Ways and Means Chairman DAN ROSTENKOWSKI stated his intention to review the Senate provisions at the earliest opportunity next year. Similar sentiments were expressed as well by Congressman JAKE PICKLE. It seems clear that there must be a package of perfecting amendments if the UMWA retirees are to have a workable funding scheme.

I have been advised that one area which must be examined, if only to

avoid future litigation, is the question of constitutionality.

Mr. President, in order to lend to the process, I ask unanimous consent that an analysis on the constitutionality of the provisions be inserted in the RECORD at this point. This constructive study was provided by the Hon. Charles J. Cooper, former Assistant Attorney General of the United States for the Office of General Counsel, and now a partner in the firm of Shaw, Pittman, Potts & Trowbridge.

SHAW, PITTMAN, POTTS & TROWBRIDGE,

Washington, DC, September 25, 1992.

Pursuant to your request, we have done a preliminary review of potential constitutional challenges to the Coal Industry Retiree Health Care Act of 1992. As we understand it, the bill essentially requires any current or past signatories to the National Bituminous Coal Wage Agreement, and any related entities, to provide lifetime health benefits to UMWA retirees. Most notably, these signatory companies must finance the health care costs for all beneficiaries assigned to them, even though a substantial percentage of these beneficiaries were never employed by the responsible company.

Our preliminary analysis indicates that the portion of the proposed legislation mandating the provision of health benefits to persons not previously employed by the responsible coal company would be quite vulnerable to a challenge under the Taking and Due Process Clauses of the Fifth Amendment. While our brief review has not uncovered any Supreme Court decision directly on point, we believe that the proposed legislation is inconsistent with the basic purposes of the Taking Clause, as articulated by the current majority of the Court. Support for this view can be found in cases striking down analogous government confiscation schemes, as well as in the reasoning of cases upholding other government-mandated income redistribution programs.

The Supreme Court has repeatedly emphasized that the basic purpose of the Taking Clause is "to bar Government from forcing some people alone to bear public burdens which, in all fairness and justice, should be borne by the public as a whole." *Armstrong v. United States*, 364 U.S. 40 (1960). See also *First English Evangelical Lutheran Church of Glendale v. Los Angeles County*, 107 S.Ct. 2370 (1987); *Penn Central Transportation Company v. New York City*, 438 U.S. 104, 123 (1978). Unlike other legislation which has been found to satisfy the Fifth Amendment, the proposed bill does not "regulate" any industry by establishing price ceilings or imposing requirements concerning workers' health, safety or minimum compensation. Rather, it simply transfers private property from a few selected coal companies (and their related entities) to individuals who were never employed by the companies. Since the coal companies are not in any way responsible for any non-employees' health problems and did not benefit from their labors, there is simply no reason for those companies to now assume financial responsibility for those individuals in their retirement. If Congress believes the public welfare demands that these individuals receive health benefits, the burden of providing those benefits should be distributed equally among the public through a uniform tax scheme, not by imposing a specific financial burden on a few. This is the basic command of the Fifth Amendment.

The Supreme Court in the past has invalidated markedly less radical income redis-

tribution schemes under the Due Process and Taking Clauses. Most notably, in *Railroad Retirement Board v. Alton R. Co.*, 395 U.S. 330 (1935), the Court struck down as violative of the Due Process Clause a congressional statute that "arbitrarily" required employer-financed pensions for former employees who were not in the employ of the railroads at the time of enactment, but had been so employed within the year. Under this precedent, the proposed legislation would seem to be invalid in its entirety, even as it applies to past or current employees of the responsible coal companies. However, although Alton has never been overruled, it is shaky precedent that is generally viewed as a hold-over from the Lochner substantive due process era and has been strictly limited to its particular facts by more recent cases, such as *Usery v. Turner Elkhorn Mining Co.*, 428 U.S. 1, (1976), and *Connolly v. Pension Benefit Guaranty Corp.*, 475 U.S. 211 (1986). In those cases, the Court upheld, against Taking and Due Process challenges, the retroactive imposition of pension and retirement benefits on, respectively, operators of coal mines and companies that had voluntarily opted into a government-guaranteed, multi-employer pension plan. These cases, then, would seem to foreclose an argument that forced payment of retirement benefits to prior employees of the coal companies is unconstitutional. Nothing in these cases, however, would prevent a Taking and/or Due Process challenge to a statute requiring coal companies to assume financial obligations for beneficiaries that were and are complete strangers to these companies.

The Supreme Court in both *Connolly* and *Turner Elkhorn* reasoned that the Fifth Amendment does not preclude "legislation readjusting rights and burdens" unless it is wholly "arbitrary and irrational." *Connolly*, 475 U.S. at 223; *Turner Elkhorn*, 428 U.S. at 18-20. This finding of a permissible constitutional purpose, however, was premised on the view that requiring these companies to pay health benefits was reasonable because "the purpose of the Act is to satisfy a specific need created by the dangerous conditions under which the former employee labored—to allocate to the mine operator an actual, measurable cost of his business." *Turner Elkhorn*, 428 U.S. at 19. See also *Connolly* 475 U.S. at 226-228.

This does not suggest any legitimate basis for requiring a company to pay benefits to an individual whose work it has never benefited from and on whom it has never imposed a burden. This point is made explicit in Justice O'Connor's concurrence in *Connolly*: "[I]mposition of this type of retroactive liability on employers, to be constitutional, must rest on some basis in the employer's conduct that would make it rational to treat the employees' expectations of benefits under the plan as the employer's responsibility." 475 U.S. at 229. See *id.* (legislation is irrational "in the absence of any connection between the employer's conduct and some detriment to the employee").

The Court's Taking Clause cases in analogous circumstances have established this principle more firmly. For example, in *Webb's Fabulous Pharmacies, Inc. v. Beckwith*, 449 U.S. 155 (1980), a unanimous Supreme Court struck down as violative of the Taking Clause a Florida statute providing that counties could claim as their property the interest generated on funds deposited in the state courts through interpleader. The Court struck down the appropriation of this interest because "it is not reasonably related to the cost of using the courts." *Id.*

at 163. See also *United States v. Sperry Corp.*, 493 U.S. 52 (1989); *Hodel v. Irving*, 481 U.S. 704 (1987); *FCC v. Florida Power Corp.*, 480 U.S. 245 (1987). Thus, the petitioner in Webb's Fabulous Pharmacies could not be deprived of his interest because he had no specific responsibility or obligation to the court system different from the average citizen. By the same token, it would appear that the government cannot mandate a transfer of monies from the coal companies to beneficiaries they have never employed because the companies bear no responsibility for these employees that is in any way distinguishable from that of another taxpayer.<sup>1</sup> Accordingly, all such taxpayers must bear the cost of any public welfare benefits provided to those employees.

This point was made even more explicitly in an opinion by Justice Scalia, in a case involving rent control for "hardship" tenants:

The fact that Government acts through the landlord-tenant relationship does not magically transform general public welfare, which must be supported by all the public, in to mere "economic regulation," which can disproportionately burden particular individuals. Here the City is not "regulating" rents in the relevant sense of preventing rents that are excessive; rather, it is using the occasion of rent regulation . . . to establish a welfare program privately funded by those landlords who happen to have "hardship" tenants.

*Pennell v. City of San Jose*, 108 S. Ct. 849, 863 (1988) (Scalia, J., concurring and dissenting). The majority of the Court did not reach this issue because it viewed the taking question as "premature."

Notably, a recent decision of the D.C. Circuit upheld a similar wealth transfer statute by Congress, but expressly did so only because the same congressional enactment provided "just compensation" for the company's burden. See *Colorado Springs Production Credit Association, v. Farm Credit Administration*, 967 F.2d 648 (D.C. Cir. 1992). No such compensation provision is contained in the proposed bill.

In short, the absence of any employment nexus between the beneficiaries of the proposed health benefit program and the limited class of companies forced to bear this public burden establishes a firm basis for challenging the proposed legislation under the Fifth Amendment—regardless of whether the statute is analyzed as a "per se" or regulatory taking, or as arbitrary and irrational retroactive legislation. That there is no Supreme Court decision directly on point is primarily due to the fact that Congress has previously not gone this far. As noted, any challenge to mandated compensation for prior employees of the coal companies would be substantially weaker.<sup>2</sup>

If you have any questions or comments about the foregoing, please give me a call.

Sincerely,

CHARLES J. COOPER.

<sup>1</sup>The fact that the monies here will be transferred from the companies into a private fund, rather than going directly to Treasury or some other government entity for redistribution, should be of no constitutional significance. See *Hawaii Housing Authority v. Midkiff*, 467 U.S. 229, 243 (1984) (Taking Clause analysis does not change because property "is transferred in the first instance to private beneficiaries").

<sup>2</sup>Additional constitutional concerns may be raised by the provisions of the proposed bill that require a "related entity" to pay the benefits and that directly interfere with a prior collective bargaining agreement. In light of the time constraints under which this review has been performed, we have not examined these secondary issues.

Mr. President, let us look once more at the players in this debate. The retired community of the United Mine Workers of America have no interest in depriving their younger working membership of their jobs. Nor do working miners wish, in any way, to diminish the benefits of hard-fought, hard-earned retirement from the coal mines. Let us remember them, first and foremost, and we should come readily to our goals.

#### HYDRO-FEDERAL POWER SECTION

Mr. BUMPERS. Mr. President, I would like to ask the distinguished chairman of the Energy Committee for a clarification of the language from title XVII of H.R. 776, the Hydro-Federal Power Act section. Am I correct in interpreting the provision regarding fishways to say that even if FERC and the Departments of Commerce and Interior do not agree on a fishways definition, that FERC will still be able to issue hydrolicenses by order?

Mr. JOHNSTON. Yes, that is my understanding.

Mr. BUMPERS. Once again even if FERC and the National Marine Fisheries Service and the Fish and Wildlife Service cannot agree on a definition of fishways through the rulemaking process, can hydro projects in Arkansas and elsewhere across the country which are up for licensing be assured that the licensing process will continue and not be brought to a dead stop if this language is agreed to?

Mr. JOHNSTON. Yes, that is my understanding.

Mr. HATFIELD. Mr. President, I want to take an even stronger position than my colleague from Arkansas that it must be clearly understood that the language regarding fishways is intended to allow FERC to continue without limitation its role in issuing licenses with conditions. The Senate never dealt with this issue in its bill. The Pacific Northwest has spent more money on fish protection than almost anywhere in the country, and is expected to spend in excess of \$1.5 billion over the next 10 years for the preservation of fish. We also have more litigation than anywhere in the country on fish and wildlife issues. The conference report makes perfectly clear that FERC can continue to issue hydrolicense orders and delineate the proper scope of fishway prescriptions included in those orders.

Also, we need to clarify that when we say "physical structures" in this language we mean those structures—ladders, screens and so on—that are principally designed for the up and downstream passage of fish and that help fish around the project works of a hydropower project. Is it the chairman's understanding that the language must not be interpreted to go beyond that into generally regulating flows or assuming control over the operation project works?

Mr. JOHNSTON. Yes, that is my understanding.

Mr. BUMPERS. I agree with the views of my colleague from Oregon. Furthermore, fishways are only those structures for the passage of fish which need such passage to maintain their life stages.

Mr. WALLOP. Mr. President, I concur with the remarks emphasizing that this language allows FERC to proceed on a case-by-case basis, and is limited to physical structures principally designed for passage, and not flows.

Mr. HATFIELD. I agree.

Mr. COCHRAN. Mr. President, at the beginning of the 102d Congress, almost 2 years ago, President Bush submitted to Congress his proposals for a comprehensive energy policy. Since that time, the Senate has twice passed energy policy bills, both of which survived filibusters, the conference between the House and the Senate was deadlocked on several occasions, and the energy bill was declared dead on more than one occasion over the past 2 weeks. Yet, today we are considering a conference report that deals with the many controversial issues of energy policy in what I believe to be a well-balanced manner.

The resilience of this bill can be attributed to the dedication of the distinguished chairman and ranking member of the Senate Energy Committee, the Senator from Louisiana [Mr. JOHNSTON] and the distinguished Senator from Wyoming [Mr. WALLOP], and to the tireless efforts of the Secretary of Energy, James Watkins, and Deputy Secretary of Energy, Linda Stuntz. I applaud the diligence and perseverance of those involved to bring the bill to life once again.

This conference report represents a clear and workable strategy for reducing the U.S. dependence on foreign sources of energy.

The bill sets in place a long-term approach to conserving energy by encouraging the use of more energy-efficient technologies and products that will reduce the amount of energy consumed in our country. Research and development of these technologies is encouraged by incentives in the bill.

There are also provisions which encourage the development and use of alternative fuels, such as clean-burning natural gas and non-fossil fuels, both in energy production and in vehicles.

These changes are necessary not only to reduce our need for imported oil but also to make more efficient use of our resources.

Until we reach the point where these alternative technologies, products, and fuel sources are widely available, we must encourage the domestic production of oil and gas. This important element of our economy will be promoted through a provision in the bill to change the alternative minimum tax treatment of expenses associated with

production by independent oil and gas producers.

Perhaps the most dramatic changes in this bill are in the area of Federal regulation of electricity production. Newer, safer designs for nuclear powerplants are currently being developed to provide for electricity production that is safe, economical and nonpolluting. But unless the process for granting permits to operate those plants is made more efficient and more predictable, no nuclear plant will be built in the future. The bill before us provides for such a process, whereby a license for construction and operation of a nuclear plant will be granted simultaneously, after extensive opportunities for public comment and participation.

Even more dramatic changes are made through amendments to the Public Utility Holding Company Act [PUHCA]. Under the conference agreement, consumers will benefit from the competition in the electric utility industry that will result from the deregulation of powerplant construction and power distribution. The conferees are to be commended for resolving some very contentious issues in PUHCA reform—especially with regard to wheeling—in a fair and equitable manner.

Mr. President, this bill is one of the most important pieces of legislation to be considered in this Congress. It was crafted in a bipartisan manner and provides much-needed direction for meeting the future energy needs of our Nation. I urge the Senate to approve this conference report.

Mr. NICKLES. Mr. President, I rise today to urge my colleagues to support passage of the National Energy Policy Act of 1992. When this bill is passed it will be the first comprehensive energy legislation enacted in over a decade. Although the provisions of this bill do not go as far as I would like, especially in the area of encouraging domestic production of oil and gas, it does contain many provisions that will help decrease our dependence on foreign energy sources and encourages increased use of clean-burning natural gas.

Just last week the Senate and House conferees completed action on the nontax provisions of the comprehensive energy bill. This bill will benefit producers in that it will stimulate new markets for natural gas through its alternative fuel provisions, its encouragement of competition in power production and increased research and development programs. However, these provisions in and of themselves are not enough. It is critical that AMT relief be provided now to independent producers before we no longer have any domestic producers left.

Over the weekend, the Senate and House conferees completed action on the revenue provisions of this bill. In these provisions we were successful in preserving the Senate passed AMT pro-

vision that allows independent producers to take greater deductions against AMT for percentage depletion and intangible drilling costs. Under the bill, percentage depletion is fully deductible against AMT income. IDC's may be fully deducted against AMT income to the extent that the increased IDC deductions do not reduce AMT income by more than 40 percent, 30 percent in 1993. This AMT relief for independents would be permanent.

Our domestic oil and gas industry is bleeding to death, increasing our Nation's continued dependence on foreign oil. Mr. President, we are trying to enact a national energy bill that is intended to help reverse this trend of increasing dependence. AMT relief is one of the most necessary provisions in this bill that will have direct impacts on increasing domestic exploration and help decrease the need for foreign imports.

Independents drill 85 percent of the oil and gas wells in the United States. Over two-thirds of these independents are small, often family run, businesses with less than 20 employees. The AMT in its current form has an especially punitive impact on these small producers, denying them the deduction of their most fundamental ordinary and necessary business expenses. Because the amount of IDC allowed under the AMT is tied to the producer's net income from oil and gas, the lower the amount of production, the lower the deduction for drilling costs. In addition, the percentage depletion deduction, which allows smaller producers to replace increasingly costly reserves and prevents the premature abandonment of many properties, is disallowed under the AMT.

If the AMT provisions in the energy bill are passed, drilling would increase between 17 and 24 percent and should result in almost 7,000 new wells drilled each year. This should increase the rig count by at least 200. On average, each rig operating full time directly creates 150 to 200 new jobs. Therefore, between 30,000 and 45,000 additional jobs could be created in the United States in the first year alone as a direct result of eliminating the nondeductibility of drilling costs and percentage depletion under the AMT.

A rig count of 720 indicates that the industry has entered a period of accelerated decline. The Nation's domestic oil production is falling at annual rate of 300,000 barrels a day, and foreign imports are rapidly approaching 50 percent of our domestic needs. We have lost nearly 400,000 jobs, almost half of the oilfield worker jobs since the peak in 1982 when the rig count was 3,105.

Independent producers have been devastated by a combination of low oil and gas prices and high taxes. Every rig that shuts down means jobs that are lost and increased dependency upon foreign oil for our energy needs. I

strongly believe that tax relief is needed to save the domestic industry from collapse.

I am convinced that the alternative minimum tax relief is the single most important agenda item for the oil and gas industry. It does little good to talk about extending incentives unless we remove alternative minimum tax impediments.

When a recession coincides with sustained low oil and gas prices, the alternative minimum tax works like a severe penalty that gets progressively worse the longer the taxpayer falls under it. The longer prices are low and profits thin, the harsher is the alternative minimum tax's impact.

Under current law, when percentage depletion and intangible drilling costs are added back to income in calculating alternative minimum tax liability, it can result in a 70 to 80 percent effective tax rate for some producers. The result is indisputably punitive, if not confiscatory.

Including intangible drilling costs and percentage depletion as preference items in 1986 was a mistake. It has been referred to by some Americans trying to increase oil production here in the United States as a drilling penalty tax for independents. We need to eliminate IDC's entirely from the alternative minimum tax.

IDC's are the only out-of-pocket business expense in any industry or profession that are treated as a preference item in the alternative minimum tax. Inclusion of IDC's was unfair, and another example of treating the domestic industry as a cash cow to be milked every time revenue is needed.

Taking IDC's and percentage depletion out of the alternative minimum tax is appropriate not simply because they are a unique penalty on oil and gas producers, but because in practice these provisions have been both anti-competitive and regressive, and have had the effect of significantly reducing drilling activity in the United States.

It is imperative that AMT relief be enacted this year. The independent oil and gas producers are being unfairly penalized by the 1986 tax amendments. If the AMT tax provisions contained in the energy bill are not adopted the results will be a continued decapitalization of a strategic sector of our industrial economic base, a continued loss of jobs and a continued risk to our Nation's ability to respond to requirements for domestic oil and gas production. The AMT tax provisions must be enacted now if this industry is to survive and the national security of this Nation be preserved from further reliance on foreign energy sources.

PERFORMANCE CONTRACTING FOR FEDERAL ENERGY MANAGEMENT

Mr. WIRTH. Mr. President, one of the most promising initiatives in this energy legislation are provisions that would encourage greater energy effi-

ciency in Federal buildings. The Federal Government is the Nation's single largest energy consumer and should be leading the effort to use energy more efficiently. Federal energy efficiency is good economic policy and good environmental policy.

Unhappily, the Federal Government has been slow to take advantage of creative financial arrangements that promote energy efficiency without requiring enormous investment outlays. This is most unfortunate for two reasons. First, as we are all too aware, current budgetary constraints make it difficult if not impossible to make many cost-effective, long-term investments in efficiency. Second, the Federal Government is failing to utilize performance contracts widely taken advantage of by the private sector.

In order to harness the opportunity to promote energy efficiency at little or no upfront cost to the Government, this legislation includes provisions that will ease the bureaucratic roadblocks to performance contracting. In this way, performance contracting can be utilized to stop the annual wasting of 1 billion dollars' worth of energy in Federal buildings.

The performance contracting industry is capable of assessing Federal buildings and identifying energy efficiency opportunities. More importantly, this industry is capable of financing and maintaining new equipment and guaranteeing that energy savings will exceed the payments necessary to compensate the contractor. What this legislation clearly suggests is that the Federal Government should take maximum advantage of the opportunities presented by performance contracts.

Current procurement laws and regulations—no doubt useful, necessary and applicable in many cases—are ill-designed to allow the Federal Government to take advantage of performance contracting. The regulations are painfully complex and not applicable to performance contracting in many respects:

Most performance contracts provide for paybacks to the contractor over multiple years, conflicting with our annual budgetary procedures and requirements for advance appropriations;

Traditional cost, pricing and cost accounting standards are inappropriate for these contracts;

Considerations must be given to specifying the appropriate costs that should be paid by the Government in the event of contract termination for the convenience of the Government—these costs would include those related to designing, financing, installing and engineering energy efficiency improvements, as well as penalties by utilities.

In an attempt to address these concerns, the energy legislation includes a number of provisions to enhance the Federal Government's ability to make

use of performance contracts. Specifically, the bill: Authorizes multi-year contract authority without advance appropriation. Directs the Secretary of Energy, working with the FAR Council, to issue regulations that will facilitate performance contracting with the Federal Government.

The bill is a clear direction to the Secretary to issue regulations that will address the impediments to performance contracting I previously discussed, as well as any others identified by the Secretary.

Any regulations developed by DOE should be formulated to apply to all contracts—as opposed to rules that would require a case-by-case application—which is a prescription for bureaucratic inertia. These regulations should relieve contracting officers of any hesitancy to enter into performance contracts.

Finally, we recognize in this legislation that new procedures will be required to get this job done. Therefore, the legislation directs the General Accounting Office to monitor these efforts and report to Congress on problems and progress. And in order to ensure a thorough evaluation of the success of these new initiatives, the bill sunsets these provisions after 5 years.

Unfortunately, Mr. President, we were unable to gain agreement in conference on remedying some of the obstacles that prevent performance contractors from doing business with the Federal Government. Instead, we have left that task to the implementing agencies. We expect that they will address all of the impediments to performance contracting and ensure that the Federal Government can take advantage of these creative financing mechanisms for energy efficiency.

#### DAMS IN THE PARKS

Mr. WALLOP. The conferees agreed to a version of a provision in the House-passed bill which would have prohibited any dams or improvements within any unit of the National Park System. The conference agreement would prohibit FERC from issuing an original license for a hydroelectric dam located within the exterior boundaries of a unit of the National Park System and which would have a direct adverse impact on federally owned lands within the exterior boundaries of such unit.

That section will not apply to existing unlicensed or licensed projects, or future additions or modifications to such projects, nor projects for which applications are pending upon the date of enactment of this act.

The provisions also do not apply to subsequent applications for an original license which are located entirely on non-Federal land and do not repeal any provision of law which would exempt or authorize such projects within existing units, such as the authority for High Ross Dam in North Cascades.

Unfortunately, passage of these provisions will extend what is already law

in national parks and monuments to all other areas of the system. Lake Mead and Glen Canyon National Recreation Areas would not be units of the system were it not for the dams which created the reservoir. Using a shotgun approach to problem solving, the House placed these provisions in the bill because nationwide there are only two cases which seem to pose a problem; both of which only became an issue of concern after the Federal Government made minor boundary adjustments which incorporated existing projects within the new boundaries without making any provision for the projects.

The House action only complicates our lives and forces us to complete a lengthy exhaustive analysis of the hydro potential in any new legislative proposal for a new park area. The foolishness of this provision can be seen if you look at only a few units of the National Park System. Lowell National Historical Park has 21 projects operating under a FERC license and was specifically made a unit of the system due to the importance of hydropower in industrial development.

#### SITE SELECTION FOR A MONITORED RETRIEVABLE STORAGE FACILITY

Mr. BINGAMAN. Mr. President, I have been very concerned that the nuclear waste negotiator be held accountable for demonstrating the value of all expenditures in connection with the site selection process for a monitored retrievable storage facility for spent commercial nuclear waste. In the Nuclear Waste Policy Act of 1982, Congress directed the Department of Energy to take possession of high level nuclear waste, to be emplaced in a temporary storage facility for about 40 years, and in a permanent facility thereafter.

The selection process for an MRS consists of a series of steps of research and analysis, each with a greater price tag than the previous one. Phase II-B of the grant process allows up to \$3 million to be provided for a variety of activities, including continued feasibility studies and formal discussions and negotiations with the Office of the Nuclear Waste Negotiator.

Three million dollars seems like a lot of money when the prospect of achieving the final goal, siting of monitored retrievable storage facility, may be quite uncertain. I believe that it was Congress' intent that a unit of Government should enter into phase II-B with the negotiator only if there is a reasonable likelihood that a given site will be chosen.

Mr. JOHNSTON. I agree. It is Congress' intent that efforts to evaluate a given site for a temporary storage facility take into account the likelihood of achieving that ultimate goal.

Mr. SIMPSON. Mr. President, would the distinguished Senator from Louisiana yield for purposes of a colloquy?

Mr. JOHNSTON. I would be happy to yield to my friend from Wyoming.

Mr. SIMPSON. I thank the Senator.

As the Senator knows, the President initialled an agreement on highly enriched uranium with the Russian Federation on August 31. While the details have yet to be worked out, the agreement calls for the United States to purchase 500 metric tons of highly enriched uranium recovered by dismantling Soviet warheads. This material would then be converted into low-enriched uranium for use in civilian nuclear powerplants.

This is an extraordinary development. The agreement will help beat nuclear "swords into plowshares." From an environmental view point, I can think of no greater benefit than ridding the world of the highly enriched uranium from 20,000 nuclear weapons.

I am interested to hear from the Senator from Louisiana how the uranium provisions in the conference report would affect this proposed agreement.

Mr. JOHNSTON. I am familiar with the agreement and share the Senator from Wyoming's views on its importance. The uranium provisions of the conference report are consistent with the agreement.

The conference report completely overhauls the uranium enrichment program in this country. As the Senator knows, the Department of Energy has for years operated a \$1.5 billion uranium enrichment business. If the enrichment program were a private corporation it would rank about 240th on the Fortune 500. DOE operates two aging enrichment plants that were built for military purposes in the early days of the cold war. These plants now supply most of the enriched uranium used to generate about 20 percent of the Nation's electricity. They also supply nuclear powerplants around the world and generate about half a billion dollars of foreign payments each year.

But times have changed and DOE has not been able to keep up. Accordingly, the conference report sets up a new Government corporation to run the enrichment program like a business. It sets up a fund to pay the cost of cleaning up and ultimately retiring the old plants. It provides a mechanism for developing a new, promising, and more efficient, enrichment technology.

The new Government corporation will be responsible for implementing the United States' side of the agreement with Russia. The conference report expressly directs the corporation to purchase the Russian highly enriched uranium and to assume the obligations of DOE under the agreement.

Mr. SIMPSON. How will the corporation pay for the Russian material? In his announcement, the President said that the costs of the transaction would be budget neutral. Is that still the case?

Mr. JOHNSTON. Yes. It is less expensive to blend down highly enriched bomb-grade uranium to low-enriched

reactor fuel than to enrich natural uranium to the point that it can be used for reactor fuel. Enriching natural uranium in DOE's existing plants requires enormous amounts of electricity. Using the Russian material will reduce the amount of electricity the corporation uses, thus saving money. The corporation will be able to buy the Russian material with the money saved. As a result, the transaction will be budget neutral. It is our intent that the corporation would recover all of its costs under the Russian agreement on a year-to-year basis.

Mr. SIMPSON. It is my understanding that the actual arrangements for blending down the Russian material have not yet been worked out. The conversion from the highly enriched to low-enriched form may take place in existing, NRC-licensed, privately owned facilities in this country. If so, I am advised that it would be flown into this country aboard military aircraft and that the Defense Department already has authority to do so if requested by the President.

DOE would then be responsible for ground transportation to the conversion facility. Existing NRC licenses may have to be amended in minor respects to possess and process the highly enriched material here, but no additional legislation will be required. Is that the Senator from Louisiana's understanding?

Mr. JOHNSTON. The Senator is correct. I share the Senator's judgment that additional authorizing legislation, beyond the pending conference report, is not necessary.

Mr. SIMPSON. Will the private sector continue to have a role in this program? Private firms have taken a lead role in encouraging this program and they should continue to play a part as the program unfolds.

Mr. JOHNSTON. I fully agree with the Senator. The conference report addresses this. It provides that if the Russian material is to be converted in this country, the corporation is to develop a least-cost approach for doing so consistent with environmental, safety, security, and nuclear nonproliferation requirements. The corporation may select private-sector firms to perform these services through a competitive bidding process.

Mr. SIMPSON. How will the Russian agreement affect the domestic uranium industry and jobs in uranium mining and enrichment in this country?

Mr. JOHNSTON. The Senator from Wyoming raises a very serious concern. Once again, though, we have addressed it in the conference report. The new corporation is expressly directed to manage the release of the Russian material into the market in a manner that minimizes its impact on the domestic uranium industry.

The Russian material will not be released into the market all at once. Dis-

mantling the warheads will take years. The uranium they yield will be converted and marketed over time in a controlled and economically responsible fashion. Utilities will continue to deliver natural feed uranium, which, through overfeeding, will help to reduce electricity costs at the enrichment plants.

I have been assured that the amount of Russian material covered by the proposed agreement and the rate at which it would become available will not result in any loss of jobs at the Paducah, KY, and Portsmouth, OH, enrichment plants. Moreover, additional amounts of natural uranium will be required to blend down the Russian material from bomb grade to reactor grade. So there will still be demand for natural uranium from domestic mines.

Mr. SIMPSON. As the Senator from Louisiana knows, the domestic uranium industry is on the ropes. During the 1980's, hundreds of mines were closed and thousands of jobs were lost.

Last year, the domestic producers filed an antidumping suit against the Soviet Union regarding below-market-price uranium and enriched uranium imports. In December, the International Trade Commission found that the United States uranium industry was being harmed by the Soviet imports and, in May, the United States Commerce Department found that six Republics of the former Soviet Union were selling uranium at below market cost. Last month, the Commerce Department announced a proposed settlement of the antidumping action that would impose quotas on these imports of low enriched and natural uranium, which are relaxed and lifted based on an increase in market price.

Does the conference report have any effect on the proposed settlement agreements with the Republics?

Mr. JOHNSTON. No, the conference report does not affect the antidumping case or the proposed settlements.

This is a very difficult issue. The domestic uranium enrichment industry has been harmed and it is entitled, under our law, to relief. But this is a critical moment in our relations with Russia. As we forge new commercial ties, we must find ways to encourage commerce in one of the few commodities they can sell for hard currency.

The conference report does not solve this dilemma. It is my hope, though, that an appropriate solution can be found to balance, in a fair and responsible manner, the interests of both the domestic industry and the Republics. The new Government corporation may provide an appropriate means for doing so.

Ultimately, though, I think we need a Government-to-Government agreement with the Russians that covers not just uranium derived from dismantled warheads but also low-enriched uranium produced from Russia's enrich-

ment plants. I have urged both the administration and the Russians themselves to negotiate such an agreement. I think that, in the long run, an arrangement that balances the interests of United States uranium miners, the enrichment corporation, and the Russians offers a better solution than resorting to antidumping actions.

Mr. SIMPSON. I thank the distinguished chairman of the Committee on Energy and Natural Resources and commend him for his attention to these important matters.

#### WHOLESALE TRANSMISSION SERVICES

Mr. RIEGLE. I would like to ask the chairman of the Energy Committee a question regarding the conference report's language on rates, charges, terms and conditions for wholesale transmission services. Does the clause "including, but not limited to, an appropriate share, if any," modify the clause "the costs of any enlargement of transmission facilities" as well as the clause "legitimate, verifiable and economic costs"?

Mr. JOHNSTON. Yes it does.

Mr. RIEGLE. I thank the Senator.

#### FERC STUDY OF HYDROPOWER LICENSING IN HAWAII

Mr. AKAKA. Mr. President, I would like to engage the chairman of the Energy Committee in a colloquy concerning a provision of the bill which directs the FERC to perform a study on the merits of removing the jurisdiction of the Federal Energy Regulatory Commission [FERC] to license hydropower projects on the fresh waters of the State of Hawaii. The bill provides that the study shall be conducted in conjunction with the State of Hawaii.

As the chairman knows, there are considerable differences between the State of Hawaii and FERC on this issue, and it is quite possible that these differences will remain unresolved at the time that the final report is issued.

Should this turn out to be the case, it seems only reasonable that the State of Hawaii should be permitted to have its contrary views represented in the final report.

I would like to ask the chairman of the Energy Committee if the conferees intend that the views of the State of Hawaii be fully and fairly reflected in the FERC report.

Mr. JOHNSTON. Yes, I agree with my colleague from Hawaii. The conferees specifically addressed this issue when the phrase "in coordination with the State of Hawaii" was included in this provision. We adopted this phrase so that the views of the State of Hawaii would be fully and fairly reflected in the final report. If FERC and the State of Hawaii do not agree on some or all of the conclusions of the final report, then the additional or dissenting views of the State of Hawaii should be printed as part of the FERC report.

Mr. AKAKA. I thank the chairman of the Energy Committee for that clarification.

#### PUBLIC UTILITY COMPANY ACT AMENDMENTS

Mr. METZENBAUM. Mr. President, I would like to engage the chairman of the Energy and Natural Resources Committee and the senior Senator from Arkansas in a colloquy about a provision in the energy bill which amends the Public Utility Holding Company Act [PUHCA] to permit utility and utility holding companies to invest in foreign utility companies. As I understand this provision, for all utilities and holding companies, except those associated with the nine multi-State utility holding companies which are registered under PUHCA, every State regulatory commission with retail rate authority over an affected utility must certify to the Securities and Exchange Commission [SEC] that, first, it has the authority to protect ratepayers from the impact of foreign utility investments, and second, it intends to exercise that authority. However, the only regulatory body with authority to directly review foreign utility investments engaged in by registered holding companies is the SEC.

Mr. JOHNSTON. That is correct. The provision requires the SEC to promulgate rules or regulations which provide for the protection of the customers of registered holding company utilities. In addition, when a registered holding company issues securities to acquire a foreign utility company, those State commissions with retail authority over the holding company's utility subsidiaries would be permitted to make a recommendation to the SEC regarding the holding company's relationship to a foreign utility company. The SEC will be required to "reasonably and fully consider such State recommendation."

Mr. BUMPERS. Mr. President, during conference committee consideration of the energy bill, where the foreign investment provision was included, I argued that due to the risky nature of foreign investments and other related concerns about utility holding company diversification, registered holding company consumers needed protection in addition to that provided by the SEC. The Commission's PUHCA office is underfunded, understaffed and, in the recent past, has not played an active role in the protection of consumers.

Mr. METZENBAUM. I share the concerns of the Senator from Arkansas. Like ratepayers in Arkansas, many consumers in my State of Ohio are served by a multi-State registered utility holding company. During the last 5 years, several court cases have raised questions regarding whether the laws governing utilities and utility holding companies provide any forum for the protection of consumers. I fear that the foreign utility amendment will further leave consumers in my State and the other 22 States served by registered holding companies further unprotected.

Mr. BUMPERS. As I noted before, while I am dissatisfied that State regulators of registered holding company subsidiaries were not given the same authority over foreign utility investments that all other State regulators were given, and contested the provision in the conference committee, I do note that the SEC will have to take several steps toward the protection of consumers. I intend to follow the SEC's process of reviewing registered holding company applications to make foreign investments and the issuance of rules and regulations to protect consumers extremely closely. If I see that the SEC is not doing the job that the chairman of the conference committee has assured me that it would do, I will take action to amend the law so that consumers will be adequately protected.

Mr. METZENBAUM. I thank the Senator from Arkansas for his diligence on this issue. I also intend to closely scrutinize the SEC's actions under the foreign investment provisions to ensure that consumers are adequately protected and will join with you in taking all necessary actions to change the law if it is insufficient.

#### GEOTHERMAL HEAT PUMP PROVISION

Mr. MOYNIHAN. I wonder if I can engage in a colloquy with the manager of the bill, my good friend the senior Senator from Louisiana.

Mr. JOHNSTON. I would be pleased to engage in a colloquy with the senior Senator from New York.

Mr. MOYNIHAN. As the Senator knows, section 303 of the bill authorizes the Secretary of Energy to encourage the installation of geothermal heat pumps which utilize the flow of water from and back into the public water system. I think the Senate should know that States, counties, municipalities, private water authorities, public service commissions and others have raised serious concerns regarding the potential for these devices to have a negative impact on local public health and safety because of the potential contamination, of the public water supply.

Mr. JOHNSTON. I am aware of those concerns and that is why section 303 states that this must be done consistent with public health and safety.

Mr. MOYNIHAN. Since the legislation is silent on specific actions the Secretary is required to take, am I correct that the legislation does not authorize or require the Secretary to undertake any specific action such as a rulemaking, a national program or a proactive effort of any form?

Mr. JOHNSTON. That is correct. The legislation does not authorize any specific action on the part of the Secretary to encourage these devices, other than in the most general way consistent with public health and safety concerns.

Mr. MOYNIHAN. May I also assume correctly that when issues of public

health and safety are to be determined that the determination is to be made by the appropriate level of State or local government and not the Secretary?

Mr. JOHNSTON. That is correct.

Mr. MOYNIHAN. I thank my friend.

#### ENERGY EFFICIENCY

Mr. JOHNSTON. Mr. President, there are several sections of this bill regarding energy efficiency, title I, on which I would like to specifically comment.

First, under section 125 of the bill, there will be established a new energy efficiency information program for commercial office equipment. This language was based upon joint recommendations made by the American Council for an Energy Efficient Economy, the Alliance to Save Energy, and the Computer and Business Equipment Manufacturers Association. These groups recommended that Congress follow two principles: First, encourage voluntary cooperative efforts and impose Government regulation only if such voluntary efforts fail; and second, provide sufficient flexibility so that the goal of providing consumers with energy efficiency information can be achieved in a manner that makes sense in this market.

Flexibility is needed to determine what type of energy efficiency information is most usefully provided, and how it can best be conveyed to consumers in a timely manner. Household appliances such as refrigerators are quite different than commercial office equipment such as personal computers. The energy consumption labels found on refrigerators simply may not be appropriate for commercial office equipment. It is contemplated that the full range of methods for providing consumers with useful information, including labels, concerning the energy efficiency of commercial office equipment products will be considered. For example, it may be most useful to make energy efficiency information available in catalogs, promotional materials, or in trade magazines, rather than affixing labels to the products themselves.

The effort to develop an effective energy efficiency testing and information program may involve a number of difficult technical tasks, such as establishing testing protocols and appropriately categorizing different types of commercial office equipment. On such technical questions, it is expected that those with technical expertise on commercial office equipment, such as equipment manufacturers, standard-setting organizations, or technical societies, should be relied upon.

Second, subsection 124(c) of the bill would direct the Secretary of Energy to conduct a study on the practicability, cost effectiveness, and potential energy savings of replacing, or upgrading components of, existing utility distribution transformers during routine maintenance.

In conducting this study, I believe that it is important to recognize that, unlike the other consumer products addressed in this legislation, distribution transformers are not commodity products but a key part of an electricity distribution system that requires a balance of all its component parts in order to maximize efficiencies while providing reliable service to customers.

Finally, section 155 of title I would amend title VIII of the National Energy Conservation Policy Act to further promote the use of energy performance contracts.

It is estimated that the Federal Government could reduce its energy costs by approximately \$1 billion annually through the installation of energy efficiency measures. However, the budget deficit has prevented the necessary investments from being made by the Government.

Energy savings performance contracts are a mechanism through which private sector funds can be obtained to finance Federal energy assistance improvements. The conferees recognize that these contracts differ significantly from traditional Federal procurement contracts. Under these contracts, the contractor bears the risk of performance, makes a significant initial capital investment, guarantees significant energy savings to the Government agency, and from these savings the agency, in effect, makes payments to the contractor. The contractor makes a guarantee that the energy and maintenance cost savings will exceed the contractor payments.

Because these contracts differ significantly from traditional Federal contracts, existing contracting regulations are often inconsistent. For example, current regulations regarding the submission of cost and pricing data and compliance with cost accounting standards were not contemplated for application to energy performance contracts. Accordingly, this provision authorizes and directs the Secretary, with the concurrence of the Federal Acquisition Regulation Council, to develop substitute regulations in these and other areas where existing regulations are inconsistent with the goal of promoting energy performance contracts. The Secretary is given wide latitude to develop substitute regulations within procurement law, in order to facilitate the use of energy performance contracts.

It is the expectation of the conferees that uniform regulations will be developed for energy performance contracts to relieve contracting offices of the need to make develop modifications, waivers, or determinations on a case-by-case basis. The intent is to encourage energy service companies to contract with Federal agencies on a uniform basis.

It is further the intent of the conferees that if any agency terminates an

energy performance contract for the convenience of the Government, it is appropriate for the Government to pay the contractor's fair and reasonable termination costs, which may include the costs related to designing, financing, installing, and engineering the energy efficient improvements provided for in the contract, plus any reasonable penalties resulting from such termination imposed by utilities or other entities providing funding.

Finally, this section would clarify, in clause (a)(2)(D)(ii), that performance contracts do not require the advanced appropriation of the payments to be made under the contract.

Many of the provisions in this bill convey additional responsibilities to the State energy offices through the State Energy Conservation Program [SECP]. A comprehensive update of this program, as well as the Institutional Conservation Program and the Weatherization Assistance Program was implemented through the State Energy Efficiency Programs Improvement Act, Public Law 101-440, signed into law on October 18, 1990. This act was intended to streamline the aforementioned programs and increase their flexibility while increasing non-Federal financing of State energy projects. Unfortunately, the Department of Energy has failed to issue the implementing regulations for the statute that provides a basis for so many of the important energy efficiency and renewable energy provisions in the Energy Policy Act of 1992. The conferees therefore urge the Department to take all measures necessary to issue these implementing regulations immediately.

#### NATURAL GAS

The conferees agreed not to include most of title II, regarding natural gas regulatory issues, in the conference report. Three divisive issues proved to be the undoing of the natural gas title.

First among these was the FERC restructuring rule known as Order No. 636. The House conferees contended that a provision included as part of the natural gas import section made the FERC order a conference issue. The Senate conferees disagreed.

Second was the natural gas prorationing and the so-called Markey-Scheuer amendment in the House bill. The Senate bill included no comparable provision. The conferees agreed to include as part of title II a nonbinding sense of the Congress that natural gas consumers and producers, and the national economy, are best served by competitive wellhead natural gas markets. The conferees also agreed to statement-of-managers language expressing the view that the prorationing section was unnecessary because existing law provides adequate protection against States using their prorationing authority to restrict production for the purpose of increasing the price of natural gas.

Third was natural gas imports. The House bill included a section providing for fewer restrictions on imports of natural gas. Most of this section had been adopted in response to the so-called Wirth-Domenici amendment to the Senate bill. The Wirth-Domenici amendment addressed concerns of domestic natural gas producers that Canadian natural gas enjoyed a competitive advantage due to disparity between the way that United States and Canadian regulators set rates for natural gas pipeline transportation. Subsequent to the adoption of this provision in the Energy Committee, the Federal Energy Regulatory Commission took action to address the pipeline rate design issue that was at the heart of the controversy. The Wirth-Domenici amendment was stricken from the Senate bill on the floor. Still, the House retained its provision that had been adopted in response to the Wirth-Domenici amendment.

The conferees agreed to an amended version of the House natural gas import section. As amended, the provision has been expanded to include fewer restrictions on exports of natural gas to countries with which the United States has a Free Trade Agreement. Other language in the import section also was modified to the satisfaction of the Senate conferees.

Unfortunately, due to the contentiousness of these three issues, most of the natural gas title was not included in the conference report. The provisions that were dropped included many where the Senate and House bills were in basic agreement. These included provisions to expedite the authorization to construct new natural gas pipelines and to streamline procedures at the Federal Energy Regulatory Commission. I believe that the intent underlying these provisions remains valid and urge the Commission, through the administrative process, to take steps to implement this intent.

#### FLEETS AND ALTERNATIVE FUELS

The legislation contains ambitious provisions on alternative-fueled fleets. This is an important component of a comprehensive energy policy bill given the fact that two-thirds of all the oil used in the United States is used in transportation. During the last month alone, American cars and trucks have burned about 9 billion gallons of gasoline.

The fleets provisions of the conference report in title V contain elements of both the House and Senate bill. Clearly, I have a preference for the approach adopted by the Senate. I believe the clear and even-handed approach of the Senate bill would have afforded greater certainty to the automobile manufacturers and fleet operators and would have assured to the American public the benefit of decreased reliance on oil in the transportation sector.

Further, it is with some reluctance that I agreed to the provisions of the legislation relating to the imposition of special mandates on alternative-fuel providers. However, the final compromise on this section contains sufficient safeguards so that I am satisfied that a sound and reasonable program can be implemented.

Section 501(a)(1) of the bill requires that of the new light-duty motor vehicles acquired by an alternative-fuel provider, starting in model year 1996, a designated percentage must be alternative-fueled vehicles. However, paragraph (a)(5) of section 501 requires the Secretary to promulgate regulations providing for a prompt exemption, through a simple and reasonable process, from the acquisition requirements if the alternative fuel provider demonstrates that alternative-fueled vehicles meeting its needs are not reasonably available or that the needed fuels are not available in the area where the vehicles are to be operated.

In addition, section 507(g)(3) of the legislation provides general authority that nothing in the title is to be construed to require any alternative fuel provider, or other fleet operator subject to requirements imposed by the title, to acquire alternative-fueled vehicles or alternative fuels that do not meet the normal business requirements and practices and needs of the fleet.

The alternative fuel provider program set forth in section 501 is, through the definition of covered person contained in title III, subject to criteria as set forth in the Senate bill making the program applicable only to fleets of 20 or more vehicles capable of being centrally fueled and used primarily in cities of 250,000 or more population where the alternative fuel provider owns 50 or more vehicles nationwide. Thus, the program is intended to apply only to relatively large business concerns.

Paragraph (a)(2) of section 501 describes the alternative fuel providers to whom the program requirements apply. Subparagraph (a)(3)(A) clarifies that the program is intended to apply only to those affiliates, divisions, or other business units of the alternative fuel provider which are substantially engaged in the alternative fuels business, as determined by the Secretary. Subparagraph (a)(3)(B) provides that alternative fuel providers who are engaged in a principal business transforming alternative fuels into a product that is not an alternative fuel or consuming alternative fuels as a feedstock are not covered.

Finally, the Secretary is granted under subsection 501(b) broad authority after model year 1997 to revise the percentage requirements under the program downward and to extend the time under the acquisition schedule for up to 2 model years.

The legislation also contains provisions relating to a municipal and private fleets program found in section 507. Pursuant to subsection (b) of that section, the Secretary is required to undertake a mandatory rulemaking to determine if a municipal and private fleet requirement program is necessary, based on certain findings as set forth in the legislation. The rulemaking is to be started no sooner than 1 year after the date of enactment of the legislation and to be concluded no later than December 15, 1996.

Any determination under this early rulemaking regarding whether a vehicle operating on reformulated gasoline qualifies as meeting the requirements of the program must be made at the time of this rulemaking, pursuant to paragraph (g)(4) of section 507. In the event that the Secretary determines that a municipal and private fleets requirement program is necessary, the program will commence in calendar year 1998, when model year 1999 begins or some later date established by the Secretary.

If the Secretary declines to initiate a program, the Secretary, pursuant to subsections (c), (d), and (e) of section 507, must undertake a second rulemaking starting in 1998 and ending with a determination no later than January 1, 2000, as to whether a municipal and private fleet requirement program is necessary. If the program was initiated under the first rulemaking, this later rulemaking shall not be undertaken.

Once again, any determination about whether reformulated gasoline use qualifies under the program must be made as part of this rulemaking, as required by paragraph (g)(4) of section 507. If the Secretary determines under this later rulemaking that the program is necessary, the program will commence in model year 2002, or at some later date determined by the Secretary.

The legislation provides for exemptions from the municipal and private fleets requirement program under section 507. Paragraph (g)(3) of section 507 applies to the program. In addition, subsection 507(i) sets forth specific exemptions. Paragraph (2) of that subsection provides that private fleets garaged at personal residences under normal operations are exempt from the private fleets requirement program. Paragraph (g)(2) of section 507 grants the Secretary authority to establish lesser acquisition requirements and to extend the dates under the acquisition schedule. Section 507(n) provides the Secretary with suspension authority as specified.

Section 507(o) establishes a fleet requirement program for the States. A Federal fleets program is provided for in title III of the legislation. Definitions applicable to titles III, IV, and V, are also contained in title III.

## COALBED METHANE

The bill provides mechanisms to allow coalbed methane development to proceed while questions of ownership of the methane resource are decided. The provisions make no attempt to address or resolve the ownership question, and no inference should be drawn regarding such question.

The section provides that in cases where the coalbed methane operator does not have the consent of the coal operator to stimulate a coal seam, a neutral entity, the Secretary of the Interior, is to determine whether such coal seam may be stimulated. Such a determination is subject to appeal.

The Senate bill did not have a coalbed methane development provision. As passed by the House, this section gave the coal operator a veto over the stimulation of coal seam in the proximity of his coal mine or in the proximity of a coal seam in which he has the right to operate a mine. The Senate was concerned that this coal operator veto would frustrate the goal of the section, which is to promote the development of coalbed methane resources. In response to this concern, the conference report establishes a procedure whereby a coalbed methane operator who has been refused consent, or who has not received a reply to his request for consent, may petition the Secretary for a determination.

## ELECTRICITY

I would like to make the following observations concerning title VII of the conference report dealing with electricity.

The definition of an exempt wholesale generator contained in new section 32(a)(1) of the Public Utility Holding Company Act of 1935 permits an exempt wholesale generator to own facilities and goods, such as fuel and related transportation, storage, and handling facilities, reasonably necessary for the operation of its business. The definition also permits an exempt wholesale generator to sell byproducts of electric generation such as steam and fly ash. Such ownership and sales are incidental to an EWG's involvement in wholesale electric generation.

The definition of an EWG has been drafted so as to permit an EWG to sell wholesale power that it has not necessarily generated itself. It appears that buyers of wholesale power may frequently desire to purchase capacity in increments that exceed what the most economical unit would produce. Consequently, the legislation would permit EWG, for example, to generate 350 MW and purchase an additional 50 MW in order to fill a purchaser's 400 MW capacity need.

Under section 32(h)(6) the SEC may, prior to the promulgation of final rules, issue proposed or temporary rules, and registered holding companies may operate pursuant to those proposed or temporary rules until final

rules are effective. The SEC and affected persons may continue to rely upon and proceed on the basis of such temporary or proposed rules if the promulgation of final rules is delayed, by reason of judicial review or otherwise, beyond the 6-month deadline contained in section 32(h)(6).

The State approval requirements for affiliate transactions under new section 32(k) of PUHCA do not apply to situations in which a retail operating subsidiary of a registered holding company does not enter into a contractual relationship with an affiliated EWG but indirectly receives energy from such EWG—as opposed to capacity—from another retail operating subsidiary of such holding company pursuant to the normal integrated operation of such holding company system.

Mr. President, I want to give some recognition to the staffs of other Members of Congress who were critical to the successful conclusion of the electricity title of this bill. On the House side, I give my thanks to Jessica Laverty, minority counsel to Congressman MOORHEAD, and to David Nemtsov, legislative director to Congressman MARKEY, for their diligent efforts on behalf of PUHCA reform and especially transmission access. On the Senate side I am grateful to Howard Useem for his cooperation and tireless work.

In particular, I express my respect and deep appreciation to Sue Sheridan, counsel to Congressman SHARP's Energy and Power Subcommittee. But for her fairness, courage, and intelligence in the face of difficult and uncertain negotiations, I question whether there would have ever been an electricity title agreed to by the conferees.

Finally, I am greatly indebted to Sharon Heaton, senior policy adviser to Senator RIEGLE. She shared the vision of PUHCA reform at a time when it was not the popular measure that it has since become. With an acute understanding of substance and an unfailing ability to generate creative solutions to political problems, Sharon has been a faithful ally in the pursuit of good public policy.

## HYDROELECTRIC POWER

In title XVII the conference committee included provisions that define the scope of the term "fishways" under section 18 of the Federal Power Act. Section 1701 of the bill provides that fishways are:

Limited to physical structures, facilities, or devices \* \* \* and project operations and measures related to such structures, facilities, or devices which are necessary to ensure the effectiveness of such structures, facilities, or devices.

Therefore, for example, a fishway does not include general project flows but only those, such as attraction flows, necessary to the proper operation of a structure, facility, or device. To state it more generally, any flows

or project operations that are purported to be a legitimate part of a fishway must be functionally necessary for a structure, facility, or device to work. Flows and project operations have no independent validity as fishways.

## STRATEGIC PETROLEUM RESERVE

In title XIV, the conferees agreed to a modification of the existing law that defines the circumstances under which the President can draw down the SPR, the SPR trigger. This modification does not represent a major policy change. The law, as modified in the conference report, allows the President to draw down the SPR only if there is a severe energy supply interruption. Previously, the Energy Policy and Conservation Act [EPCA] defined an interruption in terms of a shortage. This definition reflected the fact that when EPCA was first enacted, oil markets were regulated with price and allocation controls. Under those circumstances, a supply interruption would likely result in shortages. Supplies would not flow to the highest bidders, and markets would not clear. Fortunately, for both consumers and producers, price and allocation controls were abolished over a decade ago. Markets now operate much more efficiently.

The conferees agreed that the SPR trigger language needed modification to reflect the current reality of free, deregulated oil markets. One would now expect a severe energy supply interruption to result in sharp price increases. These sharp price increases can inflict the major economic damage in the same way as supply shortages. Therefore, the modified trigger language allows the President to draw down the SPR if: First, an emergency situation exists; second, a significant reduction in supply has occurred which is of significant scope and duration; third, a severe increase in the price of oil has occurred; and fourth, the price increase is likely to cause a major adverse impact on the national economy.

Let me emphasize that all four conditions must be met. Taken together, they define the kind of crisis in which the President should have the power to draw down the SPR. This modified trigger does not allow the President to use the SPR to control oil prices, smooth out price fluctuations, or otherwise manipulate the oil market. A drawdown in response to a price increase is allowed but only in the context of all four conditions. Price spikes or supply imbalances of a regional nature would not qualify. Nor would a demand-driven price spike qualify. In essence, the SPR title of the energy bill maintains the policy that the SPR is to be used solely for severe energy supply interruptions, while recognizing that such an interruption might result in either shortages or severe price increases that could cause major harm to the economy.

Mr. President, I want to join with the vast majority of my colleagues in expressing support for this legislation.

This has been one long time coming. There has been a great deal of work done on this bill in order to reach such a carefully crafted, strong, bipartisan piece of legislation. This is, indeed, the culmination of years of hard work at all levels.

Mr. SIMPSON. Mr. President, I would like to first take the time to offer my great appreciation to the very able committee chairman, Senator JOHNSTON, and the ranking member, my esteemed and dedicated senior colleague and long-time friend from Wyoming, Senator MALCOLM WALLOP.

I have known the senior Senator from Wyoming for over 40 years. He is a special man and a special friend. I know that Senator WALLOP has devoted so much time these past years to crafting a national energy strategy bill that truly charts the course for energy use and conservation in the United States well into the 21st century. MALCOLM WALLOP is truly a credit to Wyoming and to the Senate. We are all so very proud of him and his herculean efforts. He brings great pride to our State.

Mr. President, I am troubled by the resistance this legislation seems to be faced with in these closing hours of the session. It is somewhat ironic that the resistance is coming from those who are normally strongly aligned with proenvironmental legislation. Because I believe this bill is, in fact, very good for the environment.

This energy legislation charts our country's energy course for the next generation; well into the 21st century. The bill before us encourages the consumption of cleaner fuels using increasingly efficient methods. This legislation responsibly addresses the environmental impacts of fuel use in densely populated areas.

Our colleagues serving on the Finance Committee deserve commendation, as well, Mr. President. This legislation corrects a great unfairness imposed on independent oil and gas producers by eliminating the alternative minimum tax for intangible drilling costs. That single provision will do much to stimulate domestic production of oil and gas and take us one further step from reliance on imported oil.

This is truly a national energy strategy, Mr. President. This legislation deals with electric power generation and includes provisions to economically expand electrical power generation facilities by amending the Public Utility Holding Company Act. But that is not all, Mr. President, there are incentives in this legislation which will lead to use of cleaner fuels in existing power generation facilities.

Efficient use of existing forms of energy is a priority in this strategy. Everything is covered: from alternative

fuels for fleet operators to more efficient light bulbs, air-conditioners, and hearing systems.

The Federal Government plays a significant role in increasing efficiency and reducing waste and cutting back on pollution. In many respects, Mr. President, we could fairly call this legislation the environmentally conscious national energy strategy.

This national energy strategy not only looks to the future in providing for cleaner and more efficient energy sources, but the legislation also takes on a global perspective. The provisions to improve clean fuel technology and then aggressively share those cleaner technologies with the rest of the world reflect true vision, Mr. President. These provisions, together with the farsighted research and development sections of this legislation, will result in less dependence on foreign oil, a cleaner environment for all Americans, and the potential to sell these technologies throughout the world.

With respect to nuclear power, Mr. President, it is my view that history will record this legislation as truly a landmark of the 102d Congress of the United States.

I am particularly pleased to see that the conferees have retained the uranium mining and enrichment provisions as well as the nuclear plant licensing reform provisions.

This legislation takes a step toward privatizing the Federal program of uranium enrichment—it creates a Government uranium enrichment corporation. Restructuring the Department of Energy's uranium enrichment office into an independent Government corporation will improve the corporation's competitive edge and will promote enrichment sales.

I am pleased that this legislation contains provisions which allow the partial reimbursement of the costs of reclamation and remediation at uranium mill tailings sites which produced uranium for the U.S. defense program.

For many years, I have sought to preserve the infrastructure needed to maintain a modicum of domestic capability to fuel the domestic nuclear reactors which produce more than 20 percent of this Nation's electricity.

Uranium is a fuel which is abundant in the United States and which is extremely efficient. For example, the energy of a finished uranium fuel pellet the size of a pencil eraser is equivalent to the energy contained in 1,780 pounds of coal, 149 gallons of oil, or 157 gallons of regular gasoline.

The United States was the major producer of uranium in the world, and Wyoming still produces uranium to fuel electricity generating reactors. At its height of production in 1980, Wyoming produced 12 million pounds of uranium—the energy equivalent of 15 billion gallons of oil. In 1980, the U.S. ura-

nium mining industry employed 20,000 people. Now only about 1,300 people are employed—300 in Wyoming; 26 uranium mills and 350 uranium mines have closed around the country since the peak in production of the early 1980's. Today, only several uranium mines and two uranium mills are operating.

Market conditions during the 1980's, oversupply and low-cost uranium producers outside the United States, have plagued the U.S. uranium industry. This has resulted in the deterioration of the U.S. uranium mining infrastructure. By 1995, estimates show that U.S. uranium production will only be 10 percent or less of U.S. demand to fuel reactors.

This country's utilities have become dependent on imports of uranium. This legislation will increase the demand for U.S.-produced uranium. It will preserve the uranium mining and enrichment infrastructure of this country so that we can reduce our dependence on imported uranium.

Another important uranium provision in this bill seeks to ensure that an agreement, announced by the President, between the United States and Russia will succeed. According to the agreement, the United States will purchase Russian nuclear weapons-grade uranium. That high-enriched uranium will be used by the Department of Energy in its production of low-enriched uranium fuel for commercial nuclear reactors and will be used in a way that will minimize disruptions to the commercial market. This swords-to-plowshares agreement is a watershed development for the peace and security of all nations. It will make the world a safer place from nuclear proliferation and ushers in a new era of international cooperation.

The nuclear plant licensing reform provision expands, so very favorably in my belief, upon the Nuclear Regulatory Commission's [NRC] part 52 rule for a combined construction and operating license. This provision clarifies that public concerns should be addressed before a spade of soil is turned—not after completion of a plant. Once the construction of a plant is approved by the Nuclear Regulatory Commission [NRC], a utility may proceed with construction without the specter of indefinite delays. The NRC may halt construction at any time if new information arises which the Commission decides is significant with respect to safety. In any event, any NRC licensing decision may be appealed in Federal court. This is significant improvement over current practice.

I wish to thank Senator BREAUX for diligently working to preserve a provision, which he introduced and I cosponsored, which allows for the removal of restrictions on utility decommissioning fund investments. This provision will open up a wider range of investment options for utilities to consider

in managing these funds and will thereby greatly benefit utility ratepayers and the American taxpayers.

Certainly, Mr. President, some tough compromises had to be made to get to the point we have now reached on this legislation. As in all truly bipartisan efforts, this legislation does not do all that some among us would prefer. Some of our colleagues here feel very strongly that there should have been a moratorium declared on Outer Continental Shelf leasing. I happen to disagree with them—just as strongly. Others of our colleagues—I among them—strongly feel that there should have been a provision in this legislation to permit the limited exploration of the Arctic National Wildlife Refuge. There are other conscientious issues.

The truth is, Mr. President, that this is a national energy strategy, not a parochial one. There are no special provisions directed to benefit any single State. All States benefit.

My home State of Wyoming will benefit in ways far different than the populated coastal States. For example, Wyoming will directly benefit from this energy strategy. It encourages increased production of natural gas. While Wyoming is a leader in the production of natural gas, the rig count in recent years has been well below average. I have reason to believe this legislation will cause a real improvement in exploration and development activities in the West.

But, Mr. President, as Wyoming benefits from increased demand and production of natural gas, more densely populated States will benefit from the increased supply of that resource. Prices will tend to remain stable so consumers will benefit. The population centers will also benefit because natural gas is cleaner and more efficient—the air quality and the quality of life in the major cities will be improved.

This legislation encourages the use of clean coal and the development of new technologies for using and for marketing that coal. Wyoming will benefit from these provisions because Wyoming has some of the cleanest and largest coal reserves in the world. My State's economy will benefit and consumers will benefit. Use of clean coal will result in a direct improvement of air quality. Again, Mr. President, everyone will enjoy an improvement in the quality of life because of this legislation and the planning and the thoughtful efforts of our fine colleagues on the Energy and Natural Resources Committee.

But that is legislating, Mr. President. That is what we are all about. We make the tough compromises and the tough choices—sometimes we take our lumps making those choices and compromises—but we do that with the country's very best interest in mind.

This legislation is historic, just as the Clean Air Act was, and I, for one,

am very pleased to support it. In my view, Congress will have done well, indeed, when we send this legislation to the President for his signature.

#### MONITORED RETRIEVABLE STORAGE PROVISIONS

Mr. DURENBERGER. Mr. President, one of the provisions in this bill changes our policy with respect to the temporary storage of nuclear waste from electric powerplants.

In the Nuclear Waste Policy Act, Congress authorized construction of temporary, above-ground storage facilities for the spent fuel rods from powerplants. These facilities would serve as a midway point between the storage pools located at nuclear reactors and the permanent repository that will isolate the waste from the biosphere so long as it remains radioactive.

The temporary holding facilities are called MRS the acronym for monitored retrievable storage. MRS facilities will take the wastes, store it safely for a time, perhaps process the waste for ultimate disposal and then send it on to the permanent repository.

There has been opposition to the MRS concept. Many are opposed to processing spent fuel because it can be used to make nuclear explosives. The Carter administration banned fuel reprocessing as an option in the United States because of this fear of proliferation.

The other concern about MRS is that it will weaken our resolve to develop a permanent repository. If we have these temporary storage facilities, the pressure to find a permanent solution to the nuclear waste problem will be off. The powerplants will be relieved of their wastes, the material will be in the hands of the Government and who cares if the Government takes the next step and places it in a permanent facility.

We all should care, Mr. President. We ought not pass this nuclear waste problem on to our children unresolved. For these two reasons, current law prevents the construction of an MRS until the permanent waste repository is in operation. That is a policy that we should continue.

Northern States Power, a Minnesota utility that operates two reactors, is beginning to run short of storage capacity at its powerplants. Their petition to expand that storage capacity has recently been rejected by the State of Minnesota. Allowing construction of an MRS even before a permanent facility is open would give them relief. Nevertheless, I think this is a change in policy that is not well advised. We need to keep our focus on the permanent repository that will separate nuclear waste from life on this planet.

#### ELECTRICITY TRANSMISSION

Mr. LOTT. Mr. President, amending section 212 of the Federal Power Act, the conference agreement says the rates, charges, terms and conditions of

wholesale transmission services pursuant to a section 211 order shall permit the recovery of costs "including taking into account any benefits to the transmission system of providing the transmission service." What are such "benefits to the transmission system?"

Mr. WALLOP. The purpose of this language is to recognize that the electrical system of a transmitting utility is a dynamic system which must handle numerous transfers of electricity simultaneously. This phrase requires that where an order under section 211 causes benefits from reduced line losses on parts of the transmission system, the reduced losses must be taken into account in the recovery of other costs, including the costs of any increased losses in other portions of the transmission system.

Mr. LOTT. Amending the same section, the conference agreement states, among other things, that transmission "rates, charges, terms, and conditions shall promote the economically efficient transmission and generation of electricity." What is the meaning of "economically efficient transmission and generation of electricity" in this context?

Mr. WALLOP. The purpose of this language is to encourage negotiated rates, where appropriate. In cases where the relevant market—the market for delivered power—is competitive, the negotiated or market price will reflect the true value of the use of facilities and promote the economically efficient allocation of resources. In such cases, a market-based rate shall be deemed to meet all the requirements of section 212 (a).

Mr. NICKLES. Mr. President I ask unanimous consent to put in the RECORD a summary and section-by-section analysis of the oil pipeline regulatory reform title of the Energy Policy Act of 1992.

This was prepared jointly by the Association of Oil Pipelines and the National Council of Farmer Cooperatives.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

#### OIL PIPELINE REGULATORY REFORM TITLE XVIII OF H.R. 776

##### BACKGROUND AND NEED FOR LEGISLATION

The Interstate Commerce Act (ICA) was enacted in 1887 and has been amended many times over the years. In 1906, oil pipelines were made subject to the ICA by the Hepburn Act.

In 1977, in conjunction with the formation of the Department of Energy, regulatory authority over oil pipeline under the ICA was transferred from the Interstate Commerce Commission (ICC) to the newly created Federal Energy Regulatory Commission (FERC). See Section 402(b) of the Department of Energy Organization Act, 42 U.S.C. 7172(b). That transfer was intended to facilitate a coordination of energy policy by bringing regulation of oil pipelines under the same agency responsible for regulation of other forms of energy transportation. Importantly, the traditional standards governing rate regulation under the ICA were not modified.

The FERC's first substantive ruling under its ICA authority concerned a rate proceeding involving Williams Pipeline. The case has been initiated at the ICC before regulatory authority over oil pipelines was transferred to the FERC. The ICC's decision had been appealed to a federal appeals court for review. The FERC requested the court to remand the case to enable the FERC to develop its own oil pipeline rate making methodology. The court remanded the matter to the FERC. *Farmers Union Central Exchange v. FERC*, 584 F.2d 408 (D.C. Cir. 1978) ("Farmers Union I").

On remand, the FERC issued Order No. 154. 21 FERC ¶61,260 (1982). Order No. 154 was struck down by the D.C. Circuit in *Farmers Union Central Exchange, Inc. v. FERC*, 734 F.2d 1486 (D.C. Cir. 1984) ("Farmers Union II"). In response to the D.C. Circuit's rejection of Order No. 154, the FERC issued Order No. 154-B, 31 FERC ¶61,337 (1985), adopting "net depreciated trended original cost" as the basis for oil pipeline rate regulation, but leaving aspects to be developed on a case-by-case basis. See *ARCO Pipe Line Co.*, 53 FERC ¶61,398 (1990).

Despite years of administrative proceedings and judicial litigation, to date the process has not yielded a generally applicable oil pipeline ratemaking methodology that meets the needs of the oil pipeline industry and its shippers. Moreover, both oil pipelines and shippers have generally been dissatisfied with the FERC's case-by-case approach to developing an oil pipeline ratemaking methodology.

#### HISTORY OF TITLE VIII

The House Energy and Commerce Committee adopted an oil pipeline regulatory reform proposal as Title XVIII of the House energy bill, H.R. 776. H.R. 776 was sequentially referred to the House Public Works and Transportation Committee. The House Public Works and Transportation Committee reported its own version of Title XVIII which was more general in many respects than the Title reported by the Energy and Commerce Committee.

A compromise version of Title XVIII was adopted as part of the original text of H.R. 776 considered by the full House. Title XVIII as passed by the House enjoys the support of both the oil pipeline industry and many oil pipeline shipper interests.

Oil pipeline legislation was not included in S. 1220 reported by the Senate. The Senate receded to the House after minor amendments offered by the Senate were agreed to by the House.

#### SECTION-BY-SECTION ANALYSIS

Title XVIII is comprised of three major elements. First, Title XVIII calls upon the FERC to develop a "simplified" ratemaking methodology applicable to regulation of oil pipelines under the Interstate Commerce Act. Second, Title XVIII directs the FERC to streamline its ratemaking procedural rules. Third, for purposes of future ratemaking, Title XVIII establishes a baseline of historically-effective rates that, to a limited extent, are deemed to be just and reasonable under the ICA. This mechanism is intended to provide a one-time basis for implementation of new rates developed pursuant to the rate reform methodology to be developed by the FERC in response to the legislation, the starting point for which are those existing rates that meet the specified criteria in section 1803(a). The mechanism for establishing base rates as just and reasonable does not apply to rates approved by the FERC after the date of enactment.

It is important to note that Title XVIII does not affect regulation of the rates of the Trans-Alaska Pipeline.

#### SECTION 1801—OIL PIPELINE RATEMAKING METHODOLOGY

Section 1801(a) requires the FERC to conduct a rulemaking to develop a "simplified ratemaking methodology" for oil pipelines in accordance with section 1(5) of Part I of the Interstate Commerce Act. In this regard, the methodology must be consistent with the substantive requirements of the ICA. This ratemaking methodology must be "generally applicable" to oil pipelines. The FERC must issue a final rule within one year after enactment. Section 1801(b) provides a 365-day delay in the effective date of the final rule required by subsection (a).

#### SECTION 1802—STREAMLINING OF FERC PROCEDURES

Section 1802(a) requires the FERC to conduct a rulemaking to streamline its oil pipeline ratemaking procedures. The procedural reforms are intended to eliminate unnecessary regulatory costs and delays. The FERC must enact the final rule within 18 months after enactment of the legislation.

Section 1802(b) identifies issues the FERC is to consider in conducting the rulemaking mandated by subsection (a). Subsection (b) does not, however, require the FERC to adopt any particular procedural reforms.

Subsection (c) directs the FERC to identify procedural changes which the FERC believes would be useful but which require legislative authorization before they may be adopted by the FERC. The FERC is to advise Congress of procedural changes that require such legislative authorization.

Subsection (d) is a response to dissatisfaction by oil pipelines and shippers respecting their inability to terminate costly proceedings before the FERC when the pipeline and the shipper have reached an accord on their differences and the pipeline has withdrawn the tariff increase that gave rise to the tariff proceeding. Oil pipelines and shippers have expressed concern regarding the inability of the pipeline to withdraw its proposed tariff increase and reinstate its prior rate in order to resolve a shipper's protest.

Under paragraph (1) of subsection (d), if an oil pipeline withdraws a proposed rate increase, the tariff proceeding related to the withdrawn rate increase is to be terminated and the pipeline's previously-effective rate is to be reinstated. The oil pipeline must refund any amounts collected under the withdrawn tariff that were in excess of the revenues the pipeline could have collected under the previously effective tariff rate. However, the Conference Committee expects that the FERC will give due consideration to the adverse consequences to shippers that could result from the untimely termination of cases challenging rate increases. For example, if a case, that has been litigated for a considerable period of time, is nearing a decision, the Committee would not expect the FERC to permit the case to be abruptly terminated over the objection of the complaining shipper.

Under paragraph (2) of subsection (d), when a complaint is withdrawn, the proceeding before the FERC is to be terminated. Paragraph (2) is intended to ensure that the FERC does not continue a proceeding where the basis for the complaint which initiated the proceeding no longer exists. Nothing in paragraph (2) prejudices the FERC's authority to institute its own investigation under the ICA if the FERC determines that such an investigation is warranted.

Subsection (e) requires the FERC to adopt rules which promote the use of alternative dispute resolution procedures as the preferred method of resolving rate disputes between oil pipelines and shippers. Subsection (a) provides an opportunity for alternative dispute resolution after an oil pipeline tariff change has been filed, and thus offers significant potential rewards in reduced costs and time for both shippers and oil pipelines. While the FERC has taken steps to implement the Administrative Dispute Resolution Act, this subsection is a continuing expression by Congress that alternative dispute resolution should be encouraged in this context.

#### SECTION 1803—PROTECTION OF CERTAIN EXISTING RATES

Section 1803 provides increased rate certainty, limits the opportunity for future challenges to rates which have been in effect without challenge for an extended period of time, and limits refund exposure with respect to those rates.

Subsection (a) of section 1803 identifies oil pipeline rates that will be deemed just and reasonable by operation of law. Paragraph (1) of subsection (a) provides that rates in effect for a 365-day period before enactment of this legislation are deemed to be just and reasonable for purposes of the ICA if the rates were not subject to protest, investigation or complaint within that 365-day period. Paragraph (2) of subsection (a) provides that rates that were in effect on the 365th day preceding the date of the enactment of this legislation are deemed to be just and reasonable for purposes of the ICA even if the rates were not in effect throughout the 365-day period preceding enactment if an intervening rate filing was made during the 365-day period, so long as the rates in effect 365 days before enactment were not subject to protest, investigation or complaint during the period in which those rates were in effect. Consistent with the foregoing, the conferees intend that a person may file a complaint up to, and including, the day preceding the date of the enactment of this legislation and that the complaint need only comply with FERC's existing regulations in order to satisfy the statutory requirement. So long as a complaint filed during the periods described above meets this standard, the complaint will be sufficient to preclude a rate from being deemed just and reasonable under section 1803(a). In view of the fact that, but for the exceptions provided in subsections (b) and (c) of section 1803, this will be complainants' last chance to challenge such rates as well as FERC's last chance to review such rates before they are deemed just and reasonable, the conferees expect that FERC will review such complaints carefully.

Deeming rates just and reasonable under subsection (a) does not insulate those rates from all subsequent challenge, however. Paragraph (1) of subsection (b) establishes two alternative threshold showings, either of which will permit a substantive challenge to the justness and reasonableness of a rate (otherwise deemed just and reasonable under subsection (a)). Under paragraph (1) of subsection (b), the person seeking to challenge a rate deemed just and reasonable under subsection (a) must demonstrate the existence of a substantial change after the enactment of the legislation either (A) in the "economic circumstances of the oil pipeline" which were the basis for the rate; or (B) in "the nature of services provided" which were the basis for the challenged rate. Under paragraph (2) of subsection (b), a person may challenge a rate deemed just and reasonable

if the person had been prohibited from filing a complaint by a contract provision in effect prior to January 1, 1991 and on the date of the enactment of this legislation. The complaint must, however, be brought within 30 days of the expiration of the contractual prohibition.

Except as provided in subsection (c) described below, the FERC may not investigate the lawfulness under the ICA of a rate deemed just and reasonable under subsection (a) unless one of these threshold showings is made. In the event that one of the required threshold showings has been made, the FERC may proceed to review the justness and reasonableness of the challenged rate without regard to subsection (a). However, if as a consequence of such review, a tariff reduction is ordered, refunds may be ordered to be paid only for transportation services rendered from the date the complaint was filed.

Subsection (c) provides that even though a rate is deemed just and reasonable under subsection (a), an aggrieved person may file a claim against any rate as unduly discriminatory or unduly preferential. Subsection (c) also permits complaints to be filed against non-rate tariff provisions on grounds of undue discrimination or undue preference. The distinction between complaints under subsection (b) and complaints under subsection (c) is that complaints under subsection (b), as to which the threshold showings described above apply, are complaints directed at the level of the rate itself. By contrast, complaints under subsection (c) are premised on some element of undue discrimination, rather than the level of the rate alone.

#### SECTION 1804—DEFINITIONS

Section 1804(1) defines the term "Commission" as the Federal Energy Regulatory Commission. The term includes the Oil Pipeline Board and any other office of the FERC unless the context requires otherwise.

Paragraph (2) defines "oil pipeline" as any common carrier which transports oil by pipeline and is subject to the FERC's ratemaking authority under the ICA. The definition excludes the Trans-Alaska Pipeline (TAPS).

Paragraph (3) incorporates the meaning of "oil" used for purposes of transferring the oil pipeline regulatory functions of the ICC under the ICA to the FERC pursuant to the Department of Energy Organization Act. When authority over oil pipelines (including both crude oil and refined petroleum product lines) was transferred to the FERC, initially the ICC also transferred, and the FERC accepted, authority over anhydrous ammonia pipelines which had been regulated by the ICC under the ICA on the same basis as oil pipelines. Subsequently, the FERC and the ICC determined, and the Court of Appeals agreed, that anhydrous ammonia did not qualify as "oil" and regulation of these pipelines was returned to the ICC where it is vested today. This definition assures that regulatory reform under this legislation will apply only to those oil pipelines over which the FERC exercises regulatory authority under the ICA and does not extend to anhydrous ammonia pipelines which remain subject to regulation by the ICC under the ICA.

Paragraph (4) defines the term "rate" to mean "all charges that an oil pipeline requires shippers to pay for transportation service." This definition is intended to encompass any type of fee, tariff, fare, or other charge, however denominated by the pipeline, for transportation or transportation services, and is included to address imposition of separate charges by some pipelines for certain transportation services. However,

the definition is not intended to change the scope of FERC jurisdiction under the ICA or extend the jurisdiction of the FERC beyond that provided under the ICA.

(At the request of Mr. MITCHELL, the following statement was ordered to be printed in the RECORD:)

#### CHANGES TO THE PUBLIC UTILITY HOLDING COMPANY

• Mr. SANFORD. Mr. President, I rise to discuss provisions in this conference report amending the Public Utility Holding Company Act [PUHCA]. I am pleased that the conference report changing PUHCA includes concepts from the Senate bill that assures that the States will be required to consider promptly a series of issues arising in connection with so-called exempt wholesale generators [EWG's]. As the Senate is aware, this was an issue in which I took a special interest, with emphasis on assuring full State consideration of the effects of disproportionately greater amounts of debt that EWG's use compared to public utilities. Chairman JOHNSTON and his staff have done a commendable job with this issue, and I appreciate the vigor with which they advocated the Senate position. I want to thank Senator JOHNSTON for his work to retain many of the safeguards of PUHCA reform which were added to the Senate bill.

As I understand the conference agreement, States must within 1 year conduct a general evaluation of a series of enumerated issues—including the issue of how much debt is appropriate—and then determine whether to apply general standards—such as minimum equity requirements—to all exempt wholesale generators. I think this is a workable approach. It assures full consideration of these critically important issues while leaving each State regulatory commission free to tailor the standards they believe necessary to meet their individual needs. I hope very much that the States take this responsibility seriously. I believe we will rue the day if we permit this well-capitalized industry to become excessively leveraged. Such excessive leveraging need not take place, and indeed I don't believe it will take place. This bill puts in place some important safeguards that if used properly will make sure that we do not end up eroding the strong equity base that exists in this industry.

There are several points that I would like to emphasize with respect to these mandated State proceedings. First, while the conference agreement speaks in terms of conducting a general evaluation of these issues, it in no way restricts a State commission from holding a formal public hearing or proceeding and allowing all interested parties to present their views on these important issues. I must say, Mr. President, that in my view that is precisely how all State commissions should proceed to conduct the required general eval-

uations of these issues. Opportunities for full public comment and participation offer the best—and perhaps the only—assurance that all facets of these key issues will be considered and appropriate general standards adopted. Given the requirement that these evaluations should be completed within 1 year, I am confident that fully participatory proceedings can readily be accomplished. For these reasons, I hope all States will use full and open proceedings to discharge their responsibility under these provisions.

A second point I wish to make, Mr. President, is that there is nothing in the legislation that forecloses a State commission from adding additional issues to these proceedings and evaluations. For example, the conference agreement does not contain the Senate's provision which mandates considering the effects on consumers of retaining the so-called residual value of a powerplant by the EWG for the shareholder benefit. My concern has been that to the extent that utility companies purchase power from EWG's rather than building their own plants, at the end of the day, these utility companies will no longer own operating facilities as part of their equity base. States are perfectly free to consider this issue and I think they should do so. Similarly, States are free to consider—and I hope they will—the effects of EWG contracts that would displace utility-owned facilities that are still fully capable of producing power. Such stranded investment situations could well have adverse effects on all concerned.

In general, States should be considered fully free to operate in a discretionary manner to fully and effectively implement the full scope of this regulation authority in this area in order to protect consumers.

Mr. President, I think that as we move toward a broad restructuring of the utility industry, our mandate that States take an active role in considering the risks as well as the promised rewards of purchased power will prove as the most important consumer protection tool in this legislation.

If I might, Mr. President, let me conclude by noting that this is just the first chapter in a restructuring effort that Congress will have to revisit, at least in an oversight capacity. In that connection, we may need additional legislation. For example, changes may be in order to the Public Utility Regulatory Policies Act. I understand that our chairman has agreed to look at this issue early in the next Congress, and I commend him for that as I suspect that, in the new climate created by this bill, some limits on the PURPA mandatory purchase right may prove to be appropriate.

Mr. President, I thank the Chair and I yield the floor.●

Mr. CONRAD. Mr. President, I want to express my strong support for the

conference report on H.R. 776, the Energy Policy Act of 1992. This is the most comprehensive energy legislation that we have considered in over a decade, touching virtually every sector of the U.S. energy industry. It will reduce our dependence on imported energy, make our economy more efficient and competitive, and spur research and development of innovative new energy technologies. H.R. 776 is a "Made in America" bill that will improve the utilization of our domestic resources and lead to domestic economic growth.

Our need for a comprehensive energy policy is acute. We cannot afford to forget so quickly the wrenching experience of the Persian Gulf war. Just 2 years ago, we sent over 500,000 of our men and women halfway around the world to defend the oil reserves in the Middle East. We risked the lives of our fighting forces to ensure that we would not lose our oil supply. In fact, the war was in part the result of our failure to implement a comprehensive energy strategy.

Mr. President, I strongly believe our country needs and deserves an energy policy that will reduce our dependence upon imported oil. Our economy is still highly vulnerable to increased oil prices. Can we allow our economic future to be determined by the whims of Middle Eastern leaders? The oil embargo price spikes of the 1970's still haunt us today, and they could be waiting just around the corner in the near future if we do not take aggressive action today.

H.R. 776 will address the problem of our oil dependency from many different directions. One of the most important titles in the bill is the one on energy efficiency. Increased efficiency must be a cornerstone of any serious policy—it is the key to reducing demand and making our economy more competitive. I would note that improvements that we have made in energy efficiency since the 1970's have yielded significant increases in productivity. H.R. 776 will set new energy efficiency measures for homes, buildings, appliances, motors, lamps, and factories. It also sets new standards for showerheads, faucets, and toilets. Mr. President, these may seem like small steps, but they will yield enormous benefits in energy savings. Make no mistake about it, in the long run it will be cheaper to implement small measures such as this rather than build expensive new powerplants.

I would also like to note that I am pleased that H.R. 776 has retained an amendment that I cosponsored with Senators HATFIELD and WIRTH that will beef up the Department of Energy low-income weatherization program. This will benefit those who often do not have the resources to weatherize their homes, and it will be particularly helpful in a State like North Dakota.

H.R. 776 will also increase the efficiency of our power-generating indus-

try by increasing competition. The amendments to the Public Utility Holding Company Act [PUHCA] will open up the utility industry to allow independent power producers to compete for power contracts. The increased competition that will result from these changes will lead to reduced utility costs, and the Department of Energy estimates that it will save \$1.8 billion per year.

There were many who were concerned about the wisdom of altering the Holding Company Act. I shared many of these concerns and believe that H.R. 776 goes a long way in assuring that the PUHCA amendments will not have a negative effect. It will allow wholesale sales by IPP's, but not retail sales or so-called sham transactions. This will prevent an IPP from cherry-picking large customers away from a utility and leaving the small customers with higher rates. H.R. 776 also has a strong provision to ensure system reliability. Finally, I continue to be concerned about the potential negative effects of highly leveraged IPP projects. IPP projects generally have a much higher debt-equity ratio than utility projects. Therefore, I am pleased that H.R. 776 contains my amendment requiring States to conduct a review of the potential negative effects of debt-leveraging. Such a review will hopefully serve to protect consumers from the adverse consequences of highly leveraged projects.

I also feel very strongly that we need to take steps to promote alternative fuels as a way of reducing our dependence on foreign oil. Transportation accounts for 60 percent of U.S. oil consumption, and it is time to start promoting fuels other than oil. H.R. 776 contains an aggressive alternative fuels program that will utilize natural gas, alcohol fuels, hydrogen, and electricity. The bill also solves the problem of creating both a supply and demand for these vehicles by requiring Government fleets to begin purchasing alternative fuel vehicles. It will also require the Secretary of Energy to perform a rulemaking to set standards and a timetable for private fleet requirements. The fleet requirements will apply to 50-car fleets in cities of 250,000 or more.

One of the biggest energy policy failures of the past 12 years has been the administration's gutting of renewable energy programs. Environmentally safe and domestically available, renewable energy holds the promise for our energy future. H.R. 776 takes strong steps to promote development of solar, wind, biomass, and geothermal power. It includes a Federal production incentive for new renewable facilities, joint ventures for technology development, and a tax credit for renewable energy production. Mr. President, my State of North Dakota has more potential for wind energy than any other State. I

can assure you from personal experience that the wind blows almost all the time there. Does it not make sense to harness and develop this nonpolluting resource? H.R. 776 will help to achieve this goal.

I'd also like to point out that the bill also contains a provision of mine which will help promote renewable energy projects in rural areas. It will authorize States to make DOE grants to farmers and rural electric cooperatives for renewable energy development.

Another key to reducing our oil dependence is to find new ways to utilize our coal resources in clean and efficient ways. We have enough coal in the United States to supply us for hundreds of years. H.R. 776 will promote clean coal technology and efficiency by authorizing new innovative coal projects. Of particular note are provisions which I authored to promote the research of low-rank lignite coal, which is found in abundance in North Dakota. North Dakota has an estimated 30 billion tons of recoverable coal reserves which can power our country for centuries to come.

Finally, Mr. President, although this bill properly ensures that retired coal miners will continue to receive their health benefits, it does so on the backs of the wrong people. The reachback provision in the bill is unfair, and imposes extreme hardship on certain former BCOA signatories. It creates a windfall for large BCOA signatory companies, who since 1988 have willfully underfunded the 1950 and 1974 health benefit trusts, at the expense of former signatories. I urge the Finance Committee to revisit the reachback issue early next year, to ensure that the bill places these financial obligations where they belong.

Mr. President, H.R. 776 contains a great many other provisions which I won't list here, but which will have a profound effect on our energy consumption. This bill has been 2 years in the making. It was forged in the crucible of the Persian Gulf war, and, though we have stable oil prices now, we cannot afford to take the chance that they will stay that way in the future. H.R. 776 is by no means perfect. I personally would have liked for it to contain a provision requiring increased fuel efficiency in new automobiles. There were other similarly worthy ideas that were not included in this bill. Nevertheless, this is a vitally important step toward a comprehensive energy policy that our country desperately needs. It is time to act now—we will be better for it in the future.

Mr. BRADLEY. Mr. President, the national energy policy now before the Senate is lengthy, complex, and, as is generally the case with such legislation, a mixed bag. On the one hand, the bill promotes the use of natural gas in industry and in the transportation sector. It promotes energy conservation.

It promotes competition in the electric utility industry. On the other hand, it gives billions in tax relief to the oil and gas industry. It attempts to restructure the uranium enrichment business in the United States in a manner that could cost consumers billions. It could have gone much further in the pursuit of energy conservation. There could have been greater consumer safeguards included, as I urged, in the reform of the Public Utility Holding Company Act.

However, I am pleased that the legislation includes a number of items that I have fought for. The tax provisions do make clear that energy conservation rebates by utilities will not be taxed, as was the case until 1989. In recent years, these rebates have emerged as one of the most effective tools in the battle to promote energy efficiency and avoid the need for siting and building new powerplants. One New Jersey utility has estimated that these rebates have already saved us enough power to forego two medium-sized powerplants that would have otherwise been required. Few Federal programs have had such an impact. These rebates mean less energy demand, less energy produced, and cleaner air and water.

The bill also includes provisions to ensure independent electric power producers will not be shut off the electric transmission grid. The bill takes a giant step, with the PUHCA reform title, toward deregulating the electric utility industry. However, as we have seen in other industries, deregulation is not without risks for consumers. These electric utilities have been regulated because they are natural monopolies. Even with PUHCA reform, the monopoly on the transmission grid will persist. Only through a policy which includes wider access to the grid can the full benefits of a competitive electric utility industry be felt by consumers.

Mr. President, as I said at the outset, this bill has as its centerpiece increased natural gas use. The natural gas title, title II, is short but it also has very important provisions in it for both natural gas consumers and producers. Both sections of the title concern matters on which I have been active for some time—imports and prorationing.

Title II continues and broadens our Federal natural gas policy. It completes the drive for an open North American gas market. It also will ensure vigorous competition at the point of production—the wellhead markets. These new provisions are critical, particularly as to the prorationing issue, because of what has happened recently. As Federal regulation of wellhead markets has eased, and the accompanying Federal preemption of State pricing regulation by a comprehensive scheme of Federal price controls has started to phase out, new concerns have arisen.

Some producing States have considered reoccupying this important field of interstate commerce with a new type of regulation—wellhead production regulation that could be used to cut back output in order to raise the price of natural gas.

The replacement of Federal regulation and market intervention with State price-raising regulation and intervention, would, of course, be directly contrary to a national energy strategy aimed at free, market-based growth of natural gas use. It would hurt gas use both in new areas promoted in the other titles of the bill and in the traditional gas markets. Moreover, State intervention in place of Federal control would undermine fundamentally our attempts to have a competitive gas market.

Many supporters of new producing state prorationing proposals have asserted that there is no evidence of their intent to set up State administered price fixing cartels. On the one hand, it would be preferable to defer to the States on this matter. However, there is a long history here. During the 1950's the Texas Railroad Commission used economic waste and reasonable market demand prorationing to affect price. Also the public statements of numerous producing State officials regarding these new State initiatives raise serious questions that cannot be ignored. When the Senate Energy Committee held hearings on this issue, I referred to a letter sent by Oklahoma Energy Secretary Charles Nesbitt. I ask unanimous consent that the text of that letter, which lobbied on behalf of an Oklahoma prorationing proposal, be included in the record following my remarks.

There is a long history of legitimate State regulation to further the goals of physical conservation, to prevent unfair drainage among producers in a common reservoir, to enforce wellspacing rules, and so on. The Congress has not intended to preempt these legitimate State authorities. It is, however, now necessary for us to speak definitively on these new prorationing initiatives, and I am very pleased that title II has done so.

The prorationing provision in title II does not decide the lawfulness of these new State initiatives. This is entirely a question for the Federal courts, in the context of a preemption challenge to those State laws or regulations that substantially and unreasonably interfere with the broad Federal policy of wellhead competition. The intent of Congress, however, will be a central question in any possible future disputes. Accordingly, new section 202 of title II restates and extends our support for free national gas production markets, and I am pleased to have had a hand in its evolution and adoption by us in this legislation.

This short natural gas title also makes very clear that Canadian natu-

ral gas will be considered like any other gas in this country. Unfettered access to Canadian energy supplies was one of the great accomplishments of the Canadian Free-Trade Agreement. Unfortunately, time and time again domestic producers have sought to use U.S. regulatory authority to block access by consumers to these alternative supplies. With the passage of this legislation, we make clear that these tactics will not succeed.

I am also pleased that this legislation includes provisions I've promoted which gives tax equity to commuters who use mass transit. The existing Tax Code allows employers to deduct the cost of onsite employee parking as part of the cost of doing business. The tax proposal would allow an employee to receive each month up to \$150 from his or her employer if they park at commuter stops and an additional \$60 when they commute by public transportation. This benefit, which would not have to be reported as income, could amount to nearly \$2,500 annually for a commuter. For the millions of New Jerseyites who commute every day, this proposal makes public transportation a good option. It could make the difference in choosing whether to drive all the way to work or go to Newark, Metropark, or Princeton Junction or any one of the SEPTA stations and catch a train or bus.

Mr. President, this national energy policy is not without problems. It is not the proverbial home run. But it represents progress, nonetheless, and I will support it. The managers of this bill have tried to balance many competing interests and they have largely succeeded. They are to be complimented for their persistence, their endurance, and their simple hard work.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF OKLAHOMA,  
OFFICE OF THE SECRETARY OF ENERGY,  
Oklahoma City, OK, October 22, 1991.  
Representative GROVER CAMPBELL,  
State Capitol Building, Oklahoma City, OK.

DEAR REPRESENTATIVE CAMPBELL: I enclose a draft of a bill which is being prepared for introduction in the 1992 legislative session. As a member of the Energy, Environment, and Natural Resources Committee, I feel you should be kept informed about proposed legislation in the field of Energy.

The subject of this legislation is seasonal market demand proration of natural gas. As you are no doubt aware, Oklahoma enacted the nation's first market demand laws relating to both oil and gas in 1913, when a condition of severe oversupply had resulted in low field prices and widespread waste.

These laws were enforced and worked very well until the mid-1970's, when the first Arab embargo and punitive federal price controls on natural gas resulted in a severe shortage of supply. Later, when the shortage of gas had turned to surplus, the Oklahoma Supreme Court held that the Corporation Commission could not impose more stringent production controls except after personal notice which is a practical impossibility.

Recent events have clearly demonstrated the cost to Oklahoma and its citizens resulting from an excess of natural gas supply. During the summer of 1991, gas field prices sank to the lowest level in many years, below the cost of replacement, simply because of oversupply in the field.

Those who profit from the oversupply and resulting depressed price are the gas traders, the interstate pipe-lines, and the Eastern consumers. Those who lose are the developers, the State, and above all, the Oklahoma mineral owners. We should never forget that natural gas, unlike annual crops, is a nonrenewable resource. When gas is sold at a distress price, the landowner suffers a financial loss which can never be recouped.

This proposal would simply impose a seasonal limitation on production from natural gas wells. It is well known that the market for gas is seasonal: high in the winter months; low in the summer months. Pipe lines are rapidly developing storage facilities, specifically designed to further extend the period of low field prices.

When there is an excess of supply over demand, the simple solution is to reduce the oversupply by storing gas in the ground. If every producer were willing to cut production proportionately during the summer period, no legislation would be necessary. However, we all know that as a practical matter, such joint action, even if it would mean higher prices immediately, simply will not occur.

This proposal would impose a daily gas production limitation of 50% of well deliverability during the winter 6 months' period and 25% of deliverability during the summer 6 months' period. Wells producing casinghead gas and wells of low capacity (under one million cu/ft/day) would be exempt, because the impact of these wells on the market is small. Production from super-wells would be further limited to 25% of deliverability over 10 million cu/ft/day year round. Overage or underage could be made up only during a similar seasonal period, to minimize manipulation. Finally, the present draft includes an automatic sunset provision, under which the allowable restrictions would expire automatically at the end of two years unless renewed by legislative act. If for any reason the plan is not working, it can simply be allowed to die.

No one state can unilaterally overcome the distress prices resulting from seasonal oversupply. No state would want to impose production restrictions, and then see the market move to another state with no improvement in field prices. For this reason, the gas producing states of the Southwest are in close cooperation in these efforts to address the problem of oversupply and low field prices. The Texas Railroad Commission already has conducted hearings preparatory to issuing an Order imposing seasonal market demand proration on gas wells in that state. Similar initiatives are under way in Kansas, Arkansas, Louisiana and Colorado.

Oklahoma is fortunate in that all states recognize the necessity for legislation here. This means that Oklahoma no doubt will be the last to actually impose binding production restrictions. We will know whether other states will act before final passage of the bill by the Oklahoma legislature. However, it is essential that Oklahoma move forward in concert with the other states.

I would appreciate your careful attention to this proposal. I would be glad to meet with you to discuss the matter further if you desire. If you share my conviction that this legislation would be of significant benefit to

Oklahoma, its economy, and especially its citizen-landowners, your joinder as a legislative sponsor would be extremely valuable.

Very truly yours,

CHARLES NESBITT,  
Secretary of Energy.

Mr. GLENN. Mr. President, I voted for passage of the Comprehensive National Energy Policy Act when it was before the Senate earlier this year, and I plan to vote for final passage of the conference report. However, I have strong reservations about several major provisions in this final version of the bill.

The conference committee deleted provisions dealing with natural gas prorationing that were passed overwhelmingly by the House. I strongly opposed efforts by certain States to control natural gas production solely to artificially increase prices. I do not challenge the traditional authority of States to proration gas production to protect property owners' rights, to protect State interest in resource conservation or for other reasons. I sympathize with producer concerns about low natural gas prices, but these concerns would be better answered by expanding gas markets than by artificially increasing prices. In fact, the bill before us takes significant steps to encourage and stimulate the use of natural gas in transportation, electric generation, and appliances.

Ohio is ranked fifth in the Nation for natural gas expenditures. Continued increases in natural gas prices will have a severe impact in Ohio and the Midwest. I oppose the deletion of prorationing provisions from this legislation.

In addition, I wish to question the provision in the energy bill conference report which addresses nuclear waste disposal standards. This provision sets an unfortunate precedent. It excludes the Environmental Protection Agency from establishing a public health standard for long-term high-level nuclear waste disposal and instead delegates this authority to the National Academy of Sciences—an entity which is neither a regulatory nor a standard setting body.

Not only does this provision require the NAS to promulgate standards, it also tells the NAS exactly what kind of standard should be issued. It orders the NAS to promulgate standards that only take into account the maximum dose that any individual can be exposed to from radiation leaking from a high-level nuclear waste repository. It would not address the issue of how many people would be subjected to a given dose.

This provision has the effect of setting the stage for the DOE to pick the Yucca Mountain site, when the purpose of site characterization is to determine whether or not this site is actually suitable. The Department of Energy is opposed to the approach being taken by EPA in setting a repository standard

because it may put into doubt the suitability of the Yucca Mountain site. This is, in my view, an insufficient reason to change our normal regulatory procedures.

Mr. President, in the areas of energy efficiency and conservation, I am pleased that conference accepted provisions on Federal energy management which I had offered in a series of amendments during the Senate's consideration of this bill. This language paralleled legislation I had introduced last year—S. 1040, the Government Energy Efficiency Act—which was favorably reported by the Committee on Governmental Affairs.

I've been preaching the virtues of energy efficiency and conservation long before it became popular. And so I am pleased that the conference has accepted language which I had offered during the Senate's consideration regarding energy conservation and efficiency in federally owned buildings.

Mr. President, when consumers in my home State of Ohio are faced with rising utility bills, they respond with energy conservation efforts, like installing clock thermostats, weatherstripping doors and windows, and insulating the attic and pipe systems. While these steps sound small, they can add up to significant—10 to 30 percent—savings.

Unfortunately, the Federal Government does not seem to exhibit a similar response. In short, I'm not sure who exactly is watching the meter in the Federal Government. Answers to such questions as—who turns out the building lights at night; what incentives do agencies and their employees have for installing energy efficient products or conserving energy; how do building managers know which heating systems and water pumps are most energy efficient—are vague at best.

Further, it has been estimated that even though the average Federal building uses more than \$7,000 per year in energy, we spend less than \$90 per building on efficiency improvements. OTA, DOE lab experts, independent analysts, and even Federal building managers say that a 25-percent improvement in Federal energy use is easily attainable with the goods and services on the market today. That would shave \$900 million from our annual Federal energy costs. It does not take a rocket scientist to see that cost-effective energy investments abound throughout the Federal Government—if only proper commitment and resources are applied.

Energy conservation and efficiency has an added benefit. In fact, I look upon the promotion of American industries in this field as recession busting: We'll create more jobs for Americans and save money in the long run through the use of these products. You just can't go wrong with a program like that.

I strongly believe that the Federal Government must be a leader in the ac-

quisition and use of new and innovative energy efficiency technologies and conservation measures. To this end, I am pleased that the conferees have established an energy efficiency fund, authorized at \$60 million, to install proven energy efficiency technologies and products in Federal buildings. Further, the bill includes a provision I originally proposed for demonstrating the commercial viability of state-of-the-art technologies in Government facilities. Let's get these technologies out of the lab and into the public use. Finally, this legislation requires the Federal Government, through GSA, to identify energy efficient products and services and start to buy them.

This bill requires Federal agencies to develop procedures to reliably account for utility bill costs as well as account for spending on efficiency and conservation upgrades. Additionally, the bill authorizes the placement of qualified, trained energy engineers in the Government's most energy-wasteful buildings as well as setting up an incentives program to reward Federal agencies and employees who implement conservation and efficiency improvements in buildings which result in substantial savings in taxpayer dollars.

In an effort to build on innovative energy management programs already in existence, the bill requires GSA to hold regional workshops for Federal, State, and local energy management officials. If an energy conservation program is working successfully on a local or State level, perhaps it could work at the regional or national level. My legislation attempts to address these and other problems concerning the Federal Government's use of energy.

I am committed to making the Federal Government a model of efficient energy use and conservation. And I can assure you that I will continue these efforts in the 103d Congress.

I am also pleased that the conferees accepted language to help promote and better coordinate Federal Government purchase and use of clean burning, alternatively fueled vehicles.

In addition, I also support a provision of the bill that will preserve health benefits that were promised to retired coal miners and their families. It will also protect additional miners in the future if their companies go bankrupt. The program will be funded by tracing retired miners back to their previous employer or a related company, by shifting excess money from a pension fund, and from interest on the abandoned mine lands fund.

Mr. President, in general I support the objectives of this legislation and will vote for its passage.

Mr. SIMON. Mr. President, I wanted to briefly discuss the Comprehensive National Energy Policy Act.

I want to commend the Members of the Senate Energy Committee for all

the important work that went into this piece of legislation. There are some important provisions included in this conference report. In particular, the policies adopted on energy efficiency and renewable energy will be an important step in decreasing our dependence on foreign oil.

There are also a number of provisions that will be very important to the State of Illinois. The coal title of the energy bill contains several programs that encourage new ways to use coal more cleanly and efficiently. This will help enhance the use of coal as an energy source in the future. In addition, the uranium title of the energy bill contains provisions that will authorize funding for the off-site disposal of low-level radioactive waste from certain active uranium and thorium processing sites. One of these sites is located in West Chicago. I am pleased that much of the language from the House bill was retained in conference. Finally, the tax title of the bill contains a compromise that will provide health benefits for coal industry employees and retirees. The inclusion of this compromise is very important to me and my constituents in Illinois.

I want to take this opportunity to thank my good friend and colleague, Senator ROCKEFELLER, for his hard work in forging a compromise on provisions providing health care benefits to retirees of the coal industry. Without Senator ROCKEFELLER, this compromise would not have been reached. A number of other Senators also worked hard to come to agreement on this issue.

The energy bill provides a vehicle for funding the health benefits of all coal industry employees and retirees, particularly those retirees who have been orphaned by bankrupt companies and coal companies which no longer are in business. Coal industry workers have contributed significantly to providing energy consumed in the United States and abroad. It is vital to every worker as well as the American economy that we maintain a stable and strong coal industry. The provision of lifelong health benefits is crucial to ensuring the continued well-being and security of coal industry employees, retirees, and their dependents, many of whom work and reside in Illinois.

While there are a number of provisions in this bill that I support, I believe we could have done better. I am concerned by the provisions regarding Yucca Mountain, and the process by which they were inserted in the bill.

I also supported language that was passed by the House, but dropped in conference, that would have restricted the ability of States to pass prorationing natural gas legislation. Since several major natural gas-producing States passed these laws, natural gas prices have increased by 56 percent. Illinois natural gas users will pay

\$631 million more, according to the Northeast Midwest Senate Coalition. I am very disappointed that the House provisions were not accepted by the conference committee.

Finally, the Senate bill contained provisions requiring certain private fleets to begin phasing in alternatively fueled vehicles. I supported even stricter provisions on alternative fuels when I voted twice for amendments offered by Senator JEFFORDS that would have set production goals for domestically produced alternative fuels. Ultimately, these amendments were defeated in the Senate. Unfortunately, the alternative fuels provisions accepted by the conference committee are weaker even than those originally passed by the Senate.

Mr. INOUE. Would the manager of the conference report H.R. 776, the distinguished senior Senator from Louisiana and chairman of the conference committee on H.R. 776, clarify subtitle B, of title VII of the agreement concerning transmission?

Is this Senator's understanding correct that the Federal Energy Regulatory Commission's authority to order wholesale transmission service under the conference agreement does not apply if the power is to be transmitted to other than a wholesale customer.

Mr. JOHNSTON. The Senator is correct in his understanding.

Mr. INOUE. Is this Senator's understanding also correct that implementation of a FERC order to provide wholesale transmission service on an island or between islands would require approval by the local public utility commission? In other words, if the local public utility commission does not grant approval, the transmitting utility is excused from the wheeling order?

Mr. JOHNSTON. Yes, to the extent such approval is required under State law, the Senator is also correct in this understanding.

Mr. INOUE. Is this Senator's understanding also correct that FERC would require the applicant seeking wholesale transmission service to provide evidence of its ability to pay for the transmission service including the transmitting utility's cost of expanding the transmission facilities to accommodate the petitioner?

Mr. JOHNSTON. The Senator is again correct in his understanding. My expectation is that in any situation involving major expansion of transmission facilities FERC would not order transmission services unless it was clear that the applicant could pay for its allocated share of the costs.

Mr. INOUE. I thank the Senator for his clarification.

(At the request of Mr. MITCHELL, the following statement was ordered to be printed in the RECORD:)

• Mr. SANFORD. Mr. President, I rise today to speak on the conference report to the National Energy Security

Act, H.R. 776. And it was with very mixed feelings that I reviewed this conference report. I support many of the provisions in this bill because I want to see progress in our national energy policy; we must reduce our dependence on foreign oil and begin to make efficiency and conservation part of the American lifestyle. I am concerned, however, that the energy bill does not go far enough to reduce our need for polluting fossil fuels. And, sadly for North Carolinians, the bill does not address the desires of those in my State who have maintained hope that Congress would address the issue of offshore drilling.

I am thankful for the hard work of the Energy Committee, as they steered this legislation along a very difficult course through the Senate. I did not support the original Energy Bill, S. 1220, offered by the Energy Committee, and I voted last November with a number of my colleagues to keep S. 1220 from coming to the floor of the Senate. At that time, I felt that several Senators had not had the opportunity to give their input on the bill. Since the energy bill first came to the floor, progress has been made on a number of important provisions.

I am particularly pleased with the language to increase the use of renewable and alternative fuels. Such provisions are critical to improving our long-term energy policy. As fossil fuel supplies dwindle, these new energy sources will become ever more important in meeting our country's energy needs. Also, as we all know, the emissions from the use of fossil fuels have an adverse affect on our environment, and it is in our best interest to move away from these polluting fuels. We must increase our use of such fuels as ethanol, natural gas, hydrogen, solar, wind, geothermal, and biomass; H.R. 776 will lead us in that direction.

I am also pleased with the language in the conference report on energy efficiency. The language expresses the intention of the conferees to make the Federal Government a leader in the use of energy efficiency technology. The report also includes numerous efficiency standards for light bulbs, electric motors, heating and cooling equipment, and shower heads and faucets. These energy efficiency provisions are a critical part of reducing energy consumption, and, therefore, reducing our imports of foreign oil.

My support for this bill is tempered, however, by my great concern about the omission of any language on the matter of Outer Continental Shelf [OCS] oil and gas drilling. This is a subject of great concern to many people around the country, and certainly to my constituents, the citizens of North Carolina. I would like to take this opportunity to share with my colleagues the recent history of this issue in North Carolina.

Several years ago, Mobil Oil Co. led a group that purchased leases for oil and gas drilling off the coast of North Carolina. However, the efforts of Mobil Oil and its partners to begin exploratory drilling have been held up for 4 years due to local opposition and a lack of scientific information regarding the possible environmental impacts.

In 1990, at the direction of Congress, a top-flight collection of professionals, the Environmental Sciences Review Panel, was assembled to analyze the drilling option. This North Carolina/Minerals Management Service cooperative study found that available information was inadequate to assess potential environmental effects. Significant risks to marine and coastal environments may result from drilling in this area of uniquely strong converging currents and severe weather.

I supported the language in the House version of the National Energy Security Act which called for the cancellation and buy-back of existing Mobil leases and a 10-year moratorium on new leases in the mid-Atlantic and south Atlantic planning areas. I also supported several fair compromise positions that I felt should have been acceptable to both the House and Senate conferees.

In the end, the White House stood in the way. The same administration that 2 years ago called for moratoria on drilling in several coastal areas of our Nation and pledged to cancel and begin the buy back of off-shore leases in south Florida has now had a change of heart and decrees even limited drilling moratoria in other sensitive areas and says that buy backs are unacceptable.

Due to the objections of President Bush's Office of Management and Budget, there is no lease buy-back provision and no moratoria on either leasing or drilling off the coast of North Carolina. The chance to address this critical matter this session was thus eliminated.

I am very disappointed and concerned about this result. It was my sincere hope that this matter could be resolved in a manner that is fair to both Mobil and the people of North Carolina. Mobil has never been able to take action on the leases they paid good money for, and the people of North Carolina are concerned about the still-unknown impact that drilling would have on our outer banks. Coastal residents, the environmental community, and Mobil Oil want to put this frustrating saga behind them. North Carolina has much work to do before we are ready to bring offshore drilling back to the table in an area of the State which is largely dependant on recreation and tourism for economic survival.

Since we have not dealt with this matter now, I hope my colleagues will work with me to resolve this issue early in the 103d Congress. I am hopeful that the chairman of the Energy Com-

mittee will give this matter his careful attention and lend me his assistance and support in crafting a workable solution to this matter as soon as possible.

Congress must not leave this matter hanging. This is not fair to Mobil and its partners, and it is not fair to the people of North Carolina.●

Mr. KERREY. Mr. President, in adopting the National Energy Security Act, H.R. 776, the Senate has taken a long overdue step addressing the lack of a coordinated national energy strategy. The United States stands out among the industrialized countries for our lack of a comprehensive energy plan. In a period of increasing emphasis on economic competitiveness, energy costs are a critical variable. The United States currently spends about 10 percent of its GNP on energy, almost twice the amount spent by Japan and Germany. We need to lower our energy costs.

Although I have some specific concerns about a number of provisions in this legislation, on balance it is a step in the right direction.

This bill's energy efficiency and conservation provisions are critical to our country's effort to reduce our reliance on imported oil, reduce environmentally destructive emissions and help our country make a transition to new cleaner energy sources. The legislation improves energy efficiency standards for appliances, lighting, motors, commercial air-conditioning, and heating equipment. Further, it sets efficiency standards for Federally insured housing.

The legislation will require State regulators to consider ratemaking changes and other reforms that would make electric utilities' investments in energy efficiency as profitable as investments in new generating plants. This approach to energy efficiency, known as least cost planning or demand-size management, involves managing a utility's various power supplies and the demands of its retail customers to make the most of existing generating capacity.

Improved efficiency is a critical component to our country's economic competitiveness, and I applaud Senator WIRTH and others who have played a critical part in seeing that efficiency and conservation become central to our energy policy. Not only will our firms be in a better position to compete, but these fields will provide important job opportunities in the coming decade.

I am also pleased that this legislation expands research and development programs for alternative and renewable energy sources. The alternative fuels fleet provisions build on the measures that were included in the Clean Air Act last year. We could, and should, go further and I look forward to working with others who have supported alternative fuels to see that we continue

our transition to domestically produced alternative fuels.

The conferees included language to create a Federal production incentive for public utilities that build or purchase facilities that generate electricity from renewable energy sources. The bill would also authorize joint ventures between the Federal Government and private enterprises to develop renewable technologies and applications. Renewable energy sources will also benefit from the transmission access provisions that were included in the conference. Traditionally, renewable energy producers have faced substantial obstacles in selling their clean energy to the Nation's electricity grid. The United States has traditionally been a leader in the field of renewable energy. Unfortunately, we have lost some of our competitive edge. This legislation will strengthen our position by encouraging U.S. producers to export renewable energy technology.

Finally, we have built a framework for an energy strategy without opening the Arctic National Wildlife Refuge's coastal plain oil and gas drilling. This important ecological area does not need to be opened in order to satisfy our oil habitat. This legislation paves the way to saving millions of barrels of oil through efficiency and energy conservation. This savings offsets the need to open up ANWR.

Even though I did support the conference agreement, I am strongly opposed to the provision that addresses the Yucca Mountain high-level radioactive waste site. The Congress should not be directing a non-governmental entity to study radiation exposure and develop standards that the Environmental Protection Agency will promulgate. This short-circuits the public process that helps guarantee accountability and openness on this divisive issue.

I am opposed to the inclusion of nuclear licensing provisions, one-step licensing, that streamline the process for license applicants, but create new obstacles for the public. Citizens with just cause should have the opportunity to have a hearing before a nuclear plant goes online. The provisions in this bill will only add to the current climate of distrust about nuclear power and the Nuclear Regulatory Commission. I am also concerned about the uranium enrichment provisions in the legislation because it involves a poor expenditure of taxpayer dollars.

Despite these drawbacks, the legislation does move us closer to reducing our dependence on oil, protecting the environment and helping make our country more competitive. Finally, we should not allow this to be the last word on energy policy. We need to support the development of innovative solutions to encourage the conservation of existing energy resources and promote the development of renewable energy resources.

Mr. DURENBERGER. Mr. President, if you ask Americans what should be the fundamental objective of U.S. energy policy most would say, "Our policy should strive to reduce oil imports." As one listens to the debate on the energy bill here on the floor of the Senate that is the objective most often mentioned. In light of Desert Storm, Members of this body have been moved to make very impassioned statements on the evils of oil imports and our dependence on Persian Gulf energy supplies.

There are three ways that we could reduce imports. We could increase the supply of domestic oil to meet our needs. We could shift to domestic sources of energy other than oil. Or, we could reduce our consumption of oil by improving our efficiency or changing our lifestyles.

There are examples of each of these strategies in the energy bill now pending before the Senate. The tax provisions of this bill would exempt investments in oil and gas exploration from the alternative minimum tax. That should increase the domestic supply of oil.

There are mandates for the use of alternative fuels in fleets owned by the Federal and State governments in this bill. Those mandates may lead to increased use of natural gas, ethanol and methanol fuels. That will increase the use of alternative domestic energy supplies.

And the Department of Energy and the States are required to consider and adopt various fuel efficiency standards for new construction and new appliances and motors. That will reduce our consumption of oil.

There were many other proposals that would have reduced oil imports that were proposed for inclusion in this bill that were rejected.

This bill does not include an increase in the corporate average fuel economy standards that now require new cars to average 27.5 miles per gallon.

The bill does not authorize leasing of the Arctic National Wildlife Refuge for oil exploration.

The bill does not include any real solution to the Nation's nuclear waste disposal problems. It does not ease permitting of new natural gas pipelines. And it does not include the tough mandate for alternative transportation fuels that Senator JEFFORDS proposed here in the Senate.

There are some modest provisions in this bill that may serve the objective of reducing oil imports. There are other measures that were considered and rejected that would have reduced oil imports by much greater amounts, much greater amounts.

Mr. President, if you compare the rhetoric of war and defiance used to justify this bill with its modest, business-as-usual provisions, you could become confused about the objectives of

U.S. energy policy. Should we really be prepared to reduce oil imports at any cost as is sometimes suggested by the advocates of this bill? If so, then this bill leaves us well short of our objective. In fact, imports as a percentage of our oil use will continue to increase under this legislation.

On the other hand, if this bill is an appropriate response to our energy situation then, what are we to make of the rhetoric of war and independence that makes up so much of our energy debate?

I want to try to tackle the import question directly today. Do we import too much oil? Forty percent of our oil demand is met with imports. Is that too much? If so, what kind of effort would be appropriate to reduce our imports?

To answer these questions let us look first to some energy realities. The first reality is the enormous reserves of cheap oil in the Middle East. Proven reserves in the Persian Gulf region are 589 billion barrels. At current production rates that is enough oil for another 100 years. The actual reserves are likely much larger than even this amount. And it can be produced for \$2 to \$3 per barrel. We are not running out of cheap oil.

The second reality is the dependence of the whole world on this oil supply. Cheap, abundant oil fuels economic growth all around the world. Even if the United States were still an exporter of oil, we would not be economically independent from the Middle East reserves. Our economy is tied to the world economy. Our prospects for growth and higher standards of living depend on growing economies all around the globe. Even complete energy independence, zero imports, would not free us of the economic problems which occur when the flow of oil is interrupted.

The third reality is the dominant role that oil plays in our transportation system. Americans drive. Today's Americans drive more than those of yesterday. Higher oil prices do not keep us home. Today we drive twice as many miles as we did before the first embargo of 1973. Our cars and trucks are more efficient, but we have many more of them and we use them more extensively than we ever have before. That's not going to change.

The fourth reality is declining American oil production. We started the petroleum century. We've looked practically everywhere within our borders for crude oil. We've found and produced great quantities. But there will be less and less oil from domestic sources in the future. More and more of what we use will need to be imported.

In that respect we will be more like the rest of the developed world. Because of our reserves of coal and natural gas, only 15 percent of our total energy needs are met by imports. We are

much better situated than Japan, Germany, the Scandinavian nations, most of Western Europe, all of these nations are much more dependent on imported energy than we are. Nobody in Japan would say, as some Americans do, that Japan does not have an energy policy because its oil imports are high as a percentage of total use. Japan imports virtually all of its oil and a policy to reduce imports to zero would not be thinkable.

Another reality in the American energy picture is a long string of failures by Government. I spoke on this subject at length when this bill was before the Senate last spring. Today, let me just repeat the list of the big energy policies that have been repealed, President Nixon's price controls, President Carter's windfall profits tax, the Powerplant and Industrial Fuel Use Act that rationed natural gas, the Synfuels Corporation, the natural gas price controls imposed by the Supreme Court, the billions of dollars in conservation and wind and solar energy tax credits. The list of Government blunders is sobering, especially to Senators who served in this body when many of those policies were adopted.

On the other hand, the U.S. energy picture has changed in some dramatic ways since the first oil embargo. Our fleet of cars and trucks is almost twice as fuel efficient today. Large improvements in energy efficiency have been made throughout the economy.

We use one-third less energy per dollar of real GNP today as compared to the early 1970's. We are by no means the most energy efficient economy in the world, but progress has been made. These improvements are the result of the higher oil prices that came with the energy disruptions of the 1970's and 1980's. When we finally decontrolled prices, the energy market pointed us in the right direction.

One final reality needs to be mentioned. Oil is relatively cheap today. After the rapid price increases that came with the 1973 embargo and the 1979 Iranian revolution, prices have now subsided again. In fact, oil prices collapsed in the mid-1980's and gasoline is today as cheap as it was in the 1950's when compared to the prices we pay for other goods and services. And it appears that the policy of the international cartel that controls world oil production is to keep the price in the present range.

OPEC is in business to sell oil. They don't want the world to convert to exotic synfuels or to cut consumption dramatically. They want our dollars and they plan to sell oil at prices that will keep the world dependent on their resource. Absent some very dramatic change in the governments of many OPEC nations, we are not likely to see oil prices that will make alternative transportation fuels like ethanol or methanol or electricity competitive in the marketplace.

Lower oil prices have been good for our economy. The current worldwide recession would likely have begun sooner and been much steeper, if energy prices had been maintained at the levels reached in the early 1980's.

So those are some realities in the energy picture. Let me return now directly to the question of oil imports and whether we import too much. Notwithstanding the fact that 95 percent of all Americans would say that our imports are too high, I find this a very difficult question to answer. My own view of the correct answer to the question has changed during the time that I have served in the Senate and watched events in the oil economy.

To sort out the factors that need to be considered in answering the import question, I am going to describe four different oil scenarios. Let us see what each can teach about our import problem.

My first scenario is the simplest. Let us suppose for a moment that all of those Middle East oil reserves were here in the United States, in east Texas, 600 billion barrels of oil, produced at very low prices by a private, competitive oil industry. Oil imports would, of course, not be a problem. Recycling our export revenue would be our principal concern.

But even with that incredible natural resource blessing, 100 years supply of cheap oil within our borders, we still might decide that our current level of oil consumption was too high. There are environmental costs of oil use, including air pollution in our cities, spills and accidents in the oil production system, and the buildup of carbon dioxide in the atmosphere, a possible threat to our climate as a consequence. We might, based on the evidence of global warming, decide to consume less oil than we presently do even if we had no oil imports.

The fuels, ethanol, methanol, natural gas, and electricity, that might be used as alternatives to oil in the transportation sector are quite expensive because of the huge capital investments that would be needed to make any substantial conversion from oil.

For instance, DOE estimates that it would require an investment of \$240 billion to replace 1 million barrels per day of oil with electric energy used in cars.

Some of these fuels, especially natural gas and ethanol, can play a role in solving our urban air pollution problem. But we should not expect that they are an immediate option to abate our concerns about global warming.

But there are many conservation options that are available at today's prices that could reduce our use of oil in the transportation sector. The Senate was correct to reject a 40 miles per gallon CAFE standard for this bill, at this time, but there are many smaller steps that could be taken to push the fuel efficiency of our new car fleet to a

higher miles per gallon. A modest, long-term benefit in lower oil imports would result.

So, even if all the oil were ours, we might use somewhat less, to protect the environment. That's our first possible scenario.

Now, a second scenario. Let's suppose that all that Middle East oil were in Canada. Again, we assume that it is produced by a private, competitive oil industry and as a result we can expect stable oil prices over the long term. There is no security issue in this scenario. We don't have to fight any wars to gain access to this vast reserve of Canadian oil.

But there is the economic problem of imports. As the oil comes in across the border our dollars flow out. Our balance of trade suffers. Our standard of living is less. If this were the energy reality we faced, should we reduce oil imports and if so by how much?

I don't know if any Member who wrote this bill or any staff person who worked on it has considered this question. But there are some economists who have. Their studies do not claim absolute economic certainty. But they have measured the economic penalty of a barrel of imported oil without the security risk associated with the Persian Gulf. And these economists would tell us that the economic penalty for imported oil is about \$2 to \$3 per barrel.

In addition to the \$18 we actually pay for any barrel of oil today, whether domestic or imported, the imported barrel also carries a penalty of \$2 to \$3, because the basic payment of \$18 leaves our country.

If that is a correct estimate, then we should be willing to pay somewhat more for domestic energy sources that can be substituted for oil, not a lot more, but somewhat more. Domestic energy options including conservation and renewable energy, and even enhanced oil recovery technologies, that cost up to \$2 to \$3 per barrel more than the basic price of oil should be preferred because they are domestic.

That doesn't mean \$60 per barrel synfuels. The economic penalty we pay for imports is not large. And the drain on our economy typically measured as a negative balance of trade does not justify huge investments in liquid fuels from coal or oil shale or exotic conservation or renewable technologies.

Our national energy policy should take this economic reality into account. In addition to the conservation policies we employ to address pollution including global warming, small subsidies for domestic options that are only slightly more expensive than oil would be appropriate. And research and development to bring other technologies into this range should also be pursued.

Now let me turn to a third scenario. This is the scenario that I see as the reality today. All that oil is in the Per-

sian Gulf region. The region is politically unstable. Many of the oil nations are our friends and allies. But some are not. The price and production rates for the oil are controlled by a cartel. It is likely that periodic interruptions in supply will occur.

There is a new cost in this scenario that isn't present if we imagine the oil in Canada. It is the cost of economic uncertainty. Although over the long run, we might expect a stable real price for oil in the \$18 per barrel range, there will be short term events that cause much higher spot market prices. What is the economic cost of these disruptions?

If we remain unprepared as we were in the early 1970's and 1980's for these disruptions, the costs are quite high. Oil disruptions have triggered recessions that cost us billions of dollars in lost GNP. But if we prepare ourselves for the realities of this scenario, the cost can be much less. The cost is an adequate strategic petroleum reserve. It is the most important piece of our energy policy under this third scenario. A reserve with 750 million to 1 billion barrels of oil used aggressively to manage disruptions can protect us from the large economic losses that would otherwise occur in this energy scenario.

Those who use oil ought to pay for the SPR. Today, the SPR is not as big as it should be. It is about 570 million barrels. Because the taxpayer currently finances the SPR and because of our budget deficits, we have been slower than we should have been in reaching full capacity. The cost of filling and maintaining the reserve should more appropriately fall on the energy consumer and ought to be carried on the price of oil as an additional fee. That fee would also stimulate a modest amount of additional domestic production to reduce imports.

Some would also include our military expenditures in the Persian Gulf as a cost of energy under this third scenario. I personally do not think we fought for access to oil in Desert Storm. Perhaps our enemy did, but our interest was in containing his power, not in having his oil. After all, the world has access to the oil that is inside Iraq for the very same price that we buy the oil produced by Kuwait.

Even if you include the cost of Desert Storm in the price of energy under this third scenario, the numbers are not large. The nations who participated in Desert Storm spent \$60 billion on the war. For 600 billion barrels of oil, that's 10 cents a barrel.

The principal point I am making here is that huge expenditures on conservation or renewables or domestic fossil resources are a means to reduce oil imports are not justified by the actual economic penalties we pay either because we import oil or because we import oil from an unstable region. The economic penalties measured in a neg-

ative balance of trade or in the cost of the strategic petroleum reserve are small. Even the material price of Desert Storm, which I do not believe was a war for the oil resource, is small when compared to the economic value to us and to the world of the Middle East oil reserve.

My final scenario is the one that I think most Americans carry around in their heads. It is the scenario born of gas lines, hostages in Iran, economic decline at home, and American men and women fighting in the deserts of the Middle East.

Those who hold this view, and it is a plausible interpretation of our current energy reality, see the Persian Gulf oil reserves in the hands of nations hostile to our interests who will use the oil weapon to bring us to our knees. Under this scenario our dependence is a threat to our security and to the security of our allies, most especially Israel. No price is too small to regain our independence.

I must say that there was a period after the 1979 Iranian revolution when I found this scenario the most realistic. I voted for the windfall profits tax and the Synfuels Corporation and the tax subsidies for every kind of energy that wasn't foreign energy. At the time the U.S. Department of Energy was predicting oil prices of \$90 per barrel by 1990 and it seemed that huge investments in domestic alternatives were our best policy.

It doesn't seem so today. In fact, I believe that OPEC prices and production rates have been managed to help our economy and our consumers for a number of years now. Eliminating the oil we have imported for most of the last decade, by paying billions and billions of dollars more for domestic energy would have been an economic folly of catastrophic proportion.

In outlining these four scenarios, I have also tried to outline the elements of a national energy policy I could support.

We must focus on the threat of global warming and should be employing all the measures that are available at today's prices to reduce carbon buildup in the atmosphere.

Second, we should provide small subsidies to domestic alternatives that are somewhat more expensive than oil to offset the economic costs associated with a negative balance of trade.

Third, we should conduct research and development efforts across the broad range of near-term energy technologies that may be brought within the range of these small subsidies.

Fourth, we need to fill the strategic petroleum reserve and pay for it with a fee on energy consumers.

Finally, we should do everything within our means to facilitate peace and stability among the nations of the Middle East. We must prevent scenario number four from becoming our energy reality.

I am voting against cloture on this bill. I have voted against the bill each time it has come before the Senate. There is no part of the conference report which is especially troublesome to me. There is no special outrage in this bill, nothing to compare with leasing the Arctic National Wildlife refuge, for instance. The bill is now mostly a collection of adjustments for various sectors of the energy industry, some justified by the reality of our energy situation and some not.

I have voted against this bill not because of what it contains, but what it lacks. It lacks a theory, a purpose, a clear statement of reality and policy around which it is focused. There is no evidence that the bill was put together based on a coherent view of our economic and energy reality and a determination to take advantage of every opportunity to improve our condition, and an equal determination to reject the options that are beyond a reasonable cost.

Do we import too much oil? Probably. A little bit too much. How much should imports be reduced? You won't find the answer in this bill. After 2 years of debate and consideration, this collection of adjustments in our national energy policy is still justified by the old rhetoric of war and independence.

The American people deserve an energy policy based on a hard-headed analysis of our energy realities. We need to clearly define our energy objective and justify the cost of each of the steps we take to reach it. I haven't seen that kind of justification for this bill. So, I shall vote against cloture.

KUDOS

Mr. WALLOP. Mr. President, I want to pay tribute to our colleagues in the House who were such tough and honorable negotiators. Congressmen JOHN DINGELL, PHIL SHARP, GEORGE MILLER, NORM LENT, DON YOUNG, and the others all brought ideas, ideals, and a common purpose to the conference.

Our spirited debates helped articulate the goals and define the solutions to these complicated and diverse issues. I think most of us would agree that our two bills got better in conference.

Let me also commend my friend, and colleague, the chairman of the Energy and Natural Resources Committee, BENNETT JOHNSTON. It's been a long journey, but throughout this 2-year odyssey the senior Senator from Louisiana never gave up. This bill is a testimony to the persistence and the vision of a very good legislator.

There is another group of individuals whose contribution to this bill was enormous. Secretary of Energy, Jim Watkins, Deputy Secretary of Energy, Linda Stuntz, and their staffs were of incalculable help to us throughout. The Energy Policy Act of 1992 was truly a partnership between the executive and

legislative branches, thanks, to a great extent, to them.

The best I've saved till last. Any acknowledgements would be incomplete without a word about the carpenters who put it all together—the staffs of 10 House committees and 7 Senate committees.

We've heard a lot about the faults of our institution. Clearly, those critics haven't been to an energy conference with these men and women.

These dedicated individuals put in, literally, tens of thousands of hours to get us here, today. And believe me, it wasn't just a 9 to 5 undertaking. Those hours were logged during weekdays, weeknights, weekends, and even during a few sunrises.

Congratulations, too, to Ben Cooper and the majority staff for the professional and cooperative manner they worked with everyone. Ben once remarked that organizing this conference was like herding cats. He was a good cat wrangler.

And, of course, a very special thanks to Rob Wallace, Gary Ellsworth, Richard Grundy, Jim Beirne, Judy Pensabene, Howard Useem, Jim O'Toole, Marian Marshall, Carol Craft, Gerry Hardy, Gigi Beall, Kelly Fisher, Vaughn Baker, and Jim Tate of the Minority staff. It was a job well done.

ACKNOWLEDGEMENTS: H.R. 776

Mr. JOHNSTON. Mr. President, many, many people worked to make this bill into a law. I can only acknowledge a few of them in the space here. I must necessarily omit mention of many who should be mentioned. For that I apologize in advance.

I would particularly like to thank my colleagues:

MALCOLM WALLOP, ranking minority member, who has been my partner throughout this effort;

KENT CONRAD, who stuck with me through everything;

TIM WIRTH, the inspiration for the energy efficiency, renewable energy and global warming provisions;

JOHN D. DINGELL, chairman of the Committee on Energy and Commerce, who made it happen in the House; and

PHIL SHARP, chairman of the Subcommittee on Energy and Power, who produced the bill.

This was an effort that included the administration from the beginning, an example of how Congress and the executive branch can work together to produce legislation that is in the national interest. I particularly want to thank:

Adm. James D. Watkins, Secretary of Energy, who guided the National Energy Strategy through an administration that was not always united in its support;

Henson Moore, as Deputy Secretary of Energy and on the White House staff, was a tireless advocate for the legislation;

Gregg Ward, DOE Assistant Secretary for Congressional Affairs, who

always kept the line of communication open; and

Linda Stuntz, Deputy Secretary of Energy, and the guiding force in the design of the national energy strategy.

I also recognize the professionalism and great energy of the House staff, and particularly want to thank:

Mike Woo, of Chairman DINGELL's staff with whom we worked throughout the year to develop the strategy for the legislation; we sorely missed Mike's counsel while he was ill during the conference; and

Dave Finnegan, Chairman DINGELL's right hand man, who kept us all focused on the goal.

I would also like to acknowledge my own committee staff, who worked for 2 years without losing hope.

Paul Barnett, who worked on the R&D sections.

Patty Beneke, senior counsel, who organized everyone else and still found time to handle OCS and alternative fuel fleets issues.

Bill Conway, the architect of PUHCA reform, who believed before anyone else did, including me.

Ben Cooper, staff director.

Leslie Black Cordes, who handled an extraordinarily broad range of issues, including renewables, energy efficiency, alternative fuels, and global warming.

Sam Fowler, all purpose counsel, handled several very difficult policy and drafting assignments, including uranium enrichment, alternative fuels and fleets, nuclear licensing reform, and whistleblower protection.

Mike Harvey, chief counsel, our most valuable and most experienced hand.

Karl Hausker, chief economist, chartmeister, number cruncher and ruler of the strategic petroleum reserve.

Tom Jensen, our water and hydroelectric power expert, who was also the guiding force behind the omnibus water policy legislation.

Don Santa, who handled natural gas issues, oil pipeline regulatory reform and counted the votes.

Allen Stayman, who handled the huge energy efficiency section of the bill and got his work done first.

Lisa Vehmas, our newest counsel, who more than ably handled the Interior Department and native America issues in the conference.

Mary Louise Wagner, who covered coal, R&D, and nuclear waste, and still managed to get a conference report drafted on the WIPP bill and arrange a wedding.

Tom Williams, steady hand, master of the Public Lands Subcommittee and expert on Alaskan issues and all matters relating to the National Park System.

This was a bipartisan effort from the beginning, and it stayed that way. We could not have succeeded without the cooperation of the minority and, in

this case, without the uniformly high quality of Senator WALLOP's committee staff. I want to acknowledge the help of:

Jim Beirne, hydropower expert, who, like Tom Jensen, also juggled the energy bill and the water bill.

Gary Ellsworth, chief counsel to the minority, whose value to the process cannot be overstated.

Richard Grundy, who seemed to be involved in almost every title of the bill.

Marian Marshall, expert on the Interior Department issues.

Jim O'Toole, who covered national parks and Alaska issues for the minority.

Judy Pensabene, the minority's expert on all nuclear issues.

Howard Useem, who covered electricity and hydropower issues and coped with Bill Conway.

Rob Wallace, minority staff director, who led the minority with distinction, humor and keen insight into the ways of the Senate.

And finally, Mr. President, I want to express my deepest gratitude to the administrative staff of the committee. These people are the backbone of the committee. We absolutely could not have completed the work without their tireless efforts and dedication. They worked into the wee hours of the night and sacrificed weekends, typed and reproduced innumerable materials, delivered and retrieved documents, responded to an infinite number of written and oral inquiries, coordinated a myriad of complicated schedules, monitored legislative activities, and contributed in countless other ways to this legislative effort. And above all, they managed to carry out these demands while continuing to perform their many other responsibilities admirably.

At this point I would like to thank these people individually: Vicki Thorne, the committee's chief clerk, for coordinating the activities of the entire administrative staff and organizing all of the many administrative details of the conference meetings; Raymond Paul, who operated at the center of the hurricane with confidence and great good humor; Diane Balamoti for her work in putting together provisions in the bill relating to Alaska while at the same time assisting in the voluminous workload of the Public Lands Subcommittee; Jason Dilg and Craig Ward for their extraordinary patience and fortitude in staffing the reception office and assisting in the distribution of materials; Wanda Freeman, for her excellent work in carrying out the enormous task of coordinating and compiling the materials for the more than 1,000-page conference report; Marjorie Gordner for her unrelenting dedication and assistance in compiling the titles relating to the strategic petroleum reserve, alternative fuels, and

uranium enrichment; Anne Goshorn for the ease in which she was able to juggle the demands generated by this bill and the reclamation bill which were being conferenced simultaneously; Heather Hart for all her hard work on the provisions relating to natural gas, oil pipelines, coal bed methane, and for her proficiency in compiling the statement of managers; Chris Kimball and Mia Miranda for making the whole job of document distribution and seating arrangements for more than 100 Members look effortless; Celeste Miller for her fine work on the sections relating to alternative fuels, nuclear reactors, and coal technology while also managing the tasks surrounding the WIPP legislation; Paul Mann for his high level of computer expertise and his quick response to the inevitable computer crises; Becky Murphy for her willingness to help field phone calls and for coming to the rescue more than once when an emergency arose; Pat Temple for her tireless work on the energy efficiency and renewable energy provisions; Raymond Paul for his capacity to endure late hours and countless phone calls and for his persistence in promptly transmitting information to staff; and Hartmann Young for his support in the reception office and his efficient disbursement of documents.

I am very proud of all of them. I thank them for their individual efforts and for their contribution to an outstanding team effort.

The PRESIDING OFFICER. Is there any further debate? If not, the question is on agreeing to the conference report to H.R. 776, the energy bill.

The conference report was agreed to. Mr. JOHNSTON. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. WALLOP. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### RECLAMATION PROJECTS AUTHORIZATION AND ADJUSTMENT ACT OF 1992—CONFERENCE REPORT

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of conference report accompanying H.R. 429, which the clerk will report.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the amendment of the Senate to the bill (H.R. 429) to amend certain Federal reclamation laws to improve enforcement of acreage limitations, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The Senate proceeded to consider the conference report.

(The text of the conference report is printed in the House proceedings of the RECORD of October 5, 1992.)

The PRESIDING OFFICER. There will now be 1 hour for debate on the conference report to be equally divided between the two leaders or their designees.

Who seeks recognition?

Mr. JOHNSTON addressed the Chair. The PRESIDING OFFICER. The Senator from Louisiana.

Mr. JOHNSTON. Mr. President, this bill marks the culmination of one of the most controversial, one of the most difficult, one of the most acrimonious and one of the most important disputes ever to come before the Committee on Energy and Natural Resources. It involves water in the Central Valley of California.

At issue, Mr. President, is the competition between farmers and agriculture, who are now consuming the largest part of the water that goes through the Central Valley, and fish and wildlife, environmental species, and other uses which we can call environmental uses.

Mr. President, it has been stalled for years and years as endangered species have been further endangered, their numbers depleting.

It looked like an insoluble problem, but the distinguished Senator from New Jersey, BILL BRADLEY, chairman of the Subcommittee on Water Resources, took this on as a driven cause, as the central organizing principle of his life for the last 2 years. He has had hearings in California, he has had hearings here. He has spent literally hundreds of hours on it. He enlisted my support early on, and I have tried to do what I could to help him.

He was joined, Mr. President, by Chairman GEORGE MILLER of the Interior Committee in the House, who also took this on as a central issue of his political being.

Mr. President, along the way in the Energy Committee, we saw a vision that we could serve both interests, that we could balance off the interests of agriculture with the interest of the environment.

The distinguished Senator from Wyoming and his very talented staff worked with us to put together this compromise.

And this is, in fact, a compromise. As the purposes of the bill say, it balances water with agriculture, and when fully implemented we expect this to be—we would hope that this would mark an end to lawsuits about water in the central valley and about the balances of interests of the environment and of agriculture.

Mr. President, this bill also has a huge number of authorizing projects which have been held up for years because this problem could not be solved.

Mr. President, I am very pleased to say that after long and difficult negotiations, including the distinguished Senator from Wyoming who very vociferously and very strongly protected

the interests of that huge agricultural interest in California—and make no mistake about it, agriculture in California means products, farm products for America. It is vital, not just to the people who are employed in California but for people all across America. And I think we very successfully balanced those interests in this bill.

So, I cannot be too strong in my kudos for the distinguished Senator from New Jersey [Mr. BRADLEY]; for the distinguished Senator from Wyoming [Mr. WALLOP]; for the chairman of the House Interior Committee, Mr. GEORGE MILLER; and for all the members of the committee and of the Senate who have worked so hard and so long on this bill.

It appears now that it will pass and pass overwhelmingly, I hope, therefore, we can have a short debate, and I yield the control of the time on this side to the distinguished Senator from New Jersey, along with my thanks and congratulations for a truly historic accomplishment.

The PRESIDING OFFICER. The Senator from New Jersey is designated.

Mr. BRADLEY. I yield 2 minutes to the distinguished Senator from Wyoming.

Mr. WALLOP. Mr. President, I ask unanimous consent to have printed in the RECORD a letter to the Governor of California, the Honorable Pete Wilson, from me, detailing the specific achievements in this bill for California agriculture, and in response to the very able and heroic fight that Senator SEYMOUR has waged on this.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE, COMMITTEE ON  
ENERGY AND NATURAL RESOURCES,  
Washington, DC, October 5, 1992.

Hon. PETE WILSON,  
State of California, Governor's Office, Sacramento, CA.

DEAR GOVERNOR WILSON: I am writing in response to your letter of October 4, 1992 regarding the Central Valley Project provisions of H.R. 429, the omnibus water package. I understand your pain, but I regretfully disagree with your conclusion.

You have been absolutely correct in your insistence that the only real solution to California's long term water situation is for the federal government to turn over at least operational control of the CVP to the State so that it can be integrated into the State Project. While that option would leave California in control of its future, that option is not available given the political climate in Congress.

I also agree with you that the issues surrounding the CVP have absolutely nothing to do with the other measures involved in the omnibus water package. You and I both fought to prevent the hostage taking last Congress when projects we both supported were linked to amendments to Reclamation Reform. We lost that effort to unlink the measures, and I regret that we lost that effort again this Congress. There comes a point when we both must accept the unpleasant reality that those interested in their own social agenda are in control and are

willing to inflict as much pain as necessary to achieve their objectives, regardless of the consequences.

I made an effort to convince the Majority to counter Congressman Miller's proposal with a modified version of the proposal made by Congressmen Dooley and Lehman. Had there been some goodwill and a willingness to be responsible, I think that we could have produced legislation which would be workable and which would preserve your options as Governor to chart a course for California. I directed my staff to work with Senator Seymour and the California delegation to identify what was possible and then to submit, on my behalf, a draft based on the proposal by Congressmen Dooley and Lehman. They did so, but the offer was rejected and I was informed that the Majority would only consider changes to Congressman Miller's proposal.

My judgment was, and remains, that this situation is only going to get worse. I directed the staff to obtain as many amendments as possible, focusing primarily on the specific issues which you, Senator Seymour, and the attorneys for the various contractors had raised. We were successful in the following areas:

- elimination of the auctioning of 100,000 af of California's water to the highest bidder;
- permanent protection for the Friant water users against releases from Friant without a specific Act of Congress;

- requirement that the study of the San Joaquin/Stanislaus be "prudent, reasonable, and feasible", which in my view precludes trying to reestablish flows below Friant;

- removal of the term "enhancement" from the primary project purposes, which is a significant change;

- grandfathering existing contracts from renewal (delay in the penalty provisions) until the EIS is completed;

- limitations on the additional charges imposed on the Friant contractors to \$4—\$5—\$7 from the House's \$4—\$8—\$12;

- tying the 800,000 af directly to the purposes of this title and providing that if the water is not needed for those purposes, it will be available for beneficial uses, which eliminates the permanent dedication of the water which had been in Senator Bradley and Congressman Miller's proposals;

- changing the dry year formula for the 800,000 af and the Wildlife Refuge supplies from the House proposal that there be no reductions unless the prior right and exchange right holders were reduced to a formula tied to the service contracts with an overriding requirement that the Secretary can exceed the limitations for health and safety, including both Agriculture and M&I uses;

- bringing the iteration of specific fixes into conformity with the language used by the State agencies and incorporated into Senator Seymour's legislation;

- extension of the renewal period to 25 years from the 20 in the House proposal;

- protection of all court decrees, including the *Barcellos* decree involving Westlands;

- modification of the inverse block tiered pricing from the House proposal of 60-20-20 to 80-10-10;

- elimination of the 15% capital gains tax on farmers, which both Senator Bradley and Congressman Miller had insisted on for all water transfers, although we did agree to imposing an additional \$25 charge on the M&I user of the transferred water.

Even with these changes, I do not view this as a good measure nor do I take any pleasure in the process. I honestly believe that this is the best proposal which California is likely

to receive in the current political climate which I anticipate will last a good long while. Perhaps that too is a dream for one realistically has to suppose it will deteriorate markedly. Were I the Chairman of this Committee, I can assure you that this would not happen, but I am not.

Senator Seymour has fought courageously for California, but unless he gets help in the Senate next year, I think matters will only get worse, not just for California, but for all the Western States. There is an unpleasantness and a meanness which both of us find distasteful, but it is no use to pretend that it does not exist. I am not asking you to endorse this measure as good for California, but I would earnestly request that you consider the future. I see no hope that reason will prevail or that those not affected would refrain from imposing their social agenda on the farmers and others who labor for this Nation. The spiral has been downward and all we can do is try our best to mitigate the impact until the voters in California and elsewhere impose some sense of sanity on the Congress.

I deeply appreciate all your efforts during this Congress and I hope that on reflection you will reluctantly agree that we have done the best we can and that this measure should be enacted to forestall a far grimmer and more desperate future for California.

Sincerely,

MALCOLM WALLOP,  
Ranking Republican Member.

Mr. WALLOP. Mr. President, there are several people whose contributions to the passage of this water package should be recognized.

First and foremost, I want to express my appreciation to the ranking member of the Water and Power Subcommittee, Senator CONRAD BURNS. As the Senate may recall, a similar water package was hung up last Congress over amendments to reclamation reform. As this Congress began, Senator BURNS took up the burden of crafting legislation which would address the issues raised last Congress, but in a fashion which would not cause havoc throughout the reclamation West. He was so successful in developing a bipartisan measure, S. 1501, that he obtained a majority of the Energy Committee as cosponsors. He was responsible for forcing the drought legislation to the full committee and also for many amendments to this measure during committee consideration.

While most of the debate recently has focused on the Central Valley project title, there are 39 other titles, each of which was improved through his hard work.

While the minority staff did its usual work on this measure, I do want to single out Jim Tate for his diligent work on the Historic Preservation Act title. The personal staff for other Members also were very helpful, even if some may not be overjoyed with the outcome. I want to thank Tom Fulton, with Senator BURNS, and Rich Golb, with Senator SEYMOUR. I also want to thank Joe Raeder, with Congressman DOOLEY; Grey Staples, with Congressman LEHMAN; and Roger Gwinn, with Congressman FAZIO. All of them pro-

vided invaluable assistance to the minority staff in working on this legislation, and I appreciate their help.

Mr. President, there are a variety of things I would like to say about this water package, most of them having to do with the foolishness of the hostage-taking. I am happy that Senator GARN can take home his central Utah project several years after it should have been enacted. I am delighted that other provisions will finally head to the President years after they should have entered the statute books and, in some cases, long after they should have been implemented.

I am particularly pleased that Buffalo Bill Dam will finally be completed. It seems that every time we try to do something on Buffalo Bill, it turns into a vehicle for everything under the sun. At times it seems that half of the reclamation law consists of titles added onto a bill authorizing funds for Buffalo Bill Dam and for other purposes.

For the benefit of my colleagues, I want to assure you that I have no intention of ever offering another Buffalo Bill measure.

I am concerned with the flurry of comments about that portion of the legislation dealing with the Central Valley project. I hope people will actually look at what is actually being passed rather than the original proposal offered by Congressman MILLER in conference. That proposal was a leaner version of the chairman's mark proposed by Senator JOHNSTON. That is not what we are enacting. Most of the concerns which have been raised are based on the House proposal.

Certainly the legislation could have been better had the basic test been that proposed by Senator SEYMOUR or that proposed by Congressmen DOOLEY, LEHMAN, and FAZIO. But many of their concerns were specifically addressed in the amendments which I added to the original offer.

I also appreciate the support of Senator BURNS in making it clear that unless those legitimate concerns were dealt with, there would be no legislation.

I think that anyone who compares the text of the final language with the original offer will find that we have come a long way in making this legislation something which will work and which will bring some measure of relief to the Central Valley. This is a far cry from the earlier versions which floated through the Senate and the House. Those concoctions had amorphous standards backed by citizen suits, unworkable requirements overlaid with an expansive Federal regulatory scheme under which the Secretary of the Interior would auction off the State's water to feed its own appetite, and a series of contract and transfer requirements which would have kept the legal community fat and prosperous while the farms and cities of California

dried up. That is somewhat overstated, but not so far from the mark.

Perhaps we are still too close to the debate for a calmer read of the changes which the Senate insisted on and obtained through Senator SEYMOUR's persistence and help from some of his colleagues in the House. While I may have made the offers as the ranking minority member of the Energy Committee, the specific amendments were a result of my conversations with Senators SEYMOUR and BURNS and an enormous amount of staff work with representatives of the Governor, urban and agricultural water users, and various representatives from the environmental organizations.

While there were interests on all sides who simply would not budge, there were others, such as Tom Graff from EDF, Hal Candee from NRDC, Barry Nelson with Share the Water, as well as representatives of the CVP water users and from their various components, including Diane Rathmann, Mark Atlas, Gary Sawyers, and Stuart Somach, who were very helpful in exploring alternatives and helping to define the issues. Neither side managed to be the architect of the final product, but both were helpful to me in preparing my amendments.

It would have been nice had the negotiations between the environmental and water users been given time to bear fruit, but their labors were not wasted. The urban water interests outside the CVP service area were easier to deal with since apparently certain municipal interests would endorse anything which allowed them to go after water. But rather than dwelling on how the process would have worked, I think it is better to focus on what the amendments which we obtained will in fact do.

It is unfortunate that we are dealing with this legislation at all. The Central Valley project is in Federal hands only because California was unable to finance the project during the Depression. Despite the press releases, the CVP is not the sole cause of the problems in the Central Valley, and it is incapable of resolving them. Most of the Central Valley wetlands were lost long before the first shovel of dirt was turned for the project.

The project is not integrated with the State project, although there is an effort to coordinate operations under the COA. The CVP effectively controls 40 percent of the developed yield of the valley, while the State project controls another 20 percent.

The CVP is not large enough to solve the water problems of California, but it is large enough to prevent California from doing anything. There are two things which must happen if California is to be able to deal with all the competing needs for scarce water resources. The first thing is that the Federal project must be turned over to the

State and be fully integrated into the State project. That seems to be totally unacceptable to those walking the Halls of Congress who prefer to play with California the same way a cat toys with a mouse. The second thing which needs to happen is beyond any of our capabilities, and that is rain. Without rain, this legislation will amount to nothing. With adequate rain, the legislation is unnecessary.

What the Senate achieved is elimination of the citizen suit provisions which kept recurring. Also missing, at long last, is the auctioning off to the highest bidder by the Federal Government of 100,000 acre-feet of the State of California's water. While the CVP will be required to mitigate the fish and wildlife impacts of the project, those mitigation requirements are defined and contained within the four corners of this legislation. The 1.5 million acre-feet of permanently dedicated water, which is where we started this Congress, is now 800,000 acre-feet of temporary, up-front water designed to deal with the requirements of the Endangered Species Act and delta requirements while the various mitigation actions are undertaken.

I want to emphasize that this is not a dedicated permanent supply, but a temporary commitment which will be released to other beneficial uses as soon as it is no longer needed.

With some judgment, the Secretary should be able to use portions of that water in a fashion which permits its use for agriculture or urban use at the same time it is used for fish and wildlife. Water used for pulse flows for fish can be taken up downstream for M&I. Water used for over-wintering water fowl could have had a previous life for rice fields. This is not single use water.

The project purposes have also been amended to more accurately reflect the objectives of this legislation. While fish and wildlife mitigation and restoration is now explicitly stated as a project purpose, enhancement is also clearly included as a secondary purpose. Since the 1954 act, the CVP has been operated to provide water for fish and wildlife directly together with the other primary purposes. If that were not true, then the deliveries to the refuges and grasslands would be illegal. During the current drought, prior right and exchange right contractors agreed to forgo their priority to enable the Secretary to make some deliveries to the refuges as well as for M&I purposes.

The polarized description of agriculture versus the environment simply did not occur in practice. Recognizing fish and wildlife formally does nothing to alter the situation in fact or to imperil any contract requirements. To the extent that all contractual requirements are met and all primary purposes are fulfilled, any excess water available can now be provided for enhancement activities.

The amendments also accomplished other important changes. The total mitigation requirement of the CVP is now contained within the four corners of this document. Implementation of the provisions of this title will fully and finally meet all mitigation requirements for the CVP. Efforts to create a cabal of California Fish and Game and the Fish and Wildlife Service to set flow requirements has been dispatched.

The Secretary will decide how to run the project based on the recommendations of the Fish and Wildlife Service after consultation with California Fish and Game, the Bureau, and others, but the important thing to remember is that the Secretary will make the decision, not the Fish and Wildlife Service, and he is free to completely ignore their recommendations. The Secretary will have to evaluate the recommendations of the Fish and Wildlife Service, but will also have to take into account "contractual obligations to provide Central Valley project water to other authorized purposes" as this title requires in section 3406(b)(1)(B). That analysis will be provided by the Bureau of Reclamation.

There was concern that Congressman MILLER sought to overturn various court decrees, including the Barcellos case involving Westlands. That too is taken care of by the addition of language which specifically guards against any overturning by implication of any judgment.

There is no, and I repeat no, explicit reversal of any court decree, and we have inserted language which makes it clear that there is no intent to overturn or reverse any such decree by implication. This language specifically protects any water entitlements under a judicial decree, and any such entitlements shall be considered a long-term contract.

There was also concern from the Friant unit that this measure was designed to require a breach of Friant. That concern also has been dealt with. The study and plan for the San Joaquin and Stanislaus must now be "prudent, reasonable, and feasible" which in and of itself should preclude any releases from Friant. Just to nail that down, however, I insisted that additional protections be inserted that even after the plan is approved, the Secretary may not make any releases from Friant without a specific act of Congress.

There are certainly opportunities to do offsite work, and those should be considered, but it would be patently unreasonable to consider using releases from Friant, and since such releases are now statutorily barred, any proposal which depends on such releases is clearly not feasible.

There had been concern over contract renewals, and I think those concerns have also been addressed. The length of renewal has been extended to 25 years and the suggestion that they might not

be renewed has been eliminated. Although the renewal is discretionary in the title, it is already discretionary in fact, since various terms must be negotiated at present.

I want to make it clear that the clear meaning of the language is that such contracts are to be renewed for 25 years unless the Secretary and the contractor agree on other terms. Had Congress intended that the contracts not be renewed, then we would have said so. We did not, and I reject any gloss which suggests that there is any jeopardy in contract renewals.

A very significant change is how dry year shortages are dealt with. The House had suggested that the 800,000 acre-feet and the wildlife refuge water be subject to reduction only when shortages are imposed on prior right and exchange right water holders. Aside from the implicit taking, since those rights are secured under State law and are superior to any CVP right, that provision would never have worked in practice.

During the current drought, prior right and exchange right holders agreed to forgo certain deliveries in order to permit the Secretary to make deliveries to the wildlife refuges and to urban users. No reductions were imposed on them since no reductions could be imposed so long as there was any water. The House agreed to any amendment I insisted on that reductions trigger based on any cutbacks on service contracts. In addition, although there is a nominal floor of a 25-percent cutback, the Secretary is directed to use common sense and can exceed that limit if he decides that the water is needed for health and safety.

I want to emphasize that the phrase "health and safety" is not limited to just agricultural hardship water, but also includes M&I needs.

Mr. President, in summary, let me just say my own ideal in this world would have been to stay with the status quo. The great American engine of economic growth was also the great California engine of prosperity and growth. That was agriculture. Water was the key to the success of agriculture in California. And the courts have seen fit to respond to interests without regard to the economic consequences. So the days in which we viewed those projects as primarily projects in reclamation and economic growth have been taken from us.

The Senator from California [Mr. SEYMOUR] had very, very legitimate concerns of his constituency. I believe we have taken nearly 90 percent, maybe more, of those concerns and put them into this. I resent, as have others, the fact that we here held hostage to this process called the Central Valley project while we tried to attend to other legitimate projects. But we were unable to break that.

Having not been able to break it, I say to the Senator from New Jersey,

who was not versed before he started this subcommittee chairmanship in the ways of western water, and is rather now more versed than perhaps he ever wished to be, that he has been fair to me and fair to us in our attempts to try to see to it there was balance left; that we tried to respond to court decisions while protecting, to the maximum extent we could, California agriculture.

It is my view that California will never again see as much generosity from the two Houses of Congress as they do in this bill. That is not to say I think we have arrived at perfection for California agriculture. I do not. But I believe we have come as close as we possibly could to getting this in play in a fair way. It puts in play great other projects like the central Utah project, on which Senator GARN has worked.

Could I have 30 more seconds?

Mr. BRADLEY. How much more time remains on the side of the proponent?

The PRESIDING OFFICER. Twenty-two minutes and 31 seconds.

Mr. BRADLEY. I yield the Senator 30 more seconds.

Mr. WALLOP. It puts in place a great many more important projects, Senator MCCAIN's project, the Grand Canyon Protection Act; Senator GARN's central Utah project; Senator WALLOP's Buffalo Bill Dam, and a lot of other very, very worthy projects.

They were all part of what I think has become a very, very good bill.

I thank the Senator from New Jersey.

Mr. WALLOP. In order to ensure budget neutrality on the nonreimbursability provisions of title XVII of H.R. 429, those provisions are made effective only to the extent that there are net off-setting receipts. The ranking member of the Budget Committee was very helpful in working out the language and I would hope that he would clarify the report requirements.

Mr. DOMENICI. I would be happy to respond.

Mr. WALLOP. Section 1807 of H.R. 429 provides that all costs of the Glen Canyon Dam EIS, including supporting studies and long-term monitoring activities authorized in the bill shall be nonreimbursable. In order to meet Budget Act requirements, section 1807 provides that in fiscal years 1993 through 1997 those costs shall be nonreimbursable only to the extent that the Secretary of the Interior finds that the effect of all provisions of this entire act, not just the Grand Canyon title, is to increase net off-setting receipts. It is my understanding that this proviso requires the Secretary to make a simple finding: The Secretary must in those years add up the budget impact of all the titles of this comprehensive bill and determine whether those receipts exceed the annual costs of the EIS, studies and monitoring. To make this finding the Secretary estimates

only the receipts and direct spending that result from this act. He does not determine or subtract funds appropriated and resulting expenditures to perform activities authorized by the act. Is that the intent of section 1807?

Mr. DOMENICI. The Senator is correct. The Secretary must simply determine whether net offsetting receipts generated by the act in those years exceed the cost of the EIS and related activities in the same years. It is the intent of the conferees that all costs of these activities be nonreimbursable. The Secretary's finding is only for Budget Enforcement Act compliance purposes to assure that net spending is not increased.

#### SACRAMENTO-SAN JOAQUIN DELTA PROBLEMS

Mr. WALLOP. Mr. President, I rise to obtain a clarification from the chairman of the committee.

The State of California, through the implementation of its long-range water policy framework, has begun significant actions in the past year which are designed, through consensus, to improve the availability of water for all major sectors of California—urban, agriculture and the environment. These develop solutions to Sacramento—San Joaquin Delta problems, and the transfer of the CVP to the State. How does the CVP Improvement Act affect these efforts?

Mr. JOHNSTON. There is nothing in the CVP Improvement Act that would hinder these actions. The obligations of the act are designed to complement—not to interfere with—California's efforts to further develop and coordinate its water policy.

Mr. WALLOP. Is there anything in the CVP Improvement Act that alters Congress' long standing deference to the States in determining reasonable and beneficial uses of water?

Mr. JOHNSTON. Nothing in this bill is intended to diminish or expand any authority that California presently has. The State's authority remains unchanged consistent with the law as interpreted in *California v. United States*, 483 U.S.C. 645 (1978).

Mr. WALLOP. Some of the CVP Improvement Act's provisions put limits on what the Secretary of the Interior can do with regard to meeting his obligations under the act. Is there anything in the act that would similarly limit the State of California?

Mr. JOHNSTON. The limitations in the act with regard to CVP obligations are limitations on the specific requirements of the Secretary's responsibilities under the act. The State's authority remains unchanged consistent with the law as interpreted in *California v. United States*, 483 U.S.C. 645 (1978).

Mr. WALLOP. Section 3406(h) provides for a cost-sharing agreement with the State for a number of the measures listed in the act. Public and private entities in California have already spent a great deal of money for some of these

measures in spite of the fact that the Federal Government was not able to come up with its funding share. Will California be able to count these past expenditures as part of its share of the costs of these measures?

Mr. JOHNSTON. The Secretary is given considerable discretion under the cost-sharing section to work with California in developing an equitable cost-sharing agreement. Past expenditures by California, local agencies, and private contributions—including contributions of land and water—are certainly a major factor he must take into consideration in working out equitable cost-sharing provisions with the State of California. The Secretary also has discretion to spend Federal funds before the State agrees to cost-sharing arrangements so that measures urgently needed to mitigate effects of Central Valley project operations are not delayed by the State's current fiscal process.

Mr. WALLOP. I thank the Chairman for his clarification.

SECTION 3406(B)(1)(B)

Mr. WALLOP. Mr. President, I rise to seek clarification from the senior Senator from Louisiana, chairman of the committee, on an important point.

In a colloquy between Congressman MILLER and Congressman STUDDS regarding the conference report on H.R. 429, discussions occurred regarding the interpretation of section 3406(b)(1)(B). Do you agree with that interpretation of section 3406(b)(1)(B)?

Mr. JOHNSTON. I believe that the plain language of the statute speaks for itself.

Congress could have required the Secretary to implement the Service's recommendations without alteration had we wanted to, but we did not. The Secretary, not the Director of the Fish and Wildlife Service, makes the final decision. That decision will be based on the recommendation of the Fish and Wildlife Service, but will reflect other recommendations and considerations associated with operation of the CUP for its authorized purposes.

The discussion of the other body regarding section 3406(b)(1)(B) ignored the fact that section 3406(b)(1)(B) is part of a much larger legislative effort. The bill as a whole directs the Secretary to carry out the listed measures in consultation with other State and Federal agencies—including Bureau of Reclamation, California Water Resources Control Board, and California Department of Water Resources. Indeed it is only after the Secretary follows that broader process and consultation that it can truly be said that the Secretary has adhered to the true intent of section 3406(b)(1)(B) and of the bill taken as a whole.

Finally, there is no "clear and convincing evidence" test, in this section nor a preponderance test or a beyond a reasonable doubt test or any specified test at all.

Mr. WALLOP. I thank the chairman for his clarification.

PRIVILEGE OF THE FLOOR—H.R. 429

Mr. WALLOP. Mr. President, I ask unanimous consent that Jim Tate, a fellow on assignment to the Energy Committee, be granted the privilege of the floor during consideration of H.R. 429.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from New Jersey.

Mr. BRADLEY. I yield to the Senator from California, 3 minutes.

The PRESIDING OFFICER. The Senator from California [Mr. CRANSTON] is recognized for 3 minutes.

Mr. CRANSTON. Mr. President, I rise in support of the conference report on H.R. 429, the reclamation projects authorization bill.

This bill is a major benefit to the State of California.

For the record, I would like to review the many beneficial provisions for California contained in this measure.

The Salton Sea research project will help develop an enhanced evaporation system for saline water treatment and improve the water quality of the Salton Sea where salinity buildup is adversely affecting the sea's fishery resources and recreation.

The Los Angeles area wastewater reclamation project will reclaim scarce water supplies while reducing effluent discharges into Santa Monica Bay and protect Mono Lake's public trust and scenic values.

The San Gabriel Basin ground water demonstration project will assist in the cleanup of the San Gabriel Basin, one of the largest Superfund sites in the United States and allow it to be used as an underground storage reservoir, more than doubling southern California's existing drought reserves.

The wastewater reclamation studies for San Diego, San Jose, and other urban areas will advance efforts to increase urban water supplies through reclamation and reuse.

The Redwood Valley Water District and United Water Conservation Water District loan repayment provisions will assist two small water districts in California and improve their financial condition.

The San Juan Suburban Water District will benefit by receiving credit for costs incurred from the purchase of pumps and motors for the Bureau of Reclamation.

The Sonoma baylands wetland demonstration project will help restore valuable wetlands in the San Francisco Bay area and facilitate needed dredging at the Port of Oakland.

The San Francisco wastewater reclamation and reuse project will demonstrate the feasibility and effectiveness of solar aquatics technology for wastewater reclamation.

Finally, of major importance is comprehensive reform of Central Valley

project operations. This is landmark legislation which will help restore the Central Valley's fish and wildlife and the environment which have been adversely impacted by Federal water development.

The Central Valley project is the largest western water project, providing water to about 3 million acres, nearly one-third of the lands served by the Bureau of Reclamation. Over the years, the CVP has significantly benefited the development of California, providing water supplies, hydroelectric power, flood control, recreation, and billions of dollars of economic activity.

However, the CVP has also caused serious environmental damage to fish and wildlife. In fostering agricultural production, the project has contributed to the reduction of waterfowl habitat in the Central Valley. Riparian wetlands which provide critical habitat for a variety of species have declined significantly, to less than 5 percent of the original acreage. Water releases from dams are often insufficient to meet minimum fishery requirements. And CVP pumps have contributed to the decline of striped bass, steelhead, and salmon populations.

It is time for change. The 6 years of drought have highlighted the fact that fundamental, long-term reforms must be made. We need to anticipate the State's future water needs and put sensible policies in place. When the CVP was first conceived in the early 1930's, the population of California was 6 million people. Today there are almost 30 million Californians. Incredibly 2,000 people move into the State each day. That means California's population is growing by over a half a million people each year. It is time that the Central Valley project recognize these broader urban needs as well.

I appreciate the fact that mitigation of the adverse impacts wrought by the CVP and reallocation of our scarce water resources is going to involve shifts in water use. However, fish and wildlife and recreation have taken a back seat too long while the Central Valley project has served a limited clientele. With growing water shortages in California, we need to expand the project's benefits.

The conference report on H.R. 429 achieves these ends.

It provides that fish and wildlife are equal partners in the operations of the Central Valley project. This is essential to ensure that environmental degradation is halted and fish and wildlife resources are restored. It is critically important not only for California, but also for many other Western States where the salmon of the Pacific coast and the waterfowl of the Pacific Flyway have been severely impacted.

It provides up-front water, 800,000 acre feet, to meet the project's new environmental purposes and ensure the continued health of commercial salm-

on fisheries, sport fisheries, national wildlife refuges, and the grasslands. The water may be used to meet the requirements of the Endangered Species Act and bay-delta standards. However, additional water may be required for these purposes.

It also established a \$50 million annual fund to pay for fish and wildlife restoration efforts.

And it enables voluntary water transfers from agriculture to urban water agencies.

Mr. President, one of the criticisms of serious CVP reform concerns States rights. I disagree with those who may argue that the CVP provisions of H.R. 429 represent inappropriate Federal intervention in State water matters. The Central Valley project is after all a Federal project. Moreover, the legislation will help reduce Federal intervention in California's water matters, not increase it.

California law permits voluntary water transfers, in most cases subject to approval by the State water resources control board. California law permits water banking without losing the right to that water. California law recognizes water for fish and wildlife as a beneficial use. California law also calls for a doubling of anadromous fishery populations. I certainly don't consider it unwarranted Federal intrusion into state affairs to allow CVP water to be transferred to areas where the State deems it is needed, to suggest that the CVP be operated for purposes recognized as beneficial under California law, to suggest that the CVP be held to the same standards of environmental accountability as the State water project, or to establish a Federal policy on doubling fish populations, a policy already included in State law.

A second major criticism of CVP reform has centered on water allocations. I certainly understand the desire of current CVP contractors to retain 100 percent of their existing Federal water supplies. I also understand their interest in continuing 40 contracts. But I am convinced that we need to dedicate some water for environmental purposes.

I'm also convinced that this can be accomplished without major disruptions to agriculture. I recognize that many growers and water districts have already undertaken water conservation measures. But I firmly believe that there are additional opportunities for conservation in agricultural use.

For example, it is generally accepted that the higher the organic content in the soil, the more moisture is retained, and consequently the less water is used. I'm told that California farmers who are using organic farming methods have dramatically decreased their on-farm water use by using drip irrigation and heavy composting. Reductions in agricultural water use can also be achieved through shifts in cropping

patterns to commodities which require less irrigation.

The impact of CVP reform on jobs is simply overstated. According to testimony presented at Senate hearings, water use in the urban sector supports far more jobs than in agriculture. Agriculture provides about eight jobs for every 1,000 acre-feet of water use. The same amount of water supports 3,000 jobs in urban industries and as many as 17,000 jobs for every 1,000 acre-feet in some high technology industries.

The legislation in fact has economic benefits to agriculture. It allows growers to profit through water marketing. It also mandates 25 year renewals for contracts, an important factor in the ability of growers to obtain financing for farm operations.

Finally, some opponents of CVP reform have argued for delay in order for the State of California to purchase the project. Whether the CVP ultimately is transferred to the State, CVP reform is needed now to address the serious water problems facing California's environment and urban communities. Failure to provide a balance among agriculture, urban and environmental interests will result in continued job loss in the fishing industry and irrevocable resource destruction as the Department of the Interior renews contracts to agricultural water users under the same old terms.

Mr. President, the conference report is strongly supported by environmentalists, commercial fishermen, the California business community, and metropolitan water districts who serve millions of urban water users in California.

I commend Senator BRADLEY for his leadership, hard work, and perseverance in bringing this measure before us. It is a major achievement.

I urge my colleagues to vote for the conference report.

Mr. BRADLEY. I yield 3 minutes to the distinguished Senator from South Dakota.

Mr. DASCHLE. I thank the Senator from New Jersey for yielding me this time. Let me commend him for his tremendous effort in the work he has put in this legislation for many years now.

Mr. President, I want to discuss H.R. 429, the Reclamation Projects Authorization and Adjustment Act of 1992, and to urge adoption of this important bill.

The prime sponsor of the legislation, Senator BRADLEY, is to be commended for putting together this package and for holding together a fragile alliance of those with very different views on many subjects. The road to this point has not been easy, and we have a better bill for Senator BRADLEY's diligence, industry, and strength of purpose.

There are a variety of aspects of this bill that are extremely important for moving Federal water policy in a direction I think we all want to see it go, and there are several titles in this bill

that also address extremely important regional and local needs. The provisions of the bill pertaining to my State of South Dakota are perfect examples.

THE LAKE ANDES-WAGNER/MARTY II PROJECT

Title XX of H.R. 429 authorizes the Lake Andes-Wagner/Marty II project in Charles Mix County in South Dakota. This is a small-scale irrigation project—48,000 acres—with excellent economics and unprecedented environmental safeguards. Before the project can be built, a multiyear irrigation drainage demonstration program must be completed. The goal of this demonstration is to make sure that there will be no adverse environmental consequences of building the full project.

The Lake Andes-Wagner project, when built, will realize the first tangible benefits of the long and elusive search for irrigation development that has been a source of controversy in South Dakota since 1944, when Congress authorized the Pick-Sloan Missouri River Basin Program.

The Pick-Sloan Program was designed to provide storage for flood control and navigational benefits to the downstream Missouri River Basin States through construction of main-stream dams in the upper Missouri River Basin States. To help compensate the upper basin States for the loss of bottomlands resulting from construction of the dams, water was to be made available for irrigation development of substantial acreage in the upper basin States, including South Dakota. For decades now, the downstream States have reaped the flood control, energy, and navigational benefits of the program, while the upper basin States have received virtually none of the promised irrigation development.

Several upper basin States have been negatively impacted to some degree by main-stream dam construction under the Pick-Sloan program. The State of South Dakota lost 508,000 acres of Missouri River bottomland as a result of Pick-Sloan dam construction. More than 58,000 acres of these lost bottomlands were sacrificed by Charles Mix County, host to the Lake Andes-Wagner project. While we have been successful in authorizing the WEB and Mni Wiconi drinking water projects, there has been no irrigation development from the 1944 act.

We in South Dakota know that much of what was envisioned in Pick-Sloan is no longer feasible nor even desirable. Priorities change, both locally and nationally. But at the heart of Pick-Sloan, and at the heart of the reclamation system, is a simple goal of bringing help to the small farmers of the arid regions of rural America. This goal has not changed.

Since Pick-Sloan, the people of Charles Mix County, SD, have watched their economic base wither. The population of the project area has declined

by 60 percent since 1950. Most of this exodus has been the young people.

Where there were 100 school districts, there are now 4. Unemployment in the Yankton Sioux Tribe may be as high as 90 percent. Despite fertile soils, farmers in the region find themselves tied to a cycle of livestock production and growing programmed crops. All too frequently droughts and crop failures are a painful reality.

Under these circumstances, it would have been easy to give up and leave the area. But many did not. Instead, they decided to figure out how to improve their lot. The Lake Andes-Wagner/Marty II project is a testament to those dedicated and resourceful individuals who have now worked for more than 20 years to turn their dream into reality.

The Lake Andes-Wagner/Marty II project is a riverside irrigation project located in southeastern South Dakota. The project does not need large and expensive lifts to get the water to the fields. The reservoir, Lake Francis Case, already exists.

Lake Andes-Wagner/Marty II is a small, manageable project that would irrigate up to 45,000 acres. The Marty II component would irrigate approximately 3,000 acres belonging to the Yankton Sioux Tribe, whose members are very much in need of economic development. The local sponsors and the State of South Dakota have presented a generous cost-share agreement amounting to 30 percent of the \$200 million project.

I would like to say more about the economics of the project, as some have made unfair representations about its economic feasibility.

Allegations that this project provides \$1 million for every farmer in the region are comparable to saying that the cost of a new school should be divided by its number of students on the first day of class. Everyone from an agricultural State knows that there are far more people involved in a farming operation than the owner of the farm, from dependents to hired workers to service industries that support the agricultural economy. Cost attributed to the project are primarily fixed, one time costs, that will subsequently be repaid by the project beneficiaries.

According to the Bureau of Reclamation, the repayment capability for the project is \$137.40 per acre. Therefore, the project will pay for itself in 34 years, which means that it will need no assistance from Federal hydropower revenues. There are few projects, either existing or planned, that have numbers this good.

Some question the wisdom of authorizing a water project when agricultural production is not a problem in most parts of the Nation. The question of surplus crops and the so-called double subsidy is a legitimate concern that is addressed in the legislation.

The bill contains an innovative section limiting farm subsidy payments to the dry land value of the crops. I agree that the goal of the project is to provide opportunities outside traditional agricultural practices in the region. But without reliable water, only surplus crops will be grown in the region. With reliable water, farmers can diversify into high-value crops, which local farmers are already successfully growing in small quantities. There has already been significant economic interest in the area by agricultural processors, and a variety of incentives are in place to promote infrastructure investment.

Finally, the proposed legislation before us today provides not only environmental protection, but also an opportunity for environmental enhancement in South Dakota. All of the parties involved with this proposed project have gone to great lengths to ensure that its development does not significantly disrupt the delicate environmental balance that currently exists within the area. Not only is mitigation for fish and wildlife losses resulting from construction and operation of the project required on an ecologically equivalent acre-for-acre basis, but this legislation goes one step further.

Under H.R. 429, a South Dakota biological diversity trust would be established. It would set up a program so that up to \$12 million could eventually be available for the trust. The purpose of this trust is to select and provide funding for projects that protect or restore the best examples of South Dakota's biological diversity. The trust would have no condemnation authority, and would work with the State and Federal officials to identify and help protect unique wild places in the State. The concept of the biodiversity trust is a recognition of the importance of conserving our natural resources while we strive for economic development.

Four years ago, it looked as if the Lake Andes-Wagner/Marty II project would never be built. No sooner had high selenium levels been verified in the Marty II portion of the project than a reanalysis of the Lake Andes-Wagner portion of the project also turned up areas of unacceptably high selenium. No one in South Dakota wants another situation like that in California's Kesterson National Wildlife Refuge in our State.

Through examination of the problem by the Bureau of Reclamation, the U.S. Geological Survey, the Environmental Protection Agency, the U.S. Fish and Wildlife Service, and the State of South Dakota, it quickly became evident that no consensus exists about the management of irrigation drainage in varying soil conditions where selenium is present. Because there has been irrigation—from ground water—in the region for more than 30 years with no apparent adverse environmental impacts,

the sponsors asked for more research into the issue. The Bureau and others proposed making Lake Andes-Wagner/Marty II a guinea pig. For the first time, a full-scale research program could monitor drainage patterns and manage return flows in a controlled environment.

In addition to the knowledge gained from the research, there will be very tangible benefits for the local environment. Fresh water—not return flows—will be pumped directly into the Lake Andes National Wildlife Refuge, which will greatly enhance the viability of the refuge. Water will also be provided to several areas that were once wildlife havens, but, too often, are now waterless depression in the prairie, including Owens Bay and Red Lake. These enhanced wetland areas will significantly improve wildlife populations throughout the region.

There can be little question that the proposed research is needed. Drainage and return flow management is a problem not only in South Dakota and California, but also in North Dakota, Wyoming, Colorado, and most other Western States with existing irrigation systems or proposed ones, especially those occurring in glacial till or loess soils. The answers that are provided from the Lake Andes/Wagner demonstration program will be extremely important for protecting the environment in our western agricultural regions.

Some have expressed concern that the findings of the study will show environmental problems that should prevent the project from being built, but that the momentum of the moment leads us to fund a project that should never be built. Such things can happen in Washington, and I appreciate this concern. But it cannot happen with Lake Andes-Wagner/Marty II. I will explain.

One of the reasons that the project will take several years and more than \$20 million to complete is that this is a complicated subject. By definition, it will take time to collect and interpret the data. Because the Bureau of Reclamation, the EPA, the USGS, the Fish and Wildlife Service, and the State of South Dakota must all participate in, and sign off on, the report, it is a near certainty that the final product will be of the highest possible caliber.

After reviewing the demonstration report, the Bureau of Reclamation must prepare a new feasibility report for the project, and the project must pass review by the Secretary of Agriculture, the Director of the Fish and Wildlife Service, the Administrator of the EPA, and both Houses of the Congress of the United States—where it must sit for 180 days—before it can move forward.

These are real tests that guarantee that the environment in the region will be protected, and that the costs associated with protecting the environment

will not make the project economically infeasible. The role of the EPA was inserted to make sure that all applicable water quality standards will be met. As the Agency plays a key role in the design and implementation of the demonstration program, EPA officials will be very familiar with the technical aspects of the study and their review of the water quality portions of the project is appropriate and important.

To the project sponsors, the research project comes at a cost. Under the revised bill, effectively the soonest that the full project can start to be built is in 10 years. By the time Leo Holzbauer and other farmers of the region actually start putting Missouri River water on their crops, they will have waited at least 35 years for their dream to come true.

Obviously, this effort goes beyond merely providing South Dakota with a specific water project. As we have been saying all along, the issue at stake is the long-term viability of large portions of rural America.

Agriculture will remain the backbone of the South Dakota economy, and the economy of most of the Great Plains States, for generations to come. According to a recent study by South Dakota State University, for every 1-percent growth in agriculture in South Dakota, 1,200 new jobs are created.

The development of economic infrastructure in rural America often requires certainties beyond increasingly fluctuating weather cycles. Without appreciable irrigation development, South Dakota, and in particular Charles Mix County, has seen its young people leave their homes on the farm in search of some sort of certainty for the future.

This project is not a handout. It is an investment in the future.

Congressional consideration of the Lake Andes-Wagner project includes an examination of our national commitment to rural America. If the Congress favors making the Great Plains a buffalo preserve, as some suggest it should do, then we should forget Lake Andes-Wagner/Marty II, and have everyone move into the cities.

However, if there is to be a future in rural America, as I believe there is, then we must find ways to promote economic development in a cost-effective and environmentally sustainable fashion. That is what Lake Andes-Wagner is all about. This project is what irrigation should be—real need, good economics, small farmers, and innovative solutions to questions like the selenium and double subsidy issues.

#### MID-DAKOTA RURAL WATER PROJECT

The Mid-Dakota Rural Water Supply System is the third Bureau of Reclamation water project designed to address the drinking water needs of South Dakota, the other two being the WEB pipeline and the Mni Wiconi project. Mid-Dakota would also become a component of Pick-Sloan.

All three projects come from an identical imperative—that Americans deserve safe drinking water, and, in some areas, it is simply too expensive to meet this basic human need through conventional means.

The pipelines are a last resort. They replace mediocre and unreliable ground water supplies, and they are often the only alternative to trucking water. Many South Dakota communities have used funding from the FmHA to build their rural water supply systems, and this has been extremely successful. But there are areas of the State that require a system that is simply too large for FmHA financing.

In scope, Mid-Dakota is very similar to WEB and Mni Wiconi. It would service 12 counties in a service area of about 7,000 square miles and require 2,700 miles of pipeline. In all, the pipeline would provide water to about 30 communities with a population of more than 35,000. As agriculture is the main industry in the area, the project would also provide water to at least 647,000 head of livestock. Under the terms of the bill, the use of the water for irrigation is prohibited.

The reason we need the pipeline is because the ground water is simply not decent. It exceeds EPA standards throughout the region for a host of elements, including nitrates, sulphates, iron, sodium, dissolved solids, and more.

These are not simply the concerns of the environmental elite. These are real life concerns for every man, woman, and child in the region.

As with the Mni Wiconi project, the Mid-Dakota legislation has strong water conservation provisions and requires acre-for-acre wildlife mitigation, concurrent with project construction. In a very important aspect of the bill, the project is granted seasonal Pick-Sloan pumping power, which will go a long way in making the water from the pipeline affordable and the overall project feasible. The arrangement in the Mid-Dakota bill represents an important agreement between public power interests and the project sponsors.

Once part of the Mid-Dakota project, H.R. 429 also authorizes the creation of a special wetland trust for South Dakota. This was the brainchild of the project sponsors and the State who sought to create multiple benefits from what may appear to be a single purpose project. The wetland enhancement provisions of the bill could go a long way to preserving and protecting South Dakota's ecological riches.

I note that the administration opposes the Mid-Dakota project, claiming that their policy requires 100 percent cost sharing for this type of project. But this myopic approach fails to recognize the limits of what people can afford.

The bill has ambitious cost-share requirements, and the sponsors have al-

ready collected good-intention fees from probable users. The people will pay for their water. In fact, the rate the people will pay for their water will be far greater than what we pay here in Washington for our water.

More fundamentally, I question if it really makes sense for Federal policy to simply declare a Federal role in irrigation development, but not in providing decent drinking water.

Just this summer we voted on whether to put a moratorium on the requirements of the Safe Drinking Water Act. To be certain, rural communities face difficult times, and they need and deserve Federal assistance to comply with national mandates. But I did not support this moratorium. I don't believe that the standards are the problem. The problem is finding the resources to help the people meet the standards.

As we have shown in South Dakota, the Federal Government has a role in rural water, even if they refuse to acknowledge this publicly. By passing Mid-Dakota today, we take another step to making sure that the people will have the most basic staple of life—safe and reliable drinking water.

#### MNI WICONI PROJECT AMENDMENTS

H.R. 429 also makes important allowances under Public Law 100-516, the Mni Wiconi Project Act. The Mni Wiconi project is designed to provide reliable drinking water to western South Dakota, including the Pine Ridge Indian Reservation.

For fiscal year 1993, we were able to secure an appropriation of \$5 million for the project. More than \$3.5 million of this will be used to finish all engineering and NEPA work so that full construction can begin in fiscal year 1994. However, the remaining \$1.466 million of the fiscal year 1993 appropriation was earmarked for emergency water works construction on two districts of Pine Ridge that have no running water.

This is an absolutely critical need. But because Public Law 100-516 requires that all planning and NEPA work be completed before construction begins, we need to amend the law so that the emergency work can move forward as long as the planning and NEPA work is completed on these two districts.

A second provision concerning Mni Wiconi is the provision in the bill that permits the Secretary of the Interior to perform a needs assessment on the Rosebud Indian Reservation. Rosebud is not a part of the Mni Wiconi project, but it faces many of the same problems faced by those on Pine Ridge. Mni Wiconi may be an appropriate vehicle to meet their needs.

If Rosebud is to become a part of the project, and the Lower Brule Reservation as well, although Lower Brule is already within the project territory, we will need to amend the law. But be-

fore we take these steps, we need to assess the need and the feasibility of servicing these areas with the Mni Wiconi project. That is the goal of this provision. As the report language states, it is not the intent of Congress to use funds appropriated for other purposes under Mni Wiconi for this assessment work. The funds should come from existing funds in the Bureau of Reclamation's budget.

In closing, H.R. 429 is an important bill for South Dakota and the Nation. Many other States will benefit from projects just as South Dakota will benefit. The bill's goals in California are also laudable.

To be honest, the stigma surrounding the Central Valley project has been killing States like South Dakota, which want modest projects to benefit family farmers and protect the environment. Unfortunately, every time that people think about Federal water today, they think Central Valley, and we pay the price.

I remind my colleagues that Congress has not passed a straight irrigation project in about 20 years. We need a change; a recommitment to rural America.

I commend the chairman of the Water and Power Subcommittee, Senator BRADLEY, for tackling the Central Valley issue, and for injecting some sense to the project. Contrary to what some have said, the chairman is not antiagriculture. There were many times when it would have been very easy for him to kill the Lake Andes project. But time and again, he proved to me and hundreds of farmers in South Dakota that he does care, and that he wants to return the reclamation system to what it was always supposed to be: a partnership between the citizens, the State, and the Federal Government to promote real economic development in areas that have few options.

I would be remiss if I did not also commend the superior staff work of Dana Cooper and Tom Jensen of Senator BRADLEY's subcommittee staff. They have been extremely helpful to me, my staff, and my constituents, and I cannot say enough about them.

Tom Jensen will soon be leaving to join his wife and two children in Arizona and begin a new career. Tom has been the glue that has held this bill together, and his willingness to find solutions to seemingly impossible problems has been invaluable. One day it may have been trying to play peacemaker within the Mni Wiconi project, the next helping the Mid-Dakota sponsors negotiate a cost-share agreement, and then the next explaining Senate procedures to a farmer in Charles Mix County. Tom will be missed, and I wish him and Jane well in Arizona.

Finally, several people in South Dakota deserve special recognition. From the State government to the East

River Rural Electric Cooperative, many have rallied to show their support for the Lake Andes-Wagner project and Mid-Dakota.

In Charles Mix County, the legions who traveled year after year to Washington in support of the project kept the fire burning when many were trying to blow it out. Among these foot soldiers were Marc Goldhammer, Gerrit Juffer, Chuck Eitemiller, Dan Svatos, John Uecker, Pat Cerny, Louie Archambeau, Ray Cournoyer, and many others.

Steve Cournoyer, chairman of the Yankton Sioux Tribe, has been instrumental in developing the Marty II portion of the project and in finding new ways to help the people of his tribe. He and the non-Indian sponsors have worked well together, and I hope that this spirit of cooperation can continue as the project moves along.

Finally, I must commend Leo Holzbauer, chairman of the Lake Andes-Wagner Irrigation District. A turning point in the legislative history of this project occurred when Leo made a poignant appeal to Senator BRADLEY before the Senate Energy Committee. Leo succeeded in putting a human face on an obscure irrigation project. He was able to demonstrate the need for the project, and the sponsors' commitment to bettering their way of life. Finally, Leo was able to convince people that this project is about people, not just water and crops.

The Mid-Dakota project has amazed even me. Four years ago, this project was a vague dream. Today, it will be authorized and sent to the President.

This project has in part sold itself. The sponsors were able to demonstrate need, a solid plan, and a strong State and local financial commitment to the project. But this underestimates the abilities and hard work of the sponsors. Susan Hargens, the chairwoman of the project, has been an able and effective spokesperson, and Julie Apgar, the manager of the project, has shown remarkable agility in moving the project from an idea to a near reality. I could not ask for easier people to work with, and I look forward continuing this relationship for many years to come.

In closing, my final words of thanks go to the distinguished chairman of the Energy Committee, Senator JOHNSTON, who once again has worked so diligently for the people of South Dakota and the Nation. None of the recent water projects in South Dakota would have come to pass had it not been for Chairman JOHNSTON, both in his role as authorizer and appropriator. We thank you.

Mr. BRADLEY. I yield 3 minutes to the distinguished Senator from Arizona, Senator MCCAIN.

The PRESIDING OFFICER. The Senator is recognized for 3 minutes.

Mr. MCCAIN. Mr. President, the Senate will soon consider the Reclamation

Projects Authorization and Adjustment Act.

This package includes a number of measures of vital importance to the State of Arizona. Later, I will be submitting a full statement on the various measures—including a critical and long-awaited Indian water rights settlement.

At this time, however, I want to call the Senate's attention to a title of this bill which has national and international significance. I'm referring to the Grand Canyon Protection Act.

As my colleagues are aware, I opposed the linking of the Grand Canyon Protection Act to controversial reclamation measures. The bill is park protection legislation, not a water project. Unfortunately, my point of view did not prevail. Time will determine the outcome.

My colleagues know how strongly I feel about the Grand Canyon, and the importance of protecting this world treasure.

Ten years ago, the Department of the Interior reported that operations at Glen Canyon Dam were damaging resources within the Grand Canyon.

The erratic release of water from the dam to meet peak electric power demands had destroyed Colorado River beaches, and harmed other natural, cultural, and recreational resources. Somewhere along the line we forgot our obligation to the canyon and to the future generations for whom we hold it in trust.

In response, I introduced the Grand Canyon Protection Act to reorder those priorities—to stop the damage and legally require the dam to be operated in a manner which will protect park resources. That was 2½ years ago. It's been a long haul. The fight has not always been easy. But, the stakes are high and the cause is right.

While we have not always agreed on how the Grand Canyon Protection Act should be handled or on the terms of the legislation, I appreciate the diligent efforts of the Senate Energy Committee in presenting this conference report.

I urge the Senate to pass the reclamation bill and the President to sign it. Enactment of this legislation will be a great victory and a historic step in the effort to protect one of the great wonders of the natural world.

We are accustomed to celebrating man's control of the natural world. Today, we can celebrate quite a different achievement—the recognition that the progress of man is not always measured in how much we master our environment, but in how well we preserve and protect the most precious gifts of God and nature. No one can disagree that the Grand Canyon is one of the most magnificent gifts with which we have been entrusted.

This bill will result in greater protection for the resources of the Grand

Canyon in keeping with our stewardship responsibilities. That's what is most important. But, I must say that I'm very disappointed in how the conferees have decided to handle the costs of the environmental support studies necessary to implement the legislation.

The bill includes a provision that will require that the costs of preparing the environmental impact statement and of long-term monitoring will be paid by the Treasury instead of the project beneficiaries.

The Secretary of the Energy, the Secretary of the Interior and the Office of Management and Budget have objected vehemently to this provision. They object because it violates longstanding Federal policy which holds that environmental study costs should be paid by project beneficiaries.

I had hoped and anticipated that the financing provisions would be removed or a reasonable compromise could be achieved during the conference. Such a compromise might have required project beneficiaries to pay for studies directly associated with harmful dam impacts, while making studies dealing with resources enhancement or the general condition of canyon resources a nonreimbursable cost. Unfortunately this did not happen. I regret the issue was not resolved in a more satisfactory manner. It is a matter we should revisit when Congress reconvenes next year.

Notwithstanding those concerns, the important thing is that we have acted to protect the Grand Canyon for the benefit of this and future generations. That's what it's all about. Former Secretary of the Interior Stewart Udall said it best:

Because the hand of man now controls the flow of water through the \* \* \* Grand Canyon, Congress, acting for the American people, has a responsibility to ensure that our hand is guided firmly by the ethics of stewardship \* \* \* we must conserve and protect those resources and values that caused Congress to designate the Grand Canyon as a national park and to make its special qualities available to the American people for all time.

We have an opportunity to answer that call with our votes.

I would like to conclude by expressing my deep appreciation and gratitude to all of the very special people who helped make this legislation possible.

Time precludes me from mentioning all the individuals who made contributions. However, I'm compelled to acknowledge one very special person without whose leadership the Grand Canyon Protection Act would not have been possible. I'm speaking of Ed Norton of the Grand Canyon trust. Words cannot express how important Ed and his organization have been to the responsible stewardship of Grand Canyon National Park and the Colorado Plateau. He was indispensable in the conception, development and passage of

this bill. We owe him a great debt of gratitude.

I would also like to acknowledge others in the conservation community who made vital contributions to this legislation, including the Grand Canyon River guides who have educated us about the canyon and the need to care for all its resources. Thanks go to Rob Elliot of America Outdoors, Beth Norcross and Gail Peters of American Rivers, Rob Smith of the Sierra Club, and Dave Conrad of the National Wildlife Federation.

A number of people in the water and power community deserve our acknowledgment and gratitude for their contribution and for helping to make this legislation possible. I would like to thank Bill Plummer, Bill McDonald, and Jim Lochhead who represented the Colorado River Basin water users, as well as Cliff Barrett, Bob Lynch, Michael Curtis, and Deborah Sliz who represented regional power users.

I regret that time precludes me from naming all of the special people who contributed to this landmark legislation. We know who you are. Your efforts will be memorialized in the timeless gift we know as the Grand Canyon.

I want to thank Senator DECONCINI for joining with me on this initiative and for his efforts, and those of his staff, to pass this measure.

Mr. BRADLEY. I yield 30 seconds to the distinguished Senator from New Mexico.

Mr. BINGAMAN. Mr. President, I want to join my colleagues in commending the Senator from New Jersey for the heroic work he has done in bringing this bill to the floor. It is historic legislation. It takes on the most contentious issue historically in the West; that is water. We have many more killings over water in our State than we do of marital infidelity. The Senator from New Jersey deserves a tremendous credit, and I am glad to support the legislation.

Mr. BRADLEY. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator has 10 minutes and 31 seconds.

Mr. HATFIELD. Mr. President, I will be happy to take my time from this side.

The PRESIDING OFFICER. Does the Senator from Oregon seek recognition?

Mr. HATFIELD. If the Senator from New Jersey has yielded the floor, I will seek recognition on my own time.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. HATFIELD. Mr. President, there are so many reasons to support this bill because it is a comprehensive water bill. I would like to point out one provision that is especially of interest, I think, to everyone in this Chamber.

The Senator from New Jersey [Mr. BRADLEY] and I cosponsored a proposal to establish a national water commission to take up the many problems of

water studies, water policy and jurisdiction and conflicts. I might just remind the Chamber that there are 13 congressional committees and subcommittees that claim some jurisdiction over water policy, hardly a clear definition really of congressional role. There are six the same time in the executive branch of Government eight Cabinet offices that claim some jurisdiction over water policy. There are two White House offices that have jurisdiction of some type. There are six independent agencies of our Government that have some role to play. No wonder we have no comprehensive water strategy in this country. It does not make sense.

And now, Mr. President, because of the fact that the national scope was, indeed, a very large order, we found it more feasible to begin with a regional approach to this same problem of developing a comprehensive water policy. And so the West was chosen, the arid part of the country.

In this bill, we do have the provision for comprehensive, well represented through pluralism of interests a comprehensive program undertaking the Western States' problem of water.

Mr. President, once we get that cornerstone, that will then easily be expanded to the rest of the country. But we must start at least at some point, and that is what this bill provides.

We are also concerned about the growing need of recognizing water in its multiple uses.

The Chair recognizes that the Columbia River, which was initially a river of fishery and navigation, has become a river of fishery, navigation, irrigation, recreation, and power production. Sixty-five percent of our energy in the Northwest is produced in the so-called Bonneville power network.

But also we understand some salmon are listed as endangered or threatened. We now begin to understand that a larger part of that river allocation must be put to preserving the fisheries, and that is going to be true throughout this country.

We have to recognize the multiple uses, the multiple purposes, and achieve a balance between all of them, not to the exclusion of any but to try to find the reasonable balance. This bill is a major step in that direction, to achieve that objective.

So I urge my colleagues to support this cloture motion and to voice vote or to rollcall the first step of developing a national water strategy.

The PRESIDING OFFICER. The Senator has yielded the floor.

The Senator from New Jersey.

Mr. BRADLEY. I yield 4 minutes to the distinguished Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 4 minutes.

Mr. HATCH. Mr. President, I thank my colleague from New Jersey. First, I

thank him for the work he has done in assisting us and helping us with this bill. He has given tremendous service. We appreciate it. Certainly the two Senators from Utah appreciate it.

I want to thank Senator GARN, in particular. This is his last day in the Senate, and he has had an awful lot to do with helping to get this bill to this point.

The Utah congressional delegation, in cooperation with congressional leaders, the administration, environmentalists, farmers, native Americans, power interests, sportsmen, and State and local leaders, has spent much of the last 4 years in vigorous, detailed, and sometimes very contentious negotiations trying to reach an agreement on legislation that would lead to the completion of the central Utah project and meet longstanding obligations to the people of Utah.

While it was difficult, an agreement was finally reached by our very diverse coalition. I doubt that anyone involved in the negotiations is completely satisfied with the final product. Compromises were required of everyone, but as a result of those compromises, we now have a bill that has the support of every affected group.

From our compromises, we have created a balanced and innovative bill that will finally address the many difficult issues associated with the construction of the central Utah project. This is a landmark piece of western water legislation and I would like briefly to discuss some of the highlights.

Our legislation will provide sufficient funds to complete both Wasatch Front municipal and southern Utah irrigation components of the project. We have included provisions to reform almost every adverse environmental impact that has resulted from construction of the central Utah project. It guarantees minimum stream flow protection to 240 miles of Utah streams and rivers. We have provided a major funding source to restore or improve wetlands, big game rangelands, and fisheries. We have required water users to develop conservation plans in an effort to better protect and manage Utah's water resources. In addition, we have eliminated several features that were considered too costly or unnecessary.

A key to the agreement is the consensus concerning the establishment of an ongoing mitigation and conservation fund in Utah to assist in the repair and enhancement of projects called for in the bill. Under the plan we have developed, project beneficiaries and State and Federal Governments would all contribute to establish the fund.

We have also included a title to resolve the longstanding claims of the Ute Indian Tribe against the U.S. Government. It provides a fair and complete settlement of the water rights

claims of the Ute Tribe of eastern Utah by creating financial investment opportunities in lieu of costly and infeasible water development projects. I believe that this component is an essential part of the bill and that it is time for the Government finally to make good on the promises made over 25 years ago.

Mr. President, the central Utah project is extremely important to the future of the State of Utah, and its completion has been of paramount importance to Senator GARN and myself for all the years we have spent representing Utah.

For Utahns, the wise management of water is a necessity. It is a natural resource without which there can be no growth of any kind in our State. It was the recognition of the fact that Utah was one of the driest States in the country which led to the development of the central Utah project—a project designed to allow the State of Utah to utilize water from our many mountain streams in a manner that would enable the State to control its growth and destiny.

There is no question that we are asking for a substantial increase in our spending ceiling, but I believe our request is justified. We are asking that the Federal Government fulfill a promise that was made to the people of Utah over 25 years ago. We are attempting to provide the people of Utah with a reliable source of water that will guarantee economic growth and stability well into the next century while addressing the severe environmental impacts associated with construction of the project.

In addition, I want to make it very clear that this bill is not a gift to the State of Utah. Utahns have agreed to pay 35 percent of the cost of the features that are authorized in this bill. This is a substantial contribution by the citizens of Utah; in fact, it is higher than has ever before been required for a Federal reclamation project, but it is a sacrifice that we are willing to make to assure a reliable water system.

I believe it is important to also point out that completion of the project triggers very substantial repayment obligations. The costs allocated to irrigation will be fully repaid over a period not to exceed 40 years. Irrigators pay on the construction costs up to their ability to pay and power revenues provide the balance. The municipal and industrial water users will pay back their obligations over 50 years with interest. It has been estimated that repayment will eventually bring over \$2 billion into the Federal Treasury.

Mr. President, this legislation will reclaim water for municipal, industrial, and agricultural uses; help prevent flooding and accompanying property damage; provide facilities for recreation and fish and wildlife; and increase farm and industrial income.

What began as a vision is now nearing completion and total fulfillment. We have developed a balanced proposal that takes into consideration the needs of all of the people of Utah as well as our responsibilities to the American taxpayer.

Mr. President, this is an important day for us. This is an important bill.

I wish to compliment Senator GARN again, and other members of our delegation, for the many years of service and work that we have all put in to try to get this through. But I know that for Senator GARN, in this last day, this has to be one of the hallmarks of his career. I wish to personally express my love and affection for him, and congratulate him for the work he has done.

I also yield back the remainder of my time to Senator BRADLEY.

The PRESIDING OFFICER. The Senator yields the floor.

Mr. HATFIELD. Mr. President, I would like to yield 2 minutes to the Senator from New York [Mr. MOYNIHAN]. I would like to yield 5 minutes to the Senator from Utah [Mr. GARN]; with 1 minute remaining to be retained for Senator WALLOP to close, and the remainder of the time to the Senator from California [Mr. SEYMOUR].

Mr. MOYNIHAN addressed the Chair.

The PRESIDING OFFICER. The Senator from New York.

Mr. MOYNIHAN. Mr. President, I will not require the whole of 2 minutes. My purpose is simply to congratulate the managers of this legislation and those who have worked on it; to say that here we are, working on a western reclamation era, an enterprise begun by Theodore Roosevelt.

The Senator from Oregon has made the point, and I am sure the Senator from New Jersey agrees, that if you can establish a water policy for that large an area of the country, you can do it for the country as a whole. And that seems to be an important concept, one which would involve the Committee on Environment and Public Works in the next Congress.

I look forward to learning from the Senator, and working together with him in this matter. It is a large national interest.

I congratulate and thank the Senator.

The PRESIDING OFFICER. The Senator has yielded the floor.

The Senator from Utah is recognized for 5 minutes.

Mr. GARN. Mr. President, as the 102d Congress comes to a close, I want to sincerely thank my colleagues on both sides of the aisle for their cooperation in approving titles II through VI of the bill now in front of the Senate. I particularly want to express appreciation to Senators BILL BRADLEY, MALCOLM WALLOP, and my Utah colleague ORRIN HATCH for their support. Senator BRADLEY was not always a believer in the

merits of the CUP, now he has become one of its greatest advocates and has dealt with me honestly and in a straightforward way. Senator WALLOP has been an outstanding influence for good and has always been a constructive force in moving this water bill forward. Senator HATCH has been at my side during this entire protracted effort on behalf of our State.

I believe everyone knows the central Utah project [CUP] has been held hostage to an intramural water battle taking place within the State of California for the past 3 years. This conflict has delayed the long-promised benefits of the CUP to the people of Utah for too long and the wait has been painful.

Nevertheless, I am very grateful that before my Senate career comes to a close, I can tell the people of Utah, the bill has finally passed and on its way to the President for his signature. Since the President's signature is not assured, proponents of this 57-title package from 16 States will now have to make their case to him. I can assure my colleagues and the people of Utah, I have already begun doing this.

Passage of this bill represents the culmination of 25 years of work. I first heard of the CUP when I became Salt Lake City's water commissioner in 1967. After becoming mayor in 1971, I retained my position as a water commissioner and continued to work on the project. But, my real dive into this project came when I was elected to the Senate in 1974. After coming to Washington, I became responsible to obtain the yearly appropriation for the project. With that objective in mind I jumped from the Armed Services Committee in 1978 to the Appropriations Committee where I have been ever since.

The CUP was originally scheduled to be completed by 1972. But, like the Federal Interstate Highway System and for myriad reasons, 1972 came and went and expensive construction delays occurred. By the mid 1980's, I made a disappointing but, inevitable discovery. Successive years of slow construction meant the day would come when construction on the project would stop unless my colleagues and I from Utah could persuade the Congress to raise the authorization ceiling one more time. So, my focus necessarily had to shift to a duel one, obtaining the annual CUP appropriation and negotiating a new authorization ceiling in order to be able to complete the project.

Mr. President, the Utah delegation has successfully negotiated the reauthorization bill for the CUP which is now before the Senate. This negotiation involved a protracted and tedious effort to address the concerns of both environmentalists and water users in Utah which we finished in early August of 1990. We have been waiting for this day ever since.

By way of explanation, this bill raises the authorization ceiling for the Colorado river storage project from approximately \$2.1 billion to nearly \$3 billion. The bill will provide for the delivery of municipal and industrial water for the nearly 1 million people who reside in Salt Lake and Utah counties and it creates a water supply for an additional 400,000 people. It also provides for the construction of a reliable supplemental irrigation system for which the people of rural central Utah have waited since 1956. It provides several innovative conservation and environmental mitigation programs. Finally, the bill makes good on a commitment the State of Utah made in 1965 to the Ute Indians to compensate the tribe for contributing its waters to the central Utah project.

Mr. President, this bill solves many, many problems, creates many new opportunities, and helps prepare Utah's people so they can face the future confidently.

The adoption of this conference report today represents the culmination of my dreams and of many, many Utah citizens. The father of the CUP was the late Edward W. Clyde, a man who had the foresight and vision to bring Utah's share of the Colorado River to the populated areas of the Wasatch Front and the farms and ranches of central Utah. I would also like to give well deserved credit to a bi-partisan group of Utah Governors and Members of Congress, who beginning with passage of the 1956 Colorado River Storage Project Act have fought hard for their State's water interests here in Washington: Governors J. Bracken Lee, George Dewey Clyde, Calvin L. Rampton, Scott M. Matheson, Norman H. Bangerter, Senators Arthur V. Watkins, Wallace F. Bennett, Frank M. Moss, ORRIN G. HATCH, Representatives Henry Aldous Dixon, William A. Dawson, David S. King, M. Blaine Peterson, Laurence J. Burton, Sherman P. Lloyd, K. Gunn McKay, WAYNE OWENS, Allen T. Howe, Dan Marriott, JAMES V. HANSEN, Howard C. Nielson, David S. Monson, and BILL ORTON.

Mr. President, water is the lifeblood of my State. Utah is the second most arid State in the union. The measure we are about to pass is absolutely vital to the Utah's long-term future.

Mr. President, I would feel remiss if I did not mention a few of the great staffers who have devoted hundreds of hours to putting this bill together: My legislative director Joanne Newmann, my legislative assistant Bob Weidner, Millard Wyatt of Senator HATCH's staff, Rob Wallace, Gary Ellsworth and Jim Beirne of the Senate Energy Committee minority staff, Ben Cooper, Mike Harvey, Tom Jensen, and Dana Cooper, Senate majority, Jim Barker of the House minority staff, and Dan Beard of the House majority.

To those who also helped that I have omitted, forgive me.

Mr. President, I ask unanimous consent that a letter from Gov. Norman Bangerter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF UTAH,  
OFFICE OF THE GOVERNOR,  
Salt Lake City, October 5, 1992.

Hon. JAKE GARN,  
U.S. Senate, Dirksen Office Building,  
Washington, DC.

DEAR JAKE: I understand that your years of effort and hard work to secure funding for the completion of the Central Utah Project are about to come to fruition as the House today begins final deliberations on H.R. 429, the "Omnibus Reclamation Project Act." I was pleased to learn that Senate has made significant progress on the California measures of the bill and that it will soon come to the Senate floor for final consideration.

The Central Utah Project is a critical component in meeting the water needs of our state's growing population. It strikes an important balance between the need for water and the importance of conserving and protecting that vital natural resource. In the last few years we have come to learn just how important that balance can be as our state has suffered from a long and often difficult drought.

Jake, your personal commitment to the reauthorization of the Central Utah Project will be an important part of the legacy that will mark your valuable service to Utah in the U.S. Senate. I realize the pressures that are placed on you and your staff as Congress rushes in these last two days to complete its business. You have my appreciation and support as you work not only to seek final passage of this important legislation, but also the Utah land exchange legislation.

Please contact my office if we can be of any assistance to you or your staff in these final hours. Our best wishes and hopes for your success in these efforts.

Sincerely,

NORMAN H. BANGERTER,  
Governor.

Mr. GARN. Mr. President, I regret that we have been held hostage for 3 years, along with projects from 15 other States. I recognize the seriousness of the problems in California, and I certainly have never felt it was my position to in any way dictate what went on within that State.

But forces in the House of Representatives have continued to say that all the rest of us cannot have our way unless they get theirs. And I think that is unfortunate; it is not the way Congress should do business, to hold innocent hostages. That is the position in which the Senator from California [Mr. SEYMOUR] has been put. He has not been able to wage a battle solely on the merits or demerits of his own project; he has had the pressure of all the rest of us trying to get our projects through.

I commend the Senator—with the difficult processes that he has been put through, and the position he has been put in—for all the constructive changes he has made. I recognize he is still not satisfied with the California portion of the bill, but I think everybody should recognize it is far better because of his efforts than it would have been otherwise.

Mr. President, on a personal note, this is a significant day. We will pass this bill today. But it is not assured that the President will sign this bill. I hope he will. I hope he will, because overall it is so much better than the negatives within it. Plus, there are so many States involved that I hope he will not veto it over the California portions and abandon all the rest of us.

In my own case—and this is a very personal reference—in 1974 I was elected, at the age of 34, as a Salt Lake City commissioner, and I was assigned full-time management of the water department. All I know about water was that you turned on a tap and water came out of it. So literally, after my swearing in 25 years ago, I went to my new office, and the water superintendent of 17 years said, Commissioner Garn, I need to start briefings on the water systems and water issues in Utah. When can we do it? I said why not start now. And he said, OK, Commissioner. Your first lesson is on the central Utah project.

So literally, I have spent a quarter of a century working on this project, more than any other single thing in my political career, and have been held up by forces that have nothing to do or no disagreements with Utah.

So it is rather interesting that this is the last day of my public career. The first day started with CVP, and it is very ironic that on the last day we are finally going to pass the final bill so that it can be completed.

I apologize to some of my colleagues for when I have been angry over the years. But I hope they understand that when you spend a quarter of a century of your life trying to do one thing for your State and you are continually blocked, it becomes very important, particularly when, as my colleague has pointed out, water is the lifeblood of our State. We are very dry.

So I appreciate the cooperation of all those who have worked on this. I do hope the President might recognize, beyond the substance of the issues, that one of his Republican colleagues has spent a quarter of a century working on this. I would not like to see it go down at this point. My first day with CVP, my last day with CVP, going to pass it big here on the Senate floor.

Please, Mr. President, do not veto it. I yield the floor.

Mr. HATFIELD. How much time do we have left?

The PRESIDING OFFICER. You have 19 minutes, 35 seconds.

Mr. HATFIELD. I reserve 1 minute for the Senator from Wyoming [Mr. WALLOP], and yield the remaining time to the Senator from California.

Mr. SEYMOUR. Mr. President, I feel as though I may be the lone voice on this floor defending what I think is in the best interest of my State, the great State of California. I heard Senator after Senator, most recently Senator

GARN, rightfully speak in support of this bill because the water projects—that are important to their States—have been held hostage.

I think it is sad, in a way, that Senator GARN has had to spend 25 years trying to get through a well-deserved project. And in most recent years the only thing that blocked his project, as well as projects of other western Senators, was the fact that those in the majority around here said, if you do not like the way we are going the rest of this reform—today it is the Central Valley project—then you do not get your water project.

So these important western water projects have been held hostage year in and year out.

Two years ago, the proponents of this bill, Senator BRADLEY and Congressman MILLER, held desperately needed water projects for other States hostage to reclamation reform. After the bill died in the closing days of the 101st Congress, Congressman MILLER and Senator BRADLEY again held the projects hostage. This time, reclamation reform was not the price for the other water projects, it was reform of the Central Valley project.

I daresay, if we were voting on the portion of the legislation, title XXXIV, that deals with the Central Valley water project in California, if we were voting on that separately from these western water projects important to western Senators like Senator GARN, that those water projects would go through. They would go through on an overwhelming vote. But as to the Central Valley project, if it were permitted to be standing alone as it impacts the largest State in this country, it would go down to defeat.

The managers of this bill well realize that. They have realized it, and they have learned that the way they can flex their political will, impose their political will on a State in which they do not even reside, which they do not even represent, is to hold others hostage.

From the outset, I have said the hostage taking was deplorable. Unfortunately, as some have said, there has been an unpleasantness and meanness in this process and I am afraid it will not soon go away. As long as there are those who will continue to impose their social agenda upon less fortunate people, I am afraid other projects for other States will again be held hostage, and the process will begin anew.

I am hopeful that the President will veto this bill, not that I want to see Senator GARN's water project or any other western Senator's water projects defeated. I think there just comes a time when you have to stand up to hostage-taking and say it is wrong, I am not going to put up with this, and veto that bill.

Earlier, one of the Senators suggested that there have been many

water wars. In my State of California, there have been probably more water wars than any other State, Mr. President. In fact, our Mark Twain once said, "Whisky is for drinkin' and water is for fightin'."

This bill, the water conference committee report, H.R. 429, will do nothing more than ignite another water war in California as it pertains to the reform of the CVP. This bill will do nothing more than to, no. 1, provide for some badly needed water resources for fish and wildlife, although, I argue, too much. They need some certainly, but too much in this bill.

Beyond that, will cities get water that badly need it? Will people and jobs get water that badly need it? I do not think so. I think this bill will lead to a decade of litigation tying up water rights in the courts in California and in the Federal courts, and that will prohibit water from being transferred, which is what we all want. I want it. I think everybody else wants it who has an interest in this. We want water transfer to occur from agriculture to urban areas, people and jobs as I have called it, as well as whatever we can allocate for fish and wildlife purposes.

As I have said repeatedly, I support water transfer of Central Valley agricultural water to urban an industrial use. There are many sector of California's economy in need of more water to continue to grow and prosper. I have vowed to do everything possible to ensure this happens, but not at the expense of any one industry, that will only result in another water war which benefits no one. I am also concerned that when other California industries need water most, during dry years, the bill dedicates so much to fish and wildlife that there will be little if any to transfer outside the project.

This bill will have severe economic consequences on my State of California. The California Department of Food and Agriculture has estimated that this bill cost the State of California approximately \$4.5 billion of economic loss every year and tens of thousands of jobs. No wonder it is opposed by the California Chamber of Commerce. No wonder the Governor of the State of California, Pete Wilson, strongly opposes it.

I also want to remind my colleagues that the majority of California's representatives also oppose this bill. Earlier this week, 25 members of California's delegation in the House of Representatives voted against H.R. 429. Governor Wilson wrote all Members of Congress strongly urging them to either separate this title from H.R. 429 or to vote against it. Additionally, the Secretaries of both the Department of Agriculture and the Interior have written several letters to Congress stating they will recommend the President veto H.R. 429 based on the onerous provisions of title XXXIV.

It is sad. Here we have a Federal project located in California, built and paid for by the Nation's taxpayers, who should be repaid. Because there are some that feel they know better than Californians what to do about their water, the wisdom of the Potomac will dictate water policy in California and determine who the haves will be and who the have nots will be.

There are three parties to this water war that is about to break out. One is urban areas, people and jobs as I call it; two, are farmers, also people and jobs; and, three, our environmental interests representing a desire to take 1 million acre-feet of water and dedicate it and commit it for fish and wildlife purposes.

I wish there were that much water in the pail that we could give to fish and wildlife and not cause an economic disaster in our State. And there would be that much water if we would have worked to build a bigger pail of water rather than the very limited pail we are providing.

One would think that California is a desert. It is not. One of our problems is that the water that runs off the mountains as the snow melts or when it does rain, the water that runs down the streets, too much of it runs to the ocean. So is there any provision in this legislation to create a bigger pail of water so we do not have to fight over this very limited resource? The answer is no. Was there any consideration given to building new water reservoirs to catch that water as it runs off? The answer is very little.

I think it is rather selfish on the part of those who want 1 million acre-feet of water dedicated for fish and wildlife purposes, or, as I have called it, animals and plants, yet are unwilling to lift a finger to create more resources, to create more water. Therefore, there is nothing in this bill that says expand the existing Trinity Shasta Dam, build the reservoir at Los Banos Grande or Los Viqueros and thereby, in just three efforts, come up with approximately 1 million acre-feet of water and take it all, all of that new water and dedicate it to fish and wildlife.

There is no talk about that in this bill because it was blocked. It was prevented. And so we have a war. We have war over a very limited resource.

What this legislation will do is say: Let us take 1 million acre-feet right off of the top of the bucket, scoop it out and set it aside for fish and wildlife purposes. That is well-meaning, because I would like to see fish and wildlife get that quantity of water off of the top. But with what little water there is in the bucket, what is left for people and jobs and farmers is not enough to go around.

The Department of the Interior said if this bill we are voting on were to have been law in 1990, 1991, the farmers in the Central Valley project would

have received no water in those 2 years, and the cities also that are served by the Central Valley project would have gotten zero. So you see the priorities are wrong.

The priorities set forth in H.R. 429 say that animals and plants are equal. They have an equal right to water along with people and jobs. I think that is wrong. I think people and jobs come first, Mr. President. Without a job, nothing else is possible. We cannot enjoy the beauty of our environment if we do not have a job.

So I think this bill is badly flawed. It is badly flawed.

Another reason why it will create a decade of litigation is over water contracts. I have not disagreed for a moment that the 40-year water contracts given to agriculture are too long. They need to be reduced. In fact, a bill I debated yesterday that I introduced would have reduced them to 25 years.

This bill also reduces them to 25 years, but it goes a step further. It says that before you can get a 25-year contract, you must have a complete environmental impact statement. We have heard enough war stories about legal delays and how sharp trial lawyers can use the law of environmental impact statements to delay, to kill, to stop totally any kinds of projects.

So what this bill offers on contract renewal is if you can get a completed environmental impact statement—and that is questionable with the litigation that will be created—then you can get a 25-year contract. But if you cannot get one completed, you will get 2- or 3-year contracts.

How would we like, Mr. President, to be going out and buying a home and go to a bank to try to borrow money to buy that home and be told, all you can get is a 2- or 3-year mortgage and then come back after 2 or 3 years and we will see about it?

That is why it is going to destroy so many businesses in the State of California. That is why it is going to cost \$4.5 billion a year taken out of an already reeling economy in California. And that is why this bill will cause tens of thousands of people to join the unemployment lines.

And they are not all big guys. I have heard the other side argue this is just the big farmers. We are just going to take this water from big farmers. That is not so. There are many farm workers, tens of thousands, mostly minorities, and they are not big people. They will be placed on the unemployment lines. What provisions does this bill provide to help them out? None.

So, Mr. President, I think it is a sad day when the Federal Government and this body, the U.S. Senate, say to California, we do not care what you say. We know what is good for you. We have the corner on the wisdom market back here and we will tell you how to do it.

I am hopeful that if this bill passes, the President will veto it. I am also

hopeful that the Governor's efforts to try to gain control of California's destiny on water are successful in negotiating agreement for the transfer of the Central Valley project from the Federal Government to the State of California.

It has been a long, hard-fought battle. It is hard for me to admit defeat, but the time has come. This bill will be passed, and because of the water project tied to this onerous legislation, it will pass easily. I say that the process that took place in the making of this law was not very pretty. We had a conference committee that met once solely for the purpose of preliminary motions and actions, but not once did the conference committee meet to discuss any substantive discussions, negotiations, or compromise. This was literally jammed down the throat of not only this Senator, but the Representatives in the House of Representatives, representing the State of California.

This is a bill written by Washington, DC, by bureaucrats and by the Federal Government, for California, dictating how they will deal with this precious resource.

California needs assistance from the Federal Government—but this is not the type of help we need. California needs the Federal Government to work with us, to assist the State to resolve our pressing water problems. We do not need or want the Federal Government to preempt our rights by dictating the use or allocation of our water. Unfortunately, title XXXIV does just that. I am afraid we have had the right to determine our own destiny stolen from us, and will probably be at the mercy of another generation of bureaucrats and Washington special interests fighting to reclaim it.

So it is indeed a sad day.

Mr. President, I urge those Senators who do not have a western water project in this bill that they want so badly and have had it held hostage for so long, I hope they take a close look at the Central Valley project portion of this bill and see it for what it is. It is bad policy. It is bad economics. And it is going to be bad for the future of the State of California.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. SEYMOUR. Mr. President, I ask unanimous consent to have printed in the RECORD these letters in strong opposition to this bill.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ASSOCIATION OF  
CALIFORNIA WATER AGENCIES,  
Sacramento, CA, October 5, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR SEYMOUR: I am writing to urge you to oppose the conference report to accompany H.R. 429 should it be considered in the Senate. The Association of California Water Agencies (ACWA) represents over 400 public water agencies in California who are responsible for 90% of the state's municipal & industrial and agricultural water supplies. The Association is made up, nearly equally, of ag and urban agencies throughout the state.

We join Governor Wilson and some members of Congress in calling for the Congress to reject any effort to force changes in a policy that affects the state so significantly without a clear and comprehensive review of the proposal. Although this issue has been before the Congress for sometime there has been no objective investigation into the issue by either body of Congress despite claims to the contrary. When evidence and testimony has been presented that challenged the assertions of the proponents of CVP reform measures, it has been simply ignored or dismissed.

Proponents of CVP reform have rushed to prescribe certain actions to resolve environmental damages within the CVP without fully understanding, or apparently caring about the impacts of their action. Much of the debate has been over so called "up front water." Yet there has been no identification of how much water is needed to solve the problems that have been identified. Simply saying one has too much and should share it with others does not justify the action.

In May, the Board of Directors of ACWA took the extraordinary step of providing the Association's official position on legislation in the form of five principles, which are included. Fundamental to these principles is the tenet that water transferred from current uses to fish and wildlife uses would be determined to have an identifiable positive affect on mitigating fisheries losses. We have not seen any documentary evidence supporting the numbers used in any of the proposals surfaced. This is clearly contrary to the Association's position.

While the Association supports water transfers as a way to meet short and some long-term supply problems, there are real questions still to be answered about the transfer provisions. There seems to be a disturbing propensity to ignore the impact on California's agricultural economy. At \$18 billion, the industry is extremely important both to the Central Valley and the state's overall economy, as is any sector of California's economy. That shift has been casually justified by comparing the urban and agricultural contributions to the economy. Yet according to Bureau of Reclamation analysis, there would be no ag or M&I water in the last two years, and little water for water marketing. In an ironic twist, in those dry years some CVP urban contractors would be forced to pay for the water that they are under contract for, but would not get, and then compete with every other urban agency in a bidding war for CVP water that they must have.

We appreciate all of your efforts to resolve these issues amicably to the benefit of both urban and agricultural users and the environment. It is unfortunate that so many disparate titles have been bundled to gain the support needed to move the legislation. And

while we have no reason to oppose projects within the states of your colleagues, we are compelled to ask you to oppose the package because of the devastation it promises for California. We agree with Senator Wallop's sentiment that other states' projects should not be held hostage to this kind of tactics; and we hope that there will be an effort to approve those measures separately, de-coupled from a conversial CVP reform proposal. Thank you for your consideration of this request.

Sincerely,

BRAD SHINN,  
Manager of Federal Affairs.

HOLLISTER, CA.

I am a single woman owning a small farm in San Benito County. I will lose this farm, and many other small farm owners will also lose theirs if the Miller Bradley Act restricting use of Central Valley Water is passed.

We in San Benito County have no subsidized crops! Our fertile farmland puts produce on America's dinner table all over the U.S. Please help!

CHARLOTE O'BANNON.

COUNTY OF KINGS,  
BOARD OF SUPERVISORS,  
Hanford, CA, September 28, 1992.

Re: Central Valley Project; Miller-Bradley Proposals.

Hon. JOHN SEYMOUR  
U.S. Senate, Washington, DC.  
Hon. JOHN SEYMOUR:

For nearly half a century, the Central Valley Project (CVP) has been the major work providing water that turned Central California into the world's most productive and efficient agricultural area. The Project provides many other benefits as well; it supplies urban water, provides flood control and recreational opportunities, generates electrical power, and helps repel salinity, all while also enhancing fish and wildlife habitats. For its entire history, the CVP has been the economic and environmental stabilizer for the Central Valley of California.

The Miller-Bradley proposals for the CVP even as "compromised" will emasculate the great economic and environmental force of the CVP. It would devastate California agricultural production, the economics of farm communities and thousands of farm families, which are already reeling from six years of drought and the present malaise of the state and national economies. The only real "benefit" from the proposals is a marginal enhancement of fish and wildlife habitat. Perpetual economic and social drought are the by-products of these harmful proposals.

The Kings County Board of Supervisors respectfully requests that you consider the real costs and benefits of the Miller-Bradley proposals, and vote against them.

Very truly yours,

JAMES M. EDWARDS,  
Chairman, Kings County  
Board of Supervisors.

CITY OF LINDSAY,  
Lindsay, CA, September 29, 1992.

Sen. JOHN SEYMOUR  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: It is my understanding that HR429 is about to emerge from a congressional conference committee. It is also my understanding that this legislation, if enacted two years ago, would have mandated that NO WATER would have been delivered through the Friant-Kern or Madera Canals during this past or the previous year! HR429 would kill Lindsay and the farming community surrounding it.

The City of Lindsay relies on the Friant-Kern Canal for its water supply as the ground water on our area is not potable, primarily because of naturally occurring salts.

In a recent report, the California Department of Food and Agriculture determined that the potential agricultural water reduction resulting from HR429 could be 1.5-million acre-feet. If that amount were reallocated to the Delta, the agricultural crop loss would be \$2-billion and cause a state income loss of \$8-billion per year. As much 800,000 acres of irrigated farm land would be lost and result in the demise of 4,050 farms. In addition, I can personally assure you that the passage of HR429—with its proposed reallocation of water—would cause the City of Lindsay to go bankrupt.

Please study this legislation carefully and vote against it as its impacts would be very devastating to California agricultural industries and its supporting communities.

Sincerely,

JOHN R. MAYNARD,  
Mayor.

DIBUDUO LAND MANAGEMENT CO., INC.,  
Pinedale, CA, September 29, 1992.

Senator JOHN SEYMOUR,  
Dirksen Office Building, Washington, DC.

DEAR SENATOR SEYMOUR: The intention of this letter is to remind you of the impact of the bill currently trying to be passed, which would literally devastate agriculture in the San Joaquin Valley, and more specifically, would likely put me out of business. The bill is a proposal by Congressman George Miller which has been termed a "compromise" between the House and Senate versions of CVP Fish and Wildlife legislation.

This so-called compromise would leave little to no water for farmers, by making irrigation water needs second in priority to fish and wildlife needs, which would mean no food, no farms, and no jobs.

The Bureau of Reclamation has calculated that if this latest proposal would have been law during the current 1992 water year, there would have been zero water available to the Friant Division. That means zero water to my ranch which is serviced by the Delano-Earlimart Irrigation District. The same would have also been true for the 1991 year.

I believe that sacrificing farmers for fish makes no sense practically, economically, morally, or politically, and most of all it is unnecessary. In the past, proposals that would have fixed the problems without inflicting punitive damages on farmers have been rejected without basis or good cause.

I see no options left but to kill this bill and hope for a more reasoned and sensible approach next year.

Thank you for your attention to this most urgent and serious matter.

Sincerely,

JERRY DIBUDUO.

SEPTEMBER 28, 1992.

Senator JOHN SEYMOUR,  
902 Hart Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: I am the owner of a moderate size farm near the Town of Hollister in California's San Benito County. I lease the farm to tenant farmers who use water from the San Felipe portion of the California Central Valley project.

I am writing to ask you to take every possible action to stop the Central Valley Project reform legislation which is currently being considered by Congress. Taking unreasonable amounts of water from agriculture for the benefit of fish and wildlife will cause

disastrous water shortages in the area of my farm. Coupled with the past seven years of drought, this will have a devastating impact on me, my farming tenants, and the already crumbling California economy.

Over the past three years, only 50%, 25%, and 25%, respectively, of the water allocation to my farm has actually been available. If the proposed legislation had been in effect during this period, no water would have been available, leaving my tenants in an impossible situation.

If enacted, the proposed legislation will allow me only 37% of past allocations for normal years, and its cost will more than double from \$45 per acre foot to \$50 per acre foot. Having this limited amount of water would be unreasonable for farmers, but having to pay \$95 per acre foot for water would be unthinkable. My tenants simply could not pay it. My farm would become dormant, and my tenants would be out of work and soon on California's welfare roles.

I support efforts to support fish and wildlife, and I recognize that necessary steps will cost some water, but the proposed legislation is clearly unbalanced and unreasonable. If all the paying users of water from the Central Valley Project are replaced by non-paying fish and wild animals, there will be no one left to pay for the Project. The Project can't afford this. California can't afford it. And the farmers certainly can't afford it!

I know that political battles are difficult in election years and that some politicians don't care what happens to California farms, but this proposed legislation is really ill-conceived and lacking in foresight. It will be ruinous for California and for me and my farm tenants. Please make an effort to oppose it in any way you can.

Thank you for your consideration.

Sincerely,

FRANK L. CHRISTENSEN.

ANDERSON CLAYTON,  
WESTERN COTTON SERVICES CORP.,  
Fresno, CA, September 30, 1992.

Hon. JOHN SEYMOUR,  
Hart Office Building, Washington, DC.

DEAR SENATOR SEYMOUR: I am writing to express my opposition to the Reclamation Projects Authorization and Adjustment Act (H.R. 429). In particular, I am very much opposed to the Central Valley Project Improvement Act (Title 34), which is proposed by Congressman George Miller and Senator Bill Bradley.

I am in charge of California operations for Anderson Clayton, a large cotton processing company. Anderson Clayton and its many customers stand to be severely damaged if the Miller/Bradley becomes law. We employ 600 people at the height of our season here in California. Our 300+ ginning customers employ another 2,000 or so full-time workers and many more than that on a seasonal basis. Anderson Clayton has a commitment to those employees and customers and to the cotton industry. We lent over \$60 million in California alone for production crop financing in 1992.

If the Miller/Bradley bill becomes law, agriculture in California will be devastated. We in agriculture agree that environmental concerns need to be dealt with. This extreme proposal, however, is going much too far. As you know, the State of California is near financial ruin, unemployment is incredibly high, and businesses and people are leaving the State in droves. If Miller and Bradley get their way those problems will get much worse.

I know that you have been an ally of California agriculture for a long time and we appreciate your help in providing alternative legislative proposals. We recognize and appreciate that very much. I do not know the status of the legislation at this moment, but I know that time is critical. Please continue to support us in our attempt to ward off the economic devastation that will surely befall us if this legislation is enacted.

Sincerely,

GEORGE R. HARDBERGER,  
Vice President, California Operations.

INLAND EMPIRE ECONOMIC COUNCIL,  
Ontario, CA, September 23, 1992.

Hon. JOHN SEYMOUR,

Dirksen Building,  
Washington, DC.

DEAR SENATOR SEYMOUR, the \$750 billion California economy is reeling from multiple blows. The general recession, restructuring of the aerospace/defense industry, and the continuation of a statewide drought into its seventh year are prime aggravators. Given the severity and length of the drought, in particular, it is clear that obtaining additional supplies of high quality water must be a priority if we are to protect our State's economy and quality of life.

Your exemplary leadership in the development of federal legislation to allow and encourage voluntary transfers of water from agriculture to urban centers has brought needed attention to the fact that water marketing must be an integral part of California's water planning agenda.

As concerned and involved business people, we at the IEEEC support your work to reform the federal Central Valley Project (CVP) water system and to promote water marketing. We believe it is essential for this effort to continue this session. We encourage you, therefore, to work in concert with Interior Committee Chairman Miller in the House-Senate Conference Committee, to reach a viable agreement on CVP reform soon.

Sincerely,

LUKMAN CLARK,  
Director of Public Affairs.

HOLLISTER, CA.

Subject: Stop CVP reform legislation Title XXXIV of H.R. 429.

DEAR SENATOR SEYMOUR: I am writing to urge you to take every possible step to stop the Central Valley Project Reform Legislation now being considered by Congress. Ripping water away from agriculture and giving it to fish and wildlife purposes is going to cause permanent drought for my farm and will have devastating impacts on me, my family and my employees.

I am a farmer in the San Benito County Water District. Over the last three years, I received only 50%, 25%, and 25% of my Central Valley project water allocation, and getting by has been extremely difficult. If this legislation had been in effect for the last two years, I would have received no water from the Project.

This legislation, as written, will only allow me a 37% supply of water in a normal year and its cost will increase by \$50 per acre foot.

I cannot afford to pay \$95 per acre foot for water. My farm cannot survive without water. My farm employees have no jobs without water.

I have been willing to support your approach of trying to implement steps to improve conditions for fish and wildlife. I know that those steps will cost some water. But when you take away so much water and change contracts so that in more and more

years, I will have no water, I won't get financing. My District's bond debts won't get paid. I won't have water to transfer to urban areas. Who will pay for the Project when the primary "users" are fish and wildlife? What will be left of the CVP for transfer to the state?

I know the political battle will be fierce, and that there are some in California who don't care what happens to farms, but this is terrible legislation for California. Please stop it any way you can!

Sincerely,

ROBERT J. WILLIAMS.

COOPERATING CITRUS GROWERS,  
OF CALIFORNIA AND ARIZONA,  
Van Nuys, CA, September 29, 1992.

Re: Opposition to HR 429 Authorized by Congressman George Miller and Senator Bill Bradley.

Hon. JOHN SEYMOUR,  
Dirksen Senate Office Bldg.,  
Washington, DC.

DEAR JOHN: We understand that HR 429 will be brought up at the Congressional Conference Committee on September 29th or 30th.

If this bill were to become law it would devastate the agricultural industry in the state of California. If the law was passed two years ago no water would have been delivered out of the Friant-Kern or Madera Canals.

The majority of the California citrus industry is located in the southern end of the central valley and most of it is dependent on these canals for their primary water supply.

We commend your efforts in opposition and urge you to continue the good work.

Respectfully yours,

WILLIAM K. QUARLES,  
Vice President, Government Affairs.

September 24, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: As the representative body for the majority of California's processing tomato growers, the California Tomato Growers Association would like to express its support of the Senate-passed version of H.R. 429 and opposition to the House-passed version of the same bill in regard to Title XXXIV.

Last year, tomatoes for processing were California's ninth largest crop, contributing in excess of \$500 million in raw product value and \$3.7 billion in value added tomato products to our state's suffering economy. California contributes over 90 percent of the U.S. supply of processing tomatoes, providing America with an affordable, nutritional mainstay. In addition to the 20,000 jobs tied directly to growing, harvesting, and processing the crop, millions of U.S. citizens are employed throughout the country in the marketing and distribution of tomato products. Raising this important crop demands four things: Grower ingenuity, ideal climate conditions, excellent soils, and a reliable source of water.

The House-passed version of H.R. 429 would seriously jeopardize the availability of water to California's tomato growers. Already burdened by a 20 percent drop in raw product prices and skyrocketing input costs, our growers cannot afford to be further disadvantaged by legislation that could cut their water supply by as much as 40 percent while dramatically increasing the cost of that limited water. Under the House version of H.R. 429, the reliability of water supplies would be non-existent, destroying the ability of farm-

ers to plan for the coming year and seriously impacting their chances of securing long-term financing to continue their operations. To its credit, the bill calls for further water conservation technology to be employed on the farm. Realistically, however, those conservation methods require capital investment. Few growers paying increased water costs and receiving a smaller water allocation will be able to invest that capital.

We appreciate the need to protect our wildlife and fish resources, but urge you to consider the need to protect our food supply and economy as well. The Senate-passed version of H.R. 429 takes a realistic approach to both of these needs. It is comprehensive and is the better approach to improve fish and wildlife without destroying agriculture. The House version, on the other hand, ignores the real needs of agriculture, and its ambiguous programs divert valuable resources to fish and wildlife without presenting a realistic plan for safeguarding these resources.

The utilization and administration of our nation's water resources is a critical issue that ultimately impacts every citizen. We strongly urge you to review both the Senate and House plans. If passed, we believe the Senate version will strike a reasonable balance between the environment and economy. If the House-supported version of H.R. 429 is passed, however, it will most definitely lead to farm bankruptcies, lost jobs, and higher prices for foods on the market shelves while doing little to protect wildlife and fish resources in California.

Sincerely,

JOHN C. WELTY,  
Executive Assistant.

KERN FARMING CO.

McFarland, CA, September 30, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR JOHN: It is my understanding that H.R. 429 may emerge. This will be devastating to my family, myself personally and Agriculture as an industry.

Under this proposed bill we would not have gotten any water from the Friant-Kern Canal to provide water to our farm this year or last. We are dependent upon this water to farm here in the San Joaquin Valley. To have our water taken from us would:

1. Cause financial ruin for my wife Lenore, my son Doug and his wife Dena and their new baby, which is expected next week. We all depend upon farming for a living.
2. Eliminate all jobs for our employees, which range from six to twenty-five.
3. Cause financial damage and ruin to most businesses here in our local rural community, as well as the larger valley cities.
4. Reduce the amount of food and fiber available to our world, that includes those who are starving now.

Please defeat this unfair bill, that if it emerges, will cause so much damage to us, our employees, the businesses who serve us and California Agriculture.

Please contact us for any questions or information.

Thank you for your help.  
Sincerely,

WARREN CARTER.

DEAR SENATOR SEYMOUR: I am a farmer in San Benito County, a part of the best fruit and vegetable growing area in the United States where most of the fruit and vegetables for this nation are grown.

Some of the water wells here are drying now. If legislation is passed to take CVP water away from us, the farmed acreage will

go down considerably and the price of farm products will certainly go up and stay up. This will cause inflation and more unemployment in the State.

I believe the Miller/Bradley or any other such Bill would be bad for the economy.

Sincerely,

RICHARD SILVA FARMS,

Hollister, CA, September 28, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate, Dirksen Senate Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: As a third generation farmer, I feel deeply for the preservation of the family farm and farmer. H.R. 429 greatly threatens not only the small farmer but California agriculture on a statewide basis. This legislation does not represent a balanced or equitable solution to the States' water concerns or to the concerns of California's delicate ecology.

I believe that a slew of propaganda has been leveled against farmers. Columnists routinely report that farmers are huge water wasters. This is not correct. Every precious drop of this God given resource is used to produce food and fiber as expeditiously as possible.

I urge you to cast a no vote on H.R. 429. Keep America fed and clothed and keep the California farmer the most productive and efficient farmer in the world.

Thank you for allowing my concerns to be communicated.

RICHARD SILVA.

POND-SHAFTER-WASCO  
RESOURCE CONSERVATION DISTRICT,  
Wasco, CA, September 28, 1992.

Re H.R. 429.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: The legislation that is coming out of the congressional conference committee sponsored by Senator Bill Bradley and Congressman George Miller apparently could be very devastating to California's Central Valley agriculture.

Do they realize the ramifications of this bill if it were to go into effect? Agriculture in Central California would essentially dry up. Not only would the ground water supply be in an extreme overdraft, due to the continuing drought and no water from the project, but many agriculturally related industries would also be affected.

The trickle down effect could be tremendous, affecting everybody from the farmer himself to the consumer, and everybody in between.

On behalf of the directors of the Pond-Shafter-Wasco Resource Conservation District, I am expressing my opposition to this legislation, and look to you for support in this matter.

Thank you for taking this into consideration.

Sincerely,

BRIAN W. HOCKETT,  
Manager.

PANOCHÉ WATER DISTRICT,  
Firebaugh, CA, September 29, 1992.

Senator JOHN SEYMOUR,  
Hart Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: I am writing to urge you to stop the California Central Valley Project Reform Legislation now being considered by Congress.

The San Joaquin Valley is Mother Nature's greatest creation. The valley is a virtual

bread basket. Nowhere in the world does the same climate and rich soil exist to produce food and fiber, our greatest resource for world security.

The lifeblood of this great valley is water from the Central Valley Project. Please do not let an agriculture hating Congressman and an eastern Senator decide our future. We need to be as responsible to agriculture as we are to fish and wildlife.

This proposed legislation is a potential disaster for the entire valley. Please stop it any way you can.

Sincerely,

DENNIS FALASCHI,  
General Manager.

CITY OF ORANGE COVE,

Orange Cove, CA, September 29, 1992.

Re City of Orange Cove, contract No. 14-06-200-J230.

Senator JOHN SEYMOUR,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR SEYMOUR: The City of Orange Cove is very concerned regarding HR 429 and its potential impact on the city's water needs for its residents.

As a municipality with an allocation of 1400 acre feet, and needing considerably more in the next few years, the cost increase to \$30 per acre foot is substantially unrealistic for this community to absorb. This amount would be three times the current rate, and for a community that is considered among the poorest in the state, virtually impossible to consider.

Central Valley agriculture is vital to the residents of the City of Orange Cove. Over 70% of the residents rely on agriculturally related employment and are directly affected by water cutbacks as well being additionally affected by the increased cost for water deliveries. With very few and limited resources available regarding additional water supplies, this city as well as the surrounding farming community would be devastatingly affected by the increased water delivery costs.

On behalf of the Central Valley community of Orange Cove, I urge your no or veto vote on this legislation.

Sincerely,

VICTOR LOPEZ,  
Mayor, City of Orange Cove.

COUNTY OF SAN BENITO,  
BOARD OF SUPERVISORS,  
Hollister, CA, September 28, 1992.

Re CVP reform legislation title 34 of H.R. 429.

Hon. JOHN SEYMOUR,  
Hart Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: The San Benito County Board of Supervisors has asked me to write to you urging you to stop the Central Valley Project Reform legislation currently scheduled for hearing by a conference committee on Tuesday, September 29.

Farming in San Benito County, as well as other parts of California would be devastated by this legislation. Because of the continuing drought, Central Valley allocations to local farmers have been 25% of entitlements for the last two years. Had this legislation been in effect during that period, these farmers would have received no water.

In normal years this legislation would limit farmers to a maximum of 37% of current entitlements and would increase the cost by \$50 per acre foot.

These limitations and price increases would put many local farms out of business.

We understand the concerns for fish and wildlife, which prompted this legislation but we believe there has to be a balance between these concerns and the basic needs of the farming industry.

Yours sincerely,

RICHARD SCAGLIOTTI,  
Board of Supervisors.

EL DORADO COUNTY WATER AGENCY,  
Placerville, CA, September 29, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: I am writing on behalf of the El Dorado County Water Agency following the House defeat of Auburn Dam flood control authorization to address a concern regarding Central Valley Project reform measure H.R. 429.

The Agency opposed the authorization of a single-purpose facility at Auburn believing that a regional solution providing flood control, water supply, hydroelectric power generation, recreation, and instream flows would ensure greater benefits for more people. The Agency is one of several local cost-sharing partners, including Sacramento, participating in a 5-year federal study assessing unmet water-related resource needs in a 5-county area. Hopefully, a range of alternatives will be identified which will satisfy all unmet resource needs in the region.

Representative Vic Fazio recognized the need for regional solutions when he succeeded in 1990 in securing Congressional direction to the Secretary of Interior to enter into a long-term water service contract with the Agency (15,000 acre-feet from Folsom Reservoir for municipal and industrial purposes). HR 5014, a Department of Interior Appropriations measure, was passed by the Congress and signed into law by President Bush.

Unfortunately, the House offer on Title XXXIV (September 15, 1992) proposes to bar the Secretary from entering into new contracts for CVP water.

The Agency has embarked on a program with three objectives: (1) to secure sufficient water supplies to meet projected demands on the West Slope of El Dorado County through 2020, (2) to provide an affordable water supply to residents, and (3) to protect the environment to the extent feasible given the other objectives of the program. Both structural and nonstructural projects have been identified as alternatives; conservation and best management practices are included in the program.

The identification of nonstructural projects, i.e., those that do not include the construction of a dam and appurtenant facilities, has been a top priority given the lower capital costs and fewer significant environmental impacts involved in such projects.

The Agency has identified two nonstructural alternatives which it is pursuing today. The first is an application to the State Water Resources Control Board for consumptive water rights from Pacific Gas & Electric Company's (PG&E) El Dorado Project (FERC No. 184). The needed dams and reservoirs are in place; they exist for the purpose of generating power. The Agency seeks to utilize the available stored water and compensate PG&E whenever power generation is foregone. The second is the CVP contract.

The Agency does not seek to judge the necessity of barring new contracts; obviously, the CVP and California are struggling with serious environmental challenges including the Bay-Delta and endangered species. Rath-

er, the Agency seeks to point out the previous commitment of the Congress in the content of the 1990 legislation. If the commitment is not honored, then the Agency will fall short of its goal in meeting projected water supply demands through 2020. The remaining alternatives involve the construction of dams and reservoirs on natural watercourses within El Dorado County. Such an endeavor would involve more significant environmental impacts as opposed to securing an entitlement to use water already developed.

Any assistance you can provide to the Agency to ensure that the 1990 Congressional direction is excepted from a general provision barring new CVP contracts would be greatly appreciated.

Thank you for your time and consideration.

Sincerely,

ROBERT J. REEB,  
General Manager.

CHOWCHILLA WATER DISTRICT,  
Chowchilla, CA, October 1, 1992.

Re H.R. 429.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: I am writing to you to ask for your support to defeat the H.R. 429 proposal by Congressman Miller and Senator Bradley.

H.R. 429 will destroy the backbone of the United States economy, the family farm. Most communities in California's San Joaquin Valley, which is the most productive farming region in the world, depend heavily on farming for their existence. If H.R. 429 becomes law this will be an unbearable burden on an already struggling farm community. Hundreds of farmers will be out of business. Still yet, thousands of workers will be out of a job causing millions of dollars of widespread loss. This also means an increasing burden on our already overtaxed welfare system.

H.R. 429 requires the Federal Reclamation Project to give up a large amount of water and to charge its users for damages by establishing a restoration fund that can be used for any problem, no matter what the cause. This bill punishes the family farmer in two ways. First, it requires him to give up much of his precious water supply. Secondly, it will inevitably require him to pay for the water that he will not even receive. This in itself will push many farmers out of business.

Why of all the Reclamation Projects, is the Central Valley Project of California being singled out by Congressman Miller and Senator Bradley? Is it because of their deep concern for the environment? I feel it is because Congressman Miller represents the metropolitan area of San Francisco and has nothing but arrogant contempt for California agriculture.

This is not the time to allow Congressman Miller's dream to come true.

Senator Seymour, you need to act now to stop H.R. 429 and permit the citizens of California to solve their own problems in a sensible manner and to allow the San Joaquin Valley farmers a chance to continue building a strong America.

Sincerely,

BARRY J. BEAL,  
Secretary-Manager.

ANTON CARATAN & SON,  
Delano, CA, October 3, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR SEYMOUR: I'm a third generation family farmer. My father and sister are also active in the operation on a full time basis. I employ approximately 700 people in the process of growing table grapes in the Delano area. With the passage of H.R. 5099 these people along with myself will be unemployed. I cannot exist without the certainty of the C.V.P. supplying water to the water districts that I farm in.

Forty years ago the C.V.P. was built to stimulate development in the San Joaquin Valley and we were told to form districts and pay for the water. The town of Delano had a population of 400 people where dryland wheat was farmed. Today as a result of the certain water supply the town has grown to 25,000 and those residents produce a myriad of crops that help feed the world. This same type of development and productivity occurred in all of the towns in the San Joaquin Valley.

I realize that times change and therefore we have to. When the Reclamation Reform Act was enacted the Federal Government i.e. the people of the United States said that the C.V.P. had stimulated the economy. However, in this age of budget deficits they wanted the water users to not only pay for the water but also pay for the C.V.P. so pricing structures were set up so that in the next 40 years the project costs would be recovered and from what I understand it is being paid for.

Now just 5 short years later, we are being told that the basis for operation is for fish and wildlife mitigation. I find it very astonishing to believe that mother nature is going to repay the Federal Government for the project when those that have contracts for the water are unable to use and pay for it if H.R. 5099 is enacted.

I'm not doing anything illegal all I'm trying to do is make an honest living, provide jobs for others keep them off of welfare line and pay back the Government for a service that is so vitally needed and depended upon.

Congressman Miller you make no mention of how these items will be accomplished in H.R. 5099 and we all know how badly our Government can use these revenues not only from water sales but from the multiplier effect that those water sales has on creating tax revenues.

I urge you to please fight against the passage of this bill. If you have any questions or requests please call or write.

Yours truly,

ANTON G. CARATAN.

KERN COUNTY WATER AGENCY,  
Bakersfield, CA, October 5, 1992.

Re opposition to H.R. 429.

Members of the U.S. CONGRESS,  
Capitol Building, Washington, DC.

DEAR MEMBERS OF CONGRESS: We are writing to express the Kern County Water Agency's strong opposition to HR 429 dealing with reform of California's Central Valley Project (CVP). The CVP reform provisions proposed by Congressman Miller will take more than one million acre-feet from California's central valley cities and farms creating untold economic damage to California's already depressed economy. Districts within our service area receive water from the CVP's Friant Division and the CVP reform contained in HR 429 will devastate these districts as well as our local economy where current unemployment is almost 15%.

The Kern County Water Agency is the largest agricultural contractor and second largest municipal and industrial contractor of California's State Water Project. Please be advised that the State Water Contractors, an organization comprised of those entities contracting for water from the State Water Project, has assumed a neutral position with regard to HR 429. Be assured that this position is not indicative of complacency, but rather is the result of division among the contractors. The Metropolitan Water District of Southern California may support certain provision of HR 429; the Kern Country Water Agency is vigorously opposed.

The proponents of CVP reform are driven by the ill-advised notion that agriculture has abundant water and fish and wildlife not enough. You should be aware that 150,000 acres of prime agricultural land in Kern County is out of production due to water shortages from the State Water Project and Central Valley Project. This is some of the most productive land in the world. In 1991, more water was dedicated to fish and wildlife purposes than was diverted from the Sacramento-San Joaquin Delta for urban and agricultural uses. Furthermore, large shortages were incurred this year, and even larger shortages next year, due to restriction on water use to protect the Sacramento winter run chinook salmon, a threatened species under the Endangered Species Act.

Under these circumstances, it makes absolutely no sense to dedicate additional water to fish and wildlife purposes as contained in the CVP reform provisions of HR 429. We therefore strongly urge that the CVP reform provisions be served from HR 429. Lacking such severance, we urge you to oppose HR 429. Thank you for your consideration of this important matter.

Sincerely,

THOMAS N. CLARK,  
General Manager.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: I oppose H.R. 429 as it passed the House, because of what Congressman George Millers' "Central Valley Project Reform Act" title would do to our water contracts. My family and I own and operate about 300 acres in Tulare County. We utilize both the Porterville Irrigation District and the Saucelito Irrigation District. We grow vegetable and cut crops.

My family is dependent on the Central Valley Project water from the Friant Division. Our farms future with cropping contracts and financing institutions are very critical around the water issue. This bill would certainly have a detrimental effect towards our farm. I realize that the Central Valley has environmental needs. It bothers me that the farmers are continuously being blamed when in fact farm families are very environmental conscious nowadays. I want a law which is fair, balanced and reasonable, but I want to preserve our economy and the way our families and workers are able to earn a living.

Please oppose George Millers approach as contained in the House version of H.R. 429. It's bad legislation. It would ruin good agriculture, jobs and related industries. At this point in time, California does not need to lose any of these.

I ask you to support the common-sense Seymour-Lehman-Doooley approach. It is well defined environmentally. Our San Joaquin Valley problems can be better resolved through this bill by Senator John Seymour, the "Central Valley Fish and Wildlife Act." It is understandable and more importantly it is reasonable, fair and balanced.

Please give us a solution we can live with here in the valley, support the Seymour approach. Thank you for your consideration.

Mr. Seymour, thank you for your hard work concerning this matter. We need your support constantly.

Sincerely,

DAVID E. GISLER.

HOLLISTER, CA,  
October 1, 1992.

Re Stop CVP Reform Legislation Title XXIV of H.R. 429.

Senator JOHN SEYMOUR,  
Hart Office Building,  
Washington, DC.

DEAR SENATOR JOHN SEYMOUR: I am writing to urge you to stop the Central Valley Project Reform Legislation now being considered by Congress. Taking water from agriculture will cause permanent damage to my agricultural property in San Benito County, and have great impact on my own personal and financial condition.

I own an apricot orchard in the San Benito County Water District. My water allocation has been progressively decreased over the past three years and had this legislation been in effect for the last two years, I would have received no water.

My property cannot survive without water, and I am not able to pay an increase of \$50 an acre foot that this legislation would require.

I know that fish and game preservation require attention but certainly not at the extinction of the farming industry in San Benito County.

I know of your political responsibility to make fair and equitable decisions that benefit, as well as limit, all Californians equally. I am confident that you will make every effort to vote against this legislation in its present unequal, unbalanced, and unfair form. Please notify me of the action that you take in stopping CVP Reform Legislation.

JOHN H. ERKMAN.

CAN-AM PRODUCE, INC.,  
Kingsburg, September 28, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate,  
Washington, DC.

HONORABLE JOHN SEYMOUR: Thirteen years ago, we invested 1.1 million dollars to buy a 160 acre piece of land and to develop it into a table grape vineyard. Except for the past few years of dwindling water supply, we have been fairly successful raising a good quality table grape—very popular and exceptionally good tasting.

However, its future may be ominous as our only source of irrigation water for this vineyard is the CVP water. Without it, there would be no point in farming it and hoping that we could possibly raise some kind of a crop. We would be reduced to selling the property at only its bare land value which would result in a million dollar loss in assets.

Passage of Congressman George Miller's CVP Fish and Wildlife Legislation would mean job losses, loss of a good product, and a certain death sentence to our property. Please, don't let this happen. Lets move forward and create—not shift backwards and destroy.

Respectfully yours,

SUS KOMOTO,  
Plant Manager.

TULARE FAMILY DENTISTRY,  
Tulare, CA, September 28, 1992.

Senator JOHN SEYMOUR,  
Dirksen Office Building,  
Washington, DC.

DEAR SIR: It is a very heavy heart that I write this letter. The actions of Congressman George Miller regarding the Central Valley Project and his so called Compromised Bill will totally devastate and destroy agriculture in the San Joaquin Valley in Central California.

The Bill leaves no water for farmers which translates in to no food, no farms, and no jobs.

It is plain stupid to sacrifice farmers for saving fish. It is morally, politically, practically, and economically suicidal.

Many other proposals which fix the problem without inflicting devastating damages on farmers and their livelihood have been rejected without basis or good cause.

This leaves no option but for sanity to prevail and to kill this Bill and hope for a more reasonable and sensible approach next year.

Sincerely,

S.S. MALLI D.D.S.

MADERA, CA,  
September 30, 1992.

Senator JOHN SEYMOUR,  
U.S. Senator, Washington, DC.

DEAR SENATOR SEYMOUR: Please consider the devastating economic impact that passage of H.R. 429 (Miller and Bradley) will have. This bill encompasses 80,000 acres of farm land in the San Joaquin Valley of California. Passage of the act does not apply to farmers only, but to every industry in the Valley. The impact will be felt immediately on passage. Thousands of people will be unemployed.

I respectfully urge you to oppose this bill with every avenue available to you and your staff.

Sincere appreciation for your efforts.

Sincerely,

NELL BRIGGS.

Chowchilla, CA, October 1, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.  
RE: H.R. 429.

DEAR SENATOR SEYMOUR: My name is Russell Harris. I'm a young farmer in the Friant Central Valley Project. It is vital that farms get water from the Friant Central Valley Project cause without it, I will be out of business. And countless other jobs will be lost. I realize that some people would like the water down river to save the fish. But, without the dams we have, in the past 6 years of drought, the rivers would have dried up and the fish would have died anyway. Farmers have been forced to cut back crops because of not enough water. I don't see Los Angeles cutting back water at all.

The farm economic is the best thing California has. It is over 18 billion dollars strong. If we allow the Bradley bill through, we are through.

I say vote NO!

Sincerely yours,

RUSSELL HARRIS.

OCTOBER 2, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: I am a citrus and olive farmer located in the San Joaquin Valley of California. Please do everything in your power to kill Miller-Bradley bill H.R. 429. This bill would effectively destroy agriculture for the three most productive coun-

ties in the U.S., break California's back as agriculture is our state's number one industry, and ruin the lives of many farmers and their families, farm workers, and employees and owners of ag related businesses. The average size of a citrus orchard in the Valley is about 40 acres, and many of these citrus growers can't survive without district water nor can they afford to pay the potential high price bill would require. How Miller and Bradley can even consider sacrificing countless people, businesses, and California's economy and welfare system for the sake of their agenda is incomprehensible.

Your effort to immediately stop this devastating bill is desperately needed.

Very truly yours,

AL WILLIAMS.

E.L. MEAD, D.D.S.,  
Lindsay, CA.

Hon. JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

SIR: H.R. 429 must not become law! I am a small farmer in the San Joaquin Valley and receive water through the Central Valley Project via the Friant Kern Canal. We now supplement this limited water with pumping from wells. If H.R. 429 becomes law, practically all water will be from wells which will soon be depleted. Times are tough here in the Valley, but we are willing to share the water to a point. Beyond this will spell ruin to the most productive agricultural area in the nation. I can't believe you want this to happen.

Sincerely yours,

E.L. MEAD.

Hon. JOHN SEYMOUR,  
U.S. Senator, Washington, DC.

DEAR SENATOR: I am a farmer concerned about the Central Valley Project (CVP) legislation which will soon be going before a conference committee. My family's farm uses water from one of Reclamation's great successes, the Central Valley Project's Friant Division. We farm 135 acres in Tulare and Kern Counties.

I realize that the Central Valley has environmental needs and it bothers me to hear farmers being blamed for delaying CVP legislative action. The fact is that farm families are very environmentally conscious. For more than a year, our representatives have been working in good faith toward a solution. We want a law which is fair, balanced and reasonable. All of us want to protect the environment, but we have to preserve our economy and the way families like mine and the farm workers we employ earn a living.

Our future is in your hands. It will be protected by people supporting your consensus bill which passed the Senate in its Reclamation legislation (H.R. 429) as the "Central Valley Project Fish and Wildlife Act." Your bill offers specific solutions, providing both money and water, for identified environmental, fish and wildlife needs. It would help the environment. It would give us the water supply certainty we must have. It would keep us in business.

I oppose the House-passed version of H.R. 429, proposed by Congressman George Miller. His bill is unreasonable. By requiring that the CVP be operated to benefit fish and wildlife co-equally with cities and farms, George Miller's "Central Valley Project Reform Act" would unfairly allow unspecified amounts of water to be taken from our contracts. We'd lose all certainty in our water supply but would still pay millions of dollars more each year to try and meet poorly-defined environmental objectives. We'd face an

unjust tiered pricing system. We'd see the CVP become further bogged down in endless environmental reviews, political disputes and court battles. For our valley, the Miller bill would be a waste, and a disaster.

We all want a solution to fish and wildlife needs. Please give us one which is fair, and one that we can live with.

YUROSEK REALTY.

Porterville, CA, October 2, 1992.

Re Proposed bill H.R. 429.

Senator JOHN SEYMOUR,

U.S. Senate, Washington, DC.

DEAR SENATOR: Propose Bill HR 429 is a detrimental measure giving no regard whatsoever to central valley farmers. How do Congressman George Miller and Senator Bill Bradley expect us to raise crops to help feed this nation without available water? Where available, ground water is already overtaxed and some areas have no underground water making farmers dependent upon Central Valley Project water.

The summation is obvious. Farmers cannot grow crops without water. It doesn't matter whether that water is taken away altogether or priced so highly that we cannot afford to pay for it. Many people depend on the farm economy for employment and they stand to lose their jobs and homes if this Bill HR429 is passed. There must be alternatives which can satisfy everyone and keep this state's farm production alive and profitable for everyone.

Sincerely,

JEFF YUROSEK.

SIERRA FOREST PRODUCTS,

September 30, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: Please stop the Congress of the United States from putting us out of business!

HR 429 (the Miller-Senator Bradley) bill will take all of the available water for the east side of the southern San Joaquin Valley. No water. No town. No business. People are more important than fish. We urge you to defeat HR 429.

We are a sawmill. First Congress passed the Endangered Species Act, which places a greater value on birds than people's jobs. Now Congress is going to renege on water policy that is forty years old.

We are beginning to understand how the Indians felt about making a treaty with Washington, DC.

Sincerely,

ROBERT STYLES.

D.M. CAMP & SONS,

Bakersfield, CA, October 1, 1992.

Senator JOHN SEYMOUR  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: If HR 429 is put into law, much of the Central Valley of California will be devastated. Thousands of jobs will be lost and many small businesses will be closed. This is a bad law for our country and especially local communities such as Arvin, California.

Sincerely,

D.M. CAMP & SONS,  
D.M. CAMP.

WASCO, CA,  
September 29, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: HR 429 is due to emerge from a congressional conference

committee any day now. As I understand this bill, it will be especially detrimental to the Central Valley here in California. Under the provisions of this bill, the Central Valley would have received no water from the Friant-Kern or Madera Canals for the past two years.

Agriculture is the life blood of this end of the Central Valley. Without sufficient water many jobs will be lost and farming operations will come to a standstill. HR 429 will devastate this area! I recognize that Southern California and other western states strongly support this legislation. Central Valley agriculture must not be sacrificed to meet the needs of other areas. A compromise must be effected. Anything you could do to help would be greatly appreciated.

Sincerely,

JAMES A. FORREST, Ed.D.,  
District Superintendent,

STRATHMORE, CA,  
September 29, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR: The CVP compromises have gotten completely out of hand in the House and I honestly hope you can kill it in the Senate. Modern environmentalists have lost all recognition of why the CVP was formed in the first place. Flooding was no laughing matter before the dams were built and the economy was the pits.

Thirty years ago I started growing orange trees from seed when our children were little. My husband rented cotton and row crop land to make ends meet and encouraged me to raise the trees so that we could realize our dream to be orange growers. Our one hundred acres of groves were earned in that manner; it wasn't easy to finance land, plant trees and wait five years to break even, but we did it and we were proud of our accomplishment and contribution to the economy of the Lindsay-Strathmore areas. My husband died ten years ago and I am still farming oranges and growing more nurseries. He would not believe that our contracts with the Government could ever face the threats we are facing now.

With our water, and that's what HR 429 would have done to us the past two years if it had been in place, our investments would be a harsher disaster than the freeze.

Please do what you can to save the water we desperately need to raise our crops. The majority of California's oranges come from lands within a few miles on each side of the Friant-Kern canal.

Thank you again for your kind, caring attitude to the people in our area. It has been easy and an honor to sell tickets for some of your fund raisers because you are so highly regarded.

Sincerely,

OPHELIA BARNES.

B.E. GIOVANNETTI & SONS,  
Huron, CA, September 30, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: It is my understanding that Congressman George Miller is again attempting to ramrod legislation through Congress that would reallocate Central Valley Project water to fish and wildlife and thus cut previous commitments to California agriculture. The ramifications of such action are not in the best interests of California and the nation. Based on today's uncertain economic climate, America does not need a shutdown of some of the country's most productive citizens. Furthermore, such

legislation would obviously embroil the federal government in additional litigation. This is counterproductive. At a time when this country needs to pull together, legislation that pulls it apart should be stopped. Anything you can do to stop this waste of time and money on the part of Congressman Miller would be greatly appreciated. Thank you in advance for your efforts.

Sincerely,

JOHN GIOVANNETTI.

TERRA BELLA, CA.  
September 29, 1992.

Hon. JOHN SEYMOUR,

U.S. Senator,  
Washington, DC.

DEAR SENATOR: I am opposed to H.R. 429, the Western Reclamation bill, because of what Congressman George Miller's "Central Valley Project Reform Act" title of that bill would do to our water contracts.

My family and I own a small farm, about 130 acres, in the Terra Bella Irrigation District in Tulare County. We grow Citrus, Olives and Pistachios. Our farm receives Central Valley Project water from the Friant Division. Like a lot of the San Joaquin Valley's east side, my family relies on Friant water. We have been able to build our farm and get the financing we must have because we have a certain water supply provided through our district's federal water contract.

This bill would take that certainty away. Congressman Miller and others want to limit contract renewals to 20 years. They want to force districts which have already renewed to new 40-year contracts in good faith to immediately negotiate to shorter contracts. They want to let the government take an unspecified amount of water from our contracts to be used for fish and wildlife and other purposes. Our contracts, instead of letting us farm into the future, would be just about worthless. That's not fair.

Please oppose the George Miller approach as contained in the House version of H.R. 429. It's bad legislation. It would harm family farmers like me.

There is a bill you should support. Well-defined environmental problems that our valley faces can be better resolved if you back the consensus bill by Senator John Seymour, the "Central Valley Fish and Wildlife Act," which the Senate passed as part of its H.R. 429. It's reasonable. It is fair and balanced. It will help the valley and the environment.

Respectfully,

ED DOYEL.

DELANO FARMS CO.,  
Delano, CA, September 29, 1992.

Senator JOHN SEYMOUR,  
Washington, DC.

MR. SEYMOUR: This letter is to urge you to kill bill H.R. 429 because it threatens everyone in the Southern San Joaquin Valley.

Irrigation for farmers is the single most important issue we face in California due to the continuing drought and to take our water during these times would bankrupt even more farmers than the unusually high rate we have now.

Saving water for fish and wildlife has its merits but not to the point of taking away more jobs in this already floundering economy. The fertile San Joaquin Valley would revert back to desert in the time and food prices would skyrocket.

Please vote to kill this bill until another bill is proposed that is good for everyone.

Thank You,

JOE CAMPBELL,  
Delano Farms Co.

HAURY & RENFRO RANCH,

Ivanhoe, CA, September 29, 1992.

Senator JOHN SEYMOUR,

U.S. Senate, Washington, DC.

DEAR SENATOR SEYMOUR: Regarding H.R. 429 sponsored by Cong. George Miller and Sen. Bill Bradley, we would like to protest the passing of the bill for the following reasons:

(1) We are farmers in the San Joaquin Valley and rely on this water for our livelihood.

(2) This water project was built for farming purposes and as users we have paid for this project.

(3) If the water is diverted for the fishing industry our crops will dry up and therefore all of our employees will be out of a job.

We as farmers feel this is an unfair bill as it does not protect the farming industry, the farm employees jobs, and all other jobs in this area that are related to agriculture. Why do the sportsmen feel they should have access to this water when they have not had it for the last 40 years??? Also why do the big cities feel they are more important than the farmers—because there are more of them—do they not need food to survive???

Please do all you can to defeat this bill.

Yours truly,

HAURY & RENFRO RANCH.

Lindsay, CA, September 30, 1992.

Senator JOHN SEYMOUR,

U.S. Senate, Washington, DC.

DEAR JOHN: Referring to bill H.R. 429:

This bill refers to the turning back of some million acre feet of water per year to take care of the fish.

If this bill passes, it will lead to the devastation of this valley. Life, as we know it today, won't be possible. My family is totally dependent on Central Valley Water. I'm only one of thousands that are dependent on this project.

Thousands of jobs and families will be forced to move from this area.

We are looking to our leaders to do everything in their power to see that H.R. 429 is defeated.

Sincerely yours,

JOHN BURR.

PRO-AG, INC.,

Visalia, CA, October 2, 1992.

Hon. JOHN SEYMOUR,

Hart Senate Building, Washington, DC.

DEAR SENATOR SEYMOUR: Please be advised that if HR 429 is enacted into Law it will put our company out of business. We are only one of many thousands of Agricultural operations that will be effected in central California.

We employ approximately 550 people for 10 months of each year, 125 of them are 12 month employees. We believe the welfare of these people plus all the supporting entities, ie. grocery stores, gas stations, auto repair shops, clothing stores, restaurants, etc. are worth protecting.

If you think California's economy is bad now, HR 429 will completely decimate it. It's too bad that Congressman Miller and Senator Bradley don't know what feeds and clothes this country.

Sincerely,

KENNETH P. CRANDALL,

President.

BAKERSFIELD, CA.

Hon. JOHN SEYMOUR,

I am an 80-year-old retiree with an 80-year-old wife who is confined to a wheel chair. We have avoided welfare by living frugally and in 1964 beginning an investment in farming.

The government backed water supply seemed secure. We invested as much as \$19,000 an acre in one of our perennial crops.

Thru our efforts new jobs were created, the economy benefited and taxes were paid at the county, state and federal levels. Our produce expanded the food supply here and abroad.

Now there is a threat of possible betrayal in the Miller Bradley Bill HR 429. This bill would limit and in dry years eliminate our water supply. That would relegate our land and that of thousands of other farmers to worthless desert.

Somehow eternal values have become obscured and distorted to the point that environmental desires have superseded human necessities.

Please use your honored influence to reject Bill HR 429.

Gratefully,

JAMES T. DRESSER.

SANTA CLARA VALLEY WATER DISTRICT,

San Jose, CA, January 14, 1992.

Hon. JOHN SEYMOUR,

U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: First, let me take this opportunity to thank you again for your continued very active role in the resolution of long-term water supply issues facing the urban, agricultural, and environmental interests of this state. Your desire to meet with us and other water and business leaders today to further discuss these issues is most appreciated. Let me also indicate this District's conceptual support of your Central Valley Project Fish and Wildlife Act of 1991 (S. 2016).

As you know, we are a Central Valley Project (CVP) contractor with an entitlement of 152,000 acre-feet of water from the San Felipe Division of the CVP. We also import water from the State Water Project (SWP) and have extensively developed local surface and groundwater supplies to conjunctive service 15 cities including the City of San Jose. Our responsibilities covers a total population of 1.5 million and thousands of business and industries, including a major focus on the electronics industry, commonly referred to as Silicon Valley. As an urban water supplier, one of the Districts' primary concerns in M&I water supply reliability. This concern has been especially magnified over the past two years in the shortage provision of our federal M&I contract in that we must take the same shortages as agriculture while having major urban supply responsibilities. This resulted in a 50% CVP supply in 1990 and only a 25% supply last year. Title II of your bill on water transfers will provide much more flexibility to move CVP water within the CVP service area on a short-term as well as on a long-term basis. These provisions will in turn provide the mechanism needed for urban districts such as Santa Clara to pursue water transfers toward enhancement of our current water supply reliability. This District, and the other CVP M&I contractors, have also been meeting with the Bureau of Reclamation in attempts to establish an equitable M&I water shortage provision policy as it relates to CVP M&I water service contracts. We are optimistic that this effort will also provide improved M&I water supply reliability from the CVP. Should this effort not produce such assurances, we will be proposing amendments to you on this issue for inclusion in your bill.

The programs outlined under Titles I and III of your bill to protect, restore, and enhance the Central Valley fish and wildlife

habitat and to encourage financially feasible water conservation are critically important issues to us and the other contractors. The approach taken in your bill is pragmatic and achievable based on appropriate technical study and analysis.

As you know, there are a variety of clean-up amendments to the bill that are currently being formulated by the Central Valley Project Water Association (CVPWA) of which we are a member agency. Issues of specific concern to us are embodied in Section 201d, (3) and (4) of Title II. These subsections of the bill would limit transfers resulting from permanent land fallowing to 20% of the available supply within the service area of the transferor or 3,000 acre-feet, whichever is greater and would require 20% of the transferrable supply to be retained for fish and wildlife purposes within the CVP and within the transferor's service area to assist in groundwater protection. These requirements will preclude the sale in total of some small water districts which may no longer wish to operate and which currently provide water to very marginal lands. Some of these same small districts have no usable groundwater basins and therefore would not benefit from a requirement to leave a portion of its water supply within its service area for such a purpose. It is our goal to develop amendment language through the CVPWA that will under appropriate circumstances remove these constraints, thus freeing up more federal water for transfer.

We are optimistic that the amendments being developed by the CVPWA and/or by this District will be acceptable to you and that the bill can move forward very soon. Thank you again for your time spent with us today and your ongoing efforts to address these critical federal water resource issues in California.

Sincerely,

RONALD R. ESAU,  
General Manager.

SOUTHERN CALIFORNIA  
BUSINESS ASSOCIATION,  
Los Angeles, CA, May 4, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senate,  
Washington, DC.

DEAR SENATOR SEYMOUR: As you are aware, the Southern California Business Association has actively followed the water debate in California. We have been particularly interested in Federal legislation regarding California's Central Valley Project.

It is our belief that your bill, S. 2016 is a balanced and reasonable bill. In fact, your bill will accomplish what we consider to be the primary goals of legislation affecting the Central Valley Project; restoration of fish and wildlife habitat in the Central Valley, and to allow for the historic transfer of water from agricultural use in the Central Valley to municipal and industrial use throughout the State.

We appreciate your strong efforts to develop legislation that balances the water needs of all interests in California, including urban, business, environmental and agricultural. The Southern California Business Association supports S. 2016 and remains hopeful that Congress will adopt this legislation.

Sincerely,

LES BENSON,  
President.

COUNTY OF LOS ANGELES WATER ADVISORY COMMISSION, DEPARTMENT OF PUBLIC WORKS,  
Alhambra, CA, April 22, 1992.

Hon. JOHN SEYMOUR,  
Dirksen Senate Office Building,  
Washington, DC.

DEAR SENATOR SEYMOUR: On behalf of the Los Angeles County Water Advisory Commission, I would like to express my appreciation to Mr. Craig Schmidt of your staff for his presentation before the Commission regarding Senate Bill 2016 (Central Valley Project Fish and Wildlife Act of 1991).

As you are well aware, California is facing an uncertain future over the quality and quantity of its water supplies. Tough decisions lay ahead as to the uses of the State's limited water supplies and how they can be stretched to provide for the State's anticipated population of 35 million by the turn of the century. As urban, agricultural, and environmental interests continue to compete for this limited resource, it is important that efforts be made to develop a mutually acceptable agreement on the management of this resource. It is therefore gratifying to see that you, Senator Bradley, and Chairman Johnson are working towards that goal.

One of the responsibilities of this Commission is to monitor legislation that is of interest and benefit to the citizens of Los Angeles County. A key provision of your bill that would remove the legal obstacles and allow the voluntary transfers of Central Valley Project (CVP) water to urban areas is of special interest to our local water agencies in their attempt to provide a dependable supply of water for the community.

The Commission feels that this is an important piece of legislation and will recommend to the Los Angeles County Board of Supervisors that it support, in principle, Senate Bill 2016 and your effort in developing compromise CVP legislation.

Very truly yours,

EUGENE F. MOSES,  
Chairman.

ENDOCRINE-METABOLIC ASSOCIATES,  
Redwood City, CA, January 3, 1992.

Hon. JOHN SEYMOUR,  
Senate Office Building, Washington, DC.

DEAR SENATOR SEYMOUR: Thank you very much for your legislation on the Central Valley Project Fish and Wildlife Act of 1991. I am a long term bird watcher since childhood and duck hunter since I was old enough. The Central Valley Water Project must be managed to protect fish and wildlife for the people of California and the Nation.

I would make the following suggestions to the language of your legislation asking that water supplies for wetlands are available immediately upon enactment of the bill. This is drought time and extremely important. Central Valley Project water is made available to fish and wildlife on an equal basis with current agricultural and municipal users is a second major important part of this legislation. There should also be made a special point with reference to water being provided on an equitable basis with "Water Rights Contractors". The costs of providing water to public and private wetlands should be implemented on an equal basis since there is equal benefit to be gained.

These changes are critical to the preservation to migratory birds in the Pacific flyway that belong to everyone. My bird watching and duck hunting are personal points of view but I know that all Californians share in this. I thank you for your concern and inserting these necessary changes to the bill.

Sincerely yours,

J. JOSEPH PRENDERGAST, M.D.

OCTOBER 7, 1992.

Hon. JOHN SEYMOUR.

This letter is to let you know that we are very much opposed to the "HR429 Miller Bradley proposal".

My husband and I are residents of San Benito County and are small orchard owners. We count on this water to help in the irrigation of our orchard.

Please make note of our opposition in your decision.

Thank you,

KARON AND KENT COSSEY.

MEYERS FARMING I,  
Firebaugh, CA, October 6, 1992.

Senator JOHN SEYMOUR,  
U.S. Senate, Washington, DC.

DEAR JOHN: Please don't give up—keep fighting for our water and agriculture. I'm sure it feels like you are alone in this fight, and it must be disheartening at times. I want to assure you that all of California agriculture is behind you, supports you and is grateful for all your efforts.

We can't let HR429 become law. It will destroy agriculture and its related industries in the Central Valley and eventually the entire economy of California. You seem to be the only voice of reason in Congress who understands the bill would mean a zero water allocation to agriculture which would destroy us.

We have urged President Bush to veto HR429 if it passes Congress and have enclosed a copy of our letter to him. Please know we are behind you all the way; don't give up the good fight.

Sincerely,

MARVIN A. MEYERS,  
Family farmer.

MEYERS FARMING I,  
Firebaugh, CA, October 6, 1992.

President GEORGE BUSH,  
Washington, DC.

DEAR PRESIDENT BUSH: George Miller's Bill H.R. 429 is a disastrous bill for the Central Valley of California. It will destroy the agricultural economy of California and all related industries.

In years such as 1990, 1991, 1992, when drastic water allocation reductions were made, we farmers would have received absolutely no water from the Central Valley Project if this bill were law. As it is, with the reduced water situation, farms and business are folding by the multitude yearly which, with the trickle down effect, has impacted the economy of the entire State. Although farmers are taking the direct hits from every direction NOW, passage of H.R. 429 will quickly destroy the Central Valley and eventually ruin the entire State economy. I implore you to veto H.R. 429 if it is passed—it is a bad bill for the people of California.

Also, in our opinion you are not "out of it" in California. You can carry the State and the agricultural vote in the Central Valley can put you over the top in a tight race. We're behind you; don't falter. Please veto H.R. 429.

Sincerely,

MARVIN MEYERS.

KERN-TULARE WATER DISTRICT,  
Bakersfield, CA, January 22, 1992.

Hon. JOHN SEYMOUR,  
U.S. Senator, Washington, DC.

DEAR SENATOR SEYMOUR: At the January 14, 1992 meeting of the Board of Directors of the Kern-Tulare Water District, the Board affirmed its support for S. 2016 and H.R. 3876, subject to incorporation of technical amend-

ments which will be submitted by the CVP Water Association.

While we fully support your bill, we believe that it more than completely corrects any legitimate criticisms of the Central Valley Project and that any efforts to significantly broaden the impact of your bill should be opposed.

We thank you for your continued interest and leadership in addressing CVP fish and wildlife issues and water transfers.

Sincerely,

MATT PANDOL,  
President, Board of Directors,  
Kern-Tulare Water District.

RAG GULCH WATER DISTRICT  
Bakersfield, CA, January 22, 1992.

Hon. JOHN SEYMOUR,

U.S. Senator, Washington, DC.

DEAR SENATOR SEYMOUR: At the January 14, 1992 meeting of the Board of Directors of the Rag Gulch Water District, the Board affirmed its support for S. 2016 and H.R. 3876, subject to incorporation of technical amendments which will be submitted by the CVP Water Association.

While we fully support your bill, we believe that it more than completely corrects any legitimate criticisms of the Central Valley Project and that any efforts to significantly broaden the impact of your bill should be opposed.

We thank you for your continued interest and leadership in addressing CVP fish and wildlife issues and water transfers.

Sincerely,

VINCENT J. ZANINOVICH,  
President, Board of Directors,  
Rag Gulch Water District.

WESTERN COTTON  
SERVICES CORP.,  
Fresno, CA, October 8, 1992.

Hon. JOHN SEYMOUR,

Hart Office Building, Washington, DC.

DEAR SENATOR SEYMOUR: I applaud your efforts to defeat the disastrous water reform legislation that most of our Congress seems bent on inflicting upon us. We need more people in Washington with the political courage you have displayed. We in the San Joaquin Valley know it would have served you better at election time to have joined the pack and voted with the majority.

Whether you will win or not in November, I cannot predict. There is one thing that I can tell you, though, and that is that you will have my vote.

Thank you for fighting for us.

Sincerely,

GEORGE HARDBERGER,  
Vice President, California Operations.

Mr. BRADLEY. Mr. President, how much time remains?

The PRESIDING OFFICER (Mr. KERREY). The Senator from New Jersey has 7 minutes, 27 seconds; and the Senator from California has 4 minutes, 15 seconds.

Mr. BRADLEY. Mr. President, I will not take the full 7 minutes, but I would like to make a few closing comments.

The PRESIDING OFFICER. The Senator from New Jersey is recognized.

Mr. BRADLEY. Mr. President, this is a bill about America's West and its most precious natural resource: water. H.R. 429 is a 40-title bill spanning 21 States and covering topics as diverse as comprehensive fish and wildlife restoration for the Central Valley in Cali-

fornia, settlement of Indian water rights claims in four States, and management of recreation at Bureau of Reclamation facilities westwide. This bill will benefit virtually every Western State. I commend my colleagues both here in the Senate and in the House of Representatives who have worked tirelessly and diligently for close to 2 full years in an effort to strike a balance among the many competing needs for our scarce water resources in the West.

This bill will bring clean water to rural residents, who have no choice but to drink water of such poor quality that their health is threatened by it. This bill will stimulate research into new ways of recycling drainage and waste water so limited supplies can be stretched as far as possible.

There is a clear recognition both in Congress and among most western water users that the key to meeting the West's growing water needs is greater efficiency. The bottom line of this bill is not about water or even money. It is about jobs. Over 30,000 direct jobs will be created by this bill, and almost 60,000 indirect jobs will be created by this bill. Millions of jobs will be saved, and countless millions will accrue in economic benefits to local economies hard hit by recessionary times.

With 5-year high national unemployment at nearly 6.7 percent, we simply cannot afford not to pass this legislation.

Mr. President, I am particularly pleased that this bill in virtually every title marks real progress toward bringing the Bureau of Reclamation's program into conformance with modern notions of environmental and water use policy.

In this regard, there is simply no western water issue more pressing of local and national importance than the future of the Bureau of Reclamation's Central Valley project in California and the central Utah project.

Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from New Jersey has 5 minutes, 12 seconds.

Mr. BRADLEY. I yield myself 3 more minutes.

Mr. President, the central Utah project is an historic accomplishment. Much of the credit goes to Senator JAKE GARN. He has spent a big part of his life achieving the balance between urban, rural and environmental interests.

The Central Valley project bill achieves that same balance between urban, agriculture and environmental interests. That is why the distinguished Senator from California, Senator CRANSTON, supports this bill. That is why 18 Members of the House of Representatives from California voted for the bill. That is why the California

business roundtable representing 100 of the largest corporations and banks in California support the bill. That is why the economic bay area council supports the bill.

It is a bill that will provide the proper balance between environmental, urban and agricultural interests and greater flexibility for the State of California to manage its own water.

California is in every sense a State different from virtually every other State. It has 28 million people and every year another 800,000 people moving into the State of California. Every year another San Francisco comes into the State of California. And yet 80 to 85 percent of the water in California still goes to agricultural interests.

This bill is an attempt to open up California's water resources and create greater flexibility. The Central Valley portion of H.R. 429 has 5 major reforms. One, recognizes that if we move to a tiered pricing approval, a farmer can save money simply by saving water. We protect fish and wildlife by establishing a \$50 million fund and allocation of 800,000 acre-feet of water for fish, for mitigation and for restoration.

We provide for contract renewals of 25 years with 25 years guaranteed after that initial 25 years. For the first time ever, we provide conservation standards and access to the 8 million acre-feet of water in the Central Valley Project that is now totally separate and removed from the rest of the State of California. We now allow water to be sold out of that valley so that urban interests might benefit from farmers using water more efficiently.

Mr. President, that is why the metropolitan water district which represents 15 million consumers in southern California strongly supports this legislation.

Mr. President, let me say that as a Senator not from the West, I began this journey with a lot to learn. I think I have benefited greatly from my opportunity to understand the importance of water in the West. In just one title we have heard from 75 witnesses, held five or six hearings, and heard from countless thousands of other people through meetings here and in California. Water is the life-blood of the West a concept in many senses not well understood by other Senators. It has been my privilege to come to understand its importance and guard its use.

The PRESIDING OFFICER. The Senator has 2 minutes remaining.

The Senator from California is recognized.

Mr. SEYMOUR. Mr. President, I understand I have 3 minutes remaining.

The PRESIDING OFFICER. The Senator is correct.

Mr. SEYMOUR. Mr. President, the distinguished Senator from New Jersey suggested that this is a jobs bill. I suspect he is absolutely correct. It is a jobs bill for those western water

projects that are included in the bill and the construction that will take place, I am sure, will create many jobs important to those Western States.

But, Mr. President, let us not in any way conclude that this is a jobs bill for California. This is a jobs destroyer bill for California and that has been borne out in studies by the California Department of Food and Agriculture, by the Department of the Interior, and the Department of Agriculture. This is not a jobs bill for California. Anyone who can come to that conclusion I just do not know where any factual evidence can be found that the bill would create jobs for California.

Senator BRADLEY of New Jersey also indicated that agriculture today in California uses 80 to 85 percent of the water. He is right. They do. And they do need to have some of that water transferred.

But let us not forget the amount of water that is consumed to grow our food, to grow our crops, to raise our cattle and chickens for market.

To give a bottom line to that, Mr. President, how much water it takes to feed a human being each day is over 4,300 gallons of water. So obviously there should be a great disproportionate share of water that is used by agriculture. An industry that provides the food and fiber for tens of millions of Americans.

Relative to the tiered pricing, suggesting that this is an incentive for water users to use less water, what it is is a stick to drive them away from water.

I offered an alternative that created a carrot incentive, a true incentive that would cause people to use less water.

Finally, Mr. President, relative to water contracts, the distinguished Senator from New Jersey said they get a 25-year contract and then they get 25 years, maybe. That is a big "maybe" and that is what I have been talking about, Mr. President. I do not think a banker is going to have any faith that these people are going to have water contracts longer than 25 years, because of the litigious process put in place by this bill.

In closing, let me thank the distinguished floor manager for allowing me this time. I do thank my colleagues for trying to work with me, knowing full well that at the end of the line their own water projects and their own States would come before my State of California.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The Senator from New Jersey has 2 minutes remaining.

Mr. BRADLEY. Mr. President, let me just reiterate that the Ports of San Francisco and Oakland do not have the options that are available to agriculture. The ports, representing \$5.4

billion in annual revenues, need to dredge to maintain and deepen their channels. Without this dredging, the ports face the potential loss of 100,000 jobs.

The fishing industry will generate another 8,000 jobs, and 5,000 more will be generated in the recreational area.

The fact of the matter is that in a economy of \$760 billion in California, agriculture is only \$18.5 billion. The rest of the economy needs water. It seems to me industrial growth needs water. This bill would provide the flexibility to get the water. The fact of the matter is this bill does strike a balance between agriculture urban and industrial users. It is also sensitive to the environment.

Mr. President, this bill deserves to be passed. Let me express my appreciation to those who worked so hard to make this possible: the staff of the Water and Power Subcommittee, Dana Cooper, and to the Republican staff, Gary Ellsworth and Jim Beirne.

Rob Wallace, the distinguished staff on the Republican side. I would like to thank as well. I cannot forget the invaluable work by Tom Graff and David Vardas of the Environmental Defense Fund. And lastly, I would like to say a special word of thanks to Tom Jensen, who has lived with this issue for 4 years, and whose wife Jane has lived with it as well. Both of them deserve thanks from all of us for the Yoeman work that had been done to make this bill a reality.

I hope the President will sign this bill. It is enormously important to 16 Western States, it is enormously important to millions of consumers and to the entire country that views this vote as essentially a jobs vote.

Mr. President, I would hope we would adopt the conference report and the President would sign it.

The PRESIDING OFFICER. The Senator's time has expired. The Senator from Wyoming is recognized.

Mr. WALLOP. Mr. President, I will be brief. Let me begin by saying that my cap is off to the Senator from California. His vision and my dream would be that the status quo remain, but I think both of us know that the courts have interfered with the status quo.

I grew up with irrigation water and fights with neighbors in courts. I know this bill is a disappointment to the Senator from California, and I agree with him about that, but it is also a tribute to his vision and his persistence, and I say to him that it represents his victories as well.

In the letter that he wrote to me saying what would constitute ideal bill, I believe that we have gotten more than 90 percent of what he asked and it is his triumph. Those are the things that would not have been in this legislation but for him.

While he is disappointed in the total structure, he has to feel a sense of sat-

isfaction and pride in the work he did in making this.

I, too, hope that the President will sign this bill, notwithstanding my reservations, because I believe this is the best deal that California is going to get from a Congress that now believes, like the Senator says, it knows better than the State itself how best to handle its water. I would say one other thing. I hope that the Congress finds it in its heart some day to transfer the control of these projects to the State of California where it properly belongs.

Mr. JOHNSTON. Mr. President, title 40 of H.R. 429 contains the Historic Preservation Act Amendments of 1992, legislation which has been actively considered by the Committee on Energy and Natural Resources for the past several years. Our committee has held five hearings on this measure since it was first introduced in 1989.

This important measure has been sponsored and championed in the Senate by Senator FOWLER who deserves much of the credit for bringing this measure before us today. The committee reported Senator FOWLER's bill, S. 684, on June 23 by a vote of 19 to 1. Subsequently, in response to concerns raised by Senator WALLOP and others at the committee's business meeting, the measure was further modified before being added as an amendment to this bill. The version included as title XL in the measure before us today, is very similar to the one which passed the Senate as part of H.R. 429 last summer.

As amended by the conference agreement, the major provisions of title XL: Would simplify the historic preservation process by allowing State historic preservation officers to assist the Secretary of the Interior in carrying out certain limited activities; for the first time, would include Indian tribes within the national historic preservation program, by allowing them to assume the functions of a State historic preservation officer on tribal lands; would establish procedures to ensure that native Hawaiian organizations are consulted with respect to historic preservation activities in Hawaii; direct the Secretary to establish a comprehensive historic preservation education and training program, including technical and financial assistance to establish preservation training and degree programs at historically black colleges, tribal colleges, and colleges with a high enrollment of native Americans and native Hawaiians; streamline the process for the awarding of Federal historic preservation grants to States, and caps the amount of allowable administrative costs to ensure higher funding for historic preservation activities; add provisions to strengthen the Federal agency protection process for historic properties; prohibit Federal assistance to parties who engage in anticipatory demolition, where a historic

property is intentionally destroyed or significantly damaged in order to avoid the consultation requirements with the Advisory Council on Historic Preservation; reauthorize the historic preservation fund and authorizes appropriations for the Advisory Council on Historic Preservation through 1996; and establish the National Center for Preservation Technology and Training at Northwestern State University in Natchitoches, LA.

The purpose of the Center is to: Develop and distribute preservation and conservation skills and technologies for the identification and conservation of historic resources; develop and facilitate training for Federal, State, and local resources preservation professionals; facilitate the transfer of preservation technology among Federal, State, and local governments, universities, international organizations, and the private sector; and cooperate with related international organizations.

Mr. President, I am aware that the administration opposes some of the provisions included in title XL. I want the record to reflect that over the last 4 years, the committee has made a concerted effort to address the concerns of the Department of the Interior and other agencies. The bill, as originally introduced by Senator FOWLER in 1989, has undergone extensive changes to meet those and other concerns. Many of the provisions that the Department found most objectionable have been deleted entirely from the measure before us today or significantly modified to try and reach an accommodation.

Despite these best efforts, Secretary Lujan, in an October 5 letter to me, insists that the Department will oppose title XL unless more changes are made. Mr. President, I respectfully suggest that the Secretary look again at the provisions contained in title XL before declaring it unacceptable.

The Secretary's October 5 letter identified seven provisions in title XL that are still of concern to the administration. I would like to list those concerns, along with a brief explanation of why I believe these provisions are adequate.

First:

Section 4003 could be read to require the Secretary to review significant threats to each individual property included in or determined eligible for inclusion in the National Register. This provision must be amended to allow review for threats in general, rather than individual review of threats to each property.

The administration's letter assumes words that are not in the legislation. The section simply states that at least once every 4 years, the Secretary of the Interior shall review "significant threats to properties" included in or eligible for inclusion in the National Register.

The section does not specify the words "individual" or "each property." Furthermore, the section states that the purpose of the review is to "deter-

mine the kinds of properties that may be threatened," clearly indicating the general nature of the review.

Second:

Section 4012 must be amended to allow a Federal agency to substitute its compliance procedures for NEPA [in lieu of historic preservation compliance procedures] if the advisory council finds it appropriate. We supported this provision in earlier drafts and we urge its reinclusion.

This provision was included in the Senate-passed bill. It was dropped in conference at the insistence of the House.

Even in the Senate version, the advisory council had to make a finding that the NEPA review would adequately address the historic preservation review needs. The conference report does not add any new review burden—it merely retains existing law.

Third:

Section 4013, which would require Federal agencies to establish adaptive use alternatives for historic properties not needed for current or projected agency purposes, must be deleted. We object to changing this discretionary authority into a requirement.

The section directs an agency, to the extent practicable, to establish and implement alternatives for historic properties.

While the agency is directed to establish adaptive use procedures, the discretion is left to each agency to determine to what extent is practicable.

Fourth:

Section 4018 would authorize the Advisory Council on Historic Preservation to enforce section 106 of the Historic Preservation Act "in its entirety." This provision would overturn a 1983 Department of Justice legal opinion, that under current law, the council has no authority to regulate how other Federal agencies take council actions into account. Therefore, this section must be deleted.

This section authorizes the advisory council to promulgate such rules and regulations as it deems necessary to govern the implementation of section 106 in its entirety.

Although the Secretary's letter argues that this provision will permit the council to regulate how other agencies take advisory council regulations into account, it simply ensures that agencies may not completely ignore council regulations.

Furthermore, section 4012(2)(E) makes clear that each agency's procedures for compliance with section 106 only must be consistent with the council's regulations.

Fifth:

The definition of undertaking must be deleted from section 4019. The definition would throw a settled body of case law into disarray, causing years of "redefinition" to take place, would make private actions subject to State regulations promulgated under laws that delegate Federal authority to the States, and render moot pending legislation where the Federal Government is a party.

Contrary to the Secretary's assertion, the definition of undertaking is consistent with the settled body of case

law and the regulatory interpretation by the advisory council.

The section 106 consultation and review provisions does not affect private actions. Rather the definition makes clear that Federal responsibility under section 106 is not waived where a State assists a Federal agency in implementing Federal authorities.

Sixth:

The definition of "tribal land" would include all lands within the boundaries of an Indian reservation, and ignore whether the land is held "in trust," thus making privately owned lands within the boundaries of a reservation Indian land. This definition is inconsistent with definitions found elsewhere in the law, and would throw historic preservation matters into the same legal morass of jurisdictional problems that private landowners within the boundaries of Indian reservations now face in criminal, civil, and taxation matters.

This definition of tribal land is actually slightly more restrictive than the definition used in the Native American Grave Protection and Repatriation Act.

This bill only permits tribes to assume the functions of a State historic preservation officer on tribal lands. These functions are not regulatory.

The conference report also retains the agreement reached following the reporting of the bill from the Energy Committee.

With respect to individuals who own property within "tribal land" as defined, those individuals may elect to have the State historic preservation officer, in addition to the tribal preservation officials, undertake the historic preservation review responsibilities.

Seventh:

Section 4022, which would establish a new National Center for Preservation Technology and Training, would add a new section 405 to the Historic Preservation Act which would provide for preservation technology and training grants to eligible applicants. In these times of severe budget constraints, we cannot justify another grant program especially when the current matching grant program is working well. Therefore, this section must be deleted.

The section authorizes the Secretary to provide preservation technology and training grants. Actual funding for this program will occur in the normal appropriation process.

Eighth:

In addition, new section 407 would require the Secretary to: fully utilize and further develop the National Park Service preservation centers and regional offices; improve cooperation of these centers and offices within the service; and coordinate their activities with the center created by section 4022. This section is micromanaging the activities of the Secretary, and assumes that the Department has not been fully implementing current law, and will not properly implement title XL should it pass. This section must be deleted.

This provision was included so that existing park service preservation programs would not be discontinued or diminished. The section does not place

any micromanagement restrictions on the operation of these facilities.

Ninth:

Section 4023 would amend the so-called Historic Sites, Buildings, and Antiquities Act to require specific congressional authorization before moneys appropriated to the Secretary under sections 2(e) or 2(f) are spent. The assumed purpose of this section is to prevent congressional appropriation of monies to projects under the general authorities found in sections 2(e) and 2(f), but not specifically authorized by the Congress. Because of rules of construction of congressional acts, future Congresses would not be bound by this section, but instead the Secretary's discretion to expend funds under sections 2(e) and 2(f) for programs such as the American Battlefield Protection program would be eliminated. Therefore, we urge deletion of this section.

Section 4023 merely ensures that projects funded through section 2 of this Historic Sites Act must be authorized. This provision is consistent with the administration's views that Congress not fund programs which have not been appropriately authorized.

Mr. President, I think that a fair reading of these and other provisions in the conference agreement relative to historic preservation will demonstrate that the issues raised by the Department are not as serious as some are alleging. I think title XL is a good compromise and I urge my colleagues to join with me in supporting it.

Finally, Mr. President, I want to express my deepest appreciation to David Brooks, counsel for the Subcommittee on Public Lands, National Parks and Forests for his efforts on title XL. I also want to recognize the contributions of Laura Hudson of my personal staff on this issue. I am grateful for their hard work and the professionalism they have demonstrated in helping bring this legislation before us today.

Mr. DASCHLE. I wish to enter into a colloquy with the distinguished chairman of the Water and Power Subcommittee, Mr. BRADLEY, for purposes of clarification relating to title XX or H.R. 429, which authorizes the construction of the Lake Andes-Wagner/Marty II project.

The Senate version of H.R. 429 included language in the planning reports/environmental impact statements section which referred to the use of feasibility methodologies consistent with those employed in the Lake Andes-Wagner Unit planning report/final environmental impact statement, filed September 17, 1985.

This planning report was the effort of many years of hard work between the State of South Dakota, local project sponsors, the Secretary and the Bureau of Reclamation, and it was completed with an understanding of the needs for this particular area and the proposed project. The feasibility methodologies used reflect this understanding of the project area.

I would like to clarify with the chairman that in deleting this language

from the conference report it was not the intent of the committee to rule out the use of these methodologies during preparation of the final reports, but rather that the committee expects the final reports to be consistent with the feasibility methodologies in the 1985 report and did not want to rule out the future consideration of other methodologies which may be better suited to the Lake Andes-Wagner/Marty II project.

Mr. BRADLEY. That is correct. It is not the intention of the committee to preclude the use of the feasibility methodologies consistent with the Lake Andes-Wagner 1985 planning report. Rather, the committee expects the final reports to be consistent with the feasibility methodologies in the 1985 report, but we did not want to prevent the Secretary from considering in the future other methodologies in the final report which may be better suited to the Lake Andes-Wagner/Marty II project.

Mr. DASCHLE. I thank the chairman. If I may continue with further discussion of the Lake Andes-Wagner title of the conference report, language referring to the proposal dated September 29, 1987, supplemented October 30, 1987—and on file with the Energy Committee—which provides for the funding and responsibilities of the State of South Dakota and the Lake Andes/Wagner Irrigation District, was also deleted from the original authorizing legislation.

As the chairman is fully aware, the 1987 agreement was carefully crafted to ensure a fair non-Federal cost share and to allow the district to administer the project at a substantial savings to the Federal Government, a savings future cost-share agreements should reflect.

I would like to clarify with the chairman that in deleting the reference to the 1987 proposal it was not the intent of the committee to prevent a similar or identical agreement between the Secretary of the Interior and State and local interests.

Mr. BRADLEY. I agree with the Senator from South Dakota that it was not the intent of the committee to prevent a cost-share agreement between the Secretary and the State and local interest that is similar or identical to the 1987 proposal. The committee understands and appreciates the willingness of the State and local interests to engage in an equitable sharing of the costs, and the committee agrees that those savings generated by the district's administration of the design and construction of the project should be reflected in future cost-share agreements. Deletion of this language in the conference report of H.R. 429 is intended simply to reflect the difficulty the committee had in stating with certainty what the costs associated with a project will be, since it is a project

that is a few years away from construction.

Mr. DASCHLE. I thank the distinguished chairman of the subcommittee.

Mr. HATFIELD. Mr. President, I am pleased today to cast my vote in favor of the conference report on H.R. 429, the Reclamation Projects Authorization and Adjustment Act of 1992. While I still have some strong concerns about this legislation, I am pleased it is well on its way to becoming public law.

I commend Senator JOHNSTON, chairman of the Senate Committee on Energy and Natural Resources, Senator WALLOP, ranking member of the committee, Senator BRADLEY, chairman of the Subcommittee on Water and Power of the Energy Committee, and Senator BURNS, ranking member of the Subcommittee on Water and Power, for their diligent work over the past several years to sew together this patchwork bill dealing with a number of important aspects of our Nation's most precious natural resource—water. Their efforts deserve high praise.

The need to conserve and coordinate our finite water supplies has been a strong interest of mine for the last 40 years, in both the State and Federal arenas. The sheer lack of coordination of our Nation's Federal water policies has led me to conclude that America's state of readiness to deal with a water crisis of considerable magnitude is weak at best.

In an effort to better understand the deficiencies in our current water policy framework, I introduced a bill in June of 1991 called the Western Water Policy Review Act, S. 1228. The Senate Committee on Energy and Natural Resources held hearings on this legislation and adopted it, with several changes, as an amendment to H.R. 429.

The current and final version of the Western Water Policy Review Act, establishes a 10-member, 3-year commission designed to study and evaluate western water policies in the 17 reclamation States, Alaska and Hawaii. Upon completion of this evaluation, the Commission will recommend necessary changes in existing water policies to the President of the United States. Twelve congressional Members will serve as ex-officio members of the Commission to provide congressional oversight on the enactment of necessary legislative water policy changes.

I hope the Congress can learn from the model we are implementing today in the West and enact legislation assisting other areas of the Nation in evaluating and correcting their own water policy implementation and formulation problems. I pledge my full support and effort toward this endeavor.

While I am extremely pleased the Congress will be implementing the Western Water Policy Review Act today as an amendment to H.R. 429, I

am particularly troubled by the conference committee's decision to forego amendments to the Reclamation Reform Act. Oregon's small reclamation farmers have been suffering under several Reclamation Act requirements for a number of years, namely over burdensome reporting requirements and oppressive fines for unintentional errors on reporting forms. I look forward to revisiting these issues during the 103d Congress.

Mr. President, barring these reservations, the United States simply cannot delay a fair and balanced assessment of its water policies in the West, and I am happy to cast my vote in favor of the conference report on H.R. 429 at this time.

Mr. CONRAD. Mr. President, I wish to highlight a provision in H.R. 429 that is extremely important to the State of North Dakota and its Indian tribes. H.R. 429 includes, as one of its many titles, the Three Affiliated Tribes and Standing Rock Sioux Tribe Equitable Compensation Act. The Compensation Act attempts to make right an injustice perpetrated upon the people of the Standing Rock and Fort Berthold Indian reservations, when the Federal Government shattered their lives to make way for two main-stem dams on the upper Missouri River.

Mr. President, when the Garrison and Oahe Dams were constructed, more than 300,000 acres of tribal land were lost, and the lives of members of the Standing Rock Sioux Tribe and the Three Affiliated Tribes were changed forever. The dams destroyed infrastructure, such as bridges, homes, hospitals, and roads, but they also destroyed a way of life.

When Fort Berthold's land was taken in 1949, the Three Affiliated Tribes lost one quarter of their reservation's land base; 325 families—80 percent of the tribal membership—were forcibly relocated. And the remainder of the reservation was segmented into five water-bound areas. Ninety-four percent of the agricultural lands of these farmers and ranchers were destroyed. The tribal headquarters at Elbowoods was completely flooded. The tribe's agrarian way of life was literally wiped out.

At Standing Rock, the tribe lost 56,000 acres of land. Ninety percent of the timbered area on the reservation was demolished. And thousands of acres of exceptional grazing land and rangeland were eliminated. Sixty percent of the ranchers at Standing Rock saw their land disappear. One quarter of the Tribe's membership was forcibly relocated. The tribal headquarters at Fort Yates became surrounded by water, and separated from the remainder of the reservation. And the reservation, itself, became much more isolated. A bridge that had formerly crossed the Missouri River, which completely bounds the reservation to the east, was destroyed.

When Standing Rock was flooded, the tribe was not even provided an opportunity to cut and remove the timber from the area to be flooded. Today, tree stumps still jut out of the reservoir, making it almost completely unsuitable for recreation.

The result of the Federal Government's brutal treatment of these tribes is difficult to put into words. Their unemployment rates exceed 50 percent. In fact, at Standing Rock, the unemployment rate is 80 percent. Both reservations struggle to combat alcoholism, diabetes, suicide, and a multitude of other difficult problems.

This legislation allows these tribes the opportunity to rebuild. It provides them with the resources to develop their economies, educate their children, improve their health and restore their hope. And by doing so, it also adds important resources to the North Dakota economy as a whole.

As Senator BURDICK and I originally proposed, the bill authorizes the build-up of two Federal trust funds—one for Fort Berthold and the other for Standing Rock—from which the tribes may draw the interest. The trust fund for Standing Rock will amount to \$90.6 million, and the Fort Berthold trust fund will amount to \$149.2 million. But unlike the bill as introduced, this version has been amended to make the interest monies available to the tribes in much the same way as a permanent appropriation.

Mr. President, this proposal did not come out of thin air. Rather, it is the function of two reports. The first was entitled the "Final Report of the Garrison Unit Joint Tribal Advisory Committee," a special committee created by former Interior Secretary Hodel. The JTAC report acknowledged the Federal Government's obligation to compensate the tribes. It provided ranges of compensation to which each of the reservations is entitled—between \$181.2 and \$349.9 million for Standing Rock and between \$178.4 and \$411.8 million for Fort Berthold. The second report, which was conducted by the General Accounting Office, analyzed the JTAC report. The levels of compensation proposed in the bill, which are below those recommended in JTAC, fall within the range recommended by GAO. They are the result of years of work and much compromise.

In addition to the monetary compensation I have just described, the bill also provides for the return of certain lands to the tribes, Indian and non-Indian individuals, from whom they were originally taken.

Mr. President, at this point I feel compelled to address statements that the administration has made about this proposal. The administration continues to argue that the United States has no legal obligation to compensate the tribes, and that Congress, through the Garrison Diversion Reformulation

Act of 1986 and legislation enacted during the 1950s, has already compensated the tribes.

The administration's position on JTAC has been, and continues to be, one of distortion and subterfuge. Any fair reading of the record will demonstrate the falsity of the administration's position. First, Secretary Lujan argues that the tribes were compensated for the lands to the tune of \$25 million in the 1950s. But he refuses to acknowledge that almost none of this money actually reached the tribes in the form of compensation. Rather, the funds appropriated were used for subsistence payments and to condemn the land on the reservation. For the Bush administration to argue that this money actually compensated the tribes for the devastation of their reservations is absurd.

And it's even more outlandish for the administration to claim that this legislation duplicates irrigation for the tribes that was authorized as part of the Garrison Reformulation Act. We have explained to the Interior Department more than once that this bill takes the \$60 million the act authorized for irrigation at Fort Berthold, and converts it into compensation for the tribes. It eliminates Fort Berthold's irrigation authorization, and uses it as a portion of the compensation to be provided by the bill.

Mr. President, none are so blind as those who will not see. And it is apparent that the Department of the Interior has closed its eyes to the Federal Government's obligation to these tribal people. While Interior might try and hide behind past, unsatisfactory efforts to compensate these tribes, the fact remains that the Federal Government has both a legal and moral obligation to provide just compensation.

The case for compensation is clear. I thank my colleagues for their support of this provision, and urge the President to sign this important legislation.

Mr. DECONCINI. Mr. President, the conference report before the Senate contains the Grand Canyon Protection Act. This legislation, in my opinion, represents a fair and equitable balance between the power generation requirements of the Glen Canyon Dam and the need to protect the natural and recreation resources of the Grand Canyon.

My colleague from Arizona, Senator MCCAIN, deserves recognition for this happening. He and his staff have worked tirelessly to craft this legislation and I was pleased to join with him in this endeavor.

The relationship between Glen Canyon Dam and the Grand Canyon is truly unique. In the 27 years since this dam was built, it has provided water and energy to much of the Southwest. The Colorado River Storage Project Act [CRSP], passed in 1956, authorized the construction of Glen Canyon Dam.

CRSP also provided for the establishment of the upper basin fund into which revenues from power generation—mostly from Glen Canyon Dam—would finance the construction of the other upper basin projects authorized by the act. Further, the large reservoir behind the dam provides storage space in order that the upper basin could use its entitlement to Colorado River water.

The construction of the Glen Canyon Dam has forever changed the Colorado River through the Grand Canyon. The water released at the bottom of Glen Canyon Dam is clear and cold. This has resulted in the creation of one of the best trout fisheries in the country. Fishing enthusiasts from around the world travel to Lee' Ferry in anticipation of catching 4- and 5-pound rainbow trout. Also, the dam has controlled seasonal floods which has allowed vegetation to grow along the banks of the Colorado River. This situation has contributed to this area becoming home to one of the most diverse bird populations in the Southwest.

Notwithstanding these beneficial aspects, a number of studies have concluded that the operations of Glen Canyon Dam are having an adverse impact on the natural and recreational resources of the Grand Canyon. Among these consequences is the erosion of the beaches along the river. As I mentioned previously, the water discharged by the dam is clear and cold, thus giving it tremendous carrying capacity for sediment. As the saying goes, "a clear river is a hungry river." Some may argue that the erosion of beaches impacts only a select number of rafters and campers. However, it is the beaches that provide the habitat for wildlife and create backwaters for certain aquatic species.

Also there are a number of impacts on certain endangered species, particularly the humpback chub. It was determined that the lower river temperatures are having a negative impact on this and a number of other native species. Also, the blue ribbon trout fishery created by the dam is being impacted by the way it is being operated. The fluctuating flows strand fish, interfere with fish reproduction, and impact fishing activities.

As I said earlier, I believe that the approach we have adopted in this bill balances the need to provide power and water against the need to protect the Grand Canyon.

Because of this, I ask my colleagues to join me in supporting the conference report.

Mr. SEYMOUR. Mr. President, I would like to thank the distinguished junior senator from Wyoming, Senator WALLOP, for his efforts on my behalf during negotiations on H.R. 429, the Reclamation Projects Authorization and Adjustment Act of 1992. Specifically, Senator WALLOP was able to de-

lete several unacceptable provisions including: Elimination of the auctioning of 100,000 acre-feet of California's water to the highest bidder; removal of the term "enhancement" from the primary project purposes; permanent protection for the Friant water users against releases from Friant without a specific act of Congress; and elimination of the 15 percent capital gains tax on farmers.

Mr. President, I see the distinguished ranking Republican of the Senate Energy and Natural Resources Committee, Senator WALLOP, on the floor, and I would like to pose several questions to him with regard to H.R. 429.

I understand section 3406(b)(15) of title XXXIV of H.R. 429 provides for construction of a fish barrier at the head of Old River in the South delta.

Model studies have shown that these barriers, by eliminating dry spots in the channels and improving water circulation and quality, could also benefit fishery and recreational uses in those channels. They would also result in major improvements in the quality of water exported from the delta by the Central Valley project and thereby begin improving the salt load and salt balance problems in the San Joaquin Valley.

According to the State of California and local interests, an improperly designed barrier may actual dewater several South Delta channels. Does this section require the Secretary to consider recommendations made by the State and local interests such as the South Delta Water Agency?

Mr. WALLOP. I first would like to thank the distinguished Senator from California for bringing this to our attention. I understand the intent of this title is to make sure that when the Secretary does implement this section, his actions will be based on discussion and consensus with State and local officials.

Mr. SEYMOUR. Additionally, Mr. President, the legislation contemplates a study by the Secretary to investigate the possibility of rotation reservoirs and reservoir habitat to further mitigate the impact of 6 years of drought on fish and wildlife in reservoirs in the Central Valley? Does this study require input from local agencies such as the Valley Bass Council to ensure local interest are met?

Mr. WALLOP. Again, the Senator from California raises an important point. I would like to assure him that the intent of this section is to require consultation with local agencies.

Mr. BRADLEY. Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays have been ordered.

The question is on agreeing to the conference report on H.R. 429, the reclamation projects authorization bill.

On this question, the yeas and nays have been ordered, the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. EXON (when his name was called). Present.

Mr. FORD. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Vermont [Mr. LEAHY], and the Senator from North Carolina [Mr. SANFORD] are necessarily absent.

Mr. SIMPSON. I announce that the Senator from Missouri [Mr. BOND], the Senator from North Carolina [Mr. HELMS], the Senator from Vermont [Mr. JEFFORDS], the Senator from Wisconsin [Mr. KASTEN], and the Senator from Alaska [Mr. MURKOWSKI] are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber desiring to vote?

The result was announced—yeas 83, nays 8, as follows:

[Rollcall Vote No. 267 Leg.]

YEAS—83

Adams	Ford	Mikulski
Akaka	Fowler	Mitchell
Baucus	Garn	Moynihhan
Bentsen	Glenn	Nickles

ANSWERED "PRESENT"—1

Exon

NOT VOTING—8

Bond	Jeffords	Murkowski
Gore	Kasten	Sanford
Helms	Leahy	

So the conference report was agreed to.

Mr. BRADLEY. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. MITCHELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TAX ENTERPRISE ZONES ACT—  
CONFERENCE REPORT

CLOTURE MOTION

The Senate resumed consideration of the cloture motion.

The PRESIDING OFFICER. Under the previous order, there will now be 1

hour of debate equally divided and controlled between the two leaders, or their designees, prior to the vote on the motion to invoke cloture on the conference report accompanying H.R. 11.

The Senator from Texas is recognized.

Mr. BENTSEN. Mr. President, after months of debate, we finally have H.R. 11 before the Chamber for approval and transmittal to the White House.

I have heard a lot of talk about the possibility of voting against this bill because it has some tax increases in it. It does, but it also has tax cuts in it and it remains deficit neutral. It does not add to the deficit. Let me make the point that we have just voted for the energy bill by a massive majority, a bill that the President has said in writing that he is going to sign. And yet that bill also had tax increases and tax cuts. It, like this bill, is revenue neutral; it will not add to the deficit.

It is my understanding that a point of order might be made. I tell you once again that this bill is fully paid for for 1993 and over the 5-year budget window, and that any points of order that might be against this bill are purely technical.

Mr. President, both Chambers of the Congress, our respective committees and our joint conferees have stepped up to the critical issues this bill addresses. We are in this Congress' final legislative moments, and we must act. We must act to assure a better tomorrow for rural and urban areas.

We chose the House version of the enterprise proposal because that is what the administration had approved. We must act in order to have 50 enterprise zones, urban and rural. We must act to promote savings and capital formation and to fund foster care. We must act to continue lapsing Medicare provisions, to train for jobs, to build low-income housing to extend other long relied on tax provisions and if we do not, those taxpayers will face tax increases for investments in low-income housing, for research and development real estate. We must pass H.R. 11 for millions of Americans who, if they were here, would vote aye with us.

The Secretary of Housing and Urban Development has again flagged enterprise zones of this measure as "too little and too late." His comment is another of the hostile and hasty contradictions that he will again retreat from when he faces the hard facts. The fact is this bill duplicates other zone provisions agreed on between the administration and the House. Secretary Kemp endorsed those exact same provisions barely 2 months ago. That is why they are here; that is why the Senate version is not. This \$27 billion measure devotes \$11.5 billion in assistance of many types for economically troubled areas and families. If \$11.5 billion is too little, I remind the Secretary that the

administration had asked for \$2.5 billion and never, ever say it is too late to act for our Nation and her people.

I again remind my colleagues that months of cooperation and determination brought us to this threshold. This is a bipartisan bill that was reported out of the Finance Committee without one vote against it. This bill was born with and sustained by the Congress' intention that it would become law. It passed the Senate by an overwhelming vote of 70 votes to 29. Throughout this process, we have worked to oblige what we believe to be the President's position. We would have redoubled our efforts had he indicated what his position was going to be. But lacking a reliable hand, we have done what we could to produce a bill that we believe he can and should sign. Present in this version are elements of the Senate and House bills, including capital gains provisions for enterprise zones, and that is what the administration insisted on and endorsed last summer.

As this process has advanced, we have included four of seven growth measures that the White House had favored.

One thing that the President said twice in a row was that he did not want Pease and PEP in, and we have left them out. We have kept this bill revenue neutral.

Mr. President, at this point, anybody's guess is as good as mine what the President is going to do. I strongly hope and recommend that he signs it, but the time for guessing is over. The conference committee delivers this good bill, this honest, good faith effort with high hopes. H.R. 11 serves the purpose and the intent of the Congress and it addresses economic and social needs on many fronts. It takes an important step toward making life better for millions of American families, businesses and futures. It deserves to be passed and signed.

Mr. PACKWOOD addressed the chair. The PRESIDING OFFICER. The Senator from Oregon is recognized.

Mr. PACKWOOD. Mr. President, in a few moments, I hope we will be voting on final passage. I hope we indeed do invoke cloture on this. There is not much more to be said on this bill. We spent a week on it in August and September. Over 80 amendments were considered.

The bill contains a good many important provisions that have widespread support in this body: A new enterprise zone program to provide needed relief to economically distressed urban and rural areas; extension of expiring tax programs such as the research and development credit, the low-income housing credit, target jobs credits, educational assistance. As the chairman said, four of the President's short-term economic proposals are in the bill, a new child welfare program, and time-sensitive Medicare provisions.

The bill also contains some important provisions for my home State of Oregon, including expansion of the reforestation trust fund, a fix to the Treasury regulations for small woodlot owners that will allow them to prove they are active for purposes of passive loss rules, Medicare provisions increasing access to rural health care, and an extension of several important demonstration projects including the Alzheimer's disease project in Portland.

I am well aware there are critics of this bill. I have some misgivings about some parts of it. Compromises were made; they had to be made, and bitter medicine comes with the sweet. There is just more good medicine than bad in this bill.

I am particularly concerned about the impact of the provision putting a cap on deductible employee moving expenses and increasing the moving expense mileage, and I hope we have a chance to revisit that next year. I do not think this is going to affect higher paid employees. I think what is going to happen is the employers are going to increase their salaries to take care of the moving costs. But those who are making \$10,000 or \$20,000 or \$35,000 a year, who are promoted from salesperson to branch manager, and they are moving 100 miles away and face expensive moving costs, I think that is the group it is going to hit.

Like the chairman, I do not know if the President will sign this bill or not. I do not know if he will sign any tax bill. All I can say is that I hope he will, and for these reasons I ask my colleagues to join in voting for cloture and then for adoption of the conference report.

I should like to compliment the chairman of the committee on the work he has done. There are some times at night when I have seen him harried and haggard and I thought to myself I know what he is going through. But he has done an extraordinary job.

Mr. BENTSEN. Mr. President, I thank my distinguished colleague. He has been a true compadre, partner in this effort, and he deserves full credit.

I yield to the distinguished senior Senator from the State of Arizona.

Mr. DECONCINI. Mr. President, I rise today with mixed emotions on final passage of the pending conference report on the tax bill. While I know that it took many, many hours, and a lot of sweat and blood to get the conference report this far, I cannot let this bill pass without bringing to the attention of this body a provision that was added during conference which I find to be particularly troubling. That provision, Mr. President, changes the way in which inspectors and canine officers of the U.S. Customs Service are compensated. It incorporates section II of the House Ways and Means Committee's reported bill, H.R. 3837, on Customs inspectors pay.

I stand here today as I did back on August 7, 1992, commending the House Ways and Means Oversight Subcommittee and its staff for what I consider to be a yeoman effort to overhaul the antiquated compensation system for Customs personnel. The current pay system is based on one which was established in 1911. However, I believe the Ways and Means approach is not totally fair to those individuals who are the front lines of this war on drugs. I will bet you that few people in this Chamber and virtually no one in the gallery know that Customs inspectors—the men and women we find proudly protecting and serving their country as the first line of defense in the war on drugs, the individuals which you encounter 24 hours a day, 365 days a year arriving from foreign trips, the professionals with the guns, badge, handcuffs, and drug detector dogs. All these people are not considered by current law to be Federal law enforcement officers for compensation and retirement purposes. Mr. President, I do not know of anything more absurd than this, yet there appears to be a concerted effort by the administration to maintain the status quo.

Two very basic and modest changes should have been made to the House bill before it was adopted as part of this conference report. First, as a result of the Customs inspector not having Federal law enforcement status they are ineligible for Federal law enforcement locality pay adjustments which are currently in effect throughout the country. This is the premium pay which is granted for all Federal law enforcement officers who live and work in regions of the country with a high cost of living. I believe locality pay for Customs inspectors should have been authorized as part of the larger pay compensation package. Currently, if you wear a suit and tie and carry a gun, you are considered eligible for a locality pay differential. But, if you wear a customs uniform and are in some cases exposed to greater dangers you are not considered eligible for a locality pay differential. The distinction is unfair and the compensation difference is unjustified. Mr. President, I am sure these facts are not proudly displayed on any Government recruitment brochure or poster.

Mr. President, the second revision to the inspector pay bill should have been to ensure that the customs officer is paid double time for all work performed on Sunday. This suggested pay change is in line with every other Federal border representative agency, including the Immigration and Naturalization Service and the U.S. Border Patrol. As I have stated on more than one occasion, I cannot think of a more demoralizing position for the Customs inspector to be in than to be paid considerably less for working Sundays than other border enforcement agen-

cies, particularly when in some instances they have greater responsibility and are working under more arduous conditions.

Mr. President, I think this is wrong. By including this legislation in the conference report when no hearings have been held in the Senate and when there was no chance for the Customs inspector to make his case to the Senate, we are about to take action that will adversely affect them and I think it is wrong and unjust. But, since the conference report is unamendable, there is not a thing that can be done at this time.

I began this statement as I will end it. There was solid responsible support from inside and outside Government to reform pay schedules which were established back in 1911. Mr. President, there was no reason for the House Ways and Means Oversight Subcommittee to establish a take-no-prisoners approach to this legislation. Mr. President, you can be absolutely certain that I intend to take another intensive look at the entire issue of inspector pay in the next Congress. This Senator is sending a message to a segment of the thin blue line, the Customs inspector and canine officer, that you have not been completely abandoned and that there are Members of Congress willing to fight for what is reasonable and just to see that you are properly compensated for the excellent and thankless job that you do.

Mr. BENTSEN. Mr. President, I compliment the Senator from Arizona. I share his concern for the problem. I have that Mexican border share and understand the motivation.

I yield a minute to my distinguished colleague, the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized.

Mr. MOYNIHAN. Mr. President, may I congratulate both the chairman and ranking member for bringing this extraordinary collection of proposals to the floor.

I would just like to use a moment to note that H.R. 11 may be one of the most important measures in the history of higher education in our country. It restores to our private colleges and universities their status as exempt persons under the law, with full access to tax-exempt financing, which we stripped from them in the 1986 Tax Act. Moreover, it restores the full deduction for gifts of appreciated property for purposes of calculating the alternative minimum tax, which is essential to the fundraising efforts of our museums, our orchestras, our colleges and universities, and our nonprofit medical institutions. They know it and they are deeply grateful, as they ought to be. I simply wish to express my gratitude as well.

Mr. BENTSEN. I thank the distinguished Senator. He made major contributions to this legislation. He has

had great interest in the universities in our country and has assisted as we brought this legislation forward.

Mr. PACKWOOD. Mr. President, I yield a couple minutes to the minority leader.

The PRESIDING OFFICER. The minority leader is recognized.

Mr. DOLE. Mr. President, first I would like to make a parliamentary inquiry. In the event cloture is not invoked, will there be time for debate on the conference report, and will the time be limited?

The PRESIDING OFFICER. The conference report remains fully debatable and there is no unanimous consent that governs time. It is unlimited debate.

Mr. DOLE. And if cloture is invoked, is there any time limit?

The PRESIDING OFFICER (Mr. WOFFORD). There is a 30-hour time limit, if cloture is invoked.

Mr. DOLE. Mr. President, I would just say a word or two now, because I think we are going to have ample time after this first vote to discuss the bill and the merits of the bill.

I would like to reiterate what I have been saying right along. I think there are a lot of good provisions, as the chairman and the ranking Republican, Senator PACKWOOD, pointed out. It probably has provisions that help every Member of this body in one way or another, as well as a lot of general provisions that many people support.

We could start with the luxury tax, and we ought to repeal that before we sink any more boat builders or others in that business, and before we clip the wings of the aircraft industry. The jewelry and fur industries are not in much better shape. It does not repeal the tax on autos, but that may be revisited and can be revisited.

There are a number of issues that I had, I suppose, special interest in. They were not special-interest amendments, but we have had some problems in the areas of family farmers, cooperatives, and things of that kind.

Of course, you have all these expiring provisions, the so-called extenders. People always get nervous about the time they are ready to expire. Since they have already expired, they are really nervous. And many are waiting on so-called economic growth provisions in this package, and there are some, even though the first-time homebuyers' credit was eliminated, as was the investment tax allowance.

So I guess what I am saying is there are a number of provisions that I think every Member would strongly support, and we did. As I argued here earlier, we had to drop PEP and Pease, or it would certainly be vetoed by the President. Those have been dropped, but the bill still contains about \$27 billion of revenue measures. I guess it is fair to say that because of the rush of time and the fact that we could not have a normal conference, there may be other

provisions some people are not totally aware of.

So we are going to wrap up action on this sometime today, and I assume the bill will pass. There will also be a point of order made after the cloture vote by the distinguished Senator from Colorado, Senator BROWN.

But the bottom line is, the President will not sign this bill. And some will say that is fine, let us just send it on to him and let him take the heat. And if there is any embarrassment, let us get it down to the President; it is right before the election, so he will either have to sign it or not sign it, whatever, pocket veto it.

And so it seems to me that if the point of order is sustained or somehow we can reach some agreement there are a number of things we could put together very quickly; something the President would sign. We can repeal the luxury tax. We can extend the expiring provisions in 12 months. So we can help people who are relying on those areas. We can go ahead and provide passive loss relief as the real estate industry, I think with justification, says should be done.

We could use pay-fors that will be acceptable to the administration. There are several compliance provisions in the conference report that we can use for these purposes.

In addition to the revenue items, there are a number of expiring Medicare provisions which were included in H.R. 11 and these items are truly time sensitive. I think they affect some 500 hospitals across America. They should not be held hostage.

There is a way to pay for those that I think will satisfy the administration's concerns. I know the distinguished chairman has said he is not interested in that. Certainly, that is a proper stance at this moment.

But in the event the point of order should be sustained, then it would seem to me that there might be an opportunity to repeal the luxury tax, provide for passive loss relief, accelerate and increase the depreciation, IRA withdrawals, extenders for 12 months, including section 29 for 6 months, and Medicare amendments.

We pay for those with the diesel fuel exemption repeal, depreciation extension on real estate, because that is an agreement the industry worked out among themselves; corporation estimated taxes and individual estimated taxes speed-ups.

So they are not tax increases, and they would not violate the President's promise he made in Houston, TX, here in August about not signing any more bills that call for tax increases.

We also provide a way to pay for the Medicare amendments. We have cost items; we have pay-fors. In fact, the cost items are about \$217 million, the pay-fors add up to about \$227 million.

Mr. President, I will address this later after the cloture vote. But I

thought just to indicate that I think it is fair to say, unless I misread what I hear from 1600 Pennsylvania Avenue, that this bill will not be signed.

That does not mean the Congress should not act. That is up to the President, who is going to make that choice.

I guess Congress will act. The House has acted, but not by a very wide margin, 208 to 202. So there is absolutely no doubt about whether or not a veto will be sustained. A veto would be sustained. It just barely passed. In fact, when the first round of voting expired in the House, I think it was a one- or two-vote margin. It got up to a six-vote margin.

Now we are down to 91 or 92 Members in the Senate. I am not certain which side they are from, or how they may fall on this particular legislation.

But the point of order will require 60 votes, and it seems to me that may be an appropriate way to determine whether or not the votes are there. If they are not, my view is the bill ought to be passed, it ought to be sent to the President, and he will have to make the appropriate judgment based on the information he has at the time.

Mr. President, I thank my colleague for yielding. I yield the floor.

Mr. PACKWOOD. I yield 2 minutes to the Senator from Rhode Island.

Mr. CHAFEE. Mr. President, in this bill that is before us, there are several measures that are extremely important to my State, and I am just in favor of the thrust of the legislation. These measures are not solely important to my State. They are important to the Nation as a whole, but, incidentally, have greater effect in my State than perhaps in other States.

These measures are two especially. One is the luxury tax repeal.

That luxury tax was imposed about 2 years ago, and has been an unqualified disaster. The theory was that it would hit the rich by saying that anybody who bought a yacht or a boat that cost over \$100,000 would have to pay a 10-percent tax on the excess amount over \$100,000.

What has been the effect? The effect has not been to hurt the rich in any fashion at all. The effect has been to devastate the boat building industry, and especially in my State where we build more sailboats or boat hulls than any State in the Nation, even more than California. Our little State with 1 million people has built more sailboat hulls than any State in the Nation.

This legislation does not raise money, does not hurt the rich—if you are out to hurt the rich. All it does is hurt a series of low-income and middle-income boat builders who are trying to make a living.

So, thank goodness this legislation repeals that luxury tax. It also repeals the luxury tax on jewelry, which indirectly affects my State where we are large jewelry producers, but mostly in

the so-called costume jewelry end of the line, which is usually considered \$50 or less.

The second major step that this legislation does is to extend the mortgage revenue bonds. The mortgage revenue bonds are extremely important for low-income and middle-income individuals to make their first-time purchase of a home. So also I mention in closing, it also extends the low-income housing credit.

So there are some good points in this bill. I commend it to my colleagues.

I thank the Chair. I thank the distinguished ranking member for permitting me this time.

The PRESIDING OFFICER. Who yields time?

Mr. PACKWOOD. I yield 4 minutes to the Senator from New Mexico.

Mr. DOMENICI. Mr. President, first I hope no one seriously contends that this is the tax measure that the President asked for. I was going to bring the bill that contained the President's economic recovery requests and hold it up beside this. Suffice it to say that the President's bill was 95 pages long. We all know how big this one is that is being put here before us—about 1,400 pages. It is voluminous. It just shows that there is no real resemblance between this bill and what the President asked for months ago.

But I want to make two points about the bill that has many good provisions in it, but there are sufficient things in it that are not so good that lead me to say we ought not pass it. It raises taxes by \$24.4 billion.

Senators in this body know that this Senator has voted for tax increases when they were accompanied by spending cuts. But I just cannot go along with this one.

What do these tax increases pay for? The bill raises some taxes by \$24.4 billion and cuts other taxes by \$21.1 billion, and it raises spending by \$3.2 billion.

We may need to raise spending on certain programs by \$3.2 billion. But I believe we ought to make an effort to cut spending rather than paying for new spending with new taxes.

I would remind my colleagues that we promised in the congressional budget resolution to cut, not increase, mandatory spending. We promised to cut it by \$10 billion over the next 10 years. In this bill we are increasing mandatory expenditures by \$3.2 billion. Some will say it's just a little bit. Yes, just a little \$3.2 billion increase instead of a \$10 billion reduction.

The other item has to do with where we raise the money. There is a lot said about raising taxes on the middle class. So let me just remind the Senators where a large portion of this tax increase comes from.

We cap moving expenses at \$10,000, when the average cost to move in the United States is \$15,000. I submit that

most of that tax increase will affect the middle class of the United States who in these changing times may be compelled to move. There is no doubt about it.

We just, in a very casual manner, say let us pay for all of these other goodies by taxing the middle class under the guise of changing what is the deductible part of moving costs. I do not believe moving costs are luxuries. I believe they are part of today's marketplace of work, marketplace of employment.

In addition, let me remind everyone that tax increase is \$3.2 billion. So no one will think it is trivial, I'll tell you it is 13 percent of the revenue raised in this bill.

In addition, there is a new threshold that is required by small business in terms of their estimated tax payments. This is another big revenue raiser. The 120-percent safe harbor is just \$3.9 billion, and it is going to be on small business America who have to estimate their taxes in a different manner and lend the Government money.

Mr. President, if that was not enough, let me close by suggesting that IRA's were included in putting this bill together. I know many like the IRA provisions, but while we are wondering how we are going to take care of future deficits, we will also have to decide how to pay for the \$10 billion in lost taxes that occur outside the budget window due to the IRA provisions.

We are just saying do not worry about \$10 billion more in lost taxes in future years. It is all to the good of the country. For all of these reasons, I do not think we ought to pass this conference report. Frankly, there are a lot of good provisions, and I think we will get those good provisions sooner or later. I do not think we ought to get them today under this approach.

Frankly, even though the President will not sign it, I am very hopeful that the Senate will not, by sufficient numbers, lend their approval to it.

I yield the floor.

Mr. BENTSEN. Mr. President, how much time do I have?

The PRESIDING OFFICER. The Senator has 22 minutes.

Mr. BENTSEN. Mr. President, I yield myself an additional 3 minutes.

I would like to make a point that the bill we just voted on, the energy bill, had a net increase in taxes in it, and it passed by an overwhelming majority and had a letter of commitment from the President that he was going to sign it.

On this question of 120 percent that was referred to, it is not mandated. It is an option. For corporations, they can still go on the 100 percent in their estimate. So it is not mandated, it is merely an option for them.

Where did that recommendation come from? That came from the administration. That was a revenue rais-

er that the administration was talking about. That is what we put in.

I listened to the distinguished minority leader, for whom I have very high regard, and I understand some of his concerns there. But the idea that we can now go to a stripped-down bill at this late stage is just not going to happen. I will, obviously, oppose that, because Member after Member came to me and said, "I want a stripped-down bill, but be sure my provision is in it." Stripped-down is in the eyes of the beholder, so long as his provision is in it.

Time and time again, that is what they have asked for. We have had months of arduous negotiation. We spent 4 days and nights with the House conferees, trying to work out these problems. They are locked in, and they have gone and they do not even have a quorum left.

The idea that we now go back and pick and choose on this side and decide what a stripped-down bill was that would satisfy all these members with all of the things they have in it that they think are important for their constituents just does not add up.

It cannot be. The House to have passed it by 208 to 202, by 6 votes, do you think they want to vote again? Certainly not, but over there, without a quorum, you have to have a unanimous consent. It is totally impossible to talk about going to a stripped-down bill at this point. I will strongly resist it. It is time we wrap this up and get the job done for our country.

I retain the remainder of my time.

Mr. PACKWOOD. Mr. President, I yield 5 minutes to the Senator from Delaware.

Mr. ROTH. Mr. President, I rise today in support of H.R. 11, the Revenue Act of 1992.

Overall, this package is an improvement in the tax law for taxpayers. These are important tax changes that should be passed this year. The bill includes the creation of enterprise zones in a form that is substantially the same as the package negotiated between the House and the Secretary of Housing Jack Kemp. The creation of these zones could address an important social policy, the rehabilitation of depressed economic areas, by harnessing private enterprise with as little government involvement as possible. I believe this is an important transformation in public policy after years of passing social programs that cause government reliance and dependence, many of which have not worked.

The bill also includes the extension of the expiring tax provisions, like the R&D tax credit, health insurance deductibility for farmers and small businesspeople, mortgage revenue bonds, employer provided education expenses and others, which are an essential part of this package. Failure to pass these provisions will only create more dissatisfaction and anger from

the public that has lost much of its confidence in the Congress, and the Federal Government.

Repeal of the luxury excise taxes, a misconceived brainchild of those filled with anger and envy rather than common sense, is long overdue since their passage in 1990. I might add, I was a strong opponent of the 1990 Budget law, and these provisions in particular. Expansion of education savings bonds and withdrawals from IRA's without penalty for college expenses are structural changes that will allow Americans to save for their future and their children's future and education. And important changes to simplify and improve the tax law for charitable organizations will help these organizations carry out their lofty goals at a time when they are as essential as they have ever been to our society.

The bill also contains four of the President's seven growth incentives that he proposed as part of his budget in January of this year. I have to say, the Congress is long overdue with this, since the President reasonably asked that we pass these initiatives by March 20, when he gave his State of the Union Address. Simplification provisions in this bill are also important to taxpayers that are overtaxed not only on their dollars, but on their tempers when it comes to preparing their tax forms.

Most importantly, after working for 6 long years to revive the individual retirement account after its cut-back in 1986, I believe this bill substantially improves the IRA for almost all Americans, and provides exciting new opportunities to attract new savings for this country that is so poor in capital creation. One study, by the respected Lewin/ICF economic group, modeled the Bentsen-Roth IRA and projects new capital of at least \$31 billion in 1995 and \$838 billion by the year 2030. This is money that our country vitally needs in order to address infrastructure needs, to build new plants, to purchase new machinery and equipment to create new jobs and simply to save for our future retirement and family needs.

But more importantly, I want to stress the importance of the Bentsen-Roth IRA to families. This proposal allows families to save up to \$2,000 per year, \$4,000 for a two-earner family, in either a tax deductible IRA or in back-loaded IRA that provides for tax-free savings after 5 years. This IRA expands the number of eligible two-earner families that can contribute to an IRA from less than 50 percent to about 90 percent or more. It includes a proposal virtually identical to the administration's family savings account that was part of the budget since 1990. And it includes important penalty-free early withdrawals that allow families to provide for themselves and their loved ones. These withdrawals allow parents or grandparents to withdraw funds pen-

alty-free for their children's education, or their first home. It allows families to save for their own first home downpayment, or education expenses, for example for retraining or college. And it even allows children and grandchildren to save so that they can help pay the medical costs of their families.

Finally, it allows families to again count on their own savings to provide for themselves when periods of long unemployment occur, rather than be tied to the limited hand of government. I am talking about an opportunity for self-reliance and stronger family interdependence that is essential for a strong country. For years, Americans have been envious of the Japanese for a strong economy, but part of that strong economy is the interdependence between family members in that country. I think the Bentsen-Roth IRA helps encourage Americans in that same direction.

I have said it many times, but I will say it again, let us pass the Bentsen-Roth Super IRA; it is good for the family, and it is good for America.

#### OVERTURNING THE SUTER VERSUS ARTIST M. DECISION

Mr. RIEGLE. Mr. President, I rise to address a little provision in the conference report to H.R. 11 that is small in terms of the number of words it contains, but enormous in its impact. This provision overturned the Supreme Court's decision in the case of Suter versus Artist M. In this case the Supreme Court ruled that individuals—mainly low-income children—do not have recourse through the Federal courts when States fail to implement State plan requirements under the Foster Care Program of the Social Security Act.

This case dealt a devastating blow to thousands of low-income children who could potentially be denied benefits and services that Congress intended them to receive. States began attempts to extend the Suter ruling to other Social Security Act programs.

The House included a provision to overturn the Supreme Court's ruling in its version of H.R. 11; the Senate did not do so in its version of the bill. The distinguished chairman of the Finance Committee, at my request, asked the Social Security Subcommittee to hold a hearing on the issue. That hearing resulted in compromise language that restores the right of individuals to turn to Federal courts when States fail to implement Federal standards under the Social Security Act.

I want to thank the chairman of the Finance Committee, Mr. BENTSEN and the distinguished chairman of the Social Security Subcommittee, Mr. MOYNIHAN, for giving the Senate the opportunity to hear testimony about this issue. Thanks to my distinguished colleagues this little provision will pro-

tect the rights of millions of beneficiaries of Social Security Act programs.

Mr. LOTT. Mr. President, on behalf of Senator KASTEN, I ask unanimous consent to insert in the RECORD a letter from the American Institute of Certified Public Accountants [AICPA] outlining their position on the estimated tax revisions included in H.R. 11, the urban aid tax bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN INSTITUTE OF  
CERTIFIED PUBLIC ACCOUNTANTS,  
Washington, DC, October 1, 1992.

Hon. ROBERT W. KASTEN, Jr.,  
Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR KASTEN: During the debate on H.R. 11, The Revenue Act of 1992, the Senate considered changes to the estimated tax rules for individuals. In the discussion on the Senate floor, the AICPA's position on estimated taxes may have been misunderstood. We would like to restate our position, for clarity, and let you know how it developed.

Last November, Congress enacted changes of great complexity to the estimated tax laws. The 1991 changes were targeted at higher income individuals, and would have denied them the right to estimate their current year's tax based on the amount they had actually incurred in the prior year. Instead, they could avoid a penalty only by paying in 90 percent of the current year's actual tax, in appropriate installments. If a taxpayer was a partner in a partnership, or a significant S corporation shareholder, the quarterly estimates would have to take into account what that owner's share of income for the partnership or S corporation would be for the year (or proportionate part)—even though, for example, the estimated tax payment was due June 15 and the partnership year would not end until December 31.

The AICPA immediately recognized last November's changes as unworkable, making it impossible for many taxpayers to comply. More recently, taxpayers themselves have discovered their inability to know if they have properly met their estimated tax obligations. We have tried to take the lead in finding alternatives to this impracticable statute. Among the options we suggested to members and staff—recognizing Congressional desire to accelerate estimated tax payments of higher income individuals but also trying to retain some measure of simplicity—were several that would apply only to taxpayers with adjusted gross incomes exceeding \$75,000. We recommended, for example, that this group might appropriately continue to use last year's tax as a base for computing the current year's estimate, but at a level above 100 percent. If this group were required to use 110 percent or 115 percent of last year's tax as a safe harbor, acceleration of payment would be achieved but a fairly simple calculation would be retained.

The bill you approved this week included our concept of using a more-than-100 percent safe harbor based on last year's tax (it adopted a 120 percent threshold), but applied that to all individual taxpayers starting in 1993, not just higher-income individuals. (The House version of the same provision had a 115 percent safe harbor, also applicable to all individuals.) Further, what started as a proposal for simplification has now become a significant revenue raiser for each chamber's

tax package. To illustrate, the House (115 percent) approach is scored as a \$3.0 billion revenue raiser; the Senate (120 percent) approach would raise \$3.9 billion during the 5-year window used for budget purposes.

At the time the House was considering its version of H.R. 11, we were asked if we could support a 115 percent safe harbor if it included all individual taxpayers. While not a preferred approach, we agreed it was supportable. However, when your Finance Committee proposed a 120 percent safe harbor, we called for caution. A safe harbor as high as 120 percent of the prior year's tax is inappropriate, especially for lower income individuals and for lower income unincorporated businesses that report their earnings on Schedule C or Schedule E of a Form 1040. The higher that threshold gets above 100 percent, the fewer taxpayers will use the safe harbor. Instead, these individuals and unincorporated businesses may well decide to go through the complexity of computing actual quarterly income to take advantage of the other primary exception to underpayment penalties—paying in 90 percent of current year's tax. Not only will this create additional complexity for taxpayers, but it will also reduce the acceleration of current year revenues being sought by this provision.

Thus, we continue to prefer a safe harbor of 115 percent that is limited to those individuals with adjusted gross incomes over \$75,000. We have felt it may be possible to accomplish this without a dramatic fall-off in estimated revenue. We would expect that a substantial number of lower and middle income individual taxpayers derive the bulk of their reported income from wages subject to withholding, and may not otherwise be required to pay estimated taxes.

Again, we encourage efforts to correct the unworkable 1991 rules to protect the interests of the many small business owners and millions of individual taxpayers who may be affected by the various proposals presently being considered. While you have already cast your vote on this issue, we wanted to be sure our position was properly understood. Thanks for your time reading this letter.

Sincerely,

GERALD W. PADWE,  
Vice President—Taxation.

Mr. SPECTER. With much reluctance, Mr. President, I am voting for cloture and I am supporting the urban aid tax bill, H.R. 11, because it is imperative that Congress fulfill its obligation to assist our Nation's troubled cities. This bill takes important strides toward assisting our cities with enterprise zones and the permanence of certain extenders namely, the low-income housing tax credit, the targeted jobs tax credit, and the mortgage revenue bond programs. These are important provisions that I support and, when coupled with the additional funding we provided to the cities a few months ago in H.R. 5132, the dire emergency supplemental, and important provisions in the housing reauthorization bill, which I anticipate we will soon adopt, relative to economic and community development and the HOME Program, I believe we are taking responsible steps to address the needs of our cities. For this reason, I also encourage President Bush to sign this legislation.

There are other provisions in H.R. 11 that I support, such as the repeal of the

luxury tax, penalty-free withdrawals from IRA's for certain purposes—although I am very disappointed that my cars amendment, which promised to infuse the economy with \$29 billion was dropped in conference—passive loss reform, and extension of the other extenders.

However, Mr. President, we are foregoing an opportunity to provide important initiatives to spur this economy—provisions that each of the House, Senate and the President agree are important to cause a sustained economic recovery. Hence, my reluctant support of this bill. I am referring, of course, to the four common points: The first time home buyers tax credit, the investment tax allowance, passive loss reform, and pension funds investment in real estate. I know that H.R. 11 includes the latter two points. But, it should also include the former two because they will create jobs and encourage spending.

We recognized this back in March when they were included in H.R. 4210; the President has recognized this in his budget proposals. Senator DOMENICI and I recognized this when we introduced S. 2612, the High Value Economic Growth Act, in April of this year. In fact, the Finance Committee continued to recognize this when it reported its version of H.R. 11. The need for these initiatives have not diminished. Unfortunately, that need will not be completely addressed by this legislation.

In addition, Mr. President, Congress is missing an important opportunity to address the health care issue—albeit modestly—which, next to the economy, Americans want to see Washington address. As you know, the Senate version contained a modest, yet significant, step toward making health care more affordable by permitting full deductibility by self-employed persons of their health care costs, reforming the small group insurance market, and authorizing small purchasing groups organizations, among other things. Unfortunately, all of these provisions were dropped in conference.

In the end, however, Mr. President, H.R. 11 is better than no bill at all. We must promote the revitalization of our cities. We will do that with this legislation. And I believe that if the economy continues to limp along, the 103d Congress will take the necessary steps to redress it. I also believe that the 103d Congress will be forced to resolve the health care access and affordability issue because that issue will not go away with inaction.

I thank my colleagues and yield the floor.

#### MEDICARE AND MEDICAID REFORMS

Mr. RIEGLE. Mr. President, I rise today to speak about the important Medicare and Medicaid reforms in-

cluded in S. 3274 that were added to H.R. 11, the urban aid package, as an amendment. I supported the urban aid bill, and the Medicare and Medicaid provisions it contained. I am pleased that the conferees chose to retain some important provisions from S. 3274 in the bill's final version—modifications and technical corrections to Medicare which will improve services for beneficiaries.

I am disappointed, however, that the conferees have failed to include meaningful changes to Medicaid as well. As chairman of the Senate Finance Subcommittee on Health for Families and the Uninsured, I am particularly concerned about programs that provide health services to low-income families. For several years, I and many of my colleagues have met with constituents, held hearings, and developed legislation to correct problems in the Medicaid Program and make improvements. S. 3274 was the first real opportunity we have had in 2 years to enact the most pressing of those changes.

#### QUALIFIED MEDICARE BENEFICIARIES

This year, the Senate has failed to capitalize on one of the most obvious opportunities to assist low-income Medicare beneficiaries. Since 1989, certain low-income older people—so-called qualified medicare beneficiaries, or QMBs—have been eligible to have the Medicaid Program pay their out-of-pocket Medicare costs. Since that time, I have written several letters asking the administration to fully implement this important program. However, many eligible seniors are still not receiving benefits, either because they do not know they are eligible or they do not know where to apply. A recent study by the Families U.S.A. Foundation found that close to 2 million Medicare beneficiaries are still paying for benefits out of their pocket that the Government should be paying for, including premium costs, deductibles, and other cost-sharing.

That is why I introduced S. 2814, the Medicare Enrollment Improvement and Protection Act. The bill has 24 cosponsors, including seven of my colleagues on the Finance Committee. It requires the administration to ensure that low-income Medicare senior citizens and disabled persons receive benefits entitled to them, primarily through more effective notification, grants for outreach, a simplified application process, and the use of Social Security offices for enrollment.

An important provision from S. 2814 was included in the urban aid amendment. It creates a demonstration program to evaluate the effectiveness of programs outlined in the bill in improving QMB enrollment. With low-income seniors facing skyrocketing health care costs, it is essential to ensure that all QMB's receive the benefits to which they are entitled.

#### CHILDHOOD IMMUNIZATIONS

The Senate missed another opportunity during this Congress in failing to enact meaningful improvements to childhood immunizations under Medicaid. Currently, children enrolled in Medicaid are eligible for basic health screenings and services, including immunizations, through the EPSDT program. Although children enrolled in EPSDT are required to receive vaccinations, evidence presented at a June 1, 1992, hearing before the subcommittee I chair indicated that Medicaid-eligible children are not receiving their full set of immunizations on schedule.

In November 1991, I introduced S. 2116, the Comprehensive Child Health Immunization Act to address the nationwide problem of inadequate immunizations of children by coordinating and strengthening efforts within existing public health and social service programs to increase immunizations and prevent outbreaks of childhood diseases. S. 3274 included a provision from this legislation which would have created a demonstration program to evaluate the effectiveness of innovative immunization outreach techniques in improving immunization rates among Medicaid-eligible children. The amendment also contained other provisions which would have improved immunizations under Medicaid.

#### RESTORE MEDICAID DEMONSTRATION FUNDING

Two demonstration projects were created under the Omnibus Budget Reconciliation Acts [OBRA] of 1989 and 1990 to enable States to expand Medicaid coverage for pregnant women, children, and low-income families. Several States, including the State of Michigan, have already been awarded funding for these programs, but since the projects were not fully implemented until fiscal year 1992, legislative action is needed to restore lost funding. Without this funding, the projects will be unable to continue beyond early next year.

Included in S. 3274 was a provision to restore \$43 million through 1995 for these demonstration programs. This provision would have enabled States to continue to implement and evaluate model programs to provide health services for our most vulnerable populations.

Mr. President, I am very disappointed that the Medicaid provisions from the urban aid package were not included in the conference report, and that we have once again missed an opportunity to enact these and other provisions to strengthen Medicaid and improve access to quality health care for low-income families. I intend to reintroduce these bills during the 103d Congress, and I will continue to make every effort to improve the Medicaid Program and ensure beneficiaries the quality care to which they are entitled.

### INDIAN EMPLOYMENT INVESTMENT

Mr. INOUE. Mr. President, I rise in support of the conference report on H.R. 11. In particular, I want to commend the chairman of the Finance Committee, Mr. BENTSEN, and the ranking member, Mr. PACKWOOD, whose support has insured the inclusion in this legislation of provisions of historic importance to hundreds of thousands of American Indians on reservations throughout the United States. I refer to the Indian employment and investment provisions of the bill, which I sponsored along with the select committee's vice-chairman, Senator MCCAIN, and Senator DOMENICI, a member of the Select Committee on Indian Affairs. Those provisions—which authorize investment and employment tax credits to help attract urgently needed new investment and jobs to Indian reservations—were accepted by the chairman and the ranking member, and adopted by the Senate. Now, I thank the chairman for working to keep those Senate-passed provisions in conference.

While the Congress has rightfully focused substantial attention on the plight of our inner cities, and responded with enterprise zones and other tax-related urban aid measures, many of us on the Select Committee on Indian Affairs have long advocated the use of the tax code to bring relief to perhaps the most poverty-stricken areas of our Nation—Indian reservations. Although the needs, such as a nationwide Indian reservation average unemployment rate of 56 percent, have long been apparent to many in this Chamber, it has been a difficult, and I must admit, an often lonely battle to attempt to compete with numerous other interests seeking changes to the tax code before the Finance Committee.

This year, Senators MCCAIN, DOMENICI, and I, along with other Members from both sides of the aisle, redoubled our efforts. Drawing from provisions of earlier legislation sponsored by Senate select committee members, the Indian employment and investment provisions in H.R. 11 are based on legislative language developed almost 1 year ago by the country's largest Indian tribe, the Navajo Nation, under the wise and able leadership of its president, Peterson Zah. The Navajo Nation has since worked closely with us in strong support of these measures, which have also gained the support of the National Congress of American Indians and its member tribes throughout the country.

Mr. President, Chairman BENTSEN listened carefully to our arguments, and he responded: at first by making provision for ten Indian enterprise zones in the Finance Committee bill, and later by striking those zones in favor of these investment and employment tax credits that—at virtually the

same cost to the Federal Government—have the potential to help, not just 10, but all Indian tribes.

These tax credits represent a new approach—relying on the private sector—to helping attract economic development and opportunities to Indian country. It is appropriate that the Congress has tried this innovative new approach during 1992, a year that the President has joined the Congress in designating the “Year of the American Indian.”

Mr. President, I want to thank those members from both parties who have joined us in this bipartisan effort. And again, Mr. President, I thank and commend the chairman of the Finance Committee for his leadership in helping us—both before this Chamber and in the conference committee—to assure that these important tax incentives have the potential to address some of the most serious problems in Indian country.

#### POST CONFERENCE COLLOQUY

Mr. DOLE. Mr. President, one very important provision in the bill before us relates to sales and other dispositions of assets by farmer cooperatives. This provision will enable cooperatives to determine with far greater certainty whether gain or loss from such dispositions should be treated as patronage-sourced under the special rules of subchapter T of the Internal Revenue Code. In contrast to nonpatronage-sourced items, patronage sourced items are not taxable at the cooperative level if distributed to the cooperative's member-patrons.

The provision originated with legislation introduced by the distinguished senior Senator from Oklahoma. The Senator from Kansas is pleased to be able to say that he is an original cosponsor of that bill, as are a majority of the members of the Committee on Finance. In fact, a majority of the Members of the entire Senate are cosponsors of this legislation.

Since there was no formal report from the Finance Committee on H.R. 11, it may be helpful to discuss the purpose of the provision. Under the provision as adopted by the Senate, cooperatives can assure that gain or loss from these asset dispositions will be treated as patronage sourced by demonstrating that the asset in question had, in fact, been used by the cooperative to facilitate the conduct of patronage operations. This so-called facilitative test derives from a longstanding IRS revenue ruling and applies regardless of the character or type of asset involved, so long as the requisite factual nexus to patronage operations can be demonstrated.

This test had been endorsed both by the IRS and by the courts in various fact situations as an appropriate legal standard for determining whether an income or loss item is patronage sourced. However, there are other cases in which the facilitative test had not

applied, and this situation has caused great uncertainty for cooperatives. For both the cooperative community and the Government, the cost of pursuing tax disputes administratively and in the courts has been very high.

Mr. President, in view of this background and given particularly the absence of a Senate report with respect to this provision, I would like to request confirmation from my colleague, Senator BOREN, the principal sponsor of this legislation, that it is our hope that this legislation will help end the unnecessary and costly disputes in this area.

Mr. BOREN. I would like to thank the distinguished Republican leader for stating so cogently why this legislation is so important to the cooperative community. I too wish to reiterate the clarifying purpose of the provision with respect to the application and scope of the facilitative test.

The legislation before us carries a prospective effective date. No inference should be drawn from its enactment as to the validity of a party's position in pending cases. Instead, this legislation merely clarifies an area of the law which is subject to differing interpretations, as my colleague from Kansas has noted.

The frustration level of cooperatives because of this legal uncertainty is understandably very high. Despite the endorsement of the facilitative test by courts in a variety of contexts, the IRS has challenged cooperatives which seek to use the test in situations where the factual linkage to patronage operations appears clear. This uncertainty and the resulting legal disputes seriously impede cooperatives and their member-patrons in their efforts to meet the enormous agricultural demands of this country.

This legislation is designed to remove that impediment by permitting electing cooperatives to assure application of the facilitative test to dispositions of any type of asset. Consistent with the clarifying nature of the legislation, it is my hope that the IRS will make every effort to resolve current law disputes with cooperatives which have treated gain or loss from the sale of their assets as patronage sourced as quickly as possible. The principles of this legislation could serve as a guide for the parties in reaching these settlements.

#### PUBLIC INVESTMENT PROVISIONS OF TAX BILL

Mr. RIEGLE. Mr. President, I rise in support of the conference agreement on the tax bill. That agreement contains provisions providing \$2.65 billion over 5 years in public investment for enterprise zones and other distressed areas. These provisions are the result of an amendment I offered to the bill on the Senate floor on behalf of myself, Sen-

ator KENNEDY, chairman of the Labor Committee, Senator SASSER, chairman of the Budget Committee, Senator BIDEN, chairman of the Judiciary Committee, the majority leader, and Senators WOFFORD, KERRY, and SARBANES. These provisions provide the other half of the strategy needed to give the Federal enterprise zone experiment the chance to make a difference in some of our most distressed communities.

This spring, I visited Benton Harbor, an inner city community in Michigan that is home to the State's only enterprise zone. The lesson that Benton Harbor has learned from its experience is one that Washington must listen to as we craft Federal enterprise zone legislation: Tax incentives alone do not generate sufficient new investment to turn around our inner cities.

Benton Harbor's experience has been shared by enterprise zones in 35 other States and the District of Columbia. Studies of State zones have shown that infrastructure quality, labor force skills, and community characteristics like public safety are at least as important in business location decisions as taxes.

In July, I introduced S. 2998 to create enhanced enterprise zones by pairing tax incentives with targeted investments in housing, infrastructure, public safety, job training, economic development, and other needed services. The provisions of the conference agreement incorporate elements of that bill and integrate them with the House enterprise zone bill's investment provisions as well as with programmatic initiatives of the Senate Labor, Judiciary, and Agriculture Committees.

The conference agreement provides \$500 million in increased authorizations for 1993 for Federal resources targeted to enterprise zones and nationwide urban aid programs and over the next 10 years an amount equal to the estimated cost of the tax breaks provided for enterprise zones. These provisions appropriate no money, but the \$500 million in appropriations for 1993 were included in last week's supplemental appropriations bill, contingent on passage of this authorizing legislation.

Of the \$500 million for 1993, \$320 million would be allocated to a block grant program for enterprise zones. Seventy percent would go to urban zones and 30 percent to rural zones. Within the two categories, the money would be evenly divided. Zones would be able to choose from a menu of Federal programs in five areas on which to spend the money: First, crime and community policing; second, job training; third, child care and education; fourth, health, nutrition, and family assistance; and fifth, housing and community development.

Zones would be required to spend one-fifth of their grant in each category but could receive special permission to spend up to two-fifths in any

one category. They could not spend less than 5 percent on any one of the categories, however.

The remaining \$180 million would be reserved for programs that empower local communities through public-private partnerships between government and community-based organizations. Almost all of this money would be spent to benefit enterprise zone residents:

The Head Start preschool education program would receive \$40 million.

Community health centers which provide primary care in low-income areas would receive \$20 million.

Job Corps, which trains disadvantaged youth in a bootcamp-like environment, would receive \$40 million.

The Neighborhood Reinvestment Corporation which makes grants to community-based groups that develop affordable housing would also receive \$10 million.

Youthbuild—a new program developed by Senator KERRY and included in the housing reauthorization bill in which community groups educate and train low-income youth while they rehab and construct affordable housing—would receive \$10 million.

Two new programs to increase the availability of capital for business development would also be funded: The Enterprise Capital Access Program, which was included in my enhanced enterprise zone bill, would be funded with \$20 million to make grants to non-profit, community-based lenders to provide loans for business and other community development in distressed communities. And a National Community Economic Partnership Program would be funded with \$40 million to provide grants to community development corporations to capitalize revolving loan funds for business development lending. Fifty percent of the funds for these two programs could be spent to benefit the residents of distressed communities that do not obtain enterprise zone status.

With this investment program, the enterprise zone tax breaks present a promising experiment to address the challenges confronting some of our most distressed inner city and other communities. But Federal enterprise zones are only an experiment and will reach, at least initially, only a few communities.

We need to do more. We need to make an investment in all our distressed communities at least comparable to what we make here in enterprise zones. Unfortunately, the administration has opposed such an investment program for our cities.

As chairman of the Senate Democratic Task Force on Community and Urban Revitalization, I have heard from our Nation's mayors and other local leaders about hopelessness and frustration in our inner cities that are reaching the breaking point. We saw in

Los Angeles what happens when that point is passed, and I am afraid that if we do not act quickly with more resolve and more forcefulness we will see more Los Angeles in communities across the Nation.

In July, I outlined on the floor of this Chamber a \$6.7 billion program of investment in our cities and other distressed communities. I have not abandoned that program today. Although I believe we are better off if we accept what little urban aid the administration will allow us to provide in this bill rather than prompt a veto, I will continue working as chairman of the Banking Committee and chairman of the Task Force on Community and Urban Revitalization for a full scale effort to provide the investment in our infrastructure and our people that we need to make our cities and our Nation healthy and competitive.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Mr. President, I yield 4 minutes to the distinguished Senator from West Virginia.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. ROCKEFELLER. Mr. President, I will be brief, but I rise to join the chairman of the Finance Committee, and others, in urging all of our colleagues to support the pending tax bill.

If this legislation fails, either through this cloture vote or through a Presidential veto, once again pure politics will have won over public policy. And I should note that I personally have problems with some aspects of this legislation. But it is impossible to craft a bill designed to achieve the goals in question—assistance for economically distressed parts of the country, and economic growth for the whole country—without making some compromises.

After the Los Angeles riots, the President himself promised the people of that city and all of our urban areas that he would come through for them. He centered his promise on his favorite idea—enterprise zones—and this package would deliver on that promise. Did he ever think that the millions of dollars required to finance this effort would just magically appear from nowhere? This package properly finances the enterprise zones and the other growth provisions we included.

While this tax bill does have many worthy initiatives, I am upset that the conferees did not see fit to include an extension of the section 29 credit for nonconventional fuels in the final bill. This body heard a balanced and informative debate on section 29, and supported it with its vote. Unfortunately, because the President boxed himself in with his latest no new taxes pledge, we did not have the revenue to pay for worthy initiatives like section 29. But I

worry that the impact will be thousands of jobs lost. Come the next Congress, I plan to be back again, because this credit is worth it, we need it, and our Nation's energy and environmental security is compromised without Section 29 dependent oil and gas production.

There are many reasons to support this tax package. One of the most important is that it includes desperately needed provisions to invest over \$2 billion in family preservation and child welfare improvements.

As Chairman of the National Commission on Children, I have had the unique opportunity to focus on child welfare issues. With members of the Commission, I spent an intense day in LA juvenile court. I met with teens in the foster care independent living program. Their personal stories and cases touch your heart. One young man gave his name—and his case number. Children aren't numbers and should not feel that they are.

We need to act now, to provide new funds and innovative approaches to shore up our child welfare system that is woefully struggling to keep pace with escalating caseloads of child abuse and neglect.

We need to invest in prevention and new family preservation initiatives to try and solve these problems before the crisis strikes.

Thanks to the leadership of Chairman BENTSON, this package has key provisions that will strengthen the child welfare system, including new funding and reforms so that States can focus their efforts on preventing family crises, breakups, and the need for so many foster placements.

These provisions were drawn from Chairman BENTSON's bill, S. 4—a major initiative announced in January 1991. Since then, child advocates and concerned leaders have been pushing for action. Vulnerable children and families have been waiting for support.

We even included my own amendment to strengthen child support enforcement and push absent parents to pay the child support.

A vote for the tax package is also a vote for children, and a vote for preserving families.

And I want to note that it's also a vote for responding to some urgent health care needs of very deserving Americans. This package includes one of my own provisions to allow Medicare to pay for oral drugs for cancer patients. This package extends vital provisions that rural hospitals are depending on us to enact.

Some extremely important Medicare provisions are also included in this bill. In particular, I am pleased that a portion of a bill I introduced last November, S. 1996, is included in this package of Medicare amendments. In fact, this provision is practically the only amendment which would actually ex-

pand drug coverage for Medicare beneficiaries, and at the same time, is cost effective. If enacted into law, Medicare beneficiaries diagnosed with cancer would be able to take oral versions of chemotherapy drugs rather than having to travel to their doctor's office to receive their chemotherapy intravenously. This provision was given a zero cost estimate because it would actually decrease Medicare charges for physician office visits. More importantly, it would greatly enhance the quality of life for Medicare cancer patients.

There is evidence that when oral versions of chemotherapeutic agents are available, patients experience fewer side effects, such as nausea and vomiting. Additionally, senior citizens won't have to travel, sometimes long distances, to get needed medical care. This is especially important in rural areas, like West Virginia. It is a real hardship, both physically and financially, for families to travel to their oncologists' office to get chemotherapy several days in a row. Frequently, family members have to take off time from work, and then there is the expense of having to stay overnight in a motel when a patient is scheduled to receive IV chemotherapy several days in a row, which is often the case.

Mr. President, this package is full of time-sensitive provisions. While some may not view my cancer provision as particularly time-sensitive, it absolutely is for cancer patients and their families. They, and I, will be very disappointed if this measure is not enacted this year.

This bill also includes a number of provisions to extend special payments to rural referral centers, Medicare-dependent hospitals, and provides guidelines and funding for "Essential Access Community Hospital" rural demonstration projects. And, this bill includes provisions to restore separate payments for EKGs and new physicians under Medicare. An Alzheimer disease demonstration project operating in West Virginia and several other States will end next year even though it is critical to continue this project one more additional year. An additional year of funding will make sure that these demonstration projects have an adequate sample size so that the results of this project are valid. The Alzheimer's demonstration projects will provide important information to the administration and to Congress on services which prove beneficial to families and beneficiaries with Alzheimer's disease.

For the sake of our cities, our children and families, our rural communities, I urge my colleagues to vote for cloture, and for the tax package.

I yield the floor.

Mr. PACKWOOD. Mr. President, I yield 5 minutes to the Senator from Missouri.

The PRESIDING OFFICER. The Senator from Missouri is yielded 5 minutes.

Mr. DANFORTH. Mr. President, I hope the Senate will vote cloture on this conference report and adopt the conference report. This hope is based on several reasons. The first is that this was intended to be a bill, an act of Congress, that responded to the urban crisis in America.

It can be criticized that it did not do enough. Any legislation can be criticized that it did not do enough. But this legislation does provide for enterprise zones, urban enterprise zones and rural enterprise zones.

I would simply say to those who are critics of the legislation, saying that it does not do enough, what is the alternative? Is the alternative to do nothing at all? Is the alternative to not enact the enterprise zone legislation, not address the problem that we told ourselves last summer we would address.

This legislation also provides help for the struggling real estate industry through proposals to provide passive loss relief and pension plan investment in real estate. It would eliminate the age depreciation adjustment and provide penalty free withdrawals from IRA's for various purposes.

The legislation also extends various expiring provisions of the Internal Revenue Code, including the research and development tax credit, the low income housing tax credit, and the targeted jobs tax credit. It really would not be responsible to let those provisions expire, and that is one of the issues that is now before the Senate.

Are we to allow them to expire or are we to extend them in this legislation?

In addition to provisions in the Internal Revenue Code that would expire, there are health provisions that would expire, most importantly aid to small rural hospitals that depend on this legislation for their very survival.

In addition to that, Mr. President, this legislation is a major breakthrough for higher education and for nonprofit organizations in our country. The Bond cap on research universities is removed, the treatment of gifts of appreciated property under the alternative minimum tax is eliminated, all to the benefit of higher education and nonprofit organizations.

The legislation is revenue neutral, and I would simply like to make one concluding point relating to revenue neutrality in the allegation that a tax bill is a tax increase bill. It seems to me that the basic issue on whether legislation is a tax increase bill is there a net increase in the tax burden of the American people.

To say, for example, that to help the real estate industry which is beleaguered in our country by dealing with their problem relating to the 1986 Tax Act and pay for it by extending the depreciation schedule, to call that exten-

sion of the depreciation schedule a tax increase to me is really stretching matters in our definition of what is a tax increase. A revenue neutral bill is not a tax increase. Any change in the Internal Revenue Code could be attacked as a tax increase, because any change necessarily relieves the pressure somewhere and increases the burden somewhere else if it is going to be revenue neutral.

This is not tax increase legislation. This is an improvement in the Internal Revenue Code. It is an important step forward and I would hope that we would vote for cloture and vote for the bill.

The PRESIDING OFFICER. The Senator from Oregon.

Mr. PACKWOOD. Does the Senator from Colorado wish time.

Mr. BROWN. No.

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum and ask unanimous consent that it be charged equally to both sides.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 14 minutes and 40 seconds remaining.

Mr. BENTSEN. Mr. President, I yield 5 minutes to the loyal opposition.

Mr. BROWN. Mr. President, I want extend my thanks to the distinguished chairman of the Finance Committee for the allocation of time and for his exceptional courtesy.

I also want to extend my thanks to both the chairman and the ranking member of the Finance Committee for what I believe is an outstanding job in trying to craft a bill.

This bill is deficit neutral, at least that is my understanding. It includes many provisions that I think are needed, changes in the tax law. It reflects a thoughtful, thorough approach to examining the problems and trying to address them.

I reluctantly rise to voice my opposition to the measure because it is my understanding, while the bill is deficit neutral, it is not revenue neutral; that, far from simply being an offset, as I believe many Members understand it—that is, raising taxes and cutting taxes in equal amounts—it does something significantly different. What it does is raise more revenue than it releases in tax cuts.

The bottom line is, over 5 years, it is my understanding, the bill has a \$3.2 billion increase in spending. That is what this bill does. It raises \$3.2 billion

more money than it cuts in taxes and it, in effect, raises \$3.2 billion to finance additional spending programs.

Now, the sponsors of the bill think that is good policy, that the revenue raises are appropriate, and that the spending is appropriate. I do not question their motives at all, but I do question the contention that this is revenue neutral.

I believe a reasonable review of the facts will indicate very clearly this bill is a tax increase. It is a \$3.2 billion tax increase spent on new spending, appropriated or used in new mandatory spending programs.

Mr. President, you could still be in favor of this program. It has some very good things in the tax bill, but there is no question that this is a tax increase.

Some believe that is the right prescription for our economy in these difficult times. I personally do not. I think it is a mistake to deal with our economic problems with more tax increases and more spending increases. Far from it. I think we need to look at what the rest of the world is doing to address economic problems, and that is bite the bullet on spending.

So I rise in opposition to this measure because it is a tax increase, very clearly.

Second, I have concern about the measure because it violates the Budget Act, not once, but at least eight times that we have been able to indicate and there may be more.

This bill guts the protections put in our Budget Act. It waives the Budget Act in a number of areas, including specifically authorizing new spending for administration of Medicare. \$1.147 billion of new spending is authorized in this.

It specifically violates the Budget Act agreement. And, Mr. President, what it does is it provides a loophole in the Budget Act. Once this loophole is exploited, once it is developed, once it is authorized, once it is pushed through, this new loophole will be available to every good program we have, and we have hundreds of good programs.

If you want to gut the Budget Act, if you want to gut our controls, meager as they are, in trying to control this deficit, then you will be comfortable in voting for this bill.

But if you are concerned about it, as I know the Members of this Chamber are, I hope we will say there is a better alternative.

As good as the bill is—and there are many good provisions in it—as good as the bill is, I think we can do better. I think we can go back and design a measure that will not break the budget, will not violate the Budget Act, and will take care of the essential bills before this Congress.

I yield back my time, Mr. President. Mr. BENTSEN addressed the Chair.

The PRESIDING OFFICER. The Senator from Texas.

Mr. BENTSEN. Mr. President, I yield myself 2 minutes.

I think my friend from Colorado has made an interesting argument, but the point is he has made his argument from OMB numbers, and we are dictated, insofar as what we have to do, by CBO numbers. And they are quite different. The OMB numbers are not applicable to this bill at this point.

And if we are looking at net tax increases, we have the same situation, apart from OMB, that we had in the energy bill that the vast majority of the Members of this body have overwhelmingly voted for.

I retain the remainder of my time.

H.R. 11, THE REVENUE ACT OF 1992

Mr. MCCAIN. Mr. President, as I said when this legislation left the Senate on September 29, 1992, this is just another tax increase. Although Congress included many good tax incentive provisions like enterprise zones, Indian enterprise zones, expanded individual retirement accounts, modification of the passive loss rules, the extension of the low-income housing tax credit, extension of the targeted jobs tax credit, extension of the mortgage revenue bonds and mortgage credit certificate provisions, extension of the R&D tax credit, and an extension of qualified small-issue bonds, it also includes a \$28 billion tax increase.

The last thing our struggling economy needs is a \$28 billion tax increase. While the tax incentives included would provide some economic stimulus, those incentives would be stifled under the tremendous burden of a \$28 billion tax increase. We cannot, and never will, tax our way to prosperity.

Mr. President, here is a small sampling of the tax increases included in H.R. 11. The safe harbor, which is the amount a taxpayer must pay to avoid interest and penalties, for individuals who pay estimated taxes is made permanent at 120 percent raising \$3.9 billion over 5 years. This tax increase will prove to be particularly destructive to small business and the self-employed.

For those who pay estimated corporate taxes, the percentage is permanently increased to 100 percent safe harbor. This tax increase will raise \$5.7 billion over 5 years. This will not create jobs, opportunity, or economic growth.

Securities dealers will be forced to mark-to-market their inventories of securities regardless of the price of the security at purchase. This tax increase raises \$3.7 billion over 5 years. This tax on phantom gains will do nothing but damage to the efficient workings of our equity markets and our economy which they finance. This is simply bad for the economy.

Finally, a \$10,000 cap is placed on moving expense deductions. The bill also eliminates meals and qualified sales expenses, and increases the threshold to 60 miles. This tax increase

raises \$3.2 billion on working men and women and their families who must move to keep their jobs or move to find a new job. This provision is particularly ill-conceived in this time of great economic change.

Mr. President, as I have said before, we cannot tax our way to prosperity. The tax increases in H.R. 11 are not the answer to our economic problems. That is why I oppose H.R. 11.

REGARDING S. 3004

Mr. SANFORD. Mr. President, I would like to engage the chairman of the Finance Committee, Senator BENTSEN, in a colloquy on legislation I introduced that would reliquidate the entry into the United States of four warp knitting machines.

Mr. BENTSEN. I would be happy to discuss this matter with the Senator from North Carolina.

Mr. SANFORD. I introduced S. 3004 to provide for the liquidation or reliquidation of a certain entry of warp knitting machines as free of certain duties. This bill would correct an error made against a small business in North Carolina.

This business imported four warp knitting textile machines made in Germany. The machines were properly classified under the Harmonized Tariff Schedule and admitted under the correct duty-free heading. The company then exported the machines through a third party in Miami to a Venezuelan company, with the understanding that the machines would be returned if the company could not operate them as they wanted to. This, in fact, is what occurred and the machines were returned to my constituent in North Carolina. However when the machines reentered into the United States, they were improperly classified upon reentry causing the machines to carry a 4.4-percent duty. Not well versed in the bureaucratic procedures, the small company protested the assessment of the new duty, but did so, according to Customs, in an insufficient and untimely manner. Now, the company owes approximately \$25,000 in duty with interest accruing daily, and will be placed on a sanctions list if these improperly assessed duties are not paid, effectively inhibiting its ability to do business. Litigating this manner would do more harm than good and the company cannot afford to absorb this loss.

Customs admits that when all of the facts were sorted out, that a duty should not have been imposed on the warp knitting machines. They admit that they have made an error and that no duties are owed, but state that because the protest was not filed in a sufficient manner, they cannot do anything other than to insist that these duties be paid. Therefore, there is no appropriate relief other than this type of legislation.

I had urged my colleagues to support inclusion of this relief in any mis-

cellaneous tariff legislation the Congress may adopt because I think it is the only fair and just thing to do for my constituent.

However, I now understand that there will not be a miscellaneous tariff package this year. It is my desire, as a matter of fairness, that Customs hold off on collecting the duties assessed on the warp knitting machines since they should not have been assessed in the first place. It is possible that tariff legislation may be possible next year, and I hope to pursue this matter then.

Mr. BENTSEN. I certainly understand the concerns of the Senator from North Carolina and regret that we could not address this trade issue this year. I hope there will be some means for the Customs Service to address the concerns Senator SANFORD has raised, and I thank Senator SANFORD for taking the time to speak on the importance of this legislation.

Mr. SANFORD. I thank the Chair of the Finance Committee for his attention to this important matter.

(At the request of Mr. BENTSEN, the following statement was ordered to be printed in the RECORD.)

REGARDING A STUDY OF ALLEGED INTELLECTUAL PROPERTY RIGHTS VIOLATIONS BY TEXTILE MANUFACTURERS IN PAKISTAN.

• Mr. SANFORD. Mr. President, I would like to engage the Chairman of the Finance Committee, Senator BENTSEN, in a colloquy on intellectual property rights violation by textile manufacturers in Pakistan.

Mr. BENTSEN. I would be happy to discuss this matter with the Senator from North Carolina.

Mr. SANFORD. U.S. textile manufacturers invest substantial amounts of money, effort, and resources in creating and copyrighting textile designs. The designs are copyrighted in the United States, and are produced and exported throughout the world. Although these products are theoretically protected by international copyright law, I have been informed of actions by foreign companies which amount to stealing these copyrighted designs, illegally reproducing them, and selling cheaper reproductions in world markets.

I have been informed that this problem is particularly acute in Pakistan. Textiles copyrighted and produced in America are being illegally reproduced by Pakistani textile corporations and sold at a lower price, to the detriment on United States and North Carolina business.

I had hoped to mandate a study on this issue, but given that we will not be able to take up broad-based trade legislation this year, I am deferring this action until a more suitable time.

I do hope that the U.S. Trade Representatives, the Commerce Department, and U.S. Customs Service will thoroughly look into this matter and will take all steps available to them to

ensure that this practice does not continue. In looking into this matter, I encourage USTR to consult with all appropriate Government agencies as well as representatives of the private sector.

Mr. BENTSEN. I certainly understand the concerns of the Senator from North Carolina and thank Senator SANFORD of taking this time to speak on the important of this issue.

Mr. HELMS. Mr. President, I too, would like to express my support for examination of this problems by USTR and other agencies and agree with my colleague from North Carolina.

Mr. SANFORD. I thank the chair of the Finance Committee for his attention to this important matter and the Senior Senator from North Carolina for his support.

Mr. RIEGLE. Mr. President, as chairman of the Finance Subcommittee that has jurisdiction over the Medicaid Program, I am disappointed that the conference report to H.R. 11 does not include important Medicaid provisions that were a part of the Senate version of the bill. I am more immediately concerned that a provision to restore funding, a total of \$43 million, for two demonstration projects from the Omnibus Budget Reconciliation Acts [OBRA] of 1989 and 1990 was not included in the final conference report. These demonstrations would expand Medicaid for pregnant women, children, and low-income families. Several States, including Maine and Michigan, have already been awarded funding. Though they have funds to enable them to continue until early next year, we need to act legislatively to restore funding as soon as possible next year and the majority leader, Senator MITCHELL, and I have been working to accomplish this. Michigan's Caring for Children Program provides needed health care services to tens of thousands of children. These demonstration programs will serve as a model for our efforts to improve access to health care nationwide.

Mr. MITCHELL. I, too, am extremely concerned about restoring funds for these Medicaid demonstration projects. Maine participates in both programs, one for low-income pregnant women and children, and the second for low-income families without regard to categorical eligibility. As the Senator from Texas knows, I have been working to reform the Nation's health care system. These demonstrations can provide important information about how best to expand access to health care for low-income Americans as part of a larger reform package.

Mr. BENTSEN. I appreciate the concerns of the Senators from Maine and Michigan, who serve with me on the Finance Committee. Senators MITCHELL and RIEGLE have been working hard to resolve the problem described. We worked together to develop a provision both to restore funding for these

projects and add \$10 million new sub-State projects, which Texas among other States is very interested in applying for. It was included as part of S. 3274, the Medicare and Medicaid Amendments of 1992, which was then added to H.R. 11 and passed by the Senate. I share the Senators' disappointment that the House refused to deal with the Senate on the Medicaid provisions in H.R. 11, and therefore, this provision—along with a number of other worthwhile Medicaid amendments—were excluded from the conference report on H.R. 11.

I would like to assure the Senators from Maine and Michigan that I understand the urgency of the need to restore funding for the demonstration projects they have described and will cooperate fully in attempting to get the needed legislation enacted in a timely fashion. Restoring the funding for these important demonstration programs will be a high priority for me next year.

Mr. RIEGLE. I greatly appreciate the efforts of the distinguished chairman of the Finance Committee who has been a leader in expanding health care services for children and pregnant women under the Medicaid Program.

Mr. WELLSTONE. Mr. President, we are nearing the end of what has been a very frustrating legislative session for everyone involved. It has been frustrating for many reasons. We are in an election season, which has limited any willingness to put partisanship aside and, thus, has limited our ability to really address this country's problems. And there is no doubt that we have some pretty enormous problems that need to be addressed, especially in our cities. We have been in a deep recession for far too long. Our cities are falling to pieces. Much of our transportation infrastructure is crumbling. Children go to schools with inadequate resources to prepare them for the future. Higher education has become increasingly difficult for many Americans to afford. Health care costs are high and getting higher—a single illness can financially wipe out a family. In short, Mr. President, fewer and fewer Americans can conceive of the American Dream as anything more than a dream. This is especially true for low and moderate income families.

These are just a few of the serious problems confronting our Nation in this election year. It has been many months since the riots in Los Angeles. Those events were supposed to have spurred us to take significant action here in Washington. But instead of facing squarely these urban problems and developing effective solutions to address them, we have converted an urban aid bill into an ill-conceived and irresponsible package of tax breaks for wealthy individuals and corporations.

The goal of this conference report—our promise to the American people—

was to address some of the fundamental social problems that provoked the riots in Los Angeles. This was to be our response to the desperation born of no opportunities, poor housing, bad schools and, in brief, no hope for many, many Americans. But that is not what we have done here, Mr. President. We have not found the will to actually spend money on our cities, on those programs that we know work and that we know can address the dire problems that face us. Instead, the conference report we have before us is full of special provisions for wealthy Americans and corporations.

Let me be perfectly clear about my intentions here, Mr. President. I have just voted to limit debate on this conference report, but I intend to vote against the bill itself. I believe that there are things in this report worth supporting. And I believe this conference report merits a straight up and down vote here in the Senate. It should not die simply because a minority in the Senate wants to prolong debate indefinitely. That is why I supported cloture. However, Mr. President, I did not support H.R. 11 and I do not support this conference report. This report does very little to address the most urgent needs of our Nation. It does nothing to help us bring the deficit under control, in fact, it will probably contribute to its increase in the long run. It does very little to get our economy going again. It does little to bring hope to the millions of Americans who are wondering when they might work again, or to help restore confidence in the ability of this Government to do something positive to alleviate the problems in our cities and in the workplace.

It does send a message to the American people about our intentions here in Congress. It tells them that we are not serious about helping the cities. It tells them that we are not serious about helping the poor. It tells them that we are still willing to follow the failed trickle-down economic policies of the last 12 years—the very policies that have gotten us into this mess. If we agree to this report, we will continue our policies of taxing Americans in order to subsidize the wealthy, in the hope that they will invest wisely and create new jobs. But that policy has clearly failed.

I would have preferred to see the revenues raised in this conference report—close to \$28 billion, as I understand it—used to address some of the problems I have described. I am, Mr. President, very happy to see that we can raise this kind of money in these tough budgetary times. I would like to call my colleagues' attention to the fact that this is only 7 billion less than the \$35 billion in urban aid requested many months ago by the U.S. Conference of Mayors. This means that we could have used this additional money for infra-

structure, housing, public works, education and social services. We are nearing the end of the fiscal year 1993 appropriations process now and we all know how difficult it has been, under the constraints of the 1990 budget agreement, to find the funds necessary for many seriously underfunded programs. Just a week ago, in the VA/HUD appropriations conference, the conferees were forced to cut a third of the funding for emergency shelter grants for the homeless. That means they cut \$25 million out of a \$74 million program. Here, in this conference report, we have raised over \$28 billion to pay for expanded tax breaks. We could easily have made up for the shortfall in funding for programs for the homeless with this money. That is but one, relatively small example. I am sure we can all think of many, many other programs that we have been forced to freeze or cut, even when we know they are effective, in order to remain within the budget agreement.

I oppose this conference report and I urge my colleagues to oppose it, for one simple reason. The main thrust of the conference report before us is based on a dubious idea, at best. Provision after provision writes off our ability to manage the economy, by giving away billions in tax breaks. This sort of policy limits our future ability to formulate effective policy. But it is also very difficult for us to predict how much this might cost. It is well known how hard it is to estimate the real cost of tax expenditures. They could easily be double or triple the estimates that have been provided. Why, the capital gains provisions of the enterprise zone parts of the report will only take effect outside of the budgetary window. Can anyone tell me with any degree of certainty how much this will cost? Is anyone ready to predict, with any certainty, how much we stand to lose on the IRA provisions in this report outside of the 5 year budget window? Do we know, honestly, the long-term effects of the passive loss rules this report changes? Can anyone tell me where we can get the revenue, 5 years from now, to replace this money? How can we take this risk when we are faced with a huge deficit? How can we take this risk when we are faced with a dire urban crisis?

To be sure, there are a few token provisions in the report that can be described as urban aid. The conference report provides over \$2.5 billion in tax credits for the creation of enterprise zones in 50 areas, 25 urban and 25 rural, around the country. That might sound, at first glance, pretty generous—50 places around this country would receive something like \$50 million in tax incentives to encourage business investment in each zone. But let's put this in perspective. The original House version of the bill provided that areas where census tracts have an unemploy-

ment rate 1.5 times the national average and a poverty rate of 20 percent in 90 percent of the census tracts would qualify to be enterprise zones. I am sure we all agree that any area that meets these criteria is in dire straights. With a national average unemployment rate of 7.7 percent right now, areas that would qualify as enterprise zones would have an unemployment rate of 11.7 percent. It has been a very long time since we have seen numbers like that. Some analysts argue that under these criteria, 150 American cities would qualify as enterprise zones. Let me be very clear here. That's 150 entire cities. Do we really expect the tax credits for our 50 small zones to make a difference in all of these areas? Is this honestly the best we can do?

Many of us have expressed our doubts about the effectiveness of enterprise zones. They have worked in some places, not in others. Community development officials in Minnesota have suggested to me that enterprise zones can work, but only if linked to comprehensive community development efforts on a local level. Even then, and even with investment in infrastructure, education, training, housing and community policing, we simply do not know how effective these zones will be. We are experimenting with a way to help business people who, in turn, might help people who live in distressed parts of the country. This looks, at least on the face of it, like the same old, tired trickle down ideas of the last 12 years. So little has trickled down that we are now faced with a dire urban crisis in this country. Is it wise to pursue the same sort of policies that got us into this mess in the first place?

Certainly, there are a few provisions tossed into this package that might help relieve some social problems. Foster care reform is good, changing the way savings are counted in eligibility for AFDC is good, providing additional money for the JOBS Program is to be commended. Mr. President, I have, in other circumstances, supported and even cosponsored legislation that would further each of these goals. I would like to support them again. I am disappointed that we will not have separate votes on these issues, separate debates during which we can discuss their merits. But these measures are relatively modest. Aside from the enterprise zone section of this report, we are going to provide less than \$10 billion in programs that might benefit low-income Americans. That is less than a third of this entire package.

Mr. President, we have labored mightily for an urban aid bill that would put our cities back on track. Instead we have given birth to a tax bill that pretty much ignores the cities. This is not an urban aid package. It will do very little to help rebuild our

cities. It will do little to revive the economy in the short term and, in the long term, it could do great harm. It will not help us to control the deficit and, in fact, it will probably make it even more difficult for us to control it. It is, on the other hand, a huge gift to wealthy individuals and corporations, many of whom are already failing to pay their fair share of the tax burden. Mr. President, I cannot support this conference report. This is precisely the kind of legislation that has frustrated many Americans, that has given this Congress the reputation of being a do-nothing Congress. I urge my colleagues to oppose it.

#### MEDICARE PROTECTION ACT

Mr. HARKIN. Mr. President, the Medicare Protection Act of 1992 introduced earlier this year is now included in the Revenue and Urban Aid Act of 1992. This provision, if enacted, would protect the Medicare Program from billions of dollars now lost to overpayment, fraud, and abuse. This provision, if adopted, would save several billion in fiscal year 1993.

Mr. President, this is an issue that I have been following for some time in my capacity as chairman of the Labor, Health and Human Services and Education Subcommittee. The very first hearing I held as chairman of the subcommittee in February 1989 was on this issue. As the members know, the Medicare Program is managed by 54 different contracts awarded by the Health Care Financing Administration. These contracts are funded by a Medicare contractors appropriation which in 1993 totaled \$1,609,000,000. Buried within this line item for medicare contractors is an amount made available for audit activities. Even though these audit activities save \$13 for every dollar spent, the administration has never funded this audit activity at an appropriate level. The need to process claims and make payments on time has always taken priority and this fact of life has held down funding for the audit activity.

In the spring of 1989 I had a discussion with Senator SASSER, chairman of the Senate Budget Committee and with Richard Darman, Director of the Office of Management and Budget in an effort to reach agreement on excluding funds spent on audit activities in the Medicare Program from budget ceilings. The precedent for doing that was included in previous omnibus budget reconciliation bills when the Finance Committee was given credit for directing increased appropriations for this activity. Chairman SASSER and OMB Director Dick Darman, while sympathetic to my concerns were unable to provide the subcommittee with any relief. That has been the case until just recently when this legislation was included in the Revenue and Urban Aid Act of 1992.

Mr. President, the Budget Enforcement Act of 1990, another precedent for

what is proposed here was adopted into law. Included in the Budget Enforcement Act of 1990 was authority for the IRS to spend up to specified amounts in each of 5 years on audit activities without these additional appropriations being scored against budget ceilings. The logic of this provision is that these additional expenditures will produce revenue to the Government well in excess of the actual amount spent. The logic of this provision is that to unnecessarily restrict spending on these audit activities is counterproductive to our efforts to reduce the deficit.

Mr. President, the provision at issue here is based on exactly the same logic. For each year through fiscal year 1995, audit activities of the Medicare contractors appropriation could be set at a level up to an 11.6-percent increase over the previous year's level. This increased amount would not count against the budget ceilings and would therefore permit substantial savings each year. The 11.6 percent figures is selected as it represents the 10-year historical average of growth in Medicare claims workload. These audit activities should at least keep up with the increased growth rate in claims if we are to have adequate protection for taxpayer dollars. This will also better insure proper enforcement of Federal laws and regulations.

Mr. President, the fiscal year 1993 act is already adopted and signed into law. This provision could not be adopted and enacted unless we have a supplemental later in the year. Triggering this provision later in the year could mean adding up to \$187 million to the already approved level. This, however, would save \$2.4 billion based on the success based on GAO audits that Medicare audit activity has had in eliminating fraud, waste, and abuse.

Mr. President, this provision of the tax bill, if enacted, would save over \$2 billion in the first full year of implementation and additional billions for each year through fiscal year 1995.

Mr. WARNER. Mr. President, I once again stand before my colleagues in regard to my tax-exempt disclosure legislation. This legislation, which was accepted by the Senate as part of H.R. 11, was subsequently dropped in Senate-House conference. Yes, there was one small aspect of it which was retained, but by and large, the legislation was dropped in an effort to pare down the omnibus tax bill.

Mr. President, this greatly concerns the Senator from Virginia. Not only because it is legislation I worked very hard to get passed, not only because I met with numerous persons in an effort to make the legislation bipartisan, but because I firmly believe the American public will be the losers if this legislation—or some better formula for disclosure—is not eventually enacted into law.

I have been around this body for many years, and have attended my share of conferences. I know that not every part of a bill can be retained and enacted into law. A revenue estimate by the Joint Tax Committee determined that the cost of enacting this legislation would be minuscule. Since the administration's primary problem with H.R. 11 is the excessive cost of the bill, I would think that amendments which would soar the cost of the bill would be deleted. My legislation, on the other hand, appears to have been dropped for reasons, at present I do not know. But I will soon determine why, for I am determined to press on in the next Congress for greater disclosure and for an easing of the means to get copies of that disclosure.

Mr. President, as I have previously expressed to this body and to the American public, the United Way tragedy was the original impetus for this legislation. I strongly believed the average donor who makes \$40,000 a year must be made to feel confident that his contributions are going to help the cause the charity was organized for, and not toward first-class airfare, limousine service, exorbitant salaries, and so forth.

And, Mr. President, the worst part of the United Way ordeal is that it was not an isolated incident. Since the time when Mr. Aramony's excessive lifestyle was made public, stories have continuously come to light illuminating similar practices occurring within other tax-exempt charitable organizations.

My legislation was nothing short of a consumer protection amendment, and I must say one that was greatly needed. It was not a pork amendment which would focus on my State, it was not an amendment which would make huge headlines, it was simply necessary legislation which took the first step toward lifting the veil on the expenditures of tax-exempt organizations.

Mr. President, my legislation would have taken current law as it pertains to reporting requirements for tax-exempt organizations and extended them a few steps further. Currently, tax-exempt organizations are required to file a Federal 990 form with the IRS detailing, among other items, their income, expenditures, fundraising costs, and salaries of their five highest paid employees.

The problem with current law, however, is that the IRS and the tax-exempt organization both have a copy of the 990 form, but the organization is not required to notify donors that this form is available, or to send it out to the donor. Thus, any individual interested in viewing the statement must go to the organization's headquarters or contact the IRS and request the information. Moreover, the reality is that most persons are not even aware such a form exists, or that they are entitled to view or obtain copies of it.

My legislation would have put the burden upon the charity to inform the public that such a disclosure form does exist, and at the public's request, the charity will send the individual a copy.

Further, my legislation would have expanded the substance of the current 990 form in the following ways. First, after an individual has indicated that they desire a copy of the statement, the statement must be sent to that person within 30 days of the charity receiving the request. Second, non-compliance with the request would result in a \$50 per violation per day fine. Third, the form would be expanded to include not only the top five highest paid employees, but all employees making over \$100,000.

My legislation would have exempted hospitals, religious organizations, and churches.

There were two pieces of legislation pertaining to tax-exempt organizations, which were introduced in the House by my good friend, and a very experienced legislator, Representative PICKLE, of Texas. One of his bills addressed many of the same issues as my legislation, and his legislation was retained in conference. I commend Congressman PICKLE on his efforts, which in many ways mirror my efforts on this side.

Congressman PICKLE's legislation says that when an individual walks into a tax-exempt organization, he must be told that a 990 disclosure form exists and it is available for the individual if he desires. His legislation, like ours, would put the burden on the organization to notify the individual that this information is available.

Congressman PICKLE's legislation does not go as far as mine because it does not include a requirement for additional information be made a part of the 990 form that my amendment would require. But, Mr. President, one aspect of my legislation which was retained in conference was the penalty provision, increasing noncompliance penalties to \$50 a day per violation. A small step forward in a campaign I will continue to wage. However, this, in combination with Congressman PICKLE's legislation, provides a foundation, and I look forward to working with him in the next Congress to formulate new legislation. I am always open to suggestions as to how this legislation can be improved and become law.

Mr. President, I cannot stress enough my interest in this legislation and my determination to see it pass in the next Congress. I strongly believe the American people are the losers if we don't enact legislation to this effect, and I will not give up in my next 4 years until I achieve my goal.

In conclusion Mr. President, I want to thank the many people, in and out of Government, on the Senate Finance Committee, and on my staff, particularly Lori Nirenberg and Gerri Engelhart for their valuable assistance.

Mr. COHEN. Mr. President, the conference report on H.R. 11 includes two provisions based upon legislation I introduced with my colleague, Senator PRYOR, to protect Medicare beneficiaries from excessive physician charges and to protect the Medicare Program from abuse by unscrupulous medical equipment suppliers. These two proposals were the result of extensive investigations and hearings conducted by the Senate Special Committee on Aging, and I am pleased that the conferees agreed to include them in their report.

The conference agreement consolidates two separate bills that Senator SASSER and I introduced to combat fraud and abuse in the Medicare durable medical equipment program (S. 1988 and S. 1736). These provisions are anticipated to save well over \$100 million over the next 5 years and were the result of over a year's worth of investigations and hearings conducted by both the Senate Special Committee on Aging and the Senate Budget Committee into the practices of unethical durable medical equipment dealers who have taken advantage of weaknesses in the system to bleed millions of dollars from the Medicare Program.

The provisions included in the conference agreement will not only help to combat fraud and abuse, but they will also establish more rational payment and administrative policies for durable medical equipment.

Among other provisions, the conference report revises and strengthens the national standards with which suppliers must comply in order to receive a supplier number. HCFA recently issued regulations requiring suppliers to disclose certain ownership information and to certify that they meet certain basic operational standards, such as repairing and maintaining rental items, answering questions and complaints, and accepting returns. This legislation would strengthen those standards by requiring the suppliers also to comply with all applicable State and Federal licensure and regulatory requirements, maintain a physical facility on an appropriate site, and have proof of appropriate liability insurance.

The legislation also prohibits the Secretary of Health and Human Services from issuing more than one billing number to a supplier, unless more than one is appropriate to identify subsidiary or regional entities under the supplier's ownership or control.

The conference agreement also provides for more uniform national coverage and utilization review requirements. HCFA is currently in the process of developing uniform coverage and utilization criteria for 100 items of its own choosing. This legislation would require the Secretary, in consultation with representatives of DME suppliers, beneficiaries, and medical specialty organizations, to expand that list to 200

items which are either frequently purchased or rented, or which are frequently subject to a determination that the item is not medically necessary. An item may also be included if the coverage or utilization criteria applied to that item is not consistent among carriers.

The Omnibus Budget Reconciliation Act of 1990 prohibited suppliers of DME from distributing completed or partially completed certificates of medical necessity [CMN's] to physicians or Medicare beneficiaries. Both suppliers and physicians have complained that physicians do not always have the product information necessary to complete the form, and that the forms are too long and time-consuming for physicians to complete, which may decrease beneficiary access to needed equipment and supplies.

This legislation modifies the current prohibition by permitting suppliers to complete the administrative section of the form; that is, information identifying the beneficiary, supplier or provider; and description of the item to be provided; and a product code identifying the item. If supplier does choose to complete this information, he or she must also include price information to ensure that the physician is aware of the cost of the item. The physician would still be required to complete all information related to medical necessity. Additionally, because there are no standardized forms to document medical necessity, the bill requires the Secretary to develop standardized certificates of medical necessity for DME, prosthetics and orthotics.

The legislation would also modify current antikickback law. Currently some financial arrangements between nursing homes and providers appear to circumvent Medicare antikickback statutes. For example, suppliers and other third-party billers pay nursing homes for employment costs of paperwork and warehousing of equipment as an inducement for business. This bill strengthens the antikickback statute by clarifying the definition of inducement as kickbacks.

In addition, there currently are no balance billing limits applied to DME, and there are no circumstances specified in current law under which beneficiaries are not liable for charges for DME furnished by suppliers on an unassigned basis. This legislation stipulates circumstances—such as when the supplier has been excluded from the Medicare program or when Medicare has denied payment for the item in advance—under which Medicare beneficiaries are not financially liable for DME or prosthetics and orthotics furnished by a supplier on an unassigned basis.

Finally, under present law, ostomy supplies, tracheostomy supplies, urologicals, surgical and other medical supplies are included in the prosthetics

and orthotics fee schedule, which is subject to regional payment limits. An inquiry by the Budget Committee found wide variation in the prices of these items and also found that these items were subject to abusive billing practices. This legislation requires that these items be reimbursed under a national fee schedule similar to the DME fee schedule.

Mr. President, these reforms are critical if we are to ensure that scarce Medicare dollars are not wasted on overpriced or useless medical equipment.

The conference report on H.R. 11 also includes the provisions of the Medicare Beneficiary Payment Protection Act, which Senator PRYOR and I introduced earlier this year to ensure that Medicare beneficiaries receive the protection they have been promised by law against excessive physician charges.

In 1989, Congress enacted legislation to limit the amount doctors could charge their Medicare patients over and above the Medicare-approved amount. Generally referred to as the limiting charge, this cap was intended to protect Medicare beneficiaries from excessive, out-of-pocket medical expenses.

However, the limiting charge is like a seat belt: it offers protection, but only if it is used.

Earlier this year, the Special Committee on Aging held a hearing which revealed that many doctors are still charging their Medicare beneficiaries more—at times even thousands of dollars more—than the billing limits allow. Many of these overcharges are the result of honest billing errors. Others may be intentional. In either case, however, the Medicare patient is far too often stuck with a very big bill that Congress did not intend him or her to pay.

Among other provisions, the conference agreement on H.R. 11 clarifies that beneficiaries should not be held liable for charges in excess of the billing limits. It also requires physicians to make refunds to beneficiaries for charges that exceed the billing limits.

In addition, the legislation requires Medicare to examine each unassigned claim for limiting charge compliance prior to payment and to notify physicians when the limiting charge has been exceeded. Finally, the legislation requires that information about the limiting charge be included in the Explanation of Medicare Benefits form sent to the beneficiary.

Enactment of these provisions will ensure that the promise of protection against excessive medical bills that Medicare beneficiaries were given with the enactment of the limiting charge in 1989 is fulfilled.

Mr. President, once again, I am pleased that both of these provisions have been included in the agreement, and I thank the distinguished chair-

man of the Finance Committee for his support.

Mr. SEYMOUR. Mr. President, I rise to explain my vote in support of the conference report to H.R. 11, the Revenue Act of 1992. It is not without some difficulty and reservation that I make this difficult decision.

The reason why I support this legislation is because I believe, in some small ways, this bill will create jobs and promote economic growth.

In my statement of support for the Senate version of H.R. 11, I stated that I had reservations concerning the tax provisions in the bill. My main concern, as it has always been, is whether there are increases in the marginal tax rates. The Senate version contained permanent extensions of two provisions which are hidden marginal tax increases—itemized deductions and a phaseout of the personal exemption for higher taxpayers. I opposed these provisions because I believe higher marginal rates on individuals will mean less money in the hands of individuals. Less money in the hands of individuals means less money saved to build our capital base for investments—investments in new or expanding enterprises that are necessary to create new jobs.

While I'm not completely enthralled with the final version of this bill, I do believe that there are several elements which will have a positive impact on our economy. They include tax breaks for investors who open businesses in economically depressed areas. These measures, known as enterprise zones, have the potential of turning around areas that have been plagued by high unemployment and negative business growth. While they will not create economically vital areas overnight, they will begin the process of rebuilding, which is the necessary first step.

In addition, I'm pleased by the provisions which expand the use of individual retirement accounts [IRA's]. IRA's are important to rebuilding our depleted savings rate and capital pool. This measure will also allow penalty free withdrawals for the purpose of purchasing a first-time home, or to pay for catastrophic health care or to pay for a college education, or to allow the longterm unemployed to pay for expenses.

The bill also repeals the luxury tax on jewelry, boats, furs, aircraft and indexes for inflation the luxury tax on automobiles. Two years ago, misguided members of the majority, who thought imposing a luxury tax would soak the rich, have instead cost thousands of American workers their jobs and income. A repeal of the luxury tax will help these industries rebound from this recession.

Also, there are a number of important tax credits in this bill that are temporarily extended or made permanent. These provisions include: permanent extension of the low income hous-

ing credit which provides incentives for the building of housing for the poor; permanent extension of the targeted jobs tax credit; temporary extension of the R&D tax credit and mortgage revenue bonds, among others.

Lastly, the conference report contains a provision I worked hard to include in the Senate version of H.R. 11. This provision will make it easier for victims of Presidentially declared disasters to rebuild their lives. With a few simple modifications to the Tax Code, we will give disaster victims the additional time they need to rebuild or purchase a new home, allow them to use personal property proceeds to make up for real property proceeds shortfalls, and make it easier for them to deal with personal property losses. Because this measure will help victims of the Oakland firestorm, as well as the many other natural disasters that have struck this year in California and across the Nation, the impact of this legislation will be far reaching.

For the reasons I have outlined, I support final passage of the bill.

Ms. MIKULSKI. Mr. President, I support H.R. 11, the Revenue Act of 1992, but with some serious reservations.

This bill is far from perfect. It does not do enough to help out the middle class, and it does not do enough to stimulate our economy, but it is an important step. The tax bill also does not make sure that the very wealthiest Americans, making about \$200,000 per year and more, pay their fair share of the tax burden. Nevertheless, I am going to support this bill.

I will support it because I believe this bill is primarily about tax cuts: Tax cuts for businesses and individuals to help make our Tax Code fairer and to help create jobs. And it pays for those tax cuts, dollar for dollar, with revenue increases—mainly on businesses like securities firms, who will have to reflect the real value of their assets for tax purposes. It also makes sure that companies can deduct only certain expenses for business meals. And the bill denies tax deductions for private club dues, and denies special tax treatment for certain stock transactions in bankruptcies. These are the types of tax increases in H.R. 11, and they are in the bill only to make sure that other tax cuts are possible.

If I thought H.R. 11 would put a bigger tax burden on most Americans, I would work to kill it.

One of the important tax cuts in this bill is the repeal of the so-called luxury taxes. Most important to Maryland is eliminating the luxury tax on boats. This tax has crippled America's boating industry, and has already cost many jobs in Maryland. That is why I have strongly opposed the tax, and why I am glad we finally have a chance to repeal it by passing this bill.

I know that many middle-class Marylanders are struggling trying to make

ends meet. They are telling me how tough things are in the economy, and many are not sure how long they or their family members will have their jobs. And in these tough circumstances, they are still trying to save a little money for their families' future.

That is why I am glad to see this bill expand individual retirement accounts, and make it easier for Americans to save. And the tax bill also makes these IRA's more flexible, so that families can withdraw these funds penalty-free for important needs. If a child is ready to go to college or a husband gets suddenly ill, IRA funds would be available without any 10 percent penalty. And if a family finds the home they have wanted to buy, or if someone is laid off for a period of time, IRA's would be accessible without any penalty. I have cosponsored legislation to provide all of these provisions, and I am glad to see it included in this bill.

There are other important provisions in this bill. It helps businesses with an extension of the research and experimentation tax credit. H.R. 11 also reforms certain technical tax laws that have hurt innovation and caused unnecessary legal battles between many small and large firms and the IRS. There is help for our cities and distressed rural areas, and there are greater incentives for savings and an improvement of the individual retirement accounts.

However, there are also many omissions in this bill and provisions I dislike. I want to take some time now to discuss my reservations about the section of the bill having to do with overtime pay to customs inspectors, many of whom live in Maryland.

I support some change in the overtime pay for customs inspectors. But the tax bill is not the place for these changes and the changes in it are not fair.

Customs inspectors are the front line of our war against drugs, illegal smuggling that robs American workers of jobs, and even international terrorism. Yet this bill cuts their pay 13 to 17 percent and no hearings or review was ever even done in the Senate.

Although these employees may make up some of the income loss once they retire, that is small comfort to an average 43-year-old customs inspector at the Port of Baltimore who has a mortgage to pay and children to send to college. So I think that trying to solve this problem at the last minute in a tax bill is the wrong way for the Senate to act. We should not make such an important decision without hearing what this really means to hard-working Marylanders who have dedicated their careers to public service.

In addition to this tax bill, there is a lot more that needs to be done to stimulate our economy. We need to help reward investors who help create new

jobs, and we need to help ease the squeeze on America's middle class. And we need to make sure that businesses have the chance to grow, and that everyone pays their fair share of taxes. But despite the fact that this bill does not do all of that, it does take some steps in that direction. That is why I am voting today to pass H.R. 11.

Mr. CONRAD. Mr. President, I rise today to highlight an important provision in the pending tax bill, H.R. 11, which will ensure that the Medicare trust fund is properly administered and protected from waste, fraud, and abuse. This provision is similar to the approach adopted in the Budget Enforcement Act regarding funding for enforcement of the Internal Revenue Service, which I have repeatedly supported. As a strong advocate of the IRS funding mechanism adopted in 1990, I believe that extending the same treatment to the administration of Medicare is sound fiscal policy.

Since 1989, Medicare's administrative costs have not kept pace with the rapid growth of the program. Currently, the program serves 34 million beneficiaries and their health care providers and generates more than 660 million Medicare claims annually. However, the existing budget scorekeeping rules discourage the administration and Congress from increasing funding for the administrative activities to meet the program's needs. Savings to the Medicare Program by preventing fraudulent payments do not count in the budget process to offset the additional funding needed to properly administer the program.

H.R. 11 contains a provision which fixes this problem by allowing limited adjustments to the overall spending caps to accommodate additional spending for the administration of Medicare. This increased spending will be more than offset by reductions in wrongful benefit expenditures. Both the General Accounting Office and the inspector general of the Department of Health and Human Services estimate that this provision will save more than it costs. GAO estimates that for every \$1 spent on improving Medicare's payment safeguard activities, the Medicare Program saves \$14.

A similar provision has been in place for IRS revenue collection since 1990. Although the IRS remains underfunded, this innovative provision has improved the agency's administration and saved taxpayers money. It is time that we place the same emphasis on ensuring that Medicare is properly administered, and I am pleased to see the inclusion of this provision in H.R. 11.

Mr. DURENBERGER. Mr. President, last week I voted for the Senate version of H.R. 11. As I said on the 29th of September: "The title of this bill refers to urban aid, but its most substantial lasting contribution will be in the area of health."

What has emerged from the conference committee little resembles the bill that passed the Senate. There is no small group health insurance market reform. The chairman of the Finance Committee, Senator BENTSEN, and I have worked for the past 2 years to reform the small group health insurance market. We included small group reform in H.R. 11, but the conference committee dropped it.

For more than 5 years, I have introduced legislation that would have provided a measure of fairness to self-employed individuals and farmers in the purchase of health insurance. The version of H.R. 11 that passed last week included my legislation that provides 100-percent deductibility of the cost of health insurance for the self-employed. The conference committee dropped that provision and returned to the 25 percent deduction that exists in current law.

In addition, Mr. President, the conference committee dropped a provision cosponsored by Senator BUMPERS and myself that would have put more pressure on fathers who do not provide child support.

The bill contains a modified version of the President's enterprise zone legislation. In my view, the \$2.6 billion proposed to be spent on creating 25 urban and 25 rural enterprise zones would be better spent on job retraining, infrastructure enhancement, and a host of other programs aimed at skill development for the unskilled and undereducated in every city and every depressed rural area of America.

I also have very serious concerns about opening the individual retirement account [IRA] door again. And I am especially concerned about the new type of IRA, the so-called back door IRA, which will allow individuals to contribute up to \$2,000 to an IRA, receive no tax deduction, and then be allowed to withdraw the money—plus the earnings that built up—tax-free if the money is held in the account for 5 years. In addition, individuals could transfer their current IRA assets, penalty-free, into the back door IRA. I believe the \$2.5 billion estimated revenue loss associated with this proposal is far understated and will seriously endanger the Federal budget in the late 1990's.

Mr. President, there are many provisions in this conference report I have sponsored and have fought for several years, especially in the health section of the report. I would identify just a few of these provisions.

With regard to Medicare Part A, this conference report expands the Essential Access Community Hospital [EACH] Program to now cover nine States. In addition, it reauthorizes the Rural Transition Health Grant Program and extends the grandfather for the classification of regional referral centers.

Under part B of Medicare, we have made significant improvements in the RBRVS method of reimbursing physicians. My legislation concerning payment for EKG's (S. 2914), and a modified version of legislation I cosponsored concerning payments for anesthesia and new physicians is also included in this report.

The legislation also continues the Medicare Alzheimer's disease demonstration project operated in Minnesota by the Wilder Foundation.

On the tax side of this conference report, there are also many provisions I have cosponsored. The report repeals the luxury tax on boats, airplanes, jewelry, and fur, and repeals the 1986 provision that subjected gifts of appreciated property to the alternative minimum tax.

However, Mr. President, this bill does nothing to solve the health crisis in America and this bill violates the Budget Act of 1990. This bill adds more than \$2 billion to the Federal debt and as I have stated on many occasions, I will not cast votes that add to the debt we are piling onto our children and grandchildren.

In May, I voted against aid to Los Angeles because the aid bill added to the deficit. Last month, I voted against emergency to the victims of Hurricane Andrew because the aid bill was not paid for.

Mr. President, when we will summon the courage to face the reality that we are \$4 trillion in debt and that we are adding to the debt at the rate of more than \$1 billion a day. Every day for as far as I can see.

I will not add to the Federal debt to pay for enterprise zones and IRA's. I will vote against this bill because it will not help our inner cities; it will not increase savings; and it will only serve to increase the debt our children will be saddled with.

Mr. BRADLEY. Mr. President, like many other Senators, I had hoped that this bill would rediscover its original purpose in conference. I had hoped that, in the process of paring this bill down to a size that the President would sign, the conferees would transform H.R. 11 into a legitimate urban aid bill. But the old saying remains true, "You can't make a silk purse out of a sow's ear." While IRA's were cut back and a few of the extenders were made permanent, the bill remains primarily a special interest bill. While the bill now costs \$28 billion instead of \$34 billion, it still is not paid for honestly and fully. And while the overall amount of money targeted to urban aid increased slightly, it still does too little for the poor in our inner cities. For these reasons, I cannot vote for it.

Let me not be misunderstood. There are provisions in the bill that I strongly support. I was glad that the luxury tax repeal was included in the bill. The income security, substance abuse, and

child welfare provisions of the bill are also to be commended. And while I feel that it is but a drop in the bucket, I also support the increased authorizations for the Weed and Seed programs.

But the biggest winners in this bill are not those living in urban blight. The biggest winners are narrow pockets of taxpayers who benefit from the special interest tax breaks included in the bill. Instead of spending more money on jobs programs or on urban infrastructure, this bill gives wealthy real estate developers passive loss and section 108 relief. Instead of spending more on community policing, it allows corporations to retain more of their tax breaks in the alternative minimum tax. Instead of spending more on education or Head Start, it spreads tax largesse out among a variety of member items. Even the enterprise zone proposal has been transformed into a tax break for the wealthy. Where the Senate's package rewarded employers who hired zone residents, the bill now rewards taxpayers with capital gains relief when they decide to sell out and leave the zone.

But I might be able to overlook the shortcomings of this bill if it at least paid for the tax relief it provides honestly. Unfortunately, much of the cost of this bill is hidden outside the budget window. The IRA proposal has been sliced down to \$2.6 billion only through budget gimmicks like rollovers, backloaded accounts, and effective date manipulations. The intangibles bill is listed as a revenue raiser, but has a high price tag down the road when the full cost of allowing the amortization of goodwill kicks in. And while the enterprise zone provisions are not permanent, they are extended for 15 years, adding another \$1 billion a year to the ultimate cost of H.R. 11.

To make matters even worse, the bill relies upon an odd assortment of illusory revenue speedups and compliance measures to pay for the loopholes it creates. The biggest offsets in the bill are the changes to the estimated tax provisions. I would like someone to explain to me how we can claim to raise over \$9 billion simply by asking taxpayers to send in their tax checks a little bit earlier—this is an illusory one-time gain that will harm small business and reduce the funds available for investment. The \$4 billion mark-to-market rule for security dealers just phases in a one-time increase due to change in their inventory accounting. Another \$1.4 billion comes from a temporary estate tax extension that expires.

The conferees also tightened the rules on moving expense deduction beyond what was included in the Senate bill. At a time when tens of thousands of Americans are being laid off and labor mobility will be critical for international competitiveness, we are making it even tougher for Americans to

find a new job. Finally the conferees decided to drop the limitations on itemized deductions and personal exemptions—the so-called Pease and PEP provisions—that were included in the Senate bill. These were never legitimate revenue offsets, but rather scheduled reductions in our current tax liability. But by taking them out of the bill, the wealthiest taxpayers in America can have their cake and eat it too. Even if they don't benefit directly from the loopholes in the package, they still can count on a lower tax bill due to the expiration of these provisions.

Mr. President, I look forward to moving beyond the current partisan season and getting to work on a tax bill that will promote real long-term growth. We are facing a fiscal crisis in this country. The deficits we continue to run are weighing down our economy and jeopardizing our children's way of life. And every Senator knows that a critical part of a deficit reduction package will be to get control over Federal spending. But looking at this bill, I feel it is important to remember that we can spend money just as easily through the Tax Code as we can through the appropriations process. And the tax breaks we provide today won't be subject to the annual appropriations process tomorrow. They will go on and on until we muster the courage to take on the special interests—something we do far too rarely around here. And to the extent that we pay for permanent tax relief with illusory or temporary tax increases, we mortgage our future even further.

Mr. President, I hope we will be working with a new administration next year. I also hope that we can move beyond our current approach of tinkering at the edges of the Tax Code and get to work on a real package for deficit reduction. Instead of debating whether this provision or that one is a tax increase—instead of trying to jumpstart a \$6 trillion economy with \$10 billion worth of tax breaks—we should be deciding just what our national priorities are in the post-cold-war world. But because this bill spends more on loopholes for wealthy individuals and corporations than it does on urban aid, because it relies on budget gimmicks to hide its true costs, and because I feel that it will harm and not help our economy by further increasing our deficit, I feel compelled to vote against it.

Mr. GORTON. Mr. President, I support the conference report to H.R. 11, the Urban Aid Act of 1992. Although I had serious reservations with the original Senate version, the conference report before us today has been altered to a such a degree as to make this bill acceptable.

Notwithstanding the sound provisions in the original version, my objection was based upon several onerous tax increases contained within. Quite

simply, I was concerned about retaining the tax increases scheduled to be phased out or increasing taxes when the economy is just beginning to recover from the recession. Among these taxes are: First, an extension of the 55-percent top estate and gift tax rate for 5 years; second, extension of the personal exemption phaseout for upper income taxpayers for 1 year; and third, extension of the itemized deduction limitation for upper income taxpayers for 2 years. I voted against those taxes when they were part of the 1990 budget deal and was concerned about making them permanent now because they would have been unproductive and detrimental to the economy.

That is why I was pleased to learn that most of the tax increases were dropped in conference. The bill now is nearly a tax revenue neutral bill, with approximately \$24 billion in tax increases coupled with about \$21 billion in tax cuts. Does this mean I think that what's left in the bill is all good? No. For example, it still contains an estimated tax provision to which I strongly object.

Under the provisions of the conference report, the so-called safe harbor rule for those paying estimated taxes will be changed. The new law will require that 120 percent of the previous year's tax liabilities must be paid to avoid potentially large penalties, rather than the 90 percent allowed under current law. For small businesses, for whom adequate cash-flow is a critical problem, this provision will be damaging. If this bill is signed into law, I promise to do everything I can to modify or repeal this change during the next Congress. I feel that strongly about it.

But I must evaluate a bill in its entirety. And the conference report includes enough notable provisions, and has dropped enough egregious ones, that I can vote in favor of it.

I am particularly pleased that the bill contains a repeal of the luxury tax, which directly affects a very important industry in Washington. After visiting Bayliner, one of the boat builders in my State, I was so swayed by the plight of the company and its employees that I signed on as a cosponsor of the legislation to repeal this tax. We all know that this luxury tax did nothing to help our fiscal situation. Instead, it crippled whole companies and threw hard-working employees into the unemployment line.

Mr. President, I am pleased that the conference report has been significantly altered to remove many objectionable parts and will vote for it today.

Mr. CHAFEE. Mr. President, the urban aid bill that we are voting on today is a massive bill, incorporating hundreds of provisions each important to particular groups. It represents the culmination of a national debate on

how the Tax Code might be utilized to address such pressing problems as the riots in Los Angeles, the sluggishness of U.S. economy, and the need to improve how the tax system itself works.

As far as the enterprise zone piece of this legislation goes, there will always be the question of whether this is the right mix of incentives and whether it is large enough to make an impact. Only time will provide us with the answer to those questions. But as a supporter of enterprise zones from as far back as 1980, I am happy that this legislation will now provide the opportunity to test the effectiveness of these ideas.

The bill also includes four of the seven economic growth incentives that the President requested Congress to adopt in his State of the Union address in February. Again, the impact that these proposals will have on the economy is a matter of great debate.

I am very pleased that this bill will, once and for all, repeal the luxury tax. When enacted, this tax was aimed at the rich. But it has had a much different effect. Instead of paying the tax, the rich simply stopped buying those items that were determined to be luxuries.

The boatbuilding industry in Rhode Island, and across the country, has been devastated by the combination of the recession and this tax. I will be the first to admit that the boatbuilding industry was already losing sales as a result of the recession. However, the industry has survived recessions that were much worse than the current one. The luxury tax has been a blow that has devastated one of the few American industries that enjoyed a favorable balance of trade.

It is imperative that we act now to repeal this tax in order to save what remains of this once thriving industry. Many small, independent boatyards in Rhode Island have seen their business decline to virtually nothing. In the process, they have been forced to lay off hundreds of workers.

As you know, Mr. President, the Senate has expressed its desire to eliminate this tax on three separate occasions. In November of last year, 92 Senators voted in favor of a sense-of-the-Senate resolution supporting repeal of the luxury tax. Again early this year, the Senate included the repeal of the luxury tax as part of the tax bill passed by the Senate. Finally, the Senate again passed a resolution supporting the repeal of this tax on September 10. Given the overwhelming level of support for repealing this tax, I hope that we can finally do just that. This will be good news for boatbuilders as they get ready for their boat show in Annapolis next week.

This bill also permanently extends the mortgage revenue bond program, which I have been working toward for several years now. Last year, I joined

with the distinguished Senator from Michigan [Mr. RIEGLE] to introduce a bill to permanently extend the Mortgage Revenue Bond Program. This program has helped thousands of first-time home buyers acquire a home of their own in Rhode Island.

For many Americans, the dream of home ownership continues to become more and more difficult to achieve. The Nation's home ownership rate is at its lowest level in almost two decades. Most of these families will never be able to afford a home if the Mortgage Revenue Bond Program is permitted to expire. I am pleased that this bill extends this program permanently. The Mortgage Revenue Bond Program's value has been demonstrated time and time again, and I am happy that we finally recognize this fact and have made the program a permanent part of the Tax Code.

The bill also permanently extends the low-income housing tax credit. This credit encourages the construction and rehabilitation of housing for low-income Americans. Like the Mortgage Revenue Bond Program, the effectiveness of this credit in providing low-income housing has been proven during the 5 years since its enactment and we should not let it expire.

The credit provides a valuable tax incentive to both nonprofit and for-profit developers to fund the production and preservation of low-income rental housing. It is absolutely necessary to encourage the development and renovation of housing for the poor.

In my State, the Rhode Island Housing and Mortgage Finance Corporation [RIHFC], the State housing agency, has used the tax credit to successfully address the needs of our citizens for safe and affordable housing. The loss of these credits would be devastating to their efforts. By combining the credit with bond financing and zero interest second mortgages, RIHFC has been able to produce and preserve low-income housing in one of this country's most expensive housing markets.

The measure also contains several important provisions relating to the Medicare Program. First, it repeals a provision enacted in the 1990 budget reconciliation law which eliminated a separate payment for interpretation of EKG's. I opposed enactment of that provision in 1990, and am glad to see it repealed. In addition, the bill provides that new physicians and practitioners should be reimbursed at the same level as other professionals under Medicare. In my home State of Rhode Island, we have had trouble attracting health care providers due to historically low reimbursement rates under Medicare. A further reduction in payments for new physicians made it especially difficult to attract recent medical graduates, as well as other new practitioners.

The bill also requires the Secretary to review and update the Medicare geo-

graphic practice cost index. I am hopeful that this update will take into consideration the current cost of medical practice and will result in increased reimbursement in Rhode Island and other States which have been reimbursed at lower levels than other comparable practice areas. I am hopeful that these and other reforms will improve the delivery of health care under Medicare.

I would like to express concern about one provision which reduces reimbursement for payment to kidney dialysis centers for erythropoietin or EPO. This drug is provided to persons suffering from end stage renal disease [ESRD]. Currently, Medicare reimburses at a maximum payment of \$11 for 1,000 units. This bill reduces that payment to a maximum of \$10 per 1,000 units. It is my understanding that these centers pay the manufacturer approximately \$10 per 1,000 units. According to the centers, the difference is used to administer the drug. Clearly, this payment reduction will have no impact on the company that manufactures the drug, but instead will impact the center. I am concerned that the cut will adversely impact patient care.

I would also like to express my frustration that we were unable to include in the conference agreement, any of the Senate amendments to the Medicaid Program. There were a number of improvements in the home and community-based waiver program for those with disabilities. I regret that they were dropped.

With so many provisions, there is bound to be those that any individual Senator supports and opposes. That is certainly true for this Senator. Yet, on the whole it is a bill that does more good than harm, and I urge my colleagues to support it.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Texas has 5 minutes remaining.

Mr. BENTSEN. I have no more speakers. I anticipated others, but they have not arrived. I am prepared to yield back the remainder of my time.

Mr. PACKWOOD. I am prepared to yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back.

#### CLOTURE MOTION

The PRESIDING OFFICER. Under the previous order, the clerk will report the motion to invoke cloture.

The legislative clerk read as follows:

#### CLOTURE MOTION

We, the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, hereby move to bring to a close the debate on the conference report on H.R. 11, the urban aid bill:

George Mitchell, Daniel K. Akaka, Bob Kerrey, Edward M. Kennedy, Brock

Adams, J. Bennett Johnston, Joseph Lieberman, Daniel K. Inouye, Jeff Bingaman, Timothy E. Wirth, David Pryor, Dennis DeConcini, Lloyd Bentsen, John Breaux, Claiborne Pell, Jay Rockefeller.

#### CALL OF THE ROLL

The PRESIDING OFFICER. By unanimous consent, the quorum call has been waived.

#### VOTE

The PRESIDING OFFICER. The question is, Is it the sense of the Senate that debate on the conference report accompanying H.R. 11, the urban aid bill, shall be brought to a close? The yeas and nays are required. The clerk will call the roll.

The legislative clerk called the roll.

Mr. FORD. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Vermont [Mr. LEAHY], the Senator from Nevada [Mr. REID], and the Senator from North Carolina [Mr. SANFORD] are necessarily absent.

Mr. SIMPSON. I announce that the Senator from Missouri [Mr. BOND], the Senator from North Carolina [Mr. HELMS], the Senator from Vermont [Mr. JEFFORDS], the Senator from Wisconsin [Mr. KASTEN], the Senator from Kentucky [Mr. MCCONNELL], and the Senator from Alaska [Mr. MURKOWSKI] are necessarily absent.

I further announce that, if present and voting, the Senator from North Carolina [Mr. HELMS] would vote "nay."

The PRESIDING OFFICER (Mr. DODD). Are there any other Senators in the Chamber who desire to vote?

The yeas and nays resulted—yeas 80, nays, 10, as follows:

[Rollcall Vote No. 268 Leg.]

#### YEAS—80

Adams	Durenberger	Mikulski
Akaka	Exon	Mitchell
Baucus	Ford	Moynihan
Bentsen	Fowler	Nickles
Biden	Glenn	Nunn
Bingaman	Gorton	Packwood
Boren	Graham	Pell
Bradley	Gramm	Pressler
Breaux	Grassley	Pryor
Bryan	Harkin	Riegle
Bumpers	Hatch	Robb
Burdick, Jocelyn	Hatfield	Rockefeller
Burns	Heflin	Roth
Byrd	Hollings	Rudman
Chafee	Inouye	Sarbanes
Cochran	Johnston	Sasser
Cohen	Kassebaum	Seymour
Conrad	Kennedy	Simpson
Cranston	Kerrey	Specter
D'Amato	Kerry	Stevens
Danforth	Kohl	Symms
Daschle	Lautenberg	Thurmond
DeConcini	Levin	Warner
Dixon	Lieberman	Wellstone
Dodd	Lott	Wirth
Dole	Mack	Wofford
Domenici	McCain	

NAYS—10

Brown	Lugar	Smith
Coats	Metzenbaum	Wallop
Craig	Shelby	
Garn	Simon	

NOT VOTING—10

Bond	Kasten	Reid
Gore	Leahy	Sanford
Helms	McConnell	
Jeffords	Murkowski	

The PRESIDING OFFICER. On this vote, the yeas are 80 and the nays are 10. Three-fifths of the Senators duly chosen and sworn having voted in the affirmative, the motion is agreed to.

Mr. BENTSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HEFLIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MITCHELL. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

The clerk will continue calling the roll.

The clerk continued with the call of the roll.

Mr. DOMENICI. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMENICI. Mr. President, I am sure that one way or the other, very soon, or at least some time this afternoon, either one or more points of order will be made against this bill. I am equally certain that when that occurs, a request will be made of the Senate that it waive the point of order; or there will be a motion made to waive points of order.

Frankly, one can make that appear if you take just one point of order and waive it, but in the language say we are waiving all points of order, it can be made to appear that a point of order on this bill is a rather insignificant trivial sort of thing.

I thought that I might explain to the Senate with reference to the points of order that lie against this bill and the Budget Act and the 5-year agreement, just how many points of order lie and how serious they are. So I chose to take just a few moments to share that with the Senate.

The first point of order is a very significant one. Everyone in this body understands that the one rule that exists, because of the 5-year agreement that is now part of the Budget Act of the United States, is a binding limitation on how much we can appropriate in domestic spending. There is a cap on how much. What this bill does is, directly by language in a tax bill, change that and it now says, and I am merely paraphrasing in my own way. It says as to

the enforcement provisions and administration costs of Medicare, that appropriated amount is not subject to a cap. What is really happening is that the appropriators are not putting enough money in this part of the appropriated accounts, at least as seen by those who write those laws.

So this says do not worry about that appropriators, you are not going to be bound by the appropriations cap when it comes to this account. It will be outside the cap.

Some will get up and tell the Senate, if they chose to make an issue on substance that is, this is imperative, that we must do it, that clearly if we do not do this and the appropriators do not give enough money for this activity, we are hurting ourselves.

Mr. President, every authorizing committee around that has important legislation that the appropriators do not fund at a high enough level, can come to the floor in a bill that is very large and has many things in it and say, "look, we do not want what we think is needed to be subject to the appropriating cap. So please break it." And we put language in here, saying appropriators, you are no longer bound by it. There will be no sequester if you exceed the cap for this kind of expenditure, because we deem the cap to be not applicable.

That is the best I can do, and he can say they may find examples in past agreements. I can think of one where we did this but actually this was encapsulated in the agreement itself, the Budget Act or the 5- or 3-year agreement.

Not so for the expenditures that this bill says take out of the cap.

Again, I merely make the point to the Senate, that if you are going to be bound by caps to control expenditures, then where do you start breaking it and when do you stop breaking it? In this case this bill chooses to say ignore the cap, you are not bound by limitations on spending taxpayers' money for something that this bill thinks is very important, but all the rest of the things that are important, you are still bound by the cap.

Second, I am told that as far as the very important issue, the so-called Social Security firewall point of order, which I am very proud to have played a little role in getting into the law—the distinguished chairman of the committee, Senator BENTSEN deserves enormous credit for the so-called firewall with reference to Social Security.

This conference report includes provisions which decrease revenues of the Social Security trust fund by \$53 million. Earlier this year there was an amendment offered that assured a permanent 60-vote point of order against all legislation that would reduce Social Security surpluses. In fact, again I give great praise to the chairman of the committee, Senator BENTSEN, who of-

fered that amendment, to make sure that the law was made permanent with reference to the 60-vote requirement if you were going to reduce the surpluses in the Social Security trust fund.

Then many took the floor and spoke powerfully about the need to protect Social Security for today's workers and future generations of beneficiaries, and the lead spokesman again, and I compliment him, was the chairman of the Finance Committee.

The Senate, because that argument was so persuasive, voted 94 to 3 to adopt that amendment, to make permanent and to assure that we would not break this firewall which is an assurance that Social Security will not be rendered any less solvent by actions we take to spend money or tax.

So, after that 94-to-3 vote, and before today, there was an invocation of the firewall point of order to defeat two amendments that would have drained the trust fund. Unfinanced spending would have occurred and increased that trust fund's expenditures.

That occurred here. It was overwhelmingly supported even in the most difficult of cases. We know which the two were.

So here today, after all that history of making sure that we do not break that Social Security trust fund firewall, in this bill is a provision to violate it to the tune of \$53 million.

Now, Mr. President, regardless of what point of order is waived, regardless of which point of order is brought to the attention of the Senate when there is the motion to waive all the points of order, I want the Senators to know that if one of the others that I am going to enumerate is chosen as the lead violator, you are going to be waiving all these because that is the language. You can rest assured nobody is going to want to waive one at a time. So those who want to waive, they are going to put up a trivial and say we are hearing one, we are waiving it, and along with it any others that may be found in this bill. I have cited two of them. So let me move on to a couple more.

I have more detailed remarks on both of these, the firewall and breaking the budget agreement with reference to the appropriations caps.

Now, let me just cite for the RECORD: Section 302(f) budget authority exceeds the Finance Committee allocations for fiscal year 1993. A point of order lies for that.

Section 303(f) budget authority exceeds the Finance Committee's allocation for 1993 through 1997.

One might wonder why I state two that sound very much the same. We made two distinct requirements in the law. The year itself during which you are acting has a certain allocation. That is 1993. This exceeds that allocation to the Finance Committee. But in order to not let us move from one year

to another as we had frequently done. I say to Senator DOLE, we would make it budget neutral in 1993 and then in 1994, 1995, and 1996 we would break it. There is an allocation for all of those years combined, each of the years. That is 302(f) also. This bill violates 1993 through 1997 in terms of the allocations to the committee.

Now 302(f) is another one. The outlays, not just the authorities, exceed the Finance Committee's allocation for 1993. And I think all of these are understandable, because we are spending money; \$3.2 billion is in the bill to be spent, which was not within the allocation.

Section 311, the budget authority exceeds the total budget resolution levels for 1993. That is a different section, and in a very real sense a serious one.

The budget resolution which we agreed to in this body set overall budget authority levels for 1993. This legislation causes us to exceed that budget authority level, creating a very precise section 311 point of order for exceeding the overall budget authority. And with reference to that same section, the budget resolution also sets an overall outlay and this bill causes us to exceed the outlay level.

Now I am not speaking here of what we allocated to the Finance Committee. I am now speaking of what we allocated to the Congress for all spending. The 311 point of order in both budget authority and outlays addresses the overall expenditures and this bill causes those to be breached, so there is a point of order there also.

Now, other tax bills that we have debated in this Senate since we have had these caps and this 5-year agreement have also caused an increase in budget authority and outlays.

But I must remind the Senate that we provided reserve funds in the budget resolution to allow increases for certain purposes in budget authority and outlays. Frankly, not something I agreed with. I thought it was just a big window to allow us to spend money for these certain purposes and thus break the budget. But we did it.

The reserve fund can only be used if the legislation is deficit neutral; meaning revenues and expenditures can be taken into account and it comes out neutral.

I must say on that score, this bill is not deficit neutral in that regard. So reserve funds cannot be used and section 311 points of order lie.

Now, Mr. President, frankly, it is growing more and more difficult to draw legislation of this type, and I understand that. Obviously, you pick out things that you can increase—change times and the like—so you pick up revenue so you can spend revenue under the guise of making it all balance out.

Mr. President, as I said in some previous remarks, this bill has a tremendous number of good points. But,

frankly, I close by saying the budget resolution made a commitment with reference to mandatory or entitlement expenditures of our Government. It said we are going to reduce them by \$10 billion over 5 years. Frankly, this single bill adds \$3.2 billion increase to those expenditures. And I think what we are really saying is instead of living up to the \$10 billion mandatory cut, we have now increased it by \$3 billion and not cut the \$10 billion. And I think much of that leads to points of order because that is how you get to that point. Some, but not all of these, relate to that series of numbers and that breach.

So overall I say to the Senate, when you are asked, if you are asked to waive the Budget Act and all points of order, you are being asked to waive all of these that I have just enumerated.

And, frankly, I am not so good at looking through a bill like this and finding them all. I would surmise that there are some more. But at least I have cited for you a series. Eight points of order that lie against the bill.

#### OPPOSING BREAKING THE BUDGET AGREEMENT IN TAX BILL

Mr. President, I was very disappointed to learn that the conferees on the tax bill decided to include a provision that would violate the 1990 Budget Agreement.

This provision would allow \$1.147 billion in new spending to be exempt from the discretionary caps that were central to the 1990 agreement.

This provision is not in the jurisdiction of the tax committees.

Moreover, it was never considered by the committees with jurisdiction in either the House or Senate. But, somehow, it appeared in this conference report.

Specifically, this provision would exempt some spending for the contractors that administer the Medicare Program from the spending limits agreed to with the President as well as exempt it from points of order in the congressional budget process.

This end run of the normal process is not the way we should go about changing the 1990 budget agreement, which is why there is a point of order against the conference report.

But even beyond the end run of the Budget Committee's jurisdiction, there is no reason for this provision to be in this bill.

#### IN THE FINAL HOUR—ANOTHER EFFORT TO BREAK THE WALLS

We began the budget process this year with an effort to break down the walls that were part of the 1990 budget agreement.

We defeated that effort resoundingly, and the walls have stood throughout this year's budget and appropriations process.

But now that we have completed action on the 1993 budget, here is another, last minute attempt to break down the walls.

#### INCREASE THE BUDGET DEFICIT BY \$1.147 BILLION

The effect of this provision is to add \$1.147 billion to the deficit over the next 3 years.

#### A TERRIBLE PRECEDENT

If we do this for Medicare contractors, who is next in line? There are hundreds of Federal agencies and programs that claim they are investments, not spending.

Like WIC, Head Start, the Social Security Administration, highway projects, and law enforcement—the list of investments can go on and on.

We should not provide piecemeal exemptions from the budget process because it will only encourage advocates of other programs to pursue the same course.

#### FUNDING MUST WAIT TIL NEXT YEAR ANYWAY

This provision would not provide any additional funding now—it would simply allow us to provide more funding in a separate bill and have that funding exempt from the budget caps.

But we have already completed action on the 1993 appropriations bills, so we are not going to provide any additional funding before we adjourn.

Congress can consider this and other process changes in the normal course next year and still have plenty of time to pass additional funding if it is thought to be important.

#### LABOR-HHS CONFERENCE REPORT PROVIDES A 5.4-PERCENT INCREASE

The appropriations bill provides a 5.4-percent increase in funding for Medicare contractors. Compared to many other programs, that is a substantial increase.

#### NO ACCOUNTABILITY

Proponents of this exemption argue that there is solid evidence that a small investment here will save millions in erroneous Medicare payments.

Unfortunately, to my knowledge, we have no plan as to how the Medicare contractors would spend this money or the expected returns from such spending.

There is no accountability and no assurance of better administration of the Medicare Program.

#### SOCIAL SECURITY FIREWALL POINT OF ORDER ON THE TAX BILL

The conference report includes provisions which decrease revenues of the Social Security trust funds by \$53 million over 5 years.

Earlier this year, I offered an amendment that assured a permanent 60-vote point of order against all legislation that would reduce the Social Security surpluses.

At that time, he spoke very powerfully about the need to protect Social Security for today's workers and future generations of beneficiaries.

The Senate overwhelmingly agreed with his arguments, voting 94 to 3 to adopt his amendment to protect Social Security.

More recently, I invoked this Social Security firewall point of order to de-

feat two amendments that would have drained the trust funds with unfinanced Social Security spending increases.

Again, he prevailed in protecting Social Security despite the popularity of the two provisions at issue—the earnings test and higher benefits for the Social Security notch.

The violation of the Social Security firewall in this conference report is not egregious—it is due to a provision which exempts student camp counselors from paying payroll taxes.

Nonetheless, if we allow this provision to tap the Social Security surpluses, we are clearly encouraging other such amendments in the future.

Just as it is unwise to add even \$50 million to a budget deficit of \$330 billion, we should not take even \$53 million out of the Social Security reserves that are needed to pay benefits in the next century.

Social Security is our most important domestic program—too important to the American people to allow such a dangerous precedent to go through the Congress.

Mr. BENTSEN. Mr. President, I would like to make a comment.

The PRESIDING OFFICER. The Senator from Texas.

Mr. BENTSEN. Mr. President, once again this bill is fully paid for in 1993. Over a 5-year budget window, the bill would not add to the deficit. The technical changes were made to take care of strong positions by the House.

Mr. MITCHELL addressed the Chair. The PRESIDING OFFICER. The majority leader.

Mr. MITCHELL. Mr. President, this is an important measure and we are attempting to accommodate the interests of thorough consideration of it with the schedules of all of the Senators.

I have discussed the matter with the manager of the bill, the chairman of the Finance Committee, the distinguished Republican leader, and the Senator from Colorado.

I believe the best way to proceed—and this is with their prior concurrence—is that Senator BROWN be recognized to address the matter for up to 10 minutes, at which time he has indicated he will make a point of order, following which Senator BENTSEN will be recognized to make a motion to waive the point of order.

I notice the distinguished Republican leader present. Before I put that request, I would be pleased to yield to him.

Mr. DOLE. If the majority leader will yield, it is my understanding that if that is not the case, then the majority leader will offer a point of order; is that correct?

Mr. MITCHELL. That is correct.

Mr. DOLE. So if Senator BROWN is willing, after 10 minutes of debate, to make a point of order, then you will yield for that purpose, and then the Senator from Texas, the chairman of

the committee, would move to waive, what? All budget points of order?

Mr. BENTSEN. Yes.

Mr. DOLE. At that point, I might ask the Parliamentarian would the waiver be amendable to make it specific?

The PRESIDING OFFICER. Motions to waive the Budget Act are amendable.

Mr. DOLE. I thank the Chair.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MITCHELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MITCHELL. Mr. President, pursuant to my previous discussions with the distinguished Republican leader, Senator BENTSEN and Senator BROWN, I now ask unanimous consent that Senator BROWN be recognized to address the Senate for up to 10 minutes, at the conclusion of his remarks he be recognized to make a point of order, and following his making the point of order, Senator BENTSEN be recognized to make a motion to waive the Budget Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Colorado is recognized for 10 minutes.

Mr. BROWN. Mr. President, I rise to echo the concerns of the Senator from New Mexico with regard to waiving the budget point of order which lies against this bill.

I suppose if there is one solution to the dilemma we find ourselves in with regard to the budget, it is to find some discipline that this body will follow. Obviously, the Members of this body are split over the very contentious discussion of a balanced budget amendment that would level some outside restrictions on the discretion of Congress to spend.

We all, I think, appreciate and understand the difficulties that could be involved with that. Some have decided it is bad policy for this country. Others like I have thought that outside discipline was the only way we would really find the necessary ability to bring the budget deficit into line.

Until we have a constitutional amendment that balances the budget, we have to use existing tools and the existing tools are simply the Budget Act. The Budget Act sets forth clearly limitations on spending. It is broken down by category. All the Members are acutely aware of it.

The Appropriations Committee is charged with maintaining an allocation and keeping appropriations within those allocations. Everyone, even the critics of congressional spending, should have some appreciation for

what a difficult and challenging job that is.

The problem is that when we come up against tough decisions, there has to be some discipline. Someone has to be willing to say no. Someone has to be willing to say this is not as high a priority as something else.

The particular portion of the Budget Act I am concerned with in making this point of order is section 306 of the Budget Act. It relates specifically to the provision to have \$1.147 billion in new spending authorized that circumvents the Budget Act, gets around the Budget Act, creates a loophole in the Budget Act.

It is not done in the still of the night or the dark of the night. This is done in the daylight. It is a straightforward measure. It is not one that is beyond the contemplation of our rules. The rules provide a way for Congress to waive that Budget Act.

I simply rise in hopes that this body will be very cautious and careful about considering that power. It is the ability to undercut the slender discipline this body still has. If we consistently waive the Budget Act on a regular basis, what we do is simply establish a precedent that says it does not mean anything; that we do not intend to stand by it. All the rhetoric that we do not need a constitutional amendment simply goes out the window because it is clear this body cannot stand by the budget it produced.

This budget, the budget we are waiving, is not one that I thought was a good one. It is not one that I voted for. It was one that was passed by the majority of this body. It was not as tough as I would hope we would have.

It allowed for a big increase in spending. In the area we are concerned about, in this \$1.147 billion increase in authorization in spending over 3 years, we are talking about payments to Medicare contractors over and above what is allowed in the budget. They have not been treated overly harshly in the budget, as it stands now. The Labor-HHS conference report provides a 5.4-percent increase in funding for Medicare contractors.

Let us put it this way. Social Security recipients did not come off as well as Medicare contractors. Medicare contractors were not underfunded. They got more than Social Security recipients, they got more than the cost of living. This is not too tight. This is generous by any means. I believe there is not a basis to say that they have been underfunded.

Some could say, I believe, that they have been overfunded. But this measure will waive the Budget Act with regard to Medicare contractors and payment to them; allow \$1.147 billion in new spending, and make it exempt from the discretionary caps.

How can anyone sit down and make a budget deal if you are going to waive

it? That is what the 1990 budget deal was all about. It was debated by both of our political parties. It was the subject of hot contested debate. There were a lot of compromises in that. But one thing that was not in it was the contemplation that we would simply throw it aside when it was inconvenient, when there was a binding discipline in that document.

What this bill literally does is create a loophole. Some would say, well, this is important. This is important and we ought to be flexible enough to recognize it when it comes along.

That argument has not necessarily been made or focused on today but it is a good argument and it is a reasonable argument. These funds you can make a basis for.

The problem is, every single solitary area of spending, every program, can come to this floor and make a case for more spending, too. Our problem is not that there is a shortage of things to spend money on. There is a whole world of things to spend money on.

If you make this loophole, others will be along to get their own loopholes. What we do is not solve a problem giving this loophole. What we do is destroy a system, undercut the Budget Act, and invite every interest group that wants funds from the Federal Treasury to come and get their own loophole.

The precedent is one that I cannot believe the Members of this body want to follow; whether you think the Medicare contractors get enough or not. I cannot believe it is in the interest of this body or this Nation to shoot holes in the budget agreement.

No, it is not a sacred document. No, there is nothing holy about it. But I do know one thing. There is not a single Member of this body who goes home and brags about how the deficit has run. There is not one of us who is comfortable or satisfied with the awesome deficit that faces this country, and our children and our grandchildren.

Whether it is a Senator who has the best voting record on controlling spending, or the worst—all speak out against the deficit. Here is where it counts. Here is where we go to the very core of our attitude with regard to the budget deficit. And that is waving the one protection we have against runaway spending. That protection is a slender budget agreement that we have.

Is it easy? No. Is it popular? Perhaps not. But it is the one protection we have in this Congress to keep spending within guidelines. If we ignore it, if we throw it away, if we create loopholes in it, if we undercut it, we do away with the very discipline that can provide a future for this country.

One of the documents that was produced through the General Accounting Office this last year showed that if we would bring this country to a balanced

budget and a slight surplus that in 20-some years, we would have—really by the year 2020, literally 28 years—we could have a 50-percent higher per capita GNP than if we continued on our current rate.

Put a different way: If we continue to ignore the budget, if we continue to shoot loopholes in it, we guarantee this country a much lower GNP. We guarantee this country a dimmer future. We guarantee this country lower savings, lower capital formation.

This is not just a vote about Medicare contractors. If it were just a vote about \$1.147 billion, my guess is it would be resolved very quickly. It is a vote about much more than that. It is a vote about the integrity of the process. It is a vote about sticking to a deal. It is a vote about whether or not we have the gumption as legislators for this Nation to follow guidelines.

No, the budget deficit will not get out of control just on this one vote. But what it will do is send one more signal to the American people that this Congress is incapable of facing up to the financial problems in front of us.

I hope the Members of this body, regardless of how they feel on the tax bill, regardless how they feel about the very wise legislators who worked on it, regardless of how they feel about many of the very fine provisions of the bill—and there are many good provisions in the bill—I hope they will insist that the Budget Act be followed. Because without that commitment, we do not stand a chance in a world competitive market.

Some of my friends who are advocates of the IRA will be thinking about whether or not they will be voting to waive the budget. They believe in the IRA's. I believe in the IRA's. It is so important they may feel it overrules their need to stay within the budget. I hope not.

Some in the real estate industry look at this bill and see enormous benefits that could come. Are they there? Yes; I think they are. There are some real pluses in this bill.

But I say to my friends who are tempted with those provisions to ask themselves what happens in the real estate industry or other industries in this country if we simply throw out the window a willingness to abide by the rules? If we throw out of the window, even our thin, meager efforts to stay within the budget act? My guess is, on reflection, they will believe that sticking with a deal, sticking with the budget, sticking with the rules, outweighs a short-term benefit that comes with this tax bill.

Mr. President, it is with that concern that I now point your attention to the conference report accompanying H.R. 11, the Revenue Act of 1992, and point out that it contains provisions dealing with matters within the jurisdiction of the Senate Budget Committee. In pur-

suant to section 306 of the Congressional Budget Act, I raise a point of order against the conference report.

The PRESIDING OFFICER (Mr. LIEBERMAN). Under the previous order, the Senator from Texas is recognized.

Mr. BENTSEN. Mr. President, pursuant to section 904 of the Congressional Budget Act of 1974, I move to waive all provisions of the Congressional Budget Act for consideration of the conference report of H.R. 11.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. DOLE. I suggest the absence of a quorum.

The PRESIDING OFFICER. There is not a sufficient second.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to waive the Congressional Budget Act. The clerk will call the roll.

The legislative clerk called the roll.

Mr. FORD. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Vermont [Mr. LEAHY], the Senator from Nebraska [Mr. REID], and the Senator from North Carolina [Mr. STANFORD] are necessarily absent.

Mr. SIMPSON. I announce that the Senator from Montana [Mr. BOND], the Senator from North Carolina [Mr. HELMS], the Senator from Vermont [Mr. JEFFORDS], the Senator from Wisconsin [Mr. KASTEN], the Senator from Kentucky [Mr. MCCONNELL] and the Senator from Alaska [Mr. MURKOWSKI] are necessarily absent.

I further announce that, if present and voting, the Senator from North Carolina [Mr. HELMS] would vote "nay."

The yeas and nays resulted—yeas 60, nays 29, as follows:

So the conference report was agreed to.

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BIDEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MITCHELL addressed the Chair. The PRESIDING OFFICER. The majority leader.

PROVIDING FOR THE SINE DIE ADJOURNMENT OF THE SECOND SESSION, 102D CONGRESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of House Concurrent Resolution 384, the adjournment resolution now at the desk.

The PRESIDING OFFICER. The clerk will state the concurrent resolution by title.

The legislative clerk read as follows: A concurrent resolution (H. Con. Res 384) providing for the sine die adjournment of the 2d Session, 102d Congress.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 384) was agreed to, as follows:

H. CON. RES. 384

*Resolved by the House of Representatives (the Senate concurring).* That when the House adjourns on the legislative day of Thursday, October 8, 1992, or Friday, October 9, 1992, pursuant to a motion by the Majority Leader, or his designee, it stand adjourned sine die, and that when the Senate adjourns on the calendar day of Thursday, October 8, 1992, or any day thereafter, pursuant to a motion made by the Majority Leader, or his designee, in accordance with this resolution, it stand adjourned sine die or until noon on the second day after Members are notified to reassemble pursuant to section 2 of this resolution.

Sec. 2. The Speaker of the House and the Majority Leader of the Senate, acting jointly after consultation with the Minority Leader of the House and the Minority Leader of the Senate, shall notify the Members of the House and Senate, respectively, to reassemble whenever, in their opinion, the public interest shall warrant it.

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. SYMMS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MITCHELL addressed the Chair.

MORNING BUSINESS

The PRESIDING OFFICER. I now ask unanimous consent that there be a period for morning business, with Senators permitted to speak therein for up to 10 minutes each.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Senator BRADLEY of New Jersey is recognized.

WHATEVER IT TAKES

Mr. BRADLEY. Mr. President, perhaps we had hoped for too much, when we hoped for a Presidential campaign free of character assassination and smears. Whatever—any such hope we did have has been destroyed. Last night the President himself struck the telling blow on a live television call-in show, darkly hinting that there was something oh so sinister in Bill Clinton's travels abroad as a student. His kinder, gentler Presidency has given way in the campaign home stretch to a bitter reminder of the means he used to win it, 4 years ago—innuendo and smear.

This is a President who last December said he would do "whatever it takes" to win reelection. Now, less than 1 month before the election, with the President trailing badly in the polls, impugning the patriotism of the Democratic nominee for the Presidency falls into the whatever-it-takes category.

Bill Clinton traveled as a student to what was then the Soviet Union, in the

The PRESIDING OFFICER. On this vote, the yeas are 60, the nays are 29. Three-fifths of the Senators duly chosen and sworn having voted in the affirmative, the motion is agreed to.

The point of order falls.

If there is no further debate, the question is on agreeing to the conference report.

Mr. MITCHELL. Mr. President, I request the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The clerk will call the roll.

The legislative clerk called the roll.

Mrs. BURDICK. Mr. President, on this vote, I have a live pair with the Senator from Vermont [Mr. LEAHY]. If he were present, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withhold my vote.

Mr. FORD. I announce that the Senator from Tennessee [Mr. GORE], the Senator from Nebraska [Mr. REID], and the Senator from North Carolina [Mr. SANFORD] are necessarily absent.

On this vote, the Senator from North Dakota [Mrs. BURDICK] is paired with the Senator from Vermont [Mr. LEAHY]. If present and voting, the Senator from Vermont would vote "nay" and the Senator from North Dakota would vote "yea."

Mr. SIMPSON. I announce that the Senator from Missouri [Mr. BOND], the Senator from North Carolina [Mr. HELMS], the Senator from Vermont [Mr. JEFFORDS], the Senator from Wisconsin [Mr. KASTEN], the Senator from Kentucky [Mr. McCONNELL], and the Senator from Alaska [Mr. MURKOWSKI] are necessarily absent.

I further announce that, if present and voting, the Senator from North Carolina [Mr. HELMS] would vote "nay."

The PRESIDING OFFICER (Mr. AKAKA). Are there any other Senators in the Chamber desiring to vote?

The result was announced—yeas 67, nays 22, as follows:

late 1960's. He did this while he was studying at Oxford as a Rhodes scholar. Not exactly the stuff that tabloid coverage is made of, even by today's lower standards.

Mr. President, I went to Russia when I was a Rhodes scholar. It was a great trip. I saw totalitarianism up close, was revolted by it, met hundreds of Russians, Ukrainians, found them to be warm and friendly people whom I hope ultimately would triumph in throwing off the yoke of communism. That summer I drove and camped about 1,100 miles through Byelorussia, Russia, and Ukraine. I went with three fellow students from Oxford, one Englishman, two Americans, one of who became an assistant to Henry Kissinger and worked in the Reagan State Department.

Mr. President, what does the President imply? That we were unpatriotic to go? That anybody who as a student traveled to Russia is unpatriotic? What hogwash. I thought education was learning about the world firsthand, as well as from books.

No, Mr. President, this is a smear. Should President Bush be held accountable for every trip he has made abroad as a private citizen? Has he been to the former Soviet Union as a private citizen? How many times? What did he do? Where did he go? Who did he talk to?

Also, how about any trips he might have taken as a private citizen to Iraq, to China, to Libya, to Iran, to Panama? How many? When? What did he do? What did he see? To whom did he talk?

Mr. President, this would be ridiculous if it were not so sad. The President himself said on TV last night, "I don't have the facts. I don't have the facts."

He may not have the facts, but that did not stop him from going on national television to make unsubstantiated allegations, raise innuendoes, and try some awkward guilt by association. Those tactics should be recognized by those in this body who are familiar with the history of the Senate in the 1950's and the activities of the junior Senator from Appleton, WI, at the time. It is called McCarthyism.

This country rejected then the divisive discourse which now carries that Senator's name. But that victory, like all great victories in matters of high principle, is maintained only at the price of continuous hard-fought vigilance. So, when we hear what we heard last night, when we hear it no less from a President of the United States, we must reply with a passion and commitment which still echo through the years, since that last great struggle. "Have you no sense of decency, sir, at long last? Have you no sense of decency?"

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. KERRY. Mr. President, it is clear, following up on the comments of

my colleague from New Jersey, and I think it is most regretful that the President has decided to again travel down division road.

Last night on "Larry King" the President of the United States said some things that both surprised me and, I must say, saddened me. The man who began his term saying in his inaugural address that he would heal this Nation is seeking now, in apparent frustration and desperation, to divide it.

When asked last night about Bill Clinton's trip to the Soviet Union in 1969, 23 years ago, Mr. Bush said, "Larry, I don't want to tell you what I really think because I don't have the facts."

But then, having properly said that he does not have the facts, having properly deferred, the President proceeded to say exactly what he thinks and to show us how he thinks. He proceeded to conjure up images, to create murky impressions, to raise without facts what he knows to be the purest speculation. He proceeded to draw on his own murkiness, saying, "I really think the answer is, level with the American people. You can remember who you saw in an airport in Oslo, but you cannot remember who you saw in Moscow."

Enter, the "Moscow" word, and all the connotations of 1969 that might conceivably go with it.

Mr. President, the operative sentence was the President of the United States' own statement, "I don't have the facts." But, without the facts it obviously could not be clear what he really was saying. But make no mistake, it is very clear what he meant to imply. He demanded that Bill Clinton level with the American people, and proceeded to lambaste him for demonstrations led against his own country.

Mr. President, I am having a lot of trouble understanding why the President of the United States is unwilling to draw a distinction between demonstration against a policy and a demonstration against your country. I know of very few demonstrations that were against country. I know of many that were against a policy in favor of country.

It seems to me that for a President of the United States to impugn people's right to dissent is in fact to impugn the very thing that so many have laid their lives down for, that is so much at the heart of what we are as a nation.

What saddens me, also, Mr. President, is here we are, a nation saddled with the worst economic situation in 50 years, a \$3.9 trillion debt, millions of our fellow citizens losing jobs—literally losing homes; losing faith in the political process itself; a record epidemic of violence in our streets; environmental and economic challenges as great as our country has ever known; a multitude of crises around the globe.

Yet all the President of the United States, the leader of the free world, wants to talk about is what Bill Clinton did 23 years ago as a student.

Well, incredible as it may seem, that is precisely the kind of demonstration of being out of touch with the real concerns of the American people that makes Americans increasingly anxious about their future and, equally as important, makes them cynical about the governmental process.

I ask my colleagues to think for a moment about that cynicism. Remember back to last winter when we all sat out here in front of the Capitol on a cold January day at the ritual of the inauguration of the President of the United States, and President Bush said at that time, as I recall, in a very eloquent and healing inaugural address:

Our great political parties have too often been far apart and untrusting of each other. It's been this way since Vietnam. That war cleaves us still. But, friends, that war began in earnest a quarter of a century ago and surely the statute of limitations has been reached.

The President went on to say:

This is a fact: The final lesson of Vietnam is that no great Nation can long afford to be sundered by a memory.

Those were his words and those are words that ought to be spoken by a President of the United States.

So what has happened to the George Bush who made that statement? Why, President Bush, now do you choose to break another promise? Why do you choose to break your own statute of limitations? Why do you choose yourself to bring back the memory that only 4 years ago you said sundered this Nation? Is your desire to hold office really so great that you would betray your own sense of decency and fairness? Is your desperation now really so great that you would adopt a conscious strategy of reopening and pouring salt on some of the most painful wounds that our Nation has ever experienced?

How sad to say in one breath to Larry King, "I don't have all the facts," and in the very next breath to conjure up a litany of make-believe associations which try vainly to question patriotism.

Every single one of us knows the issue in this campaign is not Bill Clinton's patriotism. I think he has proven that in a dozen different ways, Mr. President. And as one who served in Vietnam and one who is proud of my service in Vietnam, I can still personally say that even by agonizing over his responsibilities as a young American and by ultimately putting his name into the draft lottery, despite the deepest reservations about the war, I can say that that was a form of service to country. I can say that he has proven his patriotism by living out his life as a public servant, not enriching himself, but rather working to enrich the lives of others. So we can say these things, Mr. President. They are true.

The issue in this campaign is not Bill Clinton's patriotism, not the patriotism of anyone running for office. That is not the issue in this campaign. The issue in this campaign ought to more properly be the question of promises made of those who run for elected office and the question of the failure of those promises where that failure is evident or a failure even of leadership.

Mr. President, we are left asking today if the only promise that you are now prepared to keep is the promise you made to do anything to get re-elected?

Mr. President, you and I know that if support or opposition to the war were to become a litmus test for leadership, America would never have leaders or recover from the divisions created by that war. You and I know that if service or nonservice in the war is to become a test of qualification for high office, you would not have a Vice President, nor would you have a Secretary of Defense and our Nation would never recover from the divisions created by that war.

And you know, Mr. President, and I know that if a person's patriotism or love of country is to be judged by a single set of standards based on just one of the many perspectives that our Nation's collective emotions and memories bring to us from that tortured era, then our Nation will never recover from the divisions recreated by that war.

Mr. President, we believe that you know better. You have more decency than that and you should have more pride than that. We have come over time to learn that a President of the United States has many roles. He has many responsibilities. One of those obviously is to govern. Another is to lead. But surely another is to teach, and we are left asking: What are you teaching America in this campaign? Are you saying that those who dissent from national policy must be branded as traitors? Bill Clinton is not the first future President of the United States of America whose ideals or principles or beliefs came into conflict with those who were in power. Washington, Adams, Jefferson came into conflict with those in power. Lincoln protested the war in Mexico and our Nation's shameful embrace of slavery. Franklin Roosevelt led a virtual revolution of dissent against Republican economic policies of his time.

And, Mr. President, we ask that you do not try to tell us or teach us that dissent is wrong. Please do not try to convince us that Bill Clinton loves this country less because he opposed a war in which so many of our young people died and which so many viewed as a terrible mistake. Please do not try to persuade us in 1992 that Bill Clinton's past is more important than America's future in this election.

Mr. President, one last thing I say about the Rhodes scholarship. In these

statements, regrettably, the man who wanted to be the education President seems to be tarnishing and even denigrating one of the highest honors that a young American scholar can achieve. The President has suggested that it is somehow suspicious or wrong that a Rhodes scholar would seek to enlarge his or her education by further travel to foreign countries.

Mr. President, to take the honor that was bestowed upon Bill Clinton and so many others who serve in this Chamber and other distinguished Americans and to try to cheapen it and make it seem like a badge of dishonor is just plain wrong. And for the so-called education President to disparage educational excellence diminishes us all.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, I regret the comments my two fellow Senators have made. I watched the "Larry King Show" last night and I found it very appropriate for the President to say he did not have the facts but he had some questions. When does asking a question become undignified or unfair? And I have some questions. I share those questions with the President.

We hear about this college student from Arkansas. He was a college graduate from Arkansas, a college graduate who wrote to the University of Arkansas ROTC and said.

I have written and spoken and marched against a war. After I left Arkansas last summer I went to Washington to work in the national headquarters of the moratorium, then to England to organize the Americans there for demonstrations.

Now I think it is entirely appropriate to ask the question, was it just protest? I have no argument with people who protested the war. As a matter of fact, we all knew many people who protested the war. The question is, should a man who organized an effort in a foreign country against the policy of the United States become President of the United States?

And what is more, what is wrong with asking? What was he doing there? He went over to be a Rhodes scholar and it is true, as the Senator from New Jersey says, many Rhodes scholars take trips throughout Europe, but this is 1969. Most people could not get into Russia at the time. He went in through Helsinki. Everyone knew what that was. That was a special entrant for those who were organizing protests against the United States involvement in Vietnam. Many of us were here trying to support those of our Americans who were in Vietnam still fighting an enemy.

We have, instead, a man who goes to London, a Rhodes scholar and what does he do? He stays there a year or so, then he ends up in Finland. He does, as

the President said, remember the man he met there and spent 2 days. We have no explanation what he did in Czechoslovakia. What did he do in Moscow? What did he do in Russia? I think those are questions that ought to be answered by anyone who wants the trust of the American people to become President of the United States.

We are not, I think, looking at a question of what did some young boy do in his infancy as he was a student. He was a college graduate. He was older than I was after I came back from World War II and I was drafted during World War II. What I see is a man who wanted to avoid service in the military, the military of the United States, not just not be involved in Vietnam, he did not want to serve in the military of the United States. And yet he wants to be the Commander in Chief of that military.

I think these are questions that have to be asked, but as the father of three sons, and I wish one of them might have been a Rhodes scholar, I ask another question: Why did he not sit for the examinations? He was over there 2 years. He did not take the examinations. He did not bring back a degree from those British colleges.

He did not sit for the examinations. Instead, he decided to tour Europe, go to Czechoslovakia and go to Russia. And I would like answers to the questions the President's asked. What was he doing? Who was he with?

The Senator from New Jersey readily says who he was with. He remembers just like that who he was with. Why cannot Governor Clinton remember who he was with? Why can he not remember what he did and why he went there? And why did he not go back and take those examinations?

He was a Rhodes scholar, representing this country abroad, trying to make an impression over there, I would assume. But more than that, I just think that the fathers of the sons who wanted to be Rhodes scholars were denied the opportunity because this man from Arkansas, a college graduate, not just some young college student, went over there and did not fulfill his job. He did not sit for his examinations. Why should he become President of the United States if he accepts the responsibility of being an American abroad, a student abroad as a college graduate and does not finish?

Now, I think those are questions that have to be answered. I see no reason for the opposition here to suddenly say it is unfair that the President raised this. Many of us have been raising those questions.

And I am part of the President's generation. I believe my generation wants some answers. We want answers to what this man did as a man, not as a boy. He was not a young student. He was a college graduate. He was over there organizing demonstrations against the policy of the United States.

If you want to protest here at home, fine. I do not believe an American should go abroad and protest abroad the policies of the United States, policies still supported, I might say, by a bipartisan group in the U.S. Senate at the time. And yet he wants to be Commander in Chief of the U.S. Armed Forces? No, no, not until he answers those questions, as far as I am concerned. He ought to come forward and say what he did. Who he was with. Why he went there. Who paid for it. Why did he go over there. And what did he do there. Why did he not go back and finish his job as a Rhodes scholar?

Mr. KERRY. Will the Senator yield? Mr. STEVENS. No, I will not yield. The Senator took his time, and I will take mine. If the Senator wants a dialog after I am through, I will be happy to do it.

I think it is very unfair to come in and say the President did something unfair. Some have talked about character assassination. I heard it twice on the floor tonight. I hope I do not hear it too much more. I think we will be here a long time if you want to have a debate on Bill Clinton's service in the military. We will start going over it right now in terms of why did he not accept the draft.

Many of us were drafted. Why did he not accept service in the United States military after the time came when he could not have been sent to Vietnam? I can understand a protest against Vietnam, but I cannot understand not answering the call of your Government to serve in the military under a policy approved by the Congress, followed by every other young man that I know at the time. Many protested the war, but I did not hear many of them protesting going into the service. As a matter of fact, many of them completed their college education and then went in and served as he would have done if he had kept his commitment to ROTC.

There are a lot of things about this man that have to be explained, and I think in the next month we deserve some real explanation of what did the college graduate Bill Clinton do, not the student. He was not a college student. He was past being a college student. He had his degree. He had something many people in that day wished they had, and he went overseas; he went into London. He had an opportunity really, a marvelous opportunity for his educational activity, and he did not finish it. He did not finish it. Why did he not sit for his examinations?

I do not think the President went far enough. He should not be criticized for asking the questions. He should be criticized for not asking all of the questions.

Mr. BIDEN addressed the Chair.

Mr. KERRY. Will the Senator yield?

Mr. STEVENS. I am not sure I have the time. It is under morning business. I will be happy to yield if I have the right to yield.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator has 2 minutes.

Mr. KERRY. I would simply ask the Senator, with respect to the issue of protesting or demonstrating abroad, I know the Senator would agree with me that a protest, if you enter into it on a policy, is not a protest against your country; it is a protest on policy. And there are Democrats abroad. There are Republicans abroad. They are organized as such. They are allowed to vote. We appeal to them to vote. And indeed even on occasion Senators address them abroad. They do not lose their rights, as the Senator knows. And we have embassies in each of those countries to protect their rights.

So I would ask him, would he now strip the right of Bill Clinton to speak as a citizen abroad, which is a right we protect under our Constitution?

Mr. STEVENS. No, I would not strip the right of anyone under the Constitution but I am talking about an explanation. He wrote this letter. I did not write this letter. He wrote the letter to the ROTC, and he said he then went to England to organize Americans there for demonstrations. I thought he went there as a Rhodes scholar. I find out he was there organizing a protest in front of the American Embassy.

I can understand foreign students, college students going before the Embassy of the United States. We have seen it all around the world.

I do not know one American who has done that abroad, gone and organized foreign students to come in front of the American Embassy and protest in front of our American Embassy, protest and try to attract the attention of Americans there against the Government of the United States there.

Those Americans knew what was going on here. You did not have to have someone from Arkansas go to London and organize a protest. There were many people over there who disagreed with the war, and there were many who supported it.

As a matter of fact, at that time in 1969 the American people still supported the war. So did this Senate support it in 1969. And I say to my friend from Massachusetts, the problem is Governor Clinton ought to tell us what he was doing.

Read the Washington Times this morning, as a matter of fact, if you want to look at his war record and see the inconsistencies in what he said so far. He has a lot of questions to answer. And I think the President ought to continue to ask that he tell the American people the truth. What was he doing there? Why did he go? Why did he not go back and finish his studies after he had been there? Now, I want to know that.

If the man is going to be Commander in Chief of the military and part of the defense surveillance group here in the

Senate, I think we ought to know. Should we not have confidence in this man as Commander in Chief? He ought to tell us what he was doing over there.

Mr. BIDEN addressed the Chair.

The PRESIDING OFFICER. The Senator's time has expired.

The Senator from Delaware.

#### ANSWERING QUESTIONS WITH QUESTIONS

Mr. BIDEN. Mr. President, I sought recognition because I want to speak to the situation in Bosnia, but I am dumbfounded by what I am hearing on the Senate floor. This is absolutely bizarre.

Let me answer, although I did not intend on doing this, the question of my friend from Alaska. I have great respect for him. But, I am dumbfounded that he has posed the question he posed. He said, if I am not mistaken: "When does asking a question become wrong?" The answer: When you know by asking the question you are going to create an impression you know not to be true. That is when it is wrong.

It is like my standing before a candidate when I am running for office and saying I want everyone to know I know my friend here does not beat his wife. I believe he is not a wife beater. I know that. Or my asking—it would be absolutely preposterous, since I am opposed to President Bush's reelection, for me to stand and say, I have a question: Why, when President Bush's plane went down, did he survive and the man behind him die? Did he leave him there to die?

That would be outrageous for me to do. But it is equally preposterous to suggest, unless the President really believes Bill Clinton, at 22 years of age, went over to Moscow to confer with the KGB. Does he really believe that? For gosh sakes. What are we talking about? Does the President of the United States want to know what happened? It reminds me of that movie: I know who you are, and I can see you, and I am watching what you are doing.

My God. It is wrong to ask the question when you know by raising it, it creates an impression that you do not believe to be the case. Let us assume Bill Clinton can go back 25 years and figure out everybody he spoke to.

Let us assume that for a moment. It is irrelevant unless he believes that somebody he spoke to was recruiting him to undermine the United States. This is ridiculous. I am ashamed the Senate is even discussing this. Let me get on to something substantive, if I may, in the little time I have left in an unrelated matter to this malarkey that is being spread around here.

**BIPARTISAN SUPPORT FOR A MORE DETERMINED POLICY TO ASSIST BOSNIA AND HERCEGOVINA**

Mr. BIDEN. Mr. President, this week saw two important developments in American policy toward the conflict in Bosnia.

The first was a measure incorporated in the conference report on the Foreign Operations Appropriations Act. That measure, which I introduced last week, calls on the President to seek the lifting of the U.N. arms embargo against Bosnia—and, contingent on that action, authorizes the transfer of \$50 million in United States military weapons and equipment to the Sarajevo government, provided that our allies participate in such a program of military assistance.

This new law will, I believe, send a strong message to the President and to America's allies.

It signals, unmistakably, that Congress is prepared to back a strong policy of opposition to the savage and unabated slaughter being perpetrated by Serbs in Bosnia. It embodies our conviction that the United States should lead the United Nations in lifting the embargo against Bosnia and in helping to provide to the people of that country the means to defend themselves.

The second new development in the past week was a Presidential announcement on October 2, which signaled that the administration, too, is moving toward a more robust American policy. In effect, the President declared that the agreements reached at the recent London Conference have failed.

In the President's words:

Bosnian cities remain under siege, the movement of humanitarian relief convoys is still hazardous, and innocent civilians continue to be slaughtered.

At London, the President continued,

The parties agreed to a ban on all military flights over Bosnia. Yet the bombing of defenseless population centers has actually increased. This flagrant disregard for human life and for a clear agreement requires a response from the international community, and we will take steps to see that the ban is respected.

President Bush went on to express his recognition that the combination of continuing war and oncoming winter could result in the death of tens of thousands of innocent people in Bosnia. In response, he announced several steps the United States would take immediately. Among these, the two most significant, in my judgment, were these:

First, the United States will seek a new Security Council resolution that establishes a no-fly zone over Bosnia—a ban on unauthorized flights that the President pledged the United States to participate in enforcing, if requested.

Second, the President announced that the United States will take steps

in concert with other nations to increase the impact of sanctions of Serbia.

As to sanctions, the President did not describe his specific intentions. But I must hope the administration will seek an immediate cessation of the arms embargo against Bosnia. Surely the greatest single step the United Nations could take to increase the impact of sanctions on Serbia is strengthen the arms embargo against Serbia while lifting the arms embargo against Bosnia.

However well intentioned, the arms embargo against Bosnia has had the undeniable effect—the unfair, unconscionable, and thoroughly perverse effect—of freezing the people of that country in a state of utter defenselessness.

As to a no-fly zone over Bosnia, the need for United Nations action is both obvious and urgent. At present—indeed, probably at this very moment—Serbian planes are engaged in a merciless, relentless bombing of Bosnian civilians, using some 20 aircraft currently operating from a Serb-controlled airbase within the territory of Bosnia itself. For their part, the Bosnians have not a single aircraft with which to defend themselves.

It cannot be too much to ask of the international community to ban this savagery—and, if necessary, intervene to suppress it.

As originally envisaged by the administration, the Security Council would not only impose a ban on all flights over Bosnia, but would also—at the same time—authorize measures of enforcement if the ban is violated. Our British and French allies, however, have argued that in view of two factors—the politics of the Security Council and the safety of existing British and French humanitarian relief forces—it would be wiser to seek enforcement authority later; only if a no-fly resolution is passed, then violated.

I have no comment to offer on this procedural question—except this: The Security Council, whatever its methodology, should entertain no delay at all in imposing a ban and then enforcing it. If that can best be done through two consecutive measures, so be it.

What we are speaking of here—let us state it plainly—is the use of force. But it is a use of force that would occur only if the U.N. Security Council acts and then Serb forces continue to bomb Bosnian civilians. Consider this: Serbian attack planes are now using humanitarian airlift flights as cover to protect themselves on their bombing missions. They are creating carnage and then using the relief effort as protective cover while they inflict more carnage.

Mr. President, this moment in history will not be soon forgotten. It may indeed rank with the Spanish Civil War as an historic test of what the inter-

national community is—or is not—willing to stomach. In the year 1992, as we stand poised on the threshold of a new world order, the plight of Bosnia poses a test of our moral mettle—a test that cannot be passed with empty rhetoric.

Because it would be nothing less than a conscious act of negligence if we and our allies do not oppose such barbarism, I must certainly hope that a majority of my colleagues in both Houses would support American participation in a United Nations use of force as may be needed to prevent a continuation of this particularly flagrant horror.

Yet even with that sentiment, what is lacking is a formal measure that transfers congressional support into clear-cut Presidential authority—the kind of clear-cut authority needed for both constitutional and political reasons when force is used.

Because circumstances now present us with the possibility that such an authorization might well be needed while Congress is in adjournment, I believe Congress should—as a matter of policy and as a matter of constitutional principle—act to provide such authority before adjournment.

If our constitutional system were functioning with greater fealty to the intent of the Framers, the President would even now be requesting such authority. That, however, is a debate we need not resume today. The point is that he needs such authority—I repeat, for policy and for constitutional reasons—and in the current circumstances I believe there is a congressional will to see him so authorized.

Such a measure can take the form of the simple joint resolution I now send to the desk. I ask unanimous consent that I read the text, rather than the clerk. The resolution states as follows:

Whereas the President on October 2 declared his intention to seek United Nations Security Council approval of a ban on all flights in Bosnian airspace except those authorized by the United Nations;

Whereas the President stated his further intention that United States armed forces would participate in enforcement measures, if requested by the United Nations; and

Whereas Congress finds that such a ban on unauthorized flights in Bosnian airspace could alleviate the tragic plight of Bosnia and Hercegovina and help to avert the death of tens of thousands of its citizens in the winter ahead; Congress hereby:

(1) commends the President on his October 2 announcement; and

(2) authorizes the President to employ the armed forces of the United States to participate in enforcing a Security Council decision to ban unauthorized flights in the airspace of Bosnia and Hercegovina.

Mr. President, we have entered the final month of a heated political season. But as we do, I hope that the terrible tragedy of Bosnia is one subject we can keep out of partisan debate.

Ideally, in my view, Congress would now act promptly—whether requested by the President or not—to approve the necessary authority by which the

President can carry out the U.N. decision he has pledged himself to seek. In so doing, I believe, we would express strong and valuable support for the President in acting under the United Nations in helping to alleviate the horrible suffering in Bosnia—suffering that assuredly awaits the beleaguered people of that desperate country unless the United Nations does act.

I fully recognize the obstacles to achieving congressional, or even Senate, action in so short a time. But as to the Senate's role, I would simply say: Let us do what we deem necessary, and let the House respond as its leaders and Members determine.

In this connection, I would point out that the current situation underscores, quite vividly, the need for the rewrite of the War Powers Resolution I have long proposed. I believe we must uphold the constitutional principle that significant uses of force require congressional authorization. But I believe we can accomplish that through a new and more soundly crafted law that gives due deference to the principles of the Founders and the need, in some cases, for rapid Presidential decision.

Mr. President, I believe that squaring the circle can be accomplished—as I described in a law review article some time ago—by providing, in permanent law, a generous but still circumscribed range of Presidential authorities, along with a delineation of effective procedures by which Congress can, in specific circumstances, extend the limited preauthorization.

I ask unanimous consent that the article I referred to be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Georgetown Law Journal, December 1988]

THE WAR POWER AT A CONSTITUTIONAL IMPASSE: A JOINT DECISION SOLUTION

(By Senator Joseph R. Biden, Jr.,\* and John B. Ritch III\*\*)

I. INTRODUCTION

During a period of relative tranquility at home and abroad, the question of how America goes to war begins to seem academic if not anachronistic. But the war power occupies a solemn place in our constitutional system, and if history is any guide, the issue—not just of war, but the process by which we decide on it—will once again acquire prominence and passion. This abiding question warrants dispassionate analysis in the calm before those fevers arise.

With the American Constitution now 200 years old, one might expect so fundamental a question to have been resolved—by two centuries of constitutional experience, if not by the Constitution itself. But in fact the reverse has occurred. Today the war power question is debated not in its nuances, but in its essence by two sharply conflicting factions whose arguments are charged with all

the energy and ideology of two decades of dispute over policy and principle.

Ironically, the focus for this contention—the lightning rod—is a sixteen-year-old law intended by its framers to resolve the issue and facilitate harmony by establishing a constitutionally sound and functioning mechanism for decision. At least thus far, this admirable aim has met defeat.

Enacted over the veto of President Nixon, who attacked it as an unconstitutional infringement on the Executive's powers as Commander in Chief, the War Powers Resolution of 1973<sup>1</sup> was heeded by President Ford and affirmatively accepted by President Carter.<sup>2</sup> But the 1980s saw the dispute resurrected, as the Reagan Administration, abetted by former President Ford speaking in a newly critical voice and by an Executive-oriented element in Congress, grew steadily bolder in denouncing both the Resolution and its underlying rationale. Meanwhile others in Congress continue to regard the War Powers Resolution as sound in its constitutional premises, even if imperfect in its details, and to insist upon presidential compliance.

With the conflict having degenerated into trench warfare, we have reached what amounts to a constitutional impasse that will debilitate American foreign policy for so long as it goes unresolved. While the prospects for a solution appear unpromising, that goal should be the object of a genuine search. For the achievement of broad agreement on the constitutional parameters surrounding the war power, and the codification of this consensus in accepted procedures, would serve the nation not only in time of crisis, but by fostering greater comity and clearer focus—on the part of both the Executive and the Congress—in the constant interaction form which American foreign policy emerges.

*Symptom of the impasse: A chronic debate over procedure*

The most recent case in point arose in 1987, when the Reagan Administration placed Kuwaiti oil tankers under the American flag and committed the United States Navy to protect those vessels in the Persian Gulf. As this policy rather haphazardly emerged, the Administration presented it as a simple matter of principle—an assertion of the right of innocent passage on the high seas. In fact, Administration policy represented nothing less than a major commitment of American forces on the Iraqi side in the Iran-Iraq War.<sup>3</sup>

Whatever its ultimate wisdom or folly, this action was a complex, high-risk undertaking not at all self-evident in its justification. With American forces about to begin a mission entailing a considerable possibility that the United States would be drawn into one of this century's bloodiest wars, surely a significant debate was in order—whether in public or behind closed doors—to establish the requisite congressional support. Yet that debate hardly occurred. Instead, Congress quickly descended, as it has several times in recent years, into a debate not on the policy at issue but on the procedure—specifically, how the requirements of the War Powers Resolution might apply, and indeed whether that law is even constitutional.<sup>4</sup>

Such a focus on procedure was no doubt inevitable since the Administration had, by defying the requirements of the War Powers Resolution, denied Congress any role in a decision portending United States involvement in a major war. Nonetheless, intellectual energies needed for analysis of the national interest in the situation were diverted, as on

prior occasions, into frenzied argument over legalisms. Did these circumstances fulfill the criterion of "hostilities or . . . imminent involvement in hostilities," as specified in the War Powers Resolution? If so, when had the sixty-day time clock for congressional authorization begun to run? Since the President had not sent Congress the required report, which would clearly trigger the clock, how could anyone know for sure that the clock was running? Could Congress make it run? Et cetera.

*Essence of the problem: Two sharply divergent views*

In late 1987, recognizing such digressive and divisive debate as a chronic phenomenon rather than an exceptional incident, the Senate Foreign Relations Committee established the Special Subcommittee on War Powers to review and reassess the entire problem.<sup>5</sup> During 1988, the Subcommittee held extensive hearings involving some thirty witnesses—including a former President, key legislators involved in originating the War Powers Resolution, current and former Secretaries of Defense and State, current and former Chairmen of the Joint Chiefs of Staff, the State Department Legal Adviser, and numerous historians and constitutional scholars.<sup>6</sup>

Several witnesses articulated what has become a commonplace: that enactment of the War Powers Resolution in 1973 was little more than a misguided symptom of congressional disillusion with the Vietnam War and that matters could be straightened out if Congress simply would repeal the law.<sup>7</sup> But in fact, as the hearings underscored, what is at stake is a profound constitutional issue, defined by a fundamental divergence of view which, in historic perspective, has appeared only recently, and which will not be resolved by the expedient of erasing an existing law. This divergence concerns the nature and extent of the inherent constitutional authority of the President to commit the United States to hostilities. It is conflict over *this authority*, not the existing law, that is the essence of our current problem.

One view can fairly be labeled "monarchist." This model sees the President as having virtually unlimited authority to deploy and use the armed forces in pursuit of what he regards as the national interest. Monarchists concede that Congress can act to constrain the President, but they argue that the only congressional power relevant to warmaking is the power of the purse.<sup>8</sup> In short, if the President starts a war to which Congress objects, Congress can always cut off the money to wage it. Certainly this is a clean division of labor. But what merits debate is whether it is a constitutionally mandated division of labor or even a desirable one considering its ultimate effect on American foreign policy.

The practical implications of the monarchist are sobering. Congress will never fail to provide overall funding for the armed forces, and the President can veto military appropriations bills containing restrictions he finds unacceptable. Thus, under the monarchist model, in order to stop a President from using American forces in a particular way, Congress faces the task of passing a specifically restrictive law over his veto. Monarchists would thus grant a determined President a free hand so long as he sustains the support of one-third-plus-one in either house. Under this model, even if Congress eventually asserts its will by insisting that the President sign an appropriations bill with restrictive amendments, the role envisaged for Congress is purely reactive and neg-

ative—a role played only after a presidential policy has been unilaterally implemented and has gone awry.

The alternative view advanced herein is a "joint decision" model.<sup>9</sup> Its premise is that there are indeed limits on the President's independent power to commit forces to combat—limits that, while not precisely defined in the Constitution, exist nonetheless and may be delineated in codified, constitutionally sound procedure. In this view, the President draws his independent authority not from some robust concept of the President as an all-knowing and nearly omnipotent Commander in Chief, but from a more limited Executive responsibility to protect the nation and its citizens from immediate threats. Under the joint decision model, presidential power to use force in the absence of statutory authorization derives from the concept of emergency: the need to repel an attack on the United States or its forces, to forestall an imminent attack, or to rescue United States citizens whose lives are imperiled. Conversely, any policy involving a sustained use of force must derive from an affirmative decision of the entire government, including Congress.

Evaluating these two models is complex not only because the Constitution itself is vague but also because custom and practice—the deeds of two centuries of American history—offer a wealth of examples that are cited to support both sides of the argument. Such confusion tends to work in favor of the monarchist model by inducing a kind of collective constitutional shrug—an attitude that, since the Constitution appears unclear, perhaps we would do best to let the President get on with the business of defending American interests as he sees fit. On the other hand, the constitutional situation is, upon examination, not as murky as the monarchists would have it.

#### *Intent of the Framers*

The intent of the Framers of the Constitution cannot resolve this debate,<sup>10</sup> but is the logically necessary point from which to begin when the text itself seems unclear.<sup>11</sup> The Constitution they drafted is, in its allocation of powers affecting foreign policy, "cryptic and ambiguous"<sup>12</sup>—and, one must conclude, purposefully so. The greatness of the Framers lay not only in what they knew but in their wise recognition of what they could not know. In foreign policy they recognized the need for flexibility. As Alexander Hamilton wrote in the *Federalist*, "[I]t is impossible to foresee or to define the extent and variety of national exigencies \* \* \*. The circumstances that endanger the safety of nations are infinite; and for this reason, no constitutional shackles can wisely be imposed on the power to which the care of it is committed."<sup>13</sup>

But rejecting "shackles" did not mean rejecting processes by allocating foreign policy to one unconstrained authority. Clearly, the Framers wished to repose strong executive power in the President—to overcome the chaos that had characterized government under the Articles of Confederation. But on the question of warmaking, the Framers' thoughts were dominated by their experience with the British King, whose power, as analyzed by Blackstone, included "the sole prerogative of making war and peace."<sup>14</sup> Such powers the Framers were determined to deny to the President. Accordingly, even so staunch an advocate of presidential power as Hamilton emphasized that the President's power as Commander in Chief would be "much inferior" to that of the King, amounting to "nothing more than the su-

preme command and direction of the military and naval forces."<sup>15</sup> This power was not to include the decision on war itself.

Indeed, an early draft of the Constitution reserved exclusively for Congress the power to "make war."<sup>16</sup> Later this was changed to "declare war." But the reason for the change is instructive. In the convention, James Madison and Elbridge Gerry argued for the amendment solely in order to allow the President "the power to repel sudden attacks."<sup>17</sup>

The Framers had no interest in the ceremonial aspects of declaring war. Even then, as Hamilton noted, "[T]he ceremony of a formal denunciation of war" had "of late fallen into disuse."<sup>18</sup> The real issue was congressional authorization of war. And on that issue there appears little doubt that the Framers' aim was to empower the President to respond when war was imposed on the nation, but not to empower him to undertake war on his own.

#### II. THE WAR POWER THROUGH TWO CENTURIES

##### *Constitutional practice: 1789 to the Civil War*

In the early years of the new Republic, James Madison summarized the Framers' intent in a letter to Thomas Jefferson: "The Constitution supposes, what the History of all Govts demonstrates, that the Ex. is the branch of power most interested in war, & most prone to it. It has accordingly with studied care vested the question of war in the Legisl."<sup>19</sup>

Since a fair reading of the Framers' intent makes it difficult to draw any conclusion at odds with Madison's authoritative summation, modern-day monarchists must rest their constitutional arguments less on original intent than on constitutional practice, in which they claim to discern a long history of support.<sup>20</sup> Let us therefore scan the two centuries for evidence and themes. Does American history confer legitimacy on presidential warmaking?

The first potential example for the monarchist case arose when President John Adams deployed naval forces in an undeclared war with France from 1798 to 1801. But on examination this episode can offer the monarchists little solace, for Adams actually sought and obtained congressional support. Indeed, Congress ultimately became more belligerent than Adams, passing a number of measures aimed at encouraging successful prosecution of the conflict.<sup>21</sup>

The young Republic's war with France also produced significant Supreme Court decisions bearing on the question of limited war, a phenomenon that modern monarchists often suggest lies outside the provisions of the Constitution. The Constitution itself had touched on this subject by reserving for Congress the authority to grant "Letters of Marque and reprisal,"<sup>22</sup> licenses issued to private citizens empowering them to seize enemy ships in an 18th century version of limited war. But the Court's rulings made the matter of limited war still clearer. Wars, the Court said, even if "imperfect," are nonetheless wars.<sup>23</sup> Moreover, Chief Justice John Marshall ruled that "Congress may authorize general hostilities . . . or partial hostilities."<sup>24</sup> In short, all war—not just full-scale "perfect" war, but also limited war—falls within the constitutional concept of war.

In still another case arising from this conflict, *Little v. Barmette*,<sup>25</sup> Chief Justice Marshall rendered a decision of enormous importance in defining the scope of the President's inherent powers. Congress had barred all commerce with France and authorized the seizure of American vessels bound for

France.<sup>26</sup> Marshall ruled that Congress had thereby clearly implied a limit on the President's power in enforcing the ban. This, the seizure of an American vessel sailing from France conflicted with the congressional will and was therefore illegal. By acting, Congress had preempted presidential discretion.<sup>27</sup>

Modern monarchists also refer habitually to the actions of Adams' successor, Thomas Jefferson, in coping with Barbary pirates, whose attacks on shipping caused Jefferson to dispatch the Navy and brought the United States into a limited and undeclared war with Tripoli from 1801 to 1804.<sup>28</sup> But note President Jefferson's concept of the constraints on his inherent power: United States naval forces, he told Congress, were "unauthorized by the Constitution, without the sanction of Congress, to go beyond the line of defense."<sup>29</sup> He thereupon requested "authorizing measures of offense," which Congress quickly granted.<sup>30</sup>

Jefferson spoke similarly a few years later. Having made history's sharpest real estate deal by purchasing Louisiana, he addressed himself to the question of whether American forces should be used against the Spanish, whose incursions from Florida posed a threat to the newly acquired territory. Jefferson told Congress that "Considering that Congress alone is constitutionally invested with the power of changing our condition from peace to war, I have thought it my duty to await their authority for using force \* \* \*. The course to be pursued will require the command of means which it belongs to Congress exclusively to yield or deny."<sup>31</sup>

The War of 1812, during the presidency of James Madison, does not bear on either side of our modern-day argument over the war power. It was the first of our five declared wars,<sup>32</sup> the only in which the declaration was not simply a formality acknowledging the prior existence of war, and holds historical interest primarily as a reminder that Congress is not always more peace-loving than the President. In spilling for a fight, the War Hawks in Congress were way ahead of Madison.<sup>33</sup>

But our second declared war, with Mexico in 1846, does hold relevance to the current constitutional predicament. Hostilities began when President Polk sent American troops into disputed border territory, where they were attacked by Mexican forces defending Mexico's claim. Congress responded by declaring war.<sup>34</sup> But two years later, with the war still on, the House of Representatives, convinced by now that it had been hoodwinked by a presidential fait accompli, resolved that the war had been "unnecessarily and (unconstitutionally begun by the) President of the United States."<sup>35</sup>

An elderly Congressman, former President John Quincy Adams, who had served a quarter century earlier as James Monroe's Secretary of State and had devised the famous doctrine that bore Monroe's name, gave his last hours in public life to denouncing Polk's effort to justify the war as an application of the Monroe Doctrine.<sup>36</sup> Meanwhile, a younger colleague, Congressman Abraham Lincoln, offered a classic articulation of the dilemma of presidential warmaking we face today:

"Allow the President to invade a neighboring nation, whenever he shall deem it necessary to repel an invasion \* \* \* and you allow him to make war at pleasure. Study to see if you can fix any limit to his power in this respect \* \* \*. If today, he should choose to say he thinks it necessary to invade Canada, to prevent the British from invading us, how could you stop him?" You may say to

him, "I see no probability of the British invading us," but he will say to you, "Be silent; I see it, if you don't."<sup>37</sup>

The President's ability to deploy forces with major effect was displayed again just a few years later, in 1854, when Franklin Pierce sent Commodore Perry and a naval squadron to "open up" Japan through a persuasive show of power. But there also were many other, less conspicuous deployments. In the thirty years before the Civil War, U.S. naval forces were used without specific congressional authorization in more than a dozen instances to deal with pirates or unobedient natives in locations ranging from Africa to the South Pacific.<sup>38</sup>

Significantly, however, Presidents continued to pay heed to the distinction between deploying forces and the authority to initiate hostilities. Polk, after all, did obtain a declaration of war before proceeding to wage the Mexican conflict, his deployment of forces had precipitated. On the eve of the Civil War, President James Buchanan summed up the state of the war power after some seventy years of constitutional practice: "[W]ithout the authority of Congress the President cannot fire a hostile gun in any case except to repeal the attacks of an enemy."<sup>39</sup>

#### *Constitutional practice: The Civil War to 1950*

In the Civil War itself, President Lincoln undertook such sweeping measures in the absence of congressional authorization that one Supreme Court Justice labeled Lincoln's presidency a "military despotism."<sup>40</sup>

In the last third of the 19th century, the country looked westward; and American history begins to offer modern monarchists some vague precedent for their case only after a rising imperialist instinct had produced our third declared war: the Spanish-American War of 1898.<sup>42</sup> Victory over Spain made the United States a world power, and brought with it the territorial gains of conquest. In the newly acquired Philippines, U.S. forces quickly became mired in an undeclared, unauthorized, and far bloodier war with our new subjects. This savage counterinsurgency, involving some 130,000 American troops, presaged in many respects the much later tragedy in Vietnam.<sup>43</sup>

The Philippines, of course, was at least technically a United States possession; China was not. There President McKinley opened the new century—and set the tone for a more presidentially assertive phase in our constitutional history—by dispatching five thousand American troops to join an international force that quickly put down the Boxer Rebellion. McKinley did so without congressional authorization, using as his pretext the protection of American lives and property.<sup>44</sup> His action aroused no congressional objection, paving the way for similar exercises of unilateral power by Presidents Roosevelt, Taft, and Wilson in the Caribbean and Latin America in the years before World War I.<sup>45</sup> President Wilson did obtain our fourth official declaration of war before sending troops to Europe in 1917,<sup>46</sup> but did not seek congressional authorization when he dispatched troops to Siberia after the First World War had ended.<sup>47</sup>

From a historical perspective, the century's first two decades had served to raise the war power issue. But the monarchist model had by no means established itself, as President Wilson soon discovered. In one of several formal reservations he attached to the Versailles Treaty, the Republican Chairman of the Senate Foreign Relations Committee, Henry Cabot Lodge, stipulated that Congress had the "sole power" to "authorize

the employment of the military or naval forces."<sup>48</sup> (Such views, it is interesting to recall, were once the essence of Republicanism.)<sup>49</sup> Lodge's reservations, which killed the treaty's ratification, expressed sentiments—against presidential discretion and for isolationism—that were to govern American policy for the next two decades.<sup>50</sup> By 1939, the outbreak of war in Europe found President Franklin Roosevelt heavily constrained both by strict neutrality laws and by the balance of power in Congress.<sup>51</sup>

For two years, before Pearl Harbor produced our fifth and last declaration of war<sup>52</sup> and ended American isolationism forever, Roosevelt pressed against such limits to the utmost. He exchanged American destroyers for British bases by executive agreement, sent American troops to Greenland and Iceland, and instituted a convoy system in the North Atlantic, issuing "shoot on sight" orders to the United States Navy.<sup>53</sup> Yet when Senator Robert Taft challenged the constitutionality of the move into Iceland, Roosevelt responded not with sweeping claims of inherent presidential authority but by continuing to maneuver as best he could to prepare the United States for the war he expected to come.<sup>54</sup> In perhaps his most significant pre-war policy, Lend-Lease, Roosevelt sought and obtained congressional authorization.<sup>55</sup>

When World War II ended, leaving the United States a superpower supreme on the world stage, the constitutional status of the war power still appeared reasonably clear. Through a century and a half, Presidents had on numerous occasions used troops for police actions and, in the free-wheeling period before World War I, had even installed provisional governments in Latin America. It also was generally recognized, as Lincoln had discerned, that a presidential deployment of forces could in itself create the circumstances that might lead to hostilities. Yet our history to that point offers little true support for the monarchist model. Presidents had on numerous occasions acted unilaterally under the justification of defending American citizens or forces. But no President had ever asserted an inherent right to take the nation to war.

All this was about to change, although not immediately. In the five years following the Second World War, the Truman Administration courted Congress assiduously to ensure support for America's new world role.<sup>56</sup> The establishment of the United Nations,<sup>57</sup> the beginning of the international exchange program,<sup>58</sup> aid to Greece and Turkey under the Truman Doctrine,<sup>59</sup> the launching of the Marshall Plan,<sup>60</sup> and the creation of NATO<sup>61</sup> pursuant to the Vandenberg Resolution<sup>62</sup>—all had the full participation and imprimatur of Congress. Neither Truman nor his representatives suggested any challenge to "the constitutional premise that U.S. commitments abroad required an Executive-Legislative partnership and were impossible by Executive fiat."<sup>63</sup>

Thus, and this bears emphasis, the era now fondly regarded as "the golden age of bipartisanship" in American foreign policy was a product not only of international statesmanship at both ends of Pennsylvania Avenue, but also of a Truman presidency that did not, during its first five years, seek to test the limits of Executive prerogative.<sup>64</sup>

#### *The postwar period: "Monarchism" in bloom*

With the outbreak of the Korean War, this pattern of constitutional partnership was skewed by an unprecedented presidential assertion. In June 1950, in dispatching American naval and ground forces to the defense of South Korea, the Truman Administration

declined to seek congressional authorization and instead asserted, with elaborate legal argument, an inherent presidential authority to act unilaterally to protect the "broad interests of American foreign policy."<sup>65</sup>

The full constitutional significance of this "fateful moment"<sup>66</sup> was obscured at the time.<sup>67</sup> But in fact an extraordinary transformation had occurred in Executive-Legislative relations. As former Senator J. William Fulbright recently reflected:

"With the famous bipartisanship of the late 1940s, the Senate and the House of Representatives had cooperated in a series of steps by which the United States assumed a role of world leadership. But having done so, Congress found itself facing an Executive that would point to these global responsibilities as justification for bypassing traditional requirements for congressional approval."<sup>68</sup>

For many who would later condemn it—such as Fulbright<sup>69</sup> and historian Arthur Schlesinger, Jr.<sup>70</sup>—the emergence of a monarchist approach to foreign policy did not originally appear unwarranted or dangerous. Indeed, it seemed the unavoidable and rational response to compelling circumstances. America's pre-World War II isolationism was now regarded as symptomatic of congressional myopia, while the President as Commander in Chief had acquired tremendous stature during the war and in the formation of postwar alliances. Meanwhile, the emerging Cold War posed ominous uncertainties to which the nuclear age added an overarching danger. In such an environment, Truman, Eisenhower, and Kennedy seemed far safer custodians of the national security than a Congress which in the 1950s "allowed itself to become a forum for the shameful anti-communist witchhunt of McCarthyism"<sup>71</sup> and which remained, even thereafter, a hothouse of parochialism. To many reasonable observers, proponents of congressional prerogative were seen as agents not of constitutional balance but of unenlightened reaction.

By 1960, Dean Rusk, in an article that presaged his service as Secretary of State for Presidents Kennedy and Johnson, was able to write in *Foreign Affairs*: "As Commander in Chief the President can deploy the Armed Forces and order them into active operation. In an age of missiles and hydrogen warheads, his powers are as large as the situation requires . . ."<sup>72</sup> A year later, as the United States crossed into the New Frontier, Senator Fulbright, by now chairman of the Senate Foreign Relations Committee, reflected the tenor of the times and of prevailing congressional sentiment with these extraordinary words:

"The price of democratic survival in a world of aggressive totalitarianism is to give up some of the democratic luxuries of the past. We should do so with no illusions as to the reasons for its necessity. It is distasteful and dangerous to vest the Executive with powers unchecked and unbalanced. My question is whether we have any choice but to do so."<sup>73</sup>

Within four years, Fulbright himself took the lead in saying yes, there was a choice. The turning point, in early 1965, was President Johnson's dispatch of 22,000 U.S. troops to the Dominican Republic. While rationalized as a rescue of endangered Americans, this action came as a sudden throwback to the gunboat diplomacy of a half century before.

But the compelling and defining issue was, of course, Vietnam. In 1964, prior to the presidential election, Johnson had engineered the Gulf of Tonkin Resolution, arguing pri-

vately that a demonstration of American unity would help him avoid any deeper involvement in Southeast Asia.<sup>74</sup> By the summer of 1965, however, the Administration had begun its escalation, citing the Resolution in the process.<sup>75</sup> Fulbright's break with Johnson ended a longtime friendship and set the stage for the televised Senate Foreign Relations Committee hearings that were to become, in the late 1960s, the principal public forum for the nation's growing disenchantment with the Vietnam war.

By eliciting the Tonkin Gulf Resolution, albeit under dubious pretenses, Johnson at least had paid some deference to the concept of congressional authorization for the use of force. But with the election of Richard Nixon, monarchism reached full bloom. At the time of the Korean intervention, Secretary of State Acheson had pleaded expediency.<sup>76</sup> Two decades later, the argument of expediency had become doctrine. In 1970, when President Nixon sent U.S. forces into Cambodia with neither congressional authorization nor even consultation, his accompanying assertions of autonomous presidential power<sup>77</sup> were so sweeping and so extreme that the Foreign Relations Committee began a search, led by Senator Jacob Javits, for some means of rectifying what was now perceived as dangerous constitutional imbalance. The result, three years and scores of hearings later, was the War Powers Resolution—a somewhat flawed compromise between differing Senate and House versions.<sup>78</sup>

### III. THE WAR POWERS RESOLUTION: A FLAWED EFFORT TO RIGHT THE BALANCE

The mechanism envisaged by the War Powers Resolution is simple. If the President introduces U.S. forces into "hostilities or situations where imminent involvement in hostilities is clearly indicated by the circumstances," he is required under §4(a)(1) to report within forty-eight hours to Congress. Under §5(b), this report triggers a sixty/ninety-day period<sup>79</sup> within which the President must obtain congressional authorization if hostilities are to be sustained.<sup>80</sup> Before expiration of that period, Congress may also, under §5(c), require by concurrent resolution that the action be terminated.<sup>81</sup>

Unfortunately, the Resolution contains readily identifiable flaws. The Resolution begins with an attempt to enumerate comprehensively the President's authorities to use force but—primarily as a result of a flawed bargaining process between competing House and Senate versions—presents them inadequately. Section 2(c) lists only three authorities: (1) pursuant to a declaration of war; (2) pursuant to specific statutory authorization; and (3) in order to repel an attack on U.S. territory or forces. It thus omits two circumstances—rescuing Americans and forestalling an imminent attack—that had been in the original Senate version and that most constitutional scholars would place under the heading of the President's established constitutional authority and responsibility.

The Resolution then raises puzzling questions about the relationship between those authorities it cites and the sixty-day clock. According to §5(b), the clock does not apply if Congress has declared war or enacted a statutory authorization for a specific use of force. Nor does it apply if Congress is physically unable to meet as a result of an attack on the United States. Thus, the Resolution exempts from the workings of its central mechanism virtually every action it affirms as residing within the President's authority.

The Resolution, by its own logic, does not exempt from the sixty-day clock the cir-

cumstances in which the President has acted within his acknowledged constitutional authority to repel an attack and Congress, though able to meet, has not provided a declaration of war or a statutory authorization. The Resolution thereby appears to apply a sixty-day limit to an inherent presidential power that, quite arguably, cannot be so limited. This logical flaw, and the rather glaring omissions of §2(c), have made the Resolution an easy target for its critics.

No critic was more biting than Senator Sam Ervin, who focused on the repelling-invasion scenario during the 1973 Senate debate:

"This measure is an absurdity. It says that when the United States is invaded, Armed Forces of the United States must get out of the fight against an invader at the end of [sixty] days if Congress does not take affirmative action within that time to authorize the President to continue to employ the Armed Forces to resist the invasion . . . [This means] the President must convert Old Glory into a white flag . . . if Congress does not expressly authorize him to perform the duty the Constitution imposes on him to protect the Nation against invasion."<sup>82</sup>

A fuller statement of presidential powers in §2(c) would not only have been sounder constitutionally, but would also have provided a reasonable application of the sixty-day clock to the presidential powers acknowledged by the Resolution. Specifically, had §2(c) affirmed the President's constitutional authority to rescue Americans and to forestall attacks on the United States and its armed forces, it would be arguable that such presidential authorities to act abroad, though constitutionally derived, depend on the rationale of emergency and therefore are limited in time and scope. Under these circumstances, the sixty-day clock could be defended as a mechanism to implement the principle that the President may respond to certain emergencies but may not transform them into a policy of protracted warfare without congressional approval.

Since the War Powers Resolution did not recognize these additional powers, however, and since the authorities on the actual list are not limited by the sixty-day clock (or, in the case of repelling attack, not properly limited), the Resolution carries the unavoidable implication that its clock mechanism is intended to apply to presidential initiatives undertaken without proper authority. This implied expectation—that the President regularly will overstep his constitutional authority—weakens the Resolution substantially. As Professor Louis Henkin testified, "Declarations of constitutional limitation on the President are undermined if Congress proceeds to assume that he will violate them and prescribes procedures for such violations."<sup>83</sup>

Indeed, the implied assumption of routine presidential excess raises a practical question: If Congress expects the President to violate constitutional limits in committing forces, why expect his dutiful adherence to a legislated time limit on keeping forces deployed?

There is, it should be noted, one way to avoid construing the Resolution as implying an expectation that the President will exceed his proper authority. But to do so, one must construe the Resolution as constituting, in and of itself, an authorization under which the President may wage war for sixty/ninety days. While this certainly was not the congressional intent,<sup>84</sup> one of the War Powers Resolution's original champions, Senator Thomas Eagleton, recognized the danger

that such an inference would be drawn and denounced the Resolution in its final form for that reason.<sup>85</sup>

Still another flaw—many would argue—lies in §5(c), which permits Congress to require a cessation of military action by concurrent resolution. In the aftermath of the Supreme Court's 1983 decision in *INS v. Chadha*,<sup>86</sup> which found that legislative vetoes violate the Constitution's presentment clause,<sup>87</sup> most scholars who otherwise support the Resolution's constitutionality accept the unconstitutionality of §5(c).<sup>88</sup> Although this view is by no means universal,<sup>89</sup> defenders of the Resolution are generally disposed to see this subsection repealed because it is not crucial to the Resolution's purposes and serves "only to provide an excuse for denunciation and defiance of the entire Resolution."<sup>90</sup>

While these flaws did not escape notice at the time of enactment, an even more fundamental flaw in the War Powers Resolution was not anticipated—the impotence of the Resolution's basic mechanism if a President capitalizes on ambiguities available in the §4 reporting requirement. Section 4(a) of the Resolution provides that:

"In the absence of a declaration of war, in any case in which United States Armed Forces are introduced—

"(1) into hostilities or into situations where imminent involvement in hostilities is clearly indicated by the circumstances;

"(2) into the territory, airspace or water of a foreign nation, while equipped for combat, except for deployments which relate solely to supply, replacement, repair, or training of such forces; or

"(3) in numbers which substantially enlarge United States Armed Forces equipped for combat already located in a foreign nation; the President shall submit within 48 hours to the Speaker of the House of Representatives and to the President pro tempore of the Senate a report, in writing, setting forth—

"(A) the circumstances necessitating the introduction of United States Armed Forces;

"(B) the constitutional and legislative authority under which such introduction took place;

"(C) the estimated scope and duration of the hostilities or involvement."<sup>91</sup>

Section 5(b) stipulates that the clock begins when "a report is submitted or required to be submitted pursuant to section 4(a)(1)." But since a decision by the President not to submit a report leaves unresolved whether a report was "required to be submitted," the clock is unambiguously triggered only when a report is actually transmitted and when it explicitly identifies the situation as one described in §4(a)(1).<sup>92</sup> Conversely, if the report provides some or all of the information required by subparagraphs (A), (B), and (C), but fails to affirm the existence of a §4(a)(1) situation, the applicability of the clock is again left in doubt. Since the Resolution's enactment, Presidents have used this ambiguity to their advantage by doing precisely that, nodding in the direction of the War Power Resolution while avoiding formal acceptance of its fundamental mechanism.<sup>93</sup>

In the past sixteen years, Congress has received nearly a score of presidential reports described as "consistent with" the War Powers Resolution. Only one has made specific reference to §4(a)(1): President Ford's 1975 report on the Mayaguez incident, submitted after the event.<sup>94</sup> Thus, in the entire history of the War Powers Resolution, the sixty-day clock has never been unambiguously triggered. As in the recent United States naval

deployments and hostilities in the Persian Gulf, Congress has been left to engage in periodic debates about the constitutionality of the law and the President's degree of compliance with it—examining only secondarily the substantive merits of the policy at issue.

#### *Options today*

But if the War Powers Resolution has never worked as envisaged, the question remains: Could it work? Could such a framework facilitate, rather than complicate, Executive-Legislative interaction in the decision to use American forces abroad?

Certainly the Resolution's flaws described here do not make the case for repeal; they are correctable. The "legislative veto" provision is severable and can be repealed. Any implied time limit on the President's authority to repel attacks on the United States could be excised. And the list of inherent presidential authorities could be expanded, thereby removing the two deleterious implications mentioned earlier: that the clock applies only in instances in which the President has already violated the stated limits on his authority or, alternatively, that the Resolution bestows presidential powers beyond those a President would otherwise possess. Together, these alterations deprive the Resolution's critic—right and left—of their principal constitutional complaints.

Moreover, the most common operational criticism of the Resolution—that Congress could shirk its responsibility by inaction, leaving the President high and dry and forcing a withdrawal after sixty days<sup>95</sup>—is simply spurious, an allegation that has achieved effect not by persuasive force but through sheer repetition. Indeed, under the logic of the Resolution, it is difficult to imagine how withdrawal-via-inaction could occur, because § 6 guarantees highly expedited legislative procedures insuring time-certain voting on any authorization measure introduced pursuant to the President's submission of a § 4(a)(1) report. This means that, in either house, any one of the President's supporters could introduce a measure—providing precisely the authorization sought by the President—that would automatically reach a vote within a matter of days.

Thus, the criticism of potential congressional inaction is not only groundless but ironic. The problem is not that Congress may fail to give the President an answer; the problem is that Presidents have refused to ask.

Presidents have refused to ask for such authorization—not just under the War Powers Resolution, but beginning with Truman—on the basis of the relatively modern notion that to do so would weaken the Presidency. One must wonder whether, in acting on this rationale, they have succumbed, as the Foreign Relations Committee argued in 1970, to the dubious "notion that great Presidents are those who act effectively to strengthen the office of the Presidency as distinguished from strengthening the constitutional system as a whole."<sup>96</sup> The Committee quote historian Thomas Bailey:

"The bare fact that a President was a strong one, or a domineering one, does not necessarily mean that he was a great one or even a good one. The crucial questions arise: Was he strong in the right direction? Was he a dignified, fair, constitutional ruler, serving the ends of democracy in a democratic and ethical manner?"<sup>97</sup>

One must also ask whether, in their resistance to the very idea of the War Powers Resolution, Presidents have failed to take advantage of the real benefits such a procedure offers for registering, quickly if necessary, a

formal expression of national consensus behind key policies that depend on broad support for success. The truth is that any presidential policy involving a use of force enjoys an enormous presumption of support. Thus, should a President ever choose to submit a § 4(a)(1) report declaring that hostilities had begun or were imminent and requesting immediate authorization for operations necessary to protect American lives and vital national interests, Congress would be profoundly reluctant to accept responsibility for thwarting his policy. Indeed, only if the President's policy were subject to severe and legitimate doubt would Congress be likely to resist his request—a valuable function for Congress to perform. But, in any case, a vote would occur: a joint decision would be reached.

Presidents nonetheless have declined to set foot on this playing field under the advice of successive counselors that to accept the constitutionality of the game would undermine the Presidency itself.<sup>98</sup> Unfortunately, while the device of filing reports "consistent with" the War Powers Resolution has served the purpose of avoiding a head-on confrontation, it has left us fettered to a law that purports to be fundamentally important, but which the President fundamentally flouts.

In dealing with this constitutional impasse, our options today appear three-fold.

The first is to accept the status quo. Chairman Dante Fascell of the House Foreign Affairs Committee, a veteran legislator keenly familiar with the War Powers Resolution in all its aspects, testified that this probably was the most we could hope for.<sup>99</sup> He recognizes the liabilities of the current law, but his pessimism about any practical prospect of enacting improvements leads him to find a silver lining: the War Powers Resolution, whether presidents accept it or not, at least stands in law as a cautionary admonition against presidential excess.

The second option is repeal, or the functional equivalent thereof—as in the current Byrd-Warner proposal,<sup>100</sup> which would establish a formal congressional consultative group to interact with the President in critical situations, but which would denude the law of its principal "joint decision" mechanism: the requirement of congressional authorization. Functional repeal would have the one clear benefit of removing the law itself as a chronic object of dispute each time a use of force occurs. But it would have the distinct and almost unavoidable liability of symbolizing congressional acceptance of the monarchist model now asserted by the Executive.<sup>101</sup> It would return us to the status quo ante, but with a strong presumption that the monarchist model not only had prevailed but had been explicitly accepted by Congress. Since many in Congress are not prepared to accept that model, it would leave Congress and the Executive still at odds on a basic constitutional issue—with the Executive's hand somewhat strengthened.

The third possibility is to legislate a new framework on which Congress and the President can agree, a framework that more successfully embodies the "joint decision" concept. This means devising a set of authorities and procedures that both branches accept as constitutional and as desirable in the conduct of American foreign policy. While this possibility requires a convergence of view and a measure of comity that now seem unlikely, one nevertheless can envisage the premises of such a framework and the elements it might comprise.

#### *Premises of a constitutional compromise*

A new joint decision framework would be built on the premise that the war power is subject to legislation.

The most elegant rationale for this premise was articulated by Professor Louis Henkin and others during the hearings of the Special Subcommittee on War Powers.<sup>102</sup> Under their reasoning, the war power falls into what Justice Jackson, in his famous concurring opinion in the Steel Seizure Case,<sup>103</sup> called "a zone of twilight" in which the President and Congress have concurrent authority.<sup>104</sup> In this zone, Marshall's old rule in *Little v. Barreme*<sup>105</sup> customarily governs: the President can act unless Congress acts; if Congress acts, its legislation supersedes an otherwise valid order of the President.

Other scholars move more directly to the conclusion that the war power is subject to legislative delineation, resting their argument on a straight-forward reading of the Constitution: the power of the Congress to declare war and the mandate to Congress to "make all Laws which shall be necessary and proper for the carrying into Execution the foregoing [congressional] Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof."<sup>106</sup> They argue that, except in emergency situations affecting the security of American citizens or the country as a whole—situations which compel the President to act without prior congressional approval—the power to commit troops to combat is subject to congressional control, including any procedures Congress may choose to delineate in law.<sup>107</sup>

Obviously, general acceptance of a joint decision framework would entail that the Executive yield the more extravagant constitutional claims made in defense of the monarchist model. But it would require, too, some recognition that the supposed need for unconstrained presidential authority in the modern age, which gave rise to such claims, has been exaggerated, as has the assumed superiority of executive branch sources of "intelligence." In an era when it has become clear that a good journalist's published analysis of events abroad will often prove as sound as a highly classified National Intelligence Estimate, the cult of Executive expertise, which enjoyed a long run in the first decades of the postwar period, has surely had its day.

This is not to say that the President should be constrained in any way in protecting the nation during a genuine emergency or that Congress, in situations requiring longer-term judgment, will always contribute Solomonic wisdom to a joint decision. But neither can we assume that the presidency is a repository of flawless geopolitical instinct; history supports no expectation of consistent sagacity in either branch. Whatever its widely advertised foibles, Congress does, by its very nature, represent the broad diversity of America, and its members possess an enormous collective body of experience and common sense as to what works and what does not in the real world of human behavior, at home and abroad. In time of decision on war and peace, Congress' collective response will constitute a threshold test of whether the President's policies can win and sustain needed public support.

A new framework also requires the Executive to recognize that, ultimately, American foreign policy may benefit in use-of-force situations from the smooth workings of an agreed-upon system that yields a prompt congressional response. Motivated by patriotic instinct and sheer politics, Congress will, in almost any reasonable case, support a President's call to arms. And it is all the more likely to support him if the procedure for decision is no longer in dispute. Such a

procedure thus can be doubly effective in fostering unanimity: it will force Congress off the sidelines while removing a chronic complaint about process.

#### IV. OUTLINES OF A NEW "JOINT DECISION" FRAMEWORK

A new "joint decision" framework could involve several elements.

##### *New title*

An initial element, more than cosmetically important, would be a new title to the law. After years of contention, the very name "War Powers Resolution" elicits attitudes so conflicting, entrenched, and emotion-charged as virtually to preclude rational debate and the grand compromise necessary for a new framework. Among its liabilities, the existing title invites digressive semantic debates as to what constitutes a war, whereas the real subject at issue is how the United States should decide on a policy that entails the likelihood of extended warfare. The current name also conveys an impression that legislation in this area represents a small-minded congressional effort to prosecute a parochial dispute about "powers," even at the cost of impeding military actions needed for American security.

In truth, the new law's purpose would be essentially that of its predecessor: to provide an effective mechanism, consistent with the Constitution, for joint decisionmaking on the use of American military power. But this affirmative aim, and the expectation that force will be used where necessary, would be more plainly conveyed by a title such as "The Use of Force Act."

##### *Enumeration of Presidential authorities*

The key element of a new framework would be to move beyond the now sterile dispute over precisely what the Constitution, unembellished by legislation, allows and to accommodate practical reality by enumerating and affirming in law a broad range of soundly conceived presidential authorities. Such authorities would be available to the President without incident-specific congressional action—but, except in emergencies, only for a limited period. This listing would include and subsume those emergency authorities to use force regarded as *inherent* presidential powers deriving from accepted constitutional practice. And it would include additional authorities that Congress might wish, in the national interest, to grant, such as a circumscribed authority to preempt or retaliate against clearly identified acts of terrorism.

It bears emphasis that Congress would not, through this technique, be *conceding* constitutional authority to the President, but rather *exercising* its own constitutional power to define and delegate authority. In the War Powers Resolution, enacted in an atmosphere of heated interbranch contention, Congress explicitly sought to confer *no* authority. Its intention was to rein the President in from assertions of unwarranted authority. In contrast, through a Use of Force Act, Congress would affirmatively delegate authorities that embrace and extend beyond those independently held by the President solely through the Constitution. In doing so, however, Congress would impose standards, limitations, and procedures pursuant to its own constitutional powers.

One authority, clearly not inherent but which Congress might wish to provide, would empower the President to use force pursuant to a decision of the United Nations Security Council<sup>108</sup>—as President Truman did in Korea, with the difference that Truman acted unilaterally, asserting an inherent au-

thority.<sup>109</sup> It seems inconceivable that Congress would wish to thwart the United States' participation in any multilateral use of force on which the Security Council could unanimously agree, particularly if the President had consulted with the congressional leadership before participating in the United Nations' decision. From the President's perspective, genuine consultation would be the essence of prudence, since an *extended* use of force would eventually require congressional approval. Such a pre-authorization to the President could, in an international emergency such as the Korean intervention, prove useful and would serve, by its very existence, as a symbol of American support for multilateral, consensus-based U.N. action.

A similar authority for multilateral action would empower the President to use force in cooperation with America's democratic allies under circumstances wherein military intervention could have decisive effect in protecting existing democratic institutions in a particular foreign country against a severe and immediate threat. As with the U.N.-related authority, built-in constraints on the President would derive from the need to act multilaterally and the eventual need to obtain congressional authorization for a sustained use of force.

In legislation creating a new framework, all such authorities would be placed under the conceptual heading of "confirming and conferring," so as to avoid an endless dispute over the exact location of the line between what the President already possesses independently and what Congress was bestowing upon him by this legislation. By way of example, this aggregation of authorities could take the following form:

##### Authority and Limits

§1 (a) In the absence of a declaration of war or statutory authorization for a specific use of force, the President, through powers vested by the Constitution and by this law, is authorized to use force abroad—

(1) to repel an armed attack upon the United States, its territories, or its armed forces;

(2) to respond to a foreign military threat that severely and directly jeopardizes the supreme national interests of the United States under extraordinary emergency conditions that do not permit sufficient time for Congress to consider statutory authorization;

(3) to protect and extricate citizens and nationals of the United States located abroad in situations involving a direct and imminent threat to their lives, provided they are being evacuated as rapidly as possible;

(4) to forestall an imminent act of international terrorism known to be directed at citizens or nationals of the United States, or to retaliate against the perpetrators of a specific act of international terrorism directed at such citizens or nationals;

(5) to protect, through defensive measures and with maximum emphasis on multilateral action, internationally recognized rights of innocent and free passage in the air and on the seas;

(6) to participate in multilateral actions undertaken under urgent circumstances and pursuant to the approval of the United Nations Security Council; and

(7) to participate in multilateral actions undertaken in cooperation with democratic allies under urgent circumstances wherein the use of force could have decisive effect in protecting existing democratic institutions in a particular nation against a severe and immediate threat.

(b) Force may not be used for purposes of aggression, and any and every use of force

shall be subject to the principles of necessity and proportionality. Accordingly, force may be used only—

(1) if every effort has been made to achieve the objective set forth in subsection (a)(1)-(7) by means other than the use of force;

(2) with levels of force, in a manner, and for a duration essential to and directly connected with the achievement of such objective; and

(3) if the diplomatic, military, economic, or humanitarian consequences of such action are in reasonable proportion to the benefits of such objective.

Some would doubtless see in the affirmation of such authorities a dangerously excessive congressional concession. Indeed, the authorities listed above would have sanctioned such actions as the initial stages of the Korean intervention (clause 6); the Cuban missile crisis blockade (clause 2); the Iranian hostage rescue attempt (clause 3); the Dominican and Grenada invasions (clause 3, to the extent that evidence of danger to American citizens could be adduced and the limitations of subsection (b) where met); the Libya bombing (clause 4, to the extent that Libyan culpability in terrorism could be adduced); and initiation of the Persian Gulf escort operation (clause 5, to the extent the action could be justified as a defense of free passage).

But while generous in scope, this affirmation of authorities would also define and limit what the President can do and what justifications he can properly use—as opposed to the current monarchist situation in which no limits are even acknowledged.<sup>110</sup> By outlining broad but specific authority, the law also would be constraining: in accord with Marshall's rule in *Little v. Barreme*, what is not authorized is prohibited.

This approach—explicit authorization entailing implicit constraints—provides a sound constitutional means by which Congress can step usefully into Justice Jackson's "zone of twilight." By granting express authorities it would illuminate, in practical situations, when the President's authority is "at its maximum." Conversely, by implying which measures would be incompatible with the will of Congress, it would clarify those circumstances in which the President's power is "at its lowest ebb."<sup>111</sup> Thus, a Use of Force Act would serve not only to provide standards for evaluating actions already taken, but as a guide for action—an important function of all law.

An obvious concern is that the President could abuse such authorities by presenting a distorted interpretation of events. But the Chief Executive can present his version of events now, and there are no standards against which this portrayal can be weighed. In a functioning joint decision framework, a blatant distortion of authorities or circumstances would entail a clear risk. For such a framework would—except in an emergency directly imperiling the nation—empower the President to use force only in the short-term, and his efforts to obtain congressional approval for sustaining the action would be greatly compromised by a provocative act of misrepresentation.

##### *Clearer definition of use of force*

A new law also could more clearly define what kinds of activities are to be "captured" in its mechanism. The essential aim of a joint decision procedure is to ensure that the commitment of U.S. forces to sustained hostilities—to warfare—is based on affirmative congressional action. As a corollary, however, this crucial mechanism should not be triggered by any and all hostilities, includ-

ing ephemeral incidents over which the President has no control. For example, we emphatically do not want a minor episode caused by a trigger-happy corporal on either side of the Korean DMZ, or by a band of terrorists, to set into motion a mandated decisionmaking process of the entire United States Government.

Our attention belongs primarily on uses of force involving some degree of United States policy initiative, in which American forces are newly deployed, or assigned to new duties, involving extensive combat or its likelihood. Our decision mechanism should go into effect only in the event of a commitment of forces to actual or prospective warfare.

Thus, in the case of forces already on-line abroad, minor episodes, however caused, would not fall within the statute because they involve no United States policy initiative, whereas major warfare resulting from foreign attack would become a "use of force" at the point when defensive measures required a presidential decision to dispatch military reinforcements. This dividing line is appropriate. Our mutual security treaties, under which most American forces are deployed abroad, do not in themselves constitute a presidential authorization to wage war. Rather, they represent an American commitment to participate in the defense of foreign nations via the constitutional decisionmaking process of the United States Government.<sup>112</sup>

As a practical matter, of course, basing American forces abroad places them intentionally at risk and constitutes a *circumstantial* commitment undertaken by the entire government from which may be inferred an expectation that the United States will bring in additional defensive means as necessitated by energy attack. But when defensive action abroad is transformed into sustained warfare, an authorizing act should be performed, both as a constitutional requirement and as a necessary means of galvanizing the nation behind a policy that will entail sacrifice and demand unity.

In current law a use of force requiring eventual congressional authorization is defined simply: the introduction of United States Armed Forces into "hostilities or situations where imminent involvement in hostilities is clearly indicated by the circumstances."<sup>113</sup> Unfortunately, the ambiguities surrounding the concept of "hostilities" are similar to those raised by the term "war," and the meaning of "clearly indicated by the circumstances" is equally subject to debate and obfuscation. Thus, during recent operations in the Persian Gulf, even after American naval forces aboard the *USS Stark* had been killed, even after American naval vessels had hit Iranian mines, even after U.S. forces had undertaken attacks against Iranian facilities—and indeed even after then Vice-President Bush had criticized Iran for permitting its ill-fated civilian airliner to fly "over a [U.S.] warship engaged in battle"<sup>114</sup>—the Reagan administration was unwilling to acknowledge that the United States Navy had been involved in actions requiring a report under §4(a)(1) of the War Powers Resolution.

No definition can ever fully escape susceptibility to quibbling, but a new framework might employ a more complete definition, along the following lines:

#### Definition

§2. The term "use of force" means the introduction of United States Armed Forces into hostilities or potential hostilities. Such action refers to situations where United States Armed Forces—

(i) have recently been introduced into the territory of a nation, or deployed to expand significantly the United States military presence in such territory, or committed to new activities in such territory or on the high seas; and

(ii) are operating with a substantial likelihood of inflicting or occurring casualties, or have inflicted or incurred casualties.

This somewhat more refined definition could avoid some of the confusion that has surrounded the phrasing in the current law and would serve the useful purpose of making clear that the mechanism is not intended to be triggered by an isolated incident involving U.S. forces already deployed in established roles. More important, it would make clear that the mechanism would indeed be triggered by combat activities involving U.S. forces in new or expanded roles emanating from presidential decision.

#### Consultation

A critical question is whether and how Executive-Legislative consultation might be improved. Consultation does not, of course, guarantee agreement or even comity. But genuine consultation, meaning a timely exchange of information and advice, should be considered the norm and a functioning joint decision law should aim to foster that process.

The Byrd-Warner bill would seek to do so—indeed it implicitly places all of its antimonarchist hopes in this basket—by specifying an eighteen-member congressional consultative group and requiring the President to interact with it in use-of-force situations. This is a useful measure, if for no other reason than to deprive the Executive of the long-abused excuse that Congress is so large that it is impossible to know with whom to consult. But a designated consultative group will prove hapless if future Presidents continue to view "consultation" as a matter of informing Congress at the last minute, rather than of soliciting the counsel of congressional leaders and acting on the basis of that consultation.

Because it depends on a certain habit of mind and behavior, genuine consultation is unlikely to occur spontaneously in crisis situations. Rather, it requires cultivation through regular Executive-Legislative interaction. Unfortunately, the trend in recent years has been the opposite. While the sunshine legislation of the 1970s served to open Congress to public scrutiny, it also, in the context of the television age, helped to convert hearings into theater, in which departmental secretaries and members of Congress most often speak with the larger audience in mind. Closed "executive" sessions, which once provided a regular venue for frank talk and the cultivation of personal familiarity, are now used almost exclusively for briefings, often by middle-level bureaucrats.

A new joint decision law, in addition to designating a congressional consultative group, could seek to counter the depersonalization of Executive-Legislative relations by institutionalizing regular, closed-door consultative sessions between key administration officials and their oversight committees, as follows:

#### Consultation

§3. (a) Except in the event of an extreme national emergency, the President shall seek the advice and counsel of the Congress prior to the use of force.

(b)(1) To facilitate consultation between Congress and the President on foreign and national security policy, when Congress is in session the following meetings shall occur as

a regular practice, in open or closed session and with exceptions as agreed by the parties:

"(A) the Secretary of State shall meet monthly with the Committee on Foreign Relations of the Senate and the Committee on Foreign Affairs of the House of Representatives;

"(B) the Secretary of Defense shall meet monthly with the Committee on Armed Services of the Senate and the Committee on Armed Services of the House of Representatives;

"(C) the Director of Central Intelligence shall meet monthly with the Select Committee on Intelligence of the Senate and the Permanent Select Committee on Intelligence of the House of Representatives;

"(D) the President's National Security Adviser shall meet monthly with the Speaker of the House of Representatives, the House Majority Leader, the House Minority leader, the President Pro Tempore of the Senate, the Senate Majority Leader, and the Senate Minority Leader; and

"(E) the President shall meet at least once every three months with a Congressional Leadership Group, on which the Speaker of the House of Representatives shall serve as Chairman and which shall comprise the Members referred to in paragraph (D) and the chairmen and ranking minority members of the committees named in paragraphs (A), (B), and (C)."

(2) Such consultation shall have, among its primary purposes—

(A) identifying potential situations in which the use of force might be necessary and examining thoroughly the wisdom and lawfulness of such use; and

(B) in those instances in which a use of force has already been undertaken, discussing how such use of force complies with the provisions of subsection 1(b).

(3) To facilitate consultation under unusual circumstances, the President shall meet promptly with the Congressional Leadership Group on his own initiative or upon receipt of a special request from its chairman, who shall issue such special request pursuant to a request from a majority of the members of the Group.

#### A time frame for joint decision

Retention of some stipulated time frame would seem an unavoidable element of any joint decision mechanism for the simple reason that without a time period—a defined point by which affirmative congressional participation in the "joint decision" is necessary—the requirement for such participation would have no meaning. To underscore the decisiveness of the clock, the law should specifically invoke Congress' most unquestioned power—the power of the purse—by providing that, in the absence of congressional action, the President's authority to expend funds expires after the time allowed.<sup>115</sup>

An extension of the time clock from the current 60/90 days to, say 120 days would provide more flexibility to both the President and the Congress, while mitigating any appearance that the President was on a short leash. But if the joint decision mechanism contains no deadline, we are back to the monarchist model in which the President essentially can do as he pleases and Congress must reach for the purse strings as its only recourse.

Clearly, retaining a time clock, the most vehemently attacked element of the current War Powers Resolution, presents the critically problematic aspect of any compromise. But the constitutionality of such a mechanism, governing nonemergency situations,

seems beyond doubt.<sup>116</sup> And the practical case against it is hardly as substantive as many have come to believe. The basic charge, that it has proven "unworkable," is simply disingenuous; the clock mechanism will work—and produce a timely vote—if Presidents accept the procedures envisaged by the law. That vote, moreover, can come at virtually any time the President wants it; if he wants it early, his congressional supporters can produce that result. Thus, the idea that American foreign policy will be suspended in uncertainty throughout the time-clock period<sup>117</sup> is as groundless as the specter of withdrawal through congressional inaction.

A time-clock provision also faces the charge that it may provide leverage to an adversary of the United States: if he can make a conflict painful enough in the short run, perhaps he can induce timidity in the Congress. But this is an exaggerated concern. With or without a war powers law, United States willingness to undertake sustained hostilities will be subject to democratic pressures; a statutory mechanism is simply a means of delineating procedure. Moreover, as a practical matter, an enemy tactic designed to intimidate by inflicting casualties on American forces in large numbers would more likely backfire and solidify congressional support of the President and American troops in the field.

The truth is that, in suggesting such liabilities, opponents of the time clock are expressing not so much a practical concern as a constitutional attitude. In the words of Professor John Hart Ely, they are "not simply against establishing a clock, but against enforcing the Constitution generally: an inevitable byproduct of any sort of constitutional requirement of congressional approval is that the enemy also will know that approval is required. The only way around this is to make the President a dictator, but that wasn't, and shouldn't be, the idea."<sup>118</sup>

As an alternative to a numerically defined time clock—e.g., 120 days—a Use of Force Act could employ a descriptive formulation designed to embody the concept of the point at which hostilities become sustained. The numerical specification, after all, is simply an attempt to establish a reasonable dividing line between an "incident" and a conflict describable as "war." If, in the effort to negotiate a grand compromise, the time clock became an insuperable obstacle, a descriptive approach could be tried. But such a formulation must be decisively descriptive. And if the concern is to avoid rigidity—meaning the danger that a time clock could somehow hamstring the United States at a crucial moment—the direct antidote would be explicit "escapes" from the time-clock constraint.

#### *Exceptions to the time clock*

While a time clock, whether numerical or descriptive, is necessary to establish the imperative of congressional participation in a joint decision to engage U.S. forces in sustained hostilities, two types of exceptions are warranted.

The first derives from constitutional considerations and logic. Since a use of force based on an inherent presidential power—the famous example is repelling an attack on the United States—could, at least conceivably, extend beyond the limited time frame, the mechanism should provide for this possibility. If it does not, a Use of Force Act will, like the War Powers Resolution, face the charge that it aims to constrain what the Constitution permits.<sup>119</sup>

This charge can be preempted straightforwardly—by providing for a presi-

dential certification to Congress, accompanied by detailed explanation, that he has determined in a particular incident that supreme national interests are so imperiled as to constitute an emergency requiring that he exceed the limit stipulated in the law. This would, almost by definition, satisfy constitutional concerns because the basis for any assertion of presidential war-making power is emergency; to allow the President to invoke emergency is to leave unconstrained any "independent" power conferred by the Constitution.

Those suspicious of the Executive will undoubtedly view this as an irresistible invitation to presidential subterfuge a truck-sized loophole. It therefore bears reemphasis that the principal aim of this new law would be to move off the dead center of stalemate—and de facto monarchist practice—by engaging the Executive and the Congress as partners in a process wherein the President's actions are weighed, first by him and then by Congress, against agreed standards. The law would establish a powerful norm: that when the United States engages in hostilities beyond a certain duration, it must—except in dire national emergency—be based on affirmative congressional action.

Thus, any Presidential using this "loophole" would have to marshal and submit arguments, and face the political response. To help ensure the President's sobriety in drawing upon this provision, the new law could provide expedited procedures for a congressional resolution expressing disagreement with the President's rationale. While this type of resolution would have no direct legal effect unless Congress had the strength to override the President's veto, passage of such a resolution, even by only a majority vote in each house, would express the President's loss of congressional, and presumably public, confidence. It could also have judicial significance by adding ripeness to a situational dispute between the branches—a dispute of a kind that the new law would invite the courts to arbitrate, through provisions discussed below.

As a guard against prolonged presidential abuse of the "emergency escape," the new statute could provide that the certification of emergency permits the continuation of a use of force for only thirty legislative days unless Congress, by joint resolution, affirmatively accepts the President's rationale.<sup>120</sup> This limitation could subject the statute to the Ervin-style charge that it seeks unconstitutionally to limit the President's inherent authority to deal with emergencies. But it is difficult to contend that the President possesses a constitutional authority to deal with extended emergencies of a kind that he cannot persuade Congress to acknowledge.

A second means of presidential escape from the automaticity of the time clock would be a stipulation designed to reassure all those who might continue to worry over the specter of troop withdrawal by congressional inaction. Such a provision would state that the time clock would not apply if either or both of the two houses had failed to vote on a specific presidential request for authorization to undertake or sustain hostilities. In truth, expedited procedures would render this eventually almost totally theoretical. But by providing an explicit remedy for the possibility that a timid or inept Congress could avoid its responsibilities, this stipulation would lay to rest, once and for all, the principal argument employed against the current law. Even while protecting against a virtually impossible event, it would underscore and symbolize the seriousness of congressional intent underlying the new law.

#### *Reporting and expediting procedures*

A new joint decision law would retain two other features of the War Powers Resolution: the requirement of a prompt presidential report and expedited procedures for legislation affecting a use of force. But certain adjustments are in order.

Under a new law, only one kind of report should be required—a use of force report—in order to eliminate the ambiguities that have plagued reports under the War Powers Resolution. This report would include the particular authority within §1(a) under which the President had acted and a detailed explanation of how the limitations of §1(b) had been, and were being, heeded. The new law would also underscore a feature of current law too little understood: that the clock mechanism is triggered by the events that require the report, not by the report itself. The latter provision would not eliminate the possibility of confusion in a particular instance in which a President refused to submit a report: is the clock running or isn't it? But it would end the current conceptual confusion in which most participants in the process believe that the clock does not run until the President has submitted a report or Congress has passed a specific law starting it.

Expedited procedures under a new law should be similar to those under the War Powers Resolution, with one exception relating to sponsorship. Although existing procedures have never been used, they appear to be subject to operational confusion because they give top legislative priority to any bill purporting to authorize or limit any use of force. This raises the possibility that many bills will be in play at one point, and also that a single Member of Congress may become a nuisance. The Byrd-Warner bill would overcome this possibility by according expedited treatment only to bills emanating from an elite leadership group. A more democratic means to the same end, however, would be a provision that facilitated action on any bill authorizing or limiting a use of force under two conditions: first, as indicated earlier, if it were introduced pursuant to a presidential request; second, if the measure had "substantial sponsorship"—a threshold percentage, say twenty-five percent, of the members of that chamber. This would guard against parliamentary pitfalls while ensuring action in response to the President and on any other measure on which there was some considerable will for action.

Expedited procedures could also be accorded any "substantially sponsored" bill designed to make a finding that the clock, in a particular circumstance, was indeed running. To satisfy the constitutional requirements of the presentment clause, this measure would have to go to the President for signature and would accordingly face a difficult test of passage since a President who had tried to avoid the clock by refusing to submit a report could be expected to veto a measure affirming its applicability. But even if Congress could not override the President's veto, such a measure would nonetheless be a valuable vehicle of congressional expression, and a presidential veto in this context would be an act of notable political, and possibly judicial, significance.

#### *Inviting judicial review*

While enactment of a new joint decision law would overcome the current constitutional impasse, the new law would provide only a high degree of protection—not a guarantee—against an Executive-Legislative impasse with regard to a specific future use of force. For even though a revised mechanism

could only be enacted in a spirit of cooperation between Congress and the President, a future President could decline, whether for reasons of honest disagreement or bad faith, to submit a use-of-force report deemed by many in Congress to be required by the circumstances. We would then find ourselves facing the now-familiar situation in which the clock was running, but only in the abstract, and the President was protected in pursuing his policy through the minimal support of one-third-plus-one in either house. An interbranch dispute could also arise if the President continued to use force beyond the time allowed; for example, in an extended "emergency" that Congress refused to acknowledge. In such circumstance, the courts could play a useful role by rendering a decision that would formally determine the application of law to the situation in dispute.

Unfortunately, most recently in *Lowry v. Reagan*,<sup>121</sup> the courts have shied away from such a role, for reasons relating to the so-called "political question" and "equitable discretion" doctrines. It is not necessary here to evaluate in detail those arguments for judicial abstention,<sup>122</sup> except to say that they have been far too broadly applied.

What bears emphasis is that the courts, in rendering a decision in any such litigation, would not be deciding whether the United States should continue in a particular use of force, but only whether defined circumstances existed such that Congress should decide. Far from being beyond the courts' competence, a is sometimes argued, this is the way our judicial system customarily functions; the courts take testimony concerning the facts and then weigh those facts against prescribed legal standards.<sup>123</sup>

#### Judicial Review

§4. (a) Any Member of Congress may bring an action in the United States District Court for the District of Columbia for declaratory judgment and injunctive relief on the grounds that the provisions of this Act have been violated.

(b) In any action in a court of the United States seeking compliance with the provisions of this Act, the court shall not decline to make a determination on the merits based upon the doctrine of political question, remedial discretion, equitable discretion, or any other finding of nonjusticiability, unless such declination is required by Article III of the Constitution.

(2) Notwithstanding the number, position, or party affiliation of any plaintiffs in an action described in subsection (a) of this section, it is the intent of Congress that the courts infer that Congress would disapprove of any use of force inconsistent with the provisions of this Act and find that an impasse exists between Congress and the Executive which requires judicial resolution.

(c) Any court in which such action is heard shall accord such action the highest priority and announce its judgment as speedily as the requirements of Article III of the Constitution permit.

(d) If a court finds that a report was required to be submitted under the Act, it shall—

(1) direct the President to submit such a report; or

(2) declare that the time period set forth in the Act has commenced on the date of the court's judgment, or on a previous date determined by the court with due regard to unavoidable military necessity respecting the safety of the United States Armed Forces, and shall accordingly expire on a specific date.

(e) A judgment described in subsection (c) of this section shall be directly appealable to the United States Supreme Court.

Should the Supreme Court ever render such a decision, there would seem little doubt, as a practical matter, that Congress and the President would act in conformity. The clock would be unambiguously in effect; Congress would authorize or not authorize within the time allowed; and the President would be required to respond—either to an authorization with or without conditions, or to a funding cutoff. While contentious litigation concerning an ongoing use of force is hardly an appealing prospect, the availability of this recourse would give completeness to the mechanism, and by so doing would encourage presidential participation in the first place.

#### V. BENEFITS OF A NEW FRAMEWORK

Consolidating these and other elements of a possible new framework into a piece of draft legislation has yielded a draft "Use of Force Act" now under discussion within the Senate Foreign Relations Committee. Such legislation, undoubtedly requiring further refinement, would repeal and replace the War Powers Resolution, even while retaining some of its characteristics. While one cannot be sanguine about the Bush Administration's receptivity to legislation embodying the joint decision concept, one can say what the trade-offs would be if a new framework were accepted.

For the Executive, a major gain, after long years of dispute, would be a clear affirmation in law of broad authorities to use force in a wide variety of circumstances. These explicitly acknowledged powers, buttressed by a Presidential authority to waive time limitation in emergency circumstances, would serve to eliminate any possible impression of an American Commander in Chief fettered by excessive constraints. Procedurally, the President could also enjoy the benefit of an agreed mechanism of which he could take full advantage in obtaining prompt and explicit congressional support in critical foreign policy situations. And operationally, in circumstances requiring specific authorization for sustained action, he would also gain the flexibility of an extended time clock, although this in practice would tend to be more symbol than reality, since a President would probably want a vote well before the expiration of any time-limited authority.

For Congress, a grand compromise would serve to bring the President, after a prolonged and debilitating dispute, back onto the playing field—to participate, as a matter of agreed principle, in a joint decision mechanism. Having achieved this goal, Congress would surely not always welcome the accompanying requirement: that it stand up and be counted. Congress also would have to deal with the fact that any procedure enabling the President to obtain a quick response from Congress may enable him to maneuver Congress into supplying a rubber stamp. Against that danger, the only congressional defense is a strong dose of prudence in crafting any authorization provided.

But perhaps we can be more sanguine. For if such a framework is adopted the President's perspective will be this: "I now have a considerable amount of unchallenged short-term authority. But I had better use it wisely and well, for if it is necessary for hostilities to be sustained, I must win the support of a majority in each house within the next few months." Thus, the very existence of a joint decision mechanism would encourage prudence on the President's part as well, along with a strong inclination to consult.

Of course, even agreement on such a framework, its establishment in law, and its generalized acceptance cannot deliver us from the burden of choice. We have focused here on how the United States decides on the momentous question of war. What we decide is a matter, ultimately, of judgment. But sound procedure can contribute to wise decision. By resolving the constitutional dispute over the war power, we would liberate our government—both the Executive and Congress—to concentrate in crucial moments on the goals and means of American policy.

We will, in sum, have combined two vital aims. We want the President to have broad authority—and to be so seen by allies and adversaries—to uphold American interests. And we want a system embodying the sound constitutional principle that sustained hostilities should be based on affirmative and specific congressional approval.

With the approach of the 21st Century, Americans can embrace an aspiration that use of force as a tool of foreign policy by all nations will begin to enjoy a well-earned historical rest. But if circumstances do summon United States forces to combat, let us determine that our countrymen are dispatched not in an act of folly, but only when their risk and personal sacrifice are unavoidably necessary, and can be effective, in defending and protecting clearly perceived American interests. That, after all, is the ultimate standard against which any procedure—and any decision to use force—must be judged.

#### FOOTNOTES

\*Joseph R. Biden, Jr., is a United States Senator representing the State of Delaware. He is Chairman of the Senate Judiciary Committee, the Senate Foreign Relations Subcommittee on European Affairs, and the NATO Assembly's Special Committee on Alliance Strategy and Arms Control. Recently, Senator Biden served as Chairman of the Senate's Special Subcommittee on War Powers.

\*\*John B. Ritch III is deputy staff director of the Senate Foreign Relations Committee and the Committee's senior advisor on European and Soviet affairs, and served as staff director of the Senate's Special Subcommittee on War Powers.

This commentary is based on a speech delivered by Senator Biden at the Georgetown University Law Center on October 3, 1988.

The authors wish to thank Professor Michael J. Glennon of the University of California-Davis, the former Legal Counsel of the Senate Foreign Relations Committee, for reviewing drafts of this commentary and for assistance in the preparation of parts of the draft "Use of Force Act" described herein.

<sup>1</sup>The War Powers Resolution, Pub. L. No. 93-148, 87 Stat. 555 (1973) (codified at 50 U.S.C. §§1541-41 (1982)).

<sup>2</sup>President Ford's report to Congress on the Mayaguez incident reflects his Administration's policy concerning the War Powers Resolution. See *infra* note 94. The Carter Administration's policy on the Resolution is described *infra* at note 98.

<sup>3</sup>In assessing the Administration's decision, it bears emphasis that the Gulf nation crucially dependent on exporting oil by sea is Iran. Iraq and its key Arab allies have enormous pipeline capabilities which enable them to circumvent the Gulf. It was precisely for this reason that Iraq extended its land warfare against Iran into a sea war against Iranian shipping. Had Iraq at any point been willing to desist in the sea war, Iran surely would have done likewise.

Thus, when the United States committed major naval forces in the Gulf, the principal effect was not to assert the right of passage on the seas—nor to protect the "vital oil lifeline to the West" from an Iranian threat—but rather to deploy American power on the Iraqi side of that war. Iraq could now intensify its sea attacks on Iranian shipping with the extra incentive that Iranian retaliation might draw United States forces into active conflict with Iran. The United States Navy had thereby become an adjunct of Iraqi policy.

Obviously, one Administration motive was to regain Arab confidence following the arms-for-hostages fiasco. Another was fear that the Soviets might answer the Kuwaiti reflagging call and there-

by gain naval and political access in the Gulf. Still another motivation, though one barely acknowledged, was to do what the policy actually did: place American power behind the Iraqi and Arab cause and thereby help prevent an Iranian victory, which could spread instability throughout the region.

The mosaic of motives, however, was filled with questions. How necessary was it to "reassure" the Arabs, notwithstanding the arms-for-hostages mistake? Specifically, how likely, given their deep-seated antipathy to Communism, was the Kuwaitis' threatened embrace of the Soviet Navy? How serious was the prospect of Iranian victory, and how destabilizing would have been the regional consequences? Meanwhile, and most important, what was the likelihood that the United States would be drawn into direct war with Iran, and what would have been the consequences of that?

Although these questions had not been thoroughly considered either by the Executive or the Congress, the United States had undertaken what, according to one prominent commentator, was "by its nature an open-ended commitment in the Gulf" under circumstances in which "America's justification [was] not consistent with its actions—a sure course for domestic discord when the going gets tough down the road." Kissinger, *Wandering in the Gulf*, Wash. Post, June 21, 1987, at B7, col. 2.

DeFazio) (urging invocation of War Powers Resolution because decision to protect Kuwaiti tankers with naval forces was confrontation covered by "hostilities"); 133 Cong. Rec. E3, 435 (daily ed. Aug. 7, 1987) (statement of Rep. Oberstar) (same); 133 Cong. Rec. E4, 196 (daily ed. Oct. 28, 1987) (statement of Rep. Broomfield) (opposing invoking War Powers Resolution because Congress seldom shows ability to act decisively).

<sup>5</sup>Voice vote on a motion by Chairman Claiborne Pell at a business meeting of the Senate Foreign Relations Committee (December 17, 1987).

<sup>6</sup>The War Power After 200 Years: Congress and the President at a Constitutional Impasse, Hearings Before the Special Subcomm. on War Powers of the Senate Comm. on Foreign Relations, 100th Congress, 2d Sess. (1989) [hereinafter Special Subcommittee Hearings].

<sup>7</sup>See, e.g., id. at 65 (testimony of former Senator John Tower); id. at 295, 769 (testimony of Professor Robert Turner).

Albert (Peter) Lakeland, the former Senate staff aide most directly involved in the Resolution's 1973 enactment, provided a contrasting view of the origins of the law:

The principal sponsors of the War Powers Act were Senators [Jacob] Javits and [Armed Services Committee Chairman John] Stennis, . . . hardly members of the "Woodstock generation," as some would imply today. They were, rather, unabashed patriots and lifelong proponents of American strength and world leadership. They had always in their minds the crucial importance to America of a strong and successful Presidency.

. . . They were determined to enact a statutory framework to both induce and facilitate a functioning partnership between the President and the Congress as a sine qua non of U.S. national effectiveness in a dangerous world. . . .

[The] idea that the War Powers act was some hasty and ill-conceived measure directed at the ongoing Vietnam war . . . is wrong on all counts. The dwindling Vietnam war was specifically exempted from the Act's provisions, and many of the leading supporters of the Vietnam War . . . were staunch proponents of the Act. The overwhelming votes in the Senate and in the House included a number of Members of both Houses who went down the line on the Vietnam War. Id. at 107 (testimony of Albert (Peter) Lakeland).

<sup>8</sup>For a particularly significant expression of the view that the President is free to do as he believes American security interests require, see id. at 117 (testimony of retired Lieutenant General Brent Scowcroft, now Assistant to the President for National Security Affairs). Other witnesses also presented testimony along these lines. See id. at 160 (testimony of former President Gerald Ford); id. at 246 (testimony of Secretary of Defense Frank Carlucci); id. at 65 (testimony of former Senator John Tower); id. at 48 (testimony of Professor Forrest McDonald); id. at 295, 769 (testimony of Professor Robert Turner); id. at 224 (testimony of Professor Ronald Rotunda); id. at 329, 1213 (testimony of Professor Charles Rice); id. at 280 (testimony of Professor James Bond).

<sup>9</sup>For examples of analysis in support of this view, see id. at 180 (testimony of former Secretary of State Cyrus Vance); id. at 97, 653 (testimony of Albert Lakeland); id. at 300, 491 (testimony of attorney William Taylor Reveley, III); id. at 221, 1107 (testimony of Morton Halperin, Director, Center for National Security Studies); id. at 322, 567 (testimony of attorney David Friedman); id. at 331, 634 (testimony of Peter Weiss, Center for Constitutional Rights); id. at 211, 738 (testimony of Professor Abram Chayes); id. at 281, 1296 (testimony of Professor Edwin Firmage); id. at 215, 1258 (testimony of Professor Thomas Franck); id. at 292, 1167 (testimony of Professor Michael Glennon); id. at 281, 1286 (testimony of Professor William Goldsmith); id. at 272, 758 (testimony of Professor Louis Henkin); id. at 326, 1185 (testimony of Professor James Nathan); and id. at 40, 1229 (testimony of Professor Arthur Schlesinger, Jr.).

<sup>10</sup>For a valuable discussion of the various approaches the Supreme Court has used in defining constitutional power—textual, intentionalist, and adaptivist—see Glennon, *The Use of Custom in Resolving Separation of Powers Disputes*, 64 B.U.L. Rev. 109, 111-24 (1984).

None of the three approaches is \*\*\* capable of meeting reasonable objections leveled against its use as an exclusive methodology. The pure textualist approach proceeds from the fiction that the language of the Constitution alone is dispositive, in contentious circumstances it is not. On the other hand, the adaptivist approach prefers a Constitution that is all sail, threatening the very purpose of a written Constitution, while the intentionalist approach opts for a charter that is all anchor, presupposing a rigid constitutional order not subject to modification.

The Court has apparently recognized the shortcomings of sole reliance on any one of the three approaches, and has therefore generally employed a combination of approaches. First, it seeks to resolve the controversy by reference to the constitutional text. If the text is not found to be dispositive, the Court will look to the intent of the Framers and to custom and practice. When the Court moves beyond the text, it is seeking to find a fact that it will treat as the equivalent of a textual provision of the Constitution. \*\*\* The occurrence of this fact-finding procedure is implicitly recognized through the frequent reliance upon historical precedent, as well as evidence of the Framers' intent. \*\*\*

\*\*\* The Court has shifted from one approach to another, or emphasized one while deemphasizing another, without articulating any principled basis for favoring the approach selected. Id. at 122-23 (citations omitted).

<sup>11</sup>Article I, section 8 of the United States Constitution provides:

The Congress shall have Power To \*\*\* provide for the common Defence \*\*\*;

To define and punish Piracies and Felonies committed on the high Seas, and Offenses against the Law of Nations;

To declare War, grant Letters of Marque and Reprisal, and make rules concerning Captures on Land and Water;

To raise and support Armies \*\*\*;

To provide and maintain a Navy;

To make rules for the Government and Regulation of the land and naval forces; \*\*\*.

To make all laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by the Constitution in the Government of the United States, or in any Department or Officer thereof.

Article II, sections 2 and 3, provides as follows:

The President shall be Commander in Chief of the Army and Navy of the United States \*\*\*.

\*\*\* He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient. \*\*\*.

<sup>30</sup>Id. It should be noted that Alexander Hamilton severely criticized Jefferson for constitutional timidity during this episode. But even Hamilton's own constitutional assertion was a limited one. Tripoli had attacked American naval vessels, and Hamilton believed that the President possessed the power to respond without congressional authorization. However, "Hamilton's statements during the war with Tripoli cannot reasonably be read as urging a new war-initiating power for the President which would be out of harmony with the basic principles underlying the constitutional separation of powers. Hamilton asked only that the President interpret his right to repel attacks on American military forces as meaning that he could take all necessary action to eliminate the military threat which the enemy posed even before Congress acted." A Review of the Operation and Effectiveness of the War Powers Resolution, Hearings before the Senate Committee on Foreign Relations, 95th Congress, 1st Sess. 122, 145 (1977) [hereinafter *War Powers Review*] (testimony of Myron P. Curzan) [hereinafter *Curzan testimony*].

<sup>36</sup>Letter from John Quincy Adams to Albert Gallatin (Dec. 26, 1874), quoted in F. Bemis, *John Quincy Adams and the Union* 499 (1956).

Modern day monarchists are prone to invoke the Monroe Doctrine as symbolic of the robust approach to foreign policy that they associate with untrammeled presidential power to use force. But at the time of the Monroe Doctrine's promulgation, Secretary Adams had stated clearly that even if an outright attack were launched by a European power against a South American republic, the Executive's position would be that "the power to determine our resistance is in Congress." Robertson, *South American and the Monroe Doctrine*, 30 Pol. Sci. Q. 89 (1915) (quoting John Quincy Adams).

<sup>37</sup>Letter from Abraham Lincoln to William H. Herndon (Feb. 15, 1848), reprinted in 1 The Collected Works of Abraham Lincoln 451, 451 (R.P. Basier ed. 1953) (emphasis in original).

<sup>38</sup>"The American Navy in these years took military action . . . in places as remote as Sumatra (1832, 1838, 1839), the Fiji Islands (1840, 1855, 1858) and Africa (1820, 1843, 1845, 1850, 1854, 1858, 1859)." A. Schlesinger, *Presidency*, supra note 12, at 51.

<sup>39</sup>Quoted in id. at 57.

<sup>40</sup>A. Schlesinger, *Presidency*, supra note 12, at 59.

<sup>41</sup>Lincoln's action did, however, rekindle the debate first waged between Jefferson and Hamilton over the constitutional limits governing presidential power to repel attacks on American forces. See supra note 30. "To Jefferson, only defensive action was authorized by the Constitution in the absence of Congressional approval; to Hamilton, the Chief Executive could unilaterally order appropriate offensive action to eliminate any clear danger that similar attacks might recur." Curzan testimony, supra note 30, at 159.

Curzan provides a brief history of Lincoln's actions and the Supreme Court's responses:

"After the secession of various Southern states and the attack on Fort Sumter, President Lincoln

took a number of steps to defend the Union. Among these was the issuance of an order blockading various Southern ports. Thereafter, Lincoln sought Congressional authorization for his orders and received it. However, during the period of time following the proclamation of a blockade but prior to Congressional ratification, several Southern ships were seized. The legality of the seizure was challenged and this challenge, of course, brought the legality of the presidentially imposed blockade into question.

"The Supreme Court in the Prize Cases, 67 U.S. (2 Black) 635 (1862), split 5 to 4 on the issue, with the majority opinion reflecting Hamilton's position and the minority opinion adopting Jefferson's reasoning. Interestingly enough, in light of the weight which many proponents of Presidential power have placed on this case, it should be recognized that the majority of the Court took precautions to place its holding in context and to assert that no major changes in constitutional theory were being proposed. Thus, the opinion noted that the President had "no power to initiate or declare a war against a foreign nation or a domestic state." But once a war had been declared on the United States, the President had to determine "the shape" of the conflict and decide upon the "degree of force the crisis demand[ed]." Certainly, this doctrine did not mean that the response could be completely out of proportion to the attack or that ex post facto Congressional ratification should not be sought. What it did mean was that when the viability of the nation's political structure was under military challenge, the President should have power to respond through ordering at least a blockade of the attacker's ports. Id. at 159-61.

<sup>72</sup> Act of April 25, 1898, ch. 189, 30 Stat. 364.

<sup>73</sup> Modern readers will find a vivid evocation of the historic parallels in Mark Twain's 1901 essay, "To a Person Sitting in Darkness, a sharp-edged and premonitory denunciation of American folly in the era of high imperialism, reprinted in *The Complete Essays of Mark Twain* (C. Neider ed. 1963).

<sup>78</sup> Id.; see also D. Schaffer & D.M. Matthews, *The Powers of the President as Commander-in-Chief of the Army and the Navy of the United States*, H.R. Doc. No. 443, 84th Cong., 2d Sess. 67 (1956) (discussing debate between Senators Lodge, Walsh, and Borah on reservation to Treaty of Versailles).

<sup>79</sup> For a more recent example, at a critical moment in the history of the war power, see infra note 67 (discussing Senate Republican leader Robert Taft's opposition to President Truman's deployment of American troops to Korea and Europe without congressional authorization).

<sup>80</sup> One Supreme Court decision of this period, *United States v. Curtiss-Wright Export Corp.*, 299 U.S. 304 (1936), has been frequently portrayed as a landmark case upholding very broad presidential power in foreign affairs. In *Curtiss-Wright*, the Court did voice certain positions tending to affirm, inherent, independent presidential authority in foreign affairs: e.g., "the power of external sovereignty did not depend upon the affirmative grants of the Constitution," id. at 318, and "participation [by Congress] in the exercise of the power is significantly limited," id. at 319. But while these ruminations are often cited by modern-day monarchists (most recently by Lt. Col. Oliver North during the 1987 Iran-Contra hearings), they were obiter dicta—not integral to the Court's holding. Indeed, the decision itself affirmed no more than the President's power to impose an embargo on United States shipping to a foreign country pursuant to a congressional authorization to do so, hardly a monarchist precedent.

<sup>94</sup> Id.; see *The Korean Situation: Its Significance to the People of the United States*, 23 DEP'T ST. BULL. 163-69 (1950). As professor Schlesinger describes it: "At a new meeting with congressional leaders, Senator H. Alexander Smith of New Jersey suggested that the President request a joint resolution approving his action. Truman said he would consider this and instructed [Secretary of State] Acheson to prepare a recommendation on it. In the meantime, the debate spilled over to the Senate. Kenneth Wherry of Nebraska said that the President should not have acted without congressional authorization, adding that there was no doubt he would have obtained it. \*\*\*

"This was a fateful moment. Truman had evidently not yet fully made up his mind about the scope of presidential authority. Nor did he pretend to legal skills, but he had a most eminent lawyer at his right hand. His Secretary of State had been law clerk for Justice Brandeis. \*\*\* On July 3 Acheson recommended that Truman not ask for resolution but instead rely on his constitutional powers as President and Commander-in-Chief. On the same day the State Department churned out a memorandum listing 87 instances \*\*\* in which Presidents had sent American Forces into combat on their own initiative. Truman, impressed by the appearance of precedent and concerned not to squander the power of his office, accepted his Secretary of State's recommendation. A. SCHLESINGER, *PRESIDENCY*, supra note 12, at 132-33 (emphasis in original; citations omitted).

<sup>95</sup> Id. at 132.

<sup>96</sup> A nearly lone voice of concern and consistency was that of the Senate Republican leader, Robert A. Taft ("Mr. Republican"). Several months later, when Truman indicated his intent to send four divisions of U.S. forces to Europe without congressional authorization, Taft initiated what came to be known as the "great debate" over the President's authority to deploy American troops abroad. In a formal speech to the Senate, Taft argued that, while he would have supported a joint resolution providing the necessary authority for the Korean intervention, the President had instead "simply usurped authority, in violation of the laws and the Constitution, when he sent troops to Korea to carry out the resolution of the United Nations in an undeclared war." Former Senator Taft speaks on Foreign Policy, 117 CONG. REC. 15,839, 15,841 (1971) (reprinting speech by Senator Taft before the full Senate on January 5, 1951). See generally id. at 15,839-45.

<sup>97</sup> Fulbright Foreword, supra note 56.

<sup>98</sup> Elected to the Senate in 1944, J. William Fulbright became chairman of the Senate Foreign Relations Committee in 1959, and remained loyal to the monarchist concept into the mid-1960s. Monarchism, of course, was not labeled as such; rather, it was then the quintessential "liberal" approach to foreign policy—a defense of the prerogatives of the Executive, who was assumed to have a sophisticated approach to foreign affairs, as against the provincial perspective imputed to the conservatives who dominated Congress. Once Fulbright's disillusion with the Dominican intervention and the Vietnam War had undercut his faith in Executive wisdom, the final decade of his chairmanship—from 1965 to 1975—was characterized by a concerted effort to restore a balance in Executive-Legislative control over American foreign policy. See, e.g., J.W. Fulbright, *The Arrogance of Power* (1966); Fulbright, *The Decline and Possible Fall of Constitutional Democracy in America*, 117 CONG. REC. 10,355 (1971).

<sup>99</sup> In 1951, Professor Schlesinger, supporting the Truman Administration, labeled as "demonstrably irresponsible" Senator Taft's criticism of unauthorized military actions by the President. Letter to the New York Times, Jan. 14, 1951. For supplying a gloss of historical and constitutional legitimacy to untrammeled Executive use of force, he and Professor Henry Steele Commager were dubbed "High-flying prerogative men" by the redoubtable historian Professor Edward Corwin. Schlesinger, *Policy*, supra note 12, at 96. Subsequently, the views of Schlesinger and Commager followed a path of reversal similar to that of Senator Fulbright. See e.g., Special Subcommittee Hearings, supra note 6 (testimony of Professor Arthur Schlesinger, Jr.); War Powers Legislation Hearings 1972; Hearings on the War Powers Act Before the Senate Comm. on Foreign Relations, 92d Cong., 1st Sess. 7-71 (1972) (testimony of Henry Steele Commager).

<sup>101</sup> Rusk, *The President*, 38 FOREIGN AFF., 353, 357 (1960).

<sup>102</sup> Fulbright, *American Foreign Policy in the 20th Century Under an 18th Century Constitution*, 47 CORNELL L. REV. 1, 7 (1961).

<sup>103</sup> Joint Resolution to Promote the Maintenance of International Peace and Security in Southeast Asia, H.R.J. Res. 1145, Pub. L. No. 88-408, 78 Stat. 384 (1964). As described by Professor Schlesinger: "After the alleged attack on American destroyers off the coast of North Vietnam, Johnson called in the congressional leaders. Reminding himself, and them, of Taft's criticism of Truman for not seeking congressional ratification of the Korea decision, he asked their judgment about getting something this time that, as he cautiously put it, 'would give us the opinion of Congress.' The leaders thought it a fine idea, and the administration pulled out a draft resolution, prepared months before and awaiting the occasion. A. SCHLESINGER, *PRESIDENCY*, supra note 12, at 179.

Later the Senate Foreign Relations Committee would conduct an extensive inquiry into the Tonkin Gulf episode. The Gulf of Tonkin, the 1964 Incidents (Parts I and II): Hearings Before the Senate Comm. on Foreign Relations, 90th Cong., 2d Sess. (1968).

By 1970, the Committee had concluded that "Congress was confronted in August 1964 with a situation that was described to it as urgent, requiring prompt acquiescence in an expedient that seemed likely to meet the needs of the moment, of which the foremost—or so we allowed ourselves to be persuaded—was a resounding expression of national unity at a moment when it was believed that the country had been attacked."

\*\*\* It has since been established that the [two American vessels attacked] were engaged in intelligence activities in the Gulf of Tonkin, a fact that was not vouchsafed to Congress when it considered the resolution. In addition, considerable doubt has been raised as to the exact circumstances of the alleged second attack on the two vessels, most particularly as to whether this attack occurred at all, and, if it did, whether the administration had proof of it at the time that it ordered its retaliatory air strike on August 4, 1964. Senate Comm. on Foreign Relations, *Termination of Middle East and Southeast Asia Resolutions*, S. Rep. No. 384, 91st Cong., 2d Sess. 9-10 (1970) [hereinafter *Termination Report*].

<sup>104</sup> Johnson's Under Secretary of State, former Attorney General Nicholas Katzenbach, testified that the Resolution constituted the "functional equivalent" of a declaration of war. But Katzenbach did not mean this assertion to entail the proposition that any such declaration was required. With or without the Resolution, Katzenbach further asserted, the President possessed the constitutional authority to carry on the war. U.S. Commitments to Foreign Powers: Hearings Before the Senate Comm. on Foreign Relations, 90th Cong., 1st Sess., 82, 141 (1967).

President Johnson himself took full advantage of this straddle, extracting the political benefit of what arguably was an authorization while maintaining that any such authorization was unnecessary. "Though it amused him to taunt members of Congress by pulling the Tonkin Gulf resolution out of his pocket and flourishing it as proof that Congress had authorized the escalation of American involvement, he did not believe for a moment that the resolution provided the legal basis for his action." A. Schlesinger, *PRESIDENCY*, supra note 12, at 181.

For its part, stung by revelations about the events that precipitated the Gulf of Tonkin Resolution and increasingly concerned by the war's intensification, the Senate Foreign Relations Committee sought to discount the Resolution's significance as an authorization:

"Often referred to loosely as an act of congressional authorization for the President to commit the United States to full scale war in Vietnam if he saw fit, the Gulf of Tonkin resolution is in fact not an authorization at all. The resolution says nothing about authorizing or empowering anybody to do anything \*\*\*

\*\*\* In this respect, the distinction between an expression of approval and a grant of authority would seem to be of critical importance. Termination Report, supra note 74, at 9 (emphasis in original).

Such fine distinctions notwithstanding, the Resolution's language was sweeping: "Congress approves and supports the determination of the President \*\*\* to take all necessary measures to \*\*\* prevent further aggression" and the United States is "prepared, as the President determines, to take all necessary steps, including the use of armed force" to assist South Vietnam.

The Resolution was repealed in 1971, but by then the Executive, under Richard Nixon, brooked no challenge to the Commander in Chief's authority.

<sup>76</sup>"We are in a position in the world today where the argument as to who has the power to do this, that, or the other thing, is not exactly what is called for from America in this very critical hour." Senate Comm. on Foreign Relations, National Commitments Report, S. Rep. No. 797, 90th Cong., 1st Sess., 17 (1967).

<sup>77</sup>Typical was this assertion, issued by the Nixon Administration some months prior to the Cambodian invasion in response to a pending congressional resolution: "As Commander in Chief, the President has the sole authority to command our Armed Forces, whether they are within or outside the United States. And, although reasonable men may differ as to the circumstances in which he should do so, the President has the constitutional power to send U.S. military forces abroad without specific congressional approval." Quoted in Termination Report, supra note 74, at 7.

<sup>78</sup>See generally 1973 U.S. Code Cong. & Admin. News 2346.

<sup>79</sup>Section 5(b) specifies a 60-day period but allows a 30-day extension "if the President determines and certifies to the Congress in writing that unavoidable military necessity requires the continued use of such armed forces in the course of bringing about a prompt removal of such forces." War Powers Resolution §5(b), 50 U.S.C. §1544(b). Because the time clock commences when the report is due (i.e., within 48 hours after commencement of the action), the actual period before authorization is required is 62/92 days. The Resolution's clock is intended to tick even if no report is sent. But, as discussed below, the lack of a report creates a crucial ambiguity as to whether one was in fact due.

<sup>80</sup>Although the term "withdrawal" is commonly used in discussing the War Powers Resolution, section 5(b) actually requires that "the President shall terminate any use of United States Armed Forces with respect to which a report was submitted (or required to be submitted)." *Id.* (emphasis added).

<sup>81</sup>Concurrent resolutions do not require the President's signature.

<sup>82</sup>119 Cong. Rec. 25,093 (1973) (statement of Sen. Ervin).

<sup>83</sup>Special Subcommittee Hearings, supra note 6, at 765 (testimony of Professor Henkin).

<sup>84</sup>Indeed, §8(d) of the Resolution states this specifically:

"Nothing in this joint resolution—(1) is intended to alter the constitutional authority of the Congress or of the President, or the provisions of existing treaties; or (2) shall be construed as granting any authority to the President with respect to the introduction of United States Armed Forces into hostilities or into situations wherein involvement in hostilities is clearly indicated by the circumstances which authority he would not have had in the absence of this joint resolution. 50 U.S.C. §1547(d).

<sup>85</sup>In voting against the Resolution Senator Eagleton stated: "I wish to say . . . that I do not view this as a historic recapture [of congressional authority]; on the contrary I view it as a historic surrender." 119 Cong. Rec. 36,189 (1973).

This danger is exemplified by the construction given the War Powers Resolution by some scholars defending its constitutionality. These scholars view the Resolution as a sort of "sunset law," the functional equivalent of a statute requiring that troops may not be committed for more than 60/90 days. See Carter, The Constitutionality of the War Powers Resolution, 70 Va. L. Rev. 101, 133 (1984). But in so doing, such defenders of the Resolution may concede more than they would wish, since it seems inherent in the very concept of a "sunset law" that what is being constrained temporarily is an authority, not an act of illegality.

<sup>86</sup>462 U.S. 919 (1983).

<sup>87</sup>Every Order, Resolution, or Vote to which the Concurrence of the Senate and the House of Representatives may be necessary (except on the question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill. U.S. Const. art. I, §7, cl. 3.

<sup>88</sup>See, e.g., Special Subcommittee Hearings, supra note 6, at 1260 (testimony of Professor Franck); *id.* at 1176-79 (testimony of Professor Glennon); *id.* at 738 (testimony of Professor Chayes).

<sup>89</sup>See Ely, Suppose Congress Wanted a War Powers Act That Worked, 88 Colum. L. Rev., 1379, 1395-96 (1988).

In fact, section 5(c) does not appear to be unconstitutional. Even assuming that Chadha makes sense, it seems distinguishable. . . . Section 5(c) does not fit the profile of a standard "legislative veto" wherein Congress has delegated certain powers to the executive branch and then attempted to pull them back by reserving a right to veto executive exercises of the delegation. Instead, it should be read in the context of sections 4(a)(1) and 5(b), as part of a package attempting in concrete terms to approximate the accommodation reached by the Constitution's framers, that the President could act militarily in an emergency but was obligated to cease and desist in the event Congress did not approve as soon as it had a reasonable opportunity to do so." *Id.* (emphasis in original; footnote omitted); see also Vance, Striking the Balance: Congress and the President Under the War Powers Resolution, 133 U. Pa. L. Rev., 79, 86-87 (1984).

<sup>90</sup>Ely, supra note 89, at 1397.

<sup>91</sup>War Powers Resolution §4(a), 50 U.S.C. §1543(a) (1982).

<sup>92</sup>It is sometimes suggested that Congress could, if it simply had the will, adopt a resolution triggering the clock through a finding that a report was "required to be submitted." But a concurrent resolution would have no legal effect for presentment clause reasons, whereas a joint resolution (which has the status of law) probably would require a two-thirds vote in each house because any President, having refused to submit the report in the first place, presumably would veto it. Thus, any such attempt to "enforce" the War Powers Resolution would represent a reversion to the monarchist model in which the President is unrestrained until Congress can overwhelm him.

Indeed, to speak of "enforcing" the War Powers Resolution using two-thirds majorities to oppose the President reflects a loss of orientation. The purpose of the War Powers Resolution is to delineate procedures embodying the principle that warfare, except in limited emergency situations, should be based on affirmative congressional action taken through simple majorities in the two houses.

<sup>93</sup>Professor Ely has summarized this phenomenon: "Repeatedly—as in the last stages of the war in Indo-China, the attempt to free our hostages in Iran, and in Lebanon, Central America, Grenada, and Tripoli—the President either has not reported under section 4(a) or has failed to specify that what he is filing is a section 4(a)(1) 'hostilities' report, thus avoiding the 60-day clock. Congress has responded to this evasion only once, in connection with the Lebanon crisis, when after much hemming and hawing it negotiated a 'compromise' recognizing the applicability of the War Power Resolution (which recognition President Reagan immediately repudiated) and extending the period the troops could remain in Lebanon for 18 months." Ely, supra note 89, at 1381.

<sup>94</sup>SS "Mayaguez"—Communication From the President of the United States, H.R. Doc. No. 151, 94th Cong., 1st Sess., reprinted in 121 Cong. Rec. 14,427, 14,427 (1975). President Ford's report to Congress was submitted "[i]n accordance with my desire that the Congress be informed on this matter and taking note of Section 4(a)(1) of the War Power Resolution." *Id.* In it, President Ford took the opportunity to assert that his use of military force to free the merchant marine vessel and crew seized by Cambodian forces in international waters "was ordered and conducted pursuant to the President's constitutional Executive power and his authority as Commander-in-Chief of the United States Armed Forces." *Id.*

<sup>95</sup>See, e.g., Special Subcommittee Hearings, supra note 6, 247 (testimony of Secretary of Defense Carlucci) ("Instead of showing the world the will of the American people, the War Powers Resolution could, according to its terms, implement itself without a single vote being cast in Congress. . . . This is why the no-fault formula in the War Powers Resolution, wherein no Member of Congress is required to stand up and be counted is unacceptable.")

<sup>96</sup>Termination Report, supra note 74, at 8.

<sup>97</sup>T. Bailey, Presidential Greatness 227 (1966), quoted in Termination Report, supra note 74, at 8. In posing such a question, the Foreign Relations Committee reflected the revolution in the views of its Chairman, J. William Fulbright, who had suggested, in the late-1950s article quoted earlier, see supra note 73, that the defense of democracy might require some compromise of its procedures, but who now had this to say:

"The values of democracy are in large part the processes of democracy. . . . When the exigencies of foreign policy are thought to necessitate the suspension of these processes, repeatedly and over a long period of time, such a foreign policy is not only inefficient but utterly irrational and self-crippling. J.W. Fulbright, *The Crippled Giant* 208 (1972).

<sup>98</sup>It bears emphasis that is the Carter Administration's position on the War Powers Resolution was never fully voiced or tested. Instead, the Administration adopted the conciliatory approach of praising the Resolutions' consultation and reporting requirements while agreeing to abide by the constitutionally controversial provisions of §5 "as a matter of policy" so as to avoid a "prolonged debate over elusive constitutional issues." See War Powers Review, supra note 30, at 190 (testimony of Herbert Hansell, Legal Adviser, Department of State). Hansell went on to describe the Carter Administrations' acceptance of the War Power Resolution's basic concept of joint decisionmaking: "As section 2(a) suggests, Congress intended the Resolution as a remedial measure to insure that decisions to commit United States Armed Forces to hostilities should involve 'the collective judgment of both the Congress and the President.'" This Administration is of the view that, as a matter of constitutional law and public policy, this country should not go to war without that collective judgment. *Id.* at 188.

Hansell's 1977 testimony gave rise to some optimism that the war powers issue might have been in large measure resolved. See *id.* at 191 (statement of Sen. Javits) ("I am delighted [that] . . . [w]e are not faced with the problem of the trees, not the forest."). But Senator Dick Clark expressed concern that a future Administration could easily adopt a different "policy" toward the Resolution, and that this would be all the easier because of the Carter Administration's unwillingness to adopt a formal position accepting the Resolution's constitutionality. *Id.* at 210 (statement of Sen., Clark). Hansell responded by expressing the Carter Administration's belief that "a much more important and effective restraint . . . on future administrations would be to develop a body of practice, of performances." *Id.* (Hansell testimony).

As it turned out, Senator Clark's concern was prescient. Because its only use of force reportable under the War Powers Resolution was the quickly aborted Iran rescue mission, the Carter Administration did not build "a body of practice" in complying with the Resolution. In 1980, however, the Carter Justice Department did issue a legal memorandum affirming the constitutionality of the time-clock, the Resolution's key provision. See *infra* note 116.

<sup>99</sup>Special Subcommittee Hearings, supra note 6, at 15 (testimony of Rep. Fascell). Chairman Fascell's testimony provides a lucid explanation of the myriad misunderstandings to which the Resolution is subject. *Id.* at 928-46.

<sup>100</sup>"War Powers Resolution Amendments of 1988," S.J. Res. 323, 100th Cong., 2d Sess. (1988). The Byrd-Warner amendments were introduced May 19, 1988, by Senator Robert Byrd (for himself and Senators Nunn, Warner, and Mitchell) and referred to the Committee on Foreign Relations. A companion bill, H.J. Res. 601, 100th Cong., 2d Sess. (1988), was introduced June 6, 1988, by Representative Lee Hamilton in the House of Representatives.

In the 101st Congress, Senator Byrd reintroduced this legislation with minor alteration. S. 2 101st Cong., 1st Sess. (1989).

<sup>101</sup>Indeed, although Senator Byrd's 12-year tenure as Senate Democratic Leader was characterized by a stalwart defense of constitutional balance, his explanation of S.J. Res. 323 provides a clear statement of the monarchist model: "The key to the revisions I am proposing [is that it] changes the presumption of the current War Powers Resolution, which is that U.S. Armed Forces must be withdrawn from situations of hostilities or imminent involvement in hostilities within 60 days unless Congress specifically authorizes their continued presence. . . . [T]his legislation requires passage of a specific joint resolution requiring disengagement. 134 Cong. Rec. S6174 (daily ed. May 19, 1988.)

<sup>102</sup>Special Subcommittee Hearings, supra note 6, at 272-79 (testimony of Professor Henkin). For an extensive discussion of this subject, see *id.* at 1167-84 (testimony of Professor Glennon).

<sup>103</sup>Youngstown Sheet and Tube Co. v. Sawyer, 343 U.S. 579 (1952).

<sup>104</sup>*Id.* at 637 (Jackson, J., concurring). Jackson's analysis warrants extensive quotation:

Presidential powers, are not fixed but fluctuate, depending upon their disjunction or conjunction

with those of Congress. We may well begin by a somewhat over-simplified grouping of practical situations in which a President may doubt, or others may challenge, his powers, and by distinguishing roughly the legal consequences of this factor of relativity.

1. When the President acts pursuant to an express or implied authorization of Congress, his authority is at its maximum, for it includes all that he possesses in his own right plus all that Congress can delegate. In these circumstances, and in these only, may he be said (for what it may be worth) to personify the federal sovereignty. If his act is held unconstitutional under these circumstances, it usually means that the Federal Government as an undivided whole lacks power. A seizure executed by the President pursuant to an Act of Congress would be supported by the strongest of presumptions and the widest latitude of judicial interpretation, and the burden of persuasion would rest heavily upon any who might attack it.

2. When the President acts in absence of either a congressional grant or denial of authority, he can only rely upon his own independent powers, but there is a zone of twilight in which he and Congress may have concurrent authority, or in which its distribution is uncertain. Therefore, congressional inertia, indifference, or quiescence may sometimes, at least as a practical matter, enable, if not invite, measures on independent presidential responsibility. In this area, any actual test of power is likely to depend on the imperatives of events and contemporary imponderables rather than on abstract theories of law.

3. When the President takes measures incompatible with the expressed or implied will of Congress, his power is at its lowest ebb, for then he can rely only upon his own constitutional powers minus any constitutional powers of Congress over the matter. Courts can sustain exclusive Presidential control in such a case only by disabling the Congress from acting upon the subject. Presidential claim to a power at once so conclusive and preclusive must be scrutinized with caution, for what is at stake is the equilibrium established by our constitutional system. *Id.*, at 635-38 (footnotes omitted).

<sup>105</sup>6 U.S. (2 Cranch) 170 (1804); see *supra* text accompanying notes 25-27.

<sup>106</sup>U.S. Const. art. I, § 8.

<sup>107</sup>See, e.g., Ely, *supra* note 89, at 1392 n.40. Professor Ely writes:

"Enthusiasts of Justice Jackson's concurrence in *Youngstown*, 343 U.S. at 637, should have little trouble regarding the [War Powers] Resolution as a congressional exercise in mapping the "twilight zone," and therefore plainly constitutional and controlling under the logic of that opinion. (Others of us see the power to commit troops to combat, except in emergency situations, as assigned to the legislative process by the Constitution and thus not in need of rescue from any twilight zone.)" *Id.*

<sup>108</sup>Since this is an authority indisputably not derived from the Constitution, its inclusion would help to underscore the function of this law as an act of authorization—as opposed to a listing of constitutionally derived Presidential powers—accompanied by the delineation of standards and procedures.

<sup>109</sup>The Truman Administration did not cite the Security Council's decision as a basis for this authority; indeed, President Truman decided to commit American air and sea forces to the defense of South Korea on June 25, 1950, only one day after the North Korean invasion. That same day the UN Security Council passed a resolution denouncing the North Korean invasion. But it was not until June 27 that the Security Council passed a second resolution, calling for "urgent military measures . . . to repel the armed attack." A. Schlesinger, *Presidency*, *supra* note 12, at 131.

<sup>110</sup>See, for example, this exchange with Lt. Gen. Brent Scowcroft during the Special Subcommittee's hearings:

"Senator Biden: President Reagan and others have argued that the existence of the Sandinista regime in Nicaragua is a destabilizing factor in the hemisphere and may lead to broader conflict, involving U.S. interests. Do you believe that the President would have the authority, in order to prevent war, to prevent further conflict, to say I am going to invade Nicaragua with American troops. Does he have the authority to do that?"

"General Scowcroft: yes. It may not be prudent if he does not have the support of the Congress, of the country, and a debacle could ensue. But, yes, Special Subcommittee Hearings, *supra* note 6, at 122.

<sup>111</sup>For valuable analysis relevant to this approach, see *id.* at 272-79 (testimony of Professor Henkin); *id.*

at 1167-84 (testimony of Professor Glennon); and also letters subsequently submitted by these and other witnesses on the applicability of Justice Jackson's model. *Id.* at 1405-12.

<sup>112</sup>See Glennon, *United States Mutual Security Treaties: The Commitment Myth*, 24 *Colum. J. Trans. L.* 509 (1986).

<sup>113</sup>War Powers Resolution § 2(a)(1), 50 U.S.C. § 1543(a)(1).

<sup>114</sup>Statement to the United Nations Security Council, July 15, 1988.

<sup>115</sup>In practice, this "decisiveness" could prove to be elusive in a situation in which the running of the clock was disputed by the President and its expiration was therefore a matter of ambiguity. But Congress could, by simple majority, move to enforce the power of the purse through a parliamentary technique. As discussed later, a Use of Force Act could provide expedited procedures for congressional resolutions designed to make a finding either that the clock, in a particular situation, was running, or that the President had misused his authority to waive the clock. While any such resolution passed by simple majorities in the two houses could not have legal effect (assuming the President vetoed it), it could—in addition to any political and judicial significance—have powerful budgetary effect if Congress had stipulated in its own rules that passage of such a resolution would cause a parliamentary point of order to lie against any subsequent bill containing funds for the perpetuation of that use of force. This technique could not affect funds already appropriated, but would render future funding vulnerable to objection by any one member of Congress.

Although this sounds drastic, it should be emphasized that creating such procedures would be intended primarily to serve as a deterrent, helping to encourage cooperative Presidential participation in the established mechanism. As in the realm of nuclear deterrence, the aim of deploying such "weapons" would be to deter behavior that would cause their use ever to be contemplated.

<sup>116</sup>Indeed, although the Carter Administration avoided pronouncing on the constitutionality of the War Powers Resolution as a whole, the Carter Justice Department issued an important, although little noted, legal opinion affirming the constitutionality of the clock mechanism:

"We believe that Congress may, as a general constitutional matter, place a 60-day limit on the use of our armed forces as required by the provisions of [section 5(b)] of the Resolution. The Resolution gives the President the flexibility to extend that deadline for up to 30 days in cases of "unavoidable military necessity." This flexibility is, we believe, sufficient under any scenarios we can hypothesize to preserve his constitutional function as Commander-in-Chief. The practical effect of the 60-day limit is to shift the burden to the President to convince the Congress of the continuing need for the use of our armed forces abroad. We cannot say that placing this burden on the President unconstitutionally intrudes upon his executive powers.

Finally, Congress may regulate the President's exercise of his inherent power by imposing limits "by statute." Presidential Power to Use the Armed Forces Abroad Without Statutory Authority, 4A *Op. Office of the Legal Counsel*, Dep't of Justice 185, 196 (1990) (emphasis in original).

<sup>117</sup>See, e.g., Special Subcommittee Hearings, *supra* note 6, at 248 (testimony of Frank Carlucci, Secretary of Defense) ("[F]or 60 or 90 days, or longer, the War Powers Resolution would leave in suspense the question of whether a military deployment was authorized.")

<sup>118</sup>Ely, *supra* note 89, at 1400

<sup>119</sup>Cf. Special Subcommittee Hearings, *supra* note 6, at 220 (testimony of Professor Thomas Franck) ("After 60 to 90 days, section 5(b) appears to require the recall of U.S. forces from combat, even when their dispatch by the President was constitutional and lawful. It is difficult to sustain the argument that Congress can terminate what it concedes the President could initiate on his own initiative.")

<sup>120</sup>Because a President would undoubtedly sign any such joint resolution, no Chadha legislative veto problem would arise.

<sup>121</sup>676 F. Supp. 333 (D.D.C. 1987). The district court refused to consider a complaint by 110 Members of the House of Representatives that deployment of U.S. forces in the Persian Gulf triggered the reporting requirements and, by implication, the 60-day clock of the War Powers Resolution. *Id.* at 341.

<sup>122</sup>That task is comprehensively achieved, for example, by Ely, *supra* note 89.

<sup>123</sup>"The question whether to authorize a war is committed to Congress. The question whether it has

done so, or whether instead the executive is acting without authorization, is of familiar judicial contour." Ely, *supra* note 89, at 1412 n.95.

Mr. BIDEN. Enacting such a law, Mr. President, which I call the Use of Force Act, is a task that awaits us and can, I hope, be accomplished next year. I have draft legislation waiting.

I will quote President Bush. Last Friday, in announcing the resumption of the Sarajevo airlift, the President stated as follows:

I wish I could say that there is no risk of attack against these flights, but I cannot, although we are taking precautions. We can be proud of the Americans who, along with courageous personnel from other countries, will go in harm's way to save innocent lives.

This is a time and subject which summons Senators from both parties to join in supporting the President and in backing those valiant Americans, whom the President has rightly commended, who are now going in harm's way, not only to save innocent lives, but to sustain the principles of international decency.

These principles must be upheld if we are to have genuine hope in the months ahead of constructing a new world order.

Mr. President, I close by saying, I hope the President is successful in getting this resolution passed. But I point out that, once passed, he needs congressional authorization to use the force, which I believe we should be ready to give him the authority to use.

I thank my colleagues.

Mr. LEVIN. Mr. President, I was heartened at the end of last week to see a long-awaited sign that the President and his administration may be willing to go to the U.N. Security Council and advocate a no-fly zone over areas of conflict in the former Yugoslavia. The President said the Security Council should declare a ban on flights and arrange to enforce that ban. Enforcement is the key. Without some teeth to back up such a ban, it would just be another paper resolution. I hope the President will encourage a truly multilateral, collective enforcement effort that includes U.S. military assets along with other nations. I hope his announcement indicates a long-overdue U.S. policy change, one that is clearly justified by the continuing aggression.

But, Mr. President, until this recent announcement, United States leadership has been lacking relative to the former Yugoslavia, despite the extensive, bipartisan efforts of this body to encourage and support Presidential leadership for cooperative international action to halt aggression and possible genocide.

Instead, there have been mixed signals, slow responses, insufficient resolve—a basic failure to lead. I believe the lack of leadership on Yugoslavia is part of a larger failure by this administration to meet the primary security challenge of the post-cold war world.

The United States has not seized opportunities to lead in the creation of effective multilateral peace enforcement capabilities, that could deter and prevent future conflicts.

Mr. President, the Senate has been passing legislation for almost 2 years condemning violence in the former Yugoslavia, and urging the administration to help organize and lead an international response.

What is happening in the former Yugoslavia is criminal. Crimes are being committed against innocent civilians and against humanity. And in the face of these crimes, in the face of mounting evidence that ethnic cleansing is being methodically carried out—the response of the world, particularly Europe, but including the United States, has been feeble.

Last week the State Department asserted that it was only recently able to confirm reports of atrocities which I personally brought to their attention in August. We brought an eyewitness, a Bosnian who had survived death camps, to the Senate Armed Services Committee. He described atrocities including the killings of thousands of Moslems in the Bosnian town of Brcko last spring. State Department officials spoke to the witness before his trip to Washington—they knew what he would say. We sent a transcript of his testimony directly to State Department officials.

So I was amazed last week when State Department spokesman Richard Boucher said that the United States had only just received eyewitness reports of the Brcko killings. This was further sad evidence of the administration's passivity.

This Senate has urged the President, repeatedly and with increasing urgency, to show leadership on this issue. In June of this year, the Senate passed S. 306, encouraging Presidential leadership at the Security Council to get a plan and a budget for enforcement of U.N. resolutions in the former Yugoslavia. The President never sought such a plan or budget, leaving himself and us without important information we might need to make wise choices about costs of military action to enforce U.N. resolutions.

Then in August the Senate debated extensively and passed Senate Resolution 333, which encouraged the use of all necessary means to protect delivery of humanitarian assistance and to assure International Red Cross access to detention camps.

Just last week, the Senate approved an amendment I introduced that expressed the sense of the Senate that the U.N. Security Council should act to halt the policy and practice of ethnic cleansing in the former Yugoslavia. The amendment stated that the President of the United States should seek a meeting of the Security Council to consider methods of achieving that goal. We need such a high-visibility

meeting to highlight the extent of the on-going horror of ethnic cleansing, and to authorize action to stop it.

In these efforts, the Senate has stressed action taken cooperatively and internationally—not unilateral use of force by the United States. But the administration has not taken up the leadership role we are encouraging, in fact, the United States has moved slowly, in fits and starts, sometimes even backward. There were reports last week that the State Department might actually support loosening the sanctions on Serbia and Montenegro instead of tightening enforcement. Acting Secretary of State Eagleburger just last week was quoted as saying intervention with U.S. military force would be a slippery slope that could raise expectations of similar U.S. action in other conflicts around the world. That sounds very different from the President's call for a no-fly zone. These mixed signals do not help move the community of nations to take the steps necessary to stop the horror.

And, Mr. President, that horror continues. Look at the front page of Tuesday's Washington Post: "Former Prisoners Allege Wholesale Serb Atrocities." The testimony of former prisoners at the Serb-run Omarska detention camp in northwestern Bosnia is chilling.

The guards made us go out behind a small shed where there was a truck and a bulldozer. \* \* \* There were 26 bodies. Some had half their heads missing; others were missing eyes. They told us to put the bodies on the bulldozer, but it was hard to walk; we were stepping on human brains. Then they took us to a field and made us pick up two more bodies. When we were done, the guard cocked his machine gun and said, "Do you want to be next?"

The article continues:

The camps, one former prisoner said, are places where a Serb guard "will kill you for your wristwatch," and where prisoners force to gather up the dead cannot keep their balance on ground slick with human gore.

Mr. President, there are many different options for what action the United States and the world should take in the former Yugoslavia—but no action is not an acceptable option. Action is long overdue, the United States must take the lead, and it must start at the top with the President. It must be a collective action. The U.N. Security Council is the place where a highly visible debate should occur.

Because the situation in the former Yugoslavia is so urgent, and has been all year, this United States leadership vacuum is especially disappointing. But this crisis is indicative of the kind of security threats we will face in the post-cold-war era. We need to build institutions that are responsive to this kind of threat, generally. That is another area where the Senate has tried to encourage leadership from the administration this year—leadership which has not been forthcoming.

Mr. President, we have been given a historic opportunity to realize a dream: A peaceful world, where the community of nations has the capacity to enforce that peace with an international military force. The United States cannot and should not be the world's policeman. But the world desperately needs policing. The founders of the United Nations realized this, and provided a mechanism for it in the U.N. Charter.

Now the end of the cold war makes possible global security arrangements that have been impossible to implement for 45 years, by eliminating bipolar stalemate as the dominant international force. Most dramatically, the threat of an automatic Soviet veto in the U.N. Security Council is gone, creating enormous opportunities for agreement among the permanent five members.

My generation never dared dream we would have this chance. But I fear we are squandering it. The United States has a golden opportunity to lead.

In January, the U.N. Security Council held a special summit meeting to discuss the subject of U.N. enforcement of its resolutions. The Council asked the U.N. Secretary General, Boutros Ghali, to prepare recommendations on enhancing the United Nations' peacekeeping and peace enforcement capabilities. His report in July, entitled "Agenda for Peace" presented a far-reaching set of proposals to achieve the original collective security objectives of the U.N. Charter, and to further enhance the security capabilities of the United Nations in the post-cold war era.

Events in the former Yugoslavia, Somalia, and elsewhere certainly underscore the need for more substantial and more rapidly deployable international peacekeeping and humanitarian relief efforts, and the need for peace enforcement capabilities to support those efforts.

The Agenda for Peace explains clearly that the option of taking military action under Security Council auspices, when all peaceful means have failed to maintain or restore international peace and security, is essential to the credibility of the United Nations. Putting real teeth behind the United Nations' words is essential to guarantee international security in the face of a "threat to the peace, breach of the peace, or act of aggression." The Secretary General noted in his report that the "availability of armed forces is, in itself, a means of deterring breaches of the peace."

The Agenda for Peace recommends Security Council negotiations, supported by the Council's Military Staff Committee, to implement the special arrangements provided for in article 43 of the U.N. Charter, under which member states may make available to the Security Council forces, assistance and

facilities for the purpose determined by the Security Council.

The Secretary General's report also recommends that the Security Council establish peace enforcement units as envisioned under article 40 of the charter, to be utilized in clearly defined circumstances to maintain cease-fires. Such units from member states would be available on call and consist of troops that have volunteered for such service and are extensively trained. Deployment and operation of such forces would be subject to authorization by the Security Council, where the United States has a veto.

Mr. President, these are serious suggestions. They raise a lot of issues of scope and implementation, but they are surely deserving of serious consideration.

The President and members of his Cabinet have stressed in testimony to Congress the need to strengthen United States national security by increasing the effectiveness of international institutions, particularly including NATO and other regional organizations to provide collective security.

The United States has in recent years played a prominent leadership role in advancing the implementation of collective security actions by the United Nations, most notably in Operation Desert Storm.

But the administration's response otherwise has been disappointing. When President Bush addressed the U.N. General Assembly last month, he offered no support for new peacekeeping funding mechanisms, and a "no comment" on the international peace enforcement suggestions Boutros Ghali had offered.

Mr. President, there is no longer any excuse for inaction. Our old excuse was the Soviet Union's certain veto in the Security Council. But the problem is no longer the Soviets saying "nyet"; it's that no nation seems willing to say "da."

Fear of congressional opposition is no excuse, because the Senate has encouraged and prodded the administration. We passed a Defense authorization bill that requires the President to prepare and deliver a report to Congress responding to the Secretary General's recommendations and their implications for U.S. policy. We also provided up to \$300 million of transfer authority from the Defense budget to finance unanticipated peacekeeping expenses that arise during the coming year. We fully funded the administration's supplemental request for peacekeeping funds this year.

There is no excuse for our failure to help lead the community of nations to fulfill that dream of a world at peace with the collective military capability to achieve and police the peace. This is not an academic debate about institutional structure. Lives and nations are at risk—lives and nations that might

be preserved. What is happening in the former Yugoslavia is a tragic testament to the cost of inaction.

I am proud to have been involved in many of the Senate's efforts in the areas that I have been describing. The distinguished Democratic and Republican leaders have been at the forefront as well as Senators DECONCINI, LUGAR, LIEBERMAN, HATFIELD, BIDEN, GORE, SIMON, and others have helped keep these issues before the Congress and tried to keep them before the administration. I am not sure what else this Senate could have done to encourage United States leadership to take action against the horror in the former Yugoslavia, and to build international enforcement capability.

Instead of showing creativity, this administration has emphasized caution. Instead of leading the way to a truly new world order that works, the President is resisting change and relying on outmoded approaches. We need will. We need leadership now, or historic opportunities will be missed and the United States will lose our credibility to lead the way to more peaceful world.

Mr. President, I would ask unanimous consent that a number of items be placed in the record:

U.N. Secretary General Boutros-Ghali's "Agenda for Peace" Report; my address to the Center for Naval Analyses from April 30; the Defense authorization bill and report language requiring a report from the President on the Secretary General's U.N. Peacekeeping Report; the text of the amendment to the Defense authorization bill providing that defense funds may be spent for international peacekeeping activities; and the amendment to the Foreign Operations appropriations bill on halting ethnic cleansing.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[U.N. General Assembly Security Council, June 17, 1992]

AN AGENDA FOR PEACE: PREVENTIVE DIPLOMACY, PEACEMAKING, AND PEACE-KEEPING  
(Report of the Secretary-General pursuant to the statement adopted by the Summit Meeting of the Security Council on January 31, 1992)

#### INTRODUCTION

1. In its statement of 31 January 1992, adopted at the conclusion of the first meeting held by the Security Council at the level of Heads of State and Government, I was invited to prepare, for circulation to the Members of the United Nations by 1 July 1992, an "analysis and recommendations on ways of strengthening and making more efficient within the framework and provisions of the Charter the capacity of the United Nations for preventive diplomacy, for peacemaking and for peace-keeping."<sup>1</sup>

2. The United Nations is a gathering of sovereign States and what it can do depends on the common ground that they create between them. The adversarial decades of the cold war made the original promise of the Organization impossible to fulfill. The Janu-

ary 1992 Summit therefore represented an unprecedented recommitment, at the highest political level, to the Purposes and Principles of the Charter.

3. In these past months a conviction has grown, among nations large and small, that an opportunity has been regained to achieve the great objectives of the Charter—a United Nations capable of maintaining international peace and security, of securing justice and human rights and of promoting, in the words of the Charter, "social progress and better standards of life in larger freedom". This opportunity must not be squandered. The Organization must never again be crippled as it was in the era that has now passed.

4. I welcome the invitation of the security council, early in my tenure as Secretary-General, to prepare this report. It draws upon ideas and proposals transmitted to me by Governments, regional agencies, non-governmental organizations, and institutions and individuals from many countries. I am grateful for these, even as I emphasize that the responsibility for this report is my own.

5. The sources of conflict and war are pervasive and deep. To reach them will require our utmost effort to enhance respect for human rights and fundamental freedoms, to promote sustainable economic and social development for wider prosperity, to alleviate distress and to curtail the existence and use of massively destructive weapons. The United Nations Conference on Environment and Development, the largest summit ever held, has just met at Rio de Janeiro. Next year will see the second World Conference on Human Rights. In 1994 Population and Development will be addressed. In 1995 the World Conference on Women will take place, and a World Summit for Social Development has been proposed. Throughout my term as Secretary-General I shall be addressing all these great issues. I bear them all in mind as, in the present report, I turn to the problems that the Council has specifically requested I consider: preventive diplomacy, peacemaking and peace-keeping—to which I have added a closely related concept, post-conflict peace-building.

6. The manifest desire of the membership to work together is a new source of strength in our common endeavor. Success is far from certain, however. While my report deals with ways to improve the Organization's capacity to pursue and preserve peace, it is crucial for all Member States to bear in mind that the search for improved mechanisms and techniques will be of little significance unless this new spirit of commonality is propelled by the will to take the hard decisions demanded by this time of opportunity.

7. It is therefore with a sense of moment, and with gratitude, that I present this report to the Members of the United Nations.

#### I. THE CHANGING CONTEXT

8. In the course of the past few years the immense ideological barrier that for decades gave rise to distrust and hostility—and the terrible tools of destruction that were their inseparable companions—has collapsed. Even as the issues between States north and south grow more acute, and call for attention at the highest levels of government, the improvement in relations between States east and west affords new possibilities, some already realized, to meet successfully threats to common security.

9. Authoritarian regimes have given way to more democratic forces and responsive Governments. The form, scope and intensity of these processes differ from Latin America to Africa to Europe to Asia, but they are suffi-

ciently similar to indicate a global phenomenon. Parallel to these political changes, many States are seeking more open forms of economic policy, creating a world-wide sense of dynamism and movement.

10. To the hundreds of millions who gained their independence in the surge of decolonization following the creation of the United Nations, have been added millions more who have recently gained freedom. Once again new States are taking their seats in the General Assembly. Their arrival reconfirms the importance and indispensability of the sovereign State as the fundamental entity of the international community.

11. We have entered a time of global transition marked by uniquely contradictory trends. Regional and continental associations of States are evolving ways to deepen cooperation and ease some of the contentious characteristics of sovereign and nationalistic rivalries. National boundaries are blurred by advanced communications and global commerce, and by the decisions of States to yield some sovereign prerogatives to larger, common political associations. At the same time, however, fierce new assertions of nationalism and sovereignty spring up, and the cohesion of States is threatened by brutal ethnic, religious, social, cultural or linguistic strife. Social peace is challenged on the one hand by new assertions of discrimination and exclusion and, on the other, by acts of terrorism seeking to undermine evolution and change through democratic means.

12. The concept of peace is easy to grasp; that of international security is more complex, for a pattern of contradictions has arisen here as well. As major nuclear Powers have begun to negotiate arms reduction agreements, the proliferation of weapons of mass destruction threatens to increase and conventional arms continue to be amassed in many parts of the world. As racism becomes recognized for the destructive force it is and as apartheid is being dismantled, new racial tensions are rising and finding expression in violence. Technological advances are altering the nature and the expectation of life all over the globe. The revolution in communications has united the world in awareness, in aspiration and in greater solidarity against injustice. But progress also brings new risks for stability: ecological damage, disruption of family and community life, greater intrusion into the lives and rights of individuals.

13. This new dimension of insecurity must not be allowed to obscure the continuing and devastating problems of unchecked population growth, crushing debt burdens, barriers to trade, drugs and the growing disparity between rich and poor. Poverty, disease, famine, oppression and despair abound, joining to produce 17 million refugees, 20 million displaced persons and massive migrations of peoples within and beyond national borders. These are both sources and consequences of conflict that require the ceaseless attention and the highest priority in the efforts of the United Nations. A porous ozone shield could pose a greater threat to an exposed population than a hostile army. Drought and disease can decimate no less mercilessly than the weapons of war. So at this moment of renewed opportunity, the efforts of the Organization to build peace, stability and security must encompass matters beyond military threats in order to break the fetters of strife and warfare that have characterized the past. But armed conflicts today, as they have throughout history, continue to bring fear and horror to humanity, requiring our

urgent involvement to try to prevent, contain and bring them to an end.

14. Since the creation of the United Nations in 1945, over 100 major conflicts around the world have left some 20 million dead. The United Nations was rendered powerless to deal with many of these crises because of the vetoes—279 of them—cast in the Security Council, which were a vivid expression of the divisions of that period.

15. With the end of the cold war there have been no such vetoes since 31 May 1990, and demands on the United Nations have surged. Its security arm, once disabled by circumstances it was not created or equipped to control, has emerged as a central instrument for the prevention and resolution of conflicts and for the preservation of peace. Our aims must be:

To seek to identify at the earliest possible stage situations that could produce conflict, and to try through diplomacy to remove the sources of danger before violence results;

Where conflict erupts, to engage in peacemaking aimed at resolving the issues that have led to conflict;

Through peace-keeping, to work to preserve peace, however fragile, where fighting has been halted and to assist in implementing agreements achieved by the peacemakers;

To stand ready to assist in peace-building in its differing contexts: rebuilding the institutions and infrastructures of nations torn by civil war and strife; and building bonds of peaceful mutual benefit among nations formerly at war;

And in the largest sense, to address the deepest causes of conflict: economic despair, social injustice and political oppression. It is possible to discern an increasingly common moral perception that spans the world's nations and peoples, and which is finding expression in international laws, many owing their genesis to the work of this Organization.

16. This wider mission for the world Organization will demand the concerted attention and effort of individual States, of regional and non-governmental organizations and of all of the United Nations system, with each of the principal organs functioning in the balance and harmony that the Charter requires. The Security Council has been assigned by all Member States the primary responsibility for the maintenance of international peace and security under the Charter. In its broadest sense this responsibility must be shared by the General Assembly and by all the functional elements of the world Organization. Each has a special and indispensable role to play in an integrated approach to human security. The Secretary-General's contribution rests on the pattern of trust and cooperation established between him and the deliberative organs of the United Nations.

17. The foundation-stone of this work is and must remain the State. Respect for its fundamental sovereignty and integrity are crucial to any common international progress. The time of absolute and exclusive sovereignty, however, has passed; its theory was never matched by reality. It is the task of leaders of States today to understand this and to find a balance between the needs of good internal governance and the requirements of an ever more interdependent world. Commerce, communications and environmental matters transcend administrative borders; but inside those borders is where individuals carry out the first order of their economic, political and social lives. The United Nations has not closed its door. Yet if

every ethnic, religious or linguistic group claimed statehood, there would be no limit to fragmentation, and peace, security and economic well-being for all would become ever more difficult to achieve.

18. One requirement for solutions to these problems lies in commitment to human rights with a special sensitivity to those of minorities, whether ethnic, religious, social or linguistic. The League of Nations provided a machinery for the international protection of minorities. The General Assembly soon will have before it a declaration on the rights of minorities. That instrument, together with the increasingly effective machinery of the United Nations dealing with human rights, should enhance the situation of minorities as well as the stability of States.

19. Globalism and nationalism need not be viewed as opposing trends, doomed to spur each other on to extremes of reaction. The healthy globalization of contemporary life requires in the first instance solid identities and fundamental freedoms. The sovereignty, territorial integrity and independence of States within the established international system, and the principle of self-determination for peoples, both of great value and importance, must not be permitted to work against each other in the period ahead. Respect for democratic principles at all levels of social existence is crucial: in communities, within States and within the community of States. Our constant duty should be to maintain the integrity of each while finding a balanced design for all.

## II. DEFINITIONS

20. The terms preventive diplomacy, peacemaking and peace-keeping are integrally related and as used in this report are defined as follows:

Preventive diplomacy is action to prevent disputes from arising between parties, to prevent existing disputes from escalating into conflicts and to limit the spread of the latter when they occur.

Peacemaking is action to bring hostile parties to agreement, essentially through such peaceful means as those foreseen in Chapter VI of the Charter of the United Nations.

Peace-keeping is the deployment of a United Nations presence in the field, hitherto with the consent of all the parties concerned, normally involving United Nations military and/or police personnel and frequently civilians as well. Peace-keeping is a technique that expands the possibilities for both the prevention of conflict and the making of peace.

21. The present report in addition will address the critically related concept of post-conflict peace-building—action to identify and support structures which will tend to strengthen and solidify peace in order to avoid a relapse into conflict. Preventive diplomacy seeks to resolve disputes before violence breaks out; peacemaking and peace-keeping are required to halt conflicts and preserve peace once it is attained. If successful, they strengthen the opportunity for post-conflict peace-building, which can prevent the recurrence of violence among nations and peoples.

22. These four areas for action, taken together, and carried out with the backing of all Members, offer a coherent contribution towards securing peace in the spirit of the Charter. The United Nations has extensive experience not only in these fields, but in the wider realm of work for peace in which these four fields are set. Initiatives on decolonization, on the environment and sustainable development, on population, on the

eradication of disease, on disarmament and on the growth of international law—these and many others have contributed immeasurably to the foundations for a peaceful world. The world has often been rent by conflict and plagued by massive human suffering and deprivation. Yet it would have been far more so without the continuing efforts of the United Nations. This wide experience must be taken into account in assessing the potential of the United Nations in maintaining international security not only in its traditional sense, but in the new dimensions presented by the era ahead.

### III. PREVENTIVE DIPLOMACY

23. The most desirable and efficient employment of diplomacy is to ease tensions before they result in conflict—or, if conflict breaks out, to act swiftly to contain it and resolve its underlying causes. Preventive diplomacy may be performed by the Secretary-General personally or through senior staff or specialized agencies and programmes, by the Security Council or the General Assembly, and by regional organizations in cooperation with the United Nations. Preventive diplomacy requires measures to create confidence; it needs early warning based on information gathering and informal or formal fact-finding; it may also involve preventive deployment and, in some situations, demilitarized zones.

#### *Measures to build confidence*

24. Mutual confidence and good faith are essential to reducing the likelihood of conflict between States. Many such measures are available to Governments that have the will to employ them. Systematic exchange of military missions, formation of regional or subregional risk reduction centres, arrangements for the free flow of information, including the monitoring of regional arms agreements, are examples. I ask all regional organizations to consider what further confidence-building measures might be applied in their areas and to inform the United Nations of the results. I will undertake periodic consultations on confidence-building measures with parties to potential, current or past disputes and with regional organizations, offering such advisory assistance as the Secretariat can provide.

#### *Fact-finding*

25. Preventive steps must be based upon timely and accurate knowledge of the facts. Beyond this, an understanding of developments and global trends, based on sound analysis, is required. And the willingness to take appropriate preventive action is essential. Given the economic and social roots of many potential conflicts, the information needed by the United Nations now must encompass economic and social trends as well as political developments that may lead to dangerous tensions.

(a) An increased resort to fact-finding is needed, in accordance with the Charter, initiated either by the Secretary-General, to enable him to meet his responsibilities under the Charter, including Article 99, or by the Security Council or the General Assembly. Various forms may be employed selectively as the situation requires. A request by a State for the sending of a United Nations fact-finding mission to its territory should be considered without undue delay.

(b) Contacts with the Governments of Member States can provide the Secretary-General with detailed information on issues of concern. I ask that all Member States be ready to provide the information needed for effective preventive diplomacy. I will supplement my own contacts by regularly sending

senior officials on missions for consultations in capitals or other locations. Such contacts are essential to gain insight into a situation and to assess its potential ramifications.

(c) Formal fact-finding can be mandated by the Security Council or by the General Assembly, either of which may elect to send a mission under its immediate authority or may invite the Secretary-General to take the necessary steps, including the designation of a special envoy. In addition to collecting information on which a decision for further action can be taken, such a mission can in some instances help to defuse a dispute by its presence, indicating to the parties that the Organization, and in particular the Security Council, is actively seized of the matter as a present or potential threat to international security.

(d) In exceptional circumstances the Council may meet away from Headquarters as the Charter provides, in order not only to inform itself directly, but also to bring the authority of the Organization to bear on a given situation.

#### *Early warning*

26. In recent years the United Nations system has been developing a valuable network of early warning systems concerning environmental threats, the risk of nuclear accident, natural disasters, mass movements of populations, the threat of famine and the spread of disease. There is a need, however, to strengthen arrangements in such a manner that information from these sources can be synthesized with political indicators to assess whether a threat to peace exists and to analyze what action might be taken by the United Nations to alleviate it. This is a process that will continue to require the close cooperation of the various specialized agencies and functional offices of the United Nations. The analyses and recommendations for preventive action that emerge will be made available by me, as appropriate, to the Security Council and other United Nations organs. I recommend in addition that the Security Council invite a reinvestigated and restructured Economic and Social Council to provide reports, in accordance with Article 65 of the Charter, on those economic and social developments that may, unless mitigated, threaten international peace and security.

27. Regional arrangements and organizations have an important role in early warning. I ask regional organizations that have not yet sought observer status at the United Nations to do so and to be linked, through appropriate arrangements, with the security mechanisms of this Organization.

#### *Preventive deployment*

28. United Nations operations in areas of crisis have generally been established after conflict has occurred. The time has come to plan for circumstances warranting preventive deployment, which could take place in a variety of instances and ways. For example, in conditions of national crisis there could be preventive deployment at the request of the Government or all parties concerned, or with their consent; in inter-State disputes such deployment could take place when two countries feel that a United Nations presence on both sides of their border can discourage hostilities; furthermore, preventive deployment could take place when a country feels threatened and requests the deployment of an appropriate United Nations presence along its side of the border alone. In each situation, the mandate and composition of the United Nations presence would need to be carefully devised and clear to all.

29. In conditions of crisis within a country, when the Government requests or all parties consent, preventive deployment could help in a number of ways to alleviate suffering and to limit or control violence. Humanitarian assistance, impartially provided, could be of critical importance; assistance in maintaining security, whether through military, police or civilian personnel, could save lives and develop conditions of safety in which negotiations can be held; the United Nations could also help in conciliation efforts if this should be the wish of the parties. In certain circumstances, the United Nations may well need to draw upon the specialized skills and resources of various parts of the United Nations system; such operations may also on occasion require the participation of non-governmental organizations.

30. In these situations of internal crisis the United Nations will need to respect the sovereignty of the State; to do otherwise would not be in accordance with the understanding of Member States in accepting the principles of the Charter. The Organization must remain mindful of the carefully negotiated balance of the guiding principles annexed to General Assembly resolution 46/182 of 19 December 1991. Those guidelines stressed, *inter alia*, that humanitarian assistance must be provided in accordance with the principles of humanity, neutrality and impartiality; that the sovereignty, territorial integrity and national unity of States must be fully respected in accordance with the Charter of the United Nations; and that, in this context, humanitarian assistance should be provided with the consent of the affected country and, in principle, on the basis of an appeal by that country. The guidelines also stressed the responsibility of States to take care of the victims of emergencies occurring on their territory and the need for access to those requiring humanitarian assistance. In the light of these guidelines, a Government's request for United Nations involvement, or consent to it, would not be an infringement of that State's sovereignty or be contrary to Article 2, paragraph 7, of the Charter which refers to matters essentially within the domestic jurisdiction of any State.

31. In inter-State disputes, when both parties agree, I recommend that if the Security Council concludes that the likelihood of hostilities between neighboring countries could be removed by the preventive deployment of a United Nations presence on the territory of each State, such action should be taken. The nature of the tasks to be performed would determine the composition of the United Nations presence.

32. In cases where one nation fears a cross-border attack, if the Security Council concludes that a United Nations presence on one side of the border, with the consent only of the requesting country, would serve to deter conflict, I recommend that preventive deployment take place. Here again, the specific nature of the situation would determine the mandate and the personnel required to fulfill it.

#### *Demilitarized zones*

33. In the past, demilitarized zones have been established by agreement of the parties at the conclusion of a conflict. In addition to the deployment of United Nations personnel in such zones as part of peace-keeping operations, consideration should now be given to the usefulness of such zones as a form of preventive deployment, on both sides of a border, with the agreement of the two parties, as a means of separating potential belligerents, or on one side of the line, at the request of one party, for the purpose of re-

moving any pretext for attack. Demilitarized zones would serve as symbols of the international community's concern that conflict be prevented.

#### IV. PEACEMAKING

34. Between the tasks of seeking to prevent conflict and keeping the peace lies the responsibility to try to bring hostile parties to agreement by peaceful means. Chapter VI of the Charter sets forth a comprehensive list of such means for the resolution of conflict. These have been amplified in various declarations adopted by the General Assembly, including the Manila Declaration of 1982 on the Peaceful Settlement of International Disputes<sup>2</sup> and the 1988 Declaration on the Prevention and Removal of Disputes and Situations Which May Threaten International Peace and Security and on the Role of the United Nations in this Field.<sup>3</sup> They have also been the subject of various resolutions of the General Assembly, including resolution 44/21 of 15 November 1989 on enhancing international peace, security and international cooperation in all its aspects in accordance with the Charter of the United Nations. The United Nations has had wide experience in the application of these peaceful means. If conflicts have gone unresolved, it is not because techniques for peaceful settlement were unknown or inadequate. The fault lies first in the lack of political will of parties to seek a solution to their difference, through such means as are suggested in Chapter VI of the Charter, and second, in the lack of leverage at the disposal of a third party if this is the procedure chosen. The indifference of the international community to a problem, or the marginalization of it, can also thwart the possibilities of solution. We must look primarily to these areas if we hope to enhance the capacity of the Organization for achieving peaceful settlements.

35. The present determination in the Security Council to resolve international disputes in the manner foreseen in the Charter has opened the way for a more active Council role. With greater unity has come leverage and persuasive power to lead hostile parties towards negotiations. I urge the Council to take full advantage of the provisions of the Charter under which it may recommend appropriate procedures or methods for dispute settlement and, if all the parties to a dispute so request, make recommendations to the parties for a specific settlement of the dispute.

36. The General Assembly, like the Security Council and the Secretary-General, also has an important role assigned to it under the Charter for the maintenance of international peace and security. As a universal forum, its capacity to consider and recommend appropriate action must be recognized. To that end it is essential to promote its utilization by all Member States so as to bring greater influence to bear in pre-empting or containing situations which are likely to threaten international peace and security.

37. Mediation and negotiation can be undertaken by an individual designated by the Security Council, by the General Assembly or by the Secretary-General. There is a long history of the utilization by the United Nations of distinguished statesmen to facilitate the processes of peace. They can bring a personal prestige that, in addition to their experience, can encourage the parties to enter serious negotiations. There is a wide willingness to serve in this capacity, from which I shall continue to benefit as the need arises. Frequently it is the Secretary-General himself who undertakes the task. While the me-

diator's effectiveness is enhanced by strong and evident support from the Council, the General Assembly and the relevant Member States acting in their national capacity, the good offices of the Secretary-General may at times be employed most effectively when conducted independently of the deliberative bodies. Close and continuous consultation between the Secretary-General and the Security Council is, however, essential to ensure full awareness of how the Council's influence can best be applied and to develop a common strategy for the peaceful settlement of specific disputes.

#### The World Court

38. The docket of the International Court of Justice has grown fuller but it remains an under-used resource for the peaceful adjudication of disputes. Greater reliance on the Court would be an important contribution to United Nations peacemaking. In this connection, I call attention to the power of the Security Council under Articles 36 and 37 of the Charter to recommend to Member States the submission of a dispute to the International Court of Justice, arbitration or other dispute-settlement mechanisms. I recommend that the Secretary-General be authorized, pursuant to Article 96, paragraph 2, of the Charter, to take advantage of the advisory competence of the Court and that other United Nations organs that already enjoy such authorization turn to the Court more frequently for advisory opinions.

39. I recommend the following steps to reinforce the role of the International Court of Justice:

(a) All Member States should accept the general jurisdiction of the International Court under Article 36 of its Statute, without any reservation, before the end of the United Nations Decade of International Law in the year 2000. In instances where domestic structures prevent this, States should agree bilaterally or multilaterally to a comprehensive list of matters they are willing to submit to the Court and should withdraw their reservations to its jurisdiction in the dispute settlement clauses of multilateral treaties;

(b) When submission of a dispute to the full Court is not practical, the Chambers jurisdiction should be used;

(c) States should support the Trust Fund established to assist countries unable to afford the cost involved in bringing a dispute to the Court, and such countries should take full advantage of the Fund in order to resolve their disputes.

#### Amelioration through assistance

40. Peacemaking is at times facilitated by international action to ameliorate circumstances that have contributed to the dispute or conflict. If, for instance, assistance to displaced persons within a society is essential to a solution, then the United Nations should be able to draw upon the resources of all agencies and programmes concerned. At present, there is no adequate mechanism in the United Nations through which the Security Council, the General Assembly or the Secretary-General can mobilize the resources needed for such positive leverage and engage the collective efforts of the United Nations system for the peaceful resolution of a conflict. I have raised this concept in the Administrative Committee on Coordination, which brings together the executive heads of United Nations agencies and programmes; we are exploring methods by which the inter-agency system can improve its contribution to the peaceful resolution of disputes.

#### Sanctions and special economic problems

41. In circumstances when peacemaking requires the imposition of sanctions under Ar-

ticle 41 of the Charter, it is important that States confronted with special economic problems not only have the right to consult the Security Council regarding such problems, as Article 50 provides, but also have a realistic possibility of having their difficulties addressed. I recommend that the Security Council devise a set of measures involving the financial institutions and other components of the United Nations system that can be put in place to insulate States from such difficulties. Such measures would be a matter of equity and a means of encouraging States to cooperate with decisions of the Council.

#### Use of military force

42. It is the essence of the concept of collective security as contained in the Charter that if peaceful means fail, the measures provided in Chapter VII should be used, on the decision of the Security Council, to maintain or restore international peace and security in the face of a "threat to the peace, breach of the peace, or act of aggression". The Security Council has not so far made use of the most coercive of these measures—the action by military force foreseen in Article 42. In the situation between Iraq and Kuwait, the Council chose to authorize Member States to take measures on its behalf. The Charter, however, provides a detailed approach which now merits the attention of all Member States.

43. Under Article 42 of the Charter, the Security Council has the authority to take military action to maintain or restore international peace and security. While such action should only be taken when all peaceful means have failed, the option of taking it is essential to the credibility of the United Nations as a guarantor of international security. This will require bringing into being, through negotiations, the special agreements foreseen in Article 43 of the Charter, whereby Member States undertake to make armed forces, assistance and facilities available to the Security Council for the purposes stated in Article 42, not only on an ad hoc basis but on a permanent basis. Under the political circumstances that now exist for the first time since the Charter was adopted, the long-standing obstacles to the conclusion of such special agreements should no longer prevail. The ready availability of armed forces on call could serve, in itself, as a mean of deterring breaches of the peace since a potential aggressor would know that the Council had at its disposal a mean of response. Forces under Article 43 may perhaps never be sufficiently large or well enough equipped to deal with a threat from a major army equipped with sophisticated weapons. They would be useful, however, in meeting any threat posed by a military force of a lesser order. I recommend that the Security Council initiate negotiations in accordance with Article 43, supported by the Military Staff Committee, which may be augmented if necessary by others in accordance with Article 47, paragraph 2, of the Charter. It is my view that the role of the Military Staff Committee should be seen in the context of Chapter VII, and not that of the planning or conduct of peace-keeping operations.

#### Peace-enforcement units

44. The mission of forces under Article 43 would be to respond to outright aggression, imminent or actual. Such forces are not likely to be available for some time to come. Cease-fires have often been agreed to but not complied with, and the United Nations has sometimes been called upon to send forces to restore and maintain the cease-fire. This

task can on occasion exceed the mission of peace-keeping forces and the expectations of peace-keeping force contributors. I recommend that the Council consider the utilization of peace-enforcement units in clearly defined circumstances and with their terms of reference specified in advance. Such units from Member States would be available on call and would consist of troops that have volunteered for such service. They would have to be more heavily armed than peace-keeping forces and would need to undergo extensive preparatory training within their national forces. Deployment and operation of such forces would be under the authorization of the Security Council and would, as in the case of peace-keeping forces, be under the command of the Secretary-General. I consider such peace-enforcement units to be warranted as a provisional measure under Article 40 of the Charter. Such peace-enforcement units should not be confused with the forces that may eventually be constituted under Article 43 to deal with acts of aggression or with the military personnel which Governments may agree to keep on stand-by for possible contribution to peace-keeping operations.

45. Just as diplomacy will continue across the span of all the activities dealt with in the present report, so there may not be a dividing line between peacemaking and peace-keeping. Peacemaking is often a prelude to peace-keeping—just as the deployment of a United Nations presence in the field may expand possibilities for the prevention of conflict, facilitate the work of peacemaking and in many cases serve as a prerequisite for peace-building.

#### V. PEACE-KEEPING

46. Peace-keeping can rightly be called the invention of the United Nations. It has brought a degree of stability to numerous areas of tension around the world.

#### *Increasing demands*

47. Thirteen peace-keeping operations were established between the years 1945 and 1987; 13 others since then. An estimated 528,000 military, police and civilian personnel had served under the flag of the United Nations until January 1992. Over 800 of them from 43 countries have died in the service of the Organization. The costs of these operations have aggregated some \$8.3 billion till 1992. The unpaid arrears towards them stand at over \$800 million, which represent a debt owed by the Organization to the troop-contributing countries. Peace-keeping operations approved at present are estimated to cost close to \$3 billion in the current 12-month period, while patterns of payment are unacceptably slow. Against this, global defense expenditures at the end of the last decade had approached \$1 trillion a year, or \$2 million per minute.

48. The contrast between the costs of United Nations peace-keeping and the costs of the alternative, war—between the demands of the Organization and the means provided to meet them—would be farcical were the consequences not so damaging to global stability and to the credibility of the Organization. At a time when nations and peoples increasingly are looking to the United Nations for assistance in keeping the peace—and holding it responsible when this cannot be so—fundamental decisions must be taken to enhance the capacity of the Organization in this innovative and productive exercise of its function. I am conscious that the present volume and unpredictability of peace-keeping assessments poses real problems for some Member States. For this reason, I strongly

support proposals in some Member States for their peace-keeping contributions to be financed from defence, rather than foreign affairs, budgets and I recommend such action to others. I urge the General Assembly to encourage this approach.

49. The demands on the United Nations for peace-keeping, and peace-building, operations will in the coming years continue to challenge the capacity, the political and financial will and the creativity of the Secretariat and Member States. Like the Security Council, I welcome the increase and broadening of the tasks of peace-keeping operations.

#### *New departures in peace-keeping*

50. The nature of peace-keeping operations has evolved rapidly in recent years. The established principles and practices of peace-keeping have responded flexibly to new demands of recent years, and the basic conditions for success remain unchanged: a clear and practicable mandate; the cooperation of the parties in implementing that mandate; the continuing support of the Security Council; the readiness of Member States to contribute the military, police and civilian personnel, including specialists, required; effective United Nations command at Headquarters and in the field; and adequate financial and logistic support. As the international climate has changed and peace-keeping operations are increasingly fielded to help implement settlements that have been negotiated by peacemakers, a new array of demands and problems has emerged regarding logistics, equipment, personnel and finance, all of which could be corrected if Member States so wished and were ready to make the necessary resources available.

#### *Personnel*

51. Member States are keen to participate in peace-keeping operations. Military observers and infantry are invariably available in the required numbers, but logistic units present a greater problem, as few armies can afford to spare such units for an extended period. Member States were requested in 1990 to state what military personnel they were in principle prepared to make available; few replied. I reiterate the request to all Member States to reply frankly and promptly. Stand-by arrangements should be confirmed, as appropriate, through exchanges of letters between the Secretariat and Member States concerning the kind and number of skilled personnel they will be prepared to offer the United Nations as the needs of new operations arise.

52. Increasingly, peace-keeping requires that civilian political officers, human rights monitors, electoral officials, refugee and humanitarian aid specialists and police play as central a role as the military. Police personnel have proved increasingly difficult to obtain in the numbers required. I recommend that arrangements be reviewed and improved for training peace-keeping personnel—civilian, police, or military—using the varied capabilities of Member State Governments, of non-governmental organizations and the facilities of the Secretariat. As efforts go forward to include additional States as contributors, some States with considerable potential should focus on language training for police contingents which may serve with the Organization. As for the United Nations itself, special personnel procedures, including incentives, should be instituted to permit the rapid transfer of Secretariat staff members to service with peace-keeping operations. The strength and capability of military staff serving in the Secretariat should

be augmented to meet new and heavier requirements.

#### *Logistics*

53. Not all Governments can provide their battalions with the equipment they need for service abroad. While some equipment is provided by troop-contributing countries, a great deal has to come from the United Nations, including equipment to fill gaps in under-equipped national units. The United Nations has no standing stock of such equipment. Orders must be placed with manufacturers, which creates a number of difficulties. A pre-positioned stock of basic peace-keeping equipment should be established, so that at least some vehicles, communications equipment, generators, etc., would be immediately available at the start of an operation. Alternatively, Governments should commit themselves to keeping certain equipment, specified by the Secretary-General, on stand-by for immediate sale, loan or donation to the United Nations when required.

54. Member States in a position to do so should make air- and sea-lift capacity available to the United Nations free of cost or at lower than commercial rates, as was the practice until recently.

#### VI. POST-CONFLICT PEACE-BUILDING

55. Peacemaking and peace-keeping operations, to be truly successful, must come to include comprehensive efforts to identify and support structures which will tend to consolidate peace and advance a sense of confidence and well-being among people. Through agreements ending civil strife, these may include disarming the previously warring parties and the restoration of order, the custody and possible destruction of weapons, repatriating refugees, advisory and training support for security personnel, monitoring elections, advancing efforts to protect human rights, reforming or strengthening governmental institutions and promoting formal and informal processes of political participation.

56. In the aftermath of international war, post-conflict peace-building may take the form of concrete cooperative projects which link two or more countries in a mutually beneficial undertaking that can not only contribute to fundamental to peace. I have in mind, for example, projects that bring States together to develop agriculture, improve transportation or utilize resources such as water or electricity that they need to share, or joint programmes through which barriers between nations are brought down by means of freer travel, cultural exchanges and mutually beneficial youth and educational projects. Reducing hostile perceptions through educational exchanges and curriculum reform may be essential to forestall a re-emergence of cultural and national tensions which could spark renewed hostilities.

57. In surveying the range of efforts for peace, the concept of peace-building as the construction of a new environment should be viewed as the counterpart of preventive diplomacy, which seeks to avoid the breakdown of peaceful conditions. When conflict breaks out, mutually reinforcing efforts at peacemaking and peace-keeping come into play. Once these have achieved their objectives, only sustained, cooperative work to deal with underlying economic, social, cultural and humanitarian problems can place an achieved peace on a durable foundation. Preventive diplomacy is to avoid a crisis; post-conflict peace-building is to prevent a recurrence.

58. Increasingly it is evident that peace-building after civil or international strife

must address the serious problem of land mines, many tens of millions of which remain scattered in present or former combat zones. De-mining should be emphasized in the terms of reference of peace-keeping operations and is crucially important in the restoration of activity when peace-building is under way: agriculture cannot be revived without de-mining and the restoration of transport may require the laying of hard surface roads to prevent re-mining. In such instances, the link becomes evident between peace-keeping and peace-building. Just as demilitarized zones may serve the cause of preventive diplomacy and preventive deployment to avoid conflict, so may demilitarization assist in keeping the peace or in post-conflict peace-building, as a measure for heightening the sense of security and encouraging the parties to turn their energies to the work of peaceful restoration of their societies.

59. There is a new requirement for technical assistance which the United Nations has an obligation to develop and provide when requested: support for the transformation of deficient national structures and capabilities, and for the strengthening of new democratic institutions. The authority of the United Nations system to act in this field would rest on the consensus that social peace is as important as strategic or political peace. There is an obvious connection between democratic practices—such as the rule of law and transparency in decision-making—and the achievement of true peace and security in any new and stable political order. These elements of good governance need to be promoted at all levels of international and national political communities.

#### VII. COOPERATION WITH REGIONAL ARRANGEMENTS AND ORGANIZATIONS

60. The Covenant of the League of Nations, in its Article 21, noted the validity of regional understandings for securing the maintenance of peace. The Charter devotes Chapter VIII to regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action and consistent with the Purposes and Principles of the United Nations. The cold war impaired the proper use of Chapter VIII and indeed, in that era, regional arrangements worked on occasion against resolving disputes in the manner foreseen in the Charter.

61. The Charter deliberately provides no precise definition of regional arrangements and agencies, thus allowing useful flexibility for undertakings by a group of States to deal with matter appropriate for regional action which also could contribute to the maintenance of international peace and security. Such associations or entities could include treaty-based organizations, whether created before or after the founding of the United Nations, regional organizations for mutual security and defence, organizations for general regional development or for cooperation on a particular economic topic or function, and groups created to deal with a specific political, economic or social issue of current concern.

62. In this regard, the United Nations has recently encouraged a rich variety of complementary efforts. Just as no two regions or situations are the same, so the design of cooperative work and its division of labour must adapt to the realities of each case with flexibility and creativity. In Africa, three different regional groups—the Organization of African Unity, the League of Arab States and the Organization of the Islamic Con-

ference—joined efforts with the United Nations regarding Somalia. In the Asian context, the Association of South-East Asian Nations and individual States from several regions were brought together with the parties to the Cambodian conflict at an international conference in Paris, to work with the United Nations. For El Salvador, a unique arrangement—"The Friends of the Secretary-General"—contributed to agreements reached through the mediation of the Secretary-General. The end of the war in Nicaragua involved a highly complex effort which was imitated by leaders of the region and conducted by individual States, groups of States and the Organization of American States. Efforts undertaken by the European Community and its member States, with the support of States participating in the Conference on Security and Cooperation in Europe, have been of central importance in dealing with the crisis in the Balkans and neighbouring areas.

63. In the past, regional arrangements often were created because of the absence of a universal system for collective security; thus their activities could on occasion work at cross-purposes with the sense of solidarity required for the effectiveness of the world Organization. But in this new era of opportunity, regional arrangements or agencies can render great service if their activities are undertaken in a manner consistent with the Purposes and Principles of the Charter, and if their relationship with the United Nations, and particularly the Security Council, is governed by Chapter VIII.

64. It is not the purpose of the present report to set forth any formal pattern of relationship between regional organizations and the United Nations, or to call for any specific division of labour. What is clear, however, is that regional arrangements or agencies in many cases possess a potential that should be utilized in serving the functions covered in this report: preventive diplomacy, peace-keeping, peacemaking and post-conflict peace-building. Under the Charter, the Security Council has and will continue to have primary responsibility for maintaining international peace and security, but regional action as a matter of decentralization, delegation and cooperation with United Nations efforts could not only lighten the burden of the Council but also contribute to a deeper sense of participation, consensus and democratization in international affairs.

65. Regional arrangements and agencies have not in recent decades been considered in this light, even when originally designed in part for a role in maintaining or restoring peace within their regions of the world. Today a new sense exists that they have contributions to make. Consultations between the United Nations and regional arrangements or agencies could do much to build international consensus on the nature of a problem and the measures required to address it. Regional organizations participating in complementary efforts with the United Nations in joint undertakings would encourage States outside the region to act supportively. And should the Security Council choose specifically to authorize a regional arrangement or organization to take the lead in addressing a crisis within its region, it could serve to lend the weight of the United Nations to the validity of the regional effort. Carried forward in the spirit of the Charter, and as envisioned in Chapter VIII, the approach outlined here could strengthen a general sense that democratization is being encouraged at all levels in the task of maintaining international peace and

security, it being essential to continue to recognize that the primary responsibility will continue to reside in the Security Council.

#### VIII. SAFETY OF PERSONNEL

66. When United Nations personnel are deployed in conditions of strife, whether for preventive diplomacy, peacemaking, peace-keeping, peace-building or humanitarian purposes, the need arises to ensure their safety. There has been an unconscionable increase in the number of fatalities. Following the conclusion of a cease-fire and in order to prevent further outbreaks of violence, United Nations guards were called upon to assist in volatile conditions in Iraq. Their presence afforded a measure of security to United Nations personnel and supplies and, in addition, introduced an element of reassurance and stability that helped to prevent renewed conflict. Depending upon the nature of the situation, different configurations and compositions of security deployments will need to be considered. As the variety and scale of threat widens, innovative measures will be required to deal with the dangers facing United Nations personnel.

67. Experience has demonstrated that the presence of a United Nations operation has not always been sufficient to deter hostile action. Duty in areas of danger can never be risk-free; United Nations personnel must expect to go in harm's way at times. The courage, commitment and idealism shown by United Nations personnel should be respected by the entire international community. These men and women deserve to be properly recognized and rewarded for the perilous tasks they undertake. Their interests and those of their families must be given due regard and protected.

68. Given the pressing need to afford adequate protections to United Nations personnel engaged in life-endangering circumstances, I recommend that the Security Council, unless it elects immediately to withdraw the United Nations presence in order to preserve the credibility of the Organization, gravely consider what action should be taken towards those who put United Nations personnel in danger. Before deployment takes place, the Council should keep open the option of considering in advance collective measures, possibly including those under Chapter VII when a threat to international peace and security is also involved, to come into effect should the purpose of the United Nations operation systematically be frustrated and hostilities occur.

#### IX. FINANCING

69. A chasm has developed between the funds entrusted to this Organization and the financial means provided to it. The truth of the matter is that our vision cannot really extend to the prospect opening before us as long as our financing remains myopic. There are two main areas of concern: the ability of the Organization to function over the longer term; and immediate requirements to respond to a crisis.

70. To remedy the financial situation of the United Nations in all its aspects, my distinguished predecessor repeatedly drew the attention of Member States to the increasingly impossible situations that has arisen and, during the forty-sixth session of the General Assembly, made a number of proposals. Those proposals which remain before the Assembly, and with which I am in broad agreement, are the following:

Proposal one. This suggested the adoption of a set of measures to deal with the cash flow problems caused by the exceptionally

high level of unpaid contributions as well as with the problem of inadequate working capital reserves:

(a) Charging interest on the amounts of assessed contributions that are not paid on time;

(b) Suspending certain financial regulations of the United Nations to permit the retention of budgetary surpluses;

(c) Increasing the Working Capital Fund to a level of \$250 million and endorsing the principle that the level of the Fund should be approximately 25 per cent of the annual assessment under the regular budget;

(d) Establishment of a temporary Peace-keeping Reserve Fund, at a level of \$50 million, to meet initial expenses of peace-keeping operations pending receipt of assessed contributions;

(e) Authorization to the Secretary-General to borrow commercially, should other sources of cash be inadequate.

Proposal two. This suggested the creation of a Humanitarian Revolving Fund in the order of \$50 million, to be used in emergency humanitarian situations. The proposal has since been implemented.

Proposal three. This suggested the establishment of a United Nations Peace Endowment Fund, with an initial target of \$1 billion. The Fund would be created by a combination of assessed and voluntary contributions, with the latter being sought from Government, the private sector as well as individuals. Once the Fund reached its target level, the proceeds from the investment of its principal would be used to finance the initial costs of authorized peace-keeping operations, other conflict resolution measures and related activities.

71. In addition to these proposals, others have been added in recent months in the course of public discussion. These ideas include: a levy on arms sales that could be related to maintaining an Arms Register by the United Nations; a levy on international air travel, which is dependent on the maintenance of peace; authorization for the United Nations to borrow from the World Bank and the International Monetary Fund—for peace and development are interdependent; general tax exemption for contributions made to the United Nations by foundations, businesses and individuals; and changes in the formula for calculating the scale of assessments for peace-keeping operations.

72. As such ideas are debated, a stark fact remains: the financial foundations of the Organization daily grow weaker, debilitating its political will and practical capacity to undertake new and essential activities. This state of affairs must not continue. Whatever decisions are taken on financing the Organization, there is one inescapable necessity: Member States must pay their assessed contributions in full and on time. Failure to do so puts them in breach of their obligations under the Charter.

73. In these circumstances and on the assumption that Member States will be ready to finance operations for peace in a manner commensurate with their present, and welcome, readiness to establish them, I recommend the following:

(a) Immediate establishment of a revolving peace-keeping reserve fund of \$50 million;

(b) Agreement that one third of the estimated cost of each new peace-keeping operation be appropriated by the General Assembly as soon as the Security Council decides to establish the operation; this would give the Secretary-General the necessary commitment authority and assure an adequate cash flow; the balance of the costs would be

appropriated after the General Assembly approved the operation's budget;

(c) Acknowledgement by Member States that, under exceptional circumstances, political and operational considerations may make it necessary for the Secretary-General to employ his authority to place contracts without competitive bidding.

74. Member States wish the Organization to be managed with the utmost efficiency and care. I am in full accord. I have taken important steps to streamline the Secretariat in order to avoid duplication and overlap while increasing its productivity. Additional changes and improvements will take place. As regards the United Nations system more widely, I continue to review the situation in consultation with my colleagues in the Administrative Committee on Coordination. The question of assuring financial security to the Organization over the long term is of such importance and complexity that public awareness and support must be heightened. I have therefore asked a select group of qualified persons of high international repute to examine this entire subject and to report to me. I intend to present their advice, together with my comments, for the consideration of the General Assembly, in full recognition of the special responsibility that the Assembly has, under the Charter, for financial and budgetary matters.

#### X. AN AGENDA FOR PEACE

75. The nations and peoples of the United Nations are fortunate in a way that those of the League of Nations were not. We have been given a second chance to create the world of our Charter that they were denied. With the cold war ended we have drawn back from the brink of a confrontation that threatened the world and, too often, paralyzed our Organization.

76. Even as we celebrate our restored possibilities, there is a need to ensure that the lessons of the past four decades are learned and that the errors, or variations of them, are not repeated. For there may not be a third opportunity for our planet which, now for different reasons, remains endangered.

77. The tasks ahead must engage the energy and attention of all components of the United Nations system—the General Assembly and other principal organs, the agencies and programmes. Each has, in a balanced scheme of things, a role and a responsibility.

78. Never again must the Security Council lose the collegiality that is essential to its proper functioning, an attribute that it has gained after such trial. A genuine sense of consensus deriving from shared interests must govern its work, not the threat of the veto or the power of any group of nations. And it follows that agreement among the permanent members must have the deeper support of the other members of the Council, and the membership more widely, if the Council's decisions are to be effective and endure.

79. The Summit Meeting of the Security Council of 31 January 1992 provided a unique forum for exchanging views and strengthening cooperation. I recommend that the Heads of State and Government of the members of the Council meet in alternate years, just before the general debate commences in the General Assembly. Such sessions would permit exchanges on the challengers and dangers of the moment and stimulate ideas on how the United Nations may best serve to steer change into peaceful courses. I propose in addition that the Security Council continue to meet at the Foreign Minister level, as it has effectively done in recent years, whenever the situation warrants such meetings.

80. Power brings special responsibilities, and temptations. The powerful must resist the dual but opposite calls of unilateralism and isolationism if the United Nations is to succeed. For just as unilateralism at the global or regional level can shake the confidence of others, so can isolationism, whether it results from political choice or constitutional circumstance, enfeeble the global undertaking. Peace at home and the urgency of rebuilding and strengthening our individual societies necessitates peace abroad and cooperation among nations. The endeavours of the United Nations will require the fullest engagement of all of its Members, large and small, if the present renewed opportunity is to be seized.

81. Democracy within nations requires respect for human rights and fundamental freedoms, as set forth in the Charter. It requires as well a deeper understanding and respect for the rights of minorities and respect for the needs of the more vulnerable groups of society, especially women and children. This is not only a political matter. The social stability needed for productive growth is nurtured by conditions in which people can readily express their will. For this, strong domestic institutions of participation are essential. Promoting such institutions means promoting the empowerment of the unorganized, the poor, the marginalized. To this end, the focus of the United Nations should be on the "field", the locations where economic, social and political decisions take effect. In furtherance of this I am taking steps to rationalize and in certain cases integrate the various programmes and agencies of the United Nations within specific countries. The senior United Nations official in each country should be prepared to serve, when needed, and with the consent of the host authorities, as my Representative on matters of particular concern.

82. Democracy within the family of nations means the application of its principles within the world Organization itself. This requires the fullest consultation, participation and engagement of all States, large and small, in the work of the Organization. All organs of the United Nations must be accorded, and play, their full and proper role so that the trust of all nations and peoples will be retained and deserved. The principles of the Charter must be applied consistently, not selectively, for if the perception should be of the latter, trust will wane and with it the moral authority which is the greatest and most unique quality of that instrument. Democracy at all levels is essential to attain peace for a new era of prosperity and justice.

83. Trust also requires a sense of confidence that the world Organization will react swiftly, surely and impartially and that it will not be debilitated by political opportunism or by administrative or financial inadequacy. This presupposes a strong, efficient and independent international civil service whose integrity is beyond question and an assured financial basis that lifts the Organization, once and for all, out of its present mendacity.

84. Just as it is vital that each of the organs of the United Nations employ its capabilities in the balanced and harmonious fashion envisioned in the Charter, peace in the largest sense cannot be accomplished by the United Nations system or by Governments alone. Non-governmental organizations, academic institutions, parliamentarians, business and professional communities, the media and the public at large must all be involved. This will strengthen the world Organization's ability to reflect the concerns and

interests of its widest constituency, and those who become more involved can carry the word of United Nations initiatives and build a deeper understanding of its work.

85. Reform is a continuing process, and improvement can have no limit. Yet there is an expectation, which I wish to see fulfilled, that the present phase in the renewal of this Organization should be complete by 1995, its fiftieth anniversary. The pace set must therefore be increased if the United Nations is to keep ahead of the acceleration of history that characterizes this age. We must be guided not by precedents alone, however wise these may be, but by the needs of the future and by the shape and content that we wish to give it.

86. I am committed to broad dialogue between the Member States and the Secretary-General. And I am committed to fostering a full and open interplay between all institutions and elements of the Organization so that the Charter's objectives may not only be better served, but that this Organization may emerge as greater than the sum of its parts. The United Nations was created with a great and courageous vision. Now is the time, for its nations and peoples, and the men and women who serve it, to seize the moment for the sake of the future.

#### NEW APPROACHES TO INTERNATIONAL SECURITY

(Address by Senator Carl Levin to the Annual Conference of the Center for Naval Analyses, April 30, 1992)

We are living in a time of breathtaking change. The task of understanding those changes and fostering a new international environment of peace and democracy is supremely challenging. The current state of domestic politics and economics in the United States adds to that challenge. But I believe we are up to it if we'll display vision and hard-headed realism—the kind that the Center for Naval Analyses has provided so much of over the years.

Many of you have already begun to apply your skills to the new realities we're facing, especially the changed military threats. In a few short months, it has already become a cliché to say "the Cold War is over." I'm happy for that, but I'm afraid too many of our policies seem frozen in the past.

Here are some new realities: We no longer face a massive, monolithic enemy force bent on world domination. The threat of nuclear war has declined significantly. The Warsaw Pact is history and the Soviet Union is history. The former Red Army is divided and shrinking. No armed force in the former Soviet Union is poised for, or capable of a sudden, massive attack through the Fulda Gap or anywhere else. Moscow isn't fomenting armed revolutions around the globe, and it isn't deploying nationwide strategic defenses or new, state-of-the-art radars. Both superpowers have reduced forward deployments of weapons and troops, eliminated hair-trigger postures and have vastly increased warning time.

Here are some other relevant facts: The overwhelming military victory of Desert Storm against what was the fourth-largest army in the world demonstrated the effectiveness and vast superiority of the weapons and forces of the western alliance. The Gulf War dramatized the power of a multi-

national coalition. And it left the U.S. the undisputed military superpower on the planet.

All those facts add up to an enormous opportunity we never expected to have, one of those rare moments in history when we might be able to build an effective system of international security. This evening, I would like to make the case for U.S. leadership in developing a new approach. I believe we should be working out new collective arrangements to prevent emerging threats from developing and to eliminate threats where they do develop. This U.S. should take the lead in building the institutions that can carry out these tasks, and we should shape our own military forces to support these new goals.

If that sounds too general for you, let me offer some specific examples: the international community now may be united enough for the first time in modern history to enforce peace in places like Yugoslavia and Azerbaijan. It may be united enough for the first time in modern history to forcefully prevent states like Libya and Iran from developing weapons of mass destruction.

Taking these kinds of actions is much more complicated than just stating that it is possible. But it is feasible, at least under a number of conditions: two of those are that democracy needs to survive in Russia, and the U.S. needs to lead now in the creation of international coalitions that can act in new ways.

#### THE NEW THREATS

Now that I've taken you to the brink, and perhaps taken some of you over the brink—let me step back for a moment to look at some major new threats, very different from the Cold War that has dominated threat analysis for decades. Perhaps the greatest threat lies in proliferation of ballistic missiles, and nuclear, chemical and biological weapons. Just a few nuclear weapons in the hands of a Khaddafi or a terrorist group would pose a greater danger to us than the 30,000 nuclear weapons in Gorbachev's arsenal did.

Proliferation challenges us around the globe. It is at the heart of some of our most vexing foreign policy problems, and it is taking increasingly serpentine routes. China has been selling missiles and nuclear technology to Iran and other countries. Brazil sold German equipment to Iraq to produce weapons grade uranium and now may be exporting the same know-how to Iran. Recently, there were new reports that the Saudi transferred U.S.-made bombs to Iraq in 1986. Many are paying lip service to the proliferation problem but not acting to prevent it.

A second set of threats lies in historic antagonists who acquire modern, offensive, conventional military power. There is growing unrest and armed conflict in newly independent regions where old disputes have emerged as central, dictatorial control disappears. Yugoslavia represents a sobering challenge to international peacekeeping efforts because of the religious and cultural factions that exist there. Bosnia—Herzegovina may sound like a exotic, far-away place, but we Americans have short memories. Sarajevo was the flashpoint in the powder keg of ethnic and nationalistic rivalries that exploded into world war in 1914 after the assassination there of Archduke Ferdinand.

It is a new world with new threats, but these threats are not intractable, proliferation is not inevitable, and security crises can be managed before they erupt into civil war. With Russia and the United States now acting together, there are dramatic new open-

ings for international action—the possibilities are truly tremendous.

#### OLD THINKING

Unfortunately, the United States has not risen to the leadership challenge. We knew Yugoslavia was a trouble spot. We saw it coming. But the community of nations didn't take action to prevent hostilities. Now, while the world watches, the bloodshed continues and could spread. Who knows where the fighting will escalate next? Perhaps Armenia and Azerbaijan?

Nor have we modified our defense plans to address emerging threats.

Look at the Pentagon's proposed base Force plan for 1997. It was crafted before the breakup of the Soviet Union and the end of communism there, before many of the force reductions in the former Warsaw Pact and before large nuclear weapons cuts by Presidents Bush and Yeltsin.

This Base Force is premised on Cold War threats that are gone, maybe not forever, but for a long time. We should watch the Russian situation closely, of course, and work for the survival of democracy there. But we need to look ahead. Unfortunately, the Base Force wasn't designed for action to address new threats such as proliferation of weapons of mass destruction or the outbreak of ethnic and nationalist civil wars.

The Administration seems to accept proliferation as inevitable, undeserving of urgent attention or fresh approaches. Take the ballistic missile proliferation threat as an example. The Pentagon misses no opportunity to warn that 10 to 15 countries may gain ballistic missile capability before the end of the decade, and could threaten the continental United States and U.S. forces and interests abroad. The attack of Iraqi SCUD missiles on U.S. troops in Riyadh and on Israeli citizens last year is frequently invoked as the shape of things to come.

But the Pentagon has offered Congress no coordinated plan to prevent these countries from acquiring missiles. They do not suggest strengthening the Missile Technology Control Regime (MTCR) or give any progress report on the Enhanced Proliferation Control Initiative the Administration trumpeted just a year ago.

The Administration offers Star Wars, but their system would, at best, provide only partial coverage against ballistic missiles, and leave us just as vulnerable as we are now to cruise missiles, planes, boats or suitcases carrying weapons.

\$5.3 billion is requested for SDI this year, while we spend less than one percent of that sum on actual efforts to stop the spread of missiles and their technology.

No, the Pentagon's priorities are not yet responsive to the changed world and its new threats.

It's time for some fundamental changes. We need a foreign policy that articulates a positive vision, a security strategy for making that vision reality, and the right military forces to support that strategy.

#### PREVENTION AND ACTION

Our vision remains the protection and expansion of political and economic freedom. Isolationism as a strategy won't support that vision—the world is too small. Neither can we enforce our will alone through massive military superiority—we alone cannot sustain, politically or economically, the world policeman role.

But the U.S. can and should lead in the creation of an international fire brigade to stop these threats at their source. Our strategy should be to mobilize collective inter-

national action to prevent proliferation and to keep the peace. To succeed, it must be multi-lateral and broad-based.

The United Nations and its Security Council could be one basic institution for much of what I advocate, but they will need to become much stronger institutions. The United States is the only nation today with the political power to lead this effort and the military strength to help enforce it.

To try to prevent proliferation we'll need strong international agreements to control sensitive technologies and to restrict the international arms trade. We'll need agreed-upon enforcement regimes with teeth: tough inspection provisions and political or economic sanctions when necessary. And, as a last resort, we'll need the multilateral military means to destroy offensive forces before they are used. This last element is crucial. Some previous efforts, like the League of Nations, failed for lack of capability and will to enforce its resolutions.

And we must apply the same approach to crisis management in regions of ethnic and nationalistic conflict, and also be prepared to act militarily with others to keep the peace. There are situations where the international community would be wise to intervene—where the security of a region is threatened or where human rights violations are massive.

Awesome responsibilities attend that duty:  
\* \* \* the responsibility to do all we can to prevent hostilities that would justify intervention;

\* \* \* the responsibility to use political and economic means first, reserving military force as a last resort;

\* \* \* the responsibility to intervene collectively, as needed, in the common interest.

This raises complex questions about sovereignty, but we did apply some of these principles in Iraq, where the United Nations determined that the invasion of Kuwait and the subjugation of the Kurds were not "internal affairs."

Now it is time to build an international regime which can intervene with multilateral military forces to disarm combatants and enforce peace if prevention fails.

Chapter VII of the United Nations Charter allows the Security Council to create a standing U.N. military force "for the purposes of maintaining international peace and stability." Until now, the U.N. has only authorized ad hoc coalitions to defeat international aggression in Korea and Iraq. But under the Charter, the U.N. can establish a military force, comprised of national units designated by its members, to be "on call" to the Security Council to deter aggression, stop hostilities, or carry out humanitarian missions.

There is growing support for implementing this provision of the Charter. French President Mitterand, for example, has already offered to make 1000 troops available for enforcement duties within two days after passage of a Security Council resolution, and lend more forces within a week. The Charter would give the Military Staff Committee of Permanent Five Security Council members the authority to direct a U.N. force, and that committee could invite other U.N. members, like Germany and Japan, to join it. The U.S. would have a veto, of course, on any action of the Security Council.

Additional rules for the command and deployment of U.N. forces need to be determined, but the important point remains: the U.N.'s founders built a structure for Security Council intervention to maintain peace and stability. Now we have an unprecedented

international environment and the seeds of an international consensus that we utilize Chapter VII of the U.N. Charter.

In January, the U.N. Security Council asked the Secretary General to make recommendations by July for ways of strengthening the UN's capacity "for preventative diplomacy, for peacemaking and for peace-keeping." Russia, China, Britain, France and the U.S. joined the other current Council members to agree in principle that the end of the Cold War presents us with the best opportunity, since the U.N. was founded 46 years ago, to realize its goals.

This is an extraordinary development, an effort the U.S. should be leading. But in a year when the U.N. is expanding its peace-keeping operations with a major effort in Cambodia and some belated effort in Yugoslavia, the U.S. is not only failing to lead the way to fully implement Chapter VII, we are not even current on our peacekeeping dues. We owed \$380 million as of December, more than any other nation, and we're not planning to pay that off until 1996. Congress appropriated only 75 percent of our share for new UN peacekeeping operations this year.

This is terribly short-sighted. The cost of all U.N. peacekeeping efforts this year will be \$2.7 billion. Compare that to the \$1.5 billion per day that Desert Storm cost. The U.N. spent in New York that monitors over 48,000 peacekeeping personnel around the globe numbers only 15. Marrison Golding, the head of U.N. peacekeeping, warned Congress last month that delinquent payments from the U.S. and other countries could cause a major crisis, preclude new peacekeeping operations, endanger existing ones and cause strong resentment among U.S. allies.

We must pay our peacekeeping dues, and we can legitimately pay them out of the defense budget. The defense community should welcome such a change. This isn't foreign aid. It is an investment in collective action for our own security, an expense shared with other nations. Collective action can be effective where unilateral U.S. action might be attacked as an attempt at hegemony, especially in the less-developed world. International coalitions advancing a common interest have more political credibility to apply pressure against individual nations that seek weapons of mass destruction or harbor aggressive intentions. What such coalitions have lacked up to now is teeth.

There is no inconsistency in the U.S. leading collective international action and maintaining a strong military so we can act unilaterally in our own interest where necessary. That's a false dichotomy.

In fact, we need a strong military to help provide the teeth necessary for international enforcement of anti-proliferation policies against rogue nations, and to lead or contribute to international peacekeeping and Security Council enforcement efforts. And, first and foremost, we need to maintain the forces to act on our own when necessary.

Both for our contribution to an international peacekeeping force and for our own requirements against future regional contingencies and threat to our fundamental interests, our military forces must be strong. They must be highly mobile, well-trained, ready and equipped for their roles. We will need more lift capacity, and CONUS-based forces with pre-positioned equipment near areas where conflict is expected. We must preserve the technological edge in weaponry that proved itself so well in Desert Storm, and must protect the most vulnerable sectors in our industrial base.

Our forces can be smaller than the Cold War Base Force proposed by the Pentagon.

We can reduce the number of troops based permanently overseas and eliminate weapons systems that give us redundant capability. Greater warning time and reduced threat of prolonged, large wars should yield savings in inventories and materials stockpiles.

And we need to define security more broadly than we have. In addition to traditional defense expenditures, we must add legitimate security investments like U.N. peace-keeping contribution; anti-proliferation intelligence, monitoring, and enforcement; and strengthening institutions for confidence-building and conflict resolution like CSCE.

Even with those investments, the potential defense savings for us and other nations are substantial if we will construct cooperative security regimes that effectively prevent proliferation of threats, and reorient our military to meet new threats.

There are indications this year, though, that we'll end up spending too much money for military forces built to defend against the enemies we've already defeated, but inadequately prepared to prevent new threats from developing and to address them if they do.

#### ANTIPROLIFERATION POLICIES

There are other actions the U.S. can take to prevent another Iraq from getting the weapons of mass destruction that could threaten us and its neighbors.

We should announce an immediate halt to explosive nuclear testing as the Russians and the French have, and start negotiating agreements to ban such tests permanently. We pledged 23 years ago in the Nuclear Non-Proliferation Treaty to do so.

We should try to turn our unilateral halt in the production of fissile materials for nuclear weapons into a permanent multilateral ban.

We should be pushing other nations aggressively for more intrusive monitoring and inspections of weapons production facilities, instead of dragging our feet. It's time to share safe and secure techniques for dismantling and storing nuclear weapons, and to develop cooperative intelligence efforts with our former Cold War adversaries to track and detect proliferation.

We should beef up the International Atomic Energy Agency (IAEA), which has earned so much praise tracking down Saddam Hussein's arsenal. With a total nuclear safeguards budget of just \$68 million, it is starved for resources. We have already assigned it new responsibilities and may have to add more soon in North Korea, China and France, but this budget has had no real growth since 1984.

And we need to toughen and expand the non-proliferation regimes we have, adding stronger economic and political sanctions for violators, including trade sanctions, export/import restrictions or even blockades. Our own research laboratories and private industry should be developing new verification and monitoring technologies to track weapons and their components.

#### SEIZING THE MOMENT

I have tried tonight to outline some new directions for change, not a precise blueprint. We don't need toothless idealism based on paper resolutions and hopes for restraint. We need an international military force that the Security Council or an expanded NATO can authorize to prevent proliferation, keep the peace or enforce peace. A force that is willing and able to act. A thick blue line that can make the difference between international peace and endless wars.

The U.S. cannot implement it alone, and we cannot implement it overnight. There are

many challenges to implementation: We need to share with many nations the cost of creating and maintaining the systems, institutions and forces needed to monitor and enforce anti-proliferation and peacekeeping regimes.

We need agreements on command of forces, perhaps the most difficult issue of all, next to agreements on when claims of sovereignty will be overridden by a Security Council decision that international peace and security require collective action under Chapter VII.

Even if we secure broad international agreement on the details of such a regime, there will be a transition period that must be carefully managed.

But we don't need to take a leap of faith. We led NATO to deter Soviet aggression throughout the Cold War. Now the Russians can be partners in efforts for peace. We led an international coalition to retaliate against Saddam Hussein's invasion of Kuwait. Now the U.S. must lead a global effort to actively prevent proliferation.

The revolutionary changes taking place around us have created a moment of unimagined opportunity.

We have a domestic consensus for protecting American security more efficiently, and for investing in a revitalization of those things which can make us truly strong here at home. We have, at the same time, the seeds of an international consensus that cooperative action to maintain peace and prevent proliferation is both desirable and achievable. The world is too small for us to disengage. Our security demands involvement and vision. Mankind has long dreamed of true collective security. Now it is within our grasp. But only the United States can lead us to it. God help us if we squander this opportunity.

[From the CONGRESSIONAL RECORD, Sept. 18, 1992]

#### AMENDMENT NO. 3101

(Purpose: To authorize the Secretary of Defense to furnish assistance for international peacekeeping activities)

The Senator from Georgia [Mr. NUNN], for Mr. LEVIN, for himself, Mr. SIMON, Mr. WARNER, and Mr. NUNN, proposes an amendment numbered 3101.

On page 487, between lines 12 and 13, insert the following:

#### SEC. 1064. SUPPORT FOR PEACEKEEPING ACTIVITIES.

(a) FINDINGS.—The Congress makes the following findings:

(1) International peacekeeping activities contribute to the national interests of the United States in maintaining global stability and order.

International peacekeeping activities take many forms and include observer missions, ceasefire monitoring, human rights monitoring, refugee and humanitarian assistance, monitoring and conducting elections, monitoring of police in the demobilization of former combatants, and reforming judicial and other civil and administrative systems of government.

(2) International peacekeeping activities traditionally involve the presence of military troops, police forces, and, in recent years, civilian experts in transportation, logistics, medicine, electoral systems, human rights, land tenure, other economic and social issues, and other areas of expertise.

(3) International peacekeeping interests serve both the foreign policy interests and defense policy interests of the United States.

(4) The normal budget process of authorizing and appropriating funds a year in ad-

vance and reprogramming such funds is insufficient to satisfy the need for funds for peacekeeping efforts arising from an unanticipated crisis.

(5) Greater flexibility is needed to ensure the timely availability of funding to provide for peacekeeping activities.

(b) AUTHORIZED SUPPORT FOR FISCAL YEAR 1993.—(1) Subject to paragraph (2), the Secretary may provide assistance for international peacekeeping activities during fiscal year 1993 in an amount not to exceed \$300,000,000 in accordance with section 403 of title 10, United States Code, as added by subsection (c). Notwithstanding subsection (b) of that section, the assistance so provided may be derived from funds appropriated to the Department of Defense for fiscal year 1993 for operation and maintenance or from balances in working capital accounts.

(2) No amount may be obligated pursuant to paragraph (1) unless the expenditure of such amount has been determined by the Director of the Office of Management and Budget to be counted against the defense category of the discretionary spending limits for fiscal year 1993 (as defined in section 601(a)(2) of the Congressional Budget Act of 1974) for purposes of part C of the Balanced Budget and Emergency Deficit Control Act of 1985.

(c) AUTHORIZATION.—(1) Chapter 20 of title 10, United States Code, is amended by adding at the end the following new section:

#### "§ 403. International peacekeeping activities

"(a) AUTHORITY.—To the extent provided in defense authorization Acts and appropriations Acts, the Secretary of Defense may furnish assistance, by loan or contribution, in support of international peacekeeping activities of the United Nations or any regional organization of which the United States is a member.

"(b) FORMS OR ASSISTANCE.—Assistance provided under subsection (a) may include funds, supplies, and equipment. Any funds so provided shall be derived from amounts available to the Department of Defense for the fiscal year for which the assistance is provided.

"(c) LIMITATIONS RELATED TO AVAILABILITY OF STATE DEPARTMENT FUNDS.—Funds may be provided as assistance pursuant to subsection (a) for a fiscal year—

"(1) only if funds available to the Department of State for that fiscal year for contributions for international peacekeeping activities are insufficient or otherwise unavailable to meet the United States' fair share of assessments for international peacekeeping activities, as determined by the President; and

"(2) only to the extent that the United States' fair share of such assessments exceeds the amount that the President requests Congress to appropriate for the Department of State for such fiscal year for international peacekeeping activities.

"(d) CONSULTATION.—The Secretary of Defense shall consult with the Secretary of State before furnishing any assistance pursuant to subsection (a).

"(e) DETERMINATIONS REQUIRED.—No assistance may be furnished pursuant to subsection (a) unless the Secretary of Defense certifies to Congress that the provision of such assistance—

"(1) is in the national security interest of the United States; and

"(2) will not adversely affect the military preparedness of the United States.

"(f) ADVANCE NOTICE TO CONGRESS.—Not less than 30 days before obligating any funds for purposes of subsection (a), the Secretary

of Defense shall transmit to Congress a report on the proposed obligation. The report shall—

"(1) specify the account, budget activity, and particular program or programs from which the funds proposed to be obligated are to be derived and the amount of the proposed obligation;

"(2) specify the activities and forms of assistance for which the Secretary of Defense plans to obligate such funds; and

"(3) include the certification required by subsection (e).

"(g) DEFINITION.—In this section, the term 'defense authorization Act' means an Act that authorizes appropriations for one or more fiscal years for military activities of the Department of Defense, including the activities described in paragraph (7) of section 114(a) of this title."

(2) The table of sections at the beginning of such chapter is amended by adding at the end the following:

"403. International peacekeeping activities."

Mr. LEVIN. Mr. President the events of the last year underscore the security challenges of the post-cold war world, and the importance of our international institutions in meeting those challenges. In Yugoslavia and Somalia we are relying on the United Nations in the struggle for peace, the struggle to save lives. NATO is shifting its mission to put greater emphasis on peacekeeping, and other international collective security institution like the CSCE are growing in importance.

As the cold war has ended, the demand for peacekeeping has grown rapidly. From 1945 to 1988, the United Nations had set up 13 peacekeeping operations. Since 1988, the United Nations has set up 13 more. United Nations soldiers and police deployed in the field quadrupled to 44,000 between January and May of this year, and since then the United Nations has authorized deployment of thousands more in Yugoslavia and Somalia.

The total costs have risen as well. In 1987 U.N. member states were asked to pay \$233 million for peacekeeping. The U.N. Secretary General said in May that the total bill for the following 12 months would be \$2.7 billion, and the cost estimate has certainly risen since that time.

The activities within these peacekeeping operations now include organizing elections, monitoring police, promoting human rights, and repatriating refugees, in addition to traditional military functions.

But resource shortages represent a major threat to current and future peacekeeping operations. The United States is farther in arrears for its U.N. peacekeeping dues than any other nation. The Bush administration does not plan to retire the \$208.7 million debt the United States has accumulated from previous assessments for another 5 years. And Congress has to this date appropriated only \$270 million of the administration's request for \$350 million in fiscal year 1992 supplemental appropriations for peacekeeping dues that are being assessed in the current year. So we are falling farther behind.

In June, the Committee on Governmental Affairs held a hearing on this issue, and examined a bill by Senator SIMON to reclassify the cost of international peacekeeping activities from international affairs to national defense. At that hearing, witnesses from the Department of Defense and the Department of State testified that peacekeeping activities do contribute directly to our national security. There is apparently no dispute about that fact.

But peacekeeping activities are not treated as a national security expense in the Federal budget. And there is no agreement within the administration about how to rectify this situation. We asked the State and Defense Departments at that hearing to tell Congress how—we gave them another 2 more months although the question has been on the table all year. We still have no response from the administration.

In an attempt to encourage the administration to develop a solution, the Senate Armed Services Committee has included in the authorization bill a requirement, section 1062, that the President submit a report to Congress with his budget next year. This report must address funding proposals that the U.N. Secretary General has put forward, as well as this outstanding issue of where within our Federal budget U.S. contributions to peacekeeping activities will be located, how departmental responsibilities are to be assigned within the U.S. Government, and a number of related issues.

But we need to take additional action to try to assure that crucial peacekeeping missions, those which have been deployed around the globe and others which may become necessary in the coming year, are not starved for support.

This amendment takes a step in that direction by giving authority for the Secretary of Defense to provide assistance for international peacekeeping activities during fiscal year 1993 of up to \$300 million. This assistance can be in the form of funds or supplies and equipment, to be derived from Department of Defense operation and maintenance accounts or from balances in working capital accounts.

This amendment would not change the State Department's primary jurisdiction over U.N. peacekeeping activities, although that is a matter which the President must reexamine and report on to Congress under the existing reporting requirement in section 1062 of the authorization bill.

But this amendment provides an additional source of fund to the International Affairs account for peacekeeping activities, should the U.S. share of peacekeeping costs exceed the President's fiscal year 1993 request. And I am grateful that Senator SIMON has joined me as a cosponsor of this amendment. He has been a major proponent of what we seek to accomplish here.

We can expect that there will be additional funding needed next year that we do not know about now, beyond the \$450 million requested in the President's budget for fiscal year 1993. This amendment demonstrates the Senate's intent that the United States should meet our share of the funding requirements for additional peacekeeping expenses that will be incurred in the coming year, because so doing is demonstrably in our national security interest. And this amendment indicates precisely where we would want those additional funds to come from within funds provided for the national defense.

Mr. President, there are many additional challenges facing us in the areas of peacekeeping and peace enforcement. The U.N. Secretary General made recommendations to the Security Council in July on how to strengthen the U.N. capacity for preventative diplomacy, for peacemaking, and for peacekeeping. These are crucial issues and the United States, which has not yet responded to those recommendations, should be leading the Security Council to address them. The Congress must engage in that debate as well.

But in this area—meeting this Nation's share of the funding requirements that the United Nations and other international institutions incur for peacekeeping—there should be no dispute. The administration is on record clearly stating that peacekeeping is in our national security interest, and this amendment provides an additional source of funding to meet those obligations.

S. 3114

**SEC. 1062. UNITED NATIONS PEACEKEEPING AND ENFORCEMENT REPORT.**

(a) **REPORT REQUESTED.**—Not later than the date on which the President submits to Congress the budget for fiscal year 1994 under section 1105 of title 31, United States Code, the President shall transmit to Congress a report on the proposals of the Secretary General of the United Nations contained in his report to the Security Council entitled "Preventive Diplomacy, Peacemaking and Peacekeeping", dated June 19, 1992.

(b) **CONTENT OF PRESIDENT'S REPORT.**—The President's report shall contain a comprehensive analysis and discussion of the proposals of the Secretary General, including, in particular, the following:

(1) The proposal that contributions for peacekeeping and related enforcement activities be funded out of the National Defense function of the budget rather than the "Contributions to International Peacekeeping Activities" account of the Department of State.

(2) The assignment of responsibilities within the Executive branch if such contributions are funded, in whole or in part, out of the National Defense function.

(3) The proposal that the United States and other member states of the United Nations negotiate special agreements under Article 43 of the United Nations Charter to provide for those states to make armed forces, assistance, and facilities available to the Security Council of the United Nations for the purposes stated in Article 42 of that Charter, not only on an ad hoc basis but on a permanent on-call basis for rapid deployment under Security Council authorization.

(4) The proposal that member states of the United Nations commit to keep equipment specified by the Secretary General available for immediate sale, loan, or donation to the United Nations when required.

(5) The proposal that member states of the United Nations make airlift and sealift capacity available to the United Nations free of cost or at lower than commercial rates.

(6) Such other information as may be necessary to inform Congress on matters relating to the Secretary General's proposals.

**NATIONAL DEFENSE AUTHORIZATION ACT FOR FISCAL YEAR 1993**

(Report to accompany S. 3114 on authorizing appropriations for fiscal year 1993 for military activities of the Department of Defense for military construction, and for defense activities of the Department of Energy, to prescribe personally strengths for such fiscal year for the armed forces, and for other purposes.)

**UNITED NATIONS PEACEKEEPING AND ENFORCEMENT REPORT**

On June 19, 1992, the Secretary-General of the United Nations submitted a report entitled "Preventive Diplomacy, Peacemaking and Peacekeeping" to the Security Council pursuant to the Council's request. The Secretary-General believes that the end of the Cold War and with it, the end of an ideological barrier, present the international com-

munity with a unique opportunity to achieve the objectives of the United Nations Charter. His report identified funding shortfalls as the most serious threat to the effectiveness and credibility of international peacekeeping efforts by the United Nations, which are expanding rapidly. The Secretary-General has, thus, made a series of proposals to facilitate implementation of the Charter and to further traditional practices of the United Nations.

The committee believes that the Secretary-General's proposals are worthy of careful examination and analysis. If agreed to and implemented, there could be profound changes affecting the Departments of State and Defense, and the manner in which the President and the Congress approach the introduction of our armed forces into potentially hostile situations.

Accordingly, the committee recommends a provision that would require the President to submit a report to Congress no later than the date the President submits the federal budget for fiscal year 1994. The report would contain a comprehensive analysis and discussion of the Secretary-General's proposals, including, in particular, proposals relating to funding for peacekeeping; departmental assignment of responsibilities; negotiation of special agreements concerning the provision of armed forces, assistance and facilities to the Security Council; maintenance of equipment for sale, loan, or donation to the United Nations; provision of air- and sea-lift to the United Nations, and; designation of forces for rapid deployment under Security Council authorization. This report would provide a focus for the careful consideration and debate that must take place in the Congress on these far-reaching proposals.

[From the CONGRESSIONAL RECORD, Sept. 30, 1992]

The amendment (No. 3348), as modified, is as follows:

**SEC. . FINDINGS.**

(1) Continuing hostilities and "ethnic cleansing" in the former Yugoslavia are killing thousands of noncombatants, displacing hundreds of thousands of civilians, and causing massive destruction and starvation;

(2) Independent reports of torture, atrocities and murder of civilian refugees and prisoners of war have been confirmed by officials of the United States Department of State, including the slaughter last spring of thousands of Muslims who had been captured by Serbians in the Bosnian town of Breko; and

(3) The United States Senate did, on August 11, approve Senate Resolution 330, calling on the President to urge United Nations Security Council actions that would contribute to the cessation of hostilities in the former Yugoslavia, including: authorizing "all necessary force under a Security Council mandate" to facilitate provision of humanitarian relief in Bosnia-Herzegovina; and for other purposes.

Therefore, it is the Sense of the Senate that—

The United Nations Security Council should act to halt the policy and practice of "ethnic cleansing" in the former Yugoslavia and the President of the United States should seek a meeting of the Security Council to consider methods of achieving that goal.

Several Senators addressed the Chair.

Mr. HATCH. Mr. President, I wonder, does the Senator want to speak to what Senator BIDEN said?

Mr. CRANSTON. I was going to speak briefly about it.

Mr. HATCH. I ask unanimous consent to allow my colleague to follow on to what the distinguished Senator was saying, and then allow me to have the floor back.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### WAR POWERS ACT

Mr. CRANSTON. I thank the Senator from Utah.

Mr. President, I want to first praise, once again, the Senator from Delaware, Senator BIDEN, for his leadership in foreign policy. We most certainly do need to rethink the War Powers Act—the power to declare war—given to this body, Congress, under the Constitution, which has been slipping away in recent decades.

We have to explore how to get away from what the Founding Fathers wanted to avoid, the taking of America into war by the decisions of one man, the President of the United States.

Mr. President, I wish also to applaud and to associate myself with the remarks made a bit ago by Senator BRADLEY, Senator KERRY of Massachusetts, and Senator BIDEN, regarding the unscrupulous remarks and the false innuendos made by the President of the United States yesterday in regard to Bill Clinton and his patriotism and his actions 23 years ago.

Mr. President, I first met JOHN KERRY soon after I came to the Senate in 1969, when I was a United States Senator who had declined a deferment and enlisted in World War II, but who had grave concerns about the Vietnam war: I was working in the Senate to bring it to an end.

JOHN KERRY returned from Vietnam a combat veteran, and was in Washington working in demonstrations and in other thoughtful ways to end our participation in that war. We were on the same wavelength then, and so was Bill Clinton, who was over at Oxford at that time.

What we were doing—and more importantly now, what Bill Clinton was doing—was trying to change an American policy that he and I and others patriotically thought was doing great damage to our Nation.

There is a famous American saying, Mr. President, which goes as follows:

Our country, right or wrong.

Most people do not know that there is a second part to that statement. The whole of that famous quotation is:

My country, right or wrong.

When it's right, to keep it right.

When it's wrong, to make it right.

That is what Bill Clinton was doing back in those days, and that is what he is doing now in this campaign: Working to keep this country right where it is right, but to make it right where it is

wrong. And it is now wrong in terms of our economic policies, our war and peace policies, our social justice policies, and much else. That is what he is undertaking to make right, and what I believe he will make right when he becomes President of the United States.

Mr. HATCH. Mr. President, I understand the Senator from Rhode Island would also like to follow Senator CRANSTON.

I ask unanimous consent the Senator be given 2 minutes, and then, if I could make my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### END OF THE SESSION

Mr. CHAFEE. Mr. President, I came to the floor this evening to speak on a matter that we are going to subsequently address here; namely, one of the bills that has come up.

I stumbled into this tirade by the Senator from New Jersey, and other Senators, concluding with the remarks by the Senator from California. All I can say, Mr. President, is how merciful it is that this Senate session is coming to an end, finally. I think it is time.

Mr. President, I listened to the President of the United States last night, and I challenge—I did not follow every single word—I challenge whether the word patriotism was ever used. I never heard that word used.

Mr. President, I have heard all kinds of charges made against the President of the United States, that he used innuendo, and so forth; that is nonsense.

Frankly, I think it was one of the best appearances that he has made. The President was relaxed. He brushed off Bill Clinton and what he had done. He said: I do not know all of the facts.

He felt he was disturbed. If Mr. Clinton was abroad as a young man and denigrated the United States abroad, the President of the United States did not think that was proper. But a good deal of the program was devoted to other things.

All I can say, again, is: Thank goodness, this session is coming to an end. It cannot come to an end too fast for us. But I suspect, for the American people, this session cannot come to an end too quickly.

#### FAREWELL TO RETIRING COLLEAGUES

Mr. HATCH. Mr. President, I have come to the floor to bid farewell to our colleagues who are leaving the Senate. I did not intend to get in the middle of a major maelstrom. But I would nevertheless like to take a few minutes to praise my colleagues.

Mr. President, I will sorely miss my own companion, the senior Senator from Utah, JAKE GARN. I will also miss ALAN CRANSTON from California, WARREN RUDMAN from New Hampshire, TIM

WIRTH from Colorado, STEVE SYMMS from Idaho, ALAN DIXON from Illinois, BROCK ADAMS from Washington, and, of course, JOSIE BURDICK from North Dakota. All have been great Senators, although they may have differed in a wide variety of particulars. Each of them gave a great deal to this body, and I hope, each is taking a great deal home with them.

I respect them and wish them well.

Mr. President, I have admiration for each of them and look forward to seeing them after they have left the Senate.

But they have all cast their final vote today and, I am sure, they feel at least a little sad to be leaving the greatest deliberative body in the world. They have been part of it, and an integral part of it. I commend them for their contributions.

In particular, I feel compelled to tell the whole world, especially the people of Utah, how much I dearly love JAKE GARN, and how much I have appreciated him as my senior Senator, as someone who was here when I got here, who took me under his wing, taught me an awful lot about the Senate, taught me an awful lot about relationships in the Senate, and was an example to me that I do not think could be exceeded. Of course, he has become like a brother to me.

I had two brothers. One died in infancy. But the only brother I knew was my brother Jess who was killed in the Second World War. He loved airplanes just as much as JAKE GARN. His whole life was building model planes, trying to fly, taking flight lessons, trying to qualify as a pilot. And he did fly. He flew on 10 missions out of Italy. He was killed during his 10th mission.

I never thought I could even partially replace that brother. I want you to know that JAKE GARN is like my brother. He became a brother while we served here in the U.S. Senate.

I remember when JAKE's first wife was killed in an automobile accident. I remember how much it hurt him and his family and how difficult it was for him during those months before he married Kathleen. I have rarely seen a marriage that has evolved into the happy, loving, caring kind of relationship that JAKE and Kathleen Garn have. Kathleen is a wonderful person and we love her too. I am so happy for both of them. I know part of the reason JAKE has decided to leave is because of his relationship with Kathleen and the children. JAKE loves them very much and wants to be with them in Utah. It is tough to be a Senator if you must be separated from your family.

In 1982, when I was seeking reelection, I was told I was the number one target of the National Democratic Committee and a number of other very strong organizations. I have to say that, without JAKE GARN, I doubt seriously I would have been reelected. I

was politically attacked—although some probably felt I was not attacked enough—and JAKE came to my aid and stood there with me at a time when he did not know me all that well. He took good care of me. I will always appreciate it.

He gave great advice and counsel to me here in the Senate. And, I have seen him fight hard for what he believes in. I have seen him for 25 years fight for the central Utah water project, and today was the culmination of a quarter century of fighting. If one single person deserves the majority of credit for the central Utah water project, although we all worked on it, I will have to say it is my colleague, JAKE GARN.

We know how JAKE GARN sacrificed to go into space. Really, however, it was not much sacrifice, because he would have given up anything to have the opportunity, being the flier that he is, to become an astronaut and go into space.

I remember standing there in Florida as that shuttle took off and feeling the ground shake beneath my feet and offering a prayer that he and his companions on that flight would be all right. Of course, his experience in space brought him closer to God. If you ever heard him talk about it, you know it meant a great deal to him—and to me, as I was there.

We all know that he donated a kidney to his daughter. I think any father would be happy to do that, but JAKE actually did it. He faced his daughter's illness like any enemy and fought it. His daughter is alive and healthy today because of the heroism of this great man. I want to express my admiration for that.

He has been an excellent influence in my life. His staff has been great. We worked hard and well together. They helped me, and I hope we helped them.

He has a wonderful family. Anybody who knows JAKE knows he is a tough guy, but when talking about his family he starts to tear up and be emotional, because he loves them so much. JAKE even put in a special sports court beside his home to be sure the older members of the family would always come and be there in his yard and in his home all the time.

JAKE GARN has written a recent book, a book that is his testimony of life. It is his testimony of his own personal beliefs. It is one of the finest books I have read. We were traveling to, I think, 20 different counties this last August when he gave me one of those books. I read it. I have to tell you Elaine and I had tears in our eyes as we read that testimony he gave. I know he has given many Members of the Senate a copy of that book, one of the finest books I ever read. I commend everybody to read it, because it was a book about faith, about his experiences, and about how faith and experiences can really propel a person to do

the things that are right in this life. And it is said in such a beautiful way. I cannot imagine anyone of any faith who would not get a tremendous lift from reading that book.

So I commend him for taking time to do that. He is that type of person. I feel close to him. He is my brother. I am going to miss him. I get a little emotional myself when I think about this being his last voting day in the Senate, and I just hate to see it come to an end.

Mr. President, I know I have taken enough time. But, I feel so deeply about this that I just want to say: JAKE, Elaine's and my heartfelt prayers are with you as you go into the private sector and as you go out of the Senate into a different life. I know you are going to be successful. I know you are going to have joy, and I know that you are going to be even closer to your family. I hope you will stay close to us. I wish you and the family the very, very best.

Mr. President, rather than read this—I have prepared a summary of some of the things that I think are so important in JAKE GARN's career. What I would like to do, rather than take more time of the Senate, is express my love for JAKE by putting this summary of his distinguished career into the RECORD at this point. I ask unanimous consent that the summary be inserted in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### SENATOR JAKE GARN, A DISTINGUISHED CAREER OF SERVING UTAH

On January 8, 1980, the Deseret News ran an article entitled "Garn Puts State First." This headline summarizes the attitude and philosophy that characterize Senator "Garn's career in the United States Senate. The headline captures the senator's overall approach to his Senate duties. He is and always will be a Utahn, committed to placing the interests of Utah and its citizens first.

Garn's notoriety has stemmed from many national activities including his early national agenda to strengthen the nation's defense and improve the country's banking system to his well-publicized space shuttle trip and kidney donation. His national reputation has brought him both respect and admiration, which has resulted in enhancing his ability to meet the needs of the people of Utah.

From the billions of dollars in federal funding he has directed to the state from the Appropriations Committee, to the successful resolution of many of the state's public lands issues, Senator Garn has made a difference for the State of Utah—a positive difference that will be felt for many, many years to come.

Following are some of the highlights of Jake Garn's career in the Senate, including some of his early legislative battles which established a framework and agenda for his Senate career:

#### CUP

Dating back to Senator Garn's days as a water commissioner in Salt Lake City, he has been involved with the Central Utah

Project, a huge federal program to divert water from the Colorado River to the state of Utah. Throughout his years in the Senate, Garn has secured adequate funding for various units of the project to remain on track. His committee assignments on the Energy and Natural Resources Committee, along with his appointment on the Senate Appropriations Committee have given him the political clout and position to enable him to steer through the many funding bills for this massive and critical project.

#### CLEAN AIR

In 1976 when Garn was first elected to the Senate, he became involved in the debate over the Clean Air Act Amendments. In fact, he served notice to the Senate that he would "talk for a long time, whether it is all night tonight, tomorrow night or Friday night, or next week. I intend to be here as long as necessary to kill this bill." He feared the devastating impact of the bill, particularly to the state of Utah. He believed the act would have tremendous adverse effects on public land states such as Utah. Citing the uniqueness of the state of Utah, the bill's impact on Utah's national parks, its low sulfur coal production and how the bill would affect local business like Kennecott Copper, Garn made persuasive and successful arguments about how the amendments would severely limit growth and development and increase unemployment. The filibuster was successful. The legislation was killed. After making considerable changes in the bill, which satisfied the bulk of the senator's concerns, the legislation passed the following year. Later in 1980, Garn led the Utah delegation effort in introducing legislation to require an easing of federal water and air pollution requirements that threatened to close many factories and businesses, including Geneva Steel in Orem.

#### PAYMENT-IN-LIEU-OF-TAXES

Garn has been a consistent supporter of the Payment-in-lieu of Taxes [PILT] program, which grants federal dollars to counties to equalize the tax burden caused by tax-exempt federal lands. In 1976, the Administration began backing away from the bill believing it was too expensive. Garn marched into Vice President Rockefeller's office at the closing hour of the Senate and demanded that the Administration finally give something to Utah in return for the federal government keeping Utah's public lands on the tax rolls. The legislation passed, along with an amendment by Senator Garn to prevent a cut of about \$1 million to Utah's counties. The PILT program continues to be one of the few federal programs with limited overhead and no red tape.

#### LONE PEAK

In 1978, Garn introduced the Endangered American Wilderness Act to designate the 29,567-acre Lone Peak as Utah's first formal wilderness area. The Senate passed the bill, which was a balanced and reasonable wilderness bill that protected the watershed for Salt Lake City. While Garn said he had reservations about the designation, he said "there was a significant minority in the state of Utah who would like to see the area protected, and if it can be done without compromising the watershed values which are critical to the large majority of Utahns, I can support the bill."

#### SAGEBRUSH REBELLION

In February of 1978, Garn took the bold step of introducing legislation which would have divested the federal government of its public land holdings in the West, cede owner-

ship and control over the federal land to the state. In keeping with his general political philosophy, Garn said that land management could best be exercised by the agency of government closest to the people. Garn knew the bill would be unpopular, but felt committed to stating Utah's case to the government. He continues today to remind the Congress that two-thirds of Utah belongs to the federal government, which limits growth and development. Along these lines, Garn has consistently fought against locking up unreasonable amounts of Utah's land as wilderness, believing it would further restrict growth in the state.

#### EQUAL RIGHTS AMENDMENT

In Garn's early years, he became intensely involved in the national debate over the Equal Rights Amendment and the issue of extending the state ratification deadline for the amendment. Utah voted against the extension. Garn threatened to filibuster the bill in Congress, and organized a Coalition for Fair Play to help defeat the movement; and introduced an amendment to allow states to rescind their vote during the extension period.

#### ABORTION

Knowing of the strong anti-abortion sentiment in the state of Utah, one of the first Senate debates to raise Garn's ire and passion was the issue of abortion in 1975. He co-sponsored legislation to end federal funding of abortion and introduced his own bill in 1977 to protect the unborn. Garn reintroduces the bill every Congress to serve notice of his vigorous pro-life position. Senator Garn's first vote on abortion was in April of 1975. He voted against abortion then and has voted against it since.

#### MX MISSILE

January 1980, Garn held a press conference to announce that unless his objections to the MX missile, which was proposed to be based in the deserts of Utah and Nevada, were not satisfied, he would mount an aggressive campaign against the missile. Among his top objections to the project was his concern over states' rights. "While the missile is important to the nation's defense, our state's rights must not be trampled." On June 25, 1981, Garn and former Senator Paul Laxalt [R-Nev.] issued a 15-page "white paper" to the Department of Defense, opposing the Air Force's proposal for a racetrack basing mode and offering an alternative basing proposal. Among Garn's points of contention with the Air Force proposal was his concern over the immense socio-economic and environmental impact the basing mode would have on the states of Utah and Nevada.

#### ARMS CONTROL

Garn, a member of the Senate Armed Services Committee for many years, was referred to by the Carter Administration as "Mr. National Defense" for his belief and work for a stronger national defense. In 1979, Garn was the key Senate force in opposing the SALT II agreement. He believed the treaty was not true arms control; it was not equal; it was not verifiable and it ensured Soviet superiority. As he spoke out on this critical national security issue, he never lost sight of how the citizens of the state of Utah felt about entering into the SALT II. He surveyed 5,000 residents of the state and found that the majority of Utahns supported a treaty—only if it ensured a true balance between the two super-powers, but most respondents noted that their distrust of the Soviets made that nearly impossible. Based on his personal convictions and the prevail-

ing opinion in Utah, Garn worked tirelessly to make sure if the U.S. entered into an agreement that it would ensure a true balance of power and strength.

#### APPROPRIATIONS

Since Garn's appointment to the powerful Senate Appropriations Committee in 1979, he has worked tirelessly to ensure that Utah gets its share of federal funds. In the last 12 years, Garn has secured billions of federal dollars to the state of Utah.

His commitment to a strong national defense combined with the high caliber of Utah's defense contractors has motivated him to encourage Congress to approve hundreds of millions of dollars to the state for strategic programs, including the MX missile; the advanced cruise missile; the Tomahawk cruise missile, which performed with amazing accuracy during Operation Desert Storm; and the SICBM Midgetman missile. He also led Congress in authorizing funding for the new National Aerospace Plane which is supported by several Utah contractors including Hercules, Inc.

As NASA's leading advocate in the Senate, Garn worked to gain approval for the \$3.4 billion space shuttle program which is supported in large part by Utah's Thiokol Corp. Through Garn's position on the military construction subcommittee of the Appropriations Committee, Utah's military bases have received billions of dollars for modernization over the past 12 years. Garn gained funding for a sophisticated facility at Tooele Army Depot to ensure chemical munitions are disposed in a safe, cost-effective manner, and a new state-of-the-art consolidated maintenance facility at TAD which will maintain and test Army vehicles.

Due to Garn's leadership, Utah's National Guard was chosen as the home of the Army's new fleet of Apache Helicopters, which helped secure immediate U.S. air superiority in the Persian Gulf war. He also sponsored legislation which secured funding for the present Utah National Guard facility in Draper.

The preliminary work on the light rail system for Salt Lake County is a result of Garn's efforts to direct over \$15 million for the design work and preliminary engineering.

Utah's universities have achieved national prominence in the area of science and technology research. They continually receive million of federal dollars of federal funds for research and development of many critical scientific projects relating to the space industry, agricultural development and energy research.

Utah's unique beauty continues to draw millions of visitors annually to enjoy the scenery and grandeur of the state's national parks. Funds to construct and maintain tourist facilities in the national parks have been hard-won by Senator Garn. These improvements will serve visitors for many years to come.

#### EXPORT CONTROLS

Senator Garn has played a leading role in shaping U.S. export control policy during the 17 years he has served on the Senate Banking Committee. His constant focus has been to limit to the extent possible, the flow of strategic material and technology to adversaries of the United States. He participated in a major redraft of the Export Administration Act [EAA] of 1979 and, as Committee Chairman, led the fight for a substantially stronger law in 1984 and 1985.

Toshiba. During consideration of the 1988 trade bill, the illegal sale of advanced mil-

ing machines to the Soviet Union by Japanese and Norwegian companies was exposed—a sale which seriously eroded U.S. security by quieting Soviet submarines making them harder to detect. In response to this sale, Senator Garn proposed the so-called Toshiba Amendment which imposed trade sanctions on the two companies and placed trade sanctions authority for such sales into the EAA.

Proliferation. Last year, Senator Garn amended the EAA to strengthen U.S. controls on the sale of missile, chemical and biological weapons technologies and to impose trade sanctions against companies engaging in proliferation of such weapons of mass destruction. That legislation was vetoed by the President on grounds that its sanctions provisions were excessively tough. It has passed the Senate this year in essentially identical form and is now pending in the House of Representatives.

OSTT. Because of his growing concern about the failures of the system, such as shipments of critical equipment to Iraq just prior to the war, Senator Garn is proposing a major redraft of the law that would centralize management of the streamlined process for controlling the export of militarily critical technologies in an Office of Strategic Trade and Technology [OSTT]. This proposal reflects the Senator's view that the export control system will never function well as long as it is based on open competition among bureaucracies, each with inherent biases that distort their approach to export controls, rather than focusing on protecting U.S. national security. The Director of the upgraded Office would serve as principal advisor to the President on technology security issues and would be solely responsible for the consistency of policy and effective administration of the licensing process.

#### BANKING LEGISLATION AND UTAH

Senator Garn has been a member of the Senate Banking, Housing and Urban Affairs Committee for 17 years. He has served for six years as the Committee's chairman and how serves as its ranking Republican member. Garn's work on the Banking Committee has primarily focused on issues of national policy. Changes in the banking and securities laws do not have provincial application; rather, they generally affect the country on a national basis, and the benefits are seen through improvements in our economy and financial services industry. Nevertheless, some changes have had a particularly important impact for the people of Utah.

In 1987 Garn fought for legislation that would allow Utah industrial loan companies to be acquired by non-financial firms. As a direct result of Garn's efforts, this provision was included in the 1987 Competitive Equality Banking Act. Since then, many industrial loan companies have been acquired by nationally prominent firms in order to develop financial centers in Utah. For example, Sears acquired an industrial loan company in Sandy, Utah, in order to form the base for its Discover Card operations. This Sears "Discover Card Operations Center" employs over 1,000 Utahans. This would not have been possible without Garn's provision in the 1987 law.

Mr. HATCH. Mr. President, finally, I think all of us in the Senate will miss all of these wonderful Senators. They have all brought special gifts to the Senate. They all served this country well from their own perspectives.

Mr. President, I, for one, salute them and wish them all the very best as they go forward.

Mr. President, I have also been privileged to work with ALAN CRANSTON. He has had a distinguished career here in the Senate having served as Democratic whip and now chairman of the Veterans Affairs Committee. When I first came to the Senate, he was a member of what was then called the Human Resources Committee. He helped spark our committee's continuing interest in the needs of children.

TIM WIRTH typifies Western State friendliness. While our legislative paths have not crossed often—perhaps he considers that a plus—it has been a pleasure to serve with him here in the Senate. I wish him all the very best in the future.

I will sorely miss my friend, STEVE SYMMS. He has championed the Constitution throughout his two terms in the Senate, particularly the second amendment. And, I will always be grateful for his willingness to join the battle. When we needed a Senator to hold down the fort during a filibuster, he was there. God bless him for that dedication, and God bless him and Loretta as they undertake new challenges.

I have been proud to serve with WARREN RUDMAN. Few Senators are as thoughtful—or as thought-provoking—as Senator RUDMAN. But, I suppose even if you can take the man out of New Hampshire, you cannot take the New Hampshire out of the man. I am excited for him as he undertakes his new venture with another former colleague, PAUL TSONGAS, and will look forward to working with him in the future.

We will all miss ALAN DIXON. Surely one of the most popular Senators ever to serve in the body, it would not go unobserved that he also served his home State of Illinois with distinction and loyalty.

I have been pleased to work with BROCK ADAMS as a fellow member of the Labor and Human Resources Committee. We have accomplished some very important things, including the passage yesterday of the mammography screening bill. Senator ADAMS has handled many tough issues, such as the D.C. appropriations bill, with candor and aplomb.

Last, but not least, I want to say that I enjoyed my all too brief association with JOSIE BURDICK. Committed to her husband's views and agenda, she carried on his work with dedication and energy even though it must have been a difficult time. She deserves our admiration and respect. She has served North Dakota well.

Mr. President, there is always something bittersweet about the conclusion of a Congress. On the one hand, we are all grateful that we are at an end to a long, tough, arduous session. We often fought over philosophy. We fought to gain political ground. We fought over the details of specific legislation. It

will be nice to go back to Utah and spend some time with family and constituents.

On the other hand, the 102d Congress is about to become history. The names of the Senators we have admired and whose company we have enjoyed will be etched into the history books along with the Clay, Calhoun, Webster, LaFollette, and Taft. There is something gratifying about serving with individuals like these in the U.S. Senate.

It is an honor to serve here in the U.S. Senate. I will look forward to carrying on the legislative work of the country when we reconvene in January.

I yield the floor.

The PRESIDING OFFICER (Mr. LAUTENBERG). The Senator from Utah.

Mr. GARN. Mr. President, had I known my junior colleague was going to exaggerate so much I would have stayed in my office rather than come over and be embarrassed. I would suspect that my mother wrote that for him. You know how mothers exaggerate.

But Senator HATCH and I have had a very unique relationship. Oftentimes it has been my observation in the Senate that when you have two Senators from the same State and the same political party, often there is competition between them. It is sometimes easier to have one from each party. Senator HATCH and I never had that kind of relationship. We have always been close in our work, and it has been a great honor and privilege to serve with him for the last 16 years. In fact, we have even shared offices in Utah, shared staff so that we save the taxpayers' money so we did not duplicate services.

What he says is true. Besides our professional relationship, our families are very close. I have two sisters, but I never had a brother, and we do have that kind of a relationship where we consider ourselves sort of adoptive brothers. So I will truly miss him and his skills. He has represented our State with distinction and, fortunately, will continue to do so. And, if he chooses to run for reelection in 1994, I have already volunteered to be his campaign chairman, because he has been such an outstanding, dedicated Senator.

I suppose that it should not be a surprise to me a year and a half ago when I announced I was not going to run for reelection, that was a decision based entirely on family considerations, because Senator JAKE GARN the Senator would still like to stay, JAKE GARN husband and father is anxious that this day has finally come.

But I did not realize that it would be as difficult as it is.

And it is not particularly difficult to leave the Senate. It is not going to be difficult to leave all-night sessions and all of the long days that we put in here and what takes you away from your family, but it will be difficult to leave friends.

I came to the Senate when Mike Mansfield was majority leader and Hugh Scott was the minority leader. So I have had the privilege to serve in the Senate for 18 years with some very great and distinguished leaders. Mike Mansfield is still a favorite of mine; Hugh Scott was a great leader; Howard Baker, BOB DOLE and GEORGE MITCHELL and BOB BYRD, who stands here on the floor, as I have seen him so many times.

It was a great honor to serve with him. I was fortunate enough to be the Republican Secretary during many of the years that he was majority leader of U.S. Senate. And if anybody could set an example of how Senators should behave, it is Senator BYRD. Most of us have never learned the rules nearly well enough, and if we studied for our entire terms, we still would not know them as well as Senator BYRD. So I feel privileged to have served with the gentleman. He has always been a gentleman.

Certainly Senator MITCHELL and Senator DOLE, I will miss them, as well.

So I consider it a great privilege to have served with these men, and a lot of great men and women of my colleagues who have not been in the leadership.

And that is what makes it difficult today, having cast my last vote, to say goodbye to so many friends, although I have assured them, as Howard Baker said when he left, there is life after the Senate, and he has assured me that there is.

So I still intend to be very much involved in political and civic affairs, even though I will not be in the U.S. Senate.

I would also say how grateful I am to my staff. I have been very fortunate. I will not take the time to go into names, but I had an unusual situation in my 18 years that most of my professional staff have been with me the entire time. I have had very little turnover. And, boy, has that been a help.

It is a great system if you are smart enough to hire staff that are more intelligent than you are so that they make you look good, where you can have them do all the work and stand up and take the credit. So I have been blessed with a great and helpful staff who have served this country and my State well.

Finally, I guess, most of all, I am surprised—surprised and amazed that I had the opportunities that I have had. If anybody ever told me when I was a young boy—and was born in a small town in central Utah of about 3,500 people—that a small boy from a small town in rural Utah would have the opportunity to be mayor of a great city and ultimately be a U.S. Senator, I would have said, "Oh, sure," because I used to read about the Senate.

When I first came here, I looked around the floor and I saw the John

Stennises of the world, and I saw the Hubert Humphreys, and all the great men I had read about. And I was really amazed and thought: What am I doing here?

Well, I remember Harry Truman telling that story and saying: After 6 months, he wondered how they got here with him.

But I have not felt that way. After 18 years, I still wonder how I have been lucky enough to have had the opportunity to serve with a lot of great U.S. Senators in both parties. So I am very grateful for that opportunity.

And I certainly did not realize that I would have the opportunity to fly in space. Because even when I was a senior in college in 1955, it was some 4 years later before Sputnik flew. Nothing had flown in space. So if anybody said, "JAKE GARN, you will have the opportunity to orbit the Earth 109 times at 25 times the speed of sound," I certainly would not have been able to comprehend that. And yet it happened.

So the speed of change is remarkable. I cannot imagine what my children and grandchildren will be able to do, because I certainly, as I have said, have been surprised with the opportunities that have been presented to me.

Another example of these amazing charges: My father was a pilot in World War I. When Neil Armstrong walked on the Moon, he and I were watching together, and he started to cry. I said, "Dad, why are you crying? There is nothing sad about this. This is an historic event."

He said, "Oh, JAKE, I am not crying because I am sad. I am crying because I am overcome with emotion to think that here I am sitting with my son watching a man walk on the surface of the Moon, because when I was 10 years old, your grandfather Garn read me the story about the Wright brothers' first flight."

So think of that, Mr. President; that in my father's lifetime, from the time he was 10 until he was 76 years old, we went from the Wright brothers' first flight to Neil Armstrong walking on the Moon, and that his own son had the opportunity to fly in space.

So I just marvel at the opportunities that I have had. I am not sure I have been worthy of them, but I do know this: how incredibly grateful I am to the people of Utah.

Sometimes in this business we start thinking that we were able to do it all by ourselves, and that is not true. There are not any of us who got here by ourselves. We are here by leave of the citizens of our State.

The fact that the people of Utah have honored me with their votes for 18 years is still remarkable to me. I am grateful to them, because none of this would have taken place without their trust and their confidence and their support.

So my final words on the floor of the Senate are not only to say thanks to

my distinguished colleague, Senator HATCH, my other colleagues, and the great privileges that I have had to serve with them, but most of all to thank the people of Utah.

Mr. President, I yield the floor.

Mr. BYRD addressed the Chair.

The PRESIDING OFFICER. The President pro tempore.

#### SENATOR JAKE GARN

Mr. BYRD. Mr. President, when I was a lad in high school, we were required to read a book by Jules Verne, titled "Around the World in 80 Days."

It has been a great privilege to serve here in the Senate with two men, JAKE GARN and JOHN GLENN, who traveled at such a speed as would carry them around the world in 80 minutes.

Senator GARN was first elected to the Senate in 1974. I know him primarily as a member of the Appropriations Committee, to which he was appointed in 1979. For the past few years, he has served as ranking member of the VA-HUD subcommittee, where he has fought tenaciously for funding of our Nation's space program. In that role, he brought a rare perspective, first as a former Navy pilot and more recently as an astronaut. He saw the relationship between a commitment to space exploration and research and the future of our Nation's ability to compete in the world. Senator GARN should be proud of the guidance and leadership he gave in that area.

The people of Utah and, in fact, all Western States and the other States, as well, owe a debt of gratitude to Senator JAKE GARN. He has dedicated much time and effort to the issues that affect the West. As chairman of the Interior Appropriations Subcommittee, I have witnessed Senator GARN's leadership on the many controversial areas of debate that uniquely affect western States. These have been thorny issues and the committee will miss his expertise and advice.

JAKE GARN has had a remarkable career as a dedicated public servant. I wish him well in his private life and hope he will remember fondly his years on the Appropriations Committee and his years in the Senate.

#### A MAN OF VISION GOES HOME

Mr. BYRD. Mr. President, nearly six decades ago, a young American journalist from California published an unexpurgated version of Adolf Hitler's "Mein Kampf"—"My Struggle"—revealing, as few had previously done, the true depth of the danger and the evil that Hitler embodied.

That young journalist was the senior Senator from California, our friend and colleague and former Democratic whip, Senator ALAN CRANSTON.

Since his emergence on the public scene in the 1930's, ALAN CRANSTON has

been noted for his vision and his enlightened perspective on matters that affect our country.

Unfortunately, when the 103d Congress convenes in January, we will be denied Senator CRANSTON's vision and the rich composition of experiences, talents, and wisdom that he has lent to our deliberations since his election to the Senate in 1968.

I will particularly miss Senator CRANSTON. In 1977, when I was elected Senate Democratic leader, Senator CRANSTON won election as assistant Democratic leader, or "whip." In all of the years since, working first as my proverbial "right hand" and, subsequently, as a close colleague in the Senate leadership when I became President pro tempore, Senator CRANSTON has been a conscientious adjutant and a congenial friend and partner in numerous legislative efforts. Unfortunately, words alone cannot adequately convey the respect in which I hold Senator CRANSTON, nor the solid appreciation that I feel for Senator CRANSTON for his loyalty and his contributions to the Senate's work through these many years.

To know ALAN CRANSTON is to acquaint oneself with one of the most acute intellects in Congress. Through keen curiosity and the caliber of men and women whom he knows in cutting-edge professions and careers nationwide, ALAN CRANSTON has brought to his Senate duties new ideas and practical views of futuristic possibilities.

I know that all of our colleagues join me in wishing for ALAN CRANSTON a life full of continuing challenges, as well as a position from which he will be able to share his insights with us in the years ahead. May he also be assured that he will still occupy a place of affection in all of our hearts, and that we shall not soon forget the quality that he lent to us all while he stood here with us in the United States Senate.

Mr. CRANSTON. Would the Senator yield to me to make a few remarks without yielding the floor?

Mr. BYRD. I will be glad to.

The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. Mr. President, I rise to thank my friend, Senator ROBERT BYRD, President pro tempore of the Senate, for his very generous remarks. I have served with BOB BYRD over 24 years. I was whip when he was leader for a long, long time. I have profound admiration for him and the truly remarkable life that he has led.

I am proud of my friendship and collaboration with him over the years. And I thank him from the bottom of my heart for what he has just said about me and my time in the Senate.

I would like to also thank Senator HATCH for his remarks, majority leader MITCHELL for the remarks that he has made, Senator ROCKEFELLER who is on the floor, and others who have made

very generous remarks about my time in the Senate.

I would like to say just a few words of farewell to the Senate. I will, perhaps, be rising again to speak about a veterans' issue and a housing issue that still remain to be dealt with this body. But I simply want to say, first, it has been my privilege to serve with and under three great majority leaders. First, Mike Mansfield, then ROBERT BYRD, then GEORGE MITCHELL. Each has been a valued friend and a great leader in this body.

I have also enjoyed the opportunity to serve with majority leaders from the Republican side of the aisle, Everett Dirksen, Hugh Scott, Howard Baker, and the present leader, BOB DOLE.

And with many, many other Senators with whom it has been a pleasure to work on a myriad of issues.

There are some great individuals in this body now. There have been many in the past. There will be many in the future.

Mr. President, a Senator from California gets involved in a myriad of issues. Just about every issue that exists has an impact, somehow, in the remarkable State of 30 million people that I represent. So I have been involved in countless issues over my time in the Senate.

Most of all, I have dedicated myself to the cause of peace, and to the environment. In many a sense I believe that my work on the environment is probably the longest-lasting work I have accomplished here.

When you deal with a social issue, or a war and peace issue, or an economic issue, or whatever the results, the consequences are fleeting. Whatever you accomplish is soon changed, and often what you have done leads to new problems that then have to be dealt with.

But when you preserve a wild river, or a wilderness, or help create a national park, that is forever. That part of your State, our Nation, is then destined to be there forever after, as God created it.

I worked with particular dedication over these years, too, on issues of justice, equal rights, human rights, civil rights, voting rights, equal opportunity. I worked for democracy and freedom in my country and in all countries. I focused particularly on housing, and transportation, and veterans.

I thank the people of California for the remarkable opportunity I have had to serve them in the Senate for almost a quarter of a century. I thank the many Senators, so many great human beings here with whom I have also had the opportunity to work. I thank my wonderful staff—the many members of my staff who have made it possible for me to do what I could not have done without their help—the staff led for so many years by my administrative assistant Roy Greenaway. And I thank my secretary, Mary Lou McNeely, for

all that she has done over so many years, to help me do what I wanted to do and had to do.

I thank committee staffers for their great work. I thank the many people on the Senate staff for all that they have done. I thank people inside and outside the Senate, who in so many different ways have contributed to my capacity to work effectively in the Senate.

Finally I want to say that I am not really retiring. I am retiring from the Senate. But I expect to lead a very, very active life in days and years to come. Once again I will be focusing perhaps most of all on issues of war and peace, and the environment.

I again thank ROBERT BYRD, and I yield the floor back to him.

Mr. BAUCUS. Will the Senator yield without losing his right to the floor?

Mr. BYRD. Yes, I do.

#### SENATOR ALAN CRANSTON

Mr. BAUCUS. Mr. President, I join my colleagues in praising Senator CRANSTON and telling him how much we will miss him.

When I graduated from law school, I came to Washington, DC, looking for a job. And I walked into the office of Senator CRANSTON, the Senator from the State of California, seeking a job.

I was, like a lot of law school graduates, looking to see what I could find on Capitol Hill. Why did I choose Senator CRANSTON? Why did I choose his office to go into? Very simply, because as a student in the State of California—I went to college and law school in California—I kept reading about Senator CRANSTON. He was, at that time, and in earlier times, not Senator, I think he was Comptroller of the Currency at one time. But I kept seeing ALAN CRANSTON's name in the news, as a student, a college student, and later as a law student. I was very, very impressed with what he had done. It just made an impression on me.

I must say, Mr. President, unfortunately Senator CRANSTON had not offered me a job. I did not personally speak with ALAN, I spoke with somebody in his office, an administrative assistant, I presume. And they said: Nope. There are no openings here. No employment here. So I walked out of the office and I was not able to find employment on Capitol Hill. But then did find a job later with the Securities and Exchange Commission.

Since I have come to the Senate now I have found that my first impressions of ALAN CRANSTON, way back as a college student, and later as a law student, were wrong. He is far more than I expected. He is a wonderful person, a true gentleman. There is no one here more honorable, whose word is stronger, and a man for whom I have more respect than ALAN CRANSTON.

I join my colleagues, saying how much I will miss ALAN CRANSTON.

The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. Mr. President, I thank my good and wonderful friend, MAX BAUCUS of Montana, for those remarks. You just told me something I never knew about one aspect of my life in the Senate. And you have just revealed the most serious error ever made by my staff in 24 years.

I thank you very much for your generous comment.

The PRESIDING OFFICER. The Senator from West Virginia.

#### A PATRIOT TAKES ANOTHER BOLD STEP FORWARD

Mr. BYRD. Mr. President, several of our colleagues will be absent from the 103d Congress when it convenes in January, and those of us who will continue our tenure here will miss all of our departed colleagues.

In some instances, our departing colleagues will be retiring to well-earned rests.

But, in the instance of Senator WARREN RUDMAN, the senior Senator from New Hampshire, leaving the Senate does not include a cessation of the role of a public man but an alteration of course in pursuit of some of the same goals that have animated Senator RUDMAN as a Senator and patriot throughout his Senate career.

Working with another former colleague, Senator Paul Tsongas from Massachusetts, Senator RUDMAN will be seeking to energize fellow Americans on issues vital to the life of our Republic, with the current Federal fiscal situation understandably taking immediate precedence among their concerns.

One of my primary regrets is that Senator RUDMAN has decided to leave the Senate to pursue aims that are both admirable and patriotic.

Indeed, with principles that transcend partisanship in so many cases, WARREN RUDMAN brought with him a refreshing breeze to our deliberations here in the Senate. Seemingly, the kind of politics that Senator RUDMAN represents is appealing to more and more Americans and, with his extensive talents and intrepid character, Senator RUDMAN has become a spokesman here in the Senate for a farflung constituency across our country, as well as being a spokesman for the citizens of New Hampshire.

In the years ahead, I look forward to hearing from Senator RUDMAN as a man qualified to offer advice to us and to other Americans. I was privileged to work with Senator RUDMAN on the Senate Appropriations Committee, and I learned especially in that context to appreciate his keen mind and his cooperative spirit.

Perhaps in this instance, the Senate's and New Hampshire's loss will be America's gain. Nevertheless, I wish

Senator RUDMAN every success as he assumes a wider role in our national life, and I thank him for all of his graciousness and wisdom in our years of service together here in the Senate.

#### RETIREMENT OF SENATOR BROCK ADAMS

Mr. BYRD. Mr. President, the senior Senator from Washington will be retiring from the Senate at the close of this session. BROCK ADAMS' life and public career have been a series of achievements. He graduated as the No. 1 scholar of his graduating class from the University of Washington with a degree in economics. He was a member of Phi Beta Kappa and student body president. He went on to earn a juris doctor degree from Harvard Law School.

His unique experience in public service began in 1961 when President John F. Kennedy asked BROCK ADAMS to serve as U.S. attorney for the western district of Washington State.

In 1964, the citizens of his native State sent him to Washington, DC, to represent them in the House of Representatives. He served in that body with distinction and became the first chairman of the House Budget Committee. In that role, he was able to set into motion the process that, for the first time, set overall congressional targets for Federal spending.

During his 14 years in the House of Representatives, he also served as a member of the House District of Columbia Committee where he was an author of the Home Rule Act which gave the citizens a democratically elected mayor and city council. His close ties to the capital city have continued to this day.

In January 1977 President Carter recognized BROCK ADAMS' leadership and asked him to join his Cabinet as Secretary of Transportation. He served in that capacity until July 1979 when he returned to the private practice of law.

However, in 1986 public service once again beckoned and he came to the Senate. He has championed the cause of those who are often unheard in this Chamber. He has been eloquent in his defense of the concerns of the elderly as chairman of the Aging Subcommittee of the Committee on Labor and Human Resources.

It has also been my good fortune to have him as a member of the Committee on Appropriations for the past 4 years. During that period, he has served as chairman of the District of Columbia Subcommittee. His experience as a member of the House District Committee served him well as preparation for that role. His understanding and caring for this city have been obvious and much admired. He has been a strong advocate for the rights of its citizens and an eloquent spokesman for the Mayor and her administration.

I shall miss the Senator's cooperative spirit and willingness to undertake re-

sponsibilities that others often avoid, and wish him well in his new endeavors.

Mr. President, for all of these fine Senators who will be leaving the Senate, I wish to say that we all have been enriched by their friendships during the years that we have served with them. I have enjoyed the spirit of cooperation with respect to those on the Appropriations Committee who are leaving, and even with those who were not on the Appropriations Committee. I have enjoyed the camaraderie and the opportunity to share their wisdom and their patriotism.

And so in closing, to all of these our friends who will be leaving, I recall a bit of verse that is appropriate for this moment:

I shot an arrow into the air,  
It fell to earth, I knew not where;  
For, so swiftly it flew, the sight  
Could not follow it in its flight.

I breathed a song into the air,  
It fell to earth, I knew not where;  
For who has sight so keen and strong,  
That it can follow the flight of song?

Long, long afterward, in an oak  
I found the arrow, still unbroke;  
And the song, from beginning to end,  
I found again in the heart of a friend.

Mr. President, I yield the floor.

Mr. CHAFEE addressed the Chair.

The PRESIDING OFFICER. The Senator from Rhode Island.

Mr. CHAFEE. Mr. President, I understand that we are in some kind of a block situation currently. If that is going to become unclogged, I will be glad to give up the floor at that time.

The PRESIDING OFFICER. The Chair informs the Senator we are in morning business, with Senators permitted to speak up to 10 minutes therein.

Mr. CHAFEE. Mr. President, I see the Senator from Iowa is here. If he could outline what he would like to do, I could give way to him, if need be.

Mr. HARKIN. Will the Senator yield? I just want to speak about some of the Senators who are departing to pay my respects. I have to preside at 6 o'clock, so I cannot go any further than that.

Mr. CHAFEE. If the Senator is going to speak until 6 o'clock, I better proceed then.

Mr. HARKIN. Mr. President, it will take me about 10 minutes or so. If the Senator wants to go ahead, I can do it after I preside. I thank the Senator.

#### VETERANS HEALTH CARE ACT OF 1992

Mr. CHAFEE. Mr. President, what I would like to address is legislation that I anticipate coming up later on, and that would be H.R. 5193. Mr. President, this is known as the Veterans Health Care Act of 1992. In it there are a lot of very good provisions, provisions that I support.

However, I am distressed at the handling of this legislation because while

it deals principally with veterans health care, it also deals with some Medicaid matters. I could argue with the handling of those particular Medicaid matters, but my real problem, Mr. President, is that the House failed to consider a series of Medicaid measures that should have been addressed and they failed to do so.

Let me just point out what some of those Medicaid matters are that were failed to be addressed. These were matters that passed the Senate and the House failed to take up. As you know, in the House of Representatives, Medicaid matters are not handled by the Ways and Means Committee, which is the counterpart of the Finance Committee, where they are handled in the Senate. They are handled by the Energy and Commerce Committee. And the Energy and Commerce Committee inserted some Medicaid provisions in the Veterans' Administration legislation but failed to deal with other Medicaid matters. They just brushed them aside.

What were some of these? I will just tick off seven of them briefly:

First, a provision to help the frail elderly.

Second, to assist those with disabilities to live in the community. That has been the thrust of the Senate's efforts continuously.

Third, to give States relief and additional flexibility in payment disputes with the Federal Government. Right now the Medicaid provisions, as far as the Federal Government goes, when you come to payment disputes, you have little recourse. This is the way it is, says the Federal Government. We think there ought to be additional flexibility.

Fourth, Medicaid coverage for foster children. Those who qualify should get Medicaid coverage, we believe.

Fifth, extended demonstration projects, particularly those in Michigan and in Maine that we felt were important.

Sixth, measures to increase the cap on Medicaid spending in Puerto Rico.

Seventh, childhood immunizations. I do not think there is anybody on this floor, indeed all of these provisions passed in the Senate, these are all important measures, Medicaid measures. But what is so annoying, Mr. President, is that the House refused to consider them. They cannot say they were not dealing with any Medicaid issues in this legislation, because indeed they were. There is a Medicaid provision in this VA legislation that is before us. But they refuse to consider all this other material that is so important, important to me and important to other Members of this Senate, important to the Senate as a whole.

So what they did was, they took a VA bill, took limited Medicaid measures that they wanted, put them on, shipped it back to us and left. So, Mr.

President, here are our options. Our options are to object to the whole bill. An objection here would be sustained and the bill would not pass. So good provisions dealing with the Veterans' Administration would fail.

The other option is to try to attach an amendment to it, an amendment dealing with these Medicaid provisions, send it back to the House, but there it would die because the House, in effect, is gone. The suggestion that they should stay around until both bodies adjourn sine die has proven false. They have gone.

And so, Mr. President, as one who believes in the provisions of the Veterans' Administration legislation that came over, I support them. I do not want to be a dog in a manger.

Now, what is a dog in a manger? Some people have asked me what that expression means. A dog in the manger comes from the old days when the groom would put out grain in the manger, and the dog would jump up and lie in the manger so the horse could not eat the grain, the oats. Yet, the dog did not want the oats; he could not eat them.

So one could be, as we say, a dog in the manger here—attach an amendment, send it back to the House, kill both measures, and nobody gets anything out of it. So that is no way to proceed. Yet, I want to publicly voice how distressed I am at the treatment of these Medicaid provisions.

I also want to say, Mr. President, that the underlying measure, while dealing principally with Veterans' Administration matters, also deals in a very piecemeal fashion with a gross error, in my judgment, that we made in 1990, on the subject of best price for prescription drugs. Now, that is an esoteric subject, Mr. President, but let me explain what was attempted to be achieved.

There are those in the Senate who believe very strongly and I am among them that something should be done to assist the States in getting discounts for those drugs that a State purchases for Medicaid recipients. And so the idea was conceived that Medicaid would be entitled to the best price or lowest price that the drug companies were willing to sell to anybody—this provision has had a detrimental effect on other purchasers.

Let me give you an example. At that time, the drug companies were giving discounts to the Veterans' Administration and other non-profit purchasers. In some instances, that price was 20 percent of what the drug companies were selling drugs to Medicaid or other entities for. And this came about because of a historic reason.

The Veterans' Administration represents a very small proportion of the total sales of the drug companies. During the war, or shortly after, as a favor in order to help the Veterans' Adminis-

tration, many—not all—of the drug companies agreed on a very low price.

In effect, this is when they sold to the Veterans' Administration in bulk. And that is one of the reasons they could give the low price.

So when we went to conference in 1990, those who were supported providing that same price said this is a good way of reducing Medicaid costs to the States. But some of us said, well, if you require that your lowest price be given to Medicaid, the companies no longer will give the deep discounts to the Veterans' Administration. And it is clear they would not.

If the Veterans' Administration represents 1 percent of the sales of a drug company, and Medicaid represents 14 percent—or 12 to 14 percent—of their total sales, it is clear that the drug companies would say, well, forget it. We will not sell at that low price anymore to the Veterans' Administration, at the depot price. That was very clear.

The PRESIDING OFFICER. The Senator's 10 minutes have elapsed.

Mr. CHAFEE. I wonder if I might have 6 more minutes, Mr. President.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. So, Mr. President, what was decided in that conference in 1990 was to carve out only the depot price—not all VA discounts—and say that will not count toward the best-price requirement but everything else will.

Well, immediately, it was seen that this had a very harmful effect because the drug companies were giving a lower price to the community health centers, for example, and they were giving a lower price to the Public Health Service; they were giving a lower price to family planning centers. If they continued after enactment of this legislation to offer those same discounts, they would also have to give them to Medicaid.

So people said, well, this is unfortunate.

Anybody could have seen this in advance, but regrettably those in favor of the best price plunged on and would not agree with suggestions that, for instance, I was in favor of rejecting the whole best-price approach because of the problems involved. Instead I preferred that a flat percentage discount be provided to Medicaid.

But sure enough, the drug companies said, if we do sell at a lower price to VA and other public entities as a favor, but that same lower price must be granted to 12 percent of our total sales under Medicaid, forget it. We will not sell at this lower price to VA or the community health centers.

So legislation before us—or soon before us—provides that the VA community health centers, Public Health Service, family planning centers, the Department of Defense, certain disproportionate share hospitals will be

exempt from the best price calculation. If those groups are getting a lower price, no longer will it make any difference. They do not have to sell at that price to Medicaid. So a great new group has been carved out from the best-price approach.

Now, you might say, well, in this legislation it provides that the companies must give a 25-percent discount to the VA and discounts to others that I have just described. Is it not wonderful we are providing for that?

Yes, it is. But, Mr. President, the people who are being hurt under this arrangement are the health maintenance organizations and many hospitals that will have to increase their prices because they are not carved out as an exception to the best price. Their discounts will continue to be included in the best price calculation, so they will lose the discounts.

Mr. President, frequently on this floor, when I have tried to move ahead with reforms in health care—and I will admit that these are not total structural changes, but changes that we could make—many have dismissed those changes of health care as minimal, or changes that are just incremental. They have objected.

The objection has been that we need a great big change, so therefore, do not take steps such as insurance market reform, the establishment of small business purchasing groups, or medical malpractice reform. Do not do any of those. Yet, those who objected to that approach are the very people who support this partial approach in connection with solving this mess we got ourselves into with best price.

So we started off, we carved out the veterans' Administration depot price, that does no count toward the best price. The step we are talking now is to carve out another big segment, the community health centers, the Public Health Service, the family planning centers, the Department of Defense, except for CHAMPUS, and the disproportionate share hospitals.

We are saying to them—and the VA, by the way, all the VA including the depot price, they are carved out. But what about the others? What about other purchases? They are not taken care of. What about HMO's? They are not taken care of. What about the hospitals? They are not taken care of. Inevitably, the result will be that their prices will go up higher than they otherwise would have been. These will be passed on in the form of higher charges and higher premiums.

So, Mr. President, it was extremely unfortunate that we ever got into that best price business 2 years ago. Though I believe these entities should get discounts, I think that this is marginal activity that is taking place tonight in these changes.

Mr. President, I want to register how distressed I am about what is taking

place. Distressed that the Medicaid provisions that were passed by the Senate were not taken care of, distressed that we did not fully address the problems that arose under the best price for drugs, for prescription drugs.

Mr. President, I certainly hope that we can revisit this next year, make sure that we look at this whole prescription drug problem under Medicaid once again, decide what we want to do, decide, is it fair? Is it right? Are we doing the best thing for the HMO's, for example, by making their prices go up, by making the prices go up to the hospitals.

Mr. President, in conclusion, let me say I was confronted with the very difficult choice here to resist the whole passage of this legislation and then kill some good provisions dealing with the Veterans' Administration.

I chose not to go that path because I thought that it was unfair to the women's veterans health programs which are encompassed in this legislation, the nurses' pay provides for nurses outside the contiguous limits of the United States, Alaska and Hawaii. Those nurses are entitled under this legislation to better pay than would otherwise be provided if we did not have this legislation—and a whole series of other provisions that are good provisions.

I hope, Mr. President, we can address this whole matter again next year.

Mr. CRANSTON addressed the Chair. The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. Mr. President, I thank the Senator from Rhode Island for his cooperation in connection with the pending bill. As the chairman of the Committee on Veterans' Affairs I am extremely pleased that it appears that we will soon pass H.R. 5193, the proposed Veterans Health Care Act of 1992.

This is a vitally important measure that will touch the lives of millions of veterans, most especially the many tens of thousands of women veterans who were raped, or sexually assaulted while in service, who will now have access to needed counseling to help them deal with their trauma.

The bill also addresses the needs of veterans of Persian Gulf service who are concerned that their health may have been affected by their service.

Operation Desert Storm veterans will have greater assurance that their Government is listening and responding to their concerns.

The bill would also make needed corrections in the VA's new locality pay system for nurses so as to enhance the VA's ability to recruit and retrain top-flight nurses.

Mr. President, this is the last of countless veterans bills that I have shepherded through the Senate and on to enactment into law during my 24 years in the Senate.

I am proud of this bill as I am proud of the others, and I thank all of my col-

leagues for their help in these efforts, especially—on the pending bill—Senators ROCKEFELLER and PRYOR who have been very, very helpful.

Mr. ROCKEFELLER addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. ROCKEFELLER. Mr. President, I also want to thank the Senator from Rhode Island. I understand his concerns, not only about what he was expressing with respect to 2 years ago, but also I know that he has a variety of things that he would like to see done in health care legislation.

I recognize also that this bill is not yet passed, that there is still a hurdle which has to be overcome. I strongly believe that hurdle will be overcome and that we will pass this in the remaining hours that are before us. It is very good legislation. It includes a long list of health care improvements for our Nation's veterans, strengthens health care services, assistance for sexually assaulted women in the military, a registry for Persian Gulf veterans, assured discounts on prescription drugs, and a lot of other provisions that will be good for the well-being of a lot of people.

I, along with Senator CRANSTON, Senator MIKULSKI, Senator KENNEDY and others have been working on this provision that deals with the prescription drugs for quite a long time. As a result of a lot of very laborious and patient work we are, in fact, hopefully, soon going to be acting to secure reasonable discounts for prescription drugs purchased by the Federal Government; and to extend desperately needed relief to VA medical centers also in our country that are struggling with empty shelves and in some cases empty pharmacies to provide the quality care to veterans.

I was guided in this effort by what Acting Secretary Tony Principi said was the bottom line, veterans will be denied health care unless VA gets financial relief from escalating prescription drug prices. That is what Tony Principi said. He is quite right. That is why I among others have invested so much in this effort to right the wrong.

I refuse to accept such a bottom line that veterans will be denied health care, and I know that my colleagues in the U.S. Senate cannot accept such a grim bottom line item.

This legislation will set a new precedent in the Federal Government procurement of prescription drugs. That is interesting and exciting, since the Federal Government can act as an educated consumer effectively using practices that have worked in the private market to guarantee discounts and to save dollars. This protects the American taxpayer by using the limited Federal dollars wisely. It protects veterans, and other Federal purchases by giving them a lower price in the pharmaceuticals for the need of the people who rely on them.

To be quite honest, Mr. President, this is a bit of phenomenal process. I think it is important to remember how far in fact we have come to reach this agreement that I hope we are about to reach. As I have noted in the past, this issue was raised over a year ago when a Veterans Administration pharmacist in West Virginia complained to me about the difficulty in obtaining some drugs because of drastically escalating drug prices. From that point on, I and others began to work on this issue and to build a coalition for action. Time and time again there were snags in the negotiations, people were focused on terms and technicalities. But today I believe we will cast a vote for veterans and stretch the Federal health care budget farther to care for our Nation's deserving veterans.

This bill is the final result of months of negotiations. It is a final deal and it is a fair deal. I know every Senator will join me and the members of this coalition, Senator CRANSTON, Senator PRYOR, Senator KENNEDY, Senator MIKULSKI, Senator SIMPSON, Senator MURKOWSKI. It is very, very crucial to get this bill enacted into law.

The experience in its entirety, from first discovering the harmful effects of rising drug prices on the VA and other Federal health care programs, to where we are now, to finally enacting this resolution that we hope will stabilize the cost and protect health care services for veterans and other Americans. It has been revealing in many respects. It demonstrates, and even warns us, just how tough it is to achieve the comprehensive health care reform that we need in this country and which must be centered on something called cost containment. And all of this that Americans expect from the next administration in the 103d Congress. But it also shows that persistence, commitment and hard work on the part of many do pay off when the cause is right, when the allies are willing to work together constructively and in a bipartisan manner. This in my view, is a very positive lesson for all of us and for the people we are here to represent.

For my part, I want to thank a lot of people. I have already thanked some. Barbara Pryor, from my own staff, has put untold hours and sacrifice into this round-the-clock type of negotiations with care and attention, as well as Ellen Doneski, who has worked right along on what is a very, very complex medical, financial, and technical issue. I believe we are about to resolve this. There is just one hurdle yet to go, and I think we can overcome it. When we do, the Nation's veterans will be better off.

I applaud the passage of the Veterans Health Care Act of 1992, H.R. 5193. This legislation includes a long list of health care improvements for our Nation's veterans: Strengthened preventive health care services; assistance for

sexually assaulted women in the military; a registry for Persian Gulf veterans; assured discounts on prescription drugs, and other key provisions that will improve their health and well being.

As many know, I have been involved personally in crafting and promoting one important section of this package, and that's the provisions to address the costs of prescription drugs that face the Department of Veterans Affairs. As a result of laborious and patient work, we are acting to secure reasonable discounts for prescription drugs purchased by the Federal Government, and extend desperately needed relief to VA medical centers across our country that are struggling to provide quality care to veterans while coping with escalating drug costs.

Specifically, this part of the bill will require drug manufacturers to enter into an agreement if they want to sell to the Federal Government. The agreement simply states the manufacturer will agree to sell to all Federal purchasers that wish to purchase a given drug on a drug by drug basis. Additionally, the manufacturer must agree to provide the VA with a 24-percent discount on the average price at which it is sold to the Federal Government.

This is a provision that I have labored on for over a year. And over the last few months, I have been engaged in intense negotiations to bring this to closure. Those of us working for this solution have made many concessions—too many concessions in my view. But I have done my utmost to improve this bill in every reasonable way and to meet the industry's legitimate concerns. I have gone many extra miles in the course of negotiations, all in order to ensure expeditious passage.

My colleagues should be aware that the prescription drug pricing agreement title of the Veterans Health Care Act is virtually identical to the drug provisions incorporated in the Senate version of that legislation, S. 2575. That legislation passed the Senate last week by unanimous consent.

First and foremost, we should not—we cannot—forget what the acting secretary, Tony Principi, said was the bottom line—veterans will be denied health care unless VA gets financial relief from escalating prescription drug prices. That is why I have invested so much in this effort.

I refuse to accept such a bottom line, and I know that my colleagues in the U.S. Senate cannot accept such a grim, chilling bottom line.

As we vote on this legislation, I urge my colleagues to remember what propels our action today—what this bill means in human terms:

A veteran being turned away from a VA hospital pharmacy because his prescription expired too late in the fiscal year, and his local VA ran out of money and they cannot fill his prescription until they get new funding.

A veteran who needs a cardiac catheterization being told to wait a few weeks because his local VA hospital is cutting back and delaying surgery because of budget shortfalls caused by increases in prescription drugs.

Those types of stories are already a reality in some VA hospitals. To guard against any more of those tragedies, we must act to resolve this desperate situation.

A little legislative history is appropriate. In 1990, Senator PRYOR, my dear friend and colleague, offered the Federal Medicaid Program a means to achieve the discounts that its market share dictates it deserves. As fashioned by Senator PRYOR, the Medicaid rebate legislation ensures that the State and Federal Medicaid partnership receives a minimum discount, now 15 percent. That discount is fair compensation to the Federal Government for its status as the single, largest purchaser of pharmaceuticals in the United States. Previously, States had not been successful in obtaining that discount in their negotiations with manufacturers, despite the clout that their purchasing power should have commanded.

OBRA 90's Medicaid rebate legislation was good, common-sense public policy. I am proud to have joined with Senator PRYOR in working on its enactment. One important benefit is that the savings that the legislation produced for the Medicaid Program allowed us to expand health care services to poor pregnant women and children. Lives were improved as a result.

Unfortunately, there were some unintended and unacceptable ramifications for other Federal health care programs. Some manufacturers responded to the Medicaid rebate law by cost-shifting their losses—and perhaps more than that—onto other Federal purchasers. VA saw its costs for drugs skyrocket. Those increases were unsustainable. They cost VA almost \$100 million. VA, already operating on a shoestring budget, needs relief. Other Federal purchasers, like public health service and Indian health service clinics, needed relief too.

So I banded with my colleagues, Senators CRANSTON, KENNEDY, PRYOR, and MIKULSKI to find a solution that would work for all Federal purchasers. We settled on the outlines of the bill we vote on today. It links all Federal purchasers in at common bond. Our bill says that if a drug manufacturer wants to sell to the Federal Government, it must sell to all its agencies. It prevents manufacturers from cherry-picking with the Federal Government; that is, from only selling to the VA—and there's strong incentive for manufacturers to do that because it is the training ground for the bulk of our country's physicians—and deciding to perhaps forego selling to the public health clinics. Additionally, manufacturers will be required to provide VA

with a discount that approximates the discounts VA was receiving before the enactment of OBRA 90, before the cost-shifting.

This legislation will set a new precedent in the Federal Government's procurement of prescription drugs. It says the Federal Government can act as an educated consumer-purchaser—effectively using practices that have worked in the private market to guarantee discounts and save dollars. It protects the American taxpayer by using limited Federal dollars wisely. It protects veterans and other Federal purchasers by giving them a lower price on the pharmaceuticals they need for the people who rely on their programs. It doesn't matter what the commodity—drugs, computer parts, or sponges—the Federal Government owes it to the taxpayer to do a better job of buying smart.

And as we enter a new era of health care reform with the preeminence of cost containment, this legislation also says that we'll use the combination of the Federal Government's purchasing power to stretch our limited health care dollars.

This has been a phenomenal process. I think it is important to remember how far we've come to reach this agreement. As I have noted in the past, this issue was raised over a year ago when a VA pharmacist in West Virginia complained to me about the difficulty of obtaining some drugs because of drastically escalating prices. Time and time again there were snags in negotiations. People were focused on terms and technicalities, but today we will cast a vote for veterans and for stretching the Federal health care further to care for truly deserving Americans.

This legislative initiative has a long history. In the Senate Veterans' Affairs Committee, Chairman CRANSTON and I joined with Senators SIMPSON and MURKOWSKI in a bipartisan compromise that has been incorporated in H.R. 5193.

To achieve this critical compromise within the Veterans' Affairs Committee, there were good-faith negotiations to hammer out the details. To do that, I gave up a number of important provisions included in my original proposal. I gave up a rollback of prices that the industry opposed. I gave up the Prescription Drug Payment Review Commission. I responded to the jurisdictional concerns expressed.

And once it passed committee, we had to continue intense negotiations to broaden and win over the necessary support in both bodies of Congress. To secure Senate passage, we changed the inflation protection for VA from PPI [Producers Price Index] to the Consumers Price Index [CPI] which is more generous to the pharmaceutical industry.

We removed the benchmarking provisions of the bipartisan committee-

passed amendment to allow VA and the drug companies greater flexibility in negotiations.

And on UPAC's [unified pharmaceutical award contracts]—a very important concept to promote buying groups of Federal purchasers—I ultimately decided to compromise there, too. Again, this idea is based on what already works in the private sector. I believe in the concept. I believe it is fair. I have yet to hear a reasonable explanation from the pharmaceutical industry or any one else why the Federal Government should not form broad buying groups for fixed volume, prescription drug contracts.

I worked closely on developing this concept with Acting Secretary Tony Principi and we both strongly believe in it.

But the pharmaceutical industry was united in its opposition to UPAC's, and as a final point of compromise, I voluntarily agreed not to pursue UPAC's as part of our negotiations with the House. So UPAC's are not included in this package.

This bill is the final result of months of negotiations. It is a final deal and it is a fair one.

I know every Senator will join me and the members of my coalition—Senators CRANSTON, PRYOR, KENNEDY, MIKULSKI, SIMPSON, and MURKOWSKI—to get this bill enacted into law.

Millions of veterans who rely on VA for health care are depending upon our action.

Mr. President, I request unanimous consent to insert into the RECORD letters I have received from veterans' organizations about the importance of this issue.

Today, we have the power to act on behalf of 27 million veterans. We have the power to pass a fair and reasonable bill that will ensure that VA receives the discounts it deserves as a major Federal purchaser of prescription drugs. We have the power and we have the responsibility.

I am honored to have spearheaded this important legislation. And I celebrate the Senate's wisdom in passing this bill that will provide help to so many million veterans and others dependent on public health services.

This is an historic public policy advance, one that should save the American taxpayers dollars, protect veterans' health care services, and provide new clout to public health clinics. It is really an extraordinary accomplishment.

I want to take a moment to thank some very important people, the caring and dedicated staffers who have ushered this legislation through the grinding and grueling legislative process. That process, culminated in our vote today, has been long and winding, and sometimes treacherous. This bill would never have made it to the end of the road without the hard work of the Sen-

ate Veterans' Affairs Committee staff, especially Ed Scott and Janet Coffman. I want to particularly thank Barbara Pryor of my personal staff who handles veterans' issues. Barbara has worked long and hard on this issue, and I also thank another member of my staff, one of my health LA's, Ellen Doneski.

I want to acknowledge that we relied heavily on the invaluable assistance and expertise afforded by Senator PRYOR's talented staff, Chris Jennings and John Coster. They helped Ed, Janet, and Barbara learn the intricacies of the VA and Medicaid's drug pricing system and assisted them in crafting a solution that will provide real protection for the VA and other Federal purchasers. Phyllis Albritton, representing Chairperson BARBARA MIKULSKI, contributed throughout the process. The Labor and Human Resources Committee staff, particularly Marsha Simon and Ann LaBelle, took the lead on the Public Health Service provisions. The Finance Committee staff, Janis Guernsey and Marina Weiss, provided technical assistance and helped bring this package together.

I would also like to recognize the critical contribution of the staff from the Republican side, especially Dave Balland of Senator SIMPSON's office and John Bradley of Senator MURKOWSKI's office. Dave's special perseverance helped us pass this both in committee and on the Senate floor. The bipartisan collegiality that was required to reach this agreement had to be operative at the staff level as well. Thanks should also be extended to others on the Veterans' Affairs Committee minority staff.

This experience, in its entirety—from first discovering the harmful effects of rising drug prices on VA and other Federal health care programs, to finally enacting this resolution that we hope will stabilize these costs and protect health care services for veterans and other Americans—has been revealing in many respects. It demonstrates just how tough it is likely to be to achieve the comprehensive health care reform, which must be centered on cost containment, that Americans expect from the next administration and the 103d Congress. But it also shows that persistence, commitment, and hard work do pay off, when the cause is right and allies are willing to work together constructively.

I am very proud of this achievement. And I make a special plea to the drug industry to do everything in their power to fulfill the goals of this legislation, as their part in serving the country and addressing the health care needs of our people.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PARALYZED VETERANS OF AMERICA,

Washington, DC, October 1, 1992.

Hon. JOHN D. (JAY) ROCKEFELLER IV,  
U.S. Senate, Hart Senate Office Building,  
Washington, DC.

DEAR SENATOR ROCKEFELLER: The Paralyzed Veterans of America would appreciate your support in reducing the price of prescription drugs sold to the Department of Veterans Affairs (VA). Since Congress is rapidly approaching adjournment, we strongly urge you to vote for S. 2575, "Department of Veterans Affairs Nurse Pay Amendments of 1992; Veterans Health Programs Improvement Act of 1992; Federal Health Programs Pharmaceutical Pricing Act of 1992," to ensure that the VA receives a reduction in prescription drug prices in Fiscal Year 1993. The cost savings to the VA could be as much as \$93 million.

On September 15, 1992, the House Committee on Energy and Commerce, Subcommittee on Health and Environment, marked up a prescription drug bill H.R. 2890; the full Committee approved it on September 17th. The House of Representatives passed the bill on September 22, 1992. Equally quick action on S. 2575 is imperative if the VA is to receive reduced drug prices in FY 1993.

We appreciate your previous support of veterans' issues and strongly seek your cooperation on this bill.

Sincerely,

FRED COWELL,  
Executive Director.

THE AMERICAN LEGION,

Washington, DC, October 1, 1992.

DEAR SENATOR: The American Legion urges you and your colleagues to approve S. 2575 as soon as possible. That measure contains a number of critically important provisions pertaining to VA medical care delivery, ranging from preventive health care to state veterans home construction.

One of the most urgent provisions of S. 2575 deals with the need to regain control over prices that VA now pays for its pharmaceuticals. Those prices during the past 18 months have risen so sharply that almost \$100 million of VA's annual budget for drugs can be attributed to excessive and unreasonably increases.

Such price-gouging, in our opinion, is unacceptable. The current situation demands a quick and effective legislative response. Remedial legislation must be approved before Congress adjourns so that VA can be relieved of this additional financial burden.

Legislation addressing the same problem cleared the House last week. It is vital that the Senate act immediately to reinforce the House action by passing S. 2575.

Your attention to The American Legion's views on this important matter is deeply appreciated.

Sincerely,

PHILIP RIGGIN,  
Director, National Legislative Commission.

AMVETS,  
Lanham, MD,

AN OPEN LETTER TO THE UNITED STATES  
SENATE

DEAR SENATOR: I am writing to express AMVETS' concern over the lack of action on S. 2575. As you may know, this bipartisan Bill contains several important improvements to veterans benefits, among them provisions that will provide relief to the VA from the predatory drug price increases that have cost the VA an extra \$100 million per year since OBRA 90. That is \$100 million that the VA can no longer use to treat veterans.

To put that in perspective, shifting \$1 million from the medical care account to the pharmaceutical account represents about 8,000 fewer outpatient visits or dropping 1,000 patients. The VA has not received supplemental funding to make up the shortfall.

Senator, even the Pharmaceutical Manufacturers Association has agreed to the pricing mechanism worked out between the Senate and House Committees staffs.

Now is the time to move this important veterans bill, and AMVETS requests your support!

In service to America's veterans,  
ROBERT L. JONES,  
*Executive Director.*

DISABLED AMERICAN VETERANS,  
Washington, DC, October 1, 1992.

DEAR SENATOR: On behalf of the more than 1.4 million members of the Disabled American Veterans (DAV) and its Women's Auxiliary, I am writing concerning S. 2575, the "Veterans' Health Care Improvements Act of 1992," and am seeking your assistance in ensuring that this measure, of utmost importance to disabled veterans, receives speedy Senate consideration and passage prior to Congress' adjournment.

S. 2575 contains an array of provisions that, when enacted, will prove extremely beneficial to the Department of Veterans Affairs (VA) health care delivery system and, more importantly, the disabled veterans it is mandated to serve. In addition to the important programmatic improvements contemplated by this measure, the DAV is keenly interested in and supportive of efforts to address the significant problems VA has faced with regard to outrageously high pharmaceutical prices since the establishment of the Medicaid Outpatient Drug Rebate Program by the Omnibus Budget Reconciliation Act (OBRA) of 1990.

It is our view that the unfortunate and, we believe, unintended outcome imposed on VA by OBRA will be remedied by S. 2575 and we again urge your assistance toward expeditious Senate passage of this measure.

Sincerely,

JOHN F. HEILMAN,  
*National Legislative Director.*

Mr. PRYOR addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas.

Mr. PRYOR. Mr. President, I rise this evening to pay special thanks to the distinguished Senator from California, who is leaving the Senate, for his leadership in this field, for his earnest commitment to the veterans of America, to his long service in the United States Senate, and also to tell him that, along with me, others wish him well in his future life. Mr. President, I thank the Senator from California specifically for the work that he has put into this measure which, hopefully, the Senate will be passing in a very short period of time.

Mr. President, I thank also the Senator from West Virginia, Senator JAY ROCKEFELLER, who has truly committed himself to the passage of this legislation and has spent an untold number of hours in the last several weeks and months developing this legislation and bringing it to this point on the floor of the United States Senate.

Mr. President, the Senator from Rhode Island also has been very, very

helpful, I think, in bringing it to the floor. And even though he is not entirely happy with some of the provisions that might relate to some of the Medicaid programs, specifically as to prescription drugs, I am very heartened to hear him say on the Senate floor—and I think I can quote—that "I will look forward to looking at the whole prescription drug situation in the next session of Congress." I think that is basically an accurate quote by the Senator from Rhode Island. I look forward to joining him in this effort as we will look to the entire prescription drug situation in our country.

Mr. President, a few nights ago I was interviewed by one of the networks, and the subject was indigent care. There are millions of Americans who no longer can pay for their prescription drugs. Five million Americans, Mr. President, today are having to choose between buying the prescription drugs that their doctor has prescribed for them and buying food for their table—5 million Americans.

The pharmaceutical industry has stated time and time again that they have a program that can serve those indigents across America who cannot buy their prescription drugs. Mr. President, as I said on that particular interview that night, this is probably the best kept secret in America, because the pharmaceutical companies do not tell the physicians, who prescribe the drugs about this program. They never held a press conference to say that these programs existed or that these drugs, under certain conditions, were, in fact, available to the public free of charge.

So, Mr. President, I ask the staff of the Special Committee on Aging of the U.S. Senate to prepare a very simple booklet to advise the elderly citizens across America that there are such programs. And we listed each company, each manufacturer, and what drugs they were willing to provide for indigents if their doctor so stated that these drugs were a necessity of life.

Mr. President, I had no idea what the response would be, but our phones started ringing in the Aging Committee, and in my office, and in perhaps the offices of the other Senators. The first day after that network carried this story about this drug program, we received some 2,000 telephone messages from all across America. Here are calls from Oakdale, CA; Wilkes-Barre, PA; Carmichael, CA—on and on. Here is Mississippi, here is South Carolina, Minnesota, Maryland, South Carolina, New Hampshire, Pennsylvania, and all across our great land. These are people who are desperate, people who are poor, people who are indigent, people who are afraid and said, "We did not know about this program." Mr. President, we have had hundreds of physicians calling our office at the Aging Committee saying, "We did not know about this program."

Mr. President, all I can say is that out there across this land, one of the great fears that we have among elderly Americans is that they will no longer be able to buy their prescription drugs. We are very fortunate that we have an increase in awareness and sensitivity to these millions of Americans who are having to make the choice of whether they buy food for their table or prescription drugs their doctors have ordered.

I hope to be able to join with the Senator from Rhode Island and other colleagues in the U.S. Senate and in the 103d Congress in looking at what we are doing to ourselves and our citizens in the prescription drug area. We have to ask about the enormous profits—unprecedented profits—of the pharmaceutical manufacturing companies, the multitude of tax breaks that we are giving away to the pharmaceutical manufacturers who in turn charge us, the American citizens, and the Medicaid program, literally the highest drug prices of all industrialized nations.

Well, Mr. President, I hope that comprehensive pharmaceutical cost containment legislation that we have looked at earlier this year in the Senate might be brought back before the Senate next year. I look forward to working with my colleague from Rhode Island. I look forward to working with the distinguished occupant of the chair, who, in my opinion, has done so much to advance the cause of more affordable health care in America, and who is today and will continue tomorrow to be one of the great leaders in America in saying to all American citizens, we in the Congress are going to do better. We are going to find that consensus. We are going to find the way to do it. And we are going to find the answer to providing all Americans a system of health care that can be afforded by all of us and that will not discriminate against the poor or the elderly.

Mr. President, I yield the floor.  
Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Iowa.

#### TRIBUTE TO DEPARTING SENATORS

Mr. HARKIN. Mr. President, I rise today to salute my friends and departing colleagues, Senators BROCK ADAMS, JOCELYN BURDICK, ALAN CRANSTON, ALAN DIXON, TIM WIRTH, JAKE GARN, STEVE SYMMS, and WARREN RUDMAN.

The departure of any one of them diminishes the stature of this body a great deal. But the departure of all eight at the same time is a milestone that I believe we should take a moment to reflect upon.

Mr. President, standing here today, I cannot help but think of that old story about President Calvin Coolidge.

Soon after he had left the White House, Calvin Coolidge had to fill out a form confirming his membership in the National Press Club. After writing his name and address, he moved on to the space marked "Occupation" in which he wrote "retired." The next space was "Remarks." Coolidge paused for a moment and then wrote, "glad of it."

Mr. President, I imagine our departing colleagues feel the same way. Many of them have been here for years and they have worked hard to represent the people of their States, and the people of America. They've left their marks. And now, for different reasons, they turn their attention elsewhere. We all know the demands placed on those of us honored to serve in this body, and I for one know that their families are glad to have them back.

But we will miss them.

SENATOR BROCK ADAMS

Mr. President, I will miss Senator BROCK ADAMS a good friend who I've had the privilege of serving with on four different committees—the Appropriations Committee, the LHHS full committee the LHHS subcommittee, and the Subcommittee on Disability Policy.

Abraham Lincoln once said that the purpose of government is to do for people what the people alone cannot do for themselves. Throughout his long and distinguished career, BROCK ADAMS has dedicated his life to making government work for people.

As a seven-term U.S. Congressman first elected by the people of Washington in 1964, BROCK was an early advocate for civil rights, voting rights, and the equal rights amendment. As Secretary of Transportation under President Carter from 1977 to 1979, BROCK ADAMS fought for landmark safety regulations to protect the consumers of America.

As a Senator, BROCK has worked hard to change this country's priorities. I will remember Senator ADAMS as a tireless advocate for the elderly and for women's health care. As much as anyone, he has made a real difference in the war on breast cancer, and millions of women live better lives today because of it.

Above all, to me, BROCK ADAMS will always be the one Senator who stood with me on this floor January 1991 to call for a vote on the gulf war. It was not a popular thing to do, and it was not an easy thing to do, but BROCK stood his ground and helped force the debate. His eloquence helped remind us all of Congress' responsibility to the American people on the most difficult decision we can make—the decision to send young men and women into battle.

BROCK ADAMS was one of a kind, and we will miss him.

SENATOR JOCELYN BURDICK

Mr. President, when the Senate convenes next January, we will do so with-

out one of the most inspiring Members of the Senate today,

SENATOR JOCELYN BURDICK

She has taught us all a lesson in courage and perseverance. Shakespeare once wrote that we must "instruct our sorrows to be proud; for grief is proud and makes his owner stoop." Mr. President, nobody has stood through grief prouder than JOCELYN BURDICK.

At a time when America grieved the loss of Quentin Burdick, nobody had more reason to grieve than JOCELYN BURDICK. But she rose above her personal sorrow, and took over her husband's term in the 102d Congress.

It seems fitting that the last full day of Quentin Burdick's life was Labor Day—because nobody was more dedicated to the working men and women of North Dakota than he was. Mrs. BURDICK has carried on in that great tradition, and the people of North Dakota owe her a debt of gratitude.

Personally, I am proud to say that the first vote JOCELYN BURDICK cast was in favor of a transfer amendment I offered last month, to break down fire walls and transfer money from military spending to health and human services and education. Although she was not here long, JOCELYN BURDICK inspired us all. I will never forget her courage and grace, and wish her luck with whatever she decides to do.

SENATOR ALAN CRANSTON

Mr. President, the Senate is losing a man of compassion and commitment in Senator ALAN CRANSTON, who is retiring after 24 years. Never has a Member of this body been more committed to world peace, human rights, and equal rights than ALAN CRANSTON.

When ALAN celebrated his 20th anniversary in the Senate, somebody asked me if America still needed ALAN CRANSTON. And my answer then is my tribute to him today: as long as one veteran is in danger of losing his benefits, as long as one missile threatens our future, as long as one judge threatens to take away our individual rights, then so long will America need ALAN CRANSTON.

His causes were as diverse as the State he's from: A leading advocate of SALT I and SALT II, he also worked to maintain our National Park System. A staunch chairman of the Veterans Affairs Committee, he also introduced the Freedom of Choice Act to help protect a woman's right to choose.

And through it all, ALAN CRANSTON has remained a Democrat's Democrat. As Senate whip, his trademark was his tally sheet, marked with pluses, minuses, and question marks. As a Californian, nobody did more to raise money for the California Democratic Party than ALAN CRANSTON. And as a U.S. Senator, nobody did more to keep the progressive cause alive.

ALAN CRANSTON has brought energy and vision to the Senate.

In behalf of the people of Iowa that I am proud and privileged to represent, I

thank him for his commitment and wish him well in his future endeavors.

I know that we will see more of him in the future. I know that ALAN CRANSTON will always carry the progressive banner as he has done all his life and the progressive cause that respects individual rights and human liberty, freedom of choice, and democracy. I know that he will continue to fight for those as long as he is with us here on this Earth, because that has been ALAN CRANSTON's life and always will.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. HARKIN. I am delighted to yield to my great, great friend.

Mr. CRANSTON. I simply want to say many, many thanks for those very generous words to my dear friend from Iowa who is himself such a great U.S. Senator. Thank you.

Mr. HARKIN. I thank my friend.

ALAN, I will miss you dearly here. I tell you that. I will miss you a great deal.

SENATOR ALAN DIXON

Mr. HARKIN. As the 102d Congress comes to a close, another colleague we bid farewell to is my friend from the neighboring State of Illinois, Senator ALAN DIXON.

Will Rogers once said "I never met a man I didn't like." And I have a feeling that if Will Rogers had not said that, ALAN DIXON would have. Walk with him some time. He is animated and has a kind word and a "hello" and a big smile for everyone he walks by. Above all, ALAN DIXON is a Senator who speaks up for the little guy, usually with the volume at full blast.

Like Everett Dirksen before him, ALAN is also a man who not only knows how to make the process of democracy work, but loves the intricate workings of the democratic system. Let me tell you: If you need to get something done, you want ALAN DIXON on your side.

And if he wasn't on your side, you needed to work twice as hard to outmaneuver him—not always with the best of luck.

But he has been one of Illinois' most successful politicians. He's been able to represent the diverse interests of the people of Illinois, from small businesses to farmers, ironworkers to students. And his contributions to the Senate have been significant.

I have been proud to serve with ALAN DIXON on the Agriculture Committee in the Senate. He brought a unique energy and style, and he will be missed.

SENATOR TIM WIRTH

Mr. President, it makes me very sad to bid farewell to my good friend and colleague Senator TIM WIRTH, because he and I both came to Washington as part of the so-called Watergate baby class of 1974.

Our prime issue then, as now, was change. Our top priority was overhauling the seniority system. And after we had both been here a while, we figured

the seniority system was not such a bad thing after all.

But we have come full circle. Now, as then, voters say it's time for a change. The irony is, one of Congress' most effective voices for change all these years has been TIM WIRTH. I can understand and respect TIM's decision not to run again, but this body will be the lesser for it.

He spoke for so many different people. The women of America are losing one of the most effective voices for choice and equality. The underprivileged are losing one of the most effective advocates for equal opportunity. And any American who cares about protecting and preserving the environment is losing a true friend.

In his one term here in the Senate, TIM WIRTH has done more than anyone to put the environment first. I hate to say that TIM will be remembered for acid rain, ozone depletion, and deforestation, but he has done more than anyone to bring attention to and solve these problems. In his fierce defense of the environment, TIM WIRTH himself has been one of our national treasures.

I don't think we've seen the last of him. TIM isn't the kind of person who goes quietly into the night. We'll hear more from him. I feel privileged to have served with TIM all these years and wish him well in whatever he decides to pursue.

SENATOR JAKE GARN

Mr. President, I have to admit: One Member of this body that I have been a little envious of the past 7 years is Senator JAKE GARN of Utah, who is also making his departure at the end of this session.

One thing I have in common with JAKE GARN is that we were both Navy pilots. Back in the 1960's, when I was flying jets, I always wanted to be an astronaut. I never made it to space, but JAKE GARN did. As we know, in 1985, Senator GARN became the first Member of Congress to travel in space, aboard the shuttle *Discovery*.

I always admired and slightly envied him for that—maybe not slightly, a great deal of envy for that. He did so with the courage and character that has marked his legislative career.

But personal courage has always been the hallmark of JAKE GARN's life and career, exceeded only by his devotion to family. Shortly after that shuttle flight, JAKE learned that his daughter was facing kidney failure due to diabetes. In September 1986 he donated one of his kidneys so that his daughter would live, one of the most courageous and selfless things I have ever seen. He has lived his beliefs and served as an example to others.

One thing that few people outside this Chamber know about Senator GARN is that every year, he hosts what he calls the Senator's Ski Cup in Park City, UT. He invites Members of Congress and the administration and their

families out to Utah to ski, and the money raised from the event goes to help the Primary Children's Hospital in Salt Lake City, UT. Next January, he will host the sixth annual Senator's Ski Cup.

Every year he has always invited me but, for some reason or other, I have never been able to make it. Well, he invited me again this year and I will tell you, I plan on being there, Mr. President, because I do not think you will find a worthier cause and a more delightful and what I might say considerate person to go for than Senator JAKE GARN.

I have served with JAKE GARN on the Appropriations Committee and I have come to admire him as a man of principle who tells it like it is. He has taught us all about courage and devotion, and the idealism of this body will be diminished in his absence. I wish him well.

SENATOR WARREN RUDMAN

Mr. President, I would also like to pay tribute to Senator WARREN RUDMAN of New Hampshire.

In many ways, I feel the same way about WARREN RUDMAN that I do about Ronald Reagan. When I was running for President earlier this year, I often said that I admired Ronald Reagan. And people were surprised to hear that. After all, we were on opposite sides of nearly every issue. But what I admired about Ronald Reagan was the fact that you always knew where he stood. No matter what issue, you always knew that he had a firm set of beliefs that guided every decision.

Mr. President, the same can be said about WARREN RUDMAN. He is a man of integrity guided by a firm set of beliefs, and he has served the people of New Hampshire well. I wish him all the best in the future. And I know we will hear more from him, as in his private life he will continue to address the problems that confront our country.

SENATOR STEVE SYMMS

Finally, Mr. President, I would like to salute my good friend Senator STEVE SYMMS, who will not be with us when the 103d Congress convenes next January.

STEVE SYMMS is a former marine who has remained forever faithful to the conservative cause. He has served his Presidents well, and consistently fought to represent the interests of the State of Idaho. Nobody has fought harder to maintain the rights of gun owners, private property owners, and extend the transportation lifeline to rural areas and rural States.

STEVE and I were on the opposite sides of just about every issue when we were in the House together and later when we served in the Senate.

In fact, in one of these recent pieces of paper that came out that compared our votes, I looked at it and I saw that STEVE and I, he was next to the last in vote comparisons between me and STEVE SYMMS.

But I am going to miss him because I have served with STEVE for so long. And I have to tell you this: He was always in a good mood. I have never seen STEVE but with a smile on his face. I have always thought that STEVE represented what I considered to be the best in the conservative cause. He fought hard for individual rights—he never wavered from that—for individuals rights and individual liberties.

I always knew that if I needed someone to argue with, I could always count on STEVE SYMMS, but we always did it in a good manner.

As I said, he was just always of a good nature and friendly. I have never, in all my years that I have served with STEVE SYMMS, ever heard him say a harsh word to me or a harsh word about anyone else in my presence, and we have spent a lot of time together; a few times we drove back and forth together because he lived out by me.

I have just always liked him. He is a great human being.

So I have been proud to call him a friend for more than 15 years and I am going to miss him when we come back here next January.

SENATOR AL GORE

Lastly, Mr. President, there is one other tribute I would like to make, but I think I will wait until January—when Senator AL GORE is in the Vice President's house.

Mr. BAUCUS addressed the Chair. The PRESIDING OFFICER. The Senator from Montana.

MONTANA WILDERNESS BILL, S. 1696

Mr. BAUCUS. Mr. President, for some 12 years now, the people of Montana have been trying mightily to resolve the fate of 6 million acres of roadless Federal land in our State. Ever since the famous RARE II decision in the late 1970's, all States with such lands have struggled with the dilemma of how to best manage their land to balance wilderness and wildlife habitat, recreation opportunities, and timber and mining opportunities. All but two States have successfully charted that course.

One of those is my State of Montana. Our lack of success has not been for lack of effort. There have been numerous Montana wilderness bills introduced in the past decade. Honest differences, and more than just a little political posturing, have combined to frustrate repeated attempts.

In 1988, the members of the delegation thought that victory was finally within our grasp. The Senate and House both passed a wilderness bill. But our joy quickly turned to despair as President Reagan vetoed the bill.

But resolution of the wilderness issue was too important to the future of Montana to let that veto stop our work. Last year, Senator BURNS and I

began what turned out to be lengthy negotiations to develop another Montana wilderness bill.

We shook hands on our agreement and agreed to stick with it through the Senate. But we both acknowledged then that we could not bind the House Members of the delegation to this agreement for they had not been party to our discussions.

The Senate passed S. 1696 earlier this year. As with any compromise, the bill did not contain everything that I wanted. Nor did it contain everything that Senator BURNS wanted.

But I believed then, as I do now, that S. 1696, provides a sound and responsible way to manage the remaining roadless areas in our State in a way that protects the environment and preserves jobs.

Two weeks ago, Senator BURNS, Congressman WILLIAMS and I met with the leadership of the House Interior Committee to discuss the prospects for the bill in that body. It was clear that the House would pass a different version of the bill, but that, as Congressmen VENTO and MILLER said, the final product would have to be somewhere in the middle.

Last Friday, as expected, the House of Representatives did pass its version of S. 1696. The House amendment to the bill changes many of the wilderness area designations in the original Senate bill. It also contains different language on water rights and release.

But despite the changes, the two bills are remarkably similar in approach. However, the House acted with only a few days left in this Congress. Because there is so little time left, shortly after House passage of the wilderness bill, I offered the delegation a compromise proposal that I believe fairly bridged the differences between the House and Senate bills.

It included elements of both bills and specifically responded to concerns raised by Congressman MARLENEE and Congressman WILLIAMS. I asked the other delegation members to meet and try to reach agreement on it.

We met twice on Saturday for some 5 hours. We met for another 5 hours the next day, Sunday. We have had many meetings.

At the pace the negotiations were proceeding, it was apparent to me that they could not possibly conclude until well after Congress adjourned.

Mr. President, I believe my colleagues in the Senate know how much I desire a resolution to this issue. It is a debate that has dragged on for more than a decade. It is a debate that has polarized our State and distracted us from the urgent task of meeting tomorrow's economic and environmental challenges in our State of cleaning up our air and water, conserving our natural resources, educating our children, upgrading the skills of our workers, improving our infrastructure, and attracting new business.

I would have clearly preferred that the members of Montana's delegation put politics aside and come together on a compromise that was in the best interests of our State. I have put a lot of effort into achieving that end.

But with only a few hours left before the probable adjournment, the clock is conspiring against consensus. With so little time left, I believe that the only remaining course of action for me is to bring up the House bill and amend it with my compromise proposal.

The people of our State want this issue behind them. That is clear from the numerous editorials that have appeared in our newspapers in the last few days. I ask unanimous consent that several editorials be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Daily Inter Lake, Oct. 7, 1992]

#### WILDERNESS SEQUEL

If you had hoped we might have a moment of silence now that the latest Montana wilderness bill is dead, forget it.

What we'll undoubtedly have is a messy, nasty post-mortem that will stretch past Nov. 3, as the people who couldn't nurse a bill through Congress now look for the cause of death. Each part of the bill will be dissected, analyzed and held up for everyone to see.

"The Senate bill failed to protect enough of Montana's precious wildlands."

"The House version of the bill locked up too much of the public's resources."

"The bills were no good because too many acres were set aside for further study."

"The bill was doomed because it failed to protect pristine wilderness in area ABC."

"The bill was unacceptable because it kept recreationists out of area XYZ."

"The bill was fatally flawed by ambiguous release language."

"The greedy timber industry killed the bill."

"Selfish wilderness interests killed the bill."

"Conrad (or Max or Pat or Ron) did it."

"It was dead on arrival."

Enough already. Such carping is tiresome even before it starts, and it doesn't do a darn thing to settle the issue.

We still have 6 million roadless acres of public land that can't be touched until Congress acts. But Congress has turned out the lights, and the bill that would have settled most of the wilderness issue is dead.

Who won?

Nobody. The fight will be refought another time. The arguments people are so sick of hearing will be replayed. The political games will be restaged.

It is a colossal waste of time and energy. The discussion long ago stopped being productive. At this point, nothing short of divine intervention could change anyone's mind. Montana's four representatives in Congress know that. They know that for every acre they shift from one pile to another, someone will be tickled and someone else will be ticked. They know the issue won't go away until someone's wilderness proposal becomes law. They know that until a bill passes Congress and is signed by the president, the controversy will haunt them and all of us.

So what does anyone gain from a rerun next year or the year after or the year after that?

Absolutely nothing.

Still, those four men—the only Montanans with the authority to get the job done—couldn't agree to disagree and just do it.

Next year, thanks to reapportionment, there will be only three Montanans in Congress to fight over a bill.

You have to look for progress where you find it.

[From the Great Falls Tribune, MT, October 5, 1992]

#### TIME RUNNING OUT FOR WILDERNESS COMPROMISE

Montana's congressional delegation must compromise now—or we all lose.

There's no hotter political potato than the Montana wilderness bill, but it has to be handled now. Or this legislation expires when Congress adjourns in a few days, and another year's struggle will have been lost.

The compromise agreed on by Sens. Max Baucus and Conrad Burns a year ago was an acceptable one. The House response, drafted by Reps. Pat Williams and Bruce Vento, added a bit more wilderness. An excellent compromise would have been to adopt the House acreage and the Senate water right language.

But then everything came unglued.

Baucus offered a last-minute compromise that would have split the differences, but tempers were short in the final days of the session.

The reality is that the difference between the three measures are insignificant. Any of the three would benefit the state by resolving a decades-old battle.

But it's wrong to be making these crucial decisions at this time and in this way.

The prolonged delay of a gridlocked Congress has cost us all dearly by jeopardizing legislation important to Montana—and by forcing hasty action on a bill too important to be rushed.

It has been painful to watch this awkward process. Even though it's nearly too late now, our congressional delegation should get together on one of the proposals—our preference would be the House bill—and back it for the good of the state.

We can't afford to lose this opportunity—again.

#### SOME LESSONS FROM YET ANOTHER FAILURE

There appear to be some certainties in life: death, taxes, and the everlasting dispute over Montana's wilderness.

That's distressing because it's becoming obvious that Montana's can't resolve this issue on our own. And that means that others will have to do it for us—if it is ever to be resolved.

Resolution of the perpetual problem got off to a promising start a year ago with agreement by Sens. Max Baucus and Conrad Burns that would have protected another 2.2 million acres of Montana, opening roughly 4 million acres to logging and to oil and gas exploration.

At the time, however, the senators warned that their compromise was shaky and should be accepted untouched.

But House environmentalists touched, pressuring Rep. Pat Williams to increase the protected acreage and change the water rights language.

Predictably, Burns balked and the bill died.

There is a natural urge to point a finger at the supposed villains in this latest soap opera, but, in reality, there are none.

Montanans are deeply split over the protection or responsible development of our

wilderness. We elect politicians to represent our interests—and they did.

Predictably, they couldn't agree any more than we could.

A new factor is that Montana's wilderness has become a national issue.

After decades of squabbling among ourselves, the rest of the nation is now paying attention to the resources of our state. Like it or not, we've lost the time when we could decide the issue solely for ourselves.

There's simply nothing else like it in America—nothing left outside of Alaska that's as big and wild and pristine.

That's important to Americans increasingly locked in a metropolitan maze—whether it be a smoggy Los Angeles, a congested Chicago or the human anthill that we call the East Coast.

If Montana were a privately run business, our chief executive officer would be listening closely to that sentiment—but he or she would be calling it market demand and finding a way to give the consumers what they want and what they are presumably willing to pay for.

We need to recognize this market force as well—because it will give us the direction we can't find for ourselves.

#### TIME FOR STATESMANSHIP

After a spell in the national spotlight, highlighted by celebrity kibitzing and predictable partisan posturing in Congress, the fate of the 6 million acres of the state's remaining unprotected roadless land is back in the laps of Montanans: two senators and two congressmen, who must either strike a deal or fail their constituents miserably.

With Congress' adjournment looming, time is short, and now is the time for statesmanship. The temptation to bend to other forces, however, will be formidable.

Two bills lie before Congress. The Senate's more conservative bill would set aside 1.2 million acres of new wilderness, and provide other legislated protection for another 1 million acres. The other version, passed by the House Friday, would create some 1.45 million acres of new wilderness, and provides other protection for another 1.1 million acres.

The outcome of this standoff weighs heavily into the Nov. 3 face-off between Democrat Rep. Pat Williams and Republican Rep. Ron Marlenee.

Marlenee—with the help of his Republican colleague, Sen. Conrad Burns—will be tempted to solidify his constituency by clinging in bull-headed fashion to the Senate version of the bill which, he argues, will deny mining and timber workers access to less public land.

If Williams, on the other hand, stands steadfastly to the House's more liberal bill, he can claim the high ground with the special interests that have his ear.

But such unbending strategies will only scuttle the whole process, contribute to already soaring voter cynicism for both congressmen, and once again reduce the status of the state's precious natural resources and jobs to that of trivial pawns.

The most ironic aspect of this whole tale is that an examination of the impacts of any wilderness bill within the range now established by the House and Senate versions reveals a minimum of differences. The real estate that, practically speaking, invites development (read "road construction"—the one thing that will forever preclude wilderness designation), and the rate at which that land would be developed, will not vary measurably no matter which of the two bills becomes law.

So why at this 11th hour is the fate of the Montana wilderness bill so shaky?

The short answer: face-saving.

Even though the differences in final outcomes for the land in question are minimal, the process could be scuttled if a given compromise makes it appear that a particular politician caved in.

A compromise has been proposed. It offers all of the delegation something to take home to their respective constituencies. Democratic Sen. Max Baucus has crafted a middle ground that splits the difference on acreage accorded federal protection from development, and restores some state water rights protection favored by the delegation.

There is still more talking to be done, more give-and-take at the bargaining table, but—this time—let it be good faith, productive and speedy dialogue. If a pact can be struck and delivered back to Congress in the next two days, chances are good for passage and a presidential signature.

There are times to play politics. There are times to set politics aside. Never in the Montana wilderness debate has there been a more appropriate moment for the latter.

#### DON'T DROP THE BALL NOW

Since the Montana wilderness bill has become a political football, perhaps a gridiron analogy is fitting:

It's fourth down, goal to go, with just seconds left on the clock for Montana's congressional delegation.

The U.S. House on Friday passed its version of a bill affecting some 6 million acres of roadless national forest lands. It differs somewhat from the version of the bill passed earlier by the Senate, and the two bills must be reconciled, submitted for final approval and sent to the president before Congress adjourns this week.

It can be done, but not unless all four members of the state's congressional delegation do what Montanans have been asking them to do for years: strike a compromise. There probably isn't a soul in Montana who wouldn't like to add, subtract or change something in the wilderness bill. But after 12 years of fighting, most of us have come to the conclusion that it is far better to enact a law based on the vast areas of agreement, rather than continue to quibble over relatively minor differences.

Following Friday's House vote, Sen. Max Baucus proposed a reasonable and workable melding of the two versions. In simple terms, it uses water-right and release language found in the Senate version, while protecting as wilderness some of the areas included in the House version but not the Senate's.

It may not be perfect, but the Baucus proposal—or something close to it—offers the only possibility for getting a bill passed at this point. If the delegation can't work things out quickly, the whole battle will start anew.

Montanans have come too far for the delegation to give up now. Don't fumble it, boys.

Mr. BAUCUS. Mr. President, the point is very simple. The compromise proposal that I will later call up today is midway between the House and the Senate bills. It, therefore is the only Montana wilderness bill that can possibly be enacted in this Congress.

Democratic Members of this body have cleared this proposal. There are no objections on the Democratic side to this proposal.

Likewise, I am assured by Congressman WILLIAMS, with other conversa-

tions, particularly with Congressman VENTO and Congressman MILLER, that the prospects of passage of the compromise proposal is also very high, and it can be cleared on the Democratic side in that body.

Only this bill can pass. No other version at this late date, with only hours remaining, can pass. I have been working with my colleague, Senator BURNS, on his side of the aisle. He is working, trying to resolve issues that he yet sees remaining. I very much hope that when I call up this bill at a later time, all those problems will have been resolved.

Montana is fed up with politics. It is fed up with recriminations on this issue. It wants us, the Montana delegation, to pass an evenhanded, balanced bill—get on with it; get it over with; put some finality to this. Let us end it.

Montanans want stability; they want jobs; they want to protect the environment. And most of all, they want the passage of a Montana wilderness bill this session that is balanced and evenhanded. They want it passed now, so we in Montana can go on with other issues.

Mr. President, I very strongly urge my colleague from Montana to work with his colleagues on his side of the aisle; work out those resolutions. Democrats have cleared it. It is available to come up for passage. Let us get it passed.

I very much hope we finally can put this issue behind us and close the final chapter on a 12-year saga.

Mr. President, I yield the floor. The PRESIDING OFFICER (Mr. HARKIN). The Senator from New York is recognized.

#### ALAN CRANSTON

Mr. MOYNIHAN. Mr. President, late this afternoon, I left the Senate floor to attend to some matters in the Russell Building. I made my way down the Senate steps, pausing every so often—for we had had the last rollcall vote of the 102d Congress—to marvel once again at the serene seemliness of the Capitol Grounds, with the white marble of the Supreme Court turning golden in the reflection of the westerling Sun. The makings, you might say, of reverie. Until, from across the way, a distinctly British voice hailed me to ask if I would come over and say a few words for British—BBC—television.

Happy to do so. The Briton was of a more urgent mood than I. He wanted to talk about the Presidential election and wanted to know whether I thought this was the foulest campaign I had ever seen. "Not at all," I said. "Not in the least."

Whereupon, I found myself thinking, talking about ALAN CRANSTON—ALAN MCGREGORY CRANSTON, is the fact. I explained that, as I had left the floor, I

had noticed Senator CRANSTON hunched over his beloved tally sheets, rollcall votes or no rollcall votes, busy with the work of the Senate in which he has served with luminous integrity and intelligence for near on to a quarter century.

I remarked on this and used that word, "century." And of a sudden, I had an answer to the question I had been asked. "Foul campaign?" I replied. "Nothing of the sort."

"Young man," I continued, "you do not know and there is no real way you could know, what our Nation has been through for a half-century. "One Presidential election after another in which the gravest issues of the survival of democracy in a looming totalitarian world seemed continuously at stake, in the context of which the most awful suspicions, fears, accusations were given voice."

I told him, in 1939, the Second World War was about to begin. The fall of France and the Battle of Britain would follow. The American people had little sense of what was coming and even less a sense of the nature and threat of fascism. In that year, the Nazi government of Germany had published as expurgated version of Adolf Hitler's "Mein Kampf," My Struggle. I myself can remember talk of it at the time. Hitler seemed a reasonable man. Certainly Germany had been ill-used by the victorious powers at Versailles in 1919. His demands seemed understandable.

He had invoked Woodrow Wilson and the American principle of "self-determination" when he seized the German-speaking areas of Czechoslovakia. America was, in any event, an isolationist nation still. "Stay out of Europe's seemingly endless quarrels," was our first concern, and was the first concern of many. And if this was a view associated with the Middle West, it had many adherents on, for example, the Ivy League campuses of the East, where "America first" committees were being formed to much acclaim and notice.

One man knew better. ALAN CRANSTON had returned to the United States after having served as a foreign correspondent for the International News Service in England, Germany, Italy, and Ethiopia. He read German. He had read "Mein Kampf." He happened on the English language version in a New York bookstore. He was appalled by the thought that the American people were reading a wholly misleading version of a propaganda tract of immense power. With the energy and swiftness he brought and still brings to the 100 yard dash, ALAN CRANSTON sat down and produced a translation of the passages Hitler had left out of the expurgated edition. Half a million copies were sold at 10 cents apiece. A banner on the cover told readers, "This is the true version of 'Mein Kampf,' and Hit-

ler will not get a penny of the royalties."

In time, the Nazis forced the Cranston edition out of the bookstores, but not before the truth was out. A half-century of struggle with totalitarianism followed. ALAN CRANSTON was in the thick of it throughout, valiant for truth, indomitable, unafraid. And, in the end he and such as he prevailed.

"This election?" I continued with my friend from the BBC, my new friend, "Oh, there are some personality issues involved, and why not? But the long half-century struggle with totalitarianism, the totalitarian claim to own the future, the inevitability of its domination followed by goodness knows what disastrous world wars, that is over. Nazism, fascism, communism, all gone."

I said, "The most important fact about this election was not who was going to win. The most important thing to know was not who was going to win. The most important thing to know was that it was going to take place the first Tuesday after the first Monday of November. The votes would be counted, and on January 20th—a new term for President Bush, a term for Governor Clinton—one of them would begin." Democracy made it through the 20th century after all. There are not many who would have expected this when ALAN CRANSTON picked up that copy of "Mein Kampf" in a New York bookstore.

But, thanks to ALAN CRANSTON and those of his generation who joined us in that struggle, we have, in the end, prevailed.

He departs now leaving history behind. Homage, great friend.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Florida.

Mr. GRAMM. Mr. President, I yield to the Senator from California.

#### A REMARKABLE MAN

Mr. CRANSTON. Mr. President, I rise to thank the esteemed Senator from New York for his wonderful remarks about some of the things that I sought to do in my life. I am particularly pleased that the man I consider the most eloquent Member of the U.S. Senate used that eloquence to recount some of the many deeds of my many decades.

I would rather talk about the Senator from New York than myself, so let me simply say about him that he is a truly remarkable man with a prodigious capacity to deal with the smallest aspects of a big issue, as witness his great work on Social Security, along with his understanding of the broad sweep of that vitally important legislation.

He is amazingly prolific and profoundly thoughtful in his writings. He

understands the true significance of history in ways matched by few Americans. He has brought to this body a remarkable understanding of our world and our Nation and its great problems and vast opportunities.

I feel better about leaving the Senate because PAT MOYNIHAN will be in the Senate in the days and years to come.

Mr. MOYNIHAN. We feel better about being in the Senate because you have been here. Some people meet standards, others set them. You have been one of those.

Mr. CRANSTON. Mr. President, I thank the Senator.

Mr. GRAHAM. Mr. President, I wish to associate myself with the eloquence of both our colleagues, who are departing the floor, whose friendship obviously sustains.

#### SAFETY PROBLEMS WITH CUBAN NUCLEAR POWERPLANTS
